20. ABSTRACT (Continue on reverse side if necessary and identify by block number)

This final report, contained in four volumes, presents the results of research into assessing the economic (cost and down-time) impact of Potentially Avoidable Maintenance actions for selected Naval aircraft subsystems. Maintenance actions requiring no repair and those resulting in induced defects and failure-to-correct were identified. Specific high-driver two-digit Work Unit Codes were analyzed for the F-14A Fire Control, S-3A Bombing Navigation, S-3A Landing Gear, and A-7E Bombing Navigation.

20. The content of the respective volumes of this report are as follows:

Volume I - Overview

Volume II - Technical Report - includes the research methodology, results, and recommendations. The Interim Feasibility Report is an appendix to Volume II.

Volume III - Detailed Technical Data - includes the computer-generated input information tables and output data tables which form the foundation for the results contained in Volume II.

Volume IV - Software Manual - includes the logic used to develop software for generating the tables in Volume III, user instructions, and a complete listing of programs that were executed to arrive at the tables.

For the respective aircraft studied, only data from squadrons within CNAL were utilized. These results were used to project the cost and down-time impact of Potentially Avoidable Maintenance for the whole fleet of the subsystems studied.

The study made a coarse evaluation of Built-In Test effectiveness for one subsystem. Fault isolation capability regarding Shop Replaceable Assemblies was also assessed.

The study concluded that Potentially Avoidable Maintenance contributes significantly to maintenance costs and aircraft down-time, and recommends actions to identify and control the causes.

FOREWORD

This Final Report was prepared for the Department of Defense, OASD (MRA&L) by Information Spectrum, Inc., Warminster, PA, under Contract No. MDA903-78-C-0176 (Contract Period 27 December 1977 through 15 March 1979.)

This report describes work covered during Phase II (17 April 1978 to 15 March 1979) and consists of four volumes:

Volume I - Overview

Volume II - Technical Report
including the Phase I Feasibility Study
(27 December 1977 to 7 April 1978) as
as Appendix

Volume III - Detailed Supporting Data

Volume IV - Software Manual

The principal contributor to this volume was Mr. Philip S. Grenetz, Senior Systems Analyst; assisted by Mr. Raymond R. Mellott, Systems Analyst; under the direction of Mr. Milton Clyman, Executive Vice President.

The contractors report number for this volume is W-7958-02 (C).

1.0 INTRODUCTION

This Volume of the Final Report on the Maintenance Improvement Study presents the detailed supporting information and data, in tabular form, for data summarized on Tables 9, 10, 11, and 12 in Volume II, for the F-14A (WUC 74), S-3A (WUC 73), S-3A (WUC 13), and A-7E (WUC 73) respectively. Table 1 of this Volume summarizes in matrix format the organization of the remaining tables in this Volume.

For each Type/Model/Series (T/M/S)/Work Unit Code (WUC) analyzed the Input Information tables precede the Output Data tables. The Output Data tables were used to construct the above-mentioned Volume II summary tables.

2.0 DISCUSSION

This section, organized by subject matter, discusses each of the remaining tables contained in this Volume. The subject matter is divided into Input Information and Output Data, all of which resulted in computer-generated tables.

2.1 Input Information

Input Information includes the cost factors (labor and material) used to convert maintenance action quantities to dollars, as well as the physical and functional relationships developed for this analysis. Reference should be made to Section 2.1.12 of Volume II for details of this development process.

2.1.1 Subject Work Unit Codes (Tables 2,20,38 and 56)

These tables present, for the respective T/M/S/two-digit WUCs

TABLE 1. VOLUME III TABLE MATRIX

TABLE DESCRIPTION	VOLUME III TABLE NUMBER			
	F-14A WUC 74	S-3A WUC 73	S-3A WUC 13	A-7E WUC 73

I-Level No Repairs Required	9	27	45	63
Access Actions	10	28	46	64
Cannibalizations	11	29	47	65
Failure-To-Acknowledge	12	30	48	66
Failure-To-Diagnose (No Repairs Required, Access Actions)	13	31	49	67
Failure-To-Correct	14	32	50	68
Defects Induced Internally By Corrective Action	15	33	51	69
Reported Induced Defects	16	34	52	N/A
Defects Induced By Corrective Action On Physically Related Items	17	35	53	N/A
Defects Induced Internally By Non-Corrective Action	18	36	54	N/A
Defects Induced By Non-Corrective Action On Physically Related Items	19	37	55	N/A

analyzed, the individual five-digit WUCs included. These WUCs are referred to as the Subject Work Unit Codes, to each of which a Subject Work Unit Code Index Number was assigned. These Subject Work Unit Code Index Numbers were used to facilitate coding the software for the Physical and Functional Relationship Matrices.

2.1.2 Physical Work Unit Codes (Tables 3, 21, 39 and 57)

The WUCs contained in these tables are those which were identified as WUCs whose maintenance can result in either of the following conditions: (1) the need to remove and reinstall a Subject WUC for access purposes, or (2) an induced defect to a Subject WUC. Each of the Physical WUCs was also assigned an Index Number for coding purposes. The analysis which resulted in the identification of these Physical WUCs is described in Volume II, Section 2.1.12.

2.1.3 Physical Relationship Matrix (Tables 4, 22, 40 and 58)

These tables provide, for the respective T/M/S/two-digit Subject WUCs, the means to determine which WUCs are related physically to each other. These tables, used in conjunction with the applicable WUC Index Numbers described under paragraphs 2.1.1 and 2.1.2, allow for this determination. As an example, the following steps would be taken to determine for the F-14A which other WUCs are physically impacted by WUC 74A49.

a. Locate WUC 74A49 in Table 3 and find the Index Number 73 assigned to this WUC.

b. Proceed to Table 4 and find under the heading "Causative

WUC Index" the number 73; then read across, under the heading "Subject WUC Indices" the numbers 37, 38, 40, 41, 42, 68.

c. These Subject WUC Index Numbers would then be located in Table 2 and found to be 74A4B, 74A4E, 74A42, 74A45, 74A48, and 74A93, respectively.

Therefore, these WUCs were determined to be those which could be physically impacted by WUC 74A49. As can be seen in Table 3, WUCs other than those contained in WUC 74 were considered as possibly having impact on the Subject WUCs. Likewise, for the other T/M/S/two-digit Subject WUCs the tables would be read in the following sequence.

S-3A (WUC 73): Tables 21-22-20
S-3A (WUC 13): Tables 39-40-38
A-7E (WUC 73): Tables 57-58-56

2.1.4 Functional Work Unit Codes (Tables 5, 23, 41 and 59)

The WUCs contained in these tables (Functional WUCs) for the respective T/M/S/Subject WUCs were those identified as WUCs whose fault location could result in false removals of Subject WUCs at the O Level.

2.1.5 Functional Relationship Matrix (Tables 6, 24, 42 and 60)

These tables are constructed similarly to those described under paragraph 2.1.3. In this case, they provide the means to determine which WUCs are related functionally to each other. When used in conjunction with the tables described under paragraphs 2.1.1 and 2.1.4, they allow for this determination. The sequence to be followed in this case (for the F-14A) would be,

first, to locate a WUC in Table 5, and find its Index Number. Then, second, proceed to Table 6 and find this Index Number under the heading "Causative WUC Index". Third, reading horizontally across, determine the applicable Subject WUC Indices. The WUCs associated with these Index Numbers would then be located in Table 2.

The table sequence for the other T/M/S/Subject WUCs would be as follows:

S-3A (WUC 73): Tables 23-24-20
S-3A (WUC 13): Tables 41-42-38
A-7E (WUC 73): Tables 59-60-56

2.1.6 Average Maintenance Costs (Tables 7, 25, 43 and 61)

These tables present the average maintenance cost factors used to convert maintenance action information to the dollar values appearing in the Output Data tables. Average costs are shown for the respective T/M/S/two-digit Subject WUCs at the four-digit WUC level. All values shown with the exception of Depot Transportation were derived from the VAMOSC-MS (FY 77) reports for the T/M/S/Subject WUCs analyzed. The Depot Transportation cost factor was derived as described in paragraph 2.1.5 of Volume II.

This completes the discussion in the area of input data.

2.2 Output Data

The following paragraphs describe the remaining tables of this Volume, which are the computer-generated output data used in the analysis. These tables result from the execution of logic described in Volume II, in conjunction with the AMPAS individual maintenance action data, the Physical and Functional Relationship Matrices, and the Average Maintenance Costs data. The tables discussed

below provide detailed information at the five-digit WUC level for each of the two-digit Subject WUCs summarized in Tables 9, 10, 11 and 12 of Volume II.

Each of the following tables presents information for every five-digit Subject WUC. At the end of each table a total entry summarizes that particular maintenance action category.

2.2.1 O-Level No Repairs Required (Tables 8, 26, 44 and 62)

These tables indicate, for the respective T/M/S/Subject WUCs, the number of occurrences of Action Taken Code (ATC) A (under "Action Qty"), the associated Maintenance Man-Hours (under "MMH-Time"), and the resultant Labor Cost ($). Additionally, the related Not Operationally Ready Maintenance-Unscheduled (NORMU), Not Operationally Ready-Supply (NORS), and Awaiting Maintenance (AWM) times are shown.

2.2.2 I-Level No Repairs Required (Tables 9, 27, 45 and 63)

These tables provide, for I-Level occurrences of ATC A, data similar to those described in paragraph 2.2.1 for O-Level No Repairs Required.

2.2.3 Access Actions (Tables 10, 28, 46 and 64)

These tables present, for the respective T/M/S/Subject WUCs, data relative to potentially avoidable access actions, i.e., those performed on the respective Subject WUC to gain access to a Physical WUC which was later proven at the I Level to have no defect. In particular, the Action Quantity, associated MMH, and resultant Labor Cost are shown.

2.2.4 Cannibalizations (Tables 11, 29, 47 and 65)

For each T/M/S/Subject WUC, these tables indicate the potentially avoidable cannibalization actions required to replace an equipment whose removal ultimately resulted in an I-Level No Repairs Required maintenance action. The Action Quantity, associated MMH, and resultant Labor Cost are shown.

2.2.5 Failure-To-Acknowledge (Tables 12, 30, 48 and 66)

The Failure-To-Acknowledge tables indicate, for each T/M/S/ Subject WUC, occurrences of Potentially Avoidable Maintenance for which a sequence of one or more No Repairs Required maintenance actions on each five-digit Subject WUC at the O Level is terminated by an O-Level corrective action. Specific criteria for this determination are discussed in paragraph 2.1.3 of Volume II. These tables contain Action Quantity, associated MMH, and resultant Labor Cost. Related NORMU, NORS, and AWM times are also shown. It should be noted that the values shown in these tables have been accounted for in the tables described under paragraph 2.2.1, and are provided separately to quantify this cause of No Repairs Required actions.

2.2.6 Failure-To-Diagnose, (No Repairs Required, Access Actions) (Tables 13, 31, 49 and 67)

The information presented in these tables, for the respective T/M/S/Subject WUCs, reflects the impact of inefficient O-Level troubleshooting. This involves multiple removals of functionally related equipments, some of which are not faulty, and transfers

to a higher maintenance level in order to effect repair. Specific criteria applied for this analysis can be found in paragraph 2.1.4 of Volume II. These tables indicate that associated potentially avoidable access actions were also sought, but none was found to occur. For the No Repairs Required, the Action Quantity, associated MMH, and resultant Labor Cost are indicated. The values shown in these tables have been accounted for in the tables described previously under paragraph 2.2.2, and are provided separately to quantify this cause of No Repairs Required actions.

2.2.7 Failure-To-Correct (Tables 14, 32, 50 and 68)

The information presented in these tables, for the respective T/M/S/Subject WUCs, reflects the impact of repeated (one or more) unsuccessful attempts to correct a defect. Specific criteria utilized for this analysis can be found in paragraph 2.1.5 of Volume II. These tables provide, for the unsuccessful corrective actions, the Action Quantity, associated MMH, the resultant Labor Cost, and the associated Material Cost. These costs are incurred at both O and I Levels. In addition, the NORMU Time, NORS Time, and AWM Time associated with these actions are indicated.

2.2.8 Defects Induced Internally By Corrective Action (Tables 15, 33, 51 and 69)

The information presented in these tables, for the respective T/M/S/Subject WUCs, reflects the impact of defects induced on a piece of equipment during corrective maintenance of the same equipment. Specific criteria utilized for this analysis can be found

in paragraph 2.1.6 of Volume II. These tables provide, for the corrective actions resulting from such induced defects, Action Quantity, and maintenance costs for O and I Level and depot. Specifically, O&I MMH, the resultant Labor Cost, O&I Material Cost, and I-Level Discard Cost are provided. In addition, Depot Labor Cost, Depot Material Cost, and Depot Transportation Cost are indicated. The method used to calculate Depot Transportation Cost is discussed in paragraph 2.1.5 of Volume II. Further, the NORMU Time, NORS Time, and AWM Time associated with these actions are provided.

2.2.9 Reported Induced Defects (Tables 16, 34 and 52)

These tables account for maintenance actions which have reported any of the following Malfunction Codes:

086 - Improper Handling
246 - Improper or Faulty Maintenance
877 - Transportation Damage

These tables indicate that the direct reporting of induced defects is very small. These tables provide, for the corrective actions resulting from such induced defects, Action Quantity, and maintenance costs for O and I Level and depot. Specifically, O&I MMH, the resultant Labor Cost, O&I Material Cost, and I-Level Discard Cost are provided. In addition, Depot Labor Cost, Depot Material Cost, and Depot Transportation Cost are indicated. Further, the NORMU Time, NORS Time, and AWM Time associated with these actions are provided.

It should be noted that the program to generate this and the remaining tables to be described was not run for the A-7E (WUC 73).

2.2.10 Defects Induced By Corrective Action On Physically Related Items (Tables 17, 35 and 53)

The information presented in these tables, for the respective T/M/S/Subject WUCs, reflects the impact of defects induced on a piece of equipment during corrective maintenance on a physically related piece of equipment. Specific criteria utilized for this analysis can be found in paragraph 2.1.7 of Volume II. These tables provide, for the corrective actions resulting from such induced defects, Action Quantity, and maintenance costs for O and I Level and depot. Specifically, O&I MMH, the resultant Labor Cost, O&I Material Cost, and I-Level Discard Cost are provided. In addition, Depot Labor Cost, Depot Material Cost, and Depot Transportation Cost are indicated. Further, the NORMU Time, NORS Time, and AWM Time associated with these actions are provided.

2.2.11 Defects Induced Internally By Non-Corrective Action (Tables 18, 36 and 54)

The information presented in these tables, for the respective T/M/S/Subject WUCs, reflects the impact of defects induced on a piece of equipment during non-corrective maintenance of the same equipment. Specific criteria utilized for this analysis can be found in paragraph 2.1.8 of Volume II. These tables provide, for the corrective actions resulting from such induced defects, Action Quantity, and maintenance costs for O and I Level and depot. Specifically, O&I MMH, the resultant Labor Cost, O&I Material Cost, and I-Level Discard Cost are provided. In addition, Depot Labor Cost, Depot Material Cost, and Depot Transportation Cost

are indicated. Further, the NORMU Time, NORS Time, and AWM Time associated with these actions are provided.

2.2.12 Defects Induced By Non-Corrective Action On Physically Related Items (Tables 19, 37 and 55)

The information presented in these tables, for the respective T/M/S/Subject WUCs, reflects the impact of defects induced on a piece of equipment during non-corrective maintenance on a physically related piece of equipment. Specific criteria utilized for this analysis can be found in paragraph 2.1.9 of Volume II. These tables provide, for the corrective actions resulting from such induced defects, Action Quantity, and maintenance costs for O and I Level and depot. Specifically, O&I MMH, the resultant Labor Cost, O&I Material Cost, and I-Level Discard Cost are provided. In addition, Depot Labor Cost, Depot Material Cost, and Depot Transportation Cost are indicated. Further, the NORMU Time, NORS Time, and AWM Time associated with these actions are provided.

The remaining pages of this Volume contain the tables described in preceding paragraphs.
