FINAL REPORT

PROBABILITY AND STATISTICS FOR NAVAL
EXPERIMENTATION, EVALUATION, AND OPERATIONS

January 1, 1976 through September 15, 1979

Research Project conducted at the Department of Statistics,
Florida State University, supported by the Office of Naval
Research, Department of Navy. Principal Investigator:
Robert J. Serfling (now at Department of Mathematical
Sciences, Johns Hopkins University, Baltimore, Maryland
21218). Contract No.: N00014-76-C-0608.

1. Introduction

This research project was conducted under contract between the Office of Naval Research, Department of the Navy, and the Board of Regents of the State of Florida acting for the Florida State University, during the period January 1, 1976 through September 15, 1979.

The project dealt with a number of situations of random variation arising in Naval scientific experimentation, quality and reliability evaluation, and field operations. For important varieties of test statistics and estimators, the large-sample distribution theory and other convergence properties were worked out. New methodologies were developed, and the basic probability foundations were strengthened. Specifically, contributions were developed in the following areas:

- computation of error probabilities of test statistics in goodness-of-fit problems
- computation of confidence coefficients for confidence intervals based on robust and nonparametric estimators
- computation of asymptotic relative efficiencies of test statistics
- representation of complex statistics by approximate simpler forms
- properties of differentiable statistical functions
- properties of nonparametric density function estimators
- properties of nonparametric regression function estimators
- design of experiments
- use of Poisson approximation in reliability computations
- properties of sums of dependent variables

The technical reports produced are listed in Section 2, the publications in scholarly journals in Section 3, and the research personnel in Section 4.

4. Research Personnel Supported on the Project

Faculty: Robert J. Serfling, Principal Investigator
Ralph A. Bradley
Fred W. Leysieffer
J. H. Watts
P. E. Lin

Graduate Assistants:
D. Boos
M. Longnecker
C. Yeh
D. Brindley
K. F. Cheng
