INTRODUCTION

The purpose of this text is to provide a reference handbook for students and instructors of the US Army Armor School, nonresident students, instructors at other service schools, and US Army advisors to Armor units in the field. It contains data on organizations, details of equipment, and tables pertinent to armor operations.

The text reflects organizations of division level and below, as listed in Department of the Army Tables of Organization and Equipment, with changes available at time of preparation.

The **ARMOR REFERENCE DATA** has been prepared by the US Army Armor School. It reflects the current thought of this School and conforms to published Department of Army doctrine as closely as possible. Comments/recommendations concerning this special text should be forwarded to the Directorate of Training Developments, US Army Armor School, ATTN: ATZK-CSD, Fort Knox, Kentucky 40121.

INDIVIDUAL WEAPONS

Each Table of Organization and Equipment (TOE) provides that the personnel of the unit are to be armed with the rifle, 5.56mm unless otherwise indicated. Entries in the remarks column of Section II of the TOE designate specific individuals to be armed with a weapon, or weapons, other than the rifle. Rifle mounted grenade launchers, however, are authorized the squad, section, etc, in bulk for use as desired by the commander.

In this text, the following abbreviations are used to indicate the specific weapon(s) authorized each individual. Rifle grenade launchers have been included as an example of how this weapon may be distributed within the unit.

AR	Rifle, 5.56mm with bipod
GL	Launcher, grenade, M203
MG	Machinegun, 7.62mm M60
P	Pistol, caliber .45
R	Rifle, 5.56mm
Rev	Revolver, caliber .38
S	Submachinegun, caliber .45
SAW	Squad Automatic Weapon

¹Artillery and aircraft flares are vulnerable to changes in wind directions and velocity. Diameter of illuminated area will be reduced by rain, fog, dust, and smoke.

²Aircraft flares are less accurate than artillery flares. Vulnerability of delivery means must be considered in planning.

CHARACTERISTICS OF MINES**

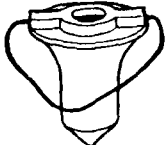

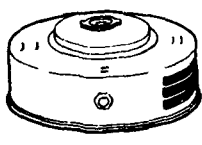

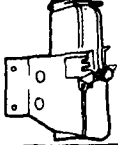

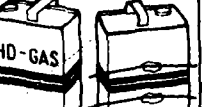

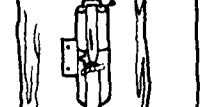

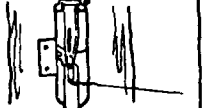

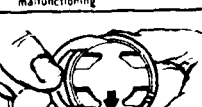

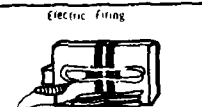

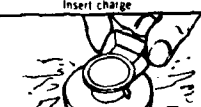

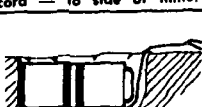

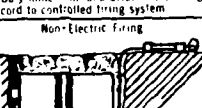

M14 BLAST ANTI-PERSONNEL MINE	M25 BLAST ANTI-PERSONNEL MINE (ELSIE)	M23 AND M1. 1 GALLON CHEMICAL LANDMINES	M49A1 TRIP FLARE
			
Wt. 3 1/2 oz. Exp. 1 oz. Tetryl Fuze Integral with Belleville Spring Functioning 20 to 35 lb.	Wt. 3 1/2 oz. Exp. 1 1/2 oz. shaped charge Fuze Integral with ball release Functioning 17 to 22 lb. press.	When armed for pressure detonation, emplace in same manner as the M15 antitank mine.	Has 55 to 70 sec. surface burning period and an illumination radius of approximately 330 yds. Initiates by taut or loose trip wire.
 Unscrew shipping plug from bottom of mine. Turn pressure plate to ARMED position with arming tool.	 Push mine into ground. Keep dust cap in place. If ground is hard dig hole with bayonet.	 HD-GAS	 Attach flare to post, tree, etc.
 Remove safety clip & check for malfunctioning.	 Remove dust cap.	Wt. 11 lb. loaded; has on 4-ft. length of detonating cord for burster charge. May be armed for electric or trip wire actuation.	 Attach trip wire to anchor, then to trigger. Pull trigger to vertical position and secure.
 Replace safety clip.	 Insert charge.	Electric firing  Attach burster charge — 4 ft. length of detonating cord — to side of mine.	 To Arm: remove safety clip.
 Screw detonator into detonator well.	 Remove safety clip.	 Bury mine 4 in. and attach detonating cord to controlled firing system.	 To Disarm: Insert safety pin.
 Bury mine & remove safety clip.	The M25 will penetrate a soldier's boot and foot or puncture a 12 ply tire and tube.	Non-Electric Firing  Bury mine as above and attach non electric detonator to burster.	 Check both ends of trip wire, then cut near trigger.
To Bury: Pressure plate should be slightly above ground level. To Disarm: Insert safety clip and remove detonator. Caution: Repeated turning of arming dial may cause excessive wear.	 To Disarm: Replace safety clip and remove charge container from mine.	Warning: SOLDIERS PREPARING LAYING and REMOVING CHEMICAL LAND MINES MUST WEAR PROTECTIVE MASK and PROTECTIVE CLOTHING	Warning: NEVER LOOK DIRECTLY AT BURNING FLARE. Note: For loose trip wire initiation, attach trip wire to eye of safety pin.

Mine bounds into air and explodes at height of 2.4 ft. Max 27 meters casualty radius. To Disarm: Reverse arming procedure.	Firing Position: Min. of 16M to rear in fox hole. Friendly troops at side and rear should be under cover at min. of 100M. To Fire: Offset safety bail and depress handle. To Disarm: Reverse arming procedure.	Burial: Pressure plate at ground level or slightly above. To Disarm: Reverse arming procedure.

INSTALLING AND ARMING  1. Remove above items from accessories pouch. Insert batteries (issued separately) in firing device.	 Wt. 28 lb. Expl. 21 lb. Fuze M606—Integral (with pressure plate) Secondary Fuze Wells 2 Functioning...350 to 500 lb. press	 Wt. 18 lb. Expl. 10.5 lb. Fuze M607 Functioning...290 lb. press. on ring or 20° deflection of tilt rod.
DISCRIMINATOR LAID ONLY FOR TRACKED VEHICLES  DISCRIMINATOR LAID FOR TRACK AND WHEELED VEHICLES 2. Unravel discriminator starting at far side of road (perpendicular to edge for wheeled vehicles; about 15° from perpendicular for tracked vehicles)	 Remove pressure plate fuze.	 Remove closing plug. Insert M 120 booster in bottom. Replace closing plug.
BROWN MARKS DISCRIMINATOR  FIRING DEVICE 3. Attach discriminator wire to DETECTOR of firing device (toggle switch on SAFE). Stand on two brown marks on discriminator nearest firing device. If lamp lights, circuit is good; otherwise discard system.	 Remove shipping plug. Inspect position of striker. After. Remove safety fork then turn dial to ARMED. Check position of striker. center. Turn to SAFE and replace safety fork.	 Remove closure assembly from fuze.
 ROCKET LAUNCHER 4. Disconnect discriminator wire from firing device. Remove launcher from dispenser pouch and place in position. Remove packing blocks, push rocket forward to safety band, and remove band. Depress ejection pin and push rocket back into launcher until contact ring is exposed at base. Grounding clip must be connected. Remove tagged shorting clip and push rocket back into launcher. Tape plastic covers over ends of launcher.	 Place mine in hole. Remove safety fork and turn dial to ARMED.	 Bury mine.
 5. Position launcher on tripod assembly or mound of earth. Mount sighting assembly and sight along discriminator to target impact point about 30° above road (soldier's belt buckle). To aim, move launcher, not sight. Fill pouches with dirt, lay over launcher, ratchet sight, re-connect discriminator wire to firing device (light out), connect rocket cable to firing device, and push toggle switch to ARMS. The system is now armed and will fire when pressure is applied to the discriminator. See TM 9-1345-200.	 Complete camouflage. To Bury: Put mine in hole with pressure plate at ground level or slightly above. To Disarm: Reverse arming procedure.	 Remove safety (pull ring assembly) and complete camouflage. To Bury—Pressure: Put mine in hole with fuze cap flush with ground surface. Tilt Rod: Seat mine firmly in snug fitting hole. Most effective in tall brush or grass. To Disarm: Reverse arming procedure.

TABLE 9
CHARACTERISTICS OF ARMY AIRCRAFT

1. General. Army airplane characteristics are shown in Table 9a and Army helicopter characteristics in Table 9b. OPERATIONAL CHARACTERISTICS for Army aircraft vary with flight conditions. Airspeeds and fuel consumptions will vary with gross weight, altitude, power settings, and aircraft. See appropriate TM 55-Series-10 aircraft operator's manual for correct airspeed and fuel consumption.

2. Definitions.

a. Maximum allowable gross weight: The maximum allowed total weight of the aircraft prior to takeoff; the "basic weight" of the aircraft plus the crew, personnel equipment, special devices, passengers/cargo, and usable fuel and oil. This is limited by structure, power available, or landing load.

b. Basic weight: The empty weight of an aircraft in its basic configuration. It includes trapped and unusable fuel and oil and all fixed equipment, to which it is only necessary to add crew, fuel, oil, cargo, and ammunition (if carried) to determine the gross weight for the aircraft.

c. Useful load: The load-carrying capability of an aircraft. It includes the payload, crew, and usable fuel and oil required for the mission. (The payload is the useful load excluding the crew and fuel and oil required for the mission.) The useful load is the difference between "maximum allowable gross weight" and the "basic weight" (a and b above).

d. Normal cruising speed: The true airspeed which an aircraft can normally be expected to maintain at some standard power setting below rated military power. (This speed will vary with altitude.)

e. Endurance at cruising speed: The time that an aircraft can remain airborne at normal cruising speed with fuel aboard without using required fuel reserve.

3. U.S. Army aircraft fuel identification. JP-4 fuel is clear. Aviation gasoline-AVGAS identification colors and performance numbers are:

a. Red - 80/87.

b. Blue - 91/96.

c. Green - 100/130.

d. Purple - 115/145.

NOTE: Information in this table was extracted from Appendix F, FM 1-15, Aviation Reference Data, 30 September 1977.

SECTION II. DIVISION ORGANIZATIONS

1. General

Army divisions in this section are habitually used in school instruction and reflect the current TOE.

2. Maneuver Battalions

Following are the combinations of maneuver battalions normally assigned to each type of division for school instruction (divisions are tailored to specific operational environments):

<u>Infantry</u>	<u>Armored</u>	<u>Mechanized</u>	<u>Airmobile</u>	<u>Airborne</u>
8 inf bn	6 tk bn	6 mech bn	9 airmbl inf bn	9 abn inf bn
1 tk bn	5 mech bn	4 tk bn		1 arm bn (abn)
1 mech bn				

3. Designations

Once a division is given a designation, it is not changed even though tactical tailoring may change the combination of combat battalions temporarily.

4. Numbering

For school purposes, the following division numerical designations are used in instruction:

- Infantry divisions: 15th through 21st.
- Armored divisions: 23d through 28th.
- Airmobile divisions: 47th.
- Infantry divisions (mechanized): 52d through 55th.
- Airborne divisions: 102d.

Note: The following are the primary divisions used for instruction in the Armor School:

- 21st Infantry
- 25th Armored
- 52d Mechanized Infantry
- 54th Mechanized Infantry
- 47th Airmobile
- 102d Airborne

5. Components

Designations of components of division are as follows:

a. The combat units of the divisions are designated in accordance with the combat arms regimental system (CARS).

(1) For instructional purposes, battalions and squadrons are assigned to division bases from regimental designations shown below:

- Tank—1st through 15th.
- Light Armor—16th.
- Armored Cavalry—21st through 27th.
- Air Cavalry—28th through 32d.
- Field Artillery—50th through 72d.
- Air Defense Artillery—439th through 450th.
- Infantry.
 - 66th through 75th (infantry divisions).
 - 76th through 85th (mechanized divisions).
 - 91st through 100th (armored divisions).
 - 181st through 190th (airmobile divisions).
 - 301st through 320th (airborne divisions).

(2) Battalions with regimental designations above will be numbered the same within a division as follows:

<u>Bn Designation</u>	<u>Armd Div</u>	<u>Inf Div (Mech)</u>	<u>Inf Div</u>	<u>Abn Div</u>	<u>Airmbl Div</u>
1st	23d	53d	21st	102d	47th
2d	25th	52d	19th		
3d	26th	55th	18th		
4th	28th	54th	17th		

b. The combat support and combat service support units not included under the combat arms regimental system have the same numerical designation as the division to which assigned.
