NOTICE

When Government drawings, specifications or other data are used for any purpose other than in connection with a definitely related Government procurement operation, the United States Government thereby incurs no responsibility nor any obligation whatsoever; and the fact that the government may have formulated, furnished, or in any way supplied the said drawings, specifications, or other data, is not to be regarded by implication or otherwise as in any manner licensing the holder or any other person or corporation, or conveying any rights or permission to manufacture, use, or sell any patented invention that may in any way be related thereto.

This report has been reviewed by the Information Office (OI) and is releasable to the National Technical Information Service (NTIS). At NTIS, it will be available to the general public, including foreign nations.

This technical report has been reviewed and is approved for publication.

DONALD R. HOLLOWAY, Capt, USAF
Project Engineer

LARRY G. KELLY, Actg Chief
Structural Integrity Branch

FOR THE COMMANDER

RALPH L. KUSTER, JR., Col, USAF
Chief, Structures & Dynamics Division

"If your address has changed, if you wish to be removed from our mailing list, or if the addressee is no longer employed by your organization please notify AFFDL/FBE, W-PAFB, OH 45433 to help us maintain a current mailing list."

Copies of this report should not be returned unless return is required by security considerations, contractual obligations, or notice on a specific document.

Block No. 20 (continued)

A series of experiments and analyses have been carried out on the cyclic crack growth behavior of center-cracked cruciform specimens under various biaxial loading conditions. The results may be summarized as follows:

1. Crack will grow straight in a biaxial stress field when the stress component parallel to the crack is equal to or smaller than the stress component normal to the crack.
2. Elastic K factors are obtainable for both straight and curved cracks and are adequate for correlating the biaxial crack growth rate data.
3. At a given stress intensity level, the constant amplitude crack growth rates are the same in all the biaxial loading conditions.
4. In out-of-phase loading conditions, the crack growth rate and crack growth directions are the same as those in the in-phase loading condition.
5. Crack tip plastic zone size variations with biaxial ratio appeared to have no effect on constant amplitude crack growth rate.
6. As for the variable amplitude tests, it is very evident that cracks grow faster at positive biaxial stress states but slower at negative biaxial loading conditions.

FOREWORD

This report describes results of work performed by the Northrop Corporation, Aircraft Group, Hawthorne, California, under Air Force Contract F33615-76-C-3121, "Effect of Multiaxial Loading on Crack Growth," Project 486U, "Advanced Metallic Structures - Advanced Development Program," Task 486U02, work unit 486U0224. The effort was sponsored by the Air Force Flight Dynamics Laboratory, Air Force Wright Aeronautical Laboratories, Air Force Systems Command, Wright-Patterson Air Force Base, Ohio. Captains John E. Allison and Donald R. Holloway of the AFFDL/FBE were the Air Force Project Engineers.

The program was performed by the Structures Research Department of Northrop Corporation, Aircraft Group, under the overall supervision of L. L. Jeans, Manager, Structural Life Assurance Research. Mr. A. F. Liu was the Northrop Program Manager and Principal Investigator. He was assisted by D. F. Dittmer on experimental tasks; J. R. Yamane, Dr. J. P. Buban, and Dr. H. P. Kan on analytical tasks. Dr. M. M. Ratwani provided guidance on cracked finite element analysis.

This report covers work accomplished during the period September 1976 through September 1978. This report consists of three volumes.

LIST OF SYMBOLS

a	One half of the total crack length, or the distance between a point on the X-axis to the center of the cruciform specimen, inches
a_{eff}	Effective crack length per equation 10 of ASTM E561, inches
B	Biaxial ratio, σ_x/σ_y , or block of a loads spectrum, or thickness of the specimen, inch
DA/DB	Crack growth rate, inch/block
DA/DN	Crack growth rate, inch/cycle
E	Young's modulus, ksi
f	Cyclic frequency, Hz
K_{eff}	Effective stress intensity, a function of a_{eff} , ksi $\sqrt{\text{inch}}$
K_{max}	Stress intensity corresponding to σ_{max} , ksi $\sqrt{\text{inch}}$
P_x	Load applied to X-axis of a cruciform specimen, always parallel to the crack, kip
P_y	Load applied to Y-axis of a cruciform specimen, always perpendicular to the crack, kip
R	Cyclic stress ratio, $\sigma_{y, min}/\sigma_{y max}$
W	Width of a center cracked specimen, inches
σ_x	Stress parallel to the crack, tension or compression, ksi
σ_y	Stress perpendicular to the crack, always in tension, ksi
ωt	Phase angle for cyclic loading, degrees

SECTION I

COMPILATION OF EXPERIMENTAL DATA

This report is the second volume of the subject technical report. All the experimental data generated in the subject research program are compiled herein and presented in the following order.

1. Stress distributions in two cruciforms specimens (without crack), pages 2 to 42.
2. Stress distributions in two cruciform specimens (with crack), pages 43 and 44.
3. Tabulation of the testing conditions for 118 specimens, pages 45 to 52.
4. The crack length versus cycles record, da/dN versus K_{max} curve, and the crack growth profile for 113 specimens, pages 53 to 570.
5. Load versus crack length records and the crack growth resistance curve for 5 specimens, pages 571 to 583.
6. Tensile test records for 36 specimens, pages 584 to 623.

The specimen materials were either 7075-T7351 or 2024-T351 aluminum alloys. In Figures 1 through 53 the data points were determined by strain gauge (rosette) measurements and the line drawn through the data points were actually, independently, determined by finite elements (NASTRAN) analysis.

- 1 Interferometry photographs
- 2 CCT specimen
- 3 20Hz for $da/dN < 10^{-6}$ inch/cycle
- 4 Precracking data for the fracture specimen
- 5 TL direction
- 6 Tested in the biaxial loading machine
- 7 Tested in distilled water

Sustained load test

Angle crack test, crack line oriented at 45° with respect to loading axes and sheet rolling direction.

Fracture test (monotonically loaded to failure), tested in uniaxial loading machine.

CCT specimen

TL direction

The following notes are applicable to pages 54 through 583.

* FLAW TYPE *

- 0 — NO FLAW
- 1 — EDM SLOT (.100 X .020) IN TRANSVERSE DIRECTION
- 2 — EDM SLOT (.100 X .020) IN LONGITUDINAL DIRECTION
- 3 — 45 DEGREE ANGLE EDM SLOT (.100 X .020)
- 4 — 0.250 HOLE WITH .010 EDM NICK ON EACH SIDE
- 5 — 0.750 HOLE WITH .010 EDM NICK ON EACH SIDE
- 6 — 0.750 HOLE, NO EDM NICK
