ACKNOWLEDGMENTS

This study was undertaken because of the initiative of CDR Steven Claassen, Chief of Naval Operations (OP 120E), who posed the problem of an equipment-based approach to linking training courses to the platforms whose readiness they support. The authors also wish to acknowledge the kind cooperation and professional support of Mr. Don Redmond and Mr. George Stupi of the Navy Maintenance Support Office and Mr. Ken Sterner of the Naval Air Technical Services Facility who provided the 3-M data that made the study possible. Special thanks go to Mr. Robert Bomia who developed the software that combined the data sources and TAEG inputs into the study data base.

SECTION I

INTRODUCTION

The planning and programming of training is an integral part of the planning and programming process for Navy operations. The justification of resources in support of training requirements is a crucial part of this process. Specifically, the justification of training courses for existing procedures and weapon systems, or in anticipation of emerging systems, has been difficult to accomplish within requirements of the resource planning process. The problem for training resource analysts (i.e., in the Naval Education and Training Command (NAVEDTRACOM), Chief of Naval Operations, Department of the Navy, Department of Defense, and the Congress) is to establish a meaningful and measurable relationship between the cutputs of a training course and its contribution to some aspect of Fleet readiness. This report addresses the problem of linking training courses to Fleet ship and aircraft platforms. It describes the rationale, methodology, and data which will contribute to problem solution.

BACKGROUND

At the request of the Chief of Naval Operations (OP-120E) the Chief of Naval Education and Training (CNET) tasked the Training Analysis and Evaluation Group (TAEG) to develop a training course data base which would be more useful in supporting course resource requirements in Program Objective Memorandum (POM) submissions. Preliminary results of the study were briefed to OP-120E in September 1980. Final results of the study were presented to OP-120 on 8 October 1980.

PURPOSE

The purpose of this study was to examine the feasibility of using an equipment-based approach to link training courses to ships and aircraft in the Fleet.

The specific objectives of the study were to:

- identify and examine the relevant data bases (CANTRAC, NITRAS, ZBD, and 3-M)
- identify and examine equipment-related data elements contained in the relevant data bases to determine if they can be used to provide a link
- develop an equipment-based methodology to link Navy training courses to specific ships and aircraft.

ORGANIZATION OF THE REPORT

In addition to this introductory section, the report contains two other sections and six appendices. Section II presents a detailed description of the data bases used in the study and the methodology developed to link courses with the platforms. Various examples showing the use of the methodology are

provided. Section III discusses the results of the study, the limitations of the data bases and methodology, and provides a recommendation. Appendices A through F contain course listings for the various outcomes (e.g., Course not in CANTRAC, No Specific Equipment in CANTRAC, Equipment in CANTRAC, Not in 3-M) resulting from this approach.

SECTION II

METHOD

This section describes the courses to equipments to platforms linkage procedures, the data sources, and the final data base that was created. Examples of actual courses and associated data are cited so that the explanation of the process studied can be more meaningful. Furthermore, it is hoped that the description of the approach studied will stimulate additional efforts both to use and improve its potential as an aid in training management decision making.

COURSES-EQUIPMENTS-PLATFORMS LINKAGE PROCEDURES

An idealized flow diagram of the approach is depicted in figure 1. Part of the process is automated. However, the process still relies heavily on manual processing. The procedure includes the following steps:

1. Identify a training course by its course identification number (CIN) in the Zero Base Displays (ZBD) listing.

2. Use the CIN to look up the CANTRAC course description.

3. Identify the ship or aircraft directly or identify any equipment mentioned in the Course Title or Purpose or Scope sections of the CANTRAC course description.

4. Find any equipments mentioned in the 3-M reference code book.

5. Match equipments or equipment codes found with ships/aircraft using either the 3-year maintenance reporting data base of 3-M or the aircraft identification codes.

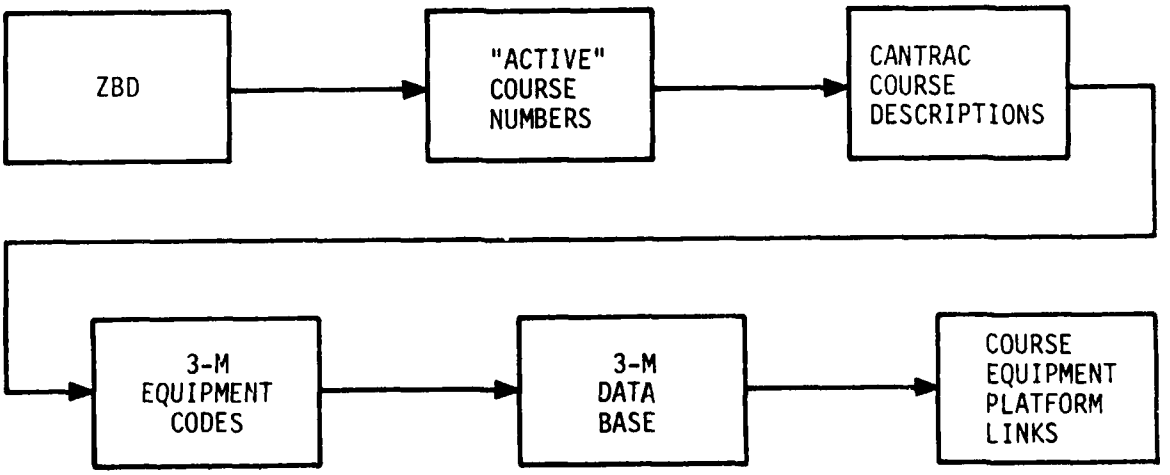

Figure 1. Idealized Equipment-Based Approach to Linking Navy Training Courses to Ships and Aircraft

CODING RESULTS

Since this is an "equipment-based approach" to linking courses to platforms it is apparent that numerous courses (administrative, supervisory, etc.) that have no specific equipments associated with them would/could be excluded. However, to assess the overall feasibility of the approach being studied it was necessary to determine what portion of the courses in the inventory could be linked. Consequently, all possible outcomes for each course search were categorized. Figure 2 shows a logical analysis of possible outcomes. Table 1 provides a summary of the outcomes.

TABLE 1. SUMMARY OF FINDING CODES

FINDING CODE 1 COURSE NOT IN CANTRAC
FINDING CODE 2 NO SPECIFIC EQUIPMENT IN CANTRAC
FINDING CODE 3 EQUIPMENT IN CANTRAC, NOT IN 3-M
FINDING CODE 4 EQUIPMENT IN CANTRAC AND 3-M
FINDING CODE 5 SPECIFIC PLATFORM IN CANTRAC
FINDING CODE 6 AVIATION GROUND SUPPORT EQUIPMENT/TEST EQUIPMENT

For purposes of this study, six categories or "finding codes" were developed and made an integral part of the data base. Not all of these "finding codes" are mutually exclusive; i.e., it is possible for a course to have a finding code 3 or finding code 4 and still have a specific platform name in the title of the course which would represent a finding code 5. In all cases, every effort was made to pursue the search to be able to end in a finding code 4 since this was a more direct test of the feasibility of the equipment-based approach. In the instance where a finding for a course was both a code 3 and code 5, a code 5 would be entered for the course since a platform link was possible on the basis of course title alone. However, the majority of the courses did not fall into multiple search outcome categories. These results are summarized and presented in section III. Actual courses and excerpts from the data are presented at the end of this section for finding codes 2 through 6. No example can be given for a finding code 1 since the course(s) could not be found in CANTRAC.

DIFFERENCES IN SEARCH FOR SHIPS VS. AIRCRAFT

Figure 3 shows the flow of the course to equipment to platform linkage with differences indicated in the process for ships and aircraft. It can be noted that these differences are slight but require examination of different 3-M reports. For ships, the equipment is identified manually and then a 3-M report extract is automatically searched for all ships reporting a maintenance action on the identified equipment during the 3 years of data. For aircraft, however, after the manual identification of equipment, a further manual search of an aviation 3-M report is conducted. When the identified equipment

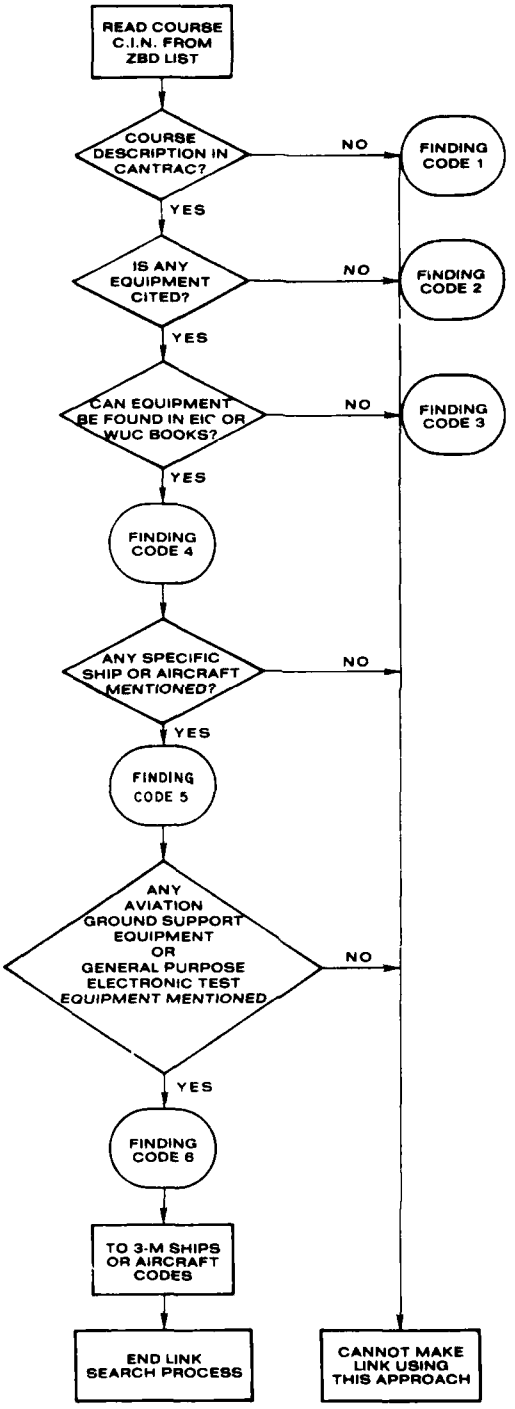

Figure 2. Course to Platform Search Process Flow Chart

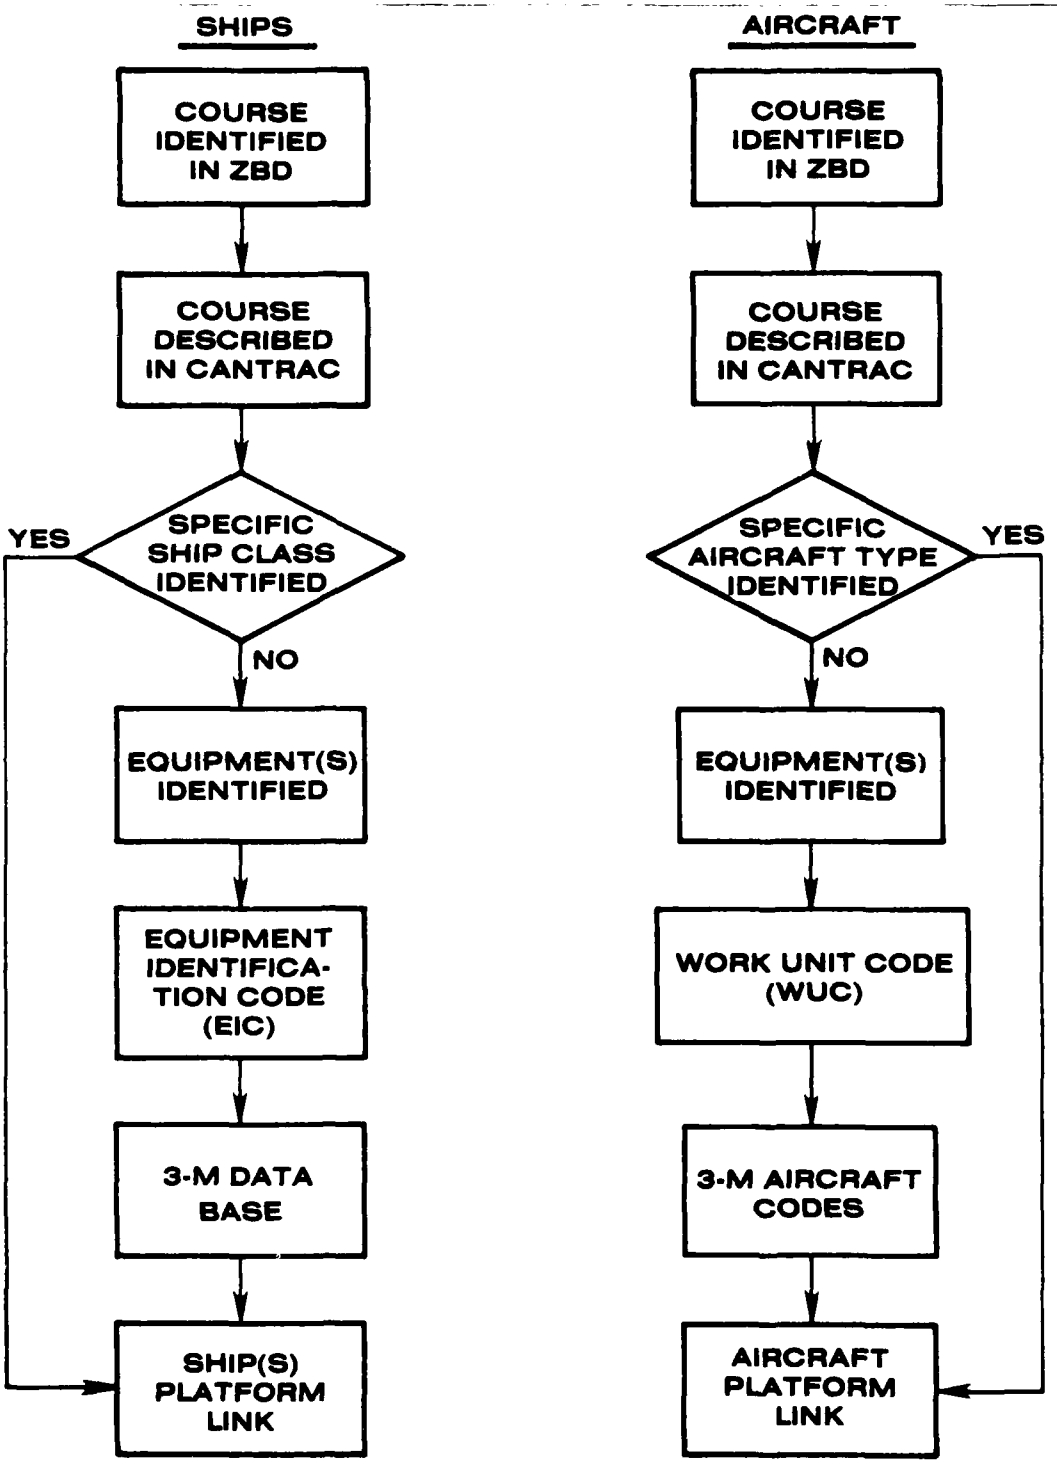

Figure 3. Comparison of Procedures to Link Courses to Equipment to Platforms (Ships and Aircraft)

is found, an aircraft code is given in the aviation 3-M report. This aircraft code is then automatically decoded to show the specific aircraft type.

DATA SOURCES

The initial step of this study was to identify and examine applicable data bases and variables that could potentially link courses to ships and aircraft. Descriptions of the data bases and the variables identified follow.

Data elements contained in the data bases cited in figure 1 were explored in several ways to determine whether they could or might be used to support the linking rationale. Telephone contacts and personal visits were made with personnel who maintain and manage the data bases to determine which data elements were relevant; i.e., could "do the job," and would be available in most accessible form. Considerable effort was made to use existing report formats thereby eliminating the need for special programming. Part of the data elements could then be acquired automatically. However, part of the data elements could be obtained only through a laborious manual search.

ZERO BASE DISPLAY (ZBD). The planning phase of the Planning, Programming and Budgeting System (PPBS) is operated within Zero Base Budgeting (ZBB) concepts. Therefore, sponsors (resource and requirement) are required to integrate their existing resource base, as displayed in the Five-Year Defense Program (FYDP), with the new resource requirements that emerge for programming consideration. In view of this requirement, CNET maintains each NAVEDTRACOM course, course group, and program with their associated resources in a continually updated file of ZBD's for potential decrement development and/or subsequent programming/budgeting decrement actions.

Since this ZBD file is continually updated and contains only those courses/course groups that are currently funded or are contained in the FYDP it provides an accurate listing of active Navy courses. The following data elements were extracted from the ZBD file:

- CDP
- CIN
- Type Course
- NEC
- Requirement Sponsor
- Resource Sponsor
- ZBD Number
- Course Short Title/Activity.

CATALOG OF NAVY TRAINING COURSES (CANTRAC). The CANTRAC (NAVEDTRA 10500) contains information on schools and courses under the purview of CNET; Commander Training Command, U.S. Altantic and Pacific Fleets; and other Navy Training Commands. The CANTRAC provides a consolidated centrally produced and computerized catalog of courses in a standardized form. For the purposes of this study, Volume II, CANTRAC Course Descriptions, was used. This segment of CANTRAC provided a catalog of all courses arranged in numerical sequence by CIN. Included in the course description were the purpose and scope of the course which were used to determine what, if any, equipment subjects are taught in the course.

It should be noted that CANTRAC contains a listing of all training courses, both active and inactive. The only courses that are not included in CANTRAC are those that are presently contained in Navy Training Plans and consequently have yet to be added to the inventory.

MATERIAL AND MAINTENANCE MANAGEMENT (3-M) SYSTEM. All ships in the Navy are required to report maintenance and supply data, for almost all maintenance actions which occur aboard ship, to the 3-M system. All parts and equipments issued in support of maintenance are required to be reported. This provides usage data that can be used for supply/resupplying purposes. Maintenance records submitted to the 3-M system are kept in the "active" file for 3 years and can be traced back to the original reporting activity.

Equipments reported in the 3-M system are identified in the Equipment Identification Code (EIC) master index, NAMSO 4790.E2579. This master index is the primary source for the codes assigned to identify shipboard systems, subsystems, and equipments when documenting maintenance actions that are submitted to the 3-M system.

TAEG DATA BASE

Table 2 contains a summary of the primary data elements and sources used for this study. In the last column of table 2 are the elements by which the data base may be sorted for a variety of printed outputs. For example, the data base could be printed out, separately, for each resource sponsor and the courses for each sponsor sorted by type of course in CIN order. Other output formats can be obtained, if requested.

EXAMPLES OF FINDING CODES

Figures 4 through 10 provide examples of actual courses and data used for each type of course finding in the order shown in table 1. The order is the same for each example; the ZBD entry is shown first, then the CANTRAC listing and finally the 3-M information, if available. The last part of each example is the TAEG formatted information.

ADVANCED FIRST TERM AVIONICS, CLASS A1

Location:

NATTC MEMPHIS

MASL Number and Location:

P139300 MEMPHIS

Length: 180 days P, 149 days M

Class of School/Course: A1

Convening Information: Weekly

Skill Identifier for which trained: USMC MOS 6221 - 6231

Purpose:

To provide advanced training to the first-term personnel who have enlisted for 6 years. To provide that additional information in electronics theory, basic and complex circuit analysis, and application of standard test equipment which will qualify the trainees to perform the technical duties of AT2, AQ2, or AX2.

Scope:

This course provides advanced training in Navigation Systems (AT only), ASW System (AX only), Fire Control radar and weapon systems (AQ only), IFF Systems, and Search radar. Theory and application of transistors, amplifiers and power supplies. Synchro and servo maintenance, Doppler principles, inertial navigation, computer maintenance, Microwave techniques. Communication techniques, SSB, multiplexing, and data link. Troubleshooting principles, test equipment, Naval aviation maintenance organization, OMA and IMA maintenance techniques including documentation procedures and forms. Module testing and repair.

Prerequisites:

This course is open only to those 6-year obligors who are graduates of the Avionics Technician Course, Class A1. Security Clearance - CONFIDENTIAL.

Purpose:

The purpose of this course is to provide the skills and knowledge required to perform all organization level preventive and corrective maintenance, to the printed circuit board level, on the TSEC/KY-75 COMSEC equipment.

Scope:

Security, TSEC/KY-75 operating procedures in accordance with KAO-154/TSEC, preventive and corrective maintenance of the TSEC/KY-75 in accordance with KAM-334/TSEC.

Prerequisites:

Electronic and digital theory background equivalent to Electronic Technician Class A School. All personnel attending this course must have a SECRET clearance PRIOR to reporting for instruction. Military and civilian personnel of the Department of Defense and selected non-DOD civilian and foreign personnel are eligible to attend this course. Preferred USN ratings are ET, AT, RM(SS), and CTM.

Quota Control: ACDU USN: NAVMILPERSCOM 406; OTHERS: CNTECHTRA (N243)

FLECOMBATRACENLANT, 8770

Length: 5 days P; 4 days M

Class of School/Course: F1

Convening Information: 7 times a year

Skill Identifier for Which Trained: None

Purpose:

To introduce Operational Specialists - OS, Fire Control Technician Missile - FTM, and Electronic Warfare Specialists - EW, members of the pre-commissioning crew to the combat system of the FFG-7 class guided missile frigate.

Scope:

The purpose, capabilities and limitations of each component of the FFG-7 Class Combat System are discussed in-depth, in addition, students are given a comprehensive tour and demonstration of the FFG-7 Class Combat Information Center.

Quota Control: COMNAVMILPERSCOM

Personnel Report To:

Commanding Officer, Fleet Combat Training Center, Atlantic, Dam Neck, Virginia Beach, VA 23461.

Special Information:

This course is one of three courses established for FFG-7 Class Pre-commissioning Combat System Team Training and is not available to fleet activities.

Location:

NAMTD NORFK
NAMTD NORTH IS

Length: 17 days P, 14 days M

Class of School/Course: C1

Convening Information: 16 times a year

Skill Identifier for Which Trained: None

Purpose:

To provide maintenance personnel with instruction on the latest theory, maintenance techniques, modifications, repair, and testing procedures applicable to the automatic stabilization equipment in the SH-2F helicopter at the organizational level, using applicable test equipment, publications, and safety procedures.

Scope:

This course covers introduction and theory of the automatic stabilization equipment components, electrical circuits and servo loops; and operation and maintenance of the ASE channels.

Prerequisites:

AE(A) School graduate or equivalent background knowledge of electricity. Source Rating - AE. Security clearance - NONE.

Quota Control: HELANTISUBRON L-31

AN/USM-403 ELECTRICAL EQUIPMENT TEST SET INTERMEDIATE MAINTENANCE

Location

NAMTD NORTH IS

Length: 61 days P, 51 days M

Class of School/Course: C1

Convening Information: 5 times a year

Skill Identifier for Which Trained: None

Purpose:

To provide fleet electronic maintenance personnel with training in the intermediate maintenance and repair of the AN/SUM-403 Electrical Equipment Test Set including theory of operation, circuit analysis, troubleshooting techniques and repair by using both NAVAIR and Vendor publications, applicable test equipment and safety precautions.

Scope:

This course covers the repairing of the AN/USM-403 station power interface adapter and interconnect devices, repairing the HAT's stations control subsystem, repairing and calibrating the programmable interface unit, the instrument interface unit, and the sampling measurement system.

Prerequisites:

E-5 or above, and successful completion of AN/USM-403 Operator course, C-198-3676, training or equivalent experience on digital computer hardware/software. Source rating - AT, AX. Security clearance - CONFIDENTIAL.

SECTION III

FINDINGS AND RECOMMENDATION

This section contains the results of the analysis of the "finding codes" described in the preceding section. It also includes a summary of the strengths and weaknesses of the equipment-based approach. In addition, a recommendation is given that will strengthen and expand the utility of the data base developed under this approach.

SUMMARY OF RESULTS

Figures 11 and 12 display the numbers of courses by each category of "finding code." In figure 11, all the courses searched from the ZBD file (that had valid CIN numbers) are grouped in their respective "finding" category. Of the 4,010 courses, the numbers and relative percentages of actual links using this approach are shown. This shows the relative potential of the equipment-based approach.

Figure 12 is a similar display but with the 1,323 courses under finding code 2 removed from the data set. This particular display shows the rate of course to platform links for all 2,592 courses in which equipments are indicated. The hit rate is a surprisingly high 73.5 percent when finding codes 4, 5, and 6 are combined. And conceivably, the hit rate could be as high as 92.7 percent if the finding code 3 courses could be more successfully linked. Parenthetically, the 192 courses under "1" in figure 12 are the expected number of courses not presently contained in the CANTRAC that could have equipment(s) indicated.

FINDINGS

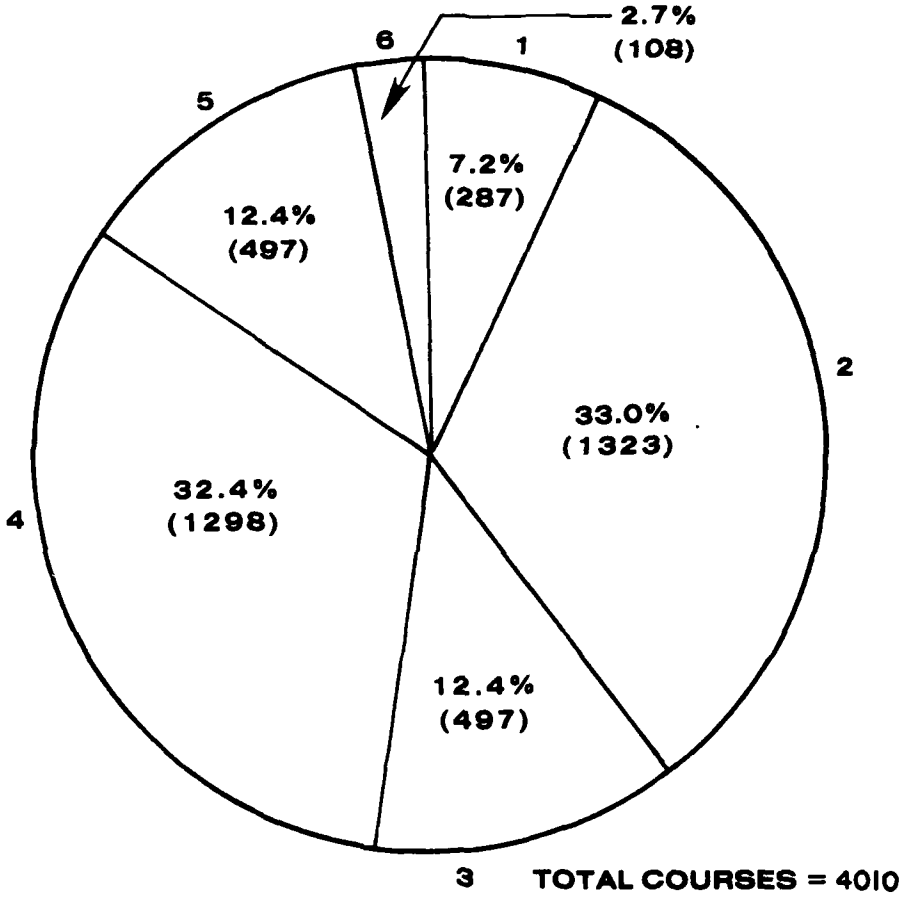
Several conclusions, inferences, and opinions emerged during the brief time devoted to the study. They are noted below with no order of importance implied.

- The equipment-based approach will exclude some obviously important courses whose contributions to fleet readiness are apparent; e.g., "A" Schools, Basic Electricity and Electronics, and numbers of "procedures" courses (SWOS, SOIC, etc.)

  - Some other approach needs to be developed for these nonequipment specific courses.

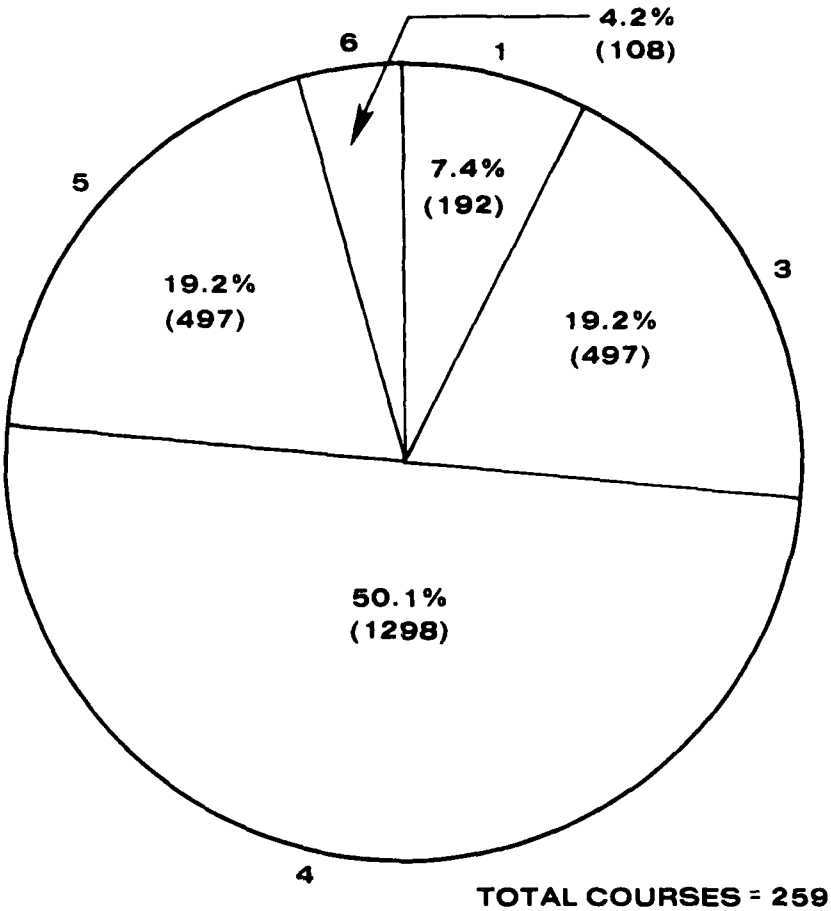
- The use of Equipment Identification Codes (EIC's) rather than Authorized Parts List (APL) numbers appears to be an adequate way to access relevant 3-M data.

- Manual search for equipments in the 3-M reference publications is subject to some human error or, at least, difficulty in finding equipments. Additionally, the search is labor intensive.



FIND CODE 1 COURSE NOT IN CANTRAC
FIND CODE 2 NO SPECIFIC EQUIPMENT IN CANTRAC
FIND CODE 3 EQUIP IN CANTRAC, NOT IN 3-M
FIND CODE 4 EQUIP IN CANTRAC AND 3-M
FIND CODE 5 SPECIFIC PLATFORM IN CANTRAC
FIND CODE 6 AVIATION GROUND SUPPORT EQUIP/TEST EQUP

Figure 11. Overall Percentage and Number of Courses in Each Finding Category



FIND CODE 1 COURSE NOT IN CANTRAC
FIND CODE 2 NO SPECIFIC EQUIP IN CANTRAC
FIND CODE 3 EQUIP IS IN CANTRAC, NOT IN 3-M
FIND CODE 4 EQUIP IN CANTRAC AND 3-M
FIND CODE 5 SPECIFIC PLATFORM IN CANTRAC
FIND CODE 6 AVIATION GROUND SUPPORT EQUIP/TEST EQUP

Figure 12. Overall Percentage and Number of Courses in Each Finding Category (with Category 2, "No Equipment," excluded)

- The approach is "face valid," but ways of validating or determining the comprehensiveness of the equipment based data developed by the Training Analysis and Evaluation Group (TAEG) are desirable.

ADDITIONAL OBSERVATIONS. Other observations germane to the data sources used are:

- No single data base contains all the elements required for the equipment-based approach to linking courses to platforms.
- While CANTRAC defines the universe of Navy training courses, the ZBD file is the target population of interest because courses in the ZBD file are "active" in the fiscal planning sense.
- After course equipments have been laboriously identified through the CANTRAC the only efficient way to complete the link with platforms is through the 3-M data base. This obviates any reporting burden on either the Training Commands or Fleet training units.

RECOMMENDATION

If the data base developed by TAEG is deemed useful enough to require that it be maintained or updated for future reference, there is one major recommendation:

> Improve the efficiency and accuracy of this method by adding a specific equipment nomenclature and 3-M equipment code section to the data elements in the CANTRAC.

Implementing the above recommendation would take a relatively short time to accomplish (6 months to 1 year is a rough estimate) and would make the equipment-based approach virtually 100 percent automated.
