ARI Research Reports and Technical Reports are intended for sponsors of R&D tasks and for other research and military agencies. Any findings ready for implementation at the time of publication are presented in the last part of the Brief. Upon completion of a major phase of the task, formal recommendations for official action normally are conveyed to appropriate military agencies by briefing or *Disposition Form*.

FOREWORD

This is the second in a series of six reports by the System Development Corporation (SDC) which describes the utilization of tactical computers for training. The first report was on the Analysis of System and Training Requirements (RN 80-29). Other reports under contract DAHC19-75-C-0031 are: Field Evaluation Plan (RN 80-30), Job/Task and Training Analysis-Ammunition and Fire Unit (AFU) Module (RR 1282), Analysis of System and Training Requirements (Summary Report) (RR 1283) and Development of CAI Performance Measures: TACFIRE Tactical Data System (RR 1284).

This Research Report (RR 1281) presents the Phase II results in the development of TACFIRE Automated Instruction (AI) Courseware.

JOSEPH ZEIDNER
Technical Director

EXECUTIVE SUMMARY

The purpose of this project was to examine the feasibility of using computer-assisted instruction (CAI) as an embedded, stand-alone, individualized training program for instructing operational users of the TACFIRE Tactical Data System.

TACFIRE courseware, based upon an analysis of system and training requirements and a Job/Task and Training Analysis, has been developed and produced in five functional areas: Tactical and Technical Fire Control (Fire Mission Module); Artillery Target Intelligence (ATI Module); Ammunition and Fire Unit (AFU Module); Support (SPRT Module); and System (SYS Module). Courseware consists of independent modular blocks of instruction containing 44 PLANIT Lessons (23 Student Lessons) and 10 performance based module pre- and post-tests totaling approximately 3,600 PLANIT frames. Average course time for this individualized, self-paced embedded training program is estimated at 40 hours. Preliminary estimates indicate 25% to 35% of battalion fire direction center (FDC) operations are covered. Based on this estimate, for twice the cost of the current effort the remainder can be done. Courseware applies also to DivArty FDC operations, as well as a spin-off to fire support officer (FSO) and fire support element (FSE) operations.

The Courseware is well documented. The specific tasks, criterion and enabling objectives, and test items are well defined, having been developed in accordance with the TRADOC Systems Approach to Training (SAT), Systems Engineering of Training, TRADOC Reg 350-100-1, and with the "functional context plus" approach. This approach considers the job (tasks), what the student brings into the learning situation and how to arrange lesson modules to be maximally supportive of the student during the learning process. The course starts in a context familiar to the student, providing a bridge between his previous experience (manual field artillery) and TACFIRE. This makes it easier for the student to learn, relate, and integrate TACFIRE operations. This approach further provides an organization (course and lesson design) where earlier lessons, such as fire missions (TFFC-FM function), provide the basis and requirement for other operations, such as fire unit and observer location (AFU function). The "why," "effect," and "use" of various operations is made explicit as a natural part of course development. This also makes it easy for the student to learn, relate and integrate TACFIRE operations. It also provides for repeated reinforcement of TACFIRE operations during the course.

The TACFIRE course executes properly on the TACFIRE system, has been reviewed for content and tactical employment by personnel of the U.S. Army Field Artillery School (USAFAS), and is operationally ready for implementation. The courseware is expected to produce individuals who can perform in an operational setting, under light load conditions, the tasks/job covered in the course. An extensive on-the-job training (OJT) period of 5 or 6 months should not be required. Further training such as a carefully planned series of exercises (light load, medium load, heavy load), each stressing various objectives, should result in an operational ready individual within a short time frame.

PRECEDING PAGE BLANK-NOT FILLED

This program can be used on any TACFIRE system for training, either in a school or field environment.

The courseware is updated quickly and easily as changes in tactical doctrine or equipment occur. This was fully demonstrated during the content review by USAFAS personnel when changes were made on-line as each module was reviewed. Cost of courseware for each additional TACFIRE system is minimal, i.e., the cost of duplicating courseware computer tape and printing additional copies of the offline course exhibits.

Automated instruction (AI) can be developed for all the functional areas. There are no methodological restrictions. The determining factor for those selected for this project was that they were more critical for fire direction.

Recommendations include:

1. Complete the courseware development to provide a permanent embedded training program, easily modified to meet changes in tactical doctrine and equipment, and easily duplicated to as many TACFIRE systems as required.
2. Use courseware to provide orientation and initial exposure to TACFIRE.
3. Use TACFIRE AI Module tests to determine need for refresher training.
4. Use the methodology and restructure the TACFIRE AI course for command and staff personnel who are not "direct" users of the system.
5. Use the proven methodology and inherent classification of the system components to develop a classified AI training program applicable to nuclear weapons.
6. Develop a simplified reference manual for ACC operators.
7. Develop a computerized production system for generating exercises.
8. Develop embedded training programs for other tactical data systems.
9. Develop or use TACFIRE modules to train reserve units affiliated with active Army units.

Documentation produced in this project, including this final report, are as follows:

Utilization of Tactical Computers for Training: Analysis of System and Training Requirements, 20 June 1975. (Research Note 80-29).

Utilization of Tactical Computers for Training: Job/Task and Training analysis, 20 August 1975. (Research Report 1281).

Utilization of Tactical Computers for Training: Field Evaluation Plan, 5 December 1975. (Research Note 80-30).

Utilization of Tactical Computers for Training: Job/Task and Training Analysis - Ammunition and Fire Unit (AFU) Module, 1 March 1976. (Research Report 1282).

Utilization of Tactical Computers for Training: Summary Report. (Research Report 1283).

TACFIRE AI courseware and module tests in the form of card decks, course listings and off-line course exhibits.

Figure 1: Utilization of Tactical Computers for Training: Major Project Phases	1-2
---	-----

1. INTRODUCTION

This Research Report, RR 1281, Utilization of Tactical Computers for Training: Job/Task and Training Analysis, presents the Phase II results in the development of TACFIRE Automated Instruction (AI) courseware. Figure 1 depicts the five phases that constitutes the total project effort.

A. SCOPE

The overall project aim is to extend the scope of the application of computer-assisted interaction (CAI) to the development of self-instructive programs and procedures for users of tactical data processing systems. The basic approach is to provide AI training subsystem packages which can be run on the operating system and, when not used for tactical operation, to provide initial and refresher training in system use. The overall objective of this work effort is the development of stand alone CAI courseware appropriate to the training of users of the TACFIRE System. Project products will provide the foundation for subsequent evaluation and refinement of CAI technology as applied to training in tactical systems.

In Phase I, the TACFIRE functional areas were selected for AI training. These functional areas were Technical and Tactical Fire Control (FM); Artillery Target Intelligence (ATI); **Ammunition** and Fire Unit (AFU); Support (SPRT); and System (SYS).

B. PURPOSE

The purpose of Phase II is to conduct a detailed job/task analysis of the five functional areas selected for AI training and report the results. This system engineering of training process, in accordance with TRADOC Reg 350-100-1, includes: (1) the development of Task/Subtask Flow Charts; (2) the development of Training Analysis Information Sheets (TAIS); (3) the development of Criterion and Enabling Objective Worksheets, and (4) the development of performance based criterion test items. In addition, content development outlines have been prepared.

Figure 1. Utilization of Tactical Computers for Training:
Major Project Phases

The job/task analysis conducted for Phase II is based upon an analysis of TACFIRE documentation, an analysis of the system engineering of training documentation prepared by the U.S. Army Field Artillery School (USAFAS), Ft. Sill, Oklahoma, discussions with TACFIRE personnel at USAFAS, and demonstration of the hands on experience operating the TACFIRE equipment at USAFAS and the MELPAR Facility Computer Systems Command, Arlington, Virginia.

C. ORGANIZATION

The results of the job/task analysis are linked together by an audit trail utilizing the TAIS number on each of the Phase II products. The relationship between various sections of this report are shown by the TAIS number, e.g., 1001, and the breakdown of the task elements, e.g., 1001.1, 1001.2. This numbering system is carried over to the Criterion and Enabling Objectives and the Test Item Worksheets.

Section I of this Research Report identifies the position of Phase II in the major project phases, the purpose of Phase II, and the organization of this report. Section II provides the content development outlines. These data includes a summary of the subject content and the general task/objectives for each functional area (module).

Section II provides the Task/Subtask Flow Charts which show the relationship *between each selected task and the various levels of task sub-elements involved in the performance of the task.*

Section IV provides the Training Analysis Information Sheets (TAIS), Criterion and Enabling Objectives and Test Items for each of the five functional areas. The documentation used in preparation of this report is listed under References in Appendix A.

These Phase II products after review by the U.S. Army Field Artillery School will form the basis for Phase II of this project: Develop Courseware.

II. CONTENT DEVELOPMENT OUTLINES

This section contains the content development outlines for the TACFIRE functions that were selected for the Phase II Job/Task and Training Analysis. Subject content for each TACFIRE functional area is indicated on the left with a corresponding general task/objective statement for each major sub area presented on the right. The audit trail for each general task/objective is maintained by the TAIS number (e.g., 1001) throughout the Task/Subtask Flow Charts (Section III) and Training Analysis documentation; TAIS, Criterion and Enabling Objectives, and Test Items (Section IV), for each TACFIRE functional area.

Content development outlines cover tasks in the following functional areas:

- Tactical and Technical Fire Control Function
- Artillery Target Intelligence Function
- Ammunition and Fire Unit Function
- Support Function
- Operating System Messages

<u>Tactical and Technical Fire Control Function</u>	<u>General Task/Objective (TAIS)</u>

Process Quick Fire Mission

1009 Process a fire mission against a target established as a known point.

- a. Display FM;QF message.
- b. Interpret message formats.
 - 1) FM;QF message
 - 2) FM;5205 message
 - 3) FM;FC message
- c. Transmit fire commands to fire units.
- d. Process end of mission.
 - 1) Display AFU;MFR message.
 - 2) Interpret AFU;MFR message.
 - 3) Take computer action and identify results.

10. Update Location of Forward Observer

a. Select and display FM;OBCO message.

1) Select FM;OBCO message format.

- a) Depress format matrix switches.
- b) Activate FORMAT COMMAND switch.

2) Select FM;DIR message format.

- a) Depress format matrix switch.
- b) Activate FORMAT COMMAND switch.
- c) Move cursor to letter O.
- d) Activate FORMAT SELECT switch.

b. Identify entries for FO location.

- 1) OB
- 2) CORD

c. Take computer action and identify results.

d. Print and verify entries.

- 1) Select and display FM;COMD message.
- 2) Specify OBF and PRINT.
- 3) Take computer action.
- 4) Interpret FM 5208 OB LIST output message.

1010 Update location of forward observer (voice input) and verify entries.

- 1) Select and display SPRT;COMD message.
- 2) Specify PRINT and MAPMOD.
- 3) Take computer action and identify results.
- 4) Interpret SPRT 7201 MAP MOD LIST output message printed on ELP.

3. Orient Map on DPM

4003 Orient a map to the digital plotter map (DPM) and verify orientation coordinates.

a. Select and display SPRT;DPM message.

- 1) Depress format matrix switches.
- 2) Activate FORMAT COMMAND switch.

b. Prepare DPM for orientation.

- 1) Press MANUAL switch on DPU.
- 2) Set marker to UP on Hand Control.
- 3) Press BRIDGE ENABLE switch on DPU.

c. Orient map on DPM and enter coordinates in SPRT;DPM message.

- 1) Orient reticle on lower left map coordinate.
- 2) Lower reticle to map surface.
- 3) Center crosshairs of reticle exactly over intersection of easting and northing coordinate line.
- 4) Raise reticle.
- 5) Press ENTER COORD switch on hand held unit.
- 6) Have ACC Operator enter coordinates in SPRT;DPM message.

- 7) Repeat above steps to obtain and identify entries for coordinates for the upper left, upper right, and lower right positions on the map, in that order.
 - 8) Press AUTO switch on DPU.
- d. Take computer action and identify results.
4. Update No Fire Line (NFL)
 - a. Select and display SPRT;GEOM message.
 - 1) Depress format matrix switches.
 - 2) Activate FORMAT COMMAND switch.
 - b. Identify entries for NFL.
 - 1) NFL
 - 2) CORD1 - CORD3
 - c. Take computer action and identify results.
 - d. Print and verify entries.
 - 1) Select and display SPRT; COMD message.
 - 2) Specify PRINT and NFL.
 - 3) Interpret SPRT 7202 ALTER GEOMETRY FILE REPORT printed on the ELP.
 - e. Display NFL on DPM.
 - 1) Select and display SPRT;COMD message.
 - 2) Specify SHOW and NFL.

4004 Update geometry file to enter a No Fire Line (NFL), verify entries and display on DPM.

 - 3) Requested message category and type.
 - 4) J
 - b. Take computer action and identify results.
- 5005 Request message formats using SYS;FORM message when operation of format matrix switches has temporarily failed.

III. TASK/SUBTASK FLOW CHARTS

Task/Subtask Flow Charts have been prepared for each general task/objective established for the selected TACFIRE functional areas. The Task/Subtask Flow Charts represent the training tasks, their task elements and the relationship among them. The audit trail (e.g., 1001) for each general task/objective is maintained throughout the content development outlines (Section II), Training Analysis documentation; TALS, Criterion and Enabling Objectives, and Test Items (Section IV) and Task/Subtask Flow Charts contained within this section. Task/Subtask Flow Charts have been prepared for tasks within these functional areas:

- Tactical and Technical Fire Control Function
- Artillery Target Intelligence Function
- Ammunition and Fire Unit Function
- Support Function
- Operating System Messages

IV. TRAINING ANALYSIS RESULTS

This section contains the TACFIRE Training Results documentation which comprises the Training Analysis Information Sheets (TAIS), Criterion and Enabling Objectives Worksheets and Test Item Worksheets for each general task/objective specified for the five functional TACFIRE areas. The audit trail (e.g., 1001) for each general task/objective is maintained throughout the content development outlines (Section II), Task/Subtask Flow Charts (Section III) and Training Analysis documentation contained within this section.

Training Analysis documentation has been prepared for tasks within these functional areas:

- Tactical and Technical Fire Control Function
- Artillery Target Intelligence Function
- Ammunition and Fire Unit Function
- Support Function
- Operating System Messages

A. TACFIRE MODULE-UNIT-TAIS CORRESPONDENCE

<u>TAIS</u>	<u>UNIT</u>	<u>Page</u>
Module 1: Tactical and Technical Fire Control Function (FM)		4-4
1001	ACC - Artillery Control Console	
1002	MSL - Message Status Line	
1003	CL - Communication Line	
1004	SPA - SPA Switches	
1005	FM1 - FM Automatic Mode	
1006	FM2 - FM Manual Mode	
1007	FM3 - FM Voice Input	
1008	FM4 - FM Div Arty Support	
1009	QF - FM;QF - Quick Fire Mission	
1010	OBCO- FM;OBCO - Observer Location	
Module 2: Artillery Target Intelligence Function (ATI)		4-76
2001	INTRO-Introduction to Artillery Target Intelligence	
2002	CDR - ATI;CDR - Coordinate Report	
2003	SRI - ATI;SRI - Standing Request for Information	
Module 3: Ammunition and Fire Unit Function (AFU)		4-93
3001	INTRO - Introduction to Ammunition and Fire Unit Function	
3002	INTRO - AFU Data Files	
3003	UPDATE - AFU;UPDATE - Fire Unit Update	
3004	BAMOUNP - AFU;BAMOUNP - Fire Unit Ammuni- tion Update	
3005	AMOL/ASR - AFU;AMOL - Critical Ammunition Level - AFU;ASR - Available Supply	
3006	MV - AFU;MV - Muzzle Velocity	

<u>TAIS</u>	<u>UNIT</u>	<u>Page</u>
Module 4: Support Function (SPRT)		4-136
4001	INTRO-Introduction to Support Function	
4002	MAP -SPRT;MAP - Map Modification	
4003	DPM -SPRT;DPM - Orientation	
4004	GEOM -SPRT;GEOM - Alter Geometry File	
Module 5: Operating System Messages (SYS)		4-165
5001	INTRO-Introduction to System Messages	
5002	PDS -SYS;PDS - Peripheral Device Status	
5003	PCLD -SYS;PCLD - Priority, Classification Logging and Display	
5004	INIT -SYS;INIT - Initialization	
5005	FORM -SYS;FORM - Format	

B. TOPIC DOCUMENTATION FOR SELECTED TACFIRE FUNCTIONS

Training Analysis Information Sheets, Criterion and Enabling Worksheets and Test Item Worksheets for each TAIS identifier are organized as a group. Documentation comprising each group are sequentially ordered (e.g., 1001, 1002, etc.) as are the modules identified in A, above.

Module 1: *Tactical and Technical Fire Control Function* (FM)

TAIS No. 1001MODULE FMUNIT ACC

TRAINING ANALYSIS INFORMATION SHEET

1. TASK IDENTIFICATION: 1.0
2. TASK: Identify the major components of the ACC and state their purpose and identify the ELP and DPM.
3. CONDITIONS: Given pictures of the ACC with arrows and associated letters pointing to major component parts, identify the part from a list of component parts and state its function.

Given pictures of the ELP and DPM, identify each TACFIRE piece of equipment and state its function.

4. STANDARD: No errors.

5. TASK ANALYSIS:

TASK ELEMENTS	PREREQUISITE KNOWLEDGE OR SKILL REQUIREMENTS	SUPPLEMENTAL TRAINING MATERIAL	REFERENCES
1.1 Identify the major component parts of the ACC and state their purpose.	1.1 None. 1.2 None.	1. Picture of ACC. 2. Picture of ELP and DPM. 3. Additional material to be developed as required.	DTM 11-7440-240-10 Chapter 3, Pages 3-29 through 3-102. Chapter 9, Pages 9-1 through 9-93; 9-119 through 9-185; 9-209 through 9-240.
1.2 Identify ELP and DPM and state their purpose.

CRITERION AND ENABLING OBJECTIVES

TASK IDENTIFICATION: 1.0

TASK ELEMENTS: 1.1 - 1.2

CRITERION OBJECTIVE(S)	ENABLING OBJECTIVE(S)
1.1 A. When given a picture of the ACC with component parts marked by letters and arrows, the student can match the letters with the correct name from a list of component parts. The letter and component part associations are as follows: 1. Receive Display (RD) - A 2. Compose/Edit Display (CED) - B 3. ACC Alphanumeric Keyboard - C 4. Switch Panel Assembly (SPA)- D B. The student can match the ACC component part with its function. The associations are as follows: 1. RD - Display incoming messages. 2. CED - Display message formats or messages to be completed, changed or edited. 3. ACC keyboard - Enter changes in message formats. 4. SPA - Provides the ACC operator manual control of computer activities.	

TAIS No. 1001MODULE FMUNIT ACC

CRITERION AND ENABLING OBJECTIVES

TASK IDENTIFICATION: 1.0

TASK ELEMENTS: 1.1 - 1.2

CRITERION OBJECTIVE(S)	ENABLING OBJECTIVE(S)
1.2 A. When given pictures of the ELP and DPM, the student can correctly identify the TACFIRE equipment with the corresponding picture. The equipment/picture associations are: ELP - Figure <u>(2)</u> DPM - Figure <u>(3)</u> B. The student can match the TACFIRE equipment with its function. The associations are: 1. ELP - Prints out <u>all</u> incoming and outgoing Bn computer messages. 2. DPM - Draw symbols on an artillery map.

CRITERION AND ENABLING OBJECTIVES

TASK IDENTIFICATION: 8.0

TASK ELEMENTS: 8.1-8.4

CRITERION OBJECTIVE(S)	ENABLING OBJECTIVE(S)
8.1 When presented with a list of sequence statements describing the processing of an initial fire request indicating a request for Div Arty support, but with the steps in a scrambled order, the student can state the correct order in which the processing occurs. The correct order is: a. Display FM;RFAF. b. PAGE and review each message segment. c. Take DELETE action on RFAF to Div Arty. d. Press RD XMIT.	8.1.1 Pick from a list where in the initial request for fire message segments that a request to Div Arty for additional fire (RFAF) is located as being: FOLLOWS THE FIRE COMMANDS TO THE FUS. 8.1.2 Match the following mnemonics with their definition and function. a. MYEFF - Estimated effects in percent obtainable by originating Bn. b. EFF - Percent of desired effects. c. VOL - Desired number of volleys.
8.2 When presented with a list of sequence statements describing the processing of an adjust fire phase of a fire mission, but with the steps in a scrambled order, the student can state the correct order in which the processing occurs. The correct order is: a. Display FM;SUBS message segment. b. PAGE and review each message segment. c. Press RD XMIT.	8.1.3 Given a FM;RFAF as displayed on the RD, answer different formatted questions concerning the indicators that identify the message segment as a RFAF for Div Arty. The indicators will include: ● SB field in communication line is blank. ● RFAF is specified. ● MYEFF is indicated. ● Target number is assigned. ● Target location is specified. ● Target descriptive data is indicated. ● Effects or volley data is specified.

CRITERION ITEM(S)	ENABLING ITEM(S)
5.2 Data to be included in Figure F: • Btry C, 1st Bn, 4th Regiment • Shell Description - Category - HEAL, HEC1, SMA1 - Level - 300, 300, 50 • Fuze Description - Category - PDA, TIA, TIB - Level - 150, 75, 300 Refer to Figures E and F and answer the following questions. 1. The correct entry for specifying the fire unit is: *a. FU: / /C/ 1/40; b. FU: /C/1 / /40; c. FU: C/1/40/ / ; d. FU: / / 1/C/40; 2. Which of the following is the correct entry to enter the shell data? a. SHELS: 300 /HEC1,300/HEC1, 50/SMA1, b. SHELS: HEAL/300,HEC1/300, 50/SMA1, *c. SHELS: HEAL/300,HEC1/300, SMA1/50, d. SHELS: HEAL/PDA,HEC1/TIA, SMA1/TIB,	5.2.3 A. What happens when a shell or fuze category drops below the critical level? 1. The FU submits a requisition for more Ammo. 2. Check fire is implemented. *3. A warning message is output on the ELP. 4. The FU informs the FDO of the problem. B. Pick the warning message that would be output if the shell category HEAL in Btry B, 2nd Bn, 18th Regiment, dropped below the critical level. *1. AFU:2208 PLAN: FU: / /B/2/18; CAT:HEAL; AMOL VIOLATED 2. AFU:2208 PLAN: FU: / /2/B/18; CAT:HEAL; AMOL VIOLATED 3. AFU:2208 PLAN: FU: / /B/2/18; SHEL:HEAL; CRITICAL LEVEL MET 4. AFU:2208 PLAN: FU: / /2/B/18; CHECK FIRE ON CAT;HEAL, AMOL VIOLATED

5.4 Refer to Figure _____. Enemy action has temporarily disrupted your supply lines and the maximum number of rounds that a FU may fire on a daily basis must be reset. As a first step, you need to select the message format so the change can be entered into the TACFIRE Computer. A. The switches on the switch action panel you would depress to select the message format you need are (C) and (3). B. To display this input message you would activate the (FORMAT COMMAND) switch. 5.5 Assume that enemy action has temporarily disrupted your supply line and a decision has been made to reset the maximum number of daily records a FU is authorized to fire. You have already selected the AFU; ASR format message (Figure G) and must now make the entries. Answer the following questions concerning the entry of data into the AFU;ASR message format. (Sample data and questions) Data to be included in Figure H. • Weapon Type - 105mm • Supply Rate - 900	5.5.3 If a FU exceeds the maximum number of rounds it is authorized to fire daily, the Bn TACFIRE computer will: a. Send a message to Div Arty. b. Display a warning message on the RD. c. Request additional Ammo from S-4. *d. Output a warning message on the ELP.

CRITERION AND ENABLING OBJECTIVES

TASK IDENTIFICATION: 3.0

TASK ELEMENTS: 3.1 - 3.4

CRITERION OBJECTIVE(S)	ENABLING OBJECTIVE(S)
3.1 Given a picture/drawing of the ACC switch panel assembly, identify the switch actions that can be used to select and display the SPRT;DPM message. The switch matrix is referenced by letters for rows and numbers for columns. The student is able to match the correct letter/number combination to select the required message format. The correct steps are: 1. Depress switches C and 4. 2. Activate FORMAT COMMAND switch.	3.1.1 Pick from a list the definition of the term DPM as being: DIGITAL PLOTTER MAP. 3.1.2 Pick from the SPA the support message format used to orient a map to the Digital Plotter Map as being: SPRT;DPM. 3.3.1 Select from a list the correct order in which the coordinates are plotted on the DPM to orient a map as being: LOWER LEFT, UPPER LEFT, UPPER RIGHT, LOWER RIGHT. 3.3.2 State in the same order as being how the map coordinates are entered into the SPRT;DPM message as obtained on the map in the DPM.
3.2 Given a picture of the DPM and hand control unit and a list of procedures to prepare the DPM for orientation, but with the steps in a scrambled order, the student can identify the correct order in which these steps are performed. The correct order is: a. Press MANUAL switch on DPM. b. Set marker to UP on hand control. c. Press BRIDGE ENABLE switch on DPM.	3.4.1 The student can state the switch action to take to process the completed SPRT;DPM message as being: C/ED CMPTR ACTION. 3.4.2 Pick from a list the symbol drawn by the DPM at each orientation coordinate as a result of taking computer action on the SPRT;DPM message as being: A CROSS 3.4.3 Pick from a list the error message output when the coordinates entered in the SPRT;DPM message are outside the MAP MOD as being: DPM NOT IN MAP MOD. 3.4.4 Pick from a list the operation that is required if the orientation points on the DPM map and those entered in the SPRT;DPM message do not match as being: REPEAT THE ORIENTATION PROCESS.

3.3 B. Given the coordinates for orienting a map on the DPM, the student will identify the data to simulate completion of the SPRT;DPM input message. Data entries will include: • Grid coordinates • Grid zone 3.4 The student can select from a list the results of taking computer action on a SPRT;DPM message as being: DPM PLOTS THE ORIENTATION POINTS.	

TEST ITEMS

TASK IDENTIFICATION: 3.0

TASK ELEMENTS: 3.1 - 3.4

CRITERION ITEM(S)	ENABLING ITEM(S)
3.1 A. Refer to Figure _____. You have moved into a new area of operations and need to orient the map to the Digital Plotter Map (DPM). What message format from the SPA would you use to do this? (Enter letter and number) <u>(C)</u> and <u>(4)</u> B. What switch action (Figure _____) would you take to display the SPRT;DPM message format on the CED? <u>()</u> 3.2 The following are the steps required so that a map can be oriented to the DPM, but in a scrambled order. Put them in the correct order: a. Set marker to UP on the hand control. b. Press MANUAL switch on the DPM. c. Press BRIDGE ENABLE switch on DPM. <u>(b,a,c)</u>	3.1.1 The term DPM stands for: a. Data Processing Module *b. Digital Plotter Map c. Digital Processing Machine d. Data Processing Map 3.1.2 The support message used to orient the Digital Plotter Map is the: a. SPRT;MAP b. SPRT;COMD *c. SPRT;DPM d. SPRT;ZNE 3.3.1 What is the correct order in which coordinates are plotted on the DPM to orient a map? a. Lower right, upper right, upper left, lower left. *b. Lower left, upper left, upper right, lower right. c. Lower left, upper right, lower right, upper left. d. Upper left, lower right, upper right, lower left.

CRITERION ITEM(S)	ENABLING ITEM(S)
3.3 A1. Refer to Figure _____. You are at the DPM and need to orient a map to the DPM. Which one of the following is your first step? a. Raise reticle. *b. Orient DPM reticle on lower left map coordinates. c. Press AUTO switch on DPM. d. Press ENTER COORD switch on hand held unit. A2. You have moved into a new location and are orienting the map to the DPM. For y c first reference point, you have centered the reticle crosshairs over the point and then raised the reticle. What switch in Figure _____ do you now activate? (_____) A3. You have moved and are orienting the new map to the DPM. The COORD1 and 2 entries have been made in the SPRT;DPM message and at each of the four points the DPM reticle has been centered and entered by the ENTER COORD switch. What ACC console switch action (Figure _____) do you now use to complete the orientation of the map to the DPM and check the results? (Enter number) (_____)	3.3.2 In what order are the map orientation coordinates entered into the SPRT;MAP message? *a. Same order as plotted. b. Reverse order. c. Only lower left and upper right coordinates are entered. d. No set order is required. 3.4.1 The switch action to take to have the completed SPRT;DPM processed is (C/ED CMPTR ACTION). 3.4.2 What is the symbol that the DPM draws over each map orientation point? a. Point or dot b. Circle *c. Cross d. The numbers 1, 2, 3 and 4 3.4.3 If a coordinate entered into the SPRT;DPM message is outside the MAP MOD, the computer will indicate: a. POINT NOT IN MAP MOD *b. DPM NOT IN MAP MOD c. DPM NOT ORIENTED d. AREA TOO LARGE

CRITERION ITEM(S)	ENABLING ITEM(S)
2.1 A. Refer to Figure ____. The paper and lighted indicator on the ELP indicates the paper supply is low and needs to be changed. As a first step you need to select the message format that enables control of the operational status of the ELP. From the list of steps given below, first <u>select</u> the procedural steps and then <u>place</u> them in the correct order. *a. Activate FORMAT SELECT switch. b. Depress switches G and 1. c. Activate FORMAT COMMAND switch. *d. Depress switches B and 1. e. Depress switches C and 1. <u>(d,a)</u>	2.1.1 What message is used to change the operating status of peripheral units such as the ELP? a. SYS;PCLD. b. SYS;ADDR. c. SYS;PDS. *d. SYS;MDS. 2.2.1 After selecting the SYS;PDS message, it will appear on which display? (<u>CED</u>). 2.2.2 When the SYS;PDS message is displayed the entries are (blank/<u>filled in</u>)? 2.2.3 Refer to Figure ____ which shows a SYS;PDS message. Which of the following is the correct entry to place the ELP in a hold status? a. ELP1:/ /HLD; *b. ELP1:3/3/HLD; c. ELP2: / /HLD; d. ELP2:3/3/HLD;

TASK ELEMENTS: 2.1 - 2.2

CRITERION ITEM(S)	ENABLING ITEM(S)
2.1 B. Refer to Figures ____ and ____. Put in the correct order the procedures to select the SYS peripheral device status message using the SYS directory message. - Depress switches H and 1. - Activate the FORMAT SELECT switch. - Activate the FORMAT COMMAND switch. - After the SYS directory message is displayed on the CED, move cursor under the first letter P. (1, 3, 4, 2) 2.2 The paper supply in the ELP is low and needs to be changed. You have already selected the SYS;PDS message. Put in the correct order the steps to take to control the status of the ELP for the paper changing operation. (A step may be used more than once.) - Take C/ED CMPTR ACTION. - Change paper in ELP. - Place ELP in HLD status. - Return ELP to ON status. (c, a, b, d, a)	2.2.4 What is the switch action to take to have the SYS;PDS processed? (C/ED CMPTR ACTION) 2.2.5 What is the result of placing the ELP in a hold state during the paper changing operation? - Saves power. - Messages to be printed on the ELP are lost until ELP is made operational. - Messages to be printed on the ELP are saved until the ELP is made operational, then printed. - Messages to be printed on the ELP are routed to Div Arty for later transmission to the Bn. 2.2.6 What is the correct entry to make to return the ELP to an operational status? - ELPL:3/3/ON; - ELP1: / /ON; - ELP2: 3/3/ON; - ELP2: / /ON;

CRITERION AND ENABLING OBJECTIVES

TASK IDENTIFICATION: 3.0

TASK ELEMENTS: 3.1 - 3.5

CRITERION OBJECTIVE(S)	ENABLING OBJECTIVE(S)
3.1 Given a picture/drawing of the ACC switch panel assembly, identify the switch actions that can be used to select and display the SYS;PCLD message. The switch matrix is referenced by letters for rows and numbers for columns. The student is able to match the correct letter/number combination to select the required message format. The correct steps are: 1. Depress switches C and I. 2. Activate the FORMAT COMMAND switch.	3.1.1 Pick from a list the message that is used to change the display status of messages as being: SYS;PCLD. 3.2.1 Equate LOGGING with PRINTED ON ELP. 3.2.2 State NOT DISPLAYED as being how FM input messages are normally established before computer processing occurs. 3.2.3 Pick from a list the requirement for those subfields in which changes are not to be made as being: SUBFIELD CAN BE BLANK. 3.5.1 Match the following mnemonics with their definition and function. a. CAT - message category b. TYPE - message type c. PRT - message priority d. CLASS - security classification e. LOG - logging status f. DEPL - display status
3.2 Given information to change the display status of the FM messages FM;RFAF and FM;SUBS, the student will identify the data to simulate the completion of the SYS;PCLD input message. The data will include: A1:FM/RFAF/ / / /Y; B1:FM/SUBS/ / / /Y;	
3.3 The student can identify the switch action to take to process the completed SYS;PCLD input message as being: C/ED CMPTR ACTION	
3.4 When presented with a list of procedures to print the SYS 1201 output message, but with the steps in a scrambled order, the student can state the correct order in which these procedures are performed. The correct order is:

TASK IDENTIFICATION: 3.0

TASK ELEMENTS: 3.1 - 3.5

CRITERION ITEM(S)	ENABLING ITEM(S)
3.1 Refer to Figure _____. The FDO has decided he wishes to review incoming FM messages, FM;RFAF and FM;SUBS before they are processed by the computer. To do this, the display status for these two types of FM messages must be changed. As a first step, you need to select the message format so this can be done. a. To select the message format you depress the SPA format matrix switches (C) and (1). b. To display the message format selected you would press the FORMAT (COMMAND) switch. 3.2 The FDO has requested you change the display status of the FM message FM;RFAF and FM;SUBS so these messages will be available for display on the RD before they are processed by the computer, you have already selected the SYS;PCLD format message (Figure A) and must now enter the changes. Answer the following questions concerning the entry of data into the SYS;PCLD message format. Data to be included in Figure B: • Change display status of FM;RFAF to Yes. Other status remains unchanged. • Change display status of FM;SUBS to Yes. Other status remains unchanged.	3.1.1 What system message is used to change the display status of messages. a. SYS;DIR b. SYS;MISC c. SYS;PDS *d. SYS;PCLD 3.2.1 Logging of a message means that it is: *a. Printed on the ELP. b. Plotted on the DPM. c. Displayed on the CED. d. Displayed on the RD. 3.2.2 FM input messages are normally established so that they (will/will not) display on the RD before computer processing takes place. 3.2.3 If the data for a particular subfield for a message category and type is not to be changed, the subfield can be (deleted/left blank).
