18. SUPPLEMENTARY NOTES

Contains an inventory listing of 1804 Army Field Commands retired organizational records held by the National Personnel Records Center including volume and chronological span.

19. KEY WORDS (Continue on reverse side if necessary and identify by block number) US Army Field Commands; WWII Retired US Army Records; Armies, Forces, Groups, Divisions, Regiments, Brigades; Battalions, Companies, Platoons, Squads, Units, Detachments, Offices, Posts; Forts, Garrisons, Combat Arms; Ships, Offices, Armor, Artillery, Cavalry, Infantry, Engineers, Arsenals, Armories, Laboratories, Proving Grounds, Ranges; Ordnance, Intelligence, Air Defense, Commands, Centers, Activities, Agencies, Con't

20. ABSTRACT (Continue on reverse side if necessary and identify by block number)

The Master Survey of US Army retired records held by GSA Federal Records Centers commenced in Early 1976. It consisted of four phases designed to restore intellectual control over some 553,000 cubic feet of US Army retired records. Phase II concerned itself with the retired organizational records held by the National Personnel Records Center, St Louis. This collection stood at approximately 112,000 linear feet when the survey commenced. Some 42,000 linear feet were identified as personnel supportive materials, i.e., Special Orders, Unit Orders, Personnel Orders, Morning Reports, Etc. These were dropped permanently from the

Item No. 19 Continued: Boards, Schools, Institutes, Terminals, Depots, Ports, Installations, Districts, Joint Commands, Ordnance, Research and Development, Chemical, Biological, Nuclear, Radiological, Corps, Signal, Communications, Transportation, Electronics, Missiles, Management, Materiel, Surveillance, Pictorial, Quartermaster, Operations, Radio, Aviation, Broadcasting, Special Warfare, Publications, Administration, Support, Medical, Surgical, Convalescence, Hospital, Dental, Dispensaries, Veterinary, Procurement, Reconnaissance, Prisoners of War, Military Police, Replacements, Area Commands, Finance, Stockades, Plants, Works.

Item No. 20 Continued: Army inventory to be disposed of in accordance with approved schedules by the General Services Administration. An additional 27,000 linear feet were identified as eligible for immediate destruction under approved disposal schedules. The remaining 43,000 linear feet were offered to the National Archives for appraisal and possible accessioning into the National Archives as permanent, historically valuable military records. This offer was completed in May, 1978, and consisted of the identified records of 1804 US Army Field Commands, organizations, activities, etc. Approximately 5400 linear feet of this collection were security classified and generally eligible for declassification review under provisions of Executive Order 12065. This collection generally covers US Army field operations from 1952 through 1964.

This report consists of six parts, i.e., a summary statement followed by five trip reports concluding with an inventory of the collection as it was offered to the National Archives. The summary statement contains generalizations on the Master Survey. The individual trip reports describe the ongoing process of bringing the collection under intellectual control.

FOREWORD

The following study constitutes a report of actions taken pursuant to completion of Phase II, Master Survey of Retired US Army Records in Federal Records Centers. Phase II is concerned with US Army organizational and field command records retired to the National Personnel Records Center in St Louis, Missouri.

Phase II was the reestablishment of intellectual control over all US Army organizational records (as opposed to individual 201 files, OPF's and personnel-type supportive materials, e.g., Morning reports, Personnel Orders, etc) held by the National Personnel Records Center in St Louis. During the transition period of Army to GSA retired records operations in Alexandria, the building of WNRC at Suitland, and discontinuance of the Kansas City national operations, all three of the military departments retired their organizational records to St Louis. This practice was in vogue from about 1955 to 1967. Survey of the St Louis Collection in 1976 resulted in the disposition of some 70,000 linear feet of non-permanent and personnel-related materials. The remaining 43,000 linear feet were identified as potentially permanent and historically valuable and were offered to the National Archives for formal appraisal and accessioning. This offer was completed 26 May 1978 and consisted of the identified records of 1804 US Army field commands, organizations and activities. Approximately 5400 linear feet of this collection was security classified. The collection generally covers US Army field operations from 1952 thru 1964.

This report has been prepared in six parts, i.e., a summary statement followed by five trip reports concluding with an inventory of the collection as it was offered to the National Archives. The summary statement contains generalizations on the Master Survey. The individual trip reports describe the collection and conditions encountered in returning it to intellectual control.

MEMORANDUM FOR THE DIRECTOR

SUBJECT: Master Survey of US Army Records Held in Federal Records Centers: Phase II, The National Personnel Records Center, St Louis, MO

1. BACKGROUND:

a. The General Services Administration (NARS) operates 15 Federal Records Centers within the United States. Thirteen of these Centers are regional records warehouses; two are national centers located in St Louis, Missouri (National Personnel Records Center), and Suitland, Maryland (Washington National Records Center. The St Louis Center, as its designation implies, is concerned primarily with personnel and personnel related records; Suitland provides custodial services for organizational and institutional records.

b. Through a series of organizational and functional changes, the National Personnel Records Center came into possession of approximately 112,000 linear feet of military organizational records. This came about largely as the result of closing out the national military organizational records in the Kansas City Federal Records Center and the division of its military organizational holdings among the National Archives; the Army Departmental Records Branch; the Alexandria, Virginia, Federal Records Center at King and Union Streets, which eventually became the Washington National Records Center in a new building at Suitland, Maryland. Movement of some of the Kansas City assets to St Louis appears to have been predicated on little more than convenience of transportation and availability of extant storage space. This took place circa 1952-54 and through the 8-10 years following most US Army organizations continued to retire their records to St Louis.

c. Eventually, this produced an inventory of some 112,000 linear feet of Army organizational records in St Louis including some 5400 linear feet of classified materials. The chronological span of these records runs roughly from 1945 to 1964 with some scattered earlier retirements. Virtually the bulk of the 8th Army records (Korea) and various continental Army commands for the McCarthy Era are included in this collection. So long as storage posed no problems, the General Services Administration raised no objections to providing custodial services for these records. However, the disastrous fire in the National Personnel Records Center in 1973 effectively reduced its storage capacity by about 20%, i.e., one full floor. Pressures

were then applied for accelerated disposition, i.e., transfer to the National Archives, destruction, donation, etc., in order to free space for constantly arriving retired personnel jackets and personnel related records.

d. While this situation was developing in St Louis, the Army built up an inventory of approximately 200,740 linear feet of records in the Washington National Records Center. Some 36,000 linear feet of this inventory is classified. Within the total Washington National Records Inventory exists the Viet Nam War Collection retired by USARV and MACV military commands and running some 40,000 linear feet. Of the total Washington National Records Center inventory, some 80,000 linear feet are more than 10-12 years old.

e. The volume of Army retired records in the 13 regional federal records centers is not known at this time. Evidence at hand, however, indicates that this is considerable; especially, in regional Corps of Engineer and transportation retirements. A study of existing inventory control documentation and personal inspection of some of the regional federal records centers must be concluded before a realistic appraisal of this aspect of the problem can be formulated.

2. CURRENT SITUATION:

a. In recent years, the General Services Administration has veered sharply away from the operational archives concept under which the Army originally agreed to place its records inventory in the federal records center custody. Basically this involved a steadily eroding research, service and disposition support furnished by the General Services Administration. This became glaringly apparent on conclusion of the Viet Nam War in the normal service and research demand developing in those records with inactivation of the creating entities.

b. The General Services Administration had the basic administrative tools necessary to perform this service, i.e., the transmittal documents which provide the indices to the record collection, but had not maintained a trained staff to do so. By physically re-creating the original transmittals which retired the Viet Nam War Collection to the Washington National Records Center under the direction of a professional Archivist, the Records Management Division re-established 95% effective intellectual control over a previously disarrayed body of records.

c. In essence, this paper proposes means with which to re-establish acceptable intellectual control over the total Army inventory of retired records. Physical control or custory will remain with the General Services Administration. Concurrent with attainment of the immediate objective, a continuing program will be established to maintain this control over future additions to the Army's retired records inventory indefinitely.

3. FORMULATION OF OPERATIONAL CONCEPTS: In coming to grips with the existing situation, the following operational concepts are suggested with respect to management and control of the Army's retired records inventory:

a. All records currently categorized as permanent under The Army Functional File System (TAFFS) should be scheduled for automatic offer to the National Archives on reaching their 10th calendar year past cut-off date.

b. The one-time master survey of Army records in Federal Records Custody now in progress should be expanded to apply the above standard to all records now 10 years old or older.

c. An operational archives function be created in the Records Management Division to insure continuing intellectual control, administration, service management, and systematic disposition of the Army's retired records inventory.

4. RECOMMENDATIONS FOR IMMEDIATE IMPLEMENTATION AND ACTION:

a. That the 12 regional federal records centers be surveyed for Army assets on conclusion of the surveys of the National Personnel Records Center and the Washington National Records Center. On-site inspections should be made where inventory control documents are inconclusive or indicate need.

b. That a Memorandum of Understanding be negotiated with the General Services Administration to provide for personnel, administrative and facilities support in the timely conclusion of the master survey and disposition of Army retired records in the National Personnel and 12 regional federal records centers. No GSA support is needed to complete the survey of Washington National Records Center holdings now in progress.

c. That the US Army Chief of Military History be consulted on the destruction of any Army retired records rejected by the National Archives for permanent accessioning and afforded the opportunity of selective screening and donation as appropriate.

d. That first priority be established for the Army military organizational holdings in the National Personnel Records Center to be closed out completely by offer to the National Archives for permanent accessioning, destruction on-site, and/or transfer to other Army depository or holding areas, as appropriate.

e. That Army related holdings, 10 years of age or older, in the Washington National Records Center be given second priority for close-out, removal from the Army inventory, or disposition scheduling.

f. That Army retired holdings, 10 years of age or older in the regional federal centers be given third priority for close-out, removal from the Army inventory, or disposition scheduling.

g. That a continuing oversight of the total Army retired records inventory be maintained by the Records Management Division through the establishment of a master file of all transmittals which place retired Army records in Federal Records Centers.

h. That all Army retired records in Federal Records Centers be scheduled for automatic offer to the National Archives, donation, destruction, or other disposition as appropriate as expeditiously as possible.

MEMORANDUM FOR: MR. POMRENZE
MR. FRAKER
MR. BOARDMAN
MR. JONES

SUBJECT: Trip Report: TDY 4-10 April, National Personnel Records Center, St. Louis

1. The Programs and Declassification Branch Chiefs are being furnished copies of this report due to the impact that several of the findings to be discussed below will have on them.

2. PERSONNEL CONTACTED: Prior notification of my visit had been forwarded to St. Louis after coordination with the Office of the Assistant Archivist (of the United States) for Federal Records Centers. Plans for the visit, objectives, and working procedures had been cleared telephonically with Mr. Thomas Wadlow. This resulted in outstanding preparation for and cooperation during my week-long visit by the people in St. Louis. The following persons were contacted in connection with my visit to the National Personnel Records Center:

Mr. Warren B. Griffin	Center Director
Mr. J. D. Kilgore	Assistant Center Director
Mr. George McManus	Chief, Military Organizational Records Branch
Mr. Jerry Wallace	Archivist (on special assignment to NPRC from Washington)
Mr. Arnold Essenpreis	Archives Specialist, Military Organizational Records
Dr. James O'Neil	Assistant Archivist of the US (who was also on a brief TDY visit to St. Louis)

VANGUARD OF FREEDOM BICENTENNIAL 1775-1975 UNITED STATES ARMY
AMERICAN REVOLUTION BICENTENNIAL 1776-1976

SUBJECT: Trip Report: TDY 4-10 April, National Personnel Records Center, St. Louis

3. VOLUME AND ANALYSIS OF ARMY MILITARY ORGANIZATIONAL RECORDS HELD BY NPRC: The National Personnel Records Center presently holds approximately 112,000 linear feet of US Army military organizational records. Of this total figure, approximately 35,000 linear feet are of no immediate concern to the Army. These are personnel related materials, i.e., special orders, clinical records, personnel-type orders, etc., and will be administered and maintained by NPRC as essential supportive material to the official personnel files it holds. Of the remaining 77,000 linear, approximately 5500 linear feet are classified. A large percentage of this material is TOP SECRET.

4. ORIGIN OF THE MILITARY ORGANIZATIONAL RECORDS HELD BY NPRC: Totally, NPRC holds some 400,000 linear feet of military organizational records representing all of the military departments. The Air Force has the largest stake in this collection with the balance about equally divided between the Army and Navy. Generally speaking, this material ranges in date from 1952 to 1964 with the normally expected overlap on each end of this range. Some Army holdings were dated as early as 1932, others as late as 1967; however, 90-95 percent appears to fall in the 1952-64 range during which years the material was either retired or transferred to St. Louis. This matches with fair consistency the condition of the times. Kansas City was in the process of transforming to a Regional Federal Records Center and was transferring its national holdings to St. Louis (some, of course, were directed to Alexandria); and, the Washington National Records Center was still in construction - opening for business in 1967.

5. MAINTENANCE AND MANAGEMENT OF THE MILITARY ORGANIZATIONAL RECORDS: Control documentation for these records was transferred with them from Kansas City to St. Louis. As was the case of the Army's phasing out of the Department Records Branch and entry into the FRC system, Kansas City personnel knowledgeable in these records were transferred along with them. Mr. Arnold Essenpreis is the last remaining member of the original cadre which came to St. Louis with the Kansas City records. His knowledge of the records and expertise in them is phenomenal, but it is entirely a matter of memory. None is written down as a working guide for younger Archives Technicians to follow. When he retires (now with 30+ years federal service), a gap will be created mirroring the same situation which now exists in the Washington National Records Center. The control documentation for the Army portion of these records takes up 19 standard 4-5 drawer file cabinets. These files, referred to by the search crews at NPRC as "THE INDEX," through the years have deteriorated through careless handling and mis-filing, but are still fairly effective. Mr. Essenpreis spends a goodly part of his working day, however, in a losing attempt to preserve the integrity of these files.

6. SAMPLING TECHNIQUE EMPLOYED: Using THE INDEX, which contains separate sections for the classified and unclassified holdings, I spent the entire week in an intensive study of the holdings of 317 Army records-creating-entities. The Center Director issued me special credentials which allowed me to work longer than normal Center operating hours. This also allowed me access to THE INDEX as early as 0700 hours plus one hour later than normal closing hours including Saturday. A special desk was set up for me directly in the 3rd floor stacks; and, Mr. Essenpreis was assigned to me for constant attendance for the full week -- including overtime hours (on GSA's tab!). Working closely, we were able to complete a fairly conclusive statistical sampling of the records. This included classified as well as unclassified at the following levels: US Armies - CONUS and Overseas, US Forces, Centers, Agencies, Divisions, and Regiments.

7. GENERAL DISCUSSION OF THE CONTENT OF THE ARMY HOLDINGS: It appears that the largest in volume and potentially most troublesome items in the classified holdings are emergency war plans and organizational planning materials. Most of this was retired as TOP SECRET and is still in its original packaging. It has been referred to little if any during the intervening years. Considering the climate of the times and its origin in the MacCarthy Era, I find nothing surprising about this. Much of this material -- even after declassification review -- will probably remain validly TOP SECRET.

Review of all of this classified material will pose special problems from a technical as well as a security viewpoint. Originally, these holdings were stored in the 6th floor vault of the National Personnel Records Center. This is the floor -- except for the vault -- which was utterly destroyed by the disastrous fire of 1973. The intense heat of the fire turned the vault into a huge oven and roasted its total content to the consistency of slightly burned toast. Practically every paper in the vault came out with charred, blacked edges and almost complete loss of flexibility. Its brittle and damaged condition will make working with it a very disagreeable, dirty, tedious, and time-consuming experience. I see no immediate solution here as this material is clearly of permanent historical value.

The regimental level appears to be the dividing line between the historically valuable and disposable material. In fact, I found very little at the regimental level, but still sufficient in volume to warrant special attention. Except for a limited number of separate (as opposed to organic) battalions, I found nothing at the battalion and company level which warranted any further en masse retention. There is a considerable concentration of unit historical material (presumed to be permanent organizational historical files) scattered throughout this collection which increases in concentration in the higher echelons of command and organization.

DAAG-AMR-S 19 Apr 76

SUBJECT: Trip Report: TDY 4-10 April, National Personnel Reeords Center, St. Louis

The Division, Army, and US Forces level of organization appear to follow normal patterns of records retirements and are consistently arranged in staff formats. Of these, operations (G-3) seems to be the heaviest concentration throughout. The CONUS based organizations, especially the Armies, show a disturbingly high concentration of "Domestic Intelligence" and "Industrial Security" files. I feel that these materials should be examined immediately for possible impact on certain Army programs long since presumed to have been completed. The overseas US Forces and Armies (and Divisions to a lesser degree) show high concentrations in geographically oriented activity and little it any of the same intelligence and security materials detected in the CONUS retirements. Both the 7th and 8th Armies retired what appears to be splendid collections of materials dealing with geographical oriented matters, i.e., Labor Service/Supervision Units in Europe and Armed Forces Activities in Korea (AFAK) which appears to document the programs which re-built South Korea after the 1950-52 invasions by the North.

8. CONCLUSIONS AND RECOMMENDATIONS: The National Personnel Records Center lost at least 20% of its effective storage capacity when the 6th floor was destroyed in the 1973 fire. It can no longer afford the luxury of the military organizational records which now take up most of the 3rd floor (including the classified materials which take up virtually all of the 3rd floor vault). NPRC currently is receiving personnel records jackets in a much greater volume than its disposition schedules match. Something has to go and the Washington office has determined this to be the military organizational records. Efforts are currently underway to accelerate disposition in all of NPRC's holdings, especially the military organizational records. To this end, Tom Wadlow has placed a member of his Washington Office staff on a year-long detail assignment at NPRC (Jerry Wallace). I don't agree with some of the procedures Mr. Wallace has initiated to accelerate disposition. One of these involves the use of conversion tables to re-define permanent and disposable records from older to newer authorities.

As an example of this, large blocks of Military Intelligence Decimal and Regional files retired by the various Armies as permanent records in the late 1940's, early and mid-1950's are being re-scheduled for immediate destruction. This involves a tortuous conversion of par 6, par 7 and par 61b, AR 345-274 (?), to TAFFS 508-05 (AR 345-210) to TAFFS 501-02 and TAFFS 501-01 (AR 340-18-5) with the net result of immediate disposition. I requested Mr. Wallace, informally, to proceed no further along this line until we had taken a closer look at it.

Another troublesome area appears to exist in organizational publications, i.e., general orders, special orders, personnel actions memoranda, operations

orders, etc. During the years that organizational records were being properly retired to the National Personnel Records Center, there was no necessity to separate these publications into specifically identified retirement categories. All simply went to St. Louis. Since roughly 1962-64, however, general orders have been separated from other organizational publications going to St. Louis and have been retired to the Washington National Records Center. Thus, we come-up with yet another abnormality to confound future researchers, a 10-12 year period when the general orders files are in St. Louis instead of Washington. My feelings here are that this is a situation which should be documented, but one with which future military historiography will have to deal. I feel that the costs for attempting such a separation at this time would be exhorbitant. Possibly at some future date such a screening might be feasible and desirable, but it is not economically practical at this time. In any event, this should be considered an inherent archival arrangement or provenance problem and left for NARS to come to grips with eventually.

As a result of my on-site study of this situation, I recommend the following:

a. That ALL US Army holdings, classified and unclassified, regimental level and higher, presently located in the National Personnel Records Center be offerred to the National Archives for immediate accessioning.

b. That all battalion and lower level materials (except as noted below) be examined by personnel from the USA Military History Research Collection for selective retention. Those not selected for retention by MHRC should be scheduled for immediate disposition. This recommendation is predicated on the assumption that NARS has no interest in records lower than regimental level.

c. That all retirements from the United Nations Command, and staff sections of the 8th US Army dealing with POW-related matters be identified as a unique collection and offered to NARS for immediate accessioning.

d. That all retirements of the Labor Service/Supervision Units of 7th Army and USAREUR be identified as a unique collection and offerred to NARS for immediate accessioning.

e. That all materials identified for immediate disposition by NPRC personnel be reported to TAG for verification prior to ordering the destruction of any Army records presently located in St. Louis.

f. That declassification review of the classified records be conducted in Washington; movement to be handled possibly by opportune USAF airlift operating between Scott AFB, Illinois, and Bolling or Andrews AFB.

g. That "Domestic Intelligence" and "Industrial Security" files discovered in the Military Organizational Records in St. Louis be examined immediately by subject-matter specialists for appropriate control and/or disposition.

h. That plans be laid at this time for MOBDES or other war plans specialists to review or be on hand for consultation when the EWP and organizational planning files are reviewed for declassification.

3 August 1976

MEMORANDUM FOR: THE DIVISION CHIEF

SUBJECT: Trip Report: TDY, 25-31 July 1976, National Personnel Records Center, St. Louis, MO

1. BACKGROUND AND PURPOSE:

a. As a result of the 4-10 April 1976 examination of military organizational records held in the National Personnel Records Center in St. Louis certain recommendations were made for extraordinary disposition. Among these was the recommendation that all organizational records retired by battalion and lower command level US Army units be screened by the Chief of Military History for selective retention; all records not selectively identified in this collection for retention should be scheduled for immediate destruction or other disposition.

b. In a series of separate meetings held by the Chief, Records Management Division, with representatives of the Assistant Archivist of the United States for Federal Records Centers and the US Army Chief of Military History, a decision was taken to follow this recommendation. For mutual convenience, the week of 25-31 July 1976 was selected as the period for representatives of the US Army, Chief of Military History to examine the collection and make appropriate recommendations. Ms. Hannah M. Zeidlik and Mr. Charles Ellsworth were named to act for the Chief of Military History; Dr. Hatcher would accompany this party in a consultive and escort capacity. As time permitted, Dr. Hatcher would also devote his attention to other aspects of the St. Louis program of the master survey of US Army records held in Federal Records Centers.

2. PERSONNEL CONTACTED:

a. Notification of the visit and its purposes was given telephonically to St. Louis by Mr. Thomas Wadlow on behalf of the Assistant Archivist of the United States for Federal Records Centers. Mr. Wadlow had attended the meeting with the Chief, Records Management Division, on 16 July 1976, and also was coincidentally scheduled to be in St. Louis on other business during the last week of July. The following NARS-GSA personnel were contacted during the weeklong visit:

PRECEDING PAGE BLANK-NOT FILMED

DAAG-AMR-D
SUBJECT: Trip Report: TDY, 25-31 July 1976, National Personnel Records Center, St. Louis, MO

Mr. J. D. Kilgore	Assistant Director, National Personnel Records Center
Mr. Thomas Wadlow	Chief Records Disposition Division, Office of Federal Records Centers
Mr. George McManus	Chief, Military Organizational Records, National Personnel Records Center
Mr. Jerry Wallace	Archivist (NARS-5 Project NPRC), Office of Federal Records Centers
Mr. Arnold Essenpreis	Archives Specialist, Military Organizational Records, National Personnel Records Center

b. As on previous occasions, every possible courtesy and cooperation were extended Department of the Army representatives during the week. Special identification credentials were issued on arrival which allowed free access to all stack areas during normal hours of operation; extended hour (earlier and later than normal duty hours) access was granted to the offices and general areas of the Center for the working convenience of the Department of the Army party. A special working area was arranged and equipped directly adjacent to the record indices in the 3rd Floor Stack of the Center and archives technicians as needed were assigned to located and pull records desired for physical examination. Copying and clerical service as desired was also provided. Hospitality, service and support were, as usual, superb and fully up to the high standards maintained in this area by the National Personnel Records Center.

3. DISCUSSION OF CMH REPRESENTATIVE ACTIVITIES:

a. By travelling on Sunday afternoon, the DA Party was in position and ready for action when the National Personnel Records Center opened for business on Monday morning. After arrival respects were paid to the Center Director and identification credentials were issued, a planning session was held with Mr. Jerry Wallace and his staff. Work plans, procedures to be followed, essential support services, etc., were agreed on at that time. In deference to Mr. Wadlow's travel arrangements and commitments, a second meeting was scheduled for Thursday, 29 July 1976, at which time findings and tentative position recommendations would be discussed.

b. The CMH Representatives decided to employ a twofold sampling technique. One sample would involve a given section of the index wherein a folder-by-folder examination of the Records Transmittal Documents on file would be made at both the battalion and company level. A second sample would be made by a

random selection of records transmittals representing various functional and combat mission assigned units, i.e., artillery, infantry, engineer, cavalry, civil affairs, military intelligence, etc. In both samples, lists of specific documentation would be prepared for physical examination, e.g., organizational, operational, and emergency planning files; command reporting files; publications, unit histories, etc. Monday afternoon and Tuesday were utilized by the CMH representatives in this fashion.

c. On Wednesday morning, archives technicians were provided by Mr. Wallace and Mr. McManus to pull the specific materials which the sampling process had identified. The CMH Representatives then devoted their attention to an exhaustive examination of these materials for the next day and a half. Any further discussion of this aspect of the trip on my part would be one of pure speculation so far as rationale and considerations for reaching final positions are concerned. Amplification and explanation of these techniques is properly a trip reporting matter for the CMH Representatives.

d. The CMH Representatives reported their findings and tentative recommendations at the meeting held in Mr. Wallace's office on Thursday afternoon. This meeting was attended by all personnel identified in the "Personnel Contacted" portion of this trip report as well as certain other members of Mr. Wallace's staff. The meeting was informally chaired by Mr. Wadlow who presented the general position of the Asst. Archivist for Federal Records Centers on the military organizational records presently held by the National Personnel Records Center. Mr. Kilgore then amplified some of the custodial, service, and management problems inherent in handling this collection as it presently stands. Ms. Zeidlik presented the CMH findings and outlined her tentative findings with regard to immediate disposal of the battalion and lower organizational records.

e. Ms. Zeidlik stated that her recommendations to the Chief of Military History would be to relinquish all proprietary interests in this collection with the single exception of the randomly scattered organizational and unit historical files. Ms. Zeidlik maintained that even though these histories reflected widely uneven quality, their value to esprit de corps of recently reactivated organizations and infusion of local color in official historical reporting was considerable and warranted an extraordinary effort to save. Mr. Wadlow and Mr. Kilgore agreed with this position. Mr. Wadlow mentioned that previous discussions with Mr. Daniel Goggins, Chief of the General Archives Division (NARS) had generally arrived at the same opinion. The General Archives Division of NARS located physically in the Washington National Records Center has been tentatively identified as the probable NARS repository for the materials which will eventually be accessioned into the National Archives from the US Army 1964 and earlier records.

f. In conclusion and summation, Mr. Wadlow agreed that the collection of Army organizational materials held by the National Personnel Records Center represented an abnormal situation which called for extraordinary means of resolution. Moreover, that none of the means being discussed for possible implementation at this time should in any way be considered as precedent for future employment. Mr. Wadlow also repeated an earlier statement that GSA-NARS certainly could never require any federal agency to destroy its records regardless of official GSA-NARS disposition appraisals even when those appraisals held the records to be non-permanent in terms of archival value. GSA-NARS could, however, as the result of such an appraisal require the generating agency to remove such records from GSA-NARS storage facilities. Mr. Wadlow then indicated that though not normally done in this order, possibly the time had come for extraordinary action for disposal of this block of records; that this should take the form of a GSA-NARS appraisal of these records independently of any official Army proposals in order to accelerate their disposition. At this point, only completion of the formal GSA-NARS appraisal and concurrence of the Chief of Military History with TAG's proposal (and the 29 Jul 76 GSA-NARS agreement to perform the unit history screening) stood in the path of final resolution of this aspect of the problem. On concluding the meeting, consensus was reached that all representatives should present these views to their principals as expeditiously as possible for final ratification and action.

g. As a matter of record, it must be emphasized at this point that the TAG representative did not participate in the screening/sampling techniques employed by the CMH Representatives. The results of that screening and the conclusions reached therefrom were arrived at independently of prior TAG opinions or findings. The close congruence of the 4-10 April TAG recommendations and 25-30 July CMH findings tend to greatly reenforce their general validity.

4. DISCUSSION OF TAG GENERAL RECORDS MASTER SURVEY ACTIVITIES: After a basic work plan and essential support had been agreed upon, the CMH Representatives proceeded independently. The TAG Representative devoted most of his time to further refinement of various earlier proposals for dealing with the entire collection of Army organizational records held by the National Personnel Records Center.

a. Explanation of NARS-5. NARS-5 is a relatively simple warehousing concept which includes a computerized inventory control. This concept has been in practical effect in the Washington National Records Center almost since its beginning. For this reason, it was relatively simple for us to arrived a certain overall figures and estimates as to the Army's holdings in the Washington National Records Center. Existing ADP Listings and computer controls allow us to zero-in quickly on Army accessions by date,

location, records group, generating agency, accession number, etc., with very little effort. No such system presently exists in the National Personnel Records Center for military organizational records. NARS-5 will do this eventually, but NARS-5 is just now being applied. My private estimate is that TAG will have long disposed of the Army's organizational records in St. Louis before NARS-5 is a practical reality there. Major impact of NARS-5 on WNRC will be in computerized series data.

b. Use of THE INDEX. This is the only practical tool available to the National Personnel Records Center for working with these records. It is hap-hazard at best. Built on records transmittal documents largely created at Kansas City and expanded through the years with accessions of records retired directly to St. Louis, it suffers from the common problems of having been "everyone's tool and no one's responsibility." Location changes and disposition have been erratically posted through the years; mis-filed documents are prominent throughout its 20-plus file cabinet size; box re-numberings have not been consistent; and, even after its complete contents have been exhausted, there is no way to guarantee that all organizational records physically in the Center have been accounted for. Eventually, the NARS-5 program will bring all of this disarray into balance and will provide an accurate inventory of the Center's total holdings. However, with all of its shortcomings, THE INDEX is the only tool that we have to work with at this time, and, with proper care and close attention to accounting detail, should result in the re-establishment of 90%-95% effective intellectual control over the Army's organizational holdings in St. Louis.

c. Almost without exception, the Army's organizational holdings at St. Louis fall into Records Group 338. THE INDEX is arranged in the same functional and levels-of-command groupings previously proposed for handling Records Group 338 holdings in the Washington National Records Center. TAG's formal accessioning offers to NARS will follow this functional arrangement and, where volume dictates, separate series and sub-series will be described within large functional groupings. For example, ACTIVITIES, AGENCIES, ARMORIES, ARSENALS, BANDS, and BOARDS are a few of the broad functional groupings used in this file scheme. Totally, there are some 125 functional categories. This figure appears more formidable than it actually is as various levels of command are counted as separate file categories in this scheme. Time not devoted to the primary purpose of this visit to St. Louis was spent in analysis and audit of the ACTIVITIES, AGENCIES and BOARDS categories of THE INDEX and preparation of disposition descriptions for formal offer of these holdings to NARS for permanent accessioning into the National Archives. Analyses of the first three categories was completed and considerable inroads were made in the ARMORY and ARSENAL categories.

Some sample series descriptions and generalizations on my findings in these areas are as follows:

(1) United States Army Security Agency. During the years 1956 thru 1964, 24 units and organizations of this agency retired approximately 117 linear feet of permanent general mission reporting and administrative records to St. Louis, generally covering the period 1951-63. A significant amount of this is classified. Disposable records and administrative publications, i.e., special orders, personnel-type orders, etc., are not counted in these or any subsequent figures presented in the following generalizations wherever it was possible to separate them. Since the USA Security Agency has been granted certain exceptions to normal records management procedures "to care for their own," this material should be brought to appropriate USASA records management officials prior to proceeding further with its disposition. Though not repeated in these sample descriptions, sufficient data was collected at this time on accession content to include it in the formal accession offers.

(2) United States Army Audit Agency. During the years 1956-63, 21 units and organizations (mostly regional offices and branches) retired approximately 41 linear feet of permanent general, mission reporting and administrative records to St. Louis generally dealing with the years 1951-60. Archival value of this material is highly questionable in my estimate; however, it is validly classed as PERMANENT in accordance with the AR 340-18 Series. Hence the final determination on disposition rests with NARS.

(3) United States Army Signal Corps Activities. During the years 1956-66, 24 Signal Corps organizations, agencies, activities, etc., retired approximately 875 linear feet (estimate 10% classified) of permanent general, mission reporting and administrative records to St. Louis generated by the retiring activity during the years 1946-63. Some Patent Agency records date as early as 1923 in this collection. Moreover, there is also a significant concentration of Signal Corps publications, i.e., TM's FM's, MWO's, etc., in this grouping--sufficient to constitute a separate signal/communications/electronics publications offer to NARS. For management and control purposes, these materials should be grouped with Chief Signal Officer (Records Group 111) holdings in the Washington National Records Center and presented to NARS in a related series of offers.

(4) United States Army Sub-Area Commands. During the critical years 1956-61, 23 US Army Sub-Area Commands in West Germany retired approximately 215 linear feet of general administrative records covering the years 1951-58 concentrated chiefly in the years 1952-55. This is a uniquely valuable collection which faithfully reflects the day-to-day problems of converting a former enemy to an important ally. This is the period when occupation ended

and the Grundgesezte (Basic Law which became the Constitution of the Bundesrepublik Deutschlands) came into effect; property was de-requisitioned; personnel controls were eased; and, the Germans became "respectable" again! In years to come this collection will be regarded as a unique treasure in plotting the socialological, economic and cultural recovery of the German nation. Of particular interest here are the administrative publications, i.e., daily bulletins, regulations, instructions, etc., documenting the dramatic German-American relationship changes taking place at the grassroots level.

(5) United States Army Boards. During the years 1956-68, 33 US Army Boards retired approximately 560 linear feet of records generally covering activities of the years 1944-65 with some records dating back to the 1920's. However, most of this material stems from the years 1957-64. A significant portion of it is classified and consists generally of RD Administrative and RD Item Case files. Again, I have considerable reservation as to the archival value of the RD Administrative materials, but separation of this material from the RD Item Case files might best be handled as an archival arrangement project after accessioning into the National Archives. A listing of the US Army Boards to be included in this series follows:

The Adjutant General Board, Fort Benjamin Harrison, Ind

US Army Air Defense Board, Fort Bliss

US Army JFK Center for Special Warfare Abn & Elct Board, FT Bragg

USA Animal Equipment Departmental Board #3, Fort Carson

USA Armor Board, Fort Knox

USA Aviation Accident Research Board, Fort Rucker

USA Aviation Board, Fort Rucker

USA Chief of Engineers Beach Erosion Research Board, Wash., DC

USA Field Force Board #1, Fort Bragg

USA Field Force Board #3, Fort Benning

USA Field Force Board #4, Fort Carson

USA Field Force Board #5 (Redesignated Abn Armt & Elct Bd), Fort Bragg

USA Infantry Board (Formerly Fld Force Bd #3), Fort Benning

DAAG-AMR-D
SUBJECT: Trip Report: TDY, 25-31 July 1976, National Personnel Records Center, St. Louis, MO

USA Artillery Board (Formerly CONARC Bd #1), Fort Sill

USA Field Force Board #6 (redesignated USA Avn Bd), Fort Rucker

USA Chemical Corps Board, USA Chemical Center

USA Chaplain's Board

FAR EAST COMMAND Board of Contract Appeals, USAJ, APO 343

USA Intelligence Board, Fort Holabird

USA Maintenance Board, Fort Knox

USA Medical Services Board, Walter Reed Medical Center

USA Military Police Board, Fort Gordon

USA Ordnance Board, Aberdeen Proving Ground

USA Quartermaster Board, Fort Lee

USA Signal Invention Evaluation Board, Fort Monmouth

USA Signal Board, Fort Monmouth

Joint Airborne Troop Board, Fort Bragg

Joint Tactical Air Support Board (Army Section Only)

USA Arctic Test Board, Fort Greely

USA Transportation Board, Fort Eustis

(6) Labor Service/Supervision Units. Since 1945 some 400 Labor Service and Labor Supervision units ranging in organizational structure from detachment to battalion (most at the company level) were created by the US Armed Forces in Europe. Most of these were US Army created and controlled organizations although the US Air Forces in Europe created and used some of these units. Though many nationalities were represented in these para-military organizations, displaced Poles predominated. In many localities, these units were known as the "Polish Guard." They performed many important support functions, i.e., guard, ground maintenance, supply, depot, administrative, etc; many were short-lived lasting only a few months into the early occupation period; and, gradually diminishing in number to the bare handful which still exists today. This has been called America's first and only flirtation with a

"Foreign Legion" and gave the Congress considerable heartburn in the mid-1950's--sufficient to prompt the enactment of laws which virtually precluded recruitment of aliens into the US Armed Forces outside the continental limits of the United States. The records retired by these organizations generally include bi-lingual unit orders, other publications, correspondence, and unit histories. The volume is not large probably not exceeding more than an average of one linear inch per unit, perhaps limiting the total collection to less than 40 linear feet. An offer to accession this material into the National Archives should include Morning Reports (paper or film) in order to complete these records with rosters of the personnel who served with these units. This is still a fairly active records group; fairly frequent requests are still received by TAG from former members of these units for various service data.

(7) Armories and Arsenals. Though not completely analyzed, the holdings of a sufficient number of arsenals and armories were examined to draw certain conclusions. These records were generally retired to St. Louis during the years 1956 to 1964 and include materials from the mid-1940' through 1962. In some cases, they contain materials as old as 1915, but this is an exception rather than the rule. In addition to the normal administrative files, the bulk of these retirements consist of RD administrative and Item Case Files, a significant volume of which is classified. It could well be that the bulk of the classified holdings in St. Louis fall into this category. If this turns out to be the case, it will result in a drastic revision of our preliminary estimate of the archival value of the 5500 linear feet of classified US Army holdings at St. Louis. This, as planned, will be verified by physical examination during our final wrap-up of this situation in October-November of this year.

5. CONCLUSIONS AND RECOMMENDATIONS: On the basis of two weeks of concentrated work in the files of the Military Organization Records Division of the National Personnel Records Center, I feel that I can now advance the following general conclusions and recommendations for re-establishing acceptable intellectual control over these records. This, of course, would be preliminary and coincident with offering them to the National Archives for permanent accessioning.

a. Disposition Descriptions. In the absence of computerized control of these holdings in the National Personnel Records Center, it will not be possible to use copies of the original transmittals as detailed series descriptions to accompany accession offers to NARS as is planned for the Washington National Records Center holdings. Consequently, it will be necessary to write disposal descriptions for the St. Louis materials. During the course of one week's work, I was able to analyze the retirements of 240 records generating entities and summarize all essential data required for the construction of good disposition descriptions. These elements of data

included identification of the records creating entity; years covered; content description of the records; unusual features; security classification; volume; NPRC assigned accession (job) number and physical location within the National Personnel Records Center. On a previous visit to St. Louis, about the same number of combat mission records retiring entities ranging from Army to brigade were similarly analyzed. This probably covers at least one-half of the records generating entities to be analyzed and brought under control. Consequently, my original estimate of 4-6 weeks work for a task force of 5-6 people to prepare these descriptions including physical examination, verification, and screening of the classified materials where indicated, is still considered valid. The task force ideally should consist of Dr. Hatcher and two TAG-provided technicians/clerks plus three GSA-NARS provided technicians. The operation should commence about 1 October and wind-up about 15 November 1976.

b. Volume of Records. Thus far we have predicated our plans and actions on volume figures provided by the National Personnel Records Center. Apparently, these figures--as best as I can determine at this time--are running totals that have been kept through the years. I am now frankly suspicious of their validity and feel that final accounting may produce significantly different figures. This revision might go in either direction. The most difficulty that I encountered in preparing the analyzes described above was to determine the actual volume of records which still existed for a given unit. Traditionally, a very complicated row-box numbering scheme has been employed in NPRC for these records. This has produced a situation where retirements of records are split up among several locations within the Center. For a variety of reasons this happened both on arrival and as disposal took place. Then, too, all disposition has not been faithfully reflected in THE INDEX. Pending completion of NARS-5, a "box counting" approach is about the only practical to determine the actual on-hand volume of records for any given records retiring activity. This is cumbersome, time-consuming and susceptible to the usual rate of error, but workable in the absence of other alternatives.

c. NPRC vs. WNRC PROGRAMS. In my original approach to the master survey of US Army records held in Federal Records Centers, I envisioned distinctly separate operations in both of the national records Centers, i.e., US Army records predating 1964 would be brought under intellectual control in each of the national centers and offered to NARS in an independent series from each Center. Closer examination now reveals the existence of a close series relationship between the two fragmented collections. Most of this occurs in the de facto Records Group 338 holdings in each Center; however, there will be some departmental staff carry-over. For example, Chief Signal Officer holdings from WNRC should be considered along with USA Signal Corps materials from NPRC in appropriately described series and sub-series. The series relationship in the combat mission units is much more obvious. For example, records of the Seventh Army and USAREUR in St. Louis should be described along with Seventh Army and USAREUR in Washington subject to the chronological blocks being offered for accessioning.

SUBJECT: Trip Report: TDY, 25-31 July 1976, National Personnel Records Center, St. Louis, MO

d. Survey of Holdings in the Regional Centers. Based on the above observations, I now feel that the survey of holdings in the regional Federal Records Centers should be accelerated and completed during the next two calendar quarters. This should result in acceptable intellectual control of the total Army records inventory in Federal Records Centers. Integrated action predicated on the total inventory concept could then proceed in an orderly and systematic manner subject to funding and manpower allocated to this project.

DEPARTMENT OF THE ARMY
OFFICE OF THE ADJUTANT GENERAL AND THE ADJUTANT GENERAL CENTER
WASHINGTON, D.C. 20314

DAAG-AMR-D 15 November 1976

MEMORANDUM FOR: THE DIVISION CHIEF

SUBJECT: Trip Report from Visit to the National Personnel Records Center in St Louis, 3 October to 13 November 1976

1. BACKGROUND AND PURPOSE: The purpose of this trip was to regain intellectual control over the United States Army organizational records held by the National Personnel Records Center with a view toward offerring them to the National Archives for permanent accessioning. The date of the trip and its duration was jointly established with representatives of the Office of the Assistant Archivist of the United States for Frederal Records Centers, the National Personnel Records Center, and Department of the Army Records Management Division.

b. A general work plan, essential support services, and participating personnel resources had been agreed to during the 25-31 July 1976 TDY visit to St Louis. Roughly, the same techniques developed for dealing with United States Army records held by the Washington National Records Center were to be applied in an extraordinary effort to remove an estimated 77,000 linear feet of records pre-dating 1964-65 from the Army inventory.

2. PERSONNEL CONTACTED:

a. The following USARCPAC and GSA-NARS personnel were contacted during the six-week TDY period on a regular basis:

Mr. Warren B. Griffin	Director, National Personnel Record Center
Mr. J. D. Kilgore	Assistant Director for Military Records, National Personnel Records Center
Mr. George McManus	Chief, Military Operations, National Personnel Records Center
Mr. Jerry Wallace	Archivist, Office of the Assistant Archivist for Federal Records Centers
Colonel W. C. Scarborough	Deputy Commander, USARCPAC
Ms. Dorothy Klos	Chief, Support Operations Division, USARCPAC
Mr. Tom Smoot	Chief, Printing and Binding Branch, USARCPAC

PRECEDING PAGE BLANK-NOT FILMED

b. As on previous occasions, every possible courtesy and cooperation were extended me throughout the operation by both NARS-GSA and RCPAC personnel. Special identification credentials were issued on arrival which allowed free access to both NARS-GSA and RCPAC areas of the Center. With the single exception of the Stack Areas, extended hour access (1600 to 2000 hours daily and 0730 to 1800 hours on weekends), Work space and advisory personnel were provided by the Center Director; additional work space, copying equipment and clerical support personnel were assigned by the RCPAC Deputy Commander. Colonel Scarborough also agreed to place his personnel on a special work hour schedule (1400-2000 hours daily; 0730-1800 hours on Saturdays) in order to maximize use of the available copying equipment.

3. CONDITION OF THE HOLDINGS:

a. The total absence of any computerized systems for management of the Army's organizational records held by the National Personnel Records Center posed certain unique problems for re-gaining intellectual control of these materials. The splendidly functioning computerized controls of the Washington National Records Center provided an excellent double check system which contributed significantly to our recently completed operations there to regain intellectual control of some 92,000 linear feet of Army records. Therefore, there is no extant standard at the National Personnel Records Center against which we can gage the effectiveness and completeness of our efforts.

b. The only device available at the National Personnel Records Center for use to these ends is THE INDEX. This is a loose-leaf file of the Records Transmittal documents which theoretically describe the collection. It is voluminous, intricately detailed, and fills eighteen 5-drawer standard filing cabinets ! For some years, no single clerk has been assigned to maintain this index. It is open to the searchers of several operating units and relies on an unsupervised charge-out system. Its very intricacy of design makes mis-filed folders a certainty. Loss or destruction of any transmittal documents equates to loss of the records described. This has undoubtedly happened several times through the years. Conversion to the NARS-5 concept of computerized control along with a row-by-row, box-by-box inventory presently in progress at the National Personnel Records Center will eventually correct these deficiencies; however, not in time to be of any assistance to our master inventory of Army records in Federal Records Centers. But such as it is, THE INDEX is all that we have to work with presently. It's accuracy and reliability is probably in the magnitude of 90-95% effective.

c. The history of the organizational records at NPRC commences with the 1956-57 bulk transfer from the Kansas City repository. A conscious effort was made at that time to get the World War II and Korean War records to Alexandria instead of St Louis. This was reasonably successful. Very few overseas and combat records through 1945-52 have been located in the NPRC holdings. From 1957 through 1967 Army field commands retired their records directly to NPRC. These retirements generally reflected records which were created between the years 1951-53 and 1964. After 1967, Army field commands (and subordinate units) retired their records directly to the Washington National Records Center. At this time, NPRC adopted a vigorous program of screening incoming records retirements. Only personnel jackets, clinical and personnel-related orders were retained by NPRC; all other items in cases of mixed shipments, were automatically

transferred to the Washington National Records Center. Since 1973, no new material has been added to the collection held in the Military Personnel Center on Page Boulevard. Personnel-type orders and other personnel-related material have been received into a new collection now maintained in the Civilian Personnel Center on Winnebago Street. Hence, the Page Boulevard Collection has been static since 1973.

d. There is a three-way mixture of materials in the Page Boulevard Collection which renders it exceedingly difficult to work with. This mixture also raises problems of nightmarish proportions in its conversion to the NARS-5 Concept. First, there is the mixture of organizational records with clinical and personnel materials; secondly, there is a mixture of scheduled (often obsolete and overtaked by subsequent march of events !) and unscheduled materials; and, lastly, there is the mixture of permanent and disposable materials. As an example, almost without exception PUBLICATIONS were retired as a standard mix of general orders, special orders, personnel-type orders and regulatory issuances, i.e., memoranda, regulations, directives, etc. This has made orderly disposition impossible.

e. Disposition has been a hit and miss proposition in this collection for several years. Some has been done and properly posted to the appropriate transmittal documents in THE INDEX. Some has been marked on THE INDEX and never, in fact, been carried out. Some has been carried out and never posted to the transmittals in THE INDEX. Such disposition as has been carried out through the years plus occasional transfers has produced a honeycomb effect in the stack shelving at NPRC. These holes were re-filled as newly arriving retirements demanded, but often at the cost of accession integrity, i.e., incoming accessions were often split up and assigned to non-contiguous space in order to "fill the holes." This practice has also added its special complications to the main problem of control and location.

f. All of these factors plus NPRC's acceptance of less than one box shipments through the years make it extremely difficuly now to determine the precise volume of records a given organization still has extant in the whole collection. It boils down to the proposition of individual study and analysis of each transmittal document, i. e., counting the boxes, feet or twelfths of feet of records which appear to be permanent or give no indication of disposition or eligibility for disposition. In the present instance, determination of volume was even more complex since allowances had to be made for personnel and clinical materials which would under any circumstances remain with NPRC. Consequently, the volumes itemized in the attached inventory were arrived at after taking all of these factors into consideration. Even, at that, there probably is still a plus or minus 10% error rate in them. Until the NARS-5 and physical inventory is completed, this will be about as precise as we can come in our offers to NARS for permanent accessioning.

4. OPERATIONAL TECHNIQUES EMPLOYED:

a. The most sharply limiting factor in the whole operation was the availability of acceptable copying equipment. Colonel Scarborough was prepared to have new copying equipment of my own selection installed for the duration of the project; however, a minimum of 3-4 weeks lead time was required by the equipment manufacturers. The only other alternate proposition was to use equipment .

already in place -- after the normal operational demands had been met. Hence, permission was granted by both RCPAC and NARS-GSA to extend my staff's duty hours to 2000 hours Monday thru Friday and from 0730 to 1800 hours on Saturday. Colonel Scarborough, as previously indicated, assigned two intermittent employees (young college students) to me for the duration of the project. After Model 2400 Xerox machines provided by NARS-GSA proved too slow for the volume of copy work envisioned, Colonel Scarborough made two dual-pedestal Dennison CVC copies available. This equipment (using all four operator positions simultaneously) had a copying potential of 7200 copies per hour. The quality of the CVC process is not nearly as good as Xerox, but certainly adequate to our needs.

b. After a few hours of orientation training, we set up a production line operation which very quickly shifted into high gear. It demanded a twelve hour day of me, 40 hours per week for my two intermittents; and, whatever time that was required of the staff and advisory personnel provided by Mr. McManus and Mr. Kilgore. The production line consisted of five tightly coordinated processes. The first of these -- and certainly the most difficult -- was a folder-by-folder screening of the eighteen file cabinets of THE INDEX. All transmittal documents which showed permanent organizational records still extant were identified for copying. I did most of the screening personally due to its complexity. The next step was to copy the material which the screening process had identified. Three copies of each transmittal (extracts where appropriate) were made (to be explained below). The next step was to restore the folders to their original condition and refile them in THE INDEX. This was done on a daily basis so as not to impede normal day-to-day Center use of THE INDEX. The fourth step was to label and arrange the reproduced transmittal documents into manageable forms. The last step was to study the functionally arranged transmittals in an attempt to arrive at a fair estimate of the volume of records they represented.

c. The foregoing was a continuous process which began on Wednesday, 6 October 1976; was interrupted only for Sundays and the two days that I returned to Washington (1 and 2 Nov 76); and finally was completed on Friday, 12 Nov 1976. Totally, approximately 720 manhours were required to complete the operation during which time, roughly 30,000 pages of documentation were run through the process described above. This resulted in a copy product of approximately 90,000 to 100,000 pages, arranged in three labelled, foldered sets. The logistics of the proposed transfer to NARS necessitated three sets of documentation.

d. Physical location of the collection in St Louis poses certain problems for the NARS appraisal process which is the vital archival conduit through which offerred materials must pass in order to reach the National Archives. One set of the copied documentation will go to the Programs Branch in the Forrestal Building and will trigger the offer process. This set will also become the official DA record of the eventual transfer or other disposition of these materials. A second set will go to the Declassification Operations Branch in the Washington National Records Center. This set will be used primarily in preliminary staffing of the approximately 5400 linear feet of classified material contained in the collection. This set of the documentation will also show the relationship between classified and unclassified materials on an individual retirement basis. This set will also be made available as desired to General Archives Personnel (also physically located in WNRC) during the appraisal process. The third set of documentation will be deposited with the resident archivist at NPRC who represents the Assistant Archivist for Federal Records Centers and who will

perform the initial appraisal. This set will also be used as a blueprint for identification and withdrawal of the accepted material for shipment to the General Archives Division.

e. In addition to the three complete sets of documentation, a fourth partial set also simultaneously created which reflects only the classified material contained in the collection. This, too, was arranged functionally and by creating entity within the function. On closer examination, much of the classified material consists of R & D materials retired in the late Fifties and early Sixties -- which the technological march of progress has probably long overtaken. It is quite possible that a great deal of this material can be bulk declassified by referral to the agencies now exercising competence in these various areas. In any event, this partial set will provide an excellent description of the classified material in the collection in highly concentrated form.

5. INTERESTING RECORDS DISCOVERED:

a. While there is no doubt in my mind of the archival value of the 52,849 linear feet of material which I propose for offer to the National Archives, there are several identified blocks within the collection that stand-out with particular clarity. Some of these represent unique facets of the national military experience; others fill-in gaps that have long existed in other records already accessioned into the National Archives. Among the most interesting blocks discovered during my analysis of the St Louis collection are the following:

(1) American Land Forces, Middle East, Specified Command. Lebanon Crisis of 1958, 107 linear feet.

(2) OPERATION MERCY. Rescue, reception and processing of the Hungarian Freedom Fighter Refugees at Camp Kilmer in 1956-57, 72 linear feet. Lessons learned in this operation might have been of real assistance in handling the recent Vietnamese refugees.

(3) Enemy Prisoner of War Materials including some little known material on US use and handling of Italian POW's at the conclusion of WW II; CONUS POW Camp retirements; and, UN POW Command materials vintage 1951-52 in Korea, 1942-1953, 110 linear feet.

(4) United States Army and Joint Exercises conducted in CONUS and overseas, 1952-63, 38 exercises identified by nickname, 174 linear feet.

(5) Labor Service operations in Europe (sometimes referred to as the Polish Guard), 1953-63; America's only flirtation with concept of a "Foreign Legion," 78 linear feet.

(6) War Criminal Prison, Landsberg (Germany), 1954-58, 4 linear feet.

(7) OMGUS ranging from Absentee Ownership and Amexco to Volkswagon in topical coverage; shipped by the US Embassy in Bonn to Kansas City and subsequently (in 1960) trans-shipped to St Louis, 2 linear feet, dates not known.

(8) Missing Technical Publications, i.e., FM's, TM's, TB's, etc., from the late Fifties and early Sixties have been the target of a lively search for

some years. I think that the mystery is partially explained now by the nature of the records retirements from the Army's technical and service schools of this period. Quartermaster, Ordnance, Signal Corps, Transportation, Engineer, etc., schools all pursued vigorous publication activities during this period. It appears that each school largely published or directed the publication of tech and field manuals pertinent to its own area of competence. School retirements from these years are all rich in record materials of this nature.

6. OPPORTUNE STAFFING REQUIREMENTS:

a. Two opportune staffing requirements were tacked on to the primary mission of this TDY at the eleventh hour. In addition to preparation for execution of the primary mission, these two additional requirements were met during the first two days of the TDY. One of these involved a satisfactory resolution of the US Army Security Agency (field stations and units) retirements contained in the St Louis collection. This was accomplished by providing the USASA Records Management Officer copies of all identifiable transmittals describing ASA materials who, in turn, was requested to annotate these transmittals with instructions for disposition, i.e., Ship to ASA, Destroy on site, or Not ASA material. Mr McManus is prepared to bring this matter to a conclusion as soon as ASA returns the annotated transmittals to him.

b. The second rider was the requirement to identify permanent dependent high school records for transfer to the Washington National Records Centers. This required considerably more effort than the ASA Project. In all, some 72 high schools and junior high schools were identified with holdings in the St Louis collection spanning the years 1947-69. This was a particularly complex screening due to the inconsistency with which dependent school records were retired by some of the overseas commands. Junior high schools were included in the screening due to the inclusion of the 9th grade in their records. SETAF in Italy, POE Bremerhaven, US Forces Far East, US Army Japan and some of the other geographical armies regularly retired dependent school records with their administrative files. Cross-referencing did not always match these records with the school indices. Some more work must be done on this prior to final transfer.

c. Approximately 600 linear feet of high school and junior high school records were identified. This relatively high volume stems from mixed accessions of high school and elementary school records. Under the circumstances, there is no practical means of separating these records until final decisions are made on how the entire collection will be re-arranged to be made compatible with the WNRC accession system. Following standard practices, duplicate sets of transmittal documents were prepared for both the Programs Branch and NPRC. Delivery of the Programs Branch set was effected approximately 10 October 1976 along with my suggestion that Mr. Stender's office be contacted on the matter since both of the national federal records centers were involved. Mr McManus is prepared to act on this matter on behalf of NPRC as soon as instructions are forthcoming from Mr. Stender's office.

7. SPECIAL HANDLING OF CORPS OF ENGINEER HOLDINGS:

a. In mid-1975, approximately 7200 linear feet of District and Division - Corps of Engineer holdings in the National Personnel Records Center were shipped to the appropriate regional Federal Records Centers having jurisdiction over the geographical areas in which these records were originally generated. Only

the unclassified records were shipped; the classified District and Division Corps of Engineers records(approximately 214 linear feet) were not shipped at that time and are still located in the 3rd Floor Vault at NPRC. Unfortunately, from our program viewpoint, these records were shipped to the Regional Federal Records Centers instead of the Regional Archives ! Since these records are still in FRC channels, they are still an Army management responsibility. This matter can be resolved in Phase III of our Master Survey of Army Records in FRC Channels when the holdings of the 12 regional centers will be analyzed for disposition.

8. CONCLUSIONS AND RECOMMENDATIONS:

a. If the April 1976 figure of 77,000 feet of Army organizational holdings is valid, I must conclude from my analysis that some 24,000 linear feet of these holdings have sunsequently been disposed of. This could be the result of several different actions. Some 16,000 linear feet of overdue disposable material have since been removed in connection with a current NPRC re-warehousing project; Mr. Wallace's aggressive scheduling of previously unscheduled records and application of current standards to in-house records would account for more; and, finally the extraordinary disposal action mutually agreed to by NARS and DA in July with regard to Battalion and lower records could account for the rest. Then, too, it is conceivable that the original organizational collection contained more clinical and personnel related material than originally estimated. My analysis has produced a figure of roughly 53,000 linear feet of permanent records in the St Louis collection.

b. I recommend that this entire collection be offerred to the National Archives on pretty much the same basis as the pre-1964 holdings of permanent records held by the Washington National Records Center in whatever function grouping or arrangement the Programs Branch deems most appropriate for administrative control.

c. In the very likely eventuality that not all of these materials will be accepted by the National Archives for permanent accessioning, I propose the following course of action in the order listed:

(1) Give the US Army Chief of Military History through the Director of the Military History Research Collection, at Carlisle Barracks, first refusal on all materials rejected by NARS.

(2) Offer all materials of a regional nature to the Regional Archives of the National Archives and Records Service.

(3) Schedule all remaining materials for disposition on a more realistic basis in accordance with operational and statutory requirements and amend the the AR 340-18 series to reflect these schedules.

d. Initiate Phase III of the Master Survey of USA Records in FRC Channels in January 1977 with on-site analyses of Army holdings in the West Coast regional federal records centers.

Memorandum for the Record, 6
November 1976, Subj: Extra-
ordinary Disposition of USA
Records Below Regimental Level.

DEPARTMENT OF THE ARMY
OFFICE OF THE ADJUTANT GENERAL AND THE ADJUTANT GENERAL CENTER
WASHINGTON, D.C. 20314

REPLY TO ATTENTION OF: DAAG-AMR-D

6 November 1976

Memorandum for the Record

SUBJECT: Extraordinary Disposition of USA Records Below Regimental Level

1. Organizational elements to be included in the extraordinary disposal of United States Army records created by "battalion-and-lower-levels-of-command" pre-dating 1964 and held by the National Personnel Records Center are listed below.

2. The following special provisions and exceptions apply to the general disposition of these records:

a. All records to be disposed of under this action will be screened for the removal of unit/organizational historical files for offer to the General Archives Division (NARS) as a permanent accession. NARS personnel will do the screening.

b. Responsible Records management officials of the USA Reserve Components Personnel and Administration Center will be consulted on the final disposition of Reserve Training Attendance Records presently located randomly throughout these holdings. If desired by USARCPAC, NARS will screen and deliver.

3. Records of the organizational elements to be disposed of pursuant to this action are identified in the NPRC INDEX as follows:

Bands	Sections/Sectors
Battalions	Ships
Batteries	Port Repair Ships
Branches	Shops and Workshops
Companies	Sites
Crews	Squadrons
Detachments (Incl ROTC & Recruiting)	Staffs
Directories	Staging Areas
Dispensaries	Surveys
Harbors	Teams
Hospital Ships	Trains
Infirmaries	Troops
Platoons	Units
Regiments (Excepting CARS)	Women's Army Corps

4. Reserve organizations retiring records through numbered armies and corps headquarters are subject to special provision 2b above. Records of regiments which have been incorporated into the Combat Arms Regimental System (CARS) as well as the "old regiments" have been screened for permanent retired material. These holdings have been identified and will be offerred to the National Archives as a permanent accession.

5. The transmittal documents of all other organizational elements contained in the NPRC INDEX have been screened for appropriate offers to NARS.

DEPARTMENT OF THE ARMY
OFFICE OF THE ADJUTANT GENERAL AND THE ADJUTANT GENERAL CENTER
WASHINGTON, D.C. 20314

DAAG-AMR-D 4 November 1977

MEMORANDUM FOR: THE DIVISION AND BRANCH CHIEFS, RECORDS MANAGEMENT DIVISION, THE ADJUTANT GENERAL CENTER, WASHINGTON, DC 20314

SUBJECT: Trip Report, 21 September 1977-3 November 1977 Visit to the National Personnel Records Center, St Louis

1. PURPOSE: The purpose of this trip was to prepare approximately 5500 linear feet of classified organizational United States Army records held by the National Personnel Records Center for movement to the Washington National Records Center and eventual permanent transfer offer to the National Archives.

2. PERSONNEL CONTACTED: The following General Services Administration, National Archives and Records Service, National Personnel Records Center and US Army Reserve Components Personnel and Administration Center personnel were contacted during the course of this visit:

a. National Archives and Records Service:

Walter Stender, Assistant Archivist of the United States for Federal Records Centers
George Scaboo, Deputy to Mr Stender

b. National Personnel Records Center:

Warren Griffith, Center Director

J. D. Kilgore, Chief, Military Personnel Records Division

Edward O'Brien, Chief, Military Operations Branch

John Dunlap, Deputy to Mr O'Brien

Thomas Helfrich, Management Analyst, Military Operations Branch

Arnold Essenpreis, Accession and Disposal Archivist

Eugene Herbig, Classified Documents Custodian

c. US Army Reserve Components Personnel and Administration Center:

O. W. Jefferson, Security Officer

Dorothy Klos, Records Management Officer

Mary Lineham, Chief, Printing and Bindery Branch

PRECEDING PAGE BLANK-NOT FILMED

3. BACKGROUND: In 1966, the United States Army relinquished control of its records center operations in St Louis to the General Services Administration. At that time and in the succeeding six years, approximately 5500 linear feet of US Army classified organizational records from worldwide resources were placed in deposit. The age of these records generally represent the Army experience from the years 1945 to 1968 with the bulk falling into the years 1952-64. As of 30 September 1977, approximately 70 linear feet of these records were TOP SECRET; the remainder falling into the SECRET and CONFODENTIAL categories including COFRAM, RD and FRD materials. Records Group 338, US Army Commands generally characterized the bulk of these materials; however, Records Groups 77 (Corps of Engineers), 319 (HQDA Departmental Staff), and 334 (Joint Commands) in measurable quantity were also contained in this collection.

For the past ten years, these records have been generally inactive and only rarely experiencing a search request from the original shippers. During the entire period of my visit only one such request was entertained and it was searched with positive results ! From previous examinations, however, the historical and archival value of this collection had been clearly established. As the result of my 1976 survey of these materials, plans had been laid for eventual offer of this material to the National Archives for permanent transfer. Imminent revision of Executive Order 11652 and dropping the life-cycle of classified documents from 30 to 20 years added new impetus for accelerating this timetable.

Exploratory discussions with Alan Thompson, Chief of the NARS Declassification Division, confirmed the urgency of this action. At a joint meeting with Walter Stender, Assistant Archivist of the United States for Federal Records Centers agreement and working accord were reached for transfer of this collection to the Washington National Records Center. This meeting was held on 29 July 1977 and was attended by members of both the HQDA Records Management Division and Mr Stender's staff. Thrust of the agreement was to prepare the entire collection for movement to the Washington National Records Center; approximately 1000 linear feet to be moved prior to 30 September 1977 and, the remainder after 1 January 1978. Dr Hatcher attended the meeting and agreed to go to St Louis to prepared the collection for transfer and offer to the National Archives.

4. DISCUSSION OF CONDITIONS ENCOUNTERED: An Army-originated INDEX has been employed by GSA personnel to manage this collection since assuming its responsibility. This INDEX is arranged functionally under certain broad military organizational categories, i.e., Armies, Arsenals, Boards, Center, Commands, etc, and, then, numerically, alphabetically, geographically, etc., thereunder. Unfortunately, this INDEX was never expanded after GSA assumption in 1966 and did not reflect accessions received from 1967 to 1972. Even more unfortunate was the fact that this was not discovered until we were approximately 1000 feet into the collection ! At that point, we suspended inventory and NARS-5 re-coding action to reproduce and interfile the 1967-72 accession documents into the INDEX. This produced some discontinuity in the accession sequence of the new functional grouping but none that NARS-5 control cannot accommodate.

Prior to departing for St Louis, I made arrangements with Jack Baumgartner, Accession and Disposal Chief, WNRC, for blocks of FY78 accession numbers in Records Groups 338 and 334 for use in re-coding the NPRC collection for NARS-5

pickup and control on arrival at WNRC. Similar arrangements were made with Bill Masters, Chief of Staff's Office, for RG319 accession numbers. Accordingly, as organizational or functional blocks of records were identified in the NPRC collection, they were re-coded for NARS-5 control. Effort was made to maintain the integrity of the original accessions so far as NARS-5 and organizational identification permitted. In many cases, large original shipments were broken into new smaller accessions on the basis of series, chronology, functional re-grouping, etc. In all instances, extreme care was taken to preserve provenance.

Working conditions were primitive and made the overall project extremely difficult and exacting. NPRC has no secure staging areas; therefore, all work had to be accomplished within the storage vault itself. Space was at a premium and generally limited to a single vault-length aisle (approximately 3 feet in width. A section of conveyor track laid across trestles served as table space. Shelf space, too, was at a premium. Consequently, starting with a single empty row of shelves, we inched our way through the collection precariously balanced between the INDEX and the next row of shelves to be cleared to hold the re-coded accessions. This made for multiple handling of the boxes and resulted in a good deal of duplicated effort, but under the circumstances about the only way to proceed.

Despite the physical limitations encountered, the inventory and re-coding aspects of the project were completed in about five weeks. This included actual shipment of 1028 linear feet of material from NPRC to WNRC on 30 September 1977 per our original commitment. An additional week was required to prepare new transmittal documents to control the entire collection. In all, some 850 new accessions (and transmittal documents were prepared for shipment. Only through the dedicated efforts of Mr Armold Essenpreis and Mr Eugene Herbig was this project brought to a successful, on-time conclusion. Both volunteered to match stride with me throughout the entire 6-week period. This meant 10-12 hour days and 7 day weeks and was cheerfully given despite its exhausting demands.

5. DISPOSAL ACTIONS: Where practical and easily identifiable, disposable material was removed from the permanent materials being inventoried and re-coded for shipment. This amounted to about 10% of the collection or some 468 linear feet. It is estimated that an additional 10% scattered through the collection is also disposable but would require a folder-by-folder screening. Neither time nor personnel were available to perform this sort of action at the time. This is properly a project for the arranging archivists after the collection is transferred to the National Archives. The bulk of the materials disposed of consisted of emergency plans, security and intelligence administrative files, contracts, and physical security surveys and inspections.

6. DECLASSIFICATION AND REGRADING ACTIONS: Approximately 25 of the 70 linear feet of TOP SECRET material held by NPRG were marked for destruction. It consisted primarily of emergency plan files. The remaining 45 linear feet (some fire and water damaged from the 1973 disaster) were regraded SECRET and re-united with other common-shipper accessions. Additionally, such individual personnel records as were opportunely found were also reviewed for declassification. In volume this amounted to probably less than 25 for NPRG; however,

some 400 such files in the custody of RCPAC were reviewed as a separate project. It was determined that approximately 242 of these files could be declassified entirely. The remaining files contained non-Army originated documents, principally from the CIA, FBI and State Department. Many of these can probably be declassified after staffing with the proponent authorities. The RCPAC Security Officer, Mr. O. W. Jefferson, was advised that we will undertake to staff these remaining files -- a few at a time as normal demands permit -- after the first of the year. A schedule and working accord to this end will be arranged with Mr. Jefferson early next year.

7. ADMINISTRATIVE SUPPORT BY USARCPAC: Again, RCPAC personnel, principally Dorothy Klos and Mary Lineham, went to great lengths to support me in this project. Overprinted SF 135's prepared by the RCPAC Printing and Bindery Branch greatly facilitated preparation of the 850 new transmittal documents by reducing the amount of repeated typing on each document. Pre-printed paper was also supplied to reduce the amount of Xerox that otherwise would have been required. Copies of the original transmittal documents were prepared as attachments to the new transmittals in order to provide better descriptions for control and future search operations. A sample of this combined Offset-Xerox-Typed product is found at attachment 3.

8. GENERAL COMMENTS ON THE COLLECTION: While the entire collection is of permanent historical value, several items in it stand out with particular clarity. The USAREUR collection of US Forces European Theater (USFET) message traffic on 16mm microfilm for the years 1945-53 is an unusually fine example of this. 14 of these reels were still being held as TOP SECRET until regraded SECRET as as part of this project. Unfortunately, this film has not fared too well through the years in non-humidity controlled storage. It is brittle with age but of fine reproductive quality and still usable.

More PROJECT CANOL materials were also uncovered. These were originally retired by the USA Corps of Engineers, Edmonton, Alberta, Canada, and Alaska Districts. PROJECT CANOL consisted largely of the 1942-44 explorations and investigations which would hopefully lead to the production of aviation fuel from the Alaska North Slope during World War Two. It is probably the father of the current North Slope production and Alaska Oil Pipeline to Valdez. With other materials retired by the US Army, Caribbean, are six reels of 35mm film which appears to be a complete operational log of the Panama Canal from opening of the Canal to the early years of World War Two.

The Joint Commands material (Record Group 334) is largely limited to 1950-52 files of the Far East Command and the United Nations Prisoner of War Command. It contains unusually good records of the operation of the Prisoner of War Camps in Korea until final closing by the Military Armistice Commission. This subcollection also contains some good early material retired by the Korean Military Advisory Group (KMAG) and some limited materials from the Joint US-Brazil Permanent Defense Board and several of the South American USA Military Missions. HQDA Departmental Staff materials (Record Group 319) located at NPRC were retired mainly by DSCOPS with some smaller shipments from the Chief Signal Officer, The Adjutant General, The Chief of Engineers and ACSI. Most of the DCSOPS and

ACSI materials were COFRAM related. For purposes of shipment all were re-coded under Records Group 319. After arrival at WNRC, some bookkeeping corrections will be made to withdraw the TAG, Signal and Engineer materials from this records group and re-identify them under Records Groups 77, 111 and 407 as appropriate.

9. CONCLUSIONS: Totally some 4858 linear feet of classified materials were re-arranged and re-coded for NARS-5 pick-up and control on arrival at WNRC. 1028 linear feet has already been moved. This consists primarily of the materials retired by the numbered and geographical Armies. There remains some 3830 linear feet at NPRC now ready for shipment as soon as space becomes available at WNRC. The remaining 3830 linear feet at NPRC are broken into 660 individual accessions; many of them are single box accessions to better facilitate NARS-5 pick-up and series identification. By and large, most of the remaining 3830 linear feet fall into the following TAFFS Series: 228-01, Historians Background Material Files; 228-06, Annual Historical Summary Files; 228-07, Command Reporting Files, 228-08, Organizational History Files, 502-03, Intelligence Collection Files; 502-04, Scientific and Technical Intelligence Product Files; 502-05, Intelligence Dissemination Files; 1304-14, Technical Report Record Files; and 1410-01, Materiel Engineering Case Files.

There presently exists a discrepancy between the actual physical measurements we arrived at following the inventory and re-arrangement of this collection and the volume carried on the NPRC "Holdings Book." This amounts to about 219 linear feet, i.e., NPRC shows total USA classified holdings "on the books" to be 5545 linear feet. Our actual measurements produced 4858 linear feet to be shipped and 468 linear feet to be destroyed for a total of 5326 linear feet. This reflects a shortage of 219 linear feet. I do not find this alarming. It would be all but impossible for selective disposal through the years, declassification and removal to open stacks, and withdrawal to have been so precisely measured as to come out exactly even. I recommend that this difference be written off and NPRC be instructed to correct its accounts accordingly.

I further recommend that favorable communications be addressed to Mr Essenpreis and Mr Herbig for their outstanding and thoroughly professional services in connection with this project.

I also recommend that this entire collection be offered to the National Archives for permanent transfer at this time.

WASHINGTON, D.C. 20314

REPLY TO ATTENTION OF: DAAG-AMR-D

15 January 1978

MEMORANDUM FOR THE RECORD

SUBJECT: Shipment of the Classified Portion of the St Louis Collection from St Louis to Washington

1. During the period, 21 September 1977 to 3 November 1977, approximately 1000 linear feet of the classified portion of the US Army field commands collection of retired records held by the National Personnel Records Center was shipped to the Washington National Records Center (Accessions: 338-78-0001 thru 338-78-0191).

2. Included in this shipment were the retired records of the numbered and geographical armies as well some arsenal materials. Cost of the shipment was defrayed by the National Archives and Records Service. After the entire classified portion had been brought under intellectual control, it was re-ordered in accession sequence with accession numbers provided by the Washington National Records Center for Fiscal Year 1978.

3. The Army, then, offered NARS funds to ship the remaining 4000 feet of classified material to the Washington National Records Center in late winter 1978. The entire classified collection had not been shipped from St Louis earlier due to limited storage capacity in the Washington National Records Center. Representatives of the NARS Office of Federal Records Center met with the Records Management Division and made the Army a counter proposal. NARS proposed leaving the remainder of the classified materials at St Louis with the larger body of unclassified materials (approximately 38,000 linear feet) to facilitate appraisal of the entire collection.

4. The Army representatives did not object to the NARS proposal provided immediate action would be initiated on the appraisal process. NARS agreed to do this. A senior archivist from Washington would be detailed to the National Personnel Records Center in mid-1978 and would spend approximately one year with the collection. During this period appraisal techniques would be developed to cope with the St Louis Collection and two apprentice archivists would be trained to carry on and complete the appraisal.

5. The appraisal got under way in the fall of 1978 under the direction of Serior Archivist Daniel Rooney from the Central Division of the Office of Federal Records Center, Washington, DC, and is proceeding at a satisfactory rate as of this date.

Standard Form 135 (Rev. 6-76)
Prescribed by GSA
FPMR (41 CFR) 101-11.4

HISTORICAL BACKGROUND: The military organizational records described herein were originally retired to the US Army Records Center, St Louis, and were subsequently placed in the custody of the National Personnel Records Center when the General Services Administration assumed responsibility for this function. On 29 July 1977 by joint agreement between the Assistant Archivist of the United States For Federal Records Centers and the Chief of the US Army Records Management Division, a decision was taken to re-locate all permanent US Army military organizational classified records held by the National Personnel Records Center to the Washington National Records Center for eventual offer to the National Archives and declassification review in accordance with pertinent Executive Orders.

Total Volume of Offers for This Week:		4019 LF
Cumulative Volume of Offers Made To Date:		39062 LF
	GRAND TOTAL	43081 LF

NOTE: This concludes offer action on all known and identifield US Army Field Commands retired organizational records held by the National Personnel Records Center, St Louis. From our experience with the classified materials in the St Louis Collection, we estimate that the Grand Total shown above represents only 90%-95% of the materials actually on the records Center shelves. This condition has been produced by loss of transmittal documents from "THE INDEX" through the years. The Grand Total shown above was arrived at by using only the available documentation. In the case of the classified materials, we still had some 250 linear feet of "unidentified" material still on the shelves of the 3rd Floor Vaul after the available transmittal documentation had been matched physically against actual holdings. Hence, there is probably some 2500-3000 linear feet of similarly "unidentified" unclassified material actually at St Louis, but not reflected in the grand total shown above.

At such time as the materials identified herein have been appraised, representatives of The Adjutant General will examine any additional materials that the appraisal inventory process brings to light and make appropriate recommendations for disposal.

DR. JOHN HENRY HATCHER
Archivist, Records Mgt. Div.
HQDA (DAAG-AMR-D) 763-2744

PHASE II: Master Survey of
UNITED STATES ARMY RECORDS IN FEDERAL RECORDS CENTERS

Report of Examination of Holdings and Findings
in the National Personnel Records Center
St Louis, Missouri 63132

ANNEX F

Sample formats of letter used to offer the St Louis Collection to the National Archives for appraisal and permanent transfer.

Washington, DC 20408

Dear Tom:

Pursuant to paragraph 101-11.411-3f, Federal Property Management Regulations, the following United States Army records are offered for transfer to the National Archives: Approximately linear feet of material originally retired to the National Personnel Records Center, St Louis, by the

These records are further described in the original retirement transmittal documents attached hereto and are located in the National Personnel Records Center except as noted below. Only those materials currently categorized as "Permanent" in The Army Functional Files System (TAFFS) are included in this offer. We assume that disposal materials still listed in the attached documentation are either in process of removal or will be removed at the time of formal appraisal. Dr. John H. Hatcher, telephone 763-2744, is our project manager for this offer.

For the guidance of your appraisal personnel, we should like to offer the following informal observations.

Sincerely,

Inclosure

Dear Tom:

Pursuant to paragraph 101-11.411-3f, Federal Property Management Regulations, the following United States Army records are offered for transfer to the National Archives: Approximately linear feet of material originally retired to the Washington National Records Center by the United States Army

These records are further described in the original retirement transmittal documents attached hereto and are located in the Washington National Records Center except as noted below. Only those materials currently categorized as "Permanent" in The Army Functional Files System (TAFFS) are included in this offer. We assume that disposable materials still listed in the attached documentation are either in process of removal or will be removed at the time of formal appraisal. Dr. John H. Hatcher, telephone 763-2744, is our project manager for this offer.

For the guidance of your appraisal personnel, we should like to offer the following informal observations. Despite current TAFFS categorization of "Permanent" for the records of this organization, we do not believe that either their evidentiary or informational content is sufficiently valuable to justify archival preservation.

Sincerely,

Inclosure

These records are further described in the original retirement transmittal documents identified at Atch #1 and are located in the Federal Archives and Records Center. Only those materials currently categorized as "Permanent" in The Army Functional Files System (TAFFS) are included in this offer. We assume that disposable materials still listed in the attached documentation are either in process of removal or will be removed at the time of formal appraisal. Dr. John H. Hatcher, telephone 763-2744, is our project manager for this offer.

For the guidance of your appraisal personnel, we should like to offer the following informal observations. Despite current TAFFS categorization of "Permanent" for the records of this organization, we do not believe that either their evidentiary or informational content is sufficiently valuable to justify archival preservation.

Sincerely,

Inclosure

GUY B. OLDAKER, Chief
Records Management Division
