20. ABSTRACT (Continue on reverse side if necessary and identify by block number) This report describes the verification of the sensitivity analysis described in Technical Report 1-80 (TR 1-80), subject, Army 86 Cost Sensitivity Analysis, dated May 1980. The cost methodology described in TR 1-80 was used to cost the Heavy Division 86 C and S-series divisions. A comparison of the costs of these divisions using the cost driver method of costing with the cost of these divisions using the AURS (100 percent) method of costing was performed. This comparison shows that the cost driver methodology is an acceptable more responsive method of force costing than the AURS (100 percent) method of costing.

ABSTRACT

This report describes the verification of the sensitivity analysis described in Technical Report 1-80 (TR 1-80), subject, Army 86 Cost Sensitivity Analysis, dated May 1980. The cost methodology described in TR 1-80 was used to cost the Heavy Division 86 C and S-series divisions. A comparison of the costs of these divisions using the cost driver method of costing with the cost of these divisions using the AURS (100 percent) method of costing was performed. This comparison shows that the cost driver methodology is an acceptable more responsive method of force costing than the AURS (100 percent) method of costing.

SENSITIVITY ANALYSIS VERIFICATION

1. **INTRODUCTION.** This report contains the verification of the sensitivity analysis (described in Technical Report 1-80 (TR 1-80) reference 1) based on the Heavy Division 86 study. The verification was added to the original tasking of reference 1 at the direction of TRADOC HQs on 18 Dec 79.

2. **DISCUSSION.** The sensitivity analysis verification compares the cost data developed during the Heavy Division 86 study with cost data developed, for the same forces, using the cost driver methodology. The Heavy Division 86 study cost data is based on the 100 percent costing methodology. The verification compares costs at the division level, at DIVARTY/DISCOM, battalion and separate company level. All costs are reported as thousands of FY 80 dollars for a 20 year period. The cost data tables are located in paragraph 6.

3. DIVISION LEVEL VERIFICATION.

a. General. The division level verification compares the cost of the S-series Heavy Division with the C-series Heavy Division. The 100 percent cost methodology data for these divisions are taken from the cost portion of the Heavy Division 86 Study.

b. Organizations. The division organizations used in this verification are:

- (1) C-Series Armor Division - SRC 17000C010
 - With 6 Tank Battalions
 - 5 Mech Infantry Battalions
 - Total Personnel 19,416
- (2) S-Series Armor Division - SRC 17000S610
 - With 6 Tank Battalions
 - 4 Mech Infantry Battalions
 - Total Personnel 19,887

Table 1 is a comparison of the differences in the number of selected major systems between the C and S series divisions and is shown for purposes of comparison.

c. Total Division Costs. The total costs for the C-series and the S-series armor divisions (based on 100 percent cost methodology), less those items of equipment listed on Table 2, are shown below:

	<u>C-Series Div</u>	<u>S-Series Div</u>
MOS FILE COSTS	\$ 8,462,008.	\$ 8,977,049.
EQUIP FILE COSTS	<u>\$ 5,632,785.</u>	<u>\$ 6,566,823.</u>
TOTAL	\$14,094,793.	\$15,543,872.

The total costs for each division were compared with the total costs developed in the heavy division 86 study.

The percent of each division's costs found in the MOS files and the equipment files are:

	<u>C-Series Div</u>	<u>S-Series Div</u>
MOS FILE COSTS	60.0	57.8
EQUIP FILE COSTS	<u>40.0</u>	<u>42.2</u>
TOTAL	100.0	100.0

The percent change in the cost of the C-series division when compared to the S-series division is:

	<u>C-Series Div</u>	<u>S-Series Div</u>	<u>Percent Change</u>
MOS FILE COSTS	\$ 8,462,008.	\$ 8,977,049.	6.1
EQUIP FILE COSTS	<u>\$ 5,632,785.</u>	<u>\$ 6,566,823.</u>	<u>16.6</u>
TOTAL	\$14,094,793.	\$15,543,872.	10.3

The percent of the change that is attributable to the MOS files is 35.6 percent and for the equipment file is 64.4 percent. The major difference in cost between the two divisions is equipment related.

d. Cost Drivers. The list of cost drivers for the C- and S-series divisions is based on the definition found in paragraph 3f of the main report (see reference 1). Based on this definition and the FCIS equipment descriptive data pages for each division, cost driver lists were developed. These lists of cost drivers can be found in paragraph 7, table 15 for the C-series division and table 29 for the S-series division. The number of line item numbers that are cost drivers for each of the two divisions is shown below;

<u>Division</u>	<u>Total Number of Line Items</u>	<u>Number of Cost Drivers</u>	<u>Percent of Total That are Cost Drivers</u>
C-Series	1326	145	10.9
S-Series	1118	142	12.7

e. Division Costs with Cost Driver Costs.

(1) The cost of each division based on adding the MOS file cost and the cost driver costs will provide a total cost which is less than the costs developed using the 100% cost methodology. These division costs are shown below;

	<u>C-Series Div</u>	<u>S-Series Div</u>	<u>Percent Change</u>
MOS FILE COSTS	\$ 8,462,008.	\$ 8,977,049.	6.1
COST DRIVER COSTS	<u>\$ 4,873,035.</u>	<u>\$ 5,806,917.</u>	<u>16.1</u>
TOTAL	\$13,335,045.	\$14,783,966.	10.9

(2) The delta cost change using this method compares favorably to costing 100 percent personnel and 100 percent equipment in each division force. The delta change using three significant figures is 10.9 percent compared to 10.3 percent, a difference of less than 0.5 percent.

(3) An analysis of the costs compared to the total equipment file shows that this method picks up a majority of the delta change between the division forces by using all cost driver costs and is shown here:

	<u>C-Series Div</u>	<u>S-Series Div</u>	<u>Percent Change</u>
EQUIP FILE COSTS	\$5,632,785.	\$6,566,823.	16.6
COST DRIVER COST	\$4,873,035.	\$5,806,917.	16.1
OTHER EQUIP FILE COSTS	\$ 759,750.	\$ 759,906.	.5

The percent of the change that is attributable to the costs associated with the cost drivers is 16.1 percent, leaving only .5 percent attributable to the remaining costs in the equipment file.

(4) Another way to look at these numbers is to see what percent of each division's total 20-year costs are captured by using this method of costing when compared to costing 100 percent personnel and 100 percent equipment costs. As shown below, approximately 95 percent of each division's total 20-year cost is captured by this methodology. This data is taken from table 12 for the C-series division and table 13 for the S-series division.

	<u>C-Series Div</u>	<u>S-Series Div</u>
COST DRIVER COSTS	\$ 4,873,035.	\$ 5,806,917.
MOS FILE COSTS	\$ 8,462,008.	\$ 8,977,049.
(COST DRIVER METHODOLOGY) TOTAL	\$13,335,043.	\$14,783,966.

	<u>C-Series Div</u>	<u>S-Series Div</u>
(100% COST METHODOLOGY) TOTAL	\$14,094,793.	\$15,543,872.
% OF TOTAL COST CAPTURED (USING COST DRIVERS)	94.6	95.1

f. Conclusions. The relative error for these division forces, comparing the cost using cost drivers against 100 percent costing, is less than 6 percent. The relative error for the C-series division is 5.4 percent and for the S-series division is 4.9 percent. The difference in the delta cost of the S-series division compared to the C-series division is 10.3 for the AURS method and 10.9 for the cost driver method of costing, a difference of .6 percent. These small relative errors and difference in the delta cost are another indication that the cost driver method of costing is an acceptable substitute for 100 percent costing via the FCIS.

4. BATTALION LEVEL VERIFICATION.

a. General. The battalion level verification will address the units, battalions and separate companies examined in the heavy division 86 studies. These C-series and S-series units will be used to evaluate the cost driver methodology. This verification will address the accuracy achieved in costing units at this level of detail based on the cost driver methodology and to further refine this methodology. Costs will be developed for each battalion and separate company using both methods of cost development, 100 percent costing and the cost driver method of costing. Both of these cost methods will use 100 percent of personnel costs; only the specific items of equipment to be costed will be varied.

b. Organizations.

(1) The units listed below by SRC number are addressed in the Heavy Division 86 Study and are therefore used in this evaluation.

<u>UNIT NAME</u>	<u>C-Series</u>	<u>S-Series</u>
DIV HHC	17004C000	17204S600
BDE HHC (3)	17042C000	17242S600

AV BN/ACAB	17085C700	17201S600
CAV/RECON SQDN**	17105C020	17205S610

*Includes NBC Co.

**Recon now in ACAB; shown separately here for comparison

(2) The number of personnel in each unit evaluated in the Heavy Division 86 study is shown on table 3 for information purposes. The S-series division has an increase of 468 personnel over the C-series division due to the reorganization of the division structure and account for 35.6 percent in the increase in cost of the S-series division over the C-series division.

c. Total Unit Costs.

(1) The cost data and the percent change in cost of an S-series unit when compared to a C-series unit is taken from the Heavy Division 86 Study and is shown on table 4. These costs are further broken down for this verification as equipment file and MOS file costs. This cost data is listed separately for the units in the C-series and the S-series divisions, and is shown in table 6 for the C-series division units and table 7 for the S-series division units.

(2) The percent of each unit's cost captured for MOS cost file is shown on table 8 for the C-series division units and on table 9 for the S-series division units. These tables reflect the percent of each unit's cost that will be affected using the cost driver method of costing since the cost data on the MOS file is held constant.

d. Cost Drivers.

(1) The selection of cost drivers for each of the units in the C- and S-series divisions are based on those selected for the total division. Tables 10 and 11 show the number of each unit's line items that are considered to be cost drivers and the percent of each unit's line items that are cost drivers. Paragraph 7 contains the cost driver lists for each of the units costed in this study.

e. Unit Costs with Cost Drivers.

(1) The cost of each division unit based on the MOS file and the cost drivers will provide a total cost that is less than the cost developed using the 100 percent method of costing. The cost for each unit based on the cost driver method of costing and the percent of the total costs (100 percent method of costing) captured using cost drivers is shown on tables 12 and 13. Table 12 contains the cost data for the C-series division units and table 13 contains the cost data for the S-series division units.

(2) Tables 14 and 15 are a comparison of the costs for each unit based on both methods of costing (cost driver and 100 percent method), and show the delta cost difference and the percent of relative error between both cost methods. Table 14 contains this information for the C-series division units and table 15 contains this information for the S-series division units.

f. Delta Cost Change.

(1) The percent change in cost of the units in the S-series division compared to the same type units in the C-series division, taken from tables 4 and 5, are shown below using both methods of costing:

% Change in Cost of S-Series Units
Compared to C-Series Units

<u>Unit</u>	<u>Heavy Division 86 Study Results</u>	<u>Cost Driver Methodology Study Results</u>	<u>Difference</u>
DIV HHC	59.8	57.8	-2.0
BDE HHC (3)	37.6	36.8	- .8
MP CO	41.1	41.0	- .1
SIG BN	28.3	32.3	+4.0
CEWI BN	62.0	63.6	+1.6
AD BN	35.0	33.7	-1.3
ENG BN	18.0	18.9	+ .9
DIV ARTY	10.5	12.2	+1.7
DISCOM	21.8	20.4	-1.6
TANK BN (6)	9.6	11.1	+1.5
MECH BN (5/4)	10.7	12.6	+1.9
AVN BN/ACAB	64.1	64.4	+ .3
CAV/RECON SQDN	39.1	38.8	- .3
TOTAL DIV	10.3	10.9	+ .6

With the exception of the AD Bn the cost driver and AURS results are within 5.0 percent.

The percent difference comparing the results of the two cost methods indicate that the cost driver methodology is an acceptable more responsive cost methodology.

5. CONCLUSION.

The sensitivity analysis verification has shown that the cost driver methodology can be used in place of the AURS costing procedures (100 percent costing).

6. VERIFICATION DATA TABLES.

The cost data tables referred to in this report are included in this paragraph.
