TEXAS A&M UNIVERSITY

DEPARTMENT OF URBAN & REGIONAL PLANNING

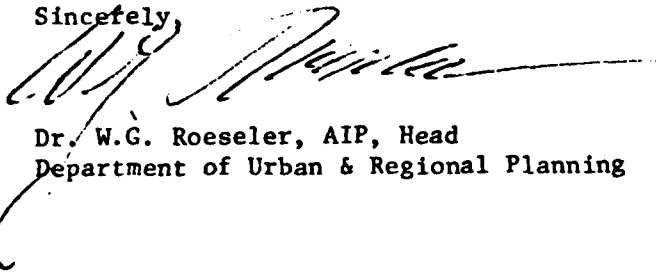

COLLEGE STATION, TEXAS 77843

District Engineer
U.S. Army Corps of Engineers
Fort Worth District
P.O. Box 17300
Fort Worth, Texas 76102

Dear Sir:

In accordance with our Contract No. DACW63-76-M-1050, we are pleased to submit herein the final draft of An Inventory of Development Plans Pertaining to the Trinity River by Agencies Other than the U.S. Army Corps of Engineers. This effort represents the consensus of the joint Corps of Engineers - Texas A&M University planning team. It should be fully adequate to assist all participants in attaining the stated objectives.

Sincerely,

Dr. W.G. Roeseler, AIP, Head
Department of Urban & Regional Planning

INTRODUCTION

The Department of Urban and Regional Planning of Texas A&M University was employed by the Fort Worth District of the U.S. Army Corps of Engineers to conduct a study of the seventeen-county region which contains the Trinity River Basin in East Texas. This project was commissioned to determine the existence of actual, proposed, or planned projects in the Trinity River Project area. Specifically, the following Survey focuses on plans or policies that could result in physical construction in the 100 year flood-plain associated with the Trinity River.

The Survey began July 1, 1976, and involved interviews with individuals who were selected on the basis of their experience and general knowledge of planning activities related to the Trinity River. During the period of July 1 to October 1, 1976, information was solicited from a variety of public agencies including State, county, and municipal governments, councils of government, and special districts, some of whose charters require the consideration of projects that affect the Trinity River.

The initial step in conducting this Survey involved the compilation of a tentative list of individuals and agencies to be interviewed. The list was reviewed and approved by the Corps of Engineers. The criteria used for the selection of agencies and individuals for interview included the following: 1. The function of the agency or person; 2. The size of the area served by the agency; 3. The expertise of certain persons; and 4. The proximity of the agency to the Trinity River.

After the survey list was completed and approved by the Corps of Engineers, all of the interviewees were notified by letter explaining the purpose of the project. Each individual was contacted by telephone to determine a specific time for an interview. The regional planner in each of the councils of government (COGs) along the Trinity River was interviewed and an inventory of each COG's library was completed. Following this step, individuals associated with city governments within each COG were interviewed. Finally, persons associated with special purpose districts were contacted by telephone. In some cases, usually at the request of the individual contacted, the interview was completed during the initial telephone conversation.

Each interviewee was asked, "Do you know of any plans, policies, or projects, either proposed or completed, that would result in any physical construction in or near the Trinity River?" For example, when interviewing a person with a municipal utilities district, the subject of transmission lines was often discussed. When a mayor or public works director was interviewed, water and sewer systems were often the topic. Information obtained from interviews was recorded on a schedule form which was reviewed and approved by the Corps of Engineers. Maps showing the jurisdictional boundaries of interviewed agencies were requested during each interview. Unfortunately, only one agency honored this request.

Many planning documents exist within the study area and, whenever possible, the documents were collected for use in this Survey. Where such plans were not available for dissemination, pertinent information taken from the plans was recorded on the Survey Schedule Sheets and is included in the narrative portions of this report.

SUMMARY

Table 1 of this report shows that of the eighty-one agencies or persons interviewed, forty-two plans were identified, and almost all of them could have an affect on the Trinity River if they were implemented. In many instances it was difficult to determine whether the plans had been implemented. In the absence of such information, the actual impact of these plans on the Trinity River is uncertain.

Of the forty-two planning documents identified, a large group - twelve - fell into the "comprehensive general plan" category. It should be noted, however, that many of these plans contain detailed information on water supply and treatment, sewage treatment, storm water runoff and other subjects that could significantly affect the Trinity River. Another twelve plans were combined water and sewer studies. Six water plans and three storm sewer plans were identified. Four transportation plans were found. The remaining documents were assorted policy oriented studies.

Documents prepared for regions accounted for the largest segment of the identified plans, accounting for eighteen of the forty-two documents. Fourteen plans were prepared for municipalities and nine documents were developed for counties. Only one special district [Dallas County WCID #7] had prepared a planning document identified during this Inventory. It should be noted that along with special districts, several counties had not prepared any plans which could be identified. The Inventory showed that Liberty, San Jacinto, Madison, Leon, and Houston Counties have apparently made no effort to develop their own comprehensive or categorical plans.

Almost all of these plans were prepared by consulting planners or engineers. In-house planning capabilities are evident at the municipal and regional levels. However, few counties and special districts employ planners on a full-time basis. Funding for the plans identified in this report was almost exclusively based on the Section 701 Program administered by the U.S. Department of Housing and Urban Development, and the Section 208 Program administered by the U.S. Environmental Protection Agency. Those plans that were not funded under these Programs appear to have been financially supported from local sources.

Of the seventy different agencies interviewed during this Inventory, six were councils of government, seventeen were counties, twelve were cities, and thirty-five were special districts, authorities or private organizations. All but one [Heart of Texas Council of Governments] of the six councils of government interviewed had projects planned or underway within the Planning Area.

Only five of the seventeen counties had projects planned or underway. Eight of the twelve cities interviewed were involved in project development. The special districts, authorities and private organizations appeared to be the most inactive, both in terms of planning and project development. Only twelve agencies within this special category were involved in projects affecting the Trinity River.

In sum, the Inventory indicates that councils of government have a keen sensitivity to their planning programs and related impacts on the Trinity River resulting from these programs. Cities and counties, in particular, are not as sensitive to relationships and possible impacts. Special district, authorities* and private organizations appear to function almost exclusively on an ad hoc project basis with no genuine commitment to long-range comprehensive planning or program development.

*It should be noted that the Trinity River Authority is an extremely active planning and project development oriented agency and should not be included in the reference to authorities above.

PLANNING SUBAREA #1

MAP #1

Delineation of Planning Subarea #1

Overview

This Inventory revealed that there has been a modest effort on the part of agencies located in Planning Subarea #1 to undertake any planning programs or projects pertaining to the Trinity River. Only two planning documents were identified. It appears that most of the predetermined special districts and authorities located in Subarea #1 operate on an ad hoc, problem by problem basis. No real effort has been made by these agencies to develop long-range comprehensive plans relating to their roles.

Delineation of Planning Subarea #1, Involvement by Councils of Government Located Within the Subarea, and Plans Identified

Planning Subarea #1 is composed of Liberty and Chambers Counties. Both of these counties are participating members of the Houston-Galveston Area Council of Governments (HGAC). No other councils of governments are operating within the Subarea. All of the plan document information contained in this section of the Report was found in the HGAC Library.

Discussions with Mr. Doyle Sebesta of the HGAC indicated that the Council has proposed two major projects for Chambers and Liberty Counties. First, industrial development has been given a high priority for both of these counties. Second, the Council supports the development of an industrial port at the City of Liberty and the creation of an authority to administer the activities of the Liberty Port.

The only planning study produced by the HGAC which would directly affect these counties and the Trinity River is the Houston-Galveston Regional Transportation Study, which was produced by the Council in 1970. This document characterizes the existing land use in Chambers County, projects population growth in Mount Belvieu and Anahuac, and briefly addresses the problem of salt-water intrusion associated with Wallisville. The Study also projects population growth in Liberty County. This projection is based on the assumption of increased demand for land along the Trinity River. A copy of the Regional Transportation Study is available for review in the HGAC Library.

No water quality plans or projects pertaining to the Trinity River Basin have been prepared or are anticipated by the Houston-Galveston Area Council of Governments. An interview with Mr. Nick Ashleman indicated that HGAC's Section 208 planning program is specifically directed at the San Jacinto River Basin. No Section 208 planning by the HGAC is being directed toward the Trinity River Basin.

Individuals conducting this Inventory were unable to locate any planning documents pertaining to Liberty County. Only one

planning document was found for Chambers County: Comprehensive Planning for Chambers County, Texas, Rice University - Mathis, Shannon, Brown and Rowe, October, 1972. This Plan contains several items which pertain to the Trinity River. The subject of saltwater intrusion and its impact on water quality is discussed. The Oak Island Port Facility and its effect on Trinity River Navigation is addressed. The Plan also cites the need for increased industrial development in Chambers County. This document is available for review in the HGAC Library.

Interviews

Including the previously noted discussion with Mr. Doyle Sebesta of the HGAC, a total of thirteen interviews were conducted in Planning Subarea #1. Specific information pertaining to these interviews will be found on the Survey Schedules contained in Appendix A of this report.

The Survey Schedules evidence the fact that with the exception of the HGAC and the City of Houston, no recurrent planning process has been employed by any of the predetermined special districts, authorities or agencies interviewed.

Interviews with the City of Houston's Water Division of the Public Works Department indicated that two major planning efforts are underway that will affect the Trinity River. The Luce Bayou pumping station will be located ten miles north of Liberty and will pump water into Lake Houston. The station is presently in the planning stages and its' construction is contingent upon the approval of a permit. The project is estimated to cost ten to fifteen million dollars.

The City of Houston also anticipates the development of a water treatment plant in the area of the North and East Belt Intersection. This major treatment facility will consist of two phases of construction. The first phase will be capable of treating fifty million gallons of water per day. The second phase will increase the capability to two hundred million gallons per day.

The Coastal Industrial Water Authority has developed a water distribution system that will serve an area from LaPorte to Sims Bayou on the west side of the Houston Ship Channel. Interviews indicated that only one component is needed to complete this system. The component referred to above is a pump station on the Trinity River seven miles South of Liberty.

Table 2 on the following two pages shows the planned development pertaining to the Trinity River in Planning Subarea #1. The only predetermined agency actively involved in development activity appears to be the Liberty-Dayton Chamber of Commerce. This agency has a long history of industrial recruitment and has been working jointly with private companies to develop and expand the port facilities presently located at Liberty.

PLANNING SUBAREA #2

MAP #2

Delineation of Planning Subarea #2

Overview

There appears to be a moderate level of planning activity occurring in Planning Subarea #2. This activity seems to be the result of the impact associated with the construction of Lake Livingston and the anticipation of barge canal construction on the Trinity River. Of the four counties located wholly within the Subarea, San Jacinto apparently has the least involvement with the planning process.

The interviews conducted in this Subarea indicate that many Trinity River oriented projects have been either commenced or proposed. However, as in Planning Subarea #1, the special purpose districts in this sub-area seem to operate on the ad hoc problem solution basis. Few of these agencies seem to utilize long-range comprehensive plans as a basis for day-to-day operational activities.

Delineation of Planning Subarea #2, Involvement by Councils of Government Located Within the Subarea, and Plans Identified

Planning Subarea #2 consists of the Northern half of Liberty County and all of Walker, San Jacinto, Polk and Trinity Counties. Liberty and Walker Counties are participating members of the Houston-Galveston Area Council of Governments (HGAC). HGAC's planning efforts pertaining to Liberty County are discussed in the section of this document entitled Planning Subarea #1. This section of the document addresses Walker County as it pertains to the activities of the HGAC. Polk, San Jacinto and Trinity Counties are participating members of the Deep East Texas Council of Governments (DETCOG).

Discussions with Mr. Doyle Sebesta of the HGAC and other persons revealed only two planning documents that have been prepared for Walker County. The Walker County Comprehensive Water and Sewer Plan was prepared by J.F. Fontaine and Associates in 1972. This Plan discusses the value of the County's clean surface waters, mentions how navigation on the Trinity River could contribute to economic growth, shows plans for reservoirs on Bedias and Harmon Creeks, and proposed a lagoon type outfall facility below the Lake Livingston Dam.

The second document referred to above is the Huntsville Preliminary Engineering Report on Surface Water Supply prepared by Bernard Johnson & Associates in 1973. The Plan projects water supply requirements for the Huntsville planning area over a fifty year period. One of the three sources of water investigated is the intake location near Riverside on Lake Livingston. This location is ultimately recommended as being the most economical supplier of water to Huntsville. The recommendations are based on a fifteen year projection and include a 4.0 million gallon per day treatment plant near Riverside. The Plan also recommends a storage and pumping facility and a twenty-inch pipeline running from Riverside to Huntsville. Copies of each of these documents are available in HGAC's Library.

The Houston-Galveston Area Council of Governments has proposed four projects impacting on the Trinity River in Walker County. These projects are listed on Table 3 and are graphically identified on Map #6 found in the pocket supplement of this report.

Discussions with Mr. John Gemethie of DETCOG and others produced six planning documents for areas located in Planning Subarea #2. Five of the documents pertain to Polk County or to the City of Onalaska, and are described below:

The Polk County Development Plan was produced by south/west Planning Associates in conjunction with Frank Suggitt & Associates in 1973. The portion of this document allocated to existing land use factors discusses the growth potential within the County resulting from the construction of Lake Livingston. The Plan recommends policies be adopted to maintain the desirability and character of the forest lands surrounding the Lake. Six political subdivisions are discussed in the Plan. Most of this portion of the document concerns recommendations for forest protection and land use controls, particularly in the vicinity of the Trinity River. A portion of the Plan entitled: "Land Use Development Factors" calls for the development of policies which will allow only compatible development in flood prone areas. The Transportation section of the Plan encourages the development of barge handling and related facilities within the County. Recreation proposals are directed toward the development of a 400 acre park on land presently owned by the Trinity River Authority on the Trinity/Polk boundary, and the creation of a canoeing concession on Long King Creek from the Livingston to the Goodrich areas.

A document entitled: Polk County Utilities and Environmental Considerations was produced by the same consulting group referred to above in 1973. This document contains detailed information on water use and sewer facilities in the Livingston, Blanchard, Onalaska and Goodrich areas. Many of the recommendations contained in the report would have a direct impact on the Trinity River.

The south/west - Suggitt planning organization produced the Polk County Transportation Study in 1973. This document contains a discussion of a multiple mode transportation system for the County and many of the recommendations are premised on the development of barge canal traffic on the Trinity River. The Study specifically recommends the creation of a barge port facility on the Trinity River West of U.S. Highway 59 near or at the present community of Goodrich.

Two planning documents were prepared by south/west Planning Associates and Frank Suggitt & Associates for the City of Onalaska in 1973. The Preliminary Development Plan specifically recommends the promotion of marine oriented industries, the development of a 400 acre park and additional access to the shoreline of Lake Livingston. The Onalaska Transportation, Community Facilities, Utilities, and Environmental Considerations Study addresses many of the subject areas discussed above. The discussion on the City's water and sewer facilities indicates a direct reliance on the Trinity River.

The final planning document associated with Planning Subarea #2, which was identified during the course of this report is entitled: Planning Toward the Second Century. This document was produced for the Trinity Peninsula Planning and Development Association by Frank Suggitt and Associates in 1973. This study is primarily oriented toward development in Trinity County. The document projects a County population of 14,716 persons by 1990. The Plan indicates the necessity for both permanent and seasonal home construction in the planning area, and identifies growth points within the County. One of the growth points is located on the Village Creek portion of the Trinity River. The study calls for the development of the Trinity River Barge Canal and related barge facilities within the County. The section of the Plan devoted to utilities proposed the development of water and sewer lines adjacent to the Trinity River and calls for the creation of a sewerage treatment plant due North of the intersection of FM Roads 355 and 356.

Interviews

A total of thirteen interviews were conducted in Planning Subarea #2. The Survey Schedules used to collect information during the interview process are contained in Appendix B. Seven of the thirteen interviews reveal existing or proposed projects affecting the Trinity River. Proposed projects are shown on Table 3 and are graphically identified on Map 6 in the pocket supplement.

PLANNING SUBAREA #3

MAP #3

Delineation of Planning Subarea #3

Overview

As in the previous Planning Subarea, there appears to be a moderate amount of planning activity in Planning Subarea #3. However, the level of planning activity is below what one might customarily expect from a physical area served by five different councils of government. Anderson, Henderson, Leon and Madison Counties have had planning documents prepared for them. Apparently, no plans have been produced for Houston, Freestone or Navarro Counties.

The interviews conducted in this Planning Subarea indicate that the Brazos Valley Development Council (BVDC) and the East Texas Council of Governments (ETCOG) have proposed the greatest number of projects affecting the Trinity River. Madison and Leon are the only two counties that have proposed projects. As in the other Planning Subareas, none of the special districts have developed comprehensive plans for their day to day operations.

Delineation of Planning Subarea #3, Involvement by Councils of Government Located Within the Subarea, and Plans Identified

Planning Subarea #3 consists principally of the Northern half of Madison County, all of Leon, Freestone, Anderson and Houston Counties, and the Southern portions of Navarro and Henderson Counties. Madison and Leon Counties are participating members of the BVDC. Houston County is a member of the Deep East Texas Council of Governments (DETCOG). Anderson and Henderson Counties are members of ETCOG. Freestone County is a member of the Heart of Texas Council of Governments (HOTCOG), and Navarro County is a member of the North Central Texas Council of Governments (NCTCOG).

A total of nine planning documents were identified in Planning Subarea #3. Several regional plans have been produced by the BVDC and these are as follows:

Regional Planning 5: BVDC Comprehensive Planning, is a general land use planning document that was produced in 1974. The economic goals section of the Plan proposes the designation of dams and reservoirs on the Trinity River. All land adjacent to the River is designated for permanent open space. The Plan notes the poor water quality associated with the River and proposals are made for regional water and sewer systems in Madison County.

Regional Planning 6: BVDC Comprehensive Planning, contains the actual civil works plans for the Region. Water, sewer and solid waste systems are proposed for Madison County and all of the proposals would have a direct impact on the Trinity River.

Regional Planning 7: Transportation Plan, is the first in a series of documents completed in 1976. This document is a conventional transportation plan and does not address the use of the Trinity River for barge traffic.

Regional Planning 7: Regional Flooding and Drainage Plan, addresses the problem of branch and creek maintenance in Madison and Leon Counties. Though these improvements are proposed for tributaries that feed into the Trinity, none of them are actually near the River.

For purposes of this Inventory, the primary importance of Regional Planning 7: Land Resource Management and Housing, is the section pertaining to soil capabilities along the Trinity River portion of Trinity and Leon Counties. These areas are primarily designated for recreational purposes.

All of the documents referred to above were produced for the BVDC by Robert W. Caldwell & Associates. A copy of each of these documents is available in the BVDC Library. No plans for Madison and Leon Counties or for the cities located in those counties were identified during this Inventory. Similarly, discussions with Mr. John Gemethie of DETCOG and Mr. J.B. Lively of Houston County failed to reveal any plans for that County or for the cities located within it.

Discussions with Mr. Tom Smeizer of ETCOG and other persons facilitated the identification of three planning documents that could affect the Trinity River. ETCOG's Comprehensive Water and Sewer Plan is a two volume series produced by B.L. Nelson & Associates in 1972. Information pertaining to Anderson County is contained in Volume 1, Book 1. In the County's Cayuga Area the present water system has a deficiency in pumping capacity which will be aggravated by future growth. The Plan calls for the use of water from the proposed Tennessee Colony Reservoir. This usage would result in the construction of new water lines in or near the floodplains of the Trinity. The proposed new sewerage systems for this area would likewise be located in the floodplain. The proposed water plan in the County's Tucker Area calls for the construction of pumps and lines within one-half mile of the River. The Plan discusses the water and sewer handling capacity of facilities in Palestine, but indicates that these appear to be adequate.

Henderson County is addressed in Volume 1, Book II of this series. There are proposals for updating the water and sewer facilities in Trinidad, Seven Points, Tool and Athens; however, none of these proposals would apparently impact directly on the Trinity River. The sewerage treatment facilities associated with Coon Creek call for new systems in the Star Harbour area located about three miles from the River.

Marvin Springer & Associates produced the Palestine Comprehensive Plan Report in 1970. Three possible futures are presented for the City. Rapid growth is predicted on navigational improvements on the Trinity River and the construction of the Tennessee Colony Reservoir. The Athens Master Development Plan was prepared by Henigson, Durham, Richardson & Associates in 1962. This standard planning document and the implementation proposals contained therein would apparently have no impact on the Trinity River. All of the documents described above are available in the ETCOG Library.

No planning documents were identified for Freestone County or for cities located in that County. Discussions with Ms. Sue Youngblood of Corsicana produced no current plans or projects impacting on the Trinity. Discussions did, however, reveal the Corsicana Master Plan produced by Marvin Springer & Associates in 1970. This Plan has not apparently been implemented to the point at which any direct effects on the Trinity River can be identified. This document may be reviewed at the Corsicana Municipal Building.

Interviews

A total of seventeen interviews were conducted in Planning Subarea #3. The Survey Schedules used to collect information during the interview process are contained in Appendix C. Only six of the interviews evidenced existing or proposed projects that would affect the Trinity River. Proposed projects are shown on Table 4 and are graphically identified on Map 6 in the pocket supplement of this report.

TABLE 4

PLANNING SUBAREA #4

MAP 4

Delineation of Planning Subarea #4

Overview

A review of the plans identified and the Survey Schedules collected in Planning Subarea #4 indicates that there is a paucity in both the number of plans documented and the projects proposed by political subdivisions located within the Increment. The councils of government are easily the most active agencies in this area. There is no evidence of any comprehensive planning process being utilized by the special districts located within the Subarea.

Delineation of Planning Subarea #4, Involvement by Councils of Government Located Within the Subarea, and Plans Identified

Planning Subarea #4 contains all of Ellis County, the Northern portion of Navarro County, the Southern portions of Kaufman and Van Zandt Counties, and the Northeast portion of Henderson County.

Ellis, Kaufman and Navarro Counties are participating members of the North Central Texas Council of Governments (NCTCOG). Henderson (discussed in Planning Subarea #3) and Van Zandt Counties are members of the East Texas Council of Governments (ETCOG).

A total of only four planning documents were identified in Planning Subarea #4. ETCOG produced a Statement of Policy on the Physical Environment in 1976. This policy pamphlet proposes the regulation of development in critical environmental areas, the adoption of a system for controlling growth in flood-prone areas, and participation by ETCOG members in the National Flood Insurance Program. A copy of this pamphlet is available in the ETCOG Library.

The Ellis County Rural Water and Waste Water Plan was produced by I.W. Sentry, Incorporated in 1975. While specific information on water and sewer facilities is contained in the document, no special references are made to the Trinity River.

The Comprehensive Water and Sewerage Planning document for Kaufman County was prepared by the engineering firm of Freese, Nichols & Endress in 1969. This Plan makes no specific references to the Trinity River.

In 1973, the firm of B.L. Nelson & Associates produced the Navarro County Comprehensive Plan for Water and Sewers. As with the two documents referred to above, no specific proposals pertaining to the Trinity River could be identified by persons conducting this Inventory. Copies of all of the documents described above are available in the ETCOG Library.

Interviews

A total of ten interviews were conducted in Planning Subarea #4. The Survey Schedules used to collect information during the interview process are contained in Appendix D. The Survey Schedules and the information found on Table 5 indicate that five of the interviewees noted projects that are either planned or underway, and that will affect the Trinity River.

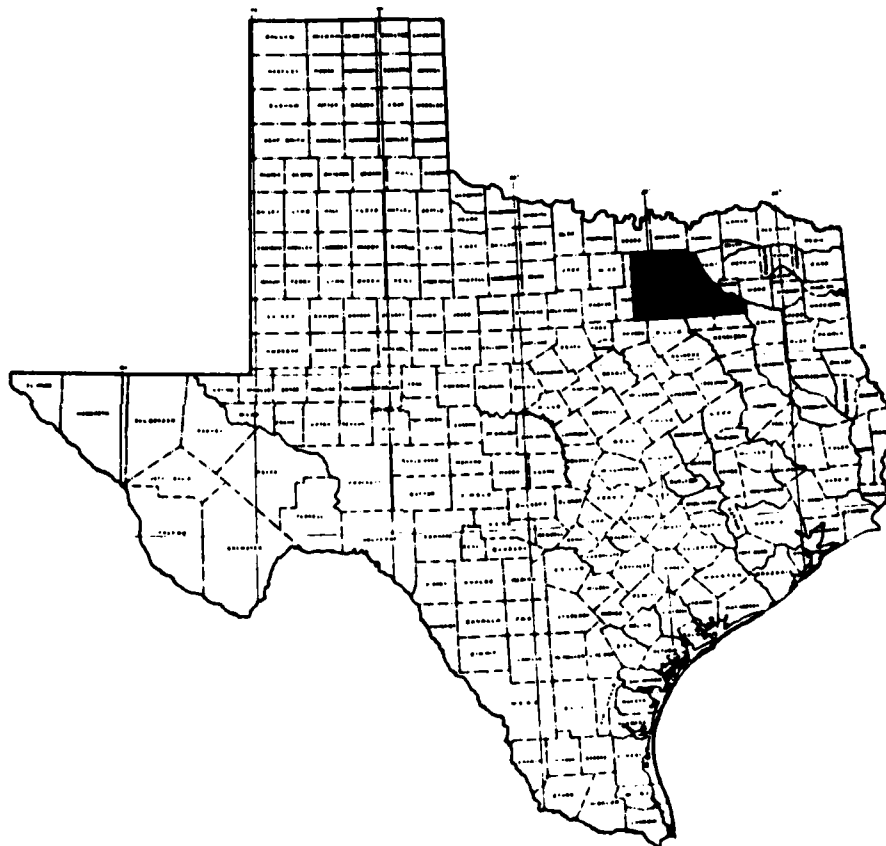

TABLE 5
An Inventory of Proposed Projects in Planning Subarea #4

<u>Agency Contacted</u>	<u>Date of Contact</u>	<u>Person Contacted</u>	<u>Description of Planned Project</u>	<u>Location on Map #4</u>
East Texas Council of Governments	8/8/76	Tom Smiser	1. Construct sewer system	15, 36
North Central Texas Council of Governments	8/14/76	Robert Wagner	1. Future water & sewer needs	-
Ellis County	8/14/76	Judge Joe Grubbs	No projects	
Kaufman County	8/17/76	Judge Wayne Cant	1. Fill river bottom area	39
City of Waxahachie	8/14/76	Howard Brown	1. Construct sewerage plant	37
Ellis County Levee Drainage District #1	9/3/76	Jack B. Eastham	No projects	
Ellis County WCID #1	8/20/76	Tom Corlis	1. Meter transmission line	38
Ellis County WCID #4	8/20/76	Jesse F. Carron	No projects

Kaufman County Levee District #15	8/15/76	Mr. Bentley	No projects	

PLANNING SUBAREA #5

MAP 5

Delineation of Planning Subarea #5

Overview

The Inventory revealed that there has been an ongoing effort on the part of agencies in Planning Subarea #5 to develop both a planning strategy and implementation systems for projects affecting the Trinity River. Planners at the regional, municipal and special district levels are particularly interested in examining the impact of projects on the Trinity River. Dallas, Tarrant, and Kaufman Counties are particularly involved in planning programs that could have an impact on the Trinity through the special districts located in those jurisdictions.

The interviews indicated that both the North Central Texas Council of Governments (NCTCOG) and the Trinity River Authority (TRA) have developed an extensive list of planning documents that, if implemented, will affect the Trinity River. Many of the plans for development are of a short-term, single purpose nature. Few of the special districts have developed a comprehensive framework for planning activities along the Trinity River. By prior agreement with the Corps of Engineers, planning and project activities within Dallas, Kaufman, and Tarrant Counties were the primary focus of this Inventory within the confines of Planning Subarea #5.

Delineation of Planning Subarea #5, Involvement by Councils of Government Located Within the Subarea, and Plans Identified

Planning Subarea #5 consists principally of the Eastern halves of Denton and Tarrant Counties, the Northern half of Van Zandt and Kaufman Counties, the Western half of Hunt County and all of Collin, Dallas and Rockwall Counties. The portion of Van Zandt County that is in Planning Subarea #5 falls within the jurisdiction of the East Texas Council of Governments (ETCOG). The remainder of the counties within the Subarea are within the jurisdiction of the NCTCOG.

A total of nineteen planning documents were identified in Planning Subarea #5. Six of those plans were prepared by or for the NCTCOG. The 1977 Environmental Planning Profile was recently produced by the Council. The document was prepared as a part of the Council's Section 208 planning program. The Profile identifies environmental studies, programs and projects in the Council's region. The document is broken into two primary parts: "Continuing Planning Activities" and "Special Studies". Within the context of the headings above, activities are categorized as "Water Resources Management, Solid Waste Management, Air Quality Management, Related Natural Resources Management, and Growth Management". Both parts of the Profile contain references to studies and planning activities that could impact on the Trinity River. A copy of this document, as well as the other five Council produced studies discussed below, are available for review in the NCTCOG Library.

In 1974, the NCTCOG produced the North Central Texas Regional Water Supply Study. This comprehensive planning document projects regional population, assesses existing water supply sources and facilities, and proposes long-range development strategies for meeting water supply demands. Many of the proposals contained in the Study would have a direct affect on the Trinity River.

In 1976, the Council produced Our Natural Resources: What Is Our Water Worth? - 1975-78 Water Quality Management Planning Program. The document is part of the NCTCOG's Section 208 water pollution control program. Essentially a program outline, the study details the Federal and State requirements for water pollution planning and control, specifies the methodology the Council's staff utilizes in water pollution control planning, and describes the work program for the years 1977 through 1979.

Produced by the firm of Camp, Dresser & McKee, Incorporated, and Water Resources Engineers, Incorporated, The 1977 Annual Water Quality Management Plan for the NCTCOG develops both a planning philosophy and an annual plan for implementing the Section 208 planning process as outlined in Public Law 92-500. Only the first of this three volume series was available for review by the persons preparing this Inventory. The first volume identifies major municipal sewerage treatment plants, significant industrial plants, major trunk sewers and active planning agencies. Volume 1 also assesses the degree to which the adopted 1990 regional sewage plan recommendations (from the 1990 Upper Trinity River Basin Comprehensive Sewer Plan) and the State and national effluent quality goals are being attained. The Council has also produced A Summary of the 1977 Annual Water Quality Management Plan for North Central Texas. This brief, general distribution publication synthesizes the larger three volume series referred to above.

The NCTCOG will shortly release a study entitled: Nonpoint Sources: An Assessment of Pollutant Loadings to Lakes and Rivers in North Central Texas. This study is presently being reviewed by the Council's Technical Committee. The study is expected to show that nonpoint sources of water pollution have a significant impact on the region's water quality and are particularly important to major tributaries such as the Trinity River.

Marvin Springer and Associates produced the Coordinated Plan: Open Space Development Trinity River System in Dallas, Texas, for the Dallas Park Board in 1969. The significance of this document is the proposal for the use of the Elm Fork Flood Plain and the Dallas Floodway as recreational resources. Of particular importance is the proposal for the "Town Lake" recreational area between Commerce Street and the Dallas-Fort Worth Turnpike in the Dallas Floodway. With a depth of twelve feet, the Town Lake complex would be visible from downtown Dallas and would contain many of the facilities that have made such projects as San Antonio's "Riverwalk" successful. No action has been taken on the Town Lake component of the Plan; however, there has been recent interest in the construction of this proposed project.

The City of Corsicana, using monies from a Section 701 grant from the U.S. Department of Housing and Urban Development, produced a four-volume report series entitled: Comprehensive Plan Report for the City of Corsicana, Texas. Of special interest for planning activities that

might affect the Trinity River, the document contains information relating to water supply and storm drainage. The subject areas of sewage collection and treatment are addressed in detail, and the Plan also contains useful information that might be applicable to planning activities along the Trinity River. Published in 1971, some of the information could be updated to be useful for developing strategies for Trinity River improvements. A copy of the Plan is available for review in the NCTCOG Library.

The Haltom City Master Plan was produced in 1966 by Glen Arnold Engineering in conjunction with Rady and Associates. The document calls for increasing the capacity of Little Fossil Creek where it intersects with an existing railroad South of Highway 121. This proposed action will apparently reduce flooding hazards in Haltom City. The document does not contain any specific references to the Trinity River. A copy of the Plan is available for review at the Haltom City Municipal Building.

Published in 1971, the Engineering Report: Proposed Bedford-Eules Water System examines areas that might indirectly affect the Trinity River. Conducted by the firm of Knowlton-Ratliff, English and Collins, the engineering report examines existing facilities, design criteria, and projects future water needs for the Cities of Bedford and Eules, Texas. The two cities jointly sponsored the study and it is available for review in the NCTCOG Library.

Funded by a Section 701 grant, the City of Grand Prairie, Texas, engaged Hunter Associates to produce Grand Prairie, Texas: Water Distribution System Analysis in two volumes. Volume 1 contains the narrative of the analytical process used by the City, while Volume 2 contains maps that are referred to in Volume 1. The report projects a municipal population for Grand Prairie of 120,000 persons by 1990. The daily average consumption of water projected for the year 1990 is about fourteen million gallons. Map 5 in Volume 2 shows a 36-inch water line crossing the Trinity River. Since the report was published in 1976, the projects developed in the report may not have been implemented at this time. Both Volumes of this Plan series are available for review at the Grand Prairie Municipal Building.

Powell and Powell, Consulting Engineers, developed a study entitled: City of Grand Prairie: A Comprehensive Plan Report - Sewage. The study was published in 1966 with the aid of a Section 701 planning grant from the U.S. Department of Housing and Urban Development. The plan proposes sewage collection lines in the immediate vicinity of the Trinity River, which range in size from ten to eighteen inches in diameter. The document also contains information on sewer design criteria, existing facilities, proposed improvements, and estimated costs. The issues addressed by the City of Grand Prairie that are concerned with sewage treatment and collection directly affect the Trinity River. This document may be reviewed at the Grand Prairie Municipal Building.

Published in 1966, the Comprehensive Plan: Grand Prairie, Texas, was produced by Marvin Springer and Associates and outlines a number of proposals that would directly affect the Trinity River. The Plan proposes a number of industrial sites, thoroughfares, parks and schools in close proximity to the Trinity River. Developed with funds from a Section 701 grant, the Plan suggests that areas subject to inundation by the Trinity River might best be used for open space development. Much of the proposed area for industrial development can be accomplished only by a system of levees that would protect the proposed areas from the Trinity. Several roads in the proposed Thoroughfare Plan Section of the document cross the Trinity River. Finally, elementary schools are proposed for areas close to the River. A copy of this Plan may be reviewed in the NCTCOG Library.

Dated February 25, 1969, the Report on Water and Sanitary Sewer Systems, was developed for Irving, Texas, by Forrest and Cotton, Consulting Engineers. The report consists of a review of existing information concerning land use, water demand, sanitary sewer service, and the determination of the general size and location criteria pertaining to water and sewer mains necessary to service future growth areas in Irving. This report may be reviewed in the NCTCOG Library.

Concerned with the area in Irving contained within the borders of South State Highway 114, North Beltline Road, West Radio Road, and East Trinity Road, the North Irving Community Study Area - 8, was published in 1974. Developed by the City's Department of Community Development, the document is a general plan for the North Irving Area and contains information on existing conditions and proposed improvements. One of the proposals in the plan calls for the creation of open space corridors along the Elm Fork of the Trinity River. A copy of this study may be reviewed in the NCTCOG Library.

Riewe and Wischmeyer, Consulting Engineers, developed a Long Range Improvement Plan: Water and Sanitary Sewer Facilities, for the Dallas County Water Control and Improvement District #7 in 1970. The planning area addressed by the Plan consists of the following respective components: Kleberg (60%), Mesquite (20.3%), Balch Springs (1.4%), Segoville (2%), and rural areas (16.3%). The document consists of an analysis of existing systems, future needs, and proposed improvements for the areas above. This Plan is available for review in the NCTCOG Library.

The Lake Livingston Area-Wide Wastewater Treatment Plan, is a part of the Trinity River Basin Water Quality Management Plan, and was prepared by URS/Forrest and Cotton, Incorporated, in 1974, for the Trinity River Authority. The Plan includes an analysis of the development that had occurred in the Lake Livingston Area up to 1974. On the basis of this analysis, projections are made up to the year 1990. From the projections, wastewater treatment plants and interceptor lines are proposed for the Lake Livingston area. The Plan utilizes target years of 1975, 1980 and

and 1990. Capital costs for these improvements are also contained in the document.

In December of 1976, the North Central Texas Council of Governments produced the review draft of Gauging Our Water Quality: An Analysis of Conditions and Trends in North Central Texas Lakes and Rivers. The report was prepared by the Trinity River Authority and funded as a Section 208 project by the U.S. Environmental Protection Agency. The report is quite lengthy, however, it contains a regional summary which describes the existing water quality, and which also projects water quality for the future. A discussion of both the point and nonpoint sources of pollution within the region is contained in the document. The format of the study utilizes "Presentation Areas" which coincide with traditional water sources such as West Fork Lake, Benbrook Lake, Lake Lavon, etc.

In 1976, the Planning and Environmental Management Division of the Trinity River Authority produced a document entitled: Existing Information Regarding Water Quality in Lake Livingston, Texas. The report contains a detailed discussion of the biological and chemical indices associated with Lake Livingston. It also contains a section on the eutrophication process and nutrients found in both Lake Livingston and the Trinity River. Copies of this report and the two referred to above may be reviewed at the offices of the Trinity River Authority.

Discussions with Mr. K.C. Rudy, Supervisor of Water Quality Services for the Trinity River Authority revealed that two new studies will be completed during 1977. These studies are: Runoff Related Pollutant Loading in the Mid-Trinity River, and Low Flow Nutrient Loss in the Mid-Trinity River. Both of these studies will be produced by the Texas Water Quality Board under contract with the Authority.

Interviews

A total of thirty interviews were conducted in Planning Subarea #5. The Survey Schedules used to collect information during the interview process are contained in Appendix E of this report. The Schedules indicate that more than twenty-five planning studies or projects are either presently underway or anticipated in the near future. Proposed projects are shown on Table 6 and are graphically identified on Map 6 in the pocket supplement of this report.

A pump station for Luce Bayou is being constructed on the Trinity River ten miles north of Liberty to pump water in Lake Houston. Total project cost for this facility is estimated at between ten and fifteen million dollars. The interviews indicated that a treatment plant is planned in the area of the North and East Belt intersection to treat water from Lake Houston. Initially, the plant will produce fifty million gallons of water per day. The second phase of the plant will increase this capacity to two-

APPENDIX C

**An Inventory of Development Plans Pertaining to the Trinity
River by Agencies other than the U.S. Army Corps of Engineers.**

SURVEY SCHEDULE

1. **TITLE OF DOCUMENT:** See narrative in Section 3, Part 1 of this Report.
2. **JURISDICTION** Brazos Valley Development Council (BVDC)
 - A. **Geographical Area:** NA
 - B. **Scope (Contents Of Document):** NA
3. **AUTHOR OF DOCUMENT:** BVDC
4. **STATUS OF PROJECT:**

Discussions with Ms. Ellise Bright of the BVDC indicated that the following projects are presently planned for areas within Navigation Increment #3.

 1. Lignite coal extraction.
 2. Upgrading of roads and bridges.
 3. A wildlife area.
 4. Construction of water facilities in Madison, County.
 5. Construction of regional sewage treatment facilities in Madison, County.
 6. Construction of solid waste facilities.
5. **DATE OF STUDY:** See narrative in Section 3, Part 1 of this Report.
6. **AVAILABILITY:** BVDC Library
 - A. **Copy Available To Send:**
 - B. **Copy On Hand For Review:**
7. **AGENCY FUNDING STUDY OR PROJECT:** Section 701, U.S. Department of Housing and Urban Development.
8. **KEY PERSON INTERVIEWED:**

Name: Ellise Bright
Agency: Brazos Valley Development Council
Address: 3006 E. 29th, Bryan, Texas
Telephone: 713 844 7421

**An Inventory of Development Plans Pertaining to the Trinity
River by Agencies other than the U.S. Army Corps of Engineers.**

SURVEY SCHEDULE

1. TITLE OF DOCUMENT: Corsicana Master Plan

2. JURISDICTION

A. Geographical Area: Corsicana, Texas

B. Scope (Contents Of Document):

This is a standard comprehensive municipal planning document.
However, the implementation of this plan has apparently had
no viable impact on the Trinity River.

3. AUTHOR OF DOCUMENT: Marvin Springer & Associates

4. STATUS OF PROJECT:

The interview indicated that no other plans or projects have been
created or implemented by Corsicana that would have an effect on
the Trinity River.

5. DATE OF STUDY: 1970

6. AVAILABILITY:

A. Copy Available To Send: No

B. Copy On Hand For Review: Yes. City of Corsicana and NCTCOG Library

7. AGENCY FUNDING STUDY OR PROJECT: Department of Housing and Urban
Development - Section 701

8. KEY PERSON INTERVIEWED:

Name: Mayor Sue Youngblood

Agency: City of Corsicana, Texas

Address: P.O. Box 465, Corsicana, Texas

Telephone: 214 874 4747

Date of Interview: 14 August 1976

SURVEY SCHEDULE

1. TITLE OF DOCUMENT: None Available

2. JURISDICTION Not Applicable

A. Geographical Area:

B. Scope (Contents Of Document):

3. AUTHOR OF DOCUMENT: Not Applicable

4. STATUS OF PROJECT:

The interview indicated that no project development was anticipated in the near future that would affect the Trinity River. However, a planning effort to upgrade the levee system in the district was anticipated in the near future. The reason for this planning effort is the increased runoff within the district's jurisdiction.
