BIBLIOGRAPHY ON COLD REGIONS SCIENCE AND TECHNOLOGY
Volume 34, 1980

INTRODUCTION

The *Bibliography on Cold Regions Science and Technology* was first published in 1951 and is a continuing publication of the Cold Regions Bibliography Project in the Science and Technology Division of the Library of Congress. It is sponsored by and prepared for the Cold Regions Research and Engineering Laboratory (formerly Snow, Ice and Permafrost Research Establishment) of the U.S. Army Corps of Engineers. Volumes 1-15 were issued as the *Bibliography on Snow, Ice and Permafrost*, SIPRE Report 12. Beginning with volume 16 the designation was changed to CRREL Report 12. With volume 20 the title was changed to *Bibliography on Snow, Ice and Frozen Ground, with Abstracts*, and with volume 23 the current title was adopted.

The present volume contains material accessioned between October 1979 and September 1980. It contains the full citation of 4255 items, in many cases with abstracts. Pt. 2 is an index section divided into author and subject indexes. In the author index principal and joint personal and corporate authors are listed along with the title, date, pagination, and language of the document and the accession number. The subject index is composed of three basic elements: 1) terms taken from a controlled vocabulary based on the *Thesaurus of Engineering and Scientific Terms* (LEX-E JC), 2) free terms added as needed, 3) geographic names, generally entered under countries. The terms are listed in a single alphabetical arrangement, along with title (original, translated, abridged, expanded, or supplied), principal author, date, pagination, and language of pertinent documents, and their accession numbers.

This publication is the result of a coordinated effort. The bibliographic work was done by the Cold Regions Bibliography Project Staff who entered all data on a single computerized data base that accommodates both the *Bibliography on Cold Regions Science and Technology* and the *Antarctic Bibliography*, thus eliminating duplication of effort between the two bibliographies. The data processing, based on MARC II input, was handled by the Library's Automated Systems Office and the photocomposition by the Cataloging Distribution Service.

Cold tolerance of micro-arthropods from Alaskan taiga.
Block, W., *Ecological entomology,* May 1979, 4(2), p.103-110, 24 refs.
Soil microbiology, Cold tolerance, Taiga, Supercooling.
The objectives of the present study were to determine the degree of cold tolerance as exemplified by individual supercooling points, of prominent species of soil and litter dwelling microarthropods in a forest habitat in central Alaska, and to examine the effects of body water content, season and hence environmental temperature, on their ability to supercool. All arthropods tested were susceptible to freezing, and the mites utilize supercooling to avoid freezing. Reference is made to studies of supercooling in antarctic terrestrial arthropods.

34-12
Three soil profiles from Elephant Island, South Shetland Islands.
O'Brien, R.M.G., et al, *British Antarctic Survey. Bulletin,* Mar. 1979, No.47, p.1-12, 23 refs.
Romans, J.C.C., Robertson, L.
Soil profiles, Continuous permafrost, Soil composition, Weathering, Elephant Island.
Three soil profiles from ice-free areas around the periphery of Elephant Island are described and discussed. All three sites are underlain by continuous permafrost and the time interval since exposure to subaerial weathering and leaching is believed to range from several hundred years to about 10,000 yr. Incipient profile-horizon differentiation is just detectable on the oldest site but all three profiles show very little evidence of mineral weathering. (Auth.)

34-13
Antarctic fast-ice food chain: observations on the interaction of amphipod *Pontogeneia antarctica* Chevreux with ice-associated micro-algae.
Richardson, M.G., et al, *British Antarctic Survey. Bulletin,* Mar. 1979, No.47, p.106-115, 12 refs.
Whitaker, T.M.
Algae, Fast ice, Sea ice, Ecology.
Sea ice provides a great variety of sites for micro-algal growth. During winter 1973, observations were made on the colonization of the coastal ice foot at Signy Island and on the feeding habits of *Pontogeneia antarctica* Chevreux associated with the micro-algal growth. Samples of amphipods and micro-algae were taken using SCUBA diving techniques. The ice-associated micro-flora started development in early June with extensive growth of the blue-green algae *Phaeocystis antarctica* Karsten. This was replaced, mainly by diatoms, with *Navicula glaciei* Van Heurck and *Nitzschia curta* (Van Heurck) Hasle predominant. With the formation of fast ice, the amphipod migrated from its summer habitat among the weed bed of the shallow water to the coastal tide-crack area. Here a protracted hatching release started in August and both young and some adults fed on the developing micro-algal flora of the ice foot. *Pontogeneia antarctica* seems to be non-selective, consuming detrital, algal or crustacean material within a broad range of particle size. This omnivorous feeding, combined with protracted hatchling release and migration to the ice-associated food source present during the most winters, increases the probability that young will survive in a variable environment. (Auth.)

34-14
Environmental assessment of the Alaskan continental shelf. Vol.1. Physical science studies. Boulder, Colorado, Outer Continental Shelf Environmental Assessment Program, March 1979, 581p., Principal investigators' final project reports. For individual reports see 34-15 through 34-17.
Research projects, Geologic structures, Geomorphology, Shores, Sea ice, Oil spills, Environmental impact.

34-15
Environmental geology and geomorphology of the coastal zone of Kotzebue Sound and the Chukchi Sea forelands from Cape Prince of Wales to Cape Lisburne.
Cannon, P.J., Environmental assessment of the Alaskan continental shelf, Vol.1, Physical science studies. Principal investigators' final project reports, Boulder, Colorado, Outer Continental Shelf Environmental Assessment Program, March 1979, p.4-30, 2 refs.

Ice shelves, Fallout, Ice composition, Atmospheric composition, Antarctica—Ross Ice Shelf.
The annual fluxes of artificial radionuclides (Pu-239, Pu-239 + 240, Am-241, Cs-137, Sr-90 and H-3) from the atmosphere to the Ross Ice Shelf in Antarctica were determined from measurements in strata data by Pb-210. Recognizable sources include the U.S. tests (Mike-Ivy and Castle Hill) in the early 1950s, the U.S.S.R. tests in the early 1960s, the SNAP-9A burnup of 1964 and the French and Chinese tests in the late 1960s and 1970s. There are several problems still awaiting resolution: the differences in atmospheric chemistries of fission products and of transuranics produced in weapon tests and the anomalous fluxes of Pu-238 to the ice shelf which do not appear to reflect a one-year stratospheric residence. There is no evidence for a smearing of the fallout record as a consequence of diffusion of these radionuclides in the glacial column. (Auth.)

DLC TE220.5.I55 1978
Wet snow, Snow compaction, Snow removal, Salinity.
The compressibility of wet snow decreases with decreasing liquid water content but increases with decreasing salinity. Also, the tendency for snow splashing on highways increases with decreasing salinity. These opposite effects are complicated by the fact that liquid water content and salinity are not necessarily independent. The amount of liquid present can be controlled somewhat by the road grade, and salinity is generally determined by how much salt is applied to the road surface. For different situations it may be desirable to regulate salt applications in order to achieve a maximum amount of splashing with a minimum of compaction of wet snow into ice. Here we provide a qualitative review of wet snow and suggest how an understanding of wet snow's behavior on a road surface might increase our ability to deal with snow removal problems.

Ice accretion, Mathematical models, Environment simulation, Drops (liquids), Particle size distribution, Time factor.
Time-dependence enters into calculations of ice accretion on objects primarily through terms dependent on the initial conditions and size and geometry of the object. A numerical technique to include the time-dependence is described here as well as simulation of complex situations where the conditions vary, for example, along a helicopter rotor blade. Some results of varying droplet sizes, velocity, and droplet distributions are presented. These indicate the general dependence of ice accretion on these parameters as well as illustrate the utility of numerical techniques in seeing how these effects can influence the rates of ice accretion for particular initial conditions.

DLC TE220.5.I55 1978
Laboratory techniques, Ice accretion, Helicopters, Ice cover thickness, Temperature effects.
Experiments have been conducted to provide a basis for a computer model that simulates atmospheric ice accretion on a rotating blade. A comparison of the computer model simulation and experimental results reveals that general agreement exists within the temperature range 0 C to -25 C and the velocity range 0 to 60 m/s. Beyond 60 m/s the computer simulation over-predicts the thickness of the ice accretion at the leading edge. Below -25 C the simulation and experimental results disagree in that the simulation significantly overpredicts the thickness of the accretion at the leading edge.

Snow removal, Computerized simulation, Environment simulation.
A general computer model to simulate urban snow removal has been developed. One part of the package includes several programs which assist in the routing of snow removal vehicles using computer graphics. The primary element, however, is a program which, once specific vehicle routes are input, allows the simulation of any particular snow removal scenario. Parameters that can be varied include both truck and snowstorm characteristics. This simulation program is tested using truck routes and storm data from Newington, Connecticut. Results indicate that the simulation predicts plowing times quite reasonably.

Losev, S.M., Timokhov, L.A.
Sea ice, Drift, Ice islands, Hummocks.
Patterns of sea ice flow were surveyed aerially. The results were used to determine the effects of grounded ice islands (known as "ice hummocks") on ice flow. Ice hummocks were found to change the direction and rate of flow in the surrounding area. "Straits" between ice hummocks were found to affect flow locally, but the density of ice hummocks in a given area was found to be more important on a large scale. Ice hummocks are found to have significant effects on the flow of sea ice, especially on velocity of flow.

34-134
Construction and performance of membrane encapsulated soil layers in Alaska.
Smith, N., *U.S. Army Cold Regions Research and Engineering Laboratory*, June 1979, CR 79-16, 27p., ADA-073 531, 17 refs.
Soil freezing, Cold weather tests, Frost protection, Soil water, Waterproofing, Frost heave.
In 1973 two membrane encapsulated soil layer (MESL) test sections were constructed into existing gravel surfaced roads at Elmendorf AFB and at Ft. Wainwright in Anchorage and Fairbanks, Alaska, respectively. The Elmendorf AFB MESL contains a silty clay soil and the Ft. Wainwright MESL contains a nonplastic silt. Both sections were constructed at soil moisture contents of approximately 2% to 3% below optimum for the CE-12 compactive effort. There were no indications of soil moisture migration during freezing in either test section, and after-thaw field California Bearing Ratio values were nearly equal to values measured before freezing. There is growing evidence of a slight increase in the overall soil moisture content in the Elmendorf AFB MESL, possibly from moisture entering through the single layer polyethylene sidewalls which were not treated with asphalt emulsion. There is good evidence that the membrane of the same section might have received damage during a soil sampling operation which allowed localized moisture infiltration. A two-layer polyethylene membrane used in the Ft. Wainwright MESL is considered a more positive moisture barrier than the single sheet and a justifiable added cost for permanent construction.

Freezing problems associated with spray irrigation of wastewater during the winter.
Bouzoun, J.R., *U.S. Army Cold Regions Research and Engineering Laboratory*, May 1979, SR 79-12, 12p., ADA-070 031, 5 refs.
Waste treatment, Water treatment, Waste disposal, Irrigation, Ice prevention.
During the winters of 1975-76, 1976-77 and 1977-78, biologically treated wastewater was applied to land in West Dover, Vermont. The wastewater was applied using the spray irrigation method at ambient temperatures as low as 0F. During the first winter, freezing was a major problem. Modified spray nozzles that were less susceptible to freezing were installed at both the low points and high points of the aboveground spray laterals. During the second and third winters, ice buildup along the spray laterals, particularly in the vicinity of the spray nozzles, caused serious damage to the pipes. Many man-hours were required to cut the ice repeatedly from the laterals. As an experiment to alleviate the problem, several 30- to 36-in risers were installed at an angle of approximately 30 degrees from the vertical on two of the spray laterals during the winter of 1977-78. They functioned well enough to warrant future installation on the entire system of spray laterals.

Drainage network analysis of a subarctic watershed, Caribou-Poker Creeks research watershed, interior Alaska.
Bredthauer, S.R., et al, *U.S. Army Cold Regions Research and Engineering Laboratory*, June 1979, SR 79-19, 9p., ADA-073 595, 14 refs.
Hoch, D.
Watersheds, Drainage, Slope processes, Permafrost.
A Strahler stream order analysis and an exterior link length distribution analysis were made of the Caribou-Poker Creeks Research Watershed near Fairbanks, Alaska. The drainage network map used for analysis was produced using a 1:2250 scale aerial photograph mosaic. Low drainage densities characterize the basins. Bifurcation ratios indicate that the overall drainage network is not dominated by strong geologic controls. Statistical analysis indicates that bifurcating source links and tributary source links do not belong to the same length population, a characteristic shared by watersheds in other climatic regions of the world. Additional analysis indicates that exterior links originating on permafrost slopes tend to be shorter than those originating on non-permafrost, well-drained slopes.

34-138
Infrared thermography of buildings: 1977 Coast Guard survey.
Marshall, S.J., *U.S. Army Cold Regions Research and Engineering Laboratory*, June 1979, SR 79-20, 40p., ADA-073 596, 9 refs.
Buildings, Heat loss, Infrared photography, Windows.
An IRTB (infrared thermography of buildings) field survey, producing 631 thermograms, 125 photographs, and weather data, was conducted during a 14-day study of 10 Coast Guard stations in Maine, New Hampshire and Massachusetts. This report discusses how the survey was initiated and performed with emphasis on details for the benefit of the reader wishing to plan a survey. One hundred twenty selected thermograms and photographs in this report illustrate many types of heat loss and compare thermally ineffective doors and windows with units designated as standards for thermal effectiveness. Radiator heat leakage through walls, mottled moisture patterns on brick walls, infiltration patterns on glass, and poorly covered openings are illustrated. Thermograms of severe heat losses through glass doors, glass transoms, and glass wall panels are also included, and several solutions for individual heat loss problems, such as fiberglass garage doors and porcelain insulated panels, are suggested. Unanticipated survey problems, such as difficulties in obtaining photographs to compare with thermograms, [illegible] vey techniques for inclement weather, are also discussed.

34-139
Application of heat pipes on the Trans-Alaska Pipeline.
Heuer, C.E., *U.S. Army Cold Regions Research and Engineering Laboratory*, July 1979, SR 79-26, 27p., ADA-073 597, 26 refs.
Pipelines, Heat pipes, Heat transfer.
The application of heat pipes on the Trans-Alaska Pipeline is reviewed. The subjects addressed include the general functioning of a heat pipe, the specific heat pipe design used, the different situations where heat pipes were employed, the methods used to develop the heat pipe design, the methods used to monitor the operating heat pipes, and the performance of the heat pipes. The discussion is qualitative in nature. Quantitative information is largely omitted to allow coverage of a broad area and because it may be considered proprietary. Nevertheless, the information presented here should give a good appreciation of the quality and complexity of the heat pipe design. The information should also be useful in developing heat pipes for use in other cold regions applications.

Optimal design of steel frames for modular buildings in the Far North. [Optimizatsiia konstruktivnogo resheniia stal'nogo karkasa sborno-razbornogo zdaniia dlia Kraĭnego Severa],
Volovik, A.IA., et al, *Stroitel'stvo v raĭonakh Vostochnoĭ Sibiri i Kraĭnego Severa*, 1972, Vol.24, p.3-15, In Russian. 5 refs.
Malyshkina, I.N.
Prefabrication, Permafrost beneath structures, Panels, Steel structures, Modular construction, Building frames, Design.

34-174
Selection of design schemes for standard industrial buildings. [K vyboru konstruktivnykh skhem inventarnykh promzdanieĭ],
Arshinin, A.A., *Stroitel'stvo v raĭonakh Vostochnoĭ Sibiri i Kraĭnego Severa*, 1972, Vol.24, p.16-21, In Russian.
Industrial buildings, Permafrost beneath structures, Standards, Design, Construction materials, Construction equipment.

34-175
Small buildings of metallic folding sections. [Maloob'emnoe zdanie iz metallicheskikh skladyvaiushchikhsia sektsiĭ],
Nevenchenko, I.M., et al, *Stroitel'stvo v raĭonakh Vostochnoĭ Sibiri i Kraĭnego Severa*, 1972, Vol.24, p.22-32, In Russian. 4 refs.
Malyshkina, I.N.
Industrial buildings, Prefabrication, Permafrost beneath structures, Foundations, Reinforced concretes, Steel structures, Panels, Thermal insulation.

34-176
Modular apartment buildings with "packet" type cells. [Sborno-razbornye zdaniia s primeneniem ob'emnykh blokov tipe "paket"],
Lazhintsev, V.I., *Stroitel'stvo v raĭonakh Vostochnoĭ Sibiri i Kraĭnego Severa*, 1972, Vol.24, p.33-42, In Russian.
Prefabrication, Residential buildings, Thermal insulation, Windows, Heat loss, Permafrost beneath structures, Modular construction.

34-177
Experimental study of the "packet" type apartment cells. [Eksperimental'noe issledovanie ob"emnykh blokov tima "paket"].
Lazhintsev, V.I., et al. *Stroitel'stvo v raionakh Vostochnoi Sibiri i Krainego Severa*, 1972, Vol.24, p.43-53. In Russian.
Heat loss, Residential buildings, Prefabrication, Thermal insulation, Permafrost beneath structures, Modular construction, Design.

34-178
Sectional buildings with bearing panels made of effective materials. [Sbornoe zdanie iz nesushchikh panelei s primeneniem effektivnykh materialov].
Lazhintsev, V.I., et al. *Stroitel'stvo v raionakh Vostochnoi Sibiri i Krainego Severa*, 1972, Vol.24, p.54-63. In Russian.
Kvach, I.K.
Residential buildings, Permafrost beneath structures, Foundations, Prefabrication, Panels, Walls, Roofs, Aluminum, Thermal insulation, Heating, Ventilation.

34-179
Methods of technical and economic evaluation of modular buildings and structures. [Metodika tekhniko-ekonomicheskoi otsenki sborno-razbornykh zdanii i sooruzhenii].
Pal'tsevich, L.P., *Stroitel'stvo v raionakh Vostochnoi Sibiri i Krainego Severa*, 1972, Vol.24, p.64-73. In Russian.
Buildings, Prefabrication, Panels, Permafrost beneath structures, Thermal insulation, Construction materials.

34-180
Organic-mineral admixtures for increasing strength and frost resistance of reinforced concretes in the Kola Peninsula. [Primenenie organo-mineral'noi dobavki (OMD) dlia povysheniia prochnosti i morozostoikosti zhelezobetonnykh izdelii v usloviiakh Kol'skogo poluostrova].
Zamoshchik, A.I., et al. *Stroitel'stvo v raionakh Vostochnoi Sibiri i Krainego Severa*, 1972, Vol.24, p.74-84. In Russian. 2 refs.
Petrusev, B.V., Shevchenko, V.I.
Reinforced concretes, Concrete admixtures, Frost resistance, Concrete strength, Concrete freezing.

34-181
Technical and economic indices of aluminum bearing structures of standard industrial buildings. [Tekhniko-ekonomicheskie pokazateli nesushchikh konstruktsii iz aliuminievykh splavov dlia inventarnykh promzdanii].
Malyshkina, I.N., et al. *Stroitel'stvo v raionakh Vostochnoi Sibiri i Krainego Severa*, 1972, Vol.24, p.85-91. In Russian. 3 refs.
Nevenchenko, I.M., Shevchenko, N.A.
Industrial buildings, Standards, Large panel buildings, Panels, Aluminum.

34-182
Technical and economic analysis of different construction materials in modular buildings. [Tekhniko-ekonomicheskii analiz primeneniia razlichnykh materialov v konstruktsiiakh sborno-razbornykh zdanii].
Kuzina, Z.G., et al. *Stroitel'stvo v raionakh Vostochnoi Sibiri i Krainego Severa*, 1972, Vol.24, p.92-97. In Russian.
Pal'tsevich, L.P., Lazhintsev, V.I.
Large panel buildings, Panels, Thermal insulation, Transportation, Cost analysis, Construction materials.

34-183
Determining optimal service life of modular buildings. [Opredelenie optimal'nykh srokov sluzhby sborno-razbornykh zdanii].
Pal'tsevich, L.P., *Stroitel'stvo v raionakh Vostochnoi Sibiri i Krainego Severa*, 1972, Vol.24, p.98-107. In Russian.
Buildings, Prefabrication, Panels, Permafrost beneath structures, Cold weather performance.

34-184
Requirements for structural elements of sectional buildings determined by the conditions of their transportation and assembly by helicopter. [Trebovaniia k konstruktsiiam sborno-razbornykh zdanii, opredeliaemye usloviiami ikh transportirovaniia i montazha vertoletami].
Bogdanov, V.A., *Stroitel'stvo v raionakh Vostochnoi Sibiri i Krainego Severa*, 1972, Vol.24, p.108-120, In Russian.
Buildings, Transportation, Helicopters, Prefabrication, Permafrost beneath structures.

34-185
Providing standard buildings for construction enterprises in the North. [Osnashchenie stroitel'nykh organizatsii Severa inventarnymi zdaniiami].
Peryshkin, E.I., et al. *Stroitel'stvo v raionakh Vostochnoi Sibiri i Krainego Severa*, 1972, Vol.24, p.121-136, In Russian
Kotenko, L.A., Koposhko, V.S.
Buildings, Standards, Permafrost beneath structures, Design.

34-186
Distribution of factories producing sectional buildings. [Vybor variantov razmeshcheniia zavodov po proizvodstvu sborno-razbornykh domov].
Pal'tsevich, L.P., et al. *Stroitel'stvo v raionakh Vostochnoi Sibiri i Krainego Severa*, 1972, Vol.24, p.137-142, In Russian
Kuzina, Z.G.
Buildings, Prefabrication, Industrial plants, Distribution.

34-187
Present state of translucent enclosures in industrial buildings of Yakutia. [Sovremennoe sostoianie svetopropuskaiushchikh ograzhdenii promyshlennykh zdanii v IAkutii].
Braman, N.V., et al. *Stroitel'stvo v raionakh Vostochnoi Sibiri i Krainego Severa*, 1972, Vol.24 p.142-151, In Russian. 2 refs.
Kuzema, G.P.
Industrial buildings, Permafrost beneath structures, Walls, Windows, Heat loss, Hoarfrost, Light transmission.

34-188
Economic effectiveness of using high thermal insulation windows in residential buildings of the North. [Ekonomicheskaia effektivnost' primeneniia okon povyshennoi teplozashchity dlia zhilykh zdanii v severnykh raionakh strany].
Kuzema, I.G., et al. *Stroitel'stvo v raionakh Vostochnoi Sibiri i Krainego Severa*, 1972, Vol.24, p.153-165, In Russian. 10 refs.
Kuzema, G.P.
Residential buildings, Windows, Thermal insulation, Heat loss, Cost analysis.

34-189
Studying the combined effect of low air temperature and wind pressure on thermal regime of walls. [Issledovanie vliianiia sochetaniia nizkoi temperatury vozdukha s vetrovym naporom na teplovoi rezhim steny].
Orel, O.P., *Stroitel'stvo v raionakh Vostochnoi Sibiri i Krainego Severa*, 1972, Vol.24, p.166-176, In Russian.
Buildings, Walls, Thermal regime, Wind pressure, Freezing, Analysis (mathematics).

34-190
Economic effectiveness of antifreeze admixtures. [Ekonomicheskaia effektivnost' primeneniia protivomoroznykh dobavok].
Modylevskii, A.B., et al. *Stroitel'stvo v raionakh Vostochnoi Sibiri i Krainego Severa*, 1972, Vol.24, p.177-185, In Russian.
Zamoshchik, A.I., Olovina, I.N., Koval'skaia, N.N.
Winter concreting, Concrete admixtures, Frost resistance, Concrete strength, Concrete freezing, Concrete hardening.

34-191
Silicate cements and dense concretes on a base of nepheline slag and phosphorite residues. [Silikatnoe viazhushchee i plotnye betony na baze nefelinovogo shlama i fosforitovykh khvostov].
Riumin, K.I., et al. *Stroitel'stvo v raionakh Vostochnoi Sibiri i Krainego Severa*, 1972, Vol.24, p.196-201, In Russian. 1 ref.
Leonov, B.IA.
Concretes, Cements, Concrete aggregates, Wastes, Concrete strength, Frost resistance.

34-192
New powerful pneumatic drift. [Novyi moshchnyi pnevmoproboinik].
Gurkov, K.S., et al. *Mekhanizatsiia stroitel'stva*, July 1979, No.7, p.8-10, In Russian. 5 refs.
Klimashko, V.V., Naboko, V.P.
Mining, Tunneling (excavation), Pile driving, Excavation, Underground facilities.

34-193
Tower cranes used by Glavmosstroi in large panel construction. [Ekspluatatsiia bashennykh kranov v ob"edinenii krupnopanel'nogo domostroeniia Glavmosstroia].
Blokhin, V.V., *Mekhanizatsiia stroitel'stva*, July 1979, No.7, p.11-13, In Russian.
Cranes (hoists), Large panel buildings, Panel installation.

34-194
Noise accompanying the breakup of ice by the hull of an icebreaker.
Bogorodskii, P.V., et al. *Soviet physics Acoustics*, Jan.-Feb 1979, 25(1), p.73-74, Translated from Akusticheskii zhurnal 7 refs.
Gavrilo, V.P.
Ice breaking, Noise (sound), Vibration, Sea ice, Icebreakers, Frequency analysis.

34-195
Methods of fastening reinforced concrete supports of overhead power lines in weak ground. [Progressivnye sposoby zakrepleniia zhelezobetonnykh opor VL v slabykh gruntakh].
Kurnosov, A.I., et al. *Energeticheskoe stroitel'stvo*, June 1979, No.6, p.29-32, In Russian.
Gabliia, IU.A., Sokolov, A.S., Gorelov, A.V.
Concrete structures, Power line supports, Swamps, Anchors.

34-196
Wall panels with polyurethane foam thermal insulation used in power plant construction. [Primenenie stenovykh panelei s uteplitelem iz penopoliuretana v energeticheskom stroitel'stve].
Danenkov, V.D., et al. *Energeticheskoe stroitel'stvo*, June 1979, No.6, p.33-34, In Russian. 2 refs.
Trincher, IU.K., Romanenkov, I.G.
Electric power, Walls, Panels, Thermal insulation, Cellular plastics.

34-197
Layer-by-layer concreting in dam construction under severe climatic conditions. [Posloinoe betonirovanie pri vozvedenii plotin v surovykh klimaticheskikh usloviiakh].
Kogan, E.A., et al. *Energeticheskoe stroitel'stvo*, 1979, No.6, p.34-36, In Russian. 3 refs.
Panfilov, V.S.
Winter concreting, Concrete structures, Dams, Concrete placing, Hydraulic structures.

34-198
Cement-silicate solutions used in building grout curtains under complex hydrogeological conditions. [Tsementno-silikatnye rastvory dlia sozdaniia protivofil'tratsionnykh zaves v slozhnykh gidrogeologicheskikh usloviiakh].
Shugalei, R.T., et al. *Russia. Ministerstvo vysshego i srednego spetsial'nogo obrazovaniia. Izvestiia vysshikh uchebnykh zavedenii. Stroitel'stvo i arkhitektura*, 1979, No.3, p.74-77, In Russian. 3 refs.
Tetel'min, V.V.
Hydraulic structures, Frozen ground, Cements, Cement admixtures, Grouting.

34-199
Methods of studying and accounting for interactions between two ductless heat pipes laid in permafrost. [Metodika ucheta i issledovanie vzaimnogo vliianiia dvukh teploprovodov pri beskanal'noi prokladke v merzlote].
Koshelev, A.A., *Russia. Ministerstvo vysshego i srednego spetsial'nogo obrazovaniia. Izvestiia vysshikh uchebnykh zavedenii. Stoitel'stvo i arkhitektura*, 1979, No.3, p.85-90, In Russian. 12 refs.
Heat pipes, Permafrost heat transfer, Pipe laying, Pipelines, Heat transfer.

34-200
Ocean ice.
Sobey, E., *Sea frontiers*, Mar.-Apr. 1979, 25(2), p.105-114.
Sea ice, Ice salinity, Climatology, Icebergs.
Written for the general reader, this article points out the tremendous importance of antarctic and arctic ice. Icebergs are discussed, especially as a potential source of freshwater, and the differences between arctic and antarctic icebergs explained. Photographs compare the jagged and tabular types of bergs. More general and far-reaching differences in the two polar regions are also contrasted and their influence on world climate stressed. The process by which sea ice loses salt as it freezes explains the relatively low salinity of ice formed from sea water.

34-201
Phosphorus regeneration in fresh-water paramecia.
Buechler, D.G., et al, *Journal of protozoology*, May 1974, 21(2), p.339-343, 30 refs.
Dillon, R.D.
Bacteria, Nutrient cycle, Tundra, Ecosystems, Water temperature, Polar regions, Microbiology, United States—Alaska—Barrow.

34-202
Feasibility of caribou winter habitat analysis using satellite data.
LaPerriere, A.J.L., III, College, University of Alaska, 1976, 181p., University Microfilms order No.77-8560, Ph.D. thesis. For abstract see Dissertation abstracts international, Sec.B, Apr. 1977, p.4854.
Tundra, Animals, Winter, LANDSAT, Lichens, Mapping, Computer applications.

34-203
Sediment characteristics of some small temperate glaciers.
Mills, H.H., Seattle, University of Washington, 1975, 156p., University Microfilms order No.76-17,567, Ph.D. thesis. For abstract see Dissertation abstracts international Sec. B, Aug. 1976, p.662.
Mountain glaciers, Sediments, Moraines, Glacial deposits, Alpine glaciation, Glacier flow.

Remote sensing in glaciology and the physics of echoes.
Nye, J.F., Remote sensing of the terrestrial environment, edited by R.F. Peel et al, Symposium of the Colston Research Society, 28th, University of Bristol, April 5-9, 1976, Proceedings, London, Butterworths, 1977, p.189-197, 24 refs.
DGS 753.7 R228t
Ice sheets, Radio echo soundings, Remote sensing.
The many applications of remote sensing that are now being used in glaciology are briefly mentioned, detailed accounts of most of them are conveniently available in a recent reference volume. The most highly developed application is the echo sounding of Greenland and Antarctic masses by radio pulses. After referring to the successes and potentialities of this technique, the chapter describes current experimental and theoretical work at Bristol on the topic. A radio echo has a detailed structure both of amplitude and of phase; it is a pattern in three dimensions, moving upwards and changing with time as it goes. It can be observed with the aid of a laboratory analogue machine that uses ultrasonic pulses in place of radio pulses. A conspicuous feature of the pattern is a complicated array of looped lines, called dislocations, along which the amplitude is zero and the phase is indeterminate. They are analogous to the dislocations found in crystals. A comprehensive theory of the scattering of pulses by a rough wavy surface, or other scattering object, which seems essential to a full understanding of active remote sensing, does not yet exist. One of the features it has to take into account is the imperfect focusing of the echoes on to caustic surfaces and the relation between these surfaces and the dislocation lines. (Auth. mod.)

34-236
Studies of ice by means of radio echo sounding.
Gudmandsen, P., Remote sensing of the terrestrial environment, edited by R.F. Peel et al, Symposium of the Colston Research Society, 28th, University of Bristol, Apr. 5th to 9th, 1976, Proceedings, London, Butterworths, 1977, p.198-211, 19 refs.
DSG 753.7 R228T
Ice sheets, Radio echo soundings, Ice electrical properties.
This paper gives a review of the airborne radio echo-soundings carried out in Greenland by the Technical University of Denmark (TUD). The technique is described by means of illustrations with emphasis placed on a qualitative interpretation of the phenomena observed and the uncertainties and limitations of the technique. Radio echo sounding of the Antarctic ice sheet is also noted. (Auth. mod.)

34-294
Mathematical model to describe the behavior of a moving ice field encountering a conical structure.
Kin, J.K., et al, *Arctic Petroleum Operators Association, Calgary, Alta. Report*, Dec. 28, 1973, APOA 57-1, 2 vols., 6 refs.
Kotras, T.V., Edwards, R.Y., Jr., Turcot, P., Wallace, W., Poirer, A.
Pack ice, Pressure ridges, Offshore structures, Ice loads, Mathematical models, Ice adhesion, Ice strength.

34-295
Ice adhesion study.
Acres Consulting Services, Ltd., *Arctic Petroleum Operators Association, Calgary, Alta. Report*, Dec. 1973, APOA 57-2, 88p., 78 refs.
Offshore structures, Ice pressure, Ice loads, Mathematical models, Pressure ridges, Ice adhesion, Ice strength.

34-296
Small prototype cone tests winter 1973-74.
Verity, P.H., *Arctic Petroleum Operators Association, Calgary, Alta. Report*, Mar. 1975, APOA 65-1, 102p. + appends.
Models, Offshore structures, Steel structures, Ice pressure, Ice strength, Dynamic loads.

34-297
Landfast ice movement—Mackenzie delta 1973-74.
Spedding, L.G., *Arctic Petroleum Operators Association, Calgary, Alta. Report*, Apr. 1975, APOA 67-1, 127p. + figs.
Fast ice, Drift, Telemetering equipment, Wind velocity, Ice elasticity.

34-298
Investigations into the feasibility of producing pressure ridge ice sheet systems with synthetic ice.
Edwards, R., et al, *Arctic Petroleum Operators Association, Calgary, Alta. Report*, Aug. 29, 1975, APOA 68-1, n.p.
Abdelnour, R., Wallace, W.
Artificial ice, Pressure ridges, Ice strength, Flexural strength, Ice models.

34-299
Analytical study of ice scour on the sea bottom.
Foundation of Canada Engineering Corporation, Ltd., *Arctic Petroleum Operators Association, Calgary, Alta. Report*, Apr. 1975, APOA 69-1, 185p. + appends., 39 refs.
Sea ice, Bottom sediment, Ice scoring, Icebergs, Ice cover thickness, Ocean waves, Mathematical models.

34-300
Normal and extreme winds and waves in the Canadian southern Beaufort Sea.
Intersea Research Corporation, *Arctic Petroleum Operators Association, Calgary, Alta. Report*, July 11, 1974, APOA 70-1, 81p., 20 refs.
Wind (meteorology), Ocean waves, Sea ice, Beaufort Sea.

34-301
Summer environmental program Mackenzie River estuary.
Slaney (F.F.) and Company, Ltd., *Arctic Petroleum Operators Association, Calgary, Alta. Report*, Apr. 1975, APOA 76-1, 3 vols., Vol.1 deals with aquatic studies, Vol.2 with terrestrial studies, and Vol.3 with marine mammals. Numerous refs.
Artificial islands, Environmental impact, Oceanography, Water chemistry, Marine biology, Animals, Estuaries, Coastal topographic features, Sea ice.

34-302
Model experiments to determine the ice forces exerted on structures by moving ice fields (comparison with small prototype test results).
Edwards, R.Y., Jr., et al, *Arctic Petroleum Operators Association, Calgary, Alta. Report*, June 4, 1975, APOA 77-1, 35p. + annex.
Wallace, W.G., Abdelnour, R.
Ice pressure, Offshore structures, Ice models, Ice strength, Ice cover thickness.

34-303
Ice island count southern Beaufort Sea 1974.
Spedding, L.G., *Arctic Petroleum Operators Association, Calgary, Alta. Report*, May 1975, APOA 99-1, 14p. + figs. and slides.
Sea ice, Ice islands, Aerial surveys, Beaufort Sea.

34-304
Ice island count southern Beaufort Sea 1975.
Spedding, L.G., *Arctic Petroleum Operators Association, Calgary, Alta. Report*, Nov. 1976, APOA 99-2, 14p. + figs.
Sea ice, Ice islands, Aerial surveys, Beaufort Sea.

34-305
Ice island count southern Beaufort Sea 1976.
Spedding, L.G., *Arctic Petroleum Operators Association, Calgary, Alta. Report*, Nov. 1977, APOA 99-3, 50p., 19 refs.
Sea ice distribution, Ice islands, Aerial surveys, Offshore structures, Beaufort Sea.

34-306
Island defense system tests.
Trofimenkoff, P.N., *Arctic Petroleum Operators Association, Calgary, Alta. Report*, Oct. 1976, APOA 111-1, 84p., 4 refs.
Artificial islands, Lake ice, Ice strength, Flexural strength.

34-307
Analysis of ocean currents Davis Strait—1977.
Osborn, T.R., et al, *Arctic Petroleum Operators Association, Calgary, Alta. Report*, Mar. 1978, APOA 138-11, 2 vols., Vol.1 is the analysis of the raw data presented in Vol.2. 51 refs.
Leblond, P.H., Hodgins, D.O., Seaconsult Marine Research, Ltd.
Oceanography, Ocean currents, Water temperature, Salinity, Measuring instruments.

34-308
Environmental conditions off the east coast of Canada: Sites 3 (54N, 54W), 4 (49N, 48W), and 5 (47N, 47W).
Denard, M., *Arctic Petroleum Operators Association, Calgary, Alta. Report*, Dec. 1977, APOA 138-12, 96p.
Meteorological data, Climatology, Wind velocity, Visibility, Ship icing, Labrador Sea.

34-309
Environmental conditions off the east coast of Canada: Godthaab, Greenland.
Danard, M., *Arctic Petroleum Operators Association, Calgary, Alta. Report,* Apr. 1978, APOA 138-12A, 13p., Addendum to APOA report Environmental conditions off the east coast of Canada: Sites 1 and 2, Oct. 1977.
Meteorological data.

34-310
Ice and meteorological observations in the Davis Strait during April, May and June 1977 for Imperial Oil Limited.
MacClaren Atlantic, Ltd., *Arctic Petroleum Operators Association, Calgary, Alta. Report,* Dec. 1977, APOA 138-13, var. p.
Ice conditions, Meteorological data, Sea ice, Icebergs, Ice cover thickness, Ice salinity.

34-311
Sediment analysis of cores from Davis Strait and Flemish Pass for Imperial Oil Limited.
MacLaren Atlantic, Ltd., *Arctic Petroleum Operators Association, Calgary, Alta. Report,* Dec. 1976, APOA 138-14, n.p.
Bottom sediment, Drill core analysis, Soil chemistry, Particle size distribution, Soil water.

34-312
Preliminary study of the fate of oil from a subsea blowout on the east coast.
Telford, A.S., et al, *Arctic Petroleum Operators Association, Calgary, Alta. Report,* Apr. 1977, APOA 138-15, 34p., 8 refs.
Metge, M.
Oil spills, Countermeasures, Wind (meteorology), Ice cover effect.

34-313
Report on strength and deformation characteristics of sea-bed samples from Davis Strait.
Hardy (R.M.) and Associates, Ltd., *Arctic Petroleum Operators Association, Calgary, Alta. Report,* Jan. 1978, APOA 138-16, 28p. + appends.
Bottom sediment, Soil strength, Compressive properties, Stress strain diagrams, Davis Strait.

34-314
Final report 1977 ocean current study.
Goodman, R.H., et al, *Arctic Petroleum Operators Association, Calgary, Alta. Report,* Jan. 1978, APOA 138-17, 24p. + appends.
Wood, A.L., Zimmerman, P.W., Furrow, L.L., Blundell, C.
Ocean currents, Logistics, Oceanographic ships.

34-315
Report on laboratory testing of sea-bed samples from Davis Strait.
Hardy (R.M.) and Associates, Ltd., *Arctic Petroleum Operators Association, Calgary, Alta. Report,* Dec. 1977, APOA 138-18, 9p. + appends.
Boreholes, Bottom sediment, Soil tests.

34-316
Some sea ice cover statistics for the Canadian east coast.
Fraser, J.E., *Arctic Petroleum Operators Association, Calgary, Alta. Report,* Oct. 1975, APOA 138-19, 28p.
Sea ice distribution, Ice cover thickness, Climatology, Drift, Ocean currents, Polynyas.

34-317
Davis Strait surface drifter buoys program 1977.
Metge, M., *Arctic Petroleum Operators Association, Calgary, Alta. Report,* Mar. 1978, APOA 138-20, 69p., 7 refs.
Remote sensing, Ocean currents, Drift stations, Davis Strait.

34-318
Davis Strait wave climate study using the 1970 through 1977 meteorological and oceanographic centre synoptic significant wave charts.
McKay, W.N., *Arctic Petroleum Operators Association, Calgary, Alta. Report,* Mar. 1978, APOA 138-21, 260p.
Ocean waves, Sea ice distribution, Climatology, Davis Strait.

34-319
Workshop on coastal research and planning in Labrador.
Rosen, P.R., ed, *Bedford Institute of Oceanography, Dartmouth, N.S. Report,* Mar. 1978, BI-R-77-12, 66p., In English with French summary. Comprised of abstracts of papers presented at the workshop held at BIO Jan. 27, 1978.
Meetings, Research projects, Oceanography.

34-320
Oceanographic survey of Porters Lake, N.S.
Elliott, J.A., *Bedford Institute of Oceanography, Dartmouth, N.S. Report,* Aug. 1978, BI-R-78-5, 24p., In English with French summary. 4 refs.
Lake water, Water temperature, Salinity, Seasonal variations.

34-321
Concentration of petroleum residues in the waters and sediments of Baffin Bay and the eastern Canadian Arctic—1977.
Levy, E.M., *Bedford Institute of Oceanography, Dartmouth, N.S. Report,* Jan. 1979, BI-R-79-3, 34p., In English with French summary. 12 refs.
Sea water, Sediments, Impurities, Crude oil.

34-322
Canadian Arctic field survey, May 17-June 23, 1969.
Atwater, R.K., et al, *Oceanographic Services, Inc., Santa Barbara, California. Report,* Aug. 1969, OSI 176-1, 35p. + appends.
Nichols, L.C., Freeman, L.W.
Sea ice, Ice surveys, Drift, Ice cover thickness, Ocean currents, Meteorological data, Ice drills, Logistics.

34-323
Boguchany hydroelectric plant.
Blond, E.A., et al, *Hydrotechnical construction,* Nov. 1978, No.11, p.1071-1077, Translated from Gidrotekhnicheskoe stroitel'stvo.
Ragozin, D.A.
Hydraulic structures, Dams, Permafrost beneath structures, Design.

34-324
Electric-heat supply for the construction region encompassing the Boguchany hydroelectric plant.
Ivanova, E.V., *Hydrotechnical construction,* Nov. 1978, No.11, p.1084-1087, Translated from Gidrotekhnicheskoe stroitel'stvo.
Electric power, Construction, Heat sources.

34-325
Analysis of soil state in the core of the Ust-Khantaika hydroelectric plant dam.
Kronik, IA.A., et al, *Hydrotechnical construction,* Nov. 1978, No.11, p.1105-1112, Translated from Gidrotekhnicheskoe stroitel'stvo. 7 refs.
Kadkina, E.L., Loseva, S.G.
Electric power.

34-326
Experience with design and operation of bucket dredges for excavating sand-gravel-boulder soils.
Freidin, V.M., *Hydrotechnical construction,* Nov. 1978, No.11, p.1123-1126, Translation from Gidrotekhnicheskoe stroitel'stvo. 5 refs.
Dredging, Excavation, Sands, Gravel, Equipment, Design, Permafrost.

34-327
Moisture-proof thermal insulation for ductless heat pipes. [Neuvlazhniaiushchaiasia teploizoliatsiia dlia beskanal'nykh teploprovodov],
Skvortsov, A.A., *Energeticheskoe stroitel'stvo,* July 1979, No.7, p.21-24, In Russian. 3 refs.
Heat pipes, Thermal insulation, Waterproofing.

34-328
Excavation of hard rocks in the central section of the Baykal Amur railroad. [Razrabotka skal'nykh gruntov na tsentral'nom uchastke BAMa],
Basistov, M.A., *Transportnoe stroitel'stvo,* July 1979, No.7, p.3-4, In Russian.
Drills, Earthwork, Frozen fines, Excavation, Equipment, Permafrost.

34-329
Roadbed design for cold regions. [Osobennosti proektirovaniia zemlianogo polotna v raionakh surovogo klimata],
Merenkov, N.D., *Transportnoe stroitel'stvo,* July 1979, No.7, p.8-9, In Russian. 3 refs.
Roadbeds, Permafrost beneath roads, Peat, Roads, Design.

34-330
Using suction dredges with an ejection device. [Ekspluatatsiia zemsnariadov s ezhektornym gruntozabornym ustroĭstvom],
Mishina, L.V., et al, *Transportnoe stroitel'stvo,* July 1979, No.7, p.17-18, In Russian.
Dogadin, V.K.
Excavation, Dredging, Equipment.

34-331
Using the super-plasticizer S-3 in manufacturing reinforced concrete supports for power lines. [Primenenie superplastifikatora S-3 pri izgotovlenii zhelezobetonnykh opor kontaktnoĭ seti],
Kolokol'nikova, E.I., et al, *Transportnoe stroitel'stvo,* July 1979, No.7, p.23-24, In Russian.
Power line supports, Reinforced concretes, Frost resistance, Concrete admixtures.

34-332
Optimal properties of cellular concrete with alkaline slag cement. [Optimizatsiia svoĭstv iacheistogo betona na shlakoshchelochnom viazhushchem],
Bagrov, B.O., *Transportnoe stroitel'stvo,* July 1979, No.7, p.45-47, In Russian.
Lightweight concretes, Frost resistance, Concrete aggregates, Wastes, Cements.

34-333
Means of protecting foundations from frost heave. [Nekotorye meropriiatiia po zashchite fundamentov ot moroznogo pucheniia],
Pyshchev, N.F., *Promyshlennoe stroitel'stvo,* Apr. 1979, No.4, p.14-15, In Russian. 5 refs.
Buildings, Foundations, Frost heave, Frost penetration, Soil water migration, Analysis (mathematics).

34-334
Design of pile foundations for the Tobol'sk petrochemical complex. [Effektivnye konstruktsii svaĭnykh fundamentov dlia usloviĭ Tobol'skogo neftekhimicheskogo kompleksa],
Babichev, Z.V., et al, *Promyshlennoe stroitel'stvo,* Apr. 1979, No.4, p.16-17, In Russian.
Industrial buildings, Petroleum industry, Pile structures, Permafrost beneath structures, Design.

34-335
Using concrete mixers at low temperatures. [Effektivnost' primeneniia avtobetonovozov v usloviiakh nizkikh temperatur],
Sovalov, I.G., et al, *Promyshlennoe stroitel'stvo,* Apr. 1979, No.4, p.17-19, In Russian. 3 refs.
Winter concreting, Cold weather operation, Cement mixers.

34-336
Evaluating the exploitational reliability of tanks at low temperatures. [Otsenka ekspluatatsionnoĭ nadezhnosti emkostnykh konstruktsiĭ v usloviiakh nizkikh temperatur],
Bondarovich, L.A., et al, *Promyshlennoe stroitel'stvo,* Apr. 1979, No.4, p.19-21, In Russian. 7 refs.
Zlochevskiĭ, A.B., Korgin, A.V., Shuvalov, A.N.
Steel structures, Tanks (containers), Freeze thaw cycles, Brittleness, Cracking (fracturing), Crack propagation, Analysis (mathematics).

34-337
Possibility of using low carbon steel for overhead power line supports for low temperatures. [O vozmozhnosti primeneniia malouglerodistoĭ stali dlia opor VL ekspluatiruemykh pri nizkikh temperaturakh],
Vinkler, O.N., et al, *Promyshlennoe stroitel'stvo,* Apr. 1979, No.4, p.21-23, In Russian. 5 refs.
Beliaev, B.F., Bukharin, E.M.
Steel structures, Power line supports, Steels, Brittleness, Cold weather performance.

34-338
Investigation of sea-bed scour in the Beaufort Sea.
Hunting Geology and Geophysics, Ltd., *Arctic Petroleum Operators Association, Calgary, Alta. Report,* Nov. 1971, APOA 19-1, 29p. + appends., 10 refs.
Ice scoring, Sea ice, Acoustic measurement, Seismic surveys.

34-339
Factors and forms of cryogenesis in soils of Kazakhstan. [Faktory i formy proiavleniia kriogeneza v pochvakh Kazakhstana],
Gorbunova, I.A., *Moscow. Universitet. Vestnik. Seriia 5 Geografiia,* Nov.-Dec. 1978, No.6, p.49-53, In Russian with English summary. 9 refs.
Soil freezing, Frost penetration, Cryogenic soils, Active layer, Geocryology, Snow cover effect, Soil temperature.

34-340
Mortars with sodium acetate admixtures. [Stroitel'nye rastvory s dobavkoĭ atsetata natriia],
Nikulin, V.T., et al, *Zhilishchnoe stroitel'stvo,* Mar. 1979, No.3, p.18, In Russian.
Bazhenov, G.D.
Grouting, Mortars, Cement admixtures, Frost resistance, Antifreezes, Cold weather construction.

34-341
Construction of alleyways and roads in freezing weather. [Ustroistvo vnutrikvartal'nykh proezdov i dorog v zimnee vremia].
Zhuravel', A.F., et al. *Zhilishchnoe stroitel'stvo*, Feb 1979, No.2, p.20. In Russian.
Plotnikov, I.I.
Roads, Pavements, Streets, Prefabrication, Plates, Cold weather construction, Earthwork, Frozen ground.

34-342
New houses for Bratsk. [Novye doma dlia Bratska].
Gorbunov, I.A., *Zhilishchnoe stroitel'stvo*, Feb 1979, No.2, p.24, In Russian.
Residential buildings, Large panel buildings, Permafrost beneath structures, Concrete structures.

34-343
Houses for the North. [Doma dlia Severa].
[illegible], *Zhilishchnoe stroitel'stvo*, Jan 1979, No.1, p.28, In Russian.
Residential buildings, Permafrost beneath structures, Large panel buildings, Pile structures, Concrete piles, Permafrost control, Design.

34-344
Shaft sinking by blasting artificially frozen rocks. [Prokhodka shakhtnykh stvolov v iskusstvenno zamorozhennykh porodakh s pomoshch'iu vzryvnykh rabot].
Oksanich, I.F., et al. *Shakhtnoe stroitel'stvo*, Apr 1979, No.4, p.10-12, In Russian. 4 refs.
Mining, Shaft sinking, Artificial freezing, Frozen rocks, Blasting.

34-345
Studying corrosion and protection of concrete and reinforced concrete structures in severe climatic conditions and corrosive media. [Issledovaniia v oblasti korrozii i zashchity betonnykh i zhelezobetonnykh stroitel'nykh konstruktsii v surovykh klimaticheskikh usloviiakh i agressivnykh sredakh].
Moskvin, V.M., ed. Moscow, 1977, 129p., In Russian. For selected articles see 34-346 through 34-353. Refs. passim.
Savvina, IU.A., ed.
DLC TA440.I765
Winter concreting, Concrete hardening, Concrete freezing, Concrete strength, Frost resistance, Concrete admixtures.

34-346
Concretes for roof plates. [Betony dlia bezrulonnoi krovli].
Savvina, IU.A., et al. Issledovaniia v oblasti korrozii i zashchity betonnykh i zhelezobetonnykh stroitel'nykh konstruktsii v surovykh klimaticheskikh usloviiakh i agressivnykh sredakh (Studying corrosion and protection of concrete and reinforced concrete structures in severe climatic conditions and corrosive media) edited by V.M. Moskvin and IU.A. Savvina, Moscow, 1977, p.14-17, In Russian.
Sergeeva, I.G.
DLC TA440.I765
Roofs, Prefabrication, Plates, Concretes, Reinforced concretes, Cements, Waterproofing, Frost resistance.

34-347
Analyzing some factors influencing corrosion stability of lightweight concretes. [Analiz nekotorykh faktorov, vliiaiushchikh na korrozionnuiu stoikost' legkikh betonov].
Podval'nyi, A.M., Issledovaniia v oblasti korrozii i zashchity betonnykh i zhelezobetonnykh stroitel'nykh konstruktsii v surovykh klimaticheskikh usloviiakh i agressivnykh sredakh (Studying corrosion and protection of concrete and reinforced concrete structures in severe climatic conditions and corrosive media) edited by V.M. Moskvin and IU.A. Savvina, Moscow, 1977, p.18-26, In Russian. 8 refs.
DLC TA440.I765
Lightweight concretes, Concrete freezing, Concrete hardening, Freeze thaw cycles, Corrosion, Concrete admixtures, Cements.

34-348
Slag concrete for building walls exposed to corrosive media. [Primenenie shlakobetona dlia sten proizvodstvennykh zdanii s agressivnymi sredami].
Bulgakova, M.G., et al. Issledovaniia v oblasti korrozii i zashchity betonnykh i zhelezobetonnykh stroitel'nykh konstruktsii v surovykh klimaticheskikh usloviiakh i agressivnykh sredakh (Studying corrosion and protection of concrete and reinforced concrete structures in severe climatic conditions and corrosive media) edited by V.M. Moskvin and IU.A. Savvina, Moscow, 1977, p.27-33, In Russian.
Stepanova, V.F., Miul'man, E.R., Kizima, I.I.
DLC TA440.I765
Prefabrication, Industrial buildings, Panels, Concrete structures, Thermal insulation, Slag concrete.

34-349
Field tests of concretes with silicon-organic oligomers. [Naturnye ispytaniia betonov s dobavkami kremnii-organicheskikh oligomerov].
Batrakov, V.G., et al. Issledovaniia v oblasti korrozii i zashchity betonnykh i zhelezobetonnykh stroitel'nykh konstruktsii v surovykh klimaticheskikh usloviiakh i agressivnykh sredakh (Studying corrosion and protection of concrete and reinforced concrete structures in severe climatic conditions and corrosive media) edited by V.M. Moskvin and IU.A. Savvina, Moscow, 1977, p.41-44, In Russian. 3 refs.
Silina, E.S.
DLC TA440.I765
Concrete structures, Concretes, Frost resistance, Concrete admixtures, Waterproofing, Cold weather tests, Freeze thaw cycles.

34-350
Optimal composition of complex powder admixtures for concretes. [Optimal'nye sostavy kompleksnykh poroshkoobraznykh dobavok dlia betona].
Gen', O.P., et al. Issledovaniia v oblasti korrozii i zashchity betonnykh i zhelezobetonnykh stroitel'nykh konstruktsii v surovykh klimaticheskikh usloviiakh i agressivnykh sredakh (Studying corrosion and protection of concrete and reinforced concrete structures in severe climatic conditions and corrosive media) edited by V.M. Moskvin and IU.A. Savvina, Moscow, 1977, p.45-50, In Russian. 2 refs.
Ivanov, F.M., Batrakov, V.G.
DLC TA440.I765
Concretes, Frost resistance, Air entrainment, Waterproofing, Corrosion, Concrete admixtures.

34-351
Protective properties of mortars and concretes with admixtures for winter concreting. [Zashchitnye svoistva rastvorov i betonov s dobavkami dlia zimnego betonirovaniia].
Rozental', N.K., Issledovaniia v oblasti korrozii i zashchity betonnykh i zhelezobetonnykh stroitel'nykh konstruktsii v surovykh klimaticheskikh usloviiakh i agressivnykh sredakh (Studying corrosion and protection of concrete and reinforced concrete structures in severe climatic conditions and corrosive media) edited by V.M. Moskvin and IU.A. Savvina, Moscow, 1977, p.51-55, In Russian. 2 refs.
DLC TA440.I765
Concrete structures, Reinforced concretes, Concrete admixtures, Winter concreting, Concrete freezing, Concrete strength.

34-352
Preservation of reinforcement in haydite concretes containing air entrainment admixtures. [Sokhrannost' armatury v keramzitobetone s vozdukhovovlecheniem].
Stepanova, V.F., Issledovaniia v oblasti korrozii i zashchity betonnykh i zhelezobetonnykh stroitel'nykh konstruktsii v surovykh klimaticheskikh usloviiakh i agressivnykh sredakh (Studying corrosion and protection of concrete and reinforced concrete structures in severe climatic conditions and corrosive media) edited by V.M. Moskvin and IU.A. Savvina, Moscow, 1977, p.71-76, In Russian.
DLC TA440.I765
Reinforced concretes, Frost resistance, Concrete admixtures, Air entrainment.

34-353
Determining concrete strength under severe climatic conditions. [Opredelenie stoikosti betona v surovykh klimaticheskikh uslovnakh].
Savitskii, A.N., et al. Issledovaniia v oblasti korrozii i zashchity betonnykh i zhelezobetonnykh stroitel'nykh konstruktsii v surovykh klimaticheskikh uslovnakh i agressivnykh sredakh (Studying corrosion and protection of concrete and reinforced concrete structures in severe climatic conditions and corrosive media) edited by V.M. Moskvin and IU.A. Savvina, Moscow, 1977, p.98-101, In Russian.
Vasil'ev, N.M.
DLC TA440.I765
Reinforced concretes, Concrete strength, Brittleness, Concrete freezing, Frost resistance, Low temperature tests, Laboratory techniques.

34-354
Structural-statistical regularities governing runoff variations along the eastern section of the Baykal Amur railroad. [Strukturno-statisticheskie zakonomernosti variatsii stoka vdol'vostochnogo uchastka trassy BAMa].
Lobanova, N.I., et al. *Vladivostok: Dal'nevostochnyi nauchno-issledovatel'skii gidrometeorologicheskii institut. Trudy*, 1977, Vol.66, p.77-85, In Russian. 4 refs.
Kononenko, L.A.
River basins, Permafrost hydrology, Drainage, Runoff, Baykal Amur railroad.

34-355
Reference basin method of evaluating calculated maximum river discharge in the eastern section of the Baykal Amur railroad. [Indikatsionnaia otsenka raschetnykh maksimal'nykh raskhodov vody rek vostochnogo uchastka zony BAMa].
Ponomareva, T.G., *Vladivostok: Dal'nevostochnyi nauchno-issledovatel'skii gidrometeorologicheskii institut. Trudy*, 1977, Vol.66, p.123-130, In Russian. 2 refs.
River basins, Permafrost hydrology, Drainage, Baykal Amur railroad, Runoff forecasting.

34-356
Natural conditions and resources of northern seas. [Prirodnye usloviia i estestvennye resursy severnykh morei].
Zhevnovatyi, V.T., ed. Leningrad, 1977, 119p., In Russian. For selected papers see 34-357 through 34-359. Refs. passim.
DLC GC311.P74
Sea ice, Drift, Icebergs, Ice conditions, Ice reporting, Ice surveys, Airborne radar.

34-357
Boundaries of ice and iceberg distribution in the North Atlantic Ocean. [Granitsy rasprostraneniia l'dov i aisbergov v Severnoi Atlantike].
Kogan, B.A., et al. Prirodnye usloviia i estestvennye resursy severnykh morei (Natural conditions and resources of northern seas) edited by V.T. Zhevnovatyi, Leningrad, 1977, p.74-82, In Russian. 17 refs.
Orlov, N.F.
DLC GC311.P74
Ice conditions, Drift, Icebergs, Ice edge, Ice forecasting, Ice navigation, Charts, Atlantic Ocean.

34-358
Using the "Toros" side-looking radar in studying ice drift in the southeastern Barents Sea. [Issledovanie dreifa l'dov v iugo-vostochnoi chasti Barentseva moria s pomoshch'iu RLS BO "Toros"].
Zubakin, G.K., et al. Prirodnye usloviia i estestvennye resursy severnykh morei (Natural conditions and resources of northern seas) edited by V.T. Zhevnovatyi, Leningrad, 1977, p.83-89, In Russian. 2 refs.
Zuev, A.N., Larin, B.V., Matorov, O.N.
DLC GC311.P74
Ice surveys, Ice reporting, Airborne radar, Ice conditions, Drift, Ice edge, Ice navigation.

34-359
Calculating basic components of ice balance in the Denmark Strait. [Raschet osnovnykh sostavliaiushchikh ledovogo balansa Datskogo proliva].
Antropova, L.V., et al. Prirodnye usloviia i estestvennye resursy severnykh morei (Natural conditions and resources of northern seas) edited by V.T. Zhevnovatyi, Leningrad, 1977, p.90-107, In Russian. 9 refs.

Numerical modeling of the glaciers-ocean-atmosphere global system.
Sergin, V.IA., *Journal of geophysical research*, June 20, 1979, 84(C6), p.3191-3204, 22 refs.
Ice sheets, Ice models, Climate, Mathematical models, Computerized simulation.
In order to carry out a study of the origins and thermodynamic mechanisms of the large-scale climate oscillations and glaciations of the earth which have occurred over the last few hundred thousand years, a simplified thermodynamic model of the glaciers-ocean-atmosphere global system is constructed. The dynamics of the system are analyzed by computer, and the perturbations due to deviations of the earth's orbit and to tectonic forces are examined. The characteristic regimes of the system are auto-oscillations, which exist with realistic numerical values of all parameters. The calculated variations in the mean temperature of both hemispheres, the temperature differences between the equator and pole, the sizes of marine and continental ice covers, the ocean level, and other values are of the same order of magnitude as those of empirical data. The transition from a relatively warm epoch (when continental ice sheets are absent) to conditions characteristic of the Pleistocene is modeled. The calculated curves show how weak temperature fluctuations are succeeded by large-scale oscillations. Thus the simulation results not only provide an answer to the question concerning the cause of oscillations in the earth's climate and glaciation during cold epochs, but they also explain the absence of oscillations during warm epochs: in the absence of the second inertial link (continental ice) the system is essentially aperiodic. Variations in the antarctic ice sheet are examined.

This work describes the construction of and results from a numerical model simulating the yearly cycle of sea ice in both the northern and southern hemispheres. Both thermodynamic and dynamic processes are incorporated. The model simulates a reasonable yearly cycle of sea ice thickness and extent in both the Arctic and Antarctic. In the Antarctic, the ice expands from a minimum in March to a maximum in late August, remaining close to the continent in the former month and extending northward of 60S in the latter month. Maximum thicknesses are about 1.4 m. Modeled ice concentrations correctly reveal a more compact ice cover in the northern hemisphere than in the southern. In the Antarctic, simulated velocities reveal predominantly westerly motion north of 58S, with smaller scale cyclonic motions closer to the continent.

Rheological fundamentals of soil mechanics. [Reologicheskie osnovy mekhaniki gruntov],
Vialov, S.S., Moscow, Vysshaia shkola, 1978, 447p., In Russian with English table of contents. 60 refs.
Soil mechanics, Rheology, Soil creep, Viscous flow, Models, Soil strength, Shear strength, Soil structure, Soil freezing, Clays, Frozen ground, Cohesion, Plastic deformation.

34-433
Soils along the Baykal Amur railroad. [Pochvy zony BAM],
Kovalev, R.V., ed, Novosibirsk, Nauka, 1979, 304p., In Russian. For selected papers see 34-434 through 34-465. Refs. passim.
Cryogenic soils, Soil formation.

34-434
Automorphic soils of the Baykal highlands. [Avtomorfnye pochvy Baikal'skoi gornoi oblasti],
Kuz'min, V.A., Pochvy zony BAM (Soils along the Baykal Amur railroad) edited by R.V. Kovalev, Novosibirsk, Nauka, 1979, p.5-12, In Russian. 2 refs.
Alpine landscapes, Alpine tundra.

34-435
Soil classification and land resources of the Irkutsk area. [Pochvennoe ralonirovanie i zemel'nye resursy Irkutskoi oblasti],
Kolesnichenko, V.T., et al, Pochvy zony BAM (Soils along the Baykal Amur railroad) edited by R.V. Kovalev, Novosibirsk, Nauka, 1979, p.13-24, In Russian. 17 refs.
Rynks, I.N.
Cryogenic soils, Mapping, Taiga, Charts.

34-436
Soils in the western section of BAM and prospects for their agricultural development. [Pochvennyi pokrov zapadnogo uchastka BAM i perspektivy ego sel'skokhozialstvennogo osvoeniia],
Kolesnichenko, V.T., Pochvy zony BAM (Soils along the Baykal Amur railroad) edited by R.V. Kovalev, Novosibirsk, Nauka, 1979, p.24-33, In Russian. 18 refs.
Taiga, Cryogenic soils, Soil profiles, Soil chemistry, Podsol.

34-437
Muysk Basin soils and their agricultural development. [Pochvennye resursy Muiskoi kotloviny i perspektivy ikh sel'skokhozialstvennogo ispol'zovaniia],
Vtorushin, V.A., et al, Pochvy zony BAM (Soils along the Baykal Amur railroad) edited by R.V. Kovalev, Novosibirsk, Nauka, 1979, p.34-42, In Russian.
Cryogenic soils, Podsol, Swamps, Peat, Soil profiles, Taiga, Soil chemistry.

34-438
Soil resources of BAM zone swamps and their agricultural development. [Pochvennye resursy marel zony BAM i puti polucheniia na nikh sels'skokhozialstvennoi produktsii],
Makeev, O.V., et al, Pochvy zony BAM (Soils along the Baykal Amur railroad) edited by R.V. Kovalev, Novosibirsk, Nauka, 1979, p.42-49, In Russian. 4 refs.
Gershevich, E.G., Khudiakov, O.I.
Cryogenic soils, Swamps, Peat, Mosses, Taiga, Land reclamation.

34-439
Soils of the central Selemdzha River area and their economic development. [Pochvennyi pokrov tsentral'noi chasti basseina r. Selemdzhi i vozmozhnosti ego osvoeniia],
Rybachuk, N.A., et al, Pochvy zony BAM (Soils along the Baykal Amur railroad) edited by R.V. Kovalev, Novosibirsk, Nauka, 1979, p.49-54, In Russian. 2 refs.
Ivanov, G.I., Shchapova, L.N.
Cryogenic soils, Lacustrine deposits, Clays, Soil formation, Taiga, Soil profiles, Swamps, Soil chemistry.

34-440
Evaluation and classification of soils in the Zeya-Bureya plain and areas adjacent to the BAM zone. [Ralonirovanie i otsenka pochv Zeisko-Bureinskoi ravniny i ralonov prilegaiushchikh k zone BAM],
Onishchuk, V.S., Pochvy zony BAM (Soils along the Baykal Amur railroad) edited by R.V. Kovalev, Novosibirsk, Nauka, 1979, p.54-59, In Russian. 6 refs.
Cryogenic soils, Permafrost distribution, Soil formation, Mapping, Baykal Amur railroad.

34-441
Sod-carbonaceous soils of the Baykal Lake area. [Dernovo-karbonatnye pochvy Pribaikal'ia],
Koposov, G.F., Pochvy zony BAM (Soils along the Baykal Amur railroad) edited by R.V. Kovalev, Novosibirsk, Nauka, 1979, p.60-68, In Russian 8 refs.
Cryogenic soils, Soil formation, Taiga, Soil profiles, Soil chemistry.

34-442
Soil regimes in the Chara River Basin and methods of their interpretation. [Pochvennye rezhimy v Charskoi kotlovine i sposoby ikh interpretatsii],
Shchetnikov, A.I., Pochvy zony BAM (Soils along the Baykal Amur railroad) edited by R.V. Kovalev, Novosibirsk, Nauka, 1979, p.68-78, In Russian. 9 refs.
River basins, Taiga, Landscape types, Soil formation, Soil profiles, Podsol, Cryogenic soils.

34-443
Brown taiga soils in the upper part of the Urkan River Basin. [O buro-taezhnykh pochvakh verkhnet chasti basseina r. Urkan].
Ovchinnikov, S.M., et al. Pochvy zony BAM (Soils along the Baykal Amur railroad) edited by R.V. Kovalev, Novosibirsk, Nauka, 1979, p.78-89, In Russian. 6 refs.
Shkhaev, V.G.
Taiga, Soil formation, Cryogenic soils, Soil profiles, Podsol.

34-444
Natural and economic aspects of protecting Siberian soils from erosion. [Prirodno-khoziaistvennye aspekty zashchity pochv ot erozii v Sibiri].
Orlov, A.D., Pochvy zony BAM (Soils along the Baykal Amur railroad) edited by R.V. Kovalev, Novosibirsk, Nauka, 1979, p.89-94, In Russian. 7 refs.
Cryogenic soils, Soil erosion, Protective vegetation.

34-445
Use and protection of lands in the northern Irkutsk region and the BAM zone. [Okhrana i ispol'zovanie zemel' v severnykh raionakh Irkutskoi oblasti i zony BAM].
Belykh, A.G., et al. Pochvy zony BAM (Soils along the Baykal Amur railroad) edited by R.V. Kovalev, Novosibirsk, Nauka, 1979, p.95-99.
Zabortsev, N.N.
Cryogenic soils, Soil erosion, Taiga, Environmental protection, Landscape types, Baykal Amur railroad.

34-446
Resistance of mountain and forest sod soils of the Baykal Lake area to erosion. [Protivoerozionnaia ustoichivost' gorno-lesnykh dernovykh pochv Pribaikal'ia].
Kovaleva, S.R., Pochvy zony BAM (Soils along the Baykal Amur railroad) edited by R.V. Kovalev, Novosibirsk, Nauka, 1979, p.100-111, In Russian. 8 refs.
Taiga, Soil erosion.

34-447
Forecasting water erosion of soils in the western part of the BAM zone (the upper Angara River Basin). [Vodnaia eroziia pochv i prognoz ee proiavleniia v predelakh zapadnoi chasti zony BAM (Verkhneangarskaia kotlovina)].
Reimkhe, V.V., Pochvy zony BAM (Soils along the Baykal Amur railroad) edited by R.V. Kovalev, Novosibirsk, Nauka, 1979, p.111-118, In Russian. 6 refs.
River basins, Water erosion, Cryogenic soils, Soil erosion, Land reclamation.

34-448
Specific nature of erosional processes in permafrost areas. [Spetsifika proiavleniia erozionnykh protsessov v zone vechnoi merzloty].
Orlov, A.D., et al. Pochvy zony BAM (Soils along the Baykal Amur railroad) edited by R.V. Kovalev, Novosibirsk, Nauka, 1979, p.118-124, In Russian. 11 refs.
Popov, G.M.
Geocryology, Thermokarst, Soil erosion, Cryogenic soils, Ground ice, Solifluction.

34-449
Deflation of Barguzin Basin soils and economic utilization. [Defliatsiia pochv Barguzinskoi kotloviny i puti ikh ratsional'nogo ispol'zovaniia].
Namzhilov, N.B., Pochvy zony BAM (Soils along the Baykal Amur railroad) edited by R.V. Kovalev, Novosibirsk, Nauka, 1979, p.124-130, In Russian. 4 refs.
Cryogenic soils, Wind erosion, Soil formation, Lacustrine deposits, Sands, Steppes, Protective vegetation, Forest strips.

34-450
Erosional vulnerability of taiga soils in the eastern BAM zone during economic development. [Erozionnaia uiazvimost' taezhnykh pochv zony BAM (Vostochnoi chasti) pri ikh sel'skokhoziaistvennom osvoenii].
Zakharov, E.S., Pochvy zony BAM (Soils along the Baykal Amur railroad) edited by R.V. Kovalev, Novosibirsk, Nauka, 1979, p.131-136, In Russian.
Taiga, Soil formation, Land development.

34-451
Fertility of cryogenic meadow-chernozem soils in the Yeravninskaya Basin (Buryat ASSR). [Nekotorye voprosy plodorodiia lugovo-chernozemnykh merzlykh pochv Eravninskoi kotloviny (Buriatskaia ASSR)].
Abasheeva, N.E., et al. Pochvy zony BAM (Soils along the Baykal Amur railroad) edited by R.V. Kovalev, Novosibirsk, Nauka, 1979, p.159-167, In Russian. 9 refs.
Chimitdorzhieva, G.D., Dugarov, V.I.
Cryogenic soils, Meadow soils, Chernozem, Forest soils, Steppes.

34-452
Classification of soils in the far northeastern USSR. [Klassifikatsiia pochv Krainego Severo-Vostoka SSSR].
Ignatenko, I.V., Pochvy zony BAM (Soils along the Baykal Amur railroad) edited by R.V. Kovalev, Novosibirsk, Nauka, 1979, p.168-176, In Russian. 35 refs.
Cryogenic soils, Soil classification, Active layer, Permafrost depth, Taiga.

34-453
Soil zones of Central Yakutia. [O pochvennykh zonakh Tsentral'noi IAkutii].
Konorovskii, A.K., Pochvy zony BAM (Soils along the Baykal Amur railroad) edited by R.V. Kovalev, Novosibirsk, Nauka, 1979, p.176-183, In Russian. 15 refs.
Cryogenic soils, Taiga, Soil classification, Charts, Alassy, Chernozem.

34-454
Genetic and agricultural peculiarities of gray non-podzolized cryogenic soils in Transbaikal. [Geneticheskie i agroproizvodstvennye osobennosti serykh lesnykh neopodzolennykh merzlotnykh pochv Zabaikal'ia].
Ishigeev, I.A., Pochvy zony BAM (Soils along the Baykal Amur railroad) edited by R.V. Kovalev, Novosibirsk, Nauka, 1979, p.184-190, In Russian. 14 refs.
Forest soils, Steppes, Cryogenic soils, Permafrost depth, Soil formation, Soil profiles.

34-455
Genetic peculiarites of gray forest soils in larch grass forests of the Krasnoyarsk area. [Geneticheskie osobennosti serykh lesnykh pochv zony listvennykh travianykh lesov Krasnoiarskogo kraia].
Gogolev, I.N., et al. Cryogenic gray larch forest soils. Pochvy zony BAM (Soils along the Baykal Amur railroad) edited by R.V. Kovalev, Novosibirsk, Nauka, 1979, p.190-201, In Russian. 4 refs.
Krasekha, E.N.
Forest soils, Soil profiles, Podsol, Soil chemistry, Cryogenic soils.

34-456
Soil structure and types of farm lands in the grassy larch forests of the Krasnoyarsk area. [Struktura pochvennogo pokrova i tipologiia sel'skokhoziaistvennykh zemel' zony listvennykh travianykh lesov Krasnoiarskogo kraia].

Microbiological characteristics of cryogenic sod-podsol soils (Yeravninskaya Basin, Buryat ASSR). [Mikrobiologicheskaia kharakteristika dernovo-podzolistykh merzlotnykh pochv (Eravninskaia kotlovina Buriatskoi ASSR)].
Nimaeva, S.Sh., et al. Pochvy zony BAM (Soils along the Baykal Amur railroad) edited by R.V. Kovalev, Novosibirsk, Nauka, 1979, p.266-274, In Russian. 4 refs.
Dugarov, V.I.
Cryogenic soils, Forest soils, Taiga, Soil formation, Permafrost depth, Soil profiles.

34-463
Hydrothermal regime of cryogenic sod-taiga soils (Yeravninskaya Basin, Buryat ASSR). [Gidrotermicheskii rezhim dernovo-taezhnykh merzlotnykh pochv Eravninskoi kotloviny (Buriatskaia ASSR)].
Dugarov, V.I., Pochvy zony BAM (Soils along the Baykal Amur railroad) edited by R.V. Kovalev, Novosibirsk, Nauka, 1979, p.274-282, In Russian. 9 refs.
Cryogenic soils, Hydrothermal processes, Permafrost depth, Soil temperature, Soil water.

34-464
Role of permafrost in the hydrothermal regime of soils. [Rol' mnogoletnei merzloty v formirovanii gidrotermicheskogo rezhima pochv].
Savvinov, D.D., Pochvy zony BAM (Soils along the Baykal Amur railroad) edited by R.V. Kovalev, Novosibirsk, Nauka, 1979, p.282-287, In Russian. 13 refs.
Soil water migration, Tundra, Taiga.

34-465
Phosphorus regime of gray forest soils in the East Siberian sub-taiga and soil formation. [Fosfornyi rezhim serykh lesnykh pochv podtaigi Vostochnoi Sibiri v sviazi s osobennostiami pochvoobrazovaniia].
Kholopova, R.V., Pochvy zony BAM (Soils along the Baykal Amur railroad) edited by R.V. Kovalev, Novosibirsk, Nauka, 1979, p.287-295, In Russian. 13 refs.
Taiga, Soil formation.

34-466
Thermal stress intensity factors for a fixed strip containing edge cracks. [Koeffitsienty intensivnosti temperaturnykh napriazhenii v zashchemlennoi polose s kraevymi treshchinami].
Pashchenko, V.I., et al. *Leningrad. Vsesoiuznyi nauchno-issledovatel'skii institut gidrotekhniki. Izvestiia*, 1978, Vol.120, p.83-87, In Russian. 8 refs.
Trapeznikov, L.P.
Plates, Thermal stresses, Cracking (fracturing), Design.

34-467
Thermal stress intensity factors for a strip with transverse internal cracks. [Koeffitsienty intensivnosti temperaturnykh napriazhenii dlia polosy s vnutrennimi poperechnymi treshchinami],
Pashchenko, V.I., et al, *Leningrad. Vsesoiuznyi nauchno-issledovatel'skii institut gidrotekhniki. Izvestiia*, 1978, Vol.120, p.58-63, In Russian. 6 refs.
Trapeznikov, L.P.
Thermal stresses, Cracking (fracturing), Design.

34-468
Approximate thermal stress analysis of a concrete structure, erected block-by-block, allowing for concrete creep. [Priblizhennyi metod rashcheta termonapriazhennogo sostoianiia (s uchetom polzuchesti materiala) betonnogo massiva v protsesse ego poblochnogo narashchivaniia],
Pliat, Sh.N., et al, *Leningrad. Vsesoiuznyi nauchno-issledovatel'skii institut gidrotekhniki. Izvestiia*, 1978, Vol.120, p.64-69, In Russian. 3 refs.
Ovchinnikova, T.T.
Concrete structures, Dams, Concrete placing, Thermal stresses, Relaxation (mechanics).

34-469
Extreme cooling curves of concrete structures. [K voprosu ob ekstremal'noi krivoi okhlazhdeniia betonnykh massivov],
Pliat, Sh.N., et al, *Leningrad. Vsesoiuznyi nauchno-issledovatel'skii institut gidrotekhniki. Izvestiia*, 1978, Vol.120, p.70-72, In Russian. 2 refs.
Sheinker, N.IA.
Concrete structures, Concrete hardening, Concrete freezing, Cooling rate, Fracturing, Frost resistance.

34-470
Approximate determination of stress relaxation coefficients in thermal creep problems. [Priblizhennyi sposob opredeleniia koeffitsienta zatukhaniia napriazhenii v zadache termopolzuchesti],
Tsybin, A.M., et al, *Leningrad. Vsesoiuznyi nauchno-issledovatel'skii institut gidrotekhniki. Izvestiia*, 1978, Vol.120, p.73-76, In Russian. 2 refs.
Sheinker, N.IA.
Hydraulic structures, Dams, Concrete structures, Thermal stresses, Relaxation (mechanics), Creep, Analysis (mathematics).

34-471
Vibration of structures built on viscoelastic foundations. [O kolebaniiakh sooruzhenii na viazko-uprugom osnovanii],
Shul'man, S.G., *Leningrad. Vsesoiuznyi nauchno-issledovatel'skii institut gidrotekhniki. Izvestiia*, 1978, Vol.120, p.77-80, In Russian. 4 refs.
Foundations, Earthquakes, Buildings, Ground thawing, Mathematical models, Viscoelasticity, Vibrations.

34-472
Application of satellite images for monitoring snowline in the Yukon and Northwest Territories.
Dey, B., et al, *Polar record*, May 1979, 19(122), p.473-483, 18 refs.
Moore, H., Gregory, A.F.
Snow cover, Snowmelt, Mapping, Spaceborne photography, Snow line, Models, Canada—Northwest Territories, Canada—Yukon Territory.

34-473
Fifty-second annual report on the work of the Scott Polar Research Institute. *Polar record*, May 1979, 19(122), p.519-526.
Radio echo soundings, Ice sheets, Sea ice.
The activities of the Scott Polar Research Institute for the year ending Sep. 30, 1978 are summarized under the following topics: teaching and research, library and information service, international activities, finance, and lectures. In addition, publications, grants, visiting scholars, staff and research students, and gifts are listed. The principal achievements of the airborne radio echo sounding of polar ice sheets program were filling in gaps in the 100-m flightline network over east Antarctica and extending it westwards. The previous sounding grid over Marie Byrd Land was extended eastwards towards the Pensacola and Ellsworth mountains and ten glaciological profiles were flown over various areas. For the first time, simultaneous magnetic profiles were obtained on radio echo flights.

34-474
SCAR Working Group on Glaciology.
Scientific Committee on Antarctic Research, *Polar record*, May 1979, 19(122), SCAR bulletin No.62, May 1979, p.527-532, 2 refs.
Ice sheets, Sea ice, Glacier ice, Snow surveys, Ice shelves.
The meeting of the glaciology working group was held in Ottawa, Canada, Aug. 19-20, 1978. The national and international activities reported are briefly summarized. Field studies are being conducted by Argentina, Australia, Chile, France, Japan, Norway, USSR, United Kingdom and the United States. The Federal Republic of Germany plans to start geophysical and glaciological studies in 1981. The international activities include the international and the Antarctic Peninsula glaciology projects, glaciological aspects of climate studies, a satellite image atlas of glaciers, a world glacier inventory, a third antarctic glaciology symposium, satellite glaciology, radio echo sounding flights, ice sheet modelling a further conference on icebergs, and ice shelf and sea ice studies. The proceedings of the meeting also included elections, proposals for future meetings, and recommendations.

34-475
Ice movements in the Beaufort Sea 1973-1975: determination by ERTS imagery.
Sobczak, L.W., *Journal of geophysical research*, Mar. 20, 1977, 82(9), p.1413-1418, 7 refs.
Sea ice distribution, Drift, Remote sensing, Wind factors, Mapping, Beaufort Sea.

34-476
Thermal regime of a prairie snowcover.
Granger, R.J., et al, *Soil Science Society of America. Journal*, Sep.-Oct. 1977, 41(5), p.839-842, 8 refs.
Chanasyk, D.S., Male, D.H., Norum, D.I.
Snowmelt, Meltwater, Thermal regime, Soil temperature, Solar radiation, Soil water, Air temperature, Diurnal variations, Heat flux, Snow cover.

34-477
Critical exponents and scaling laws for a zero-temperature phase transition in some rigorously solvable models.
Georgiev, G.I., et al, *Journal of physics C: solid state physics*, Nov. 14, 1978, 11(21), p.L877-L879, 4 refs.
Milev, N.V.
Phase transformations, Temperature effects, Mathematical models.

34-478
Use of model ice to simulate ice action on offshore structures.
Michel, B., *Arctic Petroleum Operators Association, Calgary, Alta. Report*, Oct. 1972, APOA 41-1, 81p., 9 refs.
Offshore structures, Ice pressure, Ice models, Simulation.

34-479
Arctic winter evaluation study of transportation equipment.
Rymes (J.E.) Engineering, Ltd., *Arctic Petroleum Operators Association, Calgary, Alta. Report*, July 1973, APOA 49-1, var.p., 19 refs.
Equipment, Vehicles, Cold weather performance.

34-480
Landfast ice movement—Mackenzie Delta 1972-73.
Spedding, L.G., *Arctic Petroleum Operators Association, Calgary, Alta. Report*, Oct. 1973, APOA 51-1, 122p. + figs.
Fast ice, Drift, Remote sensing, Telemetering equipment, Wind (meteorology), Air temperature, Ice temperature.

34-481
Ice forces on offshore monopods and piles.
Foundation of Canada Engineering Corporation, Ltd., *Arctic Petroleum Operators Association, Calgary, Alta. Report*, Sep. 1973, APOA 52-2, c.20p.
Offshore structures, Ice loads, Ice pressure, Ice strength.

34-482
Ice crushing tests, 1973.
Taylor, T.P., *Arctic Petroleum Operators Association, Calgary, Alta. Report*, July 1973, APOA 52-3, p.64p. + figs., 5 refs.
Lake ice, Ice strength, Compressive properties, Mechanical tests.

34-483
Compression tests on fresh water ice, 1973. *Arctic Petroleum Operators Association, Calgary, Alta. Report*, APOA 52-4, 15p. + tables and figs., 4 refs.
Lake ice, Compressive properties, Ice strength.

34-484
Ice island count, south Beaufort Sea, 1972.

Ice shelves, Calving, Classifications, Antarctica.
A classification of antarctic ice shores distinguishes two morphologic types: rocky ice (grounded ice) and floating ice. In terms of the conditions of formation of these types of shores, the following genetic types are distinguished: glacial, wave-calved, thermal abrasion, ablation, floating, calved as well as unusual accretion shores and shores formed by old fast ice. Sea ice, Ice surface.

The empirical evidence suggests that all types of ice display linear elements that can be compared with lineaments in the earth's surface. The basic global jointing pattern of NE-SW and NW-SE appears to extend to sea ice, and ice-navigation experience suggests that movement is easier along these courses while courses close to the N-S and E-W directions result more frequently in ships becoming icebound. Closer study of ice jointing patterns may thus offer new prospects for ice navigation, especially in connection with the establishment of new high-latitude icebreaker routes. The linear relief elements of antarctic sea ice and ice shelves, as well as ice cover in both the interior and marginal parts of the continent are discussed.

Mass budget of the Lambert Glacier drainage basin, Antarctica.
Allison, I., *Journal of glaciology*, 1979, 22(87), p.223-235, 30 refs.
Glacier mass balance, Glacial hydrology, Ice shelves, Ice cover thickness, Glacier ablation, Antarctica—Lambert Glacier, Antarctica—Prince Charles Mountains.
Estimates have been made of the mass budget of the total drainage basin of Lambert Glacier. These show a small but significant positive state of balance for the interior basin (the accumulation area up-stream of the major ice streams), and strongly suggest a positive balance for the Lambert Glacier system (the region of major ice streams, between the Amery Ice Shelf and the interior basin). The total mass flux into the interior basin is estimated as 60 Gt a. Results are presented from a number of ice movement stations established between 1972 and 1974 around the perimeter of the southern Prince Charles Mountains. These results, together with ice thicknesses from radio echo-sounding in the area, give a total mass outflux through the 2,000 m contour of 30 Gt a, implying a budget excess of a further 30 Gt a over the whole interior basin. Results from velocity and ice thickness measurements give a mass discharge through a section near the junction of Lambert Glacier and the Amery Ice Shelf of 11 Gt a. Losses within the Lambert Glacier system proper account for a further 7 Gt a and an overall mass excess of 12 Gt a is estimated for the Lambert Glacier system. This present positive state of balance contrasts with geomorphological evidence from the southern Prince Charles Mountains of a large drop in ice level in recent geological time, and the ice surface in the area may now be building up after a major recession. (Auth.)

***In-situ* measurements of the activation energy for D.C. conduction in polar ice.**
Bentley, C.R., *Journal of glaciology*, 1979, 22(87), p.237-246, 14 refs.
Ice electrical properties, Ice shelves, Electrical resistivity, Ice models, Antarctica—Ross Ice Shelf.
Electrical resistivity measurements were carried out at Station J9 on the Ross Ice Shelf where temperature measurements were available to a depth exceeding three-quarters of the thickness of the shelf. As in a previously published study at a point about 30 km up-stream (Bentley, 1977), the apparent resistivities fit well to a model based upon a steady-state ice shelf with zero bottom balance-rate and an apparent activation energy in the solid ice of 0.15 to 0.25 eV, with preference for the lower end of the range. This model also fits the observed temperature data almost perfectly. Causes of resistivity variation with depth other than the temperature, such as impurity content, metamorphic history, grain size, and crystal orientation, probably do not strongly affect the resistivity depth function. It is concluded that the true activation energy in the solid ice is less than 0.25 eV and perhaps as small as 0.15 eV, although a reduction by a factor of two or three in the ionic impurity concentration between 50 and 250 m depth cannot be entirely ruled out as a cause of the low apparent temperature effect. A note added in proof indicates that Herron and Langway (in press) have, in fact, reported a decrease in Na^+ concentration with increasing depth by a factor of two or three. (Auth.)

Doake, C.S.M.
Ice shelves, Shear stress, Glacier tongues, Analysis (mathematics), Antarctica—Amery Ice Shelf.
Vertical shear stress in ice shelves cannot be precisely zero, since the upper and lower surfaces are generally not parallel. Vertical shear stress is calculated for an unconfined glacier tongue and for a confined bay ice shelf, first, using the assumption of constant temperature and density with depth, and secondly, using realistic data and profiles for Erebus Glacier tongue and for the Amery Ice Shelf. Shear stresses increase almost linearly with depth and are proportional to surface slope. For Erebus Glacier tongue the shear stress is at most 5% of the magnitude of the direct stress deviators and its action through the ice shelf should result in differential movement of 1.8 cm/a between the top and bottom of the ice shelf. For the Amery Ice Shelf, the shear stress is at most 0.4% of the magnitude of the direct stress deviators and this should lead to differential movement of 2.5 cm/a between the top and bottom of the ice shelf. Shear stresses are therefore generally negligible in comparison with direct stress deviators and can be ignored when considering the overall dynamics of ice shelves. Differential movement is unlikely to be detectable. (Auth.)

Oceanographic observations at stations along the triangular grids during the Mixed Layer Experiment, August 1, 1978. Volume 84-C.
Miyake, M., *Pacific marine science report*, 1979, No.79-2, 191p.
Oceanographic surveys, Water temperature, Water pressure, Salinity, Electrical resistivity, Computer applications.

34-564
Factors regulating the food intake of caribou and reindeer on tundra ranges.
White, R.G., Circumpolar Conference on Northern Ecology, Ottawa, 1975, National Research Council, Scientific Committee on Problems of the Environment, [1976], p.1/227-1/233, 4 refs.
Tundra, Animals, Biomass, Grasses.

34-565
Some guidelines for deciding Alaska's future; final report.
Joint Federal-State Land Use Planning Commission for Alaska, Anchorage, Alaska, May 30, 1979, 94p.
Environmental protection, Land development, Regional planning.

34-566
Alaska's land—1978; annual report.
Joint Federal-State Land Use Planning Commission for Alaska, Anchorage, Alaska, May 30, 1979, 25p.
Land development, Geological surveys, Regional planning.

34-567
Geologic evaluation of LANDSAT imagery in interior Alaska.
Dean, K.G., College, University of Alaska, 1979, 156p., M.S. thesis. Refs p.152-156.
Geological surveys, Remote sensing, Surface structure, LANDSAT, Topographic surveys, Maps, United States—Alaska.

34-568
Drilling operations guide.
Arctic Petroleum Operators Association, *Arctic Petroleum Operators Association, Calgary, Alta. Report*, Jan. 1973, APOA 8-1, c195p., Report includes Guides A-1 thru A-12; B-1 thru B-7; C-1 thru C-6; D-1 thru D-6; E-1 thru E-3. Topics include, among others, drilling operations, construction (air strips, road, rig, etc.), transportation and communications, and safety.
Manuals, Drilling, Construction, Telecommunication, Safety.

34-569
Nutcracker ice strength tests, 1970-71.
Croasdale, K.R., *Arctic Petroleum Operators Association, Calgary, Alta. Report*, July 1971, APOA 9-1, c190p., 2 refs.
Ice cover strength, Test equipment, Lake ice, Sea ice.

34-570
Feasibility study: exploratory drilling systems, Beaufort Sea.
ACRES/Santa Fe Pomeroy Arctic Services, *Arctic Petroleum Operators Association, Calgary, Alta. Report*, Oct. 1971, APOA 12-1, 12-2, c430p., APOA 12-1 is the basic report; 12-2 is composed of the appendices.
Offshore drilling, Offshore structures, Ships, Ice islands, Pack ice, Ice pressure, Concrete structures, Cost analysis.

34-571
Study of the clothing problems of the oil operating crews in the Arctic.
Pang, S.H.H., et al, *Arctic Petroleum Operators Association, Calgary, Alta. Report*, Mar. 1972, APOA 24-1, 58p., In English with French summary.
Lock, A.R., Lewis, R.E.F.
Cold weather operation, Clothing, Drilling, Seismic surveys.

34-572
Model experiments to determine the forces exerted on structures by moving ice fields.
Edwards, R.Y., Jr., et al, *Arctic Petroleum Operators Association, Calgary, Alta. Report*, Mar. 6, 1972, APOA 25-1, 83p. + appends., 8 refs.
Lewis, J.W.
Offshore structures, Ice loads, Ice pressure, Pack ice, Ice mechanics, Models, Flexural strength.

34-573
Beaufort Sea exploratory drilling system: review and recommendations.
Westburne International Industries, Ltd., et al, *Arctic Petroleum Operators Association, Calgary, Alta. Report*, Dec. 1971, APOA 30-1, var. p.
SEDCO, Inc.
Offshore drilling, Ships, Sea ice, Ice breaking, Oceanography, Logistics, Cost analysis.

34-574
Study of Beaufort Sea exploratory drilling systems.
Global Marine, Inc., *Arctic Petroleum Operators Association, Calgary, Alta. Report*, Dec. 20, 1971, APOA 30-2, var. p.
Offshore drilling, Meteorological factors, Safety, Sea ice, Ships, Cold weather operation, Logistics.

34-575
Investigation of sea-bed scouring in the Beaufort Sea (PHASE II).
Hunting Geology and Geophysics, Ltd., *Arctic Petroleum Operators Association, Calgary, Alta. Report*, Feb. 1973, APOA 32-1, 27p., 7 refs.
Acoustic measurement, Grounded ice, Ice scoring, Echo sounding.

34-576
Landfast ice movement—Mackenzie Delta 1972.
Croasdale, K.R., et al, *Arctic Petroleum Operators Association, Calgary, Alta. Report*, Aug. 1972, APOA 33-1, 104p.
Spedding, L.G.
Fast ice, Pack ice, Drift, Telemetering equipment, Remote sensing, Wind (meteorology), Air temperature, Sea water.

34-577
Environmental conditions in Baffin Bay and Davis Strait.
Marine Environmental Services, Ltd., *Arctic Petroleum Operators Association, Calgary, Alta. Report*, 1972, APOA 35-1, 35-2, 144p., APOA 35-1 is appendix 2 to 35-2 and is composed of tabulated data on wind, weather, waves, and icebergs. 64 refs.
Ice conditions, Sea ice distribution, Icebergs, Wind (meteorology), Ocean waves, Ocean currents.

34-578
Arctic offshore pipeline feasibility study in Mackenzie River delta area.
Brown (R.J.) and Associates, *Arctic Petroleum Operators Association, Calgary, Alta. Report*, Feb. 1973, APOA 39-1, c530p.
Offshore structures, Pipe laying, Meteorological factors, Sea ice, Logistics, Safety, Cost analysis.

34-579
Results of model ice sheet properties research.
Edwards, R.Y., Jr., et al, *Arctic Petroleum Operators Association, Calgary, Alta. Report*, 1972, APOA 40-1, 40-2, 40-3, c130p. APOA 40-1 is the basic report on Project 40; 40-2 is an addendum; and 40-3 is a response to a critique of some of the results reported in 40-1. 7 refs.
Kotras, T.V.
Ice models, Ice mechanics, Ice strength, Ice elasticity, Flexural strength, Shear strength.

Roof response to icing conditions.
Lane, J.W., et al, *U.S. Army Cold Regions Research and Engineering Laboratory*, July 1979, CR 79-17, 40p., ADA-074 477, 12 refs.
Marshall, S.J., Munis, R.H.
Roofs, Thermal conductivity, Icing, Melting, Slope orientation.
Six test roofs of two different slopes—16.3 deg and 39.8 deg, and three different roof coverings—asphalt shingles, cedar shingles, and corrugated aluminum sheeting, were constructed at USACRREL, Hanover, New Hampshire, and were instrumented with thermocouples, heat flow meters, and calibrated gutters. Measurements were recorded for the winters of 1971-72 and 1972-73. The degree of icing and the chronological changes in the snow cover were recorded on 35-mm Kodachrome slides. It was found that eave icing is a sensitive function of the slope, roof covering composition, and solar radiation. The effects of wind were not investigated, the data were screened to remove all information corresponding to wind-speeds over 8 km/h. In order of increasing tendency to form ice dams on the eaves, the roofs were high-slope asphalt, high-slope cedar, high-slope aluminum, low-slope asphalt, low-slope cedar, and low-slope aluminum.

34-626
Bullet penetration in snow.
Cole, D.M., et al, *U.S. Army Cold Regions Research and Engineering Laboratory*, July 1979, SR 79-25, 23p., ADA-074 412, 14 refs.
Farrell, D.R.
Snow (construction material), Projectile penetration, Penetration tests.
Three types of ammunition, the M193, M80, and M43, were tested. Rounds were fired into snow targets of various thicknesses up to that thickness required to fully stop the projectiles. The maximum penetrations for the three rounds tested were 0.70 m, 1.26 m and 1.06 m, respectively. Velocity loss as a function of target thickness was determined by measuring projectile velocity before and after impact of the projectile with the target. The velocity loss vs. thickness data showed a sigmoid shape common to the three types of rounds. The impact and exit yaw angles of the M193 rounds were estimated. Scatter in the test data was attributed, in part, to random variations in the impact yaw angle. The penetration required for a 90 deg yaw was determined by the exit yaw measurements. This was shown to correspond to the inflection point on the velocity loss vs. penetration curve. This point is potentially significant in the design of composite fortifications. Discussions deal with basic concepts and definitions, the occurrence and significance of projectile tumbling and the use of laboratory tests for small arms evaluation in snow targets. The validity of the methodology used was established by testing M193 rounds in gelatin targets. These results compared favorably with similar test results in literature.

Excerpts from *Rheological Fundamentals of Soil Mechanics.*
Vialov, S.S., *U.S. Army Cold Regions Research and Engineering Laboratory*, May 1979, TL 716, 134p., ADB-039 069L, Distribution limited to U.S. Government agencies only. For the complete Russian book see 34-432.
Soil mechanics, Soil creep, Plastic deformation, Soil strength, Models, Analysis (mathematics).
The book from which the three chapters in this translation are taken investigates principles of rheology in soil mechanics and bases its scientific principle on the relation of pressure change and volume, densification, and such properties of soil as internal friction, cohesion, and changes in structure and texture. Chapter 5 investigates forms of creep, deformation, residual deformation and the relation of stress, strain and time. The general forms of the creep flow equations are treated considering time and rate variables. Experimental data are presented. Chapter 7 investigates the mechanistic models of linear elastic-plastic concepts of ground deformation, arriving at a series of complicated concepts explaining shear creep. The chapter ends with theoretical fundamentals of flow and creep based on molecular-kinetic and thermoactive processes. Chapter 9 leads to field and laboratory strength tests of soil. Investigated are the conditions of load application and its influence upon test results. The important long-term strength equations are derived in detail. The chapter gives many concepts of strength variables, conditions and states which are immediately applicable in practice.

Decleir, H.
Glacier mass balance, Glacier flow, Glacier thickness, Glacier oscillation, Glacial hydrology, Gravimetric prospecting, Antarctica—Queen Maud Land.
Mass transport and mass flux values for the different types of glaciers in the Sör-Rondane are calculated from computer models, based upon gravity data and geodetic stake velocity measurements. The results are interpreted in the light of a general flow line analysis, glacial geological investigations, and the ablation terms of the mass balance for Dronning Maud Land and other parts of Antarctica. (Auth.)

Peterson, J.A.
Geomorphology, Nunataks, Moraines, Patterned ground, Glacier surveys, Ice wedges, Mapping, Antarctica—Menzies, Mount.
Study of recent high quality stereoscopic color photography of the Southern Prince Charles Mountains, Australian Antarctic Territory, allows detailed reconnaissance mapping of geomorphology. One of the largest and southernmost nunataks of the area (around Mt. Menzies 3,228 m) was selected for detailed study. Features mapped include ice-cored moraines, moraine ridges, trim lines, thermokarst, eolian and niveo-eolian deposits, ice wedge polygons with raised rims, and ice wedge polygons with raised centers. Patterned ground is the most extensive morphological type, occurring in continuous fields in the eastern half of the nunatak. Ice-covered forms are common around much of the nunatak margins, some being mantled with a sufficient thickness of debris cover to have acquired ice-wedge polygons. Moraine ridges above the present ice limits, but lacking evidence of an ice core, occur over a wide altitudinal range. Many of these are related to higher stands of the surrounding inland ice, and provide evidence of former ice limits.

Effects of the annual migration of the antarctic pack-ice border on cyclonic storm activity over the Southern Ocean.
Kachelhoffer, S.J., Madison, University of Wisconsin, 1973, 49p., Master's thesis. 16 refs. Unpublished manuscript.
Pack ice, Sea ice distribution, Meteorological factors.
Statistics of a number of characteristics of the cloud vortices associated with cyclonic storms in the 40-75S latitude belt have been compiled, based upon an evaluation of ESSA Southern Hemisphere mosaic satellite photographs for the spring and fall seasons, when the pack-ice border is at its farthest equatorward and poleward positions. Analysis of the data shows a significant equatorward shift of the latitude of maximum frequency of storm occurrence in spring when compared to the fall season, which corresponds with the annual migration of the pack-ice border. The longitudinal distributions and directions of movement of cyclonic storms do not appear to be significantly affected. Results of an attempt to correlate the spring position of the pack-ice border with the spring latitudinal distribution of vortices in certain longitude sectors show an apparent, but not highly significant, relationship. Snow vehicles.
Snowmobiles are the main form of land transportation for field parties in Antarctica. Recently the United States Antarctic program turned almost exclusively to Ski-Doo Alpine 640-ER snowmobiles, the use and maintenance of which requires specialized techniques. The first extensive Antarctic field test of these snowmobiles was made during three months of 1977-1978 while engaged in reconnaissance geologic and topographic exploration of the Orville Coast area. Findings of the tests are reported.

Radioactive isotopes, Isotope analysis, Fallout, Precipitation (meteorology), Antarctica—Amundsen-Scott Station.
Snow samples were taken from a 5-m-deep pit located near Amundsen-Scott Station in Jan. 1975, and continuous deuterium, tritium and beta activity profiles have been obtained from them. These three measurements and the stratigraphic level observation allow a precise chronology of the pit from 1950 to 1975 to be deduced, providing a continuous record of artificial tritium fall-out in the Southern hemisphere. This has been extended to 1978 using samples from a second pit taken

in 1978. The beta and tritium peaks occur during the Antarctic summer and the Antarctic winter respectively, showing different injection mechanisms. The winter input and the high tritium values registered at the Amundsen-Scott Station indicate a preferential tritium transfer over the polar region. Two mechanisms, stratospheric-tropospheric exchange and direct stratospheric cloud precipitation, could account for this injection. (Auth.)

Martin, S.
Snow composition, Chemical composition, Snow impurities, Evaporation.
A procedure is described for the preconcentration of very dilute solutions at the 1/1,000,000 microgram/g level by nonboiling evaporation in Teflon bulbs in the presence of hydrofluoric and nitric acids under clean room conditions. By processing various synthetic standards, calibration curves are determined by variable variance statistical techniques for Na, Mg, K, Ca, Fe, Al, Mn, Pb, Cd, Cu, Zn, and Ag. The results of the analysis by this procedure of a typical snow sample collected at South Pole Station show that for most of the elements the precision is in the order of 10%. (Auth. mod.)

34-730
Determination of the stratospheric residence time from the total beta activity of antarctic and Greenland snows.
Pourchet, M., et al, *Geophysical research letters*, May 1979, 6(5), p.365-367, 9 refs.
Pinglot, F.
Snow impurities, Radioactivity, Fallout, Stratosphere.
The beta-activity in polar snow reflects the combined effects of fallout from and radioactive decay in the stratospheric reservoir of nuclear debris, which has become virtually uniform since the last bomb tests in 1965. This makes it possible to estimate the stratospheric residence time from the decrease in the beta-activity of snow with age (depth). The residence times thus determined for Antarctica and Greenland average 1.63 years and are in good agreement with published estimates from atmospheric measurements. (Auth.)

34-731
Alkali and alkaline earth enrichments in aerosols deposited in antarctic snows.
Boutron, C., *Atmospheric environment*, 1979, Vol.13, p.919-924, 25 refs.
Snow composition, Snow impurities, Aerosols.
About 175 snow samples collected in various locations both in East and West Antarctica, using stringent contamination free techniques, have been analyzed for Na, Mg, K, Ca and Al by flameless atomic absorption after preconcentration. Multiple linear regression analysis was used to calculate the enrichment factors for K, Ca and Mg in both the oceanic and the crustal components: no significant enrichments are found in antarctic snows, which suggests that the enrichments previously observed by Vosters (1971) and Boutron et al. (1972) could be linked with a contamination of the samples analyzed by these authors. This conclusion can probably be extended to antarctic aerosols, since their composition is very likely similar to that of snow, as shown at the South Pole by comparison between our snow data and unpublished aerosols composition data by Maenhaut, Duce and Zoller. (Auth.)

34-732
West Antarctic ice sheet: present-day thinning and Holocene retreat of the margins.
Thomas, R.H., *Science*, Sep. 21, 1979, 205(4412), p.1257-1258, 20 refs.
Ice sheets, Ice shelves, Glacier oscillation, Ice models.
Retreat of the margins of the West Antarctic ice sheet associated with rising sea level during the last 15,000 years is the main cause for the thinning of the ice sheet by approximately 300 meters. The West Antarctic ice sheet during the late Wisconsin was at least 30 percent wider than it is today, and Holocene retreat of its margins has added about 6 meters to the world sea level. (Auth.)

Tundra lakes as a source of fresh water: Kipnuk, Alaska.
Bredthauer, S.R., et al, *U.S. Army Cold Regions Research and Engineering Laboratory*, Sep. 1979, SR 79-30, 16p., ADA-075 475, 12 refs.
Doerflinger, D.F.
Lake water, Tundra, Snowmelt, Water supply, Arctic regions.
A study of water quality in several small tundra lakes near Kipnuk, Alaska, was conducted to determine if the lakes were of sufficiently high quality during the snowmelt season to provide the village with enough water for a year-round supply. Since the village is located just 4 miles inland from the Bering Sea, primary emphasis was placed on locating water sources with low chloride concentrations. The tundra lakes were of sufficiently high quality to be pumped into a storage area during early summer to be used as a year round supply.

34-741
Dynamic thermodynamic sea ice model.
Hibler, W.D., III, *Journal of physical oceanography*, July 1979, 9(4), MP 1247, p.815-846, 51 refs.
Sea ice, Thermodynamics, Heat transfer, Ice cover thickness, Mathematical models.
A numerical model for the simulation of sea ice circulation and thickness over a seasonal cycle is presented. This model is used to investigate the effects of ice dynamics on arctic ice thickness and air-sea heat flux characteristics by carrying out several numerical simulations over the entire Arctic Ocean region. The essential idea in the model is to couple the dynamics to the ice thickness characteristics by allowing the ice interaction to become stronger as the ice becomes thicker and/or contains a lower areal percentage of thin ice. The dynamics, in turn, causes high oceanic heat losses in regions of ice divergence and reduced heat losses in regions of convergence. To model these effects consistently, the ice is considered to interact in a plastic manner with the plastic strength chosen to depend on the ice thickness and concentration. The thickness and concentration, in turn, evolve according to continuity equations which include changes in ice mass and percent of open water due to advection, ice deformation and thermodynamic effects.

34-742
Insulating and load-supporting properties of sulfur foam for expedient roads in cold regions.
Smith, N., et al, *U.S. Army Cold Regions Research and Engineering Laboratory*, Sep. 1979, CR 79-18, 21p., ADA-074 694, 6 refs.
Pazsint, D.A.
Roads, Thermal insulation, Cellular materials, Bearing strength, Freeze thaw cycles.
Temperatures of the subgrade and of sulfur foam insulation test sections in an expedient road were monitored with thermocouples to document freezing and thawing conditions. Vehicular trafficking was conducted on a limited basis to determine the load supporting capabilities of the foam. The sulfur foam, placed directly under a prefabricated surface mat, was found to be unsuitable for use as an expedient thermal insulation and traffic load supporting material, primarily because of its low tensile strength and high brittleness. The insulating value of sulfur foam produced by the batch process in the field was about one-half that of extruded polystyrene, meaning double the thickness for equal protection against thaw.

Documentation of soil characteristics and climatology during five years of wastewater application to CRREL test cells.
Iskandar, I.K., et al, *U.S. Army Cold Regions Research and Engineering Laboratory*, July 1979, SR 79-23, 82p., ADA-074 712, 14 refs.
Quarry, S.T., Bates, R.E., Ingersoll, J.
Waste disposal, Water treatment, Soil chemistry, Climatology, Meteorological data.
Section 1 deals with physical properties of the two soils used and the changes in soil chemical characteristics. The physical properties of the soil are those most important in controlling the rate of water movement in soils, such as saturated and unsaturated soil hydraulic conductivity, particle size distribution, bulk density, void ratio, available water and specific gravity. The chemical characteristics of the soil that are of potential importance in assessing the short and long-term effects of wastewater application on land include: free iron oxides, organic carbon, organic nitrogen, pH, conductivity, cation exchange capacity, exchangeable cations, total and extractable phosphorus, and total and extractable heavy metals. Section 2 summarizes climatic conditions at the CRREL site in Hanover, New Hampshire, and the changes that occurred during the period 1974 to 1978. Climatic parameters include temperature, precipitation, wind speed, and soil temperature at depth.

34-744
Determination of dissolved nitrogen and oxygen in water by headspace gas chromatography.
Leggett, D.C., *U.S. Army Cold Regions Research and Engineering Laboratory*, July 1979, SR 79-24, 5p., ADA-074 411, 25 refs.
Lake water, Water chemistry.
In this study dissolved oxygen and nitrogen were determined by shaking 20 to 25 ml of water with an equal amount of helium in a 50-ml gas-tight syringe and injecting 2 ml of the equilibrated headgas into a gas chromatograph. Oxygen and nitrogen were separated on a 5-A molecular sieve column at ambient temperature and detected with a hot wire detector, using atmospheric air for calibration. Advantages of this method over previously reported methods are 1) oxygen and nitrogen are determined in a single analysis, 2) no specifically fabricated stripping apparatus is needed, and 3) analysis can be done in the field with completely portable, battery-operated equipment. The method appears to be accurate and reproducible; several lake O2 and N2 profiles were obtained using this technique.

34-745
Extending the useful life of DYE-2 to 1986, Part 1: Preliminary findings and recommendations.
Tobiasson, W., et al, *U.S. Army Cold Regions Research and Engineering Laboratory*, July 1979, SR 79-27, 15p., ADA-074 733, 3 refs.
Korhonen, C., Redfield, R.
Cold weather construction, Ice sheets, Steel structures, Stresses.
DEW Line Ice Cap Station DYE-2 appears to need major work within the next few years to extend its useful life to 1986. The

structural steel frame is overstressed in a few areas, and the lower portion of the subsurface timber truss enclosure is in bad condition. Additional performance measurements are needed during 1979 to determine the rate of secondary stress in the structural steel frame and the rate of deterioration of the truss enclosure. With this information, a decision can be made whether to move the building sideways onto a new undistorted foundation or to stabilize it in-place by encapsulating the lower 52 ft of the substructure in ice.

Utilization of sewage sludge for terrain stabilization in cold regions, Part 2.

Gaskin, D.A., et al, *U.S. Army Cold Regions Research and Engineering Laboratory*, Aug. 1979, SR 79-28, 36p., ADA-074 725, 10 refs. For Part 1 see 32-1368.

Palazzo, A.J., Rindge, S.D., Bates, R.E., Stanley, L.E.

Sludges, Sewage disposal, Soil stabilization, Vegetation.

From June 1975 to Sep. 1976, a research/demonstration study was conducted at CRREL in Hanover, New Hampshire, to investigate the use of sewage sludge, commercial fertilizer and cultivation techniques for terrain stabilization in cold regions. Twenty-seven test plots on a 16-deg west-facing slope received various combinations of: 1) surface preparation (tiling, bulldozer tracking, or compacting), 2) nutrient source (sewage sludge or fertilizer), 3) mulching agent (wood fiber mulch or peat moss), and 4) tacking agent (Terra Tack III or Curasol). The plots were seeded in either the spring or fall with a constant seed mixture. The effectiveness of the treatments was determined through vegetation yields and soil loss measurements.

34-747

Phenomenological description of the acoustic emission response in several polycrystalline materials.

St. Lawrence, W., *Journal of testing and evaluation*, July 1979, 7(4), MP 1246, p.223-228, 11 refs.

Snow deformation, Snow cover structure, Snow acoustics, Acoustic measurement, Models.

The pattern of acoustic emission response in snow subjected to constant deformation rates is examined. The structural character of snow is discussed, and an equation that describes the pattern of the acoustic emission response is derived. Comparison between the predicted acoustic response and experimental data is made and the agreement is shown to be excellent. The acoustic emission response for 7075-T6 aluminum and iron-3% silicon subjected to constant rates of deformation is also considered. The acoustic emission equation derived for snow represents the response in these materials. It is suggested that the internal fracture concept used to develop the model for snow may also apply to other densely packed polycrystalline materials.

Glaciological and marine biological studies at perimeter of Dronning Maud Land, Antarctica. Final report.
Orheim, O., *National Aeronautics and Space Administration. Contractor report*, June 1977, NASA-CR-155210, 17p., N78-10532, 4 refs.
Sea ice distribution, Remote sensing, Icebergs, Mapping, Spaceborne photography, Ice floes, Antarctica—Queen Maud Land.
The author has identified the following significant results. A nearly complete map of the Dronning Maud Land coastline from 10W to 29E was produced. Based on this, it was determined that for the past 20 years the minimum calving rate from this part of the coastline was 60 cu km/year. The drift speeds were measured for ice floes and bergs between 9 and 20 km/day, and it was found that the number of ice floes of a given size decreases exponentially with size, so that each size class covers approximately the same area. A large melt phenomenon at blue ice fields around 70.7S and 26-29E was discovered.

Critical velocities of a floating ice plate subjected to in-plane forces and a moving load.
Kerr, A.D., *U.S. Army Cold Regions Research and Engineering Laboratory*, Aug. 1979, CR 79-19, 12p., ADA-075 455, 6 refs.
Floating ice, Dynamic loads, Velocity.
The critical velocities of loads moving over floating ice plates have been determined by several authors. In all these analyses

it was assumed that the in-plane force field in the ice cover is zero. However, due to constrained thermal strains, in-plane forces do occur in the field. The purpose of the present paper is to determine their effect upon the critical velocities of the moving loads. It is shown that a uniform compression force field reduces the critical velocity, whereas a tension force has the opposite effect.

International Polar Meeting, 11th, Berlin, Oct. 4-7, 1978, Berlin, Deutsche Gesellschaft für Polarforschung, 1978, c50p., In German and English. Refs. passim.
Glaciology, Marine biology, Geomorphology, Climate, Tundra, Meetings.
The work program of the 11th International Polar Meeting marking the 150th anniversary of the Berlin Geographical Society, consisted of studies of the Arctic and Antarctic. This volume of abstracts of papers presented at the meeting includes the following topics: glaciology, marine biology (special attention to krill), geomorphology, climatology and tundra ecosystem. Scientists from the U.S., Argentina, Germany, Austria and Canada participated.

Proceedings.
Symposium on Meteorological Observations from Space: Their Contribution to the First GARP Global Experiment, Philadelphia, June 8-10, 1976, Boulder, Colo., National Center for Atmospheric Research, Sep. 1976, 424p., Refs. For selected articles see 34-815 through 34-821, or F-22387 through F-22389 and I-22390.
Sea ice, Snow cover, Climate, Spaceborne photography, Ice cover.
The symposium, the proceedings of which are presented in this volume, was held to review the status of the global observing system coming into being to support the First GARP Global Experiment. The papers and abstracts are assembled in six sessions. The list of topics of the various sessions represent those special kinds of space-based observations that are needed to complement ground-based observations in order to meet the observational requirements for the First GARP Global Experiment. The topics of the sessions are: Temperature and humidity fields derived from satellite observations; Surface characteristics of importance to weather and climate; Wind determination from geostationary satellites; Role of the earth's radiation budget in atmospheric dynamics; Data collection systems and some programmatic developments; and Application of satellite data to numerical analysis and prediction.

34-815
Characteristics of antarctic sea ice as determined by satellite-borne microwave imagers.
Zwally, H.J., et al, Symposium on Meteorological Observations from Space: Their Contribution to the First GARP Global Experiment, Philadelphia, June 8-10, 1976, Proceedings, Boulder, Colo., National Center for Atmospheric Research, Sep. 1976, p.94-97, 7 refs.
Wilheit, T.T., Gloersen, P., Mueller, J.L.
Sea ice distribution, Polynyas, Ocean currents, Wind factors.
Features of the antarctic sea ice, such as detailed variations in ice extent and areas of ice divergence induced by winds or ocean currents, can be discerned in microwave images. Images with resolutions of about 30 km are produced from the Electrically Scanning Microwave Radiometers (ESMR) having wavelengths of 1.55 cm on Nimbus 5 and 0.81 cm on Nimbus 6. For the GARP data system tests, weekly maps of sea ice coverage are generated showing the percent of open water in each cell. More detailed studies of the dynamics and thermodynamics of the sea ice, and its interaction with the ocean and atmosphere, are in progress using 3-day average pseudo-color images and maps of ice boundaries. During the austral winters, polynyas and areas of reduced ice concentration are observed.

34-816
Satellite observations of snow and ice with an imaging passive microwave spectrometer.
Fisher, A.D., et al, Symposium on Meteorological Observations from Space: Their Contribution to the First GARP Global Experiment, Philadelphia, June 8-10, 1976, Proceedings, Boulder, Colo., National Center for Atmospheric Research, Sep. 1976, p.98-103, 8 refs.
Ledsham, B.L., Rosenkranz, P.W., Staelin, D.H.
Sea ice, Snow cover, Brightness, Ice models, Thermal properties, Ice temperature, Snow temperature, Spectroscopy.
The scanning microwave spectrometer (SCAMS) on the Nimbus-6 satellite continuously maps the terrestrial surface and yields brightness temperatures which are a function of the distribution and character of various types of snow and ice, including microstructure and subsurface profiles in refractive index, loss (moisture, salinity) and temperature. To aid in the interpretation of this data, a model was developed to describe the propagation of microwave intensity in a scattering medium characterized by three-dimensional random fluctuations of refractive index in addition to non-random variations in permittivity, temperature, and loss. The model combines Maxwell's equations in the Born approximation with radiative transfer theory and has been applied to the thermal emission of snow and ice in Antarctica and Greenland.

34-817
Sea ice modeling: its testing with LANDSAT and potential use in FGGE.
Hall, R.T., et al, Symposium on Meteorological Observations from Space: Their Contribution to the First GARP Global Experiment, Philadelphia, June 8-10, 1976, Proceedings, Boulder, Colo., National Center for Atmospheric Research, Sep. 1976, p.104-109, 9 refs.

34-818
Global variation of snow and ice extent.
Kukla, G.J., Symposium on Meteorological Observations from Space: Their Contribution to the First GARP Global Experiment, Philadelphia, June 8-10, 1976, Proceedings, Boulder, Colo., National Center for Atmospheric Research, Sep. 1976, p.110-115, 23 refs.
Snow cover distribution, Sea ice, Ice cover, Charts, Climate.
Snow in the northern hemisphere formed earlier in the year and covered a substantially larger area on an annual average during 1971-73 than in the rest of the 1967-1975 interval. The differences are largest in autumn and spring. The anomaly was associated with diminished summer ice coverage in the Barents Sea and more snow in Central Asia. Preliminary examination of antarctic ice charts indicates a similar fluctuation apparently in phase with the northern hemisphere. (Auth.)

34-819
Monitoring earth surface characteristics important to weather and climate with earth satellites.
McClain, E.P., Symposium on Meteorological Observations from Space: Their Contribution to the First GARP Global Experiment, Philadelphia, June 8-10, 1976, Proceedings, Boulder, Colo., National Center for Atmospheric Research, Sep. 1976, p.129-135, 48 refs.
Sea ice distribution, Snow cover distribution, Ice cover thickness, Spaceborne photography.
Many of the observational requirements specified for the First GARP Global Experiment and for the GARP Climate Dynamics Subprogram are variables classified as Earth surface characteristics. Many of these characteristics are such that the required space and time resolutions of the observational data can be met only with the aid of data gathered by Earth satellites. Among the variables in question are sea, ice, and land surface temperature; snow conditions; sea ice conditions; wind stress over the ocean and surface currents; and soil moisture. This paper reviews progress in satellite data applications with respect to the monitoring of these surface characteristics, with emphasis upon the use of operational environmental satellites of the USA. The satellite-documented drift of an antarctic iceberg is illustrated and briefly discussed.

34-820
Satellite ice surveillance studies in the Arctic in relationship to the general circulation.
Haupt, I., et al, Symposium on Meteorological Observations from Space: Their Contribution to the First GARP Global Experiment, Philadelphia, June 8-10, 1976, Proceedings, Boulder, Colo., National Center for Atmospheric Research, Sep. 1976, p.179-187, 4 refs.

Engineering at the ends of the earth; polar ocean technology for the 1980's.
National Research Council. Marine Board. Assembly of Engineering, Washington, D.C., National Academy of Sciences, 1979, 74p., 46 refs.
Economic development, Sea ice, Icebergs, Research projects, Engineering.
This report is a review of polar ocean engineering research and technology that are considered necessary to the support of commercial and scientific operations in the Arctic and Antarctic during the 1980's. In presenting the panel's view of the critical national needs in polar ocean engineering, the report identifies and examines the technical deficiencies in today's state of the art and recommends ways of improving the situation. For the Antarctic, major attention is directed toward the technology necessary for harvesting krill and considerations involved in the exploitation of antarctic icebergs.

Soil creep, Plastic properties, Theories, Boundary value problems, Analysis (mathematics).
Presented in this paper is the theory of the steady in-plane deformation, obeying the Coulomb yield criterion, of plastic soils whose strain rate and stress principal directions are noncoaxial. The constitutive equations including an unknown noncoaxial angle are derived by use of the geometry of the Mohr circle and the theory of characteristic lines. A boundary value problem is solved by assigning to the non coaxial angle a set of such values that enable us to accommodate the presupposed type of flow satisfying the given boundary conditions in a given domain. The plastic material regulated by the Coulomb yield criterion in in-plane deformation is, therefore, a singular material whose constitutive equations are not constant with material but are variable with flow conditions.

Flame drilling through the Ross Ice Shelf.
Browning, J.A., *Northern engineer*, Spring 1978, 10(1), p.4-8, 4 refs.
Ice drills, Thermal drills, Antarctica—Ross Ice Shelf.
Described in the article are the flame drilling equipment and some of the problems associated with drilling on the Ross Ice Shelf. A flame jet, produced by the continuous combustion of fuel oil in a high pressure air flow, melted the ice to the sea in about 7 drilling hours. Major problems were hose feed arrangements and the risk of hole closure.

Biochemical activities of organic soils from subantarctic tussok grasslands on Campbell Island. 1. Oxygen uptakes and nitrogen mineralisation.
Ross, D.J., et al, *New Zealand journal of science*, June 1979, 22(2), p.161-171, 23 refs.
Campbell, I.B., Bridger, B.A.
Soil chemistry, Soil science, Organic soils, Campbell Island.
Oxygen uptakes and nitrogen (N) mineralization were measured with samples of organic soils taken at 4 or 5 depths from tussock grasslands at 5 sites ranging in altitude from 45 to 400 m on subantarctic Campbell Island. An altitudinal sequence in chemical or biochemical properties was not evident, probably because of local site effects. Although these soils have been shown to be potentially active biochemically, metabolism in the field would be severely restricted by the prevailing cool climate (Auth. mod.)

34-894
Biochemical activities of organic soils from subantarctic tussock grasslands on Campbell Island. 2. Enzyme activities.
Ross, D.J., et al, *New Zealand journal of science*, 1979, 22(2), p.173-182, 26 refs.
Speir, T.W.
Soil science, Organic soils, Soil chemistry, Campbell Island.
Invertase, amylase, cellulase, hemicellulase, urease, phosphatase, and sulphatase activities were high, on a soil dry weight basis, in the top horizon of organic soils from 6 sites on subantarctic Campbell Island. They generally declined with soil depth, more rapidly than did organic C contents. The enzyme activities were correlated negatively, and generally significantly, with degree of peat decomposition and mainly non-significantly, although positively, with soil organic C and total N contents. All of the enzyme activities, with the partial exception of hemicellulase, were correlated significantly with each other and with soil oxygen uptakes. Most of the enzyme activities were appreciably higher in standing dead material of the tussock grass *Poa litorosa* than in the top horizon of soil at each site; sulphatase activity, however, was always lower in standing dead material, and urease activity varied with site. Although a direct contribution by tussock plant material to soil enzyme activities (except sulphatase) appears likely the levels of enzymes in these soils were (except for invertase) not directly related to the enzyme activities of tussock plant material. (Auth.)

Snow deformation, Snow compression, Volume, Strains, Strain tests, Dynamic loads, Tracked vehicles.
A volumetric constitutive equation was developed to characterize the behavior of snow subjected to large compressive volumetric deformations. By treating the material as a suspension of air voids in a matrix material of polycrystalline ice, a rate-dependent volumetric constitutive law was formulated and found to accurately predict material response to pressure loads for a wide range of load rates. Comparison of the theory with shock wave data was not considered in this paper, although the constitutive law appears to be valid for such load situations. One application to oversnow mobility of tracked vehicles was made. In this case, power requirements due to snow compaction were calculated parametrically in terms of vehicle speed, track loading, and snow density.

This report provides a program for calculating the deflection and stresses of a floating ice sheet using a pocket calculator. The program user must select appropriate values for the ice mechanical properties in order to compute reliable deflection and stresses. Engineering judgement must be used to select the allowable ice strength and when dealing with non-ideal situations.

Lebel, B., *France. Centre national de la recherche scientifique. Laboratoire de glaciologie. Publication*, 1978, No.255, 80p., In French. Thesis, Univ. scientifique et médicale de Grenoble. Refs. p.77-80.
Ice density, Gas inclusions, Ice physics, Porosity, Antarctica—Law Dome, Antarctica—Dumont d'Urville Station.
Field studies were done at Camp Century and at a number of locations in the Antarctic to determine porosity and gas content of ice, as they vary with depth, pressure and temperature. Short-term variations only were investigated. The effect of geographic variations on porosity and gas inclusions was also studied. Short-term gas content changes are primarily due to the different porosities of the ice layers. Gas content variations with depth can shed light on thickness of layers in the polar caps, but the area of study must be carefully chosen. Best for this purpose are the sections between 1000 and 2000 m in the Antarctic, which reveal ice changes effected by climatic change.

Automatic apparatus for measuring low-level beta activity in snow samples. [Dispositif automatique de mesure de la radioactivité beta à bas niveau d'échantillons de neige],
Pinglot, J.F., *France. Centre National de la Recherche Scientifique. Laboratoire de Glaciologie. Publication*, 1978, No.257, 103p., Doctoral thesis, Institut national politechnique de Grenoble. In French. Refs. p.101-103.
Recording instruments, Radioactivity, Snow accumulation, Snow impurities, Fallout.
This monograph concerns various low-level beta-radiation sources in snow as well as a number of methods used to determine emissions. Analysis of natural and artificial beta radiation in polar snow samples requires an automatic device to determine low levels. The laboratory being half underground and the antiradiation chamber made it possible to eliminate cosmic radiation. The device is described in detail, and results of studies on polar snow (annual accumulation, dating, levels of natural and fission-product radiation) are presented.

Effect of varying low level wind fields on the opening and closing of the ice cover in the western Weddell Sea.
Kyle, T.H., Madison, University of Wisconsin, 1974, 91p., Master's thesis. 26 refs.
Sea ice, Ice forecasting, Wind (meteorology), Spacecraft, Ice conditions, Weddell Sea.
Three forms of meteorological analysis have been used for this study: meridional sea level pressure differences, low level wind directions, and cyclonic storm positions and trajectories. The results show a statistically highly significant relationship between the east-west widths of open water and all three of the meteorological parameters stated above. Average ice/wind factors of 0.6% and 1% are obtained and compare favorably with values obtained by previous investigators. High quality satellite data and extensive satellite coverage have improved trajectory forecasts for cyclones in the Southern Ocean. Forecasts of wind-induced ice cover variations may therefore possibly be made for Antarctic regions affected by these synoptic systems. However, there is evidence that factors such as freezing and restricted freedom of movement for ice floes can also be important. Therefore, an ice-open water forecast scheme should not be based on wind stress alone.

34-945
Some aspects of the ice topography of Trough Lake, southern Victoria Land, Antarctica.
Lyon, G.L., *New Zealand journal of geology and geophysics*, 1979, 22(2), p.281-284, 9 refs.
Lake ice, Floating ice, Ablation, Topography, Antarctica—Victoria Land.
Trough Lake has a permanent cover of floating ice. Contact [illegible] which are modified by differential ablation. The estimated ablation rate of 300-450 mm of ice per year is higher than that at Lake Miers, 20 km north, due to the increased prevalence of katabatic winds at Trough Lake. (Auth.)

Morey, R.M.
Sea ice, Radar echoes, Ice crystal structure, Ocean currents, Dielectric properties, Anisotropy.
Results of impulse radar studies of sea ice near Prudhoe Bay, Alaska, show that where there is a preferred current direction under the ice cover, the crystal structure of the ice becomes highly ordered. This includes a crystal structure with a preferred horizontal *c* axis that is oriented parallel with the local current. The radar studies show that this structure behaves as an anisotropic dielectric. The result is that when electromagnetic energy is radiated from a dipole antenna in which the *E* field is oriented perpendicular to the *c* axis azimuth, no bottom reflection is detected. It was also found that the frequency dispersion of anisotropic sea ice varies in the horizontal plane. This is demonstrated by the center frequency of the reflected signal spectrum, which is maximum in the preferred *c* axis direction and minimum perpendicular to it. In addition, it was found that the frequency dispersion is related to the average bulk brine volume of the ice but that the bulk dielectric constant of the ice, as determined from impulse travel time, shows little correlation with the coefficient of anisotropy.

Ice sheets, Ice cores, Radio echo soundings, Ice physics, Antarctica—Folger, Cape.
In this paper, the measured physical properties of core to bedrock taken at Cape Folger, East Antarctica, are used to compute a depth-reflection coefficient profile for comparison with the observed radio-echo reflections. The measurements available on physical properties are density variations, bubble size and shape changes, and crystal fabric variations. In calculations to differentiate the effects of the physical properties, it appears that density variations account for the primary contributions to the calculated dielectric property changes corresponding to the highest observed reflection coefficients. However, bubble changes alone can also account for reasonable, though lower, reflection coefficients at the depths corresponding to observed reflections. Crystal fabric variations correspond poorly with the reflection locations. The close correspondence between the depths of the bubble shape changes (which are definitely deformational features) and the depths of the density variations, and between both of these and the radio-echo layers, indicates that deformational events in the ice sheet's history are represented by the variations in physical properties and associated radio-echo records. Merlivat, L., Pourchet, M., Lorius, C.
Snow composition, Fallout, Isotope analysis, Particles, Antarctica—South Pole.
Snow samples were taken from a 5-m-deep pit located near the South Pole station in Jan. 1975, and continuous deuterium, tritium and beta activity profiles have been obtained from them. The first artificial tritium, due to the 1952 Ivy experiments, was detected during 1954. A two-year delay between explosions and fallout suggests that the tritium fallout is related to the main nuclear tests from 1952 to 1960. A stratospheric half residence time equal to 20 months is deduced from the fallout decrease occurring after the 1966 peak. For the French southern hemisphere experiments, it is about one year. A sharp tritium decrease is observed after a high 1973 peak, providing a new tritium reference level for future glaciological studies in Antarctica. The beta and tritium peaks occur respectively during the antarctic summer and the antarctic winter, showing different injection mechanisms. This winter input and the high tritium values registered at the South Pole indicate a preferential tritium transfer over the pole area. Two mechanisms, stratospheric-tropospheric exchange and direct stratospheric cloud precipitation, could account for this injection. (Auth. mod.)

Soil water migration, Heat transfer.
This paper presents a set of partial differential equations that describes the concurrent one-dimensional flow of liquid and heat in unfrozen unsaturated soils. A Galerkin finite element method based on hermite polynomials was used to solve the equations numerically. To verify both the theory and the solution method, laboratory measurements were made on a horizontal soil column. The results furnished essential transport coefficient values, as well as data records over space and time for infiltrations of cold water that produced steep, interacting temperature and moisture content gradients. Comparison of measured and predicted values showed very good agreement in both the moisture and temperature domains. Contrary to the usual assumption in soil studies, liquid convection played a large role in the heat transfer. A simple geometric mean formula represented the soil thermal conductivity quite adequately.

34-1088
Comment and reply on "Late Quaternary extent of the West Antarctic ice sheet: new evidence from Ross Sea cores".
Fillon, R.H., et al, *Geology*, Nov. 1979, 7(11), p.518-519, 17 refs.
Kellogg, T.B., Truesdale, R.S., Osterman, L.E.
Ice sheets, Grounded ice, Glacial geology, Antarctica—Ross Sea.
R. Fillon disagrees with the conclusions of Kellogg and others (1979; 33-3970 or E-21853) pertaining to the late Cenozoic history of the Ross Sea. Three principal areas of disagreement are noted: the biostratigraphic significance of *Globocassidulina biora*, the origin of the sandy unit, and the nature of Late Pliocene sedimentation. Kellogg et al hold that the concept of grounded ice filling the Ross Sea embayment, even during the last glaciation, is fundamental in interpreting the glacial history of Antarctica.

34-1089
Keewatin ice sheet—reevaluation of the traditional concept of the Laurentide Ice Sheet.

34-1090
Climatic and synoptic study of the Weddell Sea region during the austral fall months.
Komro, F.G., Madison, University of Wisconsin, 1978, 46p., Unpublished Master's thesis. 20 refs.
Sea ice distribution, Ice conditions, Pack ice, Wind (meteorology), Climate.
This study focuses on two main topics: the climatic conditions of the Weddell Sea during the austral fall months, and an analysis of the cyclone whose windfield indirectly trapped the *General San Martin* on Feb. 26, 1975. The evidence indicates that in addition to the residence time of cyclones and/or the frequency of their appearance over the central Weddell Sea, other factors, such as the polar easterlies, the damming up effect along the Peninsula, and katabatic winds must significantly account for much of the observed windfield within this region.

34-1091
Antarctic journal of the United States, Vol. 14, No.3.
U.S. National Science Foundation, Washington, D.C., Sep. 1979, 23p.
Ice sheets, Sea ice, Glaciology, Ice shelves.
This issue contains highlights of the 1979-80 U.S. Antarctic Research Program, planned field projects for 1979-80, planned major field camps, NSF funds awards for Apr. 1-June 30, 1979, monthly climate summary corrections, and special news announcements. Research highlights include geological studies of the Ellsworth Mountains and an investigation of wave-particle interactions in the magnetosphere from Siple Station. Approximately 80 science projects are planned for the coming season. Brief descriptions are given of research projects. A major field camp will be established in the Ellsworth Mountains to support geological investigations of the area. During 1980-81 a major field camp will be installed at site D-59 on the East Antarctic Ice Sheet to recover an LC-130 airplane that crashed at the site in 1971.

34-1107
Growth rates and characteristics of ice on the Ottauquechee and Winooski Rivers of Vermont during winter 1977-78.
Deck, D., *U.S. Army Cold Regions Research and Engineering Laboratory*, Dec. 1978, SR 78-30, 30p. ADA-063 874.
River ice, Ice growth, Ice cover thickness, Frazil ice.
Ice thickness, growth rates and characteristics of river ice are tabulated for use with a planned physical hydraulic model of the Ottauquechee River in Quechee, Vermont, using real ice.

34-1108
Study of water drainage from columns of snow.
Denoth, A., et al, *U.S. Army Cold Regions Research and Engineering Laboratory*, Jan. 1979, CR 79-1, 19p. ADA-066 935.
Seidenbusch, W., Blumthaler, M., Kirchlechner, P., Ambach, W.
Snow, Water flow, Drainage.
Experiments were conducted to study the flow of water through columns of homogeneous, repacked snow. The gravity flow theory of water flow through snow was verified, although possibly there is some dependence of the relative permeability on the state of metamorphism of the snow. Also, at very large values of saturation there may be some additional flow in saturated channels.

34-1109
Research and development towards a facility for water purification and waste treatment in the north.
Day, D.R., *Canada. Defence and Civil Institute of Environmental Medicine. Technical report*, Oct. 1978, DCIEM-TR-78X8, 115p., ADA-065 024, Revision of report dated Mar. 1978, q.v. 33-2198.

Brekhovskikh, V.L., et al, *Akademiia nauk SSSR. Izvestiya. Atmospheric and oceanic physics*, Sep. 1977, 13(2), p.101-106, Translated from Its Izvestiia. Fizika atmosfery i okeana. 8 refs.
Tatarskiĭ, V.I.
Thermal radiation, Radiometry, Glacier ice, Stratification.
Multiple reflection from inhomogeneities is used to derive features of thermal radio emission of layered structures such as antarctic glaciers. The coefficients of reflection of electromagnetic waves from a random layered medium with a small dielectric loss are calculated for both horizontal and vertical polarizations. The equations containing the function of probability distribution for the reflection coefficient are used. The angular distributions of brightness temperature are obtained for both polarizations. The computed results are compared with experimental data obtained by remote sensing from the satellites Cosmos-243 and Cosmos-384. (Auth.)

Snow crystal structure, Firn, Ice crystal structure, Snow permeability, Ice physics, Antarctica—Mizuho Station, Antarctica—Byrd Station.
Structure and properties of antarctic snow and ice recovered by drilling at Mizuho and Byrd Stations are discussed with reference to the similarity between densification of antarctic snow and ice and the ceramic firing process. The similarity lies in that in both systems the constituent powder materials, ice and soil particles respectively, expand and bond by a common mechanism of sintering at a high homologous temperature. It is suggested that the distinction between snow and ice in terms of permeability is analog us to that between earthenware and porcelain in ceramics.

Sea ice, Radar echoes, Backscattering, Pressure ridges, Ice cover thickness.
Radar backscatter measurements were made of shorefast sea ice near Point Barrow, AK, in May 1977, with a surface-based FM-CW scatterometer that swept from 1-2 GHz and from 8.5-17.5 GHz. The 1-2 GHz measurements showed that thick first-year and multiyear ice cannot be distinguished at 10-70 deg incidence angles, but that undeformed sea ice can be discriminated from pressure ridges and lake ice. Results also indicate that frequencies between 8-18 GHz have the ability to discriminate between thick first-year, multiyear, and lake ice. Cross polarization was found to be a better discriminator than like polarization. In addition, at these latter frequencies the differential scattering was found to have an approximately linearly increasing frequency response.

Rock glaciers, Glacier ice, Glacial deposits, Glacier mass balance, Cirques.

34-1169
Geomorphic processes on the north slope of Alaska.
Hall, D.K., *U.S. National Aeronautics and Space Administration. Technical memorandum*, Mar. 1979, NASA-TM-79720, 25p., N79-23561, 38 refs.
Landforms, Permafrost distribution, Patterned ground, Naleds, Ground ice, Active layer, Suprapermafrost ground water, United States—Alaska—North Slope.

34-1170
Multiple surface scattering from the ice covered Arctic Ocean.
Beilis, A., et al, *Lamont-Doherty Geological Observatory. Technical report*, Mar. 1979, LDGO-TR-2, 52p. ADA-069 843.
Tappert, F.D., Kutschale, H.W.
Ice acoustics, Sea ice, Computer applications.

34-1171
Operational research investigation of the ice-detection capability and utility of the Surface Condition Analyzer (SCAN) system and its applicability to Navy-wide use.
Mack, E.J., et al, *Calspan Corporation, Buffalo, New York. Report*, Mar. 1979, CALSPAN-6283-M-1, 181p. ADA-067 174.
Anderson, R.J., Bock, D.H., Niziol, T.A., Reif, H.G.
Ice detection, Warning systems, Runways, Temperature measurement.

34-1172
Polystyrene insulation for concrete canal lining.
Jones, C.W., et al, *U.S. Bureau of Reclamation. Engineering and Research Center. Report*, Nov. 1978, REC-ERC-78-10, 30p. PB-295 618.
Laymon, B.M.
Concrete structures, Channels (waterways), Frost heave, Thermal insulation, Polymers.

34-1173
Crust behavior in simultaneous melting and freezing on a submerged flat plate.
Ganguli, A., et al, Evanston, Illinois, Northwestern University, 1978, 51p. COO-4171-2.
Bankoff, S.G.
Melting, Freezing.

34-1174
Comparison of centrifuge and freezing calorimeter methods for measuring free water in snow.
Jones, R.N., *U.S. National Bureau of Standards. National Engineering Laboratory. Internal report*, May 1979, NBSIR-79-1604, 44p. PB-296 321.
Snow hydrology, Snow water content, Water flow, Calorimeters, Centrifuges.

34-1175
Calculation of frostline penetration in high voltage cable trench Mt. Elbert pumped-storage powerplant.
Landman, J.K., *U.S. Bureau of Reclamation. Engineering and Research Center. Report*, Dec. 1977, REC-ERC-77-7, 48p. PB-293 539.
Frost penetration, Underground cables, Trenching.

34-1176
Systems for combatting aircraft icing.
Dabrowski, K., *U.S. Air Force. Foreign Technology Division. Translation*, June 1, 1978, FTD-ID(RS)T-0623-78, 16p., ADA-066 908, Translation of Technika lotnicza i astronautyczna 32(4):11-14, 1977.
Aircraft icing, Ice prevention.

34-1177
Organizing construction of the Surgut-Polotsk oil pipeline. [Organizatsiia stroitel'stva nefteprovoda Surgut-Polotsk],
Pavlov, N.M., *Stroitel'stvo truboprovodov*, Aug. 1979, No.8, p.5-6, In Russian.
Petroleum transportation, Pipelines, Permafrost beneath structures, Gas pipelines, Construction.

34-1178
Construction of the Urengoi-Cheliabinsk gas pipeline. [Upravlenie stroitel'stvom gazoprovoda Urengoi-Cheliabinsk],
Emel'ianov, V.A., et al, *Stroitel'stvo truboprovodov*, Aug. 1979, No.8, p.7-8, In Russian.
Valieva, N.K.
Gas pipelines, Permafrost beneath structures, Construction equipment.

34-1179
Scientific problems in the construction of northern gas lines. [Nauchnye problemy sooruzheniia severnykh gazoprovodov],
Ivantsov, O.M., *Stroitel'stvo truboprovodov*, Aug. 1979, No.8, p.10-15, In Russian.
Gas pipelines, Permafrost beneath structures, Earthwork, Blasting, Thermal drills, Boreholes, Pipe laying, Welding.

34-1180
Construction of residential and public buildings in West Siberia. [Zhilishchno-grazhdanskoe stroitel'stvo v Zapadnoĭ Sibiri],
Khaltum, A.D., *Stroitel'stvo truboprovodov*, Aug. 1979, No.8, p.16-18, In Russian. 4 refs.
Residential buildings, Modular construction, Prefabrication, Large panel buildings, Permafrost beneath structures, Construction materials, Transportation.

34-1181
Construction of service roads in swamps. [Stroitel'stvo vdol' trassovykh proezdov v zabolochennykh rajonakh],
Zholobov, S.I., *Stroitel'stvo truboprovodov*, Aug. 1979, No.8, p.24-25, In Russian.
Pipelines, Swamps, Roads, Permafrost beneath roads, Snow roads, Ice roads, Ice crossings.

34-1182
Freezing of above-ground low-temperature gas pipelines. [Obmerzanie nizkotemperaturnykh gazoprovodov pri nadzemnoĭ prokladke],
Dvoĭris, A.D., et al, *Stroitel'stvo truboprovodov*, Aug. 1979, No.8, p.28-29, In Russian. 3 refs.
Krasovitskiĭ, B.A., Subbotina, L.P.
Gas pipelines, Permafrost beneath structures, Pipeline freezing, Thermal insulation, Design.

34-1183
Designing gas pipeline crossings of major river valleys in the North. [Proektirovanie perekhodov gazoprovodov cherez doliny krupnykh rek v rationakh Severa].
Kondrat'ev, V.G., et al, *Stroitel'stvo truboprovodov*, Aug. 1979, No.8, p.30-31, In Russian.
Zamolotchikova, S.A., Poltev, N.F.
Gas pipelines, River crossings, Permafrost beneath structures, Continuous permafrost, Frost heave, Pipeline freezing, River ice, Ice loads, Design.

34-1184
Discussion on methods of concreting in the North. [Obsuzhdaiutsia metody betonnykh rabot na Severe].
Ostryi, V.M., *Stroitel'stvo truboprovodov*, Aug. 1979, No.8, p.34, In Russian.
Concrete structures, Foundations, Winter concreting, Permafrost beneath structures, Reinforced concretes, Formwork (construction), Electric heating, Thermal insulation, Construction materials, Construction equipment, Meetings.

34-1185
Modernizing cutting tools of the ETR-132A and ETR-132B excavators designed for frozen ground. [Modernizatsiia rabochikh organov ekskavatorov ETR-132A i ETR-132B dlia razrabotki merzlykh gruntov].
Bondarenko, V.P., et al, *Mekhanizatsiia stroitel'stva*, Oct. 1979, No.10, p.5-7, In Russian. 2 refs.
Osipenko, B.V., Sokolov, L.K.
Earthwork, Design.

34-1186
Gasoline thermodrill for boreholes. [Benzinovyi rezak dlia razrabotki shpurov].
Mezhenin, IU.M., *Mekhanizatsiia stroitel'stva*, Oct. 1979, No.10, p.7-8, In Russian.
Thermal drills, Boreholes, Frozen ground.

34-1187
New drilling instrument for holes in frozen ground. [Novyi effektivnyi burovoi instrument dlia prokhodki shpurov v merzlykh gruntakh].
Makushkin, D.O., et al, *Mekhanizatsiia stroitel'stva*, Oct. 1979, No.10, p.8-9, In Russian.
Shmakov, V.N., Bandusiak, IU.M.
Drills, Boreholes, Frozen ground.

34-1188
Modern training in frozen ground excavation. [Shkola peredovogo opyta razrabotki merzlykh gruntov].
Gusakov, B.P., *Mekhanizatsiia stroitel'stva*, Oct. 1979, No.10, p.22-23, In Russian.
Meetings, Earthwork.

34-1189
Rock blasting under complex hydrogeological conditions. [Vzryvnye raboty v slozhnykh gidrogeologicheskikh usloviiakh].
Mets, IU.S., Kiev, Tekhnika, 1979, 109p., In Russian with English table of contents enclosed. 20 refs.
Mining, Blasting, Rocks, Fracture zones, Ground water, Explosion effects, Explosives, Boreholes, Detonation waves.

34-1190
Environment-forming role of forests in the Lake Baykal Basin. [Sredoobrazuiushchaia rol' lesov basseina ozera Baikal],
Lebedev, A.V., et al, Novosibirsk, Nauka, 1979, 256p., In Russian with English table of contents enclosed. Refs. p.247-255.
Forestry, Taiga, Tundra, Soil water, USSR—Baykal Lake.

34-1191
Flora and fauna of water bodies in the European North (Bol'shezemel'skaya Tundra taken as an example). [Flora i fauna vodoemov Evropeiskogo Severa (na primere Bol'shezemel'skoi Tundry)],
Gerasen, M.V., ed, Leningrad, Nauka, 1978, 191p., In Russian with English table of contents enclosed. Refs p.91-107.
Lakes, Arctic landscapes, Algae, Mosses, Tundra, USSR—Bol'shezemel'skaya Tundra.

34-1192
Hydrochemistry of the northwestern part of the Central Siberian Plateau. [Gidrokhimiia severo-zapadnoi chasti Srednesibirskogo ploskogor'ia],
Kuz'min, E.E., et al, Leningrad, Gidrometeoizdat, 1979, 141p., In Russian. 61 refs.
Posokhov, E.V.
Permafrost distribution, Permafrost hydrology, Water chemistry, Surface waters, Suprapermafrost ground water, Subpermafrost ground water.

34-1193
Data of glaciological studies.
Saidi, M.D., ed, Washington, D.C., U.S. National Science Foundation, 1974, 713p., PB-293 100-T, Translation of Akademiia nauk SSSR. Institut geografii. Materialy gliatsiologicheskikh issledovanii. Khronika obsuzhdeniia, Vol 21, 1973. For selected individual papers see 34-1194 through 34-1214. For Russian originals of selected portions of this volume see 29-3850 through 29-3866.
Glaciology, Glaciers, Avalanches, Snow hydrology.

34-1194
Discussions on problems of the study of the Antarctic glacial cover at the twelfth session of the Scientific Committee for Antarctic Research (SCAR), and at the meetings of the Council of the International Antarctic Glaciological Project (IAGP).
Korotkevich, E.S., Data of glaciological studies. Translated from Akademiia nauk SSSR. Institut geografii. Materialy gliatsiologicheskikh issledovanii. Khronika obsuzhdeniia, Vol.21, 1973, Washington, D.C., U.S. National Science Foundation, 1974, p.103-118, PB-203 100T, For Russian original see 29-3851 or F-15170.
Glacier ice, Ice shelves, Drilling, Research projects, Antarctica—Ross Ice Shelf.
Participating nations in the IAGP reported accomplishments in 1972 and outlined plans for 1973. The glaciology working group formulated plans and recommendations which include additional glaciological work on the Antarctic Peninsula, satellite investigation of sea ice variations, use of glacial deposits to monitor world-wide pollution levels, and micro-glaciological studies in East Antarctica. Borehole site selection has already begun on the Ross Ice Shelf.

34-1195
New phase in the study of the glacial cover in Antarctica.
Kotliakov, V.M., Data of glaciological studies. Translated from Akademiia nauk SSSR. Institut geografii. Materialy gliatsiologicheskikh issledovanii. Khronika obsuzhdeniia, Vol.21, 1973, Washington, D.C., U.S. National Science Foundation, 1974, p.123-172, PB-293 100-T, For Russian original see 29-3852 or F-15171.
Ice sheets, Research projects, History, Antarctica—East Antarctica.
Following a brief outline of recent (last 70 yr) antarctic research and the development of international cooperation in research as instruments and techniques became more sophisticated, the author describes the founding and work of the IAGP. This cooperative venture concentrates on all phases of glaciers and ice cover in East Antarctica using modern methods and instrumentation to measure and calculate ice physical properties and dimensions.

34-1196
Mass balance of the Dzhankuat Glacier from 1967-1971 and the methods used to measure and calculate it.
Golubev, G.N., et al, Data of glaciological studies. Translated from Akademiia nauk SSSR. Institut geografii. Materialy gliatsiologicheskikh issledovanii. Khronika obsuzhdeniia, Vol.21, 1973, Washington, D.C., U.S. National Science Foundation, 1974, p.173-191, PB-293 100-T, For Russian original see 29-1853. 3 refs.
Durgerov, M.B.
Glacier mass balance, Glacier alimentation, Glacier ablation, Measurement.

34-1197
On the application of existing models of movement to calculating the velocity fields of mountain glaciers (for example, the Central Tujuksu Glacier).
Tulina, T.U., Data of glaciological studies. Translated from Akademiia nauk SSSR. Institut geografii. Materialy gliatsiologicheskikh issledovanii. Khronika obsuzhdeniia, Vol.21, 1973, Washington, D.C., U.S. National Science Foundation, 1974, p.192-207, PB-293 100-T, For Russian original see 28-3854. 16 refs.
Glacier flow, Velocity measurement, Mathematical models.

34-1198
Relationship of snow transport to snow storm duration.
Grishin, I.S., Data of glaciological studies. Translated from Akademiia nauk SSSR. Institut geografii. Materialy gliatsiologicheskikh issledovanii. Khronika obsuzhdeniia, Vol.21, 1973, Washington, D.C., U.S. National Science Foundation, 1974, p.208-219, PB-293 100-T, 12 refs.
Snowstorms, Blowing snow.

34-1199
Runoff of suspended deposits in glacier adjacent zones.
Chernov, L.P., Data of glaciological studies. Translated from Akademiia nauk SSSR. Institut geografii. Materialy gliatsiologicheskikh issledovanii. Khronika obsuzhdeniia, Vol.21, 1973, Washington, D.C., U.S. National Science Foundation, 1974, p.220-234, PB-293 100-T, 21 refs.
Glacial deposits, Suspended sediments, Runoff, Turbidity.

34-1200
Laws governing the thawing of an artificially dusted glacier surface.
Bazhev, A.B., Data of glaciological studies. Translated from Akademiia nauk SSSR. Institut geografii. Materialy gliatsiologicheskikh issledovanii. Khronika obsuzhdeniia, Vol.21, 1973, Washington, D.C., U.S. National Science Foundation, 1974, p.271-296, PB-293 100-T, For Russian original see 29-3855 7 refs.
Glacier melting, Dusting, Artificial melting.

34-1201
Form and motion of the Kolka Glacier after its surge and probable mechanism of this surge.
Garelik, I.S., et al, Data of glaciological studies. Translated from Akademiia nauk SSSR. Institut geografii. Materialy gliatsiologicheskikh issledovanii. Khronika obsuzhdeniia, Vol.21, 1973, Washington, D.C., U.S. National Science Foundation, 1974, p.296-311, PB-293 100-T, 3 refs.
Grinberg, A.M.
Glacier surges, Glacier flow, Subsidence, Ice deformation.

34-1202
Recent trends in the ice cover of the Arctic Ocean.
Shpaikher, A.O., Data of glaciological studies. Translated from Akademiia nauk SSSR. Institut geografii. Materialy gliatsiologicheskikh issledovanii. Khronika obsuzhdeniia, Vol.21, 1973, Washington, D.C., U.S. National Science Foundation, 1974, p.311-322, PB-293 100-T, 8 refs.
Sea ice distribution, Periodic variations, Icebergs, Meteorological factors, Water temperature.

34-1203
Physical and mechanical properties of the ice cover of the Kara and Laptev Seas.
Peschanskii, I.S., et al, Data of glaciological studies. Translated from Akademiia nauk SSSR. Institut geografii. Materialy gliatsiologicheskikh issledovanii. Khronika obsuzhdeniia, Vol.21, 1973, Washington, D.C., U.S. National Science Foundation, 1974, p.322-333, PB-293 100-T, For Russian original see 29-3856. 3 refs.
Chikovskii, S.S.
Sea ice, Ice mechanics, Ice cover strength, Ice forecasting.

34-1204
On some rules governing the formation of ice jams and the computation of the type of preventive measures to be taken.
Tsykin, E.N., et al, Data of glaciological studies. Translated from Akademiia nauk SSSR. Institut geografii. Materialy gliatsiologicheskikh issledovanii. Khronika obsuzhdeniia, Vol.21, 1973, Washington, D.C., U.S. National Science Foundation, 1974, p.334-346, PB-293 100-T, For Russian original see 29-3857.
Tsykina, G.A.
Ice jams, Flood forecasting, Countermeasures, River ice.

34-1205
New system for the artificial reduction of the mechanical strength and the heat conductivity of the ice covers of reservoirs.
Faĭko, L.I., Data of glaciological studies. Translated from Akademiia nauk SSSR. Institut geografii. Materialy gliatsiologicheskikh issledovanii. Khronika obsuzhdeniia, Vol.21, 1973, Washington, D.C., U.S. National Science Foundation, 1974, p.346-353, PB-293 100-T, 3 refs.
Reservoirs, Ice control, Ice cover strength, Aeration.

34-1206
Variation of the turbulent exchange on a mountain glacier.
Davidovich, N.V., et al, Data of glaciological studies. Translated from Akademiia nauk SSSR. Institut geografii. Materialy gliatsiologicheskikh issledovanii. Khronika obsuzhdeniia, Vol.21, 1973, Washington, D.C., U.S. National Science Foundation, 1974, p.367-379, PB-293 100-T, For Russian original see 29-3859. 5 refs.
Popova, V.S.
Turbulent exchange, Heat flux, Glacier ablation, Mountain glaciers.

34-1207
Electrolytic conductivity of water, snow and ice in the basin of the Kolka Glacier.
Fleetwood, A., Data of glaciological studies. Translated from Akademiia nauk SSSR. Institut geografii. Materialy gliatsiologicheskikh issledovanii. Khronika obsuzhdeniia, Vol.21, 1973, Washington, D.C., U.S. National Science Foundation, 1974, p.387-395, PB-293 100-T, For Russian original see 29-3860. 7 refs.
Electrical resistivity, Glacier ice, Meltwater, Snow, Glacier surges.

34-1208
Palynological data for the characterization of the snow-firn strata of the Gergeti Glacier.
Psareva, T.V., et al, Data of glaciological studies. Translated from Akademiia nauk SSSR. Institut geografii. Materialy gliatsiologicheskikh issledovanii. Khronika obsuzhdeniia, Vol.21, 1973, Washington, D.C., U.S. National Science Foundation, 1974, p.396-406, PB-293 100-T, For Russian original see 29-3861. 9 refs.
Surova, T.G.
Pollen, Mountain glaciers, Snow cover structure, Firn stratification.

34-1209
Influence of snow deformation on the traffic of low-powered amphibian airsleighs.
Sboev, V.V., Data of glaciological studies. Translated from Akademiia nauk SSSR. Institut geografii. Materialy gliatsiologicheskikh issledovanii. Khronika obsuzhdeniia, Vol.21, 1973, Washington, D.C., U.S. National Science Foundation, 1974, p.429-433, PB-293 100-T, For Russian original see 29-3862. 6 refs.
Snow deformation, Snow vehicles.

34-1210
Results of gravimetric measurements of the ice thickness on the Obruchev Glacier.
Macheret, IU.IA., Data of glaciological studies. Translated from Akademiia nauk SSSR. Institut geografii. Materialy gliatsiologicheskikh issledovanii. Khronika obsuzhdeniia, Vol.21, 1973, Washington, D.C., U.S. National Science Foundation, 1974, p.434-439, PB-293 100-T, For Russian original see 29-3863. 3 refs.
Glacier ice, Ice cover thickness, Gravimetric prospecting.

34-1211
Variation of isotope O-18 in the mass of the Marukh Glacier (Western Caucasus).
Bazhev, A.B., et al, Data of glaciological studies. Translated from Akademiia nauk SSSR. Institut geografii. Materialy gliatsiologicheskikh issledovanii. Khronika obsuzhdeniia, Vol.21, 1973, Washington, D.C., U.S. National Science Foundation, 1974, p.440-454, PB-293 100-T, For Russian original see 29-3864. 15 refs.
Gordienko, F.G., Smirnov, K.E.
Glacier ice, Isotope analysis, Firn stratification, Glacier thickness.

34-1212
Simultaneous investigations of ice, water and heat balance in typical glacial basins.
Kotliakov, V.M., Data of glaciological studies. Translated from Akademiia nauk SSSR. Institut geografii. Materialy gliatsiologicheskikh issledovanii. Khronika obsuzhdeniia, Vol.21, 1973, Washington, D.C., U.S. National Science Foundation, 1974, p.463-491, PB-293 100-T, For Russian original see 29-3865.
Glacier mass balance, Glacier heat balance.

34-1213
Role of the internal seepage alimentation in the mass balance of glaciers and methods for determining it.
Bazhev, A.B., Data of glaciological studies. Translated from Akademiia nauk SSSR. Institut geografii. Materialy gliatsiologicheskikh issledovanii. Khronika obsuzhdeniia, Vol.21, 1973, Washington, D.C., U.S. National Science Foundation, 1974, p.492-521, PB-293 100-T, For Russian original see 29-3866. 11 refs.
Glacier mass balance, Seepage, Measurement, Snow accumulation.

34-1214
Annotated list of Soviet literature on glaciology (1969).
Kotliakov, V.M., comp, Data of glaciological studies. Translated from Akademiia nauk SSSR. Institut geografii. Materialy gliatsiologicheskikh issledovanii. Khronika obsuzhdeniia, Vol.21, 1973, Washington, D.C., U.S. National Science Foundation, 1974, p.524-692, PB-293 100-T, 444 refs.
Lapina, I.IA., comp, Chernova, L.P., comp.
Bibliographies, Glaciology.

34-1215
Thermal rock drill for permafrost. [Ustroistvo dlia termicheskogo razrusheniia gornykh porod],
Goldaev, I.P., et al, *Russia. Komitet po delam izobretenii i otkrytii. Patent,* Oct. 12, 1973, 4 col., SOVP-1256888/22-3, For English abstract see Soviet inventions illustrated, Sec.3: Mechanical, Sep. 1973, V(31), No.258-206.
Thermal drills, Rock drilling, Equipment, Permafrost.

34-1216
Snow retention heaper and swather. [Orudie dlia obrazovaniia valkov i kuch pri snegozaderzhanii],
Gromov, V.S., *Russia. Komitet po delam izobretenii i otkrytii. Patent,* Feb. 25, 1974, 4 col., SOVP-1634291/30-15, For English abstract see Soviet inventions illustrated, Sec.3: Mechanical, 1975, W(6), No.416-025.
Snow retention, Equipment.

34-1217
Ice breaking anti soil erosion plough. [Orudie dlia razrezaniia ledianoi korki pri protivoerozionnoi obrabotke pochvy],
Shikula, N.K., et al, *Russia. Komitet po delam izobretenii i otkrytii. Patent,* Feb. 25, 1974, 2 col., SOVP-1752217/30-15, For English abstract see Soviet inventions illustrated, Sec.3: Mechanical, 1975, W(6), No.416-027.
Fedorov, V.A., Podgornyi, V.K.
Ice breaking, Equipment, Soil erosion, Countermeasures.

34-1218
Constructional thermal insulating blanket. [Teploizoliatsionnyi mat],
Tsimermanis, L.B., et al, *Russia. Komitet po delam izobretenii i otkrytii. Patent,* Mar. 5, 1976, 2 col., SOVP-1484436/29-14, For English abstract see Soviet inventions illustrated. Sec.3: Mechanical, Feb. 1977, X(51), No.505-777.
Chernov, A.N., Klimov, IU.M., Genkin, A.R., Mitus, V.M.
Thermal insulation, Cellular plastics.

34-1219
Snow remover vehicle with balance weight. [Rotornyi snegoochistitel'],
Pisarchik, V.B., et al, *Russia. Komitet po delam izobretenii i otkrytii. Patent,* Jan. 25, 1976, 4 col., SOVP-1989456/27-11, For English abstract see Soviet inventions illustrated, Sec.3: Mechanical, Feb. 1977, X(51), No.500-331.
Mishin, V.A., Ivanov, A.N., Shvetsov, A.M.
Snow removal, Snow vehicles.

34-1220
Rail track snow cleaner vehicle. [Rabochii organ snegoochistitelia],
Gridasov, N.A., et al, *Russia. Komitet po delam izobretenii i otkrytii. Patent,* Jan. 25, 1976, 4 col., SOVP-1931642/27-11, For English abstract see Soviet inventions illustrated, Sec.3: Mechanical, Feb. 1977, X(51), No.500-332.
Kozlov, I.N.
Snow removal, Snow vehicles, Railroad tracks.

34-1221
Winter season roadmaking method. [Sposob vozvedeniia dorozhnogo osnovaniia],
Kurdenkov, B.I., et al, *Russia. Komitet po delam izobretenii i otkrytii. Patent,* Jan. 25, 1976, 4 col., SOVP-1860475/29-33, For English abstract see Soviet inventions illustrated, Sec.3: Mechanical, Feb 1977, X(51), No.500-325.
Egozov, V.P., Smirnov, A.A., Kurdenkov, I.B.
Construction, Winter maintenance, Roadbeds.

34-1222
Snow clearance vehicle with rotor. [Rabochii organ snegouborochnoi mashiny],
Orlov, IU.N., *Russia. Komitet po delam izobretenii i otkrytii. Patent,* Jan. 5, 1976, 2 col., SOVP-1846796/27-11, For English abstract see Soviet inventions illustrated, Sec.3: Mechanical, Feb. 1977, X(51), No.498-389.
Snow removal, Snow vehicles.

34-1223
Water area drift ice protection device. [Ustroistvo dlia zashchity akvatorii ot bitogo dreifuiushchego l'da],
Ivanov, L.V., et al, *Russia. Komitet po delam izobretenii i otkrytii. Patent,* Jan. 25, 1976, 4 col., SOVP-1958779/27-11, For English abstract see Soviet inventions illustrated, Sec.3: Mechanical, Feb. 1977, X(51), No.500-117.
Fedorov, I.P., Andreev, N.D.
Docks, Drift, Protection, Ice loads, Equipment.

34-1224
De-icing system for hydro-pneumatic units. [Ustroistvo dlia predotvrashcheniia obledeneniia pnevmogidroapparatury],
Baldin, V.I., et al, *Russia. Komitet po delam izobretenii i otkrytii. Patent,* Feb. 28, 1974, 4 col., SOVP-1824271/25-8, For English abstract see Soviet inventions illustrated, Sec.3: Mechanical, Feb. 18, 1975, W(2), No.417670.
Ermilin, V.A.
Chemical ice prevention, Icing, Equipment.

34-1225
Air- and spaceborne remote sensing in hydrogeology and engineering geology. [Aerokosmicheskie metody v gidrogeologii i inzhenernoi geologii],
Sadov, A.V., et al, Moscow, Nedra, 1979, 223p., In Russian with English table of contents enclosed. 196 refs.
Revzon, A.L.
Remote sensing, Telemetering equipment, Airborne radar, Spaceborne photography, Photointerpretation, Infrared equipment, Radar echoes, Snow cover distribution, Snow water equivalent, Soil water.

34-1226
Artificial freezing of ground in underground construction. [Zamorazhivanie gruntov pri stroitel'stve podzemnykh sooruzhenii],
Trupak, N.G., Moscow, Nedra, 1979, 344p., In Russian with English table of contents enclosed. 18 refs.
Subsurface structures, Underground facilities, Earthwork, Artificial freezing, Coolants, Pipelines, Thermal insulation, Frozen ground, Ground ice, Liquefied gases, Underground storage, Earth dams, Cooling systems, Cooling rate.

34-1227
Ocean 75 record.
Conference on Engineering in the Ocean Environment, San Diego, Calif., Sep. 22-25, 1975, New York, Institute of Electrical and Electronics Engineers, 1975, 952p., Refs. passim. For selected papers see 34-1228 through 34-1236.
DLC TC1505.C63 1975
Oceanographic surveys, Sea ice distribution, Remote sensing, Meteorological data, Computer applications.

34-1228
Arctic environmental buoy system.
Brown, W.P., Conference on Engineering in the Ocean Environment, San Diego, Calif., Sep. 22-25, 1975. Ocean 75 record, New York, Institute of Electrical and Electronics Engineers, 1975, p.50-55, 6 refs.
Sea ice distribution, Remote sensing, Buoys, Telemetering equipment, Computer applications, Design.

34-1229
Development of a meteorological and oceanographic drifting buoy system.
Hall, J.M., et al, Conference on Engineering in the Ocean Environment, San Diego, Calif., Sep. 22-25, 1975. Ocean 75 record, New York, Institute of Electrical and Electronics Engineers, 1975, p.56-69, 18 refs.
Kerut, E.G.
Sea ice distribution, Meteorological data, Oceanographic surveys, Buoys, Telemetering equipment, Computer applications.

34-1230
Thermal drill for making large holes in sea ice.
Francois, R.E., et al, Conference on Engineering in the Ocean Environment, San Diego, Calif., Sep. 22-25, 1975. Ocean 75 record, New York, Institute of Electrical and Electronics Engineers, 1975, p.303-310.
Harrison, J.G.
Thermal drills, Sea ice, Heat transfer, Ice melting.

34-1231
Motion of icebergs due to changes in water currents.
Sodhi, D.S., et al, Conference on Engineering in the Ocean Environment, San Diego, Calif., Sep. 22-25, 1975. Ocean 75 record, New York, Institute of Electrical and Electronics Engineers, 1975, p.348-350.
Dempster, R.T.
Icebergs, Drift, Ocean currents, Tidal currents, Analysis (mathematics).

34-1232
SYNRAMS ice station.
Burke, S.P., et al, Conference on Engineering in the Ocean Environment, San Diego, Calif., Sep. 22-25, 1975. Ocean 75 record, New York, Institute of Electrical and Electronics Engineers, 1975, p.413-417, 3 refs.
Buck, B.M.
Drift stations, Meteorological data, Oceanographic surveys, Buoys, Measuring instruments, Computer applications.

34-1233
Oceanographic research ship capabilities in ice.
Voelker, R.P., et al, Conference on Engineering in the Ocean Environment, San Diego, Calif., Sep. 22-25, 1975. Ocean 75 record, New York, Institute of Electrical and Electronics Engineers, 1975, p.663-667.
Kim, C.K.
Ships, Oceanographic ships, Ice breaking, Icebreakers, Models.

34-1234
Remote sensing and analysis of oceanographic parameters from ERTS-1.
Needham, B.H., Conference on Engineering in the Ocean Environment, San Diego, Calif., Sep. 22-25, 1975. Ocean 75 record, New York, Institute of Electrical and Electronics Engineers, 1975, p.798-802, 12 refs.
ERTS imagery, Sea ice distribution, Ice detection, Icebergs, Remote sensing, Oceanographic surveys, Oil spills, Upwelling, Coastal topographic features, Mapping.

34-1235
Use of satellite infrared imagery in the oceanographic study of the Chukchi Sea.
Garrison, B.R., et al, Conference on Engineering in the Ocean Environment, San Diego, Calif., Sep. 22-25, 1975. Ocean 75 record, New York, Institute of Electrical and Electronics Engineers, 1975, p.826-834.
Becker, P.
Sea ice distribution, Ice floes, Drift, Oceanographic surveys, Infrared reconnaissance, Water temperature, Salinity, Seasonal variations, Chukchi Sea.

34-1236
Use of NOAA environmental satellites to remotely sense ocean phenomena.
Koffler, R., Conference on Engineering in the Ocean Environment, San Diego, Calif., Sep. 22-25, 1975. Ocean 75 record, New York, Institute of Electrical and Electronics Engineers, 1975, p.835-839, 7 refs.
Oceanographic surveys, Ice conditions, Remote sensing, Radiometry, Photointerpretation, Infrared photography.

34-1237
Nature of strength and deformation properties of argillaceous rocks. [Priroda prochnostnykh i deformatsionnykh svoistv glinistykh porod].
Osipov, V.I., Moscow, Universitet, 1979, 232p., In Russian with English table of contents enclosed. Refs. p.215-229.
Clay minerals, Crystal growth, Chemistry, Crystal defects, Electric charge, Compressive properties, Compaction, Bearing strength, Classifications.

34-1238
Design of reinforced concrete space structures for the North. [Zhelezobetonnye prostranstvennye konstruktsii dlia stroitel'stva na Severe].
Gorenshtein, B.V., Leningrad, Stroizdat, 1979, 159p., In Russian. 81 refs.
Concrete structures, Reinforced concretes, Permafrost beneath structures, Design, Shells.

34-1239
Design snow loads. *Canadian Sheet Steel Building Institute. Information bulletin.* Oct. 1968, No.2, 4 leaves.
Roofs, Snow loads.

34-1240
Snow load design criteria for steel buildings. *Canadian Sheet Steel Building Institute. Information bulletin.* Feb. 1978, No.4, 6 leaves.
Snow loads, Roofs, Steel structures, Snow accumulation, Building codes.

34-1241
Mountain 79. [Montagna 79].
Salone internazionale della montagna, 16th, Turin, Sep.29-Oct. 7, 1979, *Neve international*, Sep. 1979, 21(2-3), p.9-93. For individual papers see 34-1242 through 34-1248.
Meetings, Winter maintenance, Snow removal, Ice detection, Cost analysis.

34-1242
New developments in winter maintenance.
Hoekstra, H., *Neve international*, Sep. 1979, 21(2-3), p.19-29, In English with French (p.82-84) and German (p.88-90) summaries.
Winter maintenance, Equipment, Salting, Water pollution, Ice detection, Brines, Cost analysis.

34-1243
Maintenance standards and criteria.
Hintikka, J., et al, *Neve international*, Sep. 1979, 21(2-3), p.29-35, In English with French (p.84) and German (p.90) summaries.
Johansson, T.
Road maintenance, Winter maintenance, Standards, Snow removal.

34-1244
Maintenance techniques and equipment.
Jacob, H., *Neve international*, Sep. 1979, 21(2-3), p.35-40, In English with French (p.84-85) and German (p.90-91) summaries.
Road maintenance, Equipment, Management.

34-1245
Maintenance compounds and methods.
Depuis, J.D., *Neve international*, Sep. 1979, 21(2-3), p.41-46, In English with French (p.85-86) and German (p.91-92) summaries.
Road maintenance, Winter maintenance, Logistics.

34-1246
Maintenance costs.
Hammond, J.L., *Neve international*, Sep. 1979, 21(2-3), p.47-55, In English and French with English (p.80) French (p.86) and German (p.92) summaries.
Road maintenance, Winter maintenance, Cost analysis.

34-1247
Maintenance organization and operation. [Organisation et gestion de l'entretien].
Lekeux, L., *Neve international*, Sep. 1979, 21(2-3), p.56-59, In French with English (p.81) and German (p.92-93) summaries.
Road maintenance, Winter maintenance, Data processing, Management.

34-1248
Information for motorists on road conditions. [Information des usagers sur l'état des routes].
Eyrolles, M., *Neve international*, Sep. 1979, 21(2-3), p.60-62, In French with English (p.81) and German (p.93) summaries.
Winter maintenance, Roads, Telecommunication.

34-1249
Increasing the use of helicopters in construction. [Uvelichit' primenenie vertoletov v stroitel'stve].
Chernitskii, A.V., *Transportnoe stroitel'stvo*, Sep. 1979, No.9, p.5-6, In Russian.
Transportation, Cold weather construction, Helicopters, Construction equipment, Construction materials.

34-1250
Lightweight concretes for tunnel linings. [Legkie betony dlia obdelok transportnykh tonnelei].
Shcherbakov, E.N., et al, *Transportnoe stroitel'stvo*, Sep. 1979, No.9, p.13-15, In Russian.
Tunnels, Linings, Lightweight concretes, Frost resistance.

34-1251
Utilizing water reservoir heat for sustaining ice-free areas around dredges. [Utilizatsiia tepla vodoema dlia podderzhaniia matny vokrug zemsnariada].
Roshchupkin, D.V., et al, *Transportnoe stroitel'stvo*, Sep. 1979, No.9, p.15-17, In Russian.
Tsernant, A.A., Kuznetsov, IU.M., Pimenov, V.T.
Dredging, Polynyas, Construction equipment, Cold weather construction, Lake ice.

34-1252
Making haydite foam concrete for wall panels. [Organizatsiia proizvodstva keramzitopenobetona dlia izgotovleniia stenovykh panelei].
Azbel', L.I., *Transportnoe stroitel'stvo*, Sep. 1979, No.9, p.21-22, In Russian.
Prefabrication, Cellular concretes, Panels, Frost resistance, Walls, Large panel buildings, Residential buildings.

34-1253
Tractor mounted cable laying equipment. [Kabeleukladchik na baze navesnogo traktornogo rykhliteliia].
Luz'menko, V.V., et al, *Transportnoe stroitel'stvo*, Sep. 1979, No.9, p.22-23, In Russian.
Kamaukhov, A.V., Zorin, B.A., Sergeev, O.D.
Earthwork, Tractors, Hammers, Frozen ground, Cables (ropes).

34-1254
Peculiarities of special mobile power supply stations for the Baykal Amur railroad. [Osobennosti energosnabzheniia peredvizhnykh spetsformirovanii na BAMe].
Talts, V.G., *Transportnoe stroitel'stvo*, Sep. 1979, No.9, p.26-28, In Russian.
Electric power, Baykal Amur railroad, Workshops.

34-1255
Evaluating bearing capacity of weak ground beneath road embankments. [Otsenka nesushchei sposobnosti slabykh osnovanii dorozhnykh nasypei].
Solov'ev, IU.I., et al, *Transportnoe stroitel'stvo*, Sep. 1979, No.9, p.40-42, In Russian. 5 refs.
Karaulov, A.M.
Roadbeds, Embankments, Foundations, Bearing strength, Design.

34-1256
Allowing for seismic effects when designing reinforced concrete culverts beneath embankments. [Uchet seismicheskikh vozdeistvii pri proektirovanii zhelezobetonnykh vodopropusknykh trub pod nasypiami].
Abduzhabarov, A.Kh., *Transportnoe stroitel'stvo*, Sep. 1979, No.9, p.43-44, In Russian.
Embankments, Culverts, Reinforced concretes, Hydraulic structures, Earthquakes, Permafrost beneath structures, Baykal Amur railroad, Design.

34-1257
Safety rules for pipeline construction in West Siberia. [Kompleksnoe reshenie zadach okhrany truda pri sooruzhenii truboprovodov v Zapadnoi Sibiri].
Glazyrin, F.V., *Stroitel'stvo truboprovodov*, Sep. 1979, No.9, p.13-14, In Russian.
Pipelines, Permafrost beneath structures, Cold weather construction, Safety.

34-1258
Forest land recultivation after pipeline construction. [Rekul'tivatsiia zemel' v lesakh posle sooruzheniia gazoprovodov].
Vysotskii, A.N., *Stroitel'stvo truboprovodov*, Sep. 1979, No.9, p.26-27, In Russian.
Permafrost beneath structures, Swamps, Peat, Environmental protection, Forestry, Revegetation, Pipelines.

34-1259
National standards index of the USSR, 1979. [Gosudarstvennye standarty SSSR. Ukazatel', 1979].
Russia. Gosudarstvennyi komitet po standartam, Moscow, Izd-vo standartov, 1979, 3 vols., In Russian. No microfiche available.
Standards.

34-1260
Properties of expanded polystyrene concrete and applications for pavement subbases.
Hanna, A.N., *Portland Cement Association. Research and development bulletin*, 1978, RD055.01P, 16p., 6 refs.
Lightweight concretes, Concrete pavements, Subgrade preparation, Thermal insulation, Frost heave, Concrete strength.

34-1261
Soil freezing—physical study and mathematical models. [Congélation des sols étude physique et modèles mathématiques].
Aguirre-Puente, J., et al, *International journal of refrigeration*, July 1978, 1(2), p.99-107. Also published in International Institute of Refrigeration. Commission B1, Heat and mass transfer in porous structures. IIR bulletin, Annexe 1976-2, p.105-117. In French with English summary. 36 refs.
Frémond, M., Comini, G.
Frozen ground thermodynamics, Heat transfer, Mass transfer, Mathematical models.

34-1262
Simulation of CO2 uptake and water relations of four Arctic Bryophytes at Point Barrow, Alaska.
Miller, P.C., et al, *Photosynthetica*, 1978, 12(1), p.7-20, 21 refs.
Oechel, W.C., Stoner, W.A., Sveinbjörnsson, B.
Mosses, Plant physiology, Tundra, Carbon dioxide, Water content, Soil water, Seasonal variations, Models.

34-1263
Holocene push-moraines in alpine permafrost.
Haeberli, W., *Geografiska annaler*, 1979, 61A(1-2), p.43-48 46 refs.
Moraines, Permafrost, Glacial deposits, Alpine glaciation, Frozen ground mechanics.

34-1264
Disappearance of snowcover depending on radiation and relief. [Die Ausaperung der Schneedecke in Abhängigkeit von Strahlung und Relief].
Meier, R., et al, *Archiv für Meteorologie, Geophysik und Bioklimatologie. Ser. B*, 1979, Vol.27, p.151-158, In German with English summary. 2 refs.
Schädler, B.
Snow melting, Snow cover distribution, Topographic features, Solar radiation, Slope orientation, Albedo.

34-1265
New map "Gepatschferner 1971", scale 1:10,000. [Zur neuen Karte "Gepatschferner 1971", Massstab 1:10,000].
Brunner, K., *Zeitschrift für Gletscherkunde und Glazialgeologie*, 1978, 14(2), p.133-151, In German with English summary. 23 refs.
Glacier surveys, Mountain glaciers, Photogrammetric surveys, Maps, Snow line, Firn, Austria—Gepatschferner.

34-1266
Contributions to the survey of the Gepatschferner. [Beiträge zur Gepatschfernervermessung].
Finsterwalder, R., *Zeitschrift für Gletscherkunde und Glazialgeologie*, 1978, 14(2), p.153-159, In German with English summary. 4 refs.
Glacier surveys, Glacier flow, Photogrammetric surveys, Austria—Gepatschferner.

34-1267
Application of a digital terrain model in glaciology. [Zur Anwendung des digitalen Geländemodells in der Gletscherforschung].
Peipe, J., et al, *Zeitschrift für Gletscherkunde und Glazialgeologie*, 1978, 14(2), p.161-172, In German with English summary. 28 refs.
Reiss, P., Rentsch, H.
Glacier surveys, Glacier surfaces, Glaciology, Mathematical models, Mountain glaciers, Altitude.

34-1268
Numerical simulation of water level variations in firn and comparison with field data in the Ewigschneefeld (Swiss Alps). [Rechnerische Nachbildung von Wasserspiegelganglinien im Firn und Vergleich mit Feldmessungen im Ewigschneefeld (Schweizer Alpen)].
Schommer, P., *Zeitschrift für Gletscherkunde und Glazialgeologie*, 1978, 14(2), p.173-190, In German with English and French summaries. 18 refs.
Firn, Water level, Permeability, Boreholes, Mountain glaciers.

34-1269
Strain features at the base of an ice-fall in Switzerland. [Structures de déformation à la base d'une chute de glacier dans le Valais].
Tison, J.L., *Zeitschrift für Gletscherkunde und Glazialgeologie*, 1978, 14(2), p.191-199, In French with English and German summaries. 9 refs.
Icefalls, Strains, Ice composition, Crevasses, Ions, Analysis (mathematics), Ice lenses, Ogives.

34-1270
New results on dielectric relaxation of snow samples. [Neue Ergebnisse zum dielektrischen Relaxationsverhalten von Schneeproben].
Ambach, W., et al, *Zeitschrift für Gletscherkunde und Glazialgeologie*, 1978, 14(2), p.201-208, In German with English summary. 9 refs.
Schattelkopf, H.
Snow electrical properties, Relaxation (mechanics), Snow water content, Grain size, Metamorphism (snow).

34-1271
Method for the determination of the hydraulic conductivity of snow.
Denoth, A., et al, *Zeitschrift für Gletscherkunde und Glazialgeologie*, 1978, 14(2), p.209-213, In English with German summary. 6 refs.
Seidenbusch, W.
Snow hydrology, Snow permeability, Hydraulics, Water flow, Grain size, Porosity.

34-1272
Influence of snow fences on deposition and quality of the snow in an avalanche starting zone. [Einfluss der Triebschneewände auf die Ablagerung und den Aufbau der Schneedecke im Bereich einer Lawinenanbruchzone].
Brugger, F., et al, *Zeitschrift für Gletscherkunde und Glazialgeologie*, 1978, 14(2), p.215-225, In German with English summary. 3 refs.
Netzer, B., Good, W.
Snow fences, Snow hardness, Avalanche formation, Snow depth, Snow water equivalent, Snow cover structure, Meteorological factors.

34-1273
Glaciers of the Austrian Alps, 1976-1977. [Die Gletscher der österreichischen Alpen 1976/77].
Kinzl, H., *Zeitschrift für Gletscherkunde und Glazialgeologie*, 1978, 14(2), p.231-238.
Glacier surveys, Glacier mass balance, Austria—Alps.

34-1274
Verifying glacier measurements on Pasterzenkees (Glockner Group) 1977. [Nachmessungen am Pasterzenkees (Glocknergruppe) im Jahre 1977].
Wakonigg, H., *Zeitschrift für Gletscherkunde und Glazialgeologie*, 1978, 14(2), p.239-243.
Glacier mass balance, Glacier flow, Glacier melting, Firn, Snow cover, Profiles, Mountain glaciers.

34-1275
Structure factors of ice crystal determined by the X-ray Pendellösung method.
Yasuda, Y., et al, *Japanese journal of applied physics*, Sep. 1979, 18(9), p.1845-1846, 5 refs.
Hondoh, T., Higashi, A.
Ice crystal structure, X ray analysis.

34-1276
Frost action on immature cement paste—effects on mechanical behavior.
Kayyali, O.A., et al, *American Concrete Institute. Journal*, Nov. 1979, No.11, p.1217-1225, 17 refs.
Page, C.L., Ritchie, A.G.B.
Cement admixtures, Freeze thaw cycles, Concrete strength, Frost action.

34-1277
Variations in summer temperature patterns near Barrow, Alaska: analysis and ecological interpretation.
Myers, J.P., et al, *Arctic and alpine research*, May 1979, 11(2), p.131-144, 51 refs.
Pitelka, F.A.
Climatology, Air temperature, Wind direction, Seasonal variations, Environmental impact.

34-1278
Limnology of subarctic Canadian lakes and some effects of impoundment.
Duthie, H.C., *Arctic and alpine research*, May 1979, 11(2), p.145-158, 50 refs.
Limnology, Biomass, Microbiology, Lake ice, Water chemistry, Algae.

34-1279
Shallow core drilling and bore-hole measurements in the permafrost of an active rock glacier near the Grubengletscher, Wallis, Swiss Alps.
Barsch, D., et al, *Arctic and alpine research*, May 1979, 11(2), p.215-228, 37 refs.
Fierz, H., Haeberli, W.
Rock glaciers, Rock drilling, Permafrost physics, Permafrost structure, Radioactive logging, Soil temperature, Boreholes.

34-1280
Monitoring and mapping sea-ice breakup and freezeup of Arctic Canada from satellite imagery.
Dey, B., et al, *Arctic and alpine research*, May 1979, 11(2), p.229-242, 25 refs.
Moore, H., Gregory, A.F.
Spaceborne photography, Sea ice, Freezeup, Ice breakup, Mapping.

34-1281
Current regenerative capacity of the northern Canadian trees, Keewatin, N.W.T., Canada: some preliminary observations.
Elliott, D.L., *Arctic and alpine research*, May 1979, 11(2), p.243-251, 35 refs.
Trees (plants), Forest tundra.

34-1282
Applications of the sonic test to experimental freeze-thaw studies in geomorphic research.
Fahey, B.D., et al, *Arctic and alpine research*, May 1979, 11(2), p.253-260, 24 refs.
Gowan, R.J.
Freeze thaw tests, Periglacial processes, Acoustic measurement, Weathering.

34-1283
Properties and relative age of soils of southwestern Cumberland Peninsula, Baffin Island, N.W.T., Canada.
Bockheim, J.G., *Arctic and alpine research*, Aug. 1979, 11(3), p.289-306, 37 refs.
Podsol, Arctic landscapes, Tundra, Soil chemistry, Soil structure, Patterned ground.

34-1284
Hydrochemistry of meltwaters draining from an alpine glacier.
Collins, D.N., *Arctic and alpine research*, Aug 1979, 11(3), p.307-324, 22 refs.
Glacial hydrology, Meltwater, Water chemistry, Electrical resistivity.

34-1285
Nitrogen-fixing moss associations in the subalpine zone of the White Mountains, New Hampshire.
Lambert, R.L., et al, *Arctic and alpine research*, Aug. 1979, 11(3), p.325-333, 21 refs.
Reiners, W.A.
Mosses, Nutrient cycle.

34-1286
Vertical distribution of live vascular phytomass in cottongrass tussock tundra.
Shaver, G.R., et al, *Arctic and alpine research*, Aug. 1979, 11(.), p.335-342, 18 refs.
Cutler, J.C.
Tundra.

34-1287
Temperature responses of germination of Arctic poppy (Papaver radicatum Rottb.) seeds.
Olson, A.R., et al, *Arctic and alpine research*, Aug. 1979, 11(3), p.343-348, 27 refs.
Richards, J.H.
Plant physiology, Growth, Temperature effects, Arctic landscapes.

34-1288
Moss *Aongstroemia longipes*, an environmentally sensitive colonizer of sediments at Austerdalsisen, Norway.
Theakstone, W.H., et al, *Arctic and alpine research*, Aug. 1979, 11(3), p.353-356, 15 refs.
Knighton, A.D.
Mosses, Growth, Sediments, Soil water.

34-1289
Frost heave tests underway for Alaska gas pipeline.
Hale, D., *Pipeline and gas journal*, Sep. 1979, 206(11), p.24-26.
Gas pipelines, Frost heave, Cold weather tests, Thermal insulation, Permafrost.

34-1290
Preventing corrosion on Arctic pipelines.
Peabody, A.W., *Pipeline and gas journal*, Sep. 1979, 206(11), p.28-42.
Pipelines, Corrosion, Countermeasures, Active layer, Ground thawing, Soil temperature, Electric fields.

34-1291
Raman studies of ice VI using a diamond anvil cell.
Abebe, M., et al, *Journal of chemical physics*, Nov. 15, 1979, 71(10), p.4167-4169, 10 refs.
Walrafen, G.E.
High pressure ice, Electromagnetic properties.

34-1292
Comment on "Drift of icebergs in the Grand Banks".
Mountain, D.G., et al, *Ocean engineering*, 1979, 6(5), p.449-450, 7 refs. For the paper being commented on see 33-2179
Hayes, R.M., Scobie, R.W.
Icebergs, Drift, Models, Ice navigation.

34-1293
On propulsion of icebreakers.
Airaksinen, K., et al, *International shipbuilding progress*, June 1976, 23(262), p.194-202, 7 refs. Presented at the 3rd Lips Propeller Symposium, Drunen, the Netherlands.
Marttila, M.
Icebreakers, Strength, Diesel engines, Ice loads, Design.

34-1294
System monitors Trans-Alaska pipeline curvature.
Anderson, D.R., *Oil and gas journal*, June 25, 1979, p.129-134
Pipelines, Monitors, Instruments, Hot oil lines, Design criteria.

34-1295
Equilibrium surface temperature climate model applied to first year sea ice growth.
Miller, J.D., Ottawa, Carleton University, 1979, 183p., Refs. p.175-182.
Sea ice, Ice growth, Ice water interface, Snow ice interface, Surface temperature, Climatic factors, Radiation balance, Thermodynamics, Mathematical models, Computerized simulation.

34-1296
Pingos of the Tuktoyaktuk area.
Barr, W., et al, *Musk-ox*, 1973, No.12, p.3-12, 27 refs.
Syroteuk, M.
Pingos, Landforms, Permafrost, Subsea permafrost, Canada—Northwest Territories—Tuktoyaktuk Peninsula.

34-1297
Rotor ice protection systems.
Shepherd, D.R., European Rotorcraft and Powered Lift Aircraft Forum, 2nd, Buckeburg, FRG, Sep. 20-22, 1976, Köln, Germany, Deutsche Gesellschaft für Luft- und Raumfahrt e.V., [1976], 19p., 5 refs.
Aircraft icing, Ice prevention, Helicopters, Ice accretion, Electric heating.

34-1298
Long-term accumulation characteristics at Vostok Station, Antarctica. [Mnogoletnie kharakteristiki akkumuliatsii na stantsii Vostok, Antarktida],
Aver'ianov, V.G., *Problemy Arktiki i Antarktiki*, 1978, No.54, p.93-99, In Russian. 13 refs.
Snow accumulation, Snow stratigraphy, Isotope analysis, Precipitation gages, Antarctica—Vostok Station.

34-1299
Failure of capillary theory of frost damage as applied to ceramics.
Blachere, J.R., et al, *American Ceramic Society. Journal*, May 1974, 57(5), p.212-216, 15 refs.
Young, J.F.
Frost action, Ceramics, Freeze thaw tests, Capillary ice, Ice pressure, Ice creep, Porous materials, Saturation.

34-1300
Climatic chamber tests of a surface ice accretion measurement system.
Tattelman, P., *U.S. Air Force Geophysics Laboratory. Technical report*, Mar. 26, 1979, No.79-0079, 50p., ADA-077 022, 20 refs.
Ice accretion, Ice detection, Icing, Glaze, Instruments, Wind velocity, Air temperature, Ice storms, Design criteria.

34-1301
Bearing capacity of sea ice. [La capacité portante de la glace de mer],
Murat, J.R., Montreal, Quebec, Ecole Polytechnique de Montréal, 1978, 408p., D.Sc.A. thesis. In French with English summary. Bibliography p.392-408.
Sea ice, Ice cover strength, Ice mechanics, Viscoelasticity, Mathematical models, Bearing tests, Flexural strength, Floating ice.

34-1302
Alaska's weather and climate: a collection of articles written for the educated layman by staff members of the Geophysical Institute and the National Weather Service in Alaska.
Wendler, G., ed, *Alaska. University. Geophysical Institute. Report*, July 1979, UAG R-269, 153p., For selected papers see 34-1303 through 34-1310.
Climate, Meteorological data, Atmospheric physics, Snow cover, Sea ice, Air pollution.

34-1303
Alaska's weather and climate.
Bowling, S.A., *Alaska. University. Geophysical Institute. Report*, July 1979, UAG R-269, p.1-29, 10 refs.
Climate, Topography, Sea ice, Atmospheric circulation.

34-1304
Alaska's sea ice.
Webster, B.D., *Alaska. University. Geophysical Institute. Report*, July 1979, UAG R-269, p.29-40, 11 refs.
Sea ice distribution, Ice cover thickness, Ice forecasting, Pressure ridges.

34-1305
Clouds and precipitation in Alaska.
Ohtake, T., *Alaska. University. Geophysical Institute. Report*, July 1979, UAG R-269, p.41-55, 13 refs.
Climatology, Precipitation (meteorology), Cloud cover, Ice fog, Ice crystals, Ice optics.

34-1306
Alaskan snow.
Benson, C.S., *Alaska. University. Geophysical Institute. Report*, July 1979, UAG R-269, p.56-69, 8 refs.
Snow cover distribution, Snow cover structure, Classifications, Snow physics.

34-1307
Weather and spring breakup.
Nibler, G.J., *Alaska. University. Geophysical Institute. Report*, July 1979, UAG R-269, p.70-78, 3 refs.
River ice, Ice breakup, Snow melting, Runoff, Floods, Ice jams.

34-1308
Microclimates.
Wendler, G., et al, *Alaska. University. Geophysical Institute. Report*, July 1979, UAG R-269, p.79-93, 10 refs.
Eaton, F.
Microclimatology, Temperature measurement, Glacier heat balance, Snow cover effect.

34-1309
Air pollution in Alaska.
Benson, C.S., et al, *Alaska. University. Geophysical Institute. Report*, July 1979, UAG R-269, p.94-113, 13 refs.
Rizzo, K.R.
Air pollution, Temperature inversions, Ice fog.

34-1310
Arctic haze.
Shaw, G.E., *Alaska. University. Geophysical Institute. Report*, July 1979, UAG R-269, p.114-127, 5 refs.
Air pollution, Haze, Turbidity, Atmospheric circulation.

34-1311
Development test II (DT II) (PQT-G) (Cold Weather Environment) of the family of military engineer construction equipment (FAMECE).
Lockwood, N.S., *U.S. Army Cold Regions Test Center. Report*, June 22, 1979, 8-EG-785-MCE-010, c190p., Distribution limited to U.S. Government agencies only.
Construction equipment, Vehicles, Low temperature tests, Cold weather performance.

34-1312
Statistical attenuation characteristics of visible and infrared radiation in a surface layer of the atmosphere.
Filippov, V.L., et al, *U.S. Army Cold Regions Research and Engineering Laboratory*, Oct. 1979, TL 719, 17p., AD-A081 021, Translation from Fizika atmosfery i okeana 15(3), 1979. 28 refs. Distribution limited to U.S. Government agencies only.
Makarov, A.S., Ivanov, V.P.
Aerosols, Atmospheric attenuation, Visibility, Infrared radiation, Statistical analysis.
Results of a statistical analysis of the spectral structure of the aerosol attenuation factor in the 0.55-12 micron band are reported.

34-1313
Land application of domestic sludge in cold climates.
Johnson, R.A., *Alaska. University. Institute of Water Resources. Report*, [Oct. 1978], IWR-97, 27p., 17 refs.
Waste treatment, Waste disposal, Sludges, Soil microbiology, Soil chemistry, Sewage disposal.

34-1314
Surface erosion and sedimentation associated with forest land use in interior Alaska.
Aldrich, J.W., et al, *Alaska. University. Institute of Water Resources. Report*, May 1979, IWR-99, 87p., Refs. p.50-55.
Johnson, R.A.
Soil erosion, Forests, Rain, Runoff, Topographic effects, Permafrost.

34-1315
Ice islands of the Arctic: Alaskan Air Command's Arctic experience.
Wise, M.L., [1971], 118p., AAC historical monograph
Ice islands, Airplanes, History.

34-1316
Icebreaker probes to Lake Melville, Labrador, in 1972.
Bradford, J.D., *Canada. Department of Fisheries and Oceans. Marine Sciences Directorate. Manuscript report series*, 1979, No.54, 40p., 13 refs
Icebreakers, Ice navigation, Ice conditions, Pack ice, Ice cover thickness, Canada—Newfoundland—Melville Lake.

34-1317
Detection of fission product deposits of atmospheric fallout in firn profiles. [Sind Spaltproduktablagerungen des atmosphärischen Fall out in Firnprofilen noch nachweisbar?],
Ambach, W., *Zurich. Eidgenössische Technische Hochschule. Versuchsanstalt für Wasserbau, Hydrologie und Glaziologie. Mitteilungen*, 1979, No.41, p.11-18, In German with English summary. 7 refs.
Glaciers, Pollution, Fallout, Firn, Glacier mass balance, Meltwater.

34-1318
Federal hydrometric station Massa-Blatten at the front of Aletsch Glacier. [La station hydrométrique fédérale de la Massa-Blatten au front du glacier d'Aletsch],
Emmenegger, C., et al, *Zurich. Eidgenössische Technische Hochschule. Versuchsanstalt für Wasserbau, Hydrologie und Glaziologie. Mitteilungen*, 1979, No.41, p.23-38, In French. 6 refs.
Spreafico, M.
Glacial hydrology, Water transport, Glacier mass balance, Statistical analysis.

34-1319
Measurement of displacements from aerial photographs. [Verschiebungsmessungen aus Luftbildern],
Flotron, A., *Zurich. Eidgenössische Technische Hochschule. Versuchsanstalt für Wasserbau, Hydrologie und Glaziologie. Mitteilungen*, 1979, No.41, p.39-44, In German. 5 refs.
Glacier flow, Aerial surveys, Photogrammetric surveys, Measurement.

34-1320
Glaciological aspects of building the Swiss postal and telecommunication service's multipurpose telecommunication facility on Chli Titlis Mountain. [Glaziologische Aspekte beim Bau der Fernmelde-Mehrzweckanlage der PTT auf dem Chli Titlis],
Haeberli, W., et al, *Zurich. Eidgenössische Technische Hochschule. Versuchsanstalt für Wasserbau, Hydrologie und Glaziologie. Mitteilungen*, 1979, No.41, p.59-75, In German. 15 refs.
Iken, A., Siegenthaler, H.
Construction, Stations, Glacier flow, Glacier mass balance, Seismic surveys, Ice creep, Crevasses, Ice temperature, Sounding, Thermal drills.

34-1321
Geotechnical studies for freezing procedures. [Geotechnische Untersuchungen für das Gefrierverfahren],
Huder, J., *Zurich. Eidgenössische Technische Hochschule. Versuchsanstalt für Wasserbau, Hydrologie und Glaziologie. Mitteilungen*, 1979, No.41, p.77-98, In German. 13 refs.
Soil freezing, Frost heave, Ice lenses, Ice pressure, Ice strength, Temperature effects, Laboratory techniques.

34-1322
Distribution of stresses and velocities in an ice slope with spatially dependent material response.
Hutter, K., et al, *Zurich. Eidgenössische Technische Hochschule. Versuchsanstalt für Wasserbau, Hydrologie und Glaziologie. Mitteilungen*, 1979, No.41, p.99-122, In English with German summary. 10 refs.
Spring, U.
Glacier flow, Ice sheets, Slope orientation, Stresses, Strains, Glacier surfaces, Temperature distribution, Analysis (mathematics), Velocity.

34-1323
Statistical study of relationships between snow reserves and summer runoff in alpine regions. [Statistische Untersuchung der Beziehungen zwischen den Schneereserven und dem Sommerabfluss alpiner Gebiete].
Jensen, H., *Zurich. Eidgenössische Technische Hochschule. Versuchsanstalt für Wasserbau, Hydrologie und Glaziologie. Mitteilungen,* 1979, No.41, p.123-144, In German. 2 refs.
Snow water equivalent, Snow accumulation, Runoff, Water reserves, Temperature effects, Seasonal variations, Statistical analysis, Alpine landscapes, Analysis (mathematics).

34-1324
Some data on mesoclimate in glacier areas. [Einige Angaben zum Mesoklima im Gletscherbereich].
Lang, H., *Zurich. Eidgenössische Technische Hochschule. Versuchsanstalt für Wasserbau, Hydrologie und Glaziologie. Mitteilungen,* 1979, No.41, p.155-167, In German with English summary. 6 refs.
Glacial hydrology, Glacier ablation, Meltwater, Meteorological factors, Glacier surfaces, Wind factors, Altitude.

34-1325
Protective structures for the Fällbach in the town of Saas Balen, Wallis, Switzerland. [Die Verbauung des Fällbaches in der Gemeinde Saas Balen (Wallis)].
Lichtenhahn, C., *Zurich. Eidgenössische Technische Hochschule. Versuchsanstalt für Wasserbau, Hydrologie und Glaziologie. Mitteilungen,* 1979, No.41, p.169-176, In German.
Glacial deposits, River basins, Protection, Stream flow, Moraines, Glacial erosion, Avalanche deposits.

34-1326
Snow cover ablation and degree days in the Weissfluhjoch test area. [Schneedeckenablation und Gradtage im Versuchsfeld Weissfluhjoch].
De Quervain, M., *Zurich. Eidgenössische Technische Hochschule. Versuchsanstalt für Wasserbau, Hydrologie und Glaziologie. Mitteilungen,* 1979, No.41, p.215-232, In German. 9 refs.
Snow cover stability, Ablation, Snow accumulation, Runoff, Meltwater, Meteorological factors, Analysis (mathematics).

34-1327
Glaciological work in connection with lake breakouts at the Gruben Glacier, town of Saas Balen, Wallis, Switzerland. [Glaziologische Arbeiten im Zusammenhang mit den Seeausbrüchen am Grubengletscher, Gemeinde Saas Balen (Wallis)].
Röthlisberger, H., *Zurich. Eidgenössische Technische Hochschule. Versuchsanstalt für Wasserbau, Hydrologie und Glaziologie. Mitteilungen,* 1979, No.41, p.233-256, In German. 14 refs.
Glacial lakes, Glacial hydrology, Ice breakup, Calving, River flow, Glacial erosion, Runoff, Ice tunnels.

34-1328
Correction of point precipitation measurements.
Sevruk, B., *Zurich. Eidgenössische Technische Hochschule. Versuchsanstalt für Wasserbau, Hydrologie und Glaziologie. Mitteilungen,* 1979, No.41, p.267-279, 25 refs.
Precipitation gages, Snow cover distribution, Measuring instruments, Accuracy.

34-1329
Mass balance of Filleckkees, Hohe Tauern, 1964-1978. [Die Massenbilanz des Filleckkeeses (Hohe Tauern) von 1964 bis 1978].
Slupetzky, H., *Zurich. Eidgenössische Technische Hochschule. Versuchsanstalt für Wasserbau, Hydrologie und Glaziologie. Mitteilungen,* 1979, No.41, p.281-299, In German with English summary. 7 refs.
Glacier mass balance, Glacier oscillation, Seasonal variations.

34-1330
Temperature profiles in boreholes at the edge of the Greenland ice sheet. [Temperaturprofile in Bohrlöchern am Rande des Grönländischen Inlandeises].
Stauffer, B., et al, *Zurich. Eidgenössische Technische Hochschule. Versuchsanstalt für Wasserbau, Hydrologie und Glaziologie. Mitteilungen,* 1979, No.41, p.301-313, In German. 10 refs.
Oeschger, H.
Ice sheets, Ice temperature, Boreholes, Temperature distribution, Measuring instruments, Greenland.

34-1331
Calving wave during the breakup of a flooded glacier tongue. [Kalbungswelle beim Aufbrechen einer überstauten Gletscherzunge].
Vischer, D.L., *Zurich. Eidgenössische Technische Hochschule. Versuchsanstalt für Wasserbau, Hydrologie und Glaziologie. Mitteilungen,* 1979, No.41, p.315-329, In German with French and English summaries. 9 refs.
Glacier tongues, Calving, Ice breakup, Wave propagation, Models.

34-1332
Geotechnical studies. [Geotechnische Untersuchungen].
Huder, J., *Zurich. Eidgenössische Technische Hochschule. Institut für Grundbau und Bodenmechanik. Mitteilungen,* 1979, No.112, p.31-42, In German. 13 refs.
Soil freezing, Frost heave, Soil creep, Ice lenses, Frozen ground strength, Rheology, Pressure, Measuring instruments, Tests.

34-1333
Technology of frozen ground. [Technologie des gefrorenen Bodens].
Huder, J., *Schweizerische Gesellschaft für Boden- und Felsmechanik. Mitteilungen,* June 1979, No.100, p.23-30, In German. 16 refs.
Frozen ground mechanics, Frozen ground thermodynamics, Frozen ground strength, Temperature effects, Pressure.

34-1334
Measurements of deformation and strength of materials from the Milchbuck tunnel. [Deformations- und Festigkeitsuntersuchungen an Material aus dem Milchbucktunnel].
Herzog, P., et al, *Schweizerische Gesellschaft für Boden- und Felsmechanik. Mitteilungen,* June 1979, No.100, p.31-35, In German. 3 refs.
Ramholt, T.
Soil creep, Frozen ground strength, Rheology, Stress strain diagrams, Cohesion, Deformation, Measuring instruments, Tests.

34-1335
Sediment transport studies at selected Norwegian glaciers 1978. [Materialtransportundersökelser i Norske bre-elver 1978].
Ekman, S.R., et al, *Norway. Vassdrags- og elektrisitetsvesenet. Hydrologiske avdeling. Rapport,* July 1979, No.3-79, 39p., In Norwegian with extended English summary. 20 refs.
Kjeldsen, O.K., Östrem, G.
Glacial deposits, Sediment transport, Glacial hydrology, Runoff, Norway.

34-1336
Glaciological investigations in Norway 1978. [Glasiologiske undersökelser i Norge 1978].
Wold, B., ed, *Norway. Vassdrags- og elektrisitetsvesenet. Hydrologiske avdeling. Rapport,* July 1979, No.4-79, 71p., In Norwegian with extended English summary. Refs. p.69-71.
Glacier mass balance, Glacial hydrology, Meteorological data, Analysis (mathematics).

34-1337
Icebreaker capability reference document.
Perrini, F., U.S. Coast Guard, 1977, c130 leaves, 13 refs.
Icebreakers, Ships, Sea ice, Ice cover thickness, Ice cover strength.

34-1338
Environmental assessment of the Alaskan continental shelf: lower Cook Inlet interim synthesis report.
Science Applications, Inc., Boulder, Colo., Environmental Research Laboratories, 1979, 241p., Refs. p.235-241.
Environmental impact, Water pollution, Hydrocarbons, Oil spills, Tidal currents, Marine biology, Earthquakes.

34-1339
Use of sewage effluent for production of agricultural crops.
Harvey, C., et al, *Texas Water Development Board. Report,* Dec. 1965, TDWR/R-9, 20p. PB-297 815.
Cantrell, R.
Sewage treatment, Waste disposal, Irrigation, Agriculture.

34-1340
First article test of lightweight camouflage screening system, snow (radar scattering).
Nelson, J.D., Fort Greely, Alaska, U.S. Army Cold Regions Test Center, 1979, 14p., ADB-037 450L, Distribution limited to U.S. Government agencies only.
Radar echoes, Snow, Low temperature tests, Wind velocity.

34-1341
Line icebreaker Kapitan Chechkin.
Shamin, IU., *U.S. Naval Intelligence Support Center. Translation,* June 1979, NISC-Trans-6090, 11p., ADB-040 769, For Russian original see 33-1165 Distribution limited to U.S. Government agencies only.
Ships, Icebreakers.

34-1342
SNiP 11-18-76. Construction norms and rules; Part 11. Planning norms: Chapter 18. Footings and foundations on permafrost. *U.S. Army Foreign Science and Technology Center. Technical translation,* July 1979, FSTC-HT-1380-78, 111p., ADB-040 647L, For Russian original see 33-965.
Permafrost beneath structures, Permafrost bases, Permafrost control, Foundations, Ground ice, Frost heave, Settlement (structural), Seasonal freeze thaw, Saline soils, Peat.

34-1343
From Yermak to Sibir.
Beyer, S., *U.S. Naval Intelligence Support Center. Translation,* July 1979, NISC-Trans-6100, 20p., ADB-040 668L, Distribution limited to U.S. Government agencies only. Translation of Marine Rundschau (Fed. Rep. of Germany) No.4:239-253, 1979.
Icebreakers.

34-1344
Mechanical technology in ice research.
Schwarz, J., et al, *U.S. Naval Intelligence Support Center. Translation,* June 1979, NISC-Trans-6087, 24p., ADB-040 780L, Translation of STG Paper, Nov. 1978 (Fed. Rep. of Germany). Distribution limited to U.S. Government agencies only.
Hoffmann, L.
Sea ice, Icebreakers, Propellers.

34-1345
Developments in Soviet icebreaker construction.
Peschanskif, A., *U.S. Naval Intelligence Support Center. Translation,* May 1979, NISC-Trans-6016, 17p., ADB-039 595L, For German original see 33-3283. Distribution limited to U.S. Government agencies only.
Icebreakers, Research projects, Ships, Construction.

34-1346
Product improvement test (cold weather/snow ingestion) of the OH-58C helicopter.
Niemiec, S.M., et al, Fort Rucker, Alabama, U.S. Army Aircraft Development Test Activity, 1979, 71p., ADB-038 702L, Distribution limited to U.S. Government agencies only.
Followill, R.J.
Cold weather tests, Helicopters, Snow, Gases, Engines.

34-1347
Finnish motorized sled. *U.S. Army Foreign Science and Technology Center. Technical translation,* Apr. 1979, FSTC-HT-954-79, 2p., ADB-041 078L, Distribution limited to U.S. Government agencies only. Translation of Nauka i tekhnika (Finland) No.3:3 1979.
Sleds, Snow vehicles.

34-1348
Investigation of the effectiveness of the action of the full-scale pyrotechnical ice-forming aerosol generators.
Beliaev, S.P., et al, *U.S. Air Force. Foreign Technology Division. Translation,* May 1979, FTD-ID(RS)T-0704-79, 23p., ADB-041 368L, For Russian original see 31-4356. Distribution limited to U.S. Government agencies only.
D'iachenko, IU.D., Kim, N.S., Matveev, IU.N.
Cloud seeding, Aerosols, Ice nuclei, Smoke generators.

34-1349
Characteristics of the design and construction of engineering structures in seismic regions of the Baykal-Amur Main Line Railroad (BAM).
Zarubin, N.E., *U.S. Army Foreign Science and Technology Center. Technical translation,* June 1979, FSTC-HT-166-79, 10p., ADB-039 289L. Distribution limited to U.S. Government agencies only. For Russian original see 32-1909
Railroads, Cold weather construction, Foundations, Seismic surveys.

34-1350
Model for space radar clutter.
Tomiyasu, K.G., Arlington, Va., Decision Science Applications, Inc., 1979, 107p. ADA-072 990.
Spaceborne photography, Radar echoes, Reflectivity, Terrain identification, Backscattering, Snow cover, Ice cover, Models.

34-1351
Some sea ice observations at Herschel Island in mid winter 1973.
Irwin, G.J., *Canada. Defence Research Establishment, Ottawa. Technical note,* 1974, No.74-16, 16p., ADA-010 498, 7 refs.
Sea ice distribution, Ice conditions, Air temperature, Canada—Northwest Territories—Herschel Island.

34-1352
Collection and measurement efficiencies of the EWER cloud water meter for hydrometeors.
Norment, H.G., Bedford, Massachusetts, Atmospheric Science Associates, 1979, 39p. ADA-072 827.
Cloud physics, Airborne equipment, Water content, Ice crystal growth.

34-1353
Development of a viscoelastic finite difference formulation for analysis of ice sheet-structure interactions.
Praskievicz, M.W., Monterey, California, U.S. Naval Postgraduate School, 1979, 162p., ADA-072 676, M.Sc. thesis.
Ice sheets, Ice pressure, Offshore structures, Sea ice, Analysis (mathematics), Models, Viscoelasticity.

34-1354
Long-term tracking of Arctic icebergs.
Robe, R.Q., et al, *U.S. Coast Guard Research and Development Center. Report,* Apr. 1979, CGR/DC-8-79, 41p. ADA-072 473.
Maier, D.C.
Icebergs, Drift, Ocean currents, Remote sensing, Ice navigation.

34-1355
Finestructure, fronts and currents in the Pacific marginal sea-ice zone-MIZPAC.
Small, W.E., *U.S. Naval Postgraduate School. Report,* June 1979, NPS68-79-002, 85p. ADA-071 970.
Oceanographic surveys, Temperature gradients, Ocean currents, Sea ice.

34-1356
Snow crystals.
Perla, R., *Canada. National Hydrology Research Institute. Paper,* 1978, No.1, Canada. Inland Waters Directorate. Scientific series No.96, 19p., In English and French.
Snow crystal structure, Microstructure, Ice crystal growth, Recrystallization, Sublimation, Wind factors, Algae.

34-1357
Investigations of possible correlations of vegetation, substrate, and topography in interior Alaska.
Neiland, B.J., Alaska. University. Dept. of Land Resources and Agricultural Sciences, April 1975, c120 leaves, Final report submitted to the Bureau of Land Management on Contract No.53500-CT-355(N), June 1971-Sep. 1974. 33 refs. + annotated bibliography (32p.).
Vegetation patterns, Active layer, Ground ice, Soil water, Soil structure, Topographic effects.

34-1358
Prudhoe Bay natural gas pipeline systems.
Alaska. Gas Pipeline Task Force, [Juneau], The Task Force, Dec. 1976, 89p. (Pertinent p.62-82), PB-298 910, 11 refs.
Gas pipelines, Natural gas, Route surveys, Environmental impact, Arctic landscapes, United States—Alaska—Prudhoe Bay.

34-1359
Analysis of disturbance effects of operations of off-road vehicles on tundra.
Radforth, J.R., *Canada. Arctic Land Use Research Program. [Report],* [1973], ALUR 71-72-13, 77p., 3 refs.
Tracked vehicles, Seismic surveys, Environmental impact, Tundra, Revegetation, Canada—Northwest Territories—Mackenzie River Delta.

34-1360
Effects of freezing temperatures and frozen ground conditions on enclosed wire in tube response.
Miller, C.A., *U.S. Army Engineer Waterways Experiment Station, Vicksburg, Mississippi. Technical publication,* Apr. 1979, WES-MP-EL-79-2, 45p. ADA-069 065.
Air temperature, Frozen ground mechanics, Cold weather tests, Military equipment, Electric equipment.

34-1361
Traffic tests of expedient airfield construction concepts for possible application in the National Petroleum Reserve, Alaska.
Burns, C.D., *U.S. Army Engineer Waterways Experiment Station, Vicksburg, Mississippi. Technical report,* Mar. 1979, WES-TR-GL-79-2, 138p. ADA-069 581.
Aircraft landing areas, Airports, Construction, Permafrost bases, Subgrade preparation, Thermal insulation.

34-1362
Investigation of the two-phase, moving boundary system, with convection at the solid-liquid interface.
Nansteel, M.W., *Pennsylvania. State University. Applied Research Laboratory. Technical memorandum,* Jan. 1979, ARL/PSU/TM-79-32, 145p., ADA-069 624, M.Sc. thesis.
Heat transfer, Boundary value problems, Liquid solid interfaces, Mathematical models, Ice models.

34-1363
Fabrication and testing of pressurized rib tents.
Steeves, E.C., *U.S. Army Natick Research and Development Command. Technical report,* Apr. 1979, Natick/TR-79/008, 103p., ADA-069 664, 8 refs.
Portable shelters, Inflatable structures, Snow loads.

34-1364
Oceanography of the Grand Banks region of Newfoundland in 1973.
Hayes, R.M., et al, *U.S. Coast Guard. Oceanographic Unit. Report,* Mar. 1978, USCG-373-73, 448p. ADA-070 003.
Robe, R.Q.
Oceanography, Icebergs, Ocean currents, Marine meteorology.

34-1365
Experimental determination of melting rates of ice moving in sea water.
Clifford, W.F., et al, Monterey, California, U.S. Naval Postgraduate School, 1979, 220p., ADA-070 367, M.Sc. thesis.
Erman, R.J.
Floating ice, Ice temperature, Water temperature, Turbulent boundary layer, Heat transfer, United States—California—Monterey Bay.

34-1366
Snowpack optical properties in the infrared.
Berger, R.H., *U.S. Army Cold Regions Research and Engineering Laboratory,* May 1979, CR 79-11, 16p. ADA-071 004.
Snow optics, Snow density, Light scattering, Reflectivity.
A theory of the optical properties of snow in the 2-20 microns region of the infrared has been developed. Using this theory, it is possible to predict the absorption and scattering coefficients and the emissivity of snow, as function of the snow parameters of grain size and density, for densities between 0.17 and 0.4 g/cu. cm. The absorption and scattering coefficients are linearly related to the density and inversely related to the average grain size. The emissivity is independent of grain size and exhibits only a weak dependence upon density.

34-1367
Proceedings.
Conference on Assessment of Ecological Impacts of Oil Spills, June 14-17 1978, Keystone, Colorado, Keystone, 1978, 945p., ADA-072 859, For selected papers see 34-1368 through 34-1372. Numerous refs.
Meetings, Oil spills, Environmental impact, Sea ice.

34-1368
Oil spill behavior in ice during the 1977 Buzzards Bay oil spill.
Deslauriers, P.C., Conference on Assessment of Ecological Impacts of Oil Spills, June 14-17, 1978, Keystone, Colorado, Keystone, 1978, p.197-215, ADA-072 859, 16 refs.
Oil spills, Ice cover effect, United States—Massachusetts—Buzzards Bay.

34-1369
Weathering estimations for spilled oil from *Bouchard No.65.*
MacLeod, W.D., et al, Conference on Assessment of Ecological Impacts of Oil Spills, June 14-17, 1978, Keystone, Colorado, Keystone, 1978, p.217-228, ADA-072 859, 8 refs.
Uyeda, M.Y., Friedman, A.J., Prohaska, P.G.
Oil spills, Ice composition, Chemical analysis.

34-1370
Fate and effect of Bunker C oil spilled by the USNS Potomac in Mellville Bay, Greenland, 1977.

Ice crystal structure, Fast ice, Ice crystal growth, Sea ice, Ocean currents.
Field observations at 60 sites located in the fast or near-fast ice along a 1200-km stretch of the north coast of Alaska between Bering Strait and Barter Island have shown that 95% of the ice samples exhibit striking c-axis alignments within the horizontal plane. Such alignments were usually well developed by the time the ice was 50 cm thick and in some cases when the ice was 20 cm thick. In all cases the degree of preferred orientation increased with depth in the ice. Representative standard deviations around a mean direction in the horizontal plane are commonly less than 10 deg for samples collected near the bottom of the ice. The general patterns of the alignments support a correlation between the preferred c-axis direction and the current direction at the ice/water interface. A comparison between c-axis alignments and spot current measurements made at 42 locations shows that the most frequent current direction coincides with the mean c-axis direction. Such alignments are believed to be the result of geometric selection with the most favored orientation being that in which the c-axis, normal to the (0001) plates of ice that compose the dendritic sea ice/sea water interface

Towing ships through ice-clogged channels by warping and kedging.
Mellor, M., *U.S. Army Cold Regions Research and Engineering Laboratory*, Sep. 1979, CR 79-21, 21p., ADA-077 801, 6 refs.
Channels (waterways), Ice cover, Ice pressure, Ships, Anchors.
The report studies the question of whether Great Lakes freighters could move effectively through ice-clogged channels with the aid of tows provided by warping or kedging systems. Ten operational concepts are outlined, and their advantages and disadvantages are noted. The crushing resistance of floating brash ice is then analyzed. The neutral, active and passive states of stress for laterally confined brash ice are considered, and the resistance to horizontal thrusting by a smooth vertical wall is calculated for cohesionless brash ice, and for ice in which there is finite cohesion between the ice fragments. The thickening of the ice cover in the vicinity of a "pusher" and the formation of pressure ridges are analyzed in order to estimate the amount of pile-up that can occur against a ship hull. The analysis then moves on to consideration of ship resistance by brash ice, taking into account crushing resistance at the bow, tangential friction at the bow, and the hull friction aft of the bow section. Comparisons are made between thrust from the ship's screws and the calculated ice resistance. The next section of the report estimates the force requirements for a warping or kedging system in terms of thrust augmentation for existing vessels. Tow cable requirements are given, and estimates are made for cable anchors and for anchorage of underwater structures. The force and power requirements for winches and windlasses are given, the practical problems involved in the pickup or transfer of cables are mentioned, and the report concludes with a brief appraisal. The conclusion is that a simple warping tug system is appropriate for a full-scale experiment, a chain ferry with auxiliary barge seems attractive for an operational system, and a chain ferry plow may be an efficient way to clear ice from channels.

Bacterial aerosols from a field source during multiple-sprinkler irrigation: Deer Creek Lake State Park, Ohio.
Bausum, H.T., et al, *U.S. Army Cold Regions Research and Engineering Laboratory*, Sep. 1979, SR 79-32, 64p., ADA-077 632, 18 refs.
Bates, R.E., McKim, H.L., Schumacher, P., Brockett, B., Schaub, S.A.
Water treatment, Waste disposal, Irrigation, Aerosols, Microbiology.
An evaluation of microbiological aerosols resulting from the spray irrigation of wastewater under known atmospheric stability conditions was performed during July and August 1978 at the Deer Creek Lake land treatment system in Ohio. In the experiment, ponded chlorinated wastewater was sprayed onto a 6-acre test area with 96 impact sprinklers representing a multi-source field aerosol distribution system. Approximately 99.9% of the wastewater applied to the 23-hectare test area fell within the area of influence of the sprinkler (about a 20-m diam circle around the sprinkler riser) with only 0.10% of the applied wastewater aerosolized. Indigenous total aerobic bacteria in the wastewater and resultant aerosols were sampled and analyzed. Fluorescent dye studies were also performed to characterize the aerosol cloud without the effects of biological decay. During all of the aerosol tests continuous on-site meteorological measurements were made and wastewater chemical parameters monitored.

Meteorological aspects of the drift of ice from the Weddell Sea toward the mid-latitude westerlies.
Schwerdtfeger, W., *Journal of geophysical research*, Oct. 20, 1979, 84(C10), p.6321-6328, 31 refs.
Ice shelves, Sea ice, Drift, Wind (meteorology), Weddell Sea.
Persistent, moderate to strong southerly surface winds, so-called barrier winds, develop along the east side of the Antarctic Peninsula when the prevailing easterlies over the central and southern Weddell Sea carry cold, stable air masses toward the 1200- to 2000-m-high mountain barrier. Because of the lack of observations from the Weddell Sea itself, wind data for the topographically similar Ross Ice Shelf area are used to estimate the probable lateral extent of barrier winds. Frequency and duration of different types of winds at the key station Matienzo indicate the importance of the barrier effect for the drift of large ice masses northward and northeastward to the relatively low latitude of 63S. Such a guided discharge of ice into the belt of the subpolar and mid-latitude westerlies, not to be found in other sectors of the Antarctic, has a profound effect on the temperature conditions over the southern South Atlantic. Evidence for each of these statements is presented. (Auth.)

34-1405
New role for icebergs.
Quinn, K.J., *Marine affairs journal*, Jan. 1978, No.5, p.72-95, 94 refs.
Iceberg towing, Ice (water storage), Water supply.
This discussion proceeds in two parts: first, it describes the emerging geographic qualities and attributes with which other world regions could most directly apply the practice of obtaining icebergs as a source of fresh water and other benefits, using current knowledge of the situation. Second, it examines the undecided nature of international law governing the ownership and transfer of icebergs. The characteristics of the iceberg resources available are described and the desirable attributes of a compatible destination are outlined. Present studies have concluded that towing antarctic icebergs to arid regions is technically feasible and can provide large quantities of fresh water at costs significantly lower lower than capital and/or energy-intensive alternate processes such as overland conveyance or seawater desalination.

Data on snow pack ice distribution in the Northern and Southern Hemispheres are obtained by analyzing NOAA charts. A total of 70 geographic segments are assessed. Measurement is done by counting grid points along latitudinal lines. The grid density for the Southern Hemisphere is 2 deg of longitude per 2 deg of latitude equatorwards of latitude 70 deg, and 4 deg of longitude per 2 deg of latitude polewards of latitude 70 deg. A separate set of snow and ice cover indices is obtained by planimetering NOAA charts.

Lebel, B.
Ice sheets, Ice cores.
Interpretation of stable isotope profiles from polar ice cores in terms of past climate requires a knowledge of the elevation at which the ice found at any depth was formed. Measurement of the total gas content of polar ice, V, can give such information

if the volume of the pores in ice is known for the time they close off from the atmosphere at the ice formation site. Results are presented here that enable description of the variations in the total gas content of ice that has been formed in present-day conditions in Antarctica and Greenland for a wide range of temperature (-12 to -53C) and elevation (400 to 3,200 m). Using these results, the gas content method can now be applied with much greater confidence than before to indicate past elevation changes.

34-1427
Local construction materials used for linings for the Baykal Amur railroad. [Oblitsovochnye materialy dlia stroek BAMa iz mestnogo syr'ia],
Troitskil, V.V., et al, *Transportnoe stroitel'stvo*, Oct. 1979, No.10, p.22-23, In Russian.
Timchenko, I.P.
Construction materials, Linings, Plates, Masonry, Baykal Amur railroad.

34-1428
Performance of BTS-150 drills on construction sites of the Baykal Amur railroad. [Opyt ekspluatatsii burovykh mashin BTS-150 na BAMe],
Bardyshev, O.A., et al, *Transportnoe stroitel'stvo*, Oct. 1979, No.10, p.26-27, In Russian.
Permafrost beneath structures, Boreholes, Blasting, Drills, Baykal Amur railroad.

34-1429
Preliminary electric heating of concrete mixtures on construction sites. [Predvaritel'nyi elektrorazogrev betonnoi smesi na stroitel'noi ploshchadke],
Kalmykov, V.A., *Transportnoe stroitel'stvo*, Oct. 1979, No.10, p.50, In Russian.
Bridges, Winter concreting, Concrete heating, Baykal Amur railroad.

34-1430
Reliability of overhead power transmission lines in the Far North. [O nadezhnosti vozdushnykh linii elektroperedachi v ralonakh Krainego Severa],
Selianin, A.I., et al, *Elektricheskie stantsii*, June 1979, No.6, p.64-65.
Liubotinskil, A.I.
Power lines, Cold weather performance, Power line icing.

34-1431
Combined design technique in large panel construction. [Opyt kompleksnogo proektirovaniia krupnopanel'nogo stroitel'stva],
IAkushev, A.A., et al, *Beton i zhelezobeton*, Aug. 1979, No.8, p.7-8, In Russian.
Vasil'eva, T.A.
Large panel buildings, Prefabrication, Panels, Thermal insulation, Reinforced concretes, Design.

34-1432
Heating cables for electric warming of joints and situcast concrete structures. [Obogrev betona stykov i monolitnykh konstruktsii greiushchimi provodami],
Astashev, V.M., et al, *Beton i zhelezobeton*, Sep. 1979, No.9, p.10-12, In Russian.
Vaksina, I.A., Gendin, V.IA., Tvorogov, A.I.
Grouting, Joints (junctions), Concrete structures, Winter concreting, Concrete freezing, Electric heating.

34-1433
Testing concrete for frost resistance. [Ob ispytanii betona na morozostoikost'],
Sizov, V.P., *Beton i zhelezobeton*, Oct. 1979, No.10, p.34-35, In Russian. 4 refs.
Concrete structures, Concrete strength, Frost resistance, Low temperature tests, Laboratory techniques.

34-1434
Controlling frost resistance of concrete during production. [Kontrol' morozostoikosti betona v protsesse proizvodstva],
Voevoda, G.F., et al, *Beton i zhelezobeton*, Oct. 1979, No.10, p.35-37, In Russian. 2 refs.
Alimov, L.A., Voronin, V.V., Efimov, B.A.
Concrete structures, Prefabrication, Reinforced concretes, Concrete strength, Frost resistance, Low temperature tests.

34-1435
Consolidation of a thin cutoff wall of clay soils of liquid consistency.
Chernyi, I.P., et al, *Hydrotechnical construction*, May 1979, No.5, p.462-465, Translated from Gidrotekhnicheskoe stroitel'stvo. 2 refs.
Nedriga, V.P., Gladilin, A.M.
Hydraulic structures, Clay soils, Permeability, Grouting.

34-1436
Crystallization of a supercooled liquid in a sound field: steady-state dynamics of crystalline-phase nuclei in the liquid.
Bulanov, V.A., *Soviet physics. Acoustics*, May-June 1979, 25(3), p.202-207, Translated from Akusticheskii zhurnal. 15 refs.
Supercooling, Sound waves, Ice nuclei, Crystal growth.

34-1437
Design of the Urengoy-Cheliabinsk pipeline. [Gazoprovod Urengoi-Cheliabinsk: opyt proektirovaniia],
Batozskil, V.D., *Gazovaia promyshlennost'*, July 1979, No.7, p.9-10, In Russian.
Gas pipelines, Permafrost beneath structures, Design, Cost analysis.

34-1438
Origin of West Siberian soils containing thick light-color zones. [O genezise pochv s moshchnym osvetlennym gorizontom Zapadnoi Sibiri],
Zonn, S.V., *Akademiia nauk SSSR. Sibirskoe otdelenie. Izvestiia. Seriia biologicheskikh nauk*, Apr. 1979, 1(5), p.3-10, In Russian. 9 refs.
Cryogenic soils, Soil profiles, Podsol, Soil formation.

34-1439
Microbiological characteristics of cryogenic meadow-chernozem soils in the Eravnin Basin, the Buryat Autonomous Republic. [Mikrobiologicheskaia kharakteristika lugovo-chernozemnykh pochv (Eravninskaia kotlovina Buriatskoi ASSR)],
Nimaeva, S.Sh., et al, *Akademiia nauk SSSR. Sibirskoe otdelenie. Izvestiia. Seriia biologicheskikh nauk*, Apr. 1979, 1(5), p.10-17, In Russian with English summary. 4 refs.
Dugarov, V.I.
Cryogenic soils, Soil microbiology, Meadow soils, Chernozem, Active layer, Continuous permafrost.

34-1440
Microbiological studies of soils in the Magadan Region. [Mikrobiologicheskoe issledovanie pochv Magadanskoi oblasti],
Poliakov, V.A., *Akademiia nauk SSSR. Sibirskoe otdelenie. Izvestiia. Seriia biologicheskikh nauk*, Dec. 1978, 3(15), p.3-10, In Russian with English summary. 17 refs.
Cryogenic soils, Soil microbiology, Podsol.

34-1441
Volume weight and thermophysical properties of soils. [Ob"emnyi ves i teplofizicheskie svoistva pochv],
Makarychev, S.V., et al, *Akademiia nauk SSSR. Sibirskoe otdelenie. Izvestiia. Seriia biologicheskikh nauk*, Dec. 1978, 3(15), p.10-12, In Russian with English summary. 6 refs.
Lunin, A.I.
Cryogenic soils, Thermal properties, Physical properties.

34-1442
Seasonal activity of invertase in drained peat soils. [Sezonnaia aktivnost' invertazy v osushennykh torfianykh pochvakh],
Efremova, T.T., *Akademiia nauk SSSR. Sibirskoe otdelenie. Izvestiia. Seriia biologicheskikh nauk*, Dec. 1978, 3(15), p.12-18, In Russian. 9 refs.
Organic soils, Swamps, Peat, Cryogenic soils, Soil chemistry, Soil temperature, Soil water.

34-1443
Lichen synusia at the upper limit of Anuy Plateau larch forests. [Lishainikovye sinuzii v listvennichnike u verkhnel granitsy lesa v Aniuiskom nagor'e],
Andreev, M.P., *Botanicheskii zhurnal*, May 1979, 64(5), p.646-653, In Russian with English summary. 19 refs.
Cryogenic soils, Taiga, Forest tundra, Alpine tundra, Lichens, Plant ecology, Ecosystems.

34-1444
Lichen synusia in Alpine phytocenoses of the northern part of Altai-Sayan Mountains. [Rol' lishainikovykh sinuzii v vysokogornykh fitotsenozakh severnoi chast Altae-Saianskoi gornoi oblasti],
Sedel'nikova, N.V., et al, *Botanicheskii zhurnal*, May 1979, 64(5), p.671-679, In Russian. 17 refs.
Sedel'nikov, V.P.
Alpine landscapes.

34-1445
Willow shrub communities in the east of Chukotka Peninsula. [Soobshchestva kustarnikovykh iv na vostoke Chukotskogo poluostrova],
Sekretareva, N.A., *Botanicheskii zhurnal*, July 1979, 64(7), p.957-970, In Russian with English summary. 22 refs.
Tundra, Classifications.

34-1446
Fodder lichen increment and distribution in the northern Yenisey Region. [Prirost kormovykh lishainikov i ikh rasprostranenie na Eniseiskom Severe],
Shchelkunova, R.P., *Botanicheskii zhurnal*, Aug. 1979, 64(8), p.1111-1121, In Russian with English summary. 19 refs.
Tundra, USSR—Taymyr Peninsula.

34-1447
Fruiting of Arctic plants (Western Taymyr). [O plodonoshenii arkticheskikh rastenii (Zapadnyi Taimyr)],
Khodachek, E.A., *Botanicheskii zhurnal*, Aug. 1979, 64(8), p.1147-1158, In Russian. Refs. p.1157-1158.
Bibliographies, Arctic landscapes, Plant ecology, Plant physiology, Ecosystems, USSR—Taymyr Peninsula.

34-1448
Human activities effect on the Pinus sylvestris (Pinaceae) increment in the Bratsk Region. [Vliianie antropogennykh vozdeistvii na prirost sosny obyknovennoi Pinus sylvestris (Pinaceae) v ralone g. Bratska],
Latrand, N.I., et al, *Botanicheskii zhurnal*, Aug. 1979, 64(8), p.1187-1195, In Russian. 2 refs.
Lovelius, N.V., IAtsenko-Khmelevskil, A.A.
Forest soils, Cryogenic soils, Human factors, Soil pollution, Water pollution, Forest land, Trees (plants).

34-1449
Drainage effect on algoflora of mesotrophic bogs. [Vliianie osusheniia na al'gofloru mezotrofnykh bolot],
Antipina, G.S., *Botanicheskii zhurnal*, Sep. 1979, 64(9), p.1285-1295, In Russian with English summary. 25 refs.
Swamps, Peat, Soil microbiology, Algae.

34-1450
Ecologic-cenotic peculiarities of meadow-steppes cryophytes in Central Transbaikal. [O nekotorykh ekologo-tsenoticheskikh osobennostiakh kriofitnykh lugo-stepei tsentral'nogo Zabaikal'ia],
Dulepova, B.I., et al, *Botanicheskii zhurnal*, Sep. 1979, 64(9), p.1332-1340, In Russian. 14 refs.
Umanskaia, N.V.
Cryogenic soils, Meadow soils, Steppes, Ecosystems, Plant ecology.

34-1451
Slope recession in the Onefour Badlands, Alberta, Canada: an initial appraisal of contrasted moisture regimes.
Barendregt, R.W., et al, *Canadian journal of earth sciences*, Feb. 1979, 16(2), p.224-229, 10 refs.
Ongley, E.D.
Slope processes, Soil erosion, Seasonal freeze thaw, Snowmelt, Periglacial processes, Soil water, Climatic factors, Glacial deposits.

34-1452
Facies of supraglacial sedimentation on Icelandic and alpine temperate glaciers.
Eyles, N., *Canadian journal of earth sciences*, July 1979, 16(7), p.1341-1361, Refs. p.1358-1361.
Glacial deposits, Moraines, Sedimentation, Ice melting, Glacier surfaces.

34-1453
Growth and decay of palsas and peat plateaus in the Macmillan Pass—Tsichu River area, Northwest Territories, Canada.
Kershaw, G.P., et al, *Canadian journal of earth sciences*, July 1979, 16(7), p.1362-1373, 23 refs.
Gill, D.
Discontinuous permafrost, Pingos, Hummocks, Growth, Frost mounds, Peat, Decomposition.

34-1454
Delta 18-O variations in snow on the Devon Island ice cap, Northwest territories, Canada.
Koerner, R., et al, *Canadian journal of earth sciences*, July 1979, 16(7), p.1419-1427, 27 refs.
Russell, R.D.
Snow surveys, Isotope analysis, Snow accumulation, Oxygen isotopes, Meteorological factors, Glacier mass balance.

34-1455
Isotopic analysis of subglacial concretions of the Laurentide ice sheet and oxygen-18 content of the ice. [Analyse isotopique de concrétions sous-glaciaires de l'inlandsis laurentidien et teneur en oxygène 18 de la glace],
Hillaire-Marcel, C., et al, *Canadian journal of earth sciences*, July 1979, 16(7), p.1494-1498, In French with English summary. 17 refs.
Soucy, J.M., Cailleux, A.
Glacial deposits, Ice composition, Isotope analysis, Sediments, Ice sheets.

34-1456
Study of the effects of pore-water salinity on some physical properties of sedimentary rocks at permafrost temperatures.
Pandit, B.I., et al, *Canadian journal of earth sciences*, Aug. 1979, 16(8), p.1566-1580, 23 refs.
King, M.S.
Frozen rocks, Porous materials, Saturation, Elastic properties, Electrical resistivity, Temperature effects, Ice salinity, Freeze thaw tests.

34-1457
Use of long-term automatic time-lapse photography to measure the growth of frost blisters.
Van Everdingen, R.O., et al, *Canadian journal of earth sciences*, Aug. 1979, 16(8), p.1632-1635, 3 refs.
Banner, J.A.
Frost mounds, Growth, Stereophotography, Pingos, Photography.

34-1458
Glacier variations in the Svartisen area, northern Norway.
Karlén, W., *Geografiska annaler. Series A Physical geography*, 1979, 61A(1-2), p.11-28, 50 refs.
Glacier oscillation, Moraines, Radioactive age determination, Lichens.

34-1459
De Geer moraines in a Swedish mountain area.
Borgström, I., *Geografiska annaler. Series A Physical geography*, 1979, 61A(1-2), p.35-42, 40 refs.
Moraines, Glacier oscillation, Models.

34-1460
Ice thickness and stratigraphy at nearshore locations on the Great Lakes (metric units).
Sleator, F.E., *U.S. National Oceanic and Atmospheric Administration. Data report*, July 1978, ERL GLERL-1-2, 440p., PB-297 121, 1 ref. For the same data in English units see 33-3433.
Lake ice, Ice cover thickness, Ice structure, Data processing.

34-1461
Relationship of glacier ice and rock glacier at Grubengletscher, Kanton Wallis, Switzerland.
Whalley, W.B., *Geografiska annaler. Series A Physical geography*, 1979, 61A(1-2), p.49-61, 25 refs.
Glacier ice, Rock glaciers, Glacial deposits, Glacier flow.

34-1462
Spring runoff forecasts from snow assessments in the Malmagen area at 62N in Sweden.
Zakrisson, K., *Geografiska annaler. Series A Physical geography*, 1979, 61A(1-2), p.63-66, 5 refs.
Snow cover, Runoff forecasting, Sweden.

34-1463
Proglacial aggradation and changes in braided channel patterns during a period of glacial advance: an alpine example.
Maizels, J.K., *Geografiska annaler. Series A Physical geography*, 1979, 61A91-2), p.87-101, 47 refs.
Glacier oscillation, Glacier mass balance, Glacial deposits, Streams, Patterned ground.

34-1464
Research on snow and ice.
Martinelli, M., Jr., et al, *Reviews of geophysics and space physics*, Sep. 1979, 17(6), p.1253-1297, Includes reviews by a number of authors and a bibliography compiled by M. Shartran, WDCA, p.1265-1297.
Shartran, M.
Bibliographies, Research projects, Snow, Ice, Glaciers, Remote sensing.

34-1465
International Symposium on Wastewater Treatment in Cold Climates, University of Saskatchewan, August 22-24, 1973.
Davis, E., ed, Canada. Environmental Protection Service. Economic and technical review report No. EPS 3-WP-74-3., Ottawa, 1974, 595p., For selected individual papers see 31-1299 and 34-1466 through 34-1490.
DLC TD745.I578 1973
Meetings, Waste treatment, Water treatment, Sewage treatment, Utilities, Cold weather operation.

34-1466
Evaluation of waste disposal practices in Alaskan villages.
Alter, A.J., *Canada. Environmental Protection Service. Economic and technical review report*, Mar. 1974, No.EPS 3-WP-74-3, International Symposium on Wastewater Treatment in Cold Climates, University of Saskatchewan, August 22-24, 1973. Proceedings, edited by E. Davis, p.1-28.
DLC TD745.I578 1973
Waste disposal, Water supply, Utilities, Temperature effects, Environmental impact, Permafrost.

34-1467
Sewage treatment methods in Finland.
Viitasaari, M., *Canada. Environmental Protection Service. Economic and technical review report*, Mar. 1974, No.EPS 3-WP-74-3, International Symposium on Wastewater Treatment in Cold Climates, University of Saskatchewan, August 22-24, 1973. Proceedings, edited by E. Davis, p.29-44, 4 refs.
DLC TD745.I578 1973
Sewage treatment, Water treatment, Waste disposal, Temperature effects.

34-1468
Swedish experiences in sewage treatment.
Ulmgren, L., *Canada. Environmental Protection Service. Economic and technical review report*, Mar. 1974, No.EPS 3-WP-74-3, International Symposium on Wastewater Treatment in Cold Climates, University of Saskatchewan, August 22-24, 1973. Proceedings, edited by E. Davis, p.45-63.
DLC TD745.I578 1973
Microbiology, Sewage disposal, Sewage treatment, Admixtures.

34-1469
Sewage treatment in the northern areas of the U.S.S.R.
Alferova, L.A., et al, *Canada. Environmental Protection Service. Economic and technical review report*, Mar. 1974, No.EPS 3-WP-74-3, International Symposium on Wastewater Treatment in Cold Climates, University of Saskatchewan, August 22-24, 1973. Proceedings, edited by E. Davis, p.64-74.
DLC TD745.I578 1973
Water treatment, Sewage treatment, Waste disposal, Temperature effects.

34-1470
Extended aeration, clarification and anaerobic treatment cycle.
Hughes, C.D., *Canada. Environmental Protection Service. Economic and technical review report*, Mar. 1974, No.EPS 3-WP-74-3, International Symposium on Wastewater Treatment in Cold Climates, University of Saskatchewan, August 22-24, 1973. Proceedings, edited by E. Davis, p.85-98.
DLC TD745.I578 1973
Microbiology, Sewage treatment, Chemical analysis, Temperature effects.

34-1471
Further field investigation on aerated lagoons in the city of Winnipeg.
Girling, R.M., et al, *Canada. Environmental Protection Service. Economic and technical review report*, Mar. 1974, No.EPS 3-WP-74-3, International Symposium on Wastewater Treatment in Cold Climates, University of Saskatchewan, August 22-24, 1973. Proceedings, edited by E. Davis, p.99-124, 5 refs.
Pick, A.R., Van Es, D.W.
DLC TD745.I578 1973
Sewage treatment, Ponds, Oxygen, Air entrainment, Microbiology, Chemical analysis.

34-1472
Effects of water temperature and elevation on aeration.
Hunter, J.S., et al, *Canada. Environmental Protection Service. Economic and technical review report*, Mar. 1974, No.EPS 3-WP-74-3, International Symposium on Wastewater Treatment in Cold Climates, University of Saskatchewan, August 22-24, 1973. Proceedings, edited by E. Davis, p.125-169, 24 refs.
Ward, J.C.
DLC TD745.I578 1973
Water treatment, Temperature effects, Altitude, Air entrainment, Analysis (mathematics).

34-1473
Diffusion systems for cold climate lagoons.
Christianson, C.D., et al, *Canada. Environmental Protection Service. Economic and technical review report*, Mar. 1974, No.EPS 3-WP-74-3, International Symposium on Wastewater Treatment in Cold Climates, University of Saskatchewan, August 22-24, 1973. Proceedings, edited by E. Davis, p.170-206, 34 refs.
Smith, D.W.
DLC TD745.I578 1973
Ponds, Air entrainment, Oxygen, Mass transfer, Equipment, Bubbling.

34-1474
Waste treatment performance data at Prince Albert Pulp Company.
Aschim, O.K., *Canada. Environmental Protection Service. Economic and technical review report*, Mar. 1974, No.EPS 3-WP-74-3, International Symposium on Wastewater Treatment in Cold Climates, University of Saskatchewan, August 22-24, 1973. Proceedings, edited by E. Davis, p.207-219, 3 refs.
DLC TD745.I578 1973
Waste treatment, Water treatment, Chemical analysis, Oxygen, Mass transfer, Air entrainment.

34-1475
Surface aeration of domestic wastes, Section 1: the Bonnybrook Sewage Treatment Plant.
Meckelborg, E.I., *Canada. Environmental Protection Service. Economic and technical review report*, Mar. 1974, No.EPS 3-WP-74-3, International Symposium on Wastewater Treatment in Cold Climates, University of Saskatchewan, August 22-24, 1973. Proceedings, edited by E. Davis, p.220-229.
DLC TD745.I578 1973
Sewage treatment, Ice formation, Air entrainment, Cold weather performance.

34-1476
Surface aeration of domestic wastes: operating experiences at Red Deer, Alberta, Section 2.
Lawson, P.D., *Canada. Environmental Protection Service. Economic and technical review report*, Mar. 1974, No.EPS 3-WP-74-3, International Symposium on Wastewater Treatment in Cold Climates, University of Saskatchewan, August 22-24, 1973. Proceedings, edited by E. Davis, p.230-240.
DLC TD745.I578 1973
Sewage treatment, Bubbling, Cold weather performance, Water temperature.

34-1477
On the combined treatment of domestic sewage and waste water from wood industries.
Airaksinen, J.U., *Canada. Environmental Protection Service. Economic and technical review report*, Mar. 1974, No.EPS 3-WP-74-3, International Symposium on Wastewater Treatment in Cold Climates, University of Saskatchewan, August 22-24, 1973. Proceedings, edited by E. Davis, p.241-257, 15 refs.
DLC TD745.I578 1973
Sewage treatment, Water treatment, Ponds, Oxygen.

34-1478
Vacuum sewer systems for northern applications.
Averill, D.W., et al, *Canada. Environmental Protection Service. Economic and technical review report*, Mar. 1974, No.EPS 3-WP-74-3, International Symposium on Wastewater Treatment in Cold Climates, University of Saskatchewan, August 22-24, 1973. Proceedings, edited by E. Davis, p.258-286, 21 refs.
Heinke, G.W.
DLC TD745.I578 1973
Sewage disposal, Water transport, Atmospheric pressure.

34-1479
Vacuum sewage transport and treatment in rural areas in Denmark.
Jespersen, F., *Canada. Environmental Protection Service. Economic and technical review report*, Mar. 1974, No.EPS 3-WP-74-3, International Symposium on Wastewater Treatment in Cold Climates, University of Saskatchewan, August 22-24, 1973. Proceedings, edited by E. Davis, p.287-304, 11 refs.
DLC TD745.I578 1973
Sewage disposal, Water transport, Atmospheric pressure.

34-1480
Psychrophiles in waste treatment.
Henry, J.G., *Canada. Environmental Protection Service. Economic and technical review report,* Mar. 1974, No.EPS 3-WP-74-3, International Symposium on Wastewater Treatment in Cold Climates, University of Saskatchewan, August 22-24, 1973 Proceedings, edited by E. Davis, p.305-331, 32 refs.
DLC TD745.I578 1973
Waste treatment, Microbiology, Bacteria, Cold tolerance.

34-1481
Bio-processes of the oxidation ditch in a sub-arctic climate.
Murphy, R.S., et al, *Canada. Environmental Protection Service. Economic and technical review report,* Mar. 1974, No.EPS 3-WP-74-3, International Symposium on Wastewater Treatment in Cold Climates, University of Saskatchewan, August 22-24, 1973. Proceedings, edited by E. Davis, p.332-357.
Rananathan, K.R.
DLC TD745.I578 1973
Waste treatment, Trenching, Air entrainment, Cold weather operation, Sludges, Chemical analysis.

34-1482
Low temperature biological denitrification of wastewater.
Sutton, P.M., et al, *Canada. Environmental Protection Service. Economic and technical review report,* Mar. 1974, No.EPS 3-WP-74-3, International Symposium on Wastewater Treatment in Cold Climates, University of Saskatchewan, August 22-24, 1973. Proceedings, edited by E. Davis, p.380-402, 29 refs.
Murphy, K.L., Dawson, R.N.
DLC TD745.I578 1973
Waste treatment, Water treatment, Water chemistry, Nutrient cycle.

34-1483
Description of some recent research work of particular interest for the introduction of new waste water treatment methods in Norway.
Abrahamsen, J., *Canada. Environmental Protection Service. Economic and technical review report,* Mar. 1974, No.EPS 3-WP-74-3, International Symposium on Wastewater Treatment in Cold Climates, University of Saskatchewan, August 22-24, 1973. Proceedings, edited by E. Davis, p.403-422, 8 refs.
DLC TD745.I578 1973
Research projects, Waste treatment, Water treatment, Chemical analysis, Sludges.

34-1484
Overview of the problems of disinfection.
Chambers, C.W., *Canada. Environmental Protection Service. Economic and technical review report,* Mar. 1974, No.EPS 3-WP-74-3, International Symposium on Wastewater Treatment in Cold Climates, University of Saskatchewan, August 22-24, 1973. Proceedings, edited by E. Davis, p.423-437, 15 refs.
DLC TD745.I578 1973
Waste treatment, Water treatment, Chemical properties, Disinfectants.

34-1485
Chlorine disinfection of treated wastewater.
Gordon, R.C., et al, *Canada. Environmental Protection Service. Economic and technical review report,* Mar. 1974, No.EPS 3-WP-74-3, International Symposium on Wastewater Treatment in Cold Climates, University of Saskatchewan, August 22-24, 1973. Proceedings, edited by E. Davis, p.438-481, 35 refs.
Davenport, C.V., Reid, B.H.
DLC TD745.I578 1973
Water treatment, Waste treatment, Bacteria, Water chemistry, Disinfectants.

34-1486
Lime disinfection of sewage bacteria at low temperature.
Morrison, S.M., et al, *Canada. Environmental Protection Service. Economic and technical review report,* Mar. 1974, No.EPS 3-WP-74-3, International Symposium on Wastewater Treatment in Cold Climates, University of Saskatchewan, August 22-24, 1973. Proceedings, edited by E. Davis, p.482-506, 21 refs.
Martin, K.L.
DLC TD745.I578 1973
Sewage treatment, Low temperature research, Bacteria, Disinfectants.

34-1487
Ozone disinfection of wastewaters at low temperatures.
Kinman, R.N., *Canada. Environmental Protection Service. Economic and technical review report,* Mar. 1974, No.EPS 3-WP-74-3, International Symposium on Wastewater Treatment in Cold Climates, University of Saskatchewan, August 22-24, 1973. Proceedings, edited by E. Davis, p.507-522, 10 refs.
DLC TD745.I578 1973
Water treatment, Waste treatment, Bacteria, Low temperature research, Disinfectants.

34-1488
Feasibility of physico-chemical treatment of raw sewage at low temperature.
Magsood, R., et al, *Canada. Environmental Protection Service. Economic and technical review report,* Mar. 1974, No.EPS 3-WP-74-3, International Symposium on Wastewater Treatment in Cold Climates, University of Saskatchewan, August 22-24, 1973. Proceedings, edited by E. Davis, p.523-548, 24 refs.
Benedek, A.
DLC TD745.I578 1973
Sewage treatment, Low temperature tests, Waste disposal, Water treatment, Admixtures.

34-1489
Alaska village demonstration projects: first generation of integrated utilities for remote communities.
Reid, B.H., *Canada. Environmental Protection Service. Economic and technical review report,* Mar. 1974, No.EPS 3-WP-74-3, International Symposium on Wastewater Treatment in Cold Climates, University of Saskatchewan, August 22-24, 1973. Proceedings, edited by E. Davis, p.549-569, 11 refs.
DLC TD745.I578 1973
Utilities, Water supply, Waste disposal, Water treatment, Health.

34-1490
Phosphorus removal by lime addition to conventional anaerobic stabilization facility.
Lechner, L.J., et al, *Canada. Environmental Protection Service. Economic and technical review report,* Mar. 1974, No.EPS 3-WP-74-3, International Symposium on Wastewater Treatment in Cold Climates, University of Saskatchewan, August 22-24, 1973. Proceedings, edited by E. Davis, p.570-586, 9 refs.
Davis, E.
DLC TD745.I578 1973
Waste disposal, Water treatment, Algae, Nutrient cycle.

34-1491
Management guidelines for water resources development, Prudhoe Bay development area.
Environmental Services Limited, Anchorage, Alaska, 1978, 39p., 17 refs.
DLC TD224.A25E58 1978
Water supply, Reservoirs, Water storage.

34-1492
Snow-mapping experiment.
Barnes, J.C., et al, *U.S. National Aeronautics and Space Administration. Special publication,* 1977, NASA-SP-380, Skylab explores the earth, prepared by NASA Lyndon B. Johnson Space Center, p.191-224, N77-28548, 4 refs.
Bowley, C.J., Parr, J.T., Smallwood, M.D.
DLC QC808.5.S48
Spaceborne photography, Snow cover, Mapping.

34-1493
Visual observations of floating ice from Skylab.
Campbell, W.J., et al, *U.S. National Aeronautics and Space Administration. Special publication,* 1977, NASA-SP-380, MP 1263, Skylab explores the earth, prepared by NASA Lyndon B. Johnson Space Center, p.353-379, N77-28548, 2 refs.
Ramseier, R.O., Weeks, W.F., Wayneberg, J.A.
DLC QC808.5.S48
Spaceborne photography, Lake ice, Sea ice, River ice.

34-1494
Soils and relief in western Greenland. [Böden und Relief in Westgrönland],
Stäblein, G., *Zeitschrift für Geomorphologie,* 1979, Vol.33, p.232-245, In German with English and French summaries. 26 refs.
Soil surveys, Arctic landscapes, Coastal topographic features, Cryogenic soils, Frost weathering, Periglacial processes, Climatic factors, Greenland.

34-1495
Periglacial sorted circle and frost wedge formations in brownish soils of northern Germany. [Periglaziäre Steinring- und Frostkeilbildungen norddeutscher Parabraunerden],
Blume, H.-P., et al, *Zeitschrift für Geomorphologie,* 1979, Vol.33, p.257-265, In German with English and French summaries. 10 refs.
Hoffmann, R., Pachur, H.-J.
Periglacial processes, Wedges, Geomorphology, Moraines, Landscape types, Frost heave, Soil mechanics, Glaciation, Polygonal topography.

34-1496
Effect of temperature variations on the length of a glacier tongue. [Der Einfluss von Temperaturänderungen auf die Länge von Gletscherzungen],
Gamper, M., et al, *Geographica helvetica,* 1978, 33(4), p.183-189, In German. 10 refs.
Suter, J.
Glacier tongues, Glacier oscillation, Temperature variations, Thermal effects.

34-1497
Selected hydrologic applications of LANDSAT-2 data: an evaluation, final report.
Wiesnet, D.R., et al, *U.S. National Aeronautics and Space Administration. Contractor report,* 1978, NASA-CR-162098, 205p. N79-32603.
McGinnis, D.F., Jr., Matson, M.
Remote sensing, LANDSAT, Infrared reconnaissance, Microwaves, Soil water, Snow cover distribution, Snowmelt.

34-1498
Freezing controlled by natural convection.
Sparrow, E.M., et al, *Journal of heat transfer,* Nov. 1979, 191(4), p.578-584, 13 refs.
Ramsey, J.W., Kemink, R.G.
Heat transfer, Convection, Freezing, Laboratory techniques, Time factor.

34-1499
Variational analysis of freezing or melting in a finite medium subject to radiation and convection.
Yeh, L.T., et al, *Journal of heat transfer,* Nov. 1979, 101(4), p.592-597, 22 refs.
Chung, B.T.F.
Heat transfer, Radiation, Convection, Freezing, Melting.

34-1500
Forced-convection heat transfer from irregular melting wavy boundaries.
Hsu, K.-S., et al, *Journal of heat transfer,* Nov. 1979, 101(4), p.598-602, 6 refs.
Locher, F.A., Kennedy, J.F.
Heat transfer, Convection, Melting, Boundary value problems, Turbulent boundary layer.

34-1501
Analysis of flexible pavement resilient surface deformations using the Chevron layered elastic analysis computer program.
Smith, N., et al, MP 1264, 1975, 13 leaves, Presented at the Symposium on Nondestructive Test and Evaluation of Airport Pavement, U.S. Army Waterways Experiment Station, [Vicksburg, Mississippi], November 18-20, 1975. 9 refs.
Groves, J.A.
Pavements, Elastic properties, Computer applications.

34-1502
Climate and ice in the Strait of Canso region.
O'Neill, A.D.J., *Canada. Fisheries and Marine Service. Technical report,* Jan. 1979, No.834, Canso Marine Environment Workshop, Part 4: Physical Oceanography and Environmental Effects, edited by F.D. McCracken, p.1-10, 45 refs.
Climate, Sea ice, Canada—Nova Scotia—Strait of Canso.

34-1503
Ice forecasts for Arctic seas and their practical use.
Kirillov, A.A., *Soviet meteorology and hydrology,* 1977, No.4, p.75-83, Translation of Meteorologiia i gidrologiia No.4:59-65, Apr. 1977. 3 refs.
Sea ice, Ice forecasting, Long range forecasting.

34-1504
Freeze-up and break-up dates of water bodies in Canada.
Allen, W.T.R., et al, Toronto, Canadian Meteorological Service, 1971, 144p., 2 refs.
Cudbird, B.S.V.
Freezeup, Ice breakup, Statistical analysis.

34-1505
Periglacial research, final report.
Burrous, C.M., Seattle, University of Washington, 1979, 10 leaves, 13 refs. Grant nos. DA-ARO-D-31-124-73-G42 and DAAG29-76-G0056.
Research projects, Frost heave, Soil physics, Frozen ground mechanics.

34-1506
Further icing experiments on an unheated non-rotating cylinder.
Stallabrass, J.R., et al, *National Research Council, Canada. Division of Mechanical Engineering. Laboratory report*, Nov. 1979, LTR-LT-105, 57 leaves, 6 refs.
Hearty, P.F.
Ice formation, Ice accretion, Wind tunnels, Temperature variations, Moisture.

34-1507
Arctic terminal for icebreaking tankers: conceptual design.
Lewis, A.E., *U.S. Maritime Administration. Research and development report*, Mar. 1979, MA-RD-970-79049, 6p. + figs., PB-295 514, Executive summary.
Bechtel Inc., Houston. Pipeline Division.
Ports, Icebreakers, Tanker ships.

34-1508
Northern landscapes affected by industrial activities and their revegetation. [Tekhnogennye landshafty Severa i ikh rekul'tivatsiia],
Pavlov, A.V., ed, Novosibirsk, Nauka, 1979, 160p., In Russian. For individual papers see 34-123, 34-124 and 34-1509 through 34-1522. Refs. passim.
Tundra, Forest tundra.

34-1509
Gully formation in the Messoiakha River Basin due to economic development of the North. [Ovragoobrazovanie pri osvoenii Severa (na primere basseina r. Messoiakha)],
Sukhodrovskiĭ, V.L., et al, Tekhnogennye landshafty Severa i ikh rekul'tivatsiia (Northern landscapes affected by industrial activities and their revegetation) edited by A.V. Pavlov, Novosibirsk, Nauka, 1979, p.23-34, In Russian. 6 refs.
Novikov, N.I.
Soil erosion, Gullies, Tundra soils, Economic development, Forest tundra.

34-1510
Landscapes affected by industrial activities in permafrost areas of the northern Tyumen' region. [Formirovanie tekhnogennykh merzlotnykh landshaftov v severnykh raionakh Tiumenskoĭ oblasti],
Grigor'ev, N.F., Tekhnogennye landshafty Severa i ikh rekul'tivatsiia (Northern landscapes affected by industrial activities and their revegetation) edited by A.V. Pavlov, Novosibirsk, Nauka, 1979, p.35-44, In Russian. 2 refs.
Permafrost distribution, Cryogenic soils, Soil erosion, Permafrost structure, Landscape development, Landscape types, Human factors, Geocryology, Environmental protection, USSR—Tyumen'.

34-1511
Preliminary disturbance of tundra covers as a means for improving geocryological conditions. [Predvaritel'noe narushenie tundrovogo pokrova kak odin iz priemov uluchsheniia merzlotno-geologicheskikh usloviĭ],
Grigor'ev, N.F., Tekhnogennye landshafty Severa i ikh rekul'tivatsiia (Northern landscapes affected by industrial activities and their revegetation) edited by A.V. Pavlov, Novosibirsk, Nauka, 1979, p.45-50, In Russian. 2 refs.
Tundra, Environmental protection, Soil water migration, Frozen ground temperature, Drilling.

34-1512
Studying the revegetation of tundra landscapes affected by industrial activities in the northern Yenisey River area. [Issledovaniia po biologicheskoĭ rekul'tivatsii narushennykh tekhnikoĭ tundr na Eniseĭskom Kraĭnem Severe],
Skriabin, S.Z., Tekhnogennye landshafty Severa i ikh rekul'tivatsiia (Northern landscapes affected by industrial activities and their revegetation) edited by A.V. Pavlov, Novosibirsk, Nauka, 1979, p.51-61, In Russian. 10 refs.
Tundra.

34-1513
Fills as soil protecting covers and foundations for structures. [Nasypi kak tekhnogennoe pokrytie i osnovanie dlia sooruzheniĭ],
Konstantinov, I.P., Tekhnogennye landshafty Severa i ikh rekul'tivatsiia (Northern landscapes affected by industrial activities and their revegetation) edited by A.V. Pavlov, Novosibirsk, Nauka, 1979, p.62-73, In Russian.
Embankments, Permafrost beneath structures, Rock fills, Soil erosion, Foundations, Buildings.

34-1514
Ground temperature variations during the economic development of the northern Amur River area. [Dinamika temperatury gruntov Severnogo Priamur'ia pri osvoenii ego territoriĭ],
Balobaev, V.T., et al, Tekhnogennye landshafty Severa i ikh rekul'tivatsiia (Northern landscapes affected by industrial activities and their revegetation) edited by A.V. Pavlov, Novosibirsk, Nauka, 1979, p.74-88, In Russian. 15 refs.
Cryogenic soils, Soil temperature, Soil erosion, Permafrost control, Rock fills, Vegetation, Snow cover effect, Thermokarst, Solifluction.

34-1515
Geocryological conditions in the Yenisey River Valley (the Dudinka area) and changes induced by human activities. [Merzlotnye usloviia v doline Eniseia (Dudinskiĭ raĭon) i ikh izmenenie v sviazi s khoziaĭstvennoĭ deiatel'nost'iu],
Kondrat'ev, V.G., et al, Tekhnogennye landshafty Severa i ikh rekul'tivatsiia (Northern landscapes affected by industrial activities and their revegetation) edited by A.V. Pavlov, Novosibirsk, Nauka, 1979, p.89-97, In Russian. 4 refs.
Valleys, Permafrost distribution.

34-1516
Changes in tundra landscapes induced by mining. [Dinamika perestroĭki landshaftov pri razrabotke mestorozhdeniĭ v zone tundry],
Olovin, B.A., Tekhnogennye landshafty Severa i ikh rekul'tivatsiia (Northern landscapes affected by industrial activities and their revegetation) edited by A.V. Pavlov, Novosibirsk, Nauka, 1979, p.98-112, In Russian. 11 refs.
Tundra, Mining, Environmental protection, Swamps, Peat.

34-1517
Technology and ecological consequences of dredging. [Tekhnologiia i ekologicheskie posledstviia drazhnykh razrabotok],
Domenik, O.P., et al, Tekhnogennye landshafty Severa i ikh rekul'tivatsiia (Northern landscapes affected by industrial activities and their revegetation) edited by A.V. Pavlov, Novosibirsk, Nauka, 1979, p.113-117, In Russian.
Martsiniuk, B.F., Paiusova, E.A.
Placer mining, Dredging, Environmental protection, Soil erosion, Water pollution, Revegetation, Permafrost.

34-1518
Increasing the effectiveness of freezing foams used in thermal melioration of soils. [Puti povysheniia effektivnosti zamerzaiushchikh pen pri teplovoĭ melioratsii gruntov],
Safonov, V.F., et al, Tekhnogennye landshafty Severa i ikh rekul'tivatsiia (Northern landscapes affected by industrial activities and their revegetation) edited by A.V. Pavlov, Novosibirsk, Nauka, 1979, p.118-123, In Russian. 3 refs.
Piatakov, V.G., Levinskiĭ, B.V.
Mining, Soil freezing, Frost protection, Thermal insulation.

34-1519
Microclimate of the Vilyuy reservoir in the area adjacent to the dam. [Nekotorye osobennosti mikroklimata priplotinnoĭ chasti Viliuĭskogo vodokhranilishcha],
Olovin, B.A., Tekhnogennye landshafty Severa i ikh rekul'tivatsiia (Northern landscapes affected by industrial activities and their revegetation) edited by A.V Pavlov, Novosibirsk, Nauka, 1979, p.124-129, In Russian. 5 refs.
Lakes, Dams, Thermal regime, Air temperature, Humidity, Wind factors.

34-1520
Changes in moisture and thermal regimes of cryogenic soils in Central Yakutia during agricultural development. [Izmenenie vodno-teplovogo rezhima merzlotnykh pochv Tsentral'noĭ IAkutii pri sel'skokhoziaĭstvennoĭ melioratsii],
Gavril'ev, P.P., Tekhnogennye landshafty Severa i ikh rekul'tivatsiia (Northern landscapes affected by industrial activities and their revegetation) edited by A.V. Pavlov, Novosibirsk, Nauka, 1979, p.130-147, In Russian. 9 refs.
Land reclamation, Cryogenic soils, Meadow soils, Active layer, Permafrost depth, Thermal regime, Soil water migration, Heat transfer, USSR—Yakutia.

34-1521
Hydrothermal variations in permafrost landscapes. [Kriogidrogennye izmeneniia landshafta],
Anisimova, N.P., Tekhnogennye landshafty Severa i ikh rekul'tivatsiia (Northern landscapes affected by industrial activities and their revegetation) edited by A.V. Pavlov, Novosibirsk, Nauka, 1979, p.148-152, In Russian. 7 refs.
Active layer, Human factors, Pollution, Frozen ground temperature, Permafrost hydrology, Taliks, Environmental protection, Water chemistry, Landscape development.

34-1522
Thermal conductivity of natural and disturbed soils in northwestern Siberia. [Teploprovodnost' estestvennykh i narushennykh gruntov na severe Zapadnoĭ Sibiri],
Mandarov, A.A., et al, Tekhnogennye landshafty Severa i ikh rekul'tivatsiia (Northern landscapes affected by industrial activities and their revegetation) edited by A.V. Pavlov, Novosibirsk, Nauka, 1979, p.153-157, In Russian. 8 refs.
Skriabin, N.P.
Forest tundra, Cryogenic soils, Peat, Thermal conductivity, Human factors, Soil erosion, Environmental protection.

34-1523
Computer analysis of earth slope stability by the finite-element method (the RUMKE program). [Raschet ustoĭchivosti gruntovykh otkosov po programme RUMKE],
Gorelik, I.IA., et al, *Leningrad. Vsesoiuznyĭ nauchno-issledovatel'skiĭ institut gidrotekhniki. Izvestiia*, 1979, Vol.129, p.42-46, In Russian. 8 refs.
Slope processes, Slope stability, Computerized simulation.

34-1524
Versions of the fraction step method for solving two-dimensional heat conductivity problems. [Nekotorye varianty metoda drobnykh shagov dlia resheniia ploskoĭ zadachi teploprovodnostiĭ],
Khrapkov, A.A., et al, *Leningrad. Vsesoiuznyĭ nauchno-issledovatel'skiĭ institut gidrotekhniki. Izvestiia*, 1979, Vol.129, p.47-55, In Russian. 6 refs.
Tsybin, A.M.
Thermal conductivity, Theories, Analysis (mathematics).

34-1525
Mathematical modeling of thermal stresses in concrete structures on rock foundations. [Matematicheskoe modelirovanie termonapriazhennogo sostoianiia betonnykh massivov vozvodimykh na skal'nom osnovaniiakh],
Rukavishnikova, T.N., et al, *Leningrad. Vsesoiuznyĭ nauchno-issledovatel'skiĭ institut gidrotekhniki. Izvestiia*, 1979, Vol.129, p.56-66, In Russian. 12 refs.
Trapeznikov, L.P.
Concrete structures, Hydraulic structures, Dams, Thermal stresses, Mathematical models.

34-1526
Calculating quasi-stationary temperature and seepage fields in massive hydraulic structures and foundations by the finite element and finite difference methods. [Raschet kvazistatsionarnykh temperaturnykh i fil'tratsionnykh poleĭ v massivnykh gidrosooruzheniiakh i osnovaniiakh],
Pisarev, G.N., et al, *Leningrad. Vsesoiuznyĭ nauchno-issledovatel'skiĭ institut gidrotekhniki. Izvestiia*, 1979, Vol.129, p.67-74, In Russian. 11 refs.
Tsybin, A.M.
Hydraulic structures, Earth dams, Concrete structures, Rock fills, Thermal regime, Seepage.

34-1527
Calculating service life of waterproof mastic roofings. [O raschete dolgovechnosti gidroizoliatsionnykh pokrytiĭ iz emul'sionnykh mastik],
Popchenko, S.N., et al, *Leningrad. Vsesoiuznyĭ nauchno-issledovatel'skiĭ institut gidrotekhniki. Izvestiia*, 1979, Vol.128, p.15-22, In Russian. 7 refs.
Trofimov, V.N.
Roofs, Waterproofing, Construction materials, Frost resistance.

34-1528
Increasing the reliability of waterproof asphalt facings for concrete dams. [Nekotorye voprosy povysheniia nadezhnosti asfal'tovykh protivofil'tratsionnykh ekranov dlia betonnykh plotin],
Davidenko, V.M., et al, *Leningrad. Vsesoiuznyĭ nauchno-issledovatel'skiĭ institut gidrotekhniki. Izvestiia*, 1979, Vol.128, p.23-29, In Russian. 6 refs.
Elizarov, E.N., Davidenko, G.A.
Hydraulic structures, Dams, Concrete structures, Waterproofing, Bitumens, Linings, Frost resistance.

34-1529
Studying frost resistance of rocks. [K metodike issledovaniia morozostoĭkosti gornykh porod],
Ben'kov, V.N., *Leningrad. Vsesoiuznyĭ nauchno-issledovatel'skiĭ institut gidrotekhniki. Izvestiia*, 1979, Vol.130, p.66-70, In Russian. 7 refs.
Sands, Freeze thaw cycles, Frost resistance, Frozen ground strength, Ultrasonic tests.

34-1530
Pressure consolidation of lumpy frozen soil dumped into water. [Issledovanie uplotneniia pod nagruzkoĭ merzlykh kom'ev gruntov posle otsypki ikh v vodu],
Pekhovich, A.I., et al, *Leningrad. Vsesoiuznyĭ nauchno-issledovatel'skiĭ institut gidrotekhniki. Izvestiia*, 1979, Vol.130, p.92-98, In Russian. 13 refs.
Razgovorova, E.L.
Soil compaction, Hydraulic structures, Earth dams, Earth fills, Frozen ground.

34-1531
Grout injection used in tunnel construction in permafrost. [In"ektsionnye raboty pri sooruzhenii tonneleĭ v mnogoletnemerzlykh porodakh],
Fursov, L.F., *Leningrad. Vsesoiuznyĭ nauchno-issledovatel'skiĭ institut gidrotekhniki. Izvestiia*, 1979, Vol.130, p.105-110, In Russian.
Tunnels, Fracture zones, Grouting, Baykal Amur railroad, Cements, Permafrost.

34-1532
Soil consolidation under difficult engineering-geological conditions. [Zakreplenie gruntov v slozhnykh inzhenerno-geologicheskikh usloviiakh],
Baushev, V.K., et al, *Leningrad. Vsesoiuznyĭ nauchno-issledovatel'skiĭ institut gidrotekhniki. Izvestiia*, 1979, Vol.130, p.111-116, In Russian.
Kosiak, L.I.
Hydraulic structures, Earth dams, Seepage, Soil stabilization, Cements, Polymers.

34-1533
Engineering geocryology. [Inzhenernoe merzlotovedenie],
Mel'nikov, P.I., ed, Moscow, Nauka, 1979, 208p., In Russian. For individual papers see 34-1534 through 34-1554. Refs. passim.
Geocryology, Engineering geology, Seasonal freeze thaw, Frozen fines, Frozen ground physics, Foundations, Permafrost bases, Permafrost beneath structures, Mining, Ground ice, Ice physics, Rheology, Cryogenics.

34-1534
Influence of salinity on frozen ground deformation. [Vliianie zasolennosti merzlykh gruntov na ikh deformativnye svoĭstva],
Pekarskaia, N.K., et al, Inzhenernoe merzlotovedenie (Engineering geocryology) edited by P.I. Mel'nikov, Moscow, Nauka, 1979, p.5-19, In Russian. 10 refs.
Chapaev, A.A.
Saline soils, Soil freezing, Frozen ground mechanics, Bearing strength, Rheology, Frost penetration, Unfrozen water content, Creep.

34-1535
Freezing effect on the strength and deformation of clays under pressure from hard stamps. [Vliianie zamorazhivaniia na prochnost' i deformiruemost' glin pri prodavlivanii cherez nikh zhestkikh shtampov],
Sadovskiĭ, A.V., et al, Inzhenernoe merzlotovedenie (Engineering geocryology) edited by P.I. Mel'nikov, Moscow, Nauka, 1979, p.20-30, In Russian.
Tikhomirov, S.M.
Frozen fines, Clays, Frozen ground strength, Compressive properties.

34-1536
Relation between shear strength of ground adfreezing and the surface roughness of materials. [Zavisimost' prochnosti smerzaniia gruntov pri sdvige ot sherokhovatosti poverkhnosti materiala],
Shusherina, E.P., et al, Inzhenernoe merzlotovedenie (Engineering geocryology) edited by P.I. Mel'nikov, Moscow, Nauka, 1979, p.30-39, In Russian. 16 refs.
Zharov, A.A., Shnelderova, V.V., Nikolaev, A.A.
Shear strength, Concrete structures, Foundations, Permafrost beneath structures, Metals, Adfreezing strength.

34-1537
Forecasting deformation of thawing bearing ground. [Prognoz deformatsii ottaivaiushchikh osnovaniĭ],
Dokuchaev, V.V., et al, Inzhenernoe merzlotovedenie (Engineering geocryology) edited by P.I. Mel'nikov, Moscow, Nauka, 1979, p.40-53, In Russian. 23 refs.
Zolotar', A.I., Shelnkman, D.R., Roman, L.T.
Foundations, Permafrost bases, Ground thawing, Frozen ground settling.

34-1538
Generalizing the experience of foundation construction in complex geocryological conditions. [Obobshchenie opyta vozvedeniia fundamentov v slozhnykh geokriologicheskikh usloviiakh],
Poluektov, V.E., et al, Inzhenernoe merzlotovedenie (Engineering geocryology) edited by P.I. Mel'nikov, Moscow, Nauka, 1979, p.54-63, In Russian.
Mezhenskiĭ, V.I.
Permafrost beneath structures, Concrete piles, Pile driving, Reinforced concretes, Design.

34-1539
Using fraction-linear relationships in pile design. [Raschet svaĭ s ispol'zovaniem drobno-lineĭnoĭ zavisimosti],
Mirenburg, IU.S., Inzhenernoe merzlotovedenie (Engineering geocryology) edited by P.I. Mel'nikov, Moscow, Nauka, 1979, p.63-67, In Russian. 7 refs.
Piles, Permafrost beneath structures, Frozen ground settling, Design.

34-1540
Performance of piles in plastic frozen ground. [Analiz raboty svaĭ v plastichno-merzlykh gruntakh],
Slepak, M.E., Inzhenernoe merzlotovedenie (Engineering geocryology) edited by P.I. Mel'nikov, Moscow, Nauka, 1979, p.67-71, In Russian. 11 refs.
Piles, Permafrost beneath structures, Frozen ground settling, Compressive properties, Creep, Design.

34-1541
Artificial cooling of ground with thermopiles. [Iskusstvennoe okhlazhdenie gruntov s pomoshch'iu termosvaĭ],
Vialov, S.S., et al, Inzhenernoe merzlotovedenie (Engineering geocryology) edited by P.I. Mel'nikov, Moscow, Nauka, 1979, p.72-91, In Russian. 18 refs.
Aleksandrov, IU.A., Mirenburg, IU.S., Fedoseev, IU.G.
Artificial freezing, Soil freezing, Thermopiles, Frozen ground strength, Permafrost control, Foundations, Design.

34-1542
Selecting a method for using permafrost bases for buildings and structures. [Vybor printsipa ispol'zovaniia vechnomerzlykh gruntov v kachestve osnovaniĭ zdaniĭ i sooruzheniĭ],
Khrustalev, L.N., Inzhenernoe merzlotovedenie (Engineering geocryology) edited by P.I. Mel'nikov, Moscow, Nauka, 1979, p.91-103, In Russian. 13 refs.
Foundations, Permafrost bases, Design, Buildings.

34-1543
Engineering and geological conditions of construction on permafrost in Transbaikal and the Baykal Amur railroad area. [Inzhenerno-geologicheskie usloviia stroitel'stva na vechnomerzlykh gruntakh v usloviiakh Zabaĭkal'ia i trassy BAM],
Mosenkis, IU.M., Inzhenernoe merzlotovedenie (Engineering geocryology) edited by P.I. Mel'nikov, Moscow, Nauka, 1979, p.104-108, In Russian. 6 refs.
Foundations, Permafrost bases, Frozen ground settling, Permafrost control, Buildings.

34-1544
Experimental study of heat transfer in fluid thermopiles. [Eksperimental'nye issledovaniia teploobmena v zhidkostnykh termosvaiakh],
Konovalov, A.A., et al, Inzhenernoe merzlotovedenie (Engineering geocryology) edited by P.I. Mel'nikov, Moscow, Nauka, 1979, p.109-117, In Russian. 7 refs.
Naumova, L.A.
Soil freezing, Artificial freezing, Thermopiles, Coolants, Heat transfer.

34-1545
Reestablishing the frozen state of ground for preventing deformations of buildings and structures. [Vosstanovlenie merzlogo sostoianiia gruntov dlia predotvrashcheniia deformatsii zdaniĭ i sooruzheniĭ],
Aleksandrov, IU.A., Inzhenernoe merzlotovedenie (Engineering geocryology) edited by P.I. Mel'nikov, Moscow, Nauka, 1979, p.117-121, In Russian.
Foundations, Permafrost bases, Ground thawing, Frozen ground settling, Permafrost control, Thermopiles, Buildings.

34-1546
Forecasting sliding of frozen rock tailings on rocky slopes. [O prognoze opolzaniia otvalov merzlykh porod na skal'nykh sklonakh],

Lorius, C.
Isotope analysis, Ice sheets, Snow composition, Precipitation (meteorology), Glacial hydrology.
Natural variations in the concentration of stable hydrogen and oxygen isotopes (deuterium and oxygen 18) and artificial tritium are considered in determining the origin and the renewal and transit times of water in given flow systems. Much of the necessary data is "filed" in the ice at the poles and in glaciers. Polar ice samples, for example, provide information on deuterium and oxygen 18 variations with mean temperature and seasonal changes in the considered precipitation area, and also on tritium distribution in rain and snowfall during the last twenty years. Data yielded by core samples of ice from both polar regions and the Mont Blanc glaciers in the French Alps is discussed. (Auth.)

Ice shelves, Ice cores, Drill core analysis.
By using a new thermocoring technique, a hole was successfully drilled through the 416-m thickness of the Ross Ice Shelf at J-9 Camp. This report provides a description of the drill and an account of this drilling project. A provisional examination of the core shows the ice shelf to consist of 410 m of snow and glacial ice underlain by 6 m of sea ice formed by direct freezing of sea water to the bottom of the Ross Ice Shelf. (Auth.)

Electron microscopy, Frozen ground physics, Soil structure, Clay soils.
Transmission and scanning electron micrographs of Umiat bentonite revealed thin, mica-like grains with irregular shapes. Most of the bentonite showed electron diffraction ring patterns, but some showed hexagonal net patterns as well as ring patterns. The lengths of the unit cells were calculated to be 5.18 Å along the a-axis and 8.97 Å along the b-axis. Semiquantitative analyses were made using an energy dispersive spectrometer. Common elements such as Si, Ti, Al, Fe, Mg, Na and K were determined. The molecular ratio of SiO_2 Al_2O_3 was calculated to be 4.92:1.00 for the bulk sample, indicating that Umiat bentonite is similar in most respects to Wyoming bentonite, and is classified as a montmorillonite. The microstructure of frozen Umiat bentonite was observed at a specimen temperature of -100C using a scanning electron microscope equipped with a cold stage. Frozen bentonite and segregated ice patterns formed from wet bentonite were examined using an X-ray map and Si X-ray line scan. Sublimation processes of ice in the frozen bentonite were observed at specimen temperatures of -60 and -80C. After sublimation of the ice, the bentonite displayed a honeycomb structure. It was concluded that the freezing-

sublimation cycle in frozen soil increases the permeability of water vapor due to the three-dimensional structure of the coagulated clay formed by freezing

Penetration tests, Military engineering, Snow (construction material), Fortifications, Small arms ammunition.
A field study was conducted to 1) more accurately define the degree of protection offered by simple snow fortification and 2) evaluate the effort required by infantry troops to build such fortifications when only basic tools are available. A seven-man infantry squad, equipped with standard issue snow shovels and an arctic sled (Akhio), constructed several simple snow structures. Construction was made more difficult by the imposition of a camouflage discipline requirement. When completed, three positions were subjected to M16A1 rifle fire while the infantry squad executed a simulated tactical assault. A fourth and much larger position was tested with simulated covering fire from a M2HB 50-caliber machine gun. None of the 5.56-mm bullets fired by the squad from ranges of 200 m to as close as 10 m managed to penetrate the 1.8-m-thick snow embankments. The 12.7-mm-diameter bullets fired from the M2HB at a range of 250 m were all stopped by 3.0 m of packed snow. The camouflage considerations and the shallow snow conditions increased the construction time for the three small emplacements by almost a factor of four, and for the larger emplacement by almost a factor of three. But the squad still handled a volume of packed snow that was equal to 3.7 times the volume of unfrozen soil that could be handled with the same amount of effort, according to field manual estimates. Under frozen soil conditions the advantages of using snow would be significantly greater.

Prototype overland flow test data: June 1977-May 1978.
Jenkins, T.F., et al, *U.S. Army Cold Regions Research and Engineering Laboratory*, Nov. 1979, SR 79-35, 91p., ADA-078 743, 9 refs.
Waste treatment, Water treatment, Irrigation, Soil chemistry, Ion exchange, Meteorological data.
A prototype overland flow land treatment system was operated at Hanover, New Hampshire, over a one-year cycle from June 1977 to May 1978. The individual data points collected over this period for water quantity and quality are presented, as well as plant yields and nutrient uptake. The soil chemical and physical parameters measured are also presented along with a table of initial site characteristics. The meteorological measurements obtained in support of this effort are included to complete the data base.

Ice electrical properties, Electric charge, Dislocations (materials), X ray analysis, Ice crystal structure.
The motion of dislocations in single crystal ice under an electric field was observed by using X-ray topographic methods. Electric charge density on these dislocations was deduced from the amplitude and length of the dislocation segment under the known AC electrical field. In linear charge density, considerable variation is possible, depending on the effective field acting on the dislocation lines.

34-1609
Some Bessel function identities arising in ice mechanics problems.
Takagi, S., *U.S. Army Cold Regions Research and Engineering Laboratory*, Nov. 1979, CR 79-27, 13p., ADA-078 709, 10 refs.
Ice mechanics, Analysis (mathematics).
Some Bessel function identities found by solving problems of the deflection of a floating ice plate by two different methods are rigorously proved. The master formulas from which all the identities are derived are in a Fourier reciprocal relationship, connecting a Hankel function to an exponential function. Many new formulas can be derived from the master formulas. The analytical method presented here now opens the way to study a hitherto impossible type of problem-the deflection of floating elastic plates of various shapes and boundary conditions.

34-1610
Economic impact of highway snow and ice control.
McBride, J.C., *Transportation research record*, 1978, No.674, p.58-63, 10 refs.
Roads, Ice control, Snow removal, Economic analysis.

34-1611
Automatic controls for salt and abrasive spreaders.
Fitzpatrick, M.W., et al. *Transportation research record*, 1978, No.674, p.64-67.
Law, D.A.
Road maintenance, Winter maintenance, Automatic control.

34-1612
Glacial erosion and ice sheet divides, northeastern Laurentide Ice Sheet, on the basis of the distribution of limestone erratics.
Andrews, J.T., et al. *Geology*, Dec. 1979, 7(12), p.592-596, 38 refs.
Miller, G.H.
Glacial erosion, Ice sheets, Glacial geology, Canada—Northwest Territories - Baffin Island.

34-1613
Formation of edge dislocation dipoles in ice single crystals by heat treatment.
Oguro, M., et al. *Japanese journal of applied physics*, Oct. 1979, 18(10), p.1897-1907, 11 refs.
Higashi, A.
Ice crystals, Dislocations (materials), Heating, X ray diffraction.

34-1614
Manual operation of SECT system thaws frozen line quickly. *Pipeline*, Nov.-Dec. 1979, 51(7), p.23.
Pipeline freezing, Artificial thawing.

34-1615
Fall ice drift in Nares Strait, as observed by sideways-looking airborne radar.
Dunbar, M., *Arctic*, Dec. 1979, 32(4), p.283-307, In English with French summary. 7 refs.
Side looking radar, Floating ice, Drift, Wind factors, Ocean currents.

34-1616
Effects of storm surges on the Beaufort Sea coast, northern Alaska.
Reimnitz, E., et al. *Arctic*, Dec. 1979, 32(4), p.329-344, In English with French summary. 26 refs.
Maurer, D.K.
Shoreline modification, Storms, Sediment transport, Wood, Beaufort Sea.

34-1617
Recent-year-to-year variations in seasonal temperatures and sea ice conditions in the eastern Canadian Arctic.
Jacobs, J.D., et al. *Arctic*, Dec. 1979, 32(4), p.345-354, 18 refs.
Newell, J.P.
Air temperature, Sea ice, Ice conditions, Seasonal variations.

34-1618
Tabular icebergs in the South Atlantic. [Tafeleisberge im Südatlantik]. *Seewart*, Oct. 1979, 40(5), p.223-228, In German.
Icebergs, South Georgia.
Excerpts from a captain's report concerning large concentrations of icebergs sighted on April 8 and 10, 1979, north and northeast of South Georgia, are presented and commented on. Because of their close grouping, the icebergs are believed to have been fragments of a disintegrating tabular iceberg. The ship's route, the locations of the icebergs, and the line of northernmost iceberg occurrence are shown on charts.

34-1619
Transportation. [Transport].
Nekrasov, N.N., ed. *Problemy Severa*, 1979, Vol.20, Moscow, Nauka, 1979, 147p., In Russian. For individual papers see 34-1620 through 34-1636. Refs. passim.
Transportation, Economic development, Mining, Forestry, Construction, Rivers, Icebound rivers, Airplanes, Helicopters, Pipelines, Baykal Amur railroad.

34-1620
Transportation, a key issue in the development of productive forces in the North. [Transport - kliuchevaia problema razvitiia proizvoditel'nykh sil Severa].
Nekrasov, N.N., *Problemy Severa*, 1979, Vol.20, p.5-13, In Russian.
Helicopters, Transportation, Pipelines, Economic development, Rivers, Airplanes, Baykal Amur railroad.

34-1621
Economic development of the northern USSR and the formation of a basic transportation pattern. [Ekonomicheskoe osvoenie zony Severa SSSR i formirovanie v nei opornoi transportnoi seti].
Burkhanov, V.F., *Problemy Severa*, 1979, Vol.20, p.14-20, In Russian. 5 refs.
Ice navigation, Economic development, Icebreakers, Transportation, Electric power, Baykal Amur railroad, Construction.

34-1622
Peculiarities and problems of inter-regional transportation and economic communications of the northern zone of the USSR. [Osobennosti i problemy mezhrlonnykh transportno-ekonomicheskikh sviazei zony Severa SSSR].
Puzanova, V.F., *Problemy Severa*, 1979, Vol.20, p.20-33, In Russian. 8 refs.
Transportation, Economic development, Petroleum industry, Coal, Mining, Forestry, Construction equipment, Construction materials.

34-1623
Baykal Amur railroad. Problems of inter-regional economic communications and natural resource development in the Near North. [BAM: problemy mezhrlonnykh ekonomicheskikh sviazei i khoziaistvennogo osvoeniia prirodnykh resursov i territorii Blizhnego Severa].
D'iakonov, F.V., *Problemy Severa*, 1979, Vol.20, p.33-42, In Russian.
Economic development, Construction, Transportation, Baykal Amur railroad, Cost analysis.

34-1624
Improving the economic effectiveness of transportation in the Komi Autonomous Soviet Socialist Republic. [Problemy povysheniia ekonomicheskoi effektivnosti transporta Komi ASSR].
Kuratova, E.S., *Problemy Severa*, 1979, Vol.20, p.42-46, In Russian. 8 refs.
Transportation, Railroads, Motor vehicles, Roads, Permafrost beneath roads, Taiga, Swamps.

34-1625
Peculiarities of motor transport under northern conditions. [Osobennosti ispol'zovaniia avtotransportnykh sredstv v usloviiakh Severa].
Khlebnikov, A.M., et al. *Problemy Severa*, 1979, Vol.20, p.47-59, In Russian. 22 refs.
Krestovnikov, G.A.
Motor vehicles, Roads, Permafrost beneath roads, Trafficability, Tracked vehicles, Tires, Rubber ice friction, Rubber snow friction, Swamps, All terrain vehicles, Analysis (mathematics).

34-1626
Designing high capacity vehicles for cross-country travel in the North. [Problemy razvitiia transportnykh sredstv vysokoi prokhodimosti dlia raionov Severa].
Korsak, V.K., *Problemy Severa*, 1979, Vol.20, p.59-73, In Russian. 10 refs.
Tracked vehicles, All terrain vehicles, Air cushion vehicles, Tractors, Motor vehicles.

34-1627
Design and construction of pile foundations for elevated transport structures and scaffolded railroad and highway bridges in the North. [Ratsional'naia konstruktsiia i tekhnologiia sooruzheniia svainykh fundamentov nadzemnykh transportnykh sooruzhenii i estakadnykh avtomobil'nykh i zheleznykh dorog v severnykh rainakh].
Burkhanov, V.F., et al. *Problemy Severa*, 1979, Vol.20, p.73-84, In Russian.
Vartanov, S.Kh., Dertsakian, A.K., Targulian, R.O.
Foundations, Bridges, Piles, Permafrost beneath structures, Railroads, Pipelines, Roads, Permafrost control, Drilling, Design.

34-1628
Air navigation in industrial construction of the North. [Effektivnost' primeneniia vozdushnogo transporta v industrial'nom stroitel'stve na Severe].
Gromov, N.N., et al. *Problemy Severa*, 1979, Vol.20, p.84-92, In Russian. 5 refs.
Chudnovskii, A.D.
Transportation, Airplanes, Industrial buildings, Construction.

34-1629
Using aircraft in cargo transportation. [Perspektivy ispol'zovaniia letatel'nykh apparatov dlia transportirovki gruzov].
Lapin, M.S., *Problemy Severa*, 1979, Vol.20, p.92-98, In Russian. 7 refs.
Transportation, Air cushion vehicles, Airplanes, Helicopters, Dirigibles.

34-1630
Passanger transport in northern population resettlement systems. [Passazhirskii transport v sistemakh rasselenija Severa].
Belinskii, A.IU., *Problemy Severa*, 1979, Vol.20, p.98-105, In Russian.
Transportation, Airplanes, Air cushion vehicles, Motor vehicles, All terrain vehicles, Swamps, Ice navigation, Snow roads, Ice roads, Baykal Amur railroad.

34-1631
Modeling transportation connections between starting points and economic development areas. [O modelirovanii transportnykh sviazei mezhdu bazami osvoeniia i osvaivaemymi raionami].
Adzhiev, M.E., *Problemy Severa*, 1979, Vol.20, p.105-108, In Russian. 9 refs.
Economic development, Transportation, Mathematical models.

34-1632
Supplying northern enterprises with special equipment. [O probleme osnashchenia predprniatii Severa spetsial'noi tekhnikoi].
Dashkova, T.E., *Problemy Severa*, 1979, Vol.20, p.109-112, In Russian. 5 refs.
Transportation, Equipment, Construction equipment, Winter maintenance, Design.

34-1633
Problems of transportation equipment in Yakutian mines. [Problemy tekhnologicheskogo transporta v gornodobyvaiushchei promyshlennosti Yakutii].
Vlasov, V.L., *Problemy Severa*, 1979, Vol.20, p.112-117, In Russian. 14 refs.
Mining, Transportation, Excavation, Permafrost.

34-1634
Trends in transportation development in northern Canada. [Tendentsii razvitiia transportnoi seti na Kanadskom Severe].
Cherkasov, A.I., *Problemy Severa*, 1979, Vol.20, p.118-130, In Russian. 18 refs.
Transportation, Motor vehicles, Air cushion vehicles, Helicopters, Airplanes, Railroads, Pipelines.

34-1635
Use of air cushion vehicles in northern Canada. [Primenenie transportnykh sredstv na vozdushnoi podushke na Kanadskom Severe].
Mikhailov, V.V., et al. *Problemy Severa*, 1979, Vol.20, p.130-136, In Russian.
Kocheulov, V.P.
Transportation, Air cushion vehicles, All terrain vehicles.

34-1636
Discussion of scientific and economic problems of northern development. [Obsuzhdenie aktual'nykh nauchnykh i khozialstvennykh problem razvitiia severnykh ralonov],
Glabina, N.K., et al, *Problemy Severa*, 1979, Vol.20, p.137-146, In Russian.
Puzanova, V.F., Tikhonov, A.V.
Economic development, All terrain vehicles, Transportation, Research projects, Air cushion vehicles, Excavation, Environmental protection, Baykal Amur railroad.

34-1637
Corona discharge of wetted hailstones as a basic mechanism of lightning initiation. [Koronnyi razriad obvodnennykh gradin kak osnovnol mekhanizm initsiirovaniia molnii],
Diachuk, V.A., et al, *Akademiia nauk SSSR. Doklady*, 1979, 248(1), p.60-63, In Russian. 10 refs.

Hail clouds, Cloud electrification, Hailstones, Water films, Hailstone growth.

34-1638
Electromagnetic radiation of snow and ice during dynamic processes. [Elektromagnitnoe izluchenie snega i l'da pri dinamicheskikh protsessakh],
Kachurin, L.G., et al, *Akademiia nauk SSSR. Doklady*, 1979, 248(3), p.583-585, In Russian. 3 refs.
Glacier ice, Ice formation, Alimentation, Phase transformations, Ice water interface, Electric potential, Electromagnetic properties, Radiation, Avalanches, Snow loads, Dynamic loads.

34-1639
Problems and results of avalanche and mudflow studies by Moscow University geographers. [Uspekhi i problemy issledovaniia lavin i selei geografami MGU],
Miagkov, S.M., et al, *Moscow. Universitet. Vestnik. Seriia 5 Geografiia*, Nov.-Dec. 1979, No.6, p.52-57, In Russian with English summary.
Troshkina, E.S.
Slope processes, Avalanches, Mudflows, Avalanche formation, Mapping, Avalanche forecasting.

34-1640
Pipeline transport. [Truboprovodnyi transport],
IUfin, V.A., ed, *Itogi nauki i tekhniki. Truboprovodnyi transport*, 1974, Vol.5, 149p. (Pertinent p.38-74), In Russian. 96 refs.
Petroleum industry, Pipelines, Permafrost beneath structures, Cold weather construction, Design.

34-1641
Pipeline transport. [Truboprovodnyi transport],
IUfin, V.A., ed, *Itogi nauki i tekhniki. Truboprovodnyi transport*, 1976, Vol.6, 123p. (Pertinent p.30-60), In Russian. 65 refs.
Petroleum industry, Pipelines, Swamps, Permafrost beneath structures, Thermal insulation, Design.

34-1642
Cryogenic suction in partially saturated soils. [Succion cryogénique dans un sol partiellement saturé],
Frémond, M., et al, *Académie des sciences, Paris. Comptes rendus hebdomadaires des séances. Série B*, July 16, 1979, 289(3), p.57-59, In French with English summary. 6 refs.
Menot, J.M.
Soil freezing, Frost heave, Saturation, Soil water, Water content.

34-1643
Evolution of permafrost in the taiga and in the forest-tundra, western Quebec-Labrador Peninsula.
Payette, S., et al, *Canadian journal of forest research*, June 1976, 6(2), p.203-220, In English with French summary. 53 refs.
Samson, H., Lagarec, D.
Forest tundra, Taiga, Permafrost distribution, Discontinuous permafrost, Peat.

34-1644
Energy efficiency through ice storage.
Stubblefield, R.R., *Heating, piping, and air conditioning*, Dec. 1979, 51(12), p.43-47.
Artificial ice, Heating, Cooling, Air conditioning.

34-1645
Pore size distribution in critical point and freeze dried aggregates from clay subsoils.
Lawrence, G.P., et al, *Journal of soil science*, Sep. 1979, 30(3), p.499-515, 22 refs.
Payne, D., Greenland, D.J.
Soil water, Soil freezing, Freeze drying, Particle size distribution.

34-1646
Report of the International Ice Patrol Service in the North Atlantic Ocean. Season of 1978. *U.S. Coast Guard. Bulletin*, 1979, No.64, 39p.
Ice reporting, Ice conditions, Sea ice, North Atlantic Ocean.

34-1647
Snow and ice accumulation around solar collector installations.
O'Rourke, M.J., *U.S. National Bureau of Standards. Report*, Aug. 1979, NBS GCR 79-180, 69p., 16 refs.
Snow accumulation, Ice accretion, Buildings, Snow loads, Heat storage.

34-1648
Melioration and regionalization of cryogenic soils in Yakutia. [Raionirovanie i melioratsiia merzlotnykh pochv lAkutii],
Elovskaia, L.G., et al, Novosibirsk, Nauka, 1978, 175p., In Russian with English table of contents enclosed. Refs. p.166-174.
Konorovskii, A.K.
Cryogenic soils, Taiga, Alpine tundra, Alpine landscapes, Land reclamation, Alassy, Swamps, Bibliographies, USSR—Yakutia.

34-1649
Soils of the East European tundra and forest tundra. [Pochvy vostochno-evropeiskoi tundry i lesotundry],
Ignatenko, I.V., Moscow, Nauka, 1979, 280p., In Russian with English table of contents enclosed. Refs. p.256-279.
Tundra, Soil formation, Forest tundra, Soil composition, Podsol, Geocryology, Drainage, Soil chemistry, Vegetation factors, Bibliographies.

34-1650
Heat transfer problems applied to the theory of well drilling. [Zadachi teploobmena v prilozhenii k teorii bureniia skvazhin],
Pudovkin, M.A., et al, Kazan, Universitet, 1977, 182p., In Russian with English table of contents enclosed. 108 refs.

Petrova, E.I., Teterina, L.V.
Cryogenic soils, Soil formation, Active layer, Permafrost hydrology, Tundra, Taiga, Alpine landscapes, Swamps, Pingos, Soil chemistry, Soil profiles, USSR—Yakutia.

34-1653
Hydrogeologic studies for drainage and water supply engineering. [Inzhenerno-geologicheskie i gidrogeologicheskie issledovaniia dlia vodosnabzheniia i vodootvedeniia],
Artsev, A.I., Moscow, Nedra, 1979, 285p., In Russian with English table of contents enclosed. 160p.
Engineering geology, Hydrogeology, Water supply, Hydraulic structures, Foundations, Water intakes, Earth dams, Embankments, Permafrost beneath structures, Karst, Landslides, Bibliographies.

34-1654
Soil cover of the world (Soil-bioclimatic areas of the world and their agro-ecologic characteristics). [Pochvennyi pokrov mira (Pochvenno-bioklimaticheskie oblasti mira i ikh agroekologicheskaia kharakteristika)],
Rozov, N.N., et al, Moscow, Universitet, 1979, 287p., In Russian with English table of contents enclosed. Refs. p.280-283.
Stroganova, M.N.
Cryogenic soils, Soil classification, Tundra, Taiga, Soil profiles, Soil formation, Soil chemistry, Soil water migration, Mapping, Polar regions, Bibliographies.

34-1655
Snow redistribution by wind. [Über die Schneeumlagerung durch den Wind],
Hoinkes, H., *Sonnblick-Verein, Vienna. Jahresbericht*, 1957, Vols.51/53 (1953-1955), p.27-32, In German. 9 refs.
Snow cover distribution, Snowdrifts, Wind factors.

34-1656
Report on ice conditions of glaciers in the Grossglockner and Sonnblick groups in early autumn. [Bericht über die Eisstände der Gletscher der Grossglockner- und Sonnblickgruppe im Frühherbst 1954, 1955 und 1956],
Tollner, H., *Sonnblick-Verein, Vienna. Jahresbericht*, 1957, Vols.51/53 (1953-1955), p.33-38, In German. 4 refs.
Glacier mass balance, Glacier oscillation, Glacier tongues, Mountain glaciers.

34-1657
Effects of the retreat of Austrian glaciers on the water supply of high alpine power plants. [Die Folgen des Rückganges österreichischer Gletscher auf die Wasserspeicherung hochalpiner Kraftwerksanlagen],
Tollner, H., *Sonnblick-Verein, Vienna. Jahresbericht*, 1957, Vols.51/53 (1953-1955), p.38-42, In German. 6 refs.
Glacier oscillation, Glacial hydrology, Water supply, Electric power, Mountain glaciers.

34-1658
Snow depth measurements in the Sonnblick region, 1927-1956. [Schneepegelbeobachtung im Sonnblickgebiet im Zeitraum 1927 bis 1956],
Roller, M., *Sonnblick-Verein, Vienna. Jahresbericht*, 1957, Vols.51/53 (1953-1955), p.43-45, In German. 12 refs.
Snow depth, Snow accumulation, Precipitation gages, Mountain glaciers, Seasonal variations.

34-1659
Snow conditions in the Sonnblick region. [Die Schneeverhältnisse im Sonnblickgebiet],
Steinhauser, F., *Sonnblick-Verein, Vienna. Jahresbericht*, 1968, Vols.63/65 (1965-1967), p.3-42, In German. 9 refs.
Snow cover distribution, Snowfall, Snow depth, Seasonal variations.

34-1660
Results of glacier measurements in upper Stubach valley (Hohe Tauern) in 1960-1967. [Ergebnisse der Gletschermessungen im obersten Stubachtal (Hohe Tauern) in den Jahren 1960-1967],
Slupetzky, H., et al, *Sonnblick-Verein, Vienna. Jahresbericht*, 1968, Vols.63/65 (1965-1967), p.43-51, In German. 6 refs.
Slupetzky, W.
Glacier mass balance, Glacier oscillation, Glacier tongues.

34-1661
Seismic surveys of glaciers in the Austrian Alps. [Seismische Untersuchungen zur Gletscherforshung in den österreichischen Alpen],
Steinhauser, P., *Sonnblick-Verein, Vienna. Jahresbericht*, 1968, Vols.63/65 (1965-1967), p.51-72, In German. 42 refs.
Glacier surveys, Seismic surveys.

34-1662
Glacier conditions in the Grossglockner and Sonnblick regions at the end of the summer of 1965, 1966 and 1967. [Der Zustand von Gletschern des Grossglockner- und Sonnblickgebietes am Ende der Sommer 1965, 1966 und 1967],
Tollner, H., *Sonnblick-Verein, Vienna. Jahresbericht*, 1968, Vols.63/65 (1965-1967), p.73-83, In German.
Glacier mass balance, Snow cover distribution, Firn.

34-1663
Secular variations of snow cover conditions in Austria. [Die säkularen Änderungen der Schneedeckenverhältnisse in Österreich],
Steinhauser, F., *Sonnblick-Verein, Vienna. Jahresbericht*, 1970, Vols.66/67 (1968-1969), p.3-19, In German with English summary. 9 refs.
Snow cover distribution, Snow depth, Snowfall, Snow accumulation, Austria.

34-1664
Precipitation on the karst plateau of the Hollen Mountains in Upper Austria. (Niederschlagsverhältnisse auf der Karsthochfläche des Hollengebirges in Oberösterreich).
Tollner, H. *Sonnblick-Verein, Vienna. Jahresbericht*, 1970, Vols.66/67 (1968-1969), p.19-35. In German. 13 refs.
Snow accumulation, Snowfall, Precipitation gages, Karst.

34-1665
Glacier measurement in the region of Tauernkraftwerke A.G. (Gletschermessungen im Bereich der Tauernkraftwerke A.G.).
Kropatschek, E. *Sonnblick-Verein, Vienna. Jahresbericht*, 1970, Vols.66/67 (1968-1969), p.36-43. In German with English and French summaries. 4 refs.
Glacier mass balance, Glacier surveys, Glacier surfaces, Photogrammetric surveys.

34-1666
Glacier conditions in the Grossglockner group and in the region of Rauriser Sonnblick, 1968 and 1969. (Der Zustand von Gletschern in der Grossglocknergruppe und im Gebiet des Rauriser Sonnblicks in den Jahren 1968 und 1969).
Tollner, H. *Sonnblick-Verein, Vienna. Jahresbericht*, 1970, Vols.66/67 (1968-1969), p.44-51. In German.
Glacier surveys, Glacier mass balance, Glacier oscillation.

34-1667
Huge avalanche near Bucheben, Austria. (Eine Riesenlawine bei Bucheben).
Tollner, H., *Sonnblick-Verein, Vienna. Jahresbericht*, 1970, Vols.66/67 (1968-1969), p.51-53. In German.
Avalanche formation, Avalanche deposits, Damage.

34-1668
Accumulation and deterioration of snow cover on Sonnblick during meteorological changes. (Der Aufbau und Abbau der Schneedecke auf dem Sonnblick im Wechselspiel der Wetterlagen).
Lauscher, A., et al. *Sonnblick-Verein, Vienna. Jahresbericht*, 1973, Vols.68/69 (1970/1971), p.3-30. In German. 14 refs.
Lauscher, F.
Snow cover distribution, Snow accumulation, Snow deterioration, Meteorological factors.

34-1669
Annual temperature in snow cover on the Upper Sonnblick (3100 m). (Der Jahresgang der Temperatur in der Schneedecke am Hohen Sonnblick (3100 m)).
Mahringer, W., *Sonnblick-Verein, Vienna. Jahresbericht*, 1973, Vols.68/69 (1970-1971), p.31-40. In German. 6 refs.
Snow temperature, Temperature distribution, Temperature variations.

34-1670
Glacier behavior in the Grossglockner and Goldberg groups in 1970, 1971 and 1972. (Das Verhalten der Gletscher in der Grossglockner- und Goldberggruppe in den Jahren 1970, 1971 und 1972).
Tollner, H., *Sonnblick-Verein, Vienna. Jahresbericht*, 1973, Vols.68/69 (1970-1971), p.54-64. In German. 4 refs.
Glacier mass balance, Glacier oscillation.

34-1671
Snow behavior and its economic importance for Austria. (Die Schneeverhältnisse Österreichs und ihre ökonomische Bedeutung).
Steinhauser, F., *Sonnblick-Verein, Vienna. Jahresbericht*, 1974, Vols.70/71 (1972-1973), p.3-42. In German. 10 refs.
Snow cover distribution, Snow depth, Snowfall, Water supply, Altitude.

34-1672
Glacier conditions in the Grossglockner and Sonnblick regions at the end of the 1972/73 ice budget year. (Der Zustand von Gletschern im Grossglockner- und Sonnblickgebiet am Ende des Eishaushaltsjahres 1972/73).
Tollner, H., *Sonnblick-Verein, Vienna. Jahresbericht*, 1974, Vols.70/71 (1972-1973), p.56-67. In German. 3 refs.
Glacier oscillation, Glacial hydrology, Glacier mass balance, Meltwater, Precipitation (meteorology).

34-1673
Results of two years of measurements of ablation and soil movement in the Mähder area, Kreuzeck group, Carinthia. (Ergebnisse zweijähriger Abtragsmessungen und Bodenbewegungsmessungen im Bereich "Mähder" in der Kreuzeckgruppe (Kärnten)).
Stocker, E., *Sonnblick-Verein, Vienna. Jahresbericht*, 1974, Vols.70/71 (1972-1973), p.87-97. In German. 11 refs.
Seasonal freeze thaw, Frost action, Frozen ground mechanics, Frost weathering, Soil mechanics.

34-1674
Computation of snow evaporation from Sonnblick Mountain. (Zur Berechnung der Schneeverdunstung auf dem Sonnblick).
Lauscher, A., et al. *Sonnblick-Verein, Vienna. Jahresbericht*, 1976, Vols.72/73 (1974-1975), p.3-10. In German. 2 refs.
Lauscher, F.
Snow evaporation, Computer applications.

34-1675
Glacier behavior in the Grossglockner and Sonnblick regions during the 1973/74 and 1974/75 ice budget years and long-term changes of the Gefrorene Wandkees in the Zillertal Alps. (Das Verhalten von Gletschern im Grossglockner- und Sonnblickgebiet in den Eishaushaltsjahren 1973/74 und 1974/75 und mehrjährige Änderungen am Gefrorene Wandkees in den Zillertaler Alpen).
Tollner, H., *Sonnblick-Verein, Vienna. Jahresbericht*, 1976, Vols.72/73 (1974-1975), p.33-46. In German.
Glacier mass balance, Glacier oscillation, Precipitation (meteorology), Glacier tongues, Snow accumulation, Firn.

34-1676
Sonnblick Station—a reporting station of the official Salzburg avalanche warning service. (Das Sonnblick-Observatorium als Meldestelle des amtlichen Salzburger Lawinenwarndienstes).
Mahringer, W., *Sonnblick-Verein, Vienna. Jahresbericht*, 1976, Vols.72/73 (1974-1975), p.85-89. In German.
Avalanche forecasting, Snow accumulation, Snow depth, Snow temperature, Snow water equivalent.

34-1677
Conditions of glaciers in the Grossglockner and Sonnblick regions in the 1975/76 ice budget year. (Der Zustand von Gletschern im Grossglockner- und Sonnblickgebiet im Eishaushaltsjahr 1975/76).
Tollner, H., *Sonnblick-Verein, Vienna. Jahresbericht*, 1977, Vols.74/75 (1976-1977), p.30-36. In German.
Glacier mass balance, Glacial meteorology, Glacial hydrology, Snow depth, Snow accumulation, Glacier oscillation, Mountain glaciers.

34-1678
Proceedings, Vol.2.
International Conference on Permafrost, 3rd, Edmonton, Alberta, July 10-13, 1978, Ottawa, National Research Council of Canada, 1979, 255p. In English, except three papers in Russian. Table of contents in English, French and Russian. For separate papers see 33-3830 and 34-1679 through 34-1689. For guidebooks to field trips which followed the technical sessions see 34-1690 through 34-1695. For Vol.1 see 32-3662.
Meetings, Permafrost preservation, Ground ice, Permafrost physics, Permafrost beneath structures.

34-1679
Geologic controls of the origin, characteristics and distribution of ground ice.
Mackay, J.R., et al, International Conference on Permafrost, 3rd, Edmonton, Alberta, July 10-13, 1978. Proceedings, Vol.2, Ottawa, National Research Council of Canada, 1979, p.1-18. Refs. p.12-18.
Konishchev, V.N., Popov, A.I.
Ground ice, Frost heave, Ice wedges, Pingos, Frost mounds, Geocryology.

34-1680
Permafrost-hydrogeological regionalization of eastern Siberia. (Merzlotno-gidrogeologicheskoe rajonirovanie vostochnoi Sibiri).
Mel'nikov, P.I., et al, International Conference on Permafrost, 3rd, Edmonton, Alberta, July 10-13, 1978. Proceedings, Vol.2, Ottawa, National Research Council of Canada, 1979, p.19-30. In Russian. 15 refs.
Tolstikhin, O.N.
Permafrost distribution, Hydrogeology, Geocryology.

34-1681
Vegetation and revegetation within permafrost terrain.
Bliss, L.C., International Conference on Permafrost, 3rd, Edmonton, Alberta, July 10-13, 1978. Proceedings, Vol.2, Ottawa, National Research Council of Canada, 1979, p.31-50. Refs. p.42-46.
Permafrost distribution, Discontinuous permafrost, Taiga, Vegetation patterns, Active layer, Tundra.

34-1682
Geophysics in the study of permafrost.
Scott, W.J., et al, MP 1266, International Conference on Permafrost, 3rd, Edmonton, Alberta, July 10-13, 1978. Proceedings, Vol.2, Ottawa, National Research Council of Canada, 1979, p.93-115. Refs. p.110-115.
Sellmann, P.V., Hunter, J.A.
Permafrost physics, Geophysical surveys, Seismic surveys, Soil temperature, Electrical resistivity, Active layer, Electromagnetic prospecting.

34-1683
Interaction of permafrost and structures. (Vzaimodeistvie vechnomerzlykh gruntov i sooruzhenij).
Vialov, S.S., International Conference on Permafrost, 3rd, Edmonton, Alberta, July 10-13, 1978. Proceedings, Vol.2, Ottawa, National Research Council of Canada, 1979, p.117-136. In Russian. 6 refs.
Foundations, Deformation, Permafrost beneath structures, Piles, Thermal analysis.

34-1684
Design, construction and performance of earth dams on permafrost in the far north. (Proektirovanie, stroitel'stvo i ekspluatatsia gruntovykh plotin na Krainem Severe i v usloviiakh vechnomerzlykh gruntov).
Tsytovich, N.A., et al, International Conference on Permafrost, 3rd, Edmonton, Alberta, July 10-13, 1978. Proceedings, Vol.2, Ottawa, National Research Council of Canada, 1979, p.137-149. In Russian. 30 refs.
Kronik, I.A.A., Brianov, G.F.
Earth dams, Permafrost beneath structures, Cold weather construction.

34-1685
Design and construction of the Alyeska pipeline.
Liguori, A., et al, International Conference on Permafrost, 3rd, Edmonton, Alberta, July 10-13, 1978. Proceedings, Vol.2, Ottawa, National Research Council of Canada, 1979, p.151-157.
Maple, J.A., Heuer, C.E.
Pipelines, Route surveys, Hot oil lines, Design, Construction, Pumps, Ports.

34-1686
Experimental research on the principal mechanical properties of freezing and frozen soils in China (a review).
Hsiao-pai, C., et al, International Conference on Permafrost, 3rd, Edmonton, Alberta, July 10-13, 1978. Proceedings, Vol.2, Ottawa, National Research Council of Canada, 1979, p.159-177. 15 refs.
Tzu-wang, W.
Frozen ground mechanics, Frost heave, Soil water, Ground thawing, Soil temperature.

34-1687
Testing of pile foundations in permafrost areas.
People's Republic of China. Research Group on Pile Foundations in Permafrost, International Conference on Permafrost, 3rd, Edmonton, Alberta, July 10-13, 1978. Proceedings, Vol.2, Ottawa, National Research Council of Canada, 1979, p.179-185.
Concrete piles, Foundations, Pile load tests, Permafrost beneath structures.

34-1688
Experimental roadbed in an area with a thick layer of ground ice.
People's Republic of China. Research Group on Experimental Roadbed Research, International Conference on Permafrost, 3rd, Edmonton, Alberta, July 10-13, 1978. Proceedings, Vol.2, Ottawa, National Research Council of Canada, 1979, p.187-197.
Roadbeds, Construction, Ground ice, Insulation, Insulation, Thaw depth, Embankments.

34-1689
Experimental research on an embankment at the lower limit of alpine permafrost.
Kuo-tung, C., et al, International Conference on Permafrost, 3rd, Edmonton, Alberta, July 10-13, 1978. Proceedings, Vol.2, Ottawa, National Research Council of Canada, 1979, p.199-222. 5 refs.
Po-liang, T.
Embankments, Permafrost beneath structures, Permafrost preservation, Ground ice, Soil temperature, Soil water, Air temperature.

34-1690
Field trip No.1: Central Yukon-Alaska.
Hughes, O.L., et al, International Conference on Permafrost, 3rd, Edmonton, Alberta, July 10-13, 1978. Guidebook, Ottawa, National Research Council of Canada, 1979, 32p., 36 refs.
Van Everdingen, R.O.
Geologic structures, Permafrost distribution, Periglacial processes, Placer mining.

34-1691
Field trip No.2: Upper Mackenzie River Valley.
Chatwin, S.C., et al, International Conference on Permafrost, 3rd, Edmonton, Alberta, July 10-13, 1978. Guidebook, Ottawa, National Research Council of Canada, 1979, 53p., 32 refs.
Rutter, N.W.
Ground ice, Permafrost distribution, Geologic structures, Landslides, Peat.

34-1692
Field trip No.3: Lower Mackenzie River Valley.
Heginbottom, J.A., ed, International Conference on Permafrost, 3rd, Edmonton, Alberta, July 10-13, 1978. Guidebook, Ottawa, National Research Council of Canada, 1979, 66p. + appends., Refs. p.55-60.
Geologic structures, Permafrost distribution, Landforms, Subsea permafrost, Permafrost hydrology.

34-1693
Field trip No.4: Northern Manitoba—District of Keewatin.
Brown, R.J.E., et al, International Conference on Permafrost, 3rd, Edmonton, Alberta, July 10-13, 1978. Guidebook, Ottawa, National Research Council of Canada, 1979, 76p., Numerous refs.
Shilts, W.W.
Geologic structures, Permafrost distribution, Soil mechanics, Economic development, Electric power, Railroads.

34-1694
Field trip No.5: Northern Quebec—Labrador.
Nicholson, F.H., International Conference on Permafrost, 3rd, Edmonton, Alberta, July 10-13, 1978. Guidebook, Ottawa, National Research Council of Canada, 1979, 96p., Refs. p.61-67.
Permafrost distribution, Active layer, Suprapermafrost ground water, Research projects, Periglacial processes, Mining.

34-1695
Field trip No.6: Rocky Mountains—Alberta foothills.
Harris, S.A., et al, International Conference on Permafrost, 3rd, Edmonton, Alberta, July 10-13, 1978. Guidebook, Ottawa, National Research Council of Canada, 1979, 43p. + 11p. append., Numerous refs.
Gardner, J.
Permafrost structure, Periglacial processes, Glacier mass balance, Glacial deposits.

34-1696
Basic factors determining the effectiveness of scrapers designed for frozen and hard grounds. [Osnovnye faktory effektivnosti rykhliteleĭ merzlykh i prochnykh gruntov],
Sakovich, V.L., et al, *Gornye, stroitel'nye i dorozhnye mashiny*, 1979, Vol.28, p.54-58, In Russian.
Zhil'tsova, T.A.
Excavation, Frozen ground, Design.

34-1697
Water temperature beneath ice in the Bratsk reservoir. [Temperatura vody pod ledianym pokrovom Bratskogo vodokhranilishcha],
Shishkanova, E.F., *Leningrad. Gosudarstvennyĭ gidrologicheskiĭ institut. Sbornik rabot po gidrologii*, 1979, No.15, p.81-86, In Russian. 6 refs.
Subglacial observations, Icebound lakes, Water temperature, Ice conditions.

34-1698
Grain clusters in wet snow.
Colbeck, S.C., *Journal of colloid and interface science*, Dec. 1979, 72(3), MP 1267, p.371-384, 19 refs.
Wet snow, Snow crystal structure, Grain size, Boundary value problems, Snow physics.
The grain boundaries in snow are generally unstable when the pore space is filled with liquid water (i.e., liquid-saturated snow). Thus, when unstressed snow is saturated with the melt, the ice particles in snow are cohesionless spheres. This leads to very low strengths and to rapid grain growth due to heat flow among particles of different sizes. The grain boundaries in highly unsaturated snow (up to about 7% liquid by volume) with small applied loads are stable, and the grains must be arranged in clusters to achieve local force equilibrium. Two grains bond together with geometrical constraints on the radii of the phase boundaries. Three grains join at a liquid vein whose size is determined by grain size and capillary pressure (i.e., liquid "tension"). Slow grain growth occurs by sublimation, vapor diffusion, and condensation, and intergrain strength is relatively high. Once grain clusters are formed, equilibrium imposes constraints on the curvature of the phase boundaries which limit change in the capillary pressure.

34-1699
Sea ice off the Icelandic coasts October 1970-September 1971.
Icelandic Meteorological Office, Reykjavik, 1979, 97p., In Icelandic and English. 10 refs.
Sea ice, Ice conditions, Pack ice, Icebergs, Iceland.

34-1700
Effects of ice and snow cover on transmission of light in lakes.
Maguire, R.J., *Canada. Inland Waters Directorate. Scientific series*, 1975, No.54, 24p., In English with French summary. 68 refs.
Lake ice, Light transmission, Ice cover effect, Snow cover effect, Ice optics, Snow optics.

34-1701
Snow cover surveys 1978-79.
U.S. Geological Survey, Silver Spring, Maryland, U.S. National Oceanic and Atmospheric Administration, 1979, 9 leaves, Contains data for New York.
Snow surveys, Statistical analysis, United States—New York.

34-1702
Screw-driven vehicles for Siberia.
Mavlenkov, A., *U.S. Army Foreign Science and Technology Center. Translation*, Aug. 1979, FSTC-HT-510-79, 9p., ADB-041 954L, Translation of Tekhnika i nauka 10:24-26, 1978. Distribution limited to U.S. Government agencies only.
Ice cutting, Vehicles, Snow vehicles.

34-1703
Experimental laser attenuation in a snow environment.
Miller, J.T., *U.S. Air Force. Arnold Engineering Development Center. Technical report*, Mar. 1978, AEDC-TR-77-99, 84p., ADA-051 586, 4 refs.
Lasers, Snow optics, Light scattering, Atmospheric attenuation, Snow cover effect, Models.

34-1704
Snow and avalanches in the Swiss Alps, winter 1977-1978. [Schnee und Lawinen in den Schweizer Alpen, Winter 1977/78],
Davos, Switzerland. Eidgenössisches Institut für Schnee- und Lawinenforschung, Its Winterberichte, No.42, 1979, Davos, Switzerland, 1979, 152p., In German. For selected articles see 34-1705 through 34-1707.
Snow surveys, Avalanches, Snow depth, Damage, Switzerland—Alps.

34-1705
Snow and avalanches in the Davos region. [Schnee und Lawinen in der Region Davos],
Föhn, P., et al, *Davos, Switzerland. Eidgenössisches Institut für Schnee- und Lawinenforschung. Winterberichte*, 1979, No.42, p.29-40, In German.
Beck, E.
Snowfall, Snow surveys, Avalanche formation, Snow depth, Snow temperature, Meteorological charts, Switzerland—Davos.

34-1706
Snow and avalanche conditions in the Swiss Alps. [Schnee- und Lawinenverhältnisse im schweizerischen Alpengebiet],
Schild, M., et al, *Davos, Switzerland. Eidgenössisches Institut für Schnee- und Lawinenforschung. Winterberichte*, 1979, No.42, p.41-88, In German.

Petroleum industry, Steel structures, Industrial buildings, Residential buildings, Thermal insulation.

34-1709
Performance and construction properties of glass-phenol-formaldehyde plastic SF1. [Stroitel'no-ekspluatatsionnye svoĭstva steklofenoplasta SF1],
Stefurak, B.I., et al, *Stroitel'stvo truboprovodov*, Oct 1979, No.10, p.14-15, In Russian.
Sosnina, S.F., Levinskaia, E.IA., IAkovleva, L.A.
Thermal insulation, Plastics, Walls, Panels.

34-1710
Thermal inertia of ground and the development of tangential frost heave forces. [Teplovaia inertsionnost' grunta i razvitie kasatel'nykh sil pucheniia],
Sokolov, V.M., *Stroitel'stvo truboprovodov*, Oct 1979, No.10, p.21-22, In Russian.
Frozen fines, Sands, Clays, Frost penetration, Frost heave, Thermal stresses, Snow cover effect.

34-1711
Thermal regime of elevated pipelines. [Termicheskiĭ rezhim nadzemnykh truboprovodov],
Gubanov, B.A., et al, *Stroitel'stvo truboprovodov*, Oct 1979, No.10, p.24, In Russian.
Gubanov, A.A., Vdovin, IU.I.
Hot oil lines, Thermal insulation, Heat transfer, Thermal regime, Design.

34-1712
Allowing for temperature drop when building and operating northern gas lines. [Uchityvat' temperaturnye perepady pri stroitel'stve i ekspluatatsii severnykh gazoprovodov],
Leĭman, P.P., et al, *Stroitel'stvo truboprovodov*, Oct. 1979, No.10, p.33-34, In Russian.
Shneerov, A.L.
Gas pipelines, Permafrost beneath structures, Welding, Pipes (tubes), Thermal stresses, Design.

34-1713
Standard foundation design for structures built on permafrost. [Unifikatsiia konstruktsiĭ fundamentov sooruzheniĭ na vechnomerzlykh gruntakh], *Stroitel'stvo truboprovodov*, Oct. 1979, No.10, p.36, In Russian.
Industrial buildings, Petroleum industry, Foundations, Prefabrication, Concrete structures, Plates, Piles, Permafrost bases.

34-1714
Hydromechanization of earthwork in West Siberia. [Gidromekhanizirovannyĭ sposob proizvodstva zemlianykh rabot v Zapadnoĭ Sibiri],
Vavilov, N.G., *Transportnoe stroitel'stvo*, Nov. 1979, No.11, p.4-6, In Russian.
Railroads Roads, Earthwork, Dredging, Embankments, Earth fills, Cold weather construction.

34-1715
Tunnel construction on landslide-prone slopes. [Sooruzhenie tonneleĭ na gorno-obval'nykh uchastkakh],
Aminov, E.Kh., *Transportnoe stroitel'stvo*, Nov. 1979, No.11, p.12-14, In Russian.
Railroads, Landslides, Tunnels, Slope processes, Slope stability, Supports, Concrete structures.

34-1716
Subgrade planning in freezing weather. [Mekhanizatsiia planirovki zemlianogo polotna v zimnikh usloviiakh],
Nedorezov, I.A., et al, *Transportnoe stroitel'stvo*, Nov. 1979, No.11, p.24-26, In Russian.
Roads, Subgrade preparation, Excavation, Frozen ground.

34-1717
Testing ice-bound columnar piles for horizontal loads. [Ispytanie vmorozhennykh sval-stolbov gorizontal'nymi nagruzkami],
Ablogin, E.A., et al, *Transportnoe stroitel'stvo*, Nov. 1979, No.11, p.42-43, In Russian.
Asmolov, V.A., Chakhlov, V.S.
Foundations, Piles, Concrete structures, Reinforced concretes, Permafrost beneath structures, Tests.

34-1718
Ecologic and biogeochemical peculiarities of northern taiga in the Kola Peninsula. [Ekologicheskie i biogeokhimicheskie osobennosti severotaezhnykh lesov Kol'skobo poluostrova],
Nikonov, V.V., et al, *Ekologiia*, Sep.-Oct. 1979, No.5, p.33-38, In Russian. 6 refs.
Manakov, K.N.
Taiga, Landscape types, Plant ecology, Soil chemistry, Biomass.

34-1719
Thermal stresses in trapezoidal layered panels with corrugated facing. [Temperaturnye napriazhenia v slostykh panelıakh s gofrirovannymi obshivkami trapezievidnogo profilia].
Chaplinskii, I.A., et al. *Russia. Ministerstvo vysshego i srednego spetsial'nogo obrazovaniia. Izvestiia vysshikh uchebnykh zavedenii. Stroitel'stvo i arkhitektura*, 1979, No.6, p.39-45, In Russian. 1 ref.
Albaut, G.N., Khva, K.E.
Prefabrication, Panels, Metals, Cellular plastics, Thermal insulation, Buildings, Walls, Thermal stresses.

34-1720
Calculating temperature distribution in seasonally freezing ground by the finite element method. [Primenenie metoda konechnykh elementov k raschetu raspredeleniia temperatury v tolshche sezonnopromerzaiushchego grunta].
Rudykh, O.L., et al. *Russia. Ministerstvo vysshego i srednego spetsial'nogo obrazovaniia. Izvestiia vysshikh uchebnykh zavedenii. Stroitel'stvo i arkhitektura*, 1979, No.6, p.130-135, In Russian. 8 refs.
Rudykh, L.N.
Soil freezing, Seasonal freeze thaw, Frost penetration, Frozen ground temperature, Temperature distribution, Analysis (mathematics).

34-1721
Radioactive isotope instruments for measuring bearing ground compaction. [Tekhnologiia i mekhanizatsiia kontrolia uplotnenitia osnovanil radioizotopnymi priboramij.
Kliushkin, V.K., et al. *Mekhanizatsiia stroitel'stve*, Nov. 1979, No.11, p.15-16, In Russian. 2 refs.
Arzhintar', M.I., Tepinskil, A.Kh.
Foundations, Settlement (structural), Compaction, Measuring instruments, Radioactive isotopes.

34-1722
New road construction equipment. [Novye dorozhno-stroitel'nye mashiny].
Volkova, A.F. *Mekhanizatsiia stroitel'stva*, Nov. 1979, No.11, p.22-23, In Russian.
Excavation, Permafrost.

34-1723
Earthwork on construction sites of the Baykal Amur railroad. [Razrabotka gruntov na BAMe].
Moshkov, V.M. *Mekhanizatsiia stroitel'stva*, Nov. 1979, No.11, p.24, In Russian.
Excavation, Tracked vehicles, Permafrost.

34-1724
Nearshore environments of the North Slope and the petroleum industry.
Schindler, J., et al. Geoscience and man; Vol.12, June 20, 1975, Baton Rouge, Louisiana State University School of Geoscience, 1975, p.67-75, In Coastal resources edited by H.J. Walker. 16 refs.
Walker, H.J.
DLC GB460.A2C6
Polar regions, Arctic landscapes, Environments, Sea ice, Permafrost, Construction, Transportation.

34-1725
Ice stagnation and paleodrainage in and near an interlobate area.
Rieck, R.L., *Michigan academician*, Winter 1979, 11(3), p.219-235, 17 refs.
Glacial geology, Moraines, Ground ice, Landforms, Periglacial processes.

34-1726
Changes in water content in and under frozen soil in Iowa, U.S.A.
Willatt, S.T., *Geoderma*, Nov. 1979, 22(4), p.323-331, 10 refs.
Frozen ground temperature, Temperature measurement, Soil water, Water content, Seasonal variations.

34-1727
Frost heaving of soils at two locations in southern Ontario, Canada.
Fahey, B.D., *Geoderma*, July 1979, 22(2), p.119-126, 9 refs.
Soil freezing, Frost penetration, Frost heave, Water table.

34-1728
Ice-breaking drillship for Arctic exploration. *Ocean industry*, July 1973, 8(7), p.30-36.
DLC GC1.O22
Icebreakers, Offshore drilling, Ships.

34-1729
Numerical investigation of the Bering Sea circulation using a linear homogeneous model.
Han, Y.-J., et al. *U.S. Pacific Marine Environmental Laboratory. Technical memorandum*, June 1979, NOAA-ERL-PMEL-15, 37p., PB 299 884, 13 refs.
Galt, J.A.
Ocean currents, Wind pressure, Water masses, Mass transfer, Mathematical models, Seasonal variations, Bering Sea.

34-1730
Snow mapping and runoff forecasting: Examination of ERTS-1 capabilities and potential benefits from an operational ERS system.
Earth Satellite Corporation, *U.S. Geological Survey Report*, Mar. 13, 1974, USGS-DO-74-009, 160p. + 25p appends., PB-232 903, For Append. 2 see 30-91. Refs. p.B-1 through B-7.
Remote sensing, Mapping, Runoff forecasting, Water supply, Cost analysis.

34-1731
Physical oceanography from the Arctic ice pack: Project AIDJEX SAR programs.
Amos, A.J., *Columbia University. Lamont-Doherty Geological Observatory. Report*, Dec. 10, 1975, LDGO no.2190, Plessey Environmental Systems S/T/D Conference and Workshop, 3rd, Feb. 12-14, 1975, San Diego, California. Proceedings, 17p. ADA-018 924.
Oceanography, Sea ice, Ocean currents, Ice bottom surface, Water temperature, Salinity.

34-1732
Solar altitude effects on ice albedo.
Bolsenga, S.J., *U.S. National Oceanic and Atmospheric Administration. Technical memorandum*, June 1979, NOAA-ERL-GLERL-25, 43p., PB-301 252, 7 refs.

Brown, M.-L.
Lake ice, Ice formation, Ice breakup, Meteorological data, Periodic variations.
A 19-yr record of the annual closing and opening dates of operation of the Lake Champlain ferry at Grand Isle, Vermont, which are controlled by the lake's ice cover, was made available to CRREL. These navigation records accurately approximated the freeze-over and breakup dates for the ferry crossing area between Gordon Landing, Vermont, and Cumberland Head, New York. When compared statistically with water temperature and climatological data for the same years at nearby Lake Champlain locations, the dates allowed accurate predictions of ice formation. From nearby air temperature records, cumulative freezing degree-day (C) curves were plotted for each year of record, and ice formation dates and standard deviations were predicted with considerable accuracy. Several methods of predicting ice formation on Lake Champlain were attempted. The most accurate approach used a combination of water temperatures and freezing degree-days. The influence of wind speed on ice cover formation and prediction are also discussed in the report.

Glacier ice, Ice cores, Radiation.
In an analysis of NO3 in an antarctic ice core we have found four spikes of high concentration, three of which occur at depths which correspond roughly to the dates of known galactic supernovae (SN). The production of the observed NO3 peaks by the hard X rays generated by a SN outburst (particularly Type II) does not seem inconceivable at least from the point of view of energy requirements and current SN models. We predict that the bright SN of 1006 will be 'observed' about 15 m beyond the end of the current core. If this is true, our identification of these spikes with SN will have important consequences for the theory of SN, atmospheric chemistry and transport, and even the dating of ice cores. (Auth.)

Ross Ice Shelf temperatures support a history of ice-shelf thickening.
MacAyeal, D.R., et al, *Nature*, Dec. 13, 1979, 282(5740), p.703-705, 17 refs.
Thomas, R.H.
Ice shelves, Ice melting, Ice cover thickness, Ice temperature, Antarctica—Ross Ice Shelf.
The ice sheet in West Antarctica is grounded on a sub-sea level basin in the antarctic continental shelf. At the seaward margins, where ice thicknesses are reduced sufficiently to attain neutral buoyancy, floating ice shelves form. The two largest are the Ross and Ronne ice shelves. Because the depth of the continental shelf increases towards the center of the West Antarctic ice sheet, ice discharge could accelerate irreversibly until the grounded portion of the ice sheet had completely disappeared. The resistance to ice discharge provided by the ice shelves is the major factor preventing such a collapse. Geological evidence indicates that the extent of grounded ice in the West Antarctic has fluctuated widely during the Pleistocene, and complete removal of the ice sheet may have occurred during the Sangamon interglacial following a climatic warming, which was probably associated with a retreat of the ice-shelf seaward margins. One of the most active ice streams draining West Antarctica flows into the southeast corner of the Ross Ice Shelf. Surface observations in this area indicate that, either the ice shelf is thickening, or that there is appreciable melting from beneath ice shelf that is >500 km from the open sea. Such melting would strongly influence temperatures within the ice shelf, and here a temperature-depth profile from the ice shelf is used to estimate the basal regime. It is concluded that, for much of the southeast corner, basal freezing/melting rates have been near zero for the past few hundred years. This implies that, within this region, the ice shelf is thickening at approx 0.3 m/yr. (Auth.)

Doake, C.S.M., Horsfall, J.A.C.
Ice shelves, Ice surface, Measuring instruments, Ice sheets.
A new design of tiltmeter has been used to measure the tidal bending of the Ronne Ice Shelf, Antarctica. By this means the point at which the ice sheet leaves the land and starts floating on the sea has been defined to within 600m. Monitoring this position in future should give an indication of the state of balance of the West Antarctic ice sheet, often considered to be unstable even if not actually disintegrating. The hydrostatic level meter is light and simple and can operate unattended while recording continuously for periods of several weeks. Observations at eight different sites on Rutford Ice Stream gave tidal records on ice more than 1,700 m thick and at points up to 600 km from the nearest open sea. (Auth.)

Variations in the ice surface height along the Mirnyy-100 km profile. [Izmenenie vysoty poverkhnosti l'da na profile Mirnyi-100-i kilometr].
Meier, S., *Sovetskaia antarkticheskaia ekspeditsiia. Informatsionnyi biulleten'*, 1979, No.99, p.17-24, In Russian. 17 refs.
Ice sheets, Mass balance, Glacier mass balance, Antarctica—Mirnyy Station.
Thickness studies were done in 1962 and 1965, and long-term accumulation records were kept along a 100-km profile near Mirnyy. In spite of rather large measurement errors, tendencies in ice sheet thickness are apparent and can be compared with observations done at other continental stations. A positive mass balance occurs up to the 5-km point (probably because the ice is held in crags). After that, the ice surface gradually drops off. Global climate accounts for this phenomenon, while local factors resulting from flow mechanics account for maximum drop of 2m/yr in the Helen Glacier area. South of the Helen Glacier basin, the surface appears to be almost in equilibrium.

Dmitriev, D.N.
Temperature measurement, Thermal drills, Ice temperature, Antarctica—Vostok Station.
Measurements down to 900 m were done to determine ice cover temperature and also to assess the effect of thermal drills on ice temperature. The sharpest decline in temperature occurs between 20 and 60 m in depth. Borehole temperature recovers within 150-200 days after drilling. Accuracy and reliability of ice temperature determinations depend on the state of the hole, its integrity and its stability. Readings done both at the time of drilling and 327 days later are in good agreement with theoretical data; at a low temperature gradient natural air convection introduces very little distortion into temperatures in deep boreholes.

34-1826
Determining horizontal ice flow gradients in the Vostok Station area down to 800 m. [Opredelenie gradientov gorizontal'not skorosti techeniia l'da v raione stantsii Vostok do glubiny 800 m].
Dmitriev, D.N., et al, *Sovetskaia antarkticheskaia ekspeditsiia. Informatsionnyi biulleten'*, 1979, No.99, p.32-34, In Russian. 3 refs.
Vostretsov, R.N.
Ice sheets, Thermal drills, Flow measurement, Glacier flow, Antarctica—Vostok Station.
Beginning in 1973, study of the ice sheet movement was carried out in a 905.4-m borehole near Vostok Station. No changes in angle of inclination, measured every 8-10 months, were noted. The drilling method, an electric thermal drill on a cable, produced a virtually vertical hole. These findings support previous conclusions that the ice cover around Vostok is practically stationary.

34-1827
Glacier echo sounding studies around Molodezhnaya. [Raboty po radiolokatsionnomu zondirovaniiu lednikov v raione Molodezhnoi].
Trepov, G.V., et al, *Sovetskaia antarkticheskaia ekspeditsiia. Informatsionnyi biulleten'*, 1979, No.99, p.35-38, In Russian. 1 ref.
Sheremet'ev, A.N., Stepanov, V.K.
Echo sounding, Glacier thickness, Antarctica—Molodezhnaya Station, Antarctica—Hays Glacier, Antarctica—Campbell Glacier.
A network over three glaciers in the Molodezhnaya Station area was made in the summer of 1975-76 to measure ice thickness by echo sounding and to set up flow measurement and control point networks. A network was laid out to allow sounding determinations of flow rate to be done at 19 points. Data from echo sounding work are compared with flow rate findings obtained by geodesic methods.

34-1828
Connections in the Gamburtsev and Vernadskiy Subglacial Mountains. [O sviazi podlednykh gor Gamburtseva i Vernadskogo].
Koblents, I.A.P., *Sovetskaia antarkticheskaia ekspeditsiia. Informatsionnyi biulleten'*, 1979, No.99, p.39-48, In Russian. 9 refs.
Ice sheets, Ice cover thickness, Glacier thickness, Antarctica—Enderby Land.
The present work is an attempt to establish relationships among the gravimetric charts of Enderby Land and the South Pole area and, by analyzing the gravity anomalies, to outline subglacial relief along 40-42° E. Extrapolating data from Enderby Land will also make it possible to chart the subglacial topography north and south from the Yamato Mountains and to study the Gamburtsev Subglacial Mountains. Subglacial relief data from gravimetry readings are set out in charts. Comparing these findings with echo sounding data gathered by British-American researchers shows that the Gamburtsev Subglacial Mountains are better described as highlands, which cover the central part of East Antarctica between Komsomolskaya and the Pole of Inaccessibility. They extend about 1000 km and have no direct connection with the Vernadskii Mountains.

34-1829
Temperature regime of the antarctic fast ice. [Temperaturnyi rezhim antarkticheskogo pripaia].
Nazintsev, IU.L., *Sovetskaia antarkticheskaia ekspeditsiia. Informatsionnyi biulleten'*, 1979, No.99, p.63-68, In Russian. 4 refs.
Fast ice, Ice shelves.
Ice condition reports from ships in the Weddell Sea in 1975-76 are summarized and compared with satellite records. Troublesome features of Weddell Sea ice navigation are pointed out; leads must be used with great caution as they often lie parallel and do not connect or reach open water.

34-1830
Snow measurements on the antarctic shelf ice. [O snegomernykh nabliudeniiakh na antarkticheskom pripae].
Kozlovskii, A.M., *Sovetskaia antarkticheskaia ekspeditsiia. Informatsionnyi biulleten'*, 1979, No.99, p.74-77, In Russian. 8 refs.
Sea ice, Sea water, Fast ice, Floating ice, Snow accumulation, Snow depth, Seepage, Antarctica.
Since sea water infiltration of sea ice is different in Antarctic from that in the Arctic, traditional measures of snow accumulation on shelf ice have led to serious underestimation of snow accumulation in southern high latitudes. The depth of the snow-water layer in the Bay of Cosmonauts and near Mirnyy is discussed and charted and a new method for more accurately assessing the contribution of snow accumulation to shelf ice depth suggested.

Merlivat, L., Jouzel, J., Pourchet, M.
Ice cores, Ice sheets, Isotope analysis, Snow accumulation, Ice dating, Climate.
Simple glaciological conditions at Dome C in east Antarctica have made possible a more detailed and accurate interpretation of an ice core to 950 m depth spanning some 32,000 yr than that obtained from earlier ice cores. Dated events in comparable marine core has enabled the reduction of accumulation rate during the last ice age to be estimated. Climatic events recorded in the ice core indicate that the warmest Holocene period in the Southern Hemisphere occurred at an earlier date than in the Northern Hemisphere. (Auth.)

Eaton, R.A., Stubstad, J.
Roads, Cold weather tests, Pavements, Bearing strength, Flexural strength.
Nondestructive repetitive plate bearing (RPB) tests were conducted on various test sections in state highways in Maine during April 13-15, 1976. The RPB test consists of making resilient surface deflection measurements during repetitive loadings at various radii from the load plate. The pavement system stiffness was calculated, and the resilient modulus values for the various pavement layers were determined with the Chevron computer program for a layered elastic system. A thawed analysis using nondimensional deflection curves for the various sections provided a guide to the susceptibility of the pavement systems to surface failure and pothole development. Some comparisons between stabilized and nonstabilized aggregate and soil were made with calculated stiffness values. The moduli of the various materials were also compared. The residual surface deflections during testing for several pavement systems indicated a linear logarithmic relationship with number of load applications. A relationship between the modulus of the asphalt cement concrete pavement and pavement temperature was developed for the limited temperature range during the testing.

Nakano, Y., *Advances in water resources*, Dec. 1979, Vol.2, MP 1269, p.185-190, 7 refs.
Water table, Boundary value problems, Analysis (mathematics).
The traditional viewpoint in hydrology and soil physics purports that water tables appearing in porous media described by Darcy's law and the extended Darcy's law are not singular surfaces. Several particular solutions in which singularities occur are presented as counter-examples to the traditional viewpoint and as evidence supporting the new theory that water tables are generally singular surfaces.

Bentley, C.R.
Ice sheets, Wave propagation, Ice density, Analysis (mathematics), Antarctica—Marie Byrd Land.
Surface-wave dispersion for the ice sheet of Marie Byrd Land, in which velocity and density increase continuously with depth and gradients near the surface are steep, has been computed by solving the equations of motion directly by finite differences. No simplifying assumptions or approximations about parameter variations with depth have been made. Computer results agree well with observed data without the introduction of any anisotropy, as was needed in a previous analysis (Acharya, 1972). Tests of the assumptions made in the previous analysis show that (a) the approximation Poisson's ratio = 1/4 introduces no significant error, even though Poisson's ratio actually varies from 1/4 to 1/3 in the upper part of the ice sheet, and (b) the assumption of a constant density, required if one is to separate compressional and shear-wave displacement potentials, is unsatisfactory. (Auth.)

Ice-sheet glaciology.
Drewry, D., *Progress in physical geography*, Sep. 1979, 3(3), p.313-328, Numerous refs.
Research projects, Ice sheets, Radio echo soundings, Drilling, Spacecraft, Ice composition, Models.
The author reviews the glaciological literature since 1970, analyzing various methods of exploring ice sheets, new methods, improved older methods, useful ones no longer actively pursued, mainly due to lack of funding. He cites some of the results and successes of the various methods and mentions several of the highly organized research projects currently in progress both in Antarctica and in Greenland.

34-1883
Polar research.
Turner, M.D., *Geotimes*, Feb. 1980, 25(2), p.43-44.
Glacier thickness, Ice sheets, Permafrost, Drill core analysis.
Antarctic and Arctic research studies of the past year are reviewed. Preliminary findings include the following. A rich and varied microbial flora has been found in rocks of the dry valleys. Major outlet glaciers from the East Antarctic ice sheet, such as the Byrd and Darwin, were found to be 1,000 m thicker near their mouths. Eighteen different amino acids, several of them unknown from modern terrestrial sources, were identified in well-preserved and uncontaminated antarctic carbonaceous meteorites. Geochemical investigations of the antarctic ice sheets have shown that fluctuations in the concentrations of nitrate and ammonium ions, from ice and snow layers of known dates, can be correlated with observed solar activity. In addition to the above studies, a field party of some 40 scientists from 7 countries worked in the Ellsworth Mountains, and New Zealand scientists drilled a deep core hole in western McMurdo Sound, using annual sea ice as a drilling platform. West Germany is conducting its first land-based antarctic expedition in nearly 40 yr.

34-1884
Problems of the Arctic and the Antarctic, collection of articles, Vol.45, 1974.
Treshnikov, A.F., ed. New Delhi, Amerind Publishing Co., 1979, 171p., TT 75-52083, Translation of Problemy Arktiki i Antarktiki, sbornik statei, vyp.45, 1974. Refs. passim. For selected articles see 34-1885 through 34-1896 or B-22705 and I-22704.
Sea ice, Ice cover strength, Hydrodynamics, Glacial hydrology, Sea level, Climatic changes, Research projects.
This volume includes papers devoted to the study and investigation of different aspects of arctic and antarctic climatology. The first four papers deal with glacial water reserve and discharge in the Arctic, Arctic cooling, large-scale sea level oscillations in the Northern Hemisphere and high relative humidity in the Arctic. Five papers are devoted to atmospheric studies in the polar regions. They cover such topics as cyclic oscillations, conjunction of certain centers of atmospheric action, characteristics of total radiation, change in wind speed and direction during geomagnetic disturbances and the relation of ionospheric troughs and plasmapause in the afternoon section. There are three papers on studies relating to the phase composition of ice, forecasting its flexural strength, and size determination of ice floes. Besides, there is a paper on the distribution of microscopic algae in Davis Sea fast ice. (Auth. mod.)

34-1885
Water resources of glaciers and glacial discharge in the Arctic.
Govorukha, L.S., et al, *Problems of the Arctic and the Antarctic, collection of articles*, 1979, Vol.45, p.1-12, TT 75-52083, For Russian original see 30-3. 33 refs.
Ivanov, V.V., Chizhov, O.P.
Glacial hydrology, Glacier ablation, Runoff, Glacier mass balance, Seasonal ablation, Seasonal variations.

34-1886
Cooling of the Arctic.
Zakharov, V.F., *Problems of the Arctic and the Antarctic, collection of articles*, 1979, Vol.45, p.13-22, TT 75-52083, For Russian original see 30-4. 14 refs.
Climatic changes, Air temperature, Weather forecasting.

34-1887
Statistical structure of large-scale sea level oscillations in the high latitudes of the Northern Hemisphere.
Bannov-Balkov, IU.L., *Problems of the Arctic and the Antarctic, collection of articles*, 1979, Vol.45, p.23-30, TT 75-52083, For Russian original see 30-5. 5 refs.
Sea level, Statistical analysis, Periodic variations.

34-1888
Secular cycle of solar activity and baric field of Earth's Northern Hemisphere.
Maksimov, I.V., et al, *Problems of the Arctic and the Antarctic, collection of articles*, 1979, Vol.45, p.31-43, TT 75-52083, For Russian original see 30-6. 16 refs.
Sleptsov-Shevlevich, B.A.
Solar activity, Atmospheric pressure, Ice cover, Periodic variations.

34-1889
Regime of high relative humidity of air in the Arctic.
Zav'ialova, I.N., *Problems of the Arctic and the Antarctic, collection of articles*, 1979, Vol.45, p.44-56, TT 75-52083, For Russian original see 30-7. 13 refs.
Humidity, Polar regions.

34-1890
Quantitative relations in phase composition of sea ice.
Nazintsev, IU.L., *Problems of the Arctic and the Antarctic, collection of articles*, 1979, Vol.45, p.76-83, TT 75-52083, For Russian original see 30-8. 14 refs.
Sea ice, Ice salinity, Ice thermal properties.

34-1891
Method of forecasting flexural strength of ice cover.
Ryvlin, A.IA., *Problems of the Arctic and the Antarctic, collection of articles*, 1979, Vol.45, p.99-108, TT 75-52083, For Russian original see 30-9. 7 refs.
Ice cover strength, Sea ice, Flexural strength, Ice salinity, Forecasting.

34-1892
Choice of algorithms for numerical determination of size distribution and compactness of ice floes.
Khelsin, D.E., *Problems of the Arctic and the Antarctic, collection of articles*, 1979, Vol.45, p.109-117, TT 75-52083, For Russian original see 30-10. 4 refs.
Sea ice distribution, Ice cover strength, Icebergs, Ice forecasting, Ice conditions, Mathematical models.

34-1893
Instability of internal waves as a mechanism of heat transfer from Atlantic waters to the Arctic Basin.
Alekseev, G.V., et al, *Problems of the Arctic and the Antarctic, collection of articles*, 1979, Vol.45, p.118-125, TT 75-52083, For Russian original see 30-11. 15 refs.

34-1894
Lower limit of application of hydrodynamic model of ice drift.
Khelsin, D.E., et al, *Problems of the Arctic and the Antarctic, collection of articles*, 1979, Vol.45, p.154-157, TT 75-52083, For Russian original see 30-13. 4 refs.
Ivchenko, V.O.
Sea ice, Drift, Hydrodynamics, Mathematical models, Icebergs.

34-1895
Microscopic algae in Davis Sea fast ice.
Bulnitskiĭ, V.Kh., et al, *Problems of the Arctic and the Antarctic, collection of articles*, 1979, Vol.45, p.126-137, TT 75-52083, For Russian original see 30-12. 10 refs.
Kozyrenko, T.F., Shamont'ev, V.A.
Fast ice, Cryobiology, Algae, Antarctica—Davis Sea.
Samples of fast ice taken from time of formation until melting in the spring were examined for algae. Species found at various times of the year and their relative frequency are given. The number and variety of algae and the monthly variations in the population testify to an active microscopic fauna in fast ice

34-1896
Determination of winter accretion of ice in leads with consideration of hummocking.
Alekseev, G.V., et al, *Problems of the Arctic and the Antarctic, collection of articles*, 1979, Vol.45, p.158-163, TT 75-52083, For Russian original see 30-14. 4 refs.
Buzuev, A.IA.
Sea ice, Ice accretion, Ice forecasting, Hummocks, Mathematical models.

34-1897
Problems of the Arctic and the Antarctic, collection of articles, Vol.46, 1975.
Treshnikov, A.F., ed, New Delhi, Amerind Publishing Co., 1979, 166p., TT 76-52023, Translation of Problemy Arktiki i Antarktiki, sbornik statei, vyp.46, 1975. Refs. passim. For selected articles see 34-1898 through 34-1904 or A-22711, H-22709, I-22708, I-22710 and K-22707.
Hydrodynamics, Meteorology, Ice conditions, Research projects.
This volume contains papers on the following subjects: hydrometeorology, oceanography, ionospheric studies, ice conditions and topics of general nature. Material has also been provided on the mental and physical state of participants of Soviet Antarctic expeditions and on the work done by the Arctic Research Laboratory, Point Barrow.

34-1898
Possibility of long-range forecasting of oceanographic conditions of the Kara Sea.
IAnes, A.V., *Problems of the Arctic and the Antarctic, collection of articles*, 1979, Vol.46, p.16-21, TT 76-52023, For Russian original see 30-3410. 11 refs.
Oceanographic surveys, Hydrology, Meteorological data, Long range forecasting, Polar regions, Navigation, Kara Sea.

34-1899
Evaluation of spatial scales of disturbances and determination of some characteristics of turbulence in the Chukchi Sea.
Izmailov, V.V., *Problems of the Arctic and the Antarctic, collection of articles*, 1979, Vol.46, p.22-29, TT 76-52023, Translated from Problemy Arktiki i Antarktiki, sbornik statei, vyp.46, 1975. 3 refs.
Ocean currents, Turbulent flow, Chukchi Sea.

34-1900
Study of fractures in consolidated pack-ice cover from radar survey data.
Gorbunov, IU.A., et al, *Problems of the Arctic and the Antarctic, collection of articles*, 1979, Vol.46, p.30-35, TT 76-52023, For Russian original see 30-3411. 6 refs.

Ice conditions as an index of recent trends of climatic cooling on the lower reaches of the Yenisei.
Antonov, V.S., *Problems of the Arctic and the Antarctic, collection of articles*, 1979, Vol.46, p.98-105, TT 76-52023, For Russian original see 30-3413.
River ice, Ice conditions, Ice formation, Ice air interface, Climatic changes, Ice navigation, Humidity, Heat transfer, Water temperature, USSR—Yenisey River.

34-1903
Effect of physicomechanical properties and uneven thickness of ice on the motion of ships in the autumn-winter season.
Smirnov, V.I., *Problems of the Arctic and the Antarctic, collection of articles*, 1979, Vol.46, p.106-112, TT 76-52023, For Russian original see 30-3414. 7 refs.
Ice navigation, Ice cover thickness, Ice mechanics, Ice physics, Seasonal variations, Plastic flow, Ice breaking, Icebreakers.

34-1904
Load-bearing capacity of ice cover and determination of breaking strength.
Serikov, M.I., *Problems of the Arctic and the Antarctic, collection of articles*, 1979, Vol.46, p.152-156, TT 76-52023, For Russian original see 30-3415. 3 refs.
Ice cover strength, Ice cover thickness, Ice strength, Ice breaking, Ice mechanics, Buoyancy, Bearing tests, Analysis (mathematics).

34-1905
Forecasting seasonal snowmelt runoff: a summary of experience with two models applied to three drainages in the Cascade Mountains of Washington.
Lettenmaier, D.P., et al, *Washington (State) University. Hydraulics Laboratory. Technical report*, Nov. 1978, TR-59, 109p. PB-294 656.
Waddle, T.J.
Snowmelt, Runoff forecasting, Watersheds, Models.

34-1906
Reliability of 6 kV power lines in coal mines in glaze development areas. [Otsenka nadezhnosti vozdushnykh linii 6 kV ugol'nykh shakht v gololednykh raionakh]
Manatskov, B.M., *Novocherkassk. Politekhnicheskiĭ institut. Trudy*, 1972, Vol.262, p.110-117, In Russian. 1 ref.
Mining, Electric power, Power line icing, Ice loads.

34-1907
Thermal insulation of roads with moderate traffic. [Isolation thermique des chaussées à trafic moyen]
Dysli, M., *Strasse und Verkehr*, Nov. 1979, 65(11), p.399-406, In French. 11 refs.
Roads, Thermal insulation.

34-1908
Computer analysis of freezing with water migration in time when the process is formed on snow cover surface. [Kolichestvennoe issledovanie protsessa promerzaniia s migratsieĭ vlagi pri formirovanii na poverkhnosti snezhnogo pokrova vo vremeni]
Medvedev, A.V., et al, *Merzlotnye issledovaniia*, 1979, Vol.18, p.3-23, In Russian. 18 refs.
Melamed, V.G.
Soil freezing, Frost penetration, Stefan problem, Computer programs, Soil water migration, Frost heave, Cryogenic structures.

34-1909
Evaluating snow cover effect on temperature field of freezing rocks, allowing for the dependence of thermophysical snow characteristics on temperature. [Otsenka vliianiia snezhnogo pokrova na temperaturnoe pole promerzaiushchikh gornykh porod pri uchete zavisimosti teplofizicheskikh kharakteristik snega ot temperatury]
Melamed, V.G., et al, *Merzlotnye issledovaniia*, 1979, Vol.18, p.24-33, In Russian. 9 refs.
Medvedev, A.V.
Stefan problem, Soil freezing, Frost penetration, Snow cover effect, Frost forecasting.

34-1910
Approximate calculation of permafrost thickness beneath underground pipelines. [Priblizhennyĭ metod rascheta moshchnosti mnogoletnego promerzaniia gruntov pod zaglublennym truboprovodom]
Kondrat'ev, V.G., *Merzlotnye issledovaniia*, 1979, Vol.18, p.34-36, In Russian. 4 refs.
Underground pipelines, Permafrost thickness, Permafrost beneath structures, Permafrost hydrology.

34-1911
Influence of paludification and water bodies on thermal regime of rocks. [K otsenke vliianiia vodoemov i zabolochennosti na temperaturnyĭ rezhim gornykh porod]
Garagulia, L.S., et al, *Merzlotnye issledovaniia*, 1979, Vol.18, p.37-42, In Russian. 5 refs.
Kudriavtsev, V.A.
Permafrost thermal properties, Permafrost hydrology, Frozen rock temperature, Swamps, Permafrost beneath lakes, Permafrost beneath rivers.

34-1912
Computerized simulation of heat transfer in ground for improving information of geocryologic surveys. [Modelirovanie na EVM teploobmennykh protsessov v gruntakh kak sposob povysheniia informativnosti merzlotnoĭ s"emki territorii]
Tutkevich, A.A., *Merzlotnye issledovaniia*, 1979, Vol.18, p.43-52, In Russian.
Geocryology, Permafrost forecasting, Permafrost thermal properties, Heat transfer, Computerized simulation, Permafrost structure.

34-1913
Evaluating temperature regime of ground on the basis of system analysis of the effect of variability of temperature forming factors. [Otsenka temperaturnogo rezhima grunta na osnove sistemnogo analiza vliianiia izmenchivosti temperaturoformiruiushchikh faktorov].
Parmuzin, S.IU., *Merzlotnye issledovaniia*, 1979, Vol.18, p.53-57, In Russian. 6 refs.
Permafrost thermal properties, Frozen rock temperature, Snow cover effect, Analysis (mathematics).

34-1914
Development stages of geocryologic forecasting. [Ob etapakh razvitiia geokriologicheskogo prognoza].
Maksimova, L.N., *Merzlotnye issledovaniia*, 1979, Vol.18, p.57-62, In Russian. 3 refs.
Geocryology, Permafrost forecasting, Theories, Research projects.

34-1915
Types of geocryologic forecasting. [Vidy geokriologicheskogo prognoza].
Maksimova, L.N., *Merzlotnye issledovaniia*, 1979, Vol.18, p.63-72, In Russian. 5 refs.
Geocryology, Permafrost forecasting, Permafrost hydrology, Engineering geology, Hydrogeology, Classification.

34-1916
Permafrost thawing beneath pipes with different pipe laying methods. [Ottaivanie porod pod truboi pri raznykh sposobakh ee zalozheniia].
Zamolotchikova, S.A., *Merzlotnye issledovaniia*, 1979, Vol.18, p.73-79, In Russian.
Pipelines, Embankments, Trenching, Permafrost beneath structures, Permafrost forecasting, Ground thawing.

34-1917
Novaya Zemlya map of permafrost temperature; scale 1:2,500,000. [Merzlotno-temperaturnaia karta Novoi Zemli v masshtabe 1:2,500,000].
Kondrat'eva, K.A., *Merzlotnye issledovaniia*, 1979, Vol.18, p.80-101, In Russian. 21 refs.
Maps, Permafrost structure, Frozen rock temperature, Ice cover thickness, Ice temperature, USSR—Novaya Zemlya.

34-1918
Rock temperatures in the Kamchatka Peninsula. [Temperatura porod Kamchatki].
Zamolotchikova, S.A., et al, *Merzlotnye issledovaniia*, 1979, Vol.18, p.102-118, in Russian. 26 refs.
Smirnova, V.N.
Maps, Geology, Geocryology, Hydrology, Glaciation, Ground ice, Permafrost distribution, Snow cover distribution, USSR—Kamchatka Peninsula.

34-1919
Rock stream structure in South Yakutia. [Osobennosti stroeniia kurumov IUzhnoi IAkutii].
Tiurin, A.I., et al, *Merzlotnye issledovaniia*, 1979, Vol.18, p.119-128, In Russian. 6 refs.
Poltev, N.F.
Geocryology, Rock streams, Rock glaciers, Ground ice, Ice structure.

34-1920
Observing rock stream movement rates on the Chul'man Plateau. [Rezul'taty nabliudenii za skorostiami dvizheniia oblomochnogo materiala kurumov Chul'manskogo Plato].
Ospennikov, E.N., *Merzlotnye issledovaniia*, 1979, Vol.18, p.129-133, In Russian. 4 refs.
Slope processes, Talus, Rock streams, Flow rate, Ground ice, Seasonal freeze thaw.

34-1921
New data on geocryological structure of swamps in southern Yakutia. [Novye dannye o merzlotno-geologicheskom stroenii bolot IUzhnoi IAkutii].
Chizhov, A.B., et al, *Merzlotnye issledovaniia*, 1979, Vol.18, p.134-140, In Russian. 4 refs.
Ospennikov, E.N., Piotrovskii, M.V., Skobeeva, E.I.
Swamps, Permafrost distribution, Permafrost structure, Thermokarst, Ground ice, Permafrost hydrology, USSR—Yakutia.

34-1922
Amount of geocryologic information obtained from the SN-6 films used in aerial photography of the Chul'man region. [O geokriologicheskoi informativnosti spektrozonal'nykh aerofotomaterialov (na primere Chul'manskogo raiona)].
Gavrilov, A.V., *Merzlotnye issledovaniia*, 1979, Vol.18, p.141-153, In Russian. 10 refs.
Aerial surveys, Geocryology, Photographic reconnaissance, Geobotanical interpretation, Taiga.

34-1923
Studies of geobotanical indices in the medium-scale combined geocryologic survey of southern Yakutia. [Osobennosti indikatsionnykh geobotanicheskikh issledovanii pri srednemasshtabnoi kompleksnoi merzlotnoi s"emke (na primere IU zhnoi IAkutii)].
Melent'ev, V.S., *Merzlotnye issledovaniia*, 1979, Vol.18, p.154-158, In Russian. 1 ref.
Mapping, Geocryology, Surveys, Geobotanical interpretation, USSR—Yakutia.

34-1924
Experimental studies of ice formation fields under nonunivariate frost penetration conditions. [Eksperimental'noe izuchenie polia l'distosti v usloviiakh neodnomernogo promerzaniia].
Zhestkova, T.N., et al, *Merzlotnye issledovaniia*, 1979, Vol.18, p.159-167, In Russian. 8 refs.
Shur, IU.L.
Soil freezing, Frost penetration, Frozen fines, Clays, Cryogenic structures, Experimentation.

34-1925
Phase composition of moisture in permafrost of different origin and age. [Fazovyi sostav vlagi v merzlykh porodakh razlichnogo genezisa i vozrasta].
Ershov, E.D., et al, *Merzlotnye issledovaniia*, 1979, Vol.18, p.168-178, In Russian.
Cheverev, V.G., Akimov, IU.P., Pakhomova, T.M.
Permafrost hydrology, Unfrozen water content, Permafrost structure, Frozen fines, Ground water, Phase transformations.

34-1926
Moisture transfer and ice segregation in the frozen zone of freezing ground. [Vlagoperenos i segregatsionnoe l'dovydelenie v merzlot zone ottaivaiushchikh gruntov].
Ershov, E.D., et al, *Merzlotnye issled aniia*, 1979, Vol.18, p.179-192, In Russian. 8 refs.
Soil freezing, Soil water migration, Frost penetration, Ice formation, Active layer, Cryogenic structures, Experimentation.

34-1927
Bound water content in fine grained rocks. [O nerastvoriaiushchem ob"eme vody, soderzhashchelsia v tonkodispersnykh gornykh porodakh].
Ananian, A.A., et al, *Merzlotnye issledovaniia*, 1979, Vol.18, p.193-196, In Russian. 9 refs.
Poltev, N.F.
Frozen fines, Hygroscopic water, Unfrozen water content, Molecular structure.

34-1928
Active centers at the surface of fine rock particles. [Ob aktivnykh tsentrakh na poverkhnosti chastits tonkodispersnykh gornykh porod].
Ananian, A.A., *Merzlotnye issledovaniia*, 1979, Vol.18, p.196-200, In Russian. 9 refs.
Frozen fines, Unfrozen water content, Molecular structure, Phase transformations, Ground ice.

34-1929
Lower boundary of water-ice phase transitions in frozen fines. [O nizhnei granitse fazovykh perekhodov vody v led v merzlykh tonkodispersnykh gornykh porodakh].
Ananian, A.A., et al, *Merzlotnye issledovaniia*, 1979, Vol.18, p.201-206, In Russian. 8 refs.
Golovanova, G.F.
Frozen fines, Unfrozen water content, Phase transformations, Clays, Frozen rock temperature, Experimentation.

34-1930
Permafrost thickness and distribution in the low-mountain Amur River region. [Kharakter rasprostraneniia i moshchnost' mnogoletnemerzlykh porod na nizkogor'e zapadnoi chasti Amurskoi oblasti].
Lisitsyna, O.M., et al, *Merzlotnye issledovaniia*, 1979, Vol.18, p.207-214, In Russian. 2 refs.
Romanovskii, V.E.
Permafrost distribution, Permafrost thickness, Permafrost structure, Permafrost beneath rivers, Permafrost hydrology, Permafrost depth, USSR—Amur River.

34-1931
Structure and absolute geochronology of alassy deposits in Central Yakutia. [Stroenie i absoliutnaia geokhronologiia alasnykh otlozhenii Tsentral'noi IAkutii].
Katasonov, E.M., ed, Novosibirsk, Nauka, 1979, 95p., In Russian with English table of contents enclosed. Refs. p.78-80.
Alassy, Cryogenic structures, Thermokarst, Geocryology, Ground ice, Permafrost dating, USSR—Yakutia.

34-1932
Infrared radiators for heating frozen cargo. [Razogrev smerzshikhsia gruzov na ustanovkakh s infrakrasnymi izluchateliami].
Lepnev, M.I., et al, Leningrad, Stroiizdat, 1979, 94p., In Russian with English table of contents enclosed. 10 refs.
Potapov, V.I.
Frozen cargo, Unloading, Heating, Infrared equipment.

34-1933
Arctic transportation systems. [Arktische Transportsysteme].
Nutzki, I., *Schiffbautechnische Gesellschaft Jahrbuch*, 1976 (publ. 1977), Vol.70, p.1-6, In German. 2 refs.
DLC VM3.S3
Marine transportation, Ships, Ice navigation, Rescue equipment, Cold weather operation, Icebreakers.

34-1934
Importance of full scale testing in ice for designing icebreaking ships.
Makinen, E., *Schiffbautechnische Gesellschaft. Jahrbuch*, 1976 (publ. 1977), Vol. 70, p.7-16, 14 refs.
DLC VM3.S3
Icebreakers, Tests, Ice conditions, Ice pressure, Protective coatings.

34-1935
Steel-ice friction coefficients from field and laboratory research. [Reibungskoeffizienten Stahl-Eis aus Versuchen in der Arktis und im Labor].
Grothues-Spork, H., *Schiffbautechnische Gesellschaft. Jahrbuch*, 1976 (pub. 1977), Vol.70, p.17-24, In German. 4 refs.
DLC VM3.S3
Ice friction, Ice solid interface, Steels, Measuring instruments, Research projects, Ice temperature, Ice salinity.

34-1936
Subsurface drainage in Siberia and methods of its investigation. [Podzemnyi stok na territorii Sibiri i metody ego izucheniia].
Shen'kman, B.M., ed, Novosibirsk, Nauka, 1979, 136p., In Russian. For selected papers see 34-1937 through 34-1940. Refs. passim.
Permafrost distribution, Permafrost hydrology, Subsurface drainage, Permafrost structure, Water supply, Water reserves, Naleds, Meltwater, Water chemistry.

34-1937
Role of naleds in chemical element migration in water. [Rol' naledei v formirovanii khimicheskogo stoka].
Ivanov, A.V., Podzemnyi stok na territorii Sibiri i metody ego izucheniia (Subsurface drainage in Siberia and methods of its investigation) edited by V.M. Shen'kam, Novosibirsk, Nauka, 1979, p.41-66, In Russian. 32 refs.
Naleds, Meltwater, Water chemistry, Freeze thaw cycles.

34-1938
Exploration and sources of ground water reserves in areas of Noril'sk-type commercial ore deposits. [Osobennosti razvedki i istochniki formirovaniia zapasov podzemnykh vod mestorozhdenii Noril'skogo promyshlennogo tipa].
Roginets, I.I., Podzemnyi stok na territorii Sibiri i metody ego izucheniia (Subsurface drainage in Siberia and methods of its investigation) edited by V.M. Shen'kam, Novosibirsk, Nauka, 1979, p.83-87, In Russian.
Mining, Water supply, Permafrost hydrology, Water reserves, Exploration, Permafrost thickness, Permafrost structure, Drilling.

34-1939
Temporary variations in subsurface drainage of southwestern Transbaikal. [Vremennaia izmenchivost' podzemnogo stoka IUgo-Zapadnogo Zabaikal'iia].
Khaustov, A.P., Podzemnyi stok na territorii Sibiri i metody ego izucheniia (Subsurface drainage in Siberia and methods of its investigation) edited by V.M. Shen'kam, Novosibirsk, Nauka, 1979, p.91-96, In Russian. 3 refs.
Permafrost distribution, Permafrost hydrology, Subsurface drainage, Permafrost structure, USSR—Transbaikal.

34-1940
Role of seasonal ground freezing in ground water regimes of the area east of Lake Baykal. [Rol'sezonnogo promerzaniia gruntov v formirovanii rezhima podzemnykh vod v Predbaikal'e],
Blokhin, IU.I., Podzemnyi stok na territorii Sibiri i metod/ ego izucheniia (Subsurface drainage in Siberia and methods of its investigation) edited by V.M. Shen'kam, Novosibirsk, Nauka, 1979, p.96-101, In Russian. 11 refs.
Soil freezing, Seasonal freeze thaw, Soil water migration, Frost penetration, USSR—Baykal Lake.

34-1941
New type of feeder road surface. [Novyi tip pokrytiia dlia lesovoznykh usov],
Sokolov, S.A., et al, *Lesnaia promyshlennost'*, 1979, No.8, p.8-9, In Russian.
Vedenskii, IU.A., Petrovskii, L.V., Galakhin, V.I.
Roads, Pavements, Prefabrication, Modular construction, Wooden structures.

34-1942
Slab of silicate reinforced concrete. [Plity iz silikatnogo zhelezobetona],
Griazin, A.D., et al, *Lesnaia promyshlennost'*, 1979, No.8, p.9, In Russian.
Savel'ev, V.V.
Pavements, Prefabrication, Reinforced concretes, Sleds, Roads.

34-1943
Bauxite slag replaces gravel. [Boksitovyi shlam vmesto graviia],
Kolbas, N.S., et al, *Lesnaia promyshlennost'*, 1979, No.8, p.10, In Russian.
Motovilov, B.P., Grishin, P.V.
Roads, Pavements, Construction materials, Wastes.

34-1944
Machine for road building and maintenance. [Mashina dlia dorozhnykh rabot],
Matveenko, L.S., et al, *Lesnaia promyshlennost'*, 1979, No.8, pl2-14, In Russian.
Potapov, IU.N., Zheleznyak, F.A.
Roads, Construction equipment, Winter maintenance, Snow removal, Snow roads.

34-1945
Road bed and surface design. [Problemy proektirovannia zemlianogo polotna i dorozhnoi odezhdy],
Vyrko, N.P., *Lesnaia promyshlennost'*, 1979, No.8, p.18, In Russian.
Pavements, Roadbeds, Frost penetration, Frost heave, Design.

34-1946
Impervious plastic screens on butyl-rubber base. [Protivofil'tratsionnye ekrany iz polimernykh materialov na osnove butilkauchuka],
Sergeev, B.I., et al, *Gidrotekhnika i melioratsiia*, May 1979, No.5, p.20-23, In Russian.
Kosichenko, IU.M.
Hydraulic structures, Channels (waterways), Slope protection, Linings, Plastics.

34-1947
Service life of plastic linings for waterways. [Dolgovechnost' plenochnykh ekranov v oblitsovkakh kanalov],
Gvenetadze, A.R., *Gidrotekhnika i melioratsiia*, May 1979, No.5, p.23-25, In Russian. 2 refs.
Hydraulic structures, Channels (waterways), Slope protection, Linings, Plastics.

34-1948
Using peat in embankment construction. [Ispol'zovanie torfa v dambakh obvalovaniia],
Shupilov, IA.M., *Gidrotekhnika i melioratsiia*, June 1979, No.6, p.18-21, In Russian.
Hydraulic structures, Earth dams, Swamps, Peat, Construction materials.

34-1949
Hydraulic method of sanding peat soils. [Peskovanie torfianykh pochv namyvnym sposobom],
Lazarev, I.V., et al, *Gidrotekhnika i melioratsiia*, June 1979, No.6, p.21-23, In Russian.
Melamut, D.L.
Swamps, Land reclamation, Peat, Organic soils, Excavation, Dredging.

34-1950
Earth structures on peaty silts under pressure head conditions. [Zemlianye napornye sooruzheniia na torfiano-ilistykh gruntakh],
Tkach, V.N., et al, *Gidrotekhnika i melioratsiia*, June 1979, No.6, p.23-26, In Russian.
Gubina, N.I.
Swamps, Hydraulic structures, Earth dams, Foundations, Peat, Bearing strength.

34-1951
Formation of larch wood in Taymyr. [Formirovanie drevesiny listvennitsy na Taimyre],
Kandelaki, A.A., *Lesovedenie*, 1979, No.6, p.64-69, In Russian with English summary. 14 refs.
Forest tundra, Plant physiology, USSR—Taymyr Peninsula.

34-1952
Rock thermophysics. Summaries of reports. [Problemy gornoi teplofiziki. Tezisy vystuplenii],
Vsesoiuznaia nauchno-tekhnicheskaia konferentsiia, Oct. 30-Nov. 2, 1973, Leningrad, 1973, 75p., In Russian. For selected summaries see 34-1953 through 34-1958.
Diad'kin, IU.D., ed.
DLC TN871.P717
Wells, Drilling fluids, Permafrost, Thermal regime, Heat transfer, Ice drills, Thermal drills, Research projects.

34-1953
Thermal regime of wells and its control. [Teplovoi rezhim skvazhin i ego regulirovanie],
Kudriashov, B.B., et al, Problemy gornoi teplofiziki (Rock thermophysics) edited by IU.D. Diad'kin, Leningrad, 1973, p.3-5, In Russian.
Pudovkin, M.A.
DLC TN871.P717
Wells, Thermal regime, Ice drills, Drilling fluids, Research projects, Permafrost.

34-1954
Influence of thermal regime variations on the state of wells drilled in permafrost. [Vliianie izmeneniia temperaturnogo rezhima na sostoianie skvazhin v tolshche vechnomerzlykh porod],
Griaznov, G.S., Problemy gornoi teplofiziki (Rock thermophysics) edited by IU.D. Diad'kin, Leningrad, 1973, p.21-22, In Russian.
DLC TN871.P717
Wells, Drilling fluids, Drilling, Heat transfer, Thermal regime, Permafrost.

34-1955
Controlling thermal regime of wells when using drilling fluids in permafrost. [Regulirovanie temperaturnogo rezhima skvazhin pri burenii s promyvkoi v merzlykh porodakh],
IAkovlev, A.M., Problemy gornoi teplofiziki (Rock thermophysics) edited by IU.D. Diad'kin, Leningrad, 1973, p.23-24, In Russian.
DLC TN871.P717
Wells, Thermal regime, Drilling fluids, Temperature control, Permafrost.

34-1956
Practical advantages and prospects of drilling with simultaneous freezing of weakly consolidated rocks. [Prakticheskie preimushchestva i perspektivy metoda bureniia s odnovremennym zamorazhivaniem slabosviaznykh porod],
Afanas'ev, I.S., et al, Problemy gornoi teplofiziki (Rock thermophysics) edited by IU.D. Diad'kin, Leningrad, 1973, p.25-26, In Russian.
Beresneva, D.I.
DLC TN871.P717
Wells, Drilling, Artificial freezing, Coring, Core samplers.

34-1957
Controlling temperatures of hydrating cementing mixtures in wells. [Regulirovanie temperatury gidratiruiushcheĭ tamponazhnoĭ smesi v skvazhine],
Putikov, O.F., et al, Problemy gornoi teplofiziki (Rock thermophysics) edited by IU.D. Diad'kin, Leningrad, 1973, p.29-30, In Russian.
IAkovlev, A.M.
DLC TN871.P717
Wells, Cements, Drilling, Concrete placing, Permafrost.

34-1958
Research on deep thermal drilling of Antarctic ice. [Rezul'taty issledovanii i razrabotok po glubokomu bureniiu-protaivaniiu vo l'dakh Antarktidy],
Kudriashov, B.B., et al, Problemy gornoi teplofiziki (Rock thermophysics) edited by IU.D. Diad'kin, Leningrad, 1973, p.35-36, In Russian.
Chistiakov, V.K., Vartykian, V.G.
DLC TN871.P717
Glacier ice, Snow depth, Firn stratification, Ice drills, Thermal drills, Antarctica.
The TELGA drilling rig has been improved to allow a much deeper core to be made. Drilling operations near Vostok have yielded high-quality cores down to 800 or 900 m. Field trials combined with laboratory work have developed a system based on a thermal drill and a well-insulated heating element, using warm air to keep the borehole clear of water.

34-1959
Synopsis—ice in estuaries and harbours.
Carstens, T., *Marine science communications*, 1979, 5(1), p.1-30, 18 refs. For this paper from another source see 33-3763.
Sea ice, River ice, Ports, Estuaries, Water flow, Heat transfer, Models, Ice prevention, Air entrainment.

34-1960
Sea ice. Part 1: major features and physical properties.
Wittmann, W., et al, *Mariners weather log*, May 1973, 17(3), p.125-134. COM-73-90027-03.
Burkhart, M.D.
DLC QC994.M28
Sea ice, Ice structure, Floating ice, Pack ice, Ice formation.

34-1961
Sea ice. Part 2: ice distribution and forecast services, North American Arctic waters.
Wittmann, W. et al, *Mariners weather log*, Nov. 1973, 17(6), p.343-355. COM-73-90027-06.
Burkhart, M.D.
DLC QC994.M28
Sea ice distribution, Ice conditions, Ice forecasting, Ice navigation, Polar regions, North America.

34-1962
Sea ice. Part 3: ice distribution and forecast services, Eurasian waters.
Wittmann, W., et al, *Mariners weather log*, July 1974, 18(4), p.219-229. COM-74-90018-04.
Burkhart, M.D.
Sea ice distribution, Ice conditions, Ice forecasting, Ice navigation, Polar regions, Eurasia.

34-1963
Expanded polystyrene concrete bases.
Hanna, A.N., *Transportation research record*, 1978, TRR-675, p.1-6, PB-295 105, 6 refs.
Frost protection, Frost action, Lightweight concretes, Concrete admixtures, Subgrade preparation, Concrete strength.

34-1964
Some factors that affect thaw strain.
Alkire, B.D., *Transportation research record*, 1978, TRR-675, p.6-10, PB-295 105, 9 refs.
Freeze thaw tests, Freeze thaw cycles, Strains, Soil compaction, Soil mechanics.

34-1965
Backscatter measurements of sea ice with a helicopter-borne scatterometer.
Patel, J.S., et al, *Kansas. University. Remote Sensing Laboratory. Technical report*, July 1979, RSL TR 331-13, 120p., ADA-077 614, 20 refs.
Onstott, R.G., Delker, C.V., Moore, R.K.
Aerial surveys, Helicopters, Sea ice, Radar echoes, Backscattering, Ice cover thickness, Temperature factors.

34-1966
Reference manual for construction on permafrost.
Antonov, A.F., et al, *U.S. Army Foreign Science and Technology Center. Technical translation*, May 1979, FSTC-HT-254-78, 674p., ADB-042 325L. For Russian original see 31-4347. Distribution limited to U.S. Government agencies only.
Belli, IU.IA., Gal'perin, V.V.
Cold weather construction, Permafrost beneath structures, Roads, Permafrost control, Active layer, Sanitary engineering, Cost analysis.

34-1967
Observations of position, ocean depth, ice rotation, magnetic declination and gravity taken at the Fram I drifting ice station.
Hunkins, K., et al, *Columbia University. Lamont Geological Observatory. Technical report*, Sep. 1979, LDGO-CU-1-79, 52p. + append., ADA-077 063, 2 refs.
Manley, T., Tiemann, W.
Drift stations, Geophysical surveys, Oceanography, Sea ice, Ice navigation, Statistical analysis.

34-1968
On the flow of polythermal glaciers. I. Model and preliminary analysis.
Fowler, A.C., et al, *Royal Society of London. Proceedings. Series A*, Nov. 1, 1978, 363(1713), p.217-242, 31 refs.
Larson, D.A.
Glacier flow, Thermal regime, Boundary value problems, Models.

34-1969
Icing of a cable.
Poots, G., et al. *Institute of Mathematics and Its Applications — Journal*, 1976, Vol.18, p.203-217, 8 refs.
Rodgers, G.G.
Transmission lines, Ice accretion, Ice loads, Vibration, Wind factors, Humidity, Turbulent flow.

34-1970
Regime of glaciers and snow avalanches in Kazakhstan. [Rezhim lednikov i snezhnykh lavin Kazakhstana]
Tokmagambetov, G.A., ed. Alma-Ata, Nauka, 1979, 175p. In Russian. For individual papers see 34-1971 through 34-1985. Refs. passim.
Mountain glaciers, Glacier mass balance, Glacier ice, Glacier surfaces, Snow cover distribution, Glacial hydrology, River basins, Slope processes, Avalanche formation, Avalanche triggering, Landslides, Solifluction.

34-1971
Thermal regime of glacial zone on the northern slope of Zailiyskiy Alatau during cold period. [Teplovoi rezhim ghatsial'noi zony severnogo sklona Zailiskogo Alatao v kholodnyi period].
Demisova, T.IA., Rezhim lednikov i snezhnykh lavin Kazakhstana (Regime of glaciers and snow avalanches in Kazakhstan) edited by G.A. Tokmagambetov, Alma-Ata, Nauka, 1979, p.3-17. In Russian. 15 refs.
Slope orientation, Snow cover distribution, Snow accumulation, Glaciers, Thermal regime, Meteorological factors, USSR—Zailiyskiy Alatau.

34-1972
Studying errors of precipitation gages in high mountains. [Issledovanie oshibok pri izmerenii osadkometrami v uslovniakh vysokogor'ia].
Sudakov, P.A., et al. Rezhim lednikov i snezhnykh lavin Kazakhstana (Regime of glaciers and snow avalanches in Kazakhstan) edited by G.A. Tokmagambetov, Alma-Ata, Nauka, 1979, p.18-27. In Russian. 7 refs.
Tokmagambetov, G.A.
Precipitation gages, Snowfall, Accuracy, Wind factors.

34-1973
Calculating snow reserves in the glacial zone of Zailiyskiy Alatau. [O metodakh izucheniia snegozapasov i ikh rascheta v ghatsial'noi zone Zailiskogo Altau].
Sudakov, P.A., et al. Rezhim lednikov i snezhnykh lavin Kazakhstana (Regime of glaciers and snow avalanches in Kazakhstan) edited by G.A. Tokmagambetov, Alma-Ata, Nauka, 1979, p.27-36. In Russian. 5 refs.
Plekhanov, P.A., Bimanov, K.B., Dzhampeisov, T.O.
Snow cover distribution, Snow accumulation, Snow water equivalent, Snow surveys, USSR—Zailiyskiy Alatau.

34-1974
Distribution of atmospheric precipitation on northern slopes of the Sarydzhas and Terskey Alatau ranges in the Narynkol-Karkara interfluve. [Raspredelenie atmosfernykh osadkov na severnykh sklonakh khrebtov Sarydzhas i Terskei Alatau v mezhdurech'e Narynkol-Karkara].
Severskii, I.V., Rezhim lednikov i snezhnykh lavin Kazakhstana (Regime of glaciers and snow avalanches in Kazakhstan) edited by G.A. Tokmagambetov, Alma-Ata, Nauka, 1979, p.37-46. In Russian. 11 refs.
Mountain glaciers, Alimentation, Precipitation (meteorology), Snow cover distribution, Glacier ablation, Slope processes, Landslides, Solifluction, Avalanches.

34-1975
Possible duration of a mountain glacier surface with daily exposure to solar radiation. [Vozmozhnaia prodolzhitel'nost' obluchenia solntsem fizicheskoi poverkhnosti gornogo lednika v sut'ki].
Cherkasov, P.A., et al. Rezhim lednikov i snezhnykh lavin Kazakhstana (Regime of glaciers and snow avalanches in Kazakhstan) edited by G.A. Tokmagambetov, Alma-Ata, Nauka, 1979, p.47-72. In Russian. 11 refs.
Inchin, A.S.
Glacier ablation, Solar radiation, Heat balance, Analysis (mathematics).

34-1976
Formulas for calculating the ice melting temperature coefficient for Zailiyskiy Alatau glaciers. [Formuly rascheta temperaturnogo koeffitsienta taianna l'da dlia lednikov Zailiskogo Alatau].
Plekhanov, P.A., Rezhim lednikov i snezhnykh lavin Kazakhstana (Regime of glaciers and snow avalanches in Kazakhstan) edited by G.A. Tokmagambetov, Alma-Ata, Nauka, 1979, p.72-85. In Russian. 16 refs.
Glacier ablation, Mountain glaciers, Ice melting, Meteorological factors.

34-1977
Linear models for calculating drainage from glacier basins. [Raschet gidrografa stoka iz lednikovykh bassenov s pomoshch'iu lineinykh modelei].
Borovikova, L.N., et al. Rezhim lednikov i snezhnykh lavin Kazakhstana (Regime of glaciers and snow avalanches in Kazakhstan) edited by G.A. Tokmagambetov, Alma-Ata, Nauka, 1979, p.85-95. In Russian. 10 refs.
Glazyrin, G.E., Konovalov, V.G.
Mountain glaciers, Glacial hydrology, Runoff forecasting, Snow cover distribution, Snow water equivalent.

34-1978
Ice and meteorological regimes, mass balance and drainage from mountain glaciers of the Tuiuksu Basin. [Ghatsiometeorologicheskii rezhim, balans massy i stok lednikov gornolednikovogo bassetna Tuiuksu].
Makarevich, K.G., et al. Rezhim lednikov i snezhnykh lavin Kazakhstana (Regime of glaciers and snow avalanches in Kazakhstan) edited by G.A. Tokmagambetov, Alma-Ata, Nauka, 1979, p.96-109. In Russian. 5 refs.
Mountain glaciers, Glacial hydrology, Glacier ice, Mass balance, Alimentation, Glacier ablation.

34-1979
Glacial runoff from the Ili River Basin. [Ob"em lednikovogo stoka rek basseina Ili].
Chekhonadskaia, V.A., et al. Rezhim lednikov i snezhnykh lavin Kazakhstana (Regime of glaciers and snow avalanches in Kazakhstan) edited by G.A. Tokmagambetov, Alma-Ata, Nauka, 1979, p.110-120. In Russian. 13 refs.
Tokmagambetov, G.A., Shchukina, T.A.
River basins, Mountain glaciers, Glacial hydrology.

34-1980
Surface kinematics of a mountain valley glacier. [O kinematike poverkhnosti gornogo dolinnogo lednika].
Makarevich, A.K. Rezhim lednikov i snezhnykh lavin Kazakhstana (Regime of glaciers and snow avalanches in Kazakhstan) edited by G.A. Tokmagambetov, Alma-Ata, Nauka, 1979, p.120-124. In Russian. 2 refs.
Mountain glaciers, Alimentation, Glacier ablation, Glacier mass balance, Glacier flow.

34-1981
Direct determination of the velocity of glacier ice movement at the surface. [Opyt priamykh opredelenii skorosti poverkhnosti lednika].
Makarevich, K.G., et al. Rezhim lednikov i snezhnykh lavin Kazakhstana (Regime of glaciers and snow avalanches in Kazakhstan) edited by G.A. Tokmagambetov, Alma-Ata, Nauka, 1979, p.125-131. In Russian. 6 refs.
Makarevich, A.K.
Mountain glaciers, Alimentation, Glacier ablation, Glacier mass balance, Glacier flow, Glacier surfaces, Flow rate.

34-1982
Recent glaciation of the Kungey Alatau Range. [Sovremennoe oledenenie khrebta Kungei Alatau].
Vilesov, E.N., Rezhim lednikov i snezhnykh lavin Kazakhstana (Regime of glaciers and snow avalanches in Kazakhstan) edited by G.A. Tokmagambetov, Alma-Ata, Nauka, 1979, p.132-142. In Russian. 10 refs.
Mountain glaciers, Classifications, Glacial hydrology, Glacier oscillation, Snow line, Slope orientation, USSR—Kungey Alatau.

34-1983
Forecasting avalanches of freshly fallen snow in the Tekeli River Basin, Dzhungarskiy Alatau. [K metodike prognoza lavin svezhevypavshego snega v basseine r. Tekeli (Dzhungarskii Alatau)].
Toporkov, A.D., Rezhim lednikov i snezhnykh lavin Kazakhstana (Regime of glaciers and snow avalanches in Kazakhstan) edited by G.A. Tokmagambetov, Alma-Ata, Nauka, 1979, p.143-146. In Russian. 9 refs.
River basins, Avalanche formation, Snow accumulation, Avalanche triggering, Avalanche forecasting.

34-1984
Dangerous phenomena on northern slopes of Sarydzhas and Terskey Alatau ranges in the Narynkol-Karkara interfluve. [Kharakteristika opasnykh stikhiinykh iavlenii na severnykh sklonakh khrebtov Sarydzhas i Terskei Alatau v mezhdurech'e Narynkol-Karkara].
Severskii, I.V., et al. Rezhim lednikov i snezhnykh lavin Kazakhstana (Regime of glaciers and snow avalanches in Kazakhstan) edited by G.A. Tokmagambetov, Alma-Ata, Nauka, 1979, p.146-161. In Russian. 20 refs.
Blagoveshchenskii, V.P., Mandro, S.I.
Slope processes, Slope orientation, Glacial hydrology, Avalanches, Landslides, Mudflows, Solifluction.

34-1985
Geomorphological conditions of avalanche formation in the eastern part of the northern slope of the Terskey Alatau Range (Karkara, Tekes, Ul'ken-Kokpak, Bayankol river basins). [Geomorfologicheskie usloviia lavinoobrazovaniia v vostochnoi chasti severnogo sklona khrebta Terskei Alatau (basseiny rek Karkara, Tekes, Ul'ken-kokpak, Baiankol)].
Blagoveshchenskii, V.P., Rezhim lednikov i snezhnykh lavin Kazakhstana (Regime of glaciers and snow avalanches in Kazakhstan) edited by G.A. Tokmagambetov, Alma-Ata, Nauka, 1979, p.161-169. In Russian. 5 refs.
River basins, Slope processes, Avalanche formation, Avalanche triggering, Topographic effects.

34-1994
Firn field types in the Aktru Basin and their relation to glaciation. [Tipy snezhnikov basseina Aktru i ikh sviazi s oledeneniem].
Ivanov, N.I., *Gliatsiologiia Altaia*, 1967, Vol.5, p.205-226, In Russian. 7 refs.
River basins, Nivation, Snowdrifts, Avalanches, Classifications, USSR—Aktru River.

34-1995
Role of firn field ablation in the Bish-Iirdu Mountains in the Aktru River's alimentation. [Ob abliatsii snezhnikov i ikh roli v pitanii r. Aktru v gorakh Bish-Iirdu].
Ivanov, N.I., *Gliatsiologiia Altaia*, 1967, Vol.5, p.227-246, In Russian. 10 refs.
River basins, Snow accumulation, Firn, Snow water equivalent, Glacial rivers, Alimentation.

34-1996
Preliminary mathematical model for reconstruction of past climate based on glaciological reference data on the antarctic ice sheet. [Predvaritel'naia matematicheskaia model' rekonstruktsii klimatov proshlogo po opornoi informatsii gliatsiologicheskikh dannykh antarkticheskogo kontinental'nogo lednika].
Efimov, V.A., *Leningrad. Arkticheskii i antarkticheskii nauchno-issledovatel'skii institut. Trudy*, 1979, Vol.357, p.5-11, In Russian. 3 refs.
Snow accumulation, Ice sheets, Glacial hydrology, Climatic changes, Climatology, Mathematical models, Antarctica.
The basic principles of modelling past climates using data on the hydrologic cycle are set forth. Data on the vertical structure of glacier accumulation are a possible source of hydrologic information. This study investigates the feasibility of modelling planetary circulation on the basis of past climate periods in the southern hemisphere.

34-1997
Univariate model of the seasonal pycno-wedge and homogeneous layer in the Arctic Basin. [Odnomernaia model' sezonnogo piknoklina i odnorodnogo sloia v Arkticheskom basseine].
Ponomarev, V.I., *Leningrad. Arkticheskii i Antarkticheskii nauchno-issledovatel'skii institut. Trudy*, 1979, Vol.357, p.37-47, In Russian. 8 refs.

34-2004
Increased mercury contamination of distilled and natural water samples caused by oxidizing preservatives.
Cragin, J.H., *Analytica chimica acta*, 1979, Vol.110, MP 1270, p.313-319, 18 refs.
Water chemistry, Gases, Vapor transfer, Pollution, Laboratories.
The passage of mercury vapor from ambient air through the walls of conventional polyethylene (CPE), linear polyethylene (LPE), and Teflon (FEP) containers can seriously contaminate solutions of distilled and natural water stored in these containers. The rate of mercury contamination is dramatically increased when the sample solution contains oxidizing agents such as nitric acid or potassium permanganate, which are commonly used as preservatives to prevent loss of mercury (II) ion. The rate of contamination also depends on container material and decreases in the order CPE> LPE> FEP> glass. Freezing the samples in plastic containers is an effective way to prevent mercury contamination. When freezing is not practical, storage in glass containers minimizes sample contamination from ambient mercury vapor.

34-2005
Inventory of Canadian research and development capabilities for engineering in cold regions.
Acres Consulting Services, Ltd., 1978, 510p., Prepared under Canadian Government Contract No.18SR 31077-7-0444 on behalf of the National Research Council of Canada. Preface and table of contents in English and French.
Engineering, Co'd weather construction, Transportation, Environments, Research projects, Canada.

34-2006
Decomposition models based on climatic variables, substrate variables, microbial respiration and production.
Flanagan, P.W., et al, Role of terrestrial and aquatic organisms in decomposition processes; the 17th Symposium of the British Ecological Society, April 15-18, 1975. Edited by J.M. Anderson and A. Macfadyen, Oxford, Blackwell Scientific Publications, 1976, p.437-457, 25 refs.

Ice surface, Topographic features, Meteorological factors, Altitude.
New data on antarctic ice surface elevation are now available from many constant density balloons, floating at altitude of about 12.5 km, which traversed the Antarctic during its 1975-76 summer. They were part of 411 balloons launched in the southern hemisphere during the Tropical Wind Energy conversion and Reference Level Experiment (TWERLE). Each balloon carries three sensors: radio altimeter, pressure sensor and ambient temperature sensor. The data are received by the Random Access Measuring System (RAMS) on board the NIMBUS-6 satellite, whenever the balloon is within line of sight. The near Polar orbit of NIMBUS-6, and the continuous day at the Pole combined to allow continuous coverage of TWERLE balloons south of 66S, during Dec. 1975 and Jan. 1976.

Correlation and quantification of airborne spectrometer data to turbidity measurements at Lake Powell, Utah.
Merry, C.J., MP 1271, International Symposium on Remote Sensing of Environment, 13th, Ann Arbor, Michigan, April 23-27, 1979. Proceedings, Environmental Research Institute of Michigan, 1979, p.1309-1316, 7 refs.
Lake water, Turbidity, Suspended sediments, Light transmission, Aerial surveys, Spectroscopy.
A water sampling program was accomplished at Lake Powell, Utah, during June 1975 for correlation to multispectral data obtained with a 500-channel airborne spectroradiometer. Field measurements were taken of percentage of light transmittance, surface temperature, pH and Secchi disk depth. Percentage of light transmittance was also measured in the labora-

tory for the water samples. Analyses of electron micrographs and suspended sediment concentration data for four water samples located at Hite Bridge, Mile 168, Mile 150 and Bullfrog Bay indicated differences in the composition and concentration of the particulate matter. Airborne spectroradiometer multispectral data were analyzed for the four sampling locations. The results showed that (a) as the percentage of light transmittance of the water samples decreased, the reflected radiance increased, and (b) as the suspended sediment concentration (mg l) increased, the reflected radiance increased in the 1-80 mg l range. In conclusion, valuable qualitative information was obtained on surface turbidity for the Lake Powell water spectra. Also, the reflected radiance measured at a wavelength of 0.58 micron was directly correlated to the suspended sediment concentration.

Ice cover thickness, Radio echo soundings, Subglacial observations, Rheology, Ice sheets, Glacier surfaces, Glacier surveys.
Progress achieved during the 6th season of an airborne radio echo sounding program [illegible] by the Scott Polar Research Institute in cooperation [illegible] National Science Foundation Division of Polar Programs [illegible] Electromagnetics Institute of the Technical University [illegible] Denmark is reported. Broad aims of the program are to [illegible] and complete a 100 km grid network over Antarctica for study [illegible] surface form, thickness, internal structure, rheology, thermodynamics, electrical properties, basal conditions and processes (including sub-ice water bodies, melting and freezing beneath ice shelves), and sub-ice geology. With completion of the 1978-79 season, the radio echo sounding coverage of Antarctica is estimated to be 50% under the NSF-SPRI-IUD program, 14% by other groups, and 36% still awaiting coverage. Equipment used and operations conducted by the NSF-SPRI-IUD program in 1978-79 are described and scientific results are outlined.

Glaciation, Paleoclimatology, Sea ice, Ice formation, Water temperature, Ice water interface, Air water interactions, Heat transfer.
The purpose of the study was to develop a model by which average ocean temperatures at present could be compared with those at the height of the last glaciation (c 1800 yrs ago). Such an integral was drawn up and the results are shown in a chart and a table. It seems that during the glaciated period mean temperature of Pacific and Atlantic Ocean water was higher than at present, while the Indian Ocean was cooler. The overall ocean temperature was higher.

Ice cores, Ice coring drills, Ice sheets, Ice dating, Climatology, Gas inclusions, Isotope analysis, Antarctica—East Antarctica.
During the 1977-1978 season the French drilled a core at Dome C to shed light on the climatic history of Antarctica as part of the international glaciological program. The techniques and equipment used are discussed and shown in figures and photographs. Initial results are presented by considering the various indicators: gas inclusions, crystal structure, impurities and isotopes in the ice of climatic changes.

34-2136
Inventory of snow cover and sea ice data.
Crane, R.G., comp., *World Data Center A for Glaciology (Snow and Ice). Report*, Dec. 1979, GD-7, 171p., Numerous refs. passim.
Data processing, Sea ice, Snow surveys.
The survey lists U.S. and foreign agencies which collect and organize snow and sea ice information; the kinds of products resulting from agency surveys; users of the products, sources, accuracy, availability, and period of current and historical data; product frequency, period, and area covered. Limited Southern Hemisphere data includes sea ice information around Antarctica.

Glaciology, Meetings.
The conference was held at the National Institute of Polar Research with the aim of summarizing and evaluating all recent meteorological and glaciological work done by JARE under the POLEX program. The volume contains 5 papers in glaciology, 5 in meteorology, 2 in cloud physics, and 3 on oxygen isotope studies. The primary concern of contributors was the interaction between the atmosphere and cryosphere at and near the air-ice interface in inland Antarctica. Some observations in coastal areas are included.

Summary of glaciological studies in Mizuho Plateau, East Antarctica, 1969-1975.
Ishida, T., *Antarctic record*, Oct. 1979, No.67, p.1-10, In Japanese with English summary. Refs. p.5-10.
Ice sheets, Glaciology, Research projects, Antarctica—Mizuho Plateau.
A summary report of the traverse glaciology project accomplished by the Japanese Antarctic Research Expedition in 1969-1975 was published in 1978 under the title of "Glaciological Studies in Mizuho Plateau, East Antarctica, 1969-1975" as a special issue of Memoirs of National Institute of Polar Research, No.7. (See 32-2701 or F-19819). This paper outlines that summary report.

34-2147
Growth rates of crystal grains in snow at Mizuho Station, Antarctica.
Narita, H., et al, *Antarctic record*, Oct. 1979, No.67, p.11-17, 16 refs.
Maeno, N.
Snow crystal growth, Snow accumulation, Climatology, Antarctica—Mizuho Plateau.
Measurements of the mean cross-sectional area of crystal grains in snow were made with core samples drilled at Mizuho Station, Antarctica. It was found that the cross-sectional area of crystal grains in snow increased with increasing depth to a depth of about 50 m. The relationship between the cross-sectional area of crystal grains and the time elapsed was essentially linear, but the growth rate of crystal grains was larger in snow at depths below 35 m. The increase in the growth rate can be attributed to the stress-enhancement or the smaller rate of snow accumulation. From the growth rate of crystal grains in snow above 35 m, the net accumulation rate at Mizuho Station was estimated to be roughly 70 kg/sq m/a. (Auth.)

34-2148
Compactive viscosity of snow and its climatic implications at Mizuho Station, Antarctica.
Maeno, N., et al, *Antarctic record*, Oct. 1979, No.67, p.18-31, Refs. p.30-31.
Narita, H.
Snow accumulation, Snow compaction, Climatology, Viscosity, Snow density, Snow physics, Antarctica—Mizuho Plateau, Antarctica—Byrd Station, Antarctica—Little America V.
The compactive viscosity coefficient of snow was obtained from a density profile at Mizuho Station. The value of the compactive viscosity coefficient was by two orders of magnitude larger than that of ordinary seasonal snow. The large value was attributed to strong bonds between constituent ice particles within antarctic snow which had been aged for prolonged periods. A sharp peak of the compactive viscosity coefficient was found in a limited range of the depth around 35 m that is in a range of the density around 750 kg/cu m. In the depth range from 30 m to 40 m the layer-to-layer densities varied largely and the mean density deviated markedly from a smoothed general trend. These results suggest that a colder climate occurred repeatedly and lasted approximately 300 years before the present in the vicinity of Mizuho Station. (Auth.)

34-2149
Some problems in stratigraphic analysis of firn in Mizuho Plateau, East Antarctica.
Watanabe, O., et al, *Antarctic record*, Oct. 1979, No.67, p.32-50, In Japanese with English summary. 16 refs.
Kato, K., Satow, K.
Firn, Snow accumulation, Isotope analysis, Firn stratification, Oxygen isotopes, Radioactive isotopes, Stratigraphy, Climatology, Antarctica—Mizuho Plateau.
Long-term variations in precipitation and surface temperature near Mizuho Station were studied by means of stratigraphic analyses of 150-m boring core. In this paper, some problems on snow stratigraphy concerning the analyses are discussed.

First, problems on the unit of stratification are discussed in relation to visible stratigraphic elements and deposition-erosion processes. Second, phenomena of a missing layer corresponding to the hiatus in the layer formation are discussed in relation to regional characteristics and frequency of those occurrences. Precise estimation of mean annual accumulation in a certain period may be impossible without a quantitative rating of hiatus duration, and establishment of an effective method of rating should be the most important subject for the stratigraphic study. Delta-18-oxygen vertical profiles in snow layer are investigated, using the data obtained from a high-accumulation area in terms of reconsideration of the classical interpretation. As a result, it is found that a part of delta-18-oxygen oscillation was due to the variation by isotopic discrimination under snow metamorphism. (Auth.)

34-2150

Sublimation and condensation at the ice sheet surface of Mizuho Station, Antarctica.

Fujii, Y., *Antarctic record*, Oct. 1979, No.67, p.51-63, 6 refs.

Ice sheets, Ice air interface, Sublimation, Ice sublimation, Condensation, Ice surface, Glacier mass balance, Antarctica—Mizuho Plateau.

Sublimation and condensation were estimated by three different methods, that is, atmometer, bulk formula and stake methods, at Mizuho Station from Feb. 1977 to Jan. 1978. The comparison of the three different methods of obtaining the sublimation rate in the summer of 1977-1978 showed a satisfactory agreement, especially in the weekly values. Condensation prevails from the middle of April to the middle of September and sublimation in the remaining seven months. The daily amount of sublimation showed its maximum, 92 mg/sq cm, on December 22 when solar radiation was at a maximum. The annual amounts of sublimation and condensation are estimated to be 4.92 g/sq cm and 0.19 g/sq cm, respectively. The present study implies that sublimation plays an important role in the heat and mass exchanges at the surface and in the metamorphism of surface texture. (Auth.)

34-2151

Numerical simulation of katabatic wind profile at Syowa Station, Antarctica.

Adachi, T., *Antarctic record*, Oct. 1979, No.67, p.64-74, 14 refs.

Wind (meteorology), Glacial meteorology, Antarctica—Showa Station.

The vertical profiles of the strong katabatic winds at Syowa Station, Antarctica, are studied. A numerical solution of the equations of the Ekman layer above the antarctic coastal slope is obtained. It is shown that the results of the numerical simulation of the strong katabatic wind profile agree well with the observed strong katabatic wind profiles at Showa Station. (Auth. mod.)

34-2152

Some characteristics of turbulence in katabatic winds over Mizuho Plateau, East Antarctica.

Kobayashi, S., et al, *Antarctic record*, Oct. 1979, No.67, p.75-85, 20 refs.

Ishida, T.

Wind (meteorology), Snow surface, Surface roughness, Turbulence, Antarctica—Mizuho Plateau.

Wind turbulence was observed, using sonic anemometers, on a snow surface at Mizuho Station and on a bare ice field near the Yamato Mountains in the Mizuho Plateau in 1973 by the party of the 14th Japanese Antarctic Research Expedition. Observations revealed, as to katabatic winds blowing above the two places, that the one above the latter is characterized by the presence of a hydraulic jump generated by nunataks there, resulting in a stronger turbulence than the one above the former which is stationary. Hence, a comparison is made in this paper between characteristics of turbulence and a hydraulic jump in a katabatic wind. (Auth.)

34-2153

Preliminary study on the structure of the atmospheric surface layer in Mizuho Plateau, East Antarctica.

Sasaki, H., *Antarctic record*, Oct. 1979, No.67, p.86-100, 11 refs.

Glacial meteorology, Temperature gradients, Wind (meteorology), Antarctica—Mizuho Plateau.

A preliminary study on the structure of the atmospheric surface layer in Mizuho Plateau was made, based on the profiles and fluctuations of wind and air temperature observed at Mizuho Station during the period June-Dec. 1972. The results are summarized. High frequency of slightly stable conditions and low frequency of unstable conditions were a characteristic feature. Mean value of roughness length was 0.24 cm, larger by one order than the values at Showa Station and the South Pole. The distributions of the power spectra of wind and temperature fluctuations and those of the cospectra of heat flux were similar to the results reported by many investigators. Temperature oscillations, which seemed to be caused by internal wave motions, were observed in winter. (Auth.)

34-2154

Oxygen isotopic composition of fallen snow in Antarctica.

Kato, K., *Antarctic record*, Oct. 1979, No.67, p.124-135, 14 refs. In Japanese with English summary.

Oxygen isotopes, Isotope analysis, Snow composition, Precipitation (meteorology), Antarctica—Showa Station.

The relationship between the oxygen isotopic composition of fallen snow at Showa Station and the transportation process of water vapor to the antarctic ice sheet has been investigated. It is found that the oxygen isotopic composition of fallen snow is largely controlled by the supply of oxygen-18-rich water vapor resulting from the approach of a circumpolar cyclone, and is closely related to the distance between the open sea and the sampling station. Taking into consideration the transportation process of water vapor to the antarctic ice sheet, the correlation between the temperature of formation and the oxygen isotopic composition of fallen snow provides information about the formation process of snow. The correlation between the monthly means of the oxygen isotopic composition of fallen snow and the surface air temperature also provides information about the formation process of snow. (Auth.)

34-2155

Oxygen isotopic composition of drifting snow in Mizuho Plateau, Antarctica.

Kato, K., et al, *Antarctic record*, Oct. 1979, No.67, p.136-151, 19 refs. In Japanese with English summary.

Watanabe, O., Satow, K.

Oxygen isotopes, Isotope analysis, Snow composition, Climatic factors, Wind factors, Antarctica—Mizuho Plateau.

Oxygen isotopic composition of drifting snow sampled at the various stations along the traverse routes in Mizuho Plateau was determined in order to investigate transportation of water vapor to antarctic ice sheet resulting from the approach of a circumpolar cyclone. The oxygen isotopic composition of drifting snow in every season at the stations below 1800 m in altitude is largely controlled by the supply of oxygen-18-rich water vapor resulting from the approach of a circumpolar cyclone, but it is not so at the stations above 2000 m. A large anomaly is found in the variation with altitude of oxygen isotopic composition of drifting snow at the stations at altitudes between 3100 and 3200 m in (austral) spring. The area where the anomaly is found is the boundary between the spheres of influence of circumpolar cyclones and antarctic anticyclones, and it changes its position seasonally. In winter, Mizuho Station (2230 m in altitude) is considered to be hardly influenced by circumpolar cyclones. (Auth.)

34-2156

Oxygen isotopic composition of snow formed under an antarctic anticyclone.

Kato, K., et al, *Antarctic record*, Oct. 1979, No.67, p.152-163, In Japanese with English summary. 21 refs.

Higuchi, K.

Oxygen isotopes, Isotope analysis, Snow composition, Precipitation (meteorology), Climatic factors, Wind factors, Antarctica—Mizuho Plateau.

In order to investigate the formation process of snow under an antarctic anticyclone and the transportation process of water vapor into the anticyclone, the oxygen isotopic composition of fallen snow at Showa Station and drifting snow and firn in Mizuho Plateau was determined. Fallen snow at Showa Station is formed by the isobaric cooling process from a cloud layer under the upper inversion. Water vapor is transported to the antarctic anticyclone and subsides in it. Snow is formed by the isobaric cooling process under the subsidence inversion. The surface air temperature is much lower than the temperature of formation of snow. Therefore, on ice sheet, water vapor moves from fallen snow to surface snow. The systematic decrease of oxygen isotopic composition of snow with depth is formed in the snow cover with well-developed depth-hoar of upward crystal growth under the influence of an antarctic anticyclone, whereas the systematic increase results from depth-hoar with downward crystal growth under the influence of a circumpolar cyclone. (Auth.)

34-2157

Axial flow wind air-turbine NU-102 with electric eddy-current brake.

Awano, S., et al, *Tokyo. National Institute of Polar Research. Memoirs. Series F, Logistics*, Oct. 1979, No.3, 57p., 2 refs.

Murayama, M., Takeuchi, S.

Electric power, Wind power generation, Antarctica—Showa Station.

A new axial-flow wind air-turbine NU-102, having an external diameter of 1.2 m, was developed in 1977 by the authors for harnessing the energy of high speed winds in Antarctica. This multi-blade wind-turbine is featured by the presence of a stator before the rotor, which enables the turbine to give a higher power, a higher torque at a lower rotational speed than an ordinary wind air-turbine. A 3-kW AC-DC generator is driven by the air-turbine through a planetary speed-up gear of speed ratio 6. The rotational speed of this generator can automatically be kept at a desired value, even in violent blizzards by means of an electric eddy-current brake newly developed by the authors. The brake also affords a new means for converting the wind energy directly into heat through the liquid heated in the jacket of the brake-stator. The present report describes the design of the whole system, the general performance of the air-turbine, and the combined performance of the wind-turbine and generator evaluated in wind-tunnel tests and field tests at Showa Station. The field tests have proved that a generator output of 2.4 kW can be obtained at a wind velocity of 30 m/s, and that the rotational speed of the generator can be kept at a desired value for variable loads and wind velocities exceeding 30 m/s. (Auth.)

34-2158

Earth science investigations in the United States Antarctic Research Program (USARP) for the period July 1, 1978-June 30, 1979.

Craddock, C., comp, Washington, National Academy of Sciences, 1979, 50p., Refs.

National Research Council. Polar Research Board.

Research projects, Bibliographies, Ice sheets, Glacial geology.

This is the eleventh in a series of annual reports on work in the earth sciences carried out as a part of the U.S. Antarctic Research Program. The material is arranged alphabetically by investigator, with affiliation, laboratory and field work, publications issued or in press, and future programs. Two tables of contents are provided; one arranged alphabetically by investigator, and the other by institution.

34-2159

Report on United States antarctic research activities for February 1976-October 1977; United States antarctic research activities planned for October 1977-September 1978.

National Research Council. Polar Research Board, *National Academy of Sciences-National Research Council. Report to SCAR*, June 1977, No.19, 77p., Refs. p.55-65.

Research projects, Antarctica.

Information is presented on the U.S. Antarctic Research Program completed during the period Feb. 1976 to Mar. 1977, in progress from Mar. 1977 to Oct. 1977, and planned for Oct. 1977 through Sep. 1978. Research activities in the fields of atmospheric sciences, earth sciences, and biology are summarized, as well as research vessel operations, and information activities. U.S. stations and scientific personnel, World Data Center A subcenters, and members of the Polar Research Board and SCAR working groups are listed. A bibliography is included.

34-2160

Report on United States antarctic research activities for February 1977-October 1978; United States antarctic research activities planned for October 1978-September 1979.

National Research Council. Polar Research Board, *National Academy of Sciences-National Research Council. Report to SCAR*, June 1978, No.20, 87p., Refs. p.55-75.

Research projects, Antarctica.

Information is presented on the U.S. Antarctic Research Program completed during the period Feb. 1977 to Mar. 1978, in progress from Mar. 1978 to Oct. 1978, and planned for Oct. 1978 through Sep. 1979. Research activities in the fields of atmospheric sciences, earth sciences, and biology are summarized, as well as research vessel operations, and information programs. Personnel, World Data Center A subcenters, and the members of the Polar Research Board and SCAR working groups are listed. A bibliography is included.

34-2161

Report on United States antarctic research activities for February 1978-October 1979; United States antarctic research activities planned for October 1979-September 1980.

National Research Council. Polar Research Board, *National Academy of Sciences-National Research Council. Report to SCAR*, June 1979, No.21, 92p., Refs. p.61-80.

Research projects, Antarctica.

This report contains information on the U.S. Antarctic Research Program completed during the period Feb. 1968 to Mar. 1979, in progress from Mar. 1979 tp Oct. 1979, and planned for Oct. 1979 through Sep. 1980. Activities in the following areas are reported: atmospheric sciences, earth sciences, biology, research vessel operations, and information programs. In addition, listings are provided of U.S. stations and scientific personnel, World Data Center A subcenters, and the memberships of the Polar Research Board and SCAR working groups. A bibliography is included.

34-2162

British Antarctic Survey, 1978-79. *Polar record*, Sep. 1979, 19(123), p.605-612.

Research projects, Glaciology, Ice shelves, Snow surveys, Ice cores.

Five main British Antarctic Survey stations were occupied throughout the year: Faraday, Halley, Signy, Grytviken, and Rothera. Support for research programs and relief operations were provided by the two BAS ships, *John Biscoe* and *Bransfield*, with assistance from two Twin Otter aircraft and HMS *Endurance*. The research program included studies in marine biology, limnology, terrestrial biology, geology and land geophysics, glaciology, and the atmospheric sciences. During the season, the new Rothera station was completed and a new ionospherics laboratory was installed at Halley. The Rothera complex has aroused considerable international interest.

34-2163

Model of a stochastically driven ice sheet with planetary wave feedback.

Oerlemans, J., *Tellus*, Dec. 1979, 31(6), p.469-477, With Russian summary. 31 refs.

Lapina, I.I.A.
Polar regions, Glaciation, Mountain glaciers, Glacial hydrology, Alimentation, Ice conditions, Glacier ablation, Ice drills, Moraines, Glacier oscillation.
Glaciological research projects conducted by Soviet institutions during 1978 in various parts of the USSR, in the Arctic and the Antarctic are outlined. Antarctic programs included participation of the Institute of Geography in the IAGP. Highlights of this program were the discovery of a relatively warm water mass near the bottom of the Ross Sea, taking of an 800 m core at Novolazarevskaya, the formulation of an antarctic model of glaciation, and development of an algorithm for calculating the movement and thermal state of large ice sheets. The Institute of Mechanics of Moscow State University worked out a method of computing ice temperature and rate of accumulation from the horizontal projection of the tongue of a stationary glacier. From ancient moraines of Meserve Glacier, atmospheric temperature and precipitation variations in McMurdo Sound were computed for the last million years.

34-2175
International symposium on computation and forecasting of runoff from glaciers and glaciated areas. [Mezhdunarodnyi simpozium po raschetu i prognozu stoka s lednikov i iz lednikovykh raionov].

A joint American-Soviet project, financed by the National Science Foundation for measuring mass balance at the lower Ross Ice Shelf surface, began in 1976/77. The program included measurements of accretion and melting rates at the ice-water interface, structure and movement of subglacial currents, and ice core drilling through the shelf. Phase transformations were studied by special ultrasonic devices. Quartz thermometers used indicated two subglacial isothermal water layers. Ice cores from a 416 m hole revealed an upper snow-firn layer 45 m thick followed by vesicular ice down to 410 m and the lower 6 meters of water permeable ice. Core samples obtained were prepared for further chemical and isotope analyses.

Aver'ianov, V.G., *Akademiia nauk SSSR. Institut geografii. Materialy gliatsiologicheskikh issledovanĭ. Khronika obsuzhdeniia,* 1979, Vol.35, p.209-211, In Russian with English summary. 4 refs.
Land ice, Ice sheets, Mass balance, Ice air interface, Moisture transfer, Evaporation, Antarctica.
Mass balance components of the ice sheet surface, related to atmospheric moisture cycles, were used in calculating moisture circulation in the whole system. Water balance structure in Antarctica was characterized by a very high runoff coefficient of 90% compared to 70% for the Arctic and 40% for the total land mass of the Earth. This difference is explained by surface specifics of the only continental ice cover of the planet and severe climate with insignificant atmospheric precipitation and very low evaporation from the surface.

Snow air interface, Ice air interface, Ice heat loss, Glacier heat balance, Heat balance, Ice heat flux, Antarctica—Mirnyy Station, Antarctica—Vostok Station.
Measurements of the solar energy components at the ice cover surface, in the atmosphere above it, and at the ice-air interface are studied at Mirnyy and Vostok Stations. The main source of heat energy at the ice cover edge is heat from atmospheric moisture crystallization, while at the center of the ice sheet it is from heat advection from the sea. Low-frequency radiation is the primary mechanism for both surface and atmospheric heat loss in both regions.

Snow recrystallization, Regelation, Seepage Snow compaction, Metamorphism (snow), Antarctica—Molodezhnaya Station.
The results of observing processes of snow cover metamorphism in the Molodezhnaya area are presented. The snow cover changes into firn with ice veins during the warm season. Processes of regelative recrystallization can recur during later warm periods if the given layer is in a water infiltration zone. Mechanical densification of snow cover during accumulation facilitates more intense formation of firn granules. Smoothing of the snow surface during summer slows firnification.

Glacial erosion, Abrasion, Glacier beds, Basal sliding, Models.
Most theories of glacier movement and subglacial erosion have assumed that glaciers rest on rigid bedrock surfaces. While this is probably correct for much of the bed area of most modern glaciers, deformable sediments do occur beneath them and formed a substantial area of the beds of large ice sheets during glacial periods. Observations and theories are presented and reviewed about the processes of glacier erosion of rock and unlithified sediment beds both when they are frozen and unfrozen. (Auth. mod.)

Ice cores, Drill core analysis, Sedimentation, Stratification, Freeze thaw cycles.
Cores from the bottom 4.83 m of the Antarctic ice sheet at Byrd Station contain abundant stratified debris ranging from silt sized particles to cobbles. The nature and disposition of the debris, together with measurements of the physical properties of the inclosing ice, indicate that this zone of dirt-laden ice originated by "freezing-in" at the base of the ice sheet. The transition from air-rich glacial ice to ice practically devoid of air coincided precisely with the first appearance of debris in the ice at 4.83 m above the bed. Stable-isotope studies made in conjunction with gas-content measurements also confirm the idea of incorporation of basal ice may well constitute the most diagnostic test for discriminating between debris incorporated in a melt-refreeze process and debris entrapped by purely mechanical means, e.g. shearing. We conclude from our observations on bottom cores from Byrd Station that "freezing-in" of basal debris is the major mechanism by which sediment is incorporated into polar ice sheets. (Auth.)

Floating ice, Grounded ice, Radio echo soundings.
Polar ice is now thought to be marginally birefringent at radio echo-sounding frequencies. An experiment on the polarization behaviour of 60 MHz radio echoes from the bed of both ice shelf and land ice in Antarctica showed a marked difference in the returned polarization. It appears that differences in electrical properties or roughness of the reflecting boundary cannot explain these results. It is suggested that there is a large change in the birefringence of the ice sheet at the hinge zone, caused by the effect of tidal strain on crystal orientation. This would imply a minimum value of the radio-frequency anisotropy in permittivity for the single crystal of 0.52%. Therefore polarization changes could allow floating and grounded ice to be distinguished. (Auth.)

River ice, Ice control, Thermal diffusion, Thermal pollution, Heat transfer.
The ice suppression resulting from discharge of warm water into rivers during winter is analyzed with emphasis on two different cases. In Part 1, the case of a thermal effluent fully mixed across the flow section is analyzed to include the effects of unsteadiness in the effluent temperature and the meteorological variations. The location of the ice edge is determined either by 0 C water temperature criterion or an equilibrium ice melting analysis. The choice of the applicable criterion emerges naturally from the analysis, even though the location of the ice edge may be considerably different when a steady-state analysis is done. In Part 2, the case of a side discharge of heated effluent is analyzed, also in an unsteady manner, and the effects of transverse dispersion are included in the analysis. Comparisons are made in Parts 1 and 2 to limited field data that are available.

McKim, H.L., Brockett, B.E.
Water treatment, Waste treatment, Water balance, Sewage treatment, Irrigation.
The water budget for a 16-ha test area was calculated during and two days after a 2.7-cm (equivalent to 99,000 l) application of wastewater. By computing the water remaining in the soil from soil sample water content data, calculating the amount lost to evapotranspiration and measuring the underdrain flow rate, it was possible to calculate the water budget to within 95% of the actual amount applied. The accuracy in computing the soil water content is critical. In this case, a 1% variation of error in the volumetric water content is equivalent to nearly one third of the total water applied.

Proceedings of the Seminar III on Dry Valley Drilling Project, 1978.
Nagata, T. ed. *Tokyo. National Institute of Polar Research. Memoirs*, Sep. 1979, Special issue No.13, 245p., Refs. For selected papers see E-22899, E-22900, E-22902 through 22922 and E-22901, or 34-2286 through 34-2289.
Research projects, Glacial geology, Drill core analysis, Ice composition, Snow composition, Permafrost structure.
The third seminar on the multi-national (United States-Japan-New Zealand) Dry Valley Drilling Project (DVDP) was held in Tokyo from June 5 to 10, 1978. The participants included twenty representatives from the U.S., five from New Zealand, two from Australia, twenty from Japan, and an audience of about twenty people. The seminar provided the opportunity to discuss scientific topics, problems concerning cooperative work, and future programs. Fifty papers were presented at eight sessions. The present volume contains 26 papers and abstracts.

View on the formation of saline waters in the Dry Valleys.
Torii, T., et al, *Tokyo. National Institute of Polar Research. Memoirs*, Sep. 1979, Special issue No.13, Proceedings of the Seminar III on Dry Valley Drilling Project, 1978, edited by T. Nagata, p.22-33, 13 refs. For another version of this paper see 10F-20374, or 32-4377.
Yamagata, N., Ossaka, J., Murata, S.
Water chemistry, Salt water, Drill core analysis, Ice composition, Snow composition.
A previous report by Torii et al (1977, 9E-18530) on the salt balance in the Don Juan basin pointed out the presence of calcium excess when the total salt deposits in the basin are assumed to have resulted simply from the evaporation of sea water. Concerning the evolutionary processes of saline waters in the Dry Valleys, sources of the salts other than trapped sea water were not necessarily excluded, and sea spray, ion exchange and rock weathering theories have been suggested by many investigators. This paper presents the results obtained by further examination of the processes of saline water formation, on the basis of the analytical results of the DVDP cores from the Wright Valley, the information on the chemical characteristics of the water systems in the Dry Valleys, and a recent reconnaissance in the Labyrinth and the Pearse Valley. It is more likely that the chemical composition of waters in these saline lakes is mainly due to the atmospheric salt rather than the modification of trapped sea salt. (Auth.)

34-2287
Upper crustal structure under McMurdo Station, Antarctica, deduced from blasts during nuclear power plant removal.
Kaminuma, K., *Tokyo. National Institute of Polar Research. Memoirs*, Sep. 1979, Special issue No.13, Proceedings of the Seminar III on Dry Valley Drilling Project, 1978, edited by T. Nagata, p.34-41, 9 refs.
Glacial geology, Seismic surveys, Blasting, Antarctica—McMurdo Station.
The upper crustal structures beneath McMurdo Station are studied, using reflected waves of blasts for dismantling the nuclear power plant in Nov. and Dec. of 1975. A three-seismograph network was installed near the Thiel Earth Sciences Laboratory, and reflected waves of four blasts out of many were successfully observed. As the distances between the blast points and seismographs were only 300 m, refracted waves were not recorded. Though the velocities of seismic wave are not determined, the arrival times of clear phases of reflected waves are detected with high accuracy. The shortest travel time of reflected waves is approx 0.7 sec, and thickness of the first layer is 1.2 km if the P wave velocity of the layer is assumed to be 3.1 km/s. The travel time of all the well-identified latest phase is 3.95 sec. This study suggests the presence of five layers in the upper crust. (Auth.)

34-2288
Chemistry and clay mineralogy of cores 8, 9, 10, New Harbor, Antarctica.
Ugolini, F.C., et al, *Tokyo. National Institute of Polar Research. Memoirs*, Sep. 1979, Special issue No.13, Proceedings of the Seminar III on Dry Valley Drilling Project, 1978, edited by T. Nagata, p.84-102, Refs. p.99-102.
Deutsch, W., Harris, H.J.H.
Permafrost structure, Electrical resistivity, Ion density (concentration), Soil chemistry, Clay minerals.
Electrical conductivity and ionic composition of extracted solutions from ice-cemented permafrost from cores 8, 9, and 10 show that most of the sediments were deposited in a marine environment and that aggradation of permafrost during exposure of the sediments to subaerial conditions caused ionic concentration. Influx of brines capable of moving in permafrost is also suggested. Regions of low conductivity are interpreted either as freshwater episodes or textural discontinuities. Clay mineralogy can be separated into three major assemblages corresponding to the three major lithological units. The clay minerals show little weathering and complex irregular interstratification of mica-vermiculite-montmorillonite and chlorite. (Auth.)

DVDP at the Florida State University: core storage and sample distribution.
Cassidy, D.S., *Tokyo. National Institute of Polar Research. Memoirs*, Sep. 1979, Special issue No.13, Proceedings of the Seminar III on Dry Valley Drilling Project, 1978, edited by T. Nagata, p.240-245, 13 refs.
Cores, Dry Valley Drilling Project.
Cores recovered by the Japan-New Zealand-United States Dry Valley Drilling Project (DVDP) in Antarctica are stored at the Florida State University's Antarctic Research Facility. More than 1100 m of DVDP drill core are stored at -23C, from which 3471 samples have been distributed to authorized investigators worldwide. All cores remain in excellent condition, and further research interest in them is invited. (Auth.)

Microbiology, Cryobiology, Algae, Fungi, Ice sheets, Glacier ice, Antarctica—Vostok Station.
The ice sheet of Antarctic provides a unique opportunity to study the conservation of microorganisms under strong cooling for tens or, possibly, hundreds of years. Microbiological investigations of thickness of the glacier up to 312 meters have been carried out for the first time in Central Antarctic. It was established that the microorganism concentration in deep layers of the glacier was extremely small with fortuitous distribution along the glacier profile. The age of studied horizons with embedded viable microorganisms is 10-13 thousand years. Among the microorganisms found, the dominant ones are classified as bacteria. Microscopic fungi and yeasts were found as well. (Auth.)

Alpine landscapes, Slope processes, Rock streams, Permafrost distribution, Frost weathering, Talus, Creep, Solifluction, Bald peaks.

34-2297
Rock streams and bald peak zones of the Lake Baykal area and northern Transbaikal. [Kurumy gol'tsov Pribaĭkal'ia i severnogo Zabaĭkal'ia],
Vyrkin, V.B., Protsessy sovremennogo rel'efoobrazovaniia v Sibiri (Recent relief-forming processes in Siberia) edited by L.N. Ivanovskiĭ, Irkutsk, 1978, p.88-108, In Russian. 35 refs.
Alpine landscapes, Rock streams, Slope processes, Solifluction.

34-2298
Frost heave in Transbaikal steppes. [Puchenie grunta v stepnom Zabaĭkal'e],
Bazhenova, O.I., Protsessy sovremennogo rel'efoobrazovaniia v Sibiri (Recent relief-forming processes in Siberia) edited by L.N. Ivanovskiĭ, Irkutsk, 1978, p.109-126, In Russian. 27 refs.
Geocryology, Soil freezing, Frost penetration, Frost heave, Soil water migration, Pingos, Ground ice, Ice lenses, Thermokarst, USSR—Transbaikal.

34-2299
International conference on meteorology of the Carpathian Mountains. Proceedings.
Mezhdunarodnaia konferentsiia po meteorologii Karpat, 7th, Tatranska Lomnica, Sep. 21-25, 1975, Bratislava, VEDA, 1979, 415p., In Russian, French and German. For selected papers see 34-2300 through 34-2305. Refs. passim.
Otruba, J., ed.
Hoarfrost, Measuring instruments, Synoptic meteorology, Snowfall, Precipitation gages, Snow cover distribution, Snow depth, Snow water equivalent, Icing, Meteorological data, Carpathian Mountains.

34-2300
Hydrologic effectiveness of continuous snow cover in the Moravian-Silesian Beskids. [Gidrologicheskaia effektivnost' sploshnogo snezhnogo pokrova v Moravsko-Silezskikh Beskidakh],
Lednický, V., et al, Mezhdunarodnaia konferentsiia po meteorologii Karpat, 7th, Tatranska Lomnica, Sep. 21-25, 1975 (International conference on meteorology of Carpathian Mountains, Sep. 21-25, 1975, Proceedings) edited by J. Otruba, Bratislava, VEDA, 1979, p.261-268, In Russian with French and German summaries. 7 refs.
Konicár, J.
Snow cover distribution, Snow water equivalent, Czechoslovakia—Beskids.

34-2301
Relationship between annual snow water content maxima and elevation in medium high mountains in the German Democratic Republic. [Die Seehöhenabhängigkeit der jährlichen Höchstwerte des Wassergehalts der Schneedecke im Mittelgebirge der DDR], Zerche, M., Mezhdunarodnaia konferentsiia po meteorologii Karpat, 7th, Tatranska Lomnica, Sep. 21-25, 1975 (International conference on meteorology of Carpathian Mountains, Sep. 21-25, 1975, Proceedings) edited by J. Otruba, Bratislava, VEDA, 1979, p.269-273, In German with Russian and French summaries.
Snow cover distribution, Snow depth, Snow water content.

34-2302
Improving snow gage accuracy. [Verbesserung der Schneeniederschlagsmessung],
Pleiss, H., Mezhdunarodnaia konferentsiia po meteorologii Karpat, 7th, Tatranska Lomnica, Sep. 21-25, 1975 (International conference on meteorology of Carpathian Mountains, Sep. 21-25, 1975, Proceedings) edited by J. Otruba, Bratislava, VEDA, 1979, p.275-283, In German with Russian and French summaries. 5 refs.
Precipitation gages, Snowfall.

34-2303
Seasonal variations in the relationship between the number of days with snow cover and elevation in high mountains. [Der Jahresgang der Höhenabhängigkeit der Zahl der Tage mit Schneedecke im Hochgebirge], Steinhauser, F., Mezhdunarodnaia konferentsiia po meteorologii Karpat, 7th, Tatranska Lomnica, Sep. 21-25, 1975 (International conference on meteorology of Carpathian Mountains, Sep. 21-25, 1975, Proceedings) edited by J. Otruba, Bratislava, VEDA, 1979, p.313-322, In German with Russian summary.
Mountains, Snow cover, Meteorological data.

34-2304
Climatic-synoptic characteristics of days with snowfall and snow cover in Eastern Serbia. [Klimato-sinopticheskie kharakteristiki dneĭ so snegom i snezhnym pokrovom v Vostochnoĭ Serbii],
Ranković, S., et al, Mezhdunarodnaia konferentsiia po meteorologii Karpat, 7th, Tatranska Lomnica, Sep. 21-25, 1975 (International conference on meteorology of Carpathian Mountains, Sep. 21-25, 1975, Proceedings) edited by J. Otruba, Bratislava, VEDA, 1979, p.335-345, In Russian with French summary. 5 refs.
Sokolović-Ilić, G.
Synoptic meteorology, Snow cover, Snowfall.

34-2305
Hoarfrost-ice deposits in West Carpathian Uplands. [Nekotorye kharakteristiki gololedno-izmorozevykh otlozheniĭ v vysokogornykh oblastiakh Zapadnykh Karpat],
Ostrožlík, M., Mezhdunarodnaia konferentsiia po meteorologii Karpat, 7th, Tatranska Lomnica, Sep. 21-25, 1975 (International conference on meteorology of Carpathian Mountains, Sep. 21-25, 1975, Proceedings) edited by J. Otruba, Bratislava, VEDA, 1979, p.363-371, In Russian with French and German summaries. 8 refs.
Hoarfrost, Icing, Measuring instruments, Meteorological factors, Czechoslovakia—Tatra Mountains.

34-2306
Biogeocenologic studies in planted meadows of East-European tundra. [Biogeotsenologicheskie issledovaniia na seianykh lugakh v vostochnoevropeĭskoĭ tundre],
Archegova, I.B., ed, Leningrad, Nauka, 1979, 190p., In Russian with English table of contents enclosed. Refs. p.179-189.
Kotelina, N.S., ed.
Tundra, Meadow soils, Cryogenic soils, Vegetation, Soil chemistry, Nutrient cycle.

34-2307
Control of blasting effects on rocks and grounds. [Upravlenie deĭstviem vzryva v gruntakh i gornykh porodakh],
Vovk, A.A., ed, Kiev, Naukova dumka, 1979, 224p., In Russian. For selected papers see 34-2308 through 34-2311. Refs. passim.
Luchko, I.A., ed.
Mining, Artificial freezing, Blasting, Land reclamation, Seasonal freeze thaw, Drainage, Frozen ground, Channels (waterways), Cold weather construction.

34-2308
Reversible and irreversible changes in strength of grounds compacted by blasting. [Obratimye i neobratimye izmeneniia prochnostnykh pokazatelei uplotnaemykh vzryvom gruntov].
Chernyi, G.I., Upravlenie deistviem vzryva v gruntakh i gornykh porodakh (Control of blasting effects on rocks and grounds) edited by A.A. Vovk and I.A. Luchko, Kiev, Naukova dumka, 1979, p.41-52, In Russian. 3 refs.
Soil compaction, Blasting, Slope stability.

34-2309
Studying physical and mechanical properties of seasonally frozen grounds subject to blasting, for the construction of land reclamation objects. [Issledovanie fiziko-mekhanicheskikh svoistv sezonnomerzlykh gruntov pri stroitel'stve gidromeliorativnykh ob"ektov vzryvom].
Vorob'ev, V.D., et al, Upravlenie deistviem vzryva v gruntakh i gornykh porodakh (Control of blasting effects on rocks and grounds) edited by A.A. Vovk and I.A. Luchko, Kiev, Naukova dumka, 1979, p.132-138, In Russian. 2 refs.
Land reclamation, Swamps, Drainage, Channels (waterways), Blasting, Peat.

34-2310
Effectiveness of slotted blasting charges used in building channels in seasonally frozen grounds. [Effektivnost' primeneniia shchelevykh zariadov pri stroitel'stve kanalov v sezonnomerzlykh gruntakh].
Frash, G.B., et al, Upravlenie deistviem vzryva v gruntakh i gornykh porodakh (Control of blasting effects on rocks and grounds) edited by A.A. Vovk and I.A. Luchko, Kiev, Naukova dumka, 1979, p.138-142, In Russian. 5 refs.
Land reclamation, Drainage, Channels (waterways), Cold weather construction, Frozen ground, Blasting.

34-2311
Stress waves in artificially frozen water-saturated ground, studied after fuse detonation on test-benches and in mining shafts. [Issledovanie voln napriazhenii v zamorozhennykh vodonasyshchennykh gruntakh ot vzryva shnurovykh zariadov na opytno-promyshlennom stende i v stvolakh].
Oksanich, I.F., et al, Upravlenie deistviem vzryva v gruntakh i gornykh porodakh (Control of blasting effects on rocks and grounds) edited by A.A. Vovk and I.A. Luchko, Kiev, Naukova dumka, 1979, p.142-148, In Russian. 2 refs.
Mironov, P.S., Chmykhalov, V.S., Fesenko, O.G.
Mining, Blasting, Frozen ground, Artificial freezing, Stresses.

34-2312
Secrets of natural ice in Kazakhstan. [Tainy prirodnykh l'dov Kazakhstana].
Tokmagambetov, G.A., Alma-Ata, Nauka, 1978, 151p., In Russian with English table of contents enclosed. 11 refs.
Glaciology, Geocryology, Glacial hydrology, Snowfall, Avalanches, Mudflows, Permafrost distribution, USSR—Kazakhstan.

34-2313
Problems raised by frost action. Fundamental and applied researches (rocks and artificial building materials). Vol.2: scientific reports. [Les problèmes posés par la gélifraction. Recherches fondamentales et appliquées (roches et matériaux artificiels de construction). Vol.2: rapports scientifiques].
International Congress of the Fondation Française d'Etudes Nordigues, 6th, Le Havre, April 23-25, 1975, *Fondation française d'etudes nordiques. Actes et documents*, 1979, No.6, 527p., In French and English with English and French summaries. Refs. passim. For selected papers see 34-2314 through 34-2351. For Vol.1 see 32-2950.
Aguirre-Puente, J., ed.
Frost action, Freeze thaw cycles, Frost resistance, Frozen rocks, Rock mechanics, Construction materials, Saturation, Porosity, Low temperature tests.

34-2314
Structural steels usable at low temperature. [Les aciers de construction métallique utilisables aux basses températures].
Murry, G., *Fondation française d'études nordiques. Actes et documents*, 1979, No.6, p.7-17, In French.
Low temperature tests, Steels, Fracturing, Elastic properties, Temperature effects, Construction materials.

34-2315
Frost shattering observed on cracks at the surface of Gilman Glacier, Ellesmere Island. [Observations sur la gélifraction par fissures à la surface du glacier Gilman (Ile d'Ellesmere)].
Brochu, M., *Fondation française d'etudes nordiques. Actes et documents*, 1979, No.6, p.55-59, In French.
Frost shattering, Ice cracks, Glacier surfaces.

34-2316
Application of factor analysis to the study of patterned ground in polar environments. [Essai d'application de l'analyse factorielle des correspondances à l'etude des sols structurés en milieu polaire].
Brossard, T., *Fondation française d'etudes nordiques. Actes et documents*, 1979, No.6, p.61-71, In French with English summary. 2 refs.
Patterned ground, Frost action, Slope orientation, Polar regions, Topographic features, Vegetation factors, Classifications.

34-2317
Some observations about rock weathering by frost upon the wall carvings.
Fukuda, M., *Fondation française d'etudes nordiques. Actes et documents*, 1979, No.6, p.73-79, In English with French summary. 8 refs.
Frost weathering, Rock properties, Freeze thaw tests, Frost action, Porosity, Moisture, Physical properties, Frozen rocks.

34-2318
Detection of frost shattering in high mountains by means of photography in the blue and near ultraviolet spectra. [Détection de la gélifraction en haute montagne au moyen de la photographie dans le spectre du bleu et du proche ultra-violet].
Galibert, G., *Fondation française d'etudes nordiques. Actes et documents*, 1979, No.6, p.81-92, In French with English summary. 2 refs.
Frost shattering, Slope orientation, Mountains, Photographic techniques, Spectroscopy.

34-2319
Influence of cryogenic processes on clay minerals.
Konishchev, V.N., et al, *Fondation française d'etudes nordiques. Actes et documents*, 1979, No.6, p.93-101, In English with French summary. 11 refs.
Rogov, V.V., Shchurina, G.N.
Geocryology, Clay minerals, Freeze thaw cycles, Microstructure, Periglacial processes, Moisture, Infrared spectroscopy.

34-2320
Experimental studies of frost shattering at the Center for Geomorphology of the French National Center for Scientific Research. [Les recherches de gélifraction expérimentale du Centre de Géomorphologie du C.N.R.S.].
Lautridou, J.P., *Fondation française d'etudes nordiques. Actes et documents*, 1979, No.6, p.103-110, In French with English summary. 10 refs.
Frost shattering, Rock mechanics, Frost action, Frost weathering, Porosity, Tests.

34-2321
Superimposed rockfalls and climatic changes in northwestern Greenland. [Eboulis superposés et changements climatiques dans le nord-ouest du Groenland].
Malaurie, J., *Fondation française d'etudes nordiques. Actes et documents*, 1979, No.6, p.117-128, In French with English summary. 18 refs.
Rock mechanics, Frost action, Freeze thaw cycles, Erosion, Climatic changes, Geomorphology, Stratification, Paleoclimatology.

34-2322
Correlation of rock weathering parameters.
Hudec, P.P., *Fondation française d'etudes nordiques. Actes et documents*, 1979, No.6, p.147-156, 25 refs.
Frost weathering, Frozen rocks, Rock mechanics, Freeze thaw cycles, Porosity, Moisture.

34-2323
Freeze-thaw tests and theories of frost action. [Les essais cycliques de gel et dégel et les théories de la gélivité].
Blachere, J.R., *Fondation française d'etudes nordiques. Actes et documents*, 1979, No.6, p.161-166, In French with English summary. 10 refs.
Freeze thaw tests, Frost action, Clays, Construction materials, Porosity, Ice pressure, Temperature effects, Theories.

34-2324
Studies of the destruction mechanism at freezing of porous materials.
Fagerlund, G., *Fondation française d'etudes nordiques. Actes et documents*, 1979, No.6, p.167-196, In English with French summary. 18 refs.
Frost action, Porous materials, Freezing, Frost resistance, Saturation, Damage, Construction materials, Salinity, Analysis (mathematics).

34-2325
Relation between the frost resistance and the mechanical and porometric characteristics of a terra cotta fragment. [Relation entre la tenue au gel d'un tesson de terre cuite et ses caractéristiques mécaniques et porométriques].
Fontaine, L., *Fondation française d'etudes nordiques. Actes et documents*, 1979, No.6, p.197-211, In French with English summary. 8 refs.
Frost resistance, Ceramics, Porosity, Mechanical properties, Analysis (mathematics).

34-2326
Methods of testing frost resistance of concretes. [Méthodes d'essai pour la gélivité des bétons].
Hounou, A., *Fondation française d'etudes nordiques. Actes et documents*, 1979, No.6, p.213-224, In French with English summary. 2 refs.
Frost resistance, Concrete strength, Freeze thaw cycles, Frost action, Saturation, Tests.

34-2327
Methods of testing frost resistance of stone. [Méthodes d'essais au gel des pierres].
Mamillan, M., *Fondation française d'etudes nordiques. Actes et documents*, 1979, No.6, p.225-238, In French with English summary. 3 refs.
Frost resistance, Rocks, Porosity, Saturation, Freeze thaw cycles, Masonry, Climatic factors, Tests, Frozen rocks.

34-2328
Experimental studies of frost shattering of ceramic tiles. [Recherches expérimentales sur la gélifraction des tuiles en céramique].
Muresan, M., *Fondation française d'etudes nordiques. Actes et documents*, 1979, No.6, p.239-249, In French with English summary. 26 refs.
Frost shattering, Ceramics, Frost resistance, Freeze thaw tests.

34-2329
What do we know about freezing of concrete. [Que savons-nous du gel du béton?].
Venuat, M., *Fondation française d'etudes nordiques. Actes et documents*, 1979, No.6, p.251-260, In French with English summary.
Freeze thaw cycles, Concrete strength, Concrete structures, Damage, Saturation, Mortars.

34-2330
Model of freezing in porous media applied to an actual case. [Modèle destiné à la simulation du gel dans les milieux poreux. Application en cas réel].
Adier-Vignes, M., et al, *Fondation française d'etudes nordiques. Actes et documents*, 1979, No.6, p.263-269, In French with English summary. 3 refs.
Dijkema, K.M.
Porous materials, Freezing, Ice water interface, Models, Capillary ice.

34-2331
Physical mechanism of freezing in rocks. [Contribution à l'etude du mecanisme physique du gel des roches].
Aguirre-Puente, J., *Fondation française d'etudes nordiques. Actes et documents*, 1979, No.6, p.271-284, In French with English summary. 10 refs.
Frozen rocks, Physical properties, Freeze thaw cycles, Damage, Freezing, Rocks.

34-2332
Ice growth at a porous plate and at a single capillarity.
Biermans, M., et al, *Fondation française d'etudes nordiques. Actes et documents*, 1979, No.6, p.285-293, In English with French summary. 5 refs.
Dijkema, K.M.
Ice crystal growth, Porous materials, Ice water interface, Temperature effects, Capillary ice, Ultrasonic tests.

34-2333
Freezing of water in porous materials. [Le gel de l'eau dans les matériaux poreux].
Blachere, J.R., *Fondation française d'etudes nordiques. Actes et documents*, 1979, No.6, p.295-303, In French with English summary. 13 refs.
Freezing, Porous materials, Frost action, Saturation, Freeze thaw tests, Damage, Thermodynamics.

34-2334
Exact solution for freezing of humid porous half-space.
Mikhailov, M.D., *Fondation française d'études nordiques. Actes et documents*, 1979, No.6, p.305-313, In English with French summary. 5 refs.
Freezing, Porous materials, Moisture, Heat transfer, Stefan problem, Temperature effects, Analysis (mathematics).

34-2335
Frost shattering of wet rock. [Gélifraction des roches humides].
Bertouille, H., *Fondation française d'études nordiques. Actes et documents*, 1979, No.6, p.315-328, In French with English summary. 4 refs.
Frost shattering, Rock mechanics, Frozen rocks, Saturation, Porosity, Fracturing, Analysis (mathematics).

34-2336
Experimental and numerical simulation of the thermal behavior of a road structure subjected to a freeze-thaw cycle. [Comportement thermique d'une structure routière soumise à un cycle de gel-dégel. Simulations expérimentale et numérique].
Caniard, L., et al, *Fondation française d'études nordiques. Actes et documents*, 1979, No.6, p.329-342, In French with English summary. 12 refs.
Dupas, A., Frémond, M., Levy, M.
Pavement bases, Freeze thaw cycles, Thermal conductivity, Analysis (mathematics), Experimentation, Computer applications.

34-2337
Study of freezing mechanisms in Caen rock. [Etude des mécanismes du gel dans la Pierre de Caen].
Lautridou, J.P., et al, *Fondation française d'études nordiques. Actes et documents*, 1979, No.6, p.343-358, In French with English summary. 6 refs.
Mazo, L., Ozouf, J.C., Benoist, J.P.
Frozen rocks, Freezing, Moisture, Water table, Temperature effects.

34-2338
Use of ultrasonic waves to monitor the propagation of the freezing front in carbonaceous rocks. [Utilisation des ondes ultrasonores pour le suivi de la propagation du front de gel dans les roches carbonatées].
Masson, M., *Fondation française d'études nordiques. Actes et documents*, 1979, No.6, p.359-365, In French. 8 refs.
Frozen rocks, Freezing, Porosity, Fracturing, Ultrasonic tests.

34-2339
Proposed size classification for the texture of frozen earth materials.
McGaw, R.W., *Fondation française d'études nordiques. Actes et documents*, 1979, No.6, p.267-275, In English with French summary. 4 refs.
Frozen ground physics, Soil freezing, Freezing rate, Ice lenses, Frost heave, Soil water migration, Heat transfer, Porosity, Classifications.

34-2340
Influence of normal fluxes on convective transfer at an interface. [Influence de flux normaux sur le mouvement convectif d'interface].
Prud'homme, R., *Fondation française d'études nordiques. Actes et documents*, 1979, No.6, p.377-392, In French with English summary. 8 refs.
Rocks, Fracture zones, Convection, Interfaces, Gravity, Thermal effects, Mathematical models.

34-2341
Discussion about the freezing point depression in small pores.
Haynes, J.M., et al, *Fondation française d'études nordiques. Actes et documents*, 1979, No.6, p.393-397, 4 refs.
Wyatt, D.A.
Freezing points, Capillary ice, Thermodynamics, Ice water interface, Porous materials, Freeze thaw cycles, Phase transformations.

34-2342
Wind action in frost shattering processes. [L'action du vent dans les processus de gélifraction].
Brochu, M., *Fondation française d'études nordiques. Actes et documents*, 1979, No.6, p.401-404, In French. 2 refs.
Frost shattering, Wind factors, Saturation, Temperature effects, Humidity.

34-2343
Thermal conductivity of soils and rocks.
Johansen, Ö., *Fondation française d'études nordiques. Actes et documents*, 1979, No.6, p.407-420, In English with French summary. 19 refs.
Thermal conductivity, Frost action, Soil water, Rocks, Thermal regime, Heat transfer, Saturation, Vapor diffusion.

34-2344
Practical trials of insulants made from plastics for frost-protection in road and railroad construction: comparison of theory and practice.
Apostolopoulos, C., et al, *Fondation française d'études nordiques. Actes et documents*, 1979, No.6, p.421-437.
Schneider, W.
Thermal insulation, Frost protection, Cellular plastics, Pavements, Roads, Railroads, Frost resistance, Construction, Design criteria.

34-2345
Heating of moist bodies.
Srivastava, K.K., et al, *Fondation française d'études nordiques. Actes et documents*, 1979, No.6, p.439-445, 1 ref.
Pandey, R.N.
Heating, Heat transfer, Moisture, Temperature distribution, Drying, Analysis (mathematics).

34-2346
Integral balance approach for determination of heat transfer potential in porous bodies under different types of boundary conditions.
Srivastava, K.K., et al, *Fondation française d'études nordiques. Actes et documents*, 1979, No.6, p.447-457, 3 refs.
Pandey, R.N.
Heat transfer, Porous materials, Boundary layer, Phase transformations, Analysis (mathematics).

34-2347
Heating of solid of simple geometry when the surrounding temperature is a harmonic function of time.
Srivastava, K.K., et al, *Fondation française d'études nordiques. Actes et documents*, 1979, No.6, p.459-466, 1 ref.
Pandey, R.N.
Heat transfer, Thermal conductivity, Temperature distribution, Solids, Time factor, Analysis (mathematics).

34-2348
Numerical sumulation of a horizontal porous layer heated from below. [Simulation numérique d'une couche poreuse horizontale chauffée par le dessous].
Caltagirone, J.P., *Foncation française d'études nordiques. Actes et documents*, 1979, No.6, p.467-479, In French with English summary. 14 refs.
Heating, Porous materials, Convection, Thermal conductivity, Temperature variations, Isotherms, Analysis (mathematics).

34-2349
Thermal regime in road constructions; measurements and simulation.
Frivik, P.E., et al, *Fondation française d'études nordiques. Actes et documents*, 1979, No.6, p.482-496, In English with French summary. 7 refs.
Pedersen, J.M.
Thermal regime, Road icing, Construction, Freezing, Frost protection, Climatic factors, Surface temperature, Air temperature, Analysis (mathematics), Tests, Temperature measurement.

34-2350
Thermal climate regime on road and ground surface.
Heiersted, R.S., *Fondation française d'études nordiques. Actes et documents*, 1979, No.6, p.497-509, In English with French summary. 5 refs.
Thermal regime, Freezing indexes, Frost penetration, Favements, Surface temperature, Air temperature, Roads, Climatic factors, Frost action, Thermal radiation, Snow depth, Seasonal variations.

34-2351
Heat pipes as applied to thermal control of frozen ground.
Vasil'ev, L.L., et al, *Fondation française d'études nordiques. Actes et documents*, 1979, No.6, p.51 -520, 3 refs.
Konev, S.V.
Permafrost control, Frozen ground temperature, Heat pipes, Permafrost beneath structures, Low temperature tests.

34-2352
Radiative cooling of layers of pebble. [Refroidissement par rayonnement des couches de cailloux].
Bernard, J.J., *Fondation française d'études nordiques. Actes et documents*, 1979, No.6, p.521-524, In French.
Gravel, Radiant cooling, Conduction, Convection, Analysis (mathematics).

34-2353
Thermohydrodynamic model of a large ice sheet. [Termogidrodinamicheskaia model' krupnogo lednikovogo shchita].
Verbitskii, M.IA., et al, *Akademiia nauk SSSR. Doklady*, Jan.-Feb. 1980, 250(1), p.59-61, In Russian. 9 refs.
Chalikov, D.V.
Glacier surfaces, Glacier flow, Ice temperature, Glacier melting, Ice sheets, Snow accumulation, Thermal conductivity, Mathematical models.
A three-dimensional mathematical model of an ice sheet is proposed, based on a combined solution of equations for dynamics and thermal conductivity, with the surface relief as one of the unknown functions. A numerical experiment conducted with the model, using the West Antarctic and Greenland ice sheets, is described.

34-2354
Geological surveys of peat fields by radio echo sounding. [Geologicheskaia razvedka torfianykh mestorozhdenii metodom radiolokatsionnogo zondirovaniia].
Bogorodskii, V.V., et al, *Akademiia nauk SSSR. Doklady*, 1980, 250(2), p.316-318, In Russian. 4 refs.
Trepov, G.V.
Peat, Radar echoes, Geological surveys, Swamps, Measuring instruments, Cold weather performance.

34-2355
Semiconductor resistance thermometers for the interval 300-0.3K.
Zinov'eva, K.N., et al, *Instruments and experimental techniques*, Dec. 1979, 22(3), Pt.2, p.845-847, Translated from Pribory i tekhnika eksperimenta, May-June 1979, No.3, p.214-216. 8 refs.
Zarubin, L.I., Nemish, I.IU., Vorobkalo, F.M., Boldarev, S.T.
Resistance thermometers, Semiconductors (materials), Low temperature tests.

34-2356
Switzerland and its glaciers from the ice age to the present. [Die Schweiz und ihre Gletscher von der Eiszeit bis zur Gegenwart], Zurich, Schweizerische Verkehrszentrale, 1979, 191p., Refs. p.184-185
Mountain glaciers, Glacier oscillation, Glacier dynamics, Glacier tongues, Paleoclimatology, Avalanches, Switzerland.

34-2357
Marine transportation systems of the Trans-Alaska Pipeline System. Washington, D.C., U.S. Coast Guard, 1971, 158p. PB-206 592.
Marine transportation, Navigation, Oil spills, Water pollution.

34-2358
Comparative study of microwave radiometer observations over snowfields with radiative transfer model calculations.
Chang, A.T.C., et al, *U.S. National Aeronautics and Space Administration. Technical memorandum*, May 1979, NASA-TM-80267, 31p. N79-30611.
Shiue, J.C.
Microwaves, Radiometry, Snow cover, Runoff, Mathematical models.

34-2359
Improved drainage and frost action criteria for New Jersey pavement design—Phase III: Structural strength of pavements with open-graded bases.

Effects of seasonal changes and ground ice on electromagnetic surveys of permafrost.
Arcone, S.A., et al, *U.S. Army Cold Regions Research and Engineering Laboratory*, Oct. 1979, CR 79-23, 33p. ADA-077 903
Delaney, A.J., Sellmann, P.V.
Permafrost distribution, Electromagnetic prospecting, Seasonal variations, Ground ice.
The performance of surface impedance and magnetic induction electromagnetic subsurface exploration techniques was studied seasonally at various sites in Alaska where permafrost and massive ground ice occurred. The methods used have greatest sensitivity within about 20 m of the surface and are, therefore, most applicable for shallow subsurface investigations. The selection of study sites was based on anticipated contrasts in electrical resistivity between ground ice and adjacent earth materials. A magnetic induction instrument, using a separation of 3.66-m between the transmitter and receiver antennas, in general was able to detect near-surface zones of massive ice and to provide data regarding permafrost distribution in both the Fairbanks and Prudhoe Bay areas.

Use of 15N to study nitrogen transformations in land treatment.
Jenkins, T.F., et al, *U.S. Army Cold Regions Research and Engineering Laboratory*, Sep. 1979, SR 79-31, 32p. ADA-077 583.
Quarry, S.T., Iskandar, I.K., Edwards, A.P., Hare, H.E.
Waste disposal, Water treatment, Irrigation, Soil chemistry.
The objective of this study was to compare different strategies of using 15N as a tracer to describe the fate of wastewater N in land application of wastewater. Four soil columns were packed with Windsor sandy loam soil and covered with forage grass. The columns were treated with 7.5 cm of either tapwater or wastewater according to four experimental strategies. The strategies varied the treatment given the soil prior to application of the 15N label, the schedule and amounts of the applied 15N label, and the type of water used for subsequent column leaching. Soil solution at depth and leachate were analyzed weekly for concentration and 15N content of nitrate and ammonium. Plant samples were obtained periodically throughout the experiment and, together with soil samples collected at the end of the experiment, analyzed for total nitrogen content and 15N/14N ratios.

Utilization of sewage sludge for terrain stabilization in cold regions. Pt. 3.
Rindge, S.D., et al, *U.S. Army Cold Regions Research and Engineering Laboratory*, Oct. 1979, SR 79-34, 33p. ADA-077 585.
Gaskin, D.A., Palazzo, A.J.
Waste disposal, Sewage disposal, Soil stabilization.
The authors have conducted a two-year revegetation study to assess the ability of sewage sludge applications with or without supplemental fertilizer to promote plant growth and stabilize sloping soils. The study site was a west-facing, 16 deg slope at CRREL in Hanover, New Hampshire. Eight revegetation treatments and one control were replicated three times. Treatments involved applications of dewatered, anaerobically digested sewage sludge at two rates (20 or 40 tons/acre). The sludge was applied alone or in combination with commercial fertilizers which supplied nitrogen, phosphorus and potassium, or all three nutrients. The seed mixture in the treatments contained four grasses and one legume. The effects of the various treatments were determined through soil loss yields, visual grass ratings and plant yields.

Considerations on the origin and properties of the antarctic aerosol.
Shaw, G.E., *Reviews of geophysics and space physics*, Nov. 1979, 17(8), p.1983-1998, Refs. p.1996-1998.
Aerosols, Snow composition, Ice composition, Particle size distribution.
Information pertaining to aerosols and to microparticles, preserved in snow and ice on the high plateau of Antarctica, is assembled and interpreted with a diffusive transport model. The boundary conditions for the problem involve the existence of a two-mode microparticle size distribution function. The smaller (Aitken) mode likely consists of converted products from nucleation of trace gases, the particles are less than 2.3 days old and are produced locally over the ice caps at a production rate of 4x10 exp 21/g/cu cm/s. The Aitken particles are present in concentrations of 100-1,000/cu cm throughout the troposphere, except in the lowest few hundred meters within the turbulent boundary layer, where they are depleted. The Aitken particles are probably composed of converted sulfates and hydrocarbons. Large particles approx 0.4 microm in radius are also found in Antarctica, in concentrations of 0.5/cu cm; these particles dominate the aerosol mass. The large particles are estimated to have come from (1) unidentified sulfate sources, (2) oceanic sources surrounding the continent, (3) arid regions in the southern hemisphere, (4) extraterrestrial sources, and (5) oases on the continent, in that order of importance. Turbulent diffusion seems to be the primary particle transport mechanism. Particle removal mechanisms are discussed.

XV 859; the Falkland Island craft.
Russell, B.J., *Hovering craft and hydrofoils*, Jan. 1978, 17(4), p.13-17.
Air cushion vehicles, Falkland Islands.
Built by the British Hovercraft Corporation for operation by the Falkland Island Hovercraft Detachment, the SR.N6 Mk 1 hovercraft's main task is to transport 12 fully equipped Royal Marines to any position in the Falkland Islands day or night. In addition, the craft has been employed to support the marines on detachment for such tasks as aircraft spotting and casualty evacuation. Notable achievements of the craft include complete circumnavigation of the Falklands, either around the islands or in a figure 8 through the Falkland Sound. Many overland journeys were made. Topographical details of the Falkland Islands are discussed. Following refurbishment in Fleetlands, the craft was returned to service in 1974, and has been employed in driver training, demonstrations, logistics tasks, and navigational exercises.

Hoch, D.
Watersheds, Drainage, Stream flow.
A drainage network map of the Caribou-Poker Creek Research Watershed, near Fairbanks, Alaska, has been used to conduct a Strahler stream order analysis and an analysis of length distributions of source and tributary-source links in a subarctic watershed. The basins have very low drainage densities, ranging from 1.35 km sq km to 5.34 km sq km. Bifurcation ratios were higher than those found in watersheds in the continental U.S. Statistical analysis indicates that source and tributary-source links in a subarctic watershed belong to different length populations, the same as found in other regions of the world. Additional analysis indicates that exterior links originating on permafrost slopes tend to be shorter than those originating on non-permafrost (well-drained) slopes.

Meetings, Icebergs, Dynamic properties.
This issue is devoted to the papers presented at an international symposium dealing with theoretical and practical problems associated with iceberg drift. The symposium was sponsored by the Newfoundland Oceans Research and Development Corp., with assistance from the U.S. Coast Guard and the Department of Industrial Development, Province of Newfoundland and

Labrador. Participants included scientists and engineers who had contributed to the understanding of the physical nature of iceberg drift and to the development of concepts or systems related to both utilization of icebergs and to protection of structures from iceberg impact.

Cheney, R.E., Marsh, J.G., Mognard, M.N.
Ocean currents, Spacecraft, Iceberg towing.
Recent oceanographic research indicates that most of the ocean momentum is probably involved in intense rings, formed by meanders of the large streams, and in mid-ocean eddies. These rings and eddies have typical dimensions on the order of 200 km with dynamic height anomalies across them of tens of centimeters to a meter. They migrate at speeds on the order of a few cm/sec. Current velocities as great as 3 knots have been observed in rings, and currents of 1 knot are common. Thus, the successful towing of icebergs is dependent on the ability to locate, measure, and track ocean rings and eddies. To accomplish this systematically on synoptic scales appears to be possible only by using satellite-borne radar altimeters. Ocean current and eddy structures as observed by the radar altimeters on the GEOS-3 and Seasat-1 satellites are presented and compared. The Antarctic Circumpolar Current is ideally suited for using this technique to identify, monitor and eventually map its rings and eddies on synoptic scales. (Auth. mod.)

High-force towing.
Mellor, M., *Cold regions science and technology*, Feb. 1980, 1(3/4), MP 1275, p.231-240, 5 refs.
Iceberg towing, Loads (forces).
Required force levels for iceberg towing at 1 knot could be at least 50 tons for protection of structures and drillships in northern waters, and around 1000 tons for iceberg exports from the Antarctic. Corresponding values of effective ("towrope") power are only 307 hp and 6140 hp, respectively. Moderately large conventional tugs typically have thrust/power (T/P) ratios of 20-25 lbf/hp with unshrouded propellers, and perhaps 30%-40% more with Kort nozzles. As tug size increases, the propeller loading usually has to increase and T/P decreases. A conventional-hull supertug capable of 1000 tons thrust would probably have T/P = 10 lbf/hp, p = 200,000 hp, and a propulsive efficiency of about 3%. Unconventional propellers, paddles, and water jets have little to offer, but efficiency could be improved with an unconventional hull that provides space for large propeller area. If an iceberg is propelled by pulling a drogue towards it, the propulsive efficiency increases as speed of the drogue decreases, but the required drogue area increases. For antarctic towing the demands exceed current capabilities for winch force, winch power and line speed. If an iceberg is towed against a bottom anchor, the propulsive efficiency is 100%, and power demands are modest. While such a system is feasible for relatively shallow waters, it would be very difficult to use in the deep oceans. For any system that has to develop very high towing forces, the tow cable itself is a problem. The safe working load of 6-in. wire rope is less than 300 tons, or 3 1/2 times less than the 1000-ton force that might be needed to move useful antarctic icebergs. The most practical expedient for antarctic towing seems to be use of multiple conventional tugs, with fewer tugs or higher speeds as the iceberg reduces its size and streamlines itself. The practical difficulty of towing antarctic icebergs may have been underestimated, and it might be worth reconsidering preliminary shaping of the iceberg to reduce the drag. (Auth.)

34-2446
On the size distribution of Antarctic icebergs.
Neshyba, S., *Cold regions science and technology*, Feb. 1980, 1(3/4), p.241-248, 14 refs.
Icebergs, Distribution, Models, Antarctica.
Composites are given of six reported antarctic iceberg size distributions, and theoretical Rayleigh distributions are fitted with reasonable small errors. A modal length of 0.4km is found for observations in East Antarctica; this increases to 0.7km when size data for icebergs observed by satellite in or near the pack ice in the Bellingshausen Sea are added. Results of model investigation of the equilibrium or standing population size distribution, based on the Gordienko observations of sizes near the Amery Ice Shelf as initial conditions and annual input together with the constraints of uniform sidewall wastage rate and that length: width ratios be maintained within the range 1:1 to 2:2 by iceberg fracturing into equal parts, show a distribution much unlike the Rayleigh in that the highest probability of occurrence is of icebergs of widths 0-0.2km. The model size distribution attains equilibrium after 21 years, at which time it is fitted very well to a Weibull distribution with parameters beta = 0.5, eta = 1.6 and gamma = 0. A method is outlined by which the size distribution of freshly-calved icebergs might be assessed for use as the initial condition to such models. (Auth.)

Western Ross Sea and McMurdo Sound ice forecasting guide.
Perchal, R.J., *U.S. Naval Oceanographic Office. Special publication*, June 1975, NOO SP-265, 132p., Refs. p.59-62.
Sea ice, Ice conditions, Ice forecasting, Pack ice, Meteorological factors, Long range forecasting, Antarctica—Ross Sea, Antarctica—McMurdo Sound.
Procedures for preparing short-range (48-hour) forecasts and long-range (15- and 30-day) estimates of austral summer sea ice conditions in the western Ross Sea and McMurdo Sound are given. Background data on environmental factors of mean storm tracks, mean monthly sea level pressure (winds) and surface air temperature over the Ross Sea and austral summer ice conditions over the western Ross Sea and McMurdo Sound are given. Analyses of historical ice edge data which are based on observations taken over sixteen years from *Deep Freeze* I (1955-56) through *Deep Freeze* 71 (1970-71) indicate median positions of the north and south pack edges at half-monthly intervals from October through January. Ice data also include the range of locations of pack edges, distribution of pack concentrations, percentage of large floe sizes, and ice thickness. Analyses of the thickness and median extent and extremes of fast ice in McMurdo Sound are included. Selection of optimum ice routes is described, using mean ice concentrations and the percentage of large floe sizes. (Auth. mod.)

Ice cores, Drill core analysis, Electron microscopy, Particles, Paleoclimatology, Antarctica—South Pole.
A detailed analysis is presented of the particles in a 101-m core from Amundsen-Scott Station, which contains approximately a one thousand year record of atmospheric particle concentrations over the East Antarctic plateau. The work is organized in 8 chapers: 1) an introduction; 2) the physical and meteorological characteristics of the central Antarctic plateau, 3) the climatic history of the earth, with emphasis on the Little Ice Age, 4) the basic properties of the tropospheric and stratospheric particles, 5) a technical description of the entire microparticle analysis procedure, 6) details of the method used to construct the time scale for the 101-m core, 7) interpretation of the microparticle data, and 8) conclusions and future research. Supplementary tables and scanning electron microscope micrographs are presented in appendixes.

Soil freezing and highway construction. Ottawa, Canada, Carlton University, 1978, 105p., Also available in French edition
Roads, Construction, Frozen ground mechanics, Frozen ground physics, Frost penetration, Soil freezing, Mathematical models.
The volume results from a seminar-course organized by the Paterson Centre, Carlton University and by the Ecole Nationale des Ponts et Chaussées, Paris, and held at Ottawa in Oct. 1977. In seventeen chapters several authors deal with various aspects of road construction on freezing soils. Some of the topics include: French research on frost action, laboratory simulation, soil thermal regimes, macro- and micro-mechanisms of freezing at the interface, frost penetration and frost susceptible soils, numerical applications, frost damage prevention.

34-2481
Initial report on geological materials collected at RISP site J9, 1978-79.
Webb, P.N., comp, RISP technical report 79-1, Lincoln, University of Nebraska, Oct. 1979, 127p., 13 refs.
Drill core analysis, Bottom sediment, Marine deposits, Ice shelves, Geological surveys, Glacial geology.
Sampling of 58 cores at Ross Ice Shelf Project J9 was undertaken in Dec. of both 1977 and 1978. An analysis of sea floor wave forms suggests that the northward movement of the Ross Ice Shelf in this region might be between 1 and 4 m a day. The lithological, paleontological and stratigraphic core analyses are described. A date of 174 m.y. was obtained from Rb-Sr dating of fine-grained detrital feldspars in a dredge sample of the core upper unit.

Zagorodnov, V.S., Raikovski, J.V.
Ice shelves, Ice cores, Sea ice, Ice growth, Ice melting, Antarctica—Ross Ice Shelf.
New techniques that have been used to obtain a continuous ice core through the whole 416-meter thickness of the Ross Ice Shelf at Camp J-9 have demonstrated that the bottom 6 meters of the ice shelf consists of sea ice. The rate of basal freezing that is forming this ice is estimated by different methods to be 2 centimeters of ice per year. The sea ice is composed of large vertical crystals which form the waffle-like lower boundary of the shelf. A distinct alignment of the crystals throughout the sea ice layer suggests the presence of persistent long-term currents beneath the ice shelf. (Auth.)

Recent variation of ice sheet in Mizuho Plateau.
Mae, S., *Tokyo. National Institute of Polar Research. Memoirs*, 1979, Special issue No.14, p.1-7, 16 refs.
Glacier flow, Ice sheets, Oxygen isotopes, Basal sliding, Antarctica—Shirase Glacier.
On the basis of a glaciological survey carried out by the Japanese Antarctic Research Expedition in Mizuho Plateau, thinning of the ice sheet in the observed area is discussed. Vertical profiles of oxygen isotope and ice temperature at Mizuho Station are explained by ice sheet thinning which commenced 100 years ago. A simple calculation of basal shear stress shows the unstable state of the ice sheet in Mizuho Plateau. (Auth.)

34-2500
Rate of snow accumulation determined from oxygen isotope and stratigraphic analyses of the core from Mizuho Station, East Antarctic (extended abstract).

Comparison of the pebble orientation in ice and deposits of the Matanuska Glacier, Alaska.
Lawson, D.E., *Journal of geology*, Nov. 1979, 87(6), MP 1276, p.629-645, 21 refs.
Glacial deposits, Ice structure, Sediment transport.
Depositional processes and their sediment source determine the orientation of pebbles in the deposits of the Matanuska Glacier and the relationship of this orientation to the direction of ice flow. Pebble fabrics in ice-derived deposits differ from those in resedimented deposits: fabric in deposits from sediment flow, ablation of exposed basal zone ice, and the slumping and spalling of ice-cored slopes does not correspond to the ice flow direction, but is developed by these depositional processes. Pebbles in basal ice and melt-out till show a unimodal distribution of orientations, with individual observations only slightly dispersed about the mean axis. Pebble fabrics in other deposits are polymodal, with a significantly larger amount of dispersion about the mean axis. The regional pattern of mean axes of basal zone ice and melt-out till pebble fabrics approximates the local and regional trends of ice flow, but pebble imbrication in ice and sediment does not necessarily indicate the direction from which the glacier flowed. A small number of measurements of pebble orientations at many sites and the analysis of these data by the eigenvalue method appear to be suitable techniques for examining the pebble fabric of glacial deposits, but additional sedimentological data are needed to define the origins of these deposits.

Analysis of plastic shock waves in snow.
Brown, R.L., *U.S. Army Cold Regions Research and Engineering Laboratory*, 1979, CR 79-29, 14p., ADA-080 051, 12 refs.
Wave propagation, Snow deformation, Shock waves, Loads (forces), Analysis (mathematics).
An analytical study of the propagation of shock waves in snow was carried out to evaluate the response of medium density snow to high rates of loading. One solution was developed for steady shock waves; this resulted in calculation of pressure jump, density jump and stress wave speed. Correlation with available experimental data was found to be good. Nonsteady shock waves were also considered in order to evaluate wave attenuation rates in snow. Very few data were available to compare with the analytical results, so no definite conclusions on the part of the study could be made. The results show, however, that shock waves that produce plastic deformation attenuate at extremely high rates and that differences in pressure between two waves are quickly eliminated within a short distance. Calculations were also made to evaluate the effect of wave frequency on attenuation rates. The results show that, for plastic waves, frequency is not a predominant factor for determining attenuation rates. (Auth.)

Paren, J.G.
Glacier ice, Ice shelves, Electrical resistivity, Ice electrical properties, Recrystallization, Impurities, Antarctica—George VI Ice Shelf.
Electrical d.c. resistivity measurements made on George VI Ice Shelf have established the polar nature of antarctic ice despite saturation by melt-water from surface melt-lakes. Previously it has been suggested that different impurity concentrations are responsible for the extremes in resistivity (a factor of 1,000) between temperate ice (essentially at its pressure melting point) and polar ice (well below its pressure melting point). However, the evidence suggests that impurity levels are similar despite the leaching of contaminants by free water in temperate glaciers, a process which is absent in true polar glaciers. This implies that, although impurities can significantly alter the electrical behavior of glacier ice, there is a more fundamental mechanism at work. It is suggested that this process is one of recrystallization. (Auth.)

Winters of the world: Earth under ice ages.
John, B.S., ed, New York, Wiley and Sons, 1979, 256p., Bibliography p.250-253. For pertinent paper see 34-2560 or E-23078
Glacial geology, Ice age theory, Geomorphology, Climatic changes, Glaciation.
The book deals with the global importance of ice and basic geological processes; causes of ice ages; effects of large-scale glaciation on environment; and environments during specific historical ice ages from Precambrian through Quaternary. It is intended to give insight toward understanding the processes and effects of the present ice age in order to interpret correctly earlier ice ages and to predict global climates over the few centuries. Antarctica is mentioned sporadically in the text and more frequently in photographs, charts, tables, and graphs.

34-2560
Glaciers and environment.
Derbyshire, E., Winters of the world: Earth under ice ages, edited by B.S. John, New York, Wiley and Sons, 1979, p.58-106.
Glacial geology, Glacier ice, Glacial deposits, Sea ice, Icebergs.
The author describes how glaciers form, shape, and change the environments in which they operate, both at and beneath the surface, including the plant and animal life of the habitats. Rock break-up due to glacier pressure, quiet and turbulent subglacial streams, glacial deposits and unique surface features, ground ice, sea ice, and sea level changes, all as they affect and are affected by glacial and interglacial periods, are described.

34-2561
SA ice ship tribute to designers, builders. *South African shipping news and fishing industry review*, May 1978, 33(5), p.10-17.
Ships, Ice navigation, Logistics.
The South African vessel, the *S.A. Agulhas*, an antarctic survey/supply ship of British design and Japanese construction, is described. Some construction details are given and various capabilities, facilities, and equipment are noted: ice navigation, cargo handling and stowing, helicopters, scientific activities, crew and passenger accommodation, and power plants.

Parameterization of sub-grid scale processes.
WMO-ICSU Joint Organizing Committee, *Global Atmospheric Research Programme. GARP publications series*, Oct. 1972, No.8, 120p. (Pertinent p.97-101). In English with French, Russian, and Spanish summaries. 7 refs.
Snow cover, Sea ice, Analysis (mathematics).

34-2565
Sea ice and ice sheets and their role in climatic variations.
Untersteiner, N., *Global Atmospheric Research Programme. GARP publications series*, Apr. 1975, No.16, p.206-224, 68 refs.
Sea ice, Ice sheets, Climatic changes.
The most important variations of the atmosphere-cryosphere-hydrosphere system on time scales up to 10,000 years are the annual cycle and the prolonged glaciations associated with secular trends of the sea ice and snow cover. Theories of sea ice dynamics are still in an early stage, and concerted efforts will be needed to improve both theory and the world-wide observational monitoring of sea ice by satellite-borne, all-weather, remote sensing methods. The continental ice sheets are important features influencing the present-day general circulation of the atmosphere and the oceans (e.g. formation of bottom water around Antarctica). In terms of climatic variations they are comparatively "inert", but they provide useful paleo-climatic information. Major outbreaks (surges) of antarctic ice would have profound consequences for world climate. The search for geomorphic evidence of such events, and efforts to improve the theory of ice sheet dynamics, should be continued. (Auth.)

Bryan, M.L., Weeks, W.F.
Radar echoes, Frozen lakes, Backscattering, Remote sensing, Bubbles, Ice water interface, Ice solid interface.
L-band radar images of a number of ice-covered lakes located approx 48 km northwest of Bethel, Alaska, show large differences in radar backscatter with lakes showing homogeneous low-returns, homogeneous high-returns and of low-returns around the lake borders and high-returns from the central areas. The patterns of the returns suggest that a low-return indicates that the lake is frozen completely to its bottom, while a high return indicates the presence of fresh-water between the ice cover and the lake bed. This interpretation is in good agreement with the limited information available on lake depths in the study area and recent X-band radar observations of North Slope lakes by Sellman, Weeks and Campbell, who suggested such an interpretation. These effects are, however, more striking in the L-band than in the X-band imagery. This can be explained by the fact that volume inhomogeneities, such as air bubbles, will cause more scattering and conductivity losses and thus more attenuation at the shorter wavelengths (X-band, 3 cm).

34-2591
Improving the quality of bridge construction with prefabricated parts for the Baykal Amur railroad. [Povysit' uroven' sbornosti mostov BAM].
Rasskazov, I.D., et al, *Transportnoe stroitel'stvo*, Dec. 1979, No.12, p.8-11, In Russian.
Ronin, B.G., Pyshko, L.V.
Bridges, Prefabrication, Reinforced concretes, Permafrost hydrology, Baykal Amur railroad.

34-2592
Combinations of equipment for handling explosive materials at the Baykal Amur railroad construction sites. [Mekhanizirovannye kompleksy po pererabotke VV dlia stroitel'stva BAMa].
Semin, A.P., et al, *Transportnoe stroitel'stvo*, Dec. 1979, No.12, p.24-25, In Russian.
Basin, V.N.
Earthwork, Blasting, Construction equipment, Explosives, Baykal Amur railroad.

34-2593
Polystyrene concrete, an effective thermal insulation material for industrial buildings and block-component construction. [Polistirolbeton—effektivnyi teploizoliatsionnyi material dlia promyshlennykh zdanii i blochno-komplektnykh ustroistv].
Stefurak, B.I., et al, *Neftepromyslovoe stroitel'stvo*, 1980, No.2, p.5-6, In Russian. 2 refs.
Levinskaia, E.IA., Salov, A.A., Petrenko, F.F.
Thermal insulation, Concrete structures, Polymers, Freeze thaw cycles, Frost resistance, Industrial buildings, Residential buildings.

34-2594
Determining electrical properties of grounds in petroleum regions. [Opredelenie elektricheskikh parametrov gruntov neftegazonosnykh ralonov].
Kondrashov, A.G., *Neftepromyslovoe stroitel'stvo*, 1980, No.2, p.10-11, In Russian.
Petroleum industry, Permafrost beneath structures, Permafrost physics, Electrical properties, Construction, Buildings.

34-2595
Calculating settlement of oil tanks on inhomogeneous bases. [Chislennyi raschet osadok neftepromyslovykh rezervuarov na neodnorodnom osnovanii].
Mangushev, R.A., *Neftepromyslovoe stroitel'stvo*, 1980, No.2, p.13-15, In Russian. 2 refs.
Tanks (containers), Settlement (structural), Peat, Bearing strength, Petroleum industry.

34-2596
Combinations of various means of transportation along the Punga-Vuktyl-Ukhta railroad. [Kompleksnoe vzaimodeistvie razlichnykh vidov transporta na trasse Punga-Vuktyl-Ukhta].
Glazkov, V.E., *Stroitel'stvo truboprovodov*, Jan. 1980, No.1, p.15-17, In Russian.
Railroads, Gas pipelines, Transportation, Construction materials, Polar regions.

34-2597
Lowering transportation costs of gas field development in the northern Tyumen' area. [Snizhenie transportnykh zatrat pri obustroistve gazovykh mestorozhdenii severa Tiumenskoi oblasti].
Strubtsova, L.M., *Stroitel'stvo truboprovodov*, Jan. 1980, No.1, p.17-18, In Russian.
Economic development, Transportation, Cost analysis, Petroleum industry, USSR—Tyumen'.

34-2598
Experimental pipeline section with prefabricated insulation. [Opytnyi uchastok iz trub s zavodskoi izoliatsiei].
Zinevich, A.M., et al, *Stroitel'stvo truboprovodov*, Jan. 1980, No.1, p.21-22, In Russian.
Leont'ev, O.V., Pershina, E.S., Ryzhkov, V.I.
Pipelines, Thermal insulation, Prefabrication, Frozen fines.

34-2599
Artificial freezing of thawed ground around thermopiles. [Rezhimy zamorazhivaniia talykh gruntov vokrug termosvai].
Kuramin, V.P., *Stroitel'stvo truboprovodov*, Jan. 1980, No.1, p.24-26, In Russian. 5 refs.
Thermopiles, Permafrost control, Permafrost hydrology, Foundations

34-2600
Hydroelectric power generation in Siberia and the Far East. [Gidro-energetika Sibiri i Dal'nego Vostoka].
Neporozhnii, P.S., Moscow, Energiia, 1979, 151p., In Russian with English table of contents enclosed. 19 refs.
Electric power, Hydraulic structures, Dams, Permafrost beneath structures, Cold weather construction, Design, Cost analysis.

34-2601
Space techniques of studying snow cover of the Earth. [Kosmicheskie metody izucheniia snezhnogo pokrova Zemli].
Deleur, M.S., Leningrad, Gidrometeoizdat, 1980, 77p., In Russian with English table of contents enclosed. 80 refs.
Spaceborne photography, Snow surveys, Snow cover distribution, Snow depth, Snow deformation, Albedo, Photointerpretation, Photometry, Snow cover stability, Snow melting, Snow water content.

34-2602
Physical and thermal properties of frozen soil and ice.
Wolfe, L.H., et al, *Society of Petroleum Engineers of AIME. Journal*, Mar. 1964, 4(1), p.67-72, 5 refs.
Thieme, J.O.
Frozen ground strength, Frozen ground physics, Ice physics, Ice thermal properties, Tensile properties, Shear strength, Ice deformation, Compressive properties, Thermal conductivity, Thermal diffusion, Density (mass/volume), Specific heat, Tests.

34-2603
Cracks, movements and joints in buildings: record of the DBR Building Science Seminar, Autumn 1972.
National Research Council, Canada. Division of Building Research, Ottawa, 1976, c125 leaves, Papers in this volume based on slide/talks given at the 1972 seminar.
Meetings, Buildings, Structural changes, Temperature variations, Loads (forces), Moisture, Joints (junctions).

34-2604
Ice accretion studies under simulated shipboard icing conditions.
Rubin, E.H., *U.S. Naval Applied Science Laboratory. Lab. project report*, July 1969, 930-20, 55p. AD-855 790.
Ship icing, Ice accretion, Environment simulation, Air temperature, Wind velocity, Sea spray.

34-2605
Environmental code of good practice for highways and railways.
Storgaard and Associates, *Canada. Environmental Protection Service. Report*, Dec. 1979, EPS 1-EC-79-2, c80p., In English and French. 41 refs.
Manuals, Roads, Railroads, Construction, Environmental protection, Environmental impact.

34-2606
Notes on the acquisition of high resolution seismic reflection profiles, side-scanning sonar records, and sediment samples, from lower Cook Inlet and Kodiak Shelf, R/V Sea Sounder cruise S8-78-WG, August 1978.
Hampton, M.A., et al, *U.S. Geological Survey. Open-file report*, Mar. 1979, No.79-1311, c60 leaves, 22 refs.
Bouma, A.H.
Seismic reflection, Underwater acoustics, Acoustic measurement, Bottom sediment.

34-2607
Construction-related impacts of the Trans-Alaska Pipeline System on terrestrial wildlife habitats.
Pamplin, W.L., Jr., *U.S./Alaska. Joint Fish and Wildlife Advisory Team. Special report*, Aug. 1979, No.24, 132p., Refs. p.63-69.
Pipelines, Environmental impact, Animals, Environments, Construction.

34-2608
Freezing in forest soil as influenced by soil properties, litter, and snow.
Thorud, D.B., et al, *Minnesota. University. Water Resources Research Center. Bulletin*, Jan. 1969, No.10, 41p., 19 refs.
Anderson, D.A.
Forest soils, Soil freezing, Soil composition, Snow cover effect.

34-2609
Arctic stream processes—an annotated bibliography.
Scott, K.M., comp, *U.S. Geological Survey. Water supply paper*, 1979, No.2065, 78p.
Bibliographies, Polar regions, Streams.

34-2610
Understanding permafrost: development and use of lightweight equipment.
Veillette, J., et al, *Northern development*, Jan./Feb. 1980, 12(1), p.21-23, Translation of Pour maitriser le pergélisol: mise au point d'un équipement approprié, Geos, Fall 1979, p.15-17.
Nixon, M.
Permafrost samplers, Frozen ground, Drills.

34-2611
New method planned for pipe under ice. *Northern development*, Jan./Feb. 1980, 12(1), p.28-29.
Pipe laying, Ice cover.

34-2612
Soil-geochemical regionalization of the non-chernozem zone for protection from pollution. [Pochvenno-geokhimicheskoe ralonirovanie nechernozemnoi zony dlia tselei okhrany pochv ot zagriazneniia].
Glazovskaia, M.A., *Voprosy geografii*, 1978, No.108, p.127-139, In Russian.
Soil pollution, Soil chemistry, Podsol, Mapping, Tundra, Forest tundra, Taiga, Landscape types.

34-2613
Ways of increasing the reliability of blasting hard rocks. [Puti povysheniia nadezhnosti vzryvnykh rabot pri sooruzhenii skal'nykh vyemok].
Basistov, M.A., *Transportnoe stroitel'stvo*, Feb. 1980, No.2, p.4-6, In Russian.
Earthwork, Blasting, Explosives, Permafrost, Boreholes.

34-2614
Fast performance and excellent quality. [Vysokie tempy i otlichnoe kachestvo].
Pavlov, A.IA., *Transportnoe stroitel'stvo*, Feb. 1980, No.2, p.28-31, In Russian.
Excavation, Cold weather construction.

34-2615
Ice strength determination allowing for climatic factors. [Opredelenie prochnosti l'da s uchetom klimaticheskikh faktorov].
Kukhtina, L.P., et al, *Transportnoe stroitel'stvo*, Feb. 1980, No.2, p.41-42, In Russian. 3 refs.
Eliseev, V.M.
River ice, Hydraulic structures, Ice loads, Ice cover thickness, Ice cover strength, Ice jams.

34-2616
Loads on cutting tools of excavators when digging pits in permafrost. [Nagruzki na rabochii organ mashiny dlia razrabotki kotlovanov v merzlote].
Bondarovich, B.A., et al, *Transportnoe stroitel'stvo*, Feb. 1980, No.2, p.44-45, In Russian.
Mazo, IU.D., Guberman, F.S.
Excavation, Permafrost.

34-2617
Mechanical properties of metals depending on temperature and deformation rates. [Mekhanicheskie svoistva nekotorykh metallov v zavisimosti ot skorosti deformatsii i temperatury].
Chaplinskii, I.A., et al, *Russia. Ministerstvo vysshego i srednego spetsial'nogo obrazovaniia. Izvestiia vysshikh uchebnykh zavedenii. Stroitel'stvo i arkhitektura*, 1979, No.8, p.31-35, In Russian. 8 refs.
Mysik, V.F., Valiev, F.S.
Metals, Frost resistance, Low temperature tests, Deformation.

34-2618
Hot sand-cement mixes for road pavement bases. [Ispol'zovanie goriachikh smesei dlia ustroistv osnovanii dorozhnykh odezhd iz peschanogo tsementobetona].
Vostrikov, IU.S., et al, *Russia. Ministerstvo vysshego i srednego spetsial'nogo obrazovaniia. Izvestiia vysshikh uchebnykh zavedenii. Stroitel'stvo i arkhitektura*, 1979, No.8, p.105-108, In Russian. 5 refs.
IAnchikov, V.F.
Pavements, Concretes, Frost resistance, Roads.

34-2619
Factors determining the wear of cutting tools in frozen ground. [Issledovanie faktorov, opredeliaiushchikh iznos instrumenta pri rezanii merzlykh gruntov].
Dobzhinskii, D.P., et al, *Russia. Ministerstvo vysshego i srednego spetsial'nogo obrazovaniia. Izvestiia vysshikh uchebnykh zavedenii. Stroitel'stvo i arkhitektura*, 1979, No.9, p.110-114, In Russian. 4 refs.
Leshchiner, V.B.
Excavation, Earthwork, Frozen ground.

34-2620
Interpreting meso- and microclimatic peculiarities of large cities for urban planning (Novosibirsk taken as an example). [Opyt planirovochnoi interpretatsii mezo- i mikroklimaticheskikh osobennostei bol'shogo goroda (na primere Novosibirska).
Pavlov, V.M. *Russia. Ministerstvo vysshego i srednego spetsial'nogo obrazovaniia. Izvestiia vysshikh uchebnykh zavedenii. Stroitel'stvo i arkhitektura.* 1979, No.10, p.48-54. In Russian. 5 refs.
Urban planning, Microclimatology, Human factors, Snowdrifts, Wind factors, USSR—Novosibirsk.

34-2621
Stabilization of artificially thawed soils on lake and river shores, by cement solutions in freezing weather. [Issledovaniia i opyt zakrepleniia v zimnikh usloviiakh predvaritel'no ottaiannykh gruntov beregov rek i vodoemov tsementnymi kompozitsiiami].
Temko, IU.P., et al. *Russia. Ministerstvo vysshego i srednego spetsial'nogo obrazovaniia. Izvestiia vysshikh uchebnykh zavedenii. Stroitel'stvo i arkhitektura.* 1979, No.10, p.89-91. In Russian. 1 ref.
Shatygin, V.A.
Rivers, Lakes, Shores, Soil stabilization, Cements.

34-2622
Thermal waves in roadbeds. [Temperaturnye volny v dorozhnykh konstruktsiiakh].
Shestakov, V.N., et al. *Russia. Ministerstvo vysshego i srednego spetsial'nogo obrazovaniia. Izvestiia vysshikh uchebnykh zavedenii. Stroitel'stvo i arkhitektura.* 1979, No.10, p.105-111. In Russian. 5 refs.
Shestakov, A.N.
Roadbeds, Thermal regime, Moisture transfer, Pavements, Thermal insulation, Roads.

34-2623
Concrete failure during cyclic freezing and the development of an automatic system for forecasting concrete frost resistance. [Issledovanie protsessov razrusheniia betonov pri tsiklicheskom zamorazhivanii i razrabotka avtomaticheskoi sistemy prognozirovaniia morozostoikosti betonov].
Vorob'ev, V.A., et al. *Russia. Ministerstvo vysshego i srednego spetsial'nogo obrazovaniia. Izvestiia vysshikh uchebnykh zavedenii. Stroitel'stvo i arkhitektura.* 1979, No.10, p.121-124. In Russian. 6 refs.
Mosesov, M.D., Popov, V.P.
Concrete freezing, Freeze thaw cycles, Concrete strength, Frost resistance.

34-2624
Influence of the length of perpendicular leg of fillet welded joints on their strength at low temperatures. [Vliianie vysoty kateta svarnykh uglovykh shvov na ikh prochnost' pri nizkikh temperaturakh].
Semenovich, M.D., et al. *Russia. Ministerstvo vysshego i srednego spetsial'nogo obrazovaniia. Izvestiia vysshikh uchebnykh zavedenii. Stroitel'stvo i arkhitektura.* 1979, No.11, p.18-22. In Russian. 6 refs.
Sil'vestrov, A.V., Shagimardanov, R.M.
Welding, Joints (junctions), Cold weather performance.

34-2625
Melting intensity of frozen zones formed in cores of rock-fill dams during construction. [Intensivnost' ottaivaniia merzlykh zon obrazovavshikhsia v period stroitel'stva v iadre kamenno-nabrosnot plotiny].
Fevralev, A.V., *Russia. Ministerstvo vysshego i srednego spetsial'nogo obrazovaniia. Izvestiia vysshikh uchebnykh zavedenii. Stroitel'stvo i arkhitektura.* 1979, No.11, p.88-91. In Russian. 4 refs.
Earth dams, Rock fills, Permafrost beneath structures, Hydraulic structures, Dams.

34-2626
Soil stabilization with a mixture of liquid bitumens and plastics. [Ispol'zovanie zhidkikh bitumov s dobavkoi termoelastoplasta dlia ukrepleniia gruntov].
Lukanina, T.M., et al. *Russia. Ministerstvo vysshego i srednego spetsial'nogo obrazovaniia. Izvestiia vysshikh uchebnykh zavedenii. Stroitel'stvo i arkhitektura.* 1979, No.11, p.108-113. In Russian. 4 refs.
Kochetkova, R.G., Gokhman, L.M.
Soil stabilization, Cements, Plastics, Bitumens.

34-2627
Forecasting periodic fluctuations of larch increments in the Taz forest tundra. [Periodicheskie kolebaniia indeksov prirosta listvennitsy sibirskoi v Tazovskoi lesotundre i ikh prognoz].
Berri, B.L., et al. *Ekologiia.* Nov.-Dec. 1979, No.6, p.22-26. In Russian. 5 refs.
Liberman, A.A., Shiiatov, S.G.
Forest tundra, Plant ecology, Plant physiology.

34-2628
Properties of forest litter in relation to natural reforestation of green-moss spruce forest in northern Sikhote-Alin. [O svoistvakh lesnoi podstilki v sviazi s estestvennym vozobnovleniem v zelenomoshnykh elnikakh severnogo Sikhote-Alinia].
Krupskaia, L.I., et al. *Ekologiia.* Jan.-Feb. 1980, No.1, p.93-95. In Russian. 10 refs.
Lebedinskaia, A.P.
Litter, Forest soils, Revegetation, Soil chemistry, Taiga, Soil composition, USSR, Sikhote-Alin.

34-2629
Ice—an ever-mounting threat to man's survival.
Foulds, D.M., *Canadian consulting engineer.* Oct. 1973, 15(10), p.27-29.
Water intakes, Lake ice, Ice conditions, Water supply, Channels (waterways), Ice cover thickness, Ice pileup, Icebergs.

34-2630
North American snowfall study; comparative through 1973-4 season.
International Snowmobile Industry Association, [Minneapolis], 1974, c400p.
DLC GB2413.157
Snowfall, Snow accumulation, Statistical analysis, Seasonal variations, Snow vehicles, Climatic factors, United States, Canada.

34-2631
Marine transportation systems of the Trans-Alaskan Pipeline System.
U.S. Coast Guard, Washington, D.C., National Technical Information Service, Dec. 1971, 158p. PB-206 592.
Marine transportation, Environmental impact, Oil spills, Water pollution, Petroleum transportation, Pipelines.

34-2632
Resistance of porous asphalt and antihydroplaning surfaces to environmental effects and simulated aircraft wheel loadings.
Hargett, E., *U.S. Air Force Weapons Laboratory (DEZ). Technical report.* Nov. 1974, AFWL-TR-74-169, 56p., ADA-003 420, 3 refs.
Bitumens, Freeze thaw cycles, Porous materials, Aircraft landing areas, Skid resistance, Vehicle wheels, Loads (forces), Runways, Tests.

34-2633
Preparing foundations for construction on sagging loess. [Podgotovka osnovanii dlia stroitel'stva na lessovykh prosadochnykh gruntakh].
Ryzhov, A.M., *Stroitel'stvo i arkhitektura.* May 1979, No.5, p.14-15. In Russian.
Foundations, Loess, Soil water migration, Settlement (structural), Design, Buildings.

34-2634
Allowing for compacted layer thickness when designing for sagging ground. [O tolshchine uplotnennogo sloia pri proektirovanii na prosadochnykh gruntakh].
Rozenfel'd, I.A., *Stroitel'stvo i arkhitektura.* July 1979, No.7, p.19-21. In Russian.
Foundations, Buildings, Loess, Settlement (structural), Soil compaction.

34-2635
From quantity to quality. [O kachestve i ka chestvu].
Antonov, A.F., et al. *Stroitel'stvo i arkhitektura Leningrada.* June 1979, No.6, p.18-20. In Russian.
Nikiforov, E.B.
Residential buildings, Urban planning, Permafrost beneath structures, Taiga, Forest tundra, USSR—Tyumen'.

34-2636
Frozen ground excavation with tractor-mounted pneumatic hammers. [Rykhlenie merzlykh gruntov navesnymi pnevmomolotami].
Ivanov, R.A., et al. *Mekhanizatsiia stroitel'stva.* Feb. 1980, No.2, p.12-14. In Russian.
Kammerer, IU.IU., Sklez, A.M.
Excavation, Frozen ground.

34-2637
Borehole blasting at Baykal Amur railroad construction sites. [Burovzryvnye raboty na BAMe].
Balbachan, I.P., et al. *Mekhanizatsiia stroitel'stva.* Feb. 1980, No.2, p.14-18. In Russian.
Podkaliuk, V.P., Onotskii, M.I., Bukin, S.N.
Blasting, Boreholes, Permafrost, Baykal Amur railroad.

34-2638
Environmental protection at construction sites of main pipelines. [Okhrana okruzhaiushchei sredy pri stroitel'stve magistral'nykh truboprovodov].
Gulkov, A.F., et al. *Stroitel'stvo truboprovodov.* Dec. 1979, No.12, p.12-13. In Russian. 8 refs.
Kostrukova, G.B.
Pipelines, Permafrost, Environmental protection.

34-2639
Technology and organization of the Trans Alaska pipeline construction [Tekhnologiia i organizatsiia stroitel'stva Transaliaskinskogo nefteprovoda].
Panov, IU.A., et al. *Stroitel'stvo truboprovodov.* Dec. 1979, No.12, p.30-33. In Russian.
Shor, I.D.
Petroleum industry, Pipelines, Construction, United States—Alaska.

34-2640
Bearing strength of piles in structures of the petroleum industry. [Nesushchaia sposobnost' svai neftegazopromyslovykh ob"ektov].
Kondrashov, A.G., *Neftepromyslovoe stroitel'stvo.* 1980, No.1, p.4-6. In Russian.
Pile structures, Foundations, Permafrost beneath structures, Permafrost control.

34-2641
Studying temperature fields produced by heat transfer between ground and gas and oil pipelines. [Issledovanie temperaturnykh polei v grunte pri vzaimodeistvii ego s gazo- i nefteprovodom].
Bronfenbrener, I.E., *Neftepromyslovoe stroitel'stvo.* 1980, No.1, p.12-15. In Russian. 6 refs.
Petroleum industry, Pipelines, Heat transfer, Soil freezing, Stefan problem.

34-2642
Geologic and geophysical investigations. [Geologo-geofizicheskie issledovaniia].
Pinneker, E.V., ed. Irkutsk, Vost.-Sib. fil. SO AN SSSR, 1976. 110p. For selected papers see 34-2693 and 34-2644. Refs. passim.
DLC QE315.G4728
Geocryology, Slope processes, Geological surveys, Geophysical surveys, Permafrost hydrology.

34-2643
Evaluating the distribution and utilization of ground water resources in the south of East Siberia. [Metodika otsenki, osobennosti raspredeleniia i ispol'zovaniia resursov presnykh podzemnykh vod iuga Vostochnoi Sibiri].
Pinneker, E.V., et al. Geologo-geofizicheskie issledovaniia (Geologic and geophysical investigations) edited by E.V. Pinneker. Irkutsk, Vost.-Sib. fil. SO AN SSSR, 1976, p.80-92. In Russian. 16 refs.
Pisarskii, B.I., Shen'kman, B.M.
DLC QE315.G4728
Permafrost distribution, Permafrost hydrology, Water reserves, Water supply, Ground water, USSR—Siberia.

34-2644
Exogenic geologic processes and phenomena in the Angara River area. [Ekzogennye geologicheskie protsessy i iavleniia Priangar'iia].
Leshchikov, F.N., et al. Geologo-geofizicheskie issledovaniia (Geologic and geophysical investigations) edited by E.V. Pinneker. Irkutsk, Vost.-Sib. fil. SO AN SSSR, 1976, p.93-101. In Russian. 27 refs.
Trzhtsinskii, IU.B.
DLC QE315.G4728
Soil freezing, Frost weathering, Geocryology, Slope processes, Solifluction, Sporadic permafrost, Seasonal freeze thaw, USSR—Angara River.

34-2645
Winter concreting—Canadian practice.
Turenne, R.G., et al. *National Research Council, Canada. Division of Building Research. DBR paper.* Jan. 1980, No.848, 13p. + 9p. figs., In English with French summary. Presented at the Second International RILEM Symposium on Winter Concreting, Moscow, Oct. 14-16, 1975. 8 refs.
Sereda, P.J.
Winter concreting, Concrete curing, Temperature control, Concrete strength.

34-2646
Surveying Columbia Icefield. *Geos.* Winter 1978, p.9-12. In English with French summary. Also available in French.
Ice sheets, Glacier surveys, Aerial surveys, Temperature measurement, Infrared photography.

34-2647
Probing with TROV: unmanned submersible reveals geology and hazards of Arctic seafloor.
Blasco, S.M., *Geos*, Winter 1978, p.13-15, In English with French summary. Also available in French
Bottom topography, Subglacial observations, Submarines, Marine geology.

34-2648
Drift ice scratches on the seafloor.
Lewis, C.F.M., *Geos*, Summer 1978, p.18-20, In English with French summary. Also available in French
Sea ice, Ice scoring.

34-2649
Moon, glaciers and permafrost.
Strangeway, D.W., *Geos*, Fall 1978, p.2-4, In English with French summary. Also available in French
Electromagnetic prospecting, Moon, Glaciers, Permafrost.

34-2650
Arctic seafloor: past and present.
Sweeney, J.F., *Geos*, Winter 1979, p.2-5, In English with French summary. Also available in French
Marine geology, Arctic Ocean.

34-2651
Study of preventive measures from the accumulation of snow on the railway track.
Hikita, S., *Railway Technical Research Institute, Tokyo. Quarterly reports*, June 1974, 15(2), p.76-78
Snow removal, Railroad tracks, Snow melting, Artificial melting, Channels (waterways), Air temperature, Water temperature, Tests.

34-2652
Development of equipment for preventing the adhesion of ice or snow to contact wire.
Mizuno, J., et al, *Railway Technical Research Institute, Tokyo. Quarterly reports*, June 1974, 15(2), p.81-82
Arizumi, S., Toda, H.
Power line icing, Ice prevention, Electric heating, Artificial melting, Railroads, Equipment.

34-2653
Study on flying snow with the prototype high speed snow plough for railway.
Shinojima, K., *Railway Technical Research Institute, Tokyo. Quarterly reports*, June 1975, 16(2), p.64-69
Railroads, Snow removal, Snow physics, Tests, Pressure, Velocity.

34-2654
Application of fluidic devices to a sprinkling nozzle with the aim of melting snow on the track.
Takeuchi, Y., et al, *Railway Technical Research Institute, Tokyo. Quarterly reports*, Mar. 1976, 17(1), p.41-42.
Ohyama, T., Hayashi, M., Endo, H.
Snow melting, Artificial melting, Railroad tracks, Water pressure, Water temperature, Hydraulics, Tests.

34-2655
Statistical amount of snow on the regions planned for the construction of Shinkansen.
Shinojima, K., et al, *Railway Technical Research Institute, Tokyo. Quarterly reports*, Sep. 1976, 17(3), p.136-127.
Imai, T., Sakazaki, K.
Snowfall, Snow depth, Railroads, Construction, Snow accumulation, Countermeasures, Statistical analysis.

34-2656
Study on occurring condition of metallic inclusions in anti-snow type composition brake shoes which cause the hollowing wear at wheel treads.
Idemura, K., et al, *Railway Technical Research Institute, Tokyo. Quarterly reports*, Mar. 1977, 18(1), p.45.
Yamashita, T.
Brakes (motion arresters), Railroads, Snow accumulation, Ice formation, Countermeasures, Metal ice friction, Tests, Railroad cars.

34-2657
Test of icicle prevention in very cold zone.
Okada, K., *Railway Technical Research Institute, Tokyo. Quarterly reports*, Sep. 1977, 18(3), p.135.
Ice prevention, Thermal insulation, Railroad tunnels, Geothermy, Tests.

34-2658
Development of fillings for slab track in cold region and its various properties.
Fukunaga, M., *Railway Technical Research Institute, Tokyo. Quarterly reports*, Sep. 1977, 18(3), p.138.

Crystal alignments in the fast ice of Arctic Alaska.
Weeks, W.F., et al, *Journal of geophysical research*, Feb. 20, 1980, 85(C2), MP 1277, p.1137-1146. For this paper in another form see 34-1379 (CR 79-22, ADA-077 188). 8 refs.
Gow, A.J.
Sea ice, Ice physics, Ice crystal structure, Ocean currents.
Field observations at 60 sites located in the fast or near-fast ice along a 1200-km stretch of the north coast of Alaska between the Barrow Spit and Barter Island have shown that 95% of the ice samples exhibit striking c axis alignments within the horizontal plane. In all cases the degree of preferred orientation increased with depth in the ice. Representative standard deviations around a mean direction in the horizontal plane are commonly less than 10 deg for samples collected near the bottom of the ice. The general patterns of the alignments support the correlation between the preferred c axis direction and the current direction at the ice-water interface suggested by Weeks and Gow (1978). A comparison between c axis alignments and instantaneous current measurements made at 42 locations shows that the most frequent current direction coincides with mean c axis direction. The c axis alignments are believed to be the result of geometric selection, with the most favored orientation being that in which the current flows normal to the (0001) plates of ice that comprise the dendritic sea ice-seawater interface.

34-2672
Traveling wave solutions of saturated-unsaturated flow through porous media.
Nakano, Y., *Water resources research*, Feb. 16, 1980, 16(1), MP 1278, p.117-122, 9 refs.
Wave propagation, Water flow.
Traveling wave solutions to the problem of saturated-unsaturated flow of water through a uniform porous medium are derived, and the regularity properties of the solutions are studied. It is found that a singularity occurs in the higher-order derivatives of flux with respect to the space coordinate in the solutions at water tables and that the water tables can be generally interpreted as propagating acceleration waves of the nth order, where n is a positive integer.

34-2673
Pilot scale study of overland flow land treatment in cold climates.
Jenkins, T.F., et al, *Progress in water technology*, 1979, 11(4/5), MP 1279, p.207-214, 11 refs.
Martel, C.J.
Waste treatment, Water chemistry, Irrigation, Cold weather tests.
Primary and secondary wastewaters were applied to separate sections of an overland flow site. The dimensions of each section were 3 m in width by 30 m in length and the system was graded to a five percent slope. The site was planted with orchard grass and tall fescue. A one-year acclimation period was allowed to obtain a good cover. Wastewater was applied to the site for one month before onset of the study to establish a high level of microbial activity. Applied wastewater as well as surface and subsurface flows were monitored for NO-3, NH+4, TKN, BOD, suspended solids, pH, conductivity, and total phosphorus. The results indicate excellent warm weather performance for removal of oxygen demanding substances, suspended matter and nitrogen. Treatment efficiency of suspended solids remained high throughout the winter while treatment of BOD declined to unacceptable levels at soil temperatures below 4C. Nitrogen treatment declined rapidly below 14C. The form of nitrogen applied to overland flow was found to affect performance with nitrate being the less desirable form. Phosphorus treatment by overland flow was found to be about 80% in the summer months, declining to nil during the winter.

34-2674
Low-frequency surface impedance measurements at some glacial areas in the United States.
Arcone, S.A., et al, *Radio science*, Jan.-Feb. 1980, 15(1), MP 1280, p.1-9, 14 refs.
Delaney, A.J.
Radio waves, Wave propagation, Radio communication.
Measurements of apparent resistivity and phase derived from the complex surface impedance of radio waves propagating in the ground wave mode at frequencies in the radio navigational aid band (between 257 and 382 kHz) are presented. Areas encompassing between 400 and 800 sq km that covered a variety of glacial sediments, land forms, and some crystalline bedrock types were surveyed. The degree of dispersion found in resistivity values reflects the dispersion in grain size, while the average resistivity increases with mean grain size. Dielectric properties are suggested as one cause of the low phases observed over crystalline bedrock. The combination of apparent resistivity and phase data implies that the resistivity measurements

are consistent in about 50% of the areas with previous measurements of field strength attenuation performed in the AM broadcast band

34-2675
Analysis of circulation patterns in Grays Harbor, Washington, using remote sensing techniques.
Gatto, L.W., *Marine geodesy*, 1980, Vol.3, MP 1283, p.289-323, 45 refs.
Remote sensing, Tidal currents, Water flow.
The objective of this investigation was to analyze surface circulation patterns in Grays Harbor, Washington, during flood and ebb tide, using National Aeronautics and Space Administration (NASA) aerial photographs and thermal-IR imagery and low altitude aerial photographs of uranine dye drogues. The application of LANDSAT-1 and passive microwave imagery was evaluated but did not prove useful. Water temperature, salinity, and suspended sediment data and the results of hydraulic model studies were used to verify and supplement interpretations from the photographs and imagery. The use of remote sensing techniques in conjunction with ground truth data and hydraulic model results, when available, provides a more complete perspective of estuarine processes than is available by using conventional shipboard surveys alone

Engineering at the ends of the earth: polar ocean technology for the 1980's. Washington, D.C., National Research Council, Assembly of Engineering, Marine Board, 1979, 74p., ADA-074 161, Refs. p.61-65.
Research projects, Polar regions.
Ocean engineering operations in polar waters, particularly in the Arctic, will increase during the foreseeable future as efforts continue to recover commercially valuable resources such as petroleum, fish, and various minerals. In the Antarctic, krill resource assessment and experimental fishing projects are being undertaken by several countries in preparation for large-scale development. In addition to U.S. activities, other nations, notably Canada, the Soviet Union, Japan, West Germany, and Norway are investing substantial funds in developing polar ocean engineering technologies. This report is a review of polar ocean engineering research and technology that are considered necessary to support of commercial and scientific operations during the decade of the 1980's.

Glaciology, Exploration, Environments, Research projects.
The development of polar exploration and scientific research programs as seen through the eyes and experiences of one who participated in that development is presented. The author traces observation and measurement techniques of ice thickness, core drilling, oceanography, and hydrography in Arctic areas from the late 1930's through the late 1950's. He then shifts to Antarctica to describe IGY activities and administering the post-IGY research programs and closes by suggesting several reasons why polar research should continue and the general trend the research should take.

Winter environmental data survey of the drainage basin of the upper Susitna River, Alaska.
Bilello, M.A., *U.S. Army Cold Regions Research and Engineering Laboratory*, Apr 1980, SR 80-19, 30p., ADA-086 931, 6 refs.
Climate, Ice cover, Snow cover, Meteorological data, Winter, United States—Alaska—Susitna River.
Basic data on the winter climate and measurements on all available snow and ice cover conditions were compiled for an area in and around the upper Susitna River basin of Alaska. The 10 years of tabulated data (from Sep 1964 to May 1974) for 16 locations include average monthly values of air temperature, precipitation amounts (including total snowfall) and maximum depth of snow on the ground. Ice thickness measurements and other related winter surface conditions on rivers in the basin are included in the report. Detailed observations on physical properties of the snow cover and the rate at which soil thaws in the spring are also provided for selected stations near the area under study.

ICEX: Ice and climate experiment; report of Science and Applications Working Group. Greenbelt, Maryland, Goddard Space Flight Center, 1979, c118p., Includes separately bound synopsis of the project. Numerous refs.
Research projects, Sea ice, Icebergs, Ice sheets, Ocean currents, Climate, Remote sensing, Spaceborne photography, Antarctica, Greenland.
In this report the various connections in both arctic and antarctic regions between ice in its many forms and world climate are shown: global heat balance effects from sea ice and the role of ice sheets in climatic processes; the hazards of ice and snow related to urban areas and the economic impact of removing these hazards; the effect of sea ice on offshore oil discoveries and recoveries; use of the fresh water in icebergs, glaciers, and snow cover. The ICEX program expects to treat all of these aspects through a multidisciplinary, international approach involving new observational tools, theoretical studies, and applications of new knowledge. The primary tool for the program is a satellite system with numerous remote sensors designed specifically for observing important features of snow, sea ice, and the ice sheets of Greenland and Antarctica.

Icebergs are a frozen asset.
Reynolds, J.M., *Geographical magazine*, Dec. 1979, 52(3), p.177-180, 185.
Iceberg towing, Ice shelves, Economic development.
The author sketches the uses to which man has put natural ice during the last century and this. Norway exported ice to Britain to preserve flounder, halibut, and salmon; other glacier ice exporting ventures were tried, some succeeded, others did not, and as ice manufacturing became cheaper than glacier harvesting, exporting eventually ceased. During WWII the concept of an aircraft carrier made of ice was developed to the prototype stage, from this experiment emerged the material still in use pykrete, a combination of water and sawdust which, when frozen, behaves like concrete. Currently, exploitation trends toward towing bergs from the vast Antarctic resources to South America and the Middle East. As an alternative to towing, a possible water harvesting system could be submersible pumps and pipelines to tap the fresh water beneath the shelf ice. It is estimated that such a system could produce forty cubic kilometers of fresh water annually from George VI Ice Shelf.

Monthly mean surface albedo for the full spectral range of incoming solar radiation and average atmospheric properties is estimated for the period Apr. 1, 1974-Mar. 31, 1975. It can be considered approximately representative of average conditions in the last decade. The monthly global surface albedo, average without weighting for radiation income, ranges from 15.7% in August to 17.9% in December, with an annual average of 17.0%. This is higher than most previously published figures. The difference is partly due to the averaging method, and partly to more accurate satellite based information on snow and ice covers. Parameterized albedo values of characteristic surface types were compiled from published references. Estimates are zonally averaged separately for land and ocean in 2 deg latitudinal belts. (Auth.)

Glacier surveys, Glacier flow, Antarctica—Allan Hills, Antarctica—Mawson Glacier.
During the 1978-1979 field season, the third U.S.-Japan joint program entitled "Antarctic search for meteorites" was carried out on the plateau side of the Allan Hills in South Victoria Land. This program included a glaciological study to elucidate the mechanism of accumulation of a large number of meteorites in the bare ice area. In Dec. 1978, a triangulation chain with 20 stations, 15 km in length, was newly established in the Allan Hills bare ice field to investigate the ice flow. Values of elevation and coordinates (X,Y) of all stations are tabulated. (Auth. mod.)

Ice shelves, Glacier flow, Remote sensing, LANDSAT, Antarctica—Filchner Ice Shelf, Antarctica—Ronne Ice Shelf.
Satellite images of Ronne and Filchner ice shelves show a variety of surface features, many of which are believed to indicate flow lines in the ice. Sufficient imagery is now available from Landsat satellites to plot these features from mosaics. Although some of the features have been recognized from aircraft, it was not until an overall view was provided that the true extent of the features and their relationship to the major ice streams became apparent. Using this evidence together with published ice thickness data from radio echo and seismic sounding, flow patterns within the ice shelves and tributary glaciers can be inferred. Flow lines show that the major input to Filchner Ice Shelf is from Slessor and Recovery glaciers, while Support Force Glacier contributes less than one third. On Ronne Ice Shelf, flow lines indicate that most of the ice comes from Foundation Ice Stream in the east and from Evans Ice Stream and three other ice streams in the west; there is a large area of relatively slow moving ice in between. Ice thickness and velocity data are now needed in order to quantify the ice discharge. However, satellite imagery can be used to estimate the relative importance of glaciers feeding ice shelves and to delineate the flow patterns within them. (Auth.)

Proceedings.
Symposium on Dynamics of Large Ice Masses, Ottawa, Aug. 1978, *Journal of glaciology*, 1979, 24(90), 520p., In English with French and German summaries. Includes subject and author indexes; abstracts of papers presented at the symposium but not published in full in this volume; abstracts of papers accepted for the symposium but not presented; and a general discussion which constituted the final session. For individual papers see: 34-2813 through 34-2845, or F-23178 through F-23199.
Meetings, Ice sheets, Ice shelves, Floating ice.
The symposium convened in Ottawa from August 21-25, 1978, organized by the International Glaciological Society, it was attended by nearly 120 scientists representing 11 different countries. The 35 papers included in this volume deal with a wide variety of topics including: glaciers and historical glaciology; ice sheet and sea ice dynamics; various ice sheet sounding techniques; mass balance, remote sensing, ice dating through cores, thickness measurement; and various modeling techniques. Many of the papers result from work done in Antarctica, especially the Ross Ice Shelf.

Ice sheets, Ice creep, Strains, Ice mechanics, Models, Antarctica—Byrd Station.
The flow of the Antarctic ice sheet near Byrd Station is modeled using surface net accumulation-rate data, surface strain-rate data, and core-hole tilting results. The model empirically allows for the progressive development of ice fabric and for values of the vertical strain-rate nearer to zero at depth, and adjusts the strain-rates according to the effect of the climatic warming at the beginning of the Holocene. The validity of the model is supported by the agreements between calculated bed form and that measured by radar sounding, and between calculated and measured present-day ice-sheet thinning-rates. The ice was about 200 m thicker before thinning. The depth-age relationship for the Byrd Station ice core shows that the climatic change represented by the oxygen isotopic ratio of the ice began some 5,000 years sooner than in north Greenland but ended at about the same time. (Auth.)

Thinning of the ice sheet in Mizuho Plateau, East Antarctica.
Naruse, R., *Journal of glaciology*, 1979, 24(90), p.45-52, In English with French and German summaries. 31 refs.
Ice sheets, Ice cover thickness, Snow accumulation, Antarctica—Mizuho Plateau.
Surveys of a triangulation chain 250 km in length were carried out in Dec. 1969 and Dec. 1973-Jan. 1974 along the surface contour lines from 2,250 m to 2,600 m in Mizuho Plateau. Horizontal velocities were obtained as small values near the Yamato Mountains, while they had maxima of more than 20 m/a around 39E 72S in the drainage of the Shirase Glacier. Submergence velocities showed large values in the region along 72S from 39E eastward to 43E. The amount of snow accumulation there, of average thickness 0.2 m/a, was not enough to compensate for the deficit of the ice mass caused by the submergence flow. It follows that the ice sheet was thinning there. It is suggested that the ice sheet of Mizuho Plateau is in an unstable condition as a whole. (Auth.)

34-2816
Basal sliding of a thinning ice sheet, Mizuho Plateau, East Antarctica.
Mae, S., *Journal of glaciology*, 1979, 24(90), p.53-61, In English with French and German summaries. 20 refs.
Ice sheets, Basal sliding, Ice cover thickness, Antarctica—Mizuho Plateau.
The Japanese Antarctic Research Expedition observed the thinning of the ice sheet, about 70 cm/year, in Mizuho Plateau. The thinning observed is analyzed using an equation of mass continuity. The result of the analysis indicates that the thinning is predominantly caused by the basal sliding and the basal sliding velocity is about 10 m/year. This sliding velocity is compared with the basal sliding velocity obtained by the calculation of the velocity due to internal deformation of the ice sheet. (Auth.)

Characteristics of ice flow in Marie Byrd Land, Antarctica.
Rose, K.E. Journal of glaciology, 1979, 24(90), p.63-75, In English with French and German summaries. 25 refs.
Ice sheets, Glacier flow, Radio echo soundings, Antarctica—Marie Byrd Land.
Extensive radio echo-sounding has mapped the part of West Antarctica between Byrd Station, the Whitmore Mountains, the Transantarctic Mountains, and the Ross Ice Shelf. The ice sheet in this area is dominated by five major sub-parallel ice streams (A-E), which are up to 100 km wide and extend inland from the ground line of the Ross Ice Shelf for about 400 km. Their positions have been determined by crevassing seen on radio echo-sounding records, trimetrogon photographs, and Landsat imagery. The ice streams are characterized by their flat transverse cross-sections, while the intervening ice sheet exhibits domes and ridges. Ice flow lines are defined from the ice-surface contour pattern and the trend of the ice streams. It is apparent from this work that the flow line passing through Byrd Station joins ice stream D. The bedrock of the area is relatively smooth near the Ross Ice Shelf, becoming rougher near Byrd Station and especially so near the Whitmore Mountains. Bedrock troughs, which control the positions of the ice streams are believed to have a tectonic origin. In this paper the role of the ice streams in the glaciological regime of West Antarctica is investigated from radio-echo data and estimates of balance velocity, basal shear stress, and basal temperatures. (Auth.)

Measured velocities of interior East Antarctica and the state of mass balance within the I.A.G.P. area.
Young, N.W., *Journal of glaciology*, 1979, 24(90), p.77-87, In English with French and German summaries. 20 refs.
Snow accumulation, Ice sheets, Mass balance, Antarctica—East Antarctica.
Recent measurements of accumulation and ice velocity made in the interior of East Antarctica indicate that a large sector between 80E and 135E and north of 80S has close to a zero net mass budget. This sector is within the study area for the International Antarctic Glaciological Project (I.A.G.P.) and covers a major portion of the area indicated for projects of special emphasis. Velocity measurements were made at a number of points on a traverse route from Mirny on the coast to Dome "C" in the interior. Accumulation measurements were made along this and other traverse routes, extending as far as Vostok by a number of methods. These included stake, stratigraphic, isotopic, and total beta-decay observations. The better accumulation data have allowed a review of the total mass input to be made. The true mass budget has been estimated by comparing velocities along the traverse routes and on a number of the outlet glaciers. For this purpose the area was divided into a number of drainage basins according to outlet at the coast. The area of about 1 million sq km and 150 Gt/a flux input is drained primarily by three glacier systems of which the Totten accounts for 40% of the flux from 55% of the area; the Vanderford 20% from 15%; and the Scott/Denman 20% from 20%. (Auth.)

Results from the I.A.G.P. flow-line study inland of Casey, Wilkes Land, Antarctica.
Budd, W.F., et al, *Journal of glaciology*, 1979, 24(90), p.89-101, In English with French and German summaries. 28 refs.
Young, N.W.
Ice sheets, Flow rate, Ice cover thickness, Ice mechanics, Antarctica—Wilkes Land.
In order to determine accurate velocities of the sheet in the interior of Antarctica, approximately along a flow line, a detailed trilateration net was established in 1973 from the summit of Law Dome (100 km inland) to about 250 km south near the 2,00 m contour. The net consisted of a double line of markers approximately 10 km apart with all sides and diagonals of the quadrilaterals measured with tellurometers. In addition, satellite doppler survey positions and astronomical azimuths were determined at about 50 km intervals to control the net on the large scale. Other measurements carried out en route included continuous barometric levelling, radio echo-sounding, gravimetry, accumulation, and surface sampling. The route was close to an earlier traverse route which reached Vostok in 1962 and along which other data, including snow-surface temperatures and temperature-depth gradients, were determined. The trilateration net was re-surveyed in 1975, allowing velocities and strain-rates to be determined. The results indicate that the ice sheet is close to balance in this region. Therefore, the measured velocities were used together with "balance velocities", further inland, to carry out a modelling study of a flow line, to derive particle trajectories, ages, temperature profiles, and "dynamics velocities", from a flow law. The results provide further insight into the dynamics and flow properties of the ice sheet. (Auth.)

Ice flow along an I.A.G.P. flow line and interpretation of data from an ice core in Terre Adélie, Antarctica.
Raynaud, D., et al, *Journal of glaciology*, 1979, 24(90), p.103-115, In English with French and German summaries. 24 refs.
Lorius, C., Budd, W.F., Young, N.W.
Ice sheets, Ice cores, Drill core analysis, Climatic changes, Antarctica—Adélie Coast.
An ice core has been obtained to the bedrock about 300 m deep in Terre Adélie, 5 km inland from the coast. Stable isotopes and gas content have been measured over the length of the core. The results have been interpreted in terms of the temperature and elevation of origin of the ice further inland on the ice sheet from the data obtained along a 600 km traverse towards Dome "C", and from Dome "C", at an elevation of about 3,200 m. The flow of the ice from Dome "C" to the coast has been modelled to determine the ages and particle trajectories of the ice for present conditions. It has been found that the upper isotope and gas-content values in the core can be matched with the present regime, using a base for ice flow above the present bed which is suggested by moraine in the ice core. The ice in the layer from the 200 m depth, where the age is apparently more than 5,000 years, to the 250 m depth, appears to have originated from conditions which differ substantially from those existing on the present inland ice-sheet surface. The results give an indication of a colder climate and greater ice-sheet thickness in the past. (Auth.)

Budd, W.F.
Ice sheets, Ice mechanics, Ice structure, Ice deformation, Antarctica—Law Dome.
Samples of a Law Dome ice core were subjected to simple shear at temperatures and deviatoric stresses which match the *in situ* conditions of the ice sheet. Similar studies of randomly-oriented laboratory-made polycrystalline ice were undertaken. Long-term tests, lasting for up to two years, were required to determine minimum strain-rates. The flow law for the anisotropic ice was thus determined as a function of that for the isotrpoic ice together with a measure of c-axis fabric strength perpendicular to the shear plane. Core studies indicate that the upper part of the ice sheet has a polycrystalline structure appropriate to the surface longitudinal stress. Deeper in the core a strong concentration of near-vertical c-axes develops. Ice having very large crystals with multiple maxima fabrics was found in the lower quarter of the ice thickness. Shear measurements in the bore hole indicate the existence of high strain-rates in the zone of vertical c-axes, and of lower shear-rates below that level. The low values of shear-rates in the basal region cannot be explained in terms of crystallographic changes alone, and therefore it is inferred that the shear stress decreases in this layer - a result which also provides a possible explanation for the development of the observed basal crystal structure. (Auth.)

Kohnen, H.
Ice sheets, Ice mechanics, Drill core analysis, Relaxation (mechanics), Ultrasonic tests, Antarctica—Byrd Station.
Deep cores from Byrd Station were used to calibrate an ultrasonic technique of evaluating crystal anisotropy in the antarctic ice sheet. Velocities measured parallel and perpendicular to the vertical axis of the cores yielded data in excellent agreement with the observed c-axis fabric profile and with the *in-situ* P-wave velocity profile measured parallel to the bore-hole axis by Bentley. Velocity differences in excess of 140 m/s for cores from below 1,300 m attest to the tight clustering of c-axes of

crystals about the vertical, especially in the zone 1,300-1,800 m. A small but significant decline in vertical velocity with ageing of the core, as deduced from Bentley's down-hole data, is attributed to the formation of oriented cracks that occur in the ice cores as they relax from environmental stresses. This investigation of cores from the 2,164 m thick ice sheet at Byrd Station establishes the ultrasonic technique as a viable method of monitoring relaxation characteristics of drilled cores and for determining the gross trends of c-axis orientation in ice sheets. The Byrd Station data, in conjunction with Barkov's investigation of deep cores from Vostok, East Antarctica, also indicate that crystal anisotropy in the antarctic ice sheet is dominated by a clustering of c-axis about a vertical symmetry axis. (Auth.)

Margin of the Greenland ice sheet at Isua.

Colbeck, S.C., et al, *Journal of glaciology*, 1979, 24(90), MP 1281, p.155-165, In English with French and German summaries. 7 refs.

Gow, A.J.

Ice sheets, Ice edge, Drill core analysis, Ice structure.

Field studies at a particular place at the margin of the Greenland ice sheet have provided information about the ice sheet. Ice temperatures were measured in five drill holes, two of which reached the unfrozen area of basal melting. Surface water entered these two bore holes, reaching the base in one, but remaining 59 m above the base in the other. The existence of this water conduit or fracture at 240 m depth, the calculated temperature profiles, and the local bedrock configuration suggest an area of stationary ice overridden by the ice sheet. This situation suggests creep rupture at depth in the ice sheet. Ice-fabric analysis made above 240 m depth shows patterns similar to fabrics elsewhere near the margin in zones of low deviatoric stress. Unfortunately, no cores were obtained below that depth where stationary ice may exist.

34-2825

Dynamics of marine ice sheets.

Thomas, R.H., *Journal of glaciology*, 1979, 24(90), p.167-177, In English with French and German summaries. 22 refs.

Ice sheets, Dynamic properties, Ice shelves, Mass balance.

Marine ice sheets rest on land that, for the most part, is below sea-level. At the grounding line there is a transition from ice-sheet dynamics to ice-shelf dynamics, and the creep-thinning rate in this region is very sensitive to sea depth; rising sea-level causes increased thinning-rates and grounding-line retreat, but falling sea-level has the reverse effect. If the bedrock slopes down towards the centre of the ice sheet, there may be only two stable modes: a freely-floating ice shelf or a marine ice sheet that extends to the edge of the continental shelf. The only current example of marine ice sheets is the West Antarctic ice sheet. This is buttressed by the Ross and Ronne Ice Shelves, and if climatic warming were to prohibit the existence of these ice shelves, then the ice sheet would collapse. Field observations suggest that, at present, the ice sheet may be advancing into parts of the Ross Ice Shelf. Such advance, however, would not ensure the security of the ice sheet since ice streams that drain to the north appear to flow directly into the sea with little or no ice shelf to buttress them. If these ice streams do not flow over a sufficiently high bedrock sill, then they provide the most likely avenues for ice-sheet retreat. (Auth. mod.)

Formation, flow, and disintegration of ice shelves.

Robin, G. de Q., *Journal of glaciology*, 1979, 24(90), p.259-271, In English with French and German summaries. 33 refs.

Ice shelves, Ice formation, Ice creep, Ocean currents.

Ice shelves may develop either by continued thickening of sea ice that is held fast to the shore, or by the seaward extension of inland ice. For both processes, as well as for an understanding of ablation and of accumulation at the bottom surface of ice shelves, we need to understand melting and freezing processes in relation to salinity, temperature, and pressure. Consideration of these factors shows that basal melting beneath the thicker parts of ice shelves is much greater than is generally appreciated. This could be sufficient to bring the estimated mass balance of Antarctica into approximate equilibrium. It appears that most antarctic ice shelves are dependent on the supply of inland ice for their continued existence. However, the thick layer of sea ice beneath the Amery Ice Shelf is readily explained in terms of sub-ice water circulation. Transport of heat and mass by water motion beneath ice shelves has the potential to change ice thicknesses by similar amounts to that caused by internal deformation of the ice shelf. Bottom freezing due to thermal conduction throughout the ice shelf is of minor importance. (Auth.)

Ice shelves: a review.

Thomas, R.H., *Journal of glaciology*, 1979, 24(90), p.273-286, In English with French and German summaries. 46 refs.

Ice sheets, Ice shelves, Calving.

Ice shelves form where ice flows off the antarctic ice sheet onto the sea to produce rather flat slabs of floating ice which, for the theoretician, are the simplest of all large masses. Boundary conditions are well defined, conditions change very slowly over distances that are large compared with ice thickness, and horizontal velocities are independent of depth. Unconfined ice shelves can be used as giant creep machines to investigate the ice flow law at low stresses. Further inland, where movement is hampered by obstructions such as grounded ice rises and by shear between the ice shelf and its sides, the ice shelf transmits a back-pressure which tends to restrict drainage from the ice sheets that feed it. Wastage from ice shelves is principally by calving and by bottom melting. There has been no direct measurement of bottom-melting rates, but indirect evidence suggests that, near the seaward edges of ice shelves, bottom-melting rates may exceed one meter per year, with significant melting within about 100 km of the ice front. Further inland there may be bottom freezing, and analysis of cores taken from the Amery Ice Shelf indicate that bottom-freezing rates average 0.5 m/a over a distance of 200 km. Such high freezing-rates are probably exceptional, and, beneath the Ross Ice Shelf, freezing appears to be insignificant even at a distance of 400 km from the ice front. (Auth. mod.)

34-2831

Ice-thickness patterns and the dynamics of the Ross Ice Shelf, Antarctica.

Bentley, C.R., et al, *Journal of glaciology*, 1979, 24(90), p.287-294, In English with French and German summaries. 11 refs.

Clough, J.W., Jezek, K.C., Shabtaie, S.

Ice shelves, Ice cover thickness, Flow measurement, Antarctica—Ross Ice Shelf.

As part of the Ross Ice Shelf Geophysical and Glaciological Survey, a detailed map of ice thickness has been produced from airborne radar measurements closely tied to the network of survey stations on the ice-shelf surface. The map, drawn with a 20 m contour interval, reveals a highly complex pattern of thickness variations reflecting presumably, at least in part, complex ice-shelf dynamics. Many features of the thickness variation pattern appear to be associated with zones of grounded ice, but not all. Features of interest include many ice thickness minima, with closures up to 120 m, a narrow, greatly elongated ridge-trough system 450 km or more in length; a few ice thickness maxima; steep regional gradients of 10 m/km in freely floating ice; highly contorted contours suggesting a large-scale "turbulence"; and at least two remarkable step-like changes in ice thickness. The irregularity of many of these features suggests dynamic non-equilibrium, i.e., the existence of transients in the dynamic system, so that the ice shelf as a whole suggests a state of rather rapid change. Flow-bands constructed on the basis of the strengths of the echo from the ice-water interface clearly delineate the outflow from the main East Antarctic outlet glaciers in the grid eastern part of the shelf. (Auth. mod.)

34-2832

Dynamics of the Ross Ice Shelf revealed by radio echo-sounding.

Neal, C.S., *Journal of glaciology*, 1979, 24(90), p.295-307, In English with French and German summaries. 19 refs.

Ice shelves, Dynamic properties, Radio echo soundings, Antarctica—Ross Ice Shelf.

Radio-echo data have yielded information on the dynamics of the Ross Ice Shelf. Distinctive features present on the radio-echo records have been used to delineate several flow lines on the ice shelf. Measurement of the power returned from the ice-water interface has revealed regional variations in the r.f. dielectric loss of Ross Ice Shelf ice. These variations are used to indicate zones of bottom melting and freezing. (Auth.)

Lateral density differences from seismic measurements at a site on the Ross Ice Shelf, Antarctica.

Kirchner, J.F., et al, *Journal of glaciology*, 1979, 24(90), p.309-312, In English with French and German summaries. 6 refs.

Bentley, C.R., Robertson, J.D.

Seismic surveys, Ice shelves, Antarctica—Ross Ice Shelf.

Seismic compressional-wave data from short refraction shooting carried out during the 1974-75 and 1976-77 seasons at J-9, the site of the Ross Ice Shelf Drilling Project, have been compared. Significant dissimilarities were found to exist between the two sets of data. The measurements were made at locations about 2 km apart, with three unreversed profiles 60 deg apart recorded during the 1976-77 season and one unreversed profile during the 1974-75 season. The resulting velocity-depth profiles, and hence the derived density-depth profiles, differ by as much as 8%. The density difference is believed to be due to the passage of the ice through the high-stress system associated with the interaction between Ice Stream B, flowing in from the West Antarctic ice sheet, and the Ross Ice Shelf. A reversed refraction profile carried out at station B/C, about 30 km upstream, shows evidence of dipping layers that may be similarly caused. (Auth. mod.)

34-2834

Seismic short-refraction studies on the Ross Ice Shelf, Antarctica.

Kirchner, J.F., et al, *Journal of glaciology*, 1979, 24(90), p.313-319, In English with French and German summaries. 15 refs.

Bentley, C.R.

Seismic surveys, Ice shelves, Antarctica—Ross Ice Shelf.

Seismic short-refraction studies were carried out at five stations on the Ross Ice Shelf during the 1976-77 summer season as part of the comprehensive Ross Ice Shelf Geophysical and Glaciological Survey. Measurements of the velocities of compressional waves were made at each location. Compressional wave velocities were measured along more than one azimuth at three sites, and shear wave velocities (both components) at two. Travel-time curves were fitted to an exponential expression by means of a non-linear least-squares regression technique. The errors in the apparent velocities are estimated to be about 50 m/s at short distances, diminishing to about 10 m/s near the ends of the profiles. Compressional-wave velocities show only slight variations with azimuth and only over certain depth intervals, showing that constant-velocity surfaces are essentially horizontal. Shear-wave velocities, however, exhibit large variations according to azimuth and polarization, indicating that transverse isotropy is violated at least in the upper 30-40 m of the ice shelf. It is believed that the anisotropy is caused by structural details in the firn perhaps modified by preferred crystal orientation and that it may arise at least partly from anisotropic stresses in the ice shelf. (Auth.)

34-2835

Electromagnetic sounding of bottom crevasses on the Ross Ice Shelf, Antarctica.

Jezek, K.C., et al, *Journal of glaciology*, 1979, 24(90), p.321-330, In English with French and German summaries. 8 refs.

Bentley, C.R., Clough, J.W.

Electromagnetic prospecting, Crevasses, Bottom topography, Ice shelves, Antarctica—Ross Ice Shelf.

During the 1976-77 season of the Ross Ice Shelf Geophysical and Glaciological Survey, a series of vertical electromagnetic sounding profiles of subsurface features was completed at station J-9. The survey comprised three five-kilometer northwest-southeast profiles separated by one kilometer and six two-kilometer northeast-southwest profiles, and was carried out on the surface using 35 MHz and 50 MHz radar systems. Folded-dipole antennae were used and oriented to detect reflectors both along and perpendicular to the profile path. This was done to facilitate the interpretation of the data, which indicated a complex system of bottom crevasses. Measurements of the positions, heights, and shapes of these crevasses showed at least two sets of crevasses varying in both strike and size. The larger crevasses, about 120 m high and oriented more or less normal to the flow direction are probably associated with the movement of ice stream B across the grounding line between the West Antarctic ice sheet and the Ross Ice Shelf. A satisfactory explanation for the secondary set of crevasses, about 60 m high and forming an angle of 60 deg with the first set, has not yet been found. (Auth.)

34-2836

Investigation of bottom mass-balance rates by electrical resistivity soundings on the Ross Ice Shelf, Antarctica.

Shabtaie, S., et al, *Journal of glaciology*, 1979, 24(90), p.331-343, In English with French and German summaries. 21 refs.

Bentley, C.R.

Ice shelves, Mass balance, Ice bottom surface, Ice temperature, Electrical resistivity, Antarctica—Ross Ice Shelf.

Electrical resistivity sounding, using the four-electrode Schlumberger array, has been carried out at 11 locations on the Ross Ice Shelf. The apparent resistivity curves generally show four characteristic zones. The first, at distances from 1 to 10 m, reflects the near-surface zone of seasonal temperature changes and inhomogeneities. The second zone, from 10 m to 100 m, reflects primarily the increasing density with depth in the upper 50 m of the ice shelf, modified, in some locations, by temperature variations. The third zone, from 100 m to a distance roughly equal to the ice thickness, is affected principally by the temperature gradient in the solid ice. In the fourth zone, at distances greater than approximately twice the ice thickness, the apparent resistivity usually decreases rapidly with distance, owing to the highly conductive sea-water beneath the ice shelf. At some stations associated with ice streams and outlet glaciers, however, an increase at large spacings indicates much more resistive basal ice. Using data from seven locations on the grid eastern half of the shelf that do not show obvious evidence of a basal resistive zone, including temperatures to 100 m at two of the sites, the mass-balance rate at the bottom of the ice is estimated to be within a few tenths of a meter per year of zero at distances between 60 and 530 km from the ice front, assuming steady-state condition over most of the ice shelf. (Auth. mod.)

Langway, C.C., Jr.
Ice shelves, Ice cores, Chemical analysis, Ice dating, Antarctica—Ross Ice Shelf.
Seasonal variations in sodium concentrations have been measured on surface-pit snow samples and on firn and ice core samples from the Ross Ice Shelf, Antarctica. The predominant source for the Na is sea salt, indicated by greater concentration levels at seaward sites. Small Al concentrations show that the input of continental dust is comparable to that at inland antarctic locations, and that dust contributes only a negligibly small fraction of the Na on the shelf. Maximum Na concentrations occur in the winter or early spring, as is the case for Greenland ice. The annual accumulation rate at J-9, determined by counting Na concentration peaks with depth, is 90 kg/sq m/yr, in agreement with rates determined radiometrically. Annual cycles in Na concentration are also detectable at depth in the J-9 ice core. It is suggested that Na concentration is a useful diagnostic criterion for distinguishing between East Antarctic ice, West Antarctic ice, and ice that fell as snow on the shelf itself. The transition between snow that is chemically characteristic of the ice-shelf regime to snow of an inland regime is expected to occur near the 500 m elevation contour. This position is up to 200 km inland of the grounding line. (Auth. mod.)

Sea ice distribution, Mass balance, Ice deformation, Salinity, Weddell Sea.
The Weddell Sea pack ice undergoes several unique advance-retreat characteristics related to the clockwise transport in the Weddell Gyre, the physical setting for the pack ice, and the free boundary with the oceans to the north. From satellite-derived ice charts, the annual cycle of the pack ice advance and retreat is depicted. The Weddell pack advance is characterized by a strong east-moving component as well as the north advance seen in other regions such as East Antarctica. Physical characteristics of the pack ice at the summer minimum ice edge are presented. Indications are that deformation is a significant component of the ice accumulation, deformed ice accounting for c. 15 to 20% of the area covered in the year-round pack. Ablation characteristics are inferred from observations made during field work and from satellite imagery. These observations indicate that surface-melt ablation typically seen on Arctic pack is not seen on the Weddell pack inside the summer edge. Using the physical-property data and transport inferred from ship and iceberg drifts, a new annual ice accumulation > 3 m is inferred over the continental shelf in the South compared to < 2 m previously estimated. The implication is that salt flux into the ocean over the shelf may be significantly larger, thereby increasing the production of Western Shelf Water, a component of Antarctic Bottom Water. (Auth.)

Excavation, Blasting, Permafrost beneath structures, Artificial thawing, Foundations, Pile driving, Buildings, Walls, Prefabrication, Panels, Thermal insulation.

34-2868
Collection No.1 of unified regional individual estimates for construction. Earthwork. [Sbornik No.1 edinykh raionnykh edinichnykh rastsenok na stroitel'nye raboty. Zemlianye raboty].
Russia Gosudarstvennyi komitet po delam stroitel'stva, Moscow, Stroizdat, 1977, 247p. (Pertinent p.200-246). In Russian with abridged English table of contents enclosed.
Earthwork, Embankments, Dams, Slope stability, Swamps, Soil stabilization, Excavation, Frozen ground, Cost analysis.

34-2869
Fundamentals of electrothermomechanical destruction of frozen rocks. [Osnovy elektrotermomekhanicheskogo razrusheniia merzlykh porod].
Nekrasov, L.B., Novosibirsk, Nauka, 1979, 230p., In Russian with English table of contents enclosed. 162 refs.
Frozen rocks, Excavation, Drilling, Electric equipment, Thermal drills, Electric fields, Electric heating, Design.

34-2870
Ice protection of power line supports. [Ledozashchitnye ustroistva opor linii elektroperedachi].
Marfin, N.I., Moscow, Energiia, 1979, 93p., In Russian with English table of contents englosed. 15 refs.
Power line supports, River crossings, Ice loads, Ice jams, Water waves, Design.

34-2871
Ice regime of pipelines. [Ledovyi rezhim truboprovodov].
Zhidkikh, V.M., et al, Leningrad, Energiia, 1979, 131p., In Russian with English table of contents enclosed. 18 refs.
Popov, IU.A.
Water pipelines, Pipeline freezing, Frost protection, Design.

34-2872
Seismogeology and seismic regionalization of the Baykal Amur railroad route and the zone of its economic influence. [Seismogeologiia i seismicheskoe raionirovanie trassy BAM i zony ee ekonomicheskogo vliianiia].
Solomenko, V.P., Novosibirsk, Nauka, 1979, 69p., In Russian with English table of contents enclosed Refs 63-68
Permafrost distribution, Earthquakes, Mapping, Baykal Amur railroad.

34-2873
Roof snow loads in Canada.
Taylor, D.A., *Canadian journal of civil engineering*, Mar 1980, 7(1), p.1-18, 16 refs
Roofs, Snow loads, Design, Buildings.

34-2874
Growth rate of spruces related to the thickness of permafrost active layer near Inuvok, Northwestern Canada.
Sakai, A., et al, *Low temperature science (Teion kagaku) Series B Biological sciences*, 1979, Vol.37, p.p.19032, 14 refs
Yoshida, S., Saito, M., Zoltai, S.C.
Trees (plants), Growth, Active layer, Thickness, Forest tundra, Soil water, Vegetation, Permafrost.

34-2875
Correct formulation of problems on modeling physical processes and particle distribution in hail-storm clouds. [O korrektnoi postanovke zadach po modelirovaniiu fizicheskikh protsessov i raspredelenii chastits osadkov v grozo-gradovykh oblakakh].
Zhekamukhov, M.K., et al, *Nal'chik Vysokogornyi geofizicheskii institut. Trudy*, 1979, Vol.44, p.3-13, In Russian 4 refs
Zhakamukhov, Kh.M.
Hail clouds, Mathematical models, Hailstone growth.

34-2876
Coagulation growth effect on the freezing of supercooled drops. [O vliianii koagulatsionnogo rosta na protsess zamerzaniia pereokhlazhdennykh kapel'].
Zhekamukhov, M.K., *Nal'chik Vysokogornyi geofizicheskii institut Trudy*, 1979, Vol.44, p.14-22, In Russian. 10 refs
Supercooled clouds, Water content, Cloud droplets, Coagulation, Freezing.

34-2877
Scattering and attenuation of electromagnetic radiation by hailstones with a logarithmically normal particle distribution function. [Rasseianie i oslablenie elektromagnitnogo izlucheniia gradinami, raspredelennymi po logarifmicheskl normal'nomu zakonu].
Bibilashvili, N.Sh., ed, *Nal'chik Vysokogornyi geofizicheskii institut Trudy*, 1979, Vol.44, p.60-66, In Russian. 6 refs.
Cherniak, M.M.
Hailstones, Water films, Radiation absorption, Scattering, Radar echoes.

34-2878
Formation of hail nuclei. [Nekotorye aspekty formirovaniia zarodyshei gradin].
Tlisov, M.I., *Nal'chik Vysokogornyi geofizicheskii institut. Trudy*, 1979, Vol.44, p.100-107, In Russian. 9 refs.
Hailstones, Radar echoes, Ice nuclei, [illegible] formation.

34-2879
Laboratory studies of dipole reflector wetting and freezing in aqueous aerosols. [Laboratornye issledovaniia obledeneniia i obvodneniia dipol'nykh otrazhatelei v vodnom aerozole].
Evstratov, V.V., et al, *Nal'chik Vysokogornyi geofizicheskii institut Trudy*, 1979, Vol.44, p.117-121, In Russian. 4 refs.
Kondratenko, V.A.
Radar, Icing rate, Supercooled fog.

34-2880
Searching for optimal parameters of a problem in soil moisture transfer. [Ob odnom sposobe poiska optimal'nykh parametrov v zadache vlagoperenosa v pochvogruntakh].
Islamov, K.A., *Sredneaziatskii regional'nyi nauchno-issledovatel'skii gidrometeorologicheskii institut Trudy*, 1979, 63(144), p.18-22, In Russian. 2 refs
Soil water migration, Mathematical models.

34-2881
Statistical characteristics of basic mass balance components of glaciers: accumulation and ablation. [Statisticheskie kharakteristiki osnovnykh sostavliaiushchikh balansa massy lednikov - akkumuliatsiia i ablatsiia].
Glazyrin, G.E., et al, *Sredneaziatskii regional'nyi nauchno-issledovatel'skii gidrometeorologicheskii institut Trudy*, 1979, 63(144), p.43-50, In Russian 21 refs
Freifel'd, IU.V.
Mountain glaciers, Glacier alimentation, Glacier ablation, Mass balance.

34-2882
Melting and runoff in glaciated areas. [Taianie i stok v gliatsial'nykh oblastakh].
Konovalov, V.G., *Sredneaziatskii regional'nyi nauchno-issledovatel'skii gidrometeorologicheskii institut Trudy*, 1979, 63(144), p.51-63, In Russian 20 refs
Mountain glaciers, Snow accumulation, Albedo, Glacier ablation.

34-2883
Calculating global radiation. [K raschetu summarnoi radiatsii].
Evdiakova, I.N., *Sredneaziatskii regional'nyi nauchno-issledovatel'skii gidrometeorologicheskii institut Trudy*, 1979, 63(144), p.64-67, In Russian 2 refs
Snowmelt, Snow air interface, Heat transfer, Analysis (mathematics).

34-2884
Generalizing morphometric characteristics of glaciation in separate drainage basins. [Obobshchenie morfometricheskikh kharakteristik oledeneniia v otdel'nykh vodosborakh].
Konovalov, V.G., *Sredneaziatskii regional'nyi nauchno-issledovatel'skii gidrometeorologicheskii institut Trudy*, 1979, 63(144), p.68-77, In Russian 9 refs
River basins, Glaciation, Glacier ablation, Thawing rate, Analysis (mathematics).

34-2885
Second order iterative approximation scheme for calculating dry snow characteristics. [Skhema vtorogo poriadka approksimatsii s iteratsiei dlia rascheta kharakteristik sukhogo snega].
Trofimova, E.B., et al, *Sredneaziatskii regional'nyi nauchno-issledovatel'skii gidrometeorologicheskii institut. Trudy*, 1979, 63(144), p.88-97, In Russian 4 refs.
Ovcharenko, V.P.
Snow cover, Mathematical models, Heat transfer, Mass transfer.

34-2886
Ecosystems of swamps in the USSR. [Ekosistemy bolot SSSR].
Boch, M.S., et al, Leningrad, Nauka, 1979, 187p., In Russian with English table of contents enclosed Refs p.150-173.
Mazing, V.V.
Swamps, Peat, Plant ecology, Ecosystems, Biomass, Human factors, Environmental protection, Mapping, Charts.

34-2887
Determination of the amount of solid precipitation under the forest canopy.
Kolesov, A.F., *Soviet soil science*, Jan-Feb 1979, No 1, p.113-116, Translated from Pochvovedenie 4 refs.
Forest canopy, Snow accumulation, Snow surveys, Precipitation gages, Snow density, Snow water equivalent.

34-2888
Ice edge dynamics on the Amudar'ya River. [Dinamika kromki l'da na Amudar'e].
Abramenkov, N.M., *Sredneaziatskii regional'nyi nauchno-issledovatel'skii gidrometeorologicheskii institut Trudy*, 1979, Vol.60, p.100-106, In Russian 5 refs.
River ice, Ice edge, Icebound rivers.

34-2889
Forecasting ice edge movement during the freezing of the Amudar'ya River. [Prognoz dvizheniia kromki l'da pri zamerzanii Amudar'i].
Abramenkov, N.M., *Sredneaziatskii regional'nyi nauchno-issledovatel'skii gidrometeorologicheskii institut Trudy*, 1979, Vol.60, p.107-120, In Russian 14 refs.
River ice, Ice edge, Icebound rivers.

34-2890
Especially dangerous icings in the Crimean mountains. [Osobo opasnye otlozhenia gololeda v Gornom Krymu].
Koshenko, A.M., *Kiev. Ukrainskh nauchno-issledovatel'skh gidrometeorologicheskh institut. Trudy* [illegible] Vol.160, p.1-12, In Russian. 4 refs.
Power line icing, Mountains, Ice accretion, Ice cover thickness, Ice loads, Wind factors.

34-2891
Recommendations for forecasting especially dangerous airmass icings in the Ukraine. [Rekomendatsii k prognozu osobo opasnykh otlozhenii gololeda vnutrimassovogo proiskhozhdeniia na Ukraine].
Koshenko, A.M., *Kiev. Ukrainskh nauchno-issledovatel'skh gidrometeorologicheskh institut. Trudy*, 1977, Vol.160, p.13-20, In Russian. 8 refs.
Power line icing, Icing rate, Meteorolpgical factors.

34-2892
Catastrophic accumulation of wet snow and gale winds at the southern cyclone exit in April 1975. [Katastroficheskoe nalipanie mokrogo snega i shtormovoi veter pri vykhode iuzhnogo tsiklona v aprele 1975 g.].
Koshenko, A.M., et al, *Kiev. Ukrainskh nauchno-issledovatel'skh gidrometeorologicheskh institut. Trudy*, 1977, Vol.160, p.114-121, In Russian. 7 refs.
Prokh, L.Z.
Snowstorms, Atmospheric disturbances, Wet snow, Snow accumulation, Wind factors, Charts.

34-2893
Forecasting hydrograph of spring water inflow into the Novosibirsk reservoir. [Prognoz gidrografa vesennego pritoka vody v vodokhranilishche Novosibirskoi GES].
Miliukova, O.A., *Leningrad. Gidrometeorologicheskh nauchno-issledovatel'skh tsentr SSSR. Trudy*, 1978, Vol.207, p.24-40, In Russian. 9 refs.
River basins, Ice conditions, Snowmelt, Flood forecasting, Electric power.

34-2894
Long range forecasts of flood water volume in the Oka River, allowing for soil freezing irregularities in the basin. [Dolgosrochnyi prognoz ob"ema polovod'ia r. Oki s uchetom neravnomernosti promerzaniia pochv v basseine].
Rakhmanov, V.V., *Leningrad. Gidrometeorologicheskh nauchno-issledovatel'skh tsentr SSSR. Trudy*, 1978, Vol.207, p.41-52, In Russian. 2 refs.
River basins, Soil freezing, Frost penetration, Flood forecasting, Snow surveys, Snow water equivalent.

34-2895
Route snow surveys in Siberian mountains. [O marshrutnykh snegomernykh s"emkakh v gorakh Sibiri].
Kharshan, A.A., *Leningrad. Gidrometeorologicheskh nauchno-issledovatel'skh tsentr SSSR. Trudy*, 1978, Vol.207, p.124-127, In Russian. 4 refs.
Mountains, Snow surveys, Route surveys, Snow water equivalent.

34-2896
Minimum winter drainage of Sakhalin rivers. [K voprosu o minimal'nom zimnem stoke rek Sakhalina].
Bykadorova, A.IA., *Vladivostok. Dal'nevostochnyi nauchno-issledovatel'skh gidrometeorologicheskh institut. Trudy*, 1979, Vol.76, p.107-109, In Russian.
Icebound rivers, Subglacial drainage, USSR—Sakhalin Island.

34-2897
Role of Kamchatka glaciers in river alimentation and the formation of solid runoff. [K voprosu o roli lednikov Kamchatki v pitanii rek i formirovanii tverdogo stoka].
Stepanova, A.I., *Vladivostok. Dal'nevostochnyi nauchno-issledovatel'skh gidrometeorologicheskh institut. Trudy*, 1979, Vol.76, p.110-116, In Russian. 6 refs.
Glaciation, Mountain glaciers, Glacier ablation, Rivers, Alimentation, USSR—Kamchatka Peninsula.

34-2898
Mudflows in the Baykal Amur railroad area. [O selevykh potokakh v raionakh trassy BAM].
Balabaev, F.G., *Vladivostok. Dal'nevostochnyi nauchno-issledovatel'skh gidrometeorologicheskh institut. Trudy*, 1979, Vol.76, p.115-117, In Russian.
Slope processes, Snowmelt, Mudflows, Baykal Amur railroad.

34-2899
Calculating the interrelation of surface and ground water in permafrost areas. [Kolichestvennaia otsenka vzaimosviazi poverkhnostnykh i podzemnykh vod v zone mnogoletnei merzloty].
Ipat'eva, A.I., *Vladivostok. Dal'nevostochnyi nauchno-issledovatel'skh gidrometeorologicheskh institut. Trudy*, 1979, Vol.76, p.118-125, In Russian. 4 refs.
Permafrost hydrology, Subpermafrost ground water, Suprapermafrost ground water, Runoff, Snow water equivalent, Vegetation factors.

34-2900
Comparing the readings of a summary rain gage and the Tret'iakov precipitation gage obtained in mountain taiga. [O sootnoshenii pokazanii summarnogo dozhdemera i osadkomera Tret'iakova v gorno-taezhnoi mestnosti].
Gorchakov, A.M., et al, *Vladivostok. Dal'nevostochnyi nauchno-issledovatel'skh gidrometeorologicheskh institut. Trudy*, 1979, Vol.76, p.126-130, In Russian. 3 refs.
Nagornov, E.A.
Precipitation gages, Landscape types, Taiga, Accuracy.

34-2901
Oats in the permafrost zone. [Oves v zone vechnoi merzloty].
Denisov, G.V., Novosibirsk, Nauka, 1979, 184p., In Russian with English table of contents enclosed. Refs. p.173-183.
Cryogenic soils, Saline soils, Thermal regime, Soil profiles, Soil temperature, Active layer, Permafrost depth.

34-2902
Polar lithogenesis. [Poliarnyi litogenez].
Danilov, I.D., Moscow, Nedra, 1978, 238p., In Russian with English table of contents enclosed. Refs. p.226-234.
Polar regions, Sedimentation, Sediment transport, Slope processes, Ice rafting, Weathering, Erosion, Geocryology.

34-2903
Formation of ice on electrical conductors during heavy falls of wet snow.
Kemp, A.K., *Meteorological magazine*, Mar. 1980, 109(1292), p.69-74, 5 refs.
Power line icing, Ice formation, Wet snow, Freezing.

34-2904
Proceedings of the seventeenth Muskeg Research Conference, 4 October 1977.
Williams, G.P., ed, *National Research Council, Canada. Associate Committee on Geotechnical Research. Technical memorandum*, May 1978, No.122, 187p., Refs. passim. For individual papers see 34-2905 through 34-2914.
Curran, J., ed.
Muskeg, Peat, Organic soils, Research projects, Meetings.

34-2905
Contribution of fibrous interlock to the strength of peat.
Wilson, N.E., *National Research Council, Canada. Associate Committee on Geotechnical Research. Technical memorandum*, May 1978, No.122, p.5-10, 1 ref.
Peat, Compressive properties, Stress strain diagrams, Muskeg.

34-2906
In situ response of muskeg to dynamic loading.
Sheeran, D.E., et al, *National Research Council, Canada. Associate Committee on Geotechnical Research. Technical memorandum*, May 1978, No.122, p.11-24.
Dalton, C.J., Fransham, P., Fattah, I.
Muskeg, Dynamic loads, Compressive properties, Shear strength, Subgrades, Mechanical properties, Railroads.

34-2907
Effects of volume change and alkalinity of water on the permeability of peat.
Lieszkowszky, I.P., et al, *National Research Council, Canada. Associate Committee on Geotechnical Research. Technical memorandum*, May 1978, No.122, p.25-36, 2 refs.
Ozden, Z.S.
Peat, Permeability, Water chemistry, Loads (forces), Organic soils, Volume, Chemical properties, Time factor, Waste treatment.

34-2908
Observations on the subsidence of drained peat soils under grassland culture in Newfoundland.
Raymond, A.F., et al, *National Research Council, Canada. Associate Committee on Geotechnical Research. Technical memorandum*, May 1978, No.122, p.37-48, Refs. p.42-45.
Mathur, S.P.
Peat, Subsidence, Organic soils, Drainage, Grasses.

34-2909
Construction, widening and performance of a freeway across organic terrain.
Mirza, C., *National Research Council, Canada. Associate Committee on Geotechnical Research. Technical memorandum*, May 1978, No.122, p.50-80, 16 refs.
Muskeg, Organic soils, Physical properties, Pavements, Construction, Roads, Design criteria.

34-2910
Design and construction experiences with fluid retaining embankments on peat.
Wiesner, W.R., et al, *National Research Council, Canada. Associate Committee on Geotechnical Research. Technical memorandum*, May 1978, No.122, p.81-115, 3 refs.
Hardy, R.M.
Peat, Construction, Embankments, Roads, Shear strength, Loads (forces), Organic soils, Design, Engineering.

34-2911
Use of "muskeg caps" to deter frost penetration under transmission line tower bases.
Sims, R.A., *National Research Council, Canada. Associate Committee on Geotechnical Research. Technical memorandum*, May 1978, No.122, p.116-131, 19 refs.
Permafrost beneath structures, Frost protection, Muskeg, Soil freezing, Frost heave, Frost penetration, Countermeasures, Power line supports, Towers.

34-2912
Stabilization of muskeg by chemical treatment.
Sethi, A.J., et al, *National Research Council, Canada. Associate Committee on Geotechnical Research. Technical memorandum*, May 1978, No.122, p.132-150, 4 refs.
Dalton, C.J., Sheeran, D.E., Yong, R.N.
Muskeg, Stabilization, Admixtures, Compressive properties, Shear strength, Soil stabilization, Mechanical properties.

34-2913
Plate bearing tests on a fibrous peat.
Lee, R.A., et al, *National Research Council, Canada. Associate Committee on Geotechnical Research. Technical memorandum*, May 1978, No.122, p.151-164, 8 refs.
Jarrett, P.M.
Peat, Bearing tests, Plates, Loads (forces).

34-2914
Role of fabric in low embankments on muskeg.
Greenway, D.R., et al, *National Research Council, Canada. Associate Committee on Geotechnical Research. Technical memorandum*, May 1978, No.122, p.165-181, 13 refs.
Bell, J.R.
Muskeg, Embankments, Construction, Roads, Polymers, Bearing strength, Shear strength.

34-2915
Geocryologic and hydrogeologic investigations in Yakutia. [Geokriologicheskie i gidrogeologicheskie issledovaniia IAkutii].
Anisimova, N.P., ed, Yakutsk, Institut Merzlotovedeniia SO AN SSSR, 1978, 187p., In Russian. For individual papers see 34-2916 through 34-2934. Refs. passim.
Katasonova, E.G., ed.
Soil freezing, Frost penetration, Seasonal freeze thaw, Permafrost distribution, Mapping, Permafrost thickness, Permafrost depth, Permafrost hydrology, Taliks, Water chemistry, Chemical analysis, Subsea permafrost, Thermokarst, Alassy, USSR—Yakutia.

34-2916
Thickness of the seasonally freezing surface layer in Yakutia. [Moshchnost' poverkhnostnoi sezonnomerzloi tolshchi na territorii IAkutii].
Solov'ev, P.A., Geokriologicheskie i gidrogeologicheskie issledovaniia IAkutii (Geocryologic and hydrogeologic investigations in Yakutia) edited by N.P. Anisimova and E.G. Katasonova, Yakutsk, Institut Merzlotovedeniia SO AN SSSR, 1978, p.3-12, In Russian. 3 refs.
Soil freezing, Frost penetration, Seasonal freeze thaw, Maps, Permafrost distribution, Permafrost thickness, Permafrost depth, USSR—Yakutia.

34-2917
Cryogenic sediments of the Muostakh Island. [Osobennosti kriolitogennykh otlozhenii ostrova Muostakh].
Ivanov, M.S., et al, Geokriologicheskie i gidrogeologicheskie issledovaniia IAkutii (Geocryologic and hydrogeologic investigations in Yakutia) edited by N.P. Anisimova and E.G. Katasonova, Yakutsk, Institut Merzlotovedeniia SO AN SSSR, 1978, p.12-25, In Russian. 7 refs.
Katasonova, E.G.
Sedimentation, Permafrost origin, Permafrost structure, Ice veins, Patterned ground, USSR—Muostakh Island.

34-2918
Permafrost dynamics on the shores of the Sannikov Strait. [O dinamike kriolitozony poberezhii proliva Sannikova].
Fartyshev, A.I., Geokriologicheskie i gidrogeologicheskie issledovaniia IAkutii (Geocryologic and hydrogeologic investigations in Yakutia) edited by N.P. Anisimova and E.G. Katasonova, Yakutsk, Institut Merzlotovedeniia SO AN SSSR, 1978, p.25-37, In Russian. 14 refs.
Subsea permafrost, Permafrost origin, Permafrost transformation, USSR—Sannikov Strait.

34-2919
Lacustrine deposits on the trap plateau of West Yakutia. [Otlozheniia ozernykh kotlovin na trappovom plato Zapadnoi IAkutii].
Spesivtsev, V.I., Geokriologicheskie i gidrogeologicheskie issledovaniia IAkutii (Geocryologic and hydrogeologic investigations in Yakutia) edited by N.P. Anisimova and E.G. Katasonova, Yakutsk, Institut Merzlotovedeniia SO AN SSSR, 1978, p.37-42, In Russian. 2 refs.
Lakes, Lacustrine deposits, Cryogenic structures, Permafrost hydrology, Taliks.

34-2920
Temperature of permafrost in the Prianabarskaya denudation plain. [O temperature mnogoletnemerzlykh porod Prianabarskoi denudatsionnoi ravniny].
Kunitskii, V.V., Geokriologicheskie i gidrogeologicheskie issledovaniia IAkutii (Geocryologic and hydrogeologic investigations in Yakutia) edited by N.P. Anisimova and E.G. Katasonova, Yakutsk, Institut Merzlotovedeniia SO AN SSSR, 1978, p.42-49, In Russian. 1 ref.
Plains, Permafrost thermal properties, Frozen rock temperature, Topographic effects, Permafrost structure, Permafrost hydrology.

34-2921
Authigenic minerals in syngenetically freezing deposits of Central Yakutia. [Autigennye mineraly v singeneticheski promerzavshikh otlozheniiakh Tsentral'noi IAkutii].
Zigert, Kh.G., Geokriologicheskie i gidrogeologicheskie issledovaniia IAkutii (Geocryologic and hydrogeologic investigations in Yakutia) edited by N.P. Anisimova and E.G. Katasonova, Yakutsk, Institut Merzlotovedeniia SO AN SSSR, 1978, p.50-57, In Russian. 9 refs.
Pleistocene, Frozen fines, Sedimentation, Mineralogy, Cryogenic structures, Cryogenic textures.

34-2922
Classification of permafrost-cross section elements according to their electrochemical activity. [O tipizatsii merzlotno-geologicheskikh elementov po ikh elektrokhimicheskoi aktivnosti].
Mel'nikov, V.P., et al, Geokriologicheskie i gidrogeologicheskie issledovaniia IAkutii (Geocryologic and hydrogeologic investigations in Yakutia) edited by N.P. Anisimova and E.G. Katasonova, Yakutsk, Institut Merzlotovedeniia SO AN SSSR, 1978, p.58-65, In Russian.
Niskovskikh, N.S.
Frozen ground chemistry, Permafrost physics, Electrical properties, Geological cross sections.

34-2923
Lithologic and palynologic characteristics of alassy deposits in Central Yakutia. [Litologo-palinologicheskaia kharakteristika otlozhenii alasnykh ozer Tsentral'noi IAkutii].
Bosikov, N.P., et al, Geokriologicheskie i gidrogeologicheskie issledovaniia IAkutii (Geocryologic and hydrogeologic investigations in Yakutia) edited by N.P. Anisimova and E.G. Katasonova, Yakutsk, Institut Merzlotovedeniia SO AN SSSR, 1978, p.66-79, In Russian. 10 refs.
Sopoeva, A.S.
Frozen fines, Alassy, Lithology, Palynology.

34-2924
Geocryological conditions of a Baykal Amur railroad construction site in the Olongoro River Basin. [Geokriologicheskie usloviia raiona stroitel'noi ploshchadki v basseine r. Olongoro (Malyi BAM)].
Sharapov, N.V., Yakutsk, Institut Merzlotovedeniia SO AN SSSR, 1978, p.79-93, In Russian. 5 refs.
Site surveys, Geocryology, Frozen rock temperature, Cryogenic textures, Permafrost structure, Baykal Amur railroad.

34-2925
Geothermal parameters of the Seligdar apatite deposits. [Geotermicheskie parametry Seligdarskogo apatitovogo mestorozhdeniia].
Deviatkin, V.N., et al, Geokriologicheskie i gidrogeologicheskie issledovaniia IAkutii (Geocryologic and hydrogeologic investigations in Yakutia) edited by N.P. Anisimova and E.G. Katasonova, Yakutsk, Institut Merzlotovedeniia SO AN SSSR, 1978, p.94-96, In Russian.
Gavril'ev, R.I., Shamshurin, V.I.
Mining, Site surveys, Permafrost thickness, Permafrost thermal properties, Heat transfer, Geothermy.

34-2926
Cryogenic structure of loose deposits in the southern part of the upper Zeya plain and the Ogoronsk Basin. [Kriogennoe stroenie rykhlykh otlozhenii iuzhnoi chasti Verkhnezeiskoi ravniny i Ogoronskoi kotloviny].
Misharina, N.K., Geokriologicheskie i gidrogeologicheskie issledovaniia IAkutii (Geocryologic and hydrogeologic investigations in Yakutia) edited by N.P. Anisimova and E.G. Katasonova, Yakutsk, Institut Merzlotovedeniia SO AN SSSR, 1978, p.97-105, In Russian. 8 refs.
Permafrost distribution, Permafrost structure, Lacustrine deposits, Swamps, Peat, Cryogenic textures, USSR—Zeya River.

34-2927
Morphology and temperature of recent perennially frozen rocks in the shore and shallow-water areas of northern Yenisey and Pyasina rivers. [O morfologii i temperature sovremennykh mnogoletnemerzlykh porod na pribrezhnykh i melkovodnykh uchastkakh rek Eniseisko-Piasinskogo Severa].
Karpov, E.G., Geokriologicheskie i gidrogeologicheskie issledovaniia IAkutii (Geocryologic and hydrogeologic investigations in Yakutia) edited by N.P. Anisimova and E.G. Katasonova, Yakutsk, Institut Merzlotovedeniia SO AN SSSR, 1978, p.105-114, In Russian. 4 refs.
Estuaries, Deltas, Subsea permafrost, Active layer, Frozen rock temperature, USSR—Yenisey River, USSR—Pyasina River.

34-2928
Nomogram for determining total ice content of frozen ground. [Nomogramma dlia opredel. niia summarnoi l'distosti merzlykh gruntov].
Shender, N.I., Geokriologicheskie i gidrogeologicheskie issledovaniia IAkutii (Geocryologic and hydrogeologic investigations in Yakutia) edited by N.P. Anisimova and E.G. Katasonova, Yakutsk, Institut Merzlotovedeniia SO AN SSSR, 1978, p.115-117, In Russian. 4 refs.
Permafrost structure, Ground ice, Ice volume, Nomographs.

34-2929
Naleds and injected ice in the Buordakh River valley. [Naledi i inʺektsionnye l'dy doliny r. Buordakh].
Klimovskii, I.V., Geokriologicheskie i gidrogeologicheskie issledovaniia IAkutii (Geocryologic and hydrogeologic investigations in Yakutia) edited by N.P. Anisimova and E.G. Katasonova, Yakutsk, Institut Merzlotovedeniia SO AN SSSR, 1978, p.118-125, In Russian. 6 refs.
Permafrost structure, Ground ice, Permafrost hydrology, Naleds.

34-2930
Chemical composition of injection ice. [Khimicheskii sostav inʺektsionnogo l'da].
Anisimova, N.P., et al, Geokriologicheskie i gidrogeologicheskie issledovaniia IAkutii (Geocryologic and hydrogeologic investigations in Yakutia) edited by N.P. Anisimova and E.G. Katasonova, Yakutsk, Institut Merzlotovedeniia SO AN SSSR, 1978, p.125-137, In Russian. 17 refs.
Karpov, E.G.
Pingos, Ice composition, Chemical composition, Ice growth.

34-2931
Chart of geocryologic and hydrogeologic regionalization of East Siberia. [O karte merzlotno-gidrogeologicheskogo rationirovaniia Vostochnoi Sibiri].
Ivanova, L.D., et al, Geokriologicheskie i gidrogeologicheskie issledovaniia IAkutii (Geocryologic and hydrogeologic investigations in Yakutia) edited by N.P. Anisimova and E.G. Katasonova, Yakutsk, Institut Merzlotovedeniia SO AN SSSR, 1978, p.137-145, In Russian. 17 refs.
Lomovtseva, N.S., Nikitina, N.M., Tolstikhin, O.N.
Maps, Hydrogeology, Geocryology, Permafrost hydrology.

34-2932
Regime, balance and peculiarities of talik alimentation in Central Yakutian sandstone. [O rezhime, balanse i osobennostiakh pitaniia mezhmerzlotnykh vod peschanykh massivov Tsentral'noi IAkutii].
Shepelev, V.V., Geokriologicheskie i gidrogeologicheskie issledovaniia IAkutii (Geocryologic and hydrogeologic investigations in Yakutia) edited by N.P. Anisimova and E.G. Katasonova, Yakutsk, Institut Merzlotovedeniia SO AN SSSR, 1978, p.145-162, In Russian. 12 refs.
Permafrost hydrology, Taliks, Sands, Alimentation.

34-2933
Evaluating chemical runoff of some continuous water springs in Central Yakutia. [Otsenka khimicheskogo stoka nekotorykh postoianno deistvuiushchikh istochnikov Tsentral'noi IAkutii].
Piguzova, V.M., et al, Geokriologicheskie i gidrogeologicheskie issledovaniia IAkutii (Geocryologic and hydrogeologic investigations in Yakutia) edited by N.P. Anisimova and E.G. Katasonova, Yakutsk, Institut Merzlotovedeniia SO AN SSSR, 1978, p.163-169, In Russian. 9 refs.
Zhigalova, O.P.
Permafrost hydrology, Taliks, Springs (water), Chemical composition.

34-2934
Formation of chemical composition of ground water in the Iengra River Basin (Baykal Amur railroad route). [Nekotorye osobennosti formirovaniia khimicheskogo sostava podzemnykh vod v basseine r. Iengry (trassa BAMa)].
Bottsov, A.V., Geokriologicheskie i gidrogeologicheskie issledovaniia IAkutii (Geocryologic and hydrogeologic investigations in Yakutia) edited by N.P. Anisimova and E.G. Katasonova, Yakutsk, Institut Merzlotovedeniia SO AN SSSR, 1978, p.169-176, In Russian. 2 refs.
Ground water, Permafrost hydrology, Chemical analysis, Subpermafrost ground water, Suprapermafrost ground water, Taliks, Baykal Amur railroad, USSR—Iengra River.

34-2935
Thawing of ground under the influence of thermomechanical erosion. [Protaivanie grunta pri termomekhanicheskom vozdeistvii].
Khalikov, G.A., *Problemy nefti i gaza Tiumeni*, 1979, No.43, p.77-78, In Russian. 2 refs.
Cryogenic soils, Soil erosion, Ground thawing, Heat sources, Permafrost thermal properties, Permafrost weathering.

34-2936
Approximate solution of nonlinear Stefan problems. [Priblizhennoe reshenie nelinelnykh zadach Stefana].
Danielian, IU.S., et al, *Problemy nefti i gaza Tiumeni*, 1979, No.43, p.79-82, In Russian. 3 refs.
IAnitskii, P.A.
Stefan problem, Soil freezing, Heat transfer, Freeze thaw cycles.

34-2937
Catalog of temperature fields of standard enclosure joints. Part I, Residential buildings. Design manual. (Katalog temperaturnykh polei uzlov tipovykh ograzhdaiushchikh konstruktsii. Chast' I. Zhilye zdaniia. Posobie dlia proektirovaniia).
Ivashkova, V.K., et al. Moscow, Stroizdat, 1980. 111p. In Russian with English table of contents enclosed.
Russia. Gosudarstvennyi komitet po delam stroitel'stva. Nauchno-issledovatel'skii institut stroitel'noi fiziki.
Manuals, Residential buildings, Large panel buildings, Walls, Panels, Concrete structures, Joints (junctions), Thermal regime, Heat loss, Thermal insulation, Design, Computer applications.

34-2938
Geocryological conditions in Asian mountains and plains. (Geokriologicheskie usloviia v gorakh i na ravninakh Azii).
Nekrasov, I.A., ed. Akutsk, Institut Merzlotovedeniia SO AN SSSR, 1978. 164p. In Russian. For selected papers see 34-2939 through 34-2954. Refs. passim.
Klimovskii, I.V., ed.
Geocryology, Electromagnetic prospecting, Mapping, Permafrost distribution, Permafrost structure, Thermokarst, Alassy, Frozen rock temperature, Vegetation factors, Snow cover effect.

34-2939
Permafrost distribution in Tibet and the Himalaya Mountains. (O rasprostranenii vechnoi merzloty v Tibete i Gimalaiakh).
Gorbunov, A.P., Geokriologicheskie usloviia v gorakh i na ravninakh Azii (Geocryological conditions in Asian mountains and plains) edited by I.A. Nekrasov and I.V. Klimovskii. Akutsk, Institut Merzlotovedeniia SO AN SSSR, 1978, p.3-7. In Russian. 5 refs.
Permafrost distribution, Permafrost thickness, Permafrost depth, Tibet.

34-2940
Cryogenic formations in the Baian-Obo area. (Kriogennye obrazovaniia v urochishche Baian-Obo).
Ragcha, T., et al. Geokriologicheskie usloviia v gorakh i na ravninakh Azii (Geocryological conditions in Asian mountains and plains) edited by I.A. Nekrasov and I.V. Klimovskii. Akutsk, Institut Merzlotovedeniia SO AN SSSR, 1978, p.8-11. In Russian. 2 refs.
Basan, T., Luvsandagva, D.
Geocryology, Patterned ground, Frost mounds, Cryogenic soils, Frost penetration, Seasonal freeze thaw.

34-2941
Perennialy frozen lacustrine deposits of East Pamir and Central Tien Shan. (O mnogoletnemerzlykh ozernykh tolshchakh Vostochnogo Pamira i Vnutrennego Tian'-Shania).
Ermolin, E.D., Geokriologicheskie usloviia v gorakh i na ravninakh Azii (Geocryological conditions in Asian mountains and plains) edited by I.A. Nekrasov and I.V. Klimovskii. Akutsk, Institut Merzlotovedeniia SO AN SSSR, 1978, p.11-19. In Russian. 9 refs.
Lacustrine deposits, Geocryology, Permafrost beneath lakes, USSR—Pamirs, USSR—Tien Shan.

34-2942
New data on rock temperatures in the Minusinsk trough and Kuznetskiy Alatau Range. (Novye dannye o temperature gornykh porod v Minusinskoi vpadine i v khr. Kuznetskii Alatau).
Shats, M.M., Geokriologicheskie usloviia v gorakh i na ravninakh Azii (Geocryological conditions in Asian mountains and plains) edited by I.A. Nekrasov and I.V. Klimovskii. Akutsk, Institut Merzlotovedeniia SO AN SSSR, 1978, p.19-26. In Russian. 5 refs.
Geothermometry, Snow cover effect, USSR—Kuznetskiy Alatau.

34-2943
Geocryologic zonation in Altai and Sayan mountains. (Osobennosti geokriologicheskoi poiasnosti v gorakh Altaia i Saian).
Shats, M.M., Geokriologicheskie usloviia v gorakh i na ravninakh Azii (Geocryological conditions in Asian mountains and plains) edited by I.A. Nekrasov and I.V. Klimovskii. Akutsk, Institut Merzlotovedeniia SO AN SSSR, 1978, p.27-33. In Russian. 10 refs.
Geocryology, Permafrost distribution, Permafrost thermal properties, Frozen rock temperature, Permafrost thickness, USSR—Sayan Mountains, USSR—Altai Mountains.

34-2944
Cryogenic landscapes of the Baykal Amur railroad area in the Turan Range and their economic development. (Merzlotnye landshafty zony BAMa vkhr. Turana i osobennosti ikh osvoeniia).
Nekrasov, I.A., et al. Geokriologicheskie usloviia v gorakh i na ravninakh Azii (Geocryological conditions in Asian mountains and plains) edited by I.A. Nekrasov and I.V. Klimovskii. Akutsk, Institut Merzlotovedeniia SO AN SSSR, 1978, p.34-46. In Russian. 5 refs.
Sorokina, Z.G.
Permafrost beneath structures, Permafrost structure, Ground ice, Ice veins, Ice wedges, Ice growth, Permafrost weathering, Baykal Amur railroad, Vegetation factors.

34-2945
Origin of ground ice deposits in the Muysk Basin. (K voprosu o proiskhozhdenii zalezheobrazuiushchikh l'dov v Muiskoi vpadine).
An, V.V., Geokriologicheskie usloviia v gorakh i na ravninakh Azii (Geocryological conditions in Asian mountains and plains) edited by I.A. Nekrasov and I.V. Klimovskii. Akutsk, Institut Merzlotovedeniia SO AN SSSR, 1978, p.46-57. In Russian. 19 refs.
Sorokina, Z.G.
Ground ice, Layers, Ice formation, Metamorphism (snow), Snow stratigraphy.

34-2946
Temperature regime of Baykal Lake shore deposits near Kurla Cape. (Temperaturnyi rezhim gruntov poberezh'ia oz. Baikal u mysa Kurly).
Liubomirov, A.S., Geokriologicheskie usloviia v gorakh i na ravninakh Azii (Geocryological conditions in Asian mountains and plains) edited by I.A. Nekrasov and I.V. Klimovskii. Akutsk, Institut Merzlotovedeniia SO AN SSSR, 1978, p.58-65. In Russian. 2 refs.
Shores, Rock temperature, Vegetation factors, Permafrost beneath structures, Ground thawing, USSR—Baykal Lake.

34-2947
Geocryologic characteristics of the central Zyryanka River basin. (Geokriologicheskaia kharakteristika basseina srednego techeniia r. Zyrianki).
Vasil'ev, I.S., et al. Geokriologicheskie usloviia v gorakh i na ravninakh Azii (Geocryological conditions in Asian mountains and plains) edited by I.A. Nekrasov and I.V. Klimovskii. Akutsk, Institut Merzlotovedeniia SO AN SSSR, 1978, p.66-78. In Russian. 6 refs.
Dorofeev, I.V.
River basins, Permafrost beneath rivers, Permafrost distribution, Permafrost thickness, Active layer, Permafrost depth, Maps, USSR—Zyryanka River.

34-2948
Rock temperature in the central part of the Cherskiy Mountains. (O temperature gornykh porod v tsentral'noi chasti gornoi sistemy Cherskogo).
Dorofeev, I.V., Geokriologicheskie usloviia v gorakh i na ravninakh Azii (Geocryological conditions in Asian mountains and plains) edited by I.A. Nekrasov and I.V. Klimovskii. Akutsk, Institut Merzlotovedeniia SO AN SSSR, 1978, p.79-86. In Russian.
Permafrost distribution, Maps, Geothermy, Permafrost thickness, USSR—Cherskiy Mountains.

34-2949
Development of Pleistocene-Holocene glaciation of the Verkhoyansk-Kolyma Highlands. (O razvitii gliatsiosfery Verkhoiano-Kolymskoi gornoi strany v pleistotsene-golotsene).
Sheinkman, V.S., Geokriologicheskie usloviia v gorakh i na ravninakh Azii (Geocryological conditions in Asian mountains and plains) edited by I.A. Nekrasov and I.V. Klimovskii. Akutsk, Institut Merzlotovedeniia SO AN SSSR, 1978, p.87-104. In Russian. 24 refs.
Glaciation, Pleistocene, Permafrost distribution, USSR—Verkhoyansk, USSR—Kolyma.

34-2950
Geocryologic-lithologic map of an interstream plateau. (Merzlotno-litologicheskaia karta vodorazdel'nogo plato).
Klimovskii, I.V., Geokriologicheskie usloviia v gorakh i na ravninakh Azii (Geocryological conditions in Asian mountains and plains) edited by I.A. Nekrasov and I.V. Klimovskii. Akutsk, Institut Merzlotovedeniia SO AN SSSR, 1978, p.105-112. In Russian. 6 refs.
Geocryology, Maps, Permafrost distribution, Permafrost structure, Lithology, USSR—Lena River, USSR—Olenek River.

34-2951
Alassy of Central Yakutia. (Alasnost' Tsentral'noi Iakutii).
Bosikov, N.P., Geokriologicheskie usloviia v gorakh i na ravninakh Azii (Geocryological conditions in Asian mountains and plains) edited by I.A. Nekrasov and I.V. Klimovskii. Akutsk, Institut Merzlotovedeniia SO AN SSSR, 1978, p.113-118. In Russian. 10 refs.
Alassy, Mapping, Geological maps, Permafrost structure, Thermokarst.

34-2952
Ice wedges in the alassy of Central Yakutia. (Povtorno-zhil'nye l'dy v alasakh Tsentral'noi Iakutii).
Bosikov, N.P., Geokriologicheskie usloviia v gorakh i na ravninakh Azii (Geocryological conditions in Asian mountains and plains) edited by I.A. Nekrasov and I.V. Klimovskii. Akutsk, Institut Merzlotovedeniia SO AN SSSR, 1978, p.119-122. In Russian. 3 refs.
Alassy, Permafrost structure, Thermokarst, Ice wedges.

34-2953
Ground ice in the area of a mountain pass in the Suntar-Khayat Range. (Podzemnye l'dy v okrestnostiakh odnogo iz perevalov khr. Suntar-Khaiata).
Gordeev, P.P., Geokriologicheskie usloviia v gorakh i na ravninakh Azii (Geocryological conditions in Asian mountains and plains) edited by I.A. Nekrasov and I.V. Klimovskii. Akutsk, Institut Merzlotovedeniia SO AN SSSR, 1978, p.123-130. In Russian. 6 refs.
Permafrost distribution, Permafrost structure, Ice formation, Ground ice, Ice wedges, Topographic effects, USSR—Suntar-Khayat Range.

34-2954
Using electrical survey data in geocryologic and geologic evaluations. (Opyt primeneniia dannykh elektrorazvedki pri merzlotno-geologicheskoi otsenke territorii).
Shasherin, I.V., Geokriologicheskie usloviia v gorakh i na ravninakh Azii (Geocryological conditions in Asian mountains and plains) edited by I.A. Nekrasov and I.V. Klimovskii. Akutsk, Institut Merzlotovedeniia SO AN SSSR, 1978, p.131-141. In Russian. 5 refs.
Geocryology, Electromagnetic prospecting, Maps.

34-2955
Load-bearing behavior of frozen earthmasses. (Tragverhalten gefrorenet Erdkörper).
Eckardt, H., *Karlsruhe. Universität. Institut für Bodenmechanik und Felsmechanik. Veröffentlichungen*, 1979. Vol.81. 141p. In German with English table of contents enclosed and English summary (p.116). 76 refs.
Frozen ground strength, Frozen ground compression, Bearing strength, Loads (forces), Soil creep, Rheology, Stress strain diagrams, Frozen ground mechanics, Water content, Mathematical models.

34-2956
Operation Icemap 2; side looking radar trials, spring 1972.
Hengeveld, H.G., Canada, Atmospheric Environment Service, Ice Division, (1973). 14p. + appends.
Remote sensing, Ice conditions, Side looking radar, Spaceborne photography, Mapping.

34-2957
Special management needs of alpine ecosystems.
Symposium on Special Management Needs of Alpine Ecosystems, Casper, Wyoming, Feb. 14, 1979. Range science series, No.5, Denver, Colo., Society for Range Management, 1979, 100p., Refs. passim. For individual papers see 34-2958 through 34-2963.
Johnson, D.A., ed.
Alpine landscapes, Alpine tundra, Plant physiology, Revegetation, Ecosystems, Environmental impact.

34-2958
Alpine ecosystems of western North America.
Billings, W.D., Special management needs of alpine ecosystems, Denver, Colo., Society for Range Management, 1979, p.6-21, 47 refs.
Alpine landscapes, Plant physiology, Ecosystems, Plant ecology, Environmental protection.

34-2959
Physiological responses of plants in tundra grazing systems.
Tieszen, L.L., et al. Special management needs of alpine ecosystems, Denver, Colo., Society for Range Management, 1979, p.22-42, 37 refs.
Archer, S.
Alpine tundra, Plant physiology, Plant ecology, Grazing.

34-2960
Range management in the alpine zone: practices and problems.
Thilenius, J.F. Special management needs of alpine ecosystems, Denver, Colo., Society for Range Management, 1979, p.43-64., Refs. p.63-64
Plant ecology, Alpine landscapes, Ecosystems, Grazing.

34-2961
Hydrologic aspects related to the management of alpine areas.
Johnston, R.S., et al. Special management needs of alpine ecosystems, Denver, Colo., Society for Range Management, 1979, p.65-75.
Brown, R.W.
Alpine landscapes, Watersheds, Snow hydrology, Alpine tundra, Environmental impact.

34-2962
Revegetation of disturbed alpine rangelands.
Brown, R.W., et al. Special management needs of alpine ecosystems, Denver, Colo., Society for Range Management, 1979, p.76-94, 43 refs.
Johnston, R.S.
Alpine landscapes, Ecosystems, Revegetation, Environmental impact.

34-2963
Future management and research needs in alpine ecosystems.
Marr, J.W., Special management needs of alpine ecosystems, Denver, Colo., Society for Range Management, 1979, p.95-100, 7 refs.
Alpine landscapes, Ecosystems, Environmental impact, Research projects.

34-2964
AGT guideway and station technology. Vol.8. Weather protection concepts.
Stevens, R.D., et al. *U.S. Urban Mass Transportation Administration. Report*, Aug. 1979, UMTA-IT-06-0152-79-7, 237p., PB-299 746, 54 refs.
Nicanco, T.J., McGean, T.J., Easley, S.M., Easley, T.L.
Urban planning, Transportation, Railroads, Cold weather operation, Thermal insulation, Heating, Cost analysis.

34-2965
Atmospheric processes and characteristics of underlying surfaces during the period preceding the formation of temperature anomalies. [Atmosfernye protsessy i kharakteristiki podstilaiushchei poverkhnosti v period predshestvuiushchii formirovaniiu temperaturnykh anomalii].
[Agudin, R.A., *Zapadno-Sibirskii regional'nyi nauchno-issledovatel'skii gidrometeorologicheskii institut. Trudy*, 1979, Vol.42, p.12-23, In Russian. 9 refs.
Synoptic meteorology, Air temperature, Ice conditions, Weather forecasting, Barents Sea.

34-2966
Synoptic conditions and the formation of major mean monthly air temperature anomalies in West Siberia. [Sinopticheskie usloviia formirovaniia krupnykh anomalii srednemesiachnoi temperatury vozdukha v Zapadnoi Sibiri].
Zubovich, M.G., et al. *Zapadno-Sibirskii regional'nyi nauchno-issledovatel'skii gidrometeorologicheskii institut. Trudy*, 1979, Vol.42, p.24-36, In Russian. 13 refs.
Weather forecasting, Synoptic meteorology, Air temperature, Atmospheric disturbances.

34-2967
Long range background forecasts of mean monthly air temperature anomalies in West Siberia. [Fonovyi dolgosrochnyi prognoz anomalii srednei mesiachnoi temperatury vozdukha v Zapadnoi Sibiri].
[Agudin, R.A., *Zapadno-Sibirskii regional'nyi nauchno-issledovatel'skii gidrometeorologicheskii institut. Trudy*, 1979, Vol.42, p.44-50, In Russian. 10 refs.
Long range forecasting, Atmospheric circulation, Solar activity, Air temperature, Ice conditions, Barents Sea.

34-2968
Ten-day forecasts of mean air temperature anomalies for West and East Siberia, Ural Mountains and North Kazakhstan [Prognoz srednei temperatury vozdukha i ee anomalii na 10 dnei dlia territorii Zapadnoi i Vostochnoi Sibiri, Urala i Severnogo Kazakhstana].
Khramtsova, I.G., et al. *Zapadno-Sibirskii regional'nyi nauchno-issledovatel'skii gidrometeorologicheskii institut. Trudy*, 1979, Vol.42, p.51-55, In Russian. 5 refs.
Shul'man, S.M.
Long range forecasting, Atmospheric circulation, Solar activity, Air temperature, Sea ice, Ice conditions, Snow cover distribution.

34-2969
Synoptic-statistical method of fog forecasting for West Siberian airports. [Sinoptiko-statisticheskii metod prognoza tumana v aeroportakh Zapadnoi Sibiri].
[Arkova, V.M., *Zapadno-Sibirskii regional'nyi nauchno-issledovatel'skii gidrometeorologicheskii institut. Trudy*, 1979, Vol.42, p.107-113, In Russian. 1 ref.
Weather forecasting, Fog, Airports.

34-2970
Forecasting surface wind velocities in the Krasnoyarsk area. [Prognoz skorosti vetra u poverkhnosti zemli v ratone Krasnoiarska].
Zaliznyak, E.L., *Zapadno-Sibirskii regional'nyi nauchno-issledovatel'skii gidrometeorologicheskii institut. Trudy*, 1979, Vol.42, p.114-120, In Russian. 5 refs.
Weather forecasting, Atmospheric disturbances, Wind velocity, Air temperature, Wind chill.

34-2971
Experience in using radar information in forecasting visibility in snowstorms. [Opytnoe ispol'zovanie radiolokatsionnoi informatsii pri prognoze vidimosti v snegopade].
Zenkevich, D.L., *Zapadno-Sibirskii regional'nyi nauchno-issledovatel'skii gidrometeorologicheskii institut. Trudy*, 1979, Vol.42, p.121-124, In Russian. 10 refs.
Snowstorms, Visibility, Radar echoes, Weather forecasting.

34-2972
Radioactive isotope technique of studying density and moisture content of landslide slopes. [Izuchenie rezhima vlazhnosti i plotnosti opolznevykh massivov radioizotopnymi metodami].
Kornienko, S.D., et al. *Russia. Ministerstvo vysshego i srednego spetsial'nogo obrazovania. Izvestiia vysshikh uchebnykh zavedenii. Geologiia i razvedka*, 1979, No.12, p.112-116, In Russian. 5 refs.
Markar'ian, V.V.
Slope processes, Landslide control, Soil water, Density (mass/volume), Measuring instruments, Radioactive isotopes.

34-2973
Studying service life and phase composition of cellular concrete outer wall panels with different finish. [Issledovanie dolgovechnosti i fazovogo sostava gazobetonnykh naruzhnykh panelei s razlichnoi otdelkoi].
Bezborodov, V.A., et al. *Russia. Ministerstvo vysshego i srednego spetsial'nogo obrazovania. Izvestiia vysshikh uchebnykh zavedenii. Stroitel'stvo i arkhitektura*, 1979, Vol.12, p.67-70, In Russian.
Khomicheva, I.V., Timakov, I.U.V.
Large panel buildings, Walls, Panels, Cellular concretes, Permafrost beneath structures.

34-2974
More attention to access roads. [Bol'shc vnimaniia pritrassovym avtodorogam].
Khvostik, I.F., *Transportnoe stroitel'stvo*, Apr. 1980, No.4, p.5-6, In Russian.
Roads, Embankments, Permafrost beneath structures, Baykal Amur railroad.

34-2975
Concretes with antifreeze admixtures. [O primenenii betonov s protivomoroznymi dobavkami].
Kostiaev, P.S., et al. *Transportnoe stroitel'stvo*, Apr. 1980, No.4, p.44-46, In Russian. 5 refs.
Kurbatova, I.I., Kurushin, A.D., Sigacheva, T.A.
Winter concreting, Concrete admixtures, Antifreezes, Permafrost beneath structures.

34-2976
Skilled workers used abroad in cold regions development. [Ispol'zovanie rabochikh kadrov pri osvoenii Severa za rubezhom].
Chudnovskii, A.D., et al. *Neftepromyslovoe stroitel'stvo*, 1980, No.3, p.19-21, In Russian. 3 refs.
Grechnin, V.A., Abdrakhmanov, R.G.
Polar regions, Economic development, United States—Alaska, Canada.

34-2977
Development and improvement of the design of digging wheel trenching excavators. [Razvitie i sovershenstvovanie konstruktsii kolesnykh travshei ekskavatorov].
Tavrov, G.E., et al. *Neftepromyslovoe stroitel'stvo*, 1980, No.3, p.21-23, In Russian.
Shor, I.D.
Pipelines, Excavation, Frozen ground.

34-2978
Cost of log roads built in swamps on pipeline construction sites. [Stoimost' lesnykh dorog pri stroitel'stve truboprovodov na bolotakh].
Suvorov, L.N., et al. *Stroitel'stvo truboprovodov*, Mar. 1980, No.3, p.11-12, In Russian.
Leitman, P.P.
Swamps, Roads, Pipelines, Construction costs.

34-2979
System of equipment reservation for the complex column technique of construction in West Siberia. [Sistema rezervirovaniia tekhniki v kompleksnykh kolonnakh v usloviiakh Zapadnoi Sibiri].
Kurbatov, N.I., et al. *Stroitel'stvo truboprovodov*, Mar. 1980, No.3, p.13-15, In Russian. 5 refs.
Zinevich, A.M., Efimov, A.S., Savenko, V.A.
Cold weather construction, Construction equipment, Pipelines, Permafrost beneath structures.

34-2980
Concrete protection from brine and frost effects. [Metody zashchity betona pri vozdeistvii zasolennykh vod i otritsatel'nykh temperatur].
Bugrim, S.F., et al. *Stroitel'stvo truboprovodov*, Mar. 1980, No.3, p.17-18, In Russian.
Andreev, V.V.
Concrete structures, Foundations, Saline soils, Permafrost beneath structures, Concrete strength.

34-2981
Thermopiles for pipeline construction. [Termosvai dlia truboprovodnogo stroitel'stva].
Petrov, B.G., et al. *Stroitel'stvo truboprovodov*, Mar. 1980, No.3, p.34-36, In Russian. 4 refs.
Spiridonov, V.V.
Pipelines, Supports, Permafrost beneath structures, Thermopiles, Permafrost control.

34-2982
Technical and economic characteristics of the Trans-Alaska Oil Line. [Tekhniko-ekonomicheskaia kharakteristika Transaliaskinskogo nefteprovoda].

Extract from the annual report: Antarctic Division 1978-79.
Australia. Department of Science. Antarctic Division, Canberra, Australian Government Publishing Service, 1979, 23p.
Research projects, Glaciology, Antarctica.
Administrative and research activities of the Antarctic Division are discussed. The Division continued to provide support for the Australian National Antarctic Research Expeditions and to undertake its own antarctic and Australia based research in glaciology, upper-atmospheric physics, cosmic rays, biology and medicine. Programs in these areas are reviewed and accomplishments in instrumentation, engineering, construction and logistics described.

DGS, G(890) qV666a
Gravity anomalies, Glacier ice, Ice cover thickness, Glacier flow, Antarctica--Taylor Glacier.
Gravity observations from the Taylor glacier region are reported. Regional Bouguer anomalies were calculated for bedrock stations from Lake Fryxell to the Upper Taylor Glacier, and reach a maximum of -139 mgal. Residual Bouguer anomalies were calculated along six lines transverse to the ice flow to determine ice thickness; anomalies of up to -62 mgal were obtained. For four of the lines ice thickness was determined assuming the glacier was underlain by bedrock of density 2.80 Mg cu m. For the other two lines, ice thickness from radio echo-sounding allowed interpretation to include a subglacial sediment layer. The largest anomaly implies an ice thickness of 1100 m underlain by 600 m of sediment, and the ice becomes progressively thinner towards the snout. The shape of the inferred ice-bedrock interface across the glacier varies from profile to profile, but is generally U-shaped. (Auth.)

34-2994
Long range forecasting of ice conditions in Arctic seas. [Izmenchivost' ledovykh uslovii v arkticheskikh moriakh i printsipy ikh dolgosrochnogo prognozirovaniia].

Offshore drilling, Petroleum industry, Sea ice distribution, Ice conditions.
The possibility exists that by 1990, exploration for gas and oil in Antarctica will begin, followed in 1995 by commercial operations. Estimated substantial but totally unproven antarctic oil deposits are seen as the spur which will help solve the national territorial claims problem. It is anticipated that arctic petroleum exploration techniques will be adapted to the Southern Ocean environment.

Oil spills, Sea ice, Ice electrical properties, Bottom ice, Fast ice, Subglacial observations, Ocean currents, Anisotropy, Remote sensing, Echo sounding, Electromagnetic properties.
The object of the CRREL study is to: (a) determine the cause of the significant relief which exists under the fast ice, (b) measure the variations in the relief under fast ice, using electromagnetic echo sounding, (c) determine if the under-ice relief is a series of individual pockets or consists of long rills, (d) estimate the quantity of oil which could pool up in the under-ice depressions should oil be released under the ice cover (e) use impulse radar to study the electromagnetic properties and anisotropy of sea ice. Initial results from using a polarized radar antenna in the air from the NOAA helicopter indicate that the c-axis anisotropy can be determined from the air. Because this anisotropy is related to current direction, it should be possible to measure, from an airborne platform, the current direction at the ice-water interface.

34-3054
Anisotropic properties of sea ice in the 50-150 MHz range.
Kovacs, A., et al, Environmental assessment of the Alaskan continental shelf, Vol. 8, Transport. Principal investigators' annual reports for the year ending March 1979, Boulder, Colorado, Outer Continental Shelf Environmental Assessment Program, Oct. 1979, p.324-353, 4 refs.
Morey, R.M.
Sea ice, Ice electrical properties, Anisotropy, Ice crystal structure, Electromagnetic properties, Ocean currents, Remote sensing.
Results of impulse radar studies of sea ice near Prudhoe Bay, Alaska, show that where there is a preferred current direction under the ice cover the crystal structure of the ice becomes highly ordered. This includes a crystal structure with a preferred horizontal c-axis that is oriented parallel with the local current. The radar studies show that this structure behaves as an anisotropic dielectric. The result is that when electromagnetic energy is radiated from a dipole antenna in which the E-field is oriented perpendicular with the c-axis azimuth no bottom reflection is detected. It was also found that the frequency dispersion of anisotropic sea ice varies in the horizontal plane and is related to the average bulk brine volume of the ice. The bulk dielectric constant of the ice, as determined from impulse travel time, shows little correlation with the coefficient of anisotropy.

The objective of CRREL's subsea permafrost program is to obtain information on the distribution and properties of permafrost beneath the Beaufort Sea. We are currently acquiring information on the distribution of ice-bonded permafrost from analysis of the velocity structure of commercial seismic records. This report summarizes the results of all studies to date, including engineering property analysis and preliminary interpretation of seismic data. Emphasis is placed on results that are relevant to offshore development of this region. Discussion of the CRREL drilling and laboratory program represents the most current interpretation of these data.

Tanimura, A., Hoshiai, T.
Samplers, Plankton, Sea ice.
A plankton sampler was devised to collect zooplankton under the sea ice. The sampler is composed of a cylindrical part (24 cm x 57.5 cm) and a conical plankton net (20 cm x 39 cm). A propeller and an electric motor which drives the propeller are installed inside the cylinder and the plankton net is attached at the posterior end of the cylinder. The plankters are taken into the sampler by a current caused by the rotating propeller and filtered by the plankton net. The sampler is not towed, but is operated as it is suspended horizontally at desired depths under the sea ice. The sampler is of simple structure, inexpensive, light enough for one-man operation. The usefulness of this sampler was shown by the field observations in the Lützow-Holm Bay, Antarctica, and Lake Saroma, Hokkaido, Japan. The problems to be solved for the quantitative investigations are also identified. This sampler is named "NIPR-I". (Auth.)

Ice sheets, Mathematical models, Ice temperature, Glacier flow.

A plane model of thermal regime dynamics of the East Antarctic ice sheet is discussed using experimental data on ice accumulation, rheology, upper and lower boundary conditions. Temperature distribution along the flow linecross-section and horizontal velocities of ice for different values of vertical velocity at the surface are illustrated by diagrams. The mathematical model offered makes it possible to evaluate the effect of climatic changes on the thermal state and dynamics of a glacier.

Ice sheets, Ice cores, Ice dating, Aerosols, Dust, Condensation nuclei, Ice crystal growth, Antarctica—Byrd Station.
The significance of soluble and insoluble microparticles and oxygen isotopes for paleoclimatological studies is discussed. Concentration, size distribution and composition of dust were studied in drill cores from the antarctic ice sheet. Electron microscope investigations of snow crystals revealed aerosol distribution, with larger sizes in centers and smaller ones dispersed throughout the crystals: the smaller the condensation nuclei sizes, the larger their quantities. Cyclic variations of dust particle concentrations were observed in Byrd Station samples. It is suggested that this cyclicity can be used in snow-ice stratigraphy problems.

Glacier flow, Antarctica—Allan Hills.
Against a long mountain barrier the antarctic ice sheet forms two types of regime: fan-shaped zones from which ice is drained into glaciers passing through the range and somewhat higher-altitude stagnant zones where ice is trapped against the barrier. The Allan Hills site at which a concentration of meteorites was found in field season 1976-77 appears to be of the latter type. Field collections were made at the Allan Hills location again during the 1977-78 field season; 311 specimens were collected. Meteorites were found upon the upper and lower limbs of a monocline described by the ice surface, probably caused by a rocky ridge over which the ice is flowing. Meteorites are apparently exposed first on the upper limb by ablation and then carried to the lower limb, where they remain because the ice of the lower limb cannot flow past Allan Hills. In addition to the meteorites recovered at Allan Hills, a nickel-iron meteorite was discovered by another field party in lower Victoria Valley. (Auth. mod.)

Studies on interaction between wind and dry snow surfaces.
Kobayashi, S., *Hokkaido University, Sapporo, Japan. Institute of Low Temperature Science. Contribution. Series A*, 1979, No.29, 64p., Refs. p.61-64.
Snow surface, Ice surface, Wind factors, Wind velocity, Topography, Drift, Erosion, Snow air interface, Boundary layer, Antarctica—Mizuho Plateau.
Interaction between the wind and the surface of dry snow and bare ice has been studied by analyzing systematic and quantitative data obtained from field and laboratory researches on the formation of snow waves, which represent one of a variety of deposition erosion patterns (waves, ripples, barchans, sastrugi, dunes, pits, etc.) formed on a snowfield, as a wind redistributes a surface layer of deposited snow. Profiles of wind speed were obtained from measurements in the lower surface layer, where snow drifts over dry snow and bare ice surfaces, in Hokkaido, Japan, and in Mizuho Plateau, East Antarctica. A helicoidal stream around an obstruction (two small huts) was observed by trajectories of smoke and drifting snow particles. When a wind stream encountered an obstacle or a surface irregularity, its boundary layer was separated and turbulent waves were formed around it. Deposition and erosion are discussed in connection with local eddy patterns. (Auth. mod.)

Sorted strips orientated by wind action: some observations from sub-Antarctic Marion Island.
Hall, K., *Earth surface processes*, July-Sep. 1979, 4(3), p.281-289, 14 refs.
Ice needles, Frost action, Rock weathering, Glacial deposits, Periglacial processes, Wind factors, Marion Island.
Sorted stripes found on the volcanic scoria and glacial deposits of Subantarctic Marion Island indicate a distinct preferred orientation. Despite uniformity of slope and material, the stripes are predominantly aligned parallel to the wind. It is suggested that melting of needle ice by the early morning sun is of only limited importance in the Subantarctic, owing to the almost continual overcast conditions. The effect of the wind is so great that in exposed situations stripes are formed on horizontal sufaces. (Auth.)

Merry, C.J., McKim, H.L., Lawson, D.E.
Aerial surveys, Remote sensing, Spaceborne photography, LANDSAT, Mapping, Photointerpretation, Spacecraft, River basins, Environments, United States—Alaska—Susitna River.
The primary objectives of this study were to 1) prepare a map from Landsat imagery of the Upper Susitna River Basin drainage network, lakes, glaciers and snowfields, 2) identify possible faults and lineaments within the upper basin and within a 100-km radius of the proposed Devil Canyon and Watana dam sites as observed on Landsat imagery, and 3) prepare a Landsat-derived map showing the distribution of surficial geologic materials and poorly drained areas. The EROS Digital Image Enhancement System (EDIES) provided computer-enhanced images of Landsat-1 scene 5470-19560. The EDIES false color composite of this scene was used as the base for mapping drainage network, lakes, glaciers and snowfields, six surficial geologic materials units and poorly drained areas. Some single-band and other color composites of Landsat images were used during interpretation. All the above maps were prepared by photointerpretation of Landsat images without using computer analysis, aerial photographs, field data, or published reports.

34-3199
Analysis of the performance of a 140-foot Great Lakes icebreaker: USCGC *Katmai Bay*.
Vance, G.P., *U.S. Army Cold Regions Research and Engineering Laboratory*, Feb. 1980, CR 80-8, 28p., ADA-084 736, 8 refs.
Icebreakers, Bubbles, Protective coatings, Ice cover thickness, Ice friction, Ice strength.
This report presents the results of the tests on the new U.S. Coast Guard 140-ft icebreaker Katmai Bay (WTGB-101) in the level plate ice and brash ice in Whitefish Bay and the St. Marys River. The results indicate that the vessel can penetrate 22 in. of level freshwater ice with 2-3 in. of snow cover. It can also penetrate up to 48 in. of brash ice in a continuous mode and at least 30 in. of plate ice by backing and ramming. The installed bubbler system decreased the required power of the vessel from 10 to 30% in brash ice and 25 to 35% in level ice. The low friction coating appears to be effective in decreasing the friction factor when it remains intact; when it peels off, it appears to make conditions worse than plain paint. An average dynamic friction factor of 0.15 could be used over the entire hull for these tests.

Cuymon, G.L., Johnson, T.C.
Mathematical models, Frost heave, Frost penetration, Heat transfer, Soil water migration, Pavements, Computerized simulation, Laboratory techniques, Forecasting.
A mathematical model of coupled heat and moisture flow in soils has been developed. The model includes algorithms for phase change of soil moisture and frost heave and permits several types of boundary and initial conditions. The finite element method of weighted residuals (Galerkin procedure) was chosen to simulate the spatial regime, and the Crank-Nicholson method was used for the time domain portion of the model. To facilitate evaluation of the model, the heat and moisture fluxes were essentially decoupled; moisture flux was then simulated accurately, as were heat flux and frost heave in a laboratory test. Comparison of the simulated and experimental data illustrates the importance of unsaturated hydraulic conductivity. It is one parameter which is difficult to measure and for which only a few laboratory test results are available. Therefore, unsaturated hydraulic conductivities calculated in the computer model may be a significant source of error in calculations of frost heave. The algorithm incorporating effects of surcharge and overburden was inconclusively evaluated. Time-dependent frost penetration and frost heave in laboratory specimens were closely simulated with the model. After 10 days of simulation, the computed frost heave was about 2.3 cm vs 2.0 cm and 2.8 cm in two tests. Frost penetration was computed as 15 cm and was measured at 12.0 cm and 12.2 cm in the two laboratory samples after 10 days.

Introduction of indigenous plants in the northern Kola Peninsula. [Introduktsiia rastenii prirodnoi flory na Kol'skom Severe],
Andreev, G.N., Voprosy introduktsii rastenii na Kol'skom Severe (Introduction of plants in the northern Kola Peninsula) edited by G.N. Andreev and L.M. Luk'ianova, Apatity, Akademiia nauk SSSR, 1979, p.3-14, In Russian. Refs. p.12-14.
Introduced plants, Plant ecology, USSR—Kola Peninsula.

34-3229
Acclimatization of introduced plants and ways to hasten it in high latitudes. (Akklimatizatsiia fitointroduktsentov i puti ee uskoreniia v regionakh vysokikh shirot).
Agaev, M.G., Voprosy introduktsii rastenii na Kol'skom Severe (Introduction of plants in the northern Kola Peninsula) edited by G.N. Andreev and L.M. Luk'ianova, Apatity, Akademiia nauk SSSR, 1979, p.15-25. In Russian. Refs. p.23-25.
Introduced plants, Plant physiology, Plant ecology, USSR—Kola Peninsula.

34-3230
Significance of antarctic and subantarctic regions for plant introduction research. (Znachenie antarkticheskikh i subantarkticheskikh raionov dlia tselei introduktsii rastenii).
Golovkin, B.N., Voprosy introduktsii rastenii na Kol'skom Severe (Introduction of plants in the northern Kola Peninsula) edited by G.N. Andreev and L.M. Luk'ianova, Apatity, Akademiia nauk SSSR, 1979, p.30-41, Russian. Refs. p.40-41.
Introduced plants, Plant ecology.
Plants of the subantarctic and antarctic areas hold great promise as potential species suitable for introduction in the Far North, since they are able to withstand harsh conditions. Some few on-side introduction studies have been done with such plants, these are reviewed here. Also, subantarctic and antarctic plants have been successfully cultivated in various botanical gardens and research stations in the Soviet Union and elsewhere. This research is also reviewed with the aim of identifying promising directions for future work.

34-3231
Preliminary investigations of the kinetics of nitrogen transformation and nitrosamine formation in land treatment of wastewater.
Jacobson, S., et al, *U.S. Army Cold Regions Research and Engineering Laboratory*, Mar. 1979. SR 79-4, 59p., ADA-086 169, 94 refs.
Alexander, M.
Waste disposal, Water treatment, Soil chemistry, Laboratory techniques.
In laboratory experiments, denitrification of nitrate in wastewater proceeded slowly in an acid soil (pH 4.2), but the rate was fast in soils with pH values of 5.5 to 6.8. The rate of denitrification was governed by the carbon source added, with glucose supporting the fastest rate. The rate was somewhat slower with methanol and succinate and was appreciably slower with secondary effluents as the source of supplemental carbon. Charlton loam supported the more rapid denitrification with glucose as a carbon source, but the rate was higher in Windsor sandy loam with sewage as the carbon source. Denitrification in these soils did not occur at 1C, and the rate increased with rising temperatures.

Iskandar, I.K.
Waste treatment, Water treatment, Nutrient cycle, Soil chemistry, Nitrogen.
A simplified model for simulation of nitrogen transformations and transportation in land treatment of wastewater is presented. The purpose of the model is to predict the behavior of NH4-N and NO3-N in the soil profile in land treatment systems. The program is based on the solution of the transient soil water flow equation simultaneously with the equations describing the transformation, transport, and plant uptake of nitrogen in the soil. The program is valid for uniform as well as multilayered soil profiles and can be adapted to incorporate various nitrogen transformation mechanisms and boundary conditions. The model can be used as a tool to predict the fate of nitrogen in land treatment systems. Model sensitivity to changes in the rate of nitrification, ammonium ion exchange, and rate of plant uptake of nitrogen is also described. Description of the computer program, the program listing, and an example of input data and a two-week computer simulation of output data are presented.

34-3264
Freezing temperature of aqueous solutions containing formamide, acetamide, propionamide and N,N-dimethylformamide.

For individual articles see F-23319 through F-23323 and I-23324, or 34-3272 through 34-3276. For Russian original see 9F-16958 through 9F-16962 and 9I-16963, or 30-3940 through 30-3944. Refs. passim.
Sea ice distribution, Spacecraft, Antarctica.
This collection of works contains material dealing with the utilization of meteorological satellites for the investigation of polar regions. In it, light is thrown on questions pertaining to the use of microwave equipment for investigating Atlantic ice and for determining the temperature of the underlying surface, the use of television equipment for the determination of cloud and ice fields in the Arctic and Antarctic regions, as well as for the comprehensive analysis of landscapes, the use of data on outgoing radiation for the determination of average-temperature fields and the restoration of aerological data, questions pertaining to identification and geographic control of the data. (Auth.)

34-3272
Antarctic ice characteristics according to *Kosmos-243* satellite radiometric measurements.
Matveev, D.T., Meteorological research, Washington, Transemantics, July 1976, p.5-12, N76-27786. For Russian original see 9F-16958 or 30-3940.
Sea ice distribution, Spacecraft, Radiometry, Antarctica.

Experimental data are presented on antarctic ice characteristics through measurements carried out from the *Cosmos-243* satellite. Heat radiation measurements were done in the 0.8 cm, 1.34 cm, 3.4 cm and 8.5 cm bands. The results are compared with average data on the position of the ice barrier. (Auth.)

34-3273

Characteristics of the antarctic temperature field according to *Kosmos 243* satellite radiometric measurements.

Kurskaia, A.A., Meteorological research, Washington, Transemantics, July 1976, p.13-20, N76-27786. For Russian original see 9F-16959 or 30-3941. 2 refs.

Sea ice, Ice shelves, Ice sheets, Ice temperature, Radiometry, Spacecraft, Antarctica.

Experimental data are presented and an analysis made of radiobrightness temperatures above the ice sheet of Antarctica according to *Cosmos-243* data. A considerable inhomogeneity of the temperature field is shown. (Auth.)

34-3274

Ice environment of the antarctic region according to *Cosmos-226* satellite data.

Leont'eva, A.V., Meteorological research, Washington, Transemantics, July 1976, p.21-28, N76-27786. For Russian original see 9F-16960 or 30-3942.

Sea ice distribution, Antarctica.

A photomontage of ice conditions in the Antarctic is presented. It is composed from television pictures taken by *Cosmos-226* in November 1968. A short description of the state of ice is given and peculiarities of the photographic images are noted. (Auth.)

34-3275

Ice conditions in the Antarctic in the summer of 1968-1969.

Provorkin, A.V., et al, Meteorological research, Washington, Transemantics, July 1976, p.29-44, N76-27786. For Russian original see 9F-16961 or 30-3943.
Dubrovin, L.I.

Sea ice distribution, Antarctica.

Average monthly charts of ice conditions in the Southern Ocean in Nov. and Dec. 1968 and Jan. 1969 are compiled according to television pictures taken from the *Cosmos-226* satellite. The results of the interpretation of the photos show marked changes in the contours in several sections of the antarctic coast. (Auth.)

34-3276

Ice mesovortices in the nearshore regions of East Antarctica.

Preobrazhenskaia, T.N., Meteorological research, Washington, Transemantics, July 1976, p.45-54, N76-27786. For Russian original see 9F-16962 or 30-3944.

Sea ice distribution, Ocean currents, Atmospheric circulation, Antarctica—East Antarctica.

The article deals with the results of a study of meso- and microvortices in the coastal regions of Antarctica according to meteorological satellite data. Vortices of the second type are related to the peculiarities and orography of the glacier slope. These vortices present accumulations of snow and ice drawn in by winds blowing from the continent. (Auth.)

Wastewater treatment in cold regions by overland flow.
Martel, C.J., et al. *U.S. Army Cold Regions Research and Engineering Laboratory*, Feb. 1980, CR 80-7, 14p., ADA-084 489, 16 refs.
Jenkins, T.F., Palazzo, A.J.
Waste treatment, Water treatment, Irrigation, Cold weather performance, Engineering, Soil chemistry, Agriculture.
Primary effluent, secondary effluent (package extended aeration plant effluent with BOD's often greater than 30 mg/liter) and tapwater were applied to separate sections of a pilot-scale overland flow site in a cold regions environment. The average application rate for each section was 5.0 cm (2.0 in.) per week. Performance was evaluated for one year, May 1977 to June 1978. Results of this study demonstrated that overland flow can renovate both primary and secondary effluent during spring, summer and fall seasons. However, during winter, runoff water quality from the primary section contained almost no pollutants during its entire operation. Ammonia was the easiest form of nitrogen to remove and nitrate was the most difficult. Rainstorms did not cause a "flushing" effect. However, ammonia and nitrate concentrations in the runoff increased during snowmelt. The forage yield from the primary and secondary sections was almost twice that of a typical New Hampshire hayfield. Wastewater application during winter caused only minor cases of plant injury. Based on these results, a minimum of 30 days of storage is recommended if overland flow is used as a polishing process. If overland flow is used to treat primary effluent, the number of storage days predicted by EPA-1 computer program appears to be adequate.

34-3326
High-explosive cratering in frozen and unfrozen soils in Alaska.
Smith, N., *U.S. Army Cold Regions Research and Engineering Laboratory*, Feb. 1980, CR 80-9, 21p., ADA-084 702, 8 refs.
Frozen ground mechanics, Explosion effects, Seasonal freeze thaw, Taliks, Excavation, Tests.
Explosive cratering tests were conducted in seasonally frozen and thawed gravel at Ft. Richardson near Anchorage, Alaska, and in seasonally frozen and thawed silt overlying permafrost and in silt permafrost at Ft. Wainwright near Fairbanks, Alaska. Explosive charge weights ranged from 26 to 3120 lb, and charge burial depths ranged from about 3 to 40 ft. The cube root of the charge weight scaling was used to determine maximum scaled crater dimensions and optimum scaled depth of burial of the charge. Test results for frozen and thawed gravel were essentially the same because of the low moisture content and the relatively shallow depth of freezing (5 to 6 ft). The optimum depth of burial of the charge for maximizing the apparent radius and depth and the true radius was about 1.8 times the cube root of the charge weight for both the frozen and thawed conditions. In seasonally frozen silt overlying a talik and silt permafrost, the maximum scaled crater dimensions and optimum scaled burial depths of the charge were smaller than for the thawed condition except for the true crater dimensions. The channeling of energy in the talik produces maximum crater dimensions and an optimum burial depth for the true crater that is larger than for the thawed condition. The results for the homogeneous silt permafrost were very similar to the frozen gravel results, with much smaller maximum crater dimensions and smaller optimum charge burial depths than for the thawed silt overlying permafrost.

34-3327
Roof leaks in cold regions: school at Chevak, Alaska.
Tobiasson, W., et al. *U.S. Army Cold Regions Research and Engineering Laboratory*, Apr. 1980, CR 80-11, 12p. ADA-084 914.
Johnson, P.R.
Roofs, Leakage, Buildings, Meltwater, Snow accumulation, Condensation, Subpolar regions.
Four types of roof leaks occurred at a new school building in Chevak, Alaska: 1) blowing snow entered the roof through eave vents and then melted, 2) slush and ice in roof valleys caused meltwater to overflow the valley flashing and run into the building, 3) water entered at a roof/wall intersection and 4) in many areas water entered through gaps in the sloping plywood deck. Sealing the eave vents made it impossible for blowing snow to enter the roof at the eaves. Electric heat tapes eliminated the valley icing problem. Missing flashing was responsible for the roof-wall intersection leaks. The absence of a vapor barrier in the roof was the cause of many leaks. It was recommended that the roof be repaired from the exterior by removing component elements down to the plywood deck, installing an adhered continuous vapor barrier and reassembling the roof. An alternative roof cladding of composition shingles was discussed as was conversion to a "cold roof." The roof was repaired and modified following recommendations, and problems appear to have been solved.

34-3328
Coastal environment, bathymetry, and physical oceanography along the Beaufort, Chukchi and Bering Seas.
Gatto, L.W., *U.S. Army Cold Regions Research and Engineering Laboratory*, Jan. 1980, SR 80-5, 357p., ADA-084 281, 56 refs.
Coastal topographic features, Bathymetry, Marine geology, Shoreline modification, Oceanography, Environments.
The report compiles references, figures and tables that are concerned with the coastal environment, bathymetry, and physical oceanography along the Beaufort, Chukchi, and Bering Seas. The text, intentionally minimized, describes the salient points with a minimum of detail. The extensive references and figures give direction to a reader seeking additional information.

34-3329
Documentation for a two-level dynamic thermodynamic sea ice model.
Hibler, W.D., III, *U.S. Army Cold Regions Research and Engineering Laboratory*, Feb. 1980, SR 80-8, 35p., ADA-084 273, 9 refs.
Sea ice, Ice thermal properties, Thermodynamic properties, Heat transfer, Ice mechanics, Ice cover thickness, Mathematical models, Computer programs, Rheology.
A discussion of the numerics and computer code for a two-level dynamic thermodynamic sea ice model is presented. For interested users a listing of the computer code and results from a 21-day test run are included as appendices. To a large degree this report is meant to serve as an extended appendix to an article by the author in the Journal of Physical Oceanography (see 34-7411) describing his model and a variety of simulation results. The model consists of a two-level ice thickness distribution coupled to the ice dynamics by a plastic rheology. In addition to the ice interaction the momentum balance includes nonlinear wind and water drag terms, Coriolis force, and inertial and momentum advection terms. The numerical scheme is formulated in an energy-conserving manner in a fixed Eulerian grid which allows simulation over unlimited time intervals. The momentum balance (including inertial terms) is numerically treated in a semi-implicit manner so that time steps of up to one day in length may be used if desired. The boundaries, grid size and time step magnitude are easily modified so that the model should have application to a variety of climate and forecasting problems.

34-3330
Ice thickness-tensile stress relationship for load-bearing ice.
Johnson, P.R., *U.S. Army Cold Regions Research and Engineering Laboratory*, Feb. 1980, SR 80-9, 11p., ADA-084 274, 3 refs.
Ice cover strength, Ice loads, Ice crossings, Ice roads, Tensile properties, Stresses, Ice cover thickness.
The "bearing capacity" of a floating ice sheet is of considerable interest. The pattern of ice thickness vs tensile stress for a fixed load and fixed ice properties was examined and showed some constant relationships. It proved possible to completely describe the ice thickness-tensile stress pattern in terms of a single number. When the load was changed by increasing the payload but not altering the geometry of the load pattern, other relationships were found that described the tensile stress in the ice sheet for any combination of payload and ice thickness. This provides a simple method of finding tensile stress in the ice that can be used in the field. Further studies are planned.

34-3331
Operation of the CRREL prototype air transportable shelter.
Flanders, S.N., *U.S. Army Cold Regions Research and Engineering Laboratory*, Feb. 1980, SR 80-10, 73p. ADA-084 275.
Portable shelters, Cold weather performance, Transportation, Airplanes, Logistics.
This report describes the operation of the CRREL prototype air-transportable shelter which was designed specifically for use in cold regions. The operating instructions cover moving the shelter on its own wheels or skis, loading it onto a truck or military transport aircraft, slinging it from a helicopter or preparing it for shipment as an ISO container. The report details how to site the shelter and expand it to about double its transport size. The report also covers operation of the utility systems, including the on-board alternator set, the primary and auxiliary heating systems, the water system, and various safety systems.

34-3332
Snow fortifications as protection against shaped charge antitank projectiles.
Farrell, D.R., *U.S. Army Cold Regions Research and Engineering Laboratory*, Mar. 1980, SR 80-11, 19p. ADA-084 276.
Snow strength, Fortifications, Cold weather construction, Cold weather operation, Snow (construction material), Explosion effects, Impact tests, Detonation waves, Embankments.
This report chronicles an investigation of the effectiveness of snow fortifications. The test was planned to observe and measure how packed snow absorbs the energy of high explosive antitank (HEAT) ammunition. In the test plan both the possibility of non-detonation due to insufficient resistance in snow and the rate of deterioration of a snow embankment with repeated impacts were considered. The 90-mm M67 recoilless rifle was used because it has a relatively low velocity, and its charge was more likely to not detonate than that of a high velocity weapon. The findings indicate that snow can be used to good advantage for building expedient fortifications, particularly in situations where large volumes of snow have to be cleared from roads and airfields.

34-3333
Drilling and coring of frozen ground in northern Alaska, Spring 1979.
Lawson, D.E., et al, *U.S. Army Cold Regions Research and Engineering Laboratory*, Mar. 1980, SR 80-12, 14p., ADA-084 277, 6 refs.
Brockett, B.
Drilling, Permafrost structure, Stratigraphy, Ground ice, Permafrost samplers, Core samplers, Equipment.
Frozen samples of perennially frozen ground were obtained from 33 holes drilled at six locations in the National Petroleum Reserve, Alaska, in the spring of 1979. Total depth of drilling was 510 m (1670 ft), of which 178 m (584 ft) was cored. The objectives of the program were to define the location and extent of segregated and massive ice at each location and to determine the origins and ages of the ground ice through studies of the hole stratigraphy and future laboratory analyses of core samples.

34-3334
Extending the useful life of DYE-2 to 1986. Part 2: 1979 findings and final recommendations.
Tobiasson, W., et al, *U.S. Army Cold Regions Research and Engineering Laboratory*, Apr. 1980, SR 80-13, 37p., ADA-084 278, 8 refs.
Tilton, P.
Radar, Stations, Snow accumulation, Ice formation, Snow strength, Loads (forces), Steel structures, Stresses, Cost analysis.
A major construction effort is needed at Dew Line Ice Cap Station DYE-2 to extend its useful life to 1986. That work should be done as soon as possible because the truss enclosure is deteriorating rapidly. Although a 210-ft sideways move as was accomplished at DYE-3 in 1977 is technically feasible, the alternative of backfilling the truss enclosure with ice is expected to cost about $2.7 million less. Unless there is a strong possibility that DYE-2 will be needed for many years beyond 1986, the ice backfill alternative is recommended.

34-3335
CRREL roof moisture survey, Pease AFB buildings 35, 63, 93, 112, 113, 120 and 220.
Korhonen, C., et al, *U.S. Army Cold Regions Research and Engineering Laboratory*, Mar. 1980, SR 80-14, 31p., ADA-084 279, 3 refs.
Tobiasson, W.
Roofs, Moisture transfer, Detection, Infrared spectroscopy, Thermal insulation, Measuring instruments.
We surveyed the roofs of seven buildings at Pease AFB with a hand-held infrared scanner to detect wet insulation. We used white spray paint to outline the wet areas and took core samples of the built-up membrane and insulation to verify our findings. Flashing defects around penetrations and bordering walls appear to be the major cause of the wet insulation found on these roofs. Since most problem areas are localized, we directed our repair recommendations toward salvaging as much of each roof as is economically possible.

34-3336
Antarctic navigation.
Woodfield, T., *Journal of navigation*, May 1979, 32(2), p.234-242, Includes discussion.
Ice navigation, Sea ice, Weather observations.
The author shares some of the wisdom he has gained from nineteen years as master of survey ships supporting the BAS in its antarctic research programs. He describes the treacherous weather conditions of the Southern Ocean, the order in which sea ice forms are encountered during a southbound voyage, and suggests good seamanship practices for safely maneuvering a vessel in pack ice. He tells how to read weather indicators, recommends navigation methods, and cautions against the pitfalls inherent in the use of either magnetic or gyro compasses. With less than one percent of antarctic waters properly surveyed, he stresses that progress when off charted routes must be slow, careful, and vigilant.

Patrick, W.H., Jr.
Waste treatment, Water treatment, Nutrient cycle, Soil chemistry.
Treating wastewater in properly designed and operated overland flow systems results in significant amounts of N being removed through nitrification-denitrification reactions Application of wastewater containing NH4-N in a simulated overland flow model led to the disappearance of ammonium and the formation of nitrate in oxidized surface soil The N balance in the simulated overland flow system was estimated by using labeled 15 N The amount of N removed in the system depends upon denitrification rates The results of this study indicated that N adsorption on the soil complex and uptake of applied ammonium by vegetation accounted for the N removed in the overland flow systems The adsorbed ammonium on the aerated surface soil mass was nitrified and converted to oxidized forms of N. The nitrate thus formed diffused downward to the reduced zone during subsequent wastewater applications Some of this nitrate then denitrified and converted to gaseous form of N or was assimilated and reduced by plant life. Results of the overland flow studies indicated that approximately 55-68% of wastewater NH4-N added to the simulated overland flow system was unaccounted for in controlled laboratory environments This NH4-N was presumably returned to the atmosphere

Nagler, R.G., Schultheis, A.C.
Spacecraft, Monitors, Sea ice, Remote sensing, Weather, Radiometry, Climate, Polar atmospheres, Environmental protection, Antarctica.
This report investigates the technical and economic feasibility of a satellite-based polar environmental monitoring system. User benefits to industry, government and the scientific community are discussed and interested and active user groups identified. The report is then organized into the following sections: user needs for polar environmental information; polar measurement status; sensor status; trajectory tradeoffs; data processing and delivery alternatives, platform (payload) alternatives; and sample implementation alternatives for polar research.

34-3391
Study of shorelines in the building and operation of Siberian reservoirs.
Vendrov, S.L., et al, *U.S. Army Cold Regions Research and Engineering Laboratory*, Feb. 1980, TL 724, 10p., ADB-046 835L. For Russian original see 32-439. 22 refs.
Shirokov, V.M.
Shoreline modification, Reservoirs, Shore erosion, Permafrost beneath lakes, Ground ice, Forecasting, Water storage.
Since the early 1950's, increased construction of large reservoirs has led to expanded studies of shoreline re-formation. Shorelines of reservoirs have been studied in two stages: 1) during the construction period and filling of the reservoir and 2) during its long-term use. Forecasting of shoreline changes not only for reservoir design but also for long-term use of the shores has attained importance. Problems needing study currently include improvement of long-term forecasts and checking of their accuracy, large scale study of shoreline re-formation throughout the country, studies of the shorelines of small and medium-sized Siberian reservoirs, changes in water level, linked reservoirs, genetic classification of reservoir shorelines, and study of the development of shorelines of reservoirs along the Baykal-Amur railroad.

34-3392
Permafrost in the territory of the Boguchansk reservoir.
Serov, A.G., et al, *U.S. Army Cold Regions Research and Engineering Laboratory*, Feb. 1980, TL 725, 9p., ADB-046 836L. For Russian original see 33-3415. 2 refs.
Leshchikov, F.N.
Permafrost distribution, Active layer, Geocryology, Sporadic permafrost, Frozen fines, Swamps, Peat, Frost penetration, Snow cover effect, Charts, USSR—Angara River.
The distribution of permafrost in the vicinity of the Boguchansk Reservoir is irregular. It covers 20-30% of the region generally on shaded north-facing slopes, in deep ravines and small valleys, and in populated areas. The top of the permafrost is mainly at 0.5 to 2.5 m depth, thickness is generally 5-10 m and can reach 20 m. The depth of seasonal freezing of soils varies greatly, depending mainly on the amount of snow cover and type of soil (range 0.6-3.5 m). Disruption of natural conditions (cutting of forests, fires, plowing, road-building) will cause rapid degradation of the permafrost. Construction of the reservoir will lead to dramatic change (permafrost degradation) in the shoreline zone.

34-3393
Geoengineering and hydrogeologic studies of the zone of influence of the Angara reservoirs and means of effective incorporation of these results in the national economy.
Odintsov, M.M., et al, *U.S. Army Cold Regions Research and Engineering Laboratory*, Feb. 1980, TL 726, 10p., ADB-046 837L. For Russian original see 33-3414. 11 refs.
Trzhtsinskii, IU.B., Shen'kman, B.M.
Reservoirs, Permafrost distribution, Electric power, Shore erosion, Slope processes, Landslides, Solifluction, Earthquakes, USSR—Angara River.
A string of hydroelectric dams in Eastern Siberia have created a system of reservoirs some 800-900 km long. The reservoirs have created a host of hydrological and geological problems, including eroding banks, activated karsting, mudslides, landslides, increases in the height of the water table, and changes in the processes of ground water-surface water exchange. The Soviet Institute of the Earth's Crust has been studying these problems. They have published a number of reports, modeled various processes, and developed a program for future research.

34-3394
Thermal behavior of concrete slab on frozen ground bed.
Gavrish, IU.E., et al, *U.S. Army Cold Regions Research and Engineering Laboratory*, Feb. 1980, TL 729, 9p., ADB-046 838L. For Russian original see 33-1817. 3 refs.
Khvorostovskaia, N.S., Serbin, V.G.
Winter concreting, Frozen ground, Concrete freezing, Concrete strength, Thermal regime, Concrete placing.
This work involved experimental and theoretical studies of the thermal behavior of a concrete slab design and frozen ground bed from the instant of placement of the concrete until its freezing. The experiment was conducted on an exposed experimental site with sandy soil, containing approximately 11% moisture by weight.

34-3395
Components of biogeocenoses of the tundra-forest regions of the northern Okhotsk Sea region.
Ignatenko, I.V., ed, *U.S. Army Cold Regions Research and Engineering Laboratory*, Mar. 1980, TL 730, 51p., ADB-046 839L. 66 refs. For Russian original see 34-1158. For individual articles see 34-3396 through 34-3399.
Khokhriakov, A.P., ed.
Forest tundra, Ecology, Biogeography, Vegetation, Climate, Animals, Soils.
A description is given of the basic components of biogeocenoses of the territory of the "Snow Valley" station, situated by the Okhotsk Sea land province: the geological structure, the topography, soil-forming rocks, the climate, the vegetation and soil beds, the flora of vascular plants, fungi and mosses, entomefauna and fauna of land invertebrates, the morphological-genetic characteristics, and the hydrothermal regulation of the more prevalent soils of the station. Diagrams of the vegetation and soil covers are given also. The structure of the soil cover is separated into various grades in the soil diagram. Much attention has been devoted to human activity in the soil and vegetation covers.

34-3396
Physical-geographical conditions of the northern Okhotsk Sea region and the hydrothermal state of the soils ("Snow Valley Station").

Dynamics of the Baykal shore processes on the Tyya-Nizhneangarsk section.
Bodenko, V.M., et al, *U.S. Army Cold Regions Research and Engineering Laboratory*, Mar. 1980, TL 731, 6p., ADB-046 840L, For Russian original see 33-3931. 5 refs.
Leshchikov, F.N., Rogozin, A.A.
Shoreline modification, Geocryology, Slope processes, Frost weathering, Permafrost beneath structures, Hydraulic structures, Earthquakes, USSR—Baykal Lake.
A 20-km length of the northern shoreline of Lake Baikal was investigated in connection with construction of the Baykal-Amur railroad. Interaction of the water body with the shore and geological evolution of the shoreline were studied. Morphology of the shore and bottom is described. Natural reworking of the shoreline and the effects and consequences of human activities (construction) are discussed.

34-3401
Studying the effect of water reservoirs on slope processes on their shores.
Kachugin, E.G., *U.S. Army Cold Regions Research and Engineering Laboratory*, Mar. 1980, TL 732, 3p., ADB-047 447L, For Russian original see 25-1305.
Slope processes, Slope stability, Shore erosion, Reservoirs.
This is a general description of reservoir shore erosion processes and data needs to assess slope stability, soil mechanics and landslide dynamics. The characteristics and types of landslides typical of the reservoir shores along the Volga are described. The following factors contribute to the loss of shore stability along these shores: abrasion at the waterline; gully and rill erosion along the face of the slope; ground water saturation of slope material and groundwater piping; chemical weathering and erosion of slope material; rapid pool level fluctuations causing alternating wetting and drying of slope and increase of hydrostatic pressure in slope after rapid drop in water level; and man-induced effects. Quantitative information on shore erosion and landslide processes is needed to predict reservoir shoreline recession.

34-3402
Recent geological processes and phenomena observed on the southern shore of Ob' Bay.
Trepetsov, E.V., *U.S. Army Cold Regions Research and Engineering Laboratory*, Mar. 1980, TL 733, 4p., ADB-046 841L, For Russian original see 29-2169. 2 refs.
Slope processes, Permafrost structure, Permafrost weathering, Thermokarst, Environmental impact, Geomorphology, Clays, Sands, USSR—Ob' Bay.
Parts of the shorelines of Ob' Bay and Tasov' Bay were studied in connection with planned and current construction projects in the Tumen' district. Windward shores composed of frozen loams, sands and sandy loams are retreating at a rate of about 0.9 m/yr due to abrasion, snow erosion and solifluction. Destruction of the turf cover by man has led to development of scours, ravines and gorges; in sand and sandy loam permafrost the rate of development is 48 m/yr. During summer, small streams fed by meltwater from thawing saturated permafrost exist in ravines. Also observed were thermokarst pits and lakes and frost mounds up to 5 m high.

34-3403
How to compute complex interconnected district heating systems.
Wehr, R., et al, *U.S. Army Cold Regions Research and Engineering Laboratory*, Mar. 1980, TL 734, 13p., ADA-084 211, Translated from Fernwärme international, 1979, 8(5):247-252. 6 refs.
Tautz, A.
Heating, Heat transmission, Computer programs, District heating.
The cost-intensive extension of urban district heating systems demands a relatively accurate assessment of the distribution apparatus with respect to the heating market to be supplied. Here we consider the plans of currently available computer programs which can reproduce with practical approximation the operating conditions of complicated interconnected heating networks. Along with the validity of the program, the quality of its application is equally critical; this application requires a meticulous analysis of parameters such as line resistances, temperature conditions and load distribution.

34-3404
Differences between explosions and earthquakes.
Cheng, Z.C., et al, *U.S. Army Cold Regions Research and Engineering Laboratory*, Mar. 1980, TL 735, 18p., ADA-084 245, Translated from Acta Geophysica Sinica, July 1975, 18(3):208-216. 11 refs.
Zhu, C.C., Hu, Z.C.
Earthquakes, Explosion effects, Seismic surveys, Statistical analysis, Analysis (mathematics).
This paper investigates the differences between seismograms of industrial explosions and earthquakes of medium strength (2 - 5.4 5) and at medium distances (100-500 km) in order to offer methods of distinguishing explosions from the records.

34-3405
Ground ice and ice-rich ground as structure foundations.
Vialov, S.S., et al, *U.S. Army Cold Regions Research and Engineering Laboratory*, Apr. 1980, TL 737, 159p., ADB-047 446L, For Russian original see 32-1655. 58 refs.
Dokuchaev, V.V., Shelnkman, D.R.
Ground ice, Permafrost bases, Permafrost beneath structures, Ice strength, Ice creep, Foundations, Ice physics, Deformation, Rheology, Experimentation.
This book examines the characteristics of foundation design on ground ice and ice-rich permafrost soils which are common in the Far North. The characteristics of these foundations are determined primarily by the properties of the enclosed or ground ice; therefore the latter is emphasized in this book. Based on experimental research, the authors establish patterns of deformation of ice-rich ground and ground ice under load, cite recommendations for the determination of characteristics necessary for design, present methods of computing foundation settling caused by the viscous flow of ice and ice-rich ground, and indicate methods of their application to engineering using examples. Supplementary tables and graphs contained in the book contribute to its value.

34-3406

34-3448
Undersea pipelines and cables in polar waters.
Mellor, M., *U.S. Army Cold Regions Research and Engineering Laboratory*, Sep. 1978, CR 78-22, 34p., ADA-086 161, 19 refs.
Pipelines, Transmission lines, Hydraulic structures, Damage, Engineering, Excavation, Sea ice, Subsea permafrost, Ice scoring, Polar regions.
Special environmental factors that influence the design, laying and maintenance of undersea pipelines and cables in polar waters are described. Various approaches to the protection of submarine pipes and cables are considered, and prime emphasis is given to burial techniques for shallow water. A wide range of methods for trenching and burying are discussed, and technical data are given.

34-3449
Five-year performance of CRREL land treatment test cells; water quality plant yields and nutrient uptake.
Jenkins, T.F., et al, *U.S. Army Cold Regions Research and Engineering Laboratory*, Nov. 1978, SR 78-16, 24p., ADA-086 172, 6 refs.
Palazzo, A.J., Schumacher, P.W., Keller, D.B., Graham, J.M., Quarry, S.T., Hare, H.E., Bayer, J.J., Foley, E.S.
Land reclamation, Waste treatment, Water treatment, Waste disposal.
The performance of the six land treatment cells is summarized over a five-year period from June 1937 through May 1978. The data presented include quality and volume of wastewater applied and percolate resulting from application of primary and secondary wastewater by spray irrigation. Mass loadings and removals are presented as well as crop production and nutrient uptake. Nutrient balance sheets are shown which demonstrate the percentage of nitrogen and phosphorus that is attributed to crop uptake and leachate over this period.

34-3450
Influence of nose shape and L/D ratio on projectile penetration in frozen soil.
Richmond, P.W., *U.S. Army Cold Regions Research and Engineering Laboratory*, Apr. 1980, SR 80-17, 21p., ADA-085 398, 10 refs.
Frozen ground, Projectile penetration, Solutions, Experimentation.
This report presents the results of a laboratory test program designed to determine the applicability of two analytical solutions to projectile penetrations in frozen soils. The test program consisted of firing small caliber cylindrical projectiles into frozen soil targets. Four types of 7.9-mm-diam projectiles were tested: two with a hemispherical nose the other two flat-nosed, with both long (length/diameter = 4) and short (L/D = 2) versions of each nose shape. Penetration depth versus impact velocity data are presented. Comparisons of the data indicate that a flat-nosed projectile is a less efficient penetrator than one of equal weight with a hemispherical nose. A small increase in resistance to penetration is observed for an increased L/D ratio.

34-3451
Deicing a satellite communication antenna.
Hanamoto, B., et al, *U.S. Army Cold Regions Research and Engineering Laboratory*, Apr. 1980, SR 80-18, 14p. ADA-085 397.
Gagnon, J.J., Pratt, B.
Ice prevention, Antennas, Spacecraft, Protective coatings, Heating, Thermal effects, Polymers.
Ice buildup on communication antenna dishes begins to cause signal reception problems when the thickness exceeds 0.64 cm (0.25 in.). CRREL's copolymer coating, which reduces the adhesive force between ice and the coated surface, was tested on antenna dish panels to facilitate ice removal. A combination of the copolymer coating and heat proved to be an effective method of removing ice from the panel.

Ice adhesion tests on coatings subjected to rain erosion.
Minsk, L.D., *U.S. Army Cold Regions Research and Engineering Laboratory*, July 1980, SR 80-28, 14p. ADA-089 698.
Ice adhesion, Ice prevention, Protective coatings, Helicopters, Tests.
Screening tests to select icephobic coatings displaying low ice release forces, both before and after exposure to rain erosion in a whirling arm simulator, were performed on approximately 60 commercial materials. A unique linear ball-slide shear test apparatus was designed to provide pure shear forces. No coating survived the erosion test to give an interfacial shear strength as low as 15 psi (103 kPa), an arbitrarily established goal. Several coatings showed shear strengths between 30 and 45 psi (207 and 310 kPa) after rain erosion.

34-3485
1979 Greenland Ice Sheet Program. Phase 1: casing operation.
Rand, J.H., *U.S. Army Cold Regions Research and Engineering Laboratory*, June 1980, SR 80-24, 18p., ADA-089 699, 5 refs.
Ice drills, Thermal drills, Glaciology, Linings, Greenland.
A modified CRREL thermal drill was used at DYE-3 in Greenland to drill a 8.75-in. diameter hole 2311 ft deep for the installation of a steel casing. This activity was accomplished by a drill team from CRREL in preparation for the Danish deep drill tests. Included in this report is a description of both the drilling and casing operation as well as a description of the equipment used.

Fukushi, H.
Low temperature research, Data processing, Computer applications.

34-3507
Measurement of hydraulic conductivity of unsaturated Tomakomai silt.
Fukuda, M., *Low temperature science (Teion kagaku) Series A Physical sciences*, 1979, No.38, p.193-195, 4 refs., In Japanese.
Soil water, Hydraulic Permeability, Water pressure, Tests.

34-3508
Controlling method for constant freezing front advancing rate in freezing soils.
Fukuda, M., *Low temperature science (Teion kagaku). Series A Physical sciences*, 1979, No.38, p.197-200, 3 refs., In Japanese.
Soil freezing, Freezing rate, Frost penetration, Time factor, Computer applications.

34-3509
USCGC Glacier cruise report: Deep Freeze 80.
U.S. Coast Guard, Long Beach, Cal., Mar. 1980, 106p.
Ice breaking, Ships, Logistics, Ice navigation, Antarctica.
The scientific mission during this deployment was primarily a marine geologic survey of the antarctic continental margin from 163W to Cape Adare southward to McMurdo. An extensive survey of McMurdo Sound was included. *Glacier*'s primary objective was to obtain data from those areas never before surveyed in order to connect with data obtained from previous cruises. The operational and logistics mission, in direct support of the resupply of McMurdo, consisted of escort service for the resupply vessels, facing the ice wharf, and towing out the ice wharf upon completion of the offloads.

34-3510
Diatomaceous algae of fresh-water bodies on the Chukotskiy Peninsula. [K izucheniiu diatomovykh vodoroslei presnykh vodoemov Chukotskogo poluostrova].

34-3514
Mapping New Zealand and Antarctic snowpack from LANDSAT.
Thomas, I.L., et al, Workshop on Operational Applications of Satellite Snowcover Observations, Final, Sparks, Nevada, April 16-17, 1979. Proceedings. Edited by A. Rango and R. Peterson, Greenbelt, Md., NASA Goddard Space Flight Center, May 1980, p.53-72, 19 refs.
Prowse, T.D., Owens, I.F.
Snow cover distribution, Sea ice distribution, Snow depth, Snow density, Remote sensing, LANDSAT, Mapping, Computer applications, Monitors.
Computer mapping, based on the Landsat digital data, can aid the efficient management of one of New Zealand's resources the annual snowpack. The same techniques are effective in supporting antarctic cartography, glaciology, and surface operations. The development of digital analysis and enhancement techniques for the routine semi-automated evaluation of Landsat data is illustrated. The 1979 field program will concentrate on an instrumented snow basin for a water yield study. An outline of this satellite ground program is presented. (Auth.)

34-3515
Application of satellite data for snow mapping in Norway.
Odegaard, H.A., et al, Workshop on Operational Applications of Satellite Snowcover Observations, Final, Sparks, Nevada, April 16-17, 1979. Proceedings. Edited by A. Rango and R. Peterson, Greenbelt, Md., NASA Goddard Space Flight Center, May 1980, p.93-106, 14 refs.

Slope processes, River basins, Slope stability, Mudflows, Alpine landscapes, Alpine tundra, Vegetation factors, USSR—Sikhote Alin.

34-3563
Preliminary analysis of synoptic climatic peculiarities favoring mudflow formation in Primor'e. [Predvaritel'nyi analiz sinoptiko-klimaticheskikh osobennostei Primor'ia sposobstvuiushchikh vozniknoveniiu selei],
Glubokov, V.N., et al. *Vladivostok. Nauchno-issledovatel'skii gidrometeorologicheskii institut. Trudy*, 1979, Vol.81, p.31-39, In Russian. 6 refs.
Matveeva, F.I., Pavlov, I.N., Fomin, M.G.
Slope processes, Slope stability, Mudflows, Mountain soils, Meteorological factors, Slope orientation.

34-3564
Testing and using the AM-11 soil moisture meter in the lUzhnoe Primor'e. [Opyt ispytaniia i ekspluatatsii izmeritelia vlazhnosti pochvy AM-11 v usloviiakh lUzhnogo Primor'ia],
Gorchakov, A.M., et al. *Vladivostok. Nauchno-issledovatel'skii gidrometeorologicheskii institut. Trudy*, 1979, Vol.81, p.51-55.
Koniaev, V.G.
Moisture meters, Soil water, Cold weather performance.

34-3565
Preliminary analysis of natural conditions in Sikhote Alin in relation to avalanche danger. [Predvaritel'nyi analiz prirodnykh uslovii Sikhote-Alinia s tochki zreniia lavinnoi opasnosti],
Glubokov, V.N., et al. *Vladivostok. Nauchno-issledovatel'skii gidrometeorologicheskii institut. Trudy*, 1979, Vol.81, p.56-61, In Russian. 4 refs.
Tunegolovets, L.A., Ivanchenko, N.N.
Avalanche formation, Avalanche triggering, Avalanche forecasting, Topographic effects, Meteorological factors, Vegetation factors, USSR—Sikhote Alin.

34-3566
Avalanche danger on Lysaya Mountain (southern Sikhote Alin range). [O lavinnoi opasnosti gory Lysaia (iuzhnaia chast' khrebta Sikhote Alin')],
Ratnikov, A.V., *Vladivostok. Nauchno-issledovatel'skii gidrometeorologicheskii institut. Trudy*, 1979, Vol.81, p.62-63, In Russian.
Rock streams, Snow cover distribution, Alpine tundra, Snow cover structure, Avalanche formation, Alpine landscapes, Vegetation factors, USSR—Sikhote Alin.

34-3567
Theoretical analysis of homogeneous crystallization of supercooled water droplets in a constant homogeneous electric field. [Teoreticheskii raschet gomogennoi kristallizatsii pereokhlazhdennykh vodianykh kapel', nakhodiashchikhsia v postoiannom odnorodnom elektricheskom pole],
Klingo, V.V., et al. *Leningrad. Glavnaia geofizicheskaia observatoriia. Trudy*, 1979, Vol.420, p.15-25, In Russian. 19 refs.
Shlykov, V.V.
Supercooled clouds, Cloud droplets, Phase transformations, Electric fields.

34-3568
Influence of point charge electric field on homogeneous crystallization of supercooled water drops. [K vliianiiu elektricheskogo polia tochechnogo zariada na gomogennuiu kristallizatsiiu pereokhlazhdennoi vodianoi kapli],
Klingo, V.V., et al. *Leningrad. Glavnaia geofizicheskaia observatoriia. Trudy*, 1979, Vol.420, p.26-32, In Russian. 12 refs.
Shlykov, V.V.
Supercooled clouds, Cloud droplets, Phase transformations, Electric charge, Ice nuclei, Ice crystal growth, Analysis (mathematics).

34-3569
Evaluating the contact nucleation mechanism after introduction of crystal-forming agents into supercooled clouds. [K ostenke deistviia mekhanizma kontaktnoi nukleatsii pri vvedenii kristallizuiushchikh reagentov v pereokhlazhdennye oblaka],
Klingo, V.V., et al. *Leningrad. Glavnaia geofizicheskaia observatoriia. Trudy*, 1979, Vol.420, p.39-46, In Russian. 17 refs.
Kudashkin, G.D.
Cloud seeding, Supercooled clouds, Nucleating agents, Silver iodide, Ice crystal growth, Analysis (mathematics).

34-3570
Isothermal changes in the structure and electrical properties of polycrystalline ice. [Izotermicheskie izmeneniia v strukture i elektricheskikh svoistvakh polikristallicheskogo l'da],
Girs, S.P., et al. *Leningrad. Glavnaia geofizicheskaia observatoriia. Trudy*, 1979, Vol.420, p.53-56, In Russian. 3 refs.
Kamentsev, V.N., Nedostaev, V.N., Stebin, V.I.
Ice crystal structure, Electrical properties, Electron microscopy, Laboratory techniques.

34-3571
Microinterferometer for studying phase transformations of water on ice-forming sublayers. [Mikrointerferentsionnaia ustanovka dlia issledovaniia fazovykh perekhodov vody na l'doobrazuiushchikh podlozhkakh],
Girs, S.P., et al. *Leningrad. Glavnaia geofizicheskaia observatoriia. Trudy*, 1979, Vol.420, p.57-62, In Russian. 5 refs.
Kamentsev, V.N.
Water, Phase transformations, Measuring instruments, Laboratory techniques, Microscopy.

34-3572
Electron microscope studies of low temperature ice modification. [Elektronnomikroskopicheskie issledovaniia nizkotemperaturnykh modifikatsii l'da],
Girs, S.P., et al. *Leningrad. Glavnaia geofizicheskaia observatoriia. Trudy*, 1979, Vol.420, p.63-67, In Russian. 9 refs.
Kamentsev, V.N., Stebin, V.I.
Ice structure, Dielectric properties, Ice growth, Phase transformations, Temperature.

34-3573
Experimental study of the freezing of water drops in a constant electric field. [Eksperimental'noe issledovanie vliianiia postoiannogo elektricheskogo polia na zamerzanie kapel' vody],
Shlykov, V.V., *Leningrad. Glavnaia geofizicheskaia observatoriia. Trudy*, 1979, Vol.420, p.68-75, In Russian. 8 refs.
Supercooled clouds, Cloud droplets, Phase transformations, Electric fields, Ice nuclei, Electric charge, Ice crystal growth.

34-3574
Studying variations in surface electrical conductivity of some ice-forming substances interacting with water vapor. [K issledovaniiu izmenenii poverkhnostnoi elektroprovodnosti nekotorykh l'doobrazuiushchikh veshchestv pri vzaimodeistvii s vodianym parom],
Vlasov, S.A., et al, *Leningrad. Glavnaia geofizicheskaia observatoriia. Trudy*, 1979, Vol.420, p.76-81, In Russian. 5 refs.
Cloud physics.

34-3575
Using an infrared radiometer for measuring thermal properties of clouds. [Primenenie radiometra IK diapazona dlia izmereniia termicheskikh kharakteristik oblakov],
Sin'kevich, A.A., *Leningrad. Glavnaia geofizicheskaia observatoriia. Trudy*, 1979, Vol.420, p.105-111, In Russian. 9 refs.
Clouds (meteorology), Thermal regime.

34-3576
Federal snow removal reimbursement policy: improvements needed.
U.S. General Accounting Office. Comptroller General, Aug. 2, 1979, 76p. CED-79 97.
Snow removal, Legislation.

34-3577
Baggin Island sandurs: a study of Arctic fluvial processes.
Church, M., *Canada. Geological Survey. Bulletin*, 1972, No.216, 208p. + maps, Refs. p.139-159.
Outwash, Alluvium, Glacier melting, Glacial deposits, Sediment transport, Glacial hydrology, River flow, Meltwater, Sands, Canada—Northwest Territories—Baffin Island.

34-3578
Uninterrupted periods of strong winds (>15m/s) over West Siberia and Altai territory. [Nepreryvnaia prodolzhitel'nost' burnykh (V>15 m/s) vetrov na territorii Zapadnoi Sibiri i Altaia],
Slutskii, V.I., et al. *Zapadno-Sibirskii regional'nyi nauchno-issledovatel'skii gidrometeorologicheskii institut. Trudy*, 1979, Vol.45, p.31-40, In Russian. 10 refs.
Trifonova, L.I., Novikova, T.V.
Wind velocity, Atmospheric disturbances, Valleys, Wind direction, Forest tundra, Tundra, Taiga, Shores, USSR—Altai Mountains.

34-3579
Probability and time characteristics of low air temperature regime of the atmospheric boundary layer above southwestern West Siberia [Veroiatnostnye i vremennye kharakteristiki rezhima nizkikh temperatur vozdukha pogranichnogo sloia atmosfery nad iugo-vostokom Zapadnoi Sibiri],
Luchitskaia, I.O., *Zapadno-Sibirskii regional'nyi nauchno-issledovatel'skii gidrometeorologicheskii institut. Trudy*, 1979, Vol.45, p.62-75, In Russian. 9 refs.
Frost forecasting, Icing, Cold weather construction, Construction equipment, Cold weather operation.

34-3580
Errors occurring in extrapolating the air temperature-wind velocity complex over the open sea area of the shelf. [Ob oshibkakh ekstrapoliatsii kompleksa tempertura vozdukha-skorost' vetra na otkrytuiu akvatoriiu shel'fa],
Borisenko, M.M., et al. *Zapadno-Sibirskii regional'nyi nauchno-issledovatel'skii gidrometeorologicheskii institut. Trudy*, 1979, Vol.45, p.76-78, In Russian. 2 refs.
Kravchenko, I.K.
Sea ice, Ice conditions, Air temperature, Wind velocity, Ice formation, Ice loads, Ice forecasting.

34-3581
Relations between wind velocity and air temperature in Siberia. [Vzaimosviaz' temperatury vozdukha i skorosti vetra v Sibiri],
Drobyshev, A.D., *Zapadno-Sibirskii regional'nyi nauchno-issledovatel'skii gidrometeorologicheskii institut. Trudy*, 1979, Vol.45, p.79-89, In Russian. 20 refs.
Weather forecasting, Atmospheric disturbances, Air temperature, Wind velocity, Frost forecasting.

34-3582
Snow depth used as a predictor in forecasting mean monthly air temperature anomalies over southern West Siberia. [Vysota snezhnogo pokrova kak prediktor dlia prognoza anomalii srednemesiachnoi temperatury vozdukha po iugu Zapadnoi Sibiri],
Eremin, V.V., et al. *Zapadno-Sibirskii regional'nyi nauchno-issledovatel'skii gidrometeorologicheskii institut. Trudy*, 1979, Vol.45, p.125-129, In Russian. 4 refs.
Shtarova, T.V.
Weather forecasting, Air temperature, Snow cover distribution, Snow depth.

34-3583
Variations of heat content of deep Atlantic waters in the Arctic Basin over a period of years. [Mnogoletnie izmeneniia teplosoderzhaniia glubinnykh atlanticheskikh vod Arkticheskogo basseina],
Bulatov, L.V., et al. *Leningrad. Arkticheskii i antarkticheskii nauchno-issledovatel'skii institut. Trudy*, 1979, Vol.361, p.6-13, In Russian. 11 refs.
Lukin, V.V., Nikiforov, E.G.
Arctic Ocean, Heat transfer, Water transport, Ice conditions, Charts.

34-3584
Si-S analysis of surface waters in the Arctic Basin [Si-S analiz poverkhnostnykh vod Arkticheskogo basseina],
Rusanov, V.P., et al. *Leningrad. Arkticheskii i antarkticheskii nauchno-issledovatel'skii institut. Trudy*, 1979, Vol.361, p.14-23, In Russian. 28 refs.
Shpaikher, A.O.
Ice conditions, Water transport, Drift stations, Water chemistry, Salinity, Arctic Ocean.

34-3585
Seasonal and annual fluctuations in Atlantic water and heat inflow into the Arctic Basin through the Fram Strait. [Osnovnye cherty sezonnykh i mezhgodovykh kolebanii postupleniia atlanticheskoi vody i tepla v Arkticheskii bassein cherez proliv Fram],
Mandel', S.Z., *Leningrad. Arkticheskii i antarkticheskii nauchno-issledovatel'skii institut. Trudy*, 1979, Vol.361, p.24-29, In Russian. 10 refs.
Water transport, Heat transfer, Ocean currents, Ice conditions, Arctic Ocean.

34-3586
Heat transfer in Atlantic waters on the continental slope of the Laptev Sea. [K voprosu o teploobmene atlanticheskikh vod na materikovom sklone moria Laptevykh],
Beliakov, L.N., et al. *Leningrad. Arkticheskii i antarkticheskii nauchno-issledovatel'skii institut. Trudy*, 1979, Vol.361, p.30-36, In Russian. 16 refs.
Volnc , G.N.
Water temperature, Heat transfer, Water transport, Ice conditions, Polynyas, Continental slope, Arctic Ocean, Laptev Sea.

34-3587
Thermal state of waters in the northern Greenland Sea in February 1972 (from data obtained along the Barentsburg-ice edge cross-section). [Termicheskoe sostoianie vod severnoi chasti Grenlandskogo moria v fevrale 1972 g. (po dannym razreza Barentsburg-kromka l'da)],
[Anes, A.V., *Leningrad. Arkticheskii i antarkticheskii nauchno-issledovatel'skii institut. Trudy*, 1979, Vol.361, p.37-42, In Russian. 4 refs.
Ice conditions, Ice edge, Water temperature, Heat transfer, Water transport, Greenland Sea, Norway—Spitsbergen.

34-3588
Variation of sea surface temperature (from airborne radiation measurements). [Izmenchivost' temperatury poverkhnosti moria (po materialam radiatsionnykh izmerenii s samoleta)],
Gorbunov, IU.A., et al, *Leningrad. Arkticheskii i antarkticheskii nauchno-issledovatel'skii institut. Trudy*, 1979, Vol.361, p.47-54, In Russian. 7 refs.
Losev, S.M.
Water temperature, Ice edge, Surface temperature, Airborne equipment, Arctic Ocean.

34-3589
Relation between heat content and water transport in the Kara Sea. [O zavisimosti mezhdu teplosoderzhaniem i perenosami vody i tepla v Karskom more],
Stepanov, S.I., *Leningrad. Arkticheskii i antarkticheskii nauchno-issledovatel'skii institut. Trudy*, 1979, Vol.361, p.55-58, In Russian. 3 refs.
Heat transfer, Water transport, Ocean currents, Water temperature, Kara Sea.

34-3590
Buoy-station equipment for small ships operating under drift conditions. [Prisposoblenie dlia raboty s bulkovymi stantsiiami na malykh sudakh v usloviiakh dreifa],
Volnov, G.N., et al, *Leningrad. Arkticheskii i antarkticheskii nauchno-issledovatel'skii institut. Trudy*, 1979, Vol.361, p.132-134, In Russian.
Benzeman, V.IU.
Ice navigation, Ships, Drift, Buoys.

34-3591
Infrared aerial survey in studying natural resources. [Teplovaia aeros"emka pri izuchenii prirodnykh resursov],
Shilin, B.V., Leningrad, Gidrometeoizdat, 1980, 247p., In Russian with English table of contents enclosed. 119 refs.
Maps, Soil water, Remote sensing, Forest land, Snow surveys, Infrared photography, Swamps, Aerial surveys, Engineering geology, Mountains, Glaciation, Ground water, Water level.

34-3592
Studying deformation of frozen peat and grounds under pressure of dies. [Issledovanie deformatsionnykh svoistv merzlykh torfov i gruntov pri vdavlivanii zhestkikh shtampov],
Zelinger, F.F., et al, *Russia. Ministerstvo vysshego i srednego spetsial'nogo obrazovaniia. Izvestiia vysshikh uchebnykh zavedenii. Stroitel'stvo i arkhitektura*, 1980, No.2, p.48-52, In Russian. 5 refs.
Sennikov, S.I.
Frozen ground mechanics, Peat, Deformation, Compressive properties, Mathematical models.

34-3593
Preservation, utilization and transformation of forest landscapes within residential areas (Novosibirsk, Akademgorodok). [O sokhranenii, ispol'zovanii i preobrazovanii lesnogo landshafta v strukture zhilykh kompleksov (Na primere Novosibirskogo akademgorodka)],
Arbatskii, V.P., *Russia. Ministerstvo vysshego i srednego spetsial'nogo obrazovaniia. Izvestiia vysshikh uchebnykh zavedenii. Stroitel'stvo i arkhitektura*, 1980, No.2, p.62-66, In Russian. 3 refs.
Urban planning, Residential buildings, Forest land, Sporadic permafrost, Landscape engineering.

34-3594
Experiment planning technique used for determining optimal compositions of combined admixtures for concretes. [Ispol'zovanie planirovaniia eksperimenta dlia opredeleniia optimal'nykh sostavov kompleksnoi dobavki v betonnuiu smes'],
Grushko, I.M., et al, *Russia. Ministerstvo vysshego i srednego spetsial'nogo obrazovaniia. Izvestiia vysshikh uchebnykh zavedenii. Stroitel'stvo i arkhitektura*, 1980, No.2, p.72-75, In Russian. 5 refs.
Lishanskii, B.A., Sviridenko, N.M.
Concrete admixtures, Air entrainment, Frost resistance, Concretes, Experimentation.

34-3595
Determining optimal resistivity of external walls to heat transfer. [Voprosy opredeleniia optimal'nogo soprotivleniia teploperedache naruzhnykh ograzhdenii],
Odel'skii, E.Kh., et al, *Russia. Ministerstvo vysshego i srednego spetsial'nogo obrazovaniia. Izvestiia vysshikh uchebnykh zavedenii. Stroitel'stvo i arkhitektura*, 1980, No.2, p.91-95, In Russian. 5 refs.
Kagan, L.I.
Buildings, Walls, Heat transfer, Design.

34-3596
Assuring frost resistance of roads under Siberian conditions. [Ob obespechenii morozoustoichivosti dorog v usloviiakh Sibiri],
Brediuk, G.P., *Russia. Ministerstvo vysshego i srednego spetsial'nogo obrazovaniia. Izvestiia vysshikh uchebnykh zavedenii. Stroitel'stvo i arkhitektura*, 1980, No.2, p.105-111, In Russian. 13 refs.
Roads, Permafrost beneath roads, Roadbeds, Frost penetration, Frost heave, Design.

34-3597
Modern design and construction methods for the Surgut-Urengoy railroad. [Zheleznoi doroge Surgut-Urengoi progressivnye tekhnicheskie resheniia i metody stroitel'stva],
Korotchaev, D.I., et al, *Transportnoe stroitel'stvo*, May 1980, No.5, p.3-6, In Russian.
Alekseev, E.P.
Railroads, Buildings, Permafrost beneath structures, Sporadic permafrost, Cold weather construction, Earthwork.

34-3598
Post-construction sagging of Baykal Amur railroad embankments. [O poslepostroechnykh osadkakh tela nasypei na BAMe],
Guletskii, V.V., et al, *Transportnoe stroitel'stvo*, May 1980, No.5, p.6-7, In Russian.
Minailov, G.P.
Embankments, Permafrost beneath structures, Cold weather construction, Earthwork, Frozen ground, Baykal Amur railroad, Settlement (structural).

34-3599
Improving the effectiveness of construction of artificial structures along the Tynda-Urgal railroad. [O povyshenii effektivnosti stroitel'stva iskusstvennykh sooruzhenii na linii Tynda-Urgal],
Aleksandrov, A.A., et al, *Transportnoe stroitel'stvo*, May 1980, No.5, p.10-12, In Russian.
Kraiushkin, D.G.
Culverts, Bridges, Concrete structures, Permafrost beneath structures, Baykal Amur railroad, Cost analysis.

34-3600
Highway design. Pt. 2. [Proektirovanie avtomobil'nykh dorog. Chast' 2],
Babkov, V.F., et al, Moscow, Transport, 1979, 407p. (Pertinent p.230-344), In Russian. 2 refs. For Pt. 1 (in earlier edition) see 29-3555.
Andreev, O.V.
DLC TE175.B32
Roads, Design, Permafrost, Swamps, Gullies, Karst, Mountains, Tunnels, Deserts, Saline soils, Roadbeds, Embankments, Soil stabilization, Slope stability.

34-3601
Forest fires in Yakutia and their influence on forest environments. [Lesnye pozhary v IAkutii i ikh vliianie na prirodu lesa],
Shcherbakov, I.P., et al, Novosibirsk, Nauka, 1979, 224p., In Russian with English table of contents enclosed. Refs. p.218-223.
Taiga, Forest fires, Forest canopy, Litter, Forest soils, Revegetation, USSR—Yakutia.

34-3602
Large-scale prognostic maps of mountain vegetation in Central Sikhote-Alin forests. [Metodika krupnomasshtabnogo prognoznogo kartografirovaniia rastitel'nosti gornykh territorii (na primere lesnoi rastitel'nosti Srednego Sikhote-Alinia)],
Kiselev, A.N., Geobotanicheskoe kartografirovanie (Geobotanical mapping) edited by V.B. Sochava and T.I. Isachenko, Leningrad, Nauka, 1979, p.8-21, In Russian. 23 refs.
Alpine landscapes, Forest land, Vegetation, Forecasting, Maps.

34-3603
Geography and cartography of pine forests in southern taiga and the broad-leaf area of the European USSR. [Sosnovye lesa iuzhnoi chasti taezhnoi i shirokolistvennolesnoi oblastei evropeiskoi chasti SSSR: geografiia i kartografiia],
Gribova, S.A., et al, Geobotanicheskoe kartografirovanie (Geobotanical mapping) edited by V.B. Sochava and T.I. Isachenko, Leningrad, Nauka, 1979, p.38-45, In Russian. 22 refs.
Isachenko, T.I.
Taiga, Landscape types, Maps, Geobotanical interpretation.

34-3604
Structural features of soils developed on different types of perennially frozen strata. [Osobennosti stroeniia pochvennogo pokrova na raznykh tipakh mnogoletnei merzloty],
Alifanov, V.M., Struktura pochvennogo pokrova i ispol'zovanie pochvennykh resursov (Soil cover structure and utilization of soil resources) edited by V.M. Fridland, Moscow, Nauka, 1978, p.136-141, In Russian. 4 refs.
DLC S599.45.A1S77
Soil structure, Soil formation.

34-3605
Structure of taiga soils in the Tomsk area of Priob'e. [O strukture pochvennogo pokrova taezhnoi zony Tomskogo Priob'ia],
Geras'ko, L.I., Struktura pochvennogo pokrova i ispol'zovanie pochvennykh resursov (Soil cover structure and utilization of soil resources) edited by V.M. Fridland, Moscow, Nauka, 1978, p.144-148, In Russian. 2 refs.
DLC S599.45.A1S77
Taiga, Landscape types, Cryogenic soils, Paludification, Soil formation.

34-3606
Age of rock glaciers in the Altai Mountains. [Kamennye gletchery i ikh vozrast na Altae],
Ivanovskii, L.N., Voprosy dinamicheskoi geomorfologii (Problems in dynamic geomorphology) edited by L.N. Ivanovskii, Irkutsk, 1977, p.125-137, In Russian. 9 refs.
DLC GB438.R9V64
Alpine landscapes, Geocryology, Slope processes, Rock glaciers, Age determination, Glacial erosion, Moraines, Ground ice, USSR—Altai Mountains.

34-3607
Cryogenic relief of bald peaks in Pribaykal'e and Northern Transbaykal. [Kriostrukturnyi rel'ef gol'tsov Pribaikal'ia i Severnogo Zabaikal'ia],
Vyrkin, V.B., Voprosy dinamicheskoi geomorfologii (Problems in dynamic geomorphology) edited by L.N. Ivanovskii, Irkutsk, 1977, p.138-163, In Russian. 15 refs.
DLC GB438.R9V64
Alpine landscapes, Geocryology, Frost weathering, Slope processes, Talus, Rock streams, Patterned ground, Permafrost distribution, Permafrost thickness, Snow cover distribution.

34-3608
Evaluating the possibilities of forecasting swamp transformations due to land reclamation. [Otsenka vozmozhnostei prognozirovaniia preobrazovaniia bolotnykh massivov pri khoziaistvennom osvoenii territorii],
Galeta, I.F., Dolina Nizhnego Irtysha (Lower Irtysh River valley) edited by G.V. Bachurin and I.B. Petrov, Irkutsk, 1978, p.12-22, In Russian. 19 refs.
DLC GB327.177D64
Land reclamation, Swamps, Peat, Cryogenic soils, Environmental protection.

34-3609
Heat and moisture content of taiga lands in the Irtysh River area. [Kharakteristika teplo- i vlagoobespechennosti taezhnogo Priirtysh'ia],
Nikitin, S.P., Dolina Nizhnego Irtysha (Lower Irtysh River valley) edited by G.V. Bachurin and I.B. Petrov, Irkutsk, 1978, p.23-33, In Russian. 19 refs.
DLC GB327.177D64
Taiga, Soil water, Snow cover distribution, Snow water equivalent, Evaporation, Biomass, Analysis (mathematics).

34-3610
Ice conditions of rivers in the West Siberian taiga zone. [Analiz ledovogo rezhima rek taezhnoi zony Zapadnoi Sibiri].
Martynov, B.D., Dolina Nizhnego Irtysha (Lower Irtysh River valley) edited by G.V. Bachurin and I.B. Petrov, Irkutsk, 1978, p.63-74, In Russian. 16 refs.
DLC GB327.177D64
Taiga, River ice, Ice conditions, Icebound rivers, Ice breakup, Ice jams, Ice forecasting, Charts.

34-3611
Biomass of microorganisms in the forest-swamp geosystems of southern taiga in the Irtysh River area. [Biomassa mikroorganizmov v leso-bolotnoi geosisteme iuzhnotaezhnogo Priirtysh'ia].
Antonenko, A.M., et al, Dolina Nizhnego Irtysha (Lower Irtysh River valley) edited by G.V. Bachurin and I.B. Petrov, Irkutsk, 1978, p.74-80, In Russian. 6 refs.
Nikitina, Z.I., Nechaeva, E.G.
DLC GB327.177D64
Taiga, Cryogenic soils, Swamps, Peat, Soil microbiology.

34-3612
Microflora and biological activity of flood-plain soils in the Lower Irtysh River area. [Mikroflora i biologicheskaia aktivnost' polmennykh pochv Nizhnego Irtysha].
Nikitina, V.G., Dolina Nizhnego Irtysha (Lower Irtysh River valley) edited by G.V. Bachurin and I.B. Petrov, Irkutsk, 1978, p.81-88, In Russian. 7 refs.
DLC GB327.177D64
Cryogenic soils, Soil microbiology, Flood plains, USSR—Irtysh River.

34-3613
Experimental evaluation of polarization coefficients of light reflected from snow surfaces. [Eksperimental'naia otsenka koeffitsienta poliarizatsii sveta, otrazhaemogo snezhnoi poverkhnost'iu].
Mel'kher, A.N., et al, *Kiev. Ukrainskii nauchno-issledovatel'skii gidrometeorologicheskii institut. Trudy*, 1979, Vol.174, p.113-116, In Russian. 6 refs.
Volkov, A.D.
Snow optics, Solar radiation, Albedo, Reflection, Snow surface, Air pollution, Snow impurities.

34-3614
Correlation between physiological-biochemical indices of woody plants and hydrothermal conditions of media. [O korreliatsii fiziologo-biokhimicheskikh pokazatelei drevesnykh rastenii s gidrotermicheskimi usloviiami sredy].
Zhiboedov, P.M., et al, Botanicheskie issledovaniia za poliarnym krugom (Botanical studies beyond the Arctic circle) edited by L.M. Luk'ianova, Apatity, 1978, p.106-118, In Russian. 20 refs.
Zhirov, V.K., Raidenko, S.M.
DLC QK86 R9[illegible]
Subarctic landscapes, Environmental protection, Human factors engineering.

34-3615
Water repellant plasticizing admixtures for cements, grouts and concretes. [Gidrofobno-plastifitsiruiushchie dobavki dlia tsementov, rastvorov i betonov].
Khigerovich, M.I., et al, Moscow, Strolizdat, 1978, 125p., In Russian with English table of contents enclosed. 237 refs.

34-3623
Ice core and ice cement effects on soil development, eastern Wright Valley, Antarctica.
Bockheim, J.G., *New Zealand journal of geology and geophysics*, 1979, 22(4), p.487-493, 20 refs.
Ground ice, Soil formation, Antarctica—Wright Valley.
[illegible] The presence of an ice core or ice cement has affected soil formation on hummocky drift behind Trilogy, Loop, and C end moraines in eastern Wright Valley. Soils on the Trilogy and Loop hummocks contain fewer salts and are coarser in texture than soils on the associated end moraines. Lack of soil development on hummocks is due to frost heaving and sorting, and while soils on hummocks behind the Loop end moraine may be as old as c. 135,000 y. B.P., they have properties more closely resembling the 18,000-year-old Trilogy soils. Data suggest that soil chronosequences may be invalid where component soils have been disturbed by frost action, and that soils on comparable sites must be used for comparative weathering studies. 34-3624
International Workshop on the Seasonal Sea Ice Zone, Monterey, California, Feb. 26-Mar.1, 1979.
Andersen, B.G., ed, *Cold regions science and technology*, Apr. 1980, Vol.2, MP 1292, 357p., For individual papers see 34-3625 through 34-3632 or B-23446, F-23442 through F-23445, and F-23447.
Weeks, W.F., ed, Newton, J.L., ed.
Meetings, Sea ice, Pack ice, Ice pileup, Acoustics, Climatology, Ecology, Oceanography.
This volume comprises a series of state-of-the-art papers by individual authors, followed by disciplinary panel statements offering research suggestions and identifying particular problems with the discipline under consideration. Several interdisciplinary panel reports are included - air-sea-ice interactions, biological interactions, engineering interactions, and acoustic interactions.

34-3625
Overview [**International Workshop on the Seasonal Sea Ice Zone**].
Weeks, W.F., *Cold regions science and technology*, Apr. 1980, Vol.2, MP 1293, p.1-35, 2 refs.
Sea ice distribution, Seasonal variations, Meetings, Models, Air water interactions, Ice water interface, Meteorology, Engineering, Oceanography, Offshore drilling.
This overview is an attempt to summarize the principal conclusions that can be drawn from the workshop. The article is divided into three sections: disciplinary studies (ice, oceanography, meteorology and climatology, biological regimes, hydroacoustics, coastal processes), interdisciplinary studies; and engineering aspects of offshore resource exploration in the polar regions. Modeling of a wide variety of processes is discussed.

34-3626
Ice characteristics in the seasonal sea ice zone.
Wadhams, P., *Cold regions science and technology*, Apr. 1980, Vol.2, p.37-92, Refs. p.81-87. Includes disciplinary panel statement, p.90-92.
Fast ice, Wave propagation, Ice breakup, Shear properties, Models, Frazil ice, Young ice.
Although the bulk of this article is devoted to north polar ice, antarctic sea ice is discussed briefly, primarily to point out the great scarcity of facts known about it and to stress the entirely different nature of antarctic sea ice from arctic.

34-3627
Physical oceanography of the seasonal sea ice zone.
McPhee, M.G., *Cold regions science and technology*, Apr. 1980, Vol.2, MP 1294, p.93-132, Refs. p.116-118. Includes disciplinary panel statement, p.119-132.
Polynyas, Oceanography, Sea ice, Ice water interface, Seasonal variations, Salinity, Ice edge.
This literature review is divided into four parts. The first deals with the role of continental shelves at the margins of polar oceans in maintaining water masses, the second emphasizes how the ocean might affect the advance and retreat of ice not contained by land, the third describes some special conditions found in the shear zone, and the fourth is a brief look at experimental techniques and instruments.

34-3628
Meteorology and climatology of the seasonal sea ice zone.
Barry, R.G., *Cold regions science and technology*, Apr. 1980, Vol.2, p.133-156, Refs. p.147-150,156. Includes disciplinary panel statement.
Sea ice, Pack ice, Seasonal variations, Atmospheric circulation, Polynyas, Meteorology, Climatic factors, Ice water interface.
Since the seasonal sea ice zone is defined by the seasonal range of ice limits, its meteorological characterization is not readily described in a systematic manner. Moreover, the ice limits are not solely determined by meteorological factors, nor does the SSIZ set up a unique climatological regime. Accordingly, this literature survey reviews selected aspects of large-scale circulation processes and examples of specific regional interactions both in the Arctic and Antarctic. Problem areas are then identified.

34-3629
Interrelationships between the seasonal sea ice and biological regimes.
Alexander, V., *Cold regions science and technology*, Apr. 1980, Vol.2, p.157-184, Refs. p.175-178. Includes disciplinary panel statement.
Sea ice, Algae, Ecology, Biomass, Seasonal variations.
The relation of seasonal sea ice with biological regimes is discussed under the following headings: ice flora; ice-edge phyto[illegible] invertebrates, fishes, birds and mammals. The current state of knowledge is reviewed and suggestions are made for further needed research.

34-3630
Arctic hydroacoustics.
Diachok, O., *Cold regions science and technology*, Apr. 1980, Vol.2, p.185-207, Refs. p.199-201. Includes disciplinary panel statement.
Ice acoustics, Sound waves, Noise (sound), Sea ice, Pack ice, Ice edge, Ice water interface, Wave propagation.

34-3631
Shore ice pile-up and ride-up: field observations, models, theoretical analyses.
Kovacs, A., et al, *Cold regions science and technology*, Apr. 1980, Vol.2, MP 1295, p.209-298, Refs. p.282-288. Includes disciplinary panel statement.
Sodhi, D.S.
Shores, Coastal topographic features, Ice pileup, Sea ice, Fast ice, Pressure ridges, Mathematical models.

34-3632
Numerical modeling of sea ice in the seasonal sea ice zone.
Hibler, W.D., III, *Cold regions science and technology*, Apr. 1980, Vol.2, MP 1296, p.299-356, Refs. p.317-320. Includes disciplinary panel statement.
Sea ice, Seasonal variations, Computerized simulation, Ice models, Mathematical models.
Various approaches to modelling sea ice have been tried by investigators; the author discusses the suitability of different types of simulations for particular research goals. Empirical studies are also reviewed. Literature covered relates to ice in both arctic and antarctic regions.

34-3633
Polar atmosphere-ice-ocean processes: a review of polar problems in climate research.
Polar Group, *Reviews of geophysics and space physics*, May 1980, 18(2), p.525-543, Refs. p.540-543.
Baker, D.J., Radok, U., Weller, G.
Research projects, Climatology, Oceanography, Sea ice, Ice air interface, Air water interactions, Models.
Interactions of the atmosphere, ice, and the oceans in the polar regions are reviewed in the context of global climate. Cryospheric processes and their feedback mechanisms are discussed, with emphasis on sea ice, the polar energy balance, meridional heat exchange processes in both the atmosphere and the ocean, and the paleoclimatic record stored in ice sheets and snow. Present modeling capabilities and parameterizations of polar ice, atmosphere, and ocean processes and their interactions are described. Further advances in our understanding of polar processes call for studies of ice dynamics and of energy transfers by radiation, convection, and advection, in both atmosphere and ocean. The relationship of the energy transfers to mesos-

cale and large-scale circulation features, to the moving pack ice boundaries, and to the annual growth and decay of ice in both hemispheres affects the energy balance and circulation and is a key factor in the global climate system. Further progress will demand systematic monitoring of climate processes in both polar regions, using an increasingly sophisticated satellite technology for the establishment of a polar climate data set. (Auth.)

34-3634
Development of a high-speed rotary snowplow (HTR-700).
Sasaki, T., et al, *U.S. Army Cold Regions Research and Engineering Laboratory*, Mar. 1980, TL 709, 25p., ADA-086 586, Translation from Engineering report, Vol.6, No.46, p.38-50.
Horikawa, G.
Snow removal, Snow accumulation, Snowdrifts, Equipment.
The development of a rotary snowplow designed to remove 3000 tons hour of snow at a speed of 20 km/hr is described. The four-wheel-drive vehicle was designed for use in areas of Hokkaido where snow accumulation and drifting are a major problem. It is powered by a 700-hp diesel engine and weighs about 22,000 kg. The snow removal equipment consists of a two-stage blower with cone ribbon screw type auger. The device has been tested in heavy snow conditions with snowslides and drifting, with excellent results and only minor mechanical problems.

34-3655
Dynamics of snow and ice masses.
Colbeck, S.C., ed, MP 1297, New York, Academic Press, 1980, 468p., Numerous refs. passim., Numerous refs. For individual papers see 34-3656 through 34-3662 or F-23452 through F-23455.
DLC GB2403.2.D95
Ice sheets, Ice shelves, Glaciers, Sea ice, Icebergs.
This book reviews the dynamical aspects of snow and ice masses on the geophysical scale. It is divided into seven chapters, each of which describes the basic features of a particular snow or ice mass. In each chapter a conceptual framework is established on a physical basis, and a mathematical description is provided with as many references to the technical literature as space allows. No attempt is made to address particular applications of the information, but the physical and mathematical descriptions of the properties and processes provide for both an understanding of snow and ice masses and a basis through which particular problems can be addressed.

34-3656
Ice sheets and ice shelves.
Paterson, W.S.B., Dynamics of snow and ice masses, edited by S.C. Colbeck, New York, Academic Press, 1980, p.1-78, Refs. p.73-78.
GB2403.2.D95
Ice sheets, Ice shelves, Ice mechanics, Ice models, Ice temperature.
Ice sheet dynamics are discussed primarily in terms of the Antarctic and Greenland ice sheets. The treatment is subdivided into the following topics: theoretical background, flow of ice sheets; numerical modeling of ice sheet changes; flow of ice shelves; temperature in ice sheets and ice shelves; and instabilities in ice sheets.

34-3657
Temperate valley glaciers.
Raymond, C.F., Dynamics of snow and ice masses, edited by S.C. Colbeck, New York, Academic Press, 1980, p.79-139, Refs. p.135-139.
DLC GB2403.2.D95
Valleys, Glaciers, Glacier surges, Glacier mass balance, Glacier flow, Glacier oscillation, Rheology, Creep, Stresses.

34-3658
Sea ice growth, drift, and decay.
Hibler, W.D., III, MP 1298, Dynamics of snow and ice masses, edited by S.C. Colbeck, New York, Academic Press, 1980, p.141-209, Refs. p.205-209.
DLC GB2403.2.D95
Drift, Sea ice, Thickness, Ice cover thickness, Ice surface, Ice formation, Models, Ice strength, Simulation.
This review of the dynamics of sea ice is organized into the following sections: general characteristics of sea ice; physics of sea ice growth, drift and decay (ice thickness distribution, thermal processes and ice drift and deformation); and numerical simulation of sea ice growth, drift and decay.

34-3659
Iceberg drift and deterioration.
Robe, R.Q., Dynamics of snow and ice masses, edited by S.C. Colbeck, New York, Academic Press, 1980, p.211-259, Refs. p.257-259.
DLC GB2403.2.D95
Icebergs, Drift, Ice melting.
This review comprises five aspects of icebergs: their sources; global drift patterns; local iceberg drift (forces such as wind and water drag and Coriolis force); deterioration (wave effects, heat transfer from water and radiation); and future trends in research.

34-3660
Freshwater ice growth, motion, and decay.
Ashton, G.D., MP 1299. Dynamics of snow and ice masses, edited by S.C. Colbeck, New York, Academic Press, 1980, p.261-304. Refs. p.302-304.
DLC GB2403.2.D95
Lake ice, River ice, Frazil ice, Rivers, Ice jams, Ice breakup, Ice melting, Ice floes, Ice formation.

34-3661
Seasonal snow cover.
Male, D.H., Dynamics of snow and ice masses, edited by S.C. Colbeck, New York, Academic Press, 1980, p.305-395.
DLC GB2403.2.D95
Snow thermal properties, Snow mechanics, Snowdrifts, Turbulent diffusion, Snow density, Snow accumulation.
A review of the literature, this articles deals with the following aspects of snow cover: metamorphism of dry snow, equitemperature and temperature gradient metamorphism, properties of dry snow, both mechanical and thermal, blowing snow, turbulent diffusion, saltation, sublimation, accumulation and erosion, snowmelt, and wet snow.

34-3662
Avalanche release, motion, and impact.
Perla, R.I., Dynamics of snow and ice masses, edited by S.C. Colbeck, New York, Academic Press, 1980, p.397-462. Refs. p.456-462.
DLC GB2403.2.D95
Avalanches, Avalanche triggering, Avalanche mechanics, Shear stress.

34-3663
Investigation of aerosol fallout in long-range pollutant transport. [Issledovanie vypadeniĭ aerozoleĭ pri dal'nem perenose zagriaznaiushchikh veshchestv].

34-3674
Petrographic observations of ice samples from Taylor Glacier, Antarctica.
Robinson, P.H., *New Zealand antarctic record*, 1979, 2(1), p.17-19, 2 refs.
Glacier ice, Stratification, Rocks, Regelation, Antarctica—Taylor Glacier.
There are basically two petrographically-defined zones in the ice of Taylor Glacier: (1) the dominant, debris-free, weakly foliated, very fine to fine-grained bubbly ice, and 2) the subordinate, restricted englacial and basal debris-bearing, strongly-foliated, fine to medium-grained, alternating bubbly and clear ice. The bubbly ice zone gains its structure from "normal" primary stratification of the snow and firn in the accumulation areas and subsequent modification by densification and flow. The origin of the alternating bubble and clear ice layers is rather more complex. Possibilities include: 1) melting by frictional drag along faults subparallel to the glacier bed, where bubbles escaping from this melted layer float upwards and are subsequently refrozen, leaving behind clear ice and 2) bubble layering in 'cold' glacier ice was considered to result from a redistribution of bubbles during flow along primary stratification planes. Regelation by englacial frictional drag may be a likely mode of formation of clear, debris-free ice layers of Taylor glacier. However, it does not explain the debris-rich alternating bubbly and clear ice layers towards the base of the ice margin. A more probable origin for such zones is pressure melting and regelation at the glacier sole. (Auth. mod.)

34-3675
Saline discharge at the snout of Taylor Glacier, Antarctica.
Keys, J.R., *New Zealand antarctic record*, 1979, 2(1), p.20-21, 6 refs.
Glacier melting, Glacial hydrology, Meltwater, Salt water, Salinity, Antarctica—Taylor Glacier.
At intervals of one to a few years, during the "non summer" months, some thousands of cubic metres of salty water flows out from either a crevasse at the northern corner of the snout of Taylor Glacier, or a source beside the glacier near this crevasse. This fluid freezes to form an outwash fan (cone), or platform, of saline ice on the debris-covered mound and delta beside the glacier. The saline ice fan is usually various shades of orange in colour, due to small amounts of hydrated iron oxides and silt. In the summers and years between such discharge events, the ice fan ablates until there is no saline ice remaining on the mound or delta. However, salty orange englacial layers, present throughout the history of each individual discharge event, remain around the discharge site in the glacier. It is believed that these layers represent crevasses that were flooded with salty water, which then froze, during past discharge events. Field investigations were carried out in Oct. 1978 and Jan. 1979 and a simple model for the discharge was drawn up. (Auth. mod.)

34-3676
Eastward ice advances in Wright Valley, Antarctica (Comment).
Robinson, P.H., *New Zealand antarctic record*, 1979, 2(1), p.22-24, 7 refs. Includes reply by G.G.C. Claridge and I.B. Campbell.
Glacier flow, Antarctica—Wright Valley.
The author postulates a small, hitherto undescribed granite outcrop to the east of the Wright Upper Glacier as the provenance of granite erratics described by Claridge and Campbell (1978), who reply in rebuttal of the hypothesis.

34-3677
Hardness of ice and a solar ice melter.
Robinson, W.H., et al, *New Zealand antarctic record*, 1979, 2(2), p.4-8, 4 refs.
Bibby, B., Tucker, A., Haskell, T., Rodgers, T.
Ice hardness, Sea ice, Solar radiation, Equipment, Ice melting.
A simple rig for measuring the displacement of a 6.35 mm diameter steel ball into ice under load (10 to 40 N) was developed in the laboratory and used on the ice at Taylor Glacier (near Finger Mountain at the snout) and on the sea ice in McMurdo Sound. As expected the depth of indentation, h, into the ice varied with time, t. When the results were analyzed to produce a stress-strain rate curve, they were found to be in good agreement with the dislocation model of creep, where the strain rate is proportional to applied stress. Another project was the testing of a solar collector designed to melt snow or ice. Over a 6-hour period (1000 to 1600 hrs 22 Nov. 1978) the 0.5 sq meter collector produced 3.1 2 litres of water from snow, with the surrounding air temperature at -7° to -15C. (Auth. mod.)

34-3678
Impact of "extreme" events on the Dry Valleys area.
Chinn, T.J.H., *New Zealand antarctic record*, 1979, 2(2), p.9-13, 3 refs.
Glacial hydrology, Glacier melting, Microclimatology, Antarctica—Wright Valley, Antarctica—Vanda, Lake, Antarctica—Onyx River.
Because the Dry Valleys of Antarctica are climatically sensitive environments where the effects of rare extreme events may create substantial and enduring features, the glaciology hydrology research group reports here two such events and their immediate effects: "heat waves" (temperatures five degrees above normal during January), an unusually heavy snowfall, and an unexplained heavy flow in the Onyx River.

34-3679
Concreting in Antarctica.
Varcoe, G.E., *New Zealand antarctic record*, 1979, 2(2), p.14-15, 1 ref.
Concrete aggregates, Construction materials, Concretes, Concrete strength, Antarctica—Ross Island.
This note summarizes the results of concreting in Antarctica, using local aggregate and simple techniques. During the 1977-78 season (Varcoe 1978) various mixtures made with local aggregates were tested in order to determine strength and workability of mix. The aggregate selected as a result of these tests was no longer available in 1979-80, and the only aggregate available lacked "fines". Despite sub-zero temperatures and poor quality of local aggregate (generally vesicular volcanic scoria and vesicular tuff) satisfactory open-air concreting, using only very simple techniques, is possible at Ross Island. If accurate and predictable control of mix is required, a screen and crusher must be used to control quality of aggregate. (Auth. mod.)

34-3680
Undulations on the McMurdo Ice Shelf near Scott Base, Antarctica.
Holdsworth, G., et al, *New Zealand antarctic record*, 1979, 2(2), p.16-22, 17 refs.
Heine, A.J.
Surface roughness, Surface properties, Ice shelves, Stresses, Ice deformation, Plastic deformation, Ice density, Ice models, Antarctica—McMurdo Sound.
Near Scott Base, a restricted area of the McMurdo Ice Shelf shows prominent surface undulations. The deformation is evidently caused by compressive forces which are transmitted horizontally through the ice shelf as it flows obliquely into the coastline northeast of Pram Point. The ice is assumed to be everywhere free of the sea bed, and the deformation begins as the horizontal compressive stress reaches a critical value to initiate an instability. Some boreholes data are presented together with some surface strain rates in an attempt to quantify the deformation. In order to do this successfully, we conclude that more observations are necessary. (Auth.)

34-3681
Metallurgical examination of some ice screws.
Redfern, R.M., *New Zealand antarctic record*, 1979, 2(2), p.23-29, 4 refs.
Low temperature tests, Metals, Mechanical tests.
"Salewa" ice screws and pitons have been manufactured from both medium and low carbon steels. The former material has a tensile strength of the order of 800 MPa and is likely to give rise to brittle failures at low temperatures, while the latter has a lower strength of the order of 540 MPa, but is not likely to fail in a brittle manner at low temperatures unless strain-aged. The "Choumard" ice screw was made from a heat-treated high strength alloy of the order of 1230 MPa and is unlikely to give rise to brittle failure at low temperatures. The "Inter-Alp" ice screw examined was made from the lowest strength material (of the order of 300 MPa) of the samples, yet poor metallurgical practice has also given rise to doubts concerning its ductile/brittle behavior at low temperatures. (Auth.)

Ice sheets, Ice cores, Isotope analysis, Ice coring drills, Thermal drills, Antarctica—Novolazarevskaya Station.
Drilling through the Lazarev Shelf Glacier started in 1974 for studying temperature variations in boreholes and underlying water and obtaining sea water and bottom sediment samples. In 1977, the testing site for a new thermal drill was selected from radar sounding data. An area of about 1000 m ice thickness, located on the Antarctic Ice Sheet slope 40 km south of [illegible] bottom, developing drilling technique, measuring ice temperature in marginal parts of the ice, and obtaining isotope analyses of ice cores. In 1978 the bottom was reached at 808 m, good core was obtained, and bottom temperature measured as -7.3C. Borehole inclinometric measurements showed ice velocity growing with depth to 600 m with subsequent decrease. The process and drilling technique are discussed.

Some promising trends in ice mechanics.
Assur, A., MP 1300, Symposium on Physics and Mechanics of Ice, Copenhagen, Aug. 6-10, 1979. Proceedings. Edited by P. Tryde, Berlin, Springer-Verlag, 1980, p.1-15, 12 refs.
Ice mechanics, Ice creep, Ice sheets, Stresses, Loads (forces), Ice models, Rheology, Ice cover thickness, Sea ice, Analysis (mathematics).
Ice sheets are inhomogeneous; properties vary strongly with depth. Theoretical treatment of plates with properties varying perpendicular to the plate has now been satisfactorily developed for floating ice sheets. However, other problems are still waiting for solutions. The use of model ice is developing rapidly. Some suggestions of how to analyze such ice are made. Breakthrough-loads on ice sheets diminish with duration of loading, but no satisfactory solution is available based upon classical procedures of applied mechanics.

34-3729
Development and application of multimodal ice failure theory.
Bercha, F.G., Symposium on Physics and Mechanics of Ice, Copenhagen, Aug. 6-10, 1979. Proceedings. Edited by P. Tryde, Berlin, Springer-Verlag, 1980, p.16-27, 10 refs.

Experience gained by use of extensive ice laboratory facilities in solving ice problems.
Frankenstein, G.E., MP 1301, Symposium on Physics and Mechanics of Ice, Copenhagen, Aug. 6-10, 1979. Proceedings. Edited by P. Tryde, Berlin, Springer-Verlag, 1980, p.93-103, 12 refs.
Ice mechanics, Ice navigation, Ice conditions, Offshore structures, Ice loads, Floating ice, Icing, Ice pileup, Flooding, Laboratory techniques.
The discovery of offshore oil in ice-infested waters has caused major concern to the design engineers. Some of the problems associated with offshore structures are ice forces, icing, and pile-up. Laboratory facilities have and will continue to solve many of the ice problems. The ice problem at navigation locks, for example, has been solved primarily due to laboratory studies. Also, the results of ice forces due to ice uplift have been virtually eliminated by controlled studies. Laboratories are becoming larger and more sophisticated. This should result in an increase in laboratory studies and a decrease in field studies. Solutions will come faster because conditions can be precisely controlled.

Study of the thermal structure of the antarctic ice cap.
Burdecki, F., *Notos*, 1967, 16(1/4), p.47-69, Refs. p.67-69.
Ice thermal properties, Ice sheets, Ice temperature, Heat sinks, Heat transfer.
An attempt is made to elaborate a model of the thermal structure of the antarctic cap (rock plus ice). The model is based on results of seismic investigations and charts of ice surface temperatures. Taking into consideration the terrestrial heat conduction, the improbability of an extremely low heat condition (negative stored heat) in Antarctica, and the present distribution of surface temperatures, a "key- temperature" of -10C at sea level at the South Pole is assumed. From temperature cross-sections along 40 meridians, with due consideration to the specific heat of rock and ice, a mean temperature of -24.6C for the whole antarctic cap was derived, that for West Antarctica being -17.7C and for East Antarctica -25.5C. It is found that if other factors which contribute to the growth or decrease of the antarctic ice are in exact equilibrium, an influx of terrestrial heat from below would need a minimum of 368,000 years to annihilate the antarctic ice mass. From a discussion of the thermodynamics of the growth and decay of the antarctic ice mass, it is inferred that in the present state the ice amount is not far from its physical maximum. Probably the ice cover of East Antarctica is shrinking slightly at present, whereas the west antarctic ice masses are growing in spite of some regional exceptions. (Auth. mod.)

Ice shelves, Profiles, Glacier flow, Glacier thickness, Glacier tongues, Velocity, Models, Ice cover thickness, Antarctica—Erebus Glacier.
Using expressions for ice-shelf creep derived by Weertman and Thomas, a general method is developed for calculating equilibrium thickness profiles, velocities, and strain-rates for any ice shelf. This is done first for an unconfined glacier tongue, and the result agrees well with data for Erebus Glacier tongue (Holdsworth, 1974). Anomalies occu. within the first 3 km after the hinge zone, and these are too great to be the result of local bottom freezing; they are probably due to disturbance of the velocity field. Secondly, profiles are calculated for bay ice shelves. Thickness gradients are largely independent of melt-rate or flow parameters but are inversely proportional to the width of the bay. Data from antarctic ice shelves agree with this result both qualitatively and quantitatively. The theory is readily extended to ice shelves in diverging and converging bays. An ice shelf in a diverging bay can only remain intact if it is thick enough and slow enough to creep sufficiently rapidly in the transverse direction. If it cannot, it will develop major rifts or will come adrift from the bay walls. It is then likely to break up. The presence of ice rises or areas of grounding towards the seaward margin can radically alter the size of the ice shelf which can form. The theory could be used as a starting point to study non-equilibrium behaviour. (Auth.)

Ice mechanics, Ice creep, Ice deformation, Compressive properties, Ice physics, Ice shelves, Profiles, Ice heat flux, Ice cover thickness, Antarctica—Antarctic Peninsula.
Profile surveys are presented of four ice rises on the east coast of the Antarctic Peninsula. On Butler Island velocity measurements were also made. The ice rises behave as miniature ice caps frozen to flat horizontal bedrock and provide a simple system for the study of law of ice flow. Deformation is principally by shear through the ice mass. Each ice rise is bounded on one side by ice shelf and on the other side by open sea. Towards open sea the profiles are found to agree well with steady-state theoretical profiles. Towards ice shelf the profiles are elongated, and they deviate from the theoretical profile. This may be due to compressive stress in the ice shelf, causing migration of the grounding line down sloping bedrock. No significantly anomalous behaviour is found in the summit region. (Auth. mod.)

34-3797
Creep of ice, geothermal heat flow, and Roosevelt Island, Antarctica.
Thomas, R.H., et al, *Journal of glaciology*, 1980, 25(91), p.47-60, 33 refs., In English with French and German summaries.
MacAyeal, D.R., Bentley, C.R., Clapp, J.L.
Ice creep, Ice mechanics, Geothermy, Heat transfer, Velocity, Recrystallization.
Measurements of ice velocity, thickness, and surface topography on the large ice rise known as Roosevelt Island are consistent with Glen's flow law. Assuming that near the center of the ice rise, where the effects of recrystallization are probably negligible, the ice behaves in the same way as randomly-oriented polycrystalline ice, then the geothermal flux G in this area is approximately 0.06 W/sq m. In the absence of measurements of deep-ice temperatures, the distribution of G across the ice rise cannot be determined. However, the simplest interpretation of the movement data requires: (1) a linear increase in G from 0.05 W/sq m on the north-east side of Roosevelt Island to 0.07 W/sq m in the south-west, and (2) strain-rate enhancement, due to recrystallization, that increases outward from the center of the ice rise to reach a maximum value of approximately two near the edges. The calculated values of G are larger than the world average, but this is consistent with the probably granitic core beneath Roosevelt Island. An increase in G of 0.02 W/sq m in a distance of 600 km would require an increase in granite thickness of about 5 km. (Auth. mod.)

Thermodynamic properties, Hydrodynamics, Glacier flow, Thermal conductivity, Ice sheets, Ice surface, Ice temperature, Ice temperature, Velocity, Mathematical models.
The purpose of this paper is to consider an ice-sheet model based on joint solution to the dynamic equations and equations of heat conductivity in which the surface relief is one of the unknown functions. The proposed model is applicable to calculation of the antarctic ice sheet. Results of a numerical experiment for present values of the temperature of the ice surface and precipitation, as well as for their separate and simultaneous increase by 2, 4, or 6 deg and 10, 20 or 30%, are given. Microwaves, Firn, Brightness, Snow optics, Remote sensing, Temperature effects.

The microwave emission from a half-space medium, characterized by coordinate dependent scattering and absorbing centers, has been calculated by numerically solving the radiative transfer equation by the method of invariant imbedding. A Mie scattering phase function and surface polarization have been included in the calculation. Also included are the physical temperature profile and the temperature variation of the index of refraction for ice. Using published values of grain-size and temperature profile and the temperature variation of the index of refraction for ice. Using published values of grain-size and temperature-profile data of polar firn, the brightness temperature has been calculated for the 1.55 cm and 0.8 cm wavelengths. For selected regions in Greenland and Antarctica, the results of our calculations are in reasonable agreement with the observed Nimbus-5 and Nimbus-6 EMSR data. (Auth.)

A dynamic constitutive law is used to study the response of medium-density snow to shock waves. The results show good correlation between theory and experiment, except for low-intensity shocks which produce small permanent density changes. In this case the validity of the data is questioned, although further experimental work is needed to settle this question. The results of this work also partially explain why snow is so effective in absorbing energy associated with stress waves. This is felt to be due to the work-hardening characteristics of snow.

Ice shelves, Iceberg towing, Crevasses, Freezing, Floating ice, Ice temperature, Theories.
An approximate calculation is made of the rate which a bottom crevasse in a cold ice shelf or tabular iceberg can close shut by freezing of water and can creep open through the creep deformation of ice. In all but the thickest ice shelves and icebergs, those with a thickness greater than about 400 m, the freezing process is the more important mechanism if the ice is cold (<-10C). Consequently, in a cold iceberg or ice shelf, a bottom crevasse, once formed, will freeze shut. Results of the calculation are applicable to the computation of the expected disintegration of towed icebergs. (Auth. mod.)

This paper presents the construction procedure, data and analysis from an experimental field program to determine the rippability and compaction characteristics of frozen soil. Also investigated was the stability upon thawing of the frozen soil compacted in the field. From the results of the experimental program, several important conclusions concerning winter earthwork were obtained. 1) Ripping frozen soil can be accomplished with heavy equipment which will produce a large range of chunk sizes. 2) The effectiveness of field compaction of frozen material is highly dependent on the moisture content of the soils. 3) The magnitude of settlement in embankments constructed of frozen material is closely related to the compacted dry density of the placed soil.

34-3874
Radio-echo sounding in the Allan Hills, Antarctica, in support of the meteorite field program.
Kovacs, A., *U.S. Army Cold Regions Research and Engineering Laboratory*, May 1980, SR 80-23, 9p., ADA-086 858, 3 refs.
Radio echo soundings, Glacier thickness, Glacier surveys, Ice cover thickness, Pollution, Meteorites, Antarctica—Allan Hills.
Radio-echo sounding measurements made on Ross Island and in the Allan Hills, Antarctica, indicate that radio-echo sounding may offer the unique possibility of detecting a buried meteorite in glacial ice. The results also revealed interval layering within the snow on Ross Island and in the snow filling an ice depression west of Allan Nunatak. Radio-echo sounding also gave the depth to bedrock near the west side of Allan Nunatak. The greatest ice depth measured was 310 m.

Bridges, Piles, Frost heave, Foundations.

34-3894
Ice pressure ridges.
Kraus, E., *U.S. Army Cold Regions Research and Engineering Laboratory*, Feb. 1980, TL 721, 59p., ADA-084 227, 38 refs. Translated from the Third Hydrological Conference of the Baltic States, Warsaw, May, 1930.
Sea ice, Pressure ridges, Tectonics.
In the first (descriptive) section, some of the greatest and most significant ice pressure ridges are discussed in order to derive from them the most important general conditions of formation. The second section brings up applications to general geological questions, particularly for tectonics. In the third section the ice pressure ridges are considered as a natural experiment with respect to the tectonic processes in the earth's crust.

34-3895
Distribution of sea ice meltwater in the eastern Canadian Arctic.
Tan, F.C., et al, *Journal of geophysical research*, Apr. 20, 1980, 85(C4), p.1925-1932, 10 refs.
Strain, P.M.
Sea ice, Meltwater, Ice melting, Distribution, Ground water, Ice cover thickness, Oxygen isotopes, Canada.

34-3896
Introduction to town planning and related matters in the Soviet North: based upon information collected during the exchange visit by a Canadian delegation to the Soviet Union—September 25th to October 7th, 1977.
Slipchenko, W., et al, [Ottawa, Department of Information, 1978], 426p.
Elkin, L.
Urban planning, Economic development, Cold weather construction, Permafrost distribution, Research projects, Pipelines, Roads, Maps, Photography.

34-3897
Building standards and regulations. Part 2: Design standards. Chapter 6: Loads and effects.
Russia. Gosudarstvennyi komitet po delam stroitel'stva. *U.S. Army Cold Regions Research and Engineering Laboratory*, Apr. 1980, TL 736, 92p., ADB-048 871L, Translation from SNiP-11-16-74.
Building codes, Standards, Structures, Cold weather construction, Ice loads, Snow loads, Wind pressure, Loads (forces), Bearing strength, Temperature effects, Design.

34-3898
Investigation of ice drift in the southeastern part of the Barents Sea with the aid of a "Toros" peripheral scanning radar station.
Zubakin, G.K., et al. *U.S. Army Cold Regions Research and Engineering Laboratory*, June 1980, TL 741, 7p., ADB-048 905L, 2 refs. For Russian original see 34-358.
Zuev, A.N., Larin, B.V., Matorov, O.N.
Ice surveys, Ice reporting, Ice conditions, Side looking radar, Drift, Ice edge, Airborne radar, Ice navigation.
The "Toros" device makes possible the mapping of the ice sheet of extensive areas of the sea at any time of year, regardless of meteorological or lighting conditions. The enumerated data, provided by the "Toros" peripheral scanning radar station, indicate the multitudinous possibilities of applying this data in the solution of problems of various types. With the help of this system, an experiment was conducted in the southeastern part of the Barents Sea in Apr. 1974, which was directed towards the solution of the problem of short-term forecasting of the location of the ice in a given area.

34-3899
Icebergs: technology for the future.
Huppert, H.E., *Nature*, May 8, 1980, 285(5760), p.67-68.
Meetings, Icebergs.
The author reports on the Conference on the Use of Icebergs held in April 1980 at SPRI in Cambridge. The conference was devoted mainly to discussions on the physical characteristics of icebergs, including the way they break and roll over, their melt rate, and the feasibility of towing them across oceans for use in arid regions. Several of the papers dealing with these aspects are reviewed.

34-3900
Cargo to the north by transport planes. [Gruzy na Sever -vozdushnym transportom].

Clapperton, C.M.
Ice sheets, Ice structure, Glacial geology, Geomorphology, Antarctica—Antarctic Peninsula.
The West Antarctic ice sheet is believed to be inherently unstable because much of it is grounded below sea level. It has been suggested that the ice sheet has withdrawn from its late Wisconsin maximum position, grounded at the edge of the continental shelf, and is now undergoing collapse as a delayed response to the warming and sea-level rise of the Holocene, and that the ice sheet is likely to collapse shortly in response to rising CO_2 levels in the atmosphere. The authors present some geomorphological evidence from Alexander Island and the Antarctic Peninsula which does not agree with either hypothesis. Rather, following deglaciation from the Wisconsin maximum, there was less ice than at present around 8,000 yr ago. The ice shelf in George VI Sound has built up subsequently. (Auth.)

34-3948
Application of recent results in functional analysis to the problem of wetting fronts.
Nakano, Y., *Water resources research*, Apr. 1980, 16(2), MP 1307, p.314-318, 16 refs.
Soil water migration, Soil physics, Boundary value problems, Seepage, Porous materials, Wettability.

Traditionally, in hydrology and soil physics, wetting fronts appearing in porous media described by Darcy's law have not generally been considered to be singular surfaces. Some recent results from functional analysis are presented as evidence supporting the viewpoint that wetting fronts with a finite propagating speed generally are singular surfaces.

34-3949
Water movement in a land treatment system of wastewater by overland flow.
Nakano, Y., et al, *Progress in water technology*, 1979, 11(4/5), MP 1285, p.185-206, 15 refs.
Khalid, R.A., Patrick, W.H., Jr.
Water flow, Waste treatment, Water treatment, Soil water, Saturation, Seepage, Slope orientation, Experimentation.
Water movement in an overland-flow land treatment system was studied experimentally and theoretically. A small-scale physical model was used to obtain experimental data. The theoretical analysis was based upon the shallow water equation for overland flow and the Darcy-Richards law for soil water flow. It was found that the water movement in the system was primarily controlled by the application rate, the friction slope, the slope angle, the hydraulic characteristics of soils, and the evapotranspiration. An approximate analytical solution to steady flow in the system was obtained. It was found that the rate of soil water flow was mainly determined by the saturated conductivity of soils and in less extent by the friction slope and the slope angle in the steady condition. A finite difference solution to non-steady flow was found satisfactory in simulating the experimental data.

Crystal size and climatic record down to the last ice age from Antarctic ice.
Duval, P., et al, *Earth and planetary science letters*, June 1980, 48(1), p.59-64, 18 refs.
Lorius, C.
Ice crystal size, Ice cores, Climatic changes.
Crystal size measurements were performed along a 905-m-long ice core obtained from east central Antarctica (Dome C). The expected increase of crystal size with age is observed in the ice deposited during the Holocene; further down major changes appear to be associated with climatic events and, in particular, with the transition from the last glacial age to present conditions. Physical mechanisms which may explain these data are discussed. A tentative estimation of the age of the deep ice is made from the ice crystal growth law. (Auth.)

Glaciological studies by Landsat imagery of perimeter of Dronning Maud Land, Antarctica.
Orheim, O., *Oslo. Norsk polarinstitutt. Skrifter*, 1978, No.169, p.69-80, 7 refs.
Sea ice, Ice shelves, Icebergs, Spacecraft, Photointerpretation.
The investigation has utilized Landsat imagery to analyze changes in the Dronning Maud Land coastline between 10W and 20E and to obtain statistical data on ocean dynamics, and sea ice and iceberg distribution in this region of the Antarctic. The imagery for the investigation was provided by National Aeronautics and Space Administration (NASA), USA. Altogether 67 images were received, mostly from the 1975/76 austral summer. Band MSS 7 has been found most useful for the ice studies. The other bands were also used to attempt differentiation between ice floes and icebergs, but with inconclusive results. The best method to distinguish between the ice shelf edge and the fast ice, and to bring out ice rises on the ice shelf, has been to copy the MSS 7 negatives at 5-10 times < normal > exposure. (Auth.)

34-3988
Snow accumulation and snow stratigraphy on Riiser-Larsenisen, Dronning Maud Land, Antarctica.
Repp, K., *Oslo. Norsk polarinstitutt. Skrifter*, 1978, No.169, p.81-92, 7 refs.
Snow accumulation, Snow physics, Snow stratigraphy, Antarctica—Queen Maud Land.
The western part of Riiser-Larsenisen is fairly flat, with small undulations difficult to detect. Outstanding features are an ice dome of 200 metres elevation and a long, narrow depression parallel to the edge of the ice shelf. Snow stratigraphy and density were measured in nine pits, the deepest 4.5 metres. Mean accumulation of all pits for the year 1976 was 588 mm in water equivalent, which is higher than earlier investigations. Five snow cores to depths of 11 to 15 metres were collected for laboratory analyses. (Auth.)

Frost action, Frost heave, Ice needles, Soil water migration, Soil tests.
A method is described for convenient study of frost action, including soil heaving and needle ice formation. The apparatus is simple and small and the procedure requires only 25 cu cm soil specimens. The method could be useful for screening either large numbers or limited quantities of soils or soil additives for frost susceptibility. The method described was used to perform a limited number of tests with several soils. The tests obtained action in the form of soil heave, ice heave, or ice needles, yielding maximum heights up to three to six times the initial 40-mm soil depth. Maximum growth rates were up to 1 to 3 mm/hr for soil heaves and 3 to 7 or more mm/h for ice heaves and ice needles. Initial trials showed that thickener additives and possibly other treatments can restrict frost action.

Ships, Icebreakers.
An icebreaker ordered by the Argentinian government and built at the Wärtsilä facility in Helsinki was delivered in early 1979. The ship is described in terms of personnel (passengers and crew), stability in heavy weather, power plant, equipment, waste disposal, and ice testing.

34-4020
Ice cores.
MacKinnon, P.K., comp., *Glaciological data*, May 1980, GD-8, 139p., Refs. passim. For selected articles see 32-2118 and 34-4021 through 34-4031, or F-19693, and F-23554 through F-23563.
Ice cores, Data processing, Bibliographies, Antarctica.
Included in this issue are: a brief report of a workshop on the status and future of ice core data and research, held in Boulder in Sep. 1979; an inventory of ice core studies and research facilities in North America and throughout the world with a substantial number of ice core tables and core site maps, including 182 sites throughout Antarctica, information storage and exchange; several contributed papers dealing with various aspects of ice cores; and a classified ice core bibliography containing 345 citations. Many of these separate topics involve Antarctica.

34-4021
Status and future of ice core data.
Barry, R.G., et al, *Glaciological data*, May 1980, GD-8, p.1-4, 4 refs.
MacKinnon, P.K.
Ice cores, Research projects, Glaciology, Data processing.
The authors review the current state of the management of ice core data as data collecting has expanded with the establishment of large scale national and international programs. With the expansion have come problems such as data exchanging, advisability of having a central data base, data formats and standards, and defining archivable data. Future possibilities for data centers are explored.

Workshop on the Status and Future of Ice Core Research and Ice Core Data (Boulder, Colorado, 24-26 September 1979). *Glaciological data*, May 1980, GD-8, p.5-14.
Meetings, Research projects, Data processing, Ice cores, Climate, Ice coring drills, Age determination.
Presented here is an outline of reviews and recommendations of working groups on core and core data management, application of ice core research to climate studies, ice core dating, and drill technology and the interface with ice core research needs. Also included is the workshop program schedule and a listing of participants.

34-4023
Ice core inventory.
MacKinnon, P.K., *Glaciological data*, May 1980, GD-8, p.15-57, 7 refs.
Ice coring drills, Core samplers, Ice temperature.
This paper reports the status of past and present ice core investigations, documentation of core sites, the groups currently involved in ice core drilling, the principal centers conducting ongoing ice core analyses, and the availability of cores and data. Ice core tables, listing 414 individual cores, contain data for Arctic Canada, Greenland, temperate ice zones and Antarctica.

34-4024
Ice core information storage and exchange system.
Thompson, J.M., et al, *Glaciological data*, May 1980, GD-8, p.59-63.
MacKinnon, P.K.
Ice cores, Data processing.
This paper presents an overview of a data and information storage and exchange system (DISES) developed by the World Data Center A for Glaciology for the management of ice core and related data. The design of this system consists of specifications for the data file structure, the computer programs necessary to obtain the proposed operational capabilities, and procedures to use the programs and data files within the host computer facility. Elements of this design have been shaped by the nature of ice core data sets and by suggestions received from the glaciological community. (Auth.)

34-4025
Central ice core storage facility—ice core sampling procedures.
U.S. National Science Foundation. Division of Polar Programs, *Glaciological data*, May 1980, GD-8, p.66-68.
Ice cores, Cold storage.
Procedures and criteria are outlined by which researchers may have access to the ice cores stored by NSF's Ice Core Storage Facility. The curator of the facility, following discussions of a project with a researcher makes recommendations to the Chief Scientist, NSF, who approves or disapproves the use of core samples. If approval is given, the curator distributes the samples.

34-4026
Specimen and core-sample distribution policy.
U.S. National Science Foundation. Division of Polar Programs, *Glaciological data*, May 1980, GD-8, p.69-70.
Ice cores, Drill core analysis.
Given here are general policies and procedures established by NSF as to how ice and sediment cores under its authority will be distributed among qualified researchers. Contact addresses and telephone numbers are listed for storage facilities and the kind of material stored at each of the four locations is noted. Ice and sediment cores are those retrieved from drilling in Antarctica during Eltanin cruises, RISP, and DVDP.

34-4027
Ice core sampling.
Radok, U., *Glaciological data*, May 1980, GD-8, p.71-76, 9 refs.
Ice cores, Ice sampling, Research projects, Antarctica, Greenland.
Before fine details of ice core records can be accepted as significant, it will be necessary to compare the features of neighboring cores as a function of their separation. Once the local variability of such features has been established, the way is open to sampling the essential features of major catchments in the Antarctic and Greenland ice sheets. It is suggested that further deep cores are needed on the Byrd flow line, and on flow lines from Dome C towards Casey and Dumont d'Urville, in the regions of relatively fast flow. Together with the existing core data and improved models, these new data will define the thermodynamics and dynamics of two major Antarctic catchments. Concurrent intermediate and shallow sampling programs are needed to complete the material from which their histories could be reconstructed. The concept of a surface sampling task force is outlined. This would collaborate with aerial radar sounding, deep drilling, and computer modeling teams in a coordinated program for completing the task of describing the polar ice sheets as physical systems. (Auth. mod.)

34-4028
Polar Ice Coring Office ice drill status report.
Kuivinen, K.C., et al, *Glaciological data*, May 1980, GD-8, p.77-85, 16 refs.
Koci, B.R.
Ice coring drills.
The report reviews the capabilities and present status of ice drilling equipment developed for use in the Antarctic, Arctic, and other alpine localities. It is limited to a discussion of drilling equipment developed through funding by the NSF-DPP, and currently under the custodianship of the Polar Ice Coring Office. A brief background statement is followed by individual discussions of the seven ice drilling and coring devices currently in the NSF-DPP inventory.

34-4030
Time-priority studies of deep ice cores.
Gow, A.J., *Glaciological data*, May 1980, GD-8, MP 1308, p.91-102, 18 refs.
Ice cores, Drill core analysis, Antarctica—Byrd Station.
Both the Greenland and Antarctic ice sheets have been successfully core-drilled to bedrock, 1390 m at Camp Century, Greenland in 1966 and 2164 m at Byrd Station, Antarctica in 1968. Core and borehole studies at both sites have revealed a wealth of interesting results, especially at Byrd Station where extensive studies of cores were begun as soon as they were pulled out of the drill hole. Continuing investigations of these Byrd Station drill cores, including recent observations of apparent widespread recrystallization in certain sections of ice core, further confirm the importance of initiating as many studies as possible at the drill site. Any list of the studies that should be conducted on deep ice cores must recognize two kinds of research: 1) those studies of a time-priority nature that must be initiated as soon as cores are pulled to the surface and, 2) other essential studies in which relaxation of the ice is not a factor. These latter studies can generally be deferred until cores are transported to more permanent storage facilities outside Antarctica. (Auth. mod.)

34-4031
Ice core work at the Laboratoire de Glaciologie, CNRS, Grenoble.
Raynaud, D., *Glaciological data*, May 1980, GD-8, p.103-107, 14 refs.
Ice cores, Drill core analysis, Laboratories.
The Laboratoire de Glaciologie is dedicated to environmental [illegible] studies. The work done by the Grenoble laboratory includes the recovery and analysis of ice cores in order to obtain a record of past environmental conditions that prevailed near the surface of ice masses. For this purpose the best conditions have been found on polar ice sheets where large areas are unaffected by surface melting and ice thicknesses provide long time series. Much of the field work has been done in Antarctica, where cores were drawn for climate and atmospheric composition studies. (Auth. mod.)

34-4032
Origin of the oxygen-isotope composition in the snow cover in East Antarctica.
Vilenskii, V.D., et al, *Geochemistry international*, 1978, 15(2), p.180-185, For Russian original see 10F-21486 or 33-3204. 10 refs.
Tesis, R.V., Kiselevskii, M.A., Kochetkova, S.N.
Snow composition, Isotope analysis, Oxygen isotopes, Antarctica—East Antarctica.
Oxygen-isotope compositions have been determined for snow-cover specimens from five areas between the Mirnyy and Pionerskaya stations in East Antarctica. The height increases away from the coast, while the mean air temperature falls, and this is accompanied by a fall in delta-18-O. In the coastal zone (less than 50 km from Mirnyy, height less than 0.86 km, air temperature above -19 deg) there are only slight variations in the oxygen-isotope composition. Further from the coast, between 50 and 353 km, the variation in delta-18-O with temperature amounts to 0.6‰ per degree. These variations in delta-18-O in the annual layers include effects arising from the details of the formation at the sampling points, so the data cannot be used directly to trace the temperature variations from year to year. The spatial nonuniformity in the snow deposition also results in considerable nonuniformity in the isotope composition for specimens taken within a restricted area. (Auth.)

Oil spills, Permafrost thermal properties, Environmental impact, Thermal regime, Subarctic regions, Seasonal variations, Experimentation.
This study was conducted to determine both the short- and long-term effects of spills of hot Prudhoe Bay crude oil on permafrost terrain in subarctic interior Alaska. Two experimental oil spills of 7570 liters (2000 gallons) each on 500 sq m

test plots were made at a forest site underlain by permafrost near Fairbanks, Alaska. The oil spills, one in winter and one in summer, were conducted to evaluate their effect during these two seasonal extremes. Oil movement, thermal regime, botanical effects, microbiological responses, permafrost impact, and composition of the oil in the soil were monitored for two years.

Physiography and glacial geomorphology of the central Black Coast, Palmer Land.
Singleton, D.G., *British Antarctic Survey. Bulletin*, Jan. 1980, No.49, p.21-32, 25 refs.
Glacial geology, Patterned ground, Cirques, Glacier ice, Antarctica—Black Coast.
The physiography and glacial geomorphology of the central Black Coast, Palmer Land, are described. Weathering processes are discussed in relation to the widespread disintegration of the bedrock. A comprehensive account of differentially eroded forms is given, and some evidence is put forward supporting theories as to the origin and development of cavernous weathering. Some small-scale patterned ground features are recorded with suggested processes of formation in the antarctic environment. The occurrence of ubiquitous glacial erratics and three supraglacial moraines is noted. (Auth.)

34-4114
Physiography of part of north-eastern Palmer Land.
Anckorn, J.F., *British Antarctic Survey. Bulletin*, Jan. 1980, No.49, p.157-166, 11 refs.
Geologic structures, Topographic features, Ice cover, Antarctica—Palmer Land.
The physiography and glaciation of part of northeastern Palmer Land are described and the controls affecting these factors are discussed. In particular, the striking differences between the respective topographies of Graham and Palmer Lands are noted, and evidence for the recession of the Palmer Land ice cap is presented. (Auth.)

34-4115
Analyses of British Antarctic Survey tidal records.
Cartwright, D.E., *British Antarctic Survey. Bulletin*, Jan. 1980, No.49, p.167-179, 11 refs.
Sea ice, Drift, Tides, Antarctica—Argentine Islands, Antarctica—George VI Sound.
The results of tidal analysis of 9 years of sea level records from the Argentine Islands and short records of ice movement from lake sites in George VI Sound are presented. Diurnal tides are normal throughout, but the semi-diurnals show a sharply tuned anti-resonance, most noticeably affecting M2. The Argentine Islands have the unusual property that their tides can nearly vanish near May 2 and Nov. 2. Tidal amplitude of sea level there is significantly lower than that of ice movement recorded in 1935. Tidal ice movement in George VI Sound appears to be quite variable in amplitude and phase. The most reliable and consistent ice record was from Ablation Lake, whose results are similar to those from older ice records at Barry Island in Marguerite Bay. Comparison of Ablation Lake with another site 60 km to the southeast shows that tidal phases increase southward in George VI Sound. (Auth.)

Engineering geology, Surveys, Permafrost beneath structures, Earth dams, Permafrost structure, Foundations.

34-4128
Zonal and regional peculiarities of geocryological conditions in the southern part of the permafrost distribution area. [Zonal'nye i regional'nye osobennosti geokriologicheskikh uslovii v iuzhnoĭ chasti oblasti rasprostraneniia MMP].
Belopukhova, E.B., et al, *Merzlotnye issledovaniia*, 1980, Vol.19, p.120-126, In Russian. 9 refs.
Sukhodol'skaia, L.A.
Geocryology, Permafrost distribution, Permafrost structure, Forest land, Swamps, Peat.

34-4129
Amount of geocryologic information obtained from local space photographs under the conditions of Aldan Stanovoy region. [Geokriologicheskaia informativnost' lokal'nykh kosmicheskikh snimkov (primenitel'no k usloviiam Aldano-Stanovogo regiona)],
Gavrilov, A.V., *Merzlotnye issledovaniia*, 1980, Vol.19, p.127-137, In Russian. 8 refs.
Spaceborne photography, Geocryology, USSR—Stanovoy Range, USSR—Aldan.

34-4130
Regularities governing formation of rock streams in North Transbaikal (Southern Muyskiy Range). [Zakonomernosti kurumoobrazovaniia v severnom Zabaikal'e (na primere IU'zhno-Muiskogo khrebta)],
Tiurin, A.I., et al, *Merzlotnye issledovaniia*, 1980, Vol.19, p.138-144, In Russian. 3 refs.
Korostelev, G.V.
Alpine landscapes, Rock streams, Permafrost hydrology, Ground ice, Baykal Amur railroad, USSR—Transbaikal.

34-4131
Direct-current electrical prospecting methods used in solving geocryologic-hydrogeologic problems in the Baykal Amur railroad area. [Primenenie metodov elektrorazvedki postoiannogo toka pri reshenii zadach merzlotno-gidrogeologicheskikh issledovanii v zone osvoeniia trassy BAM],
Bolkov, S.A., et al, *Merzlotnye issledovaniia*, 1980, Vol.19, p.145-153, In Russian. 3 refs.
Romanovskii, V.E.
Site surveys, Geocryology, Baykal Amur railroad, Hydrogeology, Permafrost hydrology, Electromagnetic prospecting.

34-4132
Hot mineral waters in the Baykal Amur railroad area and possibilities of their effective utilization. [Termomineral'nye vody zony osvoeniia BAM i vozmozhnosti ikh effektivnogo ispol'zovaniia],
Volkova, V.P., et al, *Merzlotnye issledovaniia*, 1980, Vol.19, p.154-163, In Russian. 9 refs.
Afanasenko, V.E.
Permafrost distribution, Hot springs, Permafrost hydrology, Taliks, Baykal Amur railroad.

34-4133
Freezing of ground under open system conditions. [Promerzanie gruntov v uslovniakh otkrytoi sistemy],
Zhestkova, T.N., et al, *Merzlotnye issledovaniia*, 1980, Vol.19, p.164-177, In Russian. 11 refs.
Shur, IU.L.
Geocryology, Frozen fines, Clays, Frost penetration, Soil water migration, Phase transformations, Cryogenic structures, Cryogenic textures.

34-4134
Break-off strength of adfreezing ground. [Prochnost' smerzaniia gruntov pri otryve],
Shusherina, E.P., et al, *Merzlotnye issledovaniia*, 1980, Vol.19, p.178-194, In Russian. 7 refs.
Zharov, A.A., Nikolaev, A.A., Emel'ianova, L.V.
Frozen fines, Sands, Loams, Adhesion, Materials, Wood, Rocks, Concretes.

34-4135
Thermal conductivity of frozen and thawed sands, depending on density and moisture content. [O teploprovodnosti peska v talom i merzlom sostoianiiakh v zavisimosti ot vlazhnosti i plotnosti],
Anaman, A.A., et al, *Merzlotnye issledovaniia*, 1980, Vol.19, p.195-200, In Russian. 4 refs.
Smirnova, N.N., Artiushina, V.I., Bordo, N.N.
Frozen fines, Sands, Density (mass/volume), Thermal conductivity, Soil water, Phase transformations.

34-4136
Mechanical properties of rocks in the active layer of the "Medvezh'e" area. [Mekhanicheskie svoistva gruntov sloia sezonnogo ottaivaniia rafona mestorozhdeniia "Medvezh'e"],
Vrachev, V.V., et al, *Merzlotnye issledovaniia*, 1980, Vol.19, p.201-204, In Russian. 4 refs.
Koz'iakov, A.G.
Frozen fines, Mechanical properties, Seasonal freeze thaw, Active layer.

34-4137
Drilling fluids for West Siberian fields. [Burovye rastvory dlia mestorozhdenii Zapadnoi Sibiri],
Kaz'min, A.V., et al, *Neftianoe khoziaistvo*, Nov. 1979, No.11, p.52-53, In Russian. 2 refs.
Petroleum industry, Drilling, Drills, Drilling fluids, Permafrost.

34-4138
Planning environmental protection during the development of uninhabited areas. [Proektirovanie meropriiatii po okhrane okruzhaiushchei sredy pri osvoenii neobzhitykh territorii],
Kukuevitskii, G.M., et al, *Neftianoe khoziaistvo*, Dec 1979, No.12, p.50-53, In Russian.
Markarov, S.G.
Subarctic landscapes, Environmental protection, Petroleum industry, Transportation, Permafrost beneath structures, Permafrost control, Foundations, Tundra, Soil erosion, Vegetation factors.

34-4139
Discovery of the Tanymas country. [Otkrytie strany Tanymas],
Gorbunov, A., *Nauka i zhizn'*, Oct. 1979, No.10, p.97-102, In Russian.
Alpine landscapes, Deserts, Alpine glaciation, Glacier ice, Ice surveys, Aerial surveys, USSR—Pamirs.

34-4140
Calculating temperature field of block-by-block upbuilt concrete structures using Laplace numerical conversion technique. [Raschet temperaturnogo polia poblochno narashchivaemogo betonnogo massiva s ispol'zovaniem chislennogo obrashcheniia Laplasa],
Zubkov, V.I., *Russia. Ministerstvo vysshego i srednego spetsial'nogo obrazovaniia. Izvestiia vysshikh uchebnykh zavedenii. Stroitel'stvo i arkhitektura*, 1980, No.4, p.92-97, In Russian. 3 refs.
Hydraulic structures, Dams, Concrete structures, Concrete placing, Winter concreting, Concrete freezing, Temperature distribution.

34-4141
Regularities governing penetration of a hard body into ice at supercritical impact velocities. [Zakonomernosti vnedrenna tverdogo tela v led pri sverkhkriticheskikh skorostiakh soudareniia],
Khrapatyi, N.G., et al, *Russia. Ministerstvo vysshego i srednego spetsial'nogo obrazovaniia. Izvestiia vysshikh uchebnykh zavedenii. Gornyi zhurnal*, 1980, No.2, p.5-9, In Russian. 3 refs.
Berezovskii, A.A.
Ice physics, Impact strength, Ice deformation, Analysis (mathematics).

34-4142
Effects of zonality and environmental conditions on horizontal structure of phytocenoses of flat palsa peat bogs in West Siberia. [Vliianie zonal'nosti i ekologicheskikh uslovii na gorizontal'nuiu strukturu fitotsenozov ploskobugristykh torfianikov Zapadnoi Sibiri],
Moskalenko, N.G., *Ekologiia*, May-June 1980, No.3, p.7-12, In Russian. 13 refs.
Swamps, Frost mounds, Vegetation patterns, Plant ecology, Ecosystems, Microrelief.

34-4143
Experimental modeling of ecological consequences of winter recreation. [Eksperimental'noe modelirovanie ekologicheskikh posledstvii zimnei rekreatsii],
Baiderin, V.V., *Ekologiia*, May-June 1980, No.3, p.13-21, In Russian. 19 refs.
Forest soils, Thermal regime, Models, Seasonal freeze thaw, Snow cover effect.

34-4144
Composition and structure of vegetation in ridge-pool swamps. [Sostav i struktura rastitel'nosti griadovo-mochazhinnogo kompleksa],
Boch, M.S., et al, *Ekologiia*, May-June 1980, No.3, p.22-30, In Russian. 21 refs.
Vasilevich, V.I.
Swamps, Drainage, Vegetation patterns, Plant ecology, Ecosystems, Mosses, Lichens.

34-4145
Analyzing temperature dependence of photosynthesis in closely related plants of Arctic and temperate latitudes. [Analiz temperaturnoi zavisimosti fotosinteza blizkorodstvennykh vidov rastenii arkticheskikh i umerennykh shirot],
P'iankov, V.I., *Ekologiia*, May-June 1980, No.3, p.37-41, In Russian. 18 refs.
Vegetation, Arctic landscapes, Photosynthesis, USSR—Wrangel Island.

34-4146
Mosses as accumulators of radionuclides. [Mkhi kak nakopiteli radionuklidov],
Molchanova, I.V., et al, *Ekologiia*, May-June 1980, No.3, p.42-47, In Russian. 13 refs.
Bochenina, N.V.
Swamps, Tundra, Vegetation, Forest tundra, Taiga, Litter, Mosses, Biomass, Radioactive isotopes, Fallout, Composition.

34-4147
How permanent is permafrost. [Vechna li "vechnaia" merzlota?],
Shvetsov, P.F., *Priroda*, Dec 1979, No.12, p.18-25, In Russian.
Continuous permafrost, Permafrost origin, Permafrost distribution, Permafrost thermal properties, Permafrost structure, Sporadic permafrost, Frozen ground temperature, Permafrost hydrology, Thermokarst, Tundra, Taiga.

34-4148
Problems in designing telemetering equipment for complex soil and climatic conditions in West Siberia. [Problemy sozdaniia sistem telemekhaniki dlia slozhnykh pochvenno-klimaticheskikh uslovii Zapadnoi Sibiri],
Tsibul'skii, V.R., *Russia. Ministerstvo vysshego i srednego spetsial'nogo obrazovaniia. Izvestiia vysshikh uchebnykh zavedenii. Neft' i gaz*, Mar. 1980, No.3, p.81-84, In Russian.
Petroleum industry, Wells, Pipelines, Permafrost beneath structures, Telemetering equipment, Design.

34-4149
Construction and operation of hydraulic structures in West Yakutia. [Stroitel'stvo i ekspluatatsiia gidrotekhnicheskikh sooruzhenii v Zapadnoi IAkutii],
Mel'nikov, P.I., ed, Novosibirsk, Nauka, 1979, 88p., In Russian. For individual papers see 34-4150 through 34-4157. Refs. passim
Hydraulic structures, Earth dams, Rock fills, Permafrost beneath structures, Earthwork, Tailings, Ground ice, Electric power plants.

34-4150
History of geocryological studies in West Yakutia. [Istoriia geokriologicheskikh issledovanii v Zapadnoi IAkutii],
Mel'nikov, P.I., Stroitel'stvo i ekspluatatsiia gidrotekhnicheskikh sooruzhenii v Zapadnoi IAkutii (Construction and operation of hydraulic structures in West Yakutia) edited by P.I. Mel'nikov, Novosibirsk, Nauka, 1979, p.3-6, In Russian.
Geocryology, Engineering geology, Hydraulic structures, Mining, Research projects.

34-4151
In fruitful friendship with science. [V plodotvornom sodruzhestve s naukoi],
Biianov, G.F., Stroitel'stvo i ekspluatatsiia gidrotekhnicheskikh sooruzhenii v Zapadnoi IAkutii (Construction and operation of hydraulic structures in West Yakutia) edited by P.I. Mel'nikov, Novosibirsk, Nauka, 1979, p.7-10, In Russian.
Hydraulic structures, Earth dams, Rock fills, Permafrost beneath structures, Electric power plants, USSR—Yakutia, USSR—Vilyuy River.

34-4152
Construction of dams from local materials. [Stroitel'stvo plotin iz mestnykh materialov],
Biianov, G.F., Stroitel'stvo i ekspluatatsiia gidrotekhnicheskikh sooruzhenii v Zapadnoi IAkutii (Construction and operation of hydraulic structures in West Yakutia) edited by P.I. Mel'nikov, Novosibirsk, Nauka, 1979, p.11-20, In Russian. 5 refs.
Hydraulic structures, Earth dams, Rock fills, Ground ice, Permafrost beneath structures, Electric power plants, Cold weather construction, Construction materials.

34-4153
Thermal regime variations in the Vilyuy hydroelectric power plant dam during operation. [Dinamika temperaturnogo rezhima plotiny Viliuiskoi GES v period ekspluatatsii],
Medvedev, B.A., et al, Stroitel'stvo i ekspluatatsiia gidrotekhnicheskikh sooruzhenii v Zapadnoi IAkutii (Construction and operation of hydraulic structures in West Yakutia) edited by P.I. Mel'nikov, Novosibirsk, Nauka, 1979, p.20-26, In Russian. 7 refs.
Murkin, I.V., Olovin, B.A.
Hydraulic structures, Earth dams, Rock fills, Ground ice, Permafrost beneath structures, Frozen rock temperature, USSR—Vilyuy River.

34-4154
Impervious frozen ground screens in earth dams of the "frozen" type. [Protivofil'tratsionnye merzlotnye zavesy v gruntovykh plotinakh "merzlogo" tipa],
Makarov, V.I., Stroitel'stvo i ekspluatatsiia gidrotekhnicheskikh sooruzhenii v Zapadnoi IAkutii (Construction and operation of hydraulic structures in West Yakutia) edited by P.I. Mel'nikov, Novosibirsk, Nauka, 1979, p.26-51, In Russian. 12 refs.
Hydraulic structures, Earth dams, Permafrost bases, Soil freezing, Artificial freezing, Permafrost control, Construction equipment.

34-4155
Heat exchange of an artificially frozen dam with the atmosphere. [Osobennosti energoobmena promorazhivaemoĭ plotiny s atmosferoĭ].
Olovin, B.A., Stroitel'stvo i ekspluatatsiia gidrotekhnicheskikh sooruzheniĭ v Zapadnoĭ IAkutii (Construction and operation of hydraulic structures in West Yakutia) edited by P.I. Mel'nikov, Novosibirsk, Nauka, 1979, p.51-61, In Russian. 5 refs.
Earth dams, Soil freezing, Artificial freezing, Cooling systems, Permafrost bases, Air temperature, Frozen rock temperature, Heat transfer.

34-4156
Design and operation of tailing ponds. [Proektirovanie i ekspluatatsiia khvostovykh khozialstv].
Maul', V.K., Stroitel'stvo i ekspluatatsiia gidrotekhnicheskikh sooruzheniĭ v Zapadnoĭ IAkutii (Construction and operation of hydraulic structures in West Yakutia) edited by P.I. Mel'nikov, Novosibirsk, Nauka, 1979, p.62-65, In Russian.
Hydraulic structures, Earthwork, Tailings, Ponds, Embankments, Soil freezing, Ground ice, Permafrost beneath structures, Cold weather operation.

34-4157
Structural interpretation of thawing ground compressibility. [Strukturnaia interpretatsiia szhimaemosti ottaivaiushchego grunta].
Gur'ianov, I.E., Stroitel'stvo i ekspluatatsiia gidrotekhnicheskikh sooruzheniĭ v Zapadnoĭ IAkutii (Construction and operation of hydraulic structures in West Yakutia) edited by P.I. Mel'nikov, Novosibirsk, Nauka, 1979, p.65-84, In Russian. 21 refs.
Soil mechanics, Frozen ground, Cryogenic structures, Cryogenic textures, Porosity, Ground thawing, Compressive strength, Deformation.

34-4158
Glacial stratigraphy of Koillismaa and North Kainuu, Finland.
Aario, R., et al, *Fennia*, 1979, 157(2), p.1-49, Refs. p.45-46.
Forsström, L.
Glacial deposits, Sediments, Stratigraphy, Glacier flow, Glacier beds, Landforms, Glacier surveys, Paleoclimatology.

34-4159
Forms created by the thermal movement of lake ice in Finland in winter 1972-73.
Alestalo, J., et al, *Fennia*, 1979, 157(2), p.51-92.
Häikiö, J.
Lake ice, Ice thermal properties, Thermodynamics, Pressure ridges, Shore erosion, Shoreline modification, Ice surface, Water level, Climatic changes.

34-4160
Critical survey of the application of borehole logging techniques to the study of sea ice.
Laidley, T.E., *Memorial University of Newfoundland. Centre for Cold Ocean Resources Engineering. C-CORE publication*, Apr. 1980, 80-4, 45p., 33 refs.
Boreholes, Sea ice, Recording, Ice physics, Ice mechanics, Ice composition, Tensile properties, Stresses, Pressure ridges, Fracturing, Rock mechanics.

34-4161
Physical hydraulic model study of an ice-covered river.
Johnson, R.P., et al, Specialty Conference on Computer and Physical Modeling in Hydraulic Engineering, Chicago, Ill., Aug. 6-8, 1980. Proceedings. Edited by G. Ashton, New York, American Society of Civil Engineers 1980, p.431-440, 4 refs.
Kotras, T.V.
River ice, Icebound rivers, Ice navigation, Ice mechanics, Ice physics, Hydraulic structures, Impact strength, Ice jams, Ice control, Models.

34-4162
National handbook of recommended methods for water-data acquisition. Chapter 9. Snow and ice. Reston, Va., U.S. Geological Survey, 1977, 34p., Refs. passim.
Snow hydrology, Snow water content, Glacial hydrology, Permafrost hydrology, Ice cover, Remote sensing, Laboratory techniques, Measuring instruments, Snowfall, Snowmelt, Meteorological data.

34-4163
Seasonal variations of soil formation in the Lake Baykal area. [Osobennosti sezonnoĭ dinamiki pochvoobrazovaniia v Pribaĭkal'e].
Snytko, V.A., et al, Pochvy Irkutskoĭ oblasti, ikh ispol'zovanie i melioratsiia (Soils of the Irkutsk region, their use and melioration) edited by V.A. Kuz'min, Irkutsk, 1979, p.36-48, In Russian. 7 refs.
Sazonov, A.G., Grudinina, N.A.
Soil formation, Podsol, Cryogenic soils, Soil freezing, Frost penetration, Soil water migration, Soil chemistry, USSR—Baykal Lake.

34-4164
Problems in rational utilization of natural resources and environmental control in North Siberia. [Problemy ratsional'nogo prirodopol'zovaniia i kontrolia kachestva prirodnoĭ sredy Severa Sibiri].
Cherskiĭ, N.V., ed, Yakutsk, SO AN SSSR, 1979, 158p., In Russian. For selected papers see 34-4165 through 34-4175. Refs. passim.
Tundra, Forest tundra, Taiga, Swamps, Cryogenic soils, Vegetation, Human factors, Soil erosion, Permafrost transformation, Environmental protection.

34-4165
Studying the biosphere of North Siberia for environmental protection. [Ob izuchenii biosfery Severa Sibiri v interesakh prirodookhrany].
Luchitskiĭ, I.V., et al, Problemy ratsional'nogo prirodopol'zovaniia i kontrolia kachestva prirodnoĭ sredy Severa Sibiri (Problems in rational utilization of natural resources and environmental control in North Siberia) edited by N.V. Cherskiĭ, Yakutsk, SO AN SSSR, 1979, p.3-19.
Cherskiĭ, N.V., Vozin, V.F.
Environmental protection, Forestry, Mining, Petroleum industry, Forest tundra, Taiga.

34-4166
Influence of water management practices on environments of the North. [Voprosy vliianiia vodokhoziaistvennykh meropriiatiĭ na okruzhaiushchuiu sredu v raĭonakh Severa].
Voropaev, G.V., Problemy ratsional'nogo prirodopol'zovaniia i kontrolia kachestva prirodnoĭ sredy Severa Sibiri (Problems in rational utilization of natural resources and environmental control in North Siberia) edited by N.V. Cherskiĭ, Yakutsk, SO AN SSSR, 1979, p.20-27, In Russian.
Mining, Petroleum industry, Water supply, Permafrost hydrology, Environmental protection, Engineering geology.

34-4167
Formulating mathematical models for studying the effects of human activity on the atmosphere in industrial regions. [Printsipy postroeniia matematicheskikh modeleĭ dlia izucheniia vliianiia deiatel'nosti cheloveka na atmosferu v promyshlennykh raĭonakh].
Marchuk, G.I., et al, Problemy ratsional'nogo prirodopol'zovaniia i kontrolia kachestva prirodnoĭ sredy Severa Sibiri (Problems in rational utilization of natural resources and environmental control in North Siberia) edited by N.V. Cherskiĭ, Yakutsk, SO AN SSSR, 1979, p.28-37, In Russian.
Penenko, V.V.
Economic development, Human factors engineering, Air pollution, Environmental protection, Mathematical models.

34-4168
Present state and prospects for studying protection of marine environments in the Arctic. [Sostoianie i perspektiva issledovaniĭ po okhrane morskoĭ sredy Arktiki].
Treshnikov, A.F., Problemy ratsional'nogo prirodopol'zovaniia i kontrolia kachestva prirodnoĭ sredy Severa Sibiri (Problems in rational utilization of natural resources and environmental control in North Siberia) edited by N.V. Cherskiĭ, Yakutsk, SO AN SSSR, 1979, p.38-45, In Russian.
Air pollution, Water pollution, Environmental protection, Arctic Ocean.

34-4169
Siberian forests and their rational development. [Lesa Sibiri i ikh ratsional'noe osvoenie].
Isaev, A.S., et al, Problemy ratsional'nogo prirodopol'zovaniia i kontrolia kachestva prirodnoĭ sredy Severa Sibiri (Problems in rational utilization of natural resources and environmental control in North Siberia) edited by N.V. Cherskiĭ, Yakutsk, SO AN SSSR, 1979, p.46-59, In Russian.
Pozdniakov, L.K., Shcherbakov, I.P.
Forest tundra, Taiga, Forestry, Cryogenic soils, Economic development, Environmental protection.

34-4170
Stability of tundra ecosystems in North Siberia. [Ustoichivost' tundrovykh ekosistem v usloviiakh Severa Sibiri].
Bol'shakov, V.N., et al, Problemy ratsional'nogo prirodopol'zovaniia i kontrolia kachestva prirodnoĭ sredy Severa Sibiri (Problems in rational utilization of natural resources and environmental control in North Siberia) edited by N.V. Cherskiĭ, Yakutsk, SO AN SSSR, 1979, p.60-66, In Russian.
Danilov, N.N.
Tundra, Forest tundra, Cryogenic soils, Permafrost hydrology, Plant ecology, Ecosystems.

34-4171
Geological aspects of use and protection of environments in northern West Siberia related to the development of oil and gas deposits. [Geologicheskie aspekty ratsional'nogo ispol'zovaniia i okhrany okruzhaiushchet sredy Severa Zapadnoĭ Sibiri v sviazi s osvoeniem neftianykh i gazovykh mestorozhdeniĭ].
Sergeev, E.M., et al, Problemy ratsional'nogo prirodopol'zovaniia i kontrolia kachestva prirodnoĭ sredy Severa Sibiri (Problems in rational utilization of natural resources and environmental control in North Siberia) edited by N.V. Cherskiĭ, Yakutsk, SO AN SSSR, 1979, p.95-103, In Russian.
Trofimov, V.T., Baulin, V.V.
Tundra, Forest tundra, Taiga, Environmental protection, Petroleum industry, Soil erosion, Permafrost transformation.

34-4172
Mining effect on natural environments. [Vliianie gornodobyvaiushchet promyshlennosti na okruzhaiushchuiu sredu].
Shemiakin, E.I., Problemy ratsional'nogo prirodopol'zovaniia i kontrolia kachestva prirodnoĭ sredy Severa Sibiri (Problems in rational utilization of natural resources and environmental control in North Siberia) edited by N.V. Cherskiĭ, Yakutsk, SO AN SSSR, 1979, p.104-111, In Russian.
Mining, Environmental protection, Tundra, Forest tundra, Taiga.

34-4173
Changes in geocryological conditions of economically developing areas in the North. [Izmenenie geokriologicheskikh obstanovok na osvaivaemykh territoriiakh Severa].
Shvetsov, P.F., et al, Problemy ratsional'nogo prirodopol'zovaniia i kontrolia kachestva prirodnoĭ sredy Severa Sibiri (Problems in rational utilization of natural resources and environmental control in North Siberia) edited by N.V. Cherskiĭ, Yakutsk, SO AN SSSR, 1979, p.112-120, In Russian. 5 refs.
Bobov, N.G.
Economic development, Soil erosion, Permafrost transformation, Environmental protection.

34-4174
Environmental protection in North Siberia. [Okhrana prirody Severa Sibiri].
Gerasimov, I.P., Problemy ratsional'nogo prirodopol'zovaniia i kontrolia kachestva prirodnoĭ sredy Severa Sibiri (Problems in rational utilization of natural resources and environmental control in North Siberia) edited by N.V. Cherskiĭ, Yakutsk, SO AN SSSR, 1979, p.122-138, In Russian.
Geocryology, Permafrost hydrology, Permafrost transformation, Thermokarst, Human factors, Environmental protection.

34-4175
Effect of human activities on the vegetational cover of Taymyr. [Antropogennye vozdeistviia na rastitel'nyĭ pokrov Taimyra].
Shchelkunova, R.P., Problemy ratsional'nogo prirodopol'zovaniia i kontrolia kachestva prirodnoĭ sredy Severa Sibiri (Problems in rational utilization of natural resources and environmental control in North Siberia) edited by N.V. Cherskiĭ, Yakutsk, SO AN SSSR, 1979, p.139-152, In Russian. 18 refs.
Tundra, Forest tundra, Cryogenic soils, Vegetation, Human factors, Soil erosion, Permafrost transformation, Environmental protection, USSR—Taymyr Peninsula.

34-4176
Forecasts and calculations of hydrometeorological elements of northern seas. [Prognozy i raschety gidrometeorologicheskikh elementov severnykh morej].
Terziev, F.S., ed, *Leningrad. Arkticheskiĭ i antarkticheskiĭ nauchno-issledovatel'skiĭ institut. Trudy*, 1980, Vol.348, 140p., In Russian. For selected papers see 34-4177 through 34-4185. Refs. passim.
Shores, Wind velocity, Wind direction, Air temperature, Sea ice, Ice conditions, Drift, Ice edge, Radar photography, Weather forecasting, Mathematical models, Arctic Ocean.

34-4177
Results of scientific investigations of the Murmansk branch of the Arctic and Antarctic Scientific Research Institute during 1972-1976. [Nekotorye itogi nauchno-issledovatel'skoĭ raboty Murmanskogo filiala AANII za 1972-1976 gg.].
Terziev, F.S., *Leningrad. Arkticheskiĭ i antarkticheskiĭ nauchno-issledovatel'skiĭ institut. Trudy*, 1980, Vol.348, p.6-12, In Russian. 18 refs.
Hydrology, Meteorology, Weather forecasting, Wind velocity, Air temperature, Ice conditions, Drift, Research projects, Arctic Ocean.

34-4178
Surge lowering of levels in the Barents and White seas. [Sgonnye ponizheniia urovnia na Barentsovom i Belom moriakh].
Potanin, V.A., et al, *Leningrad. Arkticheskiĭ i antarkticheskiĭ nauchno-issledovatel'skiĭ institut. Trudy*, 1980, Vol.348, p.13-20, In Russian. 10 refs.
Denisov, V.V.
Sea level, Storms, Tides, Shore erosion, Atmospheric disturbances, Wind velocity, Weather forecasting, Ice conditions, Ice forecasting.

34-4179
Calculating regime characteristics of surge waves from standard wind field data. [Raschet rezhimnykh kharakteristik voln zybi po tipovym poliam vetra].
Dzheniuk, S.L., *Leningrad. Arkticheskiĭ i antarkticheskiĭ nauchno-issledovatel'skiĭ institut. Trudy*, 1980, Vol.348, p.21-29, In Russian. 5 refs.
Ocean currents, Ocean waves, Wind velocity, Wind direction, Weather forecasting, Meteorological charts.

34-4180
Computer analysis of radar ice cover survey data. [Obrabotka rezul'tatov radiolokatsionnoĭ s"emki ledianogo pokrova na EVM].
Zubakin, G.K., et al, *Leningrad. Arkticheskiĭ i antarkticheskiĭ nauchno-issledovatel'skiĭ institut. Trudy*, 1980, Vol.348, p.30-34, In Russian. 4 refs.
Zuev, A.N., Malorov, O.N.
Sea ice, Drift, Radar photography, Ice reporting, Ice forecasting.

34-4181
Calculating geometric characteristics of ice cover. [K raschetu geometricheskikh kharakteristik ledianogo pokrova].
Zubakin, G.K., et al, *Leningrad. Arkticheskiĭ i antarkticheskiĭ nauchno-issledovatel'skiĭ institut. Trudy*, 1980, Vol.348, p.35-40, In Russian. 6 refs.
Petrukovich, V.I.
Hydraulic structures, Sea ice, Ice loads, Drift, Ice navigation, Ice cover thickness, Polynyas, Ice cover strength.

34-4182
Ice balance of the Danish Strait during anomalous glaciation years. [Ledovyĭ balans Datskogo proliva v anomal'nye po ledovitosti gody].

Gravimetric prospecting, Gravity, Ice sheets, Antarctica—Vostok Station.
Gravity connections to Vostok have been made through two routes, one from Mirnyy and the other from McMurdo. These ties are of general interest for gravimetric studies in Antarctica, because they provide a direct airborne link between the stations upon which two major gravitational networks (American and Soviet) are based. These ties are examined in some detail. (Auth.)

Kurtz, D.D., Domack, E.W., Balshaw, K.M.
Marine geology, Glacial deposits, Sediments, Ice shelves, Cores, Ross Sea, Weddell Sea, Antarctica—Ross Sea.
Continental shelf deposits recently cored in the Weddell Sea, Ross Sea, and the George V region of Antarctica show three types of sediment. Type 1 sediments are massive, poorly sorted, and textually and mineralogically homogeneous downcore; they are unfossiliferous or contain reworked fossils, lack a preferred pebble orientation, and are overconsolidated. They are interpreted as being basal tills. Type 2 sediments are crudely stratified, contain a sorted mud fraction, are texturally and mineralogically heterogeneous downcore, contain distinctive microfossil assemblages, are typically normally compacted, and have a horizontal pebble fabric. Type 3 sediments are similar to Type 2 sediments except that they are depleted in silt and clay and contain a moderately sorted sand fraction. Both Type 2 and Type 3 sediments are deposited from floating ice and reflect the action of marine currents. Distributions of these deposits on the antarctic continental shelf can be related to former glaciologic and marine conditions. (Auth. mod.)

Snow melting, Snow erosion, Channels (waterways), Meltwater, South Shetland Islands.
This paper re-examines the geomorphological role of meltwater derived from snow patches in the light of observations made during the break up of snow cover on Byers Peninsula in 1976. The object is to draw attention to the erosive capacity of snow melt and the fact that channels created by this action can show similar morphological characteristics to those commonly ascribed to a fluvioglacial origin. These include the crossing of local topographic divides and commencement in the middle of slopes. (Auth.)

Leggett, D.C., Martel, C.J.
Waste treatment, Water treatment, Waste disposal, Vaporizing.
A prototype overland flow land treatment system was studied to determine its effectiveness in reducing the levels of volatile trace organics in municipal wastewater. Chlorinated primary wastewater, water collected from the surface at various points downslope and runoff were analyzed by GC/MS, using a purge and trap sampler. Results indicated that efficient removal of a number of volatile substances including chloroform and toluene can be achieved by this method of treatment. Loss of these substances was found to follow first order kinetics. The observed behavior is consistent with a volatilization process.

Snow strength, Bearing strength, Foundations, Stresses, Snow cover stability, Snow surveys.
In 1977, DEW Line station DYE-3 on the Greenland Ice Cap was moved sideways 210 ft (64 m) onto a new undistorted foundation. When this life extension concept was proposed, abrupt failure of the supporting snow was a major concern. Snow samples were obtained and strength tested at CRREL to determine the chance of an abrupt failure of the supporting snow. Model studies were also performed to determine the bearing capacity of the snow, and predictions were made of foundation settlement during the move. The results indicated that the move could be accomplished safely.

Sea ice, Test equipment, Ice loads, Bearing strength, Scale effect.

34-4252
Simplified method of calculating frozen rock heating by an electromagnetic field, allowing for phase transformations. [Uproshchennyĭ raschet nagreva merzlykh porod elektromagnitnym polem s uchetom fazovogo perekhoda],
Rikenglaz, L.E., et al, *Russia. Ministerstvo vysshego i srednego spetsial'nogo obrazovaniia. Izvestiia vysshikh uchebnykh zavedeniĭ. Gornyĭ zhurnal*, 1980, No.4, p.15-17, In Russian.
Shonin, O.B.
Earthwork, Excavation, Frozen ground, Artificial thawing, Electric heating.

34-4253
More precise definitions and additions to the "Instructions for determination of the SN 435-72 design hydrologic characteristics" (Discussion of Construction Norms).
Kagan, B.IA., *Hydrotechnical construction*, 1979, No.12, p.1223-1226, Translated from Gidrotekhnicheskoe stroitel'stvo. 4 refs.
Building codes, Standards, Hydrology, Flood forecasting, Meltwater, Ground water, Ground thawing, Stream flow, Drainage.

34-4254
Possible relationships between changes in global ice volume, geomagnetic excursions, and the eccentricity of the Earth's orbit.
Rampino, M.R., *Geology*, Dec. 1979, 7(12), p.584-587, 34 refs.
Ice volume.
A possible relationship between major changes in global ice volume, geomagnetic variations, and short-term climate cooling has been investigated through a study of climate and geomagnetic records of the past 400,000 yr. Calculations suggest that redistribution of the Earth's water mass can cause rotational instabilities that lead to magnetic excursions; these magnetic variations in turn may lead to rapid coolings through several proposed mechanisms. Such double coincidences of magnetic excursions and sudden cooling and glacial advance at times of major ice-volume changes have occurred at about 13,500, 30,000, 110,000, and 180,000 B.P. The last four and possibly five times of maximum eccentricity of the Earth's orbit were closely followed by magnetic excursions; catastrophic cooling and rapid ice buildup accompanied several of these excursions. Thus, Milankovitch cycle parameters may lead to glaciation through both insolation changes and geomagnetic effects on climate. Although most of the supporting evidence for the hypothesis is taken from Northern Hemisphere events, coinciding sea temperature declines and extinction of a diatom in sub-Antarctic regions provide further supporting evidence.

34-4255
National Environmental Satellite Service catalog of products, third edition.
Dismachek, D C., comp, *U.S. National Oceanic and Atmospheric Administration. Technical memorandum*, Apr. 1980, NESS 109, 120p., For the 1977 edition see 32-24. 30 refs.
Booth, A.L., comp, Leese, J.A., comp.
Remote sensing, Spacecraft, Data processing.
This volume describes all the currently available operational products of the National Environmental Satellite Service (NESS). It is an update of the (1977) National Environmental Satellite Service Catalog of Products. A Product is defined as any item routinely produced and available for applications within the environmental sciences. These range from photographic displays, charts, and teletype messages to the raw alphanumeric data available on computer disk and tape. A brief description of the product, its known accuracies (when applicable), a list of primary users, and an example of the product are given; a summary table of products can be found at the end of this volume for quick reference. Data for Antarctica, derived almost exclusively from satellite observations, and sea ice charts for the Southern Oceans are included among NESS products.

NOTE

This is a companion issue to Vol. 34, Pt.1. The latter contains the full bibliographic citations referred to in the author and subject indexes included in this issue. In the author index principal and joint personal and corporate authors are listed along with the title, date, pagination, and language of the document and the accession number. The subject index is composed of three basic elements: 1) terms taken from a controlled vocabulary based on the *Thesaurus of Engineering and Scientific Terms* (LEX-E-JC), 2) free terms added as needed, 3) geographic names, generally entered under countries. The terms are listed in a single alphabetical arrangement, along with title (original, translated, abridged, expanded, or supplied), principal author, date, pagination, and language of pertinent documents, and their accession numbers.

When ordering this publication, both Parts 1 and 2 should be ordered, as they are complementary.

AUTHOR INDEX

Suppression of river ice by thermal effluents [1979, 23p., eng] 34-2283

Ashworth, T.
Adhesion of ice to concrete surfaces--preliminary results [1979, p.23-29, eng] 34-54
Investigations of the basic forces involved in the adhesion of ice to highway surfaces [1979, 109p., eng] 34-2166

Asmolov, V.A.
Testing ice-bound columnar piles for horizontal loads [1979, p.42-43, rus] 34-1717

Assel, R.A.
Summary of Great Lakes weather and ice conditions, winter 1977-78 [1979, 123p., eng] 34-4075

Assur, A.
Some promising trends in ice mechanics [1980, p.1-15, eng] 34-3728

Astafeev, A.M.
Structural design of steel power line supports for northern regions [1980, p.49-52, rus] 34-2576

Astashev, V.M.
Heating cables for electric warming of joints and situ-cast concrete structures [1979, p.10-12, rus] 34-1432

Atherton, D.L.
Optimized linear variable differential transformer displacement transducer for cryogenic use [1980, p.759-[illegible] 34-3[illegible]

Atlasov, V.G.
Dehydration of nonmetalliferous construction materials at low temperatures [1980, 70p., rus] 34-3874

Atwater, B.K.
Canadian Arctic field survey, May 17-June 23, 1969 [1969, 35p. + appends., eng] 34-322

Austin, J.A., Jr.
Model for traffic delay and its convenience and wage costs [1979, p.57-60, eng] 34-59

Australia. Department of Science. Antarctic Division
Extract from the annual report: Antarctic Division 1978-79 [1979, 23p., eng] 34-2992

Autenboer, T. van
Glacier discharge in the Sör-Rondane, a contribution to the mass balance of Dronning Maud Land, Antarctica [1978, p.1-16 + map, eng] 34-661

Avdeev, G.K.
Winter testing of thermal properties of plastic mobile houses [1969, p.89-92, rus] 34-4051

Avdeeva, V.I.
Causes of the values of winter pressure of ground on walls of solid-bottom sluice chambers, exceeding the design values [1979, p.98-105, rus] 34-2049

Avdiushin, S.I.
Method and instruments for measuring snow water reserves in mountains based on cosmic ray records [1980, p.94-101, rus] 34-3552

Aver'ianov, V.G.
Glaciation of Antarctica (study results and prospects) [1978, p.154-163, eng] 34-1414
Heat exchange between ice cover and atmosphere in East Antarctica [1979, p.91-96, rus] 34-2215
Long-term accumulation characteristics at Vostok Station, Antarctica [1978, p.93-99, rus] 34-1298
Mass and energy exchange between the ice sheet of Antarctica and the atmosphere [1979, p.189-202, eng] 34-2374
Moisture balance in the system Antarctic ice sheet surface-atmosphere [1979, p.209-211, rus] 34-2210

Averill, D.W.
Vacuum sewer systems for northern applications [1974, p.258-286, eng] 34-1478

Avetikian, IU.A.
Use of AC current surveys in permafrost studies [1980, p.43-56, eng] 34-3236

Awano, S
Axial flow wind air-turbine NU-102 with electric eddy-current brake [1979, 57p., eng] 34-2157

Azbel', L.I.
Making haydite foam concrete for wall panels [1979, p.21-22, rus] 34-1252

Azevedo, W.V.
Heating bridge decks by electrical resistance [1979, p.159-168, eng] 34-76

Aziz, K.
In-situ burning of the products of a subsea blowout [1977, 48p. + appends., eng] 34-488

Az'muka, T.I.
Possible changes in thermal conditions due to land reclamation [1979, p.8-25, rus] 34-3076

Babenko, I.D.
Thermoinsulative properties of lightweight concrete external wall panel joints in buildings of the series II-57 and II-60 [1969, p.29-35, rus] 34-4050

Babichev, Z.V.
Design of pile foundations for the Tobol'sk petrochemical complex [1979, p.16-17, rus] 34-334

Babin, A.V.
Temperature regime of snow covering attic roofs [1978, p.137-144, rus] 34-3917

Babintseva, R.M.
Ecologic fundamentals of forestry in the Lake Baykal Basin [1979, p.52-57, rus] 34-4093

Babkov, V.F.
Highway design. Pt. 2 [1979, 407p. (Pertinent p.230-344), rus] 34-3600
Roads in Finland [1980, p.28-30, rus] 34-3954

Bacon, R.J.
Snowblower discharge guide and control arrangement therefor [1978, 6 col., eng] 34-280

Bacri, J.C.
Ultrasonic study in supercooled water to -26C [1979, p.L/403-L/405, fre] 34-2861

Badakhov, Kh.I.
Energy required for the formation of liquid spherical layers on globular nuclei and thermodynamic equilibrium conditions of ice-water-vapor systems [1979, p.27-34, rus] 34-607
Thickness of fluid film on ice crystal surfaces [1980, p.57-66, rus] 34-3419

Badalian, R.G.
Compression creep of sagging ground [1976, p.256-267, rus] 34-3214
Shearing creep of clay soils due to vibration [1976, p.117-127, rus] 34-3205
Skeleton creep of weak water-saturated clay soils [1976, p.268-277, rus] 34-3215

Badu, Yu.B.
[illegible]erature of Gydan Peninsula permafrost [1980, p.102-[illegible], rus] 34-2765

Bagov, M.M.
Data units for telemetering physical and mechanical properties of snow cover on slopes [1980, p.67-74, rus] 34-3420
Snow and avalanche loads on remote-control snow surveying installations [1980, p.75-81, rus] 34-3421
Using gamma logging for snow density measurement on mountain slopes [1980, p.82-86, rus] 34-3422

Bagrov, B.O.
Optimal properties of cellular concrete with alkaline slag cement [1979, p.45-47, rus] 34-332

Baiderin, V.V.
Experimental modeling of ecological consequences of winter recreation [1980, p.13-21, rus] 34-4143

Baidina, L.A.
Natural reforestation of conifers on dried areas of northern taiga in the Arkhangel'sk region [1979, p.9-12, rus] 34-[illegible]

Baier, V.E.
Water repellant plasticizing admixtures for cements, grouts and concretes [1921, 125p., rus] 34-3615

Baker, B.
Automatic weather station for operating in severe icing climates [1979, p.734-738, eng] 34-699

Baker, D.J.
Polar atmosphere-ice-ocean processes: a review of polar problems in climate research [1980, p.525-543, eng] 34-3633

Baker, M.C.
Introduction to the problem of cracks, movements and joints in buildings [1976, 8p., eng] 34-153
Recognition of joints in the system [1976, 9p., eng] 34-162

Baker, R.
Effect of prefreezing on the strength and deformation properties of granular soils [1979, p.31-42, eng] 34-2139

Baker, R.W.
Effect of crystal size and dispersed-solid inclusions on the activation energy for creep of ice [1979, p.179-194, eng] 34-2826

Bakhlov, A.S.
Hydrogeological conditions of Yelanskiy artesian basin (Transbaikal) [1979, p.53-58, rus] 34-717

Bakov, E.K.
First observations of fluctuations of Karabatkak Glacier, Tien Shan, under a new program [1979, p.165-170, rus] 34-3134
Velocity fields of the Kara-Batkak glacier [1980, p.3-21, rus] 34-4005

Bakus, G.J.
Effects of seasonability and variability of streamflow on near-shore coastal areas [1977, c.200p., eng] 34-623

Balabaev, F.G.
Mudflows in the Baykal Amur railroad area [1979, p.115-117, rus] 34-2898

Balabanov, A.P.
Determining aquifer permeability from electrical logs in West Siberia [1979, p.50-54, rus] 34-3482

Balabolin, V.G.
Classification of cryogenic structures in the aeration zone of peat deposits [1979, p.8-11, rus] 34-2131

Balakin, V.N.
Snow plow and loader DE-228 on a wheel undercarriage [1979, p.7-9, rus] 34-2692

Balandin, S.A.
Regularities governing plant distribution with respect to snow cover in the southeastern Chukotskiy Peninsula [1979, p.24-25, rus] 34-4221

Balbachan, I.P.
Borehole blasting at Baykal Amur railroad construction sites [1980, p.14-18, rus] 34-2637
Mechanism of blasting massive frozen ground [1979, p.32-34, rus] 34-1768
Present state and prospects of excavating frozen ground and permafrost [1980, p.16-19, rus] 34-3184
Slit blasting technique of trenching for the Baykal Amur railroad [1980, p.6-8, rus] 34-2850

Baldin, V.I.
De-icing system for hydro-pneumatic units [1974, 4 col., rus] 34-1224

Balduzzi, F.
Bearing capacity and frost [1972, p.384-388, ger] 34-2396

Baldwin, J.S.
Snow and ice removal from pavement using stored earth energy [1980, 72p., eng] 34-4081

Baliasnikov, G.G.
Deformation of stabilized, ice-saturated lumpy soil [1979, p.41-42, rus] 34-1154
Using frozen ground in earth dam construction [1979, p.92-96, rus] 34-806

Baliasova, E.L.
Determining the volume of measurements for calculating water permeability of active layers in swamps [1979, p.110-115, rus] 34-834
Reliability of experimental determination of basic hydrologic characteristics of swamps [1979, p.96-109, rus] 34-833

Balitskii, V.S.
Working with concrete (technology and organization) [1980, 350p., eng] 34-3190

Baliuchik, E.A.
Methods of studying experimental prestressed concrete spans of railroad bridges designed for the North [1979, p.54-70, rus] 34-3181
Sectional capping for columnar bridge piers of the Baykal Amur railroad [1980, p.10-12, rus] 34-2586

Ball, M.A.
Continuing advances with air cushion icebreaking [1977, p.105-132, eng] 34-208

Ballantyne, C.K.
Ice-dammed lakes: a critical review of their nature and behaviour [1976, 90p., eng] 34-1607
Patterned ground on an active medial moraine, Jotunheimen, Norway [1979, p.396-401, eng] 34-554

Balobaev, V.T.
Ground temperature variations during the economic development of the northern Amur River area [1979, p.74-88, rus] 34-1514
Reconstruction of paleoclimate from present day geothermal data [1980, p.1-12, eng] 34-3828

Balov, I.L.
Maximum permissible values of nonuniform settlement of agricultural buildings [1980, p.243-248, eng] 34-3368

Balshaw, K.M.
Glacial and glacial marine sediments of the antarctic continental shelves [1980, p.399-414, eng] 34-4189

Bandusiak, IU.M.
New drilling instrument for holes in frozen ground [1979, p.8-9, rus] 34-1187

Bankoff, S.G.
Crust behavior in simultaneous melting and freezing on a submerged flat plate [1978, 51p., eng] 34-1173

Banner, J.A.
Frost gauges and freezing gauges [1979, 18p., eng] 34-779
Use of long-term automatic time-lapse photography to measure the growth of frost blisters [1979, p.1632-1635, eng] 34-1457

Bannov-Baĭkov, IU.L.
Statistical structure of large-scale sea level oscillations in the high latitudes of the Northern Hemisphere [1979, p.23-30, eng] 34-1887

Baranakovskiĭ, A.S.
Standardizing the requirements for frost resistance of asphalt-concretes [1980, p.18-19, rus] 34-3760

Barannik, L.P.
Reforestation of coal mine tailings in the southern Kuzbass [1979, p.172-179, rus] 34-954

Baranov, G.I.
Modeling annual variations in ice conditions of the Arctic Basin [1979, p.48-56, rus] 34-1998

Baranov, I.IA.
Structure of the northern circumpolar permafrost region [1980, p.327-345, eng] 34-3849

Barbash, V.R.
Thermal regime of the Antarctic ice sheet along the flow line: ice divide-Vostok Station-Byrd Glacier [1979, p.86-95, rus] 34-3123
Workshop of the Glaciology Section and tutorial seminar, Zvenigorod, June 1979 [1979, p.5-29, rus] 34-3684

Barbashina, L.V.
Wear resistance of teeth of the E-652 bucket excavator [1974, p.219-223, rus] 34-398

Barber, F.G.
Variability of the tide at some sites in the Canadian Arctic [1980, p.30-37, eng] 34-3320
Bardunov, L.V.
Alpine mosses of South Siberia [1979, p.86-91, rus] 34-4088
Bardyshev, O.A.
Effectiveness of excavating machines used on the construction of the Baykal Amur railroad and the Surgut-Urengoy line [1980, p.6-8, rus] 34-4053
Improving construction equipment [1979, p.10-12, rus] 34-130
Performance of BTS-150 drills on construction sites of the Baykal Amur railroad [1979, p.26-27, rus] 34-1428
Barel, D.
Controls on decomposition and mineral release in wet meadow tundra—a simulation approach [1978, p.754-778, eng] 34-911
Phosphorus dynamics of wet coastal tundra soils near Barrow, Alaska [1978, p.516-536, eng] 34-909
Barendregt, R.W.
Slope recession in the Onefour Badlands, Alberta, Canada: an initial appraisal of contrasted moisture regimes [1979, p.224-229, eng] 34-1451
Barke, V.V.
Using distribution functions in calculating seasonal snow melting on slopes around the Dzhankuat glacier [1979, p.169-173, rus] 34-2199
Barker, W.R.
Improved drainage and frost action criteria for New Jersey pavement design—Phase III: Structural strength of pavements with open-graded bases [1979, c82p., eng] 34-2359
Barkley, S.A.
Controls on decomposition and mineral release in wet meadow tundra—a simulation approach [1978, p.754-778, eng] 34-911
Barmin, N.I.
Construction of situ-cast bored piles in Krasnoyarsk [1977, p.126-131, rus] 34-993
Barnes, J.C.
Snow-mapping experiment [1977, p.191-224, eng] 34-1492
Barnes, P.
Bathymetric and shoreline changes in northwestern Prudhoe Bay, Alaska [1977, p.7-13, eng] 34-691
Ice gouge obliteration and sediment redistribution event; 1977-1978, Beaufort Sea, Alaska [1979, 22p., eng] 34-1559
Barnes, W.D.
Battery for Arctic radio repeater systems [1979, 26p., eng] 34-2282
Baron, E.I.
Electropulse equipment for cleaning railroad cars [1979, p.8-9, rus] 34-2083
Barr, D.R.
Lake ice density in the environment—practical approaches to measurement and calculation [1979, p.15-24, eng] 34-723
Vegetation-snow relationships in Labrador [1979, p.1-25, eng] 34-4202
Barr, W.
Pingos of the Tuktoyaktuk area [1973, p.3-12, eng] 34-1296
Barrett, S.A.
Growth and decay of "Katie's floeberg" [1978, 34p., eng] 34-775
Barry, R.G.
Coastal environment of southern Baffin Island and northern Labrador-Ungava [1977, 166p., eng] 34-490
Glacial inception and disintegration during the last glaciation [1978, p.205-228, eng] 34-3722
Meteorology and climatology of the seasonal sea ice zone [1980, p.133-156, eng] 34-3628
Status and future of ice core data [1980, p.1-4, eng] 34-4021
Study of climatic effects on fast ice extent and its seasonal decay along the Beaufort-Chukchi coasts [1979, p.272-375, eng] 34-2683
Barsch, D.
Nature and importance of mass-wasting by rock glaciers in alpine permafrost environments [1977, p.231-245, eng] 34-3260
Shallow core drilling and bore-hole measurements in the permafrost of an active rock glacier near the Grubengletscher, Wallis, Swiss Alps [1979, p.215-228, eng] 34-1279
