The RELIABILITY ANALYSIS CENTER is a DoD Information Analysis Center, operated by IIT Research Institute under contract to the Rome Air Development Center, AFSC.

The Reliability Analysis Center (RAC) is a Department of Defense Information Analysis Center sponsored by the Defense Logistics Agency, managed by the Rome Air Development Center (RADC), and operated at RADC by IIT Research Institute (IITRI). RAC is charged with the collection, analysis and dissemination of reliability information pertaining to parts used in electronic systems. The present scope includes integrated circuits, hybrids, discrete transistors and diodes, microwave devices, optoelectronics, and selected nonelectronic parts employed in military, space and commercial applications.

In addition, a System/Equipment Reliability Corporate Memory (RCM) is also operating under the auspices of the RAC and serves as the focal point for the collection and analysis of all reliability-related information and data on operating and planned military systems and equipment.

Data are collected on a continuous basis from a broad range of sources including testing laboratories, device and equipment manufacturers, government laboratories, and equipment users, both government and nongovernment. Automatic distribution lists, voluntary data submittal, and field failure reporting systems supplement an intensive data solicitation program.

Reliability data documents covering most of the device types mentioned above are available annually from RAC. Also, RAC provides reliability consulting and technical and bibliographic inquiry services. See fully discussed at the end of this document.

PREFACE

This is the first of a series of maintainability data publications at the system/equipment level. Other volumes prepared by the Reliability Analysis Center consider reliability of digital microcircuits, discrete semiconductors (including optoelectronic and microwave), hybrids, linear and interface devices, memory/LSI devices, and nonelectronic parts.

The data presented in these reliability and maintainability publications are intended to complement such documents as MIL-HDBK-217, MIL-STD-883, MIL-STD-785, MIL-STD-470 and MIL-HDBK-472. The user is cautioned, however, that the data contained herein may not be used in lieu of contractually cited references.

INTRODUCTION

This equipment level maintainability compendium provides maintenance and repair time data on military electronic equipments at the subsystem, set, group and unit levels. Due to the possible sensitivity of the numerics presented in the publication, the identification of the equipment has been masked. Each equipment has been assigned an Equipment Identification number (EQUIP ID). This EQUIP ID is unique to an equipment, and it is used consistently throughout the publication.

Section 1 lists the definition of terms and the statistical methods used in the data analysis. Section 2 presents summarizations of the detailed maintainability data presented in Sections 3-4. Sections 3 and 4 present detailed listings of maintainability data in two different ways to assist the analyst in his search for data. In Section 3 the data are sorted by Category, Equip-ID and Data Type. This grouping permits the analyst to trace an equipment's maintainability characteristics through its life cycle. In Section 4 the data are sorted by Category, Data Type, and Equip ID. This grouping allows the analyst to make comparisons between equipments at various points in their life cycle. Section 5 is a detailed listing of program and contract related data. Section 6 presents technical characterization data on the equipment.

All data for this publication have been collected from industry and government agencies by the Reliability Analysis Center. Any additional information concerning this publication may be obtained by contacting the RAC directly.

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 1

DEFINITION OF TERMS AND STATISTICAL METHODS
USED IN THE DATA ANALYSIS

SECTION 1

DEFINITION OF TERMS AND STATISTICAL METHODS

USED IN THE DATA ANALYSIS

EQUIPMENT ID: Each equipment in the detailed listing is assigned a number for easy reference. These numbers are assigned sequentially as the data are entered into the computer. The number is unique for an equipment and consistent throughout the publication.

DATA ENTRY: One line or item of maintainability data, as described in the Usage Guides of Sections 3 and 4.

NUMBER OF ENTRIES: The quantity of maintainability data items listed under an equipment category, equipment type, or data type.

CATEGORY: Denotes the general functional purpose of the overall equipment. It is usually defined at the Set equipment level. The categories included in this document are:

- Radar
- Communications
- Computer
- Electronic Counter Measures/Electronic Warfare
- Controls and Display
- Guidance and Navigation
- Software
- Weapons
- Test Equipment

EQUIPMENT TYPE: Denotes the specific function of the detail equipment. It is usually defined at the Group or Unit equipment level. The equipment types included in this document are:

Power Supply	Multiplexer/Demultiplexer
Transmitter	Interconnection/Distribution
Receiver	Converter D/A or A/D
Transceiver	Filter
Antenna	Inertial Reference
Amplifier, Audio	Stellar Reference
Amplifier, RF	Frequency/Timing Generator
Amplifier, Video	Cooling/Pressurizing
Computer	Test Circuitry
Memory	Alarm
I/O Device	Signal/Data Processor
Indicator/Control	Miscellaneous
Modulator/Demodulator	Transducer
Coder/Decoder	

DATA TYPE: The source of the data described. The data types are:

Specified or Apportioned
Predicted
Demonstrated
Flight or Field Test
Operational
Other

PROGRAM PHASE: The phase of the equipment life cycle to which this data applies. The program phases are:

Development
Production
Operational

MAINTAINABILITY: The ability of an item, under stated conditions of use, to be retained in or restored to a state in which it can perform its required functions or to a specified condition, when maintenance is performed under stated conditions and using prescribed procedures and resources. Maintainability may, depending on the particular analysis situation, be stated by one or several maintainability characteristics.

MAINTAINABILITY PARAMETERS: Due to the variety of different characteristics addressed by maintainability, we have selected seven major maintainability parameters to adequately cover the scope of maintainability efforts. These seven major maintainability parameters are defined as follows:

a) Mean-Time-To-Repair (MTTR):

The statistical mean of the distribution of times to repair.

b) Mean Corrective Maintenance Time (M_{CT}):

The mean time required to complete a corrective maintenance action, i.e., the total maintenance downtime divided by total corrective maintenance actions, over a given period of time.

c) Maximum Corrective Maintenance Time (M_{MAX}):

The maximum time required to complete a specified percentage of all corrective maintenance actions.

Two different repair percentages, 90 and 95 percent, are commonly used relative to M_{MAX} . Therefore, our database distinguishes between:

- 1) M_{MAX} (95%) of all corrective maintenance actions.
- 2) M_{MAX} (90%) of all corrective maintenance actions.

d) Mean Preventive Maintenance Time (M_{PT}):

The mean (or average) equipment downtime required to perform scheduled preventive maintenance on the item, excluding any preventive maintenance time expended on the equipment during operation and excluding administrative and logistic downtime.

e) Maintenance Manhours per Flight Hour or per Operating Hour (MMH/
FH/Oper Hr):

The total number of maintenance manhours divided by the total number of aircraft flight hours or the total equipment operating hours, whichever is appropriate.

f) Mean Down Time (MDT):

The mean number of hours during which the item is not in condition to perform its intended function; includes active maintenance (preventive and corrective), supply downtime due to unavailability of needed items, and waiting and administrative time.

g) Built-In-Test Effectiveness (BIT Effect):

This is a measure of the effectiveness of the BIT capability incorporated within the equipment. It addresses both fault detection and fault isolation. The fault detection is concerned with both the BIT's ability to identify faults when they occur and also its ability to prevent indicating failures when they indeed do not exist; i.e., false alarms.

Fault isolation is defined in two tiers allowing progressively higher percentages of faults to be isolated to progressively larger groups of equipment items. For example: a) 50 percent of all faults isolated to 1 Line Replacement Unit (LRU); b) 95 percent of all faults isolated to 3 or less LRUs.

The BIT Effectiveness addresses both automated and non-automated BIT. Therefore, the database makes the following additional distinction:

1) BIT ON-LINE/AUTO:

On-Line or Automatic BIT refers to that capability available without operator intervention or assistance. A periodic automatically initiated, self-test mode would be an example of this capability.

2) BIT OFF-LINE/MANUAL:

Off-Line, Manual or Initiated BIT refers to that capability which may be available through the intervention or assistance of the operator. Manually switching the equipment into a self test operating mode or initiating additional diagnostic tape controlled sequences would be examples of off-line/manual capability.

FAULT DETECTION: The capability of the BIT features to detect and indicate a failure or failures within the equipment itself and/or associated equipments.

FAULT ISOLATION: The capability of the BIT features to subsequently locate and identify the specific hardware item responsible for the detected malfunction.

MAINTENANCE LEVELS: Divisions of maintenance, based on difficulty and requisite technical skill, in which jobs are allocated to organizations in accordance with the availability of personnel, tools, supplies, and time within the organization. Maintenance levels include suborganizational, organizational, intermediate, and depot. Within this report we address three maintenance levels:

a) Suborganizational Maintenance

This is emergency type maintenance performed on the equipment by the operator himself during the mission. For example: in-flight maintenance where possible.

b) Organizational Maintenance

This embraces the maintenance performed by the using organization on its own equipment.

c) Intermediate Maintenance

This is performed by designated maintenance activities in direct support of using organizations.

SAMPLE SIZE: The number of fault data samples from the test or the time period for which the numeric is calculated.

STATISTICAL METHODS

$$\text{Population Mean} = \frac{1}{\sum_i N_i} \sum_i N_i Y_i$$

where:

N_i = Sample Size used to calculate the specific maintainability numeric i

Y_i = Maintainability numeric i

$$\text{Population Standard Deviation (STD. Dev.)} = \left[\sum_i N_i (Y_i - \text{Population Mean})^2 \right]^{1/2}$$

MAINTAINABILITY PARAMETERS USED IN THIS REPORT: Given these various permutations of requirements, the database actually recognizes seventeen different maintainability parameters. Not every parameter is listed for each System/Subsystem/Set/Group/Unit but only those parameters which are applicable to that item. Thus the seventeen different Maintainability Parameters delineated in this report are:

- 1) MTTR SUBORGAN: Suborganizational MTTR
- 2) MTTR ORGAN: Organizational MTTR
- 3) MTTR INTER: Intermediate MTTR
- 4) M_{CT} SUBORGAN: Suborganizational Mean Corrective Time
- 5) M_{CT} ORGAN: Organizational Mean Corrective Time
- 6) M_{CT} INTER: Intermediate Mean Corrective Time
- 7) M_{MAX} (95%) SUBORGAN: Suborganizational Maximum Corrective Maintenance Time for 95 percent of all corrective maintenance actions
- 8) M_{MAX} (95%) ORGAN: Organizational Maximum Corrective Maintenance Time for 95 percent of all corrective maintenance actions
- 9) M_{MAX} (95%) INTER: Intermediate Maximum Corrective Maintenance Time for 95 percent of all corrective maintenance actions
- 10) M_{MAX} (90%) SUBORGAN: Suborganizational Maximum Corrective Maintenance Time for 90 percent of all corrective maintenance actions
- 11) M_{MAX} (90%) ORGAN: Organizational Maximum Corrective Maintenance Time for 90 percent of all corrective maintenance actions
- 12) M_{MAX} (90%) INTER: Intermediate Maximum Corrective Maintenance Time or 90 percent of all corrective maintenance actions
- 13) M_{PT} : Mean Preventive Maintenance Time
- 14) MMH/FH/OPER HR: Maintenance Manhours per Flight Hour or per Equipment Operating Hour
- 15) MEAN DOWN TIME: Mean Down Time
- 16) BIT ON-LINE/AUTO: Built-in-Test Effectiveness On-Line or Automated
- 17) BIT OFF-LINE/MANUAL: Built-in-Test Effectiveness Off-Line Manual or Initiated

THIS PAGE INTENTIONALLY LEFT BLANK

EQUIPMENT MAINTAINABILITY DATA

SECTION 2

MAINTAINABILITY SUMMARIZED DATA

EQUIPMENT SUMMARIZED DATA

The analyses and summaries of this section have been developed to give the reader a concise overview of various trends in the data. Every attempt has been made to present summaries which will be timely and meaningful to program managers and reliability and maintainability analysts.

This section includes summarized maintainability data.

THIS PAGE INTENTIONALLY LEFT BLANK

MAINTAINABILITY SUMMARIES

Introduction

The summarized maintainability data are presented to provide more meaningful insight into the different kinds of maintainability data that are available and the subtle distinctions between the various different maintainability parameters and maintainability data sources.

Analysis by Maintainability Parameter

Tables 1 through 20 present merged data summaries of the different maintainability parameters. The first six tables address MTTR and/or M_{CT} . Summaries are presented both at the equipment black box level and at the higher (system, subsystem, set, etc.) level.

Equipment or black box level is defined as any item which contains an equipment type (i.e., power supply, RF amplifiers, etc.) designator. Higher level is defined as any item which does not contain an equipment type designator. It is usually a group of items composed of a number of different equipment types and designated as a group, set, subsystem or system. The data are delineated by data source, i.e., specified/allocated, predicted, demonstrated, field test or field operation. The data entries for a given data type are further delineated by equipment category, i.e., radar, communications, etc.

The next six tables address M_{MAX} 90/95%. Summaries are presented at both the equipment black box level and at the higher level. The data are identified by data source and by equipment category also.

Table 13 addresses the Mean Preventive Maintenance Time at the higher level. The data are identified by data source and by equipment category also.

Tables 14 and 15 address maintenance manhours per flight hour or per operating hour. Summaries are presented both at the equipment black box level and at the higher level. The data are identified by data source and by equipment category.

Mean Down Time at the higher level is addressed by Table 16. At present, the only Mean Down Time Data is based on field operation.

Table 17 addresses the effectiveness of the built-in-test capability. It identifies the probability of fault detection and the probability of fault isolation both to a single module and to a group of three or less modules. The data are identified by data source.

Tables 18, 19 and 20 portray the distribution of the maintainability data presented in this databook.

Table 18 shows the data distribution by the application environment in which the equipment is to be utilized. As can be seen at present the vast majority of the maintainability data entries are for Airborne Equipment.

Table 19 shows the data distribution by the type of data recorded, such as specified or allocated, predicted, demonstrated, field test, field operation, etc. Approximately one half of the maintainability data at present are predicted values while an additional one fourth of the data entries are specified or allocated values.

Table 20 shows the data distribution by the specific parameter recorded, such as $MTTR/M_{CT}$, M_{MAX} , $MMH/FH/OPHR$, BIT Effectiveness, etc. The $MTTR/M_{CT}$ and M_{MAX} are further delineated by the different maintenance levels such as suborganizational, organizational and intermediate. At present organizational level $MTTR/M_{CT}$ data is the predominate parameter recorded with significant numbers of organizational M_{MAX} and $MMH/FH/OPHR$ data entries also.

Comparative Analysis

Figures 1 through 8 are scatter diagrams intended to present comparisons of a specific maintainability parameter for identical equipment from different data sources. The maintainability parameter utilized and the applicable data sources compared are:

- Fig. 1 Suborganizational $MTTR/M_{CT}$ predicted vs demonstrated
- Fig. 2 Suborganizational $MTTR/M_{CT}$ specified/allocated vs demonstrated
- Fig. 3 Suborganizational M_{MAX} 90/95% predicted vs demonstrated
- Fig. 4 Suborganizational M_{MAX} 90/95% specified/allocated vs demonstrated
- Fig. 5 Organizational $MTTR/M_{CT}$ predicted vs demonstrated
- Fig. 6 Organizational $MTTR/M_{CT}$ specified/allocated vs demonstrated
- Fig. 7 Organizational M_{MAX} 90/95% predicted vs demonstrated
- Fig. 8 Organizational M_{MAX} 90/95% specified/allocated vs demonstrated

In each case the data point is indicated by the specific Equipment ID number. In a few cases duplicate data points with the same ID number indicate the existence of duplicate tests or predictions.

EQUIPMENT MAINTAINABILITY DATA

SECTION 3

**DETAILED LISTINGS
MAINTAINABILITY COMPARISON DATA
BY EQUIPMENT CATEGORY**

DETAILED LISTINGS

BY CATEGORY AND EQUIPMENT ID

Section 3 contains detailed listings of maintainability data contained in the RCM automated database. Included are maintainability numerics experienced during field operation, simulated operation and demonstration tests. Also included are specified, allocated and predicted maintainability numerics.

Entries in this section are organized first by category and by maintainability parameter, then by equipment identification number and data type. The data are organized in this manner so that the reader may readily observe the maintainability growth of the equipment.

A complete explanation of the terms and abbreviations used in the detailed listings may be found in the Usage Guide, pages 3-3 to 3-5.

THIS PAGE INTENTIONALLY LEFT BLANK

USAGE GUIDE

The description given below applies to the computer listings of this section. The circled numbers shown in the sample tabulation form below refer to the explanatory text that follows. A few minutes familiarizing oneself with the information supplied below will aid user interpretation of the data contained herein.

CATEGORY ①		COMMUNICATIONS										DATA TYPE ②				SPECIFIED/ALLOCATION		REMARKS ⑬	
EQUIP ID		PROG	MAINT	EQ	START	END	FAULT	FALSE	FAULT ISOLATE	MAINT	SAMPLE								
ID		PHASE	PARAM	TYPE	DATE	DATE	DETECT	ALARM	LRU	YLRU	NUMERIC	SIZE							
①	④	⑤	⑥	⑦	⑧	⑨	⑩	⑪	⑫	⑬	⑭	⑮							

① CATEGORY. Denotes the general functional purpose of the overall equipment as usually defined at the Set equipment level.

② MAINT PARAM. Maintainability Parameter. Identifies the specific parameter for which this data is a measure. The codes for MAINT PARAM are:

1	MTTR Suborganizational	10	M _{MAX} (90%) Suborganizational
2	MTTR Organizational	11	M _{MAX} (90%) Organizational
3	MTTR Intermediate	12	M _{MAX} (90%) Intermediate
4	M _{CT} Suborganizational	13	M _{PT}
5	M _{CT} Organizational	14	MMH/FH/OP HR
6	M _{CT} Intermediate	15	Mean Downtime
7	M _{MAX} (95%) Suborganizational	16	BIT ON-LINE/AUTO
8	M _{MAX} (95%) Organizational	17	BIT OFF-LINE/MANUAL
9	M _{MAX} (95%) Intermediate		

③ EQUIP ID. The unique identifier assigned to an equipment.

④ PROG PHASE. Program Phase. The codes for Program Phase are:

- 1 Development
- 2 Production
- 3 Operational

⑤ EQ TYPE. Equipment Type. Denotes the specific functional purpose of the equipment as usually defined at the Group or Unit equipment level. The codes for EQ TYPE are:

01 Power Supply	15 Multiplexer/Demultiplexer
02 Transmitter	16 Interconnection/Distribution
03 Receiver	17 Converter D/A or A/D
04 Tranceiver	18 Filter
05 Antenna	19 Inertial Reference
06 Amplifier, Audio	20 Stellar Reference
07 Amplifier, RF	21 Frequency/Timing Generator
08 Amplifier, Video	22 Cooling/Pressurizing
09 Computer	23 Test Circuitry
10 Memory	24 Alarm
11 I/O Device	25 Signal/Data Processor
12 Indicator/Control	26 Miscellaneous
13 Modulator/Demodulatory	27 Transducer
14 Coder/Decoder	

⑥ DATA TYPE. The source of the maintainability data. The codes for DATA TYPE are:

01 Specified or Apportioned	04 Flight or Field Test
02 Predicted	05 Operational
03 Demonstrated	06 Other

⑦ START DATE. Start date of test or period of concern (MMYY).

⑧ END DATE. End data of test or period of concern. If the start and end dates of the test are unknown, then the date on the source documentation is coded in this field (MMYY).

- ⑨ FAULT DETECT. Applicable only when MAINT PARAM is 16 or 17. This field denotes the probability of detecting a given fault.
- ⑩ FALSE ALARM. Applicable only when MAINT PARAM is 16 or 17. This field denotes the probability of indicating a fault when none exists.
- ⑪ FAULT ISOLATE 1 LRU. Applicable only when MAINT PARAM is 16 or 17. This field denotes the probability of isolating a given fault to a single Line Replaceable Unit (LRU) or Shop Replaceable Unit (SRU).
- ⑫ FAULT ISOLATE X. Applicable only when MAINT PARAM is 16 or 17. This field denotes the LRU or SRU group size to which the probability listed in field FAULT ISOLATE LRUs applies.
- ⑬ FAULT ISOLATE LRUs. Applicable only when MAINT PARAM is 16 or 17. This field denotes the probability of isolating a given fault to X LRUs or SRUs.
- ⑭ MAINT NUMERIC. The numeric value, in hours, of the maintainability parameter. Applicable for all MAINT PARAM except 16 or 17.
- ⑮ SAMPLE SIZE. The number of maintenance actions on which the applicable numeric is based.
- ⑯ REMARKS. Any additional data or background information which may be pertinent to this maintenance activity.

EQUIPMENT MAINTAINABILITY DATA

SECTION 4

DETAILED LISTINGS
MAINTAINABILITY DATA BY
EQUIPMENT CATEGORY AND DATA TYPE

DETAILED LISTINGS

BY CATEGORY AND EQUIPMENT ID

Section 4 contains detailed listings of maintainability data contained in the RCM automated database. Included are maintainability numerics experienced during field operation, simulated operation and demonstration tests. Also included are specified, allocated and predicted maintainability numerics.

Entries in this section are organized first by category and data type. The data are organized in this manner that the reader may readily compare maintainability numerics at the equipment category level.

A complete explanation of the terms and abbreviations used in the detailed listings may be found in the Usage Guide, pages 4-3 to 4-5.

THIS PAGE INTENTIONALLY LEFT BLANK

USAGE GUIDE

The description given below applies to the computer listings of this section. The circled numbers shown in the sample tabulation form below refer to the explanatory text that follows. A few minutes familiarizing oneself with the information supplied below will aid user interpretation of the data contained herein.

MAINTAINABILITY COMPARISON DATA

CATEGORY ①		COMMUNICATIONS										MAINTAINABILITY PARAMETER ②				MTTR ORGAN	
EQUIP		PROG	EQ	DATA	START	END	FAULT	FALSE	FAULT	ISOLATE	MAINT	SAMPLE					REMARKS
ID		PMASK	TYPE	TYPE	DATE	DATE	DETECT	ALARM	LRU	SILENUS	NUMERIC	SIZE					③
①	④	⑤	⑥	⑦	⑧	⑨	⑩	⑪	⑫	⑬	⑭	⑮					

- ① CATEGORY. Denotes the general functional purpose of the overall equipment as usually defined at the Set equipment level.
- ② DATA TYPE. The source of the maintainability data.
- ③ EQUIP ID. The unique identifier assigned to an equipment.
- ④ PROG PHASE. Program Phase. The codes for Program Phase are:
- 1 Development
 - 2 Production
 - 3 Operational
- ⑤ MAINT PARAM. Maintainability Parameter. Identifies the specific parameter for which this data is a measure. The codes for MAINT PARAM are:

1 MTTR Suborganizational	7 M _{MAX} (95%) Suborganizational
2 MTTR Organizational	8 M _{MAX} (95%) Organizational
3 MTTR Intermediate	9 M _{MAX} (95%) Intermediate
4 M _{CT} Suborganizational	10 M _{MAX} (90%) Suborganizational
5 M _{CT} Organizational	11 M _{MAX} (90%) Organizational
6 M _{CT} Intermediate	12 M _{MAX} (90%) Intermediate

13 M_{PT}
14 MMH/FH/OP HR
15 Mean Downtime

16 BIT ON-LINE/AUTO
17 BIT OFFLINE/MANUAL

- ⑥ EQ TYPE. Equipment Type. Denotes the specific functional purpose of the detailed equipment as usually defined at the Group or Unit equipment level. The codes for EQ TYPE are:

01 Power Supply	15 Multiplexer/Demultiplexer
02 Transmitter	16 Interconnection/Distribution
03 Receiver	17 Converter D/A or A/D
04 Transceiver	18 Filter
05 Antenna	19 Inertial Reference
06 Amplifier, Audio	20 Stellar Reference
07 Amplifier, RF	21 Frequency/Timing Generator
08 Amplifier, Video	22 Cooling/Pressurizing
09 Computer	23 Test Circuitry
10 Memory	24 Alarm
11 I/O Device	25 Signal/Data Processor
12 Indicator/Control	26 Miscellaneous
13 Modulator/Demodulator	27 Transducer
14 Coder/Decoder	

- ⑦ START DATE. Start date of test or period of concern (MMYY).

- ⑧ END DATE. End date of test or period of concern. If the start and end dates of the test are unknown, then the date on the source documentation is coded in this field (MMYY).

- ⑨ FAULT DETECT. Applicable only when MAINT PARAM is 16 or 17. This field denotes the probability of detecting a given fault.

- ⑩ FALSE ALARM. Applicable only when MAINT PARAM is 16 or 17. This field denotes the probability of indicating a fault when none exists.

- ⑪ FAULT ISOLATE 1 LRU. Applicable only when MAINT PARAM is 16 or 17. This field denotes the probability of isolating a given fault to a single Line Replaceable Unit (LRU) or Shop Replaceable Unit (SRU).
- ⑫ FAULT ISOLATE X. Applicable only when MAINT PARAM is 16 or 17. This field denotes the LRU or SRU group size to which the probability listed in field FAULT ISOLATE LRUs applies.
- ⑬ FAULT ISOLATE LRUs. Applicable only when MAINT PARAM is 16 or 17. This field denotes the probability of isolating a given fault to X LRUs or SRUs.
- ⑭ MAINT NUMERIC. The numeric value, in hours, of the maintainability parameter. Applicable for all MAINT PARAM except 16 or 17.
- ⑮ SAMPLE SIZE. The number of maintenance actions on which the applicable numeric is based.
- ⑯ REMARKS. Any additional data or background information which may be pertinent to this maintenance activity.

EQUIPMENT DATA

SECTION 5

PROGRAM/CONTRACT
CHARACTERIZATION DATA

PROGRAM/CONTRACT CHARACTERIZATION DATA

Section 5 contains detailed listings of program and contract related data contained in the RCM automated database. Included are the following types of data, when known:

- Equipment Identification Numbers
- Contractor
- Procuring Agency
- Using Command
- Design Year
- Procurement Level
- Application
- Mission Length
- Type of Contract
- Procurement Type
- R- Financial Data
- Procurement Approach
- R&M Program Elements
- R&M Analysis and Predictions
- R&M Numerics
- Design Reviews
- Failure Reporting/Corrective Action
- R&M Demonstration
- Design Analysis
- Development Tests
- Production Inspections

Entries in this section are organized by Equipment Identification Number.

A complete description of the types of data that are considered when characterizing a program may be found in the Usage Guide, pages 5-3 to 5-9.

THIS PAGE INTENTIONALLY LEFT BLANK

USAGE GUIDE

The descriptions below apply to the computer listings in this section. The data presented are the types of data that are considered when characterizing a program.

Contract No.:	This field is masked for this publication.
System Nomenclature:	"
Subsystem Nomenclature:	"
Set Nomenclature:	"
Group Nomenclature:	"
Unit Nomenclature:	"
Prime Contractor:	"
Procuring Agency:	Indicates the agency that awarded the contract.
Using Command:	Indicates the command wherein the equipment will be deployed.
Procurement Level:	Lists the appropriate level of the equipment hardware to be delivered under the contract. The levels considered are: System Subsystem

Set
Group
Unit

Application:

The type of operational application environment. The applications considered are:

Space
Aircraft
Ground
Shipboard
Other

Mission Length:

The normal equipment operational mission length. The mission lengths considered are:

Continuous
>8 hours
 $1 \leq \text{hour} \leq 8$
<1 hour
Undefined

Life Cycle:

Lists all applicable life cycle phases covered by the contract, and the date of implementation of each respective phase. The phases considered are:

Concept
Validation
Development
Production
Deployment

Contract Type:

Lists the basic financial structure of the contract. The structures considered are:

Design to Cost
Reliability Warranty
Cost plus Fixed Fee
Cost plus Incentive Fee
Firm Fixed Price
Fixed Price plus Incentive Fee

Procurement Type:

Lists the principal type of procurement being made. The types considered are:

Existing Design (follow-on/minimum changes)
Modified Design (substantial changes)
New Design
Equipment Maintenance Only
(contractor maintenance of fielded equipment)

Reliability Financial Posture:

Lists any reliability financial posture. The areas considered are:

Incentive Award
Reliability Effort >5 per cent of total budget
Reliability Effort <5 per cent of total budget
Not Determined

Procurement Approach:

Indicates the approach used in procuring equipment. The approaches considered are:

Low Bidder

Minimum Total Life Cycle Cost

Minimum Maintenance Support Cost

Technological

R&M Program:

Identifies each required R&M specification, its applicable revision letter, and the extent to which it is specified. The specifications considered are:

MIL-STD-470

MIL-STD-471

MIL-HDBK-472

MIL-STD-756

MIL-STD-781

MIL-STD-785

MIL-HDBK-217

RADC Notebook, Volume II

The applicable compliance codes considered are:

Contractual: full compliance required to each and every detail of the document

Limited: specific deviations from the document are stated and allowed

Guide: specific compliance is not required; however, actions are to be patterned after the document

Not Applicable: not specified

R&M Analysis and Predictions:

Indicates all of the R&M analyses performed. The types of analyses considered are:

- R analysis and prediction per MIL-STD-756/Parts Stress Analysis
- M analysis and prediction per MIL-HDBK-472. Also listed is the method number
- R analysis and prediction based upon documentation other than MIL-STD-756/Parts Count (Example: MIL-HDBK-217, Section 3)
- Other formal M based upon documentation other than MIL-HDBK-472
- Informal R analysis and prediction based upon similarity or function. Limited documentation requirements.
- Informal M analysis and prediction based upon similarity or function. Limited documentation requirements.
- No R or M analysis or prediction required.

R&M Numerics:

Indicates the applicability of the R&M numerics. The levels considered are:

- Contractual reliability (MTBF, R, A, etc.)
- Contractual maintainability (M_{CT} , (MTTR, MMH/FH, etc.)

Reliability stated as design goal only

Maintainability stated as design goal only

No reliability or maintainability requirement

Design Reviews:

Lists the frequency and formality of required design reviews. The types considered are:

Two or more formal design reviews required

One formal design review required

Informal reviews only

No requirement

Failure Reporting/Corrective Action:

Lists the extent of required reporting procedures. The types considered are:

Formal failure reporting and closed loop (Corrective Action System required)

Formal failure reporting system (no closed loop corrective action system)

Informal failure reporting system (minimum documentation required)

No requirement

R&M Demonstration:

Indicates the R&M demonstration requirements. The requirements considered are:

Formal R demonstration test requirements in accordance with MIL-STD-781. Also listed are the test plan and test level.

Formal M demonstration test requirements in accordance with MIL-STD-471. Also listed is test method.

Other R demonstration test requirements

Other M demonstration test requirements

No requirement

Design Analysis:

Indicates all of the applicable types of design analyses specifically required by the contract. The analyses considered are:

FMEA/FMECA

Fault Tree Analysis

Worst-Case Electrical Design Analysis

Thermal Analysis

Other

Development Tests:

Indicates all of the R&M tests required during the development phase. The tests considered are:

Design qualification tests
Environmental qualification
tests
R growth tests
Competitive fly-off

Production Inspection:

Indicates all contractually
specified inspection method-
ology(ies). The methodolo-
gies considered are:

Sample incoming inspection
100 per cent acceptance test
Process screening
R verification per MIL-STD-
781

EQUIPMENT DATA

SECTION 6

EQUIPMENT CHARACTERIZATION DATA

EQUIPMENT CHARACTERIZATION DATA

Section 6 contains detailed listings of equipment related data contained in the RCM automated database. Included are the following types of data, when known:

- Equipment Identification Numbers
- Equipment Category
- Design Year
- Mission Length
- Application
- Equipment Type
- Design Approach
- Design Technology
- Major Parameters
- Fault Tolerance Techniques
- Part Derating Guidelines
- Part Quality/Screen Class Employed
- Type of Cooling
- Self-Test Capability
- Self-Test Implementation
- Diagnostic and Replacement Level
- Fault Control Techniques
- Maintenance Concept
- Mission Criticality
- Applicable Maintenance Echelons and Skill Level
- Equipment Complexity

Entries in this section are organized by Equipment Identification Number.

A complete description of the types of data that are considered when characterizing an equipment may be found in the Usage Guide, pages 6-3 to 6-10.

THIS PAGE INTENTIONALLY LEFT BLANK

USAGE GUIDE

The descriptions below apply to the computer listings in this section. The data presented are the types of data that are considered when characterizing an equipment.

Contract No.: This field is masked for this publication.

System Nomenclature: "

Subsystem Nomenclature: "

Set Nomenclature: "

Group Nomenclature: "

Unit Nomenclature: "

Equipment Category: Denotes the General functional purpose of the overall equipment as usually defined at the Set equipment level. The categories considered are:

- 01 Computer
- 02 Controls/Displays
- 03 ECM/EW
- 04 Guidance/Navigation
- 05 Test Equipment
- 06 Radar
- 07 Software
- 08 Weapons
- 09 Communications
- 10 Sonar
- 11 Other

Design Year:	The vintage year of the equipment.
Mission Length:	The normal equipment operational mission length. The mission lengths considered are: Continuous >8 hours $1 \leq \text{hour} \leq 8$ <1 hour Undefined
Work Unit Code:	A code assigned by the using command that locates the equipment within a given system hierarchy. This field is masked for publication.
Manufacturer:	The manufacturer of the equipment. This field is masked for publication.
Proprietary Code:	A code that identifies the level of sensitivity of the data. This field is masked for this publication.
Design Approach:	The applicable approaches to a design are selected from Table 6-1. Each category has its unique set of approaches.

Design Technology:

The applicable technologies employed on design are selected from Table 6-2. Each category has its unique set of technologies.

Major Parameters:

The applicable parameters of a design are entered. Each category has its unique set of parameters. These categories are selected from Table 6-3.

Equipment Type:

Denotes the specific functional purpose of the type of equipment as usually defined at the Group or Unit equipment level. The equipment types considered are:

- 01 Power Supply
- 02 Transmitter
- 03 Receiver
- 04 Transceiver
- 05 Antenna
- 06 Amplifier, Audio
- 07 Amplifier, RF
- 08 Amplifier, Video
- 09 Computer
- 10 Memory
- 11 I/O Device
- 12 Indicator/Control
- 13 Modulator/Demodulator
- 14 Coder/Decoder
- 15 Multiplexer/Demultiplexer
- 16 Interconnection/Distribution
- 17 Converter D/A or A/D

- 18 Filter
- 19 Inertial Reference
- 20 Stellar Reference
- 21 Frequency/Timing Generator
- 22 Cooling/Pressurizing
- 23 Test Circuitry
- 24 Alarm
- 25 Signal/Data Processor
- 26 Miscellaneous
- 27 Transducer

Application:

The type of operational application environment. The applications considered are:

Space
Aircraft
Ground
Shipboard
Other

Fault Tolerance:

Indicates the methodologies employed to alleviate the consequences of failure. The fault tolerance methods considered are:

Redundant Channels or Equipment
Graceful Degradation
Degraded Modes of Operation
None

Part Derating Guidelines:

Indicates the level of stress derating employed in the equipment design. The levels considered are:

High Reliability

Intermediate ("stress" derating practices less stringent than those employed on high-reliability designs but more stringent than commercial design practices)

Commercial Design Standards

Part Quality Grade/Screen Class: All levels of quality assurance provisions applicable to part procurements for this design are indicated. The levels considered are:

JANTXV-grade semiconductors and
JAN 38510 ICs

JANTX-grade semiconductors and
IL-STD-883 screened ICs

JAN-grade semiconductors and
hermetically sealed ICs

Commercial grade semiconductors
and plastic encapsulated ICs

Type of Cooling:

Lists the type of cooling employed in the design. The types of cooling considered are:

Ambient air (normal convection)

Forced air (fan)

Liquid

Other

Self Test Capability:

The highest applicable level of self test technology employed in the design is listed. The levels considered are:

Automated BIT
Semiautomated BIT
Manual BIT
None

Diagnose To/Replacement Level:

Lists the lowest functional level to which a failure or malfunction is capable of being diagnosed and the defective item replaced. The levels considered are:

Equipment
Unit (LRU/PRU)
Assembly (SRU)
Piece Part

Self-Test Implementation:

Indicates the hardware techniques employed in the implementation of self-test in the design. The techniques considered are:

General Purpose Computer
BIT Microprocessor
Software Controlled
Hardware Controlled
Automated Printout
Manually Read Panel Indicators

Fault Control Techniques:

Indicates each of the recovery techniques used to initiate fault control in the equipment and the methodology used in implementing each of the techniques. The techniques considered are:

Automated On-Line
Automated Off-Line
Manual
None

The applicable recovery techniques are:

Reconfiguration
Fault Isolation
Fault Detection

Maintenance Concept:

Indicates the nature of the maintenance concept employed by noting both the level of maintenance activity and the extent of repair performed at each level. The maintenance levels considered are:

No Maintenance
Throw-away Maintenance
In-flight or Suborganizational Maintenance
Organizational or Flight Line
Intermediate or Shop Level
Depot or Plant Level

The repair levels considered are:

Remove and Replace
Minor Repairs
Major Repairs
None

Mission Criticality:

A measure of the indispensability of the equipment or the function performed by the equipment. It may be defined from the standpoints of mission critical, safety critical, poor historical reliability or high cost. The levels considered are:

High
Medium
Low

Complexity:

A measure of the complexity of the equipment. Quantities of the following categories are presented.

Total number of parts
Number of different generic part types
Total number of active elements
Number of tubes
Number of discrete semiconductors
Number of hybrids
Number of monolithic linear/ interface ICs
Number of SSI/MSI digital ICs
Number of LSI/memory ICs
Number of microprocessors

APPENDIX

ADDITIONAL RAC SERVICES

ADDITIONAL RAC SERVICES

Search Services

Retrospective Searches are conducted at a flat fee of \$125 per search. If no references are identified, a \$50 service charge will be made in lieu of the above. For best results, please call or write for assistance in formulating your search question. An extra charge, based on engineering time and costs, will be made for evaluating, extracting or summarizing information from the cited references.

Consulting Services

Consulting Service fees are determined by the costs incurred in the conduct of the designated work, including staff time and overhead, materials and other expenses. Work will be initiated upon receipt of a signed purchase order. We will be pleased to prepare firm cost proposals.

Full Service Participating Plans

Two plans are offered to both government and industry:

Participating Member (PM).	\$1,540
Participating Associate (PA).	340

Services provided to a Participant in either plan are:

- . Automatic receipt of one (1) copy of each RAC microcircuit and semiconductor device databook issued over twelve months at a savings of \$70.
- . Availability of additional copies of each of the above databooks at 20% off list price.
- . Discount on registration fees for RAC sponsored training courses, seminars, workshops, etc.

In addition, the Participating Member may access RAC resources as needed without issuing purchase orders. Up to 50 man-hours of professional consultation are authorized.

Blanket Purchase Order

The Blanket Purchase Order option enables you to write a single Purchase Order for a stipulated maximum dollar amount (depending on your needs) and active time duration (a one-year period is suggested), but you pay only for services rendered or documents purchased.

Military Agencies: Blanket Purchase Agreement, DD Form 1155, may be useful for ordering RAC reports and/or services. Please stipulate maximum dollar amount authorized and cutoff date on your order. Also specify services (e.g., publications, search services, etc.) to be provided. Identify vendor as IIT Research Institute (Reliability Analysis Center).

Ordering Information

Place orders or obtain additional information directly from the Reliability Analysis Center. Clearly specify the publications and services desired. Except for blanket purchase orders, prepayment is required. All foreign orders must be accompanied by a check drawn on a U.S. bank. Please make checks payable to IITRI/RAC.

Quantity Purchase Discounts - Discounts applicable to publications (for multiple copies of a single title ordered at one time) are:

Quantity	Discount	Quantity	Discount
1-2	list	10-19	33-1/3% off list
3-6	15% off list	20-49	45% off list
6-9	20% off list	50-99	60% off list
		100 or more	negotiable

ORDER FORM

Enclosed find \$ _____

Send order and check to:

Reliability Analysis Center
RADC/RBRAC
Griffiss AFB, NY 13441

Phone: 315/330-4151 Autovon: 587-4151

Please send me the documents checked above.

Name/Title _____

Organization _____

Address _____

City/State _____ Zip _____

PREPAYMENT OF ORDERS IS REQUIRED. Please make checks payable to IITRI/RAC. Foreign orders must be accompanied by check drawn on a U.S. bank.

The Reliability Analysis Center is a DoD Information Analysis Center operated by IIT Research Institute, Chicago, IL

REPORT DOCUMENTATION PAGE	1. REPORT NO. EEMD-1	2.	3. Recipient's Accession No.
4. Title and Subtitle Electronic Equipment Maintainability Data		5. Report Date Fall 1980	
7. Author(s) Norman B. Fuqua		6.	
9. Performing Organization Name and Address Reliability Analysis Center (RBRAC) Rome Air Development Center Griffiss Air Force Base, NY 13441		8. Performing Organization Rept. No.	
12. Sponsoring Organization Name and Address Rome Air Development Center Griffiss Air Force Base, NY 13441		10. Project/Task/Work Unit No.	
		11. Contract(C) or Grant(G) No. (C) F30602-78-C-0281 (G)	
		13. Type of Report & Period Covered N/A	
15. Supplementary Notes This is one of a series of electronic equipment reliability/maintainability publications.		14.	
16. Abstract (Limit: 200 words) This equipment level maintainability compendium provides maintenance and repair time data on military electronic equipments at the subsystem, set, group and unit levels. Due to the possible sensitivity of the numerics presented in the publication, the identification of the equipment has been masked. Each equipment has been assigned a unique Equipment Identification number (EQUIP ID) and it is used consistently throughout the publication. Section 1 lists the definition of terms and the statistical methods used in the data analysis. Section 2 presents summarizations of the detailed maintainability data presented in Sections 3-4. Sections 3 and 4 present detailed listings of maintainability data in two different ways. In Section 3 the data are sorted by Category, Equip-ID and Data Type. This grouping permits the reader to trace an equipment's maintainability characteristics through its life cycle. In Section 4 the data are sorted by Category, Data Type and Equip ID. This grouping allows the reader to make comparisons between equipments at various points in their life cycle. Section 5 is a detailed listing of program and contract related data. Section 6 presents technical characterization data on the equipment.
