Marine Corps Research and Development Objectives Document (RADOD).

1. INTRODUCTION. The Marine Corps Research and Development Objectives Document (RADOD) was conceived in July 1971. It was intended to provide an essential framework of R&D objectives derived from, and in support of, the Marine Corps Long-Range Plan and the Marine Corps Midrange Objectives Plan. Initially published as a yearly Marine Corps bulletin, it has in recent years been promulgated in the form of a report from the Marine Corps Development and Education Command.

2. PURPOSE. The purpose of RADOD is to provide the research and development community a reference of research and development projects of interest to the U. S. Marine Corps.

3. SCOPE. RADOD contains a consolidated inventory of documents which reflect the current Marine Corps research and development activities. Documents originating from other services which relate to the attainment of Marine Corps objectives are included.

4. RECOMMENDATIONS. Comments and recommendations on RADOD are invited. Correspondence should be addressed to the CG, MCDEC (Code D 035), or call (AUTOVON 278-2873/2874).

FORWARD

1. OBJECTIVE. The current objective of the Marine Corps Research and Development Objectives Document (RADOD) is to facilitate the task of structuring an R&D program which supports the Marine Corps Midrange Objectives Plan (MMROP). It attempts to bring together information derived from the Marine Corps Long Range Plan, the Marine Corps Mission Area Analysis and joint service planning documents which impact on Research and Development in the Marine Corps. This will facilitate the formulation of a Research and Development "Blueprint" and provide the Director of the Development Center the means to evaluate the direction of the R and D effort within the Marine Corps and to aid him in making decisions to effect any necessary redirection of that effort.

2. ADMINISTRATIVE. The value of RADOD to the user is directly proportional to the accuracy and comprehensiveness of its content. It is imperative then that this Activity (Code D 035) receive timely feedback from those users who have explicit knowledge of program and project changes which ultimately affect the accuracy of RADOD's content. A continuous flow of information from this office to the user and back again should increase the value of this publication significantly in subsequent editions.

3. GENERAL. Several significant changes have been made to the structure of the RADOD. First, the information concerning the status of Marine Corps R&D requirements documents has been computerized. Information stored within the computer memory serves as the source data for the RADOD report. To this end, a program has been designed which correlates requirements documents with ongoing programs. This is the essential function of RADOD, i.e., to show how the R&D program is supporting the anticipated future needs of the Corps. The second major change in the RADOD structure is the use of the Secretary of Defense's Mission Area Structure (MA) for R&D program identification. This structure provides the primary breakdown of the R&D effort and replaces the R&D Objectives used in previous editions. This change was directed by the Under Secretary of Defense for Research and Engineering letter of 26 February 1979.

a. Section I is a computer generated report which depicts ongoing projects based on their MA's. All Task Area Plans (TAPS), Studies, Proposed Exploratory Development Efforts (PEDES), and Work Directives pertaining to a particular MA will be listed in column A. Column B will initially show all Navy and Marine Corps Requirements Documents which are related to a particular TAP, PEDE, Study, or Work Directive. Reading horizontally and then down until the next entry appears in column A will show all documents which have a direct relationship to the column A entry. Column B information will show the title of the Work Directive, TAP, PEDE, or Study involved, followed by the CDSA Control number of the related document on the next line. For

example, on page I-5, Work Directive C0011D (Tank Weapon System) is listed in column A under MA 211.2. Column B shows that there are three separate requirements documents which pertain to that Work Directive. Column C performs the same function as column B except that it reflects the documents of other services. The final entry for each MA segment is a listing in columns B and C of all requirements documents on file which have been assigned to that MA, whether related or not to any development effort. In this listing, the information is changed to show the actual title of the document (first two lines), then the service which originated the document, followed by the CDSA Control number on the last line. An example taken from page I-5 is shown below:

Recovery Vehicle Fully Tracked Medium
M88 Product Improvement
USA LGS 6923

Note the difference between this entry and the entry of the same program in the correlation segment of the report (page I-4):

Tank Weapon System
LGS 6923

In the latter entry, the title may or may not be the same as the document title. In no case will the service origin be seen when showing a relationship to an ongoing project. This is only found in the second phase of the MA segment.

b. Section II lists all studies, TAP's, work directives and PEDES included in RADOD and gives their page reference in section I.

c. Section III lists all promulgated, proposed, and draft Marine Corps Required Operational Capabilities (ROC's), as well as Mission Elements Need Statements.

d. Section IV lists all interservice harmonization documents in which the Marine Corps has expressed interest.

e. Section V lists all recently published Developmental Bulletins and Operational Handbooks.

4. TERMS/DEFINITIONS/EXPLANATIONS

a. Study. A critical examination and investigation of a subject leading to conclusions and recommendations making substantive contributions to planning, programming, and decision-making. All studies listed in the RADOD are formal efforts included in the Marine Corps Studies Program.

b. Task Area Plan. A Task Area Plan (TAP) describes a specific exploratory development objective, within a given time frame, with a specified level of support.

c. Work Directive. Work Directives are formatted instructions for the accomplishment of specified efforts in advanced development, engineering development, or operational systems development.

d. Draft Requirements. Draft requirement documents are those which have been formally drafted and are being staffed to the FMF and CNM for comments and recommendations.

e. Proposed Requirements. Upon completion of coordination and staffing, proposed requirements are submitted to CMC (Code RD) for approval and promulgation.

f. Developmental Bulletin. Developmental Bulletins are temporary publications which describe the purpose, distribution, employment, and/or maintenance of equipment developed for use by the Fleet Marine Forces.

g. Operational Handbook. Operational handbooks are "how to" publications promulgating information and instructions relating to developing doctrine, tactics, techniques, and organizational structure.

5. DISTRIBUTION LIST CHANGES. This distribution of the RADOD is made to those addressees who are expected to have use for the document in executing their R&D functions. Addressees are requested to make recommendations concerning distribution changes to the CG, MCDEC (Code D 035).

USMC RESEARCH AND DEVELOPMENT OBJECTIVES DOCUMENT (RADOD)

SECTION IV
LIST OF INTERSERVICE HARMONIZATION REQUIREMENTS DOCUMENTS

Harmonization of Other Service Requirements Documents

1. Requirements documents of other services (Army ROC, Air Force ROC, and Navy R&D Plan/Operational Requirement (OR)) are reviewed to determine their potential to satisfy Marine Corps materiel requirements. When such operational requirements documents adequately reflect a Marine Corps requirement (with or without modification) they can be stated as official Marine Corps operational requirements documents. All subsequent changes in these documents or in the related Marine Corps requirements must be carefully reviewed to assure that acceptability of the other service's stated requirement is not nullified.

2. Other services' requirements documents are normally forwarded to CMC (Code RD) and the CG, MCDEC for interservice harmonization. The CG, MCDEC is responsible for preparing and submitting to CMC (Code RD) a recommended Marine Corps position on documents forwarded for harmonization, including a recommendation whether the document should be promulgated as a Marine Corps ROC. In addition, it may be appropriate in the response to declare "official interest" in the other service acquisition program.

3. The following list contains all documents forwarded by other services for harmonization, for which the Marine Corps has declared an interest. The list also contains a brief description of the Marine Corps position in connection with the project.

HARMONIZATION - LOGISTICS (AUG 1980)

SECTION VI
MISSION AREA STRUCTURE DEFINITIONS

<u>Mission Area</u>	<u>Mission Element</u>	<u>Mission Element Sub-Category</u>
210		Land Warfare Addresses those efforts directly related to the projection of tactical combat power on a land mass.
	211.0	Close Combat Addresses those efforts directly related to the acquisition of direct combat power except air defense and indirect firepower. Included are Army and Marine Corps programs for light weapon combat mobility and firepower attack helicopters and anti-armor capabilities.
		211.1 Infantry Systems/Light Weapons
		211.2 Armor
		211.3 Anti-Armor/Material
	212.0	Fire Support Addresses those efforts directly related to the acquisition of indirect fire combat power. Included are programs for field artillery weapons and communications, terminal homing munitions and missiles, ship-based guided and ballistic gunnery systems.
		212.1 Artillery & Organic Comm Equip.
		212.2 Mortars
		212.3 Rockets/Missiles
		212.4 Survey
		212.5 Meteorological
		212.6 Special Purpose Weapons
		212.7 Munitions
		212.8 Terminal Homing Weapons

<u>Mission Area</u>	<u>Mission Element</u>	<u>Mission Element Sub-Category</u>
	213.0	Ground Air Defense Addresses those efforts directly related to the development of air defense of all ground forces, including air bases, port facilities, etc.
	213.1	Missiles/Rockets
	213.2	Other Weapon Systems
	214.0	Mine Warfare Addresses those efforts related to mine/counter-mine warfare (including air delivered mine barrier systems).
	214.1	Mine Countermeasures
	214.2	Land Mines
	214.3	Barrier Systems
	215.0	Land Combat Support Addresses those efforts directly related to combat engineer efforts, NBC warfare and non-systems related tactical night vision devices.
	215.1	Engineer
	215.2	Nuclear, Biological, Chemical
	215.3	Explosive Ordnance Disposal
	215.4	Tactical Night Vision Devices
	215.5	Combat Support Vehicles
	215.6	Other Operations
	216.0	Land Combat Service Support Addresses those efforts directly related to capabilities which provide land tactical commanders, supply, maintenance, energy, aviation and medical support (except troop and supply transport which is part of Airlift, MA 261).

<u>Mission Area</u>	<u>Mission Element</u>	<u>Mission Element Sub-Category</u>
		216.1 Individual Clothing and Equipment
		216.2 Supply & Maintenance
		216.3 Services
		216.4 Shelters
		216.5 Combat Service Support Veh.
		216.6 Medical and Dental
		216.7 Mobile Electric Power
220		Air Warfare Addresses those capabilities required for counter-air, close air support, interdiction, defense suppression, special operations, and air warfare support. Includes capabilities required for rescue and recovery operations.
	221.0	Counter Air Addresses capabilities required to counter enemy air operations; includes neutralizing aircraft in the air as well as on the ground, plus airfields and support facilities; excludes fleet air defense.
	222.0	Offensive Air Support/CAS/Interdiction Addresses those capabilities required to conduct offensive air operations against hostile targets which are in close proximity friendly forces. This includes support of amphibious landing operations, as well as efforts for attacking both the first and second elements of an enemy's ground order of battle and for halting an armored attack.
		222.1 Weapon Systems
		222.2 Aircraft
	224.0	Defense Suppression Addresses those capabilities to degrade, neutralize or destroy fixed and mobile surface (land/sea)-based elements of enemy air defense systems.

<u>Mission Area</u>	<u>Mission Element</u>	<u>Mission Element Sub-Category</u>
	225.0	Air Warfare Support Addresses those capabilities required to support all air warfare mission areas including NBC programs, medical and life support, and rescue and recovery capabilities. Also includes capabilities required to perform heavy repair civil engineering. Also addresses Air Force special operations capabilities required to support foreign internal defense, psychological operations, unconventional warfare and other functions considered adjunct to or in support of the full spectrum of military operations.
	225.1	Clothing and Equipment
	225.2	Supply and Maintenance
	225.3	Aircraft Non Weapon Systems
230		Naval Warfare Addresses those efforts directed at establishing control over maritime areas, use of such control to conduct tactical operations against land targets (except as such operations involve tactical aircraft), and disrupting enemy attempts to utilize maritime forces to strengthen and assist his operations.
	235.0	Amphibious Warfare Addresses those efforts required for limited interventions, as well as part of a major conflict, directed at supporting friendly countries or seizure or neutralization of enemy-held territory or facilities through landing sea-based special warfare forces.
	235.1	Assault Amphibious
	235.2	Naval Gunfire
	235.3.	Amphibious Reconnaissance
	237.0	Naval Warfare Support Addresses those efforts directed at supporting forces and systems assigned to other naval warfare mission categories. Includes logistics, maintenance and repair, training, transportation, search and rescue, NBC warfare, medical support, etc.

<u>Mission Area</u>	<u>Mission Element</u>	<u>Mission Element Sub-Category</u>
240		Tactical Nuclear Warfare Addresses those capabilities required to complement and provide a link between conventional and strategic nuclear forces (intended to deter theater nuclear and conventional attacks and to respond, as appropriate, in the event of attack).
	243.0	Defensive Tactical Nuclear Warfare Addresses those capabilities for maintaining defensive nuclear capability in a theater. (Includes surface-to-air missiles and atomic demolition capabilities.)
250		Theater and Tactical Command, Control, Communications & Intel Addresses the capability to provide survivable, reconstitutable, secure and interoperable means for theater and tactical force management and technical support of theater nuclear and general purpose force operations prior to, during and after conflict short of general war.
	254.0	Tactical Command, Control and Intel Systems Addresses those capabilities required to command and control tactical units. Includes tactical information systems, command and control of task force air defense, anti-submarine warfare and amphibious operations, and area and autonomous identification systems.
	254.1	Ground Tactical Command & Control System
	254.2	Aviation Tactical Command & Control System
	254.3	Tactical Intel Systems
255.0		Tactical Surveillance, Reconnaissance and Target Acquisition Addresses the capability to determine movement, character, and disposition of hostile units and the acquisition of targets for direction of tactical firepower. Includes airborne surveillance in support of air defense and command and control. Excludes target acquisition capabilities that are integral to a given weapon system.

<u>Mission Area</u>	<u>Mission Element</u>	<u>Mission Element Sub-Category</u>
	256.0	Tactical Communications Addresses the capability to communicate with, and between, tactical units.
	257.0	Electronic Warfare and Counter C ³ -I Addresses the capability to target, disrupt, deceive and exploit hostile electromagnetic equipment and systems. Includes self-protection systems.
260		Mobility Addresses the capabilities required to project, resupply and support military forces deployed by inter-theater, intra-theater, and administrative airlift, sealift and land transportation; air refueling for strategic forces, tactical forces; airlift forces; sea-refueling in support of ships at sea; and the capabilities required for medical evacuation and non-combatant airlift.
	261.0	Airlift Addresses those capabilities required for air transportation to rapidly project substantial combat ready forces to any location worldwide and to provide intra-theater air transport to support theater operations. Includes capabilities required for inter-theater deployment; air, land, air drop or extraction; medical and non-combatant evacuation, logistical airlift, executive and mission support; airborne operations; and special air support operations such as the Joint Airborne Communication Center/Command Post.
		261.1 Assault Support
	262.0	Sealift Addresses those capabilities which maintain, improve and develop the capability to transport passengers and cargo (including POL and mail) by both military and commercial carriers, including military cargo, tanker, and support ships. Excludes capabilities for seaport terminal operations, traffic management, integral command and control systems, and the Defense Freight Railway Interchange Fleet.

<u>Mission Area</u>	<u>Mission Element</u>	<u>Mission Element Sub-Category</u>
	264.0	Refueling Addresses those capabilities required to maintain, improve and develop refueling of ships at sea, air-lift aircraft, and tactical fighters. Includes the dual role advanced tanker/cargo aircraft and replenishment of ships.
	264.1	Tactical Refueling
320		Defense Wide C³-I Support Addresses the capabilities required for providing informational and communications support to defensewide activities/operations.
	321.0	Navigation and Position Fixing Addresses the capabilities required for global, local and autonomous electromagnetic and inertial means for vehicle navigation and position fixing for multi mission or multi-platform operations. Includes mapping, charting, geodesy, microwave landing systems, and precise time and time interval (PTTI) activities.
	321.1	Navigation
	321.2	Position Fixing
	322.0	Support and Base Communications Addresses the communications capabilities required for headquarters, range and test facilities, bases and support operations.
	324.0	COMSEC Addresses the capability to protect U.S. telecommunications from exploitation.
430		Non-System Training Devices Provide the services with training devices and simulator prototypes. Among the goals are cost-effective training devices for operating and maintenance personnel, conservation of resources, improved proficiency, realistic warfare training, and flight training improvements. Although cost-effectiveness is a major factor in developing training devices, improved proficiency of personnel in the performance of their work is a necessary and essential goal of this program.

<u>Mission Area</u>	<u>Mission Element</u>	<u>Mission Element Sub-Category</u>
	431.0	Training Devices/Simulators
		431.1 Training Devices
		431.2 Simulators
450		Test and Evaluation Support Provide resources to support DoD test and evaluation programs.
	453.0	Joint Test and Evaluation Provide for a program of tests of weapon systems wherein the assets of one or more of the Services are used with or against the assets of another Service.
		453.1 Weapon System Testing
	454.0	Other Test and Evaluation Support Provide for generalized instrumentation, equipment, facilities and methods for support of weapon system testing, including radar, telemetry, communications, scoring systems, test data processing systems, underwater sensors, threat and environmental simulation devices, developmental and operational testing techniques, test support ships and aircraft, system survivability assessment and improvement techniques, electromagnetic pulse and interference facilities and techniques, instrumentation, and procedures for testing at sea.
		454.1 Weapon Sys. Testing Support Facilities
460		International Cooperative RDT&E Addresses efforts related to achieving improved Rationalization, Standardization and Interoperability through data exchanges, joint projects, evaluation of foreign weapon systems, material or related technology.
	461.0	Rationalization, Standardization, and Interoperability of Related Technology
		461.1 Data Exchange/Joint Projects Evaluation of Foreign Weapons Systems

<u>Mission Area</u>	<u>Mission Element</u>	<u>Mission Element Sub-Category</u>
470		Management Support Addresses miscellaneous management support activities which cannot be identified with any other major mission area.
	471.0	General Management Support Addresses miscellaneous management support activities which cannot be identified with any other mission area.
520		Exploratory Development Addresses those capabilities required by the Services to solve broadly defined problems, short of major development programs, in order to develop and evaluate technical feasibility.
	521.0	Electronic and Physical Sciences Addresses those capabilities required to provide Service Exploratory Development programs for design and development of military equipment to provide functions such as search, target acquisition, fire control, command and control, information processing, electronic warfare and night vision.
	521.1	Target Acquisition
	521.2	Training
	521.3	Command and Control
	521.4	Human Resources
	521.5	Electronic Warfare/ECM
	521.6	Supply, Logistics and Maintenance
	521.7	Surveillance
	521.8	Communications
	521.9	Electronics

<u>Mission Area</u>	<u>Mission Element</u>	<u>Mission Element Sub-Category</u>
	522.0	Environmental and Life Sciences Addresses those capabilities required to provide Service Exploratory Development programs that lead to better understanding of land, atmosphere and space as they affect the health and welfare of military personnel and the operation of military equipment, as well as the reduction of pollution in the environment. Also, includes technologies relating to the human resource needs of the military.
	522.1	Land, Atmosphere and Space effects on Health and Welfare of personnel
	522.2	Land, Atmosphere and Space effects on the Operation of equipment
	522.3	Reduction of Pollution in the environment
	523.0	Engineering Technology Addresses capabilities required for Service Exploratory Development programs in aircraft, tanks, propulsion, vehicles, bombs, missiles, materials, structures, etc., for design and development of weapon systems.
	523.1	Aircraft
	523.2	Tanks
	523.3	Engineer
	523.4	Vehicles
	523.5	Munitions
	523.6	Missiles/Rockets
	523.7	Materials
	523.8	Structures
	523.9	Artillery
