ABSTRACT

This project was conducted by the Combat Operations Analysis (COA) Directorate of the US Army Combined Arms Combat Development Activity (CACDA) in support of the Rear Area Combat Operations (RACO) study. (ACN 49559) done by Concepts, Doctrine and Literature (CDL) Directorate from May - August 1979. While the paper is self-sufficient, its background and application will be amplified when read in conjunction with the study report, published separately. The study's objective was to reexamine existing doctrine for security of the Division and Corps rear area. This project developed and evaluated alternative combat forces for the new rear area concept required by the changing roles, missions, operational concepts and threats within the corps and division areas. A multi-attribute utility (MAU) analysis was used to merge several assessments of the over 137 potential force and force combination options. This paper documents the methodology and assessments used to develop those forces.

REAR AREA COMBAT OPERATIONS FORCE DEVELOPMENT

1. GENERAL. The Rear Area Combat Operations (RACO) Relook study included a requirement for a reevaluation of the combat force necessary to counter old and new threats to the newly-defined corps rear area (brigade rear to corps rear). This paper discusses the effort undertaken by the Combat Operations Analysis Directorate of the Combined Arms Combat Development Activity (CACDA) to determine the size and composition of such a force. Because the study was tied to the Division 86 Related Studies timeline, a rapid methodology was required to address the many potential solutions from the large number of forces under consideration. The paper discusses that methodology and a scoring model used in the development of the force options for RACO.

2. REAR AREA COMBAT ANALYSIS TEAM (RACAT). To evaluate and assess the forces under consideration, a Rear Area Combat Analysis Team, or RACAT, was assembled at Fort Leavenworth on 16 July 1979. It was composed of representatives of the Combined Arms Combat Development Activity (CACDA); the Infantry, Armor, and Aviation Centers; the Military Police School; and Institute for Military Assistance. Representatives of CACDA's Concepts, Doctrine, and Literature Directorate briefed the objectives of the studies. CACDA Threats Division and Scenarios and War Gaming Directorate briefed the rear area threat spectrum and SCORES Europe III scenario, respectively, with particular emphasis on the corps rear aspects of each.

3. FORCE AVAILABILITY AND PHASING. The SCORES Europe III scenario established the combat forces that were considered and the time at which they were committed or available for RACO missions during the various phases of the corps battle (discussed in paragraph 5f below). The forces that were considered are listed in table 1. Note that the MPs were considered in company-sized increments, whereas other alternatives were considered in battalion or task force increments to observe the Division 86 concept that the battalion will be the smallest unit for commitment. The task force configurations were standardized at two mech companies and two tank companies. Both corps and division assets were considered. The combat force organizations conformed to the Division 86 configurations shown in figures 1 through 4. The MP companies were assumed to be heavied-up with the high-mobility vehicle. A total of 137 force and force combination options were considered individually (see appendix B).

MP Companies
Special Forces
Dedicated Infantry Battalions*
Combinations of above

*Not in Europe III scenario, but an early additional consideration.

4. THREAT LEVELS. The threats to the corps rear area were defined in the levels shown in table 2. To facilitate analysis, these levels were regrouped, as discussed in paragraph 5c below.

Table 2. Threat Levels.

Level I
1 Agents
2 Saboteurs
3 Terrorists

Level II
4 Diversionary Operations
5 Sabotage/Reconnaissance Platoons

Level III
6 Airmobile Battalions
7 Airborne Regiments

5. SCORING MODEL. To determine which force option of the 137 possible options was best and to document why it was selected, a scoring model was developed. This model required assessments of five characteristics that were recognized as common to the requirement for any rear area combat force. These characteristics were identified as intelligence, reaction, firepower, and mobility capabilities and the penalty associated with diverting an organization from its "normal mission." The "normal mission" penalty became a significant discriminator. Each characteristic is discussed separately below. A definition and measuring scale is given, followed by either the assessment or reference to its location.

a. Intelligence.

(1) Definition. The intelligence capability examined was the ability of the force being considered to bring additional enhancement

to the RACO intelligence network or to exploit the available intelligence. It was the capability associated with detecting the threat. The most difficult threats to detect were the level I threats.

(2) Scale. A scale of 0 to 3 was established for measuring each organization's intelligence capability. If an organization was likely to be able to detect a level I threat, it was given a score of 3. When level II was the most difficult threat that the organization could detect, it was given a score of 2. If a dismounted battalion was the most difficult threat the organization could detect, it was given a score of 1. Organizations that could detect only airborne and motorized threats received a 0.

(3) Assessments. The intelligence assessments for the organizations considered are shown in table 3. Force options that combined these organizations received the highest score of their component organizations.

Table 3. Intelligence Assessments.

Organization	Score
ACAS	1
Armored Cav Sqdn	0
Mech/Armor TF	0
MP Co	3
Special Forces	2
Dedicated Infantry	0
Combinations	*

*Highest of any component organization.

b. Reaction.

(1) Definition. The reaction capability examined the inherent command, control, and communications (C^3) factors of the organization or combined force being considered. Force options composed of mixes of dissimilar organizations that were combined "on-order" were not assessed as having as high a reaction capability as a single type force that habitually plans and controls combat operations.

(2) Scale. A scale of 0 to 3 was established for measuring each organization's reaction capability. The ideal C^3 characteristics received a score of 3; the worst, 0.

(3) Assessments. The reaction assessments for the organizations considered are in table 4.

Table 4. Reaction Assessments.

Organization	Score
ACAS	2
Armored Cav Sqdn	2
Mech/Armor TF	2
MP Co	2
Special Forces	2
Dedicated Infantry	3
Combinations	1

c. Firepower.

(1) Definition. The firepower capability was an assessment of the expected combat outcome between the organization being considered and a given threat force. It assumed that both forces would initially be in contact and that all their organic weapons as well as a normal "slice" of supporting fires would be employed.

(2) Scale. A scale of 0 to 3 was established for measuring each organization's firepower capability. An organization with a capability to eliminate a threat (attack and defeat the threat's mission capability) was given a 3. (Elimination of every element and remaining personnel was considered desirable, but unnecessary.) If an organization could only contain a threat, it was given a 2; 1, if it could only defend itself. An organization incapable of defending itself against the given level of threat was assessed at 0.

(3) Threat levels. Each of the assessments described above was made separately dependent upon the threat level under consideration. Since the need for sensitivity between every threat level was not expected or required, the threats were regrouped to facilitate this analysis. The grouping of threats used in the analysis is shown in table 5. It should be noted that the last three levels were recognized as surge situations of limited duration for the RACO forces. This was an important consideration in assessing the availability of combat forces.

Table 5. Analysis Threat Levels.

Agents, Saboteurs, Terrorists	(Level I)
Diversionary Operations, Sabotage/Recon Platoons	(Level II)
Airmobile Battalions	
Airborne Battalions*	(Level III)
Airborne Regiments	

*Not used in the final analysis.

(4) Assessments. The firepower assessments were numerous, since they were made individually for each combination force option as well as pure organizations. The reader is therefore referred to appendix B, which includes the firepower scores among the data listed for each force.

d. Coverage.

(1) Definition. The coverage capability was the ability of the organization being considered to apply its firepower throughout the corps rear area. It is almost synonymous with the mobility capability and was, in fact, developed by assessing average movement rates that could be expected of each organization. The rate was multiplied by 45 minutes (given as the approximate assembly time for a just-landed airborne regiment), and the resulting radius was used to calculate the circular area that could be covered by the option. The fraction of the total corps area that could be thus covered was used to reduce the raw firepower assessment (discussed in the preceding paragraph).

(2) Assessments. The movement rates assessed for each force are given in table 6. Combined organizations were assigned the rate of the slowest organization.

Table 6. Movement Rate Assessments.

Organization	Score (kph)
ACAS	120
Armored Cav Sqdn	20
Mech/Armor TF	20
MP Co	10
Special Forces[b]	120
Dedicated Infantry[b]	120
Combinations	a

a. Lowest of any component organization.
b. Assumes air assets for force mobility.

e. "Normal Mission" Penalty.

(1) Definition. It was clear to the RACAT that when an organization was given a RACO mission, there could be an expected impact on its primary or "normal" mission. This impact was accounted for in the scoring process by assigning a penalty to be assessed against each option selected for a RACO mission. This penalty considered the total number of units involved in the "normal mission;" e.g., corps reserve. Penalties were assigned for each unit taken from

that mission. The penalty for force options consisting of a combination of organizations was the same as the greatest penalty for a component organization of that option. These penalties became significant discriminators in ranking the forces that were examined for battalion and greater threats.

(2) Scale. A scale of 0 to 3 was established for measuring each organization's mission penalty. When the number of units being considered for RACO missions would not have caused any degradation to the "normal mission" of all the corps' units that were assigned to that "normal mission," then that quantity of units was assessed a score of 3. If there was a minor degradation of that "normal mission," then the quantity of units was assessed a score of 2. A score of 1 indicated a severe degradation; and 0, a total failure of that "normal mission" within the corps.

(3) Battle phases. It was recognized that, because the penalties for some organizations varied in some circumstances, the penalties should be assessed separately by the phase of the corps battle that was being considered. For example, while some mech/armor task forces were uncommitted in both the covering force battle and portions of the MBA battle, using them for RACO was more hazardous during the MBA battle, because their reinforcing capability might be required at the FEBA. The four battle phases are identified in table 7.

Table 7. Battle Phases (for Penalty Assessments)

Covering Force Battle
Initial MBA Battle
Later Stages of MBA Battle (Potential or Actual Breakthrough)
Attack (Counteroffensive)

(4) Assessments. The assessments are given in appendix A.

f. Assessment Weights. The five assessments were then combined for each force alternative as shown in figure 5. Note that the RACAT was asked to assign weights to each assessment, for each threat level, to reflect the assessment's importance to the particular force requirement in the given condition. For example, the intelligence assessment was considered to outweigh all other factors in response to agents, saboteurs, and terrorists, but was relatively less important with regard to airmobile and motorized airborne threats. Every force was given a single score for each threat and battle phase contingency. The scores for each force option were used to rank-order

all 137 options in each contingency situation. Table 8 displays the weights given each assessment.

$Weight_{threat}$ X Intelligence

$Weight_{threat}$ X Reaction

$Weight_{threat}$ X ($Firepower_{threat}$ X Coverage)

$Weight_{threat}$ X "Normal Mission" $Penalty_{battle\ phase}$

$Score_{threat,\ battle\ phase}$

Figure 5. Force Scoring Model.

Table 8. Assessment Weights

	Intelligence	Reaction	Firepower	Mission Penalty	Sum
Agent, Saboteur, Terrorist	75	15	5	5	100
Sabotage/Recon Plt	35	25	25	15	100
Airmobile Bn	10	30	30	30	100
Airborne Rgt	10	20	20	50	100

6. RANK-ORDERED PREFERENCES BY CONTINGENCY. The 137 force options, their component scores, calculated composite score, and assessment weights are contained in appendix B for each contingency. Appendix C contains the same information; however, only qualifying options are included and rank-ordered by their composite score for each contingency. Two criteria were established for force options to receive a ranking. First, they had to have sufficient firepower to eliminate the threat; i.e., have a firepower score of 3. They also had to have no more than a severe "normal mission" penalty associated with their performing a RACO mission; i.e., a score of 1 or more for "normal mission" penalty.

7. "ON-ORDER" FORCE.

a. General.

(1) The first approach taken to develop a combat force for RACO missions was based on three premises. First, initial in-place forces in Europe would probably be insufficient for a dedicated RACO mission. Secondly, MP companies would probably not be capable of eliminating all types of threats. Finally, other combat forces may be

available for limited periods of time for RACO missions on an "on-order" basis.

(2) Based on these premises the rank-ordered lists of force options in appendix C were employed, except that options that included dedicated infantry battalions were ignored. Also, force options with "tie" composite scores were subjectively screened to eliminate irrational choices, such as four ACAS when three ACAS received a tie score. Other subjective considerations could also be incorporated, such as quicker reaction with ACAS than with mech/armor forces.

b. Special Forces. After evaluation by the RACAT, it was concluded that special forces' role in any force option should be limited to base defense training, early detection, and other non-firepower related activities, since their firepower is limited to small arms and can easily be surpassed by that of an MP platoon. Also, their special expertise represented a valuable asset to the corps commander that should not be wasted.

c. Military Police.

(1) For threat levels of less than battalion size, the conclusion was that the MP company would be the initial and primary response because:

(a) Its organic firepower was sufficient to eliminate (defeat) any threat in this portion of the threat spectrum. (See also MP RACO study war games.)

(b) It satisfied firepower requirements by itself, so that the RACO command and control structure was simple and organic, and did not involve coordination with other "ad hoc" elements. Also, MP command elements were most familiar with the rear area and its potential threats.

(c) Finally, it could perform RACO missions with less penalty to the "normal" MP mission in more situations (including a threat breakthrough) than other types of combat forces.

(2) It is important to note, however, that there may be insufficient MP assets to handle all such threats without some dedicated RACO augmentation, which will be discussed in paragraph 8c.

d. Combat Forces.

(1) General. When the battalion-level and greater threats were reached, analysis of the rank-ordered force option lists indicated that combat forces were best. "Normal mission" penalties were the most significant determinant in ordering the rankings and MPs

received the lowest penalties of the non-dedicated units. Nonetheless, the MPs' limited firepower, and consequent relegation to an augmentation role, prevented them from being in leading options.

(2) Combat force availability. The combat forces' firepower was clearly time-phased. Figure 6 presents the availability of combat forces in four phases of battle. Note that while mech/armor task forces were relatively available at early stages, they were associated with increasing penalties to their "normal mission" during later phases. Cavalry was never available in sufficient numbers in Europe III to eliminate battalion-level or greater rear area threats. Similar, intense commitments for all combat forces were envisioned during breakthrough conditions.

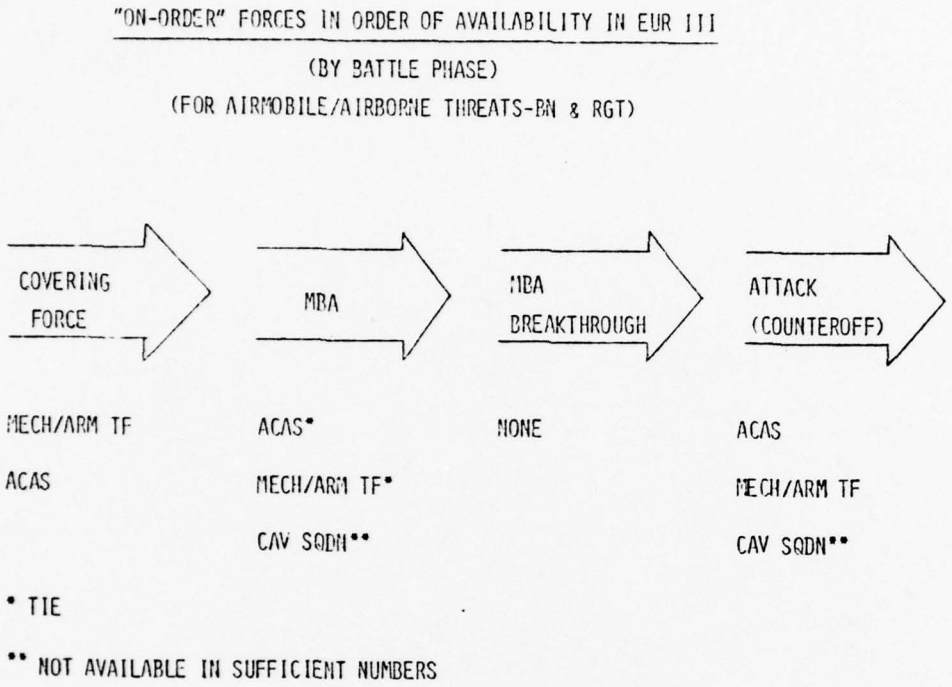

Figure 6. "On-Order" Forces in Order of Availability

(3) "On-order" force options by contingency. These observations led to a conclusion that several "on-order" force options existed. They were based on 16 contingencies of threat and battle phase. These options are displayed in figure 7. Note that, although air cavalry attack squadrons had characteristics that were preferred to mech/armor task forces, the relative availability of four mech/armor task forces made them a higher scoring option in the covering force phase of the corps battle. Note also that no force with firepower sufficient to defeat larger threats was available during a threat breakthrough.

"ON-ORDER" CONCLUSIONS (CONSTRAINED TO EUR III)

(NO "RACO BDE")

BATTLE PHASE \ THREAT LEVEL	AGENTS SABOTEURS TERRORISTS	SAB/REC DIVERSIONARY	AMBL BN*	ABN RGT*
COVERING FORCE	MP	MP	2 ACAS	4 M/A TF
MBA	MP	MP	2 ACAS	3 ACAS
MBA, BREAKTHROUGH	MP	MP	AVAILABLE FORCES LACK FIREPOWER	
ATTACK	MP	MP	2 ACAS	3 ACAS

* SURGE REQUIREMENT OF LIMITED DURATION

Figure 7. Contingency Conclusions for "On-Order" Force Options.

(4) Recommendation. Nonetheless, further evaluation of operational considerations led to the recommendation that "on-order" missions could be given to only one force. The recommendation for the "on-order" force option, then, was three ACAS. Unusual, special contingencies, such as wooded or mountainous terrain or MOUT, would be cause for modifying or adding other type units to the "on-order" RACO force.

(5) Limitations. The premises (listed in paragraph 7a) on which the "on-order" force options were designed imposed several limitations to the force recommended.

(a) The ACAS option does not necessarily achieve total elimination of the threat. MPs could have a significant task in "policing" the battlefield.

(b) Command, control, and communication structures would be on an "ad-hoc" basis within the overall RACO structure.

(c) For any option selected, RACO was a secondary mission and would not necessarily receive the same attention required by the primary, or "normal mission."

(d) Closely allied with this is the fact that there would be some penalty to the "on-order" force's "normal mission" when performing a RACO contingency mission.

8. DEDICATED FORCE.

a. General.

(1) Because of the limitations described in the last paragraphs, another basic force option was considered. This was a RACO force composed of units with a single, dedicated RACO mission. While elements of this force were considered in the initial assessments, such as straight (non-mechanized), infantry battalions, other types of forces were also considered for a dedicated RACO role. These departures from the assumptions on which the assessments were made limited the role of those assessments to one of a data base for starting the development of a dedicated force.

(2) The dedicated RACO brigade would be composed of straight (non-mechanized) infantry battalions and other type forces. It was assumed that assets would be available for force mobility of dismounted elements, although these could be truck assets at times. Finally, this force option could be composed of arriving, as well as in-place, corps units, that are available at H-hour. Alternatively, it could be a CONUS-organized force that might or might not be available in Europe at H-hour. In the latter case, if the dedicated force was not available, the corps commander could either dedicate in-place forces or designate "on-order" forces as discussed in paragraph 7.

b. Military Police. The recommendation for threats less than battalion-level changes only slightly. MPs were again recommended for this end of the spectrum for the identical reasons given in paragraph 7c. But, while MPs still may require assistance from other forces, these forces could now come from dedicated RACO forces, which is discussed next.

c. Combat Forces. For the battalion-level and greater end of the threat spectrum, a dedicated RACO force of two mechanized infantry battalions and one straight (non-mechanized) infantry battalion was recommended, plus one ACAS from corps aviation assets dedicated to RACO. This would allow efficient use of the aviation support structure that exists at corps. Also, since the RACO brigade would be in a dedicated configuration, the original mech/armor alternative developed from the Europe III scenario's in-place task forces could be substituted with pure mechanized battalions, which were sufficiently survivable, potent and less costly. This force recommendation provides rapid response with the ACAS; ground-gaining and

MP-reinforcing capabilities with the infantry elements; survivability and firepower with mechanized elements for the motorized threat; and positive command, control, and communications through its dedicated mission structure.

d. Additional Consideration. The existence of an additional force option was also noted. An airmobile division could be formed into dedicated RACO brigades, one per corps. A brigade would not have the firepower of three ACAS but would still be sufficient to counter the threat. It would also have the advantage of rapid response and habitual association of attack and infantry elements. The questionable availability of such an asset to the corps commander made such an option beyond the scope of this study.

17. DISTRIBUTION STATEMENT (of the abstract entered in Block 20, if different from Report):
N/A

18. SUPPLEMENTARY NOTES:
Presented at the General Officer Workshop at Ft. Leavenworth on Aug 22, 79.

19. KEY WORDS (Continue on reverse side if necessary and identify by block number):
Rear Area Combat, Rear Area Protection, Military Police, Infantry, Armor, Cavalry, Multi-attribute Utility Analysis, Combat Service Support.

20. ABSTRACT (Continue on reverse side if necessary and identify by block number):
This project was conducted by the Combat Operations Analysis (COA) Directorate of the US Army Combined Arms Combat Development Activity (CACDA) in support of the Rear Area Combat Operations (RACO) study (ACN 49559) done by Concepts, Doctrine and Literature (CDL) Directorate from May - August 1979. While the paper is self-sufficient, its background and application will be amplified when read in conjunction with the study report, published separately. The study's objective was to reexamine existing doctrine for security of the Division and Corps rear area. This project developed designs and evaluated alternative combat forces for the new rear area concept required by the changing roles, missions, operational concepts and threats within the corps and division areas. A multi-attribute utility (MAU) analysis was used to merge several assessments of the over 137 potential force and force
