BLOCK 20 CONTINUED

The real property inventory screening procedure described in this volume is an integral part of the facility seismic hazard indexing procedure. The screening procedure is necessary in order (1) to reduce inventoried buildings to a more manageable number, and (2) to aid in identifying the more important buildings on the basis of user-specified criteria for the earliest date of acquisition, minimum acquisition cost, and minimum building area. The screening procedure excludes from the real property inventory those buildings which do not conform with the specified criteria, and provides listings of the buildings remaining in the inventory in formats and sequences that will help in setting priorities for conducting seismic safety evaluations. However, the screening procedure does not include seismic hazard priority-ranking of the results nor does it adjust the acquisition costs to reflect the effects of inflation.

Volume II describes the basic concept of a seismic hazard priority-ranking procedure for Army buildings.

FOREWORD

This project was conducted for the Directorate of Military Programs, Office of the Chief of Engineers (OCE), under RDT&E Program 6.27.12A, Project 4A762719AT41, "Design and Construction of Fixed Military Facilities"; Task B, "Advance Technology for Military Construction"; Work Unit 017, "Mission Affordable Seismic Strengthening." The applicable QCR is 3.07.005. The OCE Technical Monitor was Mr. G. M. Matsumura.

The work was performed by the Engineering Team of the Engineering and Materials Division (EM), U.S. Army Construction Engineering Research Laboratory.

COL Louis J. Circeo is Commander and Director of CERL, and Dr. L. R. Shaffer is Technical Director.

SEISMIC INDEXING SYSTEM FOR ARMY INSTALLATIONS
VOLUME I: REAL PROPERTY INVENTORY
SCREENING PROCEDURE

1 INTRODUCTION

Background

The Army operates and maintains 164 installations and major activities in the United States. More than 127,000 buildings are located at these installations and major activities -- and nearly 20 percent of these buildings are in regions of high earthquake activity.¹ Current DOD criteria require that studies be undertaken in areas of high earthquake activity (1) to evaluate the earthquake resistance of existing military facilities such as hospitals, fire stations, emergency operation centers, garages for emergency vehicles, and other operationally critical facilities, and (2) to develop a phased and orderly plan for completing the necessary seismic strengthening of these facilities.²

The huge inventory of existing buildings and the astronomical cost of retrofitting whole classes of hazardous buildings makes the hazard abatement problem a complicated, costly issue. The Army must develop a realistic and cost-effective capability to address this problem, i.e., Mission Affordable Seismic Strengthening (MASS). The generalized process for seismic strengthening of Army facilities and the technological needs to achieve MASS are summarized in Figure 1. MASS will provide a facility seismic indexing/priority-ranking system to economically identify and evaluate the seismic capacity and strengthening strategies for essential and high potential loss facilities at Army installations. MASS includes processes to identify existing facilities that are potentially hazardous, to index the order for conducting seismic safety evaluations of potentially hazardous facilities, to evaluate the seismic capacity and upgrade requirements, to identify affordable strengthening designs and to prioritize the required strengthening in accordance with budgetary constraints and command goals.

The real property inventory screening procedure for Army installations described in this report is an integral part of the on-going work to develop a facility seismic hazard indexing procedure.

¹ United States Army Installations and Major Activities, DA Pam 210-1 (Department of the Army, February 1980); Inventory of Army Military Real Property (Department of the Army, 30 September 1979); Seismic Design for Buildings, TM 5-809-10, Draft Edition (Department of the Army, 1980).

² Construction Criteria Manual, DOD 4270.1-M (Department of Defense, 1 June 1978).

Objective

The overall objective of this work is to develop a facility seismic indexing/priority-ranking system to economically identify and evaluate the seismic capacity and strengthening strategies for essential and high potential loss facilities at Army installations. The first step in developing this system, described in this volume, is to develop an automated procedure for screening the real property inventory of Army installations that will (1) reduce the buildings in the inventory to a more manageable number, and (2) identify the more important buildings on the basis of user-specified criteria for the earliest date of acquisition, minimum acquisition cost, and minimum building area.

Volume II describes the basic concept of the seismic hazard priority-ranking procedure.

Scope

The screening procedure is limited to screening the real property inventory of Army installations and excluding from the inventory those buildings that conform with user-specified criteria for the earliest date of acquisition, minimum acquisition cost, and minimum building area; and to listing those buildings remaining in the inventory in formats and sequences which will help set priorities for conducting seismic evaluation investigations. The screening procedure does not include priority-ranking of the results nor adjustment of the acquisition costs to account for inflation. These aspects will be addressed during the development of the facility seismic indexing/priority-ranking system.

Mode of Technology Transfer

The information in this report will be used to prepare other material for inclusion in a new volume of TM 5-809-10, *Seismic Design for Buildings*.

MISSION AFFORDABLE SEISMIC STRENGTHENING (MASS)

GENERALIZED PROCESS VS. TECHNOLOGICAL NEEDS

Figure 1. Overview of Mission Affordable Seismic Strengthening (MASS).

2 SCREENING PROCEDURE

Screening Criteria

To expedite the identification of the more important buildings and utilities in the inventory of Army military real property, the Directorate of Real Estate, Office of the Chief of Engineers (DAEN-REP-S), developed a procedure for the U.S. Army Construction Engineering Research Laboratory (CERL) that will screen the real property inventory at any given Army installation or group of installations. The detailed real property inventory records are stored on magnetic tape computer data files according to the procedures specified in AR 405-45,³ and classified according to the category code and nomenclature system specified in AR 415-28.⁴ The current DOD facility classes and category code number series are listed in Table 1, and a more detailed breakdown of the system is presented in Appendix A.

The screening procedure excludes from the inventory those buildings and utilities that conform with any of the criteria specified below, and provides listings of the buildings and utilities remaining in the inventory in predeterminable formats and sequences. Note that certain parameters are variable and may be altered by the user to comply with the user's specific needs. Excluded are:

1. All buildings with less than 3000 sq ft of area (user-specified variable).

Table 1

DOD Facility Classes and Category Code Numbers

Facility Class	Category Code Number Series
Operational and Training	100
Maintenance and Training Facilities	200
Research, Development and Test Facilities	300
Supply Facilities	400
Hospital/Medical Facilities	500
Administrative Facilities	600
Housing and Community Facilities	700
Utilities and Ground Improvements	800
Real Estate	900

³ Inventory of Army Military Real Property, AR 405-45 (Department of the Army, 18 March 1977).

⁴ Department of the Army Facility Classes and Construction Categories, AR 415-28 (Department of the Army, 10 August 1973).

2. All buildings and utilities built after 1980 (user-specified variable).
3. All structures other than buildings and utilities.
4. All buildings with an initial cost less than \$200K (user-specified variable). However, the program will not exclude the inventory buildings which comply with the other screening criteria and yet are shown in the inventory having "zero" acquisition cost.

Listings

Listings of the detailed and screened real property inventory are provided in several different formats and sequences. The types of listings currently available include the following:

1. A detailed listing of real property by category code number (smallest to largest).
2. A detailed listing of the real property in category code number 800 (smallest to largest).
3. A screened listing of real property by category code number (smallest to largest).
4. A screened listing of real property by date of acquisition (oldest to newest).
5. A screened listing of real property by acquisition cost (largest to smallest).
6. A screened listing of real property by building area (largest to smallest).

Sample computer printouts for each type of listing are presented in Appendix B. The abbreviations used in the printouts are presented in Table 2 and are in accordance with AR 415-28.

Access

Requests for seismic screening of the real property inventory of an Army installation should be sent directly to the Office of the Chief of Engineers. Requests should be submitted on ENG Form 0-3778, "Request for ADP Service," as shown in Appendix C. Care should be taken to indicate the user-specified variables in block 4 of the form and to complete blocks 6 and 8. Six copies of the completed form should be submitted to HQDA (DAEN-REP-S), WASH DC 20314. The request will be processed in about 2 weeks and the printout forwarded to the requestor by mail.

WALL MATERIAL

A	Wood
B	Brick (brick veneer)
C	Concrete
D	Concrete block and clay block
E	Stone
F	Structural tile
G	Steel
H	Other
J	Adobe
K	Combination brick and wood or asbestos shingle
L	Aluminum
M	Cement asbestos
N	Cast iron
P	Glass, plastic, transparent or translucent material
Q	Roll, composition

Example Application

The current real property inventory records for Fort Ord, CA, indicate there are 3620 buildings on the installation. Using the user-specified variables of 3000 sq ft, 1980, and \$200K, DAEN-REP-S screened the real property inventory for Fort Ord and produced the listings in Appendix B. These listings indicate that only 127 buildings, or about 3 1/2 percent of the buildings on the installation, comply with the user-specified criteria. This represents a significant reduction in the inventory of existing buildings. If a further reduction is desired, the initial listings of screened real property can be used as a guide for another run. For example, if the area variable was increased to about 22,500 sq ft, the list of 127 buildings would be reduced to about 60 buildings.

3 CONCLUSION

The first step in the overall process of developing a facility seismic indexing/priority-ranking system was completed with the development of a real property inventory screening procedure for Army installations. The automated screening procedure resides with the Systems Operation and Management Branch, Programs Division, Directorate of Real Estate, Office of the Chief of Engineers (DAEN-REP-S), Washington, DC. It can be a useful tool to reduce the number of buildings in the inventory to a more manageable number and to identify the more important buildings. The screening process serves to eliminate minor facilities from the larger inventory and provides a more manageable inventory for subsequent priority ranking.

APPENDIX C:
SAMPLE REQUEST FOR ADP SERVICES

REQUEST FOR ADP SERVICE		READ INSTRUCTIONS ON REVERSE SIDE AND SUBMIT IN TRIPLICATE	DATE
TO: DAEN-DSZ-A	FROM (Requesting element of OCE): CERL	NAME & PHONE NO OF ACTION OFFICER Dr. James Prendergast 217-352-6511 X242	
SECTION I - SERVICE REQUESTED (To be completed by requesting element of OCE)			
☐ NEW/REVISED ☐ MAINTENANCE ☒ SPECIAL ☐ INTERNAL			
1 PROPOSED OR ESTABLISHED TITLE OF JOB OR SYSTEM CERL Screening System 5CL1			
2 JUSTIFICATION (Need for output and consequences if approval denied. Attach directive if available.) Letter dated: 7 Mar 1979 Subject: Computer Program for Screening RPI of Army Installations			
3 INPUT DATA (Attach copy of applicable form or format) ☐ CARDS ☐ HARDCOPY DOCUMENT ☐ MACHINE LISTING ☒ MAGNETIC TAPE ☐ PAPER TAPE ☐ OTHER (specify)			INPUT RECORD VOLUME 200,000
a AUTHORITY FOR COLLECTING INPUT DATA DAEN-REP		b DISPOSITION OF INPUT DATA	
c CUTOFF DATE (When all data is available to EIDSO)		d INPUT FREQUENCY	
4 DESCRIPTION OF OUTPUT (Show detail and format. Attach sample format. Describe mathematical computations, if any. If "SPECIAL" or "MAINTENANCE" request, state specific demand or request.) 1. Output format. 1 2 3 4 5 6 2. ALL BUILDINGS WITH LESS THAN _____ SQ FT. 3. ALL BUILDINGS BUILT AFTER _____ 4. ALL BUILDINGS COSTING LESS THAN _____			
5 ESTIMATED ☐ ANNUAL ☒ ONE-TIME WORKLOAD TO PRODUCE OUTPUT MANUALLY		6 DATE(S) OUTPUT REQ'D	
a COST MANUALLY IMPOSSIBLE		7 FREQUENCY ONE TIME	
8 DISTRIBUTION OF OUTPUT NAME OF PERSON - ROOM NO OR AGENCY ADDRESS		9 EIDSO FILES (enter dates) ☐ RETAIN UNTIL ☐ RETIRE ☐ DESTROY AFTER	
NO OF COPIES		SIGNATURE OF ADP COORDINATOR	
		SIGNATURE OF DIRECTOR OR CHIEF	
		DATE	
SECTION II - REPORTS CONTROL ACTION (To be completed by Reports Control Officer, OEC)			
10 OUTPUT CONTROL NUMBER (RCS)		SIGNATURE OF REPORTS CONTROL OFF	
11 OUTPUT CONTROL EXEMPTION		DATE	
SECTION III - EIDSO ACTION AND APPROVAL (To be completed by EIDSO only)			
12 COORDINATION		13 ANNUAL ADP WORKLOAD (estimated)	
SYS. PROG.	INIT	PHONE NO.	
EDP.			MAN-HOURS/COST
FORMS MGMT			ONE-TIME
OTHER			RECURRING
			SYSTEMS AND PROGRAMMING
			DATA PROCESSING (EDPC)
			TOTAL MAN-HOURS/COST
14 RIN NO	15 DA SYSTEM NO	SIGNATURE OF C EIDSO	
		DATE	
COPY TO: 1 EIDSO FILE 2 REPORTS CONTROL OFFICER 3 REQUESTING ELEMENT		16 REMARKS	

ENG FORM 0-3778 EDITION OF MAY 68 IS OBSOLETE,
