Report # Bib. on Cold Regions ADA #

Title: "Bib. on Cold Regions - USSR pt. 1"

Subject report is ☐ Standard Process ☒ STG report. STG - Special Technology Group. ☐ Computer Product ☐ Follow up date

☐ The report will be accessioned by DDC. The form noting the ADA number is returned.

☐ The report has been assigned the ADA number noted above and is returned to NTIS for processing.

☐ DDC will not process the report. It is returned to NTIS

BIBLIOGRAPHY ON COLD REGIONS SCIENCE AND TECHNOLOGY
Volume 35, 1981

INTRODUCTION

The *Bibliography on Cold Regions Science and Technology* was first published in 1951 and is a continuing publication of the Cold Regions Bibliography Project in the Science and Technology Division of the Library of Congress. It is sponsored by and prepared for the Cold Regions Research and Engineering Laboratory (formerly Snow, Ice and Permafrost Research Establishment) of the U.S. Army Corps of Engineers. Volumes 1-15 were issued as the *Bibliography on Snow, Ice and Permafrost,* SIPRE Report 12. Beginning with volume 16 the designation was changed to CRREL Report 12. With volume 20 the title was changed to *Bibliography on Snow, Ice and Frozen Ground, with Abstracts,* and with volume 23 the current title was adopted.

The present volume contains material accessioned between October 1980 and September 1981. It contains the full citation of 4341 items, in many cases with abstracts. Pt. 2 is an index section divided into author and subject indexes. In the author index principal and joint personal and corporate authors are listed along with the title, date, pagination, and language of the document and the accession number. The subject index is composed of three basic elements: 1) terms taken from a controlled vocabulary based on the *Thesaurus of Engineering and Scientific Terms* (LEX-EJC), 2) free terms added as needed, 3) geographic names, generally entered under countries. The terms are listed in a single alphabetical arrangement, along with title (original, translated, abridged, expanded, or supplied), principal author, date, pagination, and language of pertinent documents, and their accession numbers.

This publication is the result of a coordinated effort. The bibliographic work was done by the Cold Regions Bibliography Project Staff who entered all data on a single computerized data base that accommodates both the *Bibliography on Cold Regions Science and Technology* and the *Antarctic Bibliography,* thus eliminating duplication of effort between the two bibliographies. The data processing, based on MARC II input, was handled by the Library's Automated Systems Office and the photocomposition by the Cataloging Distribution Service.

35-1
Future development of modular construction for petroleum industry in West Siberia. (O dal'neishem razvitii komplektno-blochnogo stroitel'stva predpriatii neftianoĭ gazovoĭ promyshlennosti Zapadnoĭ Sibiri).
Grech, V I., *Promyshlennoe stroitel'stvo.* May 1980. No 5, p.32-33. In Russian 1 ref
Petroleum industry, Residential buildings, Industrial buildings, Prefabrication, Permafrost beneath structures.

35-2
"Flying cranes" and their opportunities. ("Letaiushchie krany" i ikh vozmozhnosti).
Chernitskiĭ, A V., *Promyshlennoe stroitel'stvo.* Feb 1980. No.2, p 26-27. In Russian 5 refs
Modular construction, Prefabrication, Transportation, Helicopters.

35-3
Organizing construction in the Far North. (Osobennosti organizatsii stroitel'stva v raionakh Kraĭnego Severa).
Tsaliuk, I G., *Promyshlennoe stroitel'stvo.* Jan 1980. No 1, p.13-14. In Russian.
Mining, Petroleum industry, Arctic landscapes, Construction, Permafrost beneath structures.

35-4
Settlement of pile foundations in clayey water-saturated soils. (Osadki svaĭnykh fundamentov v glinistykh vodonasyshchennykh gruntakh).
Troshkova, N D., *Promyshlennoe stroitel'stvo.* Nov 1979, No.11, p.29-30. In Russian.
Foundations, Piles, Clay soils, Models, Settlement (structural).

35-5
Complex organization of snow removal. (Kompleksnaia organizatsiia uborki snega).
Buzunov, Z.T., *Put' i putevoe khoziaĭstvo.* 1980. No.2, p.10-11. In Russian.
Roads, Railroad tracks, Winter maintenance, Snow removal, Equipment.

35-6
Dimensions of frost heave humps. (Razmery puchinnykh erovnosteĭ).
Gritsyk, V I., *Put' i putevoe khoziaĭstvo.* 1980. No 2, p 23-25. In Russian
Roads, Railroads, Frost heave, Countermeasures.

35-7
Frost heave has disappeared. (Puchiny ne poiavliaiutsia).
Lukanin, A M., *Put' i putevoe khoziaĭstvo.* 1980. No 2, p.25. In Russian.
Railroads, Embankments, Foundations, Frost heave, Countermeasures.

35-8
Thermal and filtration regimes of the Ust'-Khantai river-bed earth dam during first operation years of the hydroelectric power plant. (Temperaturnyĭ i fil'tratsionnyĭ rezhim ruslovoĭ plotiny Ust'-Khantaĭskoĭ GES v pervye gody ekspluatatsii).
Kronik, IA.A., et al, *Energeticheskoe stroitel'stvo.* June 1980. No.6, p.52-55. In Russian. 4 refs.
Kadkina, E L., Skoblin, G.A
Electric power, Hydraulic structures, Earth dams, Rock fills, Frost penetration, Thermal regime, Seepage.

35-9
Analyzing hydrothermal processes in the river-bed dam of the Ust'-Khantai power plant. (Analiz temperaturno-vlazhnostnykh protsessov v iadre ruslovoĭ plotiny Ust-Khantaĭskoĭ GES).
Khagleev, E.P., et al, *Energeticheskoe stroitel'stvo.* June 1980. No.6, p 55-58. In Russian. 2 refs.
Khagleev, F.P.
Hydraulic structures, Earth dams, Electric power, Permafrost beneath structures.

35-10
Core of the Ust'-Khantai hydroelectric plant dam. (O sostoianii iadra uzlovoĭ plotiny Ust'-Khantaĭskoĭ GES).
Kuperman, V L., et al, *Energeticheskoe stroitel'stvo.* June 1980. No.6, p.58-61. In Russian. 3 refs.
Myznikov, IU.N.
Hydraulic structures, Earth dams, Permafrost beneath structures, Design, Cold weather construction.

35-11
All-Union conference on climate, relief and human activities. Abstracts of the papers, Pt.1. (Tezisy dokladov, Chast' 1).
Vsesoiuznoe soveshchanie Klimat, rel'ef i deiatel'nost' cheloveka, Kazan', 1978, Kazan', Kazanskiĭ universitet, 1978, 155p., In Russian For selected abstracts 35-12 through 35-22
Dedkov, A.P., ed.
Deltas, Alpine landscapes, Snow erosion, Permafrost weathering, Frost weathering, Topographic features, Nivation, Rock streams, Thermokarst, Naleds, Aerial surveys, Shore erosion, Arctic Ocean.

35-12
Problems of the relations between climatic zones and exogenic relief formation. (Sovremennye problemy zonal'nosti ekzogennogo rel'efoobrazovaniia).
Asecv, A A., et al, Vsesoiuznoe soveshchanie Klimat, rel'ef i deiatel'nost' cheloveka, Kazan', 1978 Tezisy dokladov Chast' 1 (Conference on climate, relief and human activities. Abstracts of the papers, Pt.1) edited by A P Dedkov, Kazan', Kazanskiĭ universitet, 1978, p.9-21, In Russian 23 refs
Vedenskaia, I.E., Korzhuev, S.S., Timofeev, D.A
Geocryology, Topography, Nivation, Permafrost weathering, Thermokarst, Soil erosion, Cryogenic soils, Slope processes, Solifluction.

35-13
Development of gullies and ravines due to nival-fluvial processes under different climatic conditions. (Razvitie nival'no-fluvial'nykh ovragov i balok v razlichnykh klimaticheskikh uslovnakh).
Liubimov, B.P., Vsesoiuznoe soveshchanie Klimat, rel'ef i deiatel'nost' cheloveka, Kazan', 1978. Tezisy dokladov Chast' 1 (Conference on climate, relief and human activities. Abstracts of the papers, Pt.1) edited by A P. Dedkov, Kazan', Kazanskiĭ universitet, 1978, p.71-73, In Russian.
Nivation, Meltwater, Gullies, Tundra, Alpine landscapes.

35-14
Permafrost weathering in relation to subarctic morphogenesis in Northeastern Yakutia. (Osobennosti vyvetrivaniia v usloviiakh mnogoletnemerzlykh porod v sviazi s problemoĭ subarkticheskogo morfolitogeneza (na primere Severo-Vostochnoĭ IAkutii)).
Loginova, I E., et al, Vsesoiuznoe soveshchanie Klimat, rel'ef i deiatel'nost' cheloveka, Kazan', 1978. Tezisy dokladov Chast' 1 (Conference on climate, relief and human activities Abstracts of the papers, Pt.1) edited by A.P. Dedkov, Kazan', Kazanskiĭ universitet, 1978, p 93-94, In Russian
Amichba, T.M.
Subarctic landscapes, Permafrost weathering, Periglacial processes, Slope processes, Solifluction, Permafrost hydrology.

35-15
Northern badlands, exogenic paradox of Arctic regions. (Severnye bedlendy Ekzogennyĭ paradoks Arktiki).
Korzhuev, S.S., Vsesoiuznoe soveshchanie Klimat, rel'ef i deiatel'nost' cheloveka, Kazan', 1978. Tezisy dokladov Chast' 1 (Conference on climate, relief and human activities. Abstracts of the papers, Pt.1) edited by A.P. Dedkov, Kazan', Kazanskiĭ universitet, 1978, p.95-96, In Russian.
Shore erosion, Deltas, Ground ice, Ice veins, Permafrost weathering, Gullies, Thermokarst.

35-16
Development of exogenic geologic processes in different structural-tectonic and climatic areas of the Baykal Amur railroad area. (Osobennosti razvitiia ekzogennykh geologicheskikh protsessov v razlichnykh strukturno-tektonicheskikh i klimaticheskikh regionakh zony BAMa).
Lekhatinov, A.M., Vsesoiuznoe soveshchanie Klimat, rel'ef i deiatel'nost' cheloveka, Kazan', 1978. Tezisy dokladov Chast' 1 (Conference on climate, relief and human activities Abstracts of the papers, Pt 1) edited by A.P. Dedkov, Kazan', Kazanskiĭ universitet, 1978, p.99-101, In Russian.
Permafrost distribution, Geocryology, Permafrost hydrology, Thermokarst, Frost heave, Solifluction, Baykal Amur railroad.

35-17
Spaceborne methods of studying naleds in relation to the development of the Baykal Amur railroad area. (Aerokosmicheskie metody izucheniia naledeĭ v sviazi s narodnokhoziaĭstvennymi planami osvoeniia zony BAMa).
Gavrilov, A B., et al, Vsesoiuznoe soveshchanie Klimat, rel'ef i deiatel'nost' cheloveka, Kazan', 1978. Tezisy dokladov Chast' 1 (Conference on climate, relief and human activities Abstracts of the papers, Pt 1) edited by A P Dedkov, Kazan', Kazanskiĭ universitet, 1978, p 101-102, In Russian.
Topchiev, A G.
Site surveys, Naleds, Aerial surveys, Spaceborne photography, Baykal Amur railroad.

35-18
Possibilities of stimulating thermokarst phenomena in the Baykal Amur railroad area. (Termokarst i vozmozhnost' aktivizatsii ego v zone BAMa).
Viatkina, L IU., et al, Vsesoiuznoe soveshchanie Klimat, rel'ef i deiatel'nost' cheloveka, Kazan', 1978 Tezisy dokladov Chast' 1 (Conference on climate, relief and human activities. Abstracts of the papers, Pt.1) edited by A.P. Dedkov, Kazan', Kazanskiĭ universitet, 1978, p.103-104, In Russian
Khabibullina, F S
Permafrost beneath structures, Ground ice, Human factors, Paludification, Thermokarst, Baykal Amur railroad.

35-19
Rock stream formation in the area of the South Yakutian Task Economic Complex. (Osobennosti protsessov kurumoobrazovaniia v raione IUzhno IAkutskogo territorial'noproizvodstvennogo kompleksa).
Tiurin, A I., et al, Vsesoiuznoe soveshchanie Klimat, rel'ef i deiatel'nost' cheloveka, Kazan', 1978. Tezisy dokladov Chast' 1 (Conference on climate, relief and human activities Abstracts of the papers, Pt 1) edited by A P Dedkov, Kazan', Kazanskiĭ universitet, 1978, p 104-106, In Russian
Poltev, N.F.
Rock streams, Frost weathering, Nivation, Snow erosion, Fracturing, Frost shattering, Ground ice, Ice mechanics, Flow rate.

35-20
Cryomorphogenesis in Transbaikal steppes. (Kriomorfogenez v stepnom Zabaĭkal'e).
Bazhenova, O I., Vsesoiuznoe soveshchanie Klimat, rel'ef i deiatel'nost' cheloveka, Kazan', 1978. Tezisy dokladov Chast' 1 (Conference on climate, relief and human activities. Abstracts of the papers, Pt.1) edited by A P Dedkov, Kazan', Kazanskiĭ universitet, 1978, p 106-108, In Russian
Steppes, Geocryology, Sporadic permafrost, Frost weathering, Snow erosion, Topographic features, USSR—Transbaikal.

35-21
Nivation and the formation of nival niches in bald mountains of North Transbaikal and the Baykal Lake area. (Nivatsiia i formirovanie nival'nykh nish (na primere gol'tsov Pribaĭkal'ia i Severnogo Zabaĭkal'ia)).
Vyrkin, V.B., Vsesoiuznoe soveshchanie Klimat, rel'ef i deiatel'nost' cheloveka, Kazan', 1978. Tezisy dokladov Chast' 1 (Conference on climate, relief and human activities Abstracts of the papers, Pt 1) edited by A.P. Dedkov, Kazan', Kazanskiĭ universitet, 1978, p 152-154, In Russian
Alpine landscapes, Landscape development, Landscape types, Nivation, Frost weathering, Topographic features, USSR—Transbaikal.

35-22
Morphogenesis in the bald peak zone of mountains. (K probleme morfogeneza v gol'tsovom poiase gor).
Nikonova, R I., et al, Vsesoiuznoe soveshchanie Klimat, rel'ef i deiatel'nost' cheloveka, Kazan', 1978. Tezisy dokladov Chast' 1 (Conference on climate, relief and human activities Abstracts of the papers, Pt 1) edited by A P Dedkov, Kazan', Kazanskiĭ universitet, 1978, p.154-155, In Russian
Ishchenko, A A.
Alpine landscapes, Landscape development, Nivation, Landscape types, Frost weathering, Topographic features.

35-23
Stationary cloud chamber for measuring atmospheric ice nuclei concentrations. (Statsionarnaia kamera dlia izmerenna kontsentratsii atmosfernykh ledianykh iaderĭ).
Aksenov, M IA., et al, *Moscow. Tsentral'naia aerologicheskaia observatoriia. Trudy.* 1980. Vol 137, p 118-122. In Russian with English summary.
Cloud chambers, Ice nuclei, Aerosols, Cloud seeding.

35-24
SALIA-1 cloud chamber designed by the Central Aerological Observatory for airborne measurements of ice nuclei concentration. (Samoletnaia kamera TsAO dlia izmerenia kontsentratsii ledianykh iader (SALIA-1)).
Aksenov, M.IA., et al. *Moscow. Tsentral'naia aerologicheskaia observatoriia. Trudy*, 1980. Vol.137, p.123-127. In Russian with English summary 5 refs
Vychuzhanina, M.V., Miroshnichenko, V.I., Solov'ev, A.D.
Cloud seeding, Aerosols, Ice nuclei, Measuring instruments, Airborne equipment, Cloud chambers.

35-25
Surface measurements of atmospheric ice nuclei concentrations in the area of hail-cloud modification activities in Moldavia. (Nazemnye izmereniia kontsentratsii atmosfernykh ledianykh iader v raione provedeniia protivogradovykh rabot v Moldavii).
Potapov, E.I. *Moscow. Tsentral'naia aerologicheskaia observatoriia. Trudy*, 1980. Vol 137, p 128-132. In Russian with English summary 3 refs.
Hail prevention, Supercooled clouds, Cloud seeding, Aerosols, Ice nuclei, Measuring instruments.

35-26
Ice nuclei concentrations measured from helicopters. (Vertoletnye izmereniia kontsentratsii ledianykh iader).
Vychuzhanina, M.V., et al. *Moscow. Tsentral'naia aerologicheskaia observatoriia. Trudy*, 1980. Vol.137, p.133-137. In Russian with English summary 3 refs.
Miroshnichenko, V.I., Solov'ev, A.D., Tolstov, V.N.
Cloud seeding, Aerosols, Ice nuclei, Measuring instruments, Airborne equipment.

35-27
Atlases of hydrometeorological phenomena especially dangerous for sea navigation. (Atlasy osobo opasnykh gidrometeorologicheskikh iavlenii dlia obespecheniia bezopasnosti moreplavaniia).
Korniushin, O.G., et al. *Moscow. Vsesoiuznyi nauchno-issledovatel'skii institut gidrometeorologicheskoi informatsii mirovogo tsentra dannykh. Trudy*, 1980. Vol.64, p 3-7. In Russian.
Tiurin, A.P.
Ice navigation, Charts, Ship icing, Icing rate.

35-28
Dangerous hydrometeorological phenomena in the Baltic and North seas. (Opasnye gidrometeorologicheskie iavlenia v Severnom i Baltiiskom moriakh).
Korniushin, O.G., *Moscow. Vsesoiuznyi nauchno-issledovatel'skii institut gidrometeorologicheskoi informatsii mirovogo tsentra dannykh. Trudy*, 1980. Vol 64, p 8-13. In Russian 11 refs.
Weather forecasting, Ice navigation, Air temperature, Wind velocity, Ship icing, Icing rate.

35-29
Probability and duration of wind velocities dangerous for navigation in the North Atlantic Ocean. (Veroiatnost' i prodolzhitel'nost' opasnykh dlia navigatsii skorostei vetra v Severnoi Atlantike).
Birman, B.A., et al. *Moscow. Vsesoiuznyi nauchno-issledovatel'skii institut gidrometeorologicheskoi informatsii mirovogo tsentra dannykh. Trudy* 1980. Vol 64, p.14-37. In Russian. 5 refs.
Klen, L.A., Parmuzina, T.A.
Weather forecasting, Navigation, Wind velocity, Storms.

35-30
Extreme wind speeds in the North Pacific. (K voprosu o maksimal'nykh skorostiakh vetra v severnoi chasti Tikhogo okeana).
Gorbach, L.V. *Moscow. Vsesoiuznyi nauchno-issledovatel'skii institut gidrometeorologicheskoi informatsii mirovogo tsentra dannykh. Trudy*, 1980. Vol.64, p 38-53. In Russian. 40 refs.
Weather forecasting, Navigation, Wind velocity, Storms, Analysis (mathematics).

35-31
Peculiarities of ice distribution in the Danish Strait. (Nekotorye osobennosti raspredelenia l'da v Datskom prolive).
Kogan, B.A., et al. *Moscow. Vsesoiuznyi nauchno-issledovatel'skii institut gidrometeorologicheskoi informatsii mirovogo tsentra dannykh. Trudy*, 1980. Vol.64, p 54-60. In Russian. 5 refs.
Zuev, A.N.
Sea ice, Drift, Ice navigation, Ice reporting, Ice conditions.

35-32
Snowmelt run off estimate from the Beas catchment in the Himalayas using energy balance techniques.
Dadoo, V.J., et al. *Archiv fur Meteorologie, Geophysik und Bioklimatologie Ser.B.* 1978, 26(2/3), p 183-192. In English with German summary. 10 refs.
Shrivaikar, V.V.
Snowmelt, Runoff, Glacier melting, Heat balance, Meteorological factors, Computer applications.

35-33
New analysis of measurements of snow evaporation made by H. Köhler at Haldde Observatory during the winter 1920-1921. (Eine neue Analyse von Hilding Köhlers Messungen der Schneeverdunstung auf dem Haldde-Observatorium aus dem Winter 1920/1921).
Lauscher, F. *Archiv fur Meteorologie, Geophysik und Bioklimatologie Ser.B*, 1978, 26(2/3), p 193-198. In German with English summary 5 refs.
Snow evaporation, Water vapor, Wind velocity, Measurement.

35-34
Prudhoe Bay Project; Final environmental impact statement. *U.S Federal Energy Regulatory Commission. Office of Pipeline and Producer Regulation. Environmental impact statement*, July 1980. FERC-/EIS 0009, 416p., Refs. p.209-217.
Permafrost preservation, Gas pipelines, Environmental impact, Fuel transport, Research projects, Meteorological data, United States—Alaska—Prudhoe Bay.

35-35
Studies in snow and ice (A collection of student research papers and essays).
Roulet, N.T., ed, Trent student geographer, Vol 8, Peterborough, Ontario, Trent University Geographical Society, 1980, 193p., Refs. passim. For individual papers see 35-36 through 35-50.
Snow cover distribution, Snow depth, Snow water equivalent, Snow density, Ice cover thickness, Ice conditions, Sea ice, Lake ice, River ice.

35-36
Climate and snowcover in Schefferville, Quebec, winter 1978-1979.
Strickland, N., Studies in snow and ice, edited by N.T Roulet Trent student geographer, Vol.8, Peterborough, Ontario, Trent University Geographical Society, 1980, p 17-22, 7 refs
Snow cover distribution, Snow depth, Snow water equivalent, Snow density, Meteorological data.

35-37
Snowcover variation with vegetation type in the Peterborough area.
Paul, P., et al. Studies in snow and ice, edited by N.T Roulet. Trent student geographer, Vol 8, Peterborough, Ontario, Trent University Geographical Society, 1980, p.23-35, 14 refs.
O'Neil, L.
Snow depth, Vegetation factors, Snow water equivalent, Snow density, Snow cover distribution.

35-38
Role of vegetation on the disposition of snowfall on a mixed forested watershed in the Kawartha Lakes region of east central Ontario.
Mathers, T.J., Studies in snow and ice, edited by N.T Roulet Trent student geographer, Vol 8, Peterborough, Ontario, Trent University Geographical Society, 1980, p.36-50, 21 refs.
Snowfall, Snow accumulation, Vegetation factors, Snow depth, Snow cover distribution, Forest land, Watersheds, Runoff, Snowmelt.

35-39
Analysis of the relationship of snow depth, water equivalent and density in the Elizabeth Lake basin, Labrador.
Outerbridge, K., Studies in snow and ice, edited by N.T Roulet. Trent student geographer, Vol 8, Peterborough, Ontario, Trent University Geographical Society, 1980, p 51-61, 4 refs.
Snow depth, Snow water equivalent, Snow density, Vegetation factors, Tundra, Lichens, Lakes.

35-40
Snow depth distribution around spruce trees in the Chamonix Valley, France.
Roulet, N.T., Studies in snow and ice, edited by N.T Roulet. Trent student geographer, Vol.8, Peterborough, Ontario, Trent University Geographical Society, 1980, p.62-67, 8 refs.
Snow depth, Snow cover distribution, Vegetation factors, Trees (plants).

35-41
Development of snowcover on a lake in the vicinity of Peterborough, Ontario.
McCaskell, P.C., Studies in snow and ice, edited by N.T Roulet Trent student geographer, Vol 8, Peterborough, Ontario, Trent University Geographical Society, 1980, p.71-88, 12 refs
Snow cover distribution, Lake ice, Snow depth, Snow density, Snow water equivalent, Snow stratigraphy.

35-42
Characteristics of snow distribution on Elizabeth Lake, Labrador.
Sagriff, L., Studies in snow and ice, edited by N.T Roulet Trent student geographer, Vol.8, Peterborough, Ontario, Trent University Geographical Society, 1980, p 89-99, 10 refs
Snow cover distribution, Snow depth, Snow water equivalent, Snow stratigraphy, Wind factors, Topographic effects.

35-43
Cover development on Elizabeth Lake, Labrador, with special reference to black ice.
Russell, B., Studies in snow and ice, edited by N.T Roulet. Trent student geographer, Vol 8, Peterborough, Ontario, Trent University Geographical Society, 1980, p 100-109, 5 refs
Lake ice, Snow cover distribution, Ice cover thickness, Thermal regime.

35-44
Comparative study of ice regimes during the freeze-up period on the Indian River, near Peterborough, Ontario.
Price, J., Studies in snow and ice, edited by N.T Roulet Trent student geographer, Vol 8, Peterborough, Ontario, Trent University Geographical Society, 1980, p.110-120, 13 refs
River ice, Ice conditions, Ice formation, Freezeup, Hydrography, Dams, Meteorological factors.

35-45
Ice cover characteristics of two small lakes in the Peterborough area.
Heron, R., Studies in snow and ice, edited by N.T Roulet Trent student geographer, Vol 8, Peterborough, Ontario, Trent University Geographical Society, 1980, p 121-132, 11 refs
Lake ice, Ice cover thickness, Water flow, Flow rate.

35-46
Relationship between a lake ice and snowcover and zooplankton distribution.
Roulet, N.T., et al. Studies in snow and ice, edited by N.T. Roulet Trent student geographer, Vol 8, Peterborough, Ontario, Trent University Geographical Society, 1980, p 133-148, 36 refs
Wolfe, B.R.
Lake ice, Snow cover distribution, Plankton, Light transmission, Solar radiation, Ice optics, Snow optics, Marine biology.

35-47
Winter oxygen loss in three southern Ontario lakes.
Jackson, M.B., Studies in snow and ice, edited by N.T Roulet Trent student geographer, Vol 8, Peterborough, Ontario, Trent University Geographical Society, 1980, p.149-159, 31 refs.
Icebound lakes, Ice cover thickness, Oxygen, Snow depth, Water chemistry, Variations, Snow water equivalent, Snow cover effect.

35-48
Snow in the biotic environment.
Moffatt, D., Studies in snow and ice, edited by N.T Roulet. Trent student geographer, Vol 8, Peterborough, Ontario, Trent University Geographical Society, 1980, p.163-168, 26 refs
Snow cover effect, Vegetation, Ecology, Snow depth, Plants (botany).

35-49
Sea ice: its characteristics, distribution and role in human affairs.
Ferguson, N.B., Studies in snow and ice, edited by N.T Roulet. Trent student geographer, Vol 8, Peterborough, Ontario, Trent University Geographical Society, 1980, p 169-176, 12 refs
Sea ice distribution, Ice physics, Water temperature, Density (mass/volume), Salinity, Ice mechanics, Ice structure, Meteorological factors, Ice navigation, Damage.

35-50
Glaciological research at Trent University with a bibliography of faculty and student publications, 1968-1980.
Adams, W.P., Studies in snow and ice, edited by N.T Roulet. Trent student geographer, Vol.8, Peterborough, Ontario, Trent University Geographical Society, 1980, p.178-193, Refs. p.185-193.
Glaciology, Research projects, Bibliographies, Glacier surveys, Ice surveys, Snow surveys, Permafrost, Ground ice.

35-51
Arctic technology. *Offshore*, May 1980, 40(5), p.145-218
Offshore drilling, Artificial islands, Ice conditions, Offshore structures, Ice islands, Fuel transportation, Icebreakers.

35-52
Mass balance studies on Kongma Glacier, Khumbu Himal.
Ikegami, K., et al, *Seppyo*, 1978, Special Issue No 40, p.12-16, 8 refs. Also issued in Nagoya, Japan University. Water Research Institute. Collected papers on sciences of atmosphere and hydrosphere, 1978, Vol.16, No.15.
Inoue, J.
Glacier mass balance, Glacier flow, Snowfall, Glacier ablation, Snow accumulation.

35-53
Stratigraphic studies of the Gyajo Glacier, Khumbu Himal.
Fushimi, H., *Seppyo*, 1978, Special Issue No.40, p.17-20, 4 refs. Also issued in Nagoya, Japan. University. Water Research Institute. Collected papers on sciences of atmosphere and hydrosphere, 1978, Vol.16, No.16.
Glacier surveys, Stratigraphy, Snow accumulation, Ice formation.

Meltwater, Heat transfer, Convection, Ice water interface, Water temperature, Temperature effects, Ice melting, Analysis (mathematics).
An experimental study was conducted on the formation of a water layer containing a maximum density, its effect on the onset of convection and the heat transfer characteristics of such a system. This water layer was formed by one-dimensional melting (either from below or above) of a cylinder of bubble-free ice. The layer depth at the onset of convection was determined by locating the inflection point on the water layer depth versus time curve, and was compared with layer depth calculated from a linear stability analysis of an identical problem. The results were compared with the analytical work of Veronis and were found to be in excellent agreement. Formation of a constant temperature layer was observed by measuring the water temperature distribution as melting progressed. The constant temperature was found to depend on T(h) (warm plate temperature) for melting from below, but had a weaker dependence for melting from above. The heat flux to the melting surface increased linearly with T(h) for melting from below, but had a weaker dependence for melting from above. Non-dimensional mean temperature profiles of the water layer were found to be in good agreement with those by Adrian for melting from above. In the case of melting from below, the mean temperature profile also fell into a single line with a somewhat higher value in the convection layer

National Research Council. Polar Research Board, Washington, D.C., National Academy of Sciences, 1980, 39p
Research projects, Low temperature research.
The report provides a summary of the Board's activities, outlines its terms of reference, organization, and operations; and details some of its future plans. Various committees, through which the Board does its work, are identified, the duties and responsibilities of each are outlined, and some current activities, projects and tasks are noted. Relationships of the Board with Congress are mentioned and the Board's role in the national and international scientific communities is detailed. Attachments list names and affiliations of Board members and staff, representatives to the various SCAR and ICSU committees and working groups of various disciplines, Board publications in 1979 and those in preparation for 1980, and Board and related meetings for the year showing date, location, and overall topic of each

35-135
Creep and fracture of ice and surface strain measurements on glaciers and sea ice.
Goodman, D.J., Cambridge, University, Christ's College, Mar. 1977, 149p. + plates, Ph.D. thesis Refs p 139-149.
Ice creep, Ice cracks, Ice crystals, Glacier ice, Sea ice, Strains, Ice mechanics, Stress strain diagrams, Ice melting, Recrystallization, Analysis (mathematics), Antarctica—Byrd Station.

Part 1 of the thesis examines the creep and fracture properties of polycrystalline ice, while Pt.2 outlines a new technique for surface strain measurements on glaciers and sea ice. Constitutive equations for each mechanism are presented and used to construct a diagram of deformation mechanism map. The diagram is used to suggest the possible creep mechanisms in the Antarctic ice sheet at Byrd Station and in an ice shelf. Continuous observations were made of surface strain changes on sea ice, glaciers and in a rock tunnel very close to a sliding glacier in Greenland, Baffin Island and the French Alps.

35-136

Polar ice—is it a cause or consequence of climatic changes. (Polarnye l'dy sledstvie ili prichina izmeneniia klimata).
Zakharov, V.F., *Priroda*, Feb. 1980, No.2, p.70-79, In Russian. 6 refs.
Polar regions, Climatic changes, Sea ice, Land ice, Distribution.
The role of polar ice, both sea and continental, in climatic variations is examined. Although the emphasis is on arctic ice and charts and graphs show the extent and area of sea ice in the Southern Ocean as well.

Passive radiometry of the ocean from space—an overview.
McClain, E.P., *Boundary-layer meteorology*, Feb 1980, 18(1), p 7-24, 45 refs.
Spaceborne photography, Radiometry, Sea ice, Water temperature, Ocean currents, Spacecraft.
A brief description of unmanned Earth-observation platforms in space, and their ocean related radiometric instrumentation, is given. Both operational and research-type spacecraft, current and near-future, are discussed. Some recent oceanographic studies and applications are reviewed, including the following topics: sea surface temperature, sea ice, ocean surface roughness and near-surface wind, and ocean color. Satellite imagery and text include outlines of the Antarctic role in various radiometry programs. (Auth. mod.)

Underground technology for offshore hydrocarbon development in Antarctica.
Splettstoesser, J.F., International Conference on Port and Ocean Engineering Under Arctic Conditions, 5th, Trondheim, Norway, Aug. 13-18, 1979. Proceedings, Vol 3, Trondheim University, 1979, p 233-245, 17 refs.
Offshore drilling, Sea ice distribution, Ice conditions, Icebergs, Offshore structures, Marine geology, Ice scoring, Petroleum industry.
As the world's known reserves of oil and gas become depleted, more attention is being given to remote and hostile offshore areas where continental shelves hold the potential of vast amounts of hydrocarbons. One of the last frontiers is offshore Antarctica, where estimates of oil and gas resources range from 20 to 45 billion barrels of oil and 80 to 115 trillion cubic feet of natural gas. However, no reserves are proved as yet due to a lack of sufficient geophysical information, although commercial marine surveys have already begun. The unusual environment of Antarctic waters dictates that specialized techniques be applied for exploration, development and exploitation of offshore oil and gas. Sea ice conditions limit shipping and other offshore activities to only 3 months per year, iceberg presence requires semisubmersible structures for exploration drilling and possibly production, and iceberg bottom scouring requires subsurface production systems in relatively shallow water (< 500 m). Another possible means of dealing with sea ice and iceberg conditions is to use modified underground mining technology for undersea development of oil and gas resources. Access would be from a mine shaft from the surface through an offshore floating platform, a submarine entrance or a tunnel seaward from a land base. Thus production activities would be extended year-round. Drilling and recovery would be implemented in underground (subsea) rooms, with oil and gas piped through tunnels to onshore facilities or to tanker ships during the summer when ice-free conditions exist. (Au h.)

Pack ice, Icebergs, Sea ice distribution, Ice conditions, Ice physics, Remote sensing, Research projects, Seasonal variations, Sea water.
This paper reports the results of the Seasonal Sea Ice Zone (SSIZ) Workshop, held February 26 1979 in Monterey California. The purpose of the workshop was to summarize the existing knowledge of the SSIZ, to identify significant problem areas, and discuss approaches to finding solutions. The purpose of the report is to make the participants of POAC 79 aware of the important research problems of the SSIZ identified at the Workshop.

Report on United States antarctic research activities, 1979-1980; United States antarctic research activities planned for 1980-1981.
National Research Council. Polar Research Board. *National Academy of Sciences-National Research Council Report to SCAR*, June 1980, No.22, 90p., Refs. p.64-78.
Research projects, Antarctica.
This report contains information on the U.S. Antarctic Research Program completed during the period February 1979 to March 1980, in progress from March 1980 to October 1980, and planned from October 1980 through September 1981. Activities in the following areas are summarized: atmospheric sciences, earth sciences, biology, research vessel operations and information programs. World Data Center A subcenters, members of the Polar Research Board, their addresses and telephone numbers, and U.S. delegates and members of SCAR subgroups are listed.

35-184
Deep Freeze 1980 Cruise Report.
U.S. Coast Guard, Wilmington, N.C., Apr. 1980, 72p.
Garrett, R.R.
Ships, Logistics, Ice breaking, Ice navigation, Antarctica.
The *Northwind*, no longer a young vessel, performed support for Deep Freeze for what her commanding officer recommends be the last time. She successfully performed her assignment in spite of a number of maintenance and repair problems, the captain credits the crew with great diligence and dedication. *Northwind* opened the "backdoor" channel to McMurdo, while the larger icebreaker *Polar Sea* commenced main channel breaking. She also spent some time in the Ross Sea in support of a sea bird study.

Aeromagnetic and radio echo ice-sounding measurements show much greater area of the Dufek intrusion, Antarctica.
Behrendt, J.C., et al. *Science*, Aug. 19, 1980, 209(4460), p.1014-1017. 15 refs.
Drewry, D.J., Jankowski, E., Grim, M.S.
Radio echo soundings, Ice cover thickness, Seismic surveys, Aerial surveys, Antarctica—Dufek Massif.
A combined aeromagnetic and radio echo ice-sounding survey made in 1978 in Antarctica over the Dufek layered mafic intrusion suggests a minimum area of the intrusion of about 50 000 square kilometers, making it comparable in size with the Bushveld Complex of Africa. Comparisons of the magnetic and subglacial topographic profiles illustrate the usefulness of this combination of methods in studying bedrock geology beneath ice-covered areas. Magnetic anomalies range in peak-to-trough amplitude from about 50 nanoteslas over the lowermost exposed portion of the section in the Dufek Massif to about 3600 nanoteslas over the uppermost part of the section in the Forrestal Range. Theoretical magnetic anomalies computed from a model, required normal and reversed magnetizations ranging from 001 to 01 electromagnetic units cu cm. This result is interpreted as indicating that the Dufek intrusion cooled through the Curie isotherm during one or more reversals of the earth's magnetic field. (Auth.)

35-219
Properties and classification of some desert soils in coarse-textured glacial drift in the Arctic and Antarctic.
Bockheim, J.G., *Geoderma*, Aug. 1980, 24(1), p.45-69. 43 refs.
Cryogenic soils, Desert soils, Soil chemistry, Soil structure, Classifications.

Polar Desert soils in the Arctic (66 and 74 N latitude) are contrasted with Cold Desert soils in the Antarctic (77 N). The soils are derived from sandy skeletal glacial drift and have not been influenced by cryoturbation. Pedogenic horizons are limited to a desert pavement (designated D) and to a weak B horizon in the oldest soils of both groups. Solum thickness increases with age in the two soil groups, however, because of a slightly greater amount of soil moisture, the increase in solum thickness is greater for Polar Desert soils. Soils of both groups often contain dry permafrost. The Polar Desert soils at 74 N and most of the Cold Desert soils are neutral to mildly alkaline and the Polar Desert soils at 66 N are strongly to medium acid. Although soluble salts increase with age in soils of both groups, the increase is more marked in the more arid Cold Desert soils. Results from this study of Cold Desert soils and in a survey of the literature show that sodium is the prevalent cation in water extracts of Cold Desert soils and in Polar Desert soils above ca. 80 N. Chloride is the major anion in Cold Desert soils in the McMurdo Sound vicinity and in noncalcareous Polar Desert soils. A scheme contrasting clay-mineral alteration in soils of the two groups is provided. (Auth. mod.)

35-220
Solutions and use of chronofunctions in studying soil development.
Bockheim, J.G., *Geoderma*, Aug. 1980, 24(1), p.71-85. 60 refs.
Soil composition, Soil formation, Geomorphology, Time factor, Models.
Thirty-two chronosequences from 27 areas were selected from the literature for constructing chronofunctions and for correlating rates of change in soil properties with variables representing climate and parent material. The chronosequences originate from areas situated between 66 N and 78 S latitude and represent seven climatic regions ranging from tropical rainy to cold desert and seven types of parent materials including till, aeolian sand, alluvium, mine spoil, volcanic ash, raised beach deposits and mudflows. Fourteen of the chronosequences contain soils which range in age from 0 to 500 yr, seven span a 12,000-yr period, three a 100 000-yr period, and eight a period of greater than one million yr. Three linear and non-linear models were tested on 151 soil properties. (Auth. mod.)

Bockheim, J.G.
Glacial deposits, Moraines, Soil formation, Permafrost, Desert soils, Soil chemistry, Soil composition, Soil erosion, Electrical properties, Geocryology, Antarctica—Taylor Valley.
Soils were examined on moraines deposited by Taylor Glacier in lower Taylor Valley to determine changes in soil properties with time in an environment of extreme cold and aridity and minimal biologic activity. The soils range in age from 200,000 to 2.7-3.5 million years BP. Soil profiles contain a desert pavement over a weakly expressed B horizon, followed by permafrost which may be dry or ice-cemented. The soils are alkaline (pH 7.5 to 9.0) and are enriched in salts. Based on X-ray diffraction, the salts are mirabilite, trehydrite and halite. Electrical conductivity of the salt enriched zone ranges from 2.8 to 9 mmho/cm. Sodium and chloride are the dominant ions in 1:5 soil:water extracts. Ion ratios suggest that the bulk of the salts are of marine aerosol origin. The soils are generally gravelly sands, but the amounts of clay and medium + fine silt increase with soil age. Free iron also increases with age. Secondary clay minerals include montmorillonite, vermiculite, and interstratified layer silicates. The predominant clay mineral weathering process is hydration of mica. The age-soil property

...ations may have been influenced by microclimatic variations, ...revious occurrence of lakes dammed by a westward flowing marine ice sheet, mass wasting processes, and persistent ice-cemented frost table in the solum. The soils are classified as Pergelic Cryorthents, sandy skeletal, mixed, frigid. (Auth.)

Foundations, Piles, Loess, Soil water ...g... ... settlement (structural).

35-230
Stability of tailing embankments. (K voprosu ustoichivosti nasypei-otvalov).
Oglobin, V.F., et al. *Osnovaniya i fundamenty*, 1980, Vol.13, p.68-71. In Russian. 3 refs.
Gavenko, V.M.
Embankments, Tailings, Slope stability, Soil compaction, Models.

35-231
Development of deformations in loess beneath an experimental foundation. (Issledovaniia protsessa razvitiia deformatsii v lessovom osnovanii opytnogo fundamenta).
Tugaenko, I.F., et al. *Osnovaniya i fundamenty*, 1980, Vol.13, p.85-97. In Russian. 5 refs.
Pasichnichenko, V.G.
Foundations, Loess, Rheology, Elastic properties, Deformation.

35-232
Abramov glacier (Alai Range). Water-ice and heat balance of mountain glacier basins (Ledniki Abramova (Alaiskii khrebet). Vodno-lednikovyi i teplovoi balans gornoledno...kovykh basseinov).
Suslov, V.F., et al. Leningrad, Gidrometeoizdat, 1980, 206p., In Russian with English summary. English table of contents enclosed. 171 refs.
Mountain glaciers, Glacier ice, Heat balance, Mass balance, Glacier alimentation, Glacier ablation, Avalanches, Snowstorms, Snow cover distribution, Metamorphism (snow), Water balance, Glacial hydrology, USSR—Alai Range.

35-233
Mathematical modeling and experimental study of heat and mass transfer processes. (Matematicheskoe modelirovanie i eksperimental'noe issledovanie protsessov teplo- i massoperenosa).
Bondarev, E.A., ed. Yakutsk, SO AN SSSR, Yakut Fil., 1979, 136p., In Russian. For selected papers see 34-234 through 34-244. Refs. passim.
Nikitina, L.M., ed.
Thermal regime, Moisture transfer, Underground pipelines, Ducts, Stefan problem, Phase transformations, Heat transfer, Soil freezing, Thermal insulation, Frozen ground, Porous materials, Unfrozen water content, Hygroscopic water, Capillary ice.

35-234
Temperature regime of an underground pipeline. (Temperaturnyi rezhim podzemnogo truboprovoda).
Krasovitskii, B.A., Matematicheskoe modelirovanie i eksperimental'noe issledovanie protsessov teplo- i massoperenosa (Mathematical modeling and experimental study of heat and mass transfer processes) edited by E.A. Bondarev and L.M. Nikitina, Yakutsk, SO AN SSSR, Yakut. Fil., 1979, p.16-37. In Russian. 17 refs.
Petroleum transportation, Underground pipelines, Thermal regime, Frozen ground.

35-235
Mathematical model of heat transfer between a semi-buried duct and the surrounding medium and its computer algorithm. (Matematicheskaia model' protsessa teploobmena ...zagliublennogo kanala s okruzhaiushchei sredoi i ...ee realizatsii).
Bondarev, E.A., et al. Matematicheskoe modelirovanie i eksperimental...oe issledovanie protsessov teplo- i massoperenosa (Mathematical modeling and experimental study of heat and mass transfer processes) edited by E.A. Bondarev and L.M. N... Yakutsk, SO AN SSSR, Yakut. Fil., 1979, p.62-70. ... Russian. 9 refs.
Kapitonova, T.... Fedoseeva, A.I.
Utilities, Pipelines, ...t ... beneath structures, Heat transfer, Mathematical models.

35-236
Bilateral ev... ... of a superficial single-phase Stefan problem. (Odnostoronnie otsenki vneshnei odnofaznoi zad...i ...).
Medvedskii, K.I. ...maticheskoe modelirovanie i eksperimental'noe issledovanie protsessov teplo- i massoperenosa (Mathematical modeling and experimental study of heat and mass transfer processes) edited by E.A. Bondarev and L.M. Nikitina, Yakutsk, SO AN SSSR, Yakut. Fil., 1979, p.71-8... In Russian. 4 refs.
Stefan problem, Thermodynamic properties, Phase transformations.

35-237
Sorption properties and phase composition of pore water in silica gels of different porosity at natural subzero temperatures. (Sorbtsionnye svoistva i fazovyi sostav porovoi vlagi silikagelei razlichnoi poristosti v diapazone estestvennykh otritsatel'nykh temperatur).
Efimov, S.S., et al. Matematicheskoe modelirovanie i eksperimental'noe issledovanie protsessov teplo- i massoperenosa (Mathematical modeling and experimental study of heat and mass transfer processes) edited by E.A. Bondarev and L.M. Nikitina, Yakutsk, SO AN SSSR, Yakut. Fil., 1979, p.91-96. In Russian. 4 refs.
Nikitina, L.M., Gavril'ev, V.N.
Porous materials, Water, Adsorption, Phase transformations, Capillary ice.

35-238
Phase composition of sorption moisture at subzero temperature. (Fazovyi sostav sorbtsionnoi vlagi pri otritsatel'nykh temperaturakh).
Efimov, S.S., Matematicheskoe modelirovanie i eksperimental'noe issledovanie protsessov teplo- i massoperenosa (Mathematical modeling and experimental study of heat and mass transfer processes) edited by E.A. Bondarev and L.M. Nikitina, Yakutsk, SO AN SSSR, Yakut. Fil., 1979, p.97-100, In Russian. 5 refs.
Soil freezing, Unfrozen water content, Hygroscopic water, Phase transformations.

35-239
Influence of dissolved salts on thermophysical properties of grounds. (Vliianie rastvorennykh solei na teplofizicheskie svoistva gruntov).
Stepanov, A.V., Matematicheskoe modelirovanie i eksperimental'noe issledovanie protsessov teplo- i massoperenosa (Mathematical modeling and experimental study of heat and mass transfer processes) edited by E.A. Bondarev and L.M. Nikitina, Yakutsk, SO AN SSSR, Yakut. Fil., 1979, p.101-105, In Russian. 6 refs.
Saline soils, Soil freezing, Frost penetration, Unfrozen water content, Phase transformations.

35-240
Studying mass transfer properties of polymer thermal insulation materials. (Issledovanie massoobmennykh svoistv polimernykh teploizolitsionnykh materialov).
Nikitina, L.M., et al. Matematicheskoe modelirovanie i eksperimental'noe issledovanie protsessov teplo- i massoperenosa (Mathematical modeling and experimental study of heat and mass transfer processes) edited by E.A. Bondarev and L.M. Nikitina, Yakutsk, SO AN SSSR, Yakut. Fil., 1979, p.106-109, In Russian. 3 refs.
Shamaeva, A.P., Fedorova, F.G.
Buildings, Walls, Thermal insulation, Cellular plastics, Humidity, Thermal regime, Heat transfer, Mass transfer.

35-241
Studying steam permeability of some construction materials. (Issledovanie paropronitsaemosti nekotorykh stroitel'nykh materialov).
Shamaeva, A.P., et al. Matematicheskoe modelirovanie i eksperimental'noe issledovanie protsessov teplo- i massoperenosa (Mathematical modeling and experimental study of heat and mass transfer processes) edited by E.A. Bondarev and L.M. Nikitina, Yakutsk, SO AN SSSR, Yakut. Fil., 1979, p.110-113, In Russian. 4 refs.
Korolev, A.S.
Walls, Construction materials, Thermal regime, Humidity, Concretes, Lightweight concretes, Bricks, Buildings.

35-242
Studying thermophysical characteristics of polymer insulation. (Issledovanie teplofizicheskikh kharakteristik polimernykh teploizolitsionnykh materialov).
Timoshenko, A.T., Matematicheskoe modelirovanie i eksperimental'noe issledovanie protsessov teplo- i massoperenosa (Mathematical modeling and experimental study of heat and mass transfer processes) edited by E.A. Bondarev and L.M. Nikitina, Yakutsk, SO AN SSSR, Yakut. Fil., 1979, p.114-119, In Russian.
Walls, Thermal insulation, Polymers, Cellular plastics, Buildings.

35-243
Determining early dates for dusting snow cover. (Opredelenie rannikh srokov mul'chirovaniia snezhnogo pokrova).
Romanov, P.G., Matematicheskoe modelirovanie i eksperimental'noe issledovanie protsessov teplo- i massoperenosa (Mathematical modeling and experimental study of heat and mass transfer processes) edited by E.A. Bondarev and L.M. Nikitina, Yakutsk, SO AN SSSR, Yakut. Fil., 1979, p.122-124, In Russian. 2 refs.
Albedo, Snow evaporation, Snow melting, Dusting, Snow cover.

35-244
Calculating thermal regime of inflatable structures. (Raschet teplovogo rezhima pnevmaticheskogo sooruzheniia).
Kozhevnikov, N.N., Matematicheskoe modelirovanie i eksperimental'noe issledovanie protsessov teplo- i massoperenosa (Mathematical modeling and experimental study of heat and mass transfer processes) edited by E.A. Bondarev and L.M. Nikitina, Yakutsk, SO AN SSSR, Yakut. Fil., 1979, p.125-127, In Russian. 5 refs.
Inflatable structures, Thermal regime, Heat loss, Thermal insulation, Foundations, Frozen ground, Design.

35-245
Conference on ground water in Siberia and the Far East, 9th, Petropavlovsk-Kamchatskiy, 1979. Abstructs of the papers. (Tezisy dokladov).
Soveshchanie po podzemnym vodam Sibiri i Dal'nego Vostoka, 9th, Petropavlovsk-Kamchatskii, Sept. 1979, Irkutsk, 1979, 211p., In Russian with abridged English table of contents enclosed.
Pinneker, E.V., ed.
Hydrogeology, Aerial surveys, Permafrost hydrology, Water supply, Thermokarst, Taliks, Permafrost beneath rivers, Sporadic permafrost, Continuous permafrost, Water pollution, Petroleum industry, Mining, Environmental protection.

35-246
Factors influencing the diversity, species combination and abundance of phytoplankton in twenty-one arctic and subarctic lakes.
Moore, J.W., *Internationale Revue der gesamten Hydrobiologie*, 1979, 64(4), p.485-499, 39 refs.
Lakes, Plankton, Algae, Polar regions, Subpolar regions.

35-247
On the problem of techniques for measuring soil surface temperature.
Smirnov, S.A., *U S. National Aeronautics and Space Administration Technical translation,* June 1972, NASA-TT-F-14471, 11p., N72-32408. For Russian original see 24-2055 6 refs.
Soil temperature, Measuring instruments, Frozen ground physics, Antarctica—Oasis Station.
Five liquid thermometers were tested on soils during a 10-day period in February at Oasis Station Test variables included texture and roughness of the soil and its thermophysical properties plus the heat exchange between soil and air Resistance thermometers were installed at another, but essentially identical, location some 50 m distant from the liquid thermometer site Results of the two sets of measurements are presented and discussed

35-248
When the icehouse blooms.
Davids, R., *Science 80,* May/June 1980, 1(4), p 56-63
Plants (botany), Arctic landscapes, Vegetation patterns, Cold weather survival.

35-249
Dipolar correlation factor and permittivity of ice IV and V.
Johari, G.P., *Philosophical magazine,* Aug 1980, 42(2), p.241-255, 31 refs
High pressure ice, Ice crystal structure, Dielectric properties, Electrical resistivity.

35-250
Focus on polar research.
Washburn, A.L., *Science,* Aug. 8, 1980, 209(4457), p.643-652, Numerous refs
Research projects, Climatic changes, Oceanography, Sea ice, Ice sheets, Geologic structures, Environments.
The author reviews some of the many significant events which have occurred in polar research activities since the IGY 1957-1958 These events encompass both Northern and Southern Hemispheres and include such areas of research as the atmosphere, the hydrosphere, the cryosphere, the lithosphere, the biosphere, and the peoples He also touches upon the international aspects of polar research especially as they involve the antarctic environment and United States policy in and toward Antarctica

35-251
Concrete and cryogenics; Part 2.
Turner, F.H., *Concrete,* June 1980, 14(6), p 31, 12 refs. For Pt. 1 see 34-3446.
Concrete freezing, Concrete strength, Cryogenics, Low temperature tests, Temperature effects.

35-252
Avalanche and landslide danger along the Baykal Amur railroad. (Lavinnaia i selevaia opasnost' na trasse BAM),
Perov, V.F., ed, Moscow, Universitet, 1980, 189p., In Russian. Refs. p.183-187.
Slope processes, Avalanche formation, Avalanche forecasting, Avalanche triggering, Countermeasures, Avalanche engineering, Mudflows.

35-253
Heat and mass transfer in rocks during phase transformations. (Teplo i massoobmen v gornykh porodakh pri fazovykh perekhodakh),
Melamed, V G , Moscow, Nauka, 1980, 228p , In Russian with English table of contents enclosed. 189 refs.
Frozen fines, Frost penetration, Moisture transfer, Phase transformations, Heat transfer, Stefan problem, Mathematical models.

35-254
Supra-glacial lakes in Spitsbergen.
Liestöl, O., et al, *Norsk geografisk tidsskrift,* 1980, 34(2), p.89-92.
Repp, K., Wold, B.
Glacial lakes, Glacial hydrology, Glacier melting, Glacier surfaces, Drainage.

35-255
Proceedings of the Specialty Conference on Computer and Physical Modeling in Hydraulic Engineering.
Ashton, G.D., ed, MP 1321, New York, American Society of Civil Engineers, 1980, 492p , Refs passim. For selected paper see 34-4161
Hydraulics, Engineering, Computer applications, Ice physics, Models.

35-256
Drilling and sampling in frozen ground: a few basics, a few problems.
Reimers, S., *Northern engineer,* Summer 1980, 12(2), p.13-17, 10 refs.
Frozen ground, Permafrost thermal properties, Drilling, Sampling, Augers, Drilling fluids.

35-257
Physical properties of the snow cover on Mt. Tateyama in Central Honshu, Japan.
Kawata, K , et al, *Seppyo,* Dec 1976, 38(4), p 157-164, 13 refs , In Japanese with English summary
Okabe, T., Shimizu, H , Akitaya, E
Snow physics, Mountains, Snow density, Viscosity, Snow hardness, Grain size, Snow temperature.

35-258
On the light attenuation and visibility in snow drift.
Takeuchi, M , et al, *Seppyo,* Dec 1976, 38(4), p 165-170, In Japanese with English summary
Fukuzawa, Y
Visibility, Snow drifts, Light scattering, Attenuation, Snow optics, Snowfall, Blowing snow.

35-259
Design of snow-gauge using photoelectric effects.
Tanaka, K , et al, *Seppyo,* Dec 1976, 38(4), p 171-177, In Japanese with English summary
Yamaki, M , Masuda, S
Snow hydrology, Snowmelt, Meltwater, Photometry.

35-260
Airborne photogrammetrical estimations of extraordinary snow depths in Mts. Iide, Gassan and Chokai and a preliminary report on the birth of a small glacier.
Tsuchiya, I , *Seppyo,* Dec 1976, 38(4), p.178-187, 29 refs , In Japanese with English summary
Snow depth, Photogrammetry, Glacier formation, Glacier flow.

35-261
Experiment of melting snow sliding down a steep roof into a pool where river water is led in.
Fukazawa, D., *Seppyo,* Dec. 1976, 38(4), p 188-195, 3 refs , In Japanese with English summary.
Roofs, Snow slides, Snow melting, Wet snow, Snow density, Hydraulic jets, Artificial melting.

35-262
Method for measuring snow gliding.
Watanabe, S , et al, *Seppyo,* Dec 1976, 38(4), p 196-197, In Japanese
Ozeki, Y., Saeki, M
Snow slides, Measurement.

35-263
Fluctuations of the Ichinokura snow patch to the east of mount Tanigawa.
Koiwa, S., *Seppyo,* Sep 1979, 41(3), p 161-164, 4 refs , In Japanese with English summary.
Snow cover distribution, Snow melting, Air temperature, Mountains.

35-264
Studies of the perennial snow patch in Karasawa, Hotakadake.
Ken, K., et al, *Seppyo,* Sep. 1979, 41(3), p.165-170, 5 refs , In Japanese with English summary
Kusu, S., Onda, H., Kanda, K., Sagisaka, S.
Snow cover distribution, Seasonal ablation, Snow depth, Snow stratigraphy.

35-265
Report on the perennial snow patch on mount Hakusan—its location, morphology, transition of annual net mass balance and the ablation rate in the ablation seasons.
Matsuoka, H., et al, *Seppyo,* Sep. 1979, 41(3), p.171-180, 7 refs., In Japanese with English summary.
Ito, F., Sugimori, M.
Snow cover distribution, Snow morphology, Seasonal ablation, Mass balance.

35-266
Summary on the studies of perennial snow patches in Japan.
Higuchi, K , et al, *Seppyo,* Sep 1979, 41(3), p 181-197, 12 refs , In Japanese with English summary.
Snow cover distribution, Climatic factors, Geomorphology, Seasonal variations.

35-267
Conditions of snow sliding on metal sheet roofs.
Maeda, H., *Seppyo,* Sep. 1979, 41(3), p.199-204, 4 refs., In Japanese with English summary.
Roofs, Snow slides, Metal snow friction, Snow loads, Air temperature, Temperature variations.

35-268
Improved representation of snow-control costs as a function of snow-disaster index and population.
Nakatao, T , et al, *Seppyo,* Sep 1979, 41(3), p 205-210, 4 refs., In Japanese with English summary.
Mizukoshi, M.
Snow cover effect, Avalanches, Snow loads, Countermeasures, Cost analysis, Analysis (mathematics).

35-269
On drawbar pull of tracked oversnow vehicle.
Muro, T , et al, *Seppyo,* June 1980, 42(2), p 101-108, 5 refs , In Japanese with English summary
Yong, R N
Tracked vehicles, Tractors, Snow cover effect, Snow depth, Traction, Trafficability, Low temperature tests.

35-270
Proposed mechanism for the growth of ice crystals abnormally extended to the b-axis.
Yamami, N , *Seppyo,* June 1980, 42(2), p 61-66, 14 refs , In Japanese with English summary
Ice crystal growth, Ice crystal nuclei, Temperature variations, Supersaturation.

35-271
Growth form of ice crystals grown by the Frank mechanism—in colder temperature regions.
Yamami, N., *Seppyo,* June 1980, 42(2), p 67-70, 10 refs , In Japanese with English summary
Ice crystal growth, Ice crystal nuclei, Low temperature tests, Supersaturation.

35-272
Simulation model for frost penetration beneath the ground on the basis of equilibrium surface temperatures.
Fukuda, M , et al, *Seppyo,* June 1980, 42(2), p.71-80, 27 refs., In Japanese with English summary
Ishizaki, T
Frost penetration, Soil freezing, Surface temperature, Thermal regime, Forecasting, Models.

35-273
On trafficability of tracked oversnow vehicle—energy analysis for track motion on snow covered terrain.
Muro, T , et al, *Seppyo,* June 1980, 42(2), p 93-100, 17 refs., In Japanese with English summary.
Yong, R.N.
Tracked vehicles, Snow cover effect, Trafficability, Traction.

35-274
Adhesive shear strength of ice to bonded solid lubricants.
Jones, J.R , et al, *Lubrication engineering,* Dec 1972, 28(12), p 464-471, Presented at the 27th annual meeting of the American Society of Lubrication Engineering, Houston, Texas, May 1-4, 1972, Includes discussion by D.J Sargent For another version of this paper see 24-723. 19 refs
Gardos, M N., Sargent, D.J
Ice adhesion, Shear strength, Lubricants, Protective coatings, Solids.

35-275
Thermal cracks in lake ice.
Metge, M , Kingston, Ontario, Queen's University, Dec 1976, 204p., Ph D. thesis Refs. p 154-157.
Ice cracks, Thermal effects, Ice loads, Ice mechanics, Lake ice, Ice temperature, Impact strength, Pressure ridges.

35-276
Permafrost distribution in the southern part of the discontinuous zone in Québec and Labrador.
Brown, R J E., *Géographie physique et Quaternaire,* 1979, No.3-4, National Research Council, Canada, Division of Building Research Paper No 885, 1980, p 279-289, In English with French and German summaries. 31 refs.
Discontinuous permafrost, Permafrost distribution, Permafrost depth, Climatic factors, Snow cover effect, Topographic effects, Canada—Quebec, Canada—Labrador.

35-277
Foundation performance of a steel tower silo at Richmond, Ontario.
Scott, J.D., et al, *Canadian agricultural engineering,* Dec. 1979, 21(2), National Research Council, Canada Division of Building Research Paper No 880, p.85-89, In English with French summary. 9 refs
Haile, G., Bozozuk, M.
Foundations, Towers, Concrete structures, Frost protection, Clay soils, Soil strength, Shear strength, Frost action.

35-278
Boguchany artificial lake. Ground water and engineering geology of the area. (Boguchanskoe vodokhranilishche Podzemnye vody i inzhenernaia geologiia territorii).
Odintsov, M.M., ed. Novosibirsk, Nauka, 1979. 157p., In Russian with English table of contents enclosed Refs p 154-156.
Lakes, Permafrost beneath lakes, Shores, Thermokarst, Shore erosion, Permafrost structure, Permafrost hydrology, Permafrost weathering, Ground water, Engineering geology.

35-279
Cenozoic deposits, soils, geocryological and engineering-geological conditions of West Siberia. (Kainozoiskie otlozhenia, pochvy, merzlotnye i inzhenernogeologicheskie uslovia Zapadnoi Sibiri).
Popov, A.I., ed. Moscow, MGU, 1980. 256p., In Russian with English table of contents enclosed Refs p.250-254.
Trofimov, V.T., ed.
Stratigraphy, Quaternary deposits, Pleistocene, Geocryology, Engineering geology, Permafrost distribution, Permafrost structure, Active layer, Permafrost thickness, Tundra, Cryogenic soils, Swamps, USSR—Siberia.

35-280
Industrial construction on frozen peat. (Stroitel'stvo promyslovykh sooruzhenii na merzlom torfe).
Vialov, S.S., et al. Moscow, Nedra, 1980, 144p., In Russian with English table of contents enclosed 58 refs.
Kagan, G.L., Voevoda, A.N., Muravlenko, V.I.
Swamps, Peat, Frost penetration, Ground ice, Rheology, Bearing strength, Foundations, Industrial buildings, Petroleum industry.

35-281
Modeling the strength and stability of roadbeds. (Modelirovanie prochnosti i ustoichivosti zemlianogo polotna).
(Akovleva, T.G., et al. Moscow, Transport, 1980. 255p., In Russian with English table of contents enclosed. 114 refs.
Ivanov, D.I.
Roadbeds, Roads, Railroads, Embankments, Permafrost beneath structures, Models, Slope stability, Foundations, Settlement (structural), Measuring instruments.

35-282
Vegetation and soils of subarctic tundra. (Rastitel'nost' i pochvy subarkticheskoi tundry).
Andreev, V.N., ed. Novosibirsk, Nauka, 1980. 209p., In Russian. For individual articles see 35-283 through 35-294. Refs. passim.
Tundra, Landscape types, Cryogenic soils, Vegetation patterns, Plant ecology, Plant physiology, Ecosystems, Biomass, Thermokarst lakes, Algae.

35-283
Vegetation of the lower Kolyma tundra. (Rastitel'nost' Nizhnekolymskoi tundry).
Andreev, V.N., et al. Rastitel'nost' i pochvy subarkticheskoi tundry (Vegetation and soils of subarctic tundra) edited by V.N. Andreev, Novosibirsk, Nauka, 1980, p.5-43, In Russian. 23 refs.
Perfil'eva, V.I.
Tundra, Landscape types, Plant ecology, Ecosystems, Cryogenic soils, Patterned ground, Permafrost hydrology, Thermokarst, Frost mounds.

35-284
Biological peculiarities of tussock-forming sedge in the lower course of Kolyma River area. (Biologicheskie osobennosti kochkoobrazuiushchikh osok v nizov'iakh Kolymy).
Egorova, A.A., Rastitel'nost' i pochvy subarkticheskoi tundry (Vegetation and soils of subarctic tundra) edited by V.N. Andreev, Novosibirsk, Nauka, 1980, p.44-65, In Russian. 20 refs.
Swamps, Tundra, Vegetation, Hummocks, Plant ecology, Ecosystems.

35-285
Influence of burning on narrow-leaved cotton grass in subarctic tundra. (Vliianie pala na pushitsu uzkolistnuiu v subarkticheskoi tundre).
Galaktionova, T.F., et al. Rastitel'nost' i pochvy subarkticheskoi tundry (Vegetation and soils of subarctic tundra) edited by V.N. Andreev, Novosibirsk, Nauka, 1980, p.66-72, In Russian. 10 refs.
Neustroeva, A.I.
Tundra, Meadow soils, Grasses, Fires, Revegetation.

35-286
Seasonal dynamics of the above-ground biomass of cotton grass (Eriophorum vaginatum L.) in Taymyr. (Sezonnaia dinamika zapasa nadzemnoi fitomassy pushitsy vlagalishchnoi *(Eriophorum vaginatum L.)* na Taimyre).
Spodobtseva, N.I., Rastitel'nost' i pochvy subarkticheskoi tundry (Vegetation and soils of subarctic tundra) edited by V.N. Andreev, Novosibirsk, Nauka, 1980, p.73-84, In Russian 20 refs.
Tundra, Meadow soils, Grasses, Biomass, Lichens, Mosses, USSR—Taymyr Peninsula.

35-287
Spore-pollen spectra in recent deposits of the lower Kolyma River area. (Sporovo-pyl'tsevye spektry sovremennykh otlozhenii nizov'ev reki Kolymy).
Savvinova, G.M., Rastitel'nost' i pochvy subarkticheskoi tundry (Vegetation and soils of subarctic tundra) edited by V.N. Andreev, Novosibirsk, Nauka, 1980, p.85-91, In Russian 10 refs.
Tundra, Plant ecology, Ecosystems, Cryogenic soils, Soil profiles, Sediments, Pollen, Spores.

35-288
Algae in subarctic tundra lakes in the "Pokhodsk" research station area. (Al'goflora vodoemov subarkticheskoi tundry v raione statsionara "Pokhodsk").
Vasil'eva, I.I., et al. Rastitel'nost' i pochvy subarkticheskoi tundry (Vegetation and soils of subarctic tundra) edited by V.N. Andreev, Novosibirsk, Nauka, 1980, p.92-104, In Russian 26 refs
Remigailo, P.A.
Tundra, Thermokarst lakes, Algae, Plant ecology, Ecosystems.

35-289
Micromycete fungi of northeastern Yakutia, Pt.1. (Flora mikromitsetov Severo-Vostochnoi lAkutii, 1).
Shkarupa, A.G., Rastitel'nost' i pochvy subarkticheskoi tundry (Vegetation and soils of subarctic tundra) edited by V.N. Andreev, Novosibirsk, Nauka, 1980, p.105-123, In Russian. 9 refs
Tundra, Swamps, Landscape types, Vegetation, Fungi, Plant ecology, Ecosystems.

35-290
Distribution and biomass of bushy lichens in northeastern Yakutia. (Rasprostranenie i zapasy kustistykh lishainikov na Severo-Vostoke lAkutii).
Rykova, I.V., Rastitel'nost' i pochvy subarkticheskoi tundry (Vegetation and soils of subarctic tundra) edited by V.N. Andreev, Novosibirsk, Nauka, 1980, p.124-139, In Russian. 34 refs
Tundra, Landscape types, Vegetation, Lichens, Plant ecology, Ecosystems.

35-291
Musci flora. (Flora listostebel'nykh mkhov).
Stepanova, N.A., Rastitel'nost' i pochvy subarkticheskoi tundry (Vegetation and soils of subarctic tundra) edited by V.N. Andreev, Novosibirsk, Nauka, 1980, p.140-157, In Russian. 9 refs.
Tundra, Swamps, Mosses, Plant ecology, Ecosystems.

35-292
Tundra soils of the Kolyma River area. (Pochvy Prikolymskoi tundry).
Elovskaia, L.G., et al. Rastitel'nost' i pochvy subarkticheskoi tundry (Vegetation and soils of subarctic tundra) edited by V.N. Andreev, Novosibirsk, Nauka, 1980, p.158-194, In Russian 18 refs.
Teterina, L.V.
Tundra, Landscape types, Cryogenic soils, Soil formation, Frozen fines, Loess, Ground ice, Thermokarst lakes, Lacustrine deposits.

35-293
Numerical method of forecasting tundra soil temperature. (Prognozirovanie temperatury tundrovykh pochv raschetnym metodom).
Savvinov, D.D., Rastitel'nost' i pochvy subarkticheskoi tundry (Vegetation and soils of subarctic tundra) edited by V.N. Andreev, Novosibirsk, Nauka, 1980, p.195-200, In Russian. 3 refs.
Tundra, Cryogenic soils, Soil temperature, Forecasting.

35-294
Data on delichenization of tundra. (Nekotorye dannye o delikhenizatsii tundry).
Andreev, V.N., Rastitel'nost' i pochvy subarkticheskoi tundry (Vegetation and soils of subarctic tundra) edited by V.N. Andreev, Novosibirsk, Nauka, 1980, p.201-205, In Russian. 19 refs.
Tundra, Cryogenic soils, Vegetation, Lichens, Human factors.

35-295
Origin and geography of forest soils. (Genezis i geografiia lesnykh pochv).
Korsunov, V.M., ed. Moscow, Nauka, 1980. 131p., In Russian. For individual papers see 35-296 through 35-303 Refs passim.
Forest soils, Taiga, Cryogenic soils, Soil formation, Soil composition, Soil profiles, Forest fires, Topographic effects.

35-296
Loess formations and soil-forming processes in Siberia. (Lessovye porody Sibiri i pochvoobrazovatel'nye protsessy).
Koliago, S.A., Genezis i geografiia lesnykh pochv (Origin and geography of forest soils) edited by V.M. Korsunov, Moscow, Nauka, 1980, p.5-20, In Russian 18 refs
Cryogenic soils, Loess, Soil formation, Freeze thaw cycles, Frozen fines, Saline soils.

35-297
Loose surface deposits of the Central Angara River area, their origin, material composition and formation. (Rykhlye pokrovnye otlozhenia Srednego Priangar'ia, ikh veshchestvennyi sostav, genezis i pochvoobrazovanie).
Gorbachev, V.N., Genezis i geografiia lesnykh pochv (Origin and geography of forest soils) edited by V.M. Korsunov, Moscow, Nauka, 1980, p.21-39, In Russian 11 refs
Cryogenic soils, Soil formation, Soil composition, Soil profiles, Active layer, Seasonal freeze thaw, Frost penetration, Ground ice, Soil chemistry.

35-298
Peculiarities of soil formation in the forest biogeocenoses of the Angara River area, depending on the recency of forest fires. (Osobennosti pochvoobrazovanna v lesnykh biogeotsenozakh Priangar'ia v zavisimosti ot davnosti pozharov).

DLC QE39.G455
Ice sheets, Ice shelves, Glacier ice, Sedimentation.
The Antarctic continental margin is presently characterized by three different glacial regimes. These include continental margins where the ice sheet is grounded on the continental shelf, those whose inner shelves are covered by floating ice shelves, and those which bound mountainous coasts where valley glaciers debouch directly into the sea. Piston cores from all three types were examined. Sediment composition, supply, and transport in various parts of the Ross and Weddell Seas are discussed. (Auth. mod.)

35-328
CNSFA Operation Order (OPORD) No.1-Yr [1980-1981].
U.S. Naval Support Force, Antarctica, Aug. 1980, c. 100 leaves.
Logistics, Military operation, Antarctica.
This operations order establishes the logistics plan for the movement of personnel and equipment to, from, and on the Antarctic Continent in support of *Operation Deep Freeze*. It includes specifics as to who is scheduled to do what, with what, where, and at what time. The scientific programs throughout Antarctica are detailed by discipline and principal investigator. Tasks are set in such diverse areas as legal, medical/dental, and postal matters, casualty affairs, fuels, station maintenance and public works and prohibited items.

Inherent noise of the Antarctic glacier in the Novolazarevskaya Station area and acoustic attenuations. (Sobstvennye shumy antarkticheskogo lednika Novolazarevskogo i zatukhanie akusticheskikh signalov v nem),
Gavrilo, V.P., et al, *Leningrad. Arkticheskiĭ i antarkticheskiĭ nauchno-issledovatel'skiĭ institut. Trudy*, 1980, Vol.374, p.56-61, In Russian. 9 refs.
Gusev, A.V., Nikitin, V.A.
Ice acoustics, Glacier flow, Noise (sound), Measuring instruments, Antarctica--Novolazarevskaya Station.
The effect of meteorological conditions on acoustic field levels in the antarctic glacier was studied in the Novolazarevskaya Station area in June-Sep 1976. Inherent noise was recorded three times a day for one hour at equal time intervals, the piezoelectric receiver being frozen into ice at 3 meter depth and recording sounds in the 10-10,000 hertz range Acoustic attenuation results have revealed the possibility of studying ice flow by moving sensing elements to a 50 m depth, thus excluding the surface layer noise

35-371
Underwater acoustic emission of Antarctic icebergs. (Podvodnaia akusticheskaia emissiia antarkticheskikh aĭsbergov),
Gusev, A.V , et al, *Leningrad. Arkticheskiĭ i antarkticheskiĭ nauchno-issledovatel'skiĭ institut Trudy*, 1980, Vol.374, p.62-66, In Russian. 5 refs.
Popov, I.K.
Icebergs, Ice acoustics, Underwater acoustics, Ice deterioration, Noise (sound).
Acoustic emissions of icebergs, frozen into fast ice, were studied in December 1975 during their initial deterioration stage The results revealed predominance of characteristic emissions of thermal fracturing due to temperature difference between the ice body and surrounding water and an additional high frequency noise produced by air bubbles released from disintegrating ice.

35-372
Acoustic effects produced by drifting ice breaking under an icebreaker's body. (Akusticheskie effekty razrushenia dreĭfuiushchego l'da korpusom ledokola),

Weather from the ends of the earth. *Mosaic*, Sep /Oct/ 1978, 9(5), p 38-46
Spaceborne photography, Weather, Sea ice, Wind (meteorology), Models.
The meteorological, atmospheric, and oceanic interrelationships among many diverse parts of the globe are stressed The polar areas strongly affect weather patterns throughout the globe and produce a unique climate of their own This is especially true of the Antarctic area where katabatic winds throughout the continent significantly affect even the near-shore sea ice Most natural phenomena exist on a larger scale in Antarctica than in the Arctic winds blow stronger, it is colder, the sea ice extent is greater, the atmospheric circulation is more intensified, having about twice the kinetic energy of the Arctic circulation Models of these natural phenomena, either alone or coupled with others in various ways, are discussed

River ice, Ice conditions, Ice cover thickness, Heat balance, River flow, Analysis (mathematics).

35-413
Theory of aufeis and streambed erosion.
Carlson, R F., Canadian Hydrology Symposium: 79—Cold Climate Hydrology, Vancouver, B.C., May 10-11, 1979. Proceedings, Vancouver, B.C., National Research Council, Canada, Associate Committee on Hydrology, 1979, p.197-205, 7 refs.. In English with French summary.
River ice, Naleds, Ice scoring, Ice erosion, Bottom topography, Impact strength.

35-414
Modelling basin snow storage in a high Arctic environment.
Woo, M., et al, Canadian Hydrology Symposium: 79—Cold Climate Hydrology, Vancouver, B C , May 10-11, 1979 Proceedings, Vancouver, B.C., National Research Council, Canada, Associate Committee on Hydrology, 1979, p.206-216, 11 refs , In English with French summary.
Heron, R.
Snowdrifts, Snow accumulation, Snowmelt, Floods, Mathematical models, Computer applications.

35-415
Application of the UBC watershed model to Peyto Glacier basin.
Power, J M , et al, Canadian Hydrology Symposium 79—Cold Climate Hydrology, Vancouver, B C , May 10-11, 1979. Proceedings, Vancouver, B.C., National Research Council, Canada, Associate Committee on Hydrology, 1979, p.217-228, 8 refs.. In English with French summary.
Young, G.J.
Watersheds, Glacial hydrology, Glacier melting, Runoff, Forecasting, Models.

35-416
Estimation of small basin flood flows in the discontinuous permafrost zone.
Vincent, D.G., et al, Canadian Hydrology Symposium: 79— Cold Climate Hydrology, Vancouver, B.C , May 10-11, 1979 Proceedings, Vancouver, B C , National Research Council, Canada, Associate Committee on Hydrology, 1979, p.229-238, 8 refs.. In English with French summary.
Russell, S.O.
Floods, Discontinuous permafrost, Permafrost hydrology, Runoff, Water flow, Models.

35-417
Probable maximum flood for the Peace River at site C.
Fawkes, P E , Canadian Hydrology Symposium· 79—Cold Climate Hydrology, Vancouver, B C , May 10-11, 1979 Proceedings, Vancouver, B C., National Research Council, Canada, Associate Committee on Hydrology, 1979, p.239-250, 10 refs., In English with French summary
Snowmelt, Floods, Runoff, River flow, Snow accumulation, Meteorological factors, Forecasting, Air temperature.

35-418
Runoff simulation, Falls River watershed near d'Iberville Fiord, Ellesmere Island, N.W.T.
Ambler, D C , Canadian Hydrology Symposium· 79—Cold Climate Hydrology, Vancouver, B C , May 10-11, 1979 Proceedings, Vancouver, B C , National Research Council, Canada, Associate Committee on Hydrology, 1979, p 277-289, 13 refs., In English with French summary
Runoff, Snowmelt, Watersheds, Physical properties, Models.

35-419
Estimating the areal snow water equivalent in the prairie environment.
Gray, D.M , et al, Canadian Hydrology Symposium 79—Cold Climate Hydrology, Vancouver, B.C , May 10-11, 1979. Proceedings, Vancouver, B.C , National Research Council, Canada, Associate Committee on Hydrology, 1979, p.302-322, 25 refs., In English with French summary
Steppuhn, H , Abbey, F.L.
Snow water equivalent, Snow depth, Snow density, Forecasting, Landscape types, Snow cover distribution.

35-420
Response of an alpine watershed to snowmelt.
Jordan, R P , Canadian Hydrology Symposium 79—Cold Climate Hydrology, Vancouver, B.C., May 10-11, 1979. Proceedings, Vancouver, B.C., National Research Council, Canada, Associate Committee on Hydrology, 1979, p 323-333, 10 refs . In English with French summary.
Snowmelt, Watersheds, Runoff, Snow hydrology, Soil water, Soil temperature, Heat balance, Alpine landscapes.

35-421
Comparison od daily snowmelt calculated by the U.S. Corps of Engineers theoretical model with measured amounts on a snowpillow.
Storr, D., Canadian Hydrology Symposium 79—Cold Climate Hydrology, Vancouver, B.C., May 10-11, 1979 Proceedings, Vancouver, B.C , National Research Council, Canada, Associate Committee on Hydrology, 1979, p 334-345, 5 refs , In English with French summary
Snow pillows, Snowmelt, Snow cover effect, Snow depth, Solar radiation, Forecasting, Meteorological data, Models.

35-422
Numerical study of the transmission of solar radiation through snow.
O'Neill, A.D.J., et al, Canadian Hydrology Symposium. 79—Cold Climate Hydrology, Vancouver, B.C., May 10-11, 1979. Proceedings, Vancouver, B.C , National Research Council, Canada, Associate Committee on Hydrology, 1979, p 346-355, 4 refs.. In English with French summary
Galbraith, P W.
Snow depth, Solar radiation, Radiation absorption, Snow density, Grain size, Albedo, Mathematical models.

35-423
Storm runoff delays induced by snow and ice on agricultural watersheds in southern Ontario.
Whiteley, H.R , et al, Canadian Hydrology Symposium 79—Cold Climate Hydrology, Vancouver, B C , May 10-11, 1979 Proceedings, Vancouver, B C , National Research Council, Canada, Associate Committee on Hydrology, 1979, p.356-379, 16 refs., In English with French summary.
Yaeger, D.R
Runoff, Snowmelt, Snow cover effect, Ice cover, Watersheds, Storms, Channels (waterways), Mathematical models.

35-424
Hydrologic role of shallow organic soils in cold climates.
Slaughter, C W , et al, Canadian Hydrology Symposium 79—Cold Climate Hydrology, Vancouver, B C., May 10-11, 1979 Proceedings, Vancouver, B C , National Research Council, Canada, Associate Committee on Hydrology, 1979, p.380-389, 16 refs , In English with French summary.
Kane, D.L
Permafrost hydrology, Organic soils, Streams, Slope orientation, Vegetation patterns, Landscape types.

35-425
Measuring peak runoff at culverts on the interior plains.
Doyle, P.F., Canadian Hydrology Symposium 79—Cold Climate Hydrology, Vancouver, B C., May 10-11, 1979. Proceedings, Vancouver, B C , National Research Council, Canada, Associate Committee on Hydrology, 1979, p.390-402, 22 refs , In English with French summary.
Snowmelt, Runoff, Culverts, Naleds, Floods, Models.

35-426
Remote sensing and cold climate hydrology.
Kruus, J., Canadian Hydrology Symposium. 79—Cold Climate Hydrology, Vancouver, B C , May 10-11, 1979. Proceedings, Vancouver, B C., National Research Council, Canada, Associate Committee on Hydrology, 1979, p.403-413 , Refs. p.410-413 , In English with French summary.
Permafrost hydrology, Snow cover distribution, Ice cover, Remote sensing, Hydrology, Snow water equivalent, Snow line, Vegetation, Ice edge, Geomorphology, Cloud cover, Forest land, Measuring instruments.

35-427
Computer enhanced snow cover analysis of satellite data.
Hogg, W.D., et al, Canadian Hydrology Symposium 79—Cold Climate Hydrology, Vancouver, B C , May 10-11, 1979. Proceedings, Vancouver, B C , National Research Council, Canada, Associate Committee on Hydrology, 1979, p 414-423, 8 refs . In English with French summary.
Hanssen, A.J
Snow cover distribution, Snowmelt, Spacecraft, Mapping, Forest land, Remote sensing, Snow line, Computer applications.

35-428
Comparison of snow cover retreat calculated by the CEQUEAU hydrologic model to that estimated with the help of ESSA-8 satellite imagery. ¡Comparaison du retrait du manteau nival calculé par le modèle hydrologique CEQUEAU au retrait estimé à l'aide des images du Satellite ESSA-8¡.
Fortin, J.P., et al, Canadian Hydrology Symposium· 79—Cold Climate Hydrology, Vancouver, B C., May 10-11, 1979. Proceedings, Vancouver, B C., National Research Council, Canada, Associate Committee on Hydrology, 1979, p.424-448, In French with English summary. 14 refs
Lardeau, J.P., Morin, G., Sochanska, W., Rassam, J P
Snow cover distribution, Snow hydrology, Snow line, Remote sensing, Mapping, Models.

35-429
Snow cover, snowmelt and runoff in the Mackenzie basin.
Dey, B., et al, Canadian Hydrology Symposium 79—Cold Climate Hydrology, Vancouver, B C , May 10-11, 1979. Proceedings, Vancouver, B C , National Research Council, Canada, Associate Committee on Hydrology, 1979, p.449-460, 8 refs.. In English with French summary
Gregory, A F., Moore, H.
Snow cover distribution, Snowmelt, Runoff, Remote sensing, Mapping.

35-430
Description, evaluation and prospects of development of the Quebec snow survey network. ¡Description, évaluation et perspective de development du réseau nivométrique du Québec¡.
Paulin, G , Canadian Hydrology Symposium 79 Cold Climate Hydrology, Vancouver, B.C , May 10-11, 1979. Proceedings, Vancouver, B.C., National Research Council, Canada, Associate Committee on Hydrology, 1979, p.473-489, In French with English summary. 5 refs.
Snow surveys, Snow cover, Canada—Quebec.

35-431
Preliminary comparison of runoff relationships and water budgets in three experimental lake basins in the continental, sub-Arctic and Arctic climatic regions of the Precambrian Shield.
Newbury, R.W., et al. Canadian Hydrology Symposium. 79—Cold Climate Hydrology, Vancouver, B.C., May 10-11, 1979. Proceedings, Vancouver, B.C., National Research Council, Canada, Associate Committee on Hydrology, 1979, p.516-535, 14 refs., In English with French summary
Beaty, K.G., Dalton, J.A., McCullough, G.K.
Permafrost hydrology, Runoff, Lake water, Water balance, Watersheds.

35-432
Annual water balance of small high Arctic basins.
Marsh, P., et al, Canadian Hydrology Symposium. 79—Cold Climate Hydrology, Vancouver, B.C., May 10-11, 1979. Proceedings, Vancouver, B.C., National Research Council, Canada, Associate committee on Hydrology, 1979, p.536-546, 17 refs. In English with French summary
Woo, M.
Water balance, Snow accumulation, Runoff, Snow depth, Stream flow, Evaporation, Precipitation (meteorology).

35-433
Quality of sewage lagoon discharges during winter and impact on stream water quality and biota.
Slaughter, R., et al, Canadian Hydrology Symposium 79—Cold Climate Hydrology, Vancouver, B.C., May 10-11, 1979. Proceedings, Vancouver, B.C., National Research Council, Canada, Associate Committee on Hydrology, 1979, p.547-558, 9 refs., In English with French summary.
Boland, B., Thornley, S.
Ecology, Sewage disposal, Icebound lakes, Environmental impact, Streams, Water pollution, Winter.

35-434
Winter water quality sampling and its use in determining hydrological conditions in the Ogilvie River system in the Yukon Territory.
Schreier, H., Canadian Hydrology Symposium: 79—Cold Climate Hydrology, Vancouver, B.C., May 10-11, 1979. Proceedings, Vancouver, B.C., National Research Council, Canada, Associate Committee on Hydrology, 1979, p.559-569, 7 refs. In English with French summary.
Permafrost hydrology, River ice, Stream flow, Seasonal variations.

35-435
Separation of runoff components in glacierized alpine watersheds by hydrochemical analysis.
Collins, D.N., et al, Canadian Hydrology Symposium 79—Cold Climate Hydrology, Vancouver, B.C., May 10-11, 1979. Proceedings, Vancouver, B.C., National Research Council, Canada, Associate Committee on Hydrology, 1979, p.570-581, 10 refs. In English with French summary.
Young, G.J.
Meltwater, Runoff, Watersheds, Water chemistry, Glacial hydrology, Alpine glaciation.

35-436
Pressure distribution in frozen soils.
Groenevelt, P.H., et al, Canadian Hydrology Symposium. 79—Cold Climate Hydrology, Vancouver, B.C., May 10-11, 1979 Proceedings, Vancouver, B.C., National Research Council, Canada, Associate Committee on Hydrology, 1979, p.582-591, 6 refs., In English with French summary.
Kay, B.D.
Frozen ground physics, Soil pressure, Loads (forces), Ice lenses, Ice pressure, Soil water migration, Analysis (mathematics), Pressure.

35-437
Freezing on the undersurface of the Ross Ice Shelf, Antarctica. [Obnaruzhenie namerzaniia l'da u nizhnei poverkhnosti shel'fovogo lednika Rossa, Antarktida].
Zotikov, I.A., et al, *Akademiia nauk SSSR Doklady*, 1979, 249(6), p.1454-1457, In Russian 9 refs
Zagorodnov, V.S., Raikovskii, IU.V.
Ice shelves, Underwater ice, Ice bottom surface, Thawing, Freezing, Heat transfer, Antarctica—Ross Ice Shelf.
The goal of this study was to determine whether the lower surface of the Ross Ice Shelf is freezing or melting. Results show that the northernmost 200 km constitutes a belt of melting ice, whereas farther south freezing occurs. Heat loss through the ice accounts for this rather than heat exchange with water. Even farther south fresh water from inland areas and surface melting freezes when it mixes with salt water. Heat exchange characteristics of the three zones are discussed.

35-438
Clear-sky spectral solar radiation model for snow-covered mountainous terrain.
Dozier, J., *Water resources research*, Aug 1980, 16(4), p.709-718, 52 refs.
Snow cover effect, Atmospheric attenuation, Snow optics, Solar radiation, Radiation balance, Mountains, Topographic effects, Computer applications, Alpine landscapes, Models, Spectra.

35-439
Model to forecast short-term snowmelt runoff using synoptic observations of streamflow, temperature and precipitation.
Tangborn, W.V., *Water resources research*, Aug 1980, 16(4), p.778-786, 10 refs.
Snowmelt, Runoff, Drainage, Forecasting, Stream flow, Air temperature, Precipitation (meteorology), Solar radiation, Statistical analysis, Models.

35-440
Heat and mass transfer in a freezing unsaturated porous medium.
Jame, Y.-W., et al, *Water resources research*, Aug 1980, 16(4), p.811-819, 27 refs
Norum, D.I.
Soil freezing, Soil water migration, Heat transfer, Mass transfer, Frost heave, Ice lenses, Soil temperature, Porous materials.

35-441
Volumetric and derived thermal characteristics of liquid D2O at low temperatures and high pressures.
Kanno, H., et al, *Journal of chemical physics*, Aug 15, 1980, 73(4), p.1940-1947, 41 refs.
Angell, C.A.
Heavy water, Low temperature tests, Thermal properties, Pressure, Volume, Density (mass/volume), Supercooling.

35-442
Phase relations of ice under pressure.

Podbornyi, E.E.
Buildings, Permafrost bases, Foundations, Piles, Settlement (structural), Fracturing.

35-450
Methods of determining costs of transportation and delivery of local and imported construction materials to oil fields of West Siberia. [Metodika opredeleniia raskhodov po dostavke mestnykh i privoznykh stroitel'nykh materialov i oborudovaniia na neftianye mestorozhdeniia Zapadnoi Sibiri].
Purtov, P.G., et al, *Neftepromyslovoe stroitel'stvo*, 1980, No 7, p.17-20, In Russian
Markov, A.S.
Petroleum industry, Construction materials, Construction equipment, Transportation, Cost analysis.

35-451
Forecasting maximal water levels during ice breakup on the Ob' River near Kolpashevo. [Metodika prognoza maksimal'nogo urovnia pri vskrytii r. Obi u g. Kolpashevo].
Liser, I.IA., *Zapadno-sibirskii regional'nyi nauchno-issledovatel'skii gidrometeorologicheskii institut. Trudy*, 1980, Vol 43, p.3-8, In Russian 2 refs
Icebound rivers, Ice breakup, Ice forecasting, Water level, Flood control.

35-452
Characteristics of ice cover in the lower Yenisey River. [Kharakteristika ledianogo pokrova v nizov'iakh Eniseia].
Chernov, I.M., *Zapadno-sibirskii regional'nyi nauchno-issledovatel'skii gidrometeorologicheskii institut Trudy*, 1980, Vol 43, p.38-44, In Russian 4 refs
Ice conditions, Ice navigation, Ice cover thickness, Snow cover effect, USSR—Yenisey River.

35-453
Ice regime of the Krasnoyarsk hydroelectric power plant reservoir. [Ledovyi rezhim vodokhranilishcha Krasnoiarskoi GES].
Kosmakov, I.V., *Zapadno-sibirskii regional'nyi nauchno-issledovatel'skii gidrometeorologicheskii institut Trudy*, 1980, Vol 43, p.45-50, In Russian
Reservoirs, Ice conditions, Human factors, Ice formation, Ice growth, Ice cover thickness.

35-454
Improving the accuracy of calculating thicknesses of thawing ice covers. [Ob utochnenii rascheta tolshchiny taiushchego ledianogo pokrova].
Ergin, V.P., *Zapadno-sibirskii regional'nyi nauchno-issledovatel'skii gidrometeorologicheskii institut Trudy*, 1980, Vol.43, p.51-55, In Russian 3 refs
Icebound lakes, Ice cover thickness, Solar radiation, Ice melting, Heat transfer.

35-455
Mudflow basins and foci in the Katun Range (Altai). [Selevye basseiny i ochagi Katunskogo khrebta (Gornyi Altai)].
Vinogradov, V.A., *Zapadno-sibirskii regional'nyi nauchno-issledovatel'skii gidrometeorologicheskii institut Trudy*, 1980, Vol 43, p.82-85, In Russian 5 refs.
Alpine landscapes, Slope processes, Slope orientation, Glacial hydrology, Mudflows, USSR—Katun Range.

35-456
Assurance of reliable winter performance of electric locomotives. [Obespechenie nadezhnoi raboty elektrovozov zimoi].
Bel'dei, V.V., *Zheleznodorozhnyi transport*, 1979, No 12, p.10-15, In Russian.
Railroads, Equipment, Engines, Railroad tracks, Winter maintenance, Snow removal, Ice prevention.

35-457
Achieving reliable performance of axle bearings in freezing weather. (Obespechenie nadezhnoĭ raboty motorno-osevykh podshipnikov zimoĭ).
Golovinov, G.G., et al, *Zheleznodorozhnyĭ transport*. 1980, No.1, p.57-58, In Russian
Railroads, Equipment, Engines, Winter maintenance, Lubricants, Cold weather performance.

35-458
Powerful electric locomotive for Siberia. (Moshchnyĭ electrovoz dlia Sibiri), *Zheleznodorozhnyĭ transport*. 1980, No.2, p.68-69, In Russian
Railroads, Subpolar regions.

35-459
Village house for Central Yakutia. (Sel'skiĭ zhiloĭ dom dlia Tsentral'noĭ IAkutii).
Turalysov, K.G., *Zhilishchnoe stroitel'stvo*. May 1980, No.5, p.3-5, In Russian.
Houses, Permafrost beneath structures, Design.

35-460
Peculiarities of external walls of Noril'sk buildings. (Osobennosti naruzhnykh sten zdaniĭ v Noril'ske).
Zlatinskaia, T.V., *Zhilishchnoe stroitel'stvo*. May 1980, No 5, p.20-22, In Russian
Industrial buildings, Residential buildings, Walls, Thermal insulation, Permafrost beneath structures, USSR—Noril'sk.

35-461
Construction of the Baykal Amur railroad. (BAM stroitsia).
Sergeev, A F., et al, *Zhilishchnoe stroitel'stvo*. Feb 1980, No.2, p.7-10, In Russian.
Popenchenko, T.I.
Railroad tracks, Roads, Industrial buildings, Residential buildings, Baykal Amur railroad, Permafrost beneath structures.

35-462
Studying rubber seal elasticity in buildings of the North. (Issledovanie elastichnosti rezinovykh uplotniteleĭ pri stroitel'stve zdaniĭ na Severe).
Mar'inskiĭ, M M., et al, *Zhilishchnoe stroitel'stvo*. Jan 1980, No.1, p.15, In Russian. 4 refs
Shchegolev, V.V.
Residential buildings, Thermal insulation, Sealing, Rubber, Frost resistance.

35-463
Thermal regime of elevated water tanks for fire-fighting in the Far North. (Teplovoĭ rezhim nadzemnykh rezervuarov protivopozharnogo zapasa vody v raĭonakh Kraĭnego Severa).
Mostovoĭ, G.A., *Vodosnabzhenie i sanitarnaia tekhnika*, 1980, No.1, p.5-6, In Russian.
Water supply, Tanks (containers), Fires, Thermal regime, Ice formation, Ice cover thickness, Analysis (mathematics).

35-464
Improving the methods of optimizing thermal insulation levels of buildings (discussion). (Metodiku optimizatsii urovnia teplozashchity zdaniĭ neobkhodimo utochnit' (v poriadke obsuzhdeniia)).
Boguslavskiĭ, L.D., et al, *Vodosnabzhenie i sanitarnaia tekhnika*. 1979, No.11, p.15-16 In Russian 3 refs
Bystrov, A.S., Nargizian, E.A.
Residential buildings, Industrial buildings, Thermal insulation, Heat loss, Construction materials, Design.

35-465
Residential buildings in Arctic regions. (Zhilye zdaniia v arkticheskikh raĭonakh).
Samukhin, P.N., *Vodosnabzhenie i sanitarnaia tekhnika*, 1979, No.11, p.26-27, In Russian.
Residential buildings, Prefabrication, Large panel buildings, Polar regions, Construction materials, Heating.

35-466
Glacial runoff into Central Asian rivers and possibilities of its control. (Lednikovyĭ stok v reki Srednei Azii i vozmozhnosti ego regulirovaniia).
Krenke, A.N *Vodnye resursy*, 1980, No.3, p.5-19, In Russian. 30 refs.
Glacial hydrology, Mountain glaciers, Runoff, Flow control, Rivers, Alimentation.

35-467
Glacial runoff from Central Asian mountains and its control. (Nalednyĭ stok s gor Srednei Azii i vozmozhnosti ego regulirovaniia).
Kemmerikh, A O., *Vodnye resursy*, 1980, No 3, p.20-25, In Russian. 13 refs.
Naleds, Glacial hydrology, Ablation, Runoff, Flow control.

35-468
Changes in thermal and ice conditions of rivers due to regulation. (Ob izmeneniiakh v termicheskom i ledovom rezhimakh pri regulirovanii rek).
Rossinskiĭ, K I., et al, *Vodnye resursy*, 1980, No 2, p.5-19, In Russian 8 refs.
Liubomirova, K.S.
Rivers, Water temperature, Ice conditions, Flow control.

35-469
Using natural, stable oxygen isotopes in studying estuarine salinity of Arctic seas. (Izuchenie uslovii formirovaniia solenosti vod v ust'evykh uchastkakh arkticheskikh morei s pomoshch'iu prirodnykh stabil'nykh izotopov kisloroda).
Brezgunov, V.S., et al, *Vodnye resursy*, 1980, No.2, p.101-105, In Russian 4 refs.
Sea water, Salinity, Water chemistry, Water transport, Oxygen isotopes, Seasonal variations, Arctic Ocean.

35-470
Frost resistance of steamed concretes containing surfactants. (Morozostoĭkost' proparennogo betona s dobavkami PAV).
Koval'skaia, N N., et al, *Beton i zhelezobeton*, Mar. 1980, No.3, p.13-15, In Russian. 3 refs.
Malinina, L.A.
Winter concreting, Concrete admixtures, Surfactants, Concrete freezing, Concrete strength.

35-471
Allowing for low temperature effects in structural design. (Uchet vozdeĭstviia nizkikh temperatur pri raschete konstruktsiĭ).
Milovanov, A F., et al, *Beton i zhelezobeton*, Mar 1980, No.3, p.25-26, In Russian. 3 refs
Samoĭlenko, V.N.
Reinforced concretes, Concrete freezing, Freeze thaw cycles, Concrete strength, Design.

35-472
Pavement elements made of frost resistant, colored sand-concrete. (Elementy dlia moshcheniia iz tsvetnogo morozostoĭkogo peschanogo betona).
Oganesiants, S.L., et al, *Beton i zhelezobeton*, Feb 1980, No 2, p 8-10, In Russian. 6 refs.
Epshteĭn, L.I., Zakolodin, V.A., Lipkind, Z.A.
Pavements, Concrete structures, Prefabrication, Concretes, Frost resistance.

35-473
Stability of steamed concrete subjected to deep cooling. (Stoĭkost' proparennogo betona pri deĭstvii glubokogo okhlazhdeniia).
Savitskiĭ, A N., *Beton i zhelezobeton*, Feb 1980, No 2, p 25-26, In Russian. 14 refs.
Concrete freezing, Concrete strength, Concretes, Liquefied gas, Reservoirs.

35-474
Critical strength of concretes with antifreeze admixtures. (Kriticheskaia prochnost' betonov s protivomorozoznymi dobavkami).
Krylov, B A., et al, *Beton i zhelezobeton*, Dec. 1979, No 12, p.27-28, In Russian.
Lagolda, A.V., Apostolova, G.P.
Winter concreting, Concrete admixtures, Antifreezes, Concrete strength, Frost resistance.

35-475
Forecasting frost resistance of concrete when selecting its composition. (Prognozirovanie morozostoĭkosti betona pri vybore ego sostava).
Shelkin, A.E., *Beton i zhelezobeton*, Nov.1979, No 11, p.25-26, In Russian
Concrete aggregates, Cements, Concrete freezing, Concretes, Frost resistance.

35-476
Increasing frost resistance of cemented clayey soils. (Povyshenie morozostoĭkosti glinistykh gruntov ukreplennykh tsementom).
Dudkin, A S., et al, *Avtomobil'nye dorogi*, July 1980 No 7, p 7-8, In Russian
Guriachkov, I.I., Konovalov, S V., Prokopets, V.S
Clay soils, Soil stabilization, Cements, Frost resistance, Roads.

35-477
Technology of soil stabilization with slag cements in freezing weather. (Tekhnologiia ukrepleniia gruntov shlakovym viazhushchim v zimnikh usloviiakh).
Asmatulaev, B A., *Avtomobil'nye dorogi*, July 1980, No 7, p 9-10, In Russian
Roads, Pavements, Soil stabilization, Cements, Cold weather construction.

35-478
Performance of bulldozers equipped with additional dismountable blades. (Rabota bul'dozerov s dopolnitel'nym s"emnym nozhom).
Kudaibergenov, R.K., et al, *Avtomobil'nye dorogi*, July 1980, No 7, p 14, In Russian
Shekhvatov, N.T., Rubailov, A V
Earthwork, Excavation, Frozen ground.

35-479
Saline soil stabilization with waste cinders. (Ukreplenie zasolennykh gruntov zoloĭ unosa).
Ashurov, U., *Avtomobil'nye dorogi*, July 1980, No 7, p 16-17, In Russian
Saline soils, Soil stabilization, Cements, Wastes.

35-480
Frost resistance of road structures. (Obespechenie morozoustoĭchivosti dorozhnykh konstruktsiĭ).
Savko, N F., *Avtomobil'nye dorogi*, July 1980, No.7, p 17-19, In Russian 6 refs
Roads, Roadbeds, Pavements, Frost heave.

35-481
Climatic subdivision of southeastern West Siberia for road construction. (Dorozhno-klimaticheskoe raĭonirovanie lugo-Vostochnoĭ chasti Zapadnoĭ Sibiri).
Efimenko, V N., et al, *Avtomobil'nye dorogi*, July 1980, No 7, p 19-21, In Russian.
Shesler, A I.
Maps, Roads, Roadbeds, Cryogenic soils, Mapping, Frost penetration, Seasonal freeze thaw.

35-482
Electric heating of concrete mixtures for nonmonolithic structures. (Opyt primeneniia elektrorazogreva smesi pri betonirovanii nemassivnykh konstruktsiĭ).
Mal'tsev, B A., *Beton i zhelezobeton*, Nov 1979, No 11, p 27-28, In Russian.
Heating, Winter concreting, Concretes.

35-483
Icebreaking by hovercraft.
Burton, R., *Sea frontiers*, Mar-Apr. 1980, 26(2), p 78-83
Ice breaking, Air cushion vehicles.

35-484
Snowmelt and water equivalent guage for British conditions.
Waring, E A., et al, *Hydrological sciences bulletin*, June 1980, 25(2), p 129-134, In English with French summary. 16 refs
Jones, J.A A
Measuring instruments, Snowmelt, Snow water equivalent.

35-485
Theoretical determination of the efficiency with which aerosol particles are collected by simple ice crystal plates.
Martin, J.J., et al, *Journal of the atmospheric sciences*, July 1980, 37(7), p.1628-1638, 22 refs
Wang, P.K., Pruppacher, H R
Aerosols, Ice crystals, Mathematical models, Humidity.

35-486
Tundra plant structure and production in relation to the environment.
Wielgolaski, F E., *International journal of biometeorology*, Mar.1980, 24(1), p 23-30, 24 refs
Biomass, Plant ecology, Snow cover effect, Temperature effects, Tundra, Insulation, Vegetation patterns.

35-487
Freezing and melting temperature hysteresis of water in porous materials: application to the study of pore form.
Homshaw, L.G., *Journal of soil science*, Sep 1980, 31(3), p 399-414, 21 refs
Soil freezing, Porous materials, Soil water, Freeze thaw cycles, Frost heave, Temperature effects, Porosity.

35-488
Characteristics of ice in Whitefish Bay and St. Marys River during January, February and March 1979.
Vance, G P., *U.S Army Cold Regions Research and Engineering Laboratory*, Aug 1980, SR 80-32, 27p, ADA-089 950, 12 refs.
Ice breaking, Ice cover thickness, Ice cover strength, Flexural strength, Ice density, Metal ice friction, Metal snow friction, Snow density, Snow depth, Air temperature.
This report presents data on the full scale trials of the U S Coast Guard Icebreaker *Katmai Bay*, which was tested in plate ice that varied in thickness from 10 to 33 in (25.4 to 83.82 cm) and had a snow cover of 1 to 6 in (2.54 to 15.24 cm). In January the average temperature was -5C, and the ice flexural strength was 13,363 lb/sq ft (640 kPa). In March the average temperature

was -2C and the ice flexural strength was 11,643 lb/sq ft (560 kPa) The specific weight (density) of the ice was 0 894 g cu cm The specific weight of the snow was in the area of 0 32 g/cm The coefficient of friction between the ice/snow and steel plate (coated and uncoated) varied from a low of 0 02 in the dynamic case of ice on the Inerta 160 coating to 0 47 for the static case of snow on a rusty steel plate

35-489
Multilingual ice terminology.

Sugano, S
Supercooled clouds, Drops (liquids), Ice water interface

35-517
Physical aspects of the wind-snow interaction in blowing snow.
Maeno, N., et al. *Hokkaido University, Sapporo, Japan. Faculty of Science. Journal. Series 7 Geophysics.* Dec. 1979. 6(1). p 127-141. 25 refs
Araoka, K., Nishimura, K., Kaneda, Y.
Blowing snow, Wind velocity, Snow mechanics, Snow surface, Snowflakes.

35-518
Vertical profile and horizontal increase of drift snow transport.
Takeuchi, M., *Hokkaido University, Sapporo, Japan Faculty of Science. Journal Series 7 Geophysics.* Dec. 1979. 6(1). p 143-156. 7 refs
Snowdrifts, Wind velocity, Snow mechanics.

35-519
Crystallographic orientation of fractured plane about fresh snow particles.
Shio, H., *Hokkaido University, Sapporo, Japan Faculty of Science. Journal. Series 7 Geophysics.* Dec. 1979. 6(1). p.157-164. 10 refs
Snowflakes, Snow crystal structure, Ice cracks.

35-520
Grain-boundary relaxation peak of Antarctic Mizuho ice observed in internal friction measurements at low frequency.
Nakamura, T., et al. *Hokkaido University, Sapporo, Japan. Faculty of Science Journal Series 7 Geophysics.* Dec. 1979. 6(1). p 165-171. 8 refs.
Abe, O.
Ice crystal structure, Internal friction, Grain size, Low frequencies.
A peak of the internal friction curve of Antarctic Mizuho ice crystals for the low frequency range, 4-9 Hz close to the melting point of ice was concluded as the grain-boundary relaxation peak of the ice crystals. The peak level, i.e., the maximum value of the internal friction, depended on the single crystal grain diameter of the ice specimen, the smaller the diameter, the larger the peak level

35-521
Wave formation and heat transfer at an ice-water interface in the presence of a turbulent flow.
Gilpin, R.R., et al. *Journal of fluid mechanics.* Aug. 14, 1980. 99(3). p.619-640. 42 refs.

HF to VHF radio frequency polarization studies in sea ice at Pt. Barrow, Alaska.
Arcone, S.A., et al, *Memorial University of Newfoundland. Centre for Cold Ocean Resources Engineering. C-CORE publication.* May 1980, No 80-5, MP 1324, p.225-245, 8 refs.
Delaney, A.J.
Sea ice, Fast ice, Polarization (waves), Anisotropy, Ice optics, Ice cover thickness, Electromagnetic properties.
The frequency dependence of the polarization-rotation properties of fast ice upon radiowaves in the HF-VHF range were studied at Pt Barrow, Alaska, in the early spring of 1979 Five sites were investigated at frequencies between 10 and 173 MHz and at each site cores were taken and then physical properties measured The polarization was studied with a pair of crossed dipole antennas, one a transmitter, the other a receiver, both of which were rotated simultaneously as a fixed unit. This procedure was designed to produce a four-lobe cloverleaf pattern with maximum coupling occurring when the antennas were aligned at 45 deg to the c-axis direction The results showed strongest polarization between about 35 and 65 MHz Above this band the high dc conductivity of the sea ice which was measured accounts for the lack of cross coupling, but it is not yet understood why the data was so erratic below this band Experimental difficulties are also discussed

35-554
Modeling of anisotropic electromagnetic reflection from sea ice.
Golden, K.M., et al, *Memorial University of Newfoundland. Centre for Cold Ocean Resources Engineering. C-CORE publication.* May 1980, No.80-5, MP 1325, p.247-294, 21 refs.
Ackley, S.F
Sea ice, Brines, Anisotropy, Electromagnetic properties, Ice optics, Ice water interface, Dielectric properties, Ice structure, Polarization (waves), Mathematical models.
The contribution of brine layers to observed reflective anisotropy of sea ice at 100 MHz is quantitatively assessed The sea ice is considered to be a stratified, inhomogeneous, anisotropic dielectric consisting of pure ice containing ordered arrays of conducting inclusions (brine layers) Below the transition zone, the ice is assumed to have constant azimuthal c-axis orientation within the horizontal plane, so the orientation of brine layers is uniform The brine layers are also assumed to become increasingly well-defined with depth, since adjacent brine inclusions tend to fuse together with increasing temperature A theoretical explanation for observed reflective anisotropy is proposed in terms of anisotropic electric flux penetration into brine layers Penetration anisotropy and brine layer geometry are linked to anisotropy in the complex dielectric constant of sea ice Subsequently, a numerical method of approximating the reflected power of a plane wave pulse incident on a slab of sea ice is presented and used to show the contribution of the above effects to the observed reflective anisotropy

35-555
Ice freeboard determination by satellite altimetry.

Sea ice, Seismic refraction, Subsea permafrost, Antarctica—McMurdo Sound.
Three reversed seismic refraction profiles were shot in western McMurdo Sound in late November-early December 1978. Some preliminary conclusions are offered

35-639
Former extent of glacial ice in the Orville Coast region, Antarctic Peninsula.
Carrara, P., *Antarctic journal of the United States*, Oct. 1979, 14(5), p.45-46, 3 refs.
Glacial geology, Ice sheets, Antarctica—Orville Coast, Antarctica—Ronne Ice Shelf.
Field observations indicate that ice in the Orville Coast region of the Antarctic Peninsula was formerly at least 450 meters thicker than at present. Areas of the present-day Ronne Ice Shelf may have been occupied by a large ice sheet similar to that in the Ross Sea area today. Collapse of this postulated sheet may have taken place in the last 18,000 years.

35-640
Glacial geologic observations in the Dufek Massif and Forrestal Range, 1978-79.
Boyer, S.J., *Antarctic journal of the United States*, Oct 1979, 14(5), p 46-48, 6 refs.
Glacial geology, Antarctica—Dufek Massif, Antarctica—Forrestal Range, Antarctica—Pensacola Mountains, Antarctica—Davis Valley.
Reconnaissance studies were made in the northern Pensacola Mountains. A lengthy glacial record is particularly well displayed in Davis Valley. Spur ridges at many points may be remains of an ice-marginal drainage system formed during an early stage of the Antarctic ice sheet. Glacial erratics were found on the Saratoga Table, indicating ice at a level of about 400 m higher than at present. Sorna Bluff moraines and Davis Valley glaciation were also studied, and a highly tentative correlation of Pensacola Mountain glacial history with those of the McMurdo Sound area is offered

35-641
Tillite, glacial striae, and hyaloclastite associations on Hobbs Coast, Marie Byrd Land.
LeMasurier, W.E., et al, *Antarctic journal of the United States*, Oct 1979, 14(5), p.48-50, 5 refs
Melander, O., Grindley, G.W., McIntosh, W.C.
Glacial geology, Antarctica—Hobbs Coast.
On the Hobbs Coast are excellent exposure of tillite interbedded with hyaloclastite and fresh glacial striae on granitic bedrock. These provide direct evidence for a subglacial, rather than submarine environment of formation for the basaltic hyaloclastites. These findings add documentation to earlier interpretations that such hyaloclastites are a kind of glacial deposit, products of subglacial volcanic eruptions. The rounded, fresh granitic boulders in this region may be glacial erratics rather than xenoliths

35-642
Cape Spirit mirabilite beds.
Brady, H.T., et al, *Antarctic journal of the United States*, Oct. 1979, 14(5), p.50-52, 5 refs
Leckie, R.M., White, R
Glacial geology, Glacial geology, Antarctica—Spirit, Cape, Antarctica—Black Island.
In January 1979 further mapping was carried out on a large system of mirabilite beds 800 m north of Cape Spirit. It appears that these beds were deposited by a stagnant Ross Ice Shelf as it retreated from McMurdo Sound after the last Wisconsin glaciation

35-643
Ross Sea glaciations: events in the Lower Victoria Valley.
Borns, H.W., Jr., *Antarctic journal of the United States*, Oct 1979, 14(5), p 52-53, 3 refs
Ice sheets, Glacial geology, Antarctica—Ross Sea, Antarctica—Victoria Valley.
The purpose of this study of the dry valley areas of the Lower Victoria Valley was to determine the extent to which the area had been invaded from the seaward side by ice of the Ross Sea glaciations and if it had been, to examine the details of these events. Preliminary analysis suggests that ice flowing westward from the Ross Sea reached present elevations of at least 975 m. Samples of algae and calcareous concretions were taken which, when analyzed may indicate the age of one of the several terminal positions of the Victoria Lower Glacier

35-644
Glaciology and glaciogeomorphology in Victoria Land and Queen Maud Mountains.

Glacial deposits, Sediments, Antarctica—Scallop Hill, Antarctica—Black Island, Antarctica—Minna Bluff, Antarctica—McMurdo Sound.
Field work in southern McMurdo Sound has revealed several distinctive lithofacies of Scallop Hill Formation sediments. These are described and the preferred explanation for their nature- glacial transport during an Ross Sea glaciation--offered. Other local facies from Brown Peninsula, Minna Bluff and other locations on Black Island are compared with Scallop Hill sediments

35-646
Glacial history of the Byrd-Darwin Glacier area, Transantarctic Mountains.
Denton, G.H., *Antarctic journal of the United States*, Oct. 1979, 14(5), p.57-58, 1 ref.
Ice sheets, Glacial geology, Antarctica—Byrd Glacier, Antarctica—Darwin Glacier, Antarctica—Hatherton Glacier.
The purposes of this study were to examine the early history of the ice sheet and to test hypotheses developed elsewhere in Antarctica about late Quaternary history, particularly during the last glacial-interglacial period. Morphologic features in both the Byrd-Darwin and McMurdo Sound areas can be explained if large portions of the Transantarctic Mountains were uplifted through a preexisting ice sheet. In the Byrd-Darwin Glacier area the exposed erosional terrain exhibits moraines, erratics and striations that attest to former fluctuations of outlet glaciers and ice streams. The data suggest that during the last glaciation there was little, if any, expansion of local East Antarctic ice, coupled with extensive ice-sheet grounding over the Ross Ice Shelf and in the Ross Sea

35-647
Pedology of the Darwin Glacier area.
Bockheim, J.G., et al, *Antarctic journal of the United States*, Oct 1979, 14(5), p 58-59, 5 refs
Wilson, S.C
Soil profiles, Glacial geology, Antarctica—Darwin Glacier.
Soils were used as a relative-age indicator and as a stratigraphic marker in separating glacial advances in the Darwin Glacier area. Morphology of soil stratigraphic units and surface weathering characteristics of moraines were analyzed. Results indicate that the Ross Ice Shelf became grounded in the Darwin Glacier area around 1 million yrs BP and was last grounded about 18,000 yrs BP. Like the Wright Valley, but unlike the Taylor Valley, the Darwin Glacier area has ice-free valleys that have not been glaciated as a result of thickening of the East Antarctic Ice Sheet in the past 3 million yrs

35-648
Ross Ice Shelf Project 1978-79.
Clough, J.W., *Antarctic journal of the United States*, Oct 1979, 14(5), p 60
Ice cores, Ice shelves, Antarctica—Ross Ice Shelf.
The final field season of the RISP is reported. Accomplishments include three holes drilled through the ice shelf and a core taken from the lower portion of the shelf by I.A. Zotikov of the USSR

35-649
Hot-water drilling and coring at site J-9, Ross Ice Shelf.

Sea ice, Ice structure, Bottom ice, Antarctica—Ross Ice Shelf.
The authors describe the structure of the ice of Ross Ice Shelf as it appeared in a J-9 core. Comments are given on an unusual boundary layer showing in the core and conclusions and estimates on growth rate are made

35-653
Ross Ice Shelf glaciology.
Thomas, R.H., et al, *Antarctic journal of the United States*, Oct. 1979, 14(5), p 66-67, 9 refs.
MacAyeal, D.R.
Ice shelves, Physical properties, Mass balance, Antarctica—Ross Ice Shelf.
Measurements of Ross Ice Shelf ice mechanical properties have been made for 1973-1978 and prepared for publication. Measurements continued of the physical properties along with analysis of the ice sheet mass balance. It appears that the Ross Ice Shelf loses ice at the rate of 1 m/y through basal melting. Comments are made on some aspects of the physical appearance of the ice surface, its thickness and glacial history

35-654
Surface accumulation on Ross Ice Shelf.
Clausen, H.B., et al, *Antarctic journal of the United States*, Oct 1979, 14(5), p.68-72, 12 refs
Dansgaard, W., Nielsen, J.O., Clough, J.W
Ice shelves, Ice accretion, Fallout, Drill core analysis, Antarctica—Ross Ice Shelf.
Data derived from a number of ice cores from Ross Ice Shelf are analyzed for accumulation rates expressed in mm of water

equivalent of *Beta* and *delta* profile analysis advantages and disadvantages are discussed for both Greenland and Ross Ice Shelf. The analyses for the latter are also graphed and charted.

35-655

Temporal variations and correlations in the chemistry of snow on Ross Ice Shelf.

Molenar, J.V., et al. *Antarctic journal of the United States*, Oct. 1979, 14(5), p.72-74, 4 refs.

Warburton, J.A.

Snow composition, Ice shelves, Antarctica—Ross Ice Shelf.

Chemical analyses were made from 7 snow pits on Ross Ice Shelf during RISP investigations of 1974-75 and 1976-77. Variations in snow chemistry from the several sampling sites are charted and discussed and correlations between chemistry and accumulation, where they exist, are pointed out.

35-656

Enhanced enrichment of metals in precipitation on Ross Ice Shelf.

Warburton, J.A., et al. *Antarctic journal of the United States*, Oct. 1979, 14(5), p.75-76, 2 refs.

Anderson, A.V., Owens, M.S.

Snow composition, Precipitation (meteorology), Supercooled fog, Antarctica--Ross Ice Shelf.

Samples of fresh fallen snow under light wind conditions and diffuse deposits from supercooled fog were analyzed for mineral content. Results are shown in a graph and collection methods are discussed.

35-657

Heavy metal enrichment in antarctic snow and firn.

Warburton, J.A., et al. *Antarctic journal of the United States*, Oct. 1979, 14(5), p.76-78, 3 refs.

Molenar, J.V., Anderson, A.V.

Snow composition, Firn, Weather, Antarctica—Amundsen-Scott Station, Antarctica—Byrd Station, Antarctica—Ross Ice Shelf.

During the austral summers of 1971-72, 1974-75 and 1976-77 snow and firn samples were collected at Amundsen-Scott Station, Byrd Station, and several locations on the Ross Ice Shelf. Concentrations of sodium (Na), manganese (Mn) iron (Fe) and silver (Ag), in the snow and firn were determined. Cyclonic storm systems originating in the Southern Ocean often move in across the shelf penetrating to the mountains and beyond. These storms and other large scale air mass motions carry aerosols, particulates, and have meteors inland, enabling them to be precipitated onto the shelf. The ice shelf also is a region much affected by katabatic winds flowing from the Antarctic plateau. These winds could be responsible for bringing aerosol material onto the shelf from nonmarine sources, particularly from the Transantarctic Mountains and from high-pressure subsidence air masses containing both stratospheric and tropospheric components. (Auth. mod.)

35-658

Concentration and isotopic composition of CO2 occluded in the polar ice.

Deuser, W.G., *Antarctic journal of the United States*, Oct. 1979, 14(5), p.78, 2 refs.

Ice composition, Climatic changes, Atmospheric composition, Carbon dioxide.

The study compares past relationships between naturally accreted CO2 amounts in the atmosphere and climate changes. The objective is to anticipate climatic changes which may result from man induced accretion of CO2.

35-659

Subsurface measurements of McMurdo Ice Shelf.

Gow, A.J., et al. *Antarctic journal of the United States*, Oct. 1979, 14(5), MP 1338, p.79-80, 2 refs.

Kovacs, A.

Ice cores, Brines, Ice composition, Antarctica—McMurdo Sound.

Study of brine content of sea ice at McMurdo and its physical and chemical relationships to the ice and sea water was continued. Another continuing study concerns radar profiling up glacier from the exposed contact point of sea ice with the ice of Koettlitz Glacier.

35-660

Nitrogenous chemical composition of antarctic snow and ice.

Parker, B.C., et al. *Antarctic journal of the United States*, Oct. 1979, 14(5), p.80-82, 7refs.

Zeller, E.J.

Snow composition, Ice composition, Chemical analysis, Antarctica.

Objectives of the research include an understanding of (1) the nitrogenous chemical content of snow and ice of different age and from different geographic locations, (2) their concentration ranges, periodic, and nonperiodic fluctuations and (3) the sources and mechanisms which bring about these striking differences. Progress in this project is set out in tables, including some results of tests on a core from near Vostok Station. (Auth. mod.)

35-661

Saline discharge at the terminus of Taylor Glacier.

Keys, J.R., *Antarctic journal of the United States*, Oct. 1979, 14(5), p.82-85, 14 refs.

Glacial hydrology, Subglacial drainage, Antarctica—Taylor Glacier.

At intervals of one to a few years during the "non-summer" months, some thousands of cubic meters of saline water flow out from either a crevasse at the northern corner of the terminus of Taylor Glacier or a source beside the glacier near this crevasse. This fluid freezes to form a saline icing (frozen outwash fan cone, or ice platform) which extends over an ice-marginal stream delta and onto the piedmont ice of western Lake Bonney. When the discharge issues from the crevasse (the glacier discharge site) an ice marginal debris-covered mound is also partially covered. The icing is colored various shades of orange due to small amounts of hydrated iron oxides and silt. Some historic aspects of these flows, their individual volume and chemical content are presented. (Auth. mod.)

35-662

Gas studies: ice from Allan Hills meteorite site and Byrd Station.

Fireman, E.L., *Antarctic journal of the United States*, Oct. 1979, 14(5), p.85-86, 8 refs.

Ice sampling, Gas inclusions, Geochronology, Antarctica—Allan Hills.

Blue ice samples were taken from the Allan Hills meteorite fall area and analyzed for gas content with the possibility that the gas may constitute unique samples of the atmosphere of an important time period. Analysis equipment and procedures are discussed.

35-663

Glaciological studies in Allan Hills, 1978-79.

Annexstad, J.O., et al. *Antarctic journal of the United States*, Oct. 1979, 14(5), p.87-88, 3 refs.

Nishio, F.

Ice sheets, Ice surface, Geodetic surveys.

Physical features and extent of the blue ice field in the Allan Hills are described. Relationships between the ice and the meteorites found here are being considered as a possibility for determining the source(s) of the meteorites.

35-664

Byrd Glacier.

Hughes, T., *Antarctic journal of the United States*, Oct. 1979, 14(5), p.88-91, 6 refs.

Glacier ice, Glacier flow.

This study of ice stream dynamics links with earlier investigations of ice sheet and ice shelf dynamics, so that the dynamics of this major ice sheet, ice stream, ice shelf system can be addressed. It was done in conjunction with a separate glacial-geological investigation of the Byrd Glacier-Darwin Glacier region of Antarctica. The combined study is the first attempt to relate the present glaciology of a major antarctic ice stream to its glacial history, with the larger aim of understanding antarctic glacial history in terms of present glaciological processes. (Auth. mod.)

35-665

Microparticle deposition at South Pole.

Mosley-Thompson, E., et al. *Antarctic journal of the United States*, Oct. 1979, 14(5), p.91-93, 8 refs.

Thompson, L.G.

Ice cores, Drill core analysis, Firn stratification, Impurities, Antarctica—Amundsen-Scott Station.

Some 6128 samples from a South Pole firn core, 101 m long were analyzed in detail for particle concentration, size distribution, morphology, elemental constituents, and variations in all of these. The data are graphed and discussed.

35-666

Stable isotope and radio echo sounding investigations of Taylor Valley, Victoria Land.

Drewry, D.J., *Antarctic journal of the United States*, Oct. 1979, 14(5), p.93-94, 7 refs.

Ice cover thickness, Isotope analysis, Radio echo soundings, Antarctica—Taylor Glacier, Antarctica—Bonney, Lake.

The author reviews work done in 1978, then describes the 1979 program to gather ice samples for stable isotope analysis and to fly a radio echo sounding profile down the centerline of Taylor Glacier from the ice dome to Lake Bonney.

35-667

Airborne geophysical investigations of ice sheet and bedrock, 1978-79.

Drewry, D.J., et al. *Antarctic journal of the United States*, Oct. 1979, 14(5), p.95-96, 4 refs.

Meldrum, D.T., Jankowski, E., Neal, C.S.

Ice sheets, Radio echo soundings, Aerial surveys, Antarctica—West Antarctica.

During December 1978 and January 1979, the Scott Polar Research Institute undertook a sixth season of radio echo sounding in Antarctica to acquire data on the physical characteristics and dynamic/thermodynamic processes of the ice sheet and a second season of simultaneous magnetometry for sub ice geological studies. The principal objective for the 1978-79 season was to consolidate and extend a grid network in West Antarctica for geophysical investigation of the junction between the East Antarctic shield and West Antarctic accretionary plates. Several units, including a complex core area lying between the Ellsworth, Pensacola, and Horlick mountains were identified. As a result of this season's investigations and those in 1974-75 and 1977-78, a 50-kilometer square grid network now exists for about 1.4 million square kilometers of West Antarctica between ground lines of the Ross Ice Shelf and those of the Filchner and Ronne ice shelves. (Auth.)

35-668

Reflections of pulses from polar ice sheets.

Sivaprasad, K., *Antarctic journal of the United States*, Oct. 1979, 14(5), p.96-97, 1 ref.

Ice sheets, Ice models.

The radar echo sounding of polar ice indicates partial reflections within the ice sheet itself. The origin and nature of these radar reflections are the subject of much debate. Density variations of ice seem to be the most likely cause of the internal layering observed within the top 1,000 meters of the ice sheets. To simulate the variations some simple models have been considered and results from these models are presented here. In the models the variation of the dielectric constant owing to density variation is taken into account. Because the density variation is caused by the conversion of snow into ice over many thousands of years the density changes can be assumed to be either deterministic or random. (Auth.)

35-669

Research workshop on radio echo sounding of ice.

Sivaprasad, K., *Antarctic journal of the United States*, Oct. 1979, 14(5), p.98

Meetings, Radio echo soundings, Ice sheets.

A workshop entitled *Radio Echo Sounding of Ice* was held on 23-25 April 1978 at the New England Center for Continuing Education in Durham, New Hampshire. Organized by Dr. K. Sivaprasad the meeting was attended by 40 scientists from universities, government agencies, and research laboratories. It consisted of three principal sessions each including several informal presentations and open discussions. A major topic during the discussions was the radio echo sounding system developed by the Technical University of Denmark and currently used in Antarctica. (Auth.)

35-670

Geophysical investigation of the dome C area.

Beatley, C.R., et al. *Antarctic journal of the United States*, Oct. 1979, 14(5), p.98-100, 1 ref.

Jezek, K.C., Blankenship, D.D., Lovell, J.S., Albert, D.G.

Ice cover thickness, Geodetic surveys, Seismic prospecting.

During the 1978-1979 field season, the authors initiated a program of geophysical measurements at dome C that involved conducting a gravity and magnetic survey on a so-called double cross consisting of two 10 kilometer lines running north-south (grid) and spaced 1 kilometer apart, and two similar lines running east-west (grid). The program also included seismic shooting along portions of a 30 kilometer line extensive radar profiling along gravity and seismic lines testing of a new digital recording system, a detailed direct current resistivity survey out to a half-spacing of 1 kilometer, and many hours of magnetotelluric recording. Ice thickness measurements were made along the seismic and gravity lines with some thicknesses being >4 km. (Auth.)

35-671

Glaciology of dome C area.

Bolzan, J.F., et al. *Antarctic journal of the United States*, Oct. 1979, 14(5), p.100-101, 2 refs.

Palais, J.M., Whillans, I.M.

Ice sheets, Ice composition, Ice temperature.

With a view toward starting a field study of the mass balance and dynamics of the dome C area in a later year, preliminary investigations were made during the 1978-79 field season of the surface glaciology near the dome C camp. Pit studies close to the camp were used to assess the horizontal variation in certain stratigraphic quantities. Samples were collected from five vertical 3-meter profiles and six vertical 1-meter profiles. These samples are being analyzed for oxygen isotopic ratio, gross beta activity, and microparticle content for correlation with other stratigraphic studies in hopes of obtaining not only average accumulation values in the dome C area but also a understanding of the diagenetic processes occurring in the upper 3 meters. (Auth.)

35-672

180-meter core drilling at dome C and measurements in the 905-meter drill hole.

Gillet, F., et al. *Antarctic journal of the United States*, Oct. 1979, 14(5), p.101, 1 ref.

Rado, C.

Drill core analysis, Ice cores.

The task during the 1978-79 field season was to take *in situ* measurements of temperature and closure rate in the 905-meter hole, to drill a shallow hole beyond the closeoff depth for gas analysis, and also to take complementary surface samples to determine the accumulation rate in the dome C area. A team carried out this program between 7 December 1978 and 10 January 1979. Temperatures in the 905-meter drill hole were measured every 10 meters down to 540 meters, then every 20 meters down to 640 meters, and then every 50 meters down to 800 meters. The bottom of the hole was filled with kerosene so that it was not possible to get measurements for the rest of the hole. (Auth.)

35-673

Seasonal variation of total antarctic sea ice area, 1973-75.

Zwally, H.J., et al. *Antarctic journal of the United States*, Oct. 1979, 14(5), p.102-103, 4 refs.

Parkinson, C.L., Carsey, F.D., Gloersen, P., Campbell, W.J., Ramseier, R.O.

Sea ice distribution, Seasonal variations, Spaceborne photography.

Sea ice concentrations can be derived from 1.55-centimeter microwave brightness temperatures measured by the electrically scanning microwave radiometer (ESMR) on the satellite NIMBUS V. Using such measurements to calculate sea ice concentrations for most of the three-day periods in the years 1973 through 1975 and averaging the values for each month, the total areal extent of antarctic sea ice of various concentrations as it varies seasonally and annually was determined. (Auth.)

35-674

Simple parameterization for salt flux to upper ocean owing to freezing and melting at the surface.

Parkinson, C.L., *Antarctic journal of the United States*, Oct. 1979, 14(5), p.103-104, 3 refs.

Sea water, Salinity, Models.

A computerized model to determine the change in brininess of sea water as surface waters freeze or melt is presented. The process is significant in the formation of antarctic bottom water.

35-675

Relative diatom abundance as tool for monitoring winter sea ice in the fluctuations in southeast Atlantic.

DeFelice, D.R., *Antarctic journal of the United States*, Oct. 1979, 14(5), p.105-106, 8 refs.

Sea ice, Plankton.

The process of relating diatom abundance to sea temperature fluctuations which set the sea ice front is reviewed. Examination of *Islas Orcadas* core 1176-6A showed evidence of numerous fluctuations in the ice front position during the past 300,000 years.

35-676

Drifting buoy measurements on Weddell Sea pack ice.

Ackley, S.F., *Antarctic journal of the United States*, Oct. 1979, 14(5), MP 1339, p.106-108, 7 refs.

Sea ice, Drift, Temperature measurement.

The observational techniques of placing the buoys in the Weddell Sea are described, the drift record and the temperature measurement record are shown, and a preliminary assessment and interpretation of the data received is given.

35-677

Discharge of Weddell Sea ice into the belt of mid latitude westerlies.

Schwerdtfeger, W., *Antarctic journal of the United States*, Oct. 1979, 14(5), p.108-109, 4 refs.

Sea ice, Drift, Wind factors, Topographic effects.

The theory of meteorological and topographical conditions which favor movement of sea ice northward from the Weddell Sea into the prevailing westerlies is reviewed. Evidence of wind and temperature data at the surface and 850mb for stations in the Antarctic Peninsula is presented. The special conditions existing in the western Weddell Sea do are not found elsewhere in Antarctica.

35-678

Geological survey of east antarctic continental margin aboard USCGC *Glacier*.

Anderson, J.B., et al, *Antarctic journal of the United States*, Oct. 1979, 14(5), p.142-144, 1 ref.

Icebergs, Ice rafting, Ice edge, Ice shelves, Antarctica—Mertz Glacier, Antarctica—Ninnis Glacier.

An investigation of the continental margin between 140E and 150E was conducted to obtain geological and physical oceanographic data from closely spaced stations. This cruise marks the first comprehensive geologic survey of any part of the East Antarctic margin. Fifty-four geologic stations, 32 piston coring stations and 22 bottom grab stations were manned. Results of bathymetry, radiography of piston cores, iceberg counting, analysis of iceberg-entrained sediments, and ice front mapping are summarized.

35-679

Winter ice crystals at South Pole.

Ohtake, T., et al, *Antarctic journal of the United States*, Oct. 1979, 14(5), p.201-203, 9 refs.

Yogi, T.

Snow crystal structure, Precipitation (meteorology), Antarctica—Amundsen-Scott Station.

The formation mechanism of atmospheric ice crystals at the South Pole, the origins of moisture and condensation-freezing nuclei, and their contribution to the mass balance of the antarctic ice cover are studied. On about 300 days of each year, atmospheric ice crystals can be observed at the South Pole. Previous studies have discussed ice crystals during the austral summer. The work here concerns crystals during the austral winter. Ice crystals were collected on 59 days between 11 June and 23 August 1977 at air temperatures between -39.4 deg and -71.4 deg C. Precipitating ice crystals were sampled on slide glass plates coated with silicone oil, kerosene, or formvar solution and were photographed at low temperatures. The ice crystals collected were quite different from the typical snow crystals classified by Magono and Lee. We have classified them into six categories according to shape.

35-680

Radar reflectivity and precipitation rate studies at Palmer Station and Faraday Base.

Whinnery, R., et al, *Antarctic journal of the United States*, Oct. 1979, 14(5), p.212-213, 5 refs.

Barnhardt, B., Warburton, J.A.

Snowfall, Radar echoes, Ice crystal replicas.

An experiment to determine precipitation rates in snowfalls will be conducted cooperatively during the 1979 winter and 1979-80 summer field seasons in Antarctica by researchers of the Desert Research Institute and the British Antarctic Survey. The study will employ the x-band radar located at Palmer Station to record the reflectivity of clouds over Faraday Base which is 50 kilometers away in the Argentine Islands. A recording precipitation gage and ice crystal replicator will be stationed at Faraday Base. The experiment aims to ascertain the relationships between radar reflectivity from precipitating storms and the precipitation rate of the snow (water equivalent). (Auth.)

35-681

Dry Valley Drilling Project: summary of core storage Florida State University and sample distribution.

Cassidy, D.S., *Antarctic journal of the United States*, Oct. 1979, 13(5), p.231-232, 4 refs.

Cores, Dry Valley Drilling Project.

Procedures for handling the cores from the Dry Valley Drilling Project are described. Current methods of packing and refrigerated shipping work well. Sampling techniques are also outlined and an example of the records kept of sample distribution to various researchers included.

35-682

Ship operations, Deep Freeze 79.

Eckman, J.F., *Antarctic journal of the United States*, Oct. 1979, 14(5), p.234-235.

Icebreakers.

Two U.S. Coast Guard icebreakers supported the antarctic research program this season, *Glacier* and *Polar Star*. Cargo vessel *Schuyler Otis Bland* and the tanker *Maumee* supplied McMurdo once the ice channel was open. Ship operations are summarized. Because of propeller problems, the *Polar Star* was disabled and most icebreaking work was done by the USCGC *Glacier*.

35-683

Public works, Deep Freeze 79.

Evans, R.L., *Antarctic journal of the United States*, Oct. 1979, 14(5), p.235-237.

Water supply, Electric power, Ice runways, Snow roads, Antarctica—McMurdo Station.

In response to a long-time deterioration of McMurdo's physical plant, a new program was put into effect to establish a comprehensive facilities inspection program and to switch over from maintenance based on trouble-shooting to a system founded on programmed maintenance and upgrade. The accomplishments of the Public Works Department are listed. The Transportation Division opened the annual ice runway and road complex on new ice and built elevated snow roads linking Williams Field both with Scott Base and the runway.

35-684

Contractor support.

Murphy, R.L., *Antarctic journal of the United States*, Oct. 1979, 14(5), p.238-239.

Drilling, Shelters, Aircraft landing areas.

To support 305 scientific grantees, Holmes and Narver increased its own staff to 226 employees and put in its busiest season ever. Several projects were carried out in addition to setting up of field stations and other routine tasks. For example, at McMurdo two new two-story dormitories were built and old buildings demolished, a semipermanent shelter was built near the crater on Mount Erebus, and the USARP garage was remodelled and expanded. At Amundsen Scott, ground control moved to new quarters, and Palmer Station's small boat area was improved.

Ice removal, Bubbling, Ice melting, Heat transfer, Ice cover thickness, Air temperature, Water temperature, Mathematical models.

An analysis of a point source bubbler system used to induce local melting of an ice cover is presented. The analysis uses empirical results of bubbler plume experiments and impingement heat transfer results to determine the rate of melting at the

underside of an ice cover. Through a simple energy budget analysis of the ice cover, the melting of the ice cover and resulting extent of open water are determined as a function of air temperatures, depth and air discharge of the source, and water temperature. The analysis leads to a numerical simulation and an example simulation is presented

Effect of wind on heat transfer in snow.
Reimer, A., *Cold regions science and technology*, May 1980, 3(2/3), p.129-137, 15 refs
Snow thermal properties, Heat transfer, Wind factors, Snow heat flux, Mass transfer, Snow density, Thermal diffusion.

35-728
Low temperature phase changes in montmorillonite and nontronite at high water contents and high salt contents.
Anderson, D.M., et al, *Cold regions science and technology*, May 1980, 3(2/3), MP 1330, p.139-144, 8 refs.
Tice, A.R.
Unfrozen water content, Salinity, Temperature effects, Phase transformations, Soil freezing, Clays, Ions, Low temperature tests.
Prior work has revealed the existence of one or more low temperature phase changes in clay water systems in the temperature range -20C to about -50C The number and the temperatures at which these phase changes appear seems to be associated with the type of exchangable ion(s) and the number and nature of individual water domains present In this paper, we report the results of low temperature differential calorimetry on montmorillonite and nontronite clays at high water and high salt contents The presence of electrolytes at high concentration is shown to have a very marked effect The low temperature phase changes are completely absent at high electrolyte concentrations in these clay water systems The presence of electrolytes also was observed to have a distinctive effect on the shape of the initial freezing peak associated with ice segregation

35-729
Simple energy balance model of ice segregation.
Outcalt, S., *Cold regions science and technology*, May 1980, 3(2/3), p.145-151, 8 refs.
Soil freezing, Frost heave, Heat balance, Ice growth, Ice lenses, Surface temperature, Water table, Mathematical models.

35-730
Snowmelt infiltration into seasonally frozen soils.
Kane, D.L., *Cold regions science and technology*, May 1980, 3(2/3), p.153-161, 9 refs.
Snowmelt, Seepage, Frozen ground, Seasonal freeze thaw, Soil water migration, Water content, Ground ice.

Land reclamation, Earthwork, Excavation, Equipment, Frozen ground.

35-780
Concrete brands by frost resistance for meliorative structures. [Marki betona po morozostoikosti dlia meliorativnykh konstruktsii].
Nevskii, V.A., et al. *Gidrotekhnika i melioratsiia*. Feb. 1980. No 2. p.9-11. In Russian. 2 refs.
Barutenko, A.S.
Land reclamation, Concrete structures, Irrigation, Drainage, Concrete strength, Frost resistance.

35-781
Single chemical admixture of composite nature for improving frost resistance of concretes. [Dobavka NChK—sredstvo povysheniia morozostoikosti betona].
Pavlov, V.P., et al. *Gidrotekhnika i melioratsiia*. Feb 1980. No 2. p.13-14. In Russian.
Cherepanov, IU.P.
Concretes, Winter concreting, Concrete freezing, Concrete admixtures, Concrete hardening, Surfactants, Air entrainment, Concrete strength.

35-782
Allowing for the properties of freezing soils when building trenches by blasting. [Uchet svoistv merzlykh gruntov pri prokladke kanalov s pomoshch'iu vzryva].
Frash, G.B., et al. *Gidrotekhnika i melioratsiia*. Feb 1980. No 2. p.20-22. In Russian.
Vorob'ev, V.D., Postnov, V.V.
Trenching, Earthwork, Blasting, Seasonal freeze thaw, Frozen ground, Frost penetration, Snow cover effect.

35-783
Interaction of asbestos-cement pipelines with freezing and heaving soils. [Vzaimodeistvie asbestotsementnykh truboprovodov s promerzaiushchimi puchinistymi gruntami].
Dalmatov, B.I., et al. *Gidrotekhnika i melioratsiia*. Mar. 1980. No.3. p.13-16. In Russian.
Ulitskii, V.M., Alekseev, S.I.
Pipelines, Frozen ground, Frost heave, Deformation, Frost penetration, Analysis (mathematics).

35-784
New method of foundation protection from frost heave. [Novyi sposob zashchity fundamentov na puchinistykh gruntakh].
Kuracheva, N.V., *Gidrotekhnika i melioratsiia*. Mar. 1980. No 3. p.17. In Russian.
Concrete structures, Foundations, Reinforced concretes, Frost heave, Thermal insulation.

35-785
Determining the ice forming activity in diffusion chambers. [Metodika opredeleniia l'doobrazuiushchei aktivnosti v diffuzionnoi kamere].
Gorbunov, B.Z., et al. *Meteorologiia i gidrologiia*. May 1980. No.5. p.22-29. In Russian with English summary. 14 refs.
Kakutkina, N.A., Kutsenogii, K.P., Pshenichnikov, N.M.
Ice formation, Aerosols, Ice crystals, Nucleating agents, Silver iodide, Smoke generators.

35-786
Procedure for determining drifting ice concentration from satellite data. [Metodika opredeleniia splochennosti dreifuiushchikh l'dov po sputnikovym dannym].
Nikitin, P.A., et al. *Meteorologiia i gidrologiia*. May 1980. No 5. p.65-68. In Russian with English summary. 5 refs.
Liubovnyi, N.D.
Sea ice, Drift, Aerial surveys, Radiometry, Microwaves, Spaceborne photography.

35-787
Bearing strength of ice cover in the Baykal Amur railroad area rivers in spring. [O nesushchei sposobnosti ledianogo pokrova rek zony BAM v vesennii period].
Zabelina, E.F., *Meteorologiia i gidrologiia*. May 1980. No 5. p.77-84. In Russian with English summary. 11 refs.
Icebound rivers, Ice cover thickness, Ice cover strength, Ice conditions, Ice forecasting.

35-788
Dynamic classification of subglacial relief forms formed by ice sheets on plains. [Dinamicheskaia klassifikatsiia podlednikovykh form rel'efa sozdannykh pokrovnymi oledeneniami na ravninakh].
Makkaveev, A.N., *Geomorfologiia*. Jan.-Mar 1980. No 1. p.17-24. In Russian with English summary. 35 refs.
Glaciers, Ice sheets, Glacier flow, Glacier beds, Bottom topography, Ice scoring, Glacial erosion, Subglacial drainage, Water erosion.

35-789
Icebreaker *Otto Shmidt*. [Ledokol "Otto Shmidt"].
Pak, V., et al. *Morskoi flot*. July 1980. No 7. p.43-46. In Russian.
Semenov, V.
Ice navigation, Ice breaking, Icebreakers, Design.

35-790
Model of the atomic icebreaker *Arktika*. [Model' atomnogo ledokola "Arktika"].
Kostychev, V., *Morskoi flot*. July 1980. No 7. p.72-74. In Russian.
Ice navigation, Ice breaking, Icebreakers, Models, Design.

35-791
Route of the Baykal Amur railroad and some problems for further study. [Trassa Baikalo-Amurskoi magistrali i nekotorye voprosy ee dal'neishego izucheniia].
Sochava, V.B., et al. *Akademiia nauk SSSR Sibirskoe otdelenie Institut geografii Sibiri i Dal'nego Vostoka*. 1975. Vol.46. p.3-12. In Russian. 7 refs.
Shotskii, V.P., Buks, I.I.
Site surveys, Mapping, Baykal Amur railroad, Permafrost distribution, Engineering geology.

35-792
Interrelations among natural conditions, economic development and population in the Baykal Amur railroad construction zone. [Problemy vzaimodeistviia prirody, khoziaistva i naselenia v zone stroitel'stva Baikalo-Amurskoi magistrali].
Alekseev, V.R., et al. *Akademiia nauk SSSR. Sibirskoe otdelenie. Institut geografii Sibiri i Dal'nego Vostoka*. 1975. Vol 46. p.13-18. In Russian.
Vorob'ev, V.V., Prokhorov, B.B.
Environmental protection, Permafrost distribution, Human factors, Permafrost transformation, Baykal Amur railroad, Naleds, Frost heave, Solifluction, Snow cover effect, Vegetation factors.

35-793
New review map of vegetation in the West Siberian Plain. [Novaia obzornaia karta rastitel'nosti Zapadno-Sibirskoi ravniny].
Il'ina, I.S., *Akademiia nauk SSSR. Sibirskoe otdelenie Institut geografii Sibiri i Dal'nego Vostoka*. 1975. Vol.46. p.19-25. In Russian. 10 refs.
Maps, Vegetation, Aerial photography, Geobotanical interpretation.

35-794
Studying soil and geochemical regimes of forest geosystems in the West Sayan foothills. [Rezhimnye pochvenno-geokhimicheskie issledovaniia v lesnykh geosistemakh predgorii Zapadnogo Sajana].
Snytko, V.A., et al. *Akademiia nauk SSSR. Sibirskoe otdelenie. Institut geografii Sibiri i Dal'nego Vostoka*. 1975. Vol.46. p.44-54. In Russian. 17 refs.
Kochurov, B.I., Grechushkina, L.I., Grudinina, N.A.
Swamps, Forest soils, Soil formation, Soil chemistry, Thermal regime, Snow cover effect, Mountain soils, USSR—Sayan Mountains.

35-795
Transpiration of vegetation in taiga biogeocenoses in the West Sayan foothills. [Transpiratsiia rastitel'nosti taezhnykh biogeotsenozov predgorii Zapadnogo Sajana].
Antipova, N.D., et al. *Akademiia nauk SSSR. Sibirskoe otdelenie. Institut geografii Sibiri i Dal'nego Vostoka*. 1975. Vol.46. p.55-62. In Russian. 6 refs.
Antipov, A.N.
Taiga, Landscape types, Plant ecology, Plant physiology.

35-796
Studies in the Lateglacial of north-west Europe.
Lowe, J.J., ed. Oxford, Pergamon Press, 1980. 205p.. Refs p.177-199. Contains papers presented at a Symposium of the Quaternary Research Association held at University College, London, Jan 1979.
Gray, J.M., ed. Robinson, J.E., ed.
Glaciation, Ice sheets, Shore erosion, Frost action, Paleoclimatology, Environments, Radioactive age determination, Marine biology, Palynology.

35-797
Gravel removal guidelines manual for Arctic and Subarctic floodplains.
Woodward-Clyde Consultants, U.S. Fish and Wildlife Service. FWS OBS-80/09. June 1980. 169p. Refs passim.
Streams, Gravel, Excavation, Mining, Environmental impact, Ice conditions, Floods, Hydrology, Manuals, United States—Alaska.

35-798
Final environmental impact statement, Prudhoe Bay Oil Field Waterflood Project.
U.S. Army Corps of Engineers Alaska District, Anchorage, Alaska, 1980. 3 Vols., Refs Chapter 8. 28p.
Environmental protection, Landforms, Floods, Research projects, Pipelines, Marine biology, Environmental impact, Animals, Oceanography, United States—Alaska—Prudhoe Bay.

35-799
Forest-strip method of reclaiming eroded soils. [Lesnaia melioratsiia erodirovannykh pochv].
Budaev, Kh.R., ed. Ulan-Ude, 1976, 159p. In Russian. For selected papers see 35-800 through 35-804. Refs passim.
Ivanov, G.M., ed.
DLC S623.L47
Land reclamation, Forest land, River basins, Drainage, Forest soils, Soil erosion, Human factors, Protective vegetation, Forest strips, USSR—Transbaikal.

35-800
Land reclamation resources, the present state and prospects of protective afforestation in Buryatiya. [Lesomeliorativnyi fond, sostoianie i perspektivy zashchitnogo lesorazvedenia v Buriatii].
Budaev, Kh.R., Lesnaia melioratsiia erodirovannykh pochv (Forest-strip method of reclaiming eroded soils) edited by Kh.R. Budaev and G.M. Ivanov. Ulan-Ude, 1976, p.10-17. In Russian.
DLC S623.L47
Land reclamation, River basins, Drainage, Soil erosion, Forest strips, Human factors, Protective vegetation, USSR—Transbaikal.

35-801
Regionalization of the Buryat ASSR for agriculture and forest strip method of land reclamation. [Agrolesomeliorativnoe raionirovanie Buriatskoi ASSR].
Ivanov, G.M., et al. Lesnaia melioratsiia erodirovannykh pochv (Forest-strip method of reclaiming eroded soils) edited by Kh.R. Budaev and G.M. Ivanov. Ulan-Ude, 1976, p.18-36. In Russian. 3 refs.
Budaev, Kh.R., Kokorin, IU.N.
DLC S623.L47
Steppes, Taiga, Mountains, Landscape types, Cryogenic soils, Land reclamation, Mapping.

35-802
Resistance of forest soils to erosion in the Baykal Lake basin. [Protivoerozionnaia ustoichivost' lesov basseina oz. Baikal].
Babintseva, A.M., et al. Lesnaia melioratsiia erodirovannykh pochv (Forest-strip method of reclaiming eroded soils) edited by Kh.R. Budaev and G.M. Ivanov. Ulan-Ude, 1976, p.49-54. In Russian. 3 refs.
DLC S623.L47
River basins, Forest land, Soil erosion, Human factors, Environmental protection.

35-803
Erosion of cryogenic soils in East Transbaikal. [Osobennosti erozii merzlotnykh pochv Vostochnogo Zabaikal'ia].
Kerzhentsev, A.S., Lesnaia melioratsiia erodirovannykh pochv (Forest-strip method of reclaiming eroded soils) edited by Kh.R. Budaev and G.M. Ivanov. Ulan-Ude, 1976, p.66-77. In Russian.
DLC S623.L47
Cryogenic soils, Soil profiles, Soil erosion, Gullies, Meteorological factors.

35-804
Forms and reserves of nitrogen in the cryogenic meadow-chernozem soils of Buryatiya and the effectiveness of nitrogen fertilizers. [Zapasy i formy azota v lugovo-chernozemnykh merzlotnykh pochvakh Buriatii i effektivnost' azotnykh udobrenii].
Korobtsev, I.I., et al. Lesnaia melioratsiia erodirovannykh pochv (Forest-strip method of reclaiming eroded soils) edited by Kh.R. Budaev and G.M. Ivanov. Ulan-Ude, 1976, p.136-144. In Russian. 4 refs.
Pigareva, N.N.
DLC S623.L47
Cryogenic soils, Soil chemistry, Nutrient cycle, Meadow soils, Agriculture.

35-805
Fundamentals of sanitation and hygiene in urban construction of the Novosibirsk region. (Sanitarno-gigienicheskie osnovy gradostroitel'stva v Novosibirskoi oblasti).
Dobrinskii, A.A., et al. Novosibirsk, Nauka, 1974. 118p., In Russian with English table of contents enclosed. 63 refs.
DLC RA566.5.R9S24
Urban planning, Buildings, Water supply, Sewage, Sanitary engineering, Permafrost beneath structures, USSR—Novosibirsk.

35-806
Physical kinetics and transfer processes in phase transformations. (Fizicheskaia kinetika i protsessy *perenosa pri fazovykh prevrashcheniiakh*).
Pavlukevich, N.V., et al. Minsk, Nauka i tekhnika, 1980. 208p., In Russian with English table of contents enclosed. 253 refs.
DLC QD503.A36
Solids, Capillarity, Heat transfer, Moisture transfer, Phase transformations, Mathematical models, Stefan problem.

35-807
Matter and energy exchange in pine forests of the European North. (Obmen veshchestv i energii v sosnovykh lesakh Evropeiskogo Severa).
Kazimirov, N.I., et al. Leningrad, Nauka, 1977. 304p., In Russian with English table of contents enclosed. Refs. p.294-299
DLC QK321.02
Forest land, Cryogenic soils, Taiga, Biomass, Plant ecology, Plant physiology, Nutrient cycle.

35-808
Designing preliminary heating devices for hydraulic drive systems of digging-wheel excavators. (Osnovy rascheta sistemy predvaritel'nogo progreva truboprovodov gidroprivoda rotornykh ekskavatorov).
Kozin, G.IU., et al. *Moscow. Institut gornogo dela Nauchnye soobshchenia*, 1979. Vol.176. p.60-67. In Russian. 4 refs
Adlin, A.I.
Mining, Excavation, Equipment, Permafrost, Design.

35-809
Some general problems of the formation of moraine sediments. (Nekotorye obshchie voprosy morennogo sedimentogeneza).
Lavrushin, IU.A., *Akademia nauk SSSR. Geologicheskii institut. Trudy*. 1980. Vol 350. Protsessy kontinental'nogo litogeneza (Processes of continental lithogenesis) edited by A.V. Pelve. p.123-135. In Russian.
Glacial deposits, Moraines, Ground ice, Glacial erosion, Sediment transport, Glacier ice, Impurities, Subglacial drainage.

35-810
Glacial lithogenesis under conditions of active volcanism. (Osobennosti ledovogo litogeneza v obstanovke aktivnogo vulkanizma).
Geptner, A.R., *Akademia nauk SSSR. Geologicheskii institut. Trudy*. 1980. Vol 350. Protsessy kontinental'nogo litogeneza (Processes of continental lithogenesis) edited by A.V. Pelve. p.136-146. In Russian
Mountain glaciers, Volcanoes, Glacial deposits, Moraines, Glacier beds, Glacial erosion, Sediment transport, USSR—Kamchatka Peninsula.

35-811
Water balance of the Bratsk reservoir. (Vodnyi balans Bratskogo vodokhranilishcha).
Geta, R.I., Novosibirsk, Nauka, 1978. 134p., In Russian with English table of contents enclosed. Refs. p.125-133.
DLC TD395.G43
Electric power, Reservoirs, River basins, Runoff, Permafrost hydrology, Water balance, Radiation balance, Icebound lakes, Permafrost beneath lakes, Cryogenic soils, Vegetation factors, USSR—Bratsk.

35-812
Oats in the permafrost zone. (Oves v zone vechnoi merzloty).
Denisov, G.V., Novosibirsk, Nauka, 1979. 184p., In Russian with English table of contents enclosed. Refs. p.173-183.
DLC SB191.02D43
Cryogenic soils, Active layer, Permafrost depth, Grasses, Agriculture.

35-813
Climatic peculiarities of the Baykal Amur railroad zone. (Klimaticheskie osobennosti zony BAM).
Galazii, G.I., ed. Novosibirsk, Nauka, 1979. 144p., In Russian with English table of contents enclosed. 42 refs.
DLC QH98.A453
Climate, Permafrost beneath structures, Snowfall, Snowdrifts, Snow cover stability, Cryogenic soils, Thermal regime, Soil air interface, Baykal Amur railroad, Heat transfer, Wind factors, Icing.

35-814
Operation of the lubrication, hydraulic and pneumatic systems of construction machines under northern conditions. (Ekspluatatsiia smazochnykh, gidravlicheskikh i pnevmaticheskikh sistem stroitel'nykh mashin v usloviiakh Severa).
Garkavi, N.G., et al. Leningrad, Strolizdat, 1979. 111p., In Russian with English table of contents enclosed. 5 refs.
Arinchenkov, V.I., Alekseev, V.N.
DLC TH900.G329
Construction equipment, Cold weather operation, Lubricants, Engines, Winter maintenance.

35-815
Theory and application of ground freezing in civil engineering.
Jessberger, H.L., *Cold regions science and technology*. May 1980. 3(1). p.3-27. 28 refs
Soil freezing, Engineering, Frozen ground mechanics, Bearing strength, Frost heave, Thermal properties, Temperature effects, Water content, Time factor, Tensile strength, Theories.

35-816
Fracture toughness of sea ice.
Urabe, N., et al. *Cold regions science and technology*. May 1980. 3(1). p.29-37. 11 refs
Iwasaki, T., Yoshitake, A.
Sea ice, Ice cracks, Fracturing, Ice cover strength, Ice structure, Ice elasticity, Stresses, Strains.

35-817
Transmission electron microscopy study of particulate concentrations in seven individual snowflakes.
Sartin, A., et al. *Cold regions science and technology*. May 1980. 3(1). p.39-43. 19 refs
Murr, L.E.
Snowflakes, Particle size distribution, Electron microscopy, Snowfall, Time factor.

35-818
Mechanical properties of saline-doped and carbamide (urea)-doped model ice.
Timco, G.W., *Cold regions science and technology*. May 1980. 3(1). p.45-56. 31 refs.
Doped ice, Ice mechanics, Flexural strength, Strains, Salt ice, Urea, Sea ice, Models.

35-819
Adsorption force theory of frost heaving.
Takagi, S., *Cold regions science and technology*. May 1980. 3(1). MP 1334. p.57-81. Refs. p.73-76.
Frost heave, Adsorption, Soil water migration, Soil freezing, Heat transfer, Stresses, Water films, Theories, Analysis (mathematics).

35-820
Adsorbed film controversy.
Miller, R.D., *Cold regions science and technology*. May 1980. 3(1). p.83-86. 3 refs
Frost heave, Adsorption, Soil freezing, Water films.

35-821
Deflection of icebergs by anchors.
Mellor, D.C., *Cold regions science and technology*. May 1980. 3(1). p.87-88.
Icebergs, Anchors, Drift, Ice conditions, Offshore structures, Impact, Towing.

35-822
Comment on "pressure melting".
Martin, R.T., *Cold regions science and technology*. May 1980. 3(1). p.89. 4 refs
Pressure, Melting, Freezing points, Latent heat, Ice pressure, Water pressure, Ice heat balance, Soil freezing.

35-824
Thermal analysis of thick concrete sections.
Thurston, S.J., et al. *American Concrete Institute Journal*. Sep.-Oct. 1980. 77(5). p.347-357. 15 refs
Priestley, M.J.N., Cooke, N.
Concrete curing, Thermal stresses, Heat flux, Hydration.

35-825
Frost action on immature cement paste—effects on mechanical behavior.
Zaman, M.S., et al. *American Concrete Institute Journal*. Sep.-Oct. 1980. No 5. p.386. 2 refs Discussion of 34-1276, and author's reply
Ridgway, P.
Cement admixtures, Frost action, Mechanical properties, Freeze thaw cycles, Cements, Compressive properties.

35-826
Variations of heat transfer between soil and atmosphere induced by engineering activities in tundra regions.
Pavlov, A.V., et al. *U.S. Army Cold Regions Research and Engineering Laboratory*. June 1981. TL 761. 12p., ADB-058 461L. For Russian original see 34-124. 4 refs
Sergeev, B.P., Skriabin, P.N.
Tundra, Frozen ground thermodynamics, Ground ice, Heat transfer.
During the period 1974-1976 the Permafrost Research Institute of the Siberian Division of the Academy of Science of the USSR conducted systematic heat balance investigations in northern West Siberia. The primary goal of the investigation was to obtain quantitative data on the extent of distribuance of the permafrost soils resulting from the construction of line installations and to evaluate means for reestablishing the natural permafrost system. This paper deals with the results of these investigations

35-827
Cold oil salvage pumps.
Jolliff, J.V., et al. *Naval engineers journal*. Apr. 1980. 92(2). p.239-251. 6 refs.
Mittleman, J.
Oil spills, Countermeasures, Pumps, Temperature effects, Water pollution, Tests.

35-828
Solution to spring ice-jam flooding.
Loffredo, J.C., *Public works*. March 1980. 3(3). p.82-83. 15 refs.
Ice breakup, Stream flow, Ice jams, Flood control.

35-829
Leaf ultraviolet optical properties along a latitudinal gradient in the arctic-alpine life zone.
Robberecht, R., et al. *Ecology*. June 1980. 61(3). p.612-617. 27 refs.
Caldwell, M.M., Billings, W.D.
Vegetation, Ultraviolet radiation, Optical properties, Plant physiology, Polar regions, Mountains, Plant location.

35-830
Response to fertilization by various plant growth forms in an Alaskan tundra: nutrient accumulation and growth.
Shaver, G.R., et al. *Ecology*. June 1980. 61(3). p.662-675. Refs. p.674-675
Chapin, F.S., III.
Plant physiology, Tundra, Growth, Nutrient cycle, Plant ecology, Fertilizing.

35-831
Production system is planned for iceberg infested waters.
Duval, J., et al. *World oil*. Mar. 1980. 190(4). p.81-86
Mercier, G., Morin, P.
Floating structures, Offshore structures, Icebergs, Ice scoring, Damage, Countermeasures, Sea ice distribution, Marine transportation, Fuel transport, Grounded ice.

35-832
Railway track switch operable in snow and ice. Part 4. Prototype modifications.
Coveney, D.B., *National Research Council, Canada Division of Mechanical Engineering Laboratory technical report*. July 1980. LTR-LT-118. p.11p + 3 figs., 3 refs
Railroad equipment, Cold weather operation, Railroad switches.

35-833
Transport measurements in the Arctic ice-pack.
Gebhart, B., et al. *Letters in heat and mass transfer*. July-Aug. 1980. 7(4). p.293-302. 15 refs
Audunson, T.
Sea ice, Pack ice, Ice mechanics, Drift, Ice water interface, Seasonal variations, Models.

35-834
Studies on the basic properties of standard concrete subjected to extended freeze-thaw cycles. [Etude des propriétés fondamentales de bétons courants soumis à de longs cycles de gel-dégel].
Pigeon, M., et al. *Canadian journal of civil engineering.* Sep 1980, 7(3), p 407-420. In French with English summary. 17 refs.
Lemaire, F.
Concrete freezing, Freeze thaw cycles, Compressive properties, Elastic properties, Air entrainment.

35-835
Dynamic tests and analysis of a massive pier subjected to ice forces.
Montgomery, C.J., et al. *Canadian journal of civil engineering.* Sep. 1980, 7(3), p 432-441. In English with French summary. 13 refs.
Lipsett, A.W.
Piers, Ice loads, Ice mechanics, Impact strength, Bridges, Tests.

35-836
Ice action on Nanisivik wharf, Strathcona Sound, N.W.T., winter 1978-1979.
Frederking, R.M.W., *Canadian journal of civil engineering.* Sep. 1980, 7(3), p.558-563. In English with French summary. 2 refs.
Wharves, Ice accretion, Ice cover thickness, Ice mechanics, Ice conditions, Sea ice, Tides.

35-837
Strain measurements in floating ice platforms and their application to platform design: Discussion.
Gold, L.W., *Canadian journal of civil engineering.* Sep 1980, 7(3), p 564-565, 5 refs. Reply, Ibid., p 565-568, 6 refs. For original article see 34-1156.
Masterson, D.M., Anderson, K.G., Strandberg, A.G.
Floating ice, Offshore structures, Strain tests, Ice strength, Flexural strength.

35-838
Depositional deglaciation forms as indicators of different glacial and glaciomarginal environments.
Kurimo, H., *Boreas.* Sep 1980, 9(3), p 179-191, 37 refs.
Glacial deposits, Glaciation, Paleoclimatology, Landforms.

35-839
Interpretation of Alberta ice jams data.
Michel, B., *Quebec (City) Université Laval. Département de génie civil. Rapport.* July 1980, GCS-80-03, 15p., 10 refs.
Ice jams, Slush, Freezeup, River ice, Surface roughness, Ice surface, Subsurface observations, Ice breakup, Analysis (mathematics).

35-840
Research and development work in the Division of Mechanical Engineering, 1979.
National Research Council, Canada. Division of Mechanical Engineering, Ottawa, Ont., [1980], 83p.
Engineering, Aircraft icing, Research projects, Railroads, Roads, Marine transportation, Ships, Low temperature research, Air cushion vehicles, Ice cutting, Pipelines, Ice loads, Offshore structures, Hydraulic jets, Computer applications.

35-841
Eastern Arctic SURSAT SAR ice experiment: radar signatures of sea ice features.
Ketchum, R.D., Jr., et al. *U.S. Naval Ocean Research and Development Activity. Technical note.* Aug. 1980, No.68, 14p. + 24 figs., ADA-090 629, 4 refs.
Farmer, L.D.
Sea ice distribution, Remote sensing, Radar echoes, Surface roughness, Ice water interface, Icebergs.

35-842
Interpretation of the unusual behavior of H2O and D2O at low temperatures: tests of percolation model.
Stanley, H.E., et al. *Journal of chemical physics.* Oct 1, 1980, 73(7), p 3404-3422. Refs. p 3421-3422.
Teixeira, J.
Low temperature tests, Supercooling, Water temperature, Hydrogen bonds, Thermal expansion, Heavy water, Impurities, Water pressure, Models, Tests.

35-843
Theory and numerical analysis of moving boundary problems in the hydro-dynamics of porous media.
Nakano, Y., *Water resources research.* Feb 1978, 14(1), MP 1343, p 125-134, 14 refs.
Porous materials, Hydrodynamics, Boundary value problems, Soil water migration, Water flow, Analysis (mathematics), Theories.

35-844
Particular solutions to the problem of horizontal flow of water and air through porous media near a wetting front.
Nakano, Y., *Advances in water resources.* June 1980, Vol.3, MP 1341, p 81-85, 9 refs.
Porous materials, Water flow, Air flow, Boundary value problems, Wettability, Soil water migration, Infiltration, Analysis (mathematics).

35-845
Particular solutions to the problem of vertical flow of water and air through porous media near a water table.
Nakano, Y., *Advances in water resources.* Sep. 1980, Vol.3, MP 1342, p 124-133, 12 refs.
Porous materials, Analysis (mathematics), Water flow, Air flow, Water table, Boundary value problems, Soil water migration, Infiltration.

35-846
Environmental assessment of the Alaskan continental shelf, Vol.1. Boulder, Colorado, Outer Continental Shelf Environmental Assessment Program, March 1980, 595p., Principal investigators' reports April-December 1979. Refs passim.
Ecology, Environmental impact, Marine biology, Animals, Microbiology, Bottom sediment, Water pollution, Chemical analysis, Oil spills, Ocean bottom, Hydrocarbons, Crude oil, United States—Alaska.

35-847
Environmental assessment of the Alaskan continental shelf. Comprehensive bibliography. Boulder, Colorado, Outer Continental Shelf Environmental Assessment Program, Aug 1980, 177p.
Environments, Natural resources, Ecosystems, Marine biology, Oceanography, Marine geology, Bibliographies.

35-848
In vitro and nylon-bag digestibilities of reindeer and caribou forages.
Person, S.J., et al. *Journal of wildlife management.* 1980, 44(3), p.613-622, 39 refs.
Pegau, R.E., White, R.G., Luick, J.R.
Tundra, Animals, Ecology.

35-849
Numerical simulation of snow avalanche impact on structures.
Lang, T.E., et al. *U.S. Rocky Mountain Forest and Range Experiment Station, Fort Collins, Colorado U.S. Forest Service research paper.* June 1980, RM-216, 21p., 10 refs.
Brown, R.L.
Avalanche mechanics, Viscous flow, Snow depth, Hydrodynamics, Computerized simulation.

35-850
Anticipate pipe freeze-ups.
Block, B., *Water and wastes engineering.* Oct 1980, 17(10), p.34-35.
Water pipelines, Pipeline freezing, Countermeasures, Frost penetration, Water flow.

35-851
Water pollution from snow removal operations.
Pierstorff, B.W., et al. *American Society of Civil Engineers. Environmental Engineering Division. Journal.* Apr. 1980, 106(EE2), p.377-388, 15 refs.
Bishop, P.L.
Water pollution, Snowmelt, Soil pollution, Environmental impact, Soil chemistry, Snow removal.

35-852
Soils of Siberia and the Far East; a current bibliography. [Pochvy Sibiri i Dal'nego Vostoka, tekushchii ukazatel' literatury].
Akademiia nauk SSSR. Sibirskoe otdelenie. Gosudarstvennaia publichnaia nauchno-tekhnicheskaia biblioteka, Novosibirsk, 1978, 2 volumes, Vols.2 and 3. In Russian.
Bibliographies, Soils, Cryogenic soils.

35-853
Soils of Siberia and the Far East; a current bibliography. [Pochvy Sibiri i Dal'nego Vostoka, ukazatel tekushchei literatury].
Akademiia nauk SSSR. Sibirskoe otdelenie. Gosudarstvennaia publichnaia nauchno-tekhnicheskaia biblioteka, Novosibirsk, 1979, 4 volumes, Vols. 1,2,3,4. In Russian.
Bibliographies, Soils, Cryogenic soils.

35-854
Soils of Siberia and the Far East; a current bibliography. [Pochvy Sibiri i Dal'nego Vostoka, tekushchii ukazatel' literatury].

Dynamics of NH4 and NO3 in cropped soils irrigated with wastewater.
Iskandar, I.K., et al. *U.S. Army Cold Regions Research and Engineering Laboratory*, June 1980, SR 80-27, 20p, ADA-090 575, 6 refs
Parker, L., McDade, C., Atkinson, J., Edwards, A.
Waste disposal, Water treatment, Irrigation, Soil chemistry, Nutrient cycle, Agriculture.
The objectives of this field study were 1) to obtain information on the dynamic behavior of wastewater NH4 and NO3 in soils, 2) to determine the relative abundance of NH4 and NO3 in soils receiving wastewater, and 3) to evaluate the seasonal effect on the fate of wastewater NH4 applied to soils in a slow infiltration system. The study was conducted using an on-going test plot which contained two soil types and was covered with forage grass. Samples were collected in June and October to study the seasonal effect on the dynamic of N. The concentrations of NH4 and NO3 in the soil reached a daily, quasi-steady state condition. The seasonal effect on the relative amounts of NH4 and NO3 was similar but there was always more NH4 than NO3. The concentrations of both NH4 and NO3 in soil profile were high at the surface and decreased with depth, consistent with the higher CEC, the slow movement of NH4 in soils and the higher organic matter content in the surface. Both NH4 and NO3 concentrations were higher in the finer texture Charlton silt loam soil than in the coarser texture Windsor sandy loam soil

Glacial deposits, Glacier ice, Floating ice, Antarctica—George V Coast.
Floating ice deposits (paratills) and grounded ice deposits (orthotills) have been identified on the continental shelf bordering the George V. Coast, East Antarctica. They are recognized on the bases of texture, pebble fabric, presence or absence of fauna, and stratification. The shapes of over 200 clasts taken from these glacial-marine tills indicate transport in basal debris zones. Clast shapes imply passive deposition of paratills from floating ice as supported by other lines of evidence. Deposition of orthotills by melt-out processes is also suggested by clast shape analysis. Melt-out till deposition is untenable on the theoretical grounds, however, and a passive form of lodgment till deposition is proposed for orthotills in this area. (Auth.)

This report presents engineering guidance for the design and construction of foundations in areas of deep seasonal frost and permafrost as developed up to the early 1970's. Attention is given to basic considerations affecting foundation design, site investigations, survey datum points, construction considerations, and monitoring performance. Included in the main text are 17 tables, 141 figures, and 213 selected references. A bibliography presents 45 additional references.

Glacial erosion, Ice shelves, Antarctica—Ross Ice Shelf, Antarctica—McMurdo Sound.
The author describes the mechanism of exaration (glacial erosion) at the sea floor by shelf glaciers. The exaration rate is calculated to be not less than 1 cm per year at loose sediments and 1.0 to 1.5 mm per year at rock floor. Typical features of exaration topography are stated, they are formed by shelf glaciers and emerged due to tectonic uplift of the Transantarctic Mountains (sub horizontal exaration terraces crossing flatbottomed valleys now situated above mountain glaciers surface). Validation is developed of loose deposits formed by shelf glaciers (Auth.)

Fracture behavior of ice in Charpy impact testing.
Itagaki, K., et al, *U.S. Army Cold Regions Research and Engineering Laboratory*, June 1980, CR 80-13, 13p, ADA-089 920, 17 refs
Sabourin, L.
Ice cracks, Fracturing, Impact tests, Temperature effects, Doped ice, Ice composition, Ice crystal structure.
Specimens prepared from various types of ice without introducing excessive defects were tested at temperatures ranging from -2 to -190C. These tests indicated slightly higher Charpy values at lower temperatures and in more highly dispersed material concentrations. Three modes of fracture occurred during testing. Depending on the temperature and the material composition, either of the first two modes, normal fracture or multiple fracture, will appear and will show a normal frequency distribution of Charpy values in each type of ice. The third mode, fracture from both ends, which frequently occurred in the (NH4F) doped ice, gave Charpy values two to five times higher than the mean value for normal fracture. It can therefore be concluded that certain types of doping can alter the mode of fracture through which drastic modifications of impact resistance may be possible.

35-974
Sediment displacement in the Ottauquechee River—1975-1978.
Martinson, C., *U.S. Army Cold Regions Research and Engineering Laboratory*, May 1980, SR 80-20, 14p, ADA-089 737, 3 refs
Sediment transport, Bottom sediment, Ice scoring, Ice erosion, Banks (waterways), River ice, Hydrology.
A three-year study of sediment displacement was conducted on a short section of the Ottauquechee River in Vermont that has erosional problems caused by ice. The results of cross sectional surveys showed large quantities of the bank eroded and deposition in the bed within the study area. The erosion appears to have been caused by 1) the ice scouring the banks and 2) ice plugging the channel and diverting the flow toward the banks.

A reinforced, single-ply PVC membrane was examined five years after being applied over a leaky, built-up, bituminous membrane. The bare PVC membrane was dirty, poorly drained and littered with broken glass, nails and such, yet no flaws were evident on leaks reported. Even at 0 F the PVC was quite flexible. Diagonal wrinkles at a parapet wall were attributed to workmanship, other observations suggested that membrane shrinkage had not occurred. The membrane has functioned well for five years and years and appears to be in good condition.

35-976
Review of techniques for measuring soil moisture *in situ*.
McKim, H.L., et al, *U.S. Army Cold Regions Research and Engineering Laboratory*, Aug. 1980, SR 80-31, 17p, ADA-089 974, Refs, p.13-17.
Walsh, J.E., Arion, D.N.
Soil water, Electromagnetic properties, Tensile properties, Climatic factors.
Recently there has been an increased interest in the in-situ measurement of soil moisture content in the areas of hydrology, meteorology, agriculture and environmental studies. Current methods generally have limitations, depending upon the use of the data, that greatly influence acquisition and reliability of the soil moisture determination. This report discusses gravimetric, nuclear, electromagnetic, tensiometric and hygroscopic techniques and the advantages and disadvantages of using the techniques. Emphasis is placed on the tensiometric and electromagnetic techniques. These two measurements when coupled would supply information on the wetting and drying soil moisture characteristic curves and thereby provide a means of tracing moisture movement under field conditions in cold climates.

35-977
New Hampshire field studies of membrane encapsulated soil layers with additives.
Eaton, R A , et al, *U S Army Cold Regions Research and Engineering Laboratory*, Aug 1980, SR 80-33 46p , 20 refs
Berg, R L
Soil freezing, Frost penetration, Soil stabilization, Soil water, Frost resistance, Pavements, Admixtures, Liming, Design.
This report describes the construction instrumentation and performance of membrane encapsulated soil layer (MESL) pavement test sections at the U S Army Cold Regions Research and Engineering Laboratory in Hanover New Hampshire from 1973 to 1978 Membrane encapsulated soil layer construction involves using a waterproof membrane to protect low grade soils from absorbing moisture especially during the freezing process Most of these lower grade soils are frost-susceptible in these soils water can be drawn to the freezing zone to form ice lenses which in turn cause heaving of the surface Lime flyash and sodium chloride were added to a silt material prior to encapsulation These additives were incorporated to add strength to the silt, absorb excess moisture, and increase its load-supporting capabilities Results show that 1) the moisture content within the MESL sections remained relatively constant over the five years of testing, 2) a nonencapsulated lime-flyash stabilized silt material heaved 8 8 times as much as the identical material which was encapsulated 3) the lime-flyash-stabilized MESL had twice the strength of the plain or salt-stabilized MESL 4) the silt with the additives had less frost heave within the MESL than the untreated silt In summary MESL s can be constructed to perform well in cold region thereby replacing high quality aggregates which are being depleted

35-978
Making the forestry resources accessible in the Baykal- Amure-Magistrate region.
Il'ina, L N , *U S Army Cold Regions Research and Engineering Laboratory*, July 1980, TL 739, 12p , ADA-089 783, Translated from Geographische Berichte, 1979, 90(1), p 37-46 15 refs

Indicatory role of the snow cover in studying the winter system of the taiga.
Kolomyts, E.G , *U S Army Cold Regions Research and Engineering Laboratory*, Aug, 1980, TL 743, 15p , ADB-051 619L, For Russian original see 23-1816 23 refs
Snow cover distribution, Snow cover effect, Snowdrifts, Taiga, Seasonal variations.
The snow cover as a specific component of the natural conditions is a product of the winter processes Many facts relating to the extent and peculiarities of natural processes are revealed by the way in which the snow spreads itself, its parameter and seasonal changes Because of the variability of the data, the snow cover may be defined as large or small geosystems, ranging all the way from national and zonal complexes to natural boundary and environment The problem is to find the combinations or groupings that would consistently reflect the systematics of natural complexes The criteria for determining these types are 1) seasonal changes in the snow mass determining the character and speed of its melting and 2) the tendency and intensity of the metamorphism of the snow mass, reflecting the exchange of heat between various components of the landscape in winter For USSR territories characterized by plains and low mountains, three basic types of the snow mass have been determined These three types of snow mass are discussed and illustrated

Snow water equivalent, Snow cover distribution, USSR—Moscow Region.
Comparing the data of different model areas made it possible to determine the difference in the distribution of water reserves during the periods of maximum snow accumulation and their changes during the melting period depending on the relief layers slope exposure shading of the surface and the type vegetation The observations showed that peculiarities of the water reserve distribution and changes occurring in them as well as the physical state of the snow cover were also closely connected with meteorological conditions

Impending climatic change and the fate of glaciers.
Grosval'd, M.S., et al, *Polar geography and geology*, Apr.-June 1980, 4(2), p.65-78. Translated from Akademiia nauk SSSR Izvestiia Serina geograficheskaia, No.6, 1978. Refs. p.77-78.
Kotlıakov, V.M.
Climatic changes, Ice sheets, Glacier melting, Paleoclimatology.
According to the data of glaciologists, a global warming of the climate may occur in the next 40-50 years. A change in the glaciation of mountains at temperate latitudes in Eurasia, on Arctic islands, in Greenland, and in East and West Antarctica is forecast on this basis. (Auth. mod.)

35-1007
Past and future of antarctic glaciation.
Miagkov, S.M., *Polar geography and geology*, Apr.-June 1980, 4(2), p.79-86. For Russian original see F-21842.
Paleoclimatology, Climatic changes, Antarctica.
A review of the author's own work confirms the assumption of K.K. Markov that the history of glaciation in the Antarctic has been a distinctive one and that synchronism has been absent in the glacial events of the Northern and Southern hemispheres. The results suggest that middle-latitude continental and polar glaciations must be viewed as distinctive types differing in the conditions under which they originated, in control factors and hence in their impact on climate, stability and duration. (Auth.)

35-1008
Meteorological consequences of natural or deliberate changes in the surface environment.

Effect of bubbles released from a melting ice wall on the melt-driven convection in salt water.
Josberger, E G. *Journal of physical oceanography*. Mar 1980, 10(3), p.474-477. 5 refs.
Ice melting, Bubbles, Glacier ice, Ice water interface, Convection, Buoyancy, Salt water, Water temperature, Salinity.
The buoyancy created by the release of air bubbles from melting glacial ice walls results from both the upward drag of the bubbles and the density defect caused by the steady-state distribution of bubbles in the water. Calculations using typical antarctic ice bubble concentrations and Southern Ocean temperatures and salinities show that the bubble buoyancy is comparable to the dilution for vertical ice length scales greater than 100 m. A comparison of laboratory experiments using 0.6 m long sheets of both bubbly and bubble-free ice shows two additional bubble effects. First, the bubbly ice melts in an irregular fashion that produces indentations in the ice which measure 20 mm long, 25 mm wide and 5 mm deep while the bubble-free ice melts smoothly. Second, the ice-water interface salinity in the bubbly case is higher than in the bubble-free case. Finally, the observed melt rates lie within 10% of the observed melt rates from the bubble free experiments. (Auth.)

Glacio-geomorphological observations in Cape Omega on the Prince Olav Coast, East Antarctica.
Moriwaki, K. *Antarctic record*. Sep 1980, No 70, p 1-14, 19 refs. In English with Japanese summary.
Patterned ground, Moraines, Ice sheets, Rocks, Frost shattering, Meltwater, Antarctica—Omega, Cape.
A reconnaissance geomorphological survey of Cape Omega was made in January 1977. Cape Omega has glaciated features as do other ice-free areas in the vicinity of Showa Station. The past ice sheet covered Cape Omega completely. Abundant glacial striae are preserved on the bedrock, and they are classified into two groups, i.e. SE-NW trending ones and ESE-WNW trending ones. The former group indicates the older direction of ice flow, and the latter the younger. The moraine in the marginal part of the ice sheet close to the rocks is the biggest one among those in the vicinity of Showa Station. Measurement of earth temperature in sorted polygons was made for 2 days. Measured minimum temperature did not fall below the freezing point. It may be ascribed to some extent to the fact that the period of measuring was an abnormally warm period near Showa Station. In the summer season, meltwater streams occur in the marginal zone of the ice sheet. Several meltwater streams develop in a zone 2.5 km in width in the Cape Omega area. (Auth. mod.)

Ichinose, Y., Harada, M., Kaminuma, K.
Glaciology, Seismic prospecting, Ice sheets, Antarctica—Prince Olav Coast.
The summer field party of the 20th Japanese Antarctic Research Expedition carried out seismic experiments at Soya Coast. The purpose was to investigate crustal structure and to establish a technique of seismic prospecting in Antarctica, such as the laying of profiles and instrumentation, development of ice drills, dynamite for use at low temperatures, etc. The observation was conducted by 8 persons for a period of 19 days. The profile is about 70 km in length eastward from the Ongul Strait near Showa Station. Ten observation points were set up every five kilometers along the profile. Shot points are located at both ends of the profile. Dynamite weighing 1000 kg was exploded at a depth of 110 m in the Ongul Strait. On the other side of the profile a total of 560 kg dynamite was installed from a depth of 17 m to the bottom (62.8 m). The experiment was successful. (Auth. mod.)

Josberger, E.G.
Ice melting, Icebergs, Calving, Freezing points, Salt water, Meltwater, Experimentation, Density (mass/volume), Temperature effects, Layers, Salinity.
Each year approximately 5000 icebergs are calved into the Antarctic Ocean. These icebergs initially have horizontal sizes of typically 1 km and their initial depth is approx. 250 m, the mean thickness of the glacier or ice shelf at the point of calving. Approximately 25,000 Arctic icebergs are calved each year with a typical depth of 50 m. The melting of icebergs in cold water vertically stratified with salt is considered. The study extends previous investigations of ice melting in cold water at uniform salinity and in warm water with a salinity gradient. We find, in agreement with the results of the latter study, that the meltwater spreads out in a series of horizontal layers. This motion tends to convert the initially smooth salinity distribution into one with much larger gradients in the interfaces between the layers. The thickness of the layers is well represented by an equation.

Gates, W.L.
Atmospheric circulation, Sea ice, Climate, Models.
A modified version of the two-level atmospheric general circulation model has been developed and used in the simulation of January and July global climates. The overall physical and numerical formulation of this Oregon State University (OSU) model is the same as that described previously by Gates and Schlesinger, but in the new version water vapor at the upper level has been a prognostic variable, the parameterizations of cumulus convection, large-scale condensation, and evaporation, clouds and radiative transfer have been changed, the surface snow mass and ground temperature have been made prognostic variables, and the treatment of the surface boundary layer has been revised. Modifications have also been made in the numerical solution procedure (which have increased the model speed by nearly a factor of 2), and in the prescribed distributions of topography, sea surface temperature and sea ice. The surface albedo is now a function of the prescribed surface type and of the predicted surface snow cover. The model incorporates antarctic data into the computations and numerical solutions. Pleistocene bimodal response of antarctic ice.
Drewry, D.J., *Nature*, Sep 18, 1980, 287(5779), p.214-216, 40 refs
Pleistocene, Ice sheets, Paleoclimatology, Glacial geology.
Extent and volume of the Antarctic ice sheet have important roles in modulating global atmospheric and oceanographic processes and have significant implications for world sea levels. The history of ice sheet variations in Antarctica has mainly been founded on studies in the ice free (Dry) valleys of southern Victoria Land. A detailed glacial chronology is based on the premise that Taylor Glacier and neighbouring Wright Upper Glacier are outlets of the East Antarctic ice sheet and that the extent of Taylor Glacier reflects the height of this ice sheet, and, since it terminates on land, records of its former positions provide one of the few indications of former heights of the ice sheet. That the East Antarctic ice sheet reached its maximum dimensions during each of the last four world wide interglacials is an important conclusion of this work. New geophysical data from Taylor Glacier and the adjacent ice sheet in Victoria Land are presented here which challenge these suppositions. (Auth mod)

Giant solar flares in antarctic ice.
Strothers, R., *Nature*, Sep 25, 1980, 287(5780), p 365, 9 refs.
Ice cores, Drill core analysis, Paleoclimatology.
An alternative explanation for the concentration NO3 in antarctic ice cores dating from 1150 to the present is given. The ionization process as stated by Rood et al (F-22633) is regarded as strained because of the difficulty in attaining the necessary energy and the dates do not match well with historical supernovae. The alternative suggestion is that unusually powerful solar flares could have caused the necessary ionizing radiation and the dating correlates well with sunspot and auroral activity.

Sources of twelve trace metals in antarctic snows determined by principal component analysis.
Boutron, C , et al, *Journal of geophysical research*, Oct 20, 1980, 85(C10), p 5631-5638, 26 refs
Martin, S
Snow composition, Pollution, Metals, Antarctica.
More than 3000 concentrations data obtained by the analysis of 12 trace metals in 250 snow samples collected in various locations in Antarctica have been processed through principal components factor analysis The interpretation of the groups of covariant metals so obtained allows estimation of the relative contributions of the various aerosol sources to the trace metals content of antarctic aerosols Al, Fe, and Mn are shown to be crustal derived in all locations The origin of Na, Mg, K, and Ca depends on the distance from the sea the influence of the marine source decreases from the sea coast to a distance of about 500 km, where the influence of the crustal source becomes predominant it increases then toward the most central areas of the Antarctic ice cap The anomalously enriched elements Pb, Ld, Cn Zn and Ag are clearly shown to be derived from one or possibly several sources independent of both the oceanic and the crustal sources (Auth)

35-1119
Are the past variations of the stratospheric sulfate burden recorded in central antarctic snow and ice layers.
Delmas, R , et al, *Journal of geophysical research*, Oct. 20, 1980, 85(C10), p 5645-5649, 38 refs
Boutron, C
Fallout, Snow composition, Chemical analysis, Ice composition, Antarctica.
Thirty-two snow samples, taken from a pit dug at Dome C and covering a continuous time period of about 100 years from 1880 up to the present, have been subjected to sulfate analysis The concentrations determined range from 50 to 150 billionths g/g of snow with no apparent increase because of global sulfur pollution The more important fluctuations observed on the sulfate concentration profile seem to be linked to major volcanic eruptions which occurred in the southern hemisphere during the studied time period, in particular Krakatoa in 1883 and Agung in 1963 The experimental and calculated contributions of this last eruption to the sulfate deposition in Antarctica agree satisfactorily The sulfate background (about 2/3 of the overall sulfate deposition during the last 100 years) has most likely a marine origin ('excess sulfate') It is suggested that the past variations of the stratospheric sulfate burden are recorded in Antarctic snow and ice layers and that they could be reconstructed by analyzing the sulfate content in deep ice cores (Auth)

35-1120
Alaska Highway Gas Pipeline Project: Yukon public hearings (March-April 1979).
Canada Environmental Assessment Panel, Ottawa, Ontario, Federal Environmental Assessment Review Office, Aug 1979, 126p , In English and French
Gas pipelines, Pipe laying, Environmental impact, Research projects, Engineering, Legislation, Waste disposal, Revegetation, Hydrology, Frost action, Canada—Yukon Territory.

35-1170
Rate of peat accumulation in antarctic moss banks.
Fenton, J.H.C., *Journal of ecology*, Mar. 1980. 68(1). p.211-228. 31 refs.
Mosses, Peat, Permafrost, Antarctica– Argentine Islands, Signy Island.
Three Antarctic moss banks were studied in detail, two dominated by *Polytrichum alpestre* Hoppe and one by *Chorisodontium aciphyllum* (Hook. f. et Wils.) Broth. The rate of upward growth of the moss banks, 0.9-1.3 mm yr, is approximately half

the annual shoot growth The amount of decomposition which has occurred at different depths of the peat in these banks was calculated from measurements of bulk density and compression The decomposition rate appears to be <1% yr Peat 20-30 cm below the surface is permanently frozen, and about half the original material has decomposed by the time it becomes incorporated into this permafrost Evidence is presented that a slow decomposition rate is an intrinsic characteristic of *Polytrichum alpestre* The rate of peat accumulation, 89-158 g/sq m/yr, is about half the rate of production, 162-350 g/sq m yr The former is similar to accumulation rates of peat elsewhere in the world (Auth)

35-1171
Fracture strength of polycrystalline ice containing KCl.
Ogawa, K., et al, *Low temperature science (Teion kagaku). Series A Physical sciences* 1978, Vol 36, p.1-9, 13 refs.

35-1176
Measurements of electrical surface conductivity of ice.
Nishimura, J., et al, *Low temperature science (Teion kagaku). Series A Physical sciences,* 1978, Vol 36, p.67-76, 11 refs., In Japanese with English summary.
Maeno, N.
Ice electrical properties, Electrical resistivity, Ice crystals, Ice temperature, Ice sublimation, Air temperature, Antarctica—Showa Station.
The surface conductivity of pure monocrystalline ice was measured as a function of temperature, crystallographic face, and sublimation rate Specimens of natural pure monocrystalline ice were collected from the *O-ike* pond near Showa Station At temperatures below -6C, an increase in surface conductivity with temperature was expressed, while at temperatures above -6C, the surface conductivity increased the rapid increase in surface conductivity near the melting point was caused by the appearance of a quasi-liquid layer on the ice surface The variation in temperature of the ice surface during sublimation was measured with fine copper-constantan thermocouples Then from the theory of heat conduction the rate of sublimation was calculated, which increased with rising temperature, but no abrupt change was found at a specific temperature near the melting point of ice The apparent activation energy for sublimation was 0 36 eV

35-1177
Studies of fluidized snow. 1. Formation of fluidized snow and its general properties.
Maeno, N., et al, *Low temperature science (Teion kagaku). Series A Physical sciences,* 1978, Vol.36, p 77-92, 12 refs., In Japanese with English summary
Nishimura, K
Snow physics, Liquid phases, Air flow, Velocity, Particle size distribution, Air temperature.

35-1178
Studies of fluidized snow. 2. Viscosity and heat transfer coefficient of fluidized snow.
Nishimura, K., et al, *Low temperature science (Teion kagaku) Series A Physical sciences,* 1978, Vol 36, p.93-102, 5 refs., In Japanese with English summary
Maeno, N.
Snow physics, Liquid phases, Viscosity, Heat transfer.

35-1179
Measurements of free water content of wet snow by calorimetric method.
Akitaya, E., *Low temperature science (Teion kagaku) Series A Physical sciences,* 1978, Vol 36, p 103-111, 3 refs., In Japanese with English summary.
Wet snow, Snow water content, Calorimeters, Temperature measurement, Water temperature.

35-1180
Rebound of falling snow flakes in snow accumulation process, I.
Kobayashi, D., *Low temperature science (Teion kagaku). Series A Physical sciences,* 1978, Vol 36, p.113-120, 5 refs., In Japanese with English summary.

Global inventory of natural and anthropogenic emissions of trace metals to the atmosphere.
Nriagu, J.O., *Nature*, May 31, 1979, 279(5712), p 409-411, 47 refs. For comment see I-24175 or 35-1218
Atmospheric composition, Impurities, Fallout, Snow cover.
Presented are estimates of the production and emission into the atmosphere of several common ferrous and non-ferrous aerosols. Sources of these aerosols include (natural) forest fires, volcanoes, vegetation, and sea salt spray, and (man-induced) industrial, coal combustion, oil and gasoline, wood wastes incineration, and fertilizers. Ratios of trace metal production and deposition are determined through analysis of polar snow and ice including areas in the southern Hemisphere.

Trace metals in remote Arctic snows: natural or anthropogenic.
Landy, M.P., et al. *Nature*, Apr. 10, 1980, 284(5756), p 574-576, 43 refs. For article being commented on see I-24174 or 35-1217.
Peel, D.A., Wolff, E W., Nriagu, J O., Boutron, C
Atmospheric composition, Fallout, Impurities, Snow cover.
Landy, Pelle, and Wolff question the reliability of the data quoted in Nriagu's article, on the basis that they are insufficient to draw the conclusions Nriagu reached. Nriagu defends the data. All agree that additional information is necessary before definitive conclusions can be reached on the trace metal pollutant problem. Boutron comments that although the trace metal fallout in Greenland snow appears to support the idea that the sources of most pollution are in the Northern Hemisphere, the actual accumulation of snow at Centrale Greenland is nearly a full order of magnitude greater than that at Dome C in Antarctica, implying that the fallout at both places cannot be compared on a one-to-one basis.

Glacier ice, Ice sheets, Paleoclimatology, Mapping, Spaceborne photography, Slope processes, Avalanches, Mudflows, Glacier mass balance, Glacial hydrology, Naleds, Antarctica.
The Academy of Sciences of the USSR, Institute of Geography and the Leningrad Arctic and Antarctic Institute, continuing the research program of the International Antarctic Glaciological Project, completed studies on thermal regime of the Antarctic ice sheet, calculated ice movements and temperatures, and identified thawing zones for different geothermal flux values and paleoclimatic fluctuations, concluding that future warming will not significantly affect glacier bed temperatures and ice flow trends in Central Antarctica, but the state of ice shelves and coastal ice sheet areas will play a major role in the general evolution of the ice cover. Drill cores from the Ross Ice Shelf revealed an ice accretion rate of 2 cm/yr at bottom surfaces strongly increasing in fresh-water inflow areas. Snow surveys along the Mirnyy-Vostok and Pionerskaya-Dome C routes were made and radar sounding data on thicknesses and movements of ice obtained for the Pionerskaya-Komsomol'skaya-Dome B route. Borehole studies of snow and ice strata were conducted at the Vostok and Pionerskaya stations.

Zagorodnov, V S., Raikovskiĭ, IU V.
Ice shelves, Subglacial navigation, Ice bottom surface, Acoustic measurement, Ice accretion, Ice melting, Drilling, Ice drills, Ice cores, Drill core analysis, Antarctica—Ross Sea.
In December 1978 a 416-meter hole was drilled through the Ross Ice Shelf. Ice core samples revealed two layers: the upper fresh-water ice 410 m thick, and the lower 6 meters of sea ice, the salinity of which varied from 2‰ at the fresh ice boundary to 4.5 at a half-meter distance from its bottom surface. Crystals at the bottom 5 mm in cross-section formed cross-section, parallel rows of vertical plates oriented in the same direction. Ice accretion by sea water freezing proceeds at a rate of 2 cm/yr with marked acceleration in the fresh-water inflow areas. It is believed that the climatic warm-up, expected during the next 50-100 years, will not destroy the ice shelf.

Kotlıakov, V M., Smirnov, K.E.
Snow cover distribution, Snow cover structure, Snow composition, Isotope analysis, Metamorphism (snow), Snow stratigraphy, Antarctica—Mirnyy Station, Antarctica—Vostok Station.
Snow surveys along the Mirnyy-Vostok route included observation of diagenetic processes in the surface layers of ice, stratigraphic studies in boreholes and sampling of snow, firm and ice for physical and isotope analyses. Accumulation variations were determined from snow contents of oxygen-18, tritium, Pb-210, Sr-90 and Cs-137 isotopes by five different methods as shown in tabulated results. Discrepancies between the stratigraphic and isotope accumulation data are discussed. Comparison of element concentrations of marine, continental and cosmic origin in snow showed the predominance of sea-moisture in the Antarctic ice cover alimentation, its mean annual accumulation amounting in absolute values to 12-14 g/sq cm at the Pionerskaya Station, 7 g/sq cm at Vostok-1 and 2 g/sq cm at Vostok 2.

Research activities at Mizuho Station, 1977. (Mizuho kichi tsumen kansoku ky).
Fujii, Y., *Polar news (Kyokuchi)*, Jan 1980, No 30, p 2-10, In Japanese
Ice sheets, Heat transfer, Weather observations, Ice sublimation, Antarctica—Mizuho Station.
Glaciological and meteorological research was carried out at Mizuho Station from Feb 1977 to Jan 1978 as part of the 18th JARE. The main subjects of glaciological study were the microparticle concentration in surface snow and in a 30m deep core and mass and heat exchanges at the ice sheet surface. Daily mass exchange at surface was obtained in the deposition erosion process by a stake method and in the condensation sublimation process by the evaporimeter method and a bulk formula method. Condensation prevailed from mid-April to mid-September and sublimation the rest of the year. Detailed mapping of a 100m-square area was done bimonthly. Surface synoptic weather observations were also made.

Swithinbank, C., *International Association of Hydrological Sciences Publication*, 1980, No 126, p 229-236, In English w French summary. 8 refs.
Ice sheets, Mapping, Antarctica.
The Antarctic ice sheet is considered in terms of the data requirements for a World Glacier Inventory. Twenty years of uninterrupted effort by 10 nations since the International Geophysical Year of 1957-1958 have produced less than 20 per cent of the maps needed to depict the ice sheet at the minimum inventory scale of 1:250,000. Only half the coastline has been mapped at this scale. The largest scale at which the whole ice sheet has been mapped is 1:2,000,000 and the maps of this series contain some errors greater than 100 km. The prospects for filling the polar data vacuum are discussed in terms of conventional mapping, satellite photo-mapping, air photography, remote sensing and ground truth. (Auth)

Richardson, M G
Sea ice, Marine biology, Plankton, Chemical composition, Signy Island.
During winter (1973) a very pure natural population of the diatom *Navicula glacier* Van Heurck occurred in dense concentrations (up to 244 mg sq m chlorophyll a in the sea ice at Signy Island, South Orkneys, Antarctica. Samples of algal material were collected for subsequent chemical analysis. The diatom had a composition of 34.7% ash, 21.81 lipid, 25.38 crude protein, 19.04% crude carbohydrate and an intact calorific value of 15.384 kJ g. Carbon, hydrogen, nitrogen and phosphorus formed 34.5, 3.4, 1 and 0.52 % dry wt respectively. The material was analysed for the trace elements Na, K, Fe, Ca, Mg, Al, Zn, Cu, Pb, Mn, Cs-137. Fatty acid composition was dominated by 16:0 palmitic acid (20.46%), 16:1 palmitoleic acid (32.86%) and 20:5 docosahexaenoic acid (19.33%). To supplement a very scanty original description a full taxonomic description is given in the text. (Auth)

Research projects, Polar regions, Environments, Measurement.
A review of polar environmental research is made and various options as to if, how it should proceed are presented. Consideration is given to costs of research vs benefits to be reasonably expected from it, who should do the research and with what equipment and vehicles, who are the possible users of research results and can they bear some of the costs, what measurements of environmental aspects are most likely to have a multiplicity of users as opposed to aspects having only a single or limited number of agencies of interest, the nature and extent of international cooperation in polar research efforts. These questions are discussed and the options are stated along with implications of the options.

On physical weathering in Taylor Valley, Victoria Land, Antarctica. (Zur physikalischen Verwitterung im Taylor Valley, Victoria-Land, Antarktis).
Miotke, F.-D., *Polarforschung*, 1979, 49(2), p.117-142. In German with English summary. 28 refs.
Cryogenic soils, Soil temperature, Temperature variations, Glacial geology.
Daily temperature variations in the rocks and soils of Taylor Valley were recorded during December and January 1976-77. Two series of measurements were taken, each series being 3 days long. Under clear skies daily temperature ranges of about 35C are possible. Maximum temperatures reach +30C. Within deeper horizons daily maximum and minimum temperatures become less distinctive and show delays of some hours. Permafrost on Nussbaum Riegel (Taylor Valley) rises up to 70-100 cm below the rock surface, and 20-30 cm below the surface of the soil. Depending on the albedo and relief situations permafrost rises in certain place even closer to the surface. Temperature and soil moisture data were used to explain the physical weathering processes of rocks in Taylor Valley. Micro-climate is a dominant factor in frost cracking and temperature-caused tension in the rocks. Temperature differences within the rocks and soils initiate salt weathering processes. High summer temperatures above 0 C allow chemical weathering processes on the rock surface. Very well preserved small-scale features of glacial erosion on the top of Nussbaum Riegel (850 m) in the center of Taylor Valley do not support the theory that this part of the valley has been free of ice for a long time. (Auth.)

Henderson-Sellers, A., *South African journal of science*, Aug 1980, 76(8), p 373-374, 17 refs
Ice sheets, Albedo, Climatic changes.
Two important results have emerged from the use of this numerical routine for calculation of albedo. Currently the southern hemisphere reflects away a larger proportion of the solar radiation incident upon it than does the northern hemisphere. This is apparently a direct result of the position and glaciated state of Antarctica. More importantly, the southern hemisphere's climatic response to any perturbations is apparently considerably weaker than that of the northern hemisphere. It has previously been suggested that there is a best global configuration for the onset of glacial epochs. We contend, in the light of these results, that it is more pertinent to view the stability of our global climate as a function of hemispheric asymmetry. (Auth.)

World of ice: the natural history of the frozen regions. John, B.S., Lo. don, Orbis Publishing, 1979, 120p., 29 refs.
DLC GB581.J63
Sea ice, Ice sheets, Ice, Permafrost, Climate, Ecosystems.

This book, illustrated with dozens of color photographs indexed and provided with a glossary, is an introduction for the general reader to the various forms of ice and to the cold regions of the world. It discusses the reasons for their existence, their size at present and at various times in the past, the ways in which their variations have affected man and continue to do so, the ecosystems which have evolved in the northern and southern hemispheres and the reasons for the differences between them. The ways in which man has adapted to life in cold regions either as a permanent habitat, as did Eskimo and other northern peoples, or as a temporary arena for research, exploration and sport are examined.

Design values of subzero temperatures for manufacturing, installation and operation of steel structures. (O raschetnoi nizkoi temperature pri izgotovlenii, montazhe i ekspluatatsii stal'nykh konstruktsii).
Sil'vestrov, A.V., et al, *Russia. Ministerstvo vysshego i srednego spetsial'nogo obrazovania. Izvestiia vysshikh uchebnykh zavedenii. Stroitel'stvo i arkhitektura*, 1980, No.9, p.12-15, In Russian. 11 refs.
Moiseichik, E.A.
Steel structures, Cold weather construction, Design, Cold weather operation, Frost resistance.

35-1364
Influence of a complex surfactant admixture on the properties of plasticized portland cement paste, stone and mortar. (Vliianie kompleksnoi dobavki poverkhnostno-aktivnykh veshchestv na svoistva gliezhportlandtsementnogo testa, kamnia i rastvora).
Torka, A.R., et al, *Russia. Ministerstvo vysshego i srednego spetsial'nogo obrazovania. Izvestiia vysshikh uchebnykh zavedenii. Stroitel'stvo i arkhitektura*, 1980, No.9, p.71-75, In Russian. 8 refs.
Inozemtsev, I.U.P.
Concretes, Mortars, Cements, Surfactants, Cement admixtures, Frost resistance, Plastic properties.

35-1365
Performance of thermal deformation compensators during pipeline icing. (Rabota kompensatora teplovykh deformatsii pri oledenenii truboprovoda).
Danilova, N.P., *Russia. Ministerstvo vysshego i srednego spetsial'nogo obrazovania. Izvestiia vysshikh uchebnykh zavedenii. Stroitel'stvo i arkhitektura*, 1980, No.9, p.111-115, In Russian. 2 refs.
Pipelines, Icing, Ice loads, Deformation.

35-1366
Study and preservation of water resources (1971-1973). (Izuchenie i okhrana vodnykh resursov (1971-1973 gg.)).
Shablevskaia, V.A., ed. Moscow, Nauka, 1976. 128p. In Russian. For selected papers see 35-1367 through 35-1369.
DLC TC411.I95
Taiga, Swamps, Land reclamation, Drainage, Icebound rivers, Subglacial drainage, Flow rate, Ice jams, Flood control, Analysis (mathematics).

35-1367
Peculiarities of water-heat balance of the Vasyugan River region and ways of changing natural conditions in areas of oligotrophic paludification. (Osobennosti vodno-teplovogo balansa Vasiugan'ia i puti preobrazovania prirody raionov oligotrofnogo zabolachivania).
Kulikov, IU.N., Izuchenie i okhrana vodnykh resursov (1971-1973 gg.) (Study and preservation of water resources (1971-1973)) edited by V.A. Shablevskaia. Moscow, Nauka, 1976. p.6-8. In Russian.
Swamps, Land reclamation, Taiga, Paludification, Drainage, Permafrost depth, USSR—Vasyugan River.

35-1368
Compiling water-surface curves for rivers and waterways in the presence of ice and icy formations. (Postroenie krivykh poverkhnosti vody rek i kanalov pri nalichii l'da i ledovykh obrazovanii).
Orlova, T.B., Izuchenie i okhrana vodnykh resursov (1971-1973 gg.) (Study and preservation of water resources (1971-1973)) edited by V.A. Shablevskaia. Moscow, Nauka, 1976. p.87-89. In Russian.
Icebound rivers, Subglacial drainage, Flow rate, Ice jams, Flood control, Analysis (mathematics).

35-1369
Calculating subglacial passage capacity of rivers and waterways. (Raschet propusknoi sposobnosti rusel rek i kanalov pod ledianym pokrovom).
Marusenko, IA.I., Izuchenie i okhrana vodnykh resursov (1971-1973 gg.) (Study and preservation of water resources (1971-1973)) edited by V.A. Shablevskaia. Moscow, Nauka, 1976. p.89-91. In Russian.
Icebound rivers, Subglacial drainage, Analysis (mathematics).

35-1370
Proton mobility in ice.
Kunst, M., et al, *Nature*, Dec. 4, 1980, 288(5790), p.465-467, 35 refs.
Warman, J.M.
Ice composition, Proton transport, Electrical resistivity, Hydrogen bonds.

35-1371
Sintering with a weak temperature gradient. (Etude du frittage en présence d'un faible gradient de temperature).
Marbouty, D., et al, International Meeting on Alpine Meteorology, 16th, Aix-Les-Baines, France, Sep. 22-27, 1980, Société météorologique de France, 1980, p.291-295, In French with English summary. 3 refs.
Martin, A.
Ice sintering, Snow crystals, Cohesion, Temperature gradients, Shear stress.

35-1372
Plant climate in shore forests north of Lake Baykal. (Fitoklimat pribrezhnykh lesov Severnogo Baikala).
Vykhristiuk, M M., Novosibirsk, Nauka, 1980, 215p., In Russian with English table of contents enclosed Refs.153-161
Taiga, Landscape types, Cryogenic soils, Vegetation, Microclimatology, Plant ecology, Plant physiology, Forest canopy, Heat balance, Radiation balance, Soil temperature, Snow cover effect, USSR—Baykal Lake.

35-1373
Conference of young scientists, 3rd, Krasnoyarsk, 1971. Studies of the nature of Siberian forests. (Izuchenie prirody lesov Sibiri).
Konferentsiia molodykh uchenykh, 3rd, Krasnoyarsk, 1971, Krasnoyarsk, 1972, 325p., In Russian. For selected papers see 35-1374 through 35-1382 Refs passim
Voronkov, P T., ed
DLC SD231.I9
Taiga, Biomass, Cryogenic soils, Mountain soils, Slope orientation, Swamps, Peat, Soil formation, Soil microbiology, Litter, Forest fires.

35-1374
Biomass dynamics in green-moss fir forests of different age. (Vozrastnaia dinamika fitomassy v pikhtarnikakh zelenomoshnykh).
Kuzikov, I.E., Konferentsiia molodykh uchenykh, 3rd, Krasnoyarsk 1971 Izuchenie prirody lesov Sibiri (Conference of young scientists, 3rd, Krasnoyarsk, 1971 Studies of the nature of Siberian forests), Krasnoyarsk, 1972, p 16-21, In Russian.
DLC SD231.I9
Taiga, Cryogenic soils, Biomass, Mountain soils, Slope orientation.

35-1375
Biologic cycle in bilberry-peat moss pine forests. (Nekotorye itogi izuchenna biologicheskogo krugovorota v sosnniake chernichno-sfagnovom).
Prokhorova, A.IA., Konferentsiia molodykh uchenykh, 3rd, Krasnoyarsk 1971 Izuchenie prirody lesov Sibiri (Conference of young scientists, 3rd, Krasnoyarsk, 1971 Studies of the nature of Siberian forests), Krasnoyarsk, 1972, p 30-36, In Russian.
DLC SD231.I9
Taiga, Biomass, Cryogenic soils, Nutrient cycle, Swamps, Peat, Mosses.

35-1376
Microflora biomass in pine biocenoses. (Biomassa mikroflory sosnovogo biotsenoza).
Aiunts, K.M., Konferentsiia molodykh uchenykh, 3rd, Krasnoyarsk 1971 Izuchenie prirody lesov Sibiri (Conference of young scientists, 3rd, Krasnoyarsk, 1971 Studies of the nature of Siberian forests), Krasnoyarsk, 1972, p 177-180, In Russian.
DLC SD231.I9
Taiga, Cryogenic soils, Soil microbiology, Biomass.

35-1377
Biology of antagonistic microbes in peat-bog soils of Siberia. (Biologiia mikrobov-antagonistov torfianobolotnykh pochv Sibiri).
Krapivina, L.A., Konferentsiia molodykh uchenykh, 3rd, Krasnoyarsk 1971. Izuchenie prirody lesov Sibiri (Conference of young scientists, 3rd, Krasnoyarsk, 1971 Studies of the nature of Siberian forests), Krasnoyarsk, 1972, p 186-189, In Russian
DLC SD231.I9
Swamps, Peat, Soil formation, Cryogenic soils, Soil microbiology.

35-1378
Seasonal variations of soil properties in pine forests of different age. (Sezonnaia izmenchivost' svoistv pochv v sosniakakh raznogo vozrasta).
Sorokina, O A., Konferentsiia molodykh uchenykh, 3rd, Krasnoyarsk 1971 Izuchenie prirody lesov Sibiri (Conference of young scientists, 3rd, Krasnoyarsk, 1971 Studies of the nature of Siberian forests), Krasnoyarsk, 1972, p 190-195, In Russian
DLC SD231.I9
Taiga, Cryogenic soils, Soil formation, Soil chemistry, Physical properties, Seasonal variations, Soil microbiology.

35-1379
Thermal interaction of radiation with combustible forest materials. (K voprosu o teplovom vzaimodeistvii izluchenna s lesnym goriuchim materialom).
Konev, V A., Konferentsiia molodykh uchenykh, 3rd, Krasnoyarsk 1971 Izuchenie prirody lesov Sibiri (Conference of young scientists, 3rd, Krasnoyarsk, 1971 Studies of the nature of Siberian forests), Krasnoyarsk, 1972, p 230-235, In Russian
DLC SD231.I9
Taiga, Litter, Solar radiation, Forest fires.

35-1380
Influence of biochemical composition and oxygen concentration in the environment on the burning rate of coniferous litter. (O vliianii biokhimicheskogo sostava i kontsentratsii kisloroda v okruzhaiushchei srede na skorost' gorenna khvoi).
Sukhinin, A I., Konferentsiia molodykh uchenykh, 3rd, Krasnoyarsk 1971 Izuchenie prirody lesov Sibiri (Conference of young scientists, 3rd, Krasnoyarsk, 1971 Studies of the nature of Siberian forests), Krasnoyarsk, 1972, p 236-242, In Russian
DLC SD231.I9
Taiga, Litter, Forest fires.

35-1381
Limits of pine litter burning in air flow. (O predelakh gorenna khvoi v vozdushnom potoke).
Kishkhov, E K., Konferentsiia molodykh uchenykh, 3rd, Krasnoyarsk 1971. Izuchenie prirody lesov Sibiri (Conference of young scientists, 3rd, Krasnoyarsk, 1971 Studies of the nature of Siberian forests), Krasnoyarsk, 1972, p 242-248, In Russian

DLC GB2798.E53M44
Glacier surveys, Glacier mass balance, Measurement, Antarctica—Hays Glacier, Antarctica—Campbell Glacier.
A detailed discussion is presented of measurements made by an East German glaciological team on two outlet glaciers and the intervening ice cap near Molodezhnaya Station in 1972 General descriptions are given of the locales of each area of interest along with data on temperature accretion, ablation mass balance, movement, sub glacial relief, size and form of Hays and Campbell Glaciers and the ice sheet about the Molodezhnaya region Numerous tables, charts, and graphs present the measurements Symbols are defined and mathematical methods explained

Forty million years of ice at the south pole. {Vierzig millionen Jahre Eis am Südpol},
Meier, S., *Wissenschaft und Fortschritt*. 1980. 30(9,-10), p.348-351, 373-376. In German
Ice sheets, Paleoclimatology, Ice age theory.
Antarctica's glacial history is reviewed as an aid in explaining current research results Significant geological events in the Tertiary, such as polar wandering of the antarctic plate and orogeny, initiated the antarctic freeze-up This initiation of the continental ice sheet accompanied by global cooling and falling sea levels is described, and comments on modern research methods are made Climatic history of ancient epochs is recorded in the antarctic ice sheet Its variations are described and discussed in terms of ice age rhythms and hypotheses and sea levels as well as raising and lowering of land masses

Characteristics of iceberg drift. [Nekotorye zakonomernosti dreifa aisbergov].
Eskin, L.I., *Sovetskaia antarkticheskaia ekspeditsiia Informatsionnyi biulleten'*, 1980, No.101, p.68-76. In Russian. 3 refs.
Icebergs, Drift, Antarctica.
Transponders were placed on a number of floating icebergs in order to track them by satellite. Data from 5 bergs are reported. Several conclusions were drawn from the findings. First of all the extent and location of zones where icebergs exit northward, reported in earlier literature, were confirmed and refined. Tidal influence on iceberg drift is pronounced. It is noted that icebergs under some hydrometeorological conditions, can drift in coastal areas eastwards into the exit zones. Glacier iceberg tongues may include not only local bergs but also these from other areas. Mean, maximum and minimum

drift rates along the coast, in the exit zone and in the Antarctic Circumpolar Current were computed

35-1456
Iceberg drift in the Antarctic Circumpolar Current. (O dreife aisbergov v Antarkticheskom tsirkumpolarnom techenii).
Eskin, L I., *Sovetskaia antarkticheskaia ekspeditsiia Informatsionnyĭ biulleten'*, 1980, No 101, p.77-81, In Russian. 2 refs
Icebergs, Drift, Antarctica.
The dynamics of Southern Ocean icebergs in the Antarctic Circumpolar Current were studied on the basis of data from French observations between 85 and 118E Bergs in the Antarctic Circumpolar Current move in a generally eastward direction at a mean speed of 5-8 miles day, but velocity may reach 30 miles/day Synoptic processes affect drift significantly If icebergs occur in the forward portion of severe baric depressions, they may change directions to the north or south Deviations from eastward drift may continue for up to 1 5 months, carrying the berg 100 miles

35-1457
Iceberg distribution in the Atlantic sector of East Antarctica (1977-78). (Raspredelenie aisbergov v Atlanticheskom sektore Vostochnoĭ Antarktiki (1977/78g.)).
Kuznetsov, I.M., *Sovetskaia antarkticheskaia ekspeditsiia Informatsionnyĭ biulleten*, 1980, No.101, p.82-87, In Russian. 6 refs.
Sea ice, Icebergs, Ice surveys, Antarctica—Weddell Sea.
Iceberg surveys were done from Nov 1977 to Mar. 1978 on the *Kapitan Kondrat'ev* in the Weddell Sea and the Sea of the Cosmonauts, near Molodezhnaya, and between Novolazarevskaya and Druzhnaya A total of 8566 bergs were seen, maps giving distribution are included Most occurred near the coast, facilitating pack ice accumulation for 30-40 miles out and impeding navigation even before the full freeze-up Extremely large icebergs were measured by the ship's navigator and their sizes and locations are given in a table

35-1458
Assessing several characteristics of antarctic ice. (K voprosu ob otsenke nekotorykh kharakteristik antarkticheskikh l'dov).
Botnikov, V.N., et al, *Sovetskaia antarkticheskaia ekspeditsiia. Informatsionnyĭ biulleten'*, 1980, No 101, p.88-92, In Russian 14 refs.

Bottom sediments under the Novolazarevskaya ice shelf. (Donnye osadki pod shel'fovym lednikom novolazarevskim).
Kolobov, D.D , et al, *Sovetskaia antarkticheskaia ekspeditsiia Informatsionnyĭ biulleten'*, 1980, No 101, p.93-96, In Russian 5 refs
Savatiugin, L.M.
Ice shelves, Glacial geology, Sediments, Antarctica—Queen Maud Land.
A drill hole was made through the 357 m Novolazarevskii ice shelf in 1975 and ice and bottom sediments studied. Mineral composition is shown in tables and diatom population listed The predominance of antarctic diatoms indicates temperatures of -1 9 to 1.5C Analysis of the ice and bottom sediment columns leads to the following conclusions Contemporary sedimentation conditions are cold and stagnant, lacking significant mixing of water masses The accumulation area lies to the south of the sedimentation area- in the Queen Maud Land mountains Transport of fragmented material is accomplished by the body of the glacier, and sedimentation occurs because of melting out of unsorted materials from the ice shelf.

35-1460
Melting of antarctic fast ice. (Taianie antarkticheskogo pripainogo l'da).
Nazintsev, IU L., *Sovetskaia antarkticheskaia ekspeditsiia. Informatsionnyĭ biulleten*, 1980, No.101, p 97-101, In Russian 2 refs
Pack ice, Sea ice, Seasonal ablation, Ice heat flux, Heat balance, Fast ice, Antarctica.
Melting of the pack ice 1 5-2 0 km from shore near Molodezhnaya Station was studied during 2 summer seasons 1970-1972 The data gathered permit inferences about relief development and degree of ablation at different seasons Figure 1 shows that the ice surface changes unevenly from one point to another from the very start of the summer melt Also variations in ablation rate vary significantly both during the season and from year to year The relation between ablation at the top and bottom of the ice and water temperature was investigated Heat required to melt snow cover and to effect breakup was estimated.

Brines, Glacier ice, Ice composition, Ice thermal properties, Sea water, Antarctica.
A review of studies of infiltration by sea water of coastal ice is given and some conclusions drawn Sea water infiltration and salt circulation in coastal glaciers is not unusual in Antarctica Because of them unique intraglacial waters form which are high in minerals This phenomenon whenever it occurs, greatly affects structure and heat balance in coastal icebergs Brines in glaciers can be discerned by aerial radar, this technique can be used to determine how widespread brines are in antarctic ice shelves

Moore, S.C.
Water waves, Attenuation, Pack ice, Bering Sea.
Early experimental work in the Antarctic using a ship-borne wave recorder has shown that pack ice can significantly attenuate incoming ocean waves, particularly those of shorter period Wadhams has subsequently reported similar wave decay through Arctic ice in data obtained remotely by airborne laser profiling and inverted echo sounding from a submarine The 2 predominant mechanisms by which the decay can occur scattering by individual ice floes and energy loss by creep within each flexing floe were studied theoretically The results of further experiments to measure wave decay which took place in the Bering Sea during spring 1979 from the research ship Surveyor of the NOAA are presented During the cruise, oceanographic, meteorological and remote sensing data were also collected The energy decay of waves in pack ice is exponential with an attenuation coefficient which increases with decreasing wave period (Auth)

Langway, C.C., Jr
Firn, Density (mass/volume), Mathematical models.
An empirical model of firn densification from the surface to the zone of pore close-off has been constructed Fundamental rate equations have been derived from the first two stages of densification In the first stage, for densities less than 0.55 Mg/cu m, the densification rate is proportional to the mean annual accumulation times the difference in density between snow and ice The densification rate in the second stage, where Mg/cu m snow density 0.8 Mg/cu m, is proportional to the square root of the accumulation rate and to the difference in density between snow and ice Depth-density and depth-age calculations from this model are compared with observation Model accumulation rates are within about 20% of values obtained by other techniques It is suggested that depth intervals of constant density in some Antarctic cores may represent a synchronous event in the 1880's when ten times the normal accumulation fell within a year or two (Auth.)

Icebergs, Sediments.
Sediment-laden icebergs are rarely sighted in Antarctic waters However, during the recent Deep Freeze 79-USCGC *Glacier* expedition to the George V Coast and the south-western Ross Sea, nine sediment-laden icebergs and several pieces of pack ice with surficial sediment layers were observed These observations include basal debris zones, debris slumped on to glaciers and floating ice, and englacial debris believed to have been incorporated along shear zones Sediment samples collected from icebergs were texturally and mineralogically variable Some were unsorted mixtures consisting of a wide variety of angular minerals and rock fragments, others consisted primarily of slate clasts, quartz sand, and rock flour (Auth.)

Thomas, R.H
Ice shelves, Grounded ice, Temperature variations, Antarctica—Ross Ice Shelf.
Ice rises form where an ice shelf runs aground on the sea bed After grounding occurs, basal ice temperatures cool from the sea-water temperature towards an equilibrium temperature appropriate to grounded ice This cooling can take many thousands of years, and much of the delay is due to the thermal inertia of the bedrock Here, we calculate transient temperature profiles for an ice rise with a final summit thickness of 520 m that formed by grounding of ice sheets 420 m thick Seventy-five per cent cooling of the basal ice takes between 7,000 and 11,500 years, depending on the thermal memory of the bedrock This compares with an equivalent time of only 1,400 years if we neglect the thermal inertia of the bedrock Because the surface slopes of the ice rise are related to the flow properties of the underlying ice, the summit thickness will tend to thicken as the basal ice cools In principle, it should be possible to estimate the age of a recently-formed ice rise by examining its temperature/depth profile (Auth.)

35-1535
Origin and mechanism of large-scale climatic oscillations.
Sergin, V IA., *Science*, Sep 26, 1980, 209(4464), p 1477-1482, 13 refs
Climatic changes, Ice sheets, Hydrodynamics, Models.
Numerical experiments with a simplified thermodynamic model of the glacier-ocean-atmosphere global system have been performed Characteristic regimes of the system are auto-oscillations with periods varying between 20 000 and 80,000 years The longer climatic waves are generated by the influence of variations of the earth's orbital parameters Computed changes of glacial area, temperature, sea level, and other climate characteristics have values within expected ranges The transition from a relatively warm epoch (when continental ice sheets are absent) to conditions characteristic of the Pleistocene is modeled The calculated curves show how weak temperature fluctuations have been followed by large-scale oscillations (Auth)

35-1536
Cl-36 in polar ice, rainwater and seawater.
Finkel, R.C , et al, *Geophysical research letters*, Nov 1980, 7(11), p 983-986, 25 refs
Nishiizumi, K., Elmore, D., Ferraro, R.D., Gove, H E
Ice composition, Radioactive isotopes, Ice sheets, Sea water.
Concentrations of the cosmogenic radioisotope Cl 36 in Antarctic ice and in rain and an upper limit to the seawater value have been determined using van de Graaff accelerator high energy mass spectrometry Chlorine-36 concentrations in Antarctic ice lie in the range 2 5 to 8 7 million atoms Cl 36 kg Recent firn from Siple Station and ice samples collected from the Allan Hills ice field at locations where meteorites have been brought to the surface by glacial flow and ablation have Cl-36 contents which vary by more than a factor of three This variation can be attributed either to the effects of atmospheric mixing and scavenging or to radioactive decay in very old ice The Cl-36 concentration found in a sample of recent rainwater is much lower than has been reported in samples collected in the early 1960 s suggesting that there has been a large decrease in the concentration of atmospheric Cl 36 derived from nuclear weapons tests over this time period If measurement sensitivities can be increased somewhat calculations indicate that the bomb spike of Cl-36 may potentially be a useful oceanographic mixing tracer (Auth)

35-1537
Distribution and process of accumulation and ablation of snow on the west slope of Mt. Asahidake, Hokkaido.
Yamada, T , et al, *Low temperature science (Teion kagaku) Series A Physical sciences*, 1978, No.37, p 1-12, 11 refs.. In Japanese with English summary
Nishimura, H , Suizu, S , Wakahama, G.
Snow accumulation, Snow cover distribution, Slope orientation, Ablation, Alpine landscapes, Forest land, Seasonal variations.

35-1538
Study on ablation hollows on a melting snow surface.
Takahashi, S , *Low temperature science (Teion kagaku) Series A Physical sciences*, 1978, No 37, p 13-46, 18 refs , In Japanese with English summary
Snow melting, Ablation, Heat transfer, Wind velocity, Snow surface, Wind tunnels, Mountains, Analysis (mathematics).

35-1539
Observations on depositional and melting processes of snow at different altitudes of Mt. Teine, Hokkaido.
Suizu, S , et al, *Low temperature science (Teion kagaku) Series A Physical sciences*, 1978, No 37, p 47-54, 8 refs , In Japanese with English summary

35-1588
Development of a new type of model ice for refrigerated towing basins.
Timco, G W , et al, *National Research Council, Canada Mechanical engineering report*, Jun. 1980, DME-MD-55, 31p , ADA-090 200, In English with French summary 36 refs
Lane, J F.
Sea ice, Ice models, Ice mechanics, Offshore structures, Doped ice, Tests.

35-1589
Air deployed oceanographic mooring (ADOM). *New Hampshire University, Durham Marine Systems Engineering Laboratory Final report*, Feb 1980. Mar 1, 1979-Feb 28 1980, 77p , ADA-088 569, 8 refs
Sea ice, Ice conditions, Remote sensing, Airborne equipment, Drift, Pressure ridges, Ice structure, Oceanographic surveys.

35-1590
Radar clutter models at 95GHz.
Hayes, R D , *U S Army Armament Research and Development Command, Dover, N J Fire Control and Small Caliber Weapon Systems Laboratory Memorandum report*, Sep 1980, ARSCD-MR-80001, 13p , ADA-089 986, 8 refs
Snow cover distribution, Radar echoes, Wave propagation, Measuring instruments.

35-1591
Investigation of the heat transfer at the liquid/solid interface of rapidly melting ice.
Fredley, J E , *Pennsylvania, State University Applied Research Laboratory University Park Technical memorandum*, Mar 1980, ARL/PSU/TM-80-94, 87p , ADA-089 099, M.S thesis 41 refs.
Ice melting, Heat transfer, Liquid solid interfaces, Artificial melting, Ice heat flux, Velocity, Temperature effects.

35-1592
Mathematical model for dynamics of pack ice in the Arctic Ocean and its surrounding seas.
Pan, S L., et al, *U S Naval Ocean Research and Development Activity Technical note*, Apr 1976-Mar 1977, NORDA-1 N-4, 23p , ADA-088 738, 20 refs
Li, H
Pack ice, Ice mechanics, Drift, Ice models, Sea ice, Mathematical models.

35-1593
Analysis of Cl-36 in environmental water samples using an electrostatic accelerator.
Elmore, D , et al, *Nature*, Jan. 4, 1979, 277(5691), p.22-25, 23 refs
Isotopes, Radioactive isotopes, Water chemistry, Impurities, Snow impurities, Cores, Ice cores, Antarctica, Greenland.
The Rochester MP tandem Van de Graaff accelerator system was used successfully as an ultrasensitive mass spectrometer in the determination of 36Cl Cl ratio in silver chloride (AgCl) precipitates from 6 different natural water samples Measurements fell in the range of 2-12X10-12 with a background level below 3X10-15 Seventy milligrams of AgCl and 1 5 of water were used for each sample A diagram of the apparatus used for 36Cl measurements and a description of its operation are given The method described can be used to measure 36Cl concentrations in a 100 mg sample of AgCl with an uncertainty of 310 in 31 hr These results are adequate for studies using 36Cl as a tracer in groundwater hydrology, analyzing deep ice core samples from Greenland and Antarctica and estimating cosmic ray containment time within the Galaxy (Auth)

35-1594
Pressure ridges and ice resistance to moving ships. (Torosistost' i soprotivlaemost' l'da dvizhushchemusia sudnu).
Sergeev, G.N , et al, *Meteorologiia i gidrologiia*, Oct 1980, No 10, p 100-104, In Russian with English summary 10 refs
Khromov, IU.N
Ice cover thickness, Pressure ridges, Ice cover strength, Ice breaking, Icebreakers, Ice friction.

35-1595
Determination of ice viscosity under field conditions. (K opredeleniiu viazkosti l'da v naturnykh usloviiakhj.
Kozitskii, I E., *Meteorologiia i gidrologiia*, Oct. 1980, No 10 p 107-109, In Russian 2 refs
Rheology, Ice mechanics, Viscosity, Ice cover, Mathematical models.

35-1596
Design of residential and public buildings for the first climatic zone. (Voprosy proektirovaniia zhilykh i obshchestvennykh zdanii v usloviiakh I klimaticheskoi zony).
Belova, G.M , ed. Leningrad, 1973, 75p , In Russian
Fo individual papers see 35-1597 through 35-1603
Refs passim.
Residential buildings, Foundations, Permafrost beneath structures, Ground ice, Piles, Frozen fines, Sands, Clays, Loams, Frost heave, Ground thawing, Settlement (structural).

35-1597
Foundation design for fine-grained sands and deep seasonal freezing. (Osobennosti proektirovaniia fundamentov na melkikh peskakh v usloviiakh glubokogo sezonnogo promerzaniia).
Dokuchaev, V V , et al, Voprosy proektirovaniia zhilykh i obshchestvennykh zdanii v usloviiakh I klimaticheskoi zony (Design of residential and public buildings for the first climatic zone) edited by G M. Belova, Leningrad, 1973, p 3-11, In Russian. 5 refs
Tikhonov, V P , Zolotar', A I
Buildings, Foundations, Frozen fines, Sands, Seasonal freeze thaw, Frost heave, Frost penetration, Design.

35-1598
Studying clay shale deformation during thawing. (Issledovaniia deformativnosti glinistykh slantsev pri ottaivaniij.
Dokuchaev, V V , et al, Voprosy proektirovaniia zhilykh i obshchestvennykh zdanii v usloviiakh I klimaticheskoi zony (Design of residential and public buildings for the first climatic zone) edited by G M Belova, Leningrad, 1973, p 12-22, In Russian 5 refs.
Grishin, P A , Nikitin, IU A
Foundations, Permafrost beneath structures, Clays, Ground thawing, Settlement (structural), Buildings.

35-1599
Influence of the transverse cross-section form of metal piles on their bearing capacity in permafrost. (Vliianie formy poperechnogo secheniia metallicheskikh svai, pogruzhennykh v vechnomerzlyi grunt, na ikh nesushchuiu sposobnost'j.
Gerasimov, A S., Voprosy proektirovaniia zhilykh i obshchestvennykh zdanii v usloviiakh I klimaticheskoi zony (Design of residential and public buildings for the first climatic zone) edited by G.M Belova, Leningrad, 1973, p.23-27, In Russian 1 ref
Foundations, Piles, Permafrost beneath structures, Buildings, Bearing strength.

35-1600
Mechanical properties of saline frozen grounds. (Mekhanicheskie svoistva zasolennykh merzlykh gruntov).
Markin, K.F , Voprosy proektirovaniia zhilykh i obshchestvennykh zdanii v usloviiakh I klimaticheskoi zony (Design of residential and public buildings for the first climatic zone) edited by G M Belova, Leningrad, 1973, p 28-49, In Russian. 18 refs
Foundations, Permafrost beneath structures, Saline soils, Clay soils, Soil mechanics, Buildings.

35-1601
Deformation and failure of frozen saline sandy loam. (Osobennosti deformirovaniia i razrusheniia merzloi zasolennoi supesi).
Aksenov, V I , Voprosy proektirovaniia zhilykh i obshchestvennykh zdanii v usloviiakh I klimaticheskoi zony (Design of residential and public buildings for the first climatic zone) edited by G M Belova, Leningrad, 1973, p 50-54 In Russian 6 refs
Foundations, Deformation, Permafrost bases, Frozen fines, Saline soils, Loams, Soil strength, Bearing strength.

35-1602
Strength and deformation properties of sandy loam with high ice content. (Prochnost i deformativnost' sil'nol'distoi supesi).
Artemov, Z.P., Voprosy proektirovaniia zhilykh i obshchestvennykh zdanii v usloviiakh I klimaticheskoi zony (Design of residential and public buildings for the first climatic zone) edited by G.M Belova, Leningrad, 1973, p 55-61, In Russian. 3 refs
Foundations, Frozen fines, Loams, Ground ice, Soil strength, Compressive properties, Creep.

35-1603
Determining deformation properties of ground ice. (Opredelenie kharakteristik deformativnosti podzemnogo l'da).
Dokuchaev, V V., et al, Voprosy proektirovaniia zhilykh i obshchestvennykh zdanii v usloviiakh I klimaticheskoi zony (Design of residential and public buildings for the first climatic zone) edited by G.M Belova Leningrad, 1973, p.62-67, In Russian. 4 refs
Sheinkman, D.R
Foundations, Permafrost bases, Ground ice, Settlement (structural), Compressive properties, Viscous flow.

35-1604
Stepping up ship passage through sluices. (Uskorenie propuska sudov cherez shliuzy).
Kluev, V , et al, *Rechnoi transport*, 1980, No 11, p.38-39, In Russian
Gapeev, A
Ice navigation, Rivers, Sluices (hydraulic engineering), Ice floes.

35-1605
Determining propulsive performance of ships in ice. (Dlia opredelenia khodkhosti sudov vo l dakh).
Malyi, P , et al, *Rechnoi transport*, 1980, No 11, p 45, In Russian
Segal, Z
Ships, Ice navigation, Velocity, Analysis (mathematics), Propulsion.

35-1606
Extending the navigation period on rivers. (Prodleme navigatsii na rekakh).
Vinogradova, N , *Rechnoi transport*, 1980 No 10, p 24-25, In Russian
Icebound rivers, Ice navigation, Icebreakers, Ice breaking, Sluices (hydraulic engineering).

35-1607
Performance indices of an individual hydraulic piston pump working on a flooded oil well under winter conditions of West Siberia. (Nekotorye pokazateli raboty individual'noi gidroporshnevoi nasosnoi ustanovki pri ekspluatatsii obvodnennoi neftianoi skvazhiny v zimnikh usloviiakh Zapadnoi Sibiri).
Kazak, A S., *Neftepromyslovoe delo*, 1980, No 7, p 44-45, In Russian
Petroleum industry, Oil wells, Flooding, Pumps, Icing, Cold weather performance.

35-1608
Using dirigibles in pipeline repairs in West Siberia. (Ispol'zovanie dirizhablei dlia avariinogo remonta nefteprovodov v usloviiakh Zapadnoi Sibiri).
Kulikov, V D , *Neftianoe khoziaistvo*, Nov 1980 No.11, p 44-47, In Russian 6 refs
Swamps, Transportation, Petroleum industry, Pipelines, Ground thawing, Dirigibles.

35-1609
Influence of solid phase concentration in drilling mud on mechanical speed of drilling in permafrost. (Vliianie kontsentratsii tverdoĭ fazy v burovom rastvore na mekhanicheskuiu skorost' bureniia v mnogoletnemerzlykh porodakh).
Khomik, M.V., et al. *Neftianoe khoziaĭstvo*. Aug 1980. No 8, p 27-29. In Russian 2 refs
Leonov, E.G., Strogal'shchikov, L.V.
Drilling, Permafrost, Penetration, Drilling fluids, Turbodrills.

35-1610
Peculiarities of developing oil and gas deposits in West Siberia. (Osobennosti razrabotki neftianykh i gazovykh mestorozhdeniĭ Zapadnoĭ Sibiri).
Skorobogatov, V.A., *Neftianoe khoziaĭstvo*. Aug 1980. No 8, p 70-71. In Russian
Meetings, Petroleum industry, Drilling, Well casings, Cements, Wells, Cement admixtures, Permafrost.

35-1611
Changes in heat runoff of Siberian rivers. (Izmeneniia teplovogo stoka sibirskikh rek).
Odrova, T.V., *Priroda*. June 1980. No 6, p 90-93. In Russian
Rivers, Estuaries, Thermal regime, Ice conditions, Heat transfer, Water temperature, Reservoirs, Thermal effects, Arctic Ocean.

35-1612
Soils of Taymyr Peninsula. (Pochvy Taĭmyra).
Vasil'evskaia, V.D., *Moscow. Universitet. Vestnik. Seriia 17 Pochvovedenie*. July-Sep 1980. No 3, p 8-16. In Russian 16 refs
Arctic landscapes, Tundra, Cryogenic soils, Patterned ground, Soil formation, Soil profiles, Permafrost depth, USSR—Taymyr Peninsula.

35-1613
Review of geographic distribution of vascular plants in the Chukot tundra, Pt.1. (Obzor geograficheskogo rasprostraneniia sosudistykh rastenii Chukotskoĭ tundry Soobshchenie 1).
(Urtsev, B.A., et al. *Moskovskoe obshchestvo ispytateleĭ prirody Biulleten' Otdel biologicheskiĭ*. Sep-Oct 1979, 84(5), p 111-122 In Russian with English summary 29 refs
Arctic landscapes, Tundra, Cryogenic soils, Vegetation, USSR—Chukotskiy Peninsula.

35-1614
Review of geographic distribution of vascular plants in the Chukot tundra, Pt.2. (Obzor geograficheskogo rasprostraneniia sosudistykh rastenii Chukotskoĭ tundry Soobshchenie 2).
(Urtsev, B.A., et al. *Moskovskoe obshchestvo ispytateleĭ prirody Biulleten' Otdel biologicheskiĭ*. Nov-Dec. 1979, 84(6), p 74-83, In Russian.
Arctic landscapes, Tundra, Cryogenic soils, Vegetation, USSR—Chukotskiy Peninsula.

35-1615
Refuges of mesophyte relict elements of flora of the northern Okhotsk Sea coast and in the upper Kolyma River Basin. (Ubezhishcha mezofil'nykh reliktovykh elementov flory na severe Okhotskogo poberezh'ia i v basseine verkhnego techeniia Kolymy).
Khokhriakov, A.P., *Moskovskoe obshchestvo ispytateleĭ prirody. Biulleten' Otdel biologicheskiĭ*. Nov-Dec 1979, 84(6), p 84-96. In Russian with English summary 14 refs
Subarctic landscapes, Cryogenic soils, Vegetation, Plant ecology, USSR—Kolyma River.

35-1616
Absorption and scattering of microwaves by separate spherical particles of water and ice. (Pogloshchenie i rasseianie mikroradiovoln otdel'nymi sfericheskimi chastitsami vody i l'da).
Abshaev, M.T., et al. *Nal'chik. Vysokogornyĭ geofizicheskiĭ institut. Trudy*, 1975, Vol 29, p 40-71. In Russian 3 refs.
Rozenberg, V.I., Karmov, Kh.N
Cloud physics, Radio waves, Absorption, Scattering, Cloud droplets, Ice crystals.

35-1617
Crystallization of precipitation droplets. (Nekotorye osobennosti kristallizatsii kapel' osadkov).
Kazankova, Z.P., *Nal'chik. Vysokogornyĭ geofizicheskiĭ institut. Trudy*, 1975, Vol 29, p 72-76. In Russian 9 refs.
Cloud seeding, Nucleating agents, Cloud droplets, Freezing points, Ice crystal growth.

35-1618
Formation of ice crystals on AgI particles through quasi-liquid films. (Obrazovanie ledianykh kristallov cherez kvazizhidkuiu plenku na chastitsakh AgI).
Medalev, Kh.Kh., et al. *Nal'chik. Vysokogornyĭ geofizicheskiĭ institut. Trudy*, 1975, Vol 29, p 107-113. In Russian 11 refs
Adzhiev, A.Kh
Supercooled clouds, Ice formation, Ice nuclei, Nucleating agents, Silver iodide, Water films, Ice crystal growth.

35-1619
Methods of studying hailstone structure. (O metodike issledovaniia stroeniia gradin).
Bartishvili, G.S., et al. *Nal'chik. Vysokogornyĭ geofizicheskiĭ institut. Trudy*, 1975, Vol 29, p 114-121. In Russian 23 refs
Kuvaeva, G.M
Ice growth, Hailstone structure, Supercooled clouds, Hailstones, Ice accretion, Surface structure.

35-1620
Studying hail nuclei in wind tunnels. (Issledovanie zarodyshei gradin v aerodinamicheskoĭ trube).
Tlisov, M.L., et al. *Nal'chik. Vysokogornyĭ geofizicheskiĭ institut. Trudy*, 1975, Vol.29, p 122-139. In Russian 29 refs
Khorguani, V.G
Hail clouds, Ice nuclei, Hailstones, Wind tunnels, Cloud droplets, Supercooled clouds.

35-1621
Hailstone formation under a dry regime and in mixed fractions. (O nekotorykh osobennostiakh obrazovaniia gradin v sukhom rezhime i v smeshannoĭ fraktsii).
Bartishvili, G.S., *Nal'chik. Vysokogornyĭ geofizicheskiĭ institut. Trudy*, 1975, Vol 29, p 140-150. In Russian 10 refs
Hailstones, Ice formation, Hailstone growth, Ice accretion, Ice density, Spongy ice.

35-1622
Effect of crystalline phase on hailstone growth. (O vliianii kristallicheskoĭ fazy na rost gradiny).
Ekba, I.A.A., et al. *Nal'chik. Vysokogornyĭ geofizicheskiĭ institut. Trudy*, 1975, Vol.29, p 151-162. In Russian. 12 refs
Khorguani, V.G., Tlisov, M.L.
Supercooled clouds, Cloud droplets, Ice crystals, Unfrozen water content, Snow crystals, Hailstone growth.

35-1623
Centrifugal models for studying water seepage in embankments built on flood plains. (Osnovnye printsipy izucheniia fil'tratsii v poĭmennykh nasypiakh metodom tsentrobezhnogo modelirovaniia).
(Akovleva, T.G., *Moscow. Institut inzhenerov zheleznodorozhnogo transporta. Trudy*, 1979, Vol.646, p.43-54. In Russian. 7 refs
Hydraulic structures, Earth dams, Earth fills, Embankments, Permeability, Railroads, Models.

35-1624
Apparatus for modeling flooded structures. (Apparatura dlia modelirovaniia podtopliaemykh sooruzhenii).
Ivanov, D.I., *Moscow. Institut inzhenerov zheleznodorozhnogo transporta. Trudy*, 1979, Vol 646, p 55-59. In Russian
Hydraulic structures, Dams, Embankments, Flooding, Seepage, Models.

35-1625
Measuring water seepage characteristics when modeling flooded structures. (Izmerenie kharakteristik fil'tratsii pri modelirovanii podtopliaemykh sooruzhenii).
Ivanov, D.I., *Moscow. Institut inzhenerov zheleznodorozhnogo transporta. Trudy*, 1979, Vol 646, p 60-65. In Russian 3 refs.
Hydraulic structures, Earth dams, Flooding, Seepage, Models.

35-1626
Cost of foam-plastic covers preventing frost heave. (Stoimost' penoplastovykh protivopuchinnykh pokrytiĭ).
Voitov, S.A., *Moscow. Institut inzhenerov zheleznodorozhnogo transporta. Trudy*, 1979, Vol 646, p 75-84. In Russian.
Soil freezing, Frost penetration, Roadbeds, Frost heave, Thermal insulation, Cellular plastics, Cost analysis.

35-1627
Studying soil geography and landscape geochemistry in the Baykal Amur railroad zone. (Pochvenno-geograficheskie i landshaftno-geokhimicheskie issledovaniia v zone BAM).
Snytko, V.A., ed. Novosibirsk, Nauka 1980. 184p., In Russian For selected papers see 35-1628 through 35-1632 Refs passim.
Landscape types, Taiga, Cryogenic soils, Mountain soils, Soil formation, Baykal Amur railroad, Permafrost distribution, Swamps, Vegetation factors, Charts, Environmental protection, Economic development.

35-1628
Landscape-geochemical regionalization of the Baykal Amur railroad zone. (Landshaftno-geokhimicheskoe raionirovanie zony BAM).
Nechaeva, E.G., et al. Pochvenno-geograficheskie i landshaftno-geokhimicheskie issledovaniia v zone BAM (Studying soil geography and landscape geochemistry in the Baykal Amur railroad zone) edited by V.A. Snytko, Novosibirsk, Nauka, 1980, p 3-11. In Russian 21 refs
Snytko, V.A., Shchetnikov, A.I
Landscape types, Geochemistry, Mapping, Cryogenic soils, Environmental protection, Economic development, Baykal Amur railroad, Taiga, Permafrost distribution, Permafrost hydrology.

35-1629
Soils of the Baykal Amur railroad area west of Lake Baykal. (Pochvy predbaikal'skogo uchastka zony BAM).
Kuz'min, V.A., Pochvenno-geograficheskie i landshaftno-geokhimicheskie issledovaniia v zone BAM (Studying soil geography and landscape geochemistry in the Baykal Amur railroad zone) edited by V.A. Snytko, Novosibirsk, Nauka, 1980, p 11-98. In Russian. 116 refs
Mountain soils, Cryogenic soils, Soil formation, Taiga, Landscape types, Swamps, Permafrost distribution, Baykal Amur railroad, Vegetation, Charts.

35-1630
Soil formation and prospects for economic development of land in the Amur region. (Osobennosti pochvoobrazovaniia i perspektivy ispol'zovaniia zemel'nykh resursov v Amurskoĭ oblasti).
Khismatullin, Sh.D., Pochvenno-geograficheskie i landshaftno-geokhimicheskie issledovaniia v zone BAM (Studying soil geography and landscape geochemistry in the Baykal Amur railroad zone) edited by V.A. Snytko, Novosibirsk, Nauka, 1980, p 98-124. In Russian 115 refs
Taiga, Cryogenic soils, Soil formation, Swamps, Vegetation, Snow cover effect, Permafrost distribution, Frozen ground temperature, USSR—Amur River.

35-1631
Basic features of landscape structure of the Muya intermontane basin. (Osnovnye cherty struktury landshaftnoĭ struktury Muiskoĭ kotloviny).
Nefed'eva, L.G., Pochvenno-geograficheskie i landshaftno-geokhimicheskie issledovaniia v zone BAM (Studying soil geography and landscape geochemistry in the Baykal Amur railroad zone) edited by V.A. Snytko, Novosibirsk, Nauka, 1980, p 125-139. In Russian 26 refs
River basins, Landscape types, Mountain soils, Soil formation, Cryogenic soils, Taiga, Vegetation factors, USSR—Transbaikal.

35-1632
Some biogeochemical parameters of the upper Chara River basin. (O nekotorykh biogeokhimicheskikh parametrakh Verkhne-Charskoĭ kotloviny).
Nechaeva, E.G., et al. Pochvenno-geograficheskie i landshaftno-geokhimicheskie issledovaniia v zone BAM (Studying soil geography and landscape geochemistry in the Baykal Amur railroad zone) edited by V.A. Snytko, Novosibirsk, Nauka, 1980, p 152-162. In Russian. 13 refs
Korotaeva, T.V
River basins, Taiga, Swamps, Biomass, Cryogenic soils, Nutrient cycle, Soil chemistry, USSR—Chara River.

35-1633
Studying temperature fields in natural ground. (Issledovanie temperaturnykh poleĭ v estestvennom grunte).
Bronfenbrener, L.E., et al. *Neftepromyslovoe stroitel'stvo*, 1980, No 12, p 8-10. In Russian
Semerikov, A.V
Frozen ground temperature, Permafrost thermal properties, Permafrost transformation, Permafrost beneath structures, Permafrost control, Active layer, Mathematical models.

35-1634
Testing peat soils with cylindrical- and flat-base dies. (Rezul'taty ispytanii torfianykh gruntov shtampami s tsilindricheskoi i ploskoi podoshvami).
Dimov, L A , et al *Neftepromyslovoe stroitel'stvo*, 1980, No 12, p 12-14, In Russian
Morozov, V N , Rudometkin, V V
Swamps, Peat, Soil strength, Tests, Pipelines.

35-1635
Anchors with thermo-chucks for holding pipelines in frozen ground. (Zakreplenie truboprovodov v merzlykh gruntakh ankerami s termozatvorami).
Trofimov, A S , *Stroitel'stvo truboprovodov*, Dec 1980, No 12, p 13-14, In Russian
Pipelines, Anchors, Permafrost control, Petroleum industry.

35-1636
Design and construction of hydroelectric developments under severe climatic conditions. (Osobennosti proektirovaniia i stroitel'stva gidrouzlov v surovykh klimaticheskikh usloviiakh).
Beliakov, A A , et al *Energeticheskoe stroitel'stvo*, Dec 1980, No 12, p 68-72, In Russian 8 refs
Pravdivets, IU P
Electric power, Hydraulic structures, Dams, Industrial buildings, Permafrost beneath structures, Cold weather construction.

35-1637
Stabilization of earth structure slopes under severe climatic conditions. (Zakreplenie otkosov zemlianykh sooruzhenii v surovykh klimaticheskikh usloviiakh).
Pal'kin, IU S , et al. *Gidrotekhnika i melioratsia*, Nov 1980, No 11, p 30-32, In Russian
Stafeev, P F Gadilev, E O
Environmental protection, Slope stability, Permafrost transformation, Slope processes, Roads, Embankments, Dams.

35-1638
Design and operation of subsurface drainage in soil freezing zones. (Osobennosti proektirovaniia i deistviia zakrytogo drenazha v zone promerzaniia gruntov).
Shtykov, V I , *Gidrotekhnika i melioratsia*, Nov 1980, No 11, p 53-56, In Russian 10 refs
Land reclamation, Subsurface drainage, Soil freezing, Seasonal freeze thaw, Design.

35-1639
Design and construction of earth-fill overflow dams. (Opyt proektirovaniia i stroitel'stva gruntovykh vodosbrosnykh plotin).
Ilyets, IU P , *Gidrotekhnika i melioratsia*, Oct 1980, No 10, p 39-41, In Russian 11 refs
Hydraulic structures, Earth dams, Concrete structures, Reinforced concretes, Prefabrication, Flood control.

35-1640
Working tool of the ETTs-163M for wet soil excavation. (Rabochii organ ETTs-163M dlia razrabotki gruntov povyshennoi vlazhnosti).
Korshikov, A A , et al, *Gidrotekhnika i melioratsia*, Oct 1980, No 10, p 46-47, In Russian 3 refs
Mironov, V I
Land reclamation, Swamps, Drains, Equipment, Design.

35-1641
Organizing land reclamation work in freezing weather (in the Leningrad region). (Organizatsiia meliorativnykh rabot v zimnee vremia (na primere Leningradskoi oblasti)).
Chernak, M B , *Gidrotekhnika i melioratsia*, Oct 1980, No 10, p 59-61, In Russian.
Land reclamation, Earthwork, Cold weather construction, Drainage, Channels (waterways), Frozen ground.

35-1642
Determining thickness of subgrades made of earth weakly- or non-susceptible to frost heave (for clay earth dams in West Siberia). (Opredelenie tolshchiny podushki iz nepuchinistogo ili slabopuchinistogo grunta (dlia plotin otsypaemykh iz glinistykh gruntov v uslovniakh Zapadnoi Sibiri)).
Edapin, V A , *Gidrotekhnika i melioratsia*, Sep 1980, No 9, p 28-29, In Russian. 4 refs
Hydraulic structures, Clay soils, Earth dams, Foundations, Subgrade preparation, Frost heave, Permafrost beneath structures.

35-1643
Preventing the freezing of cargo. (Bor'ba s primerzaniem gruzov).
Sharapov, V , et al, *Morskoi flot*, 1980 No 11, p 17, In Russian
Korkhov, V , Kuvaldin, V
Ships, Frozen cargo, Frost protection, Electric heating.

35-1644
Satellites help define icing areas. (Opredelat' raiony obledeneniia pomogaiut sputniki).
Bezuglyi, I , et al, *Morskoi flot*, 1980 No 11, p 28, In Russian
Rebenkova, O
Ice navigation, Ship icing, Ice reporting, Spaceborne photography, Aerial surveys.

35-1645
Comfortable accommodations for gas industry workers. (Blagoustroennoe zhil'e rabotnikam gazovoi promyshlennosti)
Gudz', A G , *Gazovaia promyshlennost'*, Aug 1980, No 9, p 6-7, In Russian
Residential buildings, Houses, Petroleum industry, Natural gas, Gas pipelines.

35-1646
Accelerated tempo of road construction. (Stroitel'stvu dorog - operezhaiushchie tempy).
Shemraev, G A , et al, *Gazovaia promyshlennost'*, Aug 1980, No 8, p 10-11, In Russian
Indin, B Sh
Petroleum industry, Roads, Bridges, Pavements, Reinforced concretes, Swamps, Peat, Permafrost beneath structures, Construction materials.

35-1647
Basic types of foundation design for buildings and underground structures in 1981-1985. (Ob osnovnykh tipakh konstruktsii fundamentov zdanii i podzemnykh sooruzhenii v 1981-1985 gg), *Bulleten' stroitel'noi tekhniki*, Oct 1980, No 10, p 7-9, In Russian
Residential buildings, Industrial buildings, Underground facilities, Foundations, Piles, Concrete structures, Permafrost beneath structures.

35-1648
Frost resistance of concretes of different strengths. (Morozostoikost' betona raznoi prochnosti).
Mironov, S A , et al, *Beton i zhelezobeton*, Oct 1980, No 10, p 14-16, In Russian 4 refs
Ivanova, O S , [Artiushkina, S Kh , Zhuravleva, L E
Winter concreting, Concrete aggregates, Cements, Concrete admixtures, Concrete freezing, Concrete strength.

35-1649
Influence of superplasticizers on concrete properties. (Vliianie superplastifikatorov na svoistva betona).
Chumakov, IU M , et al, *Beton i zhelezobeton*, Oct 1980, No 10, p 16-17, In Russian. 5 refs
Concrete structures, Concrete placing, Concrete admixtures, Frost resistance.

35-1650
Joint effect of loading and subzero temperature on deformation of bending elements. (Sovmestnoe vliianie nagruzki i otritsatel'noi temperatury na deformativnost' izgibaemykh elementov).
Gorchakov, G I , et al, *Beton i zhelezobeton*, Sep 1980, No 9, p 7-9, In Russian 3 refs
Guzeev, E A., Seilanov, L A.
Concrete structures, Reinforced concretes, Concrete freezing, Deformation, Freeze thaw cycles, Cold chambers, Test equipment.

35-1651
Quick method of determining frost resistance of concrete. (Sposob uskorennogo opredeleniia morozostoikosti betona).
Piralov, I S , et al, *Beton i zhelezobeton*, Sep 1980, No 9, p 16, In Russian 3 refs
Nevskii, V A , Il'evskii, IU A
Concretes, Freeze thaw cycles, Concrete freezing, Mathematical models

35-1652
Airport pavements of fine-grained concrete. (Aerodromnoe pokrytie iz melkozernistogo betona).
Kliuchnikov, G IA , et al, *Beton i zhelezobeton*, Sep 1980, No 9, p 25, In Russian
Kravchul', I I , Krasnyi, I M , Isaluk, I G.
Airports, Pavements, Permafrost beneath structures, Concrete aggregates, Concrete admixtures, Concrete freezing.

35-1653
Combined use of lightweight and cellular concretes in large panel construction. (Kombinirovannoe primenenie legkikh i iacheistykh betonov v krupnopanel'nom domostroenii).
Rogatin, IU A , et al, *Beton i zhelezobeton*, Sep 1980, No 9, p 37-38, In Russian 5 refs
Fomicheva, E N
Lightweight concretes, Cellular concretes, Walls, Prefabrication, Large panel buildings, Thermal insulation, Cold weather performance, Cost analysis.

35-1654
Frost weathering of cellular concrete. (Osobennosti moroznogo razrusheniia iacheistogo betona).
Aleksandrovskii, S V , et al, *Beton i zhelezobeton*, Sep 1980, No 9, p 41-42, In Russian
Shtan'ko, A E
Cellular concretes, Buildings, Walls, Freeze thaw cycles, Frost shattering.

35-1655
Preventing the icing of stationary gas-turbine plants. (Bor'ba s obledeneniem statsionarnykh gazoturbinnykh ustanovok).
Kuznetsov, A L , et al, Leningrad, Nedra 1980 120p , In Russian with English table of contents enclosed 16 refs
Kuznetsov, L A
Gas pipelines, Compressors, Icing, Ice detection, Equipment.

35-1656
Solar tracks in the snow.
Olson, S , *Science news*, Nov 15, 1980, 118(20), p 313, 316
Ice cores, Chemical analysis, Solar activity.
The writer reports on the research on solar activity by E J Zeller and B C Parker She tells of the chemical analysis of antarctic ice cores for nitrate accumulation and of how the two scientists have interpreted the data, made correlations between nitrate accumulation climate and atmospheric circulation patterns Predicting future solar activity and resulting Earth climate changes may be a possibility

35-1657
Arctic sea ice decay simulated for a CO2-induced temperature rise.
Parkinson, C L , et al, *Climatic change*, 1979, 2(2), p 149-162, Refs p 160-162
Kellogg, W W

Glacial erosion, Abrasion, Glacial geology, Glacial deposits, Glacier flow, Ice temperature, Ice cover thickness, Boreholes, Meltwater, Sediments, Antarctica—Byrd Station.
In this review following definitions of cold and temperate glaciers which emphasize the variance of the pressure melting point as the distinguishing feature between the two, basic glacial processes are set forth and discussed The several facets of erosion of the underlying bedrock by moving ice are identified as distinct entities abrasion, crushing, fracturing joint-block removal subglacial meltwater Entrainment and transport of debris produced by erosion is necessary for continued erosion The various kinds of debris and various modes of moving it from place to place within the glacial environment are described Glacial till is one of the most varied of all deposits and a major portion of the chapter describes how these depositions are made basal supraglacial and marginal processes and structural changes Numerous tables, charts, and diagrams amplify the textual material and many examples of present day glacial process are given, including some in Antarctica particularly at Byrd Station

Kosmos 243 and Nimbus 5 experimental results on SHF radiative characteristics of the earth.
Basharinov, A.E., et al, *Cosmic research*, Sep 1979, 17(2), p 263-267, Translation of Kosmicheskie issledovania 17(2):313-317, 1979 2 refs
Remote sensing, Spacecraft, Temperature variations, Ice sheets, Climatic changes.
Results of measurements of terrestrial radiation in the centimeter-range channels of Cosmos-243 (Sept 1968) and in the 155-cm channel of Nimbus-5 (Dec 1972-1973) are compared by using continental regions with similar covers (North Africa, Australia), regions containing humid sectors (central part of South America Central Africa), and glaciated sectors of Antarctica A comparison of the measurements made on the two satellites shows a variation of climatic conditions on the continent of Africa over the 5 yr period The degree of blackness of the continental glaciers of Antarctica in the wavelength range of 0.8-1.55 cm had anomalously low values (0.7-0.8) apparently as a result of the total scattering of UHF radiation in the upper layer of the glaciers Radio brightness temperature measurements of the Greenland glaciers over large areas gave comparable values for both experiments. The anomalously low radio brightness temperatures of the Ross, Western and Lazarev Shelf glaciers detected on Cosmos-243 did not occur on Nimbus 5

Modeling of anisotropic electromagnetic reflection from sea ice.
Golden, K.M., et al. *U.S. Army Cold Regions Research and Engineering Laboratory*. Oct 1980. CR 80-23, 15p., ADA-094 620. 21 refs.
Ackley, S.F.
Anisotropy, Sea ice, Electromagnetic properties, Brines, Dielectric properties, Mathematical models, Ice crystal structure, Reflectivity, Radar echoes.
The contribution of brine layers to observed reflective anisotropy of sea ice at 100 MHz is quantitatively assessed. The sea ice is considered to be a stratified inhomogeneous, anisotropic dielectric consisting of pure ice containing ordered arrays of conducting inclusions (brine layers). Below the transition zone the ice is assumed to have constant azimuthal c-axis orientation within the horizontal plane so that the orientation of brine layers is uniform. The brine layers are also assumed to become increasingly well-defined with depth, since adjacent brine inclusions tend to fuse together with increasing temperature. A theoretical explanation for observed reflective anisotropy is proposed in terms of anisotropic electric flux penetration into the brine layers. Penetration anisotropy and brine layer geometry are linked to anisotropy in the complex dielectric constant of sea ice. In order to illustrate the above effects we present a numerical method of approximating the reflected power of a plane wave pulse incident on a slab of sea ice. Mixture dielectric constants, calculated for two polarizations of the incident wave, are used to calculate power reflection coefficients for the two polarizations.

35-1723
Measurement of the shear stress on the underside of simulated ice covers.
Calkins, D.J., et al. *U.S. Army Cold Regions Research and Engineering Laboratory*. Oct. 1980. CR 80-24, 11p., ADA-094 621. 15 refs
Müller, A.
Ice mechanics, Shear stress, Hydraulics, Subglacial observations, Surface roughness, Water, Velocity, Experimentation, Models.
The fluid shear stress applied to the underside of a simulated floating ice cover was measured in a laboratory flume. The measured values were compared with values of the shear stress computed from the von Karman-Prandtl velocity distribution fitted to the velocity profiles measured beneath the cover. For the lower velocity runs (about 0.079 m/s) the measured and computed values of the shear stress were in close agreement. At the high velocity flows (about 0.138 m/s) the measured values were roughly one-half those calculated from the velocity distribution. As the underside of the cover became increasingly rougher the position of maximum velocity moved closer to the bottom of the channel. It was shown that the Darcy friction coefficient is exponentially related to a normalized ice cover thickness, which suggests that it is measure of the roughness of a fragmented ice cover.

35-1724
Single and double reaction beam load cells for measuring ice forces.
Johnson, P.R., et al. *U.S. Army Cold Regions Research and Engineering Laboratory*. Oct 1980. CR 80-25, 17p., 15 refs.
Zarling, J.P.
Ice loads, River ice, Bridges, Measuring instruments, Loads (forces).
Two new types of load cells for attachment to bridge piers and direct measurement of ice forces were developed and tested with one type being installed on a pier of the Yukon River Bridge northwest of Fairbanks, Alaska. Both types of load cells used beams supported by base plates and carried nose plates that were loaded by the ice. The loads were imposed at the beams at locations differing from the support reactions so that the loads developed moments in the beams. By instrumenting them with strain gauges, the loads could be measured. Details of the design of the load cells, the means of calculating the loads and experience obtained with load cells are discussed.

35-1725
Resins and non-portland cements for construction in the cold.
Johnson, R., *U.S. Army Cold Regions Research and Engineering Laboratory*. Sep 1980. SR 80-35. 19p., ADA-092 952. 6 refs
Cements, Cold weather construction, Construction materials, Resins, Polymers.
A laboratory investigation was conducted to assess the potential of some resins and non-portland cements for structural concrete at low temperatures. The resins investigated were urethane (non-hydrophilic), epoxy and polyester, as well as a polysulfide polymer. Two non-portland (modified) cements were also tested. The curability of the resins when mixed with fine aggregate, showed that they had potential for low temperature use in the following decreasing order: urethane, polyester, and epoxy. Of the non-portland cement materials, mixed as individual neat slurries one showed potential for low temperature use at -10 C (using 3.9 C water).

35-1726
Infiltration characteristics of soils at Apple Valley, Minn.; Clarence Cannon Dam, Mo; and Deer Creek Lake, Ohio, land treatment sites.
Abele, G., et al. *U.S. Army Cold Regions Research and Engineering Laboratory*. Oct. 1980. SR 80-36, 41p., ADA 093 350. 5 refs
McKim, H.L., Brockett, B.E., Ingersoll, J.
Soil water migration, Permeability, Soil mechanics, Seepage, Waste treatment, Density (mass/volume), Gravity, Tests.
Large-scale 3- to 6-m diameter infiltration tests provide realistic data for determining soil infiltration rates. Tensiometers can be used to monitor the relative degree of saturation during the test. At Apply Valley, Minnesota, the saturated infiltration rate is moderately rapid, at Clarence Cannon Dam, Missouri, the rates range from moderate to slow, and at Deer Creek Lake, Ohio from moderately slow to slow.

35-1727
Calculation of the basic components of the ice balance in the Denmark Strait.
Antropova, L.V., et al. *U.S. Army Cold Regions Research and Engineering Laboratory*. Nov 1980. TL 742, 16p., ADB-054 463L. For Russian original see 24-359. 9 refs
Kogan, B.A.
Ice conditions, Drift, Sea ice, Ice navigation, Ice forecasting, Ice edge.
An investigation of the regularity of seasonal variations in ice conditions throughout the year in the Denmark Strait is of particular interest for navigation as well as for commercial fishing and a host of other problems. In order to identify the reasons for the variability of the ice conditions in this region, data can be used relating to the ice equilibrium of the strait. This article contains the results of a calculation of the monthly values of the basic ice balance components in the Denmark Strait for the period of 1960 to 1971, and evaluates their roles in the annual and seasonal variability of ice content in this region. To define the peculiarities of the ice system, the ice balance components are calculated both for the strait as a whole and the single-degree zones.

35-1728
Road bearing capacity as decided by deflection measurements and the index method.
Refsdal, G., *U.S. Army Cold Regions Research and Engineering Laboratory*. Nov. 1980. TL 754, 13p., ADA-094 663, 2 refs. Translated from unidentified source
Roads, Bearing strength, Dynamic loads, Trafficability, Seasonal variations.
In Norway, the bearing capacity of roads is determined on the basis of measuring the layer thickness (index method) or by deflection measurement. The layer thickness measurements give us the bearing capacity of the road over the entire year while deflection measurement shows the bearing capacity at the time of measurement. Deflection measurements are primarily used to determine the bearing capacity in the summertime, since this hardly varies from year to year. The purpose of this article is to discuss the uncertainties of using these methods.

35-1729
Cooling tendency in the surface water of the North Atlantic Ocean.
German Meteorological Service. *U.S. Army Cold Regions Research and Engineering Laboratory*. Nov 1980. TL 751, 3p., ADA-094 636. Translated from Umschau, 1966, No 23, p 777.
Water temperature, Surface waters, North Atlantic Ocean.
Results from the water temperature measurements from 9 "meteorological ship" positions making up the North Atlantic Ocean Weather Stations (all together about 380,000 observations) over the last 15 years have revealed that the surface temperature of the outer tropical North Atlantic has dropped continuously since the five-year period (1951-55). This phenomenon is considered in detail.

35-1730
Forms, form distributions and lower limits in present periglacial levels in high mountains of Europe and Africa from the Arctic to the equator. Proceedings of a symposium. Wet snow, Dielectric properties, Permeability, Liquid solid interfaces, Snow water content, Snow electrical properties, Snow density, Snow cover structure, Water flow, Porosity, Analysis (mathematics).
The mixing theory of Polder and Van Santen is revised for application to three cases of wet snow. The dielectric constant is calculated for a range of liquid contents and porosities. These calculated values compare favorably with experimental data for the two cases in which data are available. The application to a snow cover with a heterogeneous distribution of liquid is discussed. The possibility of applying this theory to calculate the imaginary part of the dielectric constant must be explored further.

Berg, R.L., ed.
Roads, Construction, Permafrost, Seasonal freeze thaw, Revegetation, Pipelines, Soil erosion, Environmental impact, Engineering, Ecology.
During the period 1975-1978 the Federal Highway Administration sponsored a series of environmental engineering investigations along the Yukon River to Prudhoe Bay Haul Road In 1976 the Department of Energy joined these investigations with a series of ecological projects which continue to the present Both agencies' research efforts were conducted on a cooperative basis with CRREL's in-house research program The objectives of the research focused on 1) an evaluation of the performance of the road, 2) an assessment of changes in the environment associated with the road, 3) documentation of flora and vegetation along the 577-km-long transect, 4) methodologies for revegetation and restoration, and 5) an assessment of biological parameters as indicators of environmental integrity In support of these objectives, specific studies were undertaken that investigated the climate along the road, thaw and subsidence beneath and adjacent to the road, drainage and side slope performance, distribution and properties of road dust, vegetation distribution, vegetation disturbance and recovery occurrence of weeds and weedy species, erosion and its control, revegetation and restoration, and construction of the fuel gas line This report presents background information on the region, detailed results of the road thaw subsidence and dust investigations, and summaries of revegetation, fuel gas line, vegetation distribution, soil, and weed studies

35-1788
Allowing for slope orientation when determining trends in landscape development. [Neobkhodimost' ucheta faktora sklonovoi ekspozitsii pri opredelenii tendentsii razvitiia landshaftov].
Shcherbakov, IU A., *Perm' Universitet. Uchenye zapiski*, 1975, Vol 329, p 24-34, In Russian. 16 refs
Landscape types, Tundra, Forest tundra, Taiga, Steppes, Alpine landscapes, Slope orientation, Slope processes, Permafrost distribution, Permafrost depth, Cryogenic soils.

35-1789
Ice phenomena on small rivers of the Upper and Central Kama Basin during the severe winter of 1968-1969. [Osobennosti ledovykh iavlenii na malykh rekakh basseina verkhnei i srednei Kamy v surovuiu zimu 1968-1969 gg.].
Kalinin, G.S., *Perm' Universitet. Uchenye zapiski*, 1975, Vol 329, p 112-117, In Russian 5 refs.
River basins, River ice, Ice conditions, Ice forecasting, Meteorological charts, Meteorological data, USSR—Kama River.

35-1790
Non-podsolized forest soils of Tannu-Ola (East Sayan Mountains). [Neopodzolennye lesnye pochvy Tannu-Oly (Vostochnyi Sayan)].
Dedkov, V S, *Akademiia nauk SSSR Ural'skii nauchnyi tsentr Institut ekologii rastenii i zhivotnykh Trudy*, 1978, Vol.109, p.100-118, In Russian 17 refs.
Alpine landscapes, Cryogenic soils, Taiga, Soil formation, Soil profiles, Soil composition, USSR—Sayan Mountains.

35-1791
Hydrometeorological provisions for the Baykal Amur railroad. [Gidrometeorologicheskoe obespechenie trassy BAM].
Dobroumov, B M, et al, *Leningrad Gosudarstvennyi gidrologicheskii institut. Trudy*, 1980, Vol.275, p.3-10, In Russian
Laptiev, P P
Permafrost beneath structures, Permafrost hydrology, Naleds, Slope processes, Baykal Amur railroad, Avalanches, Mudflows, Ice jams, Climatic factors, Weather forecasting.

35-1792
Water balance of small river watersheds in permafrost areas. [Vodnyi balans malykh rechnykh vodosborov raiona mnogoletnei merzloty].
Vasilenko, N G, *Leningrad Gosudarstvennyi gidrologicheskii institut Trudy*, 1980, Vol.275, p 11-32, In Russian 12 refs
River basins, Permafrost beneath rivers, Watersheds, Water balance, Baykal Amur railroad.

35-1793
Reducing ultimate intensity of spring flood runoff. [Redutsirovanie predel'noi intensivnosti stoka vesennego polovod.].
Goroshkova, N.I., *Leningrad Gosudarstvennyi gidrologicheskii institut. Trudy*, 1980, Vol.275, p.33-43, In Russian. 9 refs
River basins, Watersheds, Runoff, Snow water equivalent, Floods.

35-1794
Minimum summer-fall discharge of rivers in the western part of the Baykal Amur railroad zone. [Minimal'nyi letne-osennii stok rek zapadnoi chasti zony BAM].
Vladimirov, A.M, et al, *Leningrad Gosudarstvennyi gidrologicheskii institut. Trudy*, 1980, Vol 275, p.44-53, In Russian 6 refs
Shukhobodskii, A B
River basins, Watersheds, Runoff, Analysis (mathematics), Charts, Baykal Amur railroad.

35-1795
Calculating minimum runoff of small rivers in the Baykal Amur railroad zone from single measurements of water discharge during the summer-fall period. [Raschet minimal'nogo stoka malykh rek zony BAM po dannym edinichnykh izmerenii raskhodov vody v letne-osennii period].
Liubimov, G A., *Leningrad Gosudarstvennyi gidrologicheskii institut. Trudy*, 1980, Vol 275, p 54-63, In Russian 6 refs
River basins, Runoff, Permafrost hydrology, Baykal Amur railroad.

35-1796
Freeze-up of rivers in the Baykal Amur railroad zone. [O peremerzanii rek zony BAM].
Liubimov, G A, *Leningrad Gosudarstvennyi gidrologicheskii institut. Trudy*, 1980, Vol 275, p 64-73, In Russian. 15 refs
Water supply, Icebound rivers, Permafrost beneath rivers, Permafrost hydrology, Baykal Amur railroad.

35-1797
Influence of hydrometeorological factors on the formation of ground water naleds. [O vliianii gidrometeorologicheskikh faktorov na formirovanie naledei podzemnykh vod].
Sokolov, B L, *Leningrad Gosudarstvennyi gidrologicheskii institut Trudy*, 1980, Vol 275, p 74-90, In Russian 19 refs
Permafrost hydrology, Naleds, Water supply, Ground water, Ice growth, Meteorological factors.

35-1798
Thermal regime of surface waters in the subarctic zone of the Pacific Ocean. [Teplovoi rezhim poverkhnostnykh vod subarkticheskoi zony Tikhogo okeana].
Pokudov, V.V., et al, *Dal'nevostochnyi regional'nyi nauchno-issledovatel'skii institut Trudy*, 1980, Vol.90, 173p, In Russian with English table of contents enclosed. 29 refs.
Tunegolovets, V.P, Vel'taots, K O, Kondrat'eva, N.F
Subpolar regions, Air water interactions, Ocean currents, Water temperature, Surface temperature, Heat transfer, Turbulent exchange, Charts, Pacific Ocean.

35-1799
Basic problems in modeling mudflow processes. [Osnovnye problemy modelirovaniia selevykh protsessov].
Stepanov, B S, et al, *Kazakhskii regional'nyi nauchno-issledovatel'skii institut Sbornik*, 1980, No 5, p 3-9, In Russian.

35-1809
"Chemolgan-78". ["Chemolgan-78"].
Kirenskaia, T L, et al, *Kazakhskii regional nyi nauchno-issledovatel'skii institut. Sbornik*, 1980, No 5, p.64-71, In Russian. 3 refs
Stepanova, T.S., Balabaev, F G
Slope processes, Experimentation, Mudflows, Measuring instruments.

35-1810
Motion picture technique of studying mudflow kinematics. [Issledovanie kinematiki selevogo potoka s primeneniem kinometoda].
Gavrishina, L N, *Kazakhskii regional'nyi nauchno-issledovatel'skii institut Sbornik*, 1980, No.5, p 72-77, In Russian. 7 refs
Cinematography, Slope processes, Mudflows, Flow measurement.

35-1811
Slope and stream erosion in source areas of dispersed mudflows. [K voprosu o sklonovoi i ruchelkovoi erozii v ochagakh rassredotochennogo seleobrazovaniia].
Golubovich, V A., et al, *Kazakhskii regional'nyi nauchno-issledovatel'skii institut Sbornik*, 1980, No.5, p 78-81, In Russian.
Kotliarova, V K, Nagornov, I K
Slope processes, Soil erosion, Mudflows, Frost action, Water erosion.

35-1812
Determining density of loose clastic deposits in outcrops. [Ob opredelenii plotnosti tykhlooblomochnykh porod v estestvennom zaleganii].
Tsukerman, I G, *Kazakhskii regional'nyi nauchno-issledovatel'skii institut. Sbornik*, 1980, No 5, p 82-94, In Russian. 6 refs
Slope processes, Soil erosion, Slope stability, Mudflows.

35-1813
Seismic mudflow-alarm systems. [Seismicheskie sistemy opoveshchenia o selevoi opasnosti].
Krasnikov, V A, *Kazakhskii regional'nyi nauchno-issledovatel'skii institut Sbornik*, 1980, No 5, p 95-100, In Russian 7 refs
Slope processes, Mudflows, Monitors, Vibration, Measuring instruments.

35-1814
Seismic signal device for mudflow danger. (Seismicheskiĭ opovestitel' selia).
Kovalenko, P.I., et al. *Kazakhskiĭ regional'nyĭ nauchno-issledovatel'skiĭ institut. Sbornik*, 1980, No 5, p.101-110, In Russian. 5 refs.
Krasiukov, V.A., Novikov, M.IA., Stepanov, B.S.
Slope processes, Mudflows, Monitors, Vibration, Measuring instruments.

35-1815
Waging war against the cold is the job of a unique Army lab.
Wolkomir, R., *Smithsonian*, Feb. 1981, 11(11), p 103-111
Research projects, U.S. Army CRREL.
The work of the Cold Regions Research and Engineering Laboratory in Hanover, New Hampshire, is described and illustrated by photographs. A number of its more interesting projects are discussed, from studies of local examples of the lowly but costly pothole to successful attempts to move a huge DEW radar station, the supports of which had sunk dangerously far into the Greenland ice sheet. Studies of ice in the Weddell Sea reveal that ice there is twice as thick as arctic ice of comparable age. The reason is not yet clear, but the answer may relate to the primary productivity of Weddell Sea water.

35-1816
Draft environmental impact statement for World War II debris removal and cleanup, Aleutian Islands and Lower Alaskan Peninsula, AK.
U.S. Army Corps of Engineers, Alaska District, Anchorage, Alaska, Sep. 1979, 272p. + 1 Vol. of appends., Refs. passim

35-1828
Cryolithogenesis and its place in the system of lithogenesis. (Kriolitogenez i ego mesto v sisteme litogeneza).
Popov, A.I., *Problemy kriolitologii*, 1979, Vol 8, p 7-25, In Russian. 21 refs.
Geocryology, Lithology, Sedimentation, Ground ice, Ice formation, Permafrost origin, Theories.

35-1829
Temperature regime of frozen rocks and frost fracturing. (Temperaturnyĭ rezhim merzlykh porod i morozoboinoe rastreskivanie).
Tumel', N.V., *Problemy kriolitologii*, 1979, Vol.8, p 26-49, In Russian. 35 refs.
Soil freezing, Frozen rock temperature, Temperature variations, Fracturing, Frost action, Polygonal topography, Ice wedges, Patterned ground, Frost shattering.

35-1830
Cryogenic landscapes of Mars. (Merzlotnye landshafty Marsa).
Kuz'min, R.O., *Problemy kriolitologii*, 1979, Vol.8, p.50-65, In Russian. 15 refs.
Mars (planet), Permafrost, Topographic features, Landscape types, Slope processes, Solifluction.

35-1831
Cryogenic patterned microrelief. (Kriogennyĭ strukturnyĭ mikrorel'ef).
Chigir, V.G., *Problemy kriolitologii*, 1979, Vol.8, p 66-101, In Russian. 20 refs.
Terminology, Permafrost weathering, Slope processes, Patterned ground, Solifluction, Microrelief, Geocryology, Geomorphology.

35-1832
Composition of morainal silt of Spitsbergen Archipelago glaciers. (Sostav morennogo melkozema lednikov arkhipelaga Shpitsbergen).
Konishchev, V.N., et al, *Problemy kriolitologii*, 1979, Vol.8, p.102-109, In Russian. 6 refs.
Moskalevskii, M.IU.
Mountain glaciers, Moraines, Fines, Glacier beds, Glacial erosion.

35-1833
Origin and conditions of formation of Upper Pleistocene ice-bearing silts in Chukochiy Yar, Kolyma lowland. (Genezis i uslovia formirovania verkhnepleistotsenovykh l'distykh alevritov Kolymskoĭ nizmennosti (na primere Chukoch'ego IAra)).
Arkhangelov, A.A., et al, *Problemy kriolitologii*, 1979, Vol.8, p.110-135, In Russian. 28 refs.
Kuznetsova, I.P., Kartashova, G.G., Konakhin, M.A.
Permafrost origin, Pleistocene, Frozen fines, Loess, Sands, Ground ice, Ice wedges, Edoma series.

35-1834
Material composition of the Upper Pleistocene and Holocene deposits in the Chukochiy outcrop. (O veshchestvennom sostave verkhnepleistotsenovykh i golotsenovykh otlozheniĭ v obnazhenii Chukoch'em).
Kuznetsov, IU.V., *Problemy kriolitologii*, 1979, Vol 8, p 136-144, In Russian. 6 refs.
Frozen fines, Minerals, Loess, Loams, Sands, Alassy, Ice wedges, Edoma series.

35-1835
Cryogenic structure and facies changes in the ice-bearing loess (Edoma) series of the Duvannyy Yar, Kolyma lowland. (O merzlotno-fatsial'nom stroenii edomnoĭ tolshchi Duvannogo IAra Kolymskoĭ nizmennosti).
Arkhangelov, A.A., et al, *Problemy kriolitologii*, 1979, Vol.8, p 145-156, In Russian. 8 refs.
Rogov, V.V., Tianos-Mas, A.V.
Frozen fines, Loess, Sands, Loams, Cryogenic structures, Ground ice, Edoma series.

35-1836
New data on the structure and growth mechanism of epigenetic ice wedges. (Novye dannye o stroenii i mekhanizme rosta epigeneticheskikh zhil l'da).
Solomatin, V.I., *Problemy kriolitologii*, 1979, Vol 8, p 157-162, In Russian. 2 refs.
Permafrost structure, Ice wedges, Ice growth, Ice structure, Impurities.

Morey, R.M.
Sea ice, Anisotropy, Ice strength, Electromagnetic properties, Ice crystal structure, Brines, Ocean currents, Radio echo soundings.
Results of impulse radar studies of sea ice give support to the concept of a sea ice model in which the ice bottom is composed of an array of lossy parallel plate waveguides. The fundamental relation between the average bulk brine volume of sea ice and its electrical and strength properties is discussed as is the remote detection of under-ice current alignment. It was found that 1) the average effective bulk dielectric constant is dependent upon the average bulk brine volume of the sea ice, 2) sea ice anisotropy arising from a bottom structure of crystal platelets with a preferred c axis horizontal alignment can be detected by radio echo sounding measurements made not only on the ice surface but also from an airborne platform 3) the effective coefficient of reflection from the sea ice bottom decreases with increasing average effective bulk dielectric constant of the ice decreases with increasing bulk brine volume, and is typically one to two orders of magnitude lower than the coefficient of reflection from the ice surface, and 4) the losses in sea ice increase with increasing average bulk brine volume

35-1892
Mechanics of cutting and boring. Part 5: Dynamics and energetics of indentation tools.
Mellor, M., *U S Army Cold Regions Research and Engineering Laboratory*, Sep 1980. CR 80-21, 82p., ADA-092 365, 40 refs
Drilling, Ice cutting, Excavation, Permafrost, Rock drilling, Loads (forces), Equipment, Dynamic loads, Stresses, Design.
This report deals with the cutting of rock and other brittle materials by means of indentation tools. The principles of indentation cutters are dealt with at length the coverage including elastic contact stresses for initial loading by various types of indenters application of formal plasticity theory to penetration analysis and a variety of theories and penetration analyses that are not based on plasticity theory. Practical indentation mechanisms are described, and theoretical analyses are given for the dynamics and energetics of various types of roller cutters. The final section reviews experimental investigations and results for rock cutting discs giving a systematic summary of available data

35-1893
Neumann solution applied to soil systems.
Lunardini, V J., *U S Army Cold Regions Research and Engineering Laboratory*, Oct 1980. CR 80-22, 7p., ADA-092 244, 12 refs
Soil freezing, Ground thawing, Freeze thaw tests, Thermal conductivity, Thermal diffusion, Active layer, Phase transformations, Time factor, Analysis (mathematics).
The only complete analytic solution for conduction problems with phase change is the Neumann solution. The Neumann

solution is valid for phase change in a semi infinite, homogeneous medium with a step change in surface temperature starting from an initial temperature which can be different than or equal to the fusion temperature of the medium The Neumann solution, when applied to soils, forms the basis of a number of formulae for calculating the depths of freezing or thawing Widely used graphs were previously developed that are valid only when the ratios of the thermal conductivities and thermal diffusivities of the frozen and thawed soils are unity In this report general charts, applicable to any property ratios are developed The figures have been drawn specifically for soil systems but they are applicable to any material with appropriate property ratios.

35-1894
Phase change around a circular pipe.
Lunardini, V J., *U S Army Cold Regions Research and Engineering Laboratory*. Dec 1980. CR 80-27. 18p., ADA-094 600. 12 refs
Pipes (tubes), Heat transfer, Permafrost thermal properties, Stefan problem, Phase transformations, Frozen ground strength, Thermal diffusion, Freeze thaw cycles, Analysis (mathematics).
No general, analytical solution exists for phase change around a cylinder, thus, approximate methods have been evaluated The heat balance integral technique applied to the cylinder gave excellent results when compared to published numerical solutions Graphical solutions are given for phase change about a cylinder for ranges of the Stefan number, superheat parameter and property value ration for typical soils An approximate general solution has been derived which is reasonably accurate and can be used for any values of the above-mentioned parameters The effective thermal diffusivity method has been shown to be useful for practical problems of phase change

35-1895
Several properties of the radio emission of land surfaces.
Gurvich, A S., *U S National Aeronautics and Space Administration. Technical translation*. July 1973. 35-1897
Afforestation processes and their control in the European North. (Lesoobrazovatel'nye protsessy i ikh regulirovanie na evropeĭskom Severe).
L'vov, P.N., et al, Moscow, Izd-vo "Lesnaia promyshlennost." 1980. 113p., In Russian with English table of contents enclosed 51 refs
Ipatov, L F., Plokhov, A A
Forestry, Cryogenic soils, Revegetation, Taiga, Forest canopy, Plant ecology, Plant physiology.

35-1898
Siberian cities. (Gorod v Sibiri).
Pertsik, E N., Moscow, Mysl', 1980. 286p., In Russian with abridged English table of contents enclosed Refs p.281-284.
Urban planning, Residential buildings, Industrial buildings, Hydraulic structures, Transportation, Construction, Mining, Environmental protection, Natural resources, Coal, Petroleum industry.

35-1899
Simple ice phase parametrization.
Stephens, M.A., *Colorado State University, Fort Collins, Department of Atmospheric Science Atmospheric science paper*. Dec. 1979. No 319. 122p., Refs p 112-117
Freezing, Ice crystal growth, Ice physics, Snow crystal growth, Snow pellets, Snow physics, Raindrops, Mathematical models.

35-1900
Geoecology of the Colorado Front Range: a study of alpine and subalpine environments.
Ives, J.D., ed. Boulder, Colorado, Westview Press, 1980. 484p., A collection of papers selected from various sources
Environments, Alpine tundra, Nivation, Soil erosion, Forest tundra, Forest lines, Ecology.

35-1901
Quantitative evaluation of nivation in the Colorado Front Range.
Thorn, C.E., *Geological Society of America. Bulletin*. 1976, Vol 87, p 1169-1178, 50 refs Also in Geoecology of the Colorado Front Range a study of alpine and subalpine environments Edited by J D Ives, 1980, p 164-173
Nivation, Weathering, Solifluction, Meltwater, Freeze thaw cycles, Sediment transport.

35-1902
Soil loss in the Colorado Front Range: sampling design and areal variation.
Bovis, M J., *Zeitschrift fur Geomorphologie Supplement*, 1978, Vol 29, p.10-21, In English with German and French summaries. 21 refs. Also in Geoecology of the Colorado Front Range, a study of alpine and subalpine environments Edited by J.D Ives, 1980, p 187-198
Soil erosion, Alpine tundra, Solifluction, Soil mechanics.

35-1903
Engelmann spruce *(Picea engelmannii* Engel.) at its upper limits on the Front Range, Colorado.
Wardle, P., *Ecology*, 1968, 49(3), p 483-495, 17 refs Also in Geoecology of the Colorado Front Range a study of alpine and subalpine environments Edited by J D Ives, 1980 p 339-350
Forest lines, Forest tundra, Snow cover effect, Growth.

35-1904
Remarks on the stability of timberline.
Ives, J.D., Geoecological relations between the southern temperate zone and the tropical mountains Edited by C. Troll and W. Lauer, Wiesbaden, Franz Steiner Verlag GMBH, 1978, p 313-317, 19 refs. Also in Geoecology of the Colorado Front Range, a study of alpine and subalpine environments Edited by J.D Ives, 1980, p.351-358.
Forest lines, Biogeography, Periodic variations, Ecology, Mountains.

35-1905
Genetic differentiation among growth forms of Engelmann spruce and subalpine fir at tree line.
Grant, M.C., et al, *Arctic and alpine research*, 1977, 9(3), p.259-263, 26 refs Also in Geoecology of the Colorado Front Range: a study of alpine and subalpine environments Edited by J D. Ives, 1980, p 359-363
Mitton, J.B
Forest lines, Trees (plants), Growth.

35-1906
Nocturnal arthropods in the alpine tundra of Colorado.
Schmoller, R., *Arctic and alpine research*, 1971, 3(4), p.345-352, 15 refs Also in Geoecology of the Colorado Front by J.D. Ives, 1980, p 460-467
Alpine tundra, Animals, Diurnal variations, Arthropoda.

35-1907
Observation of rime and glaze deposits in Quebec.
Félin, B., March 1976, 53p + Appends., Presented at the Canadian Electrical Association Spring Meeting, Toronto, March 22-24, 1976. Unpublished manuscript. In English with French summary 20 refs
Icing, Glaze, Ice accretion, Ice formation, Supercooled clouds, Ice detection, Power line icing, Vegetation, Meteorological factors.

35-1908
Retreat of the last ice sheets in northeastern British Columbia and adjacent Alberta.
Mathew W.H., *Canada. Geological Survey Bulletin*. 1980, No 331, 22p., 33 refs.
Ice sheets, Glaciation, Ice mechanics, Glacier oscillation, History, Aerial surveys, Paleoclimatology.

35-1909
Determination of the tangential stresses on the lower surface of ice in the presence of pure wind drift.
Kheisin, D.E., et al, 1980, 7p., Unpublished manuscript by C-CORE, St Johns, NFLD For Russian original see 31-3541 7 refs
Ivchenko, V O.
Drift, Ice mechanics, Turbulence, Stresses, Sea ice, Analysis (mathematics), Wind factors.

35-1910
Ice blocks melting into a salinity gradient.
Huppert, H.E., et al, *Journal of fluid mechanics*, 1980, 100(2), p.367-384, 15 refs.
Turner, J S
Icebergs, Melting, Heat transfer, Salinity.
In our previous qualitative paper it was shown that when a vertical ice surface melts into a stable salinity gradient, the melt water spreads out into the interior in a series of nearly horizontal layers The experiments reported here are aimed at quantifying this effect, which could be of some importance in the application to melting icebergs Experiments have also been carried out with heated and cooled vertical walls at larger Rayleigh numbers R_a than those of previous experiments The main result is that for most of our experiments there is no significant difference between these three cases when properly scaled The layer thickness over a wide range of R_a is described to within the experimental accuracy by a formula which utilizes the horizontal buoyancy difference evaluated at the mean salinity and the vertical density gradient due to salinity The direct application of our results to oceanographic situations predicts layer scales under typical summer conditions of order tens of metres in the Antarctic and of order metres in the Arctic (Auth mod)

35-1911
Respective influence of global pollution and volcanic eruptions on the past variations in the trace metals content of antarctic snows since 1880's.
Boutron, C., *Journal of geophysical research*, Dec 20, 1980, 85(C12), p 7426-7432, 45 refs
Snow composition, Chemical composition, Air pollution, Age determination, Antarctica—Wilkes Land.
Forty-eight successive dated snow samples collected in central East Antarctica covering a continuous time sequence between 1880's and 1977 have been analysed for Na Mg K, Ca Fe Al Mn Pb, Cd, Cu, Zn and Ag in ultraclean conditions For all the elements, both the concentrations and the enrichment factors observed in 1977 are very close to the ones observed 100 years ago, then confirming that the influence of global pollution is actually negligible for these elements in the remote areas of the southern hemisphere During the last 100 years, the variations of the enrichment factors of Pb and Zn are shown to parallel rather well those of the global volcanic activity which suggests that the high atmospheric enrichments observed presently for these two metals are likely linked with volcanism Between 1912 and 1916, there is a very strong signal showing a definite peak for the concentrations of most of the elements It could be linked with a major antarctic volcanic eruption (Auth)

35-1912
Sea ice and temperature variability in the eastern Bering Sea and the relation to atmospheric fluctuations.
Niebauer, H J., *Journal of geophysical research*, Dec 20, 1980, 85(C12), p 7507-7515, 27 refs
Sea ice distribution, Surface temperature, Temperature variations, Bering Sea.

35-1913
Boreal ecosystem.
Larsen, J A., New York, Academic Press, 1980. 500p Refs. passim
Ecosystems, Ecology, Tundra, Vegetation, Permafrost, Climate, Environments, Soils, Animals.

35-1914
Overconsolidated surficial deposits on the Beaufort Sea shelf.
Reimnitz, E., et al, *U S Geological Survey Open-file report*, 1980., No 80-2010, 37p., 15 refs
Kempema, E., Ross, R., Minkler, P
Bottom sediment, Marine deposits, Clays, Soil strength, Ice scoring, Freeze thaw cycles, Shoreline modification, Beaches, Beaufort Sea.

35-1915
Report of radio echo sounding of ice workshop, Durham, N.H., 1978.
Sivaprasad, K., ed. Durham, University of New Hampshire, 1978. 15p. + Append., For a short summary of the workshop see Antarctic journal of the United States 14(5):98, Oct. 1979 (35-669 or F-23920).
Meetings, Radio echo soundings, Ice sheets, Measuring instruments.
In three sessions, participants discussed radar echo sounding systems, modeling radar reflection data and applications of radar echo sounding to ice sheet dynamics Emphasis was placed on the diversity of user needs which require diverse systems and methods Many of the examples of sounding records are of antarctic ice sheets, particularly around Byrd Station A major topic during the discussions was the sounding system developed by the Technical University of Denmark and currently used in Antarctica

35-1916
Age and restoration dynamics of forests in the Ural Mountains and east of the Urals. (Vosstanovitel'naia i vozrastnaia dinamika lesov na Urale i v Zaural'e).
Kolesnikov, B P., ed, *Akademiia nauk SSSR Ural'skii nauchnyĭ tsentr Institut ekologii rastenii i zhivotnykh Trudy*, 1976, Vol 101, 168p., In Russian For individual papers see 35-1917 through 35-1921 Refs. passim

35-1998
Time constraints on measuring building R-values
Flanders, S N., *U.S Army Cold Regions Research and Engineering Laboratory*, June 1980, CR 80-15, 30p., ADA-089 712, 18 refs.
Cold weather construction, Construction materials, Thermal properties, Thermal conductivity, Buildings, Heat flux, Time factor, Computer applications, Analysis (mathematics).
This report discusses the time constraints on measuring the thermal resistance (R-value) of building components. Temperature changes on either side of a building component perturb measurement accuracy. Long measurement times and measurement times corresponding to a consistent diurnal cycle can be satisfactory. However individual temperature changes cause significant error for shorter measurement periods. This report shows how to scale the thermal properties of individual constituent materials in a building element to determine its characteristic thermal time constant. The report then demonstrates the size of measurement error resulting from a variety of changes in temperature with representative walls of different time constants

35-1999
Block motion from detonations of buried near-surface explosive arrays.
Blouin, S., *U S Army Cold Regions Research and Engineering Laboratory*, Dec 1980, CR 80-26, 62p., ADA-095 492, 31 refs
Rock mechanics, Explosion effects, Explosives, Subsurface structures, Soil mechanics.
A vital concern to the survivability of hardened underground structures in rock is the relative displacement induced along geologic discontinuities by nearby explosions. Such displacement, commonly termed block motion, can occur along faults, joints, bedding planes and other structural weaknesses in rock. This report documents all occurrences of block motion observed during the development of DIHEN, a series of shallow-buried high explosive experiments designed to simulate the direct induced ground motions from a nuclear surface burst. Instances of block motion are described, along with pertinent details of the explosive arrays, geology and ground motion fields. The influence of these and other factors on the direction and magnitude of block motion is discussed

35-2000
Clearing ice-clogged shipping channels.
Vance, G P., *U S Army Cold Regions Research and Engineering Laboratory*, Dec 1980, CR 80-28, 13p., ADA-095 490, 18 refs
Channels (waterways), Ice removal, Ice navigation, Ice conditions, River ice, Stream flow, Water level.
This report investigates the feasibility of clearing ice from the shipping channel of the St Marys River. Four basic concepts are investigated: disposal under the ice, disposal on top of the ice, slurrying and rafting. Each technique was found to have application in limited portions of the river with the exception of disposal on top of the adjacent ice sheet, which is deemed feasible throughout the river system. Disposal onto the adjacent ice sheet will increase the free stream velocity less than 1.0 ft/s (<0.3 m/s) and raise the water level less than 1.0 ft (0.30 m). Further model and field tests are recommended to validate the findings of this report

35-2001
Fate and effects of crude oil spilled on subarctic permafrost terrain in interior Alaska.
Johnson, L A., et al, *U S Army Cold Regions Research and Engineering Laboratory*, Dec 1980, CR 80-29, 67p., ADA-095 491, Refs p 41-43.
Sparrow, E B., Jenkins, T.F., Collins, C M., Davenport, C V., McFadden, T
Oil spills, Permafrost, Vegetation, Damage, Soil microbiology, Thaw depth, Slopes, Freeze thaw cycles.
This study was conducted to determine the short- and long-term physical, chemical and biological effects of spills of hot Prudhoe Bay crude oil on permafrost terrain near Fairbanks, Alaska. Two experimental oil spills, one in winter and one in summer of 7570 liters (2000 gallons) were made at a forest site. The winter-spill oil moved within the surface moss layer beneath the snow. The summer-spill oil moved primarily below the moss in the organic soil. The oil moved faster and further downslope in the summer spill. Oil in the winter spill stopped during the first day but remobilized and flowed further downslope in the spring. The total area affected by the summer spill was nearly one and one-half times as large as that affected by the winter spill. The initial heat of the spilled oil had little measurable thermal effect on the soil. However, thaw depth significantly increased following two full thaw seasons. The greatest increases occurred beneath oil blackened surfaces. Evaporation of volatile components is the most significant weathering process in the first two years. Volatiles evaporated have from surface oil than from oil carried deeper into the soil profile. Microbial degradation has not been observed. The indigenous soil microbial populations responded differently to winter and summer oil applications, ranging from inhibition to stimulation with stimulation appearing to predominate. Vegetation showed both immediate and long-term damage. Damage was greatest near the top of the slope and in areas with surface oil. Deciduous species showed damage faster than evergreen species

35-2002
Field cooling rates of asphalt concrete overlays at low temperatures.
Eaton, R A., et al, *U.S. Army Cold Regions Research and Engineering Laboratory*, Dec 1980, CR 80-30, 11p., ADA-095 489, 7 refs.
Berg, R L
Temperature effects, Bituminous concretes, Cooling rate, Low temperature tests, Roads, Pavements, Compaction.
Six overlay test sections were placed on an existing test road in Hanover, New Hampshire, to gain experience in compaction of asphalt pavements at rolling temperatures as low as 150 F. The asphalt cement and aggregate used had mix characteristics similar to those of the mix expected to be used for a proposed overlay project at Thule Air Base, Greenland. Results of the overlay tests showed that computer-modeled cooling curves can be accurate predictors of the actual asphalt overlay cooling with time. In Addition the effects of temperature upon compaction were determined and it was found that nuclear gauges when used and calibrated properly successfully monitored mix density changes during compaction

35-2003
Icing on structures.
Minsk, L.D., *U S Army Cold Regions Research and Engineering Laboratory*, Dec 1980, CR 80-31, 18p., ADA-095 474, 34 refs
Structures, Icing, Ice accretion, Ice loads, Ice prevention, Humidity, Wind pressure, Ice cover thickness.
Ice accretion on structures built on the earth's surface is discussed. Sources of water are the atmosphere or water bodies near or surrounding the structure. Ice types include frost, rime, glaze and spray, properties and conditions governing their formation are presented. Methods of estimating accretion rates and total accretion on structures are given and extracts from U S and Canadian codes for ice and wind loads on structures are included. Techniques for preventing ice accretion or removing accreted ice are presented

35-2004
Thermography control of heat insulation and tightness of buildings.
Avén, B., et al, *U S Army Cold Regions Research and Engineering Laboratory*, Nov 1980, TL 753, 214p., ADA-095 610. Translation of unidentified Swedish source. 21 refs
Pettersson, B

The purpose of this publication is to prevent the usefulness of the heat camera (IR camera) and its reliability for locating and charting deficiencies in insulation and tightness of completed buildings and to indicate an appropriate procedure for routine application of the thermography method

35-2005
Embankment dams on permafrost in the USSR.
Johnson, T.C., et al, *U S Army Cold regions Research and Engineering Laboratory*, Dec 1980, SR 80-41, 59p., ADA-095 141, 24 refs
Sayles, F H
Earth dams, Permafrost, Embankments, Thermal regime, USSR—Siberia.
The report documents a study tour of the USSR to determine the current practices in analyzing the thermal regime of embankment dams on permafrost and in application of these practices in designing dams. The results of visits to earth and rockfill dams on permafrost in Siberia are summarized. Discussions with the designers of the dams, and with a construction manager and an operations manager, are recorded. The leading Soviet engineers and scientists specializing in analysis of the thermal regime of embankment dams on permafrost were consulted and the discussions are summarized. Experimental facilities of institutes concerned with this question also were inspected

35-2006
Structural evaluation of porous pavement test sections at Walden Pond State Reservation, Concord, Massachusetts.
Eaton, R A., et al, *U S Army Cold Regions Research and Engineering Laboratory*, Dec 1980, SR 80-39, 43p., ADA-094 606, 5 refs
Marzbaman, P C
Bituminous concretes, Pavements, Porous materials, Bearing strength, Concrete strength, Structural analysis, Cold weather performance, Loads (forces), Deformation, Tests.
This report presents the results of repeated load tests upon various porous pavement test sections constructed on an overflow parking lot at Walden Pond State Reservation in Concord, Massachusetts. From the fall of 1977 to the spring of 1979, the seasonal structural responses of the sections were monitored with a repeated plate bearing apparatus. After the first set of fall and spring tests, some sections were reconstructed because the asphalt concrete pavement was not porous enough. Test points were added or replaced to accommodate the reconstructed sections. Results show that the dense asphalt concrete distributed the load over a greater area than the porous asphalt concrete. Thicker pavements were stronger for both dense and porous asphalt concrete, and the deflection basin depth and diameter changed proportionately to applied loads

35-2023
Arctic animal ecology.
Remmert, H., Berlin, Springer-Verlag, 1980, 250p., Refs. p.235-245
Ecology, Animals, Marine biology, Climatic factors, Biomass, Diurnal variations, Seasonal variations, Polar regions.
This book, as a result of ecological and physiological research in the Arctic, describes factors typical to the area and their effect on the animal life there A review of conditions in the Antarctic is included to demonstrate the great differences between the two polar regions

35-2024
Morphometric features of the antarctic ice cover. (Morfometricheskie kharakteristiki lednikovogo pokrova Antarktidy).
Aver'ianov, V G., *Sovetskaia antarkticheskaia ekspeditsiia Informatsionnyi biulleten'*, 1980, No 100, p 5-9, 15 refs., In Russian
Ice sheets, Mass balance, Ice cover thickness, Ice volume, Antarctica.
The primary morphometric characteristics of continental ice cover are area mean surface altitude mean thickness of land and shelf ice ice volume and average altitude of the plateau The author reviews the available literature on these aspects of the antarctic ice cover, much of which has been collected recently by Soiuzmorniproekt during its cartographic activities Project data are compared with those of other workers and are found to provide a more precise picture for use in water and mass balance estimates

35-2025
Determining the components of antarctic ice cover mass exchange with the atmosphere. (Otsenka sostavliaiushchikh massoobmena lednikovogo pokrova Antarktidy s atmosferoi).
Aver'ianov, V G., *Sovetskaia antarkticheskaia ekspeditsiia Informatsionnyi biulleten'*, 1980, No 100, p.10-16, 18 refs., In Russian
Ice sheets, Mass balance, Precipitation (meteorology), Antarctica.
By using an equation for mass exchange between ice cover and atmosphere, the authors compute the components of mass exchange in g sq cm yr and total values in cu km/yr Precipitation intensity is 18 1 g sq cm yr the yearly total over the ice cover 2524 cu km of water

35-2026
Use of water balance method to evaluate precipitation measurement in Antarctica. (Ispol'zovanie metoda vodnogo balansa dlia otsenki osadkomernykh nabliudenii v Antarktide).
Aver'ianov, V G., *Sovetskaia antarkticheskaia ekspeditsiia. Informatsionnyi biulleten'*, 1980, No 100, p 17-22, 15 refs., In Russian.
Precipitation (meteorology), Mass balance Precipitation gages, Water balance, Antarctica—Mirnyy Station, Antarctica—Vostok Station.
Conventional methods of measuring solid precipitation are not reliable in Antarctica Many workers have attempted to use correction coefficients to solve the problem of inaccuracie due to wind blown precipitation, but they have not proven satisfactory A chart is offered to show that for one wind speed, corrected precipitation figures may vary 200-400 depending on the coefficient used Another, indirect method was tried at Mirnyy and Vostok Stations A water balance equation setting forth atmospheric precipitation as the sum of accumulation sublimation wind transfer and water flow yields errors for annual totals of 1% and 18 respectively for Mirnyy and Vostok

35-2027
Thermal regime of ice cover during thaw. (Teplovoi rezhim lednikovoi poverkhnosti v period taianiia).
Klokov, V D., *Sovetskaia antarkticheskaia ekspeditsiia Informatsionnyi biulleten'*, 1980, No 100, p.23-28, 7 refs., In Russian.
Ice sheets, Heat loss, Ice heat flux, Thawing, Thermal analysis, Thermal regime, Antarctica.
Using data from field work near Molodezhnaya, summer totals for all components of heat balance of the thawing glacier surface in coastal Antarctica were identified and the daily fluctuations recorded Radiation balance, active layer heat flow, turbulent heat and moisture flow heat expended on thawing and daily changes in heat loss are discussed Heat loss occurs as follows 54% for evaporation, 29% for thawing, and 17% for heating of the active layer Translating energy loss to mass losses led to the conclusion that evaporation and thawing account for 20 and 80 respectively of summer surface ablation losses in coastal Antarctica

35-2028
Extent of meltwater areas in Antarctica (Ploshchad' ratonov zhidkogo stoka v Antarktide).
Klokov, V D., *Sovetskaia antarkticheskaia ekspeditsiia Informatsionnyi biulleten'*, 1980, No 100, p.29-35, 12 refs., In Russian
Glacier ablation, Glacier melting, Slopes, Meltwater, Antarctica.
Meltwater along the antarctic coast (except for the Antarctic Peninsula) comes only from areas without snow-firn layers These areas occur at the edge of ice cover and in mountains The extent of snow-free ice varies with the time of year, maximum surface is seen at the end of summer after thawing ends In order to establish a connection between pitch of glacier slope and lack of snow cover, topographic maps of 7 antarctic areas were used Forty two percent of meltwater areas are on slopes of glaciers, 16 24% more on nearby glacier forms Overall extent of meltwater-producing area equals 92 thousand sq km a figure quite close to estimates of the glacial ablation zone (excluding the Peninsula)

35-2029
Preliminary estimate of ice cover flow in Antarctica using seismic data. (Predvaritel'naia otsenka tverdogo stoka lednikogo pokrova Antarktidy po dannym seismicheskikh nabliudenii).
Sytinskii, A.D., et al, *Sovetskaia antarkticheskaia ekspeditsiia Informatsionnyi biulleten'*, 1980, No 100, p 36-40, 9 refs., In Russian
Oborina, S F
Seismic surveys, Ice sheets, Glacier ice, Icebergs, Analysis (mathematics), Antarctica—Mirnyy Station.
Seismograms were taken near Mirnyy to determine the intensity of glacier dynamic processes in the coastal zone and the seasonal pattern of iceberg calving This phenomenon is assumed to account for most ice loss in Antarctica Number of icebergs calved is determined from the distance from the station based on seismic data, at Mirnyy about 100 km, which in turn yields number of calving events, and the average number of icebergs each incident produces Monthly variations in ice tremors and their intensity are graphed Average yearly output predicted from the formulas corresponds to reported field data If there were a known relationship between number of icebergs and their size, then total volume could be computed by another formula given in the article, which would permit error to be reduced to a minimum

35-2030
Age of ice in drill holes at Vostok and Vostok-1. (Vozrast l'da v burovykh skvazhinakh na stantsiiakh Vostok i Vostok-1).
Shemskii, P A., et al, *Sovetskaia antarkticheskaia ekspeditsiia. Informatsionnyi biulleten'*, 1980, No 100, p 41-48, 2 refs., In Russian.
Korotkevich, E S., Larina, T B
Drill core analysis, Ice cores, Analysis (mathematics), Climatic changes, Ice temperature, Antarctica—Vostok Station.
Chronology of climatic changes identified by ice isotope studies is arrived at by using ice age However, age of ice cannot yet be determined by isotope methods, data on glacier dynamics must be used The problem of computing ice age in a glacier is solved here with data and results from deep coring work at Vostok and Vostok-1 A simple two-dimensional model, allowing investigation of drill hole changes in ice density and temperature with depth and based on a rectilinear Cartesian coordinate system was developed Results ice age as a function of accumulation rate at both stations are given in charts Taking the age-time correlation established here, temperature variations affect ice age the duration of the Holocene warm period drops to 11 thousand years from 14-15 and the cold period increases, which more closely approximates northern hemisphere climatic cycles

35-2031
Variation in ice sheet thickness at Vostok and Vostok-1. [Izmenenie tolshchiny ledníkovogo pokrova na stantsiiakh Vostok i Vostok-1].
Shumskiĭ, P A , et al. *Sovetskaia antarkticheskaia ekspeditsiia. Informatsionnyĭ biulleten'*, 1980, No 100, p 49-53, 4 refs In Russian
Larina, T B., Petrov, V N
Drill core analysis, Ice mechanics, Ice deformation, Mathematical models, Ice sheets, Antarctica—Vostok Station.
To compute the vertical component of ice flow velocity from deformation data the nature of changes in rate of deformation along a vertical profile of the ice sheet must be known, these in turn depend on rheological parameters and on depth related changes in density and temperature A fairly accurate resolution of these questions for Vostok and Vostok 1 was made possible because of deep core drilling work A mathematical model to determine ice budget along a vertical profile is suggested and applied to field data Results indicate that at Vostok between 1964 and 1969 a slow drop in the ice cover surface occurred alternating with a rise in places within the polygon studied while at Vostok 1 on the average an even slower rise in the surface took place These findings agree with other data indicating that the ice sheet is near equilibrium

35-2032
Borehole compression in antarctic ice cover. [Szhatie burovykh skvazhin v lednikovom pokrove Antarktidy].
Shumskiĭ, P A , et al. *Sovetskaia antarkticheskaia ekspeditsiia Informatsionnyĭ biulleten'*, 1980, No 100, p 54-58, 1 ref , In Russian
Larina, T B , Barkov, N I.
Ice mechanics, Ice deformation, Stresses, Boreholes, Drilling, Compressive properties, Antarctica—Vostok Station.
Models for estimation of stress-deformation state in ice around bore-free boreholes and of rheological characteristics are developed and applied to data on compression rate of boreholes at Vostok Normal stresses and deformation rate in ice at the borehole wall increase with depth but do not depend on borehole diameter or time, while compression rate drops directly as diameter decreases The results allow an approximation of the stress deformation state of ice around boreholes and a forecast of compression rate at a given depth

35-2033
Some features of snow accumulation on a Mirnyy-Vostok profile. [Nekotorye osobennosti nakoplenia snega na profile Mirnyi-Vostok].
Lipenkov, V.IA , *Sovetskaia antarkticheskaia ekspeditsiia. Informatsionnyĭ biulleten'*, 1980, No 100, p 59-65, 8 refs , In Russian
Snow accumulation, Antarctica—Mirnyy Station, Antarctica—Vostok Station.
Snow accumulation between Mirnyy and Vostok was studied on summer traverses from 1970-1973 New characteristics of snow accumulation distribution along the profile were noted Four factors are implicated in annual variability random fluctuation attributable to data errors accumulation fluctuations caused by the microstructure of the snow cover, accumulation variation due to the relief of the snow-glacier surface and wind action transfer factor, and the variability of general climatic conditions of snow accumulation There are four boundaries which correspond to pronounced changes in the position of mean accumulation values 260 m, 400 m 540 m and 1140 m from Mirnyy Zonal change in accumulation is seen against the background of an overall increase in snow accumulation, its spatial and temporal variation one goes deeper into the continent

35-2034
Nature of snow cover density distribution along a Pionerskaya Station—Dome C profile. [Kharakter prostranstvennogo raspredelenia plotnosti snezhnogo pokrova po marshrutu stantsiia Pionerskaia – kupol "C"].
Dmitgerov, M B , et al *Sovetskaia antarkticheskaia ekspeditsiia Informatsionnyĭ biulleten'*, 1980, No 100, p 66-69, In Russian.
Korolev, P A
Snow density, Snow accumulation, Antarctica—Pionerskaya Station, Antarctica—Dome C.
In order to gather snow cover density information for annual accumulation calculations and for statistical studies of density distribution, extensive density measurements were carried out between Pionerskaya and Dome C in Jan -Mar 1977 As table 1 shows, density is distributed asymmetrically A binomial asymmetric distribution analogous to the usual distribution of snow cover strength values gives a good approximation of empirical data Thus snow cover density in the annual accumulation layer yields a picture of the statistical character of spatial density distribution and also shows that snow cover density can serve as an indicator of glaciological and geographical zonality to the extent that the total effect of such important processes as melting and wind ablation are quantitatively allowed for

35-2035
Orientation of optical axes of ice crystals from Vostok Station ice cover. [Orientirovka opticheskikh osei zeren l'da v lednikovom pokrove na stantsii Vostok].
Portnov, V G , et al. *Sovetskaia antarkticheskaia ekspeditsiia Informatsionnyĭ biulleten'*, 1980, No.100, p 70-74, 5 refs , In Russian
Barkov, N I., Korableva, N A.
Ice crystal optics, Ice cores, Ice crystal nuclei, Ice crystal structure, Ice structure, Antarctica—Vostok Station.
Optical axis orientation in ice cover crystals was studied in a 952.5-m core from near Vostok Station The degree of regularity in crystal axis orientation is not consistent For example at 44.5 m ice crystal orientation regularity is not pronounced although there is a marked maximum at the center of the core while at 364.25 m the orientation approaches the vertical and is very consistent At greater depths the concentration at the center increases and the deviation of most crystals from the zenith does not exceed 12-17 Thus the most pronounced structural feature of Vostok ice cover is the subvertical optical ice crystal orientation increase with depth A mechanism to account for this phenomenon is outlined

35-2036
Horizontal cracks in deep ice cores from Vostok Station. [O gorizontal'nykh treshchinakh v kernakh l'da glubokoĭ skvazhiny na stantsii Vostok].
Portnov, V G , *Sovetskaia antarkticheskaia ekspeditsiia Informatsionnyĭ biulleten'*, 1980, No.100, p 75-79, 8 refs , In Russian
Ice crystal optics, Drilling, Stresses, Ice mechanics, Antarctica—Vostok Station.
Ice cores from electric thermal drills show a system of horizontal cracks These usually start at 60-70 m in both dry and kerosene-flooded cores Optical orientation of ice at 5-60 m is weak and nearly circles the core, while from 96.0 m a marked maximum appears in the center of the core, where up to 20° of the crystalloblasts axes are vertical As depth increases, the phenomenon becomes more pronounced Morphologically the cracks seen in cores are similar to each other and change with depth Their formation is connected with discontinuous stresses which develop along the weakened ice when the vertical component of drilling pressure in an optically homogeneous polycrystalline aggregate is removed

35-2037
Calculating elastic properties of ice at Vostok Station. [Opredelenie uprugikh kharakteristik l'da na stantsii Vostok].
Dmitriev, D N., et al, *Sovetskaia antarkticheskaia ekspeditsiia Informatsionnyĭ biulleten'*, 1980, No 100, p 80-84, 2 refs , In Russian
Terent'ev, V G
Ice elasticity, Ultrasonic tests, Ice cores, Antarctica—Vostok Station.
During the 21st and 22nd Soviet Antarctic Expeditions ultrasonic studies were done to determine the longitudinal and transverse rates of elastic wave transmission and variation with depth in ice core samples Work with a core taken near Vostok gave a picture of elastic wave characteristics in central Antarctica and demonstrated the feasibility of the particular ultrasonic equipment tested under antarctic conditions

35-2038
Oxygen-isotope analysis of Novolazarevskaya Glacier shelf ice cores. [Rezul'taty izotopno-kislorodnykh analizov kerna l'da shel'fovogo ledníka Novolazarevskogo].
Gordienko, F G , et al, *Sovetskaia antarkticheskaia ekspeditsiia Informatsionnyĭ biulleten'*, 1980, No 100, p 85-90, 15 refs , In Russian.
Savatiugin, L M
Ice cores, Oxygen isotopes, Glacier ice, Altitude, Temperature effects, Antarctica—Novolazarevskaya Station.
This article reports results of oxygen isotope studies on 55 samples from a core 447 m deep A table gives isotope composition of surface samples for Queen Maud Land ice cover and compares the data with that from neighboring areas to identify local factors playing a role The isotope profile is shown Using the correlation between isotope values and temperatures at which the precipitation occurred, the authors suggest that the first 154 m fell at -34 to -39C, 154-355 m at -43 to -50C and the lowest portion (355-448 m) at -51 to -58C The earliest layers must have fallen at higher altitudes while the recent one accumulated near the present drilling position Present knowledge of glacial flow is too sparse to allow precise identification of the accumulation area

35-2039
Tritium in ice near Molodezhnaya Station. [Tritii vo l'dy vblizi stantsii Molodezhnaia].
Herbert, D et al, *Sovetskaia antarkticheskaia ekspeditsiia Informatsionnyĭ biulleten'*, 1980, No 100, p 91-94, 7 refs , In Russian
Fröhlich, K , Schneider, M.M
Ice composition, Snow composition, Firn, Isotope analysis, Glacier alimentation, Ice density, Snow density, Density (mass volume), Antarctica—Molodezhnaya Station, Antarctica—Hays Glacier.
Snow ice and firn samples were taken from Hays Glacier in Jan 1976 and examined for tritium content A table gives tritium concentration depth of sample and density Average density of 0.45 g cu cm agrees with values of other workers Correlation between tritium concentration and depth is shown in a graph The authors derive an annual rate of 0.57 m of snow resulting in an accumulation rate of approximately 26 g sq cm cm-yr at given density

35-2040
Causes of mountain glacier oscillation in antarctic dry valleys. [Prichiny kolebanii gornykh lednikov Sukhikh dolin Antarktidy].
Miagkov, S M , *Sovetskaia antarkticheskaia ekspeditsiia Informatsionnyĭ biulleten* 1980, No 100, p 95-98, 4 refs , In Russian
Wind erosion, Glacier ablation, Glacier oscillation, Mountain glaciers, Glacier alimentation, Wind factors, Antarctica—Scott Glacier.
Because of low precipitation rates in high antarctic areas glaciers form only where wind creates snow buildup Mountain relief during glaciation was affected more by geotectonic uplift, and flooding of lowlands than by denudation and wind erosion The complex relation between climatic and geomorphological factors contributes to an understanding of mountain glaciation in a given regime The Scott Glacier exemplifies the following overall tendencies the occurrence of dry valleys and ablating glaciers generally above 1000 m a s l glacier formation on northern slopes and degradation on western exposures and shortening of some glaciers and elongation of others which were recently feeders of the Scott Glacier and have separated from it because of recent drops of 10-20 m in the level of the due to drops in sea level

35-2041
Evolution of McMurdo Oasis glaciers according to phototheodolite survey [Evoliutsia lednikov oazisa Mak-Merdo po dannym povtornoi fototeodolitnoi s"emki].
Miagkov, S M , *Sovetskaia antarkticheskaia ekspeditsiia Informatsionnyĭ biulleten'*, 1980, No 100, p 99-102, 5 refs , In Russian
Glacier mass balance, Glacier surveys, Glacier tongues, Glacier thickness, Antarctica—Meserve Glacier, Antarctica—Taylor Glacier.
A survey of several glaciers in the McMurdo Oasis was done in 1975-1976 Results are analyzed and compared to 1970-71 survey data The Ronne and Meserve Glaciers are in the mountains and are fed largely by snow blown from nearby highlands Taylor Glacier is an exit glacier and gets some additional snow from slopes All the glaciers are quite sensitive to warming, one or two warm summers when melting and meltwater flow reach the upper parts of the tongues where only dry ablation usually occurs can lead to significant thinning During the 5-yr period studied the glaciers thinned on the average about 0.5m However they appear to be in equilibrium no noticeable retreat occurred and changes over the period in both area and thickness are negligible

35-2042
Areas of bottom melting of ice cover in the Transantarctic Mountains. [Uchastki donnogo taianiia lednikovogo pokrova v rione Transantarkticheskikh gor].
Miagkov, S M , *Sovetskaia antarkticheskaia ekspeditsiia. Informatsionnyĭ biulleten'*, 1980, No 100, p 103-106, 7 refs., In Russian.
Glacier melting, Glacier thickness, Glacial geology, Glacier beds, Mountain glaciers, Glacial lakes, Moraines, Antarctica—Transantarctic Mountains.
New data on the thickness of the continental ice cover are used to derive a scheme showing where bottom melting occurs in the Transantarctic Mountains This in turn allows better description of the exaration activity of the glaciers The following conclusions are offered In both open and ice-covered mountain areas and also possibly in some coastal areas the glacial ice is usually frozen to its bed and consequently preserved the subglacial relief The areas where the glacier bed is wet can be divided according to the nature of the glacial relief-forming action In large areas exaration predominates whereas in places where bottom melting is very active and the ice and underlying surface are separated by a thick layer of water bottom moraines may accumulate along with exaration that is a polygenetic surface is formed Thus geomorphological processes at the bottom of subglacial lakes parallel those on the sea floor under shelf ice

35-2043
Glaciological research at the South Pole, Dome C and in the McMurdo Sound area in 1974-1976. [Ghatsiologicheskie issledovaniia na Iuzhnom poliuse, kupole "C" i v rione zaliva Mak-Merdo v 1974-1976 gg.].
Barkov, N I , *Sovetskaia antarkticheskaia ekspeditsiia Informatsionnyĭ biulleten'*, 1980, No 100 p 107-113, 10 refs , In Russian.
Glacier ice, Glaciology Research projects, Sea ice, Snow cover, Antarctica—McMurdo Sound, Antarctica—South Pole, Antarctica—Dome C.
Soviet Antarctic Expedition research in glaciology is reported on under three headings snow cover studies sea ice observations and work on glaciers of the McMurdo Sound area A great deal of the work was done in cooperation with French and American scientists

35-2044
Glaciological work on the Shackleton Ice Shelf (Jan.-Apr. 1978). (Gliatsiologicheskie issledovaniia na shel'fovom lednike Shekltona (ianvar'-aprel' 1978 g.)).
Savatiugin, L.M., *Sovetskaia antarkticheskaia ekspeditsiia. Informatsionnyi biulleten'*, 1980, No 100, p.114-118, In Russian
Firn, Firn stratification, Meltwater, Ice shelves, Glacier ice, Recrystallization, Ice cores, Antarctica—Shackleton Ice Shelf.
Ice-coring in the central part of the Shackleton Ice Shelf was done to study the structure and characteristics of shelf ice, the hydrological regime and structure of sub-shelf sea water. Results are reported. The firn layer structure and temperature regime in the holes indicate that the shelf belongs to glaciers formed from cold-infiltration recrystallization or cold firn zones. The zone contained much meltwater which, penetrating to the thick snow-firn layer, freezes as bands of infiltrated ice. The gradual metamorphosis into firn in ice takes place by a slow recrystallization at great depth. At this borehole firn ice transformation occurs at 65 m.

35-2045
Drilling experiments with drilling fluids. (Eksperimental'noe burenie skvazhiny, zalitoi nezamerzaiushchei zhidkost'iu).
Zagrivnyi, E.A., et al, *Sovetskaia antarkticheskaia ekspeditsiia. Informatsionnyi biulleten'*, 1980, No 100, p.119-123, 6 refs., In Russian
Zemtsov, A.A., Vostretsov, R.N., Shkurko, A.M.
Ice coring drills, Thermal drills, Pumps, Drilling fluids, Drilling, Electric equipment, Cold weather operation, Antarctica—Vostok Station.
A thermal drill TBZS-152 was tested for ice coring with a non-freezing liquid at Vostok Station. Removing the water from the shaft of the borehole facilitates both normal drilling (at a rate of 0.5-3.5 m/hr) and complete separation of the liquid phases (water from kerosene) in the tank. Heat in the water pipes should be maintained at least 120 Bt/m in the water tank at least 1.5 kBt/m of the water column. The TBZS-152 drill needs a more reliable liquid-removal system, greater power and reliability in the heat rings, and more precise control of basic drilling parameters.

35-2046
Mechanized water preparation at Vostok. (O mekhanizirovannoi zagotovke vody na stantsii Vostok).
Zagrivnyi, E.A., et al, *Sovetskaia antarkticheskaia ekspeditsiia. Informatsionnyi biulleten'*, 1980, No 100, p.124-127, In Russian.
Zemtsov, A.A., Shkurko, A.M.
Water supply, Water pipes, Equipment, Electric equipment, Electric heating, Diesel engines, Antarctica—Vostok Station.
A new diesel-powered generator, baths and living quarters, and a waterheating complex were added to Vostok Station. warm water was also made available for drilling work. The plant is described and schematically shown. Heat for the snow-melting equipment is supplied either by electricity or by hot water from the generator circulation system. Expressions to compute heat necessary to melt snow and to maintain 1oC water temperature by electric heat are given.

35-2047
15th session of the Scientific Committee for Antarctic Research and the 9th meeting of the Coordinating Committee of the International Antarctic Glaciological Project. (Piatnadtsataia sessiia Nauchnogo komiteta po izucheniiu Antarktiki i Deviatoe zasedanie Koordinatsionnogo soveta Mezhdunarodnogo antarkticheskogo gliatsiologicheskogo proekta).
Aver'ianov, V.G., et al, *Sovetskaia antarkticheskaia ekspeditsiia. Informatsionnyi biulleten'*, 1980, No 100, p.128-132, In Russian
Korotkevich, E.S.
Research projects, Antarctica.
The meeting of the 15th session of SCAR in May 1978 in Chamonix, France is reported. It was decided that SCAR meteorological research should be integrated with the global climatic research program of WMO. All the national committees reported on their activities.

35-2050
Polar ice and atmospheric fluctuations.
Wiese, W., *U.S. Army Cold Regions Research and Engineering Laboratory*, Jan 1981, TL 749, 22p, ADB-055 329L, 23 refs. Translated from Geografiska annaler, 1924, Vol.6, p.273-299
Sea ice, Ice conditions, Mass balance, Ice air interface, Atmospheric pressure, Atmospheric circulation, Air temperature.
Various meteorologists have frequently stated the idea that the ice masses of the Arctic and Antarctic oceans have a marked effect on the condition of the atmosphere. The hypothesis that polar ice has an effect on the general condition of the atmosphere gave special interest to the systematic collection of reports on the ice conditions in the Arctic oceans. At the present time the observations collected by the Danish Meteorological Institute on the ice conditions in the northern polar region represent a considerable amount of data. A series of some special, individual studies in this area yielded some rather interesting results, in the author's opinion the most important of which are discussed here.

Ricard, J.
Roofs, Thermal insulation, Moisture transfer, Wettability, Thermal conductivity, Tests.
This paper describes a method for determining the rate of moisture gain and the decay in thermal resistance caused by moisture in common roof insulations. Information on the rate of moisture gain for various insulations is tabulated (Table III) and graphed (Figures 3 and 5). The rate of moisture gain varies significantly with insulation type and wetting test boundary conditions. Graphs are presented to define the decay in thermal resistance of insulation samples at increasing moisture contents (Figures 6-11). Moisture significantly reduces the thermal resistance of most roof insulations.

DLC QE697.L293
Glacial geology, Ice sheets, Geologic structures, Paleoclimatology, Ice age theory.
A global view is presented of the last great ice sheets which existed at their fullest extent 17,000 to 21,000 years ago and which subsequently collapsed to remnants in Antarctica and Greenland as the Earth came out of the last ice age. In Chapters 1, 2, 3, and 7 the areal distribution during the last ice age of ice sheets, ice caps and mountain glaciers is reviewed. Chapter 7 deals with the construction and disintegration of the Antarctic ice sheet during the last glaciation. In chapters 4 and 5 numerical methods of reconstructing glacier elevations are developed. In chapter 6 two fundamentally different Northern Hemisphere ice sheet reconstructions are presented which reflect deeply divided opinions among Quaternary geologists concerned with the areal extent of these ice sheets. In one of these reconstructions a minimum and in the other a maximum ice sheet extent are presented. In chapter 8 the question of possible large ice age ice shelves in the Northern Hemisphere is examined by considering the ice sheet dynamics of the maximum ice sheet reconstruction. The discussion of the marine ice sheet of West Antarctica is also related as a speculation to the role of ice streams, ice shelves, and calving bays in the growth and decay of large Northern Hemisphere paleo ice sheets. 29 charts and tables are included in a separate packet with the book. (Auth. mod.)

DLC QE697 L293
Ice sheets, Ice cover thickness, Ice models, Mathematical models, Ice mechanics.
Discussions on the areal extent of late Wisconsin-Weichselian ice sheets are summarized The result pinpoints two fundamentally different conceptions as to how glaciation occurred, which has compelled us to produce both minimum and maximum areal reconstructions of late Wisconsin-Weichselian ice sheets The vertical extent of the minimum and maximum areal reconstructions is presented in maps of ice elevation and ice thickness for specified bed topography, isostatic compensation, and basal shear stress It is emphasized that the limits of late Wisconsin-Weichselian continental glaciation are still unknown, despite more than a century of field studies It is pointed out that documenting the existence and dynamics of possible Northern Hemisphere marine ice sheets is an outstanding glacial geological task Data and charts for the Antarctic Continent are included

DLC QE697 L293
Ice sheets, Ice shelves, Radioactive age determination, Marine biology, Glacial geology, Pleistocene, Ice models, Antarctica—West Antarctica.
Several aspects of "glaciology's grand unsolved problem" are discussed A model is offered of the behavior of the West Antarctic Ice Sheet as a working hypothesis that can be tested and improved by future field work and modeling experiments The fundamental aspect of this working hypothesis is that, during late Quaternary glacial-interglacial cycles the East Antarctic Ice Sheet remains relatively stable while the West Antarctic Ice Sheet undergoes extensive changes The major contentions of the working hypothesis are summarized During ice maximums the West Antarctic Ice Sheet expands close to the continental shelf margin, nearly filling the Ross and Weddell Seas with grounded ice During interglaciations, the West Antarctic Ice Sheet retreats from the continental shelf by ground line recession Sea level variation is the dominant factor although certainly not the only factor controlling major glacial interglacial expansion and contraction of the marine West Antarctic Ice Sheet, and probably of the narrow marine periphery of the East Antarctic Ice Sheet Whether the West Antarctic Ice Sheet is still receding is unknown There is indirect evidence from sea-level data and from modeling experiments that the West Antarctic Ice Sheet might collapse by fast-mode recession during particularly warm interglaciations (Auth mod)

Stephenson, A., *Polar record*, Jan 1981, 20(127), p.317-328, 2 refs
Exploration, Expeditions, Polar regions.
The most striking differences between pre- and post-WW II British polar exploration are presented most 1930-40 exploration was done by university exploring clubs and societies expedition members paid their own ways, the leader was responsible for the entire expedition (conception, planning, and execution), expeditions emphasized enjoyment of the risks and challenge of the exploration rather than scientific or technological achievement Most polar exploration in this period looked north to Arctic areas with one major antarctic effort the British Graham Land Expedition of 1934-1937 Following WW II, expeditions were more formally handled Committees organized, controlled, and advised field parties government funding and logistics support became more readily available, equipment and transport were more sophisticated and more international cooperation developed During this time Antarctica and the subantarctic islands reemerged into prominence, the Falkland Islands Dependency Survey (FIDS later to become the British Antarctic Survey) was firmly established and a joint Norwegian British-Swedish expedition to Queen Maud Land was mounted

Bottom sediment, Marine deposits, Drill core analysis, Ice cover effect, Antarctica—Weddell Sea, Antarctica—Adélie Coast.
The polar seas represent one of the most complex and also the most poorly understood marine sedimentary environments Antarctica provides the only modern glacial marine environment where large ice shelves exist and where the ice sheet is still grounded on the seafloor These large glacial features undoubtedly play a key role in glacial marine sedimentation Prior to 1968 only a few widely scattered sediment samples had been obtained from the Antarctic continental shelf and slope From 1968 through 1970 56 sediment cores were collected during the International Weddell Sea Oceanographic Expedition To date, descriptions of most of this valuable collection have not been distributed to the scientific community The present manual includes descriptions of these materials along with descriptions of sediment grab samples and piston cores obtained during the Deep Freeze 79 expedition to the d'Urville Sea (Auth mod)

Tundra, Geomorphology, Permafrost, Soils, Vegetation, Landforms, Ecosystems, Maps, Plants (botany), Environments, Photography, Economic development, United States—Alaska—Prudhoe Bay.
This atlas illustrates the interrelationships among the landforms, soils and vegetation of a portion of the Arctic Coastal Plain of Alaska The Prudhoe Bay region is dominated by an alkaline peaty coastal tundra, a type that has not been intensively studied Forty-two vegetation communities thirteen major landforms, and eight soil types are described Several of the plant communities and one soil, the Pergelic Cryoboroll, have not been described previously The vegetation is discussed with respect to three important gradients temperature, soil pH and soil moisture Other aspects of the Prudhoe Bay environment, including geology, permafrost, and winter and summer climate are discussed and illustrated Also included are historical descriptions of the development of the oilfield and of selected scientific investigations in the Alaskan Arctic Master maps present the landforms soils and vegetation of a 145-sq km portion of the oilfield road network at a scale of 1:12,000 Derived geobotanical special purpose maps, useful for land-use planning and management of the ecosystem are explained and several examples are shown for a 36 sq km portion of the oilfield

Sea ice, Drift, Ice water interface, Boundary layer, Mathematical models, Viscous flow.
The finite element formulation of a linear viscous sea ice model has been presented The temporal ice acceleration term is in

cluded in the momentum equations in order to compute nonsteady ice drift rates. This model is applied to the Strait of Belle Isle, where strong tidal streams move the pack ice back and forth. Using idealized sinusoidal variations of the tidal streams, it is found that the time lag between the water and the ice velocities is dependent upon the viscosity parameters. These results indicate that the ice is not drifting freely and the boundary layer near the shore affects the ice movement in the Strait. The viscosity parameters used in this study are small in order to simulate a reasonable time lag between the ice and water velocities. The high shearing near the shores necessitates low viscosities for proper simulation of the flow of pack ice in the Strait.

Sea ice, Drift, Ice conditions, Mathematical models, Remote sensing, Ice melting, Freezing, Microwaves, Climate, Mapping, Radiometry, Weddell Sea.
The model developed by Campbell (1965) has been extended to a time-dependent, quasi-steady-state model that uses both the equation of continuity and the equation of momentum. It also incorporates an equation of state that relates the pressure of ice to its convergence. The constitutive equation is of a fluid type. The freezing and melting of sea ice is parameterized in terms of ice thickness, location, and season. For the 1974 austral winter twice-daily surface wind stress fields were generated from synoptic pressure data. For every third day of this period the boundaries and concentration of the Antarctic sea ice were mapped using ESMR (Electronically Scanning Microwave Radiometer) images acquired by the Nimbus-5 satellite. These data are used both as initial conditions and to compare the model results for various time periods.

Meetings, Meteorology, Weather, Climatology, Sea ice distribution, Antarctica.
This collection of papers was presented at a conference on antarctic climatology. Analysis of data collected during long-term studies made possible the refinement of current ideas of meteorological regime, circulation and atmospheric structure in southern polar regions. Much attention is devoted to new aspects of climatology: questions of heat and moisture balance, circulation mechanisms, and upper atmosphere research using rockets. Radiation, albedo, ice sheet mass balance, ice distribution, and ozone, CO, and methane concentration in the atmosphere are also investigated.

35-2179
Short-wave radiation regime in Antarctica based on 20 years of observation. (Rezhim korotkovolnovoi radiatsii v Antarktide po rezul'tatam nabludenii za 20 let).
Marshunova, M.S., Issledovaniia klimata Antarktidy (Climatic research in the Antarctic) edited by I.M. Dolgin. Leningrad, Gidrometeoizdat, 1980. p.11-19. 4 refs. In Russian.
Solar radiation, Radiation absorption, Albedo, Antarctica.
Results of 20 years of data gathering on direct total absorbed radiation and albedo of the reflecting surface are analyzed. Patterns of temporal and spatial distribution are noted. These data will aid in determining variability in radiation streams under different cloud conditions and year-to-year variation in monthly radiation totals.

35-2180
Long-term variability in thermobaric and ice conditions in the South Orkney Islands area. (Mnogoletniaia izmenchivost' termobaricheskikh i ledovykh uslovii v raione Iuzhnykh Orkneiskikh ostrovov).
Petrov, L.S., et al. Issledovaniia klimata Antarktidy (Climatic research in the Antarctic) edited by I.M. Dolgin. Leningrad, Gidrometeoizdat, 1980. p.59-65. 7 refs. In Russian.
Liubarskii, A.N.
Sea ice distribution, Atmospheric pressure, Air temperature, Scotia Sea, South Orkney Islands.
Data gathered from 1904 to 1972 were analyzed to calculate long-term fluctuations in air temperature, pressure and number of days of ice cover at Orcadas Station. It is shown that climatic variations there have a cyclical nature and covary with arctic climate changes. A 100-yr climatic cycle was noted. There is a connection between South Orkney Islands climatic cycles and cosmic factors.

35-2181
Winter climatic conditions in the Somov Sea based on data from the drift of the *Ob'* in 1973. (Kharakteristika zimnikh klimaticheskikh uslovii moria Somova po materialam dreifa d/e *Ob'* v 1973 g.).
Petrov, L.S., et al. Issledovaniia klimata Antarktidy (Climatic research in the Antarctic) edited by I.M. Dolgin. Leningrad, Gidrometeoizdat, 1980. p.72-78. 8 refs. In Russian.
Maksimov, G.A.
Weather, Sea ice distribution, Meteorology, Antarctica—Oates Coast, Antarctica—Ross Sea.
Results of meteorological observations taken as the *Ob'* drifted in ice from March to June 1973 are analyzed.

35-2182
Glacioclimatological research topics in Antarctica. (Zadachi glatsioklimaticheskikh issledovanii v Antarktide).
Aver'ianov, V.G. Issledovaniia klimata Antarktidy (Climatic research in the Antarctic) edited by I.M. Dolgin. Leningrad, Gidrometeoizdat, 1980. p.85-89. 11 refs. In Russian.
Ice sheets, Research projects, Glacier mass balance, Antarctica.
The state of the art of glaciocliimatology with regard to antarctic ice cover is reviewed and the most pressing questions for further research are outlined.

35-2183
Method for monthly charting of antarctic atmospheric precipitation. (Metodika postroeniia mesiachnykh kart atmosfernykh osadkov Antarktidy).
Briazgin, N.N. Issledovaniia klimata Antarktidy (Climatic research in the Antarctic) edited by I.M. Dolgin. Leningrad, Gidrometeoizdat, 1980. p.106-112. 5 refs. In Russian.
Snow accumulation, Analysis (mathematics), Antarctica.
Error in measuring precipitation in Antarctica and ways to reduce it are discussed. Graphs of the annual precipitation pattern based on corrected mean totals from key stations are given. Monthly precipitation charts are constructed by using these graphs and snow-accumulation results. Variability of annual total precipitation is considered.

35-2184
Surface stability in the presence of industrial activities in permafrost areas. (Ustoichivost' poverkhnosti k tekhnogennym vozdeistviiam v oblasti vechnoi merzloty).
Grave, N.A., ed. Yakutsk, Inst. Merzlotovedeniia, SO AN SSSR, 1980. 142p. In Russian. For individual papers see 35-2185 through 35-2195. Refs. passim.

35-2196
Proceedings.
Conference on the Use of Icebergs Scientific and Practical Feasibility, Cambridge, UK, April 1-3, 1980, *Annals of glaciology*, 1980, Vol 1, 136p. For individual papers see 35-2197 through 35-2219 or F-24465 through F-24469, F-24471 through F-24476, F-24478, G-24477 and J-24470. For earlier conferences see 33-4688 or 11F-22079 and 32-4707 or 10F-20448
Meetings, Icebergs, Ice mechanics, Ice models, Ocean currents, Water supply.
This meeting continues the conference of 1977 in Ames, Iowa, investigating ways by which icebergs might be profitably utilized in regions of low annual rainfall The papers dwell to a large degree on iceberg mechanics, ocean currents through which icebergs drift and their effects on the drift, and the ice melting and preservation problems

35-2197
Iceberg water: an assessment.
Weeks, W F., *Annals of glaciology*, 1980, Vol 1, MP 1365, p 5-10, 27 refs
Icebergs, Water supply, Iceberg towing.
This review of the idea of using icebergs as a source of fresh water starts with a historical survey covering the period up to April 1980 and stresses how the approach to the subject has changed with time Both the progress that has been made and the problems that have either just surfaced or never been adequately addressed are discussed It is concluded that successful tows to Australia, clearly the most easily-reached potential delivery site, are possible if icebergs can retain their structural integrity during tows in high seas and if schemes can be developed for docking and processing Tows to sites in the northern hemisphere such as Saudi Arabia and California are significantly more difficult and will remain so until an effective and operationally-realistic method is developed for isolating the iceberg from the warm sea-water that will be encountered during part of the tow Whatever the ultimate resolution of the iceberg-water proposal may be research stimulated by this idea has already resulted in a major improvement in our knowledge of the life and time of real icebergs in real oceans (Auth)

35-2198
Physical characteristics and life expectancy of tabular antarctic icebergs.
Orheim, O., *Annals of glaciology*, 1980, Vol 1, p 11-18, 21 refs.
Icebergs, Ice cover thickness, Ice temperature, Physical properties, South Atlantic Ocean, Antarctica—Weddell Sea.
The Norwegian Antarctic Research Expedition 1978-79 landed on 24 tabular icebergs and flew over many others in the South Atlantic and the Weddell Sea between latitudes 54 and 76S Data were obtained on surface mass balance, stratigraphy density 10 m temperatures crevassing, distribution and age Ice thicknesses were measured by airborne radio echo-sounding (Auth mod)

35-2199
Measurements of the radiation temperature of antarctic icebergs and the surrounding surface water.
Foldvik, A., et al, *Annals of glaciology*, 1980, Vol 1, p 19-22, 9 refs.
Gammelsrod, T., Gjessing, Y
Icebergs, Thermal radiation, Water temperature.
During the Norwegian Antarctic Research Expedition 1978-79 temperature measurements of a number of icebergs and the surrounding surface water were made, using an airborne precision radiation thermometer All icebergs were embedded in cold water-masses with temperatures generally below 0 degrees C and thus the observed temperature anomalies were relatively small deltaT 1 deg Examples of the influence of icebergs on the sea surface temperature including a possible example of upwelling will be shown The temperature of the snow-covered iceberg surface was almost constant with individual variations deltaT 0.2 deg Local minima indicative of snow covered crevasses were observed (Auth)

35-2200
Flexural response of a tabular ice island to ocean swell.
Goodman, D J., et al, *Annals of glaciology*, 1980, Vol 1, p 23-27, 9 refs
Wadhams, P., Squire, V A
Sea ice, Ice islands, Flexural strength, Ocean waves, Greenland—King Oscars Fjord.

35-2201
Measurements of oscillations and flexure of icebergs.
Foldvik, A., et al, *Annals of glaciology*, 1980, Vol 1, p 29-30, 2 refs
Gammelsrod, T., Gjessing, Y
Icebergs, Flexural strength, Oscillations.
During the Norwegian Antarctic Research Expedition 1978-79, direct measurements of oscillations were carried out on 15 icebergs using a tiltmeter with an accuracy of 10 micro-rad The amplitude of the oscillations varied from zero to about 100 micro-rad The zero amplitude indicates that the berg was grounded and this was confirmed by echo-sounding from the ship The observed oscillation periods ranged from 16 to 50 s The observed oscillation periods and the calculated values based on the dimensions and mean density of the bergs were compared and the results are discussed The flexure of the berg was measured with a theodolite and stakes Relative movements exceeding the accuracy of the system (1mm over 1 km distance) were not observed (Auth)

35-2202
Studies of icebergs, ice fronts and ice walls using side-scanning sonar.
Klepsvik, J O., et al, *Annals of glaciology*, 1980, Vol 1, p.31-36, 1 ref.
Fossum, B A
Icebergs, Ice shelves, Acoustic measurement, Antarctica—Weddell Sea.
During the Norwegian Antarctic Research Expedition of 1978-79, a number of experiments were carried out using side-scanning solar techniques for under-water mapping of icebergs ice fronts and ice walls, and for studies of active ploughing areas off ice fronts This paper presents the techniques and some results together with views on operational and environmental aspects of using side-scanning sonar in the Antarctic. From the sonographs it is possible to measure depths of icebergs and ice fronts, and to estimate the magnitudes of shape anomalies Vertical profiles of ice fronts show great variations depending on whether they are grounded or floating Also the acoustic signatures vary according to the elapsed time since calving (Auth)

35-2203
Viscoelastic analysis of calving glaciers.
Reddy, D V., et al, *Annals of glaciology*, 1980, Vol 1, p 37-41, 26 refs
Bobby, W., Arockiasamy, M., Dempster, R T

Potter, J R
Icebergs, Stability.

35-2206
Comments on Southern Ocean near-surface circulation and its variability.
Gordon, A L., *Annals of glaciology*, 1980, Vol 1, p 57-61, Includes discussion 35 refs
Ocean currents.
This literature review discusses the mean and variable surface-layer circulation of the Southern Ocean The variable components are equal to or even more energetic than the mean circulation Therefore circulation charts often do not present the significant currents that exist during specific periods (Auth)

35-2207
Iceberg oscillations and ocean waves.
Schwerdtfeger, P., *Annals of glaciology*, 1980, Vol 1, p 63-65, 1 ref
Icebergs, Oscillations, Ocean waves.
The frequencies of both linear and angular oscillations in a vertical plane of a floating iceberg are shown to converge as the horizontal dimensions become relatively larger For icebergs of thickness of 250 m the calculated period of about 30 s is supported by actual observations which have been reported Because swell in the Southern Ocean may extend to such long periods, a critical relationship between iceberg dimensions and ocean wavelengths has been formulated This relates the conditions under which the length and natural period of an iceberg may respectively coincide with the wavelength and wave period of the ocean (Auth)

35-2208
Flow around icebergs.
Foldvik, A., et al. *Annals of glaciology*, 1980. Vol 1, p 67-70, 3 refs
Gammelsrod, T., Gjessing, Y
Icebergs, Ocean currents, Water flow.
During the Norwegian Antarctic Research Expedition 1978-79 two experiments were carried out to measure flow around icebergs. Drogues were equipped with surface markers constructed to drift with the flow at various levels down to 260 m. They were tracked by a helicopter and a Motorola positioning system. As expected the surface-layer (0 to 20 m) flow was wind-induced but even at greater depths a relative motion of a few cm/s between the water and the iceberg was measured. Such measurements are important for the determination of drag on icebergs, and for melting and erosion processes. (Auth.)

35-2209
Iceberg-seabed interaction (northern Labrador Sea).
Barrie, J.V., *Annals of glaciology*. 1980. Vol 1, p 71-76, 14 refs
Icebergs, Ice scoring, Bottom sediment, Ocean currents.

35-2210
Prediction of an iceberg drift trajectory during a storm.

35-2211
Some satellite-tracked iceberg drifts in the Antarctic.
Vinje, T.E., *Annals of glaciology*, 1980, Vol.1, p.83-87, 12 refs.
Icebergs, Drift, Wind factors, Ocean currents.
The drift of eight tabular icebergs is discussed. In spite of large differences in the vertical dimension, the various icebergs seem to react in a similar manner to wind effects in areas covered with sea ice. Measurements indicate that it takes between one and five years for an iceberg to move into the westerlies from the coastal areas between about 50E and the Antarctic Peninsula.

35-2212
Investigations on the currents influencing iceberg motion.
Dhalluin, M., *Annals of glaciology*, 1980. Vol 1, p 89-93, 2 refs.
Icebergs, Drift, Ocean currents.
Several factors contribute to the natural drift of an iceberg, and among these, currents play an important part on the translation and rotation. Some information exists on surface currents in sub-Antarctic areas, but an iceberg behaves as a current integrator due to its draught and it is assumed to drift under the action of a "mean" current. In order to measure the mean current, five drogued buoys were launched in July-August 1979. These buoys were located by Argos satellite transponders. The drift of the buoys gives the mean current from 0 to 230 m depth in the Southern Ocean. Some corrections must be made on the measured drifting speed of the drogued buoys, because of the influence of the wind on the above water portion of the buoys. (Auth.)

35-2213
Physical processes involved in the melting of icebergs.
Huppert, H.E., *Annals of glaciology*, 1980. Vol.1, p 97-101, 19 refs
Icebergs, Ice melting.
The causes of iceberg deterioration can be discussed under three broad headings: wave-induced melting at the water line, breaking, and melting at the top, bottom, and sides. A short summary of current understanding under the first two headings is presented. It is then argued, under the third heading, that the melt rate at the sides of a tabular Antarctic iceberg is likely to exceed that at the top and bottom. The behaviour of the entraining plume which forms at the side of an iceberg when it melts in water of uniform salinity is outlined. Another form of convection, occurring when the ambient water is stratified, is then described, in this case the melt water spreads out in a series of almost horizontal layers. Finally, field observations on iceberg melting are discussed. (Auth.)

35-2214
Antarctic iceberg melt rates derived from size distributions and movement rates.
Budd, W.F., et al. *Annals of glaciology*, 1980. Vol 1, p 103-112, 13 refs
Jacka, T.H., Morgan, V.I
Icebergs, Ice melting, Drift.
The melt rates of Antarctic icebergs were based primarily on the distribution of iceberg concentrations. Recent more detailed data have been obtained, especially north of lat 60S which allow more precise calculations of the changes in size during drifting. On ANARE voyages each summer since 1977, observations of icebergs have included photographs, number per unit area from ship's radar, widths, heights, and shapes. These data have allowed separate calculations to be made for tabular icebergs which give a clearer indication of the contribution to average size changes of melting, breakage, and rollover. New data from satellite transponders placed on icebergs have provided more definite estimates of the average northward and then eastward drift rates of icebergs near 90E. Combined with the new data on size more accurate melt rates have been derived. (Auth. mod.)

35-2215
Iceberg melt-driven convection inferred from field measurements of temperature.

35-2218
Design parameters for a South African iceberg power and water project.
DeMarle, D.J., *Annals of glaciology*, 1980 Vol 1, p.129-133, 14 refs
Icebergs, Water supply, Electric power, South Africa.
Construction of an iceberg processing plant at Saldanha Bay, Republic of South Africa, is proposed. A reservoir would be constructed at Riebaai for ice storage. Tidal forces would be harnessed to pump the warm water of Saldanha Lagoon over heat exchangers (using ammonia or propane gas as a heat exchange medium), thus providing power for electrical generators and for melting ice. A functional analysis of operations is presented together with proposed costs. It is suggested that the fresh water and electricity produced by this system will cost 6 cents/cu m and 5 cents/kWH, respectively. Antarctica provides a ready source of icebergs for use in this project. (Auth. mod.)

35-2219
Some environmental questions: an after-dinner address.
Holdgate, M.W., *Annals of glaciology*, 1980. Vol 1, p.135-136
Iceberg towing, Environmental impact.
The author broaches some questions on the environments which icebergs will cross during towing operations. Specifically he poses questions such as: are we able to guarantee keeping Indian Ocean shipping lanes free of growlers and bergy bits from antarctic icebergs to avoid an unsuspecting supertanker oil spill? Or how will marine life at a tropical towing destination port react to the sudden temperature change? And who owns the icebergs? What are some of the legal considerations?

Frazil ice in rivers and oceans.
Martin, S, *Annual review of fluid mechanics*, 1981, Vol.13, p 379-397, 49 refs
Frazil ice, River ice, Sea ice, Ice formation, Ice crystal structure, Ice mechanics, Sintering, Heat transfer, Viscosity, Polynyas, Ocean currents.
A discussion is presented on the problems of frazil ice formation, flow, and deposition in rivers and oceans The underwater observations in the Arctic and Antarctic are very similar to the river observations Formation of large billows of frazil platelets was observed under solid ice cover in McMurdo Sound, and on the surface in large polynyas and under the ice in the Mirnyy Station area The under-ice dispersal of frazil ice depends on local currents and in regions such as Molodezhnaya Road where the current velocity is zero, frazil-ice billows are not observed

Movement of continental ice. (K voprosu o dvizhenii materikovykh l'dov).
Bagrov, N A., *Meteorologiya i gidrologiya*, Nov 1980, No 11, p 54-62, In Russian with English summary 12 refs
Ice sheets, Land ice, Ice mechanics, Glacier flow, Antarctica.
The problem of motion of continental ice is considered using the hypothesis of linearity of resistance to motion It is ascertained that the motion speed is proportional to the glacier surface inclination A model of a circular glacier is constructed and applied to the Antarctic glacier Results are in fairly good agreement with available data when one component (the resistance coefficient) is given (Auth.)

35-2250
Radar methods of studying the earth. (Radiolokatsionnye metody issledovaniya zemli).

Cryogenesis and soil climate in troughs of the northern Baykal area. (Kriogenez i klimat pochv vpadin Severnogo Pribaikal'ia).
Zamana, L V , Vsesoiuznaia konferentsiia po prognozu izmeneniia kriogennykh pochv pod vliianiem khoziaistvennogo osvoeniia territorii, Pushchino, Oct. 29-31, 1980 Tezisy dokladov (All-Union conference on forecasting changes in cryogenic soils due to economic development, Pushchino, Oct 29-31, 1980 Abstracts) edited by V.G Chigir, Pushchino, 1980, p.73-75, In Russian
Permafrost distribution, Discontinuous permafrost, Cryogenic soils, Soil temperature, Baykal Amur railroad, USSR—Baykal Lake.

35-2277
Some functional interrelationships between the hydrothermal and cryogenic regimes of soils. (O nekotorykh funktsional'nykh vzaimosviaziakh gidrotermicheskogo i merzlotnogo rezhimov pochv).
Kulikov, A I , et al. Vsesoiuznaia konferentsiia po prognozu izmeneniia kriogennykh pochv pod vliianiem khoziaistvennogo osvoeniia territorii, Pushchino, Oct. 29-31, 1980. Tezisy dokladov (All-Union conference on forecasting changes in cryogenic soils due to economic development, Pushchino, Oct. 29-31, 1980 Abstracts) edited by V G Chigir, Pushchino, 1980, p.76-78, In Russian
Dugarov, V.I
Cryogenic soils, Thermal regime, Soil water migration, Permafrost hydrology, Soil temperature, Permafrost thermal properties, Permafrost depth, Heat transfer.

35-2278
Dynamics of geochemical indices of cryogenic arid steppe soils. (Dinamika pochvenno-geokhimicheskikh pokazatelei stepnykh kriaridnykh pochv).
Snytko, V A , Vsesoiuznaia konferentsiia po prognozu izmeneniia kriogennykh pochv pod vliianiem khoziaistvennogo osvoeniia territorii, Pushchino, Oct. 29-31, 1980 Tezisy dokladov (All-Union conference on forecasting changes in cryogenic soils due to economic development, Pushchino, Oct 29-31, 1980. Abstracts) edited by V G. Chigir, Pushchino, 1980, p 78-79, In Russian
Steppes, Cryogenic soils, Soil formation, Arid land, Soil moisture, Soil chemistry.

35-2279
Soil moisture dynamics in the eastern part of the Siberian and Far Eastern permafrost areas. (Dinamika produktivnoi vlagi v pochvakh vostochnoi chasti Sibirskoi i Dal'nevostochnoi merzlotnykh oblastei).
Oznobikhin, V I , et al. Vsesoiuznaia konferentsiia po prognozu izmeneniia kriogennykh pochv pod vliianiem khoziaistvennogo osvoeniia territorii, Pushchino, Oct 29-31, 1980 Tezisy dokladov (All-Union conference on forecasting changes in cryogenic soils due to economic development, Pushchino, Oct. 29-31, 1980 Abstracts) edited by V G Chigir, Pushchino, 1980, p.80-81, In Russian.
Puzrina, M A
Cryogenic soils, Active layer, Soil water migration, Water reserves.

35-2280
Cryogenic soils of taiga and bald-peak forests in the People's Republic of Mongolia and their utilization. (Merzlotnye pochvy taezhnykh i podgol'tsovykh lesov MNR i puti ikh ratsional'nogo ispol'zovaniia).
Ogorodnikov, A V , Vsesoiuznaia konferentsiia po prognozu izmeneniia kriogennykh pochv pod vliianiem khoziaistvennogo osvoeniia territorii, Pushchino, Oct 29-31, 1980 Tezisy dokladov (All-Union conference on forecasting changes in cryogenic soils due to economic development, Pushchino, Oct 29-31, 1980 Abstracts) edited by V G Chigir, Pushchino, 1980, p.81-83, In Russian
Alpine landscapes, Cryogenic soils, Forest soils, Taiga, Permafrost distribution, Soil profiles, Ground ice, Soil formation.

35-2281
Recent and paleo-cryogenesis in the soils of northeastern Khangay, People's Republic of Mongolia. (Sovremennyĭ paleokriogenez v pochvakh severo-vostochnogo Khangaia (Mongol'skaia Narodnaia Respublika)).
Maksimovich, S.V , Vsesoiuznaia konferentsiia po prognozu izmeneniia kriogennykh pochv pod vliianiem khoziaistvennogo osvoeniia territorii, Pushchino, Oct 29-31, 1980 Tezisy dokladov (All-Union conference on forecasting changes in cryogenic soils due to economic development, Pushchino, Oct 29-31, 1980 Abstracts) edited by V G Chigir, Pushchino, 1980, p 83-85, In Russian.
Sporadic permafrost, Soil formation, Cryogenic soils, Alpine landscapes, Landscape types, Forest soils, Meadow soils.

35-2282
Role of long periods of seasonal freezing in the formation of forest litter in Amur region spruce forests (Rol' dlitel'noi sezonnoi merzloty v formirovanii podstilki el'nikov Priamur'ia).
Krupskaia, L T , Vsesoiuznaia konferentsiia po prognozu izmeneniia kriogennykh pochv pod vliianiem khoziaistvennogo osvoeniia territorii, Pushchino, Oct 29-31, 1980 Tezisy dokladov (All-Union conference on forecasting changes in cryogenic soils due to economic development, Pushchino, Oct 29-31, 1980 Abstracts) edited by V G Chigir, Pushchino, 1980, p 85-85, In Russian
Forest soils, Cryogenic soils, Seasonal freeze thaw, Litter, Soil temperature.

35-2283
Regionalization of the northeastern USSR according to winter soil temperatures. (O raionirovanii Severo-Vostoka SSSR po zimnim temperaturam pochv)
Mikhailov, V M , Vsesoiuznaia konferentsiia po prognozu izmeneniia kriogennykh pochv pod vliianiem khoziaistvennogo osvoeniia territorii, Pushchino, Oct 29-31, 1980 Tezisy dokladov (All-Union conference on forecasting changes in cryogenic soils due to economic development, Pushchino, Oct 29-31, 1980. Abstracts) edited by V.G. Chigir, Pushchino, 1980, p 90-93, In Russian.
Cryogenic soils, Soil temperature, Mapping.

35-2284
Magnitude of the gap between zero-isotherm depth and thicknesses of frozen layers in seasonally and perennially frozen grounds. (O velichine razryva mezhdu glubinoi proniknoveniia nulevoi geoizotermy i moshchnost'iu merzlotnogo sloia v promerzaiushchikh gruntakh sezonnoi i mnogoletnei kriolitozony).
Vecherskii, S.S., Vsesoiuznaia konferentsiia po prognozu izmeneniia kriogennykh pochv pod vliianiem khoziaistvennogo osvoeniia territorii, Pushchino, Oct 29-31, 1980. Tezisy dokladov (All-Union conference on forecasting changes in cryogenic soils due to economic development, Pushchino, Oct. 29-31, 1980 Abstracts) edited by V.G. Chigir, Pushchino, 1980 p.96-98, In Russian
Cryogenic soils, Soil temperature, Active layer, Permafrost thickness, Frozen ground temperature, Permafrost depth.

35-2285
Influence of thermal conditions on biologic activity of forest soils. (Vliianie termicheskikh uslovii na biologicheskuiu deiatel'nost' lesnykh pochv).
Popova, E.P., Vsesoiuznaia konferentsiia po prognozu izmeneniia kriogennykh pochv pod vliianiem khoziaistvennogo osvoeniia territorii, Pushchino, Oct 29-31, 1980 Tezisy dokladov (All-Union conference on forecasting changes in cryogenic soils due to economic development, Pushchino, Oct 29-31, 1980 Abstracts) edited by V G Chigir, Pushchino, 1980, p 98-100, In Russian
Forest soils, Soil microbiology, Taiga, Cryogenic soils, Soil temperature.

35-2286
Variations of eastern Transbaikal soils in time and space. (Prostranstvennaia i vremennaia izmenchivost' pochv Vostochnogo Zabaikal'ia).
Kerzhentsev, A S , Vsesoiuznaia konferentsiia po prognozu izmeneniia kriogennykh pochv pod vliianiem khoziaistvennogo osvoeniia territorii Pushchino Oct 29-31, 1980 Tezisy dokladov (All-Union conference on forecasting changes in cryogenic soils due to economic development, Pushchino, Oct 29-31 1980 Abstracts) edited by V G Chigir, Pushchino, 1980, p 100-102, In Russian
Cryogenic soils, Soil profiles, Landscape types, Permafrost depth, Permafrost thickness, Soil microbiology, Biomass, USSR—Transbaikal.

35-2287
Effect of cryogenesis on physical properties and moisture regime of cryogenic meadow-swamp soils of the Baykal Amur railroad area. (Vliianie kriogeneza na fizicheskie svoĭstva i vodnyĭ rezhim merzlotnykh lugovo-bolotnykh pochv (na primere pochv zony BAMa)).
Khudiakov, O.I , et al. Vsesoiuznaia konferentsiia po prognozu izmeneniia kriogennykh pochv pod vliianiem khoziaistvennogo osvoeniia territorii, Pushchino Oct 29-31, 1980 Tezisy dokladov (All-Union conference on forecasting changes in cryogenic soils due to economic development, Pushchino, Oct. 29-31, 1980 Abstracts) edited by V G Chigir, Pushchino 1980, p.102-104, In Russian.
Butsenko, A N., Ksenzova, A A
Permafrost distribution, Swamps, Meadow soils, Cryogenic soils, Permafrost thickness, Permafrost depth, Soil formation, USSR—Chita.

35-2288
Phase composition of water in frozen soils and their supercooling and freezing temperatures. (Fazovyĭ sostav vody v merzlykh pochvogruntakh i temperatury ikh pereokhlazhdeniia i zamerzaniia).
Shtykov, V I , Vsesoiuznaia konferentsiia po prognozu izmeneniia kriogennykh pochv pod vliianiem khoziaistvennogo osvoeniia territorii, Pushchino, Oct 29-31, 1980 Tezisy dokladov (All-Union conference on forecasting changes in cryogenic soils due to economic development, Pushchino, Oct 29-31, 1980 Abstracts) edited by V G Chigir, Pushchino, 1980, p 105-107, In Russian.
Soil freezing, Soil water migration, Phase transformations, Frozen fines, Soil temperature, Unfrozen water content, Supercooling.

35-2289
Cryogenic migration and crystallization of substances in tundra and forest tundra soils. (O kriogennoi migratsii i kristallizatsii veshchestv v pochvakh tundry i lesotundry).
Zvereva, T S , et al. Vsesoiuznaia konferentsiia po prognozu izmeneniia kriogennykh pochv pod vliianiem khoziaistvennogo osvoeniia territorii Pushchino Oct 29-31, 1980 Tezisy dokladov (All-Union conference on forecasting changes in cryogenic soils due to economic development, Pushchino, Oct 29-31, 1980 Abstracts) edited by V G Chigir Pushchino 1980, p 107-109, In Russian
Ignatenko, I V
Cryogenic soils, Soil chemistry, Solutions, Soil colloids, Soil water migration, Frost penetration, Phase transformations, Dispersions, Coagulation

35-2290
Role of the cryogenic factor in the migration of salts and moisture in Baraba Plain soils. (Rol' kriogennogo faktora v dvizhenii vlagi i solei v pochvakh Barabinskoi ravniny).
Melesk, Kh Kh , Vsesoiuznaia konferentsiia po prognozu izmeneniia kriogennykh pochv pod vliianiem khoziaistvennogo osvoeniia territorii Pushchino Oct 29-31, 1980 Tezisy dokladov (All-Union conference on forecasting changes in cryogenic soils due to economic development, Pushchino, Oct 29-31, 1980 Abstracts) edited by V G Chigir, Pushchino, 1980, p 110-111, In Russian
Frozen fines, Frost penetration, Moisture transfer, Solutions, Saline soils, Cryogenic soils.

35-2291
Moisture transfer between Kulunda soils and ground water during freezing and thawing. (Vlagoobmen mezhdu pochvoi i gruntovymi vodami pri promerzanii-ottaivanii v Kulunde),
Sen'kov, A.A., Vsesoiuznaia konferentsiia po prognozu izmeneniia kriogennykh pochv pod vliianiem khoziaistvennogo osvoeniia territorii, Pushchino, Oct. 29-31, 1980. Tezisy dokladov (All-Union conference on forecasting changes in cryogenic soils due to economic development, Pushchino, Oct. 29-31, 1980. Abstracts) edited by V.G. Chigir, Pushchino, 1980, p.111-113, In Russian.
Frozen fines, Freeze thaw cycles, Moisture transfer, Frost penetration, Phase transformations, Sands, Test equipment.

35-2292
Temperature and freezing of soils in forest lands during drainage. (Temperatura i promerzanie pochvogruntov na ob"ektakh lesoosushitel'noi melioratsii),
Chesnokov, V.A., Vsesoiuznaia konferentsiia po prognozu izmeneniia kriogennykh pochv pod vliianiem khoziaistvennogo osvoeniia territorii, Pushchino, Oct. 29-31, 1980. Tezisy dokladov (All-Union conference on forecasting changes in cryogenic soils due to economic development, Pushchino, Oct. 29-31, 1980. Abstracts) edited by V.G. Chigir, Pushchino, 1980, p.115-117, In Russian.
Forest land, Paludification, Soil freezing, Drainage, Soil temperature.

35-2293
Thermal regime, oxidation-reduction processes and the effectiveness of fertilizers in southern tundra soils. (Osobennosti temperaturnogo rezhima, okislitel'no-vosstanovitel'nykh protsessov i effektivnost' udobrenii v pochvakh iuzhnoi tundry),
Antonov, N.A., et al, Vsesoiuznaia konferentsiia po prognozu izmeneniia kriogennykh pochv pod vliianiem khoziaistvennogo osvoeniia territorii, Pushchino, Oct. 29-31, 1980. Tezisy dokladov (All-Union conference on forecasting changes in cryogenic soils due to economic development, Pushchino, Oct 29-31, 1980 Abstracts) edited by V G Chigir, Pushchino, 1980, p.117-118, In Russian.
Kononenko, A.V., Tsypanova, A.N.
Tundra, Cryogenic soils, Thermal regime, Soil chemistry, Vegetation factors, Permafrost depth.

35-2294
Prospects of soil melioration in the Kas-Yenisey interfluve. (Perspektivy pochvennykh melioratsii Kas-Eniseiskogo mezhdurech'ia),
Konstantinov, V D , et al, Vsesoiuznaia konferentsiia po prognozu izmeneniia kriogennykh pochv pod vliianiem khoziaistvennogo osvoeniia territorii, Pushchino, Oct. 29-31, 1980. Tezisy dokladov (All-Union conference on forecasting changes in cryogenic soils due to economic development, Pushchino, Oct 29-31, 1980. Abstracts) edited by V G Chigir, Pushchino, 1980, p.122-124, In Russian.
Gorozhankina, S.M.
Taiga, Landscape types, Cryogenic soils, Soil water, Thermal regime, Paludification, Land reclamation.

35-2295
Changes in thermal properties of forest peat soils in West Siberia due to drainage. (Izmenenie teplovykh svoistv lesnykh torfianykh pochv Zapadnoi Sibiri pod vliianiem osusheniia),
Efremov, S.P., et al, Vsesoiuznaia konferentsiia po prognozu izmeneniia kriogennykh pochv pod vliianiem khoziaistvennogo osvoeniia territorii, Pushchino, Oct. 29-31, 1980. Tezisy dokladov (All-Union conference on forecasting changes in cryogenic soils due to economic development, Pushchino, Oct. 29-31, 1980. Abstracts) edited by V.G. Chigir, Pushchino, 1980, p.124-126, In Russian.
Efremova, T.T.
Forest soils, Paludification, Drainage, Cryogenic soils, Thermal properties.

35-2296
Changes in thermal regime of soils induced by tree cultivation. (Izmenenie teplovogo rezhima pochv pod vliianiem drevesnykh kul'tur),
Shugaleĭ, L.S., et al, Vsesoiuznaia konferentsiia po prognozu izmeneniia kriogennykh pochv pod vliianiem khoziaistvennogo osvoeniia territorii, Pushchino, Oct. 29-31, 1980. Tezisy dokladov (All-Union conference on forecasting changes in cryogenic soils due to economic development, Pushchino, Oct 29-31, 1980. Abstracts) edited by V.G. Chigir, Pushchino, 1980, p.129-131, In Russian.
IAshikhin, G.I.
Forestry, Forest soils, Freeze thaw cycles, Soil temperature, Frost penetration, Vegetation factors, Snow cover effect.

35-2297
Temperature regime of cyrogenic soils in Transbaikal in agrophytocenoses of the seedling-tillering period. (Temperaturnyi rezhim merzlotnykh pochv Zabaikal'ia v agrofitotsenozakh mezhfaznogo perioda vskhody-kushcheniei),
Russkikh, A.M., Vsesoiuznaia konferentsiia po prognozu izmeneniia kriogennykh pochv pod vliianiem khoziaistvennogo osvoeniia territorii, Pushchino, Oct 29-31, 1980. Tezisy dokladov (All-Union conference on forecasting changes in cryogenic soils due to economic development, Pushchino, Oct. 29-31, 1980. Abstracts) edited by V.G. Chigir, Pushchino, 1980, p.131-132, In Russian.
Cryogenic soils, Soil temperature, Vegetation, Roots, Soil profiles, Irrigation, Permafrost depth, USSR—Transbaikal.

35-2298
Changes in temperature regime of cryogenic meadow-swamp soils due to cultivation. (Osobennosti izmeneniia temperaturnogo rezhima pri okul'turivanii merzlotnykh lugovo-bolotnykh pochv),
Khudiakov, O.I , et al, Vsesoiuznaia konferentsiia po prognozu izmeneniia kriogennykh pochv pod vliianiem khoziaistvennogo osvoeniia territorii, Pushchino, Oct. 29-31, 1980. Tezisy dokladov (All-Union conference on forecasting changes in cryogenic soils due to economic development, Pushchino, Oct. 29-31, 1980. Abstracts) edited by V.G. Chigir, Pushchino, 1980, p.134-136, In Russian.
Butsenko, A.N.
Meadow soils, Swamps, Peat, Cryogenic soils, Albedo, Soil temperature, Frost penetration, Snow cover effect.

35-2299
Changes in temperature regime of cryogenic soils in larch forests of the Central Khangay induced by felling. (Temperaturnyi rezhim merzlotnykh pochv listvennichnikov Tsentral'nogo Khangaia i izmenenie ego pod vliianiem vyrubok),
Krasnoshchekov, IU.N., Vsesoiuznaia konferentsiia po prognozu izmeneniia kriogennykh pochv pod vliianiem khoziaistvennogo osvoeniia territorii, Pushchino, Oct. 29-31, 1980. Tezisy dokladov (All-Union conference on forecasting changes in cryogenic soils due to economic development, Pushchino, Oct. 29-31, 1980. Abstracts) edited by V.G. Chigir, Pushchino, 1980, p.136-137, In Russian.
Forest soils, Cryogenic soils, Forestry, Biomass, Soil temperature, Revegetation, Felled areas.

35-2300
Moss cover effect on temperature regime of forest soils subject to long seasonal freezing. (Vliianie mokhovogo pokrova v lesu na temperaturnyi rezhim dlitel'no sezonnomerzlotnykh pochv),
Buzykin, A.I., Vsesoiuznaia konferentsiia po prognozu izmeneniia kriogennykh pochv pod vliianiem khoziaistvennogo osvoeniia territorii, Pushchino, Oct. 29-31, 1980. Tezisy dokladov (All-Union conference on forecasting changes in cryogenic soils due to economic development, Pushchino, Oct. 29-31, 1980. Abstracts) edited by V.G. Chigir, Pushchino, 1980, p.141-143, In Russian.
Forest soils, Cryogenic soils, Soil temperature, Vegetation factors, Mosses.

35-2301
Effect of maintenance felling on biologic activity of cryogenic taiga soils in the Angara River area. (Vliianie rubok ukhoda na biologicheskuiu aktivnost' kriogennykh taezhnykh pochv Priangar'ia),
Sorokin, N D , Vsesoiuznaia konferentsiia po prognozu izmeneniia kriogennykh pochv pod vliianiem khoziaistvennogo osvoeniia territorii, Pushchino, Oct 29-31, 1980. Tezisy dokladov (All-Union conference on forecasting changes in cryogenic soils due to economic development, Pushchino, Oct 29-31, 1980 Abstracts) edited by V.G Chigir, Pushchino, 1980, p.143-144, In Russian.
Taiga, Cryogenic soils, Soil temperature. Forestry.

35-2302
Forecasting seasonal freezing depth of soils in areas affected by seepage-type water intakes. (Prognoz glubiny sezonnogo promerzaniia pochv i gruntov v zone vliianiia vodozaborov infil'tratsionnogo tipa),
Solomennik, S.F., Vsesoiuznaia konferentsiia po prognozu izmeneniia kriogennykh pochv pod vliianiem khoziaistvennogo osvoeniia territorii, Pushchino, Oct 29-31, 1980. Tezisy dokladov (All-Union conference on forecasting changes in cryogenic soils due to economic development, Pushchino, Oct. 29-31, 1980 Abstracts) edited by V G Chigir, Pushchino, 1980, p.150-151, In Russian.
Rivers, Water intakes, Soil water migration, Heat transfer, Soil temperature, Seasonal freeze thaw, Frost penetration.

35-2303
Physico-chemical characteristics of old and recent soils in the evaluation of landscape-chemical conditions of their formation. (Fiziko-khimicheskie kharakteristiki paleo- i sovremennykh pochv pri otsenke landshaftno-geokhimicheskikh uslovii ikh formirovaniia),
Uchvatov, V.P., Vsesoiuznaia konferentsiia po prognozu izmeneniia kriogennykh pochv pod vliianiem khoziaistvennogo osvoeniia territorii, Pushchino, Oct. 29-31, 1980. Tezisy dokladov (All-Union conference on forecasting changes in cryogenic soils due to economic development, Pushchino, Oct. 29-31, 1980 Abstracts) edited by V.G. Chigir, Pushchino, 1980, p.152-154, In Russian.
Quaternary deposits, Podsol, Soil profiles, Landscape types, Soil physics, Soil chemistry.

35-2304
Paleocrycogenesis and evolution of grey forest soils. (Paleokriogenez i evoliutsiia serykh lesnykh pochv),
Alifanov, V.M., Vsesoiuznaia konferentsiia po prognozu izmeneniia kriogennykh pochv pod vliianiem khoziaistvennogo osvoeniia territorii, Pushchino, Oct. 29-31, 1980 Tezisy dokladov (All-Union conference on forecasting changes in cryogenic soils due to economic development, Pushchino, Oct. 29-31, 1980. Abstracts) edited by V.G. Chigir, Pushchino, 1980, p.154-156, In Russian.
Forest soils, Frost action, Polygonal topography, Soil formation, Soil profiles, Cryogenic soils.

35-2305
Origin and evolution of soils in southern tundra of the European USSR in relation to cryogenic relief. (O genezise i evoliutsii pochv iuzhnoi tundry ETS v sviazi s kriogenezom),
Fominykh, L.A , et al, Vsesoiuznaia konferentsiia po prognozu izmeneniia kriogennykh pochv pod vliianiem khoziaistvennogo osvoeniia territorii, Pushchino, Oct. 29-31, 1980 Tezisy dokladov (All-Union conference on forecasting changes in cryogenic soils due to economic development, Pushchino, Oct. 29-31, 1980. Abstracts) edited by V.G Chigir, Pushchino, 1980, p.159-161, In Russian.
Gubin, S.V.
Landscape types, Cryogenic soils. Soil formation, Polygonal topography, USSR—Bol'shezemel'skaya Tundra.

35-2306
Soils of dark conifer forests in the Khamar-Daban mountains and history of their development. (Pochvy temnokhvoinykh lesov srednegor'ia khrebta Khamar-Daban i istoriia ikh razvitiia),
Molokov, V.A., et al, Vsesoiuznaia konferentsiia po prognozu izmeneniia kriogennykh pochv pod vliianiem khoziaistvennogo osvoeniia territorii, Pushchino, Oct. 29-31, 1980 Tezisy dokladov (All-Union conference on forecasting changes in cryogenic soils due to economic development, Pushchino, Oct 29-31, 1980. Abstracts) edited by V G Chigir, Pushchino, 1980, p.167-169, In Russian.
Zubarev, A.P.
Mountain soils, Taiga, Cryogenic soils, Soil profiles, Soil formation, Soil chemistry.

35-2307
Cryogenic phenomena in the Late Pleistocene deposits of southeastern Siberia and their influence on recent soils. (Kriogennye iavleniia v pozdnepleĭstotsenovykh otlozheniiakh iuga Vostochnoĭ Sibiri i ikh vliianie na sovremennyĭ pochvennyĭ pokrov),
Vorob'eva, G.A., et al, Vsesoiuznaia konferentsiia po prognozu izmeneniia kriogennykh pochv pod vliianiem khoziaĭstvennogo osvoeniia territoriĭ, Pushchino, Oct 29-31, 1980. Tezisy dokladov (All-Union conference on forecasting changes in cryogenic soils due to economic development, Pushchino, Oct. 29-31, 1980 Abstracts) edited by V.G. Chigir, Pushchino, 1980, p.169-171, In Russian.
Korzun, M.A., Gavva, L.I.
Cryogenic soils, Soil structure, Soil formation, Frost action, Soil chemistry, Soil moisture.

35-2308
Buried soils of Upper Pleistocene deposits of North Yakutia. (Pogrebennye pochvy verkhne-pleĭstotsenovykh otlozheniĭ Severnoĭ IAkutii),
Gubin, S.V., Vsesoiuznaia konferentsiia po prognozu izmeneniia kriogennykh pochv pod vliianiem khoziaĭstvennogo osvoeniia territoriĭ, Pushchino, Oct. 29-31, 1980. Tezisy dokladov (All-Union conference on forecasting changes in cryogenic soils due to economic development, Pushchino, Oct 29-31, 1980. Abstracts) edited by V.G. Chigir, Pushchino, 1980, p.171-173, In Russian.
Patterned ground, Permafrost structure, Ice wedges, Soil formation, Cryogenic soils, Soil profiles, Frozen fines, Loess.

35-2309
History of cryogenic soil development in tundra lake landscapes. (Kriogennye pochvy ozerno-tundrovogo landshafta i istoriia ikh razvitiia),
Evseev, A.V., Vsesoiuznaia konferentsiia po prognozu izmeneniia kriogennykh pochv pod vliianiem khoziaĭstvennogo osvoeniia territoriĭ, Pushchino, Oct. 29-31, 1980. Tezisy dokladov (All-Union conference on forecasting changes in cryogenic soils due to economic development, Pushchino, Oct. 29-31, 1980. Abstracts) edited by V.G. Chigir, Pushchino, 1980, p.173-174, In Russian.
Shores, Tundra, Lakes, Cryogenic soils, Soil formation, Arctic Ocean.

35-2310
Geocryology of northeastern Khangay (People's Republic of Mongolia). (Kriogenez v severo-vostochnom Khangae (MNR)),
Chigir, V.G., Vsesoiuznaia konferentsiia po prognozu izmeneniia kriogennykh pochv pod vliianiem khoziaĭstvennogo osvoeniia territoriĭ, Pushchino, Oct. 29-31, 1980. Tezisy dokladov (All-Union conference on forecasting changes in cryogenic soils due to economic development, Pushchino, Oct. 29-31, 1980. Abstracts) edited by V.G. Chigir, Pushchino, 1980, p.175-177, In Russian.
Mountain soils, Cryogenic soils, Frost penetration, Permafrost distribution, Ground ice, Seasonal freeze thaw, Soil structure, Slope orientation, Snow cover effect.

35-2311
Peculiarities of hydrothermal regimes of cryogenic taiga soils in the Khangay Mountains (People's Republic of Mongolia). (Osobennosti rezhimov tepla i vlagi merzlotno-taezhnykh pochv Khangaia (MNR)),
Khudiakov, O.I., Vsesoiuznaia konferentsiia po prognozu izmeneniia kriogennykh pochv pod vliianiem khoziaĭstvennogo osvoeniia territoriĭ, Pushchino, Oct. 29-31, 1980. Tezisy dokladov (All-Union conference on forecasting changes in cryogenic soils due to economic development, Pushchino, Oct. 29-31, 1980. Abstracts) edited by V.G. Chigir, Pushchino, 1980, p.177-178, In Russian.
Mountain soils, Taiga, Cryogenic soils, Thermal regime, Permafrost hydrology, Heat transfer.

35-2312
Biologic productivity and nutrient element balance of cryogenic soils and ways of their optimization. (Bioproduktivnost' i balans elementov pitaniia kriogennykh pochv i puti ikh optimizatsii),
Gershevich, E.G., Vsesoiuznaia konferentsiia po prognozu izmeneniia kriogennykh pochv pod vliianiem khoziaĭstvennogo osvoeniia territoriĭ, Pushchino, Oct 29-31, 1980. Tezisy dokladov (All-Union conference on forecasting changes in cryogenic soils due to economic development, Pushchino, Oct 29-31, 1980. Abstracts) edited by V.G. Chigir, Pushchino, 1980, p.183-186, In Russian.
Cryogenic soils, Soil microbiology, Vegetation, Biomass, Nutrient cycle.

35-2313
Soil preservation in northern territories. (K voprosu ob okhrane pochvennogo pokrova severnykh territoriĭ),
Chigir, V.G., Vsesoiuznaia konferentsiia po prognozu izmeneniia kriogennykh pochv pod vliianiem khoziaĭstvennogo osvoeniia territoriĭ, Pushchino, Oct. 29-31, 1980. Tezisy dokladov (All-Union conference on forecasting changes in cryogenic soils due to economic development, Pushchino, Oct. 29-31, 1980 Abstracts) edited by V.G. Chigir, Pushchino, 1980, p.188-190, In Russian.
Cryogenic soils, Soil erosion, Human factors, Permafrost structure, Ground ice, Environmental protection, Permafrost transformation.

35-2314
Soil disturbance in the Nadym-Pur interfluve area due to the construction of linear structures. (Narushenita pochvennogo pokrova mezhdurech'ia Nadym-Pur v rezul'tate stroitel'stva lineĭnykh sooruzheniĭ),
Sopina, E.P., Vsesoiuznaia konferentsiia po prognozu izmeneniia kriogennykh pochv pod vliianiem khoziaĭstvennogo osvoeniia territoriĭ, Pushchino, Oct. 29-31 1980. Tezisy dokladov (All-Union conference on forecasting changes in cryogenic soils due to economic development, Pushchino, Oct. 29-31, 1980. Abstracts) edited by V.G. Chigir, Pushchino, 1980, p.190-191, In Russian.
Pipelines, Roads, Permafrost beneath structures, Cryogenic soils, Soil erosion, Vegetation factors, Soil temperature.

35-2315
Automated system for collecting snow and related hydrological data in mountains of the western United States.
Rallison, R.E., *Hydrological sciences bulletin*, Mar 1981, 26(1), p.83-89, Paper presented at the Symposium on Hydrological Forecasting, Oxford, UK, April 1980. In English with French summary. 4 refs.
Remote sensing, Data processing.

35-2316
Implications of alternative national energy policies for tundra ecosystems.
Schofield, E.A., Energy and the fate of ecosystems, Study of nuclear and alternative energy systems. Supporting paper 8, Washington, D.C., National Academy Press, 1980, p.274-296, Refs. p.293-296.
Tundra, Ecosystems, Environmental impact, Natural resources, Alpine landscapes, Offshore drilling, Pipelines.

35-2317
Final report: investigation of thermally actuated water migration in frozen soils to the Department of Energy, Mines and Resources Earth Physics Branch.
Williams, P.J., et al, Ottawa, Ontario, Carleton University, Geotechnical Science Laboratories, Apr 1980, 74p., DDS File No.05SU-23235-9-0484, 27 refs.
Perfect, E.
Frozen ground, Soil water migration, Thermal effects, Unfrozen water content, Permeability, Temperature gradients, Flow rate, Hydraulics.

35-2318
Mathematical description of crystallization processes. (Matematicheskoe opisanie protsessov kristallizatsii),
Avdonin, N.A., Riga, Zinatne, 1980, 178p., In Russian. 100 refs.
Stefan problem, Mathematical models, Phase transformations, Supercooling, Crystallization.

35-2319
Bituminous roofing membranes—practical considerations.
Turenne, R.G., *Canadian building digest*, July 1980, No.211, p.1-4, 4 refs.
Bitumens, Roofs, Cold weather construction, Moisture, Temperature effects.

35-2320
Geographic aspects of redirection of river courses in West Siberia. (Geograficheskie aspekty problemy pereraspredeleniia stoka v Zapadnoĭ Sibiri),
Bachurin, G.V., ed, Irkutsk, 1979, 135p., In Russian. For selected papers see 35-2321 through 35-2329. Refs. passim.
Geleta, I.F., ed, Petrov, I.B., ed.
Rivers, Flow control, Human factors, Environmental protection, Climatic changes, Taiga, Swamps, Steppes, Cryogenic soils, Soil temperature, Soil microbiology, Soil chemistry, Vegetation, Ecosystems, USSR—Siberia.

35-2321
Long range program of complex studies of the Ob'-Irtysh Natural Resource Development Center. (K programme mnogoletnikh kompleksnykh issledovaniĭ Ob'-Irtyshskogo prirodno-territorial'nogo tsentra),
Mikheev, V.S., et al, Geograficheskie aspekty problemy pereraspredeleniia stoka v Zapadnoĭ Sibiri (Geographic aspects of redirection of river courses in West Siberia) edited by G.V. Bachurin, I.F. Geleta and I.B. Petrov, Irkutsk, 1979, p.3-16, In Russian. 16 refs.
Bachurin, G.V., Petrov, I.B.
Flow control, Landscape types, Environmental protection, Taiga, Swamps, Steppes, Research projects, USSR—Ob' River, USSR—Irtysh River.

35-2322
Climatic extremes and pine increment in the areas marked for river redirection (central taiga of West Siberia). (Ekstremal'nye znacheniia faktorov klimata i prirost sosny v raĭonakh predpolagaemogo iz"iatiia chasti stoka (na primere srednetaĭgi Zapadnoĭ Sibiri)),

Acoustic emission response of snow.
St. Lawrence, W.F., *Journal of glaciology*, 1980, 26(94), MP 1366, p.209-216, 10 refs., In English with French and German summaries.
Snow acoustics, Avalanche triggering, Avalanche formation, Stress strain diagrams, Rheology, Ultrasonic tests, Mathematical models.
In this work a model of the ultrasonic acoustic emission response in snow is developed. The model derived considers the acoustic emission response in snow as a function of stress and strain. It is suggested that the acoustic emission activity in snow is a quantitative indication of the creep rupture taking place in the material. The governing differential equation is developed; an example is then presented that considers the applicability of this equation to the release of certain types of avalanche.

35-2364
Statistical models of snow strength.
Sommerfeld, R.A., *Journal of glaciology*, 1980, 26(94), p.217-223, 16 refs., In English with French and German summaries.

Propagation of stress waves in alpine snow.
Brown, R.L., *Journal of glaciology*, 1980, 26(94), MP 1367, p.235-243, 8 refs., In English with French and German summaries.
Stresses, Shock waves, Snow density, Wave propagation, Snow physics, Pressure, Analysis (mathematics), Alpine landscapes.
The propagation of pressure waves in low-density snow is investigated analytically to determine the variation of wave pressure and wave speed with density and frequency. The results show that, for pressure waves that produce finite volumetric deformations, both pressure jump across the wave and wave-speed increase with initial density and final density. The pressure jump was also found to increase with the wave frequency if other parameters were held constant, although the dependence on frequency is not as strong as the dependence on the initial and final densities. The relationship between pressure jump and frequency implies that high-frequency waves would tend to dissipate more quickly than lower-frequency waves, although like pressure, the attenuation rate would not be strongly frequency dependent.

35-2367
Model for snow-slab failure under conditions of dynamic loading.
Johnson, J.B., *Journal of glaciology*, 1980, 26(94), p.245-254, 25 refs., In English with French and German summaries.

35-2372
Thermodynamics of snow metamorphism due to variations in curvature.
Colbeck, S.C., *Journal of glaciology*, 1980, 26(94), MP 1368, p.291-301, 28 refs., In English with French and German summaries.
Metamorphism (snow), Thermodynamics, Snow thermal properties, Heat transfer, Vapor diffusion, Temperature gradients, Analysis (mathematics), Wet snow, Curvature.
In the absence of imposed temperature gradients, the metamorphism of dry snow is dominated by the slow process of vapor diffusion between surfaces of different radii of curvature. This process is so slow in a seasonal snow cover (where temperatures normally change on the scale of hours or days) that vapor migration is usually dominated by the imposed temperature gradient. Thus radius of curvature contributes to but does not control metamorphism except for short periods in very fresh snow. As opposed to dry snow, liquid-saturated snow (i.e. pore space filled by the melt) is metamorphosed by heat flow arising from relatively large temperature differences among the particles. Grain growth in liquid-saturated snow is rapid because of the large temperature differences at nearly constant liquid pressure. In wet snow with low liquid content (2-5% by volume), grain growth is dominated by vapor diffusion (as in dry snow) so grain growth is much slower than under conditions of liquid saturation.

35-2373
Experimental study of temperature-gradient metamorphism.
Marbouty, D., *Journal of glaciology*, 1980, 26(94), p.303-312, 6 refs., In English with French and German summaries.

Lang, T.E.
Snow deformation, Snow cover structure, Stress strain diagrams, Snow compression, Velocity, Snow acoustics, Analysis (mathematics).
In this paper a constitutive equation which describes the uniaxial deformation of snow is developed. The basic assumption underlying this work is that the stress-strain response can be derived by considering the structure of the material. The equation which describes the plastic portion of the deformation is developed by considering the relationship between three fundamental variables the mean spacing between ice grains, the relatative velocity between grains, and the fraction of the total number of grains which participate in the deformation process. The mean distance between ice grains is determined by a stereological investigation of the snow structure, and the velocity component is found by empirically characterizing the relaxation of the snow. To determine the mobility of the ice grains acoustic emission data are used. An equation describing the pattern of acoustic emissions for constant rates of deformation is derived and applied to a number of tests. Combining the above variables produces a compressive and tensile constitutive equation which reflects the behavior of the snow under both uniaxial deformations.

Snow composition, Chemical analysis, Snow impurities, Boundary layer, Profiles, Wind factors, Time factor, Shear stress, Antarctica—Ross Ice Shelf.
Snow from seven two-meter deep pits on the Ross Ice Shelf has been analysed for Na, Mg, Ca and K. The changes in concentration for all four elements were found to be coincident in depth at any one site. When concentrations are highest, elemental ratios are close to seawater values. The present interpretation is that the variations in chemical concentrations are caused by meteorological events (storms) large enough to influence substantial geographical areas simultaneously. The trajectories of these storms across southern oceans suggest the sea surface as the principal source of chemical impurities observed in the snow over wide areas of the Shelf. The results obtained lead to the development of a hypothesis that the shearing stress conditions in the boundary layer in proximity to the Ross ice Shelf have a strong influence on the concentrations and ratios of chemical components in the snow on the Shelf. (Auth. mod.)

35-2417
Cyclic loading and fatigue in ice.

Cole, D.
Ice crystals, Dynamic loads, Ice strength, Stress strain diagrams, Fatigue (materials), Ice creep, Time factor.
Isotropic polycrystalline ice was subjected to cyclic loading in uniaxial compression at -5C, with stress limits 0-2 and 0-3 MPa, and frequencies in the range 0.043 to 0.5 Hz. Stress-strain records showed hysteresis loops progressing along the strain axis at non-uniform rates. The effective secant modulus, which was about half the true Young's modulus, decreased during the course of a test. The elastic strain amplitude and the energy dissipated during a loading cycle both increased with increase of time and plastic strain. Strain-time records gave mean curves which were identical in form to classical constant stress creep curves, with a small cyclic alternation of recoverable strain about the mean curve. The results of the tests suggest that maximum resistance under compressive cyclic loading occurs at an axial plastic strain of about 1%, which is essentially the same as the failure strain for ductile yielding under constant stress and under constant strain-rate.

Methodological aspects of the geological investigation of the subglacial relief demonstrated by the example of the Hays Glacier. (Methodische Aspekte der geologischen Erkundung des Subglazials am Beispiel des Hays Gletschers),
Dietrich, H., *Geodätische und geophysikalische Veröffentlichungen*, 1980, Ser.1 No.9, p.20-24, In German., In German with English summary. 10 refs.
Glacial geology, Subglacial observations, Antarctica—Hays Glacier.
During the 17th SAE, drift pebbles were collected in the oasis Gora Vechernyaya 12 km east of Molodezhnaya. Among them pebbles of chlorite-gneiss and basalt were found which are not known from the rock formations outcropping in that area. Their origins were traced from the subglacial relief below the ice cap of Molodezhnaya and of the Hays Glacier, taking into account the subglacial relief and the dynamics of the ice as well as geological considerations. Two major potential areas of origin were identified. (Auth.)

Geodetic and glaciological activities in East Antarctica, 1962-1978. (Geodätisch-glaziologische Arbeiten in der Ostantarktis (1962-1978)),
Meier, S., *Geodätische und geophysikalische Veröffentlichungen*, 1980, Ser.1 No.9, p.24-31, In German., In German with English summary. 10 refs.
Geodetic surveys, Glacier surveys, Ice sheets, Ice mechanics, Antarctica—East Antarctica.
Repeated geodetic triangulations were carried out by GDR scientists between 1962 and 1965 in the Mirnyy area to derive horizontal and vertical ice movements. The feeding area of the Helen Glacier could reliably be delimited and the mass balance calculated. Repeated geodetic measurements of single reference points were carried out during the 10th, 17th, 21st and 23rd SAE over the eastern part of the Molodezhnaya ice cap. A complex program of geodetic-geographical-glaciological investigations was carried out at Hays Glacier in 1972, 1975/76 and 1977/78. From these measurements the geometry, movement, temperature distribution and parameters of the equation of flow could be determined and the loss of mass due to calving be estimated. Geodetic-astronomical first order position measurements were carried out in 1964 and 1972 at Vostok resulting in the first reliable determination of the velocity of inland ice movement in East Antarctica. (Auth. mod.)

35-2432
Repetitive geodetic-glaciological measurements of Hays Glacier, 1977/78. (Geodätisch-glaziologische Wiederholungsmessungen am Hays Gletscher 1977/78),
Hoyer, R., *Geodätische und geophysikalische Veröffentlichungen*, 1980, Ser.1 No.9, p.32-35, In German., In German with English summary. 3 refs.
Geodetic surveys, Glacier surveys.
During the 1977/78 summer of the 23rd SAE GDR scientists carried out measurements at the Hays Glacier, Enderby Land, East Antarctica. Besides the 3rd measurement along part of a traverse the program included the first repeated measurement south of 40 km from the coast. The results showed that the Hays Glacier behaves differently from previous assumptions. This applies to the course of the streamline, the velocity of the ice movement and the size of the catchment area. The total length of the glacier and its catchment area could reliably be estimated (200-250 km and about 10,000 sq km). (Auth.)

35-2433
Vertical earth crustal movements and variations in gravity potential related to changing ice load. (Vertikale Erdkrustenbewegungen und Potentialänderungen bei wechselnden Eis-Auflasten),
Dietrich, R., *Geodätische und geophysikalische Veröffentlichungen*, 1980, Ser.1 No.9, p.47-51, In German with English summary. 6 refs.
Earth crust, Gravity, Ice loads.
Based on existing geophysical model conceptions the elastic response of the earth crust subjected to changing load is considered. It is calculated that regional ice mass variations within the catchment basins of some antarctic outlet glaciers such as Hays, Lambert, and Helen Glaciers could have a measurable effect on local vertical crustal movements and gravity potential. Their size depends on the degree of recent and past changes of ice mass, the extent of the glacier and the distance of the points of measurement from the glacier. In case of respective changes of the mass balance even for smaller antarctic glaciers annual vertical crustal movements in the order of millimeters or centimeters could be expected corresponding to level changes of several meters over the whole outflow cycle. (Auth. mod.)

35-2434
Geodetic-astronomical activities during the 8th and 17th SAE. (Geodätisch-astronomische Arbeiten während der 8. und 17. SAE),
Liebert, J., *Geodätische und geophysikalische Veröffentlichungen*, 1980, Ser.1 No.9, p.51-53, In German., In German with English summary. 1 ref.
Geodetic surveys, Ice sheets.
Geodetic-astronomical position measurements were carried out by GDR scientists in 1963/64 (8th SAE) and 1971/72 (17th SAE) at Vostok as part of a geodetic-glaciological program studying the dynamics of the antarctic ice shield. Despite adverse conditions (necessity of day time observations, lack of good earthing and therefore extremely difficult time signal reception and time keeping, harsh climate, methodological problems of respective observations at near-polar positions) the total change in position during this 8 year period could be determined with rather high accuracy (29.3 m to the south, 38 deg east). Principles and efficiency of future satellite-based Doppler position measurements are briefly outlined. (Auth.)

35-2435
Meteorological processes in the antarctic atmosphere. (Meteorologische Prozesse in der antarktischen Atmosphäre),
Helbig, A., *Geodätische und geophysikalische Veröffentlichungen*, 1980, Ser.1 No.9, p.64-79, In German., In German with English summary. 40 refs.
Climate, Atmospheric circulation, Heat transfer, Ice sheets, Boundary layer, Antarctica.
The energy exchange between the tropics and the polar regions takes place in the system of general circulation of the atmosphere. Modifications in this system cause displacements of the present position of climatic zones. Therefore the study of the energy balance and dynamics of the atmosphere in polar regions is of particular importance. The meteorological processes in Antarctica are characterized by the interaction between atmosphere and ice sheet. This is most clearly reflected by the atmospheric boundary layer. Starting from the radiation balance, the coupling between the temperature and the wind field, especially in the antarctic slope region, is discussed and the manifold connections to other processes are outlined. (Auth.)

35-2436
Weather satellite observations in the South Polar region. (Wettersatellitenbeobachtungen im Südpolargebiet),
Gernandt, H., *Geodätische und geophysikalische Veröffentlichungen*, 1980, Ser.1 No.9, p.79-95, In German., In German with English summary. 8 refs.
Spacecraft, Weather observations, Sea ice, Photointerpretation.
A GDR built weather satellite ground receiving station of type WES-1 was installed in Antarctica in 1969 at Mirnyy. It monitored continuously for two winters the area between 40 and 120 E and 40 and 75 S. Since 1975 (21st SAE) another station of this type has been in permanent operation at the GDR research base near Novolazarevskaya. It receives weather pictures of the polar-orbiting satellites METEOR 2-2 and NOAA 3, 4 and 5 covering the area between 40 E and 70 W (Enderby Land, Filchner Ice Shelf, Antarctic Peninsula). The data collected were used for ice reconnaissance in this area and the monitoring of large-scale ice movements and variations. Further evaluation of these data provides contributions to the GARP Polar Sub-Programme activities. (Auth.)

Research on environmental nuclides in Antarctica. (Forschungen mit Umweltnukliden in der Antarktis),
Fröhlich, K., et al, *Geodätische und geophysikalische Veröffentlichungen*, 1980, Ser.1 No.9, p.122-144, In German., In German with English summary. 17 refs.
Schütze, H.
Ice sheets, Chemical analysis, Isotope analysis, Radioactive isotopes.
The report deals with the stable isotopes D and O-18 of water molecules and with some natural radionuclides created in the earth's atmosphere by cosmic rays. Measurements of isotopes and radionuclides in snow, firn and ice samples collected at the surface and in ice samples taken from polar ice caps provide the basis for glaciological and other geoscientific investigations. Data are gained on the accumulation rates of snow, firn and ice, on climate stages in past epochs, on the migration of ice bodies, on the dynamics of the propagation of melted snow within the antarctic oceans, on the development of antarctic lakes and their dynamics, on the global circulation of atmospheric water vapor and CO_2 and other physicochemical processes. First results derived by GDR scientists are presented. (Auth. mod.)

35-2438
Tritium and C-14 investigations in the framework of GDR research in Antarctica. (Tritium- und 14C-Untersuchungen im Rahmen der Antarktisforschung der DDR),
Herbert, D., et al, *Geodätische und geophysikalische Veröffentlichungen*, 1980, Ser.1 No.9, p.187-194, In German with English summary. 7 refs.
Fröhlich, K., Schneider, M.M.
Glacier ice, Chemical analysis, Ice dating.
A multi-stage program of using tritium and C-14 analysis for glaciological studies in Antarctica was undertaken. This program was partially completed by GDR scientists participating in the 21st and 23rd SAE. Along a firn profile of the uppermost 11 m of Hays Glacier, tritium, deuterium and O-18 analyses were carried out in order to determine the mean accumulation rate and temperature trend during recent years. The age of settlement of a penguin breeding colony was determined by means of C-14 analysis of the layer of excrements. (Auth.)

Ice sheets, Impurities, Pollution, Air pollution, Snow composition, Antarctica, Greenland.
It has been recently demonstrated that polar ice sheets are effective indicators of past and present air pollution. Reliable data obtained from the analysis of ice sheets in Greenland and Antarctica are discussed. The atmospheric concentrations of heavy metals and sulfur compounds in these areas have been determined to have increased insignificantly over the past century Man's impact on these remote areas is presently negligible. Natural sources, such as volcanic eruptions, account for most of the pollutant deposition recorded in these ice sheets (Auth.)

Josberger, E.G.
Icebergs, Melting, Antarctica.
Estimates of Antarctic iceberg melt rates made from field observations, iceberg distribution statistics, laboratory experiments and theoretical studies give a wide range of values Evaluation of the errors associated with each method allows for the quantitative first-order correction for both the effect of bubbles released from the melting ice on the convective heat transfer and the effect of other forms of iceberg deterioration besides sidewall melting. The results provide a best estimate for the melt rate of 5, 17 and 55 m/year at a temperature elevation above the freezing point of 2, 4 and 8C, respectively. (Auth. mod.)

Atmospheric circulation, Sea water, Chemical composition, Ocean currents, Sea ice distribution, Heat transfer, Models.
This paper describes the construction and results of a comprehensive, three-dimensional general circulation model (GCM) of the earth's climate. The model, developed at the National Center for Atmospheric Research (NCAR), links separate existing models of the atmosphere, ocean and sea ice. The atmospheric model is a version of the third-generation NCAR GCM which has a relatively complete treatment of physical processes It uses a generalized vertical coordinate with eight layers (approx 3km thick) and 5 deg horizontal grid spacing over the entire globe The ocean model, using the primitive equations and the hydrostatic and Boussinesq approximations, was changed to the world domain from an earlier model developed by Bryan (1969) a d reprogrammed by Semtner (1974) The model has four unequally spaced vertical layers and 5 deg horizontal grid structure. The sea ice model is a simple thermodynamic model using a simplified calculation of heat flux through sea ice (Semtner, 1976). Antarctic data are incorporated into the coupled model but the simulation more closely matches the observed arctic conditions than those observed in the Antarctic (Auth. mod.)

Trinkl, E.W., Hasselmann, K.
Sea ice distribution, Dynamic properties, Mathematical models.
The analysis of Arctic (1966-76) and Antarctic (1973-79) sea ice data is presented, and a dynamical model based on white noise atmospheric forcing, local stabilizing relaxation and lateral diffusion and advection is constructed to explain the observations Longitudinal dependent forcing, feedback, lateral diffusion and advection parameters are derived by fitting the model to the observed cross-spectral matrix of the sea ice anomaly fields It is inferred that diffusion and advection of sea ice anomalies play an important role in sea ice dynamics The model advection patterns agree reasonably well with the observed ocean surface circulation in the Arctic Ocean and around Antarctica. (Auth.)

Cold weather construction, Stations, Shelters, Buildings, Antarctica—Siple Station.
A new self-supporting facility, capable of housing personnel in a safe and comfortable manner on a year-round basis in the rigorous antarctic environment, was needed to replace the existing facility at Siple Station in Antarctica which was being crushed by snow and ice. Local problems included limited equipment at the station for unloading aircraft of constructing the facility, notoriously poor flying weather in this region and a tendency for drifting snow to bury materials. Designers worked closely with construction supervisors and a manufacturer of modular housing units to develop a facility that could be transported to the site and assembled there under harsh antarctic conditions. In designing the station, engineers had to conceive an enclosure that would protect the modular facilities from the crushing pressures of the ice resulting from an annual accumulation of approximately five feet of snow. Construction was accomplished over the course of two austral summers, and the station became operational on schedule in January 1979.

Buska, J.S., Barrett, S.
Windows, Cold weather construction, Weatherproofing, Moisture, Climatic factors, Countermeasures.
Extreme cold causes heavy buildup of frost, ice and condensation on many windows. It also increases the incentive for improving the airtightness of windows in Alaska to avoid moisture accumulation in homes and barracks. We base our conclusions on a two-year study of Alaskan military bases that included recording humidity and temperature data, observing moisture accumulation on windows and measuring airtightness with a fan pressurization device. Our study shows that tightening Alaskan windows to permit only 50% of the air leakage allowed to current American standards for window airtightness is economically attractive.

Bouzoun, J.R.
Waste treatment, Water treatment, Plants (botany), Aquaculture.
Aquaculture systems for wastewater treatment often include plants, finned fish, animals and microorganisms in various combinations in aquatic settings such as ponds, marshes, bogs and other forms of wetlands. Natural settings have often been used in the past but there is a trend toward constructed systems which permit more reliable management at higher rates of treatment. This paper evaluates the potential for application of aquaculture concepts for wastewater treatment in cold climates. Constructed wetlands and the enclosed high rate processes offer the most promise of the concepts considered. Systems based on plants are more effigient, require less area and are easier to control than concepts involving higher forms of animals.

Air pollution, Chemical analysis, Environmental impact, Motor vehicles, Human factors, Standards, Exhaust gases.
Air quality measurements were made for both gases and particulates at several locations near Fairbanks, Alaska, during winter. The results indicated that carbon monoxide levels downtown frequently exceeded air quality standards and were significantly elevated at more rural locations up to 22 km from the downtown area High levels were found to be associated with temperature inversions. Nitric oxide levels were measured and found to range from less than 50 to over 500 parts per billion (ppb) downtown. Levels of 1 to 68 ppb were measured in a more rural location The major source of both CO and NO at Fairbanks was found to be auto exhaust Levels of particulate lead in the downtown area were found to exceed Federal Standard for all 4 winter months Lead levels at the more rural site were only about one-tenth those of downtown and did not exceed standards.

Ice breakup, Ice pressure, Ice loads, Impact strength, Bridges, Ice cover strength, Loads (forces), Ice cover thickness, Radar echoes.
The Alaskan Projects Office of Cold Regions Research and Engineering Laboratory has been studying the forces imposed on the Yukon River bridge by ice during breakup. The study involved four consecutive breakups from 1977 thru 1980. Forces have been measured using load cells mounted on the front of the number 5 pier to intercept the ice as it strikes the pier Accelerometers mounted on piers number 4 and 5 were used to measure the response of the pier to the ice impacts Calibration procedures were employed to determine a transfer function which relates the accelerations to the applied forces. Ice thicknesses were measured using short pulse radar techniques. River ice damaged or destroyed the first generation load cell designs, but some useful data was obtained before failure. Radar techniques show some promise for the measurement of ice thicknesses during breakup.

Frazil ice, Ice control, River ice, River flow, Flow rate, Hydrodynamics, Ice formation.
The techniques for analyzing velocity profiles should be carefully considered in shallow streams where the flow depth is less than 1 m. The two procedures, a) mean and maximum velocity determinations and b) intercept evaluation of log (depth)-velocity plots, yield different results for the various resistance coefficients and shear stress values. The mean-max-velocity method generally predicts higher values than the other and is recommended for shallow streams. The minimum distance from a boundary to the position of maximum velocity for a good velocity profile appears to be roughly 15 to 20 cm with a 5 cm diameter sensor.

Our climatic future: an ice-free Arctic Ocean?. (Notre avenir climatique un Océan Arctique libre de glaces?)
Flohn, H., *La météorologie*, Mar. 1979, Sér. 6, No.16, p.35-51, In French, 49 refs.
Climatic changes, Ice cover effect, Atmospheric composition, Air temperature, Sea ice.
In relation to the possibility of future climatic warming resulting in the disappearance of ice from the Arctic Ocean, the greenhouse effect of CO2 and trace gases in the atmosphere is examined by calculating the temperature change for various concentrations by means of two different models. A table is presented associating various paleoclimatic phases with temperature warmings produced by different virtual concentrations of CO2, as calculated by various models with actual CO2 concentrations. A fixed altitude of cloud tops in one model and a fixed temperature of the cloud top in the other are assumed. Key domains in the climatic system, which play an important role in internal change, are examined. The causes and time scale of a possible dissappearance of floating ice in the Arctic are discussed. The coexistence of an ice-free Arctic Ocean with a glaciated Antarctic Ocean at the end of the Tertiary is considered. The consequences of a strong hemispheric asymmetry of the general circulation are reviewed. (Auth.)

NOAA Polar Orbiter data (TIROS-N and NOAA-6) users guide.
Kidwell, K.B., comp, Washington, D.C., National Oceanic and Atmospheric Administration, 1981, c115p.
Data processing, Storage, Spacecraft.
The Satellite Data Services Division (SDSD) of the National Climatic Center, in conjunction with the National Earth Satellite Service, has established a digital archive of data collected from the new generation of NOAA operational polar-orbiting satellites. This series of satellites commenced with TIROS-N (launched in October 1978) and NOAA-A (launched in June 1979 and renamed NOAA-6). It includes NOAA-A through G. Digital data from the SDSD polar orbiter archive are available in the form of CCTs (Computer Compatible Tape) which may contain complete level 1b data sets, selective extracts from Level 1b data sets or copies of NESS operational AVHRR or TOVS products. Hardcopy reproductions of the NESS polar orbiter image products are also available. General and specific characteristics of the TIROS-N and NOAA-6 instruments and orbits are discussed. Data characteristics of the Advanced Very High Resolution Radiometer and the TIROS Operational Vertical Sounder are described. The NOAA Polar Orbiter Level 1b Data Base that is archived by SDSD, and from which users may request data is discussed. SDSD presently archives several different types of NESS operational polar orbiter products. The products include atmospheric soundings, sea surface temperature, heat budget, and mapped/gridded AVHRR data. Specific NESS products which are available are listed.

Energy balance climate models.
North, G.R., et al, *Reviews of geophysics and space physics*, Feb. 1981, 19(1), p.91-121, Refs. p.119-121.
Cahalan, R.F., Coakley, J.A., Jr.
Heat balance, Ice sheets, Climate, Models.
An introductory survey of the global energy balance climate models is presented with an emphasis on analytical results. A sequence of increasingly complicated models involving ice cap albedo feedback processes is solved, and the solutions and their sensitivities are studied. The model parameterizations are examined critically in light of many current uncertainties. A seasonal model is used to study the effects of changes in orbital elements on the temperature field. A linear stability theorem and a complete nonlinear stability analysis are developed. Analytical solutions are also obtained for time dependent forced models driven by stochastic forcing processes. Lastly, a theory for the relation between natural fluctuations (climate noise) and climate sensitivity is stressed. (Auth.)

Overland flow: removal of toxic volatile organics.
Jenkins, T.F., et al, *U.S. Army Cold Regions Research and Engineering Laboratory*, Feb. 1981, SR 81-01, AD-A097 576, 34 refs.
Palazzo, A.J., Martel, C.J., Hare, H.E.
Waste treatment, Water treatment, Flooding, Land reclamation, Water chemistry, Organic wastes, Purification.
A small-scale overland flow system was studied to determine its effectiveness in reducing the levels of volatile trace organics in municipal wastewater. Chlorinated primary wastewater, water collected from the surface at various points downslope, and runoff were analyzed by gas chromatography/mass spectrometry using a purge and trap sampler. The results indicated that overland flow was effective in reducing the levels of these substances by 80-100% depending on the specific substance and the application rate. The removal mechanism was found to follow first order kinetics. The most likely mechanism to explain the observed behavior is volatilization. Comparison of the experimental results with theoretical prediction using published models resulted in reasonable agreement considering the complexity of the system compared to the model systems.

Iskandar, I.K.
Waste treatment, Water treatment, Soil chemistry, Soil microbiology, Growth, Nitrification, Enzymes.
Previous research indicates that nitrification in pure cultures can be represented by Michaelis-Menten kinetics. However, the effects of temperature and especially pH have not been treated systematically in any of the previous reviews of the subject. The work reported here is an attempt to synthesize reported temperature and pH effects on nitrification and nitrifier growth rates. In addition we attempt to extend the principles of microbial kinetics to soils. Our work indicates that pH effects can be interpreted mechanistically as inhibitions by hydrogen and hydroxyl ions, nitrous acid, and ammonia. These are incorporated into the Michaelis-Menten expressions. It is also our observation that ammonium oxidizers in natural habitats are characterized by lower Michaelis constants than pure cultures. This is significant particularly in terms of their growth and activity in acid soils. Alternatively, we speculate that proliferation of ammonium oxidizers in acid soils is due to spatial heterogeneity of "pH" at the microsite level.

Collins, C.M.
Cold weather construction, Pipelines, Snow roads, Permafrost preservation, Snow strength, Soil trafficability, Environmental protection, Artificial snow.
Construction pads made of snow were used to build two sections of the Trans Alaska Pipeline and a small gas pipeline during the winter of 1975-76. Construction during the winter has become increasingly common in the Arctic. Surface travel and the use of heavy construction equipment on the unprotected tundra have been severely restricted, even during the winter, so the use of temporary winter roads and construction pads built of snow and ice has been advocated and is being adopted. The three snow construction pads mentioned above were the first snow roads and construction pads used on a large scale in Alaska. Snow roads and construction pads have two objectives: to protect the underlying vegetation and upper layers of the ground, and to provide a hard, smooth surface for travel and the operation of equipment. Several types have been built, and a brief discussion is given of their history and classification systems. The three snow construction pads used in construction of the Trans Alaska Pipeline and the small gas pipeline in 1975-76 were visited and observed while in use.

Winter thermal structure, ice conditions and climate of Lake Champlain.
Bates, R.E., *U.S. Army Cold Regions Research and Engineering Laboratory*, Jan. 1980, CR 80-02, 26p., ADA-082 304, 7 refs.
Lake ice, Ice conditions, Thermal regime, Ice formation, Ice thermal properties, Water temperature, Meteorological data, Winter, Thermistors, Stefan problem.
Winter thermal structure and ice conditions in the land-fast ice cover of Lake Champlain were studied in detail for the winters of 1975-76 and 1976-77. The lake was instrumented to a depth of 9.5 m with a string of highly calibrated thermistors attached to an ice mooring system and connected to a data logger at Shelburne Point, Vermont, during the winter of 1975-76 and at Gordon Landing on Grand Isle, Vermont, during 1976-77. This data logger automatically recorded water temperatures from the surface of the lake through snow, ice and water vertical profiles to the bottom of the lake every four hours. Pertinent meteorological parameters are presented for the appropriate measurement sites during the two winter periods, November '75-April '76, and November '76-April '77. Computations were made of freezing degree days for both winters and correlated with ice formation dates. Predictions of ice growth, using the Stefan equation with an empirical coefficient, were correlated with actual ice growth. Documentation was made of the Lake Champlain Transportation Company's first attempt at wintertime navigation by ferry from Gordon Landing, Vermont, to Cumberland Head, New York, in a land fast ice cover during one of the coldest winters of this century.

Rindge, S.D., Gaskin, D.A.
Revegetation, Sewage disposal, Land reclamation, Grasses, Gravel, Organic soils, Sludges, Nutrient cycle.
Revegetation techniques were investigated for gravel soils in cold regions. Two gravel soil test sites were established in Hanover, New Hampshire, and Fairbanks, Alaska. During three growing seasons, we studied the applicability and cost effectiveness of various nutrient sources and mulch materials. The nutrient sources included sewage sludge (40, 60 and 80 tons/acre) and commercial fertilizer (at 200, 400 and 600 lb/acre). The mulching materials were wood fiber mulch with various types of tackifiers, peat moss, and sewage sludge. The effects of refertilization during the second growing season were also studied.

35-2587
Asphalt concrete for cold regions; a comparative laboratory study and analysis of mixtures containing soft and hard grades of asphalt cement.
Dempsey, B.J., et al, *U.S. Army Cold Regions Research and Engineering Laboratory*, Jan. 1980, CR 80-05, 55p., ADA-082 198, 39 refs.
Ingersoll, J., Johnson, T.C., Shahin, M.Y.
Bitumens, Bituminous concretes, Pavements, Cement admixtures, Tensile properties, Cracking (fracturing), Strain tests, Thermal effects, Viscosity, Trafficability.
Pavements containing soft asphalt cement have been shown in the past to be less susceptible to low-temperature contraction cracking, but more susceptible to traffic-load-associated distress in warm weather, than pavements with harder asphalt cements. This research comprised laboratory testing to determine the properties of asphalt-aggregate mixtures containing three

grades of asphalt cements, and analyses to project the performance of pavements containing each of the asphalts, in resisting thermally induced distress and traffic-associated distress From the results it is concluded that only the softest asphalt cement tested (AC 2.5) would perform satisfactorily in a cold climatic zone. The moderately soft (AC 5) and moderately hard (AC 20) asphalt cements showed little susceptibility to thermal cracking in a moderate and a warm climatic zone respectively The AC 2 5 and AC 5 asphalts are not recommended for use in warm climates, however owing to increased susceptibility to rutting under traffic.

35-2588

Maximum thickness and subsequent decay of lake, river and fast sea ice in Canada and Alaska.

Bilello, M A , *U S Army Cold Regions Research and Engineering Laboratory*, Feb. 1980, CR 80-06, 160p., ADA-084 488, 57 refs.

Ice cover thickness, Ice melting, Ice deterioration, Lake ice, River ice, Sea ice, Fast ice, Air temperature, Ice forecasting.

Weekly measurements of the thickness of lake river and fast sea ice made over a period of 10 to 15 years at 66 locations in Canada and Alaska are analyzed, and the portion of the data relating to maximum ice thickness and decay (i e. the decrease in ice thickness) is examined Ice thickness curves revealed individual patterns of ice decay, and comparisons between locations disclosed major contrasts in the amount of ice accretion and the times of maximum ice and ice clearance. Although many factors affect the ice decay process, this study investigates in detail the effect of thawing temperatures. Concurrent measurements of the air temperature at each location made it possible to analyze the relationship between accumulated thawing degree-days (ATDD) and ice cover decay. Other factors affecting ice ablation and breakup, such as snow-ice formation, snow cover depth, solar radiation and wind are also discussed

35-2589

Studies of the temperature-dependence of the brine content of sea ice by the pulse NMR method.

Mel'nichenko, N A , et al, *U S Army Cold Regions Research and Engineering Laboratory*, Feb 1981, TL 757, 6p., ADB-055 707L, Translated from Okeanologiia, 1979, 19(5), p.811-814. 12 refs.

Mikhallov, V.I., Chizhik, V.I.

Brines, Sea ice, Ice temperature, Temperature effects, Nuclear magnetic resonance, Ice thermal properties, Sea water, Water temperature.

The dependence of the brine content Q(b) in sea ice was studied by the pulse NMR method over a temperature range from -2 to -35C The value of Q(b) exhibits thermal hysteresis at temperatures between -20 and -35C. Possible explanations for the hysteresis effect are suggested. The feasibility of employing the method for practical application is discussed

35-2590

Radar video pulse device for measuring the thickness of sea ice as a new promising means of ice reconnaissance.

Finkel'shtein, M I., et al, *U S Army Cold Regions Research and Engineering Laboratory*, Mar 1981, TL 758, 16p., For Russian original see 34-3312. 7 refs

Lazarev, E.I.

Ice cover thickness, Ice surveys, Ice surface, Surface roughness, Radar echoes, Ice salinity.

A video pulse device for measuring the thickness of sea ice provides for the possibility of measuring th thickness of all basic types of sea and fresh-water ice for the purpose of ice reconnaissance. The video pulse measuring device provides for the possibility of determining the salinity and irregularities of ice, to distinguish ice of river or sea origin, etc. Experimental investigations and the first practical ice reconnaissance showed that the device developed opens new possibilities for instrumental ice reconnaissance

35-2591

1977 tundra fire at Kokolik River, Alaska.

Hall, D.K., et al, *U.S. Army Cold Regions Research and Engineering Laboratory*, Aug. 1978, SR 78-10, 11p., ADA-062 439, 10 refs. For this paper from another source see MP 1125, 32-4577

Brown, J., Johnson, L.

Tundra, Fires, Vegetation, Damage, Thaw depth, Remote sensing, Spaceborne photography, LANDSAT.

During summer 1977 widespread fires occurred in northwest Alaska Through the use of Landsat imagery and ground studies, one such fire, at Kokolik River was examined The Kokolik fire was first reported on 26 July, and by the time it was extinguished had consumed 44 sq km of tundra vegetation. Streams and drainages contained the fire on several sides. Ground observations provided information on the intensity of the fire effects Depth of thaw by late August measured 35 4 cm in the burned areas and 26 6 cm in the unburned areas

35-2592

Disinfection of wastewater by microwaves.

Iskandar, I.K., et al, *U.S. Army cold Regions Research and Engineering Laboratory*, Jan. 1980, SR 80-01, 15p., ADA-082 174, 36 refs.

Parker, L., Madore, K., Gray, C., Kumai, M

Waste treatment, Water treatment, Microwaves, Bacteria, Disinfection.

Results from a laboratory study show that microwave energy can be used for disinfection of wastewater. The time required for destruction of bacteria by microwaves was reduced over that of conventional heating Destruction of wastewater bacteria and a cell suspension of of *E Coli* B was logarithmic after an initial lag phase, which was dependent upon the volume used Thermophilic *B stearothermophilus* cells were used to try to determine if the mechanism of destruction was thermal.

35-2593

Icebreaking concepts.

Mellor, M , *U.S. Army Cold Regions Research and Engineering Laboratory*, Jan. 1980, SR 80-02, 18p., ADA-082 175, 4 refs.

Ice breaking, Icebreakers, Ice cover thickness, Penetration, Ice cutting, Ice blasting, Marine transportation, Offshore structures.

Icebreaking concepts that have potential application in the protection of offshore structures and drillships are reviewed The concepts dealt with include conventional icebreaking by ships, icebreaking by air cushion vehicles, breaking against fixed structures, mechanical cutting with drag bit tools, blasting by high explosives, blasting with compressed gases or propellants, ice melting, thermal cutting, cutting with lasers, cutting with high pressure water jets, and unproven novel concepts Special emphasis is given to the specific energy requirements for the various methods

35-2594

Danish deep drill; progress report: February-March 1979.

Rand, J , *U S Army Cold Regions Research and Engineering Laboratory*, Jan. 1980, SR 80-03, 37p ADA-082 206.

Drilling, Ice coring drills, Ice cores, Glaciology, Design, Performance, Maintenance.

The "Danish Deep Drill" was developed at the University of Copenhagen. The drill, which will be used to obtain ice cores from the Greenland Ice Sheet, was tested at the U.S. Army Cold Regions Research and Engineering Laboratory The drill is battery-operated and has a down-hole microprocessor-based control section and a delicately balanced chip removal system It is a lightweight, electro-mechanical drill designed to obtain a 10 2-cm-diameter core in 2-m lengths There are potential problems in chip recovery and storage, malfunctions of the computer or batteries, leaks in the pressure chamber, spin-out or rotation of the drill, and the very close tolerances required by the drill design Tests are recommended that will help eliminate some of these potential problems and determine the drill's overall strengths and weaknesses. The drill is a very complex and delicate instrument that will require constant maintenance, modification and monitoring when in use

35-2595

Evaluation of ice deflectors on the USCG icebreaker *Polar Star*.

Vance, G.P., *U.S. Army Cold Regions Research and Engineering Laboratory*, Jan. 1980, SR 80-04, 37p. ADA-082 205.

Icebreakers, Propellers, Ice cover thickness, Ice navigation, Deflectors.

Model tests were carried out in the CRREL Ice Engineering Facility test basin on a 1-to-19 1 model of the USCG *Polar Star* (WAGB-10) to determine the effectiveness of several different devices that would eliminate or mitigate the ingestion of ice into the propeller slip stream Propeller RPM records and high-speed movies were obtained for each device in two thicknesses of ice and at two speeds Four devices were evaluated: large bilge keels, small bilge keels, bossing fins and propeller cages (called bird cages) The most effective concept appeared to be the bilge keels Open water power tests and structural analysis must now be carried out to determine the overall feasibility of these concepts.

35-2596

Post occupancy evaluation of a planned community in Arctic Canada.

Bechtel, R.B., et al, *U.S. Army Cold Regions Research and Engineering Laboratory*, Feb. 1980, SR 80-06, 27p., ADA-082 162, 4 refs.

Ledbetter, C.B.

Urban planning, Houses, Site surveys, Buildings, Ecology, Habitability.

This report describes a post-occupancy evaluation of a small mining community in the high Arctic Providing superior housing, having wives work and integrating singles, Inuits (the indigenous people) and families successfully established a viable community. Fewer problems were encountered than is usual in other isolated cold regions communities The central focal point of the town, a large dome, was diluted by later construction of buildings housing separate recreational and social facilities Since the buildings are too costly to remove, the only method of restoring the focal point is to build connecting links at upper levels of the recreational buildings

35-2597

Some aspects of Soviet trenching machines.

Mellor, M., *U.S. Army Cold Regions Research and Engineering Laboratory*, Feb. 1980, SR 80-07, 13p., ADA-082 176, 1 ref.

Trenching, Frozen ground, Earthwork, Equipment, Design.

Technical characteristics of Soviet trenching machines are assessed and compared with those of similar machines built in the United States and Europe The report deals with transverse rotation machines and belt machines, considering rotor speeds and belt speeds, tool speeds, power/weight ratios, power density, traverse speeds, and effective mean cutting pressures The probable capabilities of Soviet machines for cutting frozen ground are assessed It is concluded that, while general design characteristics are satisfactory, construction and product development are weak, and performance in frozen ground is not expected to be impressive

35-2598

Regional distribution and characteristics of bottom sediments in Arctic coastal waters of Alaska.

Sellmann, P V , *U S. Army Cold Regions Research and Engineering Laboratory*, Apr. 1980, SR 80-15, 50p , ADA-084 922, Refs. p.31-50.

Subsea permafrost, Permafrost distribution, Bottom sediment, Marine geology, Sediment transport, Permafrost depth, Ice scoring, Offshore structures, Artificial islands, Construction materials, Offshore drilling.

This report includes a discussion of some of the properties and characteristics of offshore marine sediments found in the U S Beaufort Sea that could influence aspects of offshore development A collection of references is also included in an appendix Perennially and seasonally frozen sediments are extremely common, with variable distribution and properties The depth to the top of icebonded permafrost can be as little as 7 m below the seabed many kilometers from the sea coast The subsea permafrost can contain visible ground ice similar to that observed on land, and can be anticipated to cause problems at least as great as those experienced on land

35-2599

Estimating costs of ice damage to private shoreline structures on Great Lakes connecting channels.

Carey, K L , *U S Army Cold Regions Research and Engineering Laboratory*, May 1980, SR 80-22, 33p. ADA-089 781.

Structures, Damage, Ice loads, Impact strength, Ice pressure, Ice navigation, Cost analysis.

The possible extension of the navigation season through the entire winter or a portion thereof has been under consideration for the Great Lakes and the St Lawrence Seaway for a number of years. To balance the benefits and costs of such an extension it is necessary to determine the damage costs to shore structures that might result from ice loosened by ship passage. This paper is concerned with the interconnecting channels of the Lakes where there is estimated to be $18,000,000 (1976 dollars) worth of small, private, vulnerable shore structures

35-2600

Post occupancy evaluation of a remote Australian community: Shay Gap, Australia.

Bechtel, R.B., et al, *U.S. Army Cold Regions Research and Engineering Laboratory*, July 1980, SR 80-29, 57p , ADA-089 675, 8 refs.

Ledbetter, C.B.

Urban planning, Houses, Buildings, Site surveys, Ecology, Psychology, Habitability.

A post occupancy evaluation (POE) was made of Shay Gap, an iron mining community in Western Australia. More than 50 design hypotheses were tested with results favoring the original design Selecting a townsite surrounded by hills was deemed successful by residents. Keeping automobiles out of the living areas increased the safety of children and made residents walk and socialize more. A centrally located building housing the shopping facilities, beauty parlor, bank, post office, and snack bar served as the focal point of the community Bland, off-white interiors allowed residents to express themselves when decorating Shay Gap was a successful design concept for communities designed for remote areas in either hot or cold regions

35-2601

Dynamic testing of free field stress gages in frozen soil.

Aitken, G.W., et al, *U.S. Army Cold Regions Research and Engineering Laboratory*, July 1980, SR 80-30, 26p., ADA-089 676, 6 refs.

Albert, D.G., Richmond, P.W.

Frozen ground mechanics, Stresses, Impact tests, Shock waves, Soil mechanics, Wave propagation.

This report describes an attempt to develop a procedure for dynamic calibration of free-field soil stress gages embedded in a soil sample The method presented utilizes a drop-type impact testing machine and a small, instrumented container of soil The velocity history of a shock pulse applied to the soil sample is measured and the applied stress computed, this value is then compared with data obtained from stress gages embedded in the soil The results showed that the procedure is adequate for unfrozen soil, but for frozen soil the accuracy in the measurement of compressional wave velocity needs to be increased to obtain useful results

35-2602

Effects of a tundra fire on soils and plant communities along a hillslope in the Seward Peninsula, Alaska.

Racine, C., *U.S. Army Cold Regions Research and Engineering Laboratory*, Nov. 1980, SR 80-37, 21p., ADA-094 6607, 21 refs.

Tundra, Fires, Damage, Soils, Plants (botany), Vegetation, Slopes.

During summer 1977, wildfires burned extensive areas of low arctic tundra in the Seward Peninsula, Alaska The present study was initiated in July 1978 to determine the effects of these fires on tundra soils and vegetation Nine 10- x 1-m permanent transects were established at regular intervals along the topographic gradient of a burned hillslope in the central Seward

Peninsula near Imuruk Lake. Soil characteristics and plant species density and cover were determined in each of the 90 1-x 1-m plots on this slope during July of both 1978 and 1979.

35-2603
Thermal diffusivity of frozen soil.
Haynes, F.D., et al, *U.S. Army Cold Regions Research and Engineering Laboratory*, Dec. 1980, SR 80-38, 30p., ADA-094 605, 10 refs.
Carbee, D.L., VanPelt, D.J.
Frozen ground physics, Thermal diffusion, Thermal conductivity, Specific heat, Heat transfer, Temperature effects, Density (mass/volume), Soil water, Permafrost physics.
Knowledge of the thermal diffusivity of frozen soils is necessary for transient heat transfer analysis. The specific heat, thermal conductivity and density for a sand, a silt and a clay were obtained experimentally and used to calculate their thermal diffusivity. These properties were measured over a range of temperatures from -50 C to +45 C and for moisture contents from dry to saturated. The use of a differential scanning calorimeter for obtaining specific heat values was proven to be a reliable technique.

Radar echoes, Gravimetric prospecting, Gravity anomalies, Geologic structures, Subglacial observations, Antarctica—Gamburtsev Subglacial Mountains.
Seismic sounding by early Soviet expeditions identified two subglacial mountains in Antarctica, the Gamburtsev Mountains and the Vernadskiy Mountains. An attempt is made here to correlate the subsequent air-borne radar surveys in Enderby Land and around the South Pole and to determine the bedrock topography along the 40-42 E meridian by computing the values of gravity anomalies. A previous supposition that there is no connection between the two subglacial mountain forms is confirmed, they are found to be separated by lower-lying relief. (Auth.)

Hais, A.B.
Waste treatment, Water treatment, Ponds, Cost analysis, Statistical analysis, Design.
Treatment ponds are a cost-effective alternative for municipal wastewater treatment. When compared to other secondary treatment alternatives, ponds are generally the least costly, require less energy and less skilled operational attention. They can be designed to consistently meet BOD removal requirements and can achieve significant reductions in nutrients, bacteria, and viruses.

Matlock, C.S.
Permafrost beneath rivers, Pile driving, Foundations, Bridges, Permafrost preservation, Bearing strength, Settlement (structural), Soil temperature, Design criteria, Frost heave, Countermeasures, Streams.
This cooperative research study has focused considerable attention on the ground temperatures existing beneath and adjacent to streams in permafrost areas An appreciation of the changes in the thaw area beneath the stream, both at the time of construction and for the life of the structure, is essential to proper siting of the bridge foundation. Location of abutments and piers outside of the potential thaw zone of the stream, or penetration at the most advantageous points to depths sufficient to achieve the required bearing capacity, is essential. The design of piles based on depth of embedment, adfreeze strength or dynamic driving formulas in frozen soils is of little value if the permafrost condition is later destroyed. Emphasis must be placed on retaining the original permafrost conditions and providing for frost action.

35-2754
Estimation of heat and mass fluxes over Arctic leads.
Andreas, E.L., *Monthly weather review,* Dec 1980, 108(12), MP 1410, p.2057-2063, 26 refs
Polynyas, Sea ice, Heat transfer, Mass transfer, Turbulent exchange, Heat flux, Analysis (mathematics).
Recent work on the turbulent transfer of scalar quantities following a step increase in the surface value of the scalar is directly applicable to the problem of estimating heat and mass transfer from Arctic leads in winter With the transfer relations, turbulent fluxes can be computed from standard meteorological observables; and from the Nusselt number equality, partitioning of the turbulent fluxes can be evaluated—in particular, the partitioning of the heat flux between sensible and latent components

35-2755
Unfrozen water contents of submarine permafrost determined by nuclear magnetic resonance.
Tice, A.R., et al, MP 1412, International Symposium on Ground Freezing, 2nd, Trondheim, Norway, June 24-26, 1980, Trondheim, 1980, p.400-412, 10 refs.
Anderson, D.M., Sterrett, K.F.
Subsea permafrost, Unfrozen water content, Nuclear magnetic resonance, Frozen ground temperature, Freezing points.
Prior work resulted in the development of techniques to measure the unfrozen water contents in frozen soils by nuclear magnetic resonance (NMR) The NMR technique makes it possible, in a non-destructive, non intrusive way, to explore hysteresis by determining both cooling and warming curves. Corrections are made for dissolved paramagnetic impurities which have the effect of increasing the signal intensity at decreasing temperatures. The results demonstrate that NMR techniques can be effectively utilized both at and below the melting point of ice in frozen soils and that accurate melting points (freezing point depressions) can be determined.

35-2756
Analysis of water in the Martian regolith.

Tice, A.R.
Mars (planet), Soil water, Adsorption, Water vapor, Thermodynamics, Soil microbiology, Temperature effects.
One of the scientific objectives of the Viking Mission to Mars was to accomplish an analysis of water in the Martian regolith. The analytical scheme originally envisioned was severely compromised in the latter stages of the Lander instrument package design The presence of a duricrust at one of the Lander sites is taker as possible evidence for the presence of hygroscopic minerals on Mars The demonstrated presence of atmospheric water vapor and thermodynamic calculations lead to the belief that adsorbed water could provide a relatively favorable environment for endolithic organisms on Mars similar to types recently discovered in the dry antarctic deserts.

35-2757
Selected design parameters of existing systems for land application of liquid waste—a computer file.
Iskandar, I.K., MP 1415, Annual Conference of Applied Research and Practice on Municipal and Industrial Waste, 2nd, Madison, Wisconsin, Sep. 17-21, 1979. *Proceedings, 1979, p.65-88, 5 refs.*
Waste treatment, Water treatment, Land reclamation, Computer programs, Design.
Due to increasing interest in renovating wastewater by application on land, a computer file was established to store and retrieve information on design parameters, performance characteristics and published information on existing land application systems The purpose of establishing this file was to provide assistance to design engineers during the planning of new land treatment systems Currently there are about 350 domestic and 75 foreign systems on file. Two hypothetical examples are included for illustration.

Porous materials, Water flow, Air flow, Wave propagation, Hydraulics, Boundary layer, Wettability, Analysis (mathematics).
A traveling wave solution was derived for the problem of simultaneous flow of water and air through homogeneous porous media. The properties of the solution generally depend upon the hydraulic characteristics of a given problem. The properties of the solution are presented for a specific case in which the hydraulic characteristics are given in specific functional forms. For this specific case a singularity occurs in the solution of both a saturated-unsaturated boundary and a wetting front. Some applications of the solution are discussed.

Glaciological and geocryological field studies on King George Island during the 25th Soviet antarctic Expedition. (Polevye gliatsiologicheskie i geokriologicheskie issledovaniia na ostrove King-Dzhordzh v 25-oĭ Sovetskoĭ antarkticheskoĭ ekspeditsii).
Vtiurin, B.I., *Akademiia nauk SSSR. Institut geografii. Materialy gliatsiologicheskikh issledovaniĭ. Khronika obsuzhdeniia*, July 1980, Vol 39, p 30, In Russian.
Ice sheets, Glacier ice, Snow surveys, Geocryology, Patterned ground, Permafrost distribution, Permafrost structure, Thermokarst, Expeditions, South Shetland Islands, Antarctica—Fildes Peninsula.
Two members of the Soviet Academy of Sciences Institute of Geography, Stationed on Bellingshausen Station, studied glacial and nival processes on King George Island, South Shetland Islands. Surveys were conducted on Fildes Peninsula, in Admiralty Bay. All-terrain vehicles were used on ice shield routes and a boat in crossing to the Nelson ice dome. The research lasted from Nov. 30, 1979 to Feb. 20, 1980 which included 2 1/2 months of snow surveying along 7 profiles. Temperature and structure of snow-firn-ice strata were studied in marginal parts of the ice shield, also the dynamics of an ice dome edge, old and recent moraines, ground ice and thaw depth of loose perennially frozen morainal deposits. Cryogenic relief was mapped on Fildes Peninsula. Results revealed glacier retreat on King George Island, continuous permafrost distribution and active layer thickness variation from 0.4 to 1.2 m, depending on seasonal snow cover regime. Frost weathering, nivation, frost sorting, solifluction and thermokarst were observed. Cryogenic rock structures are described and classified.

35-2812
Calculating glacial runoff in Caucasus by the air temperature field at the equilibrium line of glacier alimentation. (Raschet lednikovogo stoka na Kavkaze po poliu temperatury vozdukha na vysote granitsy pitaniia lednikov).
Krenke, A.N., et al, *Akademiia nauk SSSR. Institut geografii. Materialy gliatsiologicheskikh issledovaniĭ. Khronika obsuzhdeniia*, July 1980, Vol.39, p.31-37, 112-118, In Russian and English. 23 refs.

35-2820
Methods of determining internal seepage alimentation of glaciers. (Metody opredelenia vnutrennego infil'tratsionnogo pitaniia lednikov).
Bazhev, A.B., *Akademiia nauk SSSR. Institut geografii. Materialy gliatsiologicheskikh issledovanii. Khronika obsuzhdeniia*, July 1980, Vol.39, p.73-81, 147-154, In Russian and English. 4 refs.
Glacier alimentation, Meltwater, Seepage, Glacier ice, Porosity, Mass balance.

35-2821
Streamflow modelling for the Narssaq River Basin, Greenland. (Modelirovanie stoka basseina reki Narsak v Grenlandii).
Christensen, M., et al, *Akademiia nauk SSSR. Institut geografii. Materialy gliatsiologicheskikh issledovanii. Khronika obsuzhdeniia*, July 1980, Vol.39, p.81-86, 154-157, In Russian and English. 4 refs.
Hansen, E.
River basins, Glacial rivers, Alimentation, Glacial hydrology, Runoff, Electric power, Models, Greenland—Narssaq River.

35-2822
Studying natural isotope content and electrical conductivity of runoff waters from the Vernagtferner glacier (Oetztal Alps). (Kompleksnye issledovaniia prirodnogo soderzhaniia izotopov i elektroprovodnosti v vodakh potoka s lednika Fernagtferner (Etstal'skie Al'py).
Oerter, H., et al, *Akademiia nauk SSSR. Institut geografii. Materialy gliatsiologicheskikh issledovanii. Khronika obsuzhdeniia*, July 1980, Vol.39, p.86-92, 157-161, In Russian and English. 9 refs.
Glacier ice, Glacial rivers, Water chemistry, Isotope analysis, Hydrogen, Oxygen, Electrical properties.

35-2823
Dynamics of melt waters on the Abramov glacier. (Dinamika talykh vod na lednike Abramova).
Akbarov, A.A., et al, *Akademiia nauk SSSR Institut geografii. Materialy gliatsiologicheskikh issledovanii. Khronika obsuzhdeniia*, July 1980, Vol.39, p.92-96, 161-165, In Russian and English. 8 refs.
Mountain glaciers, Glacial hydrology, Glacier ablation, Meltwater.

35-2824
Periglacial lakes in Zailiyskiy Alatau. (Prilednikovye ozera v Zailiiskom Alatau).
Tokmagambetov, G.A., et al, *Akademiia nauk SSSR. Institut geografii. Materialy gliatsiologicheskikh issledovanii. Khronika obsuzhdeniia*, July 1980, Vol.39, p.97-101, 165-170, In Russian and English 4 refs.
Sudakov, P.A., Plekhanov, P.A.
Mountain glaciers, Moraines, Glacial lakes, Ice dams, USSR—Zailiyskiy Alatau.

35-2825
Impact of floods from glacier-dammed lakes, Yukon, Canada. (Pavodki na IUkone (Kanada), obuslovlennye proryvami lednikovo-podprudnykh ozer).
Young, G.J., *Akademiia nauk SSSR. Institut geografii. Materialy gliatsiologicheskikh issledovanii. Khronika obsuzhdeniia*, July 1980, Vol.39, p.101-107, 170-175, In Russian and English. 8 refs.
Construction, Glacial lakes, Ice dams, Floods, Glacier ablation, Snowmelt, Moraines, Flood forecasting, Glacier oscillation, Roads, Canada—Yukon Territory.

35-2826
Mudflows in the Isfayramsay River Basin in 1977. (Seli v basseine r. Isfairamsai v 1977 g.).
Nikitin, A.M., et al, *Akademiia nauk SSSR. Institut geografii. Materialy gliatsiologicheskikh issledovanii. Khronika obsuzhdeniia*, July 1980, Vol.39, p.107-110, 175-178, In Russian and English. 2 refs.
Shchetinnikov, A.S.
Alpine landscapes, Glacial rivers, Glacial lakes, Moraines, Mudflows.

35-2827
Jökulhlaup (glacier bursts) and run-off series of Iceland rivers. (Lednikovye pavodki i riady stoka na rekakh Islandii).
Rist, S., *Akademiia nauk SSSR. Institut geografii. Materialy gliatsiologicheskikh issledovanii. Khronika obsuzhdeniia*, July 1980, Vol.39, p.110-111, 178-179, In Russian and English.
Glacial rivers, Ice dams, Floods, Flood forecasting, Iceland.

35-2828
New data on the dynamics of ic[illegible]s in the Weddell Sea. (Novye dannye o dinamike shel'fovykh lednikov moria Ueddella).
Zakharov, V.G., et al, *Akademiia nauk SSSR Institut geografii Materialy gliatsiologicheskikh issledovanii. Khronika obsuzhdeniia*, July 1980, Vol.39, p.181-185, In Russian with English summary 9 refs.
Kotliakov, V.M.
Ice shelves, Glacier ice, Flow rate, Calving, Icebergs, Antarctica—Weddell Sea.
Space photographs of the Weddell Sea coasts were obtained and compared to earlier maps for studying changes in fronts of the Larsen, Ronne and Filchner Ice Shelves during the last decade. Photointerpretation revealed continuous seaward progress of the fronts, reaching the maximum position in 1975-1976. Increased velocities and advance rates of ice edges were noticed after the calving of large icebergs. This was explained by changes in damming conditions of outlet glaciers and ice sheets. Giant icebergs break off periodically: every 20 years in the northwestern Ronne Ice Shelf, every 30 years in the central Larsen Shelf and every 15-17 years in the west Filchner Ice Shelf area.

35-2829
Studies of Spitsbergen snow cover in spring of 1979. (Issledovaniia snezhnogo pokrova Shpitsbergena vesnoi 1979 g.).
Troitskii, L.S., et al, *Akademiia nauk SSSR. Institut geografii. Materialy gliatsiologicheskikh issledovanii. Khronika obsuzhdeniia*, July 1980, Vol.39, p.185-192, In Russian with english summary 7 refs.
Gus'kov, A.S., Osokin, N.I., Khodakov, V.G.
Snow surveys, Snow cover distribution, Snow depth, Mapping, Snow accumulation, Snow density, Snow strength, Norway—Spitsbergen.

35-2830
Map of subglacial topography of the Vavilov Ice Dome (Severnaya Zemlya). (Karta rel'efa lozha lednikovogo kupola Vavilova na Severnoi Zemle).
Bogorodskii, V.V., et al, *Akademiia nauk SSSR. Institut geografii. Materialy gliatsiologicheskikh issledovanii. Khronika obsuzhdeniia*, July 1980, Vol 39, p.192-194, In Russian with English summary. 3 refs.
Glacier beds, Topography, Radar echoes, Ice cover thickness, USSR—Severnaya Zemlya.

35-2831
Observations in the mountain glacier basin of the Bol'shaya Khadata River, the Polar Urals, in the 1977-78 balance year. (Nabliudeniia v gorno-lednikovom basseine r. Bol'shaia Khadata na Poliarnom Urale v 1977-78 balansovom godu).
Gokhman, V.V., *Akademiia nauk SSSR. Institut geografii. Materialy gliatsiologicheskikh issledovanii. Khronika obsuzhdeniia*, July 1980, Vol.39, p.194-200, In Russian with English summary. 9 refs.
River basins, Mountain glaciers, Snow cover distribution, Snow surveys, Snow depth, Meteorological charts, Meteorological data, USSR—Ural Mountains.

35-2832
Plotting precipitation fields of the Surkhob, Obikhingou and Vanch river basins in the Pamirs from data on accumulation at the equilibrium line of glacier alimentation. (Postroenie polia osadkov v basseinakh rek Surkhob, Obikhingou i Vanch na Pamire po dannym ob akkumuliatsii na vysote granitsy pitaniia lednikov).
Tarasova, L.N., *Akademiia nauk SSSR. Institut geografii. Materialy gliatsiologicheskikh issledovanii Khronika obsuzhdeniia*, July 1980, Vol.39, p.200-203, In Russian with English summary. 8 refs.
Glacier ice, Snow accumulation, Snowstorms, Avalanches, Ablation, USSR—Pamirs.

35-2833
Tests of the stream-melting theory on the Adishi and Khalde glaciers of the Caucasus. (Proverka teorii ruchelkovogo taianiia na lednikakh Adishi i Khalde (Kavkaz).
Kazanskii, A.B., et al, *Akademiia nauk SSSR. Institut geografii. Materialy gliatsiologicheskikh issledovanii. Khronika obsuzhdeniia*, July 1980, Vol.39, p.203-206, In Russian with English summary 2 refs.
Lukin, V.M.
Mountain glaciers, Glacier ablation, Meltwater, Heat transfer, Air temperature, Analysis (mathematics), USSR—Caucasus.

35-2834
Fluctuations of the Bol'shoy Azau Glacier tongue on the Elbrus Mountain. (Kolebaniia iazyka ledника Bol'shoĭ Azau na El'brusc).
Martyshev, A.P., *Akademiia nauk SSSR. Institut geografii. Materialy gliatsiologicheskikh issledovanii. Khronika obsuzhdeniia.* July 1980, Vol.39, p.207-209. In Russian with English summary.
Mountain glaciers, Glacier tongues, Glacier oscillation, USSR—El'brus Mountain.

35-2835
Flank and frontal moraines of surging glaciers. (Beregovye i konechnye moreny pul'siruiushchikh ledникov).
Repin, A.G., *Akademiia nauk SSSR. Institut geografii. Materialy gliatsiologicheskikh issledovanii. Khronika obsuzhdeniia.* July 1980, Vol.39, p.209-212. In Russian with English summary. 8 refs
Mountain glaciers, Glacier surges, Moraines, Glacier surveys, Spaceborne photography, Pamirs.

35-2836
Optimal evaluation of glacier characteristics. (Ob optimal'noĭ otsenke kharakteristik ledникov).
Grakovich, V.F., et al, *Akademiia nauk SSSR. Institut geografii. Materialy gliatsiologicheskikh issledovanii. Khronika obsuzhdeniia.* July 1980, Vol.39, p.213-215. In Russian with English summary 4 refs.
Ryzhova, V.E.
Glaciers, Mapping, Glacier surveys, Remote sensing, Analysis (Mathematics), Physical properties, Geomorphology.

35-2837
Annotated list of Soviet literature on glaciology for 1978. (Annotirovannyĭ spisok sovetskoĭ literatury po gliatsiologii za 1978 g.).
Kotliakov, V.M., et al, *Akademiia nauk SSSR. Institut geografii. Materialy gliatsiologicheskikh issledovanii. Khronika obsuzhdeniia.* July 1980, Vol.39, p.216-283. In Russian. 631 refs.
Chernova, L.P.
Bibliographies, Glaciology, Meetings, Research projects, Ice composition, Ice physics, Sea ice, River ice, Lake ice, Ground ice, Naleds, Avalanches, Snow cover, Icing.
The list contains citations of Soviet publications on glaciology, published in Russian (or having summaries in Russian) in periodicals, proceedings and transactions of conferences for 1978. It is a continuation of similar bibliographies for 1956-1977. The annotated citations are presented in the following sections. Organization of studies, scientific meetings, conferences (1-24). Methods of studies (25-50). General problems of glaciology (51-119). Physics and chemistry of ice (120-133). Sea ice (134-228). River and lake ice (229-254). Underground ice and aufeis (255-293). Paleoglaciology (294-337). The Antarctic and the Arctic (338-376). The Caucasus (377-387). Central Asia and Kazakhstan (388-410). Siberia and Soviet Far East (411-446). Snow Avalanches and glacial mudflows (447-489). Snow cover, hail, hoarfrost and glaze (490-591). Seasonal snow cover outside the areas of present-day glaciers (592-631) and Name index. (Auth.)

35-2838
On the role of giant aerosol particles and ice-forming nuclei in the formation of hailstone nuclei.
Khorguani, V.G., *Akademiia nauk SSSR. Izvestiya. Atmospheric and oceanic physics.* 1979 (Publ. Apr. 80), 15(9), p.638-643, 10 refs., Translated from Fizika atmosfery i okeana.
Hail clouds, Aerosols, Ice nuclei, Hailstone growth.

35-2839
Fabrics makes foundation garment. *Alaska industry,* Jan. 1981, 14(1), p.14.
Foundations, Cold weather construction, Polymers, Soil Stabilization, Permafrost beneath structures, Materials, Petroleum products.

35-2840
Experience with the construction and performance of pile foundations under oil-pumping units.
Chizhevskiĭ, M.V., *Soil mechanics and foundation engineering.* July-Aug. 1980 (Publ. Jan.81), 17(4), p.125-127. Translated from Osnovaniia, fundamenty i mekhanika gruntov. 3 refs.
Petroleum industry, Pipelines, Buildings, Piles, Foundations, Frozen ground.

35-2841
Calculation of earth pressure on a retaining wall constructed on frozen ground.
Novikov, F.IA., *Soil mechanics and foundation engineering.* July-Aug. 1980 (Publ. Jan. 81), 17(4), p.146-152. Translated from Osnovaniia, fundamenty i mekhanika gruntov. 6 refs.
Earth fills, Slope stability, Walls, Permafrost beneath structures.

35-2842
Quick method of roadbed construction on narrow steep-sloping sections of the Baykal Amur railroad. (Skorostnoĭ metod sooruzheniia zemlianogo polotna na prizhimnykh uchastkakh trassy BAMa).
Podkaliuk, V.P., et al, *Transportnoe stroitel'stvo,* Mar. 1981, No.3, p.3-4, In Russian.
Shitikov, M.A., Kolesnikov, N.S.
Roadbeds, Embankments, Permafrost beneath structures, Earthwork, Blasting, Baykal Amur railroad.

35-2843
Bridge construction on temporary access roads. (Stroitel'stvo mostov na vremennykh pritrassovykh avtodorogakh).
Rasskazov, I.D., et al, *Transportnoe stroitel'stvo,* Mar 1981, No.3, p.6-8, In Russian.
Ronin, B.G., Pyshko, L.V.
River crossings, Roads, Bridges, Ice jams, Icebound rivers, Ice loads, Mudflows, Floods, Baykal Amur railroad, Construction materials.

35-2844
Modernizing prefabricated buildings for repair shops and preventive maintenance equipment at the Baykal Amur railroad. (Modernizatsiia inventarnykh zdaniĭ masterskikh i profilaktoriev na BAMe).
Bardyshev, O.A., et al, *Transportnoe stroitel'stvo,* Mar. 1981, No.3, p.17-19, In Russian.
Cherevko, V.I.
Buildings, Prefabrication, Modular construction, Permafrost beneath structures, Thermal insulation, Baykal Amur railroad, Construction materials.

35-2845
Quick method of checking the pollution of construction materials used in Angarstroi. (Ekspress-kontrol' zagriaznennosti stroitel'nykh materialov v Angarstroe).
Tantsman, M.A., et al, *Transportnoe stroitel'stvo,* Mar. 1981, No.3, p.22-23, In Russian.
IAkovlev, V.A.
Cold weather construction, Construction materials, Pollution, Mud, Water supply, USSR.

35-2846
Percussion-teeth shovel for frozen ground. (Kovsh udarno-otryvnogo deĭstviia dlia merzlykh gruntov).
Solomonov, S.A., *Transportnoe stroitel'stvo,* Mar. 1981, No.3, p.24-26, In Russian. 6 refs.
Earthwork, Excavation, Frozen ground.

35-2847
Durability of polymer concretes. (O stoĭkosti betonopolimera).
Granovskaia, I.V., et al, *Transportnoe stroitel'stvo,* Mar. 1981, No.3, p.51, In Russian.
Roiak, G.S.
Concretes, Polymers, Cements, Concrete strength, Frost resistance, Freeze thaw cycles.

35-2848
Ust'-Ilim Lumber Industry Complex. (Ust'-Ilimskogo lesopromyshlennogo kompleksa). *Mekhanizatsiia stroitel'stva,* Apr. 1981, No.4, p.12-14, In Russian.
Large panel buildings, Construction equipment, Cranes (hoists), Earthwork, Excavation.

35-2849
Snowplows DE-223 and DE-225. (Snegoochistiteli DE-223 i DE-225), *Mekhanizatsiia stroitel'stva,* Apr. 1981, No.4, p.25, In Russian.
Road maintenance, Winter maintenance, Snow removal.

35-2850
New excavation machines and equipment. (Novye zemleroĭnye mashiny i oborudovanie), *Mekhanizatsiia stroitel'stva,* Apr. 1981, No.4, p.26-27, In Russian.
Excavation, Frozen ground.

35-2851
Selecting pile-driving equipment and forecasting the process of pile sinking into plastic perennially frozen ground. (Vybor ratsional'nogo svaeboĭnogo oborudovaniia i prognozirovanie protsessa bezdefektnogo pogruzheniia svai v plastichnomerzlye grunty), Novozhilov, G.F., *Mekhanizatsiia stroitel'stva,* Mar. 1981, No.3, p.16-18, In Russian. 7 refs.
Foundations, Piles, Pile driving, Permafrost.

35-2852
Problems of mechanizing the laying of underground cables. (Zadachi mekhanizatsii prokladki kabelei).
Medorezov, I.A., et al, *Mekhanizatsiia stroitel'stva,* Feb. 1981, No.2, p.17-18, In Russian. 3 refs
Kuz'menko, V.V.
Equipment, Underground cables, Earthwork, Excavation, Permafrost, Cables (ropes).

35-2853
Gantry crane for repairing construction equipment at the Baykal Amur railroad. (Kozlovoĭ kran dlia remonta stroitel'noĭ tekhniki na BAMe).
Talts, V.G., et al, *Mekhanizatsiia stroitel'stva,* Feb 1981, No.2, p.21-22, In Russian.
Vil'ner, A.D.
Construction equipment, Winter maintenance, Baykal Amur railroad.

35-2854
To the Pole of Inaccessibility. (K poliusu nedostupnosti).
Pikul', V., *Izobretatel' i ratsionalizator,* 1981, No.2, p.24-26, In Russian.
Ice navigation, Icebreakers, Subglacial navigation, Submarines, Arctic Ocean.

35-2855
Shapes of snow and ice.
Takahashi, K., Tokyo, Asahi Newspaper Co., 1980, 119p., In Japanese.
Snow cover, Ice cover, Surface structure, Snow melting, Ice melting.

35-2856
Economic impact of proposed amendments to snowmobile noise regulations, R79-10.
Bumpass, D., *Illinois Institute of Natural Resources Environmental Management Division. Document,* May, 1980, No.80/80, 11p. + appends., 11 refs.
Snow vehicles, Noise (sound), Countermeasures, Pollution, Legislation, Cost analysis.

35-2857
Rapid ice building examined in Alaska. *Illinois Institute of Natural Resources. Environmental Management Division. Document,* May, 1980, No.80/80, p.10.
Artificial ice, Ice crystal nuclei, Drops (liquids), Freezing, Ice growth, Heat transfer, Mass transfer.

35-2858
Ice and steep slopes present design challenges for arctic production islands. *Illinois Institute of Natural Resources. Environmental Management Division. Document,* May, 1980, No.80/80, p.24-28.
Artificial islands, Ice pressure, Ice loads, Slopes, Water waves, Maintenance, Design, Offshore structures.

35-2859
Aquaculture systems for wastewater treatment: an engineering assessment.
Reed, S.C., et al, *U.S. Environmental Protection Agency. Office of Water Program Operations. Technical bulletin,* June 1980, 430/9-80-007, MP 1422, 127p., Refs. passim. For selected papers see 35-2860 and 35-2861.
Bastian, R.K.
Waste treatment, Water treatment, Sanitary engineering, Ponds, Cold weather performance, Aquaculture.

35-2860
Engineering assessment of aquaculture systems for wastewater treatment: an overview.
Reed, S.C., et al, *U.S. Environmental Protection Agency. Office of Water Program Operations. Technical bulletin,* June 1980, 430/9-80-007, MP 1423, p.1-12.

Waste treatment, Water treatment, Sanitary engineering, Ponds, Aquaculture.

35-2861
Combined aquaculture systems for wastewater treatment in cold climates: an engineering assessment.
Pershe, E.R., *U.S. Environmental Protection Agency. Office of Water Program Operations. Technical bulletin,* June 1980, 430/9-80-007, p.105-127, 6 refs.
Waste treatment, Water treatment, Sanitary engineering, Cold weather performance, Ponds, Aquaculture.

35-2862
Wastewater treatment ponds. *U.S. Environmental Protection Agency Office of Water Program Operations. Technical bulletin,* Mar. 1975, 430/9-74-001, 21p. + appends., 42 refs.
Waste treatment, Water treatment, Ponds, Environmental protection, Legislation.

35-2863
Little America: town at the end of the world.
Carter, P.A., New York, Columbia University Press, 1979, 301p., Numerous refs.
DLC G860.C324
Expeditions, Exploration, Stations, History, Antarctica—Little America.
The book is essentially the story of the last American frontier town, and of rapidly changing exploration technology which evolved from the windjammer and the coal-burning ship of Byrd's first expedition in 1929 to diesel powered ships and long

range aircraft of the 1950's and the nuclear powered station of the 1960's. But above all it is the story of the people involved either directly as participants in the expeditions, as sponsors, or as contributors of funds Even a partial listing of those who pass through these pages is revealing Byrd, Ellsworth, Gould, Siple, Mawson, Goodale, Ronne, Hillary, Fuchs, Balchen, FDR John D Rockefeller, Edsel Ford, Jacob Ruppert, Dana Conan, Lindbergh, Gene Tunney

35-2864
From nomadic to mobile architecture. {Ot kochevoĭ do mobil'noĭ arkhitektury}.
Maldar, D., et al, Moscow, Strolizdat, 1980, 215p. (Pertinent p.174-213), In Russian with abridged English table of contents enclosed. 215 refs.
Piurveev, D.
Urban planning, Inflatable structures, Buildings, Thermal insulation, Modular construction, Trailers, Construction materials.

35-2865
Measuring the size of artificial ice-forming nuclei with diffusion batteries. {Izmerenie razmera iskusstvennykh l'doobrazuiushchikh iader diffuzionnymi batareiami}.
Beliaev, S.P., et al, *Moscow. Institut eksperimental'noĭ meteorologii. Trudy*, 1980, 25(93), p.57-63, In Russian. 11 refs.
Kim, N.S.
Aerosols, Smoke generators, Nucleating agents, Wind tunnels, Ice crystal nuclei, Measuring instruments, Laboratory techniques.

35-2866
Biocenotic role of animals in the Yamal forest tundra. {Biotsenoticheskaia rol' zhivotnykh v lesotundre IAmala}.
Danilov, N.N., ed, *Akademiia nauk SSSR. Ural'skiĭ nauchnyĭ tsentr. Institut ekologii rastenii i zhivotnykh. Trudy*, 1977, Vol.106, 146p., In Russian. For selected papers see 35-2867 and 35-2868. Refs. passim.
Subarctic landscapes, Tundra, Forest tundra, Cryogenic soils, Soil microbiology, Meadows, Swamps, Plant ecology, Biomass, Animals, USSR—Yamal Peninsula.

35-2867
Role of animals in Subarctic biogeocenoses. {Rol' zhivotnykh v biogeotsenozakh subarktiki}.
Danilov, N.N., *Akademiia nauk SSSR. Ural'skiĭ nauchnyĭ tsentr. Institut ekologii rastenii i zhivotnykh. Trudy*, 1977, Vol 106, p.3-30, In Russian. 60 refs.
Subarctic landscapes, Cryogenic soils, Soil microbiology, Plant ecology, Biomass, Animals.

35-2868
Productivity of plant communities of the "Khadyta" research station and the effect of rodents on grass cover in the study areas. {Produktivnost' rastitel'nykh soobshchestv statsionara "Khadyta" i vliianie gryzunov na travianoĭ pokrov poligonov}.
Peshkova, N.V., *Akademiia nauk SSSR. Ural'skiĭ nauchnyĭ tsentr. Institut ekologii rastenii i zhivotnykh. Trudy*, 1977, Vol 106, p.134-145, In Russian. 11 refs.
Subarctic landscapes, Forest tundra, Taiga, Cryogenic soils, Grasses, Meadows, Swamps, Biomass, Plant ecology.

35-2869
Effect of hail nuclei concentration on their coagulation growth. {O vliianii kontsentratsii zarodyshei gradin na protsess ikh koaguliatsionnogo rosta}.
Kartsivadze, A.I., et al, *Akademiia nauk Gruzinskoĭ SSR. Institut geofiziki. Trudy*, 1980, Vol.47, p.5-17, In Russian with English and Georgian summaries. 7 refs.

Polarization of radio waves in ice sheets.
Doake, C.S.M., *Geophysical journal*, Feb. 1981, 64(2), p.539-558, 20 refs.
Ice sheets, Radio waves, Radio echo soundings, Polarization (waves), Analysis (Mathematics).
The polarization behavior of radio waves which have been transmitted and reflected at or near normal incidence in an ice sheet can be explained if the ice is assumed to be a uniaxial birefringent material Equations are derived for describing the change in polarization for the experimental conditions usually encountered when sounding ice sheets The operation of several different types of polarimeter is discussed in order to compare the amount and the quality of information which can be obtained for various degrees of complexity in equipment and technique Data obtained from sounding the antarctic ice sheet was used to develop the equations (Auth mod)

Sodium, magnesium, potassium and calcium concentrations in ice cores from the Law Dome, Antarctica.
Johnson, B.B., et al, *Geochimica et cosmochimica acta*, May 1981, 45(5), p.771-776, 19 refs.
Chamberlain, J.M.
Ice cores, Ice composition, Antarctica—Law Dome.
The concentrations of Na, Mg, K and Ca have been determined in three ice cores drilled along a flow line of the Law Dome, Antarctica. Average cationic concentrations in the upper sections of the cores show a marked decrease in concentration with increasing distance from the coast. A depth profile of the core drilled 5 km from the coast near Cape Folger indicates that the ice below 260 m was precipitated in a colder climate regime, probably towards the end of the Wisconsin stage. The depth profile of the core located at the summit of the dome, 110 km from the coast, shows an unexpected steady increase in the concentration of cations with depth. This may indicate an increase in precipitation, or a gradual change in wind patterns on the dome over recent centuries (Auth.)

35-2886
Use of radio-echo measurements in determining the thickness and velocity of an antarctic ice sheet.
Bogorodskiĭ, V.V., et al, *Akademia nauk SSSR. Izvestiya. Physics of the solid earth*, Aug. 1979, 15(1), p.60-74, 7 refs. Translated from its Izvestiia. Fizika zemli.
Trepov, G.V., Sheremet'ev, A.N.
Ice sheets, Ice cover thickness, Glacier flow, Radio echo soundings.

The authors developed and used in the Soviet Antarctic Expedition a technique of radio-echo measurements of the velocity under field conditions which allows determination of velocity of glacier movement with a relative error of 10% from two measurements 2 to 20 days apart. A combination of radio-echo measurements of the velocity and the thickness of an ice form permits the solution of a number of problems in ice sheet dynamics. This paper presents the results of the determination of the solid flow of ice across a latitudinal section and the mass balance of the ice sheet south of Molodezhnaya from radio-echo measurement data on the thickness and velocity of the ice form and front snow-metering observations in this area. (Auth.)

35-2887

Anomalous behaviour of Dome C ice core (East Antarctica) studied by mechanical damping measurements.

Vassoille, R., et al, *Annales de géophysique*, Oct.-Dec. 1980, 36(4), p.491-498, 28 refs.

Ice cores, Ice electrical properties, Antarctica—Dome C.

In order to investigate anomalous properties of Antarctic ice previously observed through electrical measurements, the authors studied specimens from the Dome C ice core by means of mechanical damping in the low frequency range (1 Hz). The temperature of the relaxation peak is lower than in the case of pure ice. Two possible explanations of the anomalous properties of polar ice are discussed, namely the role of impurities, or aging effect and conditions of crystal growth. It seems improbable that impurities are responsible for such properties due to their low concentration. But some experiments explain the behaviour of polar ice in terms of modifications with time of the concentration and distribution of intrinsic point defects present at the beginning of existence of the ice microcrystals; the conditions of formation of these crystals from snow are also discussed. (Auth.)

35-2888

Oceanographic investigations in polar regions of the World Ocean. [Okeanograficheskie raboty v poliarnykh rafonakh Mirovogo okeana],

Blinov, N.I., et al, Leningrad, Gidrometeoizdat, 1980. 239p., In Russian with English table of contents enclosed. 132 refs.

Dremliug, V.V., Romantsov, V.A.

Ice conditions, Meteorology, Drift stations, Subglacial observations, Oceanography, Research projects, Computer applications, Arctic Ocean.

Methods of oceanographic research in the polar regions are reviewed and alternatives of their development and improvement are considered. The book contains information on experiments from drifting ice in the arctic, shipboard instrumentation of Soviet vessels in the Arctic and Antarctic, specifications of technical aids, and detailed considerations of the measurement of various oceanographic elements and computer processing of the data. Theory and techniques of planning oceanographic research are discussed.

Optical, chemical and physical properties of aerosols over the antarctic ice sheet.

Shaw, G.E., *Atmospheric environment*, 1980, 14(8), p.911-921, 35 refs.

Aerosols, Atmospheric composition, Atmospheric attenuation, Particle size distribution, Ice sheets, Antarctica—Amundsen-Scott Station, Antarctica—Ross Island.

Multiwavelength optical measurements of atmospheric extinction and sky brightness in the solar aureole were made at Ross Island and at South Pole Station, to derive the column-integrated size distribution and mass loading of suspended aerosol. In addition, the composition and particle size distribution near the surface at South Pole, the Ross Ice Shelf and from the summit of Mt Erebus volcano were derived by electron microscopic analysis and X-ray spectrometry. (Auth. mod.)

Healy, T.R.
River flow, Sediments, Geomorphology, Antarctica—Onyx River.
Onyx River has three characteristic reaches, bedrock incision, moraine breaches, and alluvial. Antecedent geomorphological events control the slope the these reaches and to some extent the bed material. Antecedent geomorphological events control the slope of these reaches and to some extent the bed material. Discharge hydrographs and flow-duration curves reveal a division into two flow regimes with a hiatus at about 1 cumec. The modern channel form and pattern and distribution of bed materials may be related to these flow regimes. Channel-in-channel features, berms, overspill channels, and longitudinal bars are related to flow characteristics. The evolution of the river and its terraces is discussed in terms of changes in discharge and sediment supply. Prominent terraces are explained in terms of relative contributions of water and sediment from Wright Lower Glacier and from other glaciers. The terraces reflect climatic changes and their chronology is related to recent glacier activity and changes in level of Lake Vanda (Auth.)

If West Sheet melts rapidly—what then.
Bentley, C.R., *Geotimes*, Aug. 1980, 25(8), p 20-21
Ice sheets, Ice melting, Antarctica—West Antarctica.
The theory is discussed that the West Antarctic ice sheet, being more vulnerable than that of East Antarctica, may disappear within a few hundred years. A symposium in April 1980, though far from reaching a unanimous opinion on the theory agreed that the possibility of such an occurrence was serious enough to warrant further research. A program was outlined for gathering data that could be used to predict the future state of the West Antarctic ice sheet

And if the antarctic ice sheet melts...
Bentley, C.R., *Wisconsin academy review*, Sep. 1980, 26(4), Wisconsin University Geophysical and Polar Research Center Contribution No 32, p 24-29
Ice sheets, Glacier melting, Carbon dioxide, Glacier heat balance.
The possibility of a rapid melting of the West Antarctic ice sheet because of the atmospheric accumulation of man-made CO_2 is discussed. CO_2 buildup in the atmosphere could provide a global greenhouse effect, raise polar heating by 4-8 deg C, and cause rapid melting (in a period of 100-200 years) of antarctic ice. The physical setting is described, the mechanics of glacier movement, accumulation, and ablation are discussed, a comparison is made with the Laurentide ice sheet, and an analogy is drawn between the disappearances of that ice sheet and an earlier antarctic ice sheet. Pros and cons of the issue are examined

35-2964
Studies on the ice flow in the bare ice area near the Allan Hills in Victoria Land, Antarctica.
Nishio, F., et al, *Tokyo. National Institute of Polar Research. Memoirs*, Dec. 1980, Special issue No.17, p.1-13, 9 refs
Annexstad, J.O.
Ice sheets, Glacier flow, Velocity measurement, Glacier ablation, Antarctica—Allan Hills.
The mechanism of accumulation of a large number of meteorites in the bare ice area near the Allan Hills in south Victoria Land was investigated by surveying a triangulation chain of 20 stations, 15 km in total length, during the 1978-79 and 1979-80 field seasons. The horizontal and vertical components of surface velocities of the ice sheet in the bare ice area at 18 stations and the parameters of surface strains at 18 triangles of the chain were obtained. The horizontal velocity of the ice sheet at the station farthest from the datum point is 2.51 m/yr and the velocity vector principally points in a northeast direction which is perpendicular to the contour lines. The magnitude of horizontal velocities gradually decreases from a maximum at station 20 to nearly zero at the stations near the Allan Hills. The vertical movements of the bare ice are emergent at a rate of 4.5 cm/year on the average in the region of high meteorite accumulation, while in the area further inland the vertical ice flow shows small submergence velocities. Ablation rates are ranging from 4.2 to 7.0 cm/year with an average of 5.7 cm/year and are balanced on the average by the emergent velocity of the ice in the meteorite accumulation area. (Auth. mod.)

Sea level, ice and climatic change; Proceedings of the Symposium, 7-8 Dec. during the 17th General Assembly of IUGG, Canberra.
Allison, I., ed, *International Association of Hydrological Sciences Publication*, 1981, No 131, 471p. For selected papers see 35-3018 through 35-3041, or F-24655 through F-24665, F-24667 through F-24669, I-24666 and I-24670.
Climatic factors, Paleoclimatology, Meetings, Glaciation, Glaciers, Glaciology, Ice sheets, Sea level, Climate.
The major objective of the symposium was to review current ideas and recent results on the processes and the effects of interactions between sea level, ice, and climatic change on time scales of 100 to 10,000,000 years. The six invited review papers and all contributed papers read at the symposium are presented in this volume, mostly in full. The papers have been grouped into two major sections: ice and snow as elements in the weather and climate system and as indicators of change, and features and interactions of sea level, ice and climate in the Quaternary.

35-3026
Review of sea-ice weather relationships in the Southern Hemisphere.
Ackley, S.F., *International Association of Hydrological Sciences. Publication.* 1981, No.131, MP 1426, Sea level, ice and climatic change: proceedings of the symposium held 7-8 Dec. 1979, edited by I. Allison, p.127-159, Refs. p.157-159.
Sea ice distribution, Weather, Wind (meteorology), Ocean currents, Antarctica.
Within the last decade data on sea ice from satellite coverage have become available for the Southern Hemisphere The data record is reviewed with some consideration given to the different mechanisms of ice advection by wind forcing, thermodynamic growth, and ocean mixing These mechanisms control the ice edge around Antarctica and lead to the characteristic advance-retreat relationships for the Weddell Sea, East Antarctica, and the Ross Sea. Recent statistical and function (EOF) analyses have shown two primary areas of higher annual variation of sea ice conditions which are presumed to be of dynamic (winds and currents) rather than thermodynamic (temperature) origin. It is postulated that atmospheric forcing of the sea ice system causes changes in air-sea energy transfers that then drive the atmosphere to its own anomaly condition Further correlations that may define the mechanism of sea ice response to the forcing fields and supply stronger evidence of weather and climate responses to ice variations, may be available by analysis of the Global Weather Experiment drifting buoy data obtained during 1979 (Auth. mod.)

35-3027
Antarctic sea ice growth and oceanic heat flux.
Allison, I., *International Association of Hydrological Sciences. Publication,* 1981, No.131, Sea level, ice and climatic change: proceedings of the symposium held 7-8 Dec. 1979, edited by I. Allison, p.161-170, 15 refs.
Ice heat flux, Sea ice, Ice formation, Ice melting, Antarctica—Mawson Station.
The classical relationship between the thickness of a floating ice cover and air temperature, the Stefan law, greatly overestimates the growth rate of Antarctic sea ice, because, among other simplifications, it neglects the role of heat transfer from the ocean to the ice at the lower boundary. Sea ice measurements from near Mawson, Antarctica, are used to show that, by modifying the Stefan law to account for this heat exchange, both the growth and decay of the ice cover can be followed Air temperature and ice thickness measurements are used to estimate the ocean heat flux for several years at Mawson, these estimates agree well with heat flux values calculated from more detailed data. The ocean heat flux shows systematic variation throughout the season and is in part controlled by the ice growth process itself The flux is greatest initially when brine rejected by the rapidly growing ice sets up thermohaline convection in the underlying water. As the rate of ice growth and brine rejection decreases, so does the convection and the heat flux to the lower ice boundary drops off A second peak in the heat flux, occurring in September-October, is possibly linked with large scale meridional heat advection in the southern ocean. The oceanic heat flux estimated for several other Antarctic stations shows the same pattern as at Mawson (Auth.)

35-3028
Variations of sea ice conditions in Lützow-Holm Bay area, in Antarctica in the last 20 years.
Kusunoki, K., *International Association of Hydrological Sciences. Publication,* 1981, No.131, Sea level, ice and climatic change. proceedings of the symposium held 7-8 Dec. 1979, edited by I. Allison. p.171-176, 4 refs.
Sea ice distribution, Ice conditions, Weather, Climatic factors, Drift, Antarctica—Lützow-Holm Bay.
To elucidate the local sea ice and weather interaction in the Lützow-Holm Bay area, ice data collected by the annual relief ships of the Japanese Antarctic Research Expedition and pertinent weather and ice data from shore stations and satellites are analyzed. The edge of the pack ice on the meridian of Showa station retreated about 4 km/day in Dec.-Feb., leaving a fast ice fringe about 45 km in width. Shipboard observations revealed that the average speed of ice drift was in the range of 5-30 cm/s to 250 (west). Satellite data indicated a maximum extension of the pack ice edge to 55-60 S in mid winter and rapid retreat in Nov.-Jan Experience of navigability of relief ships suggests a 10-year cycle of favorable ice conditions, however a plausible explanation in terms of ice-weather interaction remains to be found. As an example of changes in ice conditions associated with cyclonic activity in winter, data from Showa station for 1977 are presented. (Auth.)

35-3029
Sea-ice atmosphere interactions in the Weddell Sea using drifting buoys.
Ackley, S.F., *International Association of Hydrological Sciences. Publication.* 1981, No 131, MP 1727, Sea level, ice and climatic change. proceedings of the symposium held 7-8 Dec 1979, edited by I Allison, p.177-191, 23 refs.
Sea ice, Atmospheric circulation, Pack ice, Atmospheric pressure, Drift, Air temperature, Wind factors, Weddell Sea.
Air-dropped data buoys were placed on the Weddell Sea pack ice during December 1978 These buoys transmit information via the NIMBUS satellite giving data on their position, surface pressure, and surface temperature The velocities of four buoys during fall showed values up to 40 cm/s (35 km/day) The highest sustained velocities appear to coincide with sudden drops in air temperature Schwerdtfeger (1979) has postulated a model of winds in the western Weddell Sea dominated by thermal rather than pressure gradient forces due to the damming of cold air from continental barrier and katabatic winds against the mountains of the Antarctic Peninsula. This model is examined to explain the drift rates associated with cold air outbreaks. (Auth)

35-3030
Effect of sea ice on a general circulation model of the Southern Hemisphere.
Simmonds, I., *International Association of Hydrological Sciences. Publication,* 1981, No.131, Sea level, ice and climatic change proceedings of the symposium held 7-8 Dec. 1979, edited by I. Allison, p.193-206. Refs. p.205-206.
Atmospheric circulation, Atmospheric pressure, Ice heat flux, Mathematical models, Antarctica.
A general circulation model of the Southern Hemisphere has been used to test the sensitivity of hemispheric climate to changes in the sea ice cover around Antarctica. Two simulations which differed only in the specification of sea ice were performed When integrated over the hemisphere, it was found that the total flux of latent and sensible heat was almost independent of sea ice cover. An increase in mean sea level pressure in middle to high latitudes was observed in the ice anomaly experiment, a result opposite to that obtained by other authors in Arctic sea ice experiments However the increase was shown to be qualitatively similar to the observed changes between September and March. The 500 mb level underwent a considerable lifting over a large portion of the Southern Hemisphere, most marked in the vicinity of Antarctica. (Auth)

35-3031
Climate into ice: the isotopic record in polar ice sheets.
Robin, G. de Q., *International Association of Hydrological Sciences. Publication,* 1981, No.131, Sea level, ice and climatic change: proceedings of the symposium held 7-8 Dec 1979, edited by I Allison, p.207-216, Refs. p.214-216.
Climatic changes, Paleoclimatology, Ice sheets, Oxygen isotopes, Ice temperature, Precipitation (meteorology).
A brief survey of processes that control isotopic delta values on polar ice sheets is given along with a summary of various studies of the relationship between mean delta values and mean temperatures Empirical time series studies of mean delta values and mean temperatures indicate that a ratio of delta of between 0 5 and 1 0 fits most data on a time scale ranging from seasonal variations to millennia. However ice core data cannot be used to infer past climatic fluctuations of temperature until allowance has been made for the flow of ice to the drilling site, including allowance for changes of ice sheet dimensions over the period involved Data from two Antarctic ice cores appear consistent with the concept that isotopic profiles indicate changes over wide areas with errors of the expected magnitude (Auth)

35-3032
Evidence of climatic change in Antarctica over the last 30,000 years from the Dome C ice core.
Lorius, C., et al, *International Association of Hydrological Sciences. Publication,* 1981, No.131, Sea level, ice and climatic change: proceedings of the symposium held 7-8 Dec. 1979, edited by I. Allison, p.2 7-225, Refs. p.223-225.
Merlivat, L., Duval, P., Jouzel, J., Pourchet, M
Paleoclimatology, Ice sheets, Climatic changes, Antarctica—Dome C.
Ice core studies provide information on climatic changes and variability beyond the range of instrumental records, and clues to identify physical causes of those variations. As an example the authors summarize some of the results obtained from a 905 m deep ice core collected at Dome C in East Antarctica as part of the International Antarctic Glaciological Project (Auth)

Measured and computed temperature profiles at Mizuho Station, East Antarctica.
Nishio, F., et al, *International Association of Hydrological Sciences Publication,* 1981, No 131, Sea level, ice and climatic change proceedings of the symposium held 7-8 Dec 1979, edited by I Allison, p 239-246, 12 refs.
Fujii, Y , Kusunoki, K.
Ice sheets, Ice temperature, Climatic changes, Antarctica—Mizuho Station.
At Mizuho station in East Antarctica, an ice temperature profile down to 145 m was measured in 1977 The measured profile near the surface shows a large negative temperature gradient, i e the surface temperature is higher than in lower layers, however only small negative temperature gradients are obtained from theoretical steady state temperature profiles under the assumption present accumulation rate, flow rate and ice thickness. The observed negative gradient is interpreted as climatic warming or the lowering of the surface elevation of the ice sheet or the superposition of both effects Detailed analysis of the measured and computed temperature profiles suggests that either a warming trend of about 1 C or the thinning of the ice sheet by about 70 m began 50 years ago Oxygen isotope analysis of snow in the upper layers also suggests that the start of warming was about 50-70 years ago. (Auth.)

35-3036
Variations in valley glacier activity in the Transantarctic Mountains as indicated by associated flow bands in the Ross Ice Shelf.
Bentley, C R., *International Association of Hydrological Sciences. Publication,* 1981, No.131, Sea level, ice and climatic change· proceedings of the symposium held 7-8 Dec. 1979, edited by I. Allison, p.247-251
Glacier oscillation, Sounding, Ice cover thickness.
Radar sounding records from the grid eastern Ross Ice Shelf show striking variations in basal reflectivity closely associated with the source of the ice Ice from glaciers shows a strong basal echo, whereas on ice from between the glaciers the echo is weak or absent, presumably due to brine infiltration The width and continuity of the strongly reflecting flow bands, as

they are traced across the Ross Ice Shelf, provide information about the relative activity of the glaciers compared with that of the surrounding ice Large changes in activity within the last 1500 years have been found. The cause is not certain, but the author believes it to be related to past oscillations of the glacier grounding lines resulting from changes in ice shelf thickness. A good correlation between glacier activity and the oxygen isotope records from ice cores at Dome C and Byrd stations strongly suggest some palaeoclimatic significance The continuity of the glacier flow-band record precludes any major surges of the West Antarctic ice sheet in the 1500 years (Auth.)

35-3037
Mass balance studies in East Antarctica.
Morgan, V.I., et al, *International Association of Hydrological Sciences. Publication,* 1981, No.131, Sea level, ice and climatic change: proceedings of the symposium held 7-8 Dec. 1979, edited by I. Allison, p.253-260, Refs. p.259-260.
Jacka, T.H.
Ice sheets, Ice cover thickness, Mass balance, Antarctica—East Antarctica.
Measurements were made of ice thickness, flow and snow accumulation along a traverse route in MacRobertson and Kemp lands in East Antarctica. The ice flux across the route is calculated to be 4.6 Gt/a Comparison with the calculated mass input from snow accumulation in the basin south of the traverse route (9 ± Gt/a) shows that there is an imbalance of ±100%. Similar studies indicate that other areas of East Antarctica have a positive mass budget. The implications are briefly discussed. (Auth.)

35-3038
Responses of ice sheets to environmental changes.
Young, N.W., *International Association of Hydrological Sciences. Publication,* 1981, No.131, Sea level, ice and climatic change proceedings of the symposium held 7-8 Dec. 1979, edited by I. Allison, p.331-360, Refs. p.355-360.
Ice sheets, Thermodynamics, Ice shelves, Ice pressure, Stresses, Ice temperature, Climatic changes, Antarctica—Ross Ice Shelf, Antarctica—West Antarctica.
The effect of a climatic warming is investigated for the West Antarctic ice sheet and the Ross Ice Shelf. The present temperature and stress fields are calculated using known data, wherever available, along a flowline in the Ross Ice Shelf. Calculated values of temperature closely match measured values at two borehole sites, J9 and Q13 The change of temperature at depth with time, following a 5 C increase at the surface, is calculated and the changes in flow rates in response to this warming are computed It is found that after 50 years, negligible change has occurred, but after 1000 years, temperatures and strain rates have reached a new equilibrium for most of the ice shelf. On the other hand, by that time, the ice discharge rate at the outlet of an ice stream has increased by half the potential total increase as a result of changes in the interior of the ice sheet As much as 20,000 years would be required for the thick interior ice to reach a new equilibrium. (Auth. mod.)

35-3039
Climatically and non-climatically induced glacier changes: a review of Soviet studies.
Kotlıakov, V.M., et al, *International Association of Hydrological Sciences. Publication,* 1981, No.131, Sea level, ice and climatic change: proceedings of the symposium held 7-8 Dec. 1979, edited by I. Allison, p.361-368, 19 refs.
Grosval'd, M.G.
Pleistocene, Climatic changes, Paleoclimatology, Glaciation, Glacier oscillation.
New Soviet studies on the relationships between climate and ice masses are reviewed The mechanisms of "cosmic signal amplification" operating within the atmosphere-ocean-glaciers system were developed to gain insight into the causes of glacier changes with duration of 10,000 to 100,000 years The "saw-toothed" glacial cycles, in particular gradual buildups of the Quaternary ice sheets followed by abrupt deglaciations, might be accounted for by the fact that the buildups led to an increase in the proportion of marine glaciers, implying an increase in mechanical instability of glacier systems and their collapse by surges Continental drift and resulting alterations in the pattern of ocean currents are being considered among the causes of the major glacier changes occurring on the time sale of 10,000,000 to 1,000,000 years Some Soviet students are interpreting the inception and development of the antarctic glaciation in terms of the Australian-Antarctic partition, opening up the Drake Passage and the establishment of the circumantarctic current. (Auth mod)

35-3040
Growth and retreat of ice sheets in response to orbital radiation changes.
Budd, W.F., et al, *International Association of Hydrological Sciences. Publication,* 1981, No.131, Sea level, ice and climatic change. proceedings of the symposium held 7-8 Dec. 1979, edited by I. Allison, p.369-409, Refs. p.403-409.

Climatic change, ice sheets and sea level.
Flohn, H , *International Association of Hydrological Sciences. Publication,* 1981, No.131, Sea level, ice and climatic change. proceedings of the symposium held 7-8 Dec. 1979, edited by I. Allison, p.431-440, Refs. p.437-440.
Paleoclimatology, Climatic changes, Ice sheets, Sea level, Pleistocene, Antarctica—West Antarctica.
A review is given of some of the highlights of this symposium devoted to the geophysical background of palaeoclimatology. Simultaneous investigations based on planktonic and benthic micro-fossils from ocean cores gave new insights into the physical mechanism of glaciations and deglaciations, possibly pointing to a rather rapid collapse of the West Antarctic ice sheet. The occurrence of abrupt coolings at the end of interglacial periods presents a new challenge; the same is true for the circulation shift, at 18,000 years BP, from ice-building to ice-demolishing patterns. Oceanic upwelling/downwelling may have largely controlled the global water and carbon dioxide budget. Estimates of the speed of the waxing and waning of ice sheets and the equivalent sea level changes are given. New evidence has been presented on air particle and carbon dioxide content in the climatic history of the last 30,000 years such secondary feedback effects may play a decisive role (Auth)

Taiga, Landscape types, Cryogenic soils, Paludification, Petroleum industry, Land reclamation, Drainage, Environmental protection.

35-3045
Studying global factors of climato-morphogenetic phenomena of the Far East. [Issledovanii a global'nykh faktorov klimomorfogeneza Dal'nego Vostoka],
Nikol'skaia, V.V., ed, Vladivostok, 1979, 163p , In Russian For selected papers see 35-3046 and 35-3047. Refs. passim.
Skryl'nik, G.P., ed.
Alpine landscapes, Slope processes, Rock streams, Solifluction, River basins, Alluvium, Permafrost origin, Frozen fines, Loess, Loams, Permafrost structure, Ice veins.

35-3046
Regularities governing material composition of mountain alluvium in different climate of the Far East. [Nekotorye zakonomernosti formirovaniia veshchestvennogo sostava gornogo alliuviia raznykh klimatakh Dal'nego Vostoka],
Korotkiĭ, A.M., et al, Issledovanii global'nykh faktorov klimomorfogeneza Dal'nego Vostoka (Studying global factors of climato-morphogenetic phenomena of the Far East) edited by V.V. Nikol'skaia and G.P. Skryl'nik, Vladivostok, 1979, p 114-117, In Russian. 20 refs.
Ganzeĭ, S.S.
Mountains, Slope processes, Alluvium, Grain size, Rock streams, Solifluction, Flow rate, River basins, Icebound rivers, Naleds, Permafrost, Landscape types, Climatic factors, USSR –Far East.

35-3047
Role of ancient and recent hydroclimatic factors in morphogenesis and lithogenesis of plains in the permafrost zone. [Rol' drevnikh i sovremennykh gidroklimaticheskikh faktorov v morfo- i litogeneze ravnin kriogennoĭ zony],
Gasanov, Sh.Sh., et al, Issledovaniia global'nykh faktorov klimomorfogeneza Dal'nego Vostoka (Studying global factors of climato-morphogenetic phenomena of the Far East) edited by V.V. Nikol'skaia and G.P. Skryl'nik, Vladivostok, 1979, p.143-156, In Russian. 26 refs.
Zimov, S.A.
Frozen fines, Loess, Loams, Ice veins, Permafrost structure, Thermokarst, Permafrost origin.

35-3048
Introduction of useful plants in Yakutia (collection of papers). [Introduktsiia poleznykh rasteniĭ v lAkutii (sbornik nauchnykh trudov)],
Andreev, V.N., ed, Yakutsk, lAkutskiĭ filial SO AN SSSR, 1980, 100p., In Russian with English table of contents enclosed. Refs. passim.
Introduced plants, Cryogenic soils, Permafrost, Plant ecology, Plant physiology, USSR—Yakutia.

35-3049
All-Union symposium on physical bases of recent climatic changes, Moscow, Apr. 23-25, 1979, Vol. 1. [Sbornik 1],
Vsesoiuznyĭ simpozium Fizicheskie osnovy izmeneniia sovremennogo klimata, Moscow, Apr 23-25, 1979, Moscow, 1980, 108p., In Russian. For selected papers see 35-3050 through 35-3052. Refs. passim.
Zastavenko, L.G., ed.
Polar regions, Climatic changes, Air temperature, Sea ice, Ice conditions, Taiga, Microclimatology, Human factors, Snow surveys.

35-3050
Structure of recent fluctuations in climatic conditions of the Arctic. [Struktura sovremennykh kolebaniĭ klimata Arktiki],
Voskresenskiĭ, A I., et al, Vsesoiuznyĭ simpozium Fizicheskie osnovy izmeneniia sovremennogo klimata, Moscow, Apr. 23-25, 1979. Sbornik 1 (All-Union symposium on physical bases of recent climatic changes, Moscow, Apr. 23-25, 1979. (Vol.1) edited by L.G. Zastavenko, Moscow, 1980, p.57-62, In Russian. 5 refs.
Liubarskiĭ, A.N., Petrov, L.S.
Polar regions, Climatic changes, Air temperature, Seasonal variations, Meteorological charts, Sea ice, Ice conditions.

35-3051
Changes in the radiation and thermal energy balance in West Siberia due to human factors. [Izmenenie radiatsionnogo i teploenergeticheskogo balansov v Zapadnoĭ Sibiri pod vliianiem antropogennykh faktorov],
Potapova, L.S., Vsesoiuznyĭ simpozium Fizicheskie osnovy izmeneniia sovremennogo klimata, Moscow, Apr. 23-25, 1979. Sbornik 1 (All-Union symposium on physical bases of recent climatic changes, Moscow, Apr. 23-25, 1979. (Vol. 1) edited by L.G. Zastavenko, Moscow, 1980, p.82-90, In Russian. 3 refs
Land reclamation, Solar radiation, Radiation balance, Heat balance, Vegetation, Surface properties, Albedo, Air temperature, Soil temperature, Human factors, USSR—Siberia.

35-3052
Microclimatic changes in taiga geosystems due to human factors. [Izmenenie mikroklimata v taezhnykh geosistemakh pod vozdeĭstviem antropogennykh faktorov],
Afanas'ev, V.A., et al, Vsesoiuznyĭ simpozium Fizicheskie osnovy izmeneniia sovremennogo klimata, Moscow, Apr. 23-25, 1979. Sbornik 1 (All-Union symposium on physical bases of recent climatic changes, Moscow, Apr. 23-25, 1979. Vol. 1) edited by L.G. Zastavenko, Moscow, 1980, p.90-100, In Russian. 8 refs.
Grigor'ev, G.N., Trofimova, I.E.
Taiga, Microclimatology, Human factors, Solar radiation, Heat balance, Air temperature, Humidity, Soil temperature, Snow cover effect, Snow surveys.

35-3053
Facies of soil cryogenesis and peculiarities of soil profile arrangement in them. [Fatsii pochvennogo kriogeneza i osobennosti organizatsii v nikh pochvennykh profilej],
Makeev, O V , Moscow, Nauka, 1981, 87p., In Russian with English table of contents enclosed. Refs. p.77-86.
Arctic landscapes, Subarctic landscapes, Tundra, Taiga, Permafrost distribution, Cryogenic soils, Soil formation, Soil profiles, Frost action, Geocryology, Vegetation factors, Mapping, Terminology, Classifications.

35-3054
Mycorhiza fungi and mycorhizae of forest-forming species in the North. [Mikoriznye griby i mikorizy lesoobrazuiushchikh porod Severa],
Shubin, V I., ed, Petrozavodsk, 1980, 185p., In Russian with English table of contents enclosed. Refs. p.162-179.
Taiga, Cryogenic soils, Landscape types, Vegetation, Fungi, Plant ecology, Plant physiology, Soil microbiology.

35-3055
Development of agriculture in Siberia and the Far East. [Razvitie sel'skogo khoziaistva Sibiri i Dal'nego Vostoka],
Kashtanov, A.N , ed, Moscow, Kolos, 1980, 352p , In Russian. For selected papers see 35-5056 through 35-3060.
Arctic landscapes, Deserts, Tundra, Land reclamation, Cryogenic soils, Saline soils, Paludification, Soil erosion, Irrigation, Permafrost hydrology, USSR—Siberia.

35-3056
Peculiarities of land reclamation in Siberia and the Far East. [Osobennosti melioratsii zemel' Sibiri i Dal'nego Vostoka],
Shumakov, B.B , Razvitie sel'skogo khoziaistva Sibiri i Dal'nego Vostoka (Development of agriculture in Siberia and the Far East) edited by A.N. Kashtanov, Moscow, Kolos, 1980, p.89-96, In Russian.
Land reclamation, Cryogenic soils, Arctic landscapes, Tundra, Drainage, Irrigation.

35-3057
Equipment used in the development of saline soils and flood-plain lands in West Siberia. [Mekhanizatsiia osvoeniia solontsovykh i poimennykh zemel' v Zapadnoi Sibiri],
Kulebakin, P.G., Razvitie sel'skogo khoziaistva Sibiri i Dal'nego Vostoka (Development of agriculture in Siberia and the Far East) edited by A.N. Kashtanov, Moscow, Kolos, 1980, p.145-148, In Russian.
Land reclamation, Saline soils, Flood plains, Earthwork, Excavation.

35-3058
Rational use of land resources. [Ratsional'noe ispol'zovanie zemel'nogo fonda],
Zakharina, E.S., Razvitie sel'skogo khoziaistva Sibiri i Dal'nego Vostoka (Development of agriculture in Siberia and the Far East) edited by A.N. Kashtanov, Moscow, Kolos, 1980, p.233-235, In Russian.
Taiga, Cryogenic soils, Soil water, Soil temperature, Protective vegetation, Gullies, Land reclamation.

35-3059
Land reclamation methods in the Far East. [Priemy melioratsii zemel' Dal'nego Vostoka],
Stepanov, A.N , Razvitie sel'skogo khoziaistva Sibiri i Dal'nego Vostoka (Development of agriculture in Siberia and the Far East) edited by A N Kashtanov, Moscow, Kolos, 1980, p.247-250, In Russian.
Land reclamation, Paludification, Cryogenic soils, Peat, Thermokarst, Drainage, Drains, Permafrost hydrology.

35-3060
Reclamation of heavy paluded soils in the Amur River area. [Osobennosti melioratsii tiazhelykh pereuvlazhniaiushchikhsia pochv Priamur'ia],
Chernoukhov, A M , Razvitie sel'skogo khoziaistva Sibiri i Dal'nego Vostoka (Development of agriculture in Siberia and the Far East) edited by A.N. Kashtanov, Moscow, Kolos, 1980, p.250-253, In Russian
Cryogenic soils, Paludification, Peat, Drainage, Trenching, Slope processes, Soil erosion.

35-3061
Time-depth and velocity-depth relations in sedimentary basins—a study based on current investigations in the Arctic Islands and an interpretation of experience elsewhere.
Acheson, C.H , *Geophysics*, May 1981, 46(5), p.707-716, 27 refs.
Acoustic measurement, Seismic velocity, Geophysical surveys, Mathematical models, Canada—Northwest Territories—Arctic Archipelago.

35-3062
Biologic-floristic studies related to environmental protection in polar regions. [Biologo-floristicheskie issledovaniia v sviazi s okhranoi prirody v Zapoliar'e],
Shliakov, R.N., ed, Apatity, 1980, 149p., In Russian. For selected papers see 35-3063 through 35-3075. Refs. passim.
Shores, Meadows, Grasses, Arctic landscapes, Human factors, Environmental protection, Deserts, Alpine tundra, Cryogenic soils, Vegetation, Plant ecology, Ecosystems, Plant physiology.

35-3063
Biologic peculiarities of seed germination in some plants growing on Kola Peninsula. [Biologicheskie osobennosti prorastaniia semian nekotorykh rastenii Kol'skogo poluostrova],
Skitkina, A.A , Biologo-floristicheskie issledovaniia v sviazi s okhranoi prirody v Zapoliar'e (Biologic-floristic studies related to environmental protection in polar regions) edited by R.N. Shliakov, Apatity, 1980, p.3-9, In Russian. 5 refs.
Cryogenic soils, Vegetation, Plant ecology, Plant physiology, Environmental protection, USSR—Kola Peninsula.

35-3064
Phytocenotic relations, age spectra and seed productivity of the Arctic sunrose (Helianthemum). [Fitotsenoticheskie sviazi, vozrastnye spektry i semennaia produktivnost' solntsetsveta arkticheskogo],
Filippova, L.N., Biologo-floristicheskie issledovaniia v sviazi s okhranoi prirody v Zapoliar'e (Biologic-floristic studies related to environmental protection in polar regions) edited by R.N. Shliakov, Apatity, 1980, p.9-26, In Russian. 15 refs.
Arctic landscapes, Cryogenic soils, Plant ecology, Plant physiology, Environmental protection.

35-3065
Initial growth stages of *Papaver lapponicum* (A. Tolm.) Nordh.s.str. in the Kola Peninsula. [Nachal'nye etapy razvitiia *Papaver lapponicum* (A Tolm) Nordh.s.str. v usloviiakh Kol'skogo poluostrova],
Andreeva, V.N., Biologo-floristicheskie issledovaniia v sviazi s okhranoi prirody v Zapoliar'e (Biologic-floristic studies related to environmental protection in polar regions) edited by R.N. Shliakov, Apatity, 1980, p.26-39, In Russian. 11 refs.
Environmental protection, Cryogenic soils, Vegetation, Plant ecology, Plant physiology, Introduced plants, USSR—Kola Peninsula.

35-3066
Age spectrum of the Lapland poppy population in the Khibiny Mountains. [Vozrastnoi spektr populiatsii maka laplandskogo v Khibinskikh gorakh],
Andreeva, V.N., Biologo-floristicheskie issledovaniia v sviazi s okhranoi prirody v Zapoliar'e (Biologic-floristic studies related to environmental protection in polar regions) edited by R.N. Shliakov, Apatity, 1980, p.40-49, In Russian. 9 refs.
Alpine landscapes, Cryogenic soils, Vegetation, Plant ecology, Plant physiology, Landscape types, Environmental protection, Alpine tundra, Rock streams.

35-3067
Seed productivity of two species of wood rush *Luzula arcuata* (Wahlb.) Sw. and *L. spicata* (L.) DC. in the Khibiny Mountains. [Semennaia produktivnost' dvukh vidov ozhik—*Luzula arcuata* (Wahlb.) Sw. i. *L. spicata* (L.) DC. v Khibinakh],
Tsareva, V T , Biologo-floristicheskie issledovaniia v sviazi s okhranoi prirody v Zapoliar'e (Biologic-floristic studies related to environmental protection in polar regions) edited by R.N Shliakov, Apatity, 1980, p.49-50, In Russian. 44 refs.
Alpine landscapes, Alpine tundra, Environmental protection, Vegetation, Plant ecology, Plant physiology, Bibliographies.

35-3068
Additional information on the flora of the Lovozerskie Mountains and problems of its protection. [Dopolneniia k flore Lovozerskikh gor i voprosy ee okhrany],
Kostina, V A., Biologo-floristicheskie issledovaniia v sviazi s okhranoi prirody v Zapoliar'e (Biologic-floristic studies related to environmental protection in polar regions) edited by R.N. Shliakov, Apatity, 1980, p.67-71, In Russian. 8 refs.
Alpine landscapes, Cryogenic soils, Vegetation, Environmental protection, Plant ecology.

35-3069
Flora of Srednie Ludy, the Kandalaksha Bay of the White Sea. [Flora Srednikh Lud, Kandalakshskogo zaliva Belogo moria],
Breshna, I.P., Biologo-floristicheskie issledovaniia v sviazi s okhranoi prirody v Zapoliar'e (Biologic-floristic studies related to environmental protection in polar regions) edited by R.N. Shliakov, Apatity, 1980, p.72-83, In Russian. 6 refs.
Tundra, Cryogenic soils, Vegetation, Peat, Plant ecology, Ecosystems.

35-3070
New data on the Chuna Tundra vegetation. [Novye dannye o flore Chuna-tundry],
Syroid, N.A , Biologo-floristicheskie issledovaniia v sviazi s okhranoi prirody v Zapoliar'e (Biologic-floristic studies related to environmental protection in polar regions) edited by R.N. Shliakov, Apatity, 1980, p.83-86, In Russian. 13 refs.
Cryogenic soils, Vegetation, Plant ecology, Ecosystems, USSR—Chuna Tundra.

35-3071
Characteristic epilithophyte lichen synusia in the area of Vud"iavrchorr (Khibiny Mtns.). [Kharakternye epilitnye lishainikovye sinuzii g. Vud"iavrchorr (Khibiny)],
Antonova, I M , Biologo-floristicheskie issledovaniia v sviazi s okhranoi prirody v Zapoliar'e (Biologic-floristic studies related to environmental protection in polar regions) edited by R.N. Shliakov, Apatity, 1980, p.87-95, In Russian. 8 refs.
Arctic landscapes, Alpine tundra, Vegetation, Human factors, Environmental protection, Plant ecology, Ecosystems.

35-3072
Basic liverwort synusia in the Khibiny Mountains and their role in the vegetational cover. [Osnovnye sinuzii pechenochnikov Khibin i ikh rol' v rastitel'nom pokrove],
Konstantinova, N.A., Biologo-floristicheskie issledovaniia v sviazi s okhranoi prirody v Zapoliar'e (Biologic-floristic studies related to environmental protection in polar regions) edited by R.N Shliakov, Apatity, 1980, p.96-107, In Russian. 22 refs.
Alpine tundra, Mosses, Plant ecology, Plant physiology, Ecosystems.

35-3073
Distribution of some adventitious and local plants in the Murmansk area. [K rasprostraneniiu nekotorykh zanosnykh i mestnykh rastenii Murmanskoi oblasti],
Kostolomov, M.N., et al, Biologo-floristicheskie issledovaniia v sviazi s okhranoi prirody v Zapoliar'e (Biologic-floristic studies related to environmental protection in polar regions) edited by R.N. Shliakov, Apatity, 1980, p.108-117, In Russian. 13 refs.
Kuz'min, A.V.
Arctic landscapes, Alpine tundra, Vegetation, Plant ecology, Ecosystems.

35-3074
Biology and distribution of chickweed *(Stellaria media* (L.) Vill.). [K rasprostraneniiu i biologii mokritsy—*Stellaria media* (L.) Vill.],
Shliakova, E.V., Biologo-floristicheskie issledovaniia v sviazi s okhranoi prirody v Zapoliar'e (Biologic-floristic studies related to environmental protection in polar regions) edited by R.N. Shliakov, Apatity, 1980, p.117-131, In Russian. 63 refs.
Shores, Vegetation, Plant physiology.

35-3075
Coastal meadows of the Kandalakshskaya Guba, White Sea. [Primorskie luga Kandalakshskogo zaliva Belogo moria],
Breshna, I P., Biologo-floristicheskie issledovaniia v sviazi s okhranoi prirody v Zapoliar'e (Biologic-floristic studies related to environmental protection in polar regions) edited by R.N. Shliakov, Apatity, 1980, p.132-143, In Russian. 10 refs.
Shores, Meadows, Grasses, Littoral zone, Swamps.

35-3076
Viscoelastic constitutive laws for ice.
Morland, L.W., et al, U.S. Army, European Research Office, Contract No. DAJA37-79-R-0395, Norwich, Gt. Britain, University of East Anglia, Dec. 1980, 56p., 7 refs.
Spring, U.
Ice mechanics, Ice creep, Ice elasticity, Viscoelasticity, Rheology, Stress strain diagrams, Analysis (mathematics), Models, Fluid dynamics, Solid phases.

35-3077
Passive solar heating in Alaska. Final report.
Zarling, J.P., *Alaska. Department of Transportation and Public Facilities. Report,* June 1980, No.AK-RD-81-15, 17p., 8 refs.
Heating, Solar radiation, Thermal insulation, Buildings, Cold weather construction, Design, Computerized simulation, Heat loss.

35-3078
Estuarine perspectives.
Kennedy, V.S., ed, New York, Academic Press, 1980, 533p., Refs. passim. For selected papers see 35-3079 and 35-3080.
Estuaries, Biomass, Plankton, Marine biology, Research projects.

35-3079
Study of plankton ecology in Chesterfield Inlet, Northwest Territories: an arctic estuary.
Roff, J.C., et al, Estuarine perspectives. Edited by V.S. Kennedy, New York, Academic Press, 1980, p.185-197, Refs. p.195-197.
Pett, R.J., Rogers, G.F., Budgell, W.P.
Ecology, Biomass, Plankton, Estuaries, Nutrient cycle, Canada—Northwest Territories—Chesterfield Inlet.

35-3080
Zooplankton in a Canadian arctic estuary.
Evans, M.S., et al, Estuarine perspectives. Edited by V.S. Kennedy, New York, Academic Press, 1980, p.199-210, 25 refs.
Grainger, E.H.
Biomass, Estuaries, Plankton, Marine biology, Polar regions.

35-3081
Proceedings.
Environmental Workshop on Offshore Hydrocarbon Development, 9th, Fairmont Hot Springs, B.C., Canada, May 4-7, 1980, Calgary, Alberta, Canada, Arctic Institute of North America, [1980], 440p., Refs. passim.
Upton, C.R., ed.
Petroleum industry, Oil recovery, Hydrocarbons, Offshore drilling, Oil spills, Ocean environments, Environmental protection, Pipelines, Ocean bottom, Environmental impact, Petroleum transportation.

35-3082
Multi-year sea ice investigation in the East Greenland Current.
Overgaard, S., *Copenhagen. Polyteknisk laereanstalt. Laboratoriet for elektomagnetisk feltteori. Report,* Aug. 1980, No.228, 69p., 15 refs.
Sea ice, Ice electrical properties, Ice salinity, Ice temperature, Ice density, Ice composition, Side looking radar.

35-3083
Contribution to the diatom flora of Arctic Canada: Report 1. Arctic representatives of the genus *Navicula*.
Lichti-Federovich, S., *Canada. Geological Survey. Paper,* 1981, No.81-1A, Its Current research, Part A, p.57-62, 30 refs.
Algae, Sea ice, Marine biology, Subglacial observations, Plankton, Scanning electron microscopy.

35-3084
Experiment in lake drainage, Richards Island, Northwest Territories: a progress report.
Mackay, J.R., *Canada. Geological Survey. Paper,* 1981, No.81-1A, Its Current research, Part A, p.63-68, 1 ref.
Lakes, Drainage, Periglacial processes, Channels (waterways), Ice wedges, Permafrost hydrology, Frost heave, Experimentation, Canada—Northwest Territories—Richards Island.

35-3085
Bedrock heave in the central Canadian Arctic.
Dyke, L.D., *Canada. Geological Survey. Paper,* 1981, No.81-1A, Its Current research, Part A, p.157-167, 14 refs.
Frost heave, Frozen rocks, Soil freezing, Ground water, Pressure, Ice growth, Continuous permafrost, Geomorphology, Cracking (fracturing).

35-3086
Lake sediment coring along Smith Sound, Ellesmere Island and Greenland.
Blake, W., Jr., *Canada. Geological Survey. Paper,* 1981, No.81-1A, Its Current research, Part A, p.191-200, 45 refs.
Lakes, Bottom sediment, Glaciation, Moraines, Drill core analysis, Radioactive age determination.

35-3087
Impact of disturbance on mudboil activity, north Henik Lake, District of Keewatin.
Egginton, P.A., *Canada. Geological Survey. Paper,* 1981, No.81-1A, Its Current research, Part A, p.299-303, 2 refs.
Mudflows, Ground thawing, Vegetation, Environmental impact, Construction, Canada—Northwest Territories—Henrik Lake.

35-3088
Aspects of the glacial history of Bylot Island, District of Franklin.
Klassen, R.A., *Canada. Geological Survey. Paper,* 1981, No.81-1A, Its Current research, Part A, p.317-326, 11 refs.
Glaciation, Glacial deposits, Glacier oscillation, Moraines, Paleoclimatology, Geomorphology, Rocks, Altitude, Canada—Northwest Territories—Bylot Island.

35-3089
Aspects of the deglaciation of the Coppermine River region, District of Mackenzie.
St-Onge, D.A., et al, *Canada. Geological Survey. Paper,* 1981, No.81-1A, Its Current research, Part A, p.327-331, In English with a chapter in French. 7 refs.
Glacial deposits, Glacier oscillation, Moraines, Paleoclimatology, Palynology, Canada—Northwest Territories—Coppermine River.

35-3090
Proceedings.
Workshop on Research in the Labrador Coastal and Offshore Region, Goose Bay, Labrador, Sep. 4-6, 1980, St. John's, Memorial University of Newfoundland, [1980], 410p., Refs. passim For selected papers see 35-3091 through 35-3102.
Oil spills, Ice conditions, Sea ice, Offshore drilling, Lake ice, Environmental impact, Shores, Exploration, Canada—Labrador.

35-3091
Perspective on oilspill modelling offshore Labrador.
Noll, C.J., et al, Workshop on Research in the Labrador Coastal and Offshore Region, Goose Bay, Labrador, Sep. 4-6, 1980. Proceedings, St. John's, Memorial University of Newfoundland, [1980], p.21-32.
Davidson, L.W.
Oil spills, Water pollution, Computer applications, Models.

35-3092
Remote sensing of oil in sea ice.
Goobie, G., Workshop on Research in the Labrador Coastal and Offshore Region, Goose Bay, Labrador, Sep. 4-6, 1980. Proceedings, St. John's, Memorial University of Newfoundland, [1980], p.33-52
Sea ice, Oil spills, Remote sensing.

35-3093
Oil spill contingency plans; present status and future potential.
Hunt, P., Workshop on Research in the Labrador Coastal and Offshore Region, Goose Bay, Labrador, Sep. 4-6, 1980. Proceedings, St. John's, Memorial University of Newfoundland, [1980], p.53-65.
Oil spills, Environmental impact, Research projects.

35-3094
Nearshore studies of marine benthos in the Makkovik Bay and Cartwright regions.
Barrie, J., et al, Workshop on Research in the Labrador Coastal and Offshore Region, Goose Bay, Labrador, Sep. 4-6, 1980. Proceedings, St. John's, Memorial University of Newfoundland, [1980], p.154-173, 18 refs.
Browne, S.
Marine biology, Bottom sediment, Canada—Labrador—Makkovik Bay.

35-3095
Effects of long term crude oil exposure on marine fish.
Kiceniuk, J.W., Workshop on Research in the Labrador Coastal and Offshore Region, Goose Bay, Labrador, Sep. 4-6, 1980. Proceedings, St John's, Memorial University of Newfoundland, [1980], p.212-222, 14 refs.
Oil spills, Marine biology, Environmental impact, Physiological effects, Crude oil.

35-3096
Palsa bogs, sand dunes and salt marshes, environmentally sensitive habitats in the coastal region southeastern Labrador.
Roberts, B.A., et al, Workshop on Research in the Labrador Coastal and Offshore Region, Goose Bay, Labrador, Sep. 4-6, 1980. Proceedings, St. John's, Memorial University of Newfoundland, [1980], p 245-263, Refs. p.257-260.
Robertson, A.W.
Frost mounds, Swamps, Shores, Discontinuous permafrost, Environmental impact, Vegetation, Construction, Hummocks, Peat, Sands, Ecology.

35-3097
Ice scour studies on the Labrador shelf.
Lewis, C.F.M., et al, Workshop on Research in the Labrador Coastal and Offshore Region, Goose Bay, Labrador, Sep. 4-6, 1980. Proceedings, St. John's, Memorial University of Newfoundland, [1980], p.264-265.
Barrie, J.V.
Ice scoring, Ocean bottom, Bottom topography.

35-3098
Patterns of freeze-up in lake Melville.
Bobbitt, J., et al, Workshop on Research in the Labrador Coastal and Offshore Region, Goose Bay, Labrador, Sep. 4-6, 1980. Proceedings, St. John's, Memorial University of Newfoundland, [1980], p.266-286, 8 refs.
Gill, R.J.
Lake ice, Ice formation, Freezeup, Ice conditions, Wind factors, Distribution, Ice surveys.

35-3099
Environmental aspects of winter navigation into Lake Melville.
Gill, R.J., et al, Workshop on Research in the Labrador Coastal and Offshore Region, Goose Bay, Labrador, Sep. 4-6, 1980. Proceedings, St. John's, Memorial University of Newfoundland, [1980], p.287-306, 10 refs.
Bobbitt, J., Russell, W.E.
Ice navigation, Lake ice, Ice conditions, Cold weather operation, Icebreakers, Ice pressure, Freezeup.

35-3100
Ice conditions affecting offshore hydrocarbon production in the Labrador Sea.
Wright, B., et al, Workshop on Research in the Labrador Coastal and Offshore Region, Goose Bay, Labrador, Sep. 4-6, 1980. Proceedings, St. John's, Memorial University of Newfoundland, [1980], p.307-319, 14 refs. Also presented at the INTERMARITEC Conference, Hamburg, Germany, Sep. 23-27, 1980.
Berenger, D.
Offshore structures, Offshore drilling, Ice conditions, Sea ice, Hydrocarbons, Icebergs, Pack ice.

35-3101
Big oil and small communities in coastal Labrador: the local dynamics of underdevelopment.
House, J.D., Workshop on Research in the Labrador Coastal and Offshore Region, Goose Bay, Labrador, Sep. 4-6, 1980. Proceedings, St. John's, Memorial University of Newfoundland, [1980], p.353-397, 22 refs.
Oil recovery, Economic development, Offshore drilling, Exploration.

35-3102
Lake Melville ice research.
Smith, P.N., Workshop on Research in the Labrador Coastal and Offshore Region, Goose Bay, Labrador, Sep. 4-6, 1980. Proceedings, St. John's, Memorial University of Newfoundland, [1980], p.398-410.
Lake ice, Ice conditions, Ice navigation, Ice cover strength, Canada—Labrador—Melville Lake.

35-3103
All-Union conference on Arctic environment under conditions of interzonal redistribution of water resources, Leningrad, Nov. 25-27, 1980, summaries of papers. [Tezisy dokladov].
Treshnikov, A.F., ed, Leningrad, 1980, 147p., In Russian. For selected abstracts see 35-3104 through 35-3135.
Shore erosion, River basins, Estuaries, Polar regions, Human factors, River diversion, Ice conditions, Water resources, Environmental protection, Deltas, Permafrost distribution, Subsea permafrost, Ice navigation, Arctic Ocean.

35-3104
Problems in studying the Arctic environment and preservation of its resources at the present stage of development. [Problemy izucheniia prirody Arktiki i okhrana ee resursov na sovremennom etape osvoeniia],
Treshnikov, A.F., Vsesoiuznoe soveshchanie Priroda Arktiki v usloviiakh mezhzonal'nogo pereraspredeleniia vodnykh resursov, Leningrad, Nov. 25-27, 1980. Tezisy dokladov (All-Union conference on Arctic environment under conditions of interzonal redistribution of water resources, Leningrad, Nov. 25-27, 1980. Summaries of papers) edited by A.F. Treshnikov, Leningrad, 1980, p.4-7, In Russian.
Polar regions, Ice conditions, Permafrost distribution, Natural resources, Water resources, Environmental protection, Air pollution, River diversion, Flow control, Research rpojects, Arctic Ocean.

35-3105
Results of preliminary studies of the Arctic environment for the first stage of partial runoff diversion. [Predvaritel'nye itogi issledovaniia prirody Arktiki dlia obosnovaniia pervoi ocheredi perebroski chasti stoka],
Ivanov, V.V., Vsesoiuznoe soveshchanie Priroda Arktiki v usloviiakh mezhzonal'nogo pereraspredeleniia vodnykh resursov, Leningrad, Nov. 25-27, 1980. Tezisy dokladov (All-Union conference on Arctic environment under conditions of interzonal redistribution of water resources, Leningrad, Nov. 25-27, 1980. Summaries of papers) edited by A.F. Treshnikov, Leningrad, 1980, p.8-11, In Russian.
River diversion, Flow control, Water resources, Estuaries, Hydrology, Ice conditions, Sea ice, Arctic Ocean.

35-3106
Scales of runoff redistribution in the European USSR. [Masshtaby pereraspredelenna stoka na evropeiskoi territorii SSSR],
Berezner, A.S., et al, Vsesoiuznoe soveshchanie Priroda Arktiki v usloviiakh mezhzonal'nogo pereraspredeleniia vodnykh resursov, Leningrad, Nov 25-27, 1980. Tezisy dokladov (All-Union conference on Arctic environment under conditions of interzonal redistribution of water resources, Leningrad, Nov 25-27, 1980. Summaries of papers) edited by A.F Treshnikov, Leningrad, 1980, p.12-16, In Russian.
Sarukhanov, G.L.
River diversion, Lakes, Water resources, Flow control, Channels (waterways), Ice conditions, Runoff forecasting, Ice forecasting.

35-3107
Using numerical modeling method in forecasting and measuring changes in the water regime of the North Dvina and Pechora River estuaries due to partial diversion of flow. [Razrabotka prognoza izmenenii vodnogo rezhima ust'evykh uchastkov rek Sev. Dviny i Pechory pod vliianiem iz"iatiia chasti stoka na osnove metodov chislennogo modelirovaniia],
Kotrekhov, E.P., Vsesoiuznoe soveshchanie Priroda Arktiki v usloviiakh mezhzonal'nogo pereraspredeleniia vodnykh resursov, Leningrad, Nov. 25-27, 1980. Tezisy dokladov (All-Union conference on Arctic environment under conditions of interzonal redistribution of water resources, Leningrad, Nov. 25-27, 1980. Summaries of papers) edited by A.F. Treshnikov, Leningrad, 1980, p.17-20, In Russian.
River diversion, Flow control, Hydrology, Mathematical models, USSR—Dvina River, USSR—Pechora River.

35-3108
Determining allowable quantities of partial flow diversion from northern and Siberian rivers. [Metodicheskie osnovy opredeleniia dopustimykh velichin iz"iatiia stoka iz severnykh i sibirskikh rek],
Fashchevskii, B.V., Vsesoiuznoe soveshchanie Priroda Arktiki v usloviiakh mezhzonal'nogo pereraspredeleniia vodnykh resursov, Leningrad, Nov. 25-27, 1980. Tezisy dokladov (All-Union conference on Arctic environment under conditions of interzonal redistribution of water resources, Leningrad, Nov. 25-27, 1980. Summaries of papers) edited by A.F. Treshnikov, Leningrad, 1980, p.21-24, In Russian.
River diversion, Ecology, Environmental protection, Water pollution.

35-3109
Role of annual flow distribution in water conditions of the Pechora River estuary. [Rol' vnutrigodovogo raspredeleniia stoka na sostoianie vod ust'evogo vzmor'ia r. Pechory],
Minin, V.M., Vsesoiuznoe soveshchanie Priroda Arktiki v usloviiakh mezhzonal'nogo pereraspredeleniia vodnykh resursov, Leningrad, Nov 25-27, 1980. Tezisy dokladov (All-Union conference on Arctic environment under conditions of interzonal redistribution of water resources, Leningrad, Nov 25-27, 1980. Summaries of papers) edited by A.F Treshnikov, Leningrad, 1980, p.25-27, In Russian.
River diversion, Flow control, Hydrology, Seasonal variations.

35-3110
Evaluating water salinity variations in the Onega Bay during its separation from the White Sea waters. [Otsenochnyi prognoz izmeneniia solenosti vody v Onezhskom zalive pri otdelenii ego ot akvatorii Belogo moria],
Mal'ranovskii, F.G., Vsesoiuznoe soveshchanie Priroda Arktiki v usloviiakh mezhzonal'nogo pereraspredeleniia vodnykh resursov, Leningrad, Nov. 25-27, 1980. Tezisy dokladov (All-Union conference on Arctic environment under conditions of interzonal redistribution of water resources, Leningrad, Nov. 25-27, 1980. Summaries of papers) edited by A.F. Treshnikov, Leningrad, 1980, p.28-31, In Russian.
River diversion, Water transport, Salinity, Research projects, USSR—Onega Bay, USSR—Onega River.

35-3111
Evaluating variations in water exchange between bays and estuaries and open seas after partial flow diversion from northern river basins to the south slope. [O metode otsenki izmenenniia rezhimov vodoobmena gub i estuariev s otkrytymi moriami posle perebroski chasti stoka iz basseinov severnykh rek na iuzhnyi sklon],
Kashinov, N.S., Vsesoiuznoe soveshchanie Priroda Arktiki v usloviiakh mezhzonal'nogo pereraspredeleniia vodnykh resursov, Leningrad, Nov. 25-27, 1980. Tezisy dokladov (All-Union conference on Arctic environment under conditions of interzonal redistribution of water resources, Leningrad, Nov. 25-27, 1980. Summaries of papers) edited by A.F Treshnikov, Leningrad, 1980, p.34-36, In Russian.
Estuaries, River diversion, Water transport, Water balance, Arctic Ocean.

35-3112
Evaluating possible changes in hydrological, meteorological, hydrochemical and ice conditions of the Pechora Sea after the first phase of partial flow diversion from the Pechora River. [Otsenka vozmozhnykh izmenenii ledovo-gidrologicheskogo, meteorologicheskogo i gidrokhimicheskogo rezhimov Pechorskogo moria v usloviiakh ot' ema chasti stoka reki Pechory pervoi ocheredi],
Potanin, V.A., et al, Vsesoiuznoe soveshchanie Priroda Arktiki v usloviiakh mezhzonal'nogo pereraspredeleniia vodnykh resursov, Leningrad, Nov. 25-27, 1980. Tezisy dokladov (All-Union conference on Arctic environment under conditions of interzonal redistribution of water resources, Leningrad, Nov. 25-27, 1980. Summaries of papers) edited by A.F. Treshnikov, Leningrad, 1980, p.37-40, In Russian.
River diversion, Ice conditions, Hydrology, Heat balance, USSR—Pechora River.

35-3113
Influence of partial flow diversion from the Pechora River on hydrochemical conditions of the Pechora Sea in summer. [Vliianie iz"iatiia chasti stoka r. Pechory na gidrokhimicheskie usloviia Pechorskogo moria v letnii period],
Perliuk, M.F., Vsesoiuznoe soveshchanie Priroda Arktiki v usloviiakh mezhzonal'nogo pereraspredeleniia vodnykh resursov, Leningrad, Nov. 25-27, 1980. Tezisy dokladov (All-Union conference on Arctic environment under conditions of interzonal redistribution of water resources, Leningrad, Nov. 25-27, 1980 Summaries of papers) edited by A.F. Treshnikov, Leningrad, 1980, p.41-44, In Russian.
River diversion, Sea water, Water chemistry, Arctic Ocean, USSR—Pechora River.

35-3114
Evaluating changes in hydrological regime of the Yenisey River due to human factors. [Otsenka izmeneniia gidrologicheskogo rezhima Eniseia v rezul'tate antropogennogo vozdeistviia],
Bakhtin, N.P., Vsesoiuznoe soveshchanie Priroda Arktiki v usloviiakh mezhzonal'nogo pereraspredeleniia vodnykh resursov, Leningrad, Nov 25-27, 1980. Tezisy dokladov (All-Union conference on Arctic environment under conditions of interzonal redistribution of water resources, Leningrad, Nov. 25-27, 1980. Summaries of papers) edited by A.F. Treshnikov, Leningrad, 1980, p.45-46, In Russian.
Human factors, Electric power, Lakes, Ecology, Hydrology, Ice conditions, USSR—Yenisey River, USSR—Kara Sea.

35-3115
Evaluating changes in flow dynamics of the Ob' River estuary waters due to river diversion. [Otsenka izmeneniia dinamiki potoka ust'evogo vzmor'ia r. Obi pod vliianiem iz"iatiia stoka],
Ivanova, A.A., et al, Vsesoiuznoe soveshchanie Priroda Arktiki v usloviiakh mezhzonal'nogo pereraspredeleniia vodnykh resursov, Leningrad, Nov. 25-27, 1980. Tezisy dokladov (All-Union conference on Arctic environment under conditions of interzonal redistribution of water resources, Leningrad, Nov 25-27, 1980. Summaries of papers) edited by A.F. Treshnikov, Leningrad, 1980, p.67-70, In Russian.
Lysenko, T.A., Stanovoi, V.V.
River diversion, Models, USSR—Ob' River.

35-3116
Evaluating propagation and transformation of flood waves in the Ob' River estuary. [K metodike otsenki rasprostraneniia i transformatsii volny polovod'ia ust'evoi oblasti Obi],
Lysenko, T.A., Vsesoiuznoe soveshchanie Priroda Arktiki v usloviiakh mezhzonal'nogo pereraspredeleniia vodnykh resursov, Leningrad, Nov. 25-27, 1980. Tezisy dokladov (All-Union conference on Arctic environment under conditions of interzonal redistribution of water resources, Leningrad, Nov. 25-27, 1980. Summaries of papers) edited by A.F Treshnikov, Leningrad, 1980, p.74-77.
Estuaries, Floods, Wave propagation, Water waves, USSR—Ob' River.

35-3117
Possible changes in thermal regime of the Ob' river estuary after flow diversion. [Vozmozhnye izmeneniia termicheskogo rezhima ust'evoi oblasti Obi v usloviiakh ot"ema stoka],
Kurzhunov, A.N., et al, Vsesoiuznoe soveshchanie Priroda Arktiki v usloviiakh mezhzonal'nogo pereraspredeleniia vodnykh resursov, Leningrad, Nov. 25-27, 1980. Tezisy dokladov (All-Union conference on Arctic environment under conditions of interzonal redistribution of water resources, Leningrad, Nov. 25-27, 1980. Summaries of papers) edited by A.F Treshnikov, Leningrad, 1980, p.78-81, In Russian.
IAnkina, V.A.
Estuaries, River diversion, Estuaries, Water temperature, Thermal regime, USSR—Ob' River.

35-3118
Forecasting thermal regime variations in the Ob' Bay in relation to the planned first phase of flow diversion. [Prognoz izmeneniia termicheskogo rezhima Obskoi guby v sviazi s planiruemym iz"iatiem stoka pervoi ocheredi],
Spitsyn, I.P., et al, Vsesoiuznoe soveshchanie Priroda Arktiki v usloviiakh mezhzonal'nogo pereraspredeleniia vodnykh resursov, Leningrad, Nov. 25-27, 1980. Tezisy dokladov (All-Union conference on Arctic environment under conditions of interzonal redistribution of water resources, Leningrad, Nov. 25-27, 1980 Summaries of papers) edited by A.F Treshnikov, Leningrad, 1980, p.84-86, In Russian.
Vinnikov, S.D., Trushevskii, V.L.
Thermal regime, Ice conditions, River diversion, Water temperature, USSR—Ob' River, USSR—Ob' Bay.

35-3119
Possible changes in ice conditions and mechanical properties of ice in the estuary area of Ob' River due to partial flow diversion. [Vozmozhnye izmeneniia ledovogo rezhima i fiziko-mekhanicheskikh kharakteristik l'da v ust'evoĭ oblasti Obi pod vliianiem ot"ema chasti stoka].
Nalimov, IU.V., et al, Vsesoiuznoe soveshchanie Priroda Arktiki v usloviiakh mezhzonal'nogo pereraspredeleniia vodnykh resursov, Leningrad, Nov 25-27, 1980. Tezisy dokladov (All-Union conference on Arctic environment under conditions of interzonal redistribution of water resources, Leningrad, Nov. 25-27, 1980. Summaries of papers) edited by A.F. Treshnikov, Leningrad, 1980, p.87-89, In Russian.
Nikolaev, S.E.
Estuaries, Ice conditions, Ice mechanics, Human factors, River diversion, USSR—Ob' River.

35-3120
Evaluating changes in hydrochemical regime of the Ob' River estuary after river diversion. [Otsenka izmeneniĭ gidrokhimicheskogo rezhima ust'evoĭ oblasti r. Obi v usloviiakh ot"iatiia chasti stoka].
Rusanov, V.P., Vsesoiuznoe soveshchanie Priroda Arktiki v usloviiakh mezhzonal'nogo pereraspredeleniia vodnykh resursov, Leningrad, Nov. 25-27, 1980. Tezisy dokladov (All-Union conference on Arctic environment under conditions of interzonal redistribution of water resources, Leningrad, Nov. 25-27, 1980. Summaries of papers) edited by A.F. Treshnikov, Leningrad, 1980, p.90-93, In Russian.
Estuaries, Water chemistry, Hydrology, River diversion, USSR—Ob' River.

35-3121
Possible changes in hydrobiocenoses of the Ob' estuarine area during redistribution of water resources. [Otsenka vozmozhnykh izmeneniĭ gidrobiotsenoza Obskoĭ ust'evoĭ oblasti v usloviiakh mezhzonal'nogo pereraspredeleniia vodnykh resursov].
Amstislavskiĭ, A.Z., Vsesoiuznoe soveshchanie Priroda Arktiki v usloviiakh mezhzonal'nogo pereraspredeleniia vodnykh resursov, Leningrad, Nov. 25-27, 1980. Tezisy dokladov (All-Union conference on Arctic environment under conditions of interzonal redistribution of water resources, Leningrad, Nov. 25-27, 1980. Summaries of papers) edited by A.F. Treshnikov, Leningrad, 1980, p.94-96, In Russian.
Estuaries, River diversion, Ecology, Ecosystems, Subarctic landscapes, Sea water, Vegetation, Subglacial observations, USSR—Ob' River.

35-3122
Evaluating possible changes in the meteorological regime of the Ob' River estuary during interzonal redistribution of flow. [Otsenka vozmozhnykh izmeneniĭ meteorologicheskogo rezhima ust'evoĭ oblasti r. Obi v usloviiakh mezhzonal'nogo pereraspredeleniia stoka].
Zav'ialova, I.N., et al, Vsesoiuznoe soveshchanie Priroda Arktiki v usloviiakh mezhzonal'nogo pereraspredeleniia vodnykh resursov, Leningrad, Nov 25-27, 1980. Tezisy dokladov (All-Union conference on Arctic environment under conditions of interzonal redistribution of water resources, Leningrad, Nov 25-27, 1980. Summaries of papers) edited by A.F. Treshnikov, Leningrad, 1980, p 97-100, In Russian.
Timerev, A.A., Subbotin, V.V.
Estuaries, Microclimatology, Climatic changes, River diversion, USSR—Ob' River.

35-3123
Variations in precipitation amounts in the lower courses of the Ob' and Yenisey rivers over a period of years. [Mnogoletnie kolebaniia osadkov v nizov'iakh Obi i Eniseia].
Briazgin, N.N., et al, Vsesoiuznoe soveshchanie Priroda Arktiki v usloviiakh mezhzonal'nogo pereraspredeleniia vodnykh resursov, Leningrad, Nov. 25-27, 1980. Tezisy dokladov (All-Union conference on Arctic environment under conditions of interzonal redistribution of water resources, Leningrad, Nov. 25-27, 1980. Summaries of papers) edited by A.F. Treshnikov, Leningrad, 1980, p.101-103, In Russian.
Liubarskiĭ, A.N.
Precipitation (meteorology), Snow accumulation, Precipitation gages, Snowdrifts, Wind factors, USSR—Ob' River, USSR—Yenisey River.

35-3124
Meteorological regime and heat balance of different landscape types in the Ob' River area of the north during interzonal redistribution of flow. [Osobennosti meteorologicheskogo rezhima i teplovogo balansa razlichnykh tipov landshaftov v raĭone Obskogo Severa v usloviiakh mezhzonal'nogo pereraspredeleniia stoka].
Kurbatova, A.V., et al, Vsesoiuznoe soveshchanie Priroda Arktiki v usloviiakh mezhzonal'nogo pereraspredeleniia vodnykh resursov, Leningrad, Nov. 25-27, 1980. Tezisy dokladov (All-Union conference on Arctic environment under conditions of interzonal redistribution of water resources, Leningrad, Nov. 25-27, 1980. Summaries of papers) edited by A.F. Treshnikov, Leningrad, 1980, p.104-106, In Russian.
Petrushenko, V.D.
Landscape types, Heat balance, River diversion, USSR—Ob' River.

35-3125
Thermal balance of the active layer and its possible variations during interzonal redistribution of river flow. [Teplovoĭ balans deiatel'nogo sloia sushi i vozmozhnye ego izmeneniia pod vliianiem mezhzonal'nogo pereraspredeleniia stoka].
Seriakova, L.P., et al, Vsesoiuznoe soveshchanie Priroda Arktiki v usloviiakh mezhzonal'nogo pereraspredeleniia vodnykh resursov, Leningrad, Nov 25-27, 1980. Tezisy dokladov (All-Union conference on Arctic environment under conditions of interzonal redistribution of water resources, Leningrad, Nov. 25-27, 1980. Summaries of papers) edited by A.F. Treshnikov, Leningrad, 1980, p.107-109, In Russian.
Ushakova, T.V., Bolotnikova, E.G.
Active layer, Soil temperature, River diversion, Heat balance, Seasonal variations.

35-3126
Forecasting cryogenic processses in the Ob' River delta. [O prognozirovanii merzlotnykh protsessov v raĭone delty r. Obi].
Gogolev, E.S., et al, Vsesoiuznoe soveshchanie Priroda Arktiki v usloviiakh mezhzonal'nogo pereraspredeleniia vodnykh resursov, Leningrad, Nov 25-27, 1980. Tezisy dokladov (All-Union conference on Arctic environment under conditions of interzonal redistribution of water resources, Leningrad, Nov. 25-27, 1980. Summaries of papers) edited by A.F. Treshnikov, Leningrad, 1980, p.110-112, In Russian.
Suchkin, A.L.
Estuaries, Deltas, Geocryology, USSR—Ob' River.

35-3127
River diversion effect on shore stability of the Ob' Bay. [Narushenie ustoichivosti beregov Obskoĭ guby v sviazi s problemoĭ perebroski rechnogo stoka].
Popov, B.A., et al, Vsesoiuznoe soveshchanie Priroda Arktiki v usloviiakh mezhzonal'nogo pereraspredeleniia vodnykh resursov, Leningrad, Nov 25-27, 1980. Tezisy dokladov (All-Union conference on Arctic environment under conditions of interzonal redistribution of water resources, Leningrad, Nov 25-27, 1980. Summaries of papers) edited by A.F. Treshnikov, Leningrad, 1980, p.113-117, In Russian.
Zhigarev, L.A., Sovershaev, V.A.
Shore erosion, Abrasion, Deltas, Shoreline modification, Subsea permafrost, Ground ice, USSR—Ob' River, USSR—Ob' Bay.

35-3128
Forecasting changes in permafrost conditions of northwestern Siberia due to decrease in Ob' River discharge. [Prognoz izmeneniia merzlotnykh uslovii severa Zapadnoĭ Sibiri v rezul'tate sokrashcheniia stoka r. Obi].
Shpolianskaia, N.A., Vsesoiuznoe soveshchanie Priroda Arktiki v usloviiakh mezhzonal'nogo pereraspredeleniia vodnykh resursov, Leningrad, Nov. 25-27, 1980. Tezisy dokladov (All-Union conference on Arctic environment under conditions of interzonal redistribution of water resources, Leningrad, Nov. 25-27, 1980. Summaries of papers) edited by A.F. Treshnikov, Leningrad, 1980, p.118-119, In Russian.
Permafrost thermal properties, River diversion, Frozen rock temperature, Frost penetration, Permafrost hydrology.

35-3129
Applying system analysis to modeling geomorphologic consequences of river diversion. [Sistemnoe geomorfologicheskoe modelirovanie posledstviĭ pereraspredeleniia vodnykh resursov].
Mikhankov, IU.M., et al, Vsesoiuznoe soveshchanie Priroda Arktiki v usloviiakh mezhzonal'nogo pereraspredeleniia vodnykh resursov, Leningrad, Nov. 25-27, 1980. Tezisy dokladov (All-Union conference on Arctic environment under conditions of interzonal redistribution of water resources, Leningrad, Nov 25-27, 1980. Summaries of papers) edited by A.F. Treshnikov, Leningrad, 1980, p 120-123, In Russian.
Sen'kin, O.V., Fedorov, B.G.
Deltas, Geomorphology, Geocryology, Human factors, River diversion, Mathematical models, USSR—Ob' River.

35-3130
Possible effects of human activities on the desalted layer of the Kara Sea. [Vozmozhnye posledstviia antropogennogo vozdeĭstviia na opresnennyĭ sloĭ Karskogo moria].
Nikiforov, E.G., et al, Vsesoiuznoe soveshchanie Priroda Arktiki v usloviiakh mezhzonal'nogo pereraspredeleniia vodnykh resursov, Leningrad, Nov 25-27, 1980. Tezisy dokladov (All-Union conference on Arctic environment under conditions of interzonal redistribution of water resources, Leningrad, Nov 25-27, 1980. Summaries of papers) edited by A.F. Treshnikov, Leningrad, 1980, p.124-126, In Russian.
Moretskiĭ, V.N.
Ice conditions, River diversion, Hydrology, Meteorology, USSR—Kara Sea.

35-3131
Evaluating variations in salinity of the surface layer of the Kara Sea due to river diversion and its effect on ice conditions. [Otsenka izmeneniĭ solenosti verkhnego sloia Karskogo moria pod vliianiem ot"emov rechnogo stoka i vozdeĭstvie etikh izmeneniĭ na ledovye usloviia].
Appel', I.L., et al, Vsesoiuznoe soveshchanie Priroda Arktiki v usloviiakh mezhzonal'nogo pereraspredeleniia vodnykh resursov, Leningrad, Nov. 25-27, 1980. Tezisy dokladov (All-Union conference on Arctic environment under conditions of interzonal redistribution of water resources, Leningrad, Nov 25-27, 1980. Summaries of papers) edited by A.F. Treshnikov, Leningrad, 1980, p.127-130, In Russian.
Gudkovich, Z.M., Frolov, I.E.
Ice conditions, River diversion, Sea water, Water transport, Water temperature, Salinity, Ice formation, USSR—Kara Sea.

35-3132
Moisture cycles in the lower course of the Ob' River and the Kara Sea and their possible variations due to interzonal redistribution of runoff. [Protsessy vlagooborota v nizov'iakh Obi i Karskom more i ikh vozmozhnye izmeneniia v usloviiakh mezhzonal'nogo pereraspredeleniia stoka].
Burova, L.P., Vsesoiuznoe soveshchanie Priroda Arktiki v usloviiakh mezhzonal'nogo pereraspredeleniia vodnykh resursov, Leningrad, Nov 25-27, 1980 Tezisy dokladov (All-Union conference on Arctic environment under conditions of interzonal redistribution of water resources, Leningrad, Nov 25-27, 1980 Summaries of papers) edited by A.F. Treshnikov, Leningrad, 1980, p.131-135, In Russian.
Moisture transfer, Periodic variations, Ice conditions, River diversion, USSR—Kara Sea, USSR—Ob' River.

35-3133
Oceanic eustacy, cyrolithozone dynamics during the period of 25,000 years and cryogenic forecasts for the Laptev Sea shelf. [Evstaziia okeana, dinamika kriolitozony za 25,000 let i merzlotnyĭ prognoz shel'fa moria Laptevykh].
Fartyshev, A.I., et al, Vsesoiuznoe soveshchanie Priroda Arktiki v usloviiakh mezhzonal'nogo pereraspredeleniia vodnykh resursov, Leningrad, Nov 25-27, 1980. Tezisy dokladov (All-Union conference on Arctic environment under conditions of interzonal redistribution of water resources, Leningrad, Nov 25-27, 1980. Summaries of papers) edited by A.F. Treshnikov, Leningrad, 1980, p.134-135, In Russian.
Antipina, Z.N.
Shores, Permafrost distribution, Subsea permafrost, Frozen rock temperature, Permafrost forecasting, USSR—Laptev Sea.

35-3134
Influence of human activities, including river diversions, on the environment and economic development of the estuary and lower course of the Ob' River. [Vliianie antropogennogo vozdeistviia, vkliuchaia ot"emy stoka, na okruzhaiushchuiu sredu i khoziaistvennoe ispol'zovanie nizov'ev i ust'evoĭ oblasti Obi], Greshnova, E.V., Vsesoiuznoe soveshchanie Priroda Arktiki v usloviiakh mezhzonal'nogo pereraspredeleniia vodnykh resursov, Leningrad, Nov. 25-27, 1980. Tezisy dokladov (All-Union conference on Arctic environment under conditions of interzonal redistribution of water resources, Leningrad, Nov. 25-27, 1980. Summaries of papers) edited by A.F. Treshnikov, Leningrad, 1980, p.136-137, In Russian.
Estuaries, Economic development, Transportation, Environmental protection, Tundra, Soil erosion, Permafrost control, USSR—Ob' River.

35-3135
Possible complications in providing navigable conditions in the Ob'-Irtysh Basin with partial divergence of these rivers' flow. [Vozmozhnye oslozhneniia v obespechenii putevykh uslovii v Ob'-Irtyshskom basseine pri chastichnom iz"iatii stoka etikh rek], Kovrigin, I.M., et al, Vsesoiuznoe soveshchanie Priroda Arktiki v usloviiakh mezhzonal'nogo pereraspredeleniia vodnykh resursov, Leningrad, Nov. 25-27, 1980. Tezisy dokladov (All-Union conference on Arctic environment under conditions of interzonal redistribution of water resources, Leningrad, Nov. 25-27, 1980. Summaries of papers) edited by A.F. Treshnikov, Leningrad, 1980, p.142-143, In Russian.
Strel'chenia, O.M.

Miocene stable isotope record: a detailed deep Pacific Ocean study and its paleoclimatic implications.
Woodruff, F., et al, *Science*, May 8, 1981, 212(4495), p.665-668, Numerous refs.
Savin, S.M., Douglas, R.G.
Isotope analysis, Sea water, Chemical composition, Temperature variations, Ice sheets.
Deep Sea Drilling Project site 289 in the western equatorial Pacific has yielded an extremely detailed record of the carbon and oxygen isotopic changes in the Miocene deep ocean. The isotopic record reflects major changes in paleoclimate and paleoceanography, probably dominated by a major phase of Antarctic ice-cap growth. The transition from a relatively unglaciated world to one similar to today occurred between 16.5 million and 13 million years before the present, with the greatest change occurring between approximately 14.8 million and 14.0 million years before the present. Rutford, R.H.
Deserts, Snow accumulation, Climate, Wind velocity, Sands, Sediment transport.
A combination of strong and steady easterly winds in summer, an arid climate, and an abundant supply of sand have contributed to the formation of a desert erg in lower Victoria Valley. In the erg are sand sheets, whaleback mantles, and a belt of barchan dunes without equal anywhere in Antarctica. Sand from the surface and margin of Victoria Lower Glacier and from ground moraine and outwash beyond is moved westward, partly by stream but largely by wind, to take on the various forms, all of which differ from the usual temperate desert and coastal formations by the inclusion of compacted snow strata and ice-cemented sections. This paper describes the dunes and their setting and considers their movement and sedimentary characteristics. (Auth.)

Snow optics, Albedo, Clouds (meteorology), Solar radiation, Snow thermal properties, Radiation balance.
The albedo of snow for different cloudiness conditions is an important parameter in the Earth's radiation budget analysis and in the study of snowpack thermal conditions. An efficient method is presented for approximate calculation of incident spectral solar flux and snowcover albedo in terms of atmospheric, cloud, and snow parameters. The model is illustrated using representative parameters for the Antarctic coastal regions. The albedo for a clear sky depends inversely on the solar elevation. At high elevations the albedo depends primarily upon the grain size; at low elevations this dependence is on grain size and shape. The gradient of the albedo-elevation curve increases as the grains get larger and faceted. The albedo for a dense overcast is slightly higher than the clear sky albedo at high elevations. A simple relation between the grain size and the overcast albedo is obtained. For a set of grain size and shape, the albedo matrices (the albedo as a function of solar elevation and fractional cloud cover) are tabulated. (Auth.)

Lake ice, Ice formation, Ice growth, Freezeup, Ice breakup, Weather forecasting, Ice forecasting, Water temperature, Wind velocity, LANDSAT, Navigation.
A 19-year record of annual closing and opening dates of the Lake Champlain ferry season was found to accurately approximate the freeze-over and breakup dates for the ferry crossing area between Gordon Landing, Vermont, and Cumberland Head, N.Y. These lake navigation records, when compared statistically with the lake's wintertime thermal structure and climatological data for the same years of at nearby Lake Champlain locations, allowed accurate predictions of ice formation. From nearby air temperature records, cumulative freezing degree-day (C) curves were plotted for each year of record and ice formation dates and standard deviations were predicted with considerable accuracy. Several methods of predicting ice formation on Lake Champlain were attempted. The most accurate approach used a combination of water temperatures and freezing degree-days. A method of predicting ice growth rates is shown and the influence of wind speed on ice cover formation and prediction on a large body of water such as this is also discussed.

Geographic names of the Antarctic.
Alberts, F.G., ed, Washington, D.C., National Science Foundation, 1981, 959p. GPO Stock No. SN 038-000-00471-5.
Gazetteers, Antarctica.
This volume describes and locates (using geographic coordinates) the approx 12,000 place names in and near Antarctica that are officially recognized for use by the United States Government and recommended for use by others. Approx. 3,000 variant spellings and misapplied names are entered and referred to recognized names. In a foreword, the need for standardized antarctic place names is reemphasized. The policy of the U.S. Board on Geographic Names is set forth, some of the problems needing solution in the interests of standardization (similarity of antarctic topographic features, navigational inaccuracies, e.g.) are cited, various maps and mapping techniques, both U.S. and foreign, are discussed, map availability is noted, and a list of non-U.S. gazetteers is included. A section on abbreviations covers names, entities, compass directions, military forces, and historic and more recent antarctic expeditions.

Bentley, C.R., Blankenship, D.D., Lovell, J.S., Gassett, R.M.
Ice cover thickness, Geodetic surveys, Seismic prospecting, Antarctica—Dome C.
Geophysical measurements at Dome C between Nov. 1979 and Jan. 1980 included radar sounding, seismic shooting, geoelectric sounding, gravity and magnetic surveying, and magnetotelluric recording. In addition, a joint geoelectric survey and radar-sounding program was carried out with a geophysical team from the University of Münster, West Germany. Detailed ice-thickness measurements carried out around the borehole site showed a very rough bedrock topography. At several sites the radar profiling indicated the possible presence of subglacial water channels. Further examination of a highly resistive basal ice layer on the Ross Ice Shelf was a major objective of the joint project with the University of Münster. Preliminary analysis of gravity and magnetic data at Dome C indicates that any sedimentary layer below the ice is, at most, no more than a few tens of meters thick. Seismic experiments included a wide-angle reflection profile, a compressional wave refraction profile, two large-separation refraction shots, and extensive surface-wave recording. The efficacy of the magnetotelluric method on ice sheets has been confirmed.

35-3166
Seismic refraction studies in western McMurdo Sound.
McGinnis, L.D., *Antarctic journal of the United States*, 1980, 15(5), p.11
Sea ice, Subsea permafrost, Seismic refraction, Antarctica—McMurdo Sound.
A seismic refraction study was carried out from the sea ice in McMurdo Sound from Nov. 15 to Dec. 9, 1979. Preliminary results indicate the following. 1) a basement of high relief and dip; 2) high velocity sea floor through much of the sound, probably caused by submarine permafrost, and 3) basement velocities ranging from 5.1 to 7.1 km/sec

35-3167
Earth sciences research in the McMurdo Sound region, 1979-1980.
Nagata, T., *Antarctic journal of the United States*, 1980, 15(5), p.12.
Icequakes, Ice sheets, Glaciology, Lake ice, Antarctica—McMurdo Sound.
Japanese and U.S. scientists conducted cooperative research in the Ellsworth Mountains and McMurdo Sound region on the following programs: seismological observations at the summit of Mt. Erebus, icequake observations and sampling of ice cores at Lake Vanda, glaciological survey at Allan Hills bare ice field, and geological survey of the Ellsworth Mountains. The mean number of earthquakes related to volcanism observed at Mt. Erebus was 20 per day. Glaciological studies at Allan Hills showed the maximum horizontal movement and ablation of the ice surface to be 2.6 m/yr and 7 cm/yr, respectively. Ice and rock samples were collected from respective survey areas for further study.

35-3168
Microclimate and weathering processes in the area of Darwin Mountains and Bull Pass, Dry Valleys.
Miotke, F.-D., *Antarctic journal of the United States*, 1980, 15(5), p.14-16, 3 refs.
Weathering, Soil temperature, Soil water, Snow temperature, Antarctica—Darwin Mountains.
During Dec. 1978 and Jan. 1979, microclimate, antarctic landforms, and weathering processes, i.e., temperature-caused tension, frost cracking, and salt fretting, were studied in the area of Darwin Mountains and Bull Pass, Dry Valleys. Daily temperatures were recorded by thermistors in various rocks, soils, and snow. Moisture in soils is normally very low at the upper surface, mostly below 0.1%, but can be as high as 20% where meltwater infiltrates during summer. Daily heat flow in rocks reaches deeper than in soils. X-ray analysis of salt samples from the Darwin Mountains mainly showed calcite, gypsum, thenardite, and mirabilite, while those from Bull Pass showed halite, calcite, gypsum, and thenardite. The effects of water and wind activity on slope formation and creep are discussed.

35-3169
Fission track ages of Marie Byrd Land volcanic rocks.
Seward, D., et al, *Antarctic journal of the United States*, 1980, 15(5), p.19, 3 refs.
Kyle, P.R., LeMasurier, W.E.
Ice cores, Ice composition, Antarctica—Marie Byrd Land.
When tephra layers from Byrd ice cores failed to show sufficient concentrations of volcanic glass shards to obtain a meaningful age date, three samples of obsidian from Marie Byrd Land volcanoes were examined to develop techniques for etching and dating material similar to that in ice cores. Fission track dates for the samples are tabulated, along with conventional K/Ar ages. It is demonstrated that volcanic glass from Marie Byrd Land volcanoes can be dated easily by the fission track method, because of their high uranium content. The method offers considerable potential for examining the younger volcanoes, such as Mt. Takahe. Since annealing occurred in two of the samples, it is imperative that samples be checked for annealing and appropriate corrections bemade. Fission track dating appears to offer a valuable means for dating glass shards from tephra layers in deep ice cores from West Antarctica.

35-3170
Soil development and rock weathering in the Ellsworth Mountains, Antarctica.
Bockheim, J.G., et al, *Antarctic journal of the United States*, 1980, 15(5), p.33-34, 8 refs.
Leide, J.E.
Soil profiles, Weathering, Alpine landscapes, Antarctica—Ellsworth Mountains.
Soils on moraines are described and the condition of surface boulders on moraines is identified for 22 sites in the Heritage and Sentinel Ranges. Poorly developed soils occur on moraines in the Heritage Range below 2,100 m and in the Sentinel Range below 3,000 m. Soils and surface boulder weathering features in the Heritage and Sentinel Ranges are comparable to those on Ross Sea drift in eastern Taylor Valley, Trilogy drift in eastern Wright Valley, and Britannia drift in the Darwin and Byrd Glacier areas. These data in conjunction with the findings of others, suggest that most of the peaks in the Heritage Range were overrun by ice from the expanded West Antarctic ice sheet during the last glaciation (about 18,000 y.a.). X-ray diffraction analysis of salt encrustations revealed the widespread occurrence of gypsum in the Heritage Range. Soda niter was discovered on Dickey Peak in the Sentinel Range.

35-3171
Antarctic search for meteorites, 1979-80.
Cassidy, W.A., *Antarctic journal of the United States*, 1980, 15(5), p.49-50, 3 refs.
Ice sheets, Ice surface.
During the 1979-80 field season 14 meteorites were collected from a large patch of bare ice extending westward from Reckling Peak. The collection included one iron generally considered relatively rare. The ice patch has been surveyed at two points 50 km apart, and meteorites have been found at both sites. Surface features of the area are briefly discussed. At Allan Hills, 53 meteorites were collected, ice vector measurements were made and ice samples were collected for chemical determinations. No meteorites were found in the Ellsworth Mountains.

35-3172
Glacial history of the Ellsworth Mountains.
Rutford, R.H., et al, *Antarctic journal of the United States*, 1980, 15(5), p.56-57, 5 refs.
Denton, G.H., Andersen, B.G.
Glacial geology, Ice sheets, Antarctica—Ellsworth Mountains.
The primary objective of this study is to relate the local glacial history to overall fluctuations of the West Antarctic ice sheet, particularly during late Wisconsin and Holocene times. Evidence from the Ellsworth Mountains suggests that in late Wisconsin time a thicker-than-present West Antarctic ice sheet poured seaward around and through the Ellsworth Mountains, while at least one interior dome attained a high-than-present elevation. Glaciological reconstructions adjusted to fit elevations of the last Wisconsin ice sheet surface near the Ellsworth Mountains suggest that grounded ice occupied much of the present area of the Ronne Ice Shelf and southern Weddell Sea.

35-3173
Glacial marine sedimentation in the Ross Sea, DSDP sites 270-273.
Biddle, K.B., *Antarctic journal of the United States*, 1980, 15(5), p.57-59, 3 refs.
Glacial deposits, Glacial geology, Antarctica—Ross Sea.
This research involves a stratigraphic study of Oligocene through Pliocene glacial marine sections in the eastern and western Ross Sea. It also provides an opportunity to compare Ross Sea piston core data with the stratigraphic sections. The study entails initial textural and mineralogic identification of basal tills vs glacial marine sediments in piston cores from this region to distinguish grounded from floating ice deposits. The focus then shifts to identifying these deposits in the thick glacial marine sections recovered at DSDP sites 270-273 in the Ross Sea.

35-3174
Interpretation of Rb-Sr dates of feldspar in tillite on Mt. Tuatara, Byrd Glacier.
Faure, G., et al, *Antarctic journal of the United States*, 1980, 15(5), p.59-60, 7 refs.
Taylor, K.S.
Glacial deposits, Glacial geology, Antarctica—Byrd Glacier.
Grainsize fractions of feldspar extracted from the tillites on Mt. Tuatara were dated in an effort to determine the origin of the tillite on this mountain and elsewhere in the Transantarctic Mountains. The results yield a date of 1,086 m.y. The evidence indicates that the tillite on Mt. Tuatara was deposited by an ancestral outlet glacier that drained the East Antarctic ice sheet. The location of these deposits above the present level of the Byrd Glacier may indicate that this ancestral glacier was several hundred meters thicker than the Byrd Glacier, or that Mt. Tuatara has been uplifted since deposition of the tillites, or both.

35-3175
Apparent surface lowering on Byrd Glacier between 1960 and 1978.
Brecher, H.H., *Antarctic journal of the United States*, 1980, 15(5), p.64-65, 3 refs.
Glacier mass balance, Glacier oscillation, Antarctica—Byrd Glacier.
Approximately 40 Byrd Glacier surface spot elevations determined by trigonometric leveling from fixed stations on rock during the 1978-79 field season have been found to be much lower than the glacier surface elevations depicted on topographic maps compiled from aerial photographs taken during the period 1960-62 (U.S. Geological Survey 1966). The apparent lowering varies from about 50 m at the extremes to over 150 m at the center of a 60-km section for which data are available. The most pronounced exception is Mt. Rummage at the northwest corner of Byrd Glacier, for which the map elevation appears to be 100 m too high. If confirmed, these findings could have considerable implications for studies of the mass balance of the east antarctic ice sheet.

35-3176
Glaciological studies in Allan Hills, 1979-80.
Annexstad, J.O., et al, *Antarctic journal of the United States*, 1980, 15(5), p.65-66, 4 refs.
Nishio, F.
Ice sheets, Glacier ablation, Geodetic surveys, Antarctica—Allan Hills.
A triangulation chain was established on the Allan Hills icefield during the 1978-79 season in an attempt to understand the mechanism of meteorite concentration. Preliminary data from a resurvey of the network in Dec. 1979 are presented. A table

lists the stations with elevations, ablation rates, and vertical and horizontal motions for each.

35-3177
Radioactive dating and the compositions of the gas in Antarctic ice.
Fireman, E.L., *Antarctic journal of the United States,* 1980, 15(5), p.67-68, 9 refs.
Ice composition, Gas inclusions, Geochronology, Antarctica—Allan Hills.
Measurements were taken of the carbon-14, radon-222, and the volumes and compositions (nitrogen, oxygen, argon, and carbon dioxide) of gas trapped in ice samples from the Byrd core and from the Allan Hills meteorite collection site. The measurements give ages for the ice samples and relate to the ecological history of the regions and the history of the Earth's atmosphere. The results are summarized in a table. An interesting result of the Rn-222 (radon) measurements is the indication that measurable amounts of long-lived parents of Ra-226 (radium), mainly Th-230 (thorium), were in the ancient snow that fell near Byrd Station. The alpha activities in the Byrd and Allan Hills samples will be measured to determine the Th-230 and other long-lived parents directly.

35-3178
Characteristics and significance of rock glaciers in southern Victoria Land, Antarctica.
Mayewski, P.A., et al, *Antarctic journal of the United States,* 1980, 15(5), p.68-69.
Hassinger, J.
Rock glaciers, Ice cores, Antarctica—Victoria Land.
Rock glaciers, considered useful as monitors of climatic change, were studied this season in Wright, Taylor, and Victoria Valleys, and at Bull Pass. Monitoring experiments were set up on nine glaciers to investigate velocity, strain, viscosity, response time, and intraformational components. Additional studies included collection of a 12.5-m-deep ice core from the accumulation zone of Meserve Glacier for analysis of chemical species, and testing of a radio-echo sounder on Meserve and Taylor Glaciers.

35-3179
Deep geoelectric and electromagnetic soundings at Dome C.
Thyssen, F., et al, *Antarctic journal of the United States,* 1980, 15(5), p.69-71, 3 refs.
Shabtaie, S.
Ice sheets, Ice electrical properties, Sounding, Antarctica—Dome C.
Deep geoelectric and radio-echo sounding of the polar ice at Dome C is described. Using a Schlumberger array technique, two detailed direct current electrical resistivity profiles with electrode half-spacings of 1 m to a max of 6 and 8 km, respectively, yielded well-determined apparent resistivity curves. Seven to nine points per decade on a logarithmic scale were measured. The equipment used is described. A sample recording of the potentials at a half-spacing of 4 km, with positive, zero and negative current, is shown. The influence of the telluric field is clearly seen. The results from Dome C support the concept that highly resistive layers are commonly found deep within polar ice masses. The cause remains an open question. A monopulse echo sounder with a digital recording system was tested. The results are discussed.

35-3180
Glaciological interpretation of the microparticle concentration in the 905-meter Dome C core.
Mosley-Thompson, E., et al, *Antarctic journal of the United States,* 1980, 15(5), p.71-75, 7 refs.
Thompson, L.G.
Ice cores, Drill core analysis, Impurities, Antarctica—Dome C.
Some 5,367 samples representing 51 sections of the recently drilled 905-m core at Dome C were analyzed for microparticle concentration and size distribution. The average sample size of 0.0067-m ice coupled with the annual accumulation of 0.035-m ice yields a resolution of 5.5 samples per accumulation year. Figure 1 presents the average concentration of particles with diameters >0.63 micrometer per 500 microliter sample for each of the 51 sections along with the corresponding oxygen-18 measurements. Particle concentration reaches a peak just prior to the end of the last glacial. Figures 2 and 3 present the concentrations of small particles with diameters between 0.63 and 0.80 micrometers for five sections from the postglacial strata and five sections from the glacial strata of the Dome C ice core. The data are discussed.

35-3181
Shallow-depth temperature models for Dome C.
Ewing, R.E., *Antarctic journal of the United States,* 1980, 15(5), p.75-76, 4 refs.
Ice sheets, Ice temperature, Mathematical models, Firn, Antarctica—Dome C.
Data taken at Dome C during the 1978-79 and 1979-80 field seasons is being used both to help determine thermal properties of the firn necessary for building accurate shallow-depth numerical temperature models and also to test the resulting equations. Such models can be used to make reverse calculations from measured temperature profiles from Dome C to a depth of about 100 m to derive past, decade-scale, climatic, and surface temperature changes. This research has centered on accurately determining values of thermal conductivity and specific heat at Dome C and interpreting mathematically measured temperature anomalies using a shallow-depth temperature model developed for use at Dome C in 1978-79, modified, and used again in 1979-80.

35-3182
French field activities at Dome C.
Lorius, C., *Antarctic journal of the United States,* 1980, 15(5), p.76, 3 refs.
Snow composition, Antarctica—Dome C.
A shallow snow sampling program was undertaken at Dome C during the 1979-80 season for full analysis of the main anions and cations and for measurements of artificial radioactivity, lead-210, microparticles, and stable isotopes. In the field a stake accumulation network was remeasured, a radiation probe was tested, conductivity measurements were performed to investigate volcanic dust, and samples were melted to recover cesium-137.

35-3183
Polar Ice Coring Office (PICO) drilling activities, 1979-80.
Kuivinen, K.C., et al, *Antarctic journal of the United States,* 1980, 15(5), p.76-77, 3 refs.
Marshall, P.S., Koci, B.R.
Drilling, Ice coring drills, Ice cores, Antarctica—Amundsen-Scott Station, Antarctica—Vostok Station.
The Polar Ice Coring Office (PICO) continued its program of shallow ice coring at Amundsen-Scott and Vostok Stations and completed a program of hot water drilling at Dome C during the 1979-80 field season. Included in the field work were tests of the new PICO shallow ice coring drill and the PICO hot water drill, recovery of the NSF-Swiss shallow drill stuck at 65 m depth at Dome C during the USARP 1978-79 field season, and recovery of data tapes and reactivation of the Norwegian and Soviet freeze-in experiments from the Ross Ice Shelf Project (RISP) drill camp J-9.

35-3184
Search for cometary dust in the antarctic ice.
King, E.A., et al, *Antarctic journal of the United States,* 1980, 15(5), p.78-79.
Wagstaff, J.
Ice cores, Cosmic dust, Particles.
In an attempt to find and identify cometary dust in particles from ice cores taken at the South Pole and on the Ross Ice Shelf, a systematic survey was made of a series of core samples across the interval 1830 to 1838. It is believed that the Cosequina, Nicaragua, ash fall of 1835 has been identified, and thus the immediately underlying layer that should contain the Leonid meteor particles from the great shower of 1833.

35-3185
Nitrogenous chemical composition of antarctic ice and snow.
Parker, B.C., et al, *Antarctic journal of the United States,* 1980, 15(5), p.79-81, 11 refs.
Zeller, E.J.
Ice composition, Snow composition, Firn, Chemical analysis.
The objectives of this study include an understanding of 1) the nitrogenous chemical contents of snow and ice of different ages and from different geographic locations, 2) their concentration ranges and periodic and nonperiodic fluctuations, and 3) their sources and the mechanisms that cause these fluctuations. This report summarizes earlier data and addresses the question of major mechanisms for NO_3^- production in antarctic snow and firn. Data from a computer plot of nitrate (as micrograms of nitrogen per square decimeter per year) from 1979-80 snow-pit samples and annual sunspot numbers appear to support the theory of solar-activity-induced fixation by auroras as the major source of NO_3^-. The data cannot be accepted as a valid generalization until they are repeated extensively at several locations.

35-3186
Atmospheric trace gases in association with sea ice.
Gosink, T.A., *Antarctic journal of the United States,* 1980, 15(5), p.82-83, 5 refs.
Sea ice distribution, Ice composition, Atmospheric composition, Gases.
Sea ice conditions in the vicinity of McMurdo during Nov. 1979 are briefly described and compared with similar observations in northern Alaska. All of the trace gas concentrations and ratios measured in the air and at the ice-air interface were different from what has been observed in the Arctic. Differences were also evident between the arctic and antarctic trace gases in sea ice and water. Analytical results for concentrations of carbon monoxide (CO), methane (CH_4), carbon dioxide (CO_2), and nitrous oxide (N_2O) in the air, snow, sea ice, and seawater near McMurdo are presented and discussed.

35-3187
Observation of the antarctic east wind drift current by using tabular icebergs tracked by satellite.
Tchernia, P., *Antarctic journal of the United States,* 1980, 15(5), p.83, 3 refs.
Icebergs, Drift, Ocean currents.
Previous observations show that near the Kerguelen Plateau, the westward flowing East Wind Drift current presents a U-turn establishing, between 62 and 64S, a connection between the two parallel and converse drift currents. The purpose of the present investigation is to determine whether there are other such interconnections in the area not yet explored with this technique (140E to 80W), particularly off the Ross Sea. On Jan. 21, 1980, two French radio beacons (1068 and 1069) were set up on two icebergs drifting near 75 deg 30 min S, 162 deg W and positioned by TIROS N-ARGOS. For unknown reasons 1069 discontinued working after 8 days. On Sep. 15, 1069 was 450 naut. mi. from its starting position. Information on its track will be given later.

35-3188
Sea ice studies in the Weddell Sea aboard USCGC Polar Sea.
Ackley, S.F., et al, *Antarctic journal of the United States,* 1980, 15(5), MP 1431, p.84-96, 7 refs.
Gow, A.J., Buck, K.R., Golden, K.M.
Sea ice, Drift, Primary productivity, Weddell Sea.
The purpose of this study was to investigate several characteristics of Weddell Sea pack ice that may affect the relative roles of dynamics and thermodynamics of pack ice development in this region. The physical and structural properties of the pack ice were surveyed using core samples. Significant amounts of frazil ice were found. If this formation of frazil ice is as widespread as suspected, then the role of deformation (the opening and closing of leads and polynyas) may have a greater role in the formation of Weddell Sea pack ice than similar processes do in the arctic pack. Four data buoys were deployed. The initial locations are shown, and the studies for which the buoy data will be used are discussed. Observations during the cruise confirmed the ubiquitous presence of algae in nearly all forms of ice sampled and point close links between pack ice formation and enhanced algal production.

35-3189
Interdisciplinary investigations in antarctic oceanography.
Jacobs, S.S., *Antarctic journal of the United States,* 1980, 15(5), p.87-89, 8 refs.
Glacier melting, Ocean currents.
Interdisciplinary research in antarctic oceanography is described. Investigators working aboard USCG *Northwind* observed seabird concentrations near the Ross Sea pack ice and over the subsurface Antarctic Slope Front. Vertical profiles of temperature, salinity, and density made from USCGC *Glacier* stations revealed well developed steps that were attributed to melting at the underside of the Erebus Glacier Tongue. A *Glacier* temperature section taken along the George V Coast shows potential antarctic bottom water formation and circumpolar deep water movement onto the continental shelf. A collaborative study of silicate in the deep oceans supports the concept of a predominantly lateral ocean circulation, with an advective deep silica maximum.

35-3190
Circumpolar water masses.
Gordon, A.L., *Antarctic journal of the United States,* 1980, 15(5), p.89-90.
Ocean currents, Ice melting.
The water mass structure of the Weddell (subpolar) gyre is discussed, and a schematic representation of South Atlantic circulation which would produce the observed water mass distribution is shown. The warm-saline signal, although weak throughout the Weddell gyre, is most evident in a zonal band running from Maud Rise (67S) eastward to 30E. The role of convective processes in the Weddell gyre is discussed.

35-3191
USCGC *Glacier* Deep Freeze 80.
Anderson, J.B., et al, *Antarctic journal of the United States,* 1980, 15(5), p.58-75.
Kurtz, D.D.
Icebergs, Glacier tongues, Sediments.
The objectives of this program were: 1) to occupy geologic stations along the Pennell Coast, in Terra Nova Bay, and in McMurdo Sound; 2) to conduct a reconnaissance study of other portions of the western Ross Sea, 3) to conduct bathymetric surveys in uncharted waters; 4) to sample ice-rafted detritus from icebergs and floating ice, and 5) to chart the current positions of ice tongues and glacier termini using the ship's radar. During the cruise, a series of seamounts and a possible southern extension of the Balleny Fracture Zone from the Balleny Is. to Cape Adare were discovered. Preliminary results of the observations are described.

35-3192
Late Quaternary geology of the George V and Adélie continental shelf, East Antarctica.
Domack, E.W., *Antarctic journal of the United States,* 1980, 15(5), p.127-128, 5 refs.
Glacial geology, Ice sheets, Glacier flow, Glacial deposits, Antarctica—George V Coast, Antarctica—Adélie Coast.
Detailed investigation was made of massive and stratified diamictons, laminated siliceous oozes, and well sorted, graded sands obtained from the George V/Adélie continental shelf in order to reconstruct the glacial marine geology of the area. The evidence indicates the following conditions: 1) Grounded ice extended to the shelf break within the last 18,000 yr. 2) Ice flow was from the southeast and was derived from an expanded Cook Ice Shelf. 3) Deposition of lodgement till took place over an irregular sub-glacial surface, primarily in depressions. 4) Erosion and redeposition of older glacial and or glacial marine sediments from higher parts of the shelf were extensive. 5) Retreat of the ice sheet was rapid and left a widespread, thin unit of winnowed glacial marine sediment and localized turbidites in the far eastern and western parts of the area. 6) Modern sedimentation is dominated by biogenic and marine current processes.

35-3193
Adenosine triphosphate (ATP), chlorophyll, and organic nitrogen in endolithic microbial communities and adjacent soils in the dry valleys of southern Victoria Land.
Friedmann, E I , et al, *Antarctic journal of the United States,* 1980, 15(5), p.164-166, 8 refs
LaRock, P.A., Brunson, J.O.
Soil microbiology, Lichens, Soil science, Antarctica—Victoria Land.
This study provides preliminary data on the biomass of endolithic microbial communities that colonize rocks in the cold desert of the dry valleys Twenty-four samples were analyzed Among 20 samples of Beacon sandstone, 16 contained cryptoendolithic lichens and 4 were colonized by cryptoendolithic cyanobacteria. Three soil samples were collected near sandstone boulders that were colonized by lichens One sample (Koettlitz marble with chasmoendolithic algae and cyanobacteria) was from the coastal desert near Gneiss Point, outside the high mountain desert area of the dry valleys. Kjeldahl nitrogen, adenosine triphosphate (ATP), chlorophyll a, and total organic matter were determined in the rocks and adjacent soils The measurements are tabulated and discussed The three soil samples contained 1.97 to 6 06 g. sq m organic nitrogen, but no chlorophyll. They contained significantly higher amounts of ATP than the rocks, even higher amounts than could be attributed to nonphotosynthetic soil microbial flora. A possible explanation is offered

35-3194
Lidar measurements in Antarctica.
Smiley, V.N., *Antarctic journal of the United States,* 1980, 15(5), p.188-190, 2 refs.
Clouds (meteorology), Ice crystal growth, Precipitation (meteorology).
The objectives of activities for the 1979-80 season were: 1) to take vertical backscatter and depolarization profiles of low-lying clouds; 2) to determine from the depolarization ratios whether ice crystal, water droplet, or mixed-phase clouds were present; and 3) to relate the observed events to local meteorological conditions. Significant results were found and publications are being prepared. An example of a lidar return from clear sky ice crystal precipitation data from this period is shown Also shown and discussed are examples of depolarization-sensitive lidar returns of 1) water drop and ice crystal precipitation at Amundsen-Scott Station in 1976, and 2) mixed-phase cloud and mixture of rain and snow precipitation at Palmer Station in 1978.

35-3195
Ship operations, *Deep Freeze* 80.
Taylor, P.R., *Antarctic journal of the United States,* 1980, 15(5), p.230-232.
Icebreakers.
Three U.S. Coast Guard icebreakers operated in Antarctica during *Deep Freeze* 80 USCGC *Polar Sea* performed the channel break-in to McMurdo, escorted the USNS *Maumee* into Winter Quarters Bay, supported science and provided transport for passengers and cargo enroute to Ushuaia, Argentina, via Palmer Station, and supported science in the Weddell Sea USCGC *Northwind* called at Campbell I., supported Ross Sea science, and assisted with the McMurdo icebreaking and channel tending. USCGC *Glacier* supported Ross Sea science, provided resupply ship assistance, towed the ice wharf to sea, and called at Campbell I. The dry cargo ship USNS *Pvt. John R. Towle* and tankship USNS *Maumee* provided the cargo and fuel resupply to McMurdo Details of the ships' itineraries and operations are outlined.

35-3196
Coastal-inland distributions of summer air temperature and precipitation in northern Alaska.
Haugen, R.K., et al, *Arctic and alpine research,* Nov. 1980, 12(4), MP 1439, p.403-412, 22 refs.
Tundra, Precipitation (meteorology), Air temperature, Shores, Long range forecasting, Wind factors, United States—Alaska—North Slope.
Using data from summer air temperature stations from the inland tundra to the immediate coastal area, regression analyses of the air temperature data from 1975 to 1978 were used to predict temperature values across the Alaskan Arctic Coastal Plain based upon latitude and longitude. This provides the best approximation of average values based on existing data. Mean monthly temperature, mean daily range of temperature, and thawing-degree days all increase with distance from the coast The estimated July normal for Atkasook, 48 km south of the coast, is 8.7 C, while the established 30-yr normal for Barrow, on the coast, is 3 7 C The July average temperature 6 km due south of the open water of Prudhoe Bay is 2 C higher than on the immediate coast. Within the area under the dominant influence of the sea breeze, regression analyses suggest a more precise relationship between air temperature and distance along the prevailing wind vector (N75 E) than between temperature and distance due north to the sea.

35-3234
Environmental assessment of the Alaskan continental shelf, Vol.5. Hazards. Rockville, Md., U.S. National Oceanic and Atmospheric Administration, Feb. 1981, 659p., Principal investigators' annual reports for the year ending March 1980. For selected reports see 35-3235 through 35-3251.
Subsea permafrost, Bottom sediment, Sedimentation, Geologic processes, Geomorphology, Seismic surveys.

35-3235
Beaufort seacoast permafrost studies.
Rogers, J.C., et al, Environmental assessment of the Alaskan continental shelf, Vol. 5. Hazards. Principal investigators' annual reports for the year ending March 1980, Rockville, Md., U.S. National Oceanic and Atmospheric Administration, 1981, p.1-44, 19 refs.
Morack, J.L.
Subsea permafrost, Permafrost distribution, Seismic refraction, Drilling, Beaufort Sea.

35-3236
Synthesis report: environmental geology of Kodiak Shelf.
Hampton, M.A., Environmental assessment of the Alaskan continental shelf, Vol. 5. Hazards. Principal investigators' annual reports for the year ending March 1980, Rockville, Md., U.S. National Oceanic and Atmospheric Administration, 1981, p.49-58.
Marine geology, Bottom sediment, Bottom topography, Seismic surveys.

35-3237
Hydrocarbon gases in sediments from Kodiak Shelf.
Kvenvolden, K.A., Environmental assessment of the Alaskan continental shelf, Vol 5 Hazards Principal investigators' annual reports for the year ending March 1980, Rockville, Md., U.S. National Oceanic and Atmospheric Administration, 1981, p.59-112, Refs p.68-71.
Bottom sediment, Gas inclusions, Hydrocarbons, Seismic refraction.

35-3238
Depositional environments and Quaternary sedimentary units within lower Cook Inlet, Alaska—a high-energy tidally dominated embayment along the Pacific margin of the United States.
Rappeport, M.L., Environmental assessment of the Alaskan continental shelf, Vol. 5. Hazards. Principal investigators' annual reports for the year ending March 1980, Rockville, Md., U.S. National Oceanic and Atmospheric Administration, 1981, p.170-180, 26 refs.
Bottom sediment, Bottom topography, Sedimentation, Quaternary deposits, Seismic surveys, Tides, Sea level, Ocean currents.

35-3239
Hydrocarbon gases in near-surface sediment of northern Bering Sea (Norton Sound and Chirikov Basin).
Kvenvolden, K.A., et al, Environmental assessment of the Alaskan continental shelf, Vol. 5. Hazards. Principal investigators' annual reports for the year ending March 1980, Rockville, Md., U.S. National Oceanic and Atmospheric Administration, 1981, p.215-243, Refs. p.232-235.
Redden, G.D., Thor, D.R., Nelson, C.H.
Gas inclusions, Bottom sediment, Hydrocarbons, Origin, Geochemistry, Bering Sea.

35-3240
Biogenic and thermogenic gas in gas-charged sediment of Norton Sound, Alaska.
Kvenvolden, K.A., et al, Environmental assessment of the Alaskan continental shelf, Vol. 5. Hazards Principal investigators' annual reports for the year ending March 1980, Rockville, Md., U.S. National Oceanic and Atmospheric Administration, 1981, p.244-250, 21 refs. Presented at the 11th Annual OTC, Houston, Tex., April 30-May 3, 1979.
Ocean bottom, Bottom sediment, Gas inclusions, Geochemistry.

35-3241
Thermogenic gases in near-surface sediments of Norton Sound, Alaska.
Nelson, H., et al, Environmental assessment of the Alaskan continental shelf, Vol. 5. Hazards. Principal investigators' annual reports for the year ending March 1980, Rockville, Md., U.S. National Oceanic and Atmospheric Administration, 1981, p.251-260, 16 refs. Presented at the 10th Annual OTC, Houston, Tex., May 8-11, 1978.
Kvenvolden, K.A., Clukey, E.C.
Bottom sediment, Ocean bottom, Gas inclusions, Hydrocarbons.

35-3242
Distribution of gas-charged sediments in Norton Basin, northern Bering Sea.
Holmes, M.L., et al, Environmental assessment of the Alaskan continental shelf, Vol 5. Hazards. Principal investigators' annual reports for the year ending March 1980, Rockville, Md., U.S. National Oceanic and Atmospheric Administration, 1981, p.261-287, 18 refs.
Thor, D.R.
Bottom sediment, Ocean bottom, Gas inclusions, Bottom topography, Seismic reflection, Acoustics, Distribution.

35-3243
Ice gouging on the subarctic Bering shelf.
Thor, D.R., et al, Environmental assessment of the Alaskan continental shelf, Vol 5 Hazards. Principal investigators' annual reports for the year ending March 1980, Rockville, Md., U S National Oceanic and Atmospheric Administration, 1981, p.286-314, 37 refs.
Nelson, C.H.
Sea ice, Ice scoring, Geologic processes, Bottom sediment, Bottom topography, Ice conditions, Bering Sea.

35-3244
Areas of active, large scale sand wave and ripple fields with scour potential on the Norton Basin sea floor.
Nelson, H., et al, Environmental assessment of the Alaskan continental shelf, Vol 5 Hazards. Principal investigators' annual reports for the year ending March 1980, Rockville, Md., U S National Oceanic and Atmospheric Administration, 1981, p.315-331, 8 refs.
Field, M.E., Cacchione, D.A., Drake, D.E.
Bottom topography, Bottom sediment, Sands, Ice scoring, Ocean currents, Side looking radar.

35-3245
Depositional and erosional features of the inner shelf, northeastern Bering Sea.
Hunter, R.E., et al, Environmental assessment of the Alaskan continental shelf, Vol. 5. Hazards. Principal investigators' annual reports for the year ending March 1980, Rockville, Md., U.S. National Oceanic and Atmospheric Administration, 1981, p.332-267, Refs. p.351-354.
Thor, D.R., Swisher, M.L.
Ocean bottom, Sedimentation, Erosion, Bottom topography, Bottom sediment, Drift, Water waves, Ocean currents, Bering Sea.

35-3246
Graded storm sand layers offshore from the Yukon Delta, Alaska.
Nelson, C H, Environmental assessment of the Alaskan continental shelf, Vol. 5 Hazards. Principal investigators' annual reports for the year ending March 1980, Rockville, Md., U.S. National O..anic and Atmospheric Administration, 1981. p.368-388, 15 refs
Bottom sediment, Bottom topography, Geologic processes, Sedimentation, Erosion, Storms.

35-3247
Geotechnical characteristics of bottom sediment in the northern Bering Sea.
Olsen, H.W., et al, Environmental assessment of the Alaskan continental shelf, Vol 5 Hazards Principal investigators' annual reports for the year ending March 1980, Rockville, Md., U.S. National Oceanic and Atmospheric Administration, 1981, p.389-419, 24 refs.
Clukey, E.C., Nelson, C.H.
Bottom sediment, Ocean bottom, Paleoclimatology.

35-3248
Report on surface and subsurface faulting in Norton Sound and Chirikov Basin, Alaska.
Johnson, J.L., et al, Environmental assessment of the Alaskan continental shelf, Vol. 5. Hazards. Principal investigators' annual reports for the year ending March 1980, Rockville, Md., U.S. National Oceanic and Atmospheric Administration, 1981, p.420-444, 25 refs.
Holmes, M.L.
Ocean bottom, Bottom sediment, Bottom topography, Geologic processes, Geomorphology, Seismic reflection, Acoustic measurement.

35-3249
Distribution of trace elements in bottom sediment of northern Bering Sea.
Larsen, B.R., et al, Environmental assessment of the Alaskan continental shelf, Vol. 5. Hazards. Principal investigators' annual reports for the year ending March 1980, Rockville, Md., U.S. National Oceanic and Atmospheric Administration, 1981, p.445-567, Refs. p.487-491.
Nelson, C.H., Heropoulos, C., Patry, J.J.
Bottom sediment, Ocean bottom, Geochemistry, Distribution, Bering Sea.

35-3250
Seismotectonic studies of western Alaska and sea ice studies in Beaufort Sea.
Biswas, N N, et al, Environmental assessment of the Alaskan continental shelf, Vol 5 Hazards Principal investigators' annual reports for the year ending March 1980, Rockville, Md., U.S. National Oceanic and Atmospheric Administration, 1981, p 575-618, 19 refs.
Sackinger, W.M., Gedney, L.
Sea ice distribution, Drift, Icequakes, Seismology, Tectonics, Beaufort Sea.

35-3251
Environmental geology and geomorphology of the barrier island-lagoon system along the Beaufort Sea coastal plain from Prudhoe Bay to the Colville River.
Cannon, P.J., Environmental assessment of the Alaskan continental shelf, Vol. 5. Hazards. Principal investigators' annual reports for the year ending March 1980, Rockville, Md., U.S. National Oceanic and Atmospheric Administration, 1981, p.619-634, 3 refs.
Geomorphology, Geology, Coastal topographic features, Tuliks, Lakes, Beaufort Sea.

35-3252
Environmental assessment of the Alaskan continental shelf, Vol.8. Biological studies. Rockville, Md., U.S. National Oceanic and Atmospheric Administration, Feb. 1981, 359p., Principal investigators' final reports. Numerous refs. passim.
Marine biology, Ecosystems, Nutrient cycle, Biomass, Sea ice, Environmental impact, Algae.

35-3253
Environmental assessment of the Alaskan continental shelf, Vol.7. Biological studies. Rockville, Md., U.S. National Oceanic and Atmospheric Administration, Feb. 1981, 678p., Principal investigators' final reports. Refs. passim. For selected report see 35-3254.
Marine biology, Marine deposits, Ecology, Animals, Ice cover effect, Natural resources, Fish, Beaufort Sea.

35-3254
Physical processes.
Truett, J C, Environmental assessment of the Alaskan continental shelf, Vol.7. Biological studies. Principal investigators' final reports, Rockville, Md., U.S. National Oceanic and Atmospheric Administration, Feb. 1981, p.52-108, Refs. p.101-108.
Ocean currents, Sediment transport, Bottom sediment, Bottom topography, Sea ice, Ice cover effect, Beaufort Sea.

35-3255
Environmental assessment of the Alaskan continental shelf, Vol.4. Hazards. Rockville, Md., U.S. National Oceanic and Atmospheric Administration, [1981], 677p., Principal investigators' annual reports for the year ending March 1980. For selected reports see 35-3256 through 35-3268.
Bottom sediment, Subsea permafrost, Seismology, Volcanoes, Ice scoring, Gas inclusions, Sea ice distribution.

35-3256
Delineation and engineering characteristics of permafrost beneath the Beaufort Sea.
Sellmann, P.V., et al, MP 1428, Environmental assessment of the Alaskan continental shelf, Vol.4. Hazards. Principal investigators' annual reports for the year ending March 1980, Rockville, Md., U.S. National Oceanic and Atmospheric Administration, 1981, p.125-157, 14 refs.
Chamberlain, E., Delaney, A., Neave, K.G
Subsea permafrost, Permafrost distribution, Bottom sediment, Drill core analysis, Mapping, Engineering, Seismic refraction, Wave propagation.

35-3257
Offshore permafrost studies and shoreline history as an aid to predicting offshore permafrost conditions.
Smith, P.A., et al, Environmental assessment of the Alaskan continental shelf, Vol.4. Hazards. Principal investigators' annual reports for the year ending March 1980, Rockville, Md., U.S. National Oceanic and Atmospheric Administration, 1981, p.159-255, Refs. passim. Includes three relevant reports, as appendices, see 35-3258 through 35-3268.
Hartz, R.W., Hopkins, D.M.
Subsea permafrost, Permafrost forecasting, Shoreline modification, Geologic processes, Bottom sediment, Ocean bottom, Radioactive age determination, Boreholes.

35-3258
Review of offshore permafrost studies, Beaufort Sea, Alaska, 1976 to 1980.
Hartz, R M, et al, Environmental assessment of the Alaskan continental shelf, Vol.4 Hazards. Principal investigators' annual reports for the year ending March 1980, Rockville, Md., U.S National Oceanic and Atmospheric Administration, 1981, p.167-177.
Hopkins, D.M.
Subsea permafrost, Boreholes, Natural resources, Beaufort Sea.

35-3259
Coastal morphology, coastal erosion, and barrier islands of the Beaufort Sea coast, Alaska.
Hopkins, D M, et al, Environmental assessment of the Alaskan continental shelf, Vol.4. Hazards. Principal investigators' annual reports for the year ending March 1980, Rockville, Md., U S. National Oceanic and Atmospheric Administration, 1981, p 178-186.
Hartz, R.W.
Shore erosion, Coastal topographic features, Sediment transport, Water waves, Geologic processes, Beaches, Thermokarst, Bottom topography.

35-3260
Likelihood of encountering permafrost in submerged areas of northern Bering Sea.
Hopkins, D.M., Environmental assessment of the Alaskan continental shelf, Vol.4. Hazards. Principal investigators' annual reports for the year ending March 1980, Rockville, Md., U.S. National Oceanic and Atmospheric Administration, 1981, p.188-202, 26 refs.
Subsea permafrost, Permafrost distribution, Bottom sediment, Sea level, Bering Sea.

35-3261
Geologic processes and hazards of the Beaufort Sea shelf and coastal regions.
Barnes, P., et al, Environmental assessment of the Alaskan continental shelf, Vol.4. Hazards. Principal investigators' annual reports for the year ending March 1980, Rockville, Md, U.S. National Oceanic and Atmospheric Administration, 1981, p.257-355, Refs. passim. Includes 5 relevant reports, see 35-3262 through 35-3266.
Reimnitz, E.
Geologic processes, Sea ice distribution, Ice conditions, Coastal topographic features, Shores, Erosion, Seasonal variations, Beaufort Sea.

35-3262
New seismic evidence for a widespread occurrence of gas in submarine sediments at shallow depths, Prudhoe Bay, Alaska.
Boucher, G., et al, Environmental assessment of the Alaskan continental shelf, Vol.4 Hazards. Principal investigators' annual reports for the year ending March 1980, Rockville, Md., U.S. National Oceanic and Atmospheric Administration, 1981, p.276-283, 5 refs.
Reimnitz, E., Kempema, E.
Bottom sediment, Gas inclusions, Seismic refraction, Subsea permafrost.

35-3263
Overconsolidated surficial deposits on the Beaufort Sea shelf.
Reimnitz, E, et al, Environmental assessment of the Alaskan continental shelf, Vol.4. Hazards. Principal investigators' annual reports for the year ending March 1980, Rockville, Md., U.S. National Oceanic and Atmospheric Administration, 1981, p.284-312, 12 refs.
Kempema, E., Ross, R., Minkler, P.
Bottom sediment, Composition, Settlement (structural), Clays, Overconsolidation, Beaufort Sea.

35-3264
Reassessment of ice gouging on the inner shelf of the Beaufort Sea, Alaska—a progress report.
Rearic, D., et al, Environmental assessment of the Alaskan continental shelf, Vol.4. Hazards. Principal investigators' annual reports for the year ending March 1980, Rockville, Md., U.S. National Oceanic and Atmospheric Administration, 1981, p.318-332, 10 refs.
Barnes, P.
Ice scoring, Bottom sediment, Geologic processes, Ocean bottom, Side looking radar.

35-3265
Break in gouge character related to ice ridges.
Barnes, P., et al. Environmental assessment of the Alaskan continental shelf, Vol.4 Hazards Principal investigators' annual reports for the year ending March 1980, Rockville, Md., U.S. National Oceanic and Atmospheric Administration, 1981, p.333-343, 8 refs.
Ross, R., Reimnitz, E.
Ice scoring, Bottom sediment, Bottom topography, Ice surface, Ground ice.

35-3266
Super sea-ice kettles in the arctic nearshore zone—Reindeer Island.
Reimnitz, E., et al. Environmental assessment of the Alaskan continental shelf, Vol.4. Hazards. Principal investigators' annual reports for the year ending March 1980, Rockville, Md., U.S. National Oceanic and Atmospheric Administration, 1981, p.344-355, 6 refs
Kempema, E.
Sea ice distribution, Ice conditions, Grounded ice, Bottom topography, Ocean bottom, Erosion, Ocean currents.

35-3267
Subsea permafrost: probing, thermal regime and data analysis.
Osterkamp, T.E., et al. Environmental assessment of the Alaskan continental shelf, Vol.4 Hazards. Principal investigators' annual reports for the year ending March 1980, Rockville, Md., U.S. National Oceanic and Atmospheric Administration, 1981, p.497-677, Refs. passim. For appendix see 35-3268.
Harrison, W.D.
Subsea permafrost, Permafrost thermal properties, Probes, Drill core analysis, Thermal regime, Chemical analysis, Permafrost hydrology, Permafrost distribution, Sea ice, Ice conditions, Ice temperature.

35-3268
Sediment-laden sea ice: the role of frazil and anchor ice in its formation and development.
Osterkamp, T.E., et al. Environmental assessment of the Alaskan continental shelf, Vol.4 Hazards Principal investigators' annual reports for the year ending March 1980, Rockville, Md., U.S. National Oceanic and Atmospheric Administration, 1981, p.641-662, 3 refs.
Gosink, J.P.
Sea ice, Impurities, Marine deposits, Frazil ice, Ice formation, Sediments.

35-3269
Mathematical model of nozzle blockage by freezing.
Sampson, P., et al, *International journal of heat and mass transfer*, Feb 1981, 24(2), p.231-241, In English with French, German and Russian summaries 7 refs.
Gibson, R.D.
Pipes (tubes), Pipeline freezing, Liquid solid interfaces, Mathematical models, Solid phases.

35-3270
Variable time step methods for one-dimensional Stefan problem with mixed boundary conditions.
Gupta, R.S., et al, *International journal of heat and mass transfer*, Feb. 1981, 24(2), p.251-259, 18 refs., In English with French, German and Russian summaries.
Kumar, D.
Liquid solid interfaces, Stefan problem, Heat flux, Boundary layer, Thermal diffusion, Melting, Solid phases, Time factor.

35-3271
Liquid spray cooling of a heated surface.
Grissom, W.M., et al, *International journal of heat and mass transfer*, Feb 1981, 24(2), p.261-271, 50 refs., In English with French, German and Russian summaries.
Wierum, F.A.
Aerosols, Evaporation, Cooling rate, Heat flux, Atmospheric pressure.

35-3272
Freezing on finned tube for either conduction-controlled or natural-convection-controlled heat transfer.
Sparrow, E.M., et al, *International journal of heat and mass transfer*, Feb 1981, 24(2), p.273-284, 5 refs., In English with French, German and Russian summaries.
Larson, E.D., Ramsey, J.W.
Pipes (tubes), Freezing, Heat transfer, Liquid solid interfaces, Conduction, Convection.

35-3273
Modeling the geostrophic drag coefficient for AIDJEX.
Brown, R.A., *Journal of geophysical research*, Mar. 20, 1981, 86(C3), p.1989-1994, 10 refs.
Drift, Ice mechanics, Remote sensing, Mathematical models, Sea ice, Boundary layer.

35-3274
Characteristics of the Great Whale River plume.
Ingram, R.G., *Journal of geophysical research*, Mar. 20, 1981, 86(C3), p.2017-2023, 8 refs.
River flow, Ice cover effect, Runoff, River ice, Water temperature, Salinity.

35-3275
Wintertime temperature inversion in Kootenay Lake, British Columbia.
Wiegand, R.C., et al, *Journal of geophysical research*, Mar. 20, 1981, 86(C3), p.2024-2034, 34 refs
Carmack, E.C.
Lake water, Water temperature, Temperature inversions, Winter.

35-3276
Multiple reflection effects on irradiance in the presence of Arctic stratus clouds.
Wendler, G., et al, *Journal of geophysical research*, Mar 20, 1981, 86(C3), p.2049-2057, 40 refs.
Eaton, F.D., Ohtake, T.
Snow cover, Albedo, Cloud cover, Solar radiation, Reflection, Electromagnetic properties, Polynyas, Humidity, Seasonal variations, Radiation.

35-3277
Dome's "kick tolerance" formula for safe Beaufort Sea drilling.
Wilkie, D.I., et al, *Ocean industry*, Mar. 1981, 16(3), p.33-36.
Bernard, W.F.
Offshore drilling, Bottom sediment, Pressure, Equipment, Forecasting, Beaufort Sea.

35-3278
Spring ice jams in stream channels; physical principles and quantitative analysis.
Deev, IU.A., et al, *U.S. Army Cold Regions Research and Engineering Laboratory*, Mar. 1981, TL 759, 175p., ADB-056 677 For Russian original see 33-2832. 91 refs.
Popov, A.F.
Ice jams, Ice conditions, Icebound rivers, Ice breakup, Ice floes, Experimentation, Analysis (mathematics).
Ice jams as natural, regular formations with specific, but not identical forms, sizes and properties were examined This permitted a description of the theoretical principles of the investigated processes of jam formation in relatively total form. The material presented includes a) the establishment of initial theoretical concepts of a model of ice movement and ice jams, b) an investigation of the causes and formation mechanism of jams and their special features as a function of the concrete conditions of the external environment, c) a quantitative analysis of the elements of jam formation in the form used for solving applied problems; and d) theoretical bases and practical considerations for methods of combatting ice jams and controlling them.

35-3279
Organic matter in soils of Kola Peninsula. {Organicheskoe veshchestvo v pochvakh Kol'skogo poluostrova},
Pereverzev, V.N., et al, Leningrad, Nauka, 1980, 227p., In Russian with English table of contents enclosed. Refs. p.220-226.
Alekseeva, N.S.
Cryogenic soils, Soil composition, Soil chemistry, Nutrient cycle, Soil water migration, Swamps, Peat, Forest land, Biomass, Decomposition, Soil profiles, USSR—Kola Peninsula.

35-3280
Engineering studies of frozen ground. Soil properties and the dynamics of cryogenic processes. {Inzhenernye issledovaniia merzlykh gruntov. Svoistva gruntov i dinamika merzlotnykh protsessov},
Gur'ianov, I.E., ed, Novosibirsk, Nauka, 1981, 159p., In Russian. For individual papers see 35-3281 through 35-3292. Refs. passim.
Embankments, Earth fills, Foundations, Piles, Wells, Baykal Amur railroad, Permafrost beneath structures, Permafrost thermal properties, Seasonal freeze thaw, Frozen ground strength, Mine shafts, Ground ice, Sublimation, Permafrost weathering, Tundra, Gullies, Soil erosion, Drilling, Dredging.

35-3281
Peculiarities of thermal properties of soils in the eastern part of the Baykal Amur railroad area. {Nekotorye osobennosti teplovykh svoistv gruntov vostochnoi chasti trassy BAM},
Gavril'ev, R.I., et al, Inzhenernye issledovaniia merzlykh gruntov. Svoistva gruntov i dinamika merzlotnykh protsessov (Engineering studies of frozen ground. Soil properties and the dynamics of cryogenic processes) edited by I.E. Gur'ianov, Novosibirsk, Nauka, 1981, p.5-22, In Russian. 17 refs.
Nikiforov, I.D., Gulaia, O.P.
Permafrost beneath structures, Frozen ground temperature, Permafrost thermal properties, Baykal Amur railroad, Thermal conductivity, Ground ice, Frozen fines, Soil composition.

35-3282
Methods of determining thermal properties of frozen ground and rocks. {Metodika opredeleniia teplovykh svoistv merzlykh gruntov i gornykh porod},
Gavril'ev, R.I., Inzhenernye issledovaniia merzlykh gruntov. Svoistva gruntov i dinamika merzlotnykh protsessov (Engineering studies of frozen ground. Soil properties and the dynamics of cryogenic processes) edited by I.E. Gur'ianov, Novosibirsk, Nauka, 1981, p.22-36, In Russian. 10 refs
Frozen ground, Frozen rocks, Thermal properties, Ground thawing, Heat transfer, Analysis (mathematics).

35-3283
Thermophysical characteristics of clayey soils in the numerical solutions of freeze-thaw problems. {Teplofizicheskie kharakteristiki glinistykh gruntov pri chislennom reshenii zadach o promerzanii i ottaivanii},
Gur'ianov, I.E., Inzhenernye issledovaniia merzlykh gruntov. Svoistva gruntov i dinamika merzlotnykh protsessov (Engineering studies of frozen ground. Soil properties and the dynamics of cryogenic processes) edited by I.E. Gur'ianov, Novosibirsk, Nauka, 1981, p.36-45, In Russian. 29 refs.
Frozen fines, Clay soils, Freeze thaw cycles, Soil moisture migration, Phase transformations, Thermal properties, Analysis (mathematics).

35-3284
Influence of basic physical characteristics on the strength of frozen ground. {Vliianie osnovnykh fizicheskikh kharakteristik na prochnost' merzlogo grunta},
Deriugin, A.G., et al, Inzhenernye issledovaniia merzlykh gruntov Svoistva gruntov i dinamika merzlotnykh protsessov (Engineering studies of frozen ground Soil properties and the dynamics of cryogenic processes) edited by I.E. Gur'ianov, Novosibirsk, Nauka, 1981, p.45-53, In Russian. 11 refs
Kyrbasov, S.V., Goldyreva, A.P.
Sands, Frost penetration, Soil water, Water content, Ground ice, Soil strength, Soil temperature, Deformation.

35-3285
Relation between loading speed and the strength of frozen ground. {Issledovanie skorostnoi zavisimosti prochnosti merzlykh gruntov},
Deriugin, A.G., Inzhenernye issledovaniia merzlykh gruntov. Svoistva gruntov i dinamika merzlotnykh protsessov (Engineering studies of frozen ground. Soil properties and the dynamics of cryogenic processes) edited by I.E. Gur'ianov, Novosibirsk, Nauka, 1981, p.53-70, In Russian. 24 refs.
Experimentation, Frozen ground strength, Compressive properties, Static loads, Deformation, Frozen fines, Clays, Loams, Sands, Test equipment, Laboratory techniques.

35-3286
Calculating sublimation weathering of disperse grounds in underground excavations. {K raschetu sublimatsionnogo vyvetrivaniia dispersnykh gruntov v podzemnykh vyrabotkakh},
Kuz'min, G.P., Inzhenernye issledovaniia merzlykh gruntov. Svoistva gruntov i dinamika merzlotnykh protsessov (Engineering studies of frozen ground. Soil properties and the dynamics of cryogenic processes) edited by I.E. Gur'ianov, Novosibirsk, Nauka, 1981, p.70-80, In Russian. 7 refs.
Mine shafts, Excavation, Frozen fines, Ground ice, Ice sublimation, Permafrost weathering, Mathematical models.

35-3287
Properties of frozen and thawing tundra soils and their role in the formation of gullies. (Svoĭstva merzlykh i ottaivaiushchikh gruntov tundry i ikh rol' v ovragoobrazovanii),
Konstantinov, I P , Inzhenernye issledovaniia merzlykh gruntov Svoĭstva gruntov i dinamika merzlotnykh protsessov (Engineering studies of frozen ground. Soil properties and the dynamics, Novosibirsk, Nauka, 1981, p.80-95, In Russian. 2 refs.
Tundra, Cryogenic soils, Active layer, Soil erosion, Gullies, Frozen fines, Soil composition, Water erosion.

35-3288
Variations in physical properties of coarse-grained perennially frozen rocks. (Dinamika fizicheskikh svoĭstv krupnooblomochnykh vechnomerzlykh gruntov),
Olovin, B A , Inzhenernye issledovan... merzlykh gruntov Svoĭstva gruntov i dinamika merzlotnykh protsessov (Engineering studies of frozen ground Soil properties and the dynamics of cryogenic processes) edited by I.E. Gur'ianov, Novosibirsk, Nauka, 1981, p.96-116, In Russian. 24 refs.
Sedimentary rocks, Grain size, Porosity, Permeability, Physical properties, Vapor transfer, Convection, Heat transfer, Mass transfer.

35-3289
Soil moisture dynamics in low pressure dams under permafrost conditions. (Dinamika vlazhnosti gruntov nizkonapornykh plotin v usloviiakh vechnoĭ merzloty),
Chzhan, R.V., Inzhenernye issledovaniia merzlykh gruntov Svoĭstva, Novosibirsk, Nauka, 1981, p 117-121, In Russian. 6 refs.
Hydraulic structures, Earth dams, Soil water migration, Permafrost beneath structures, Soil temperature, Seasonal freeze thaw.

35-3290
Forecasting temperature regime of an earth fill embankment and its base. (Prognoz temperaturnogo rezhima namyvnoĭ nasypi i ee osnovaniia),
Konstantinov, I.P., et al, Inzhenernye issledovaniia merzlykh gruntov Svoĭstva gruntov i dinamika merzlotnykh protsessov (Engineering studies of frozen ground. Soil properties and the dynamics of cryogenic processes) edited by I E. Gur'ianov, Novosibirsk, Nauka, 1981, p.121-134, In Russian. 9 refs.
Makhotko, S.P., Li, G.E.
Embankments, Earth fills, Permafrost beneath structures, Permafrost bases, Permafrost hydrology, Design, Frozen rock temperature, Permafrost forecasting.

35-3291
Solving an axially symmetrical two-dimensional problem of heat transfer between permafrost and a well in the process of drilling. (Reshenie osesimmetrichnoĭ dvumernoĭ zadachi teploobmena buriashcheisia skvazhiny s merzlymi porodami),
Rusakov, V G. et al, Inzhenernye issledovaniia merzlykh gruntov. Svoĭstva gruntov i dinamika merzlotnykh protsessov (Engineering studies of frozen ground. Soil properties and the dynamics of cryogenic processes) edited by I F. Gur'ianov, Novosibirsk, Nauka, 1981, p.134-140.
Boriskova, G.A.
Drilling, Wells, Drilling fluids, Heat transfer, Permafrost, Frozen rock temperature, Ground ice, Ice melting, Analysis (mathematics).

35-3292
Mechanical interaction between cast-in-situ bored piles and permafrost. (Mekhanicheskoe vzaimodeĭstvie buronabivnykh svaĭ s vechnomerzlymi gruntami),
Gaĭdaenko, E.I., Inzhenernye issledovaniia merzlykh gruntov. Svoĭstva gruntov i dinamika merzlotnykh protsessov (Engineering studies of frozen ground. Soil properties and the dynamics of cryogenic processes) edited by I.E. Gur'ianov, Novosibirsk, Nauka, 1981, p.140-154, In Russian. 7 refs.
Foundations, Piles, Permafrost beneath structures, Bearing strength, Design.

35-3293
Problems of Pleistocene paleogeography in glacial and periglacial regions. (Voprosy paleogeografii pleĭstotsena lednikovykh i perigliatsial'nykh oblasteĭ),
Velichko, A A , ed, Moscow, Nauka, 1981, 251p , In Russian For selected papers see 35-3294 and 35-3295. Refs. passim.
Grichuk, V.P., ed.
Maps, Permafrost distribution, Periglacial processes, Paleoclimatology, Cryogenic soils, Soil formation, Polygonal topography, Patterned ground, Soil profiles, Meteorological charts, Meteorological data.

35-3294
Relic cryogenic microrelief near Vyaz'ma. (Reliktovyĭ merzlotnyĭ mikrorel'ef v rafone Viaz'my),
Berdnikov, V.V., Voprosy paleogeografii pleĭstotsena lednikovykh i perigliatsial'nykh oblasteĭ (Problems of Pleistocene paleogeography in glacial and periglacial regions) edited by A A Velichko and V.P. Grichuk, Moscow, Nauka, 1981, p.200-211, In Russian. 7 refs.
Permafrost depth, Cryogenic soils, Soil formation, Polygonal topography, Frost action, Patterned ground, Soil profiles.

35-3295
Relationship between cryogenic and climatic parameters and their paleogeographic significance. (O nekotorykh sootnosheniiakh mezhdu merzlotnymi i klimaticheskimi parametrami i ikh paleogeograficheskoe znachenie),
Nechaev, V.P , Voprosy paleogeografii pleĭstotsena lednikovykh i perigliatsial'nykh oblasteĭ (Problems of Pleistocene paleogeography in glacial and periglacial regions) edited by A.A. Velichko and V.P. Grichuk, Moscow, Nauka, 1981, p.211-220, In Russian. 24 refs.
Permafrost distribution, Periglacial processes, Mapping, Snow cover effect, Meteorological charts, Meteorological data, Paleoclimatology.

35-3296
Isotope methods of studying natural waters. (Issledovanie prirodnykh vod izotopnymi metodami),
Ferronskiĭ, V.I., ed, Moscow, Nauka, 1981, 260p., In Russian. For selected articles see 35-3297 through 35-3302 Refs. passim.
Mountain glaciers, Glacier ice, Ice composition, Ice sheets, Profiles, Meltwater, Ground water, Isotope analysis, Oxygen isotopes, Radioactive isotopes. Permafrost hydrology, Glacial hydrology, Metamorphism (snow), Firn, Recrystallization.

35-3297
Water balance and the balance of stable oxygen isotopes in the Issyk-Kul' Basin. (Vodnyĭ balans i balans stabil'nykh izotopov kisloroda v Issyk-Kul'skoĭ kotlovine),
Brezgunov, V S., et al, Issledovanie prirodnykh vod izotopnymi metodami (Isotope methods of studying natural waters) edited by V.I. Ferronskiĭ, Moscow, Nauka, 1981, p.10-14, In Russian. 8 refs.
Nechaev, V.V.
Mountain glaciers, Glacial hydrology, Glacial lakes, Water balance, Isotope analysis, Oxygen isotopes, Glacier ablation.

35-3298
Relation between variations of the O-18/O-15 ratio and meteorological conditions in vertical profiles of warm glaciers. (Vzaimosviaz' variatsiĭ O-18/O-16 s meteousloviiami v vertikal'nom profile teplykh lednikov),
Vaĭkmiae, R.A., et al, Issledovanie prirodnykh vod izotopnymi metodami (Isotope methods of studying natural waters) edited by V.I. Ferronskiĭ, Moscow, Nauka, 1981, p.25-30, In Russian. 15 refs.
Punning, IA.-M.K.
Glacier ice, Ice composition, Ice sheets, Profiles, Isotope analysis, Oxygen isotopes, Snow cover, Metamorphism (snow), Firn.

35-3299
Peculiarities of water exchange between the Aldan hydrogeologic massive, the Baykal-Aldan and the Amur-Ussuriyskaya folded areas. (Osobennosti vodoobmena Aldanskogo gidrogeologicheskogo massiva, Baĭkalo-Aldanskoĭ i Amuro-Ussuriĭskoĭ oblasteĭ),
Afanasenko, V.E., et al, Issledovanie prirodnykh vod izotopnymi metodami (Isotope methods of studying natural waters) edited by V.I Ferronskiĭ, Moscow, Nauka, 1981, p.85-90, In Russian. 5 refs.
Morkovkina, I.K., Romanov, V.V.
Water supply, Permafrost hydrology, Permafrost distribution, Ground ice, Isotope analysis, Naleds, Baykal Amur railroad.

35-3300
Isotope methods of studying rock stream formation. (Issledovanie kurumoobrazovaniia izotopnymi metodami),
Morkovkina, I K , et al, Issledovanie prirodnykh vod izotopnymi metodami (Isotope methods of studying natural waters) edited by V.I. Ferronskiĭ, Moscow, Nauka, 1981, p.90-96, In Russian. 3 refs.
Romanov, V.V., Tiurin, A.I., Chizhov, A.B.
Alpine landscapes, Slope processes, Frost action, Rock streams, Permafrost depth, Active layer, Ground ice, Ice structure, Ice composition, Isotope analysis.

35-3301
Applying stable and radioactive isotopes to studying moisture migration to the freezing front. (Primenenie stabil nykh i radioaktivnykh izotopov pri issledovanii migratsii vlagi k frontu promerzaniia),
Kaliuzhnyi, I.L., et al, Issledovanie prirodnykh vod izotopnymi metodami (Isotope methods of studying natural waters) edited by V.I. Ferronskiĭ, Moscow, Nauka, 1981, p.164-170, In Russian. 6 refs.
Lavrov, S.A.
Soil freezing, Mass transfer, Isotope analysis, Soil water migration, Frost penetration, Phase transformations, Analysis (mathematics), Test equipment, Laboratory techniques.

35-3302
Uranium and plutonium isotopes in glaciers and waters of the Issyk-Kul' basin. (Izotopy urana i plutoniia v lednikakh i vodakh Issyk-Kul'skoĭ kotloviny),
Bondarev, L.G., et al, Issledovanie prirodnykh vod izotopnymi metodami (Isotope methods of studying natural waters) edited by V I Ferronskiĭ, Moscow, Nauka, 1981, p.198-200, In Russian. 4 refs.
Zverev, V.L., Spiridonov, A.I.
Mountain glaciers, Glacial hydrology, Meltwater, Isotope analysis, Radioactive isotopes, Glacier ice, Ice composition.

35-3303
Montane periglacial zone and its morphological lower limit.
Hagedorn, J., *Zeitschrift fur Geomorphologie*, 1980, Supp.36, p.96-103, Presented at the British-German Symposium on Geomorphology, Würzburg, Sep. 24-29, 1979. In English with French and German summaries. 23 refs.
Mountains, Periglacial processes, Geomorphology, Altitude.

35-3304
Study of the temperature-dependence of the brine content in sea ice by the pulsed NMR method.
Mel'nichenko, N.A., et al, *Okeanologiya*, Apr. 1980, 19(5), p.535-537, 12 refs. Translated from Okeanologiia.
Mikhaĭlov, V.I., Chizhik, V.I.
Sea ice, Ice temperature, Unfrozen water content, Brines.

35-3305
Permafrost investigations in economically developing areas of the USSR. (Merzlotnye issledovaniia v osvaivaemykh raĭonakh SSSR),
Pavlov, A.V., ed, Novosibirsk, Nauka, 1980, 183p., In Russian For individual papers see 35-3306 through 35-3335. Refs. passim.
Nekrasov, I.A., ed.
Economic development, Human factors, Environmental protection, Permafrost depth, Cryogenic soils, Soil erosion, Permafrost transformation, Tundra, Taiga, Thermokarst, Alassy.

35-3306
Permafrost studies related to the development of measures for environmental protection in the North. (Merzlotnye issledovaniia v sviazi s razrabotkoĭ meropriiatiĭ po okhrane prirodnykh kompleksov Severa),
Mel'nikov, P.I., et al, Merzlotnye issledovaniia v osvaivaemykh raĭonakh SSSR (Permafrost investigations in economically developing areas of the USSR) edited by A.V Pavlov and I.A. Nekrasov, Novosibirsk, Nauka, 1980, p.3-8, In Russian. 19 refs.
Pavlov, A.V.
Environmental protection, Economic development, Human factors, Permafrost depth, Cryogenic soils, Soil erosion, Permafrost transformation, Tundra.

35-3307
Landscape indications used in forecasting changes in engineering-geocryological conditions due to economic development. (Landshaftnaia indikatsiia inzhenerno-geokriologicheskikh usloviĭ dlia prognoza ikh izmeneniia pod vliianie khoziaĭstvennoĭ deiatel nosti),
Moskalenko, N.G., Merzlotnye issledovaniia v osvaivaemykh raĭonakh SSSR (Permafrost investigations in economically developing areas of the USSR) edited by A.V. Pavlov and I.A. Nekrasov, Novosibirsk, Nauka, 1980, p.8-18, In Russian. 9 refs.
Forest tundra, Microrelief, Economic development, Soil erosion, Cryogenic soils, Soil profiles, Ground ice, Vegetation factors, Thermokarst, Permafrost beneath structures.

35-3308
Studying thermal balance of developing areas of northwestern Siberia. [Ob issledovaniakh teplovogo balansa raionov khoziaistvennogo osvoeniia severa Zapadnoĭ Sibiri],
Ivanova, I.I., et al, Merzlotnye issledovaniia v osvaivaemykh raionakh SSSR (Permafrost investigations in economically developing areas of the USSR) edited by A.V. Pavlov and I.A. Nekrasov, Novosibirsk, Nauka, 1980, p.19-23, In Russian. 6 refs.
Lazareva, N.A., Malevskiĭ-Malevich, S.P.
Permafrost thermal properties, Heat balance, Active layer, Soil temperature, Measuring instruments, Vegetation factors, Human factors.

35-3309
Hydrothermal regime of soils during biologic recultivation of landscapes affected by industrial development. [*Vodno-teplovoĭ rezhim gruntov pri biologicheskoĭ rekul'tivatsii tekhnogennykh landshaftov*],
Skriabin, P.N., et al, *Merzlotnye issledovaniia v osvaivaemykh raionakh SSSR (Permafrost investigations in economically developing areas of the USSR) edited* by A.V. Pavlov and I.A. Nekrasov, Novosibirsk, Nauka, 1980, p.23-31, *In Russian.* 10 refs.
Sergeev, B.P.
Petroleum industry, Gas pipelines, Tundra, Soil erosion, Permafrost transformation, Revegetation, Permafrost beneath structures, Environmental protection.

35-3310
Changes in natural environments in one of the sections of a working gas pipeline in Central Yakutia. [Izmenenie prirodnykh usloviĭ na odnom iz uchastkov deĭstvuiushchego gazoprovoda (Tsentral'naia IAkutiia)],
Turbina, M.I., Merzlotnye issledovaniia v osvaivaemykh raionakh SSSR (Permafrost investigations in economically developing areas of the USSR) edited by A.V. Pavlov and I.A. Nekrasov, Novosibirsk, Nauka, 1980, p.31-36, In Russian. 3 refs.
Embankments, Gas pipelines, Permafrost beneath structures, Soil erosion, Cryogenic soils, Soil temperature, Thaw depth.

35-3311
Observing evaporation from the thermokarst lake Syrdakh. [Rezul'taty nabliudeniĭ za isparieniem termokarstovogo oz. Syrdakh],
Skachkov, IU.B., et al, Merzlotnye issledovaniia v osvaivaemykh raionakh SSSR (Permafrost investigations in economically developing areas of the USSR) edited by A.V. Pavlov and I.A. Nekrasov, Novosibirsk, Nauka, 1980, p.36-38, *In Russian.* 5 refs.
Prokop'ev, A.N.
Thermokarst lakes, Evaporation, Lake water, Measuring instruments.

35-3312
Measuring solar radiation in ice on Lake Syrdakh. [Izmerenie solnechnoĭ radiatsii vo l'du oz. Syrdakh],
Tishin, M.I., et al, Merzlotnye issledovaniia v osvaivaemykh raionakh SSSR (Permafrost investigations in economically developing areas of the USSR) edited by A.V. Pavlov and I.A. Nekrasov, Novosibirsk, Nauka, 1980, p.38-40, In Russian. 2 refs
Kirenskiĭ, K.L.
Lake ice, Solar radiation, Attenuation, Measuring instruments, Ice deterioration.

35-3313
Thermal regime of the bottom of a large thermokarst lake in Central Yakutia. [Teplovoĭ rezhim dna krupnogo termokarstovogo ozera v Tsentral'noĭ IAkutiĭ],
Tishin, M.I., Merzlotnye issledovaniia v osvaivaemykh raionakh SSSR (Permafrost investigations in economically developing areas of the USSR) edited by A.V. Pavlov and I.A. Nekrasov, Novosibirsk, Nauka, 1980, p.40-47, *In Russian.* 11 refs.
Thermokarst lakes, Bottom sediment, Surface temperature, Thermal regime, Permafrost beneath lakes, Heat transfer, Seasonal variations.

35-3314
Hydrothermal regime of cryogenic saline soils beneath forage crops with overhead irrigation. [Gidrotermicheskiĭ rezhim merzlotnykh zasolennykh pochv pod kormovymi kul'turami pri dozhdeval'nom oroshenii],
Mandarov, A.A., et al, Merzlotnye issledovaniia v osvaivaemykh raionakh SSSR (Permafrost investigations in economically developing areas of the USSR) edited by A.V. Pavlov and I.A. Nekrasov, Novosibirsk, Nauka, 1980, p.47-53.
Ugarov, I.S.
Saline soils, Cryogenic soils, Grasses, Irrigation, Soil temperature, Soil water migration, Soil profiles, Thaw depth.

35-3315
Moisture regime of Central Yakutian soils with overhead irrigation. [Rezhim vlazhnosti pochv Tsentral'noĭ IAkutii pri dozhdeval'nom oroshenii],
Ugarov, I.S., et al, Merzlotnye issledovaniia v osvaivaemykh raionakh SSSR (Permafrost investigations in economically developing areas of the USSR) edited by A.V. Pavlov and I.A. Nekrasov, Novosibirsk, Nauka, 1980, p.53-59, In Russian. 3 refs.
Rysakov, Zh.I.
Cryogenic soils, Irrigation, Soil water migration, Evaporation, Runoff, Water content, Permafrost depth, Active layer.

35-3316
Experience in subdividing the area of Yakutsk according to frost heave intensity and seasonal thaw depth for practical purposes. [Opyt kharakteristiki territorii g. IAkutska v otnoshenii glubiny sezonnogo protaivaniia i puchinistosti gruntov v prakticheskikh tseliakh],
Solov'ev, P.A., Merzlotnye issledovaniia v osvaivaemykh raionakh SSSR (Permafrost investigations in economically developing areas of the USSR) edited by A.V. Pavlov and I.A. Nekrasov, Novosibirsk, Nauka, 1980, p.60-63, In Russian.
Cryogenic soils, Frost heave, Active layer, Thaw depth, Mapping, Charts, USSR—Yakutsk.

35-3317
Heat conductivity of washed up sandy ground. [Teploprovodnost' namyvnykh peschanykh gruntov],
Mandarov, A.A., et al, Merzlotnye issledovaniia v osvaivaemykh raionakh SSSR (Permafrost investigations in economically developing areas of the USSR) edited by A.V. Pavlov and I.A. Nekrasov, Novosibirsk, Nauka, 1980, p.63-68, In Russian. 8 refs.
Gavril'ev, R.I., Skriabin, P.N., Nikiforov, I.D.
Embankments, Earth fills, Dredging, Permafrost beneath structures, Sands, Frozen fines, Thermal conductivity.

35-3318
Parameters of statistical analysis of year-round ground temperature data. [Parametry statisticheskoĭ obrabotki kruglogodichnykh nabliudeniĭ temperaturnogo polia gruntov],
Gennadinik, B.I., et al, Merzlotnye issledovaniia v osvaivaemykh raionakh SSSR (Permafrost investigations in economically developing areas of the USSR) edited by A.V. Pavlov and I.A. Nekrasov, Novosibirsk, Nauka, 1980, p.68-79, In Russian. 3 refs.
Gennadinik, G.V., Pavlov, A.V.
Permafrost thermal properties, Heat balance, Frozen rock temperature, Snow cover effect, Temperature measurement, Measuring instruments, Data processing, Statistical analysis.

35-3319
Geothermal conditions of the Yubileynaya kimberlite pipe. [Geotermicheskie usloviia kimberlitovoĭ trubki IUbileĭnaia],
Deviatkin, V.N., et al, Merzlotnye issledovaniia v osvaivaemykh raionakh SSSR (Permafrost investigations in economically developing areas of the USSR) edited by A.V. Pavlov and I.A. Nekrasov, Novosibirsk, Nauka, 1980, p.79-82, In Russian. 4 refs.
Shamshurin, V.IU.
Lakes, Taliks, Permafrost beneath lakes, Frozen rock temperature, Measuring instruments.

35-3320
Gas transfer between permafrost and the atmosphere in the watershed area of the Vilyuy River. [Gazoobmen mnogoletnemerzlykh porod s atmosferoĭ na vodorazdel'nom uchastke r. Viliuĭ],
Olovin, B.A., et al, Merzlotnye issledovaniia v osvaivaemykh raionakh SSSR (Permafrost investigations in economically developing areas of the USSR) edited by A.V. Pavlov and I.A. Nekrasov, Novosibirsk, Nauka, 1980, p.83-90, In Russian. 6 refs.
Snegirev, A.M.
Natural gas, Permafrost, Gases, Air flow, Permafrost hydrology, Ground water, Seepage, River basins.

35-3321
Studying gas permeability of massive frozen rocks. [Issledovanie gazopronitsaemosti merzlykh porod v massive],
Olovin, B.A., Merzlotnye issledovaniia v osvaivaemykh raionakh SSSR (Permafrost investigations in economically developing areas of the USSR) edited by A.V. Pavlov and I.A. Nekrasov, Novosibirsk, Nauka, 1980, p.90-98, In Russian. 7 refs.
Permafrost structure, Permeability, Gases, Sampling, Fracturing, Measuring instruments, Permafrost hydrology.

35-3322
Complex geocryological interpretation of space photographs. [Kompleksnoe geokriologicheskoe deshifrirovanie sputnikovogo snimka],
Deleur, M.S., et al, Merzlotnye issledovaniia v osvaivaemykh raionakh SSSR (Permafrost investigations in economically developing areas of the USSR) edited by A.V. Pavlov and I.A. Nekrasov, Novosibirsk, Nauka, 1980, p.98-106, In Russian. 15 refs.
Nekrasov, I.A.
Aerial surveys, Spaceborne photography, Photointerpretation, Landscape types, Geobotanical interpretation, Forest land, Thermokarst lakes, Mapping, Charts, Alassy, Frozen rock temperature, USSR—Yakutia.

35-3323
Dynamics of seasonally freezing layer in the Lake Baykal area. [Dinamika sezonnomerzlogo sloia v Pribaĭkal'e],
Zabolotnik, S.I., et al, Merzlotnye issledovaniia v osvaivaemykh raionakh SSSR (Permafrost investigations in economically developing areas of the USSR) edited by A.V. Pavlov and I.A. Nekrasov, Novosibirsk, Nauka, 1980, p.106-113, In Russian. 7 refs.
Kunitskaia, I.V.
Seasonal freeze thaw, Frozen rock temperature, Frost penetration, Taiga, Snow depth, Snow cover effect, Permafrost distribution, Thaw depth, USSR—Baykal Lake.

35-3324
Conditions of formation and the dynamics of seasonal cryolithozone in Central Siberia. [Usloviia formirovaniia i dinamika sezonnoĭ kriolitozony v Srednei Sibiri],
Zabolotnik, S.I., et al, Merzlotnye issledovaniia v osvaivaemykh raionakh SSSR (Permafrost investigations in economically developing areas of the USSR) edited by A.V. Pavlov and I.A. Nekrasov, Novosibirsk, Nauka, 1980, p.113-120, In Russian. 6 refs.
Golubykh, L.P.
Permafrost distribution, Frozen rock temperature, Snow cover effect, Seasonal freeze thaw, Frost penetration, Topographic factors.

35-3325
Frozen rocks in the southern Krasnoyarsk area. [Merzlye porody iuga Krasnoiarskogo kraia],
Shats, M.M., Merzlotnye issledovaniia v osvaivaemykh raionakh SSSR (Permafrost investigations in economically developing areas of the USSR) edited by A.V. Pavlov and I.A. Nekrasov, Novosibirsk, Nauka, 1980, p.120-124, In Russian. 12 refs.
Permafrost distribution, Sporadic permafrost, Frozen rock temperature, Topographic effects, Permafrost forecasting, Microclimatology, USSR—Krasnoyarsk.

35-3326
Geocryological conditions of the southern spur of the Kodar Range. [Geokriologicheskie usloviia iuzhnogo otroga khr. Kodar],
An, V.V., et al, Merzlotnye issledovaniia v osvaivaemykh raionakh SSSR (Permafrost investigations in economically developing areas of the USSR) edited by A.V. Pavlov and I.A. Nekrasov, Novosibirsk, Nauka, 1980, p.124-127, In Russian. 7 refs.
Gritsenko, V.S.
Permafrost distribution, Microclimatology, Topographic factors, Frozen rock temperature, Seasonal variations, USSR—Kodar Range.

35-3327
Thermal denudation relief forms in northern Yakutia. [Termodenudatsionnye formy rel'efa na severe IAkutii],
Fartyshev, A.I., Merzlotnye issledovaniia v osvaivaemykh raionakh SSSR (Permafrost investigations in economically developing areas of the USSR) edited by A.V. Pavlov and I.A. Nekrasov Novosibirsk, Nauka, 1980, p.128-132.
Topography, Permafrost weathering, Thermokarst, Alassy, USSR—Yakutia.

35-3328
Thermodelapsing formations—deposits of young thermokarst basins. [Termodeliapsivnye obrazovaniia --otlozheniia molodykh termokarstovykh kotlovin],
Ivanov, M.S., Merzlotnye issledovaniia v osvaivaemykh raionakh SSSR (Permafrost investigations in economically developing areas of the USSR) edited by A.V. Pavlov and I.A. Nekrasov, Novosibirsk, Nauka, 1980, p.132-140, In Russian. 15 refs.
Thermokarst, Alassy, Frozen fines, Cryogenic structures, Permafrost structure, Ice wedges.

35-3329
Peculiarities of ground ice development around the pole of cold. {Osobennosti razvitiia podzemnykh l'dov v raĭone poliusa kholoda},
Gordeev, P.P., Merzlotnye issledovaniia v osvaivaemykh raĭonakh SSSR (Permafrost investigations in economically developing areas of the USSR) edited by A.V. Pavlov and I.A. Nekrasov, Novosibirsk, Nauka, 1980, p.141-147, In Russian. 7 refs.
Permafrost distribution, Ground ice, Continuous permafrost, Ice veins, Ice wedges, Patterned ground, Frost mounds, USSR—Yakutia.

35-3330
Cryogenic structure of moraines in Zailiyskiy Alatau. {O kriogennom stroenii moren Zailiĭskogo Alataŭ},
Ermolin, E.D., Merzlotnye issledovaniia v osvaivaemykh raĭonakh SSSR (Permafrost investigations in economically developing areas of the USSR) edited by A.V. Pavlov and I.A. Nekrasov, Novosibirsk, Nauka, 1980, p.147-153, In Russian. 5 refs.
Moraines, Ground ice, Ice crystals, Permafrost structure, Periglacial processes, Permafrost thickness, USSR—Zailiyskiy Alatau.

35-3331
Paleocryogenic structure of fluvio-glacial deposits in valleys of the Baykal Mountains. {Paleokriogennoe stroenie vodno-lednikovykh otlozheniĭ v dolinakh Baĭkal'skogo khrebta},
Bosikov, N.P., et al, Merzlotnye issledovaniia v osvaivaemykh raĭonakh SSSR (Permafrost investigations in economically developing areas of the USSR) edited by A.V. Pavlov and I.A. Nekrasov, Novosibirsk, Nauka, 1980, p.153-156, In Russian. 9 refs
Murzin, IU.A.
Permafrost distribution, Permafrost hydrology, Taliks, Topographic effects, Paleoclimatology, Periglacial processes, USSR—Baykal Mountains.

35-3332
Studies of slope processes in northern Yakutian research stations. {O statsionarnykh issledovaniiakh sklonovykh protsessov na severe IAkutii},
Sukhodrovskiĭ, V.L., Merzlotnye issledovaniia v osvaivaemykh raĭonakh SSSR (Permafrost investigations in economically developing areas of the USSR) edited by A.V. Pavlov and I.A. Nekrasov, Novosibirsk, Nauka, 1980, p.156-160, In Russian. 5 refs.
Slope processes, Geocryology, Solifluction, USSR—Yakutia.

35-3333
Plowing boulders. {"Borozdiashchie" valuny},
Gorbunov, A.P., Merzlotnye issledovaniia v osvaivaemykh raĭonakh SSSR (Permafrost investigations in economically developing areas of the USSR) edited by A.V. Pavlov and I.A. Nekrasov, Novosibirsk, Nauka, 1980, p.160-167.
Terminology, Slope processes, Rocks, Sliding, Slope orientation, Vegetation factors, Frost action.

35-3334
Cryogenic structure of eluvium in the Daldyno-Sytykan region (Southwestern Yakutia). {Kriogennoe stroenie eliuviia Daldyno-Sytykanskogo raĭona (Severo-Zapadnaia IAkutiia)},
Spesivtsev, V.I., Merzlotnye issledovaniia v osvaivaemykh raĭonakh SSSR (Permafrost investigations in economically developing areas of the USSR) edited by A.V. Pavlov and I.A. Nekrasov, Novosibirsk, Nauka, 1980, p.167-173, In Russian.
Permafrost weathering, Active layer, Seasonal freeze thaw, Frost shattering, Permafrost beneath lakes, Permafrost beneath rivers, Cryogenic structures, Ground ice, USSR—Yakutia.

35-3335
Palynologic substantiation of vicissitude of glaciation of Zyryan, southern Verkhoyansk. {Palinologicheskoe obosnovanie stadiĭnosti Zyriankskogo oledeneniia v IUzhnom Verkhoian'e},
Sopoeva, A.S., Merzlotnye issledovaniia v osvaivaemykh raĭonakh SSSR (Permafrost investigations in economically developing areas of the USSR) edited by A.V. Pavlov and I.A. Nekrasov, Novosibirsk, Nauka, 1980, p.173-176, In Russian.
Mountain glaciers, Moraines, Glacier oscillation, Lithology, Pollen, Paleoecology, Ecosystems.

35-3336
Satellite system for recording radio signals from dynamic processes in the lithosphere, at the earth surface, and in the atmosphere. {O sputnikovoĭ sisteme registratsii radiosignalov ot dinamicheskikh protsessov v litosfere, u zemnoĭ poverkhnosti i v atmosfere},
Berri, B.L., *Russia. Ministerstvo vysshego i srednego spetsial'nogo obrazovaniia. Izvestiia vysshikh uchebnykh zavedeniĭ. Geologiia i razvedka*, Mar. 1981, No.3, p.108-113, In Russian. 11 refs.
Spacecraft, Surveys, Radio echo soundings, Avalanches, Glacier surges, Glacier oscillation, Snowstorms.

35-3337
Possibility of artificial strengthening of clay soils. {O vozmozhnosti iskusstvennogo povysheniia prochnosti glinistogo grunta},
Zhikhovich, V.V., *Russia. Ministerstvo vysshego i srednego spetsial'nogo obrazovaniia. Izvestiia vysshikh uchebnykh zavedeniĭ. Stroitel'stvo i arkhitektura*, 1981, No.2, p.7-11, In Russian.
Clay soils, Soil stabilization, Earth dams, Slope stability.

35-3338
Influence of former loading on frost resistance of butt-welded joints. {Issledovanie vliianiia predystorii nagruzheniia na khladostoĭkost' svarnykh soedineniĭ vstyk},
Sil'vestrov, A.V., et al, *Russia. Ministerstvo vysshego i srednego spetsial'nogo obrazovaniia. Izvestiia vysshikh uchebnykh zavedeniĭ. Stroitel'stvo i arkhitektura*, 1981, No.2, p.24-26, In Russian. 5 refs.
Erokhin, K.A.
Steel structures, Welding, Joints (junctions), Brittleness, Frost resistance.

35-3339

Aeromagnetic and radio-echo ice-sounding measurements over the Dufek intrusion, Antarctica.
Behrendt, J.C., et al, *Journal of geophysical research*, Apr. 10, 1981, 86(B4), p.3014-3020, 16 refs.
Drewry, D.J., Jankowski, E., Grim, M.S.
Radio echo soundings, Ice cover, Rock magnetism, Geologic structures.
A combined aeromagnetic and radio echo ice-sounding survey (4200 km of traverse) made in 1978 over the Dufek layered mafic intrusion of Jurassic age suggests a minimum area of about 50,000 sq km, making it comparable in size with the Bushveld Complex of Africa. Comparisons of the magnetic and subglacial topographic profiles illustrate the usefulness of this combination of methods in studying bedrock geology beneath ice-covered areas. Rocks are exposed in only 3% of the inferred area of the intrusion. Magnetic anomalies measured a few hundred meters above outcrops of the intrusion range in peak-to-trough amplitude from about 50 nT over the lowermost exposed portion of the section in the Dufek Massif to about 3600 nT over the uppermost part of the section in the Forrestal Range. Theoretical magnetic anomalies, computed from models based on the subice topography fitted to the highest-amplitude observed magnetic anomalies, required normal and reversed magnetizations ranging from 0001 to 01 emu/cu cm having directions and magnetizations consistent with measurements previously made on oriented samples. This result is interpreted as indicating that the Dufek intrusion cooled through the Curie isotherm during one or more reversals of the earth's magnetic field. (Auth.)

35-3363
Did ice streams carve martian outflow channels.
Lucchitta, B.K., et al, *Nature*, Apr. 30, 1981, 290(5809), p.759-763, 20 refs.
Anderson, D.M., Shoji, H.
Ice erosion, Ice creep, Extraterrestrial ice, Mars (planet).
Outflow channels on Mars are long sinuous linear depressions that occur mostly within 30 deg of the equator. Outflow channels resemble terrestrial stream beds, and their origin has generally been attributed to water in catastrophic floods or mudflows. The authors examine the problem of channel origin from the perspective of erosional characteristics and the resultant landforms created by former and present-day ice streams and glaciers on Earth. From morphologic comparisons an ice-stream origin seems well suited to explain the occurrences and form of the outflow channels on Mars, and in contrast with the hydraulic hypothesis, ice streams and ice sheets produce terrestrial features of the same scale as those observed on Mars. Similarities between ice features on Mars and in Antarctica are emphasized throughout in text and figure. (Auth. mod.)

35-3364
Effect of irregular fluctuations in antarctic precipitation on global sea level.
Oerlemans, J., *Nature*, Apr. 30, 1981, 290(5809), p.770-772, 9 refs.
Snow accumulation, Climatic changes, Ice volume, Sea level, Ice models.
Attempts to monitor climatic change by measuring global sea level are complicated by random fluctuations of the ice volume in the major ice sheets, themselves the consequence of random variations in the ice accumulation rate. Precipitation rates are highly variable, and this also applies to Antarctica, which stores most of the continental ice mass. By means of a simple model for ice flow in the Antarctic, together with proxy data on precipitation variability derived from ice cores, it is shown that long-term sea-level variations with a standard deviation of roughly 5 cm are to be expected on this account. This 'climatic noise' is comparable in magnitude with many of the secular effects now being sought. (Auth. mod.)

35-3365
Paleoclimates north and south.
Salinger, M.J., *Nature*, May 14, 1981, 291(5811), p.106-107, 2 refs.
Paleoclimatology, Climatic changes, Meetings.
Papers presented at the first CLIMANZ (Climatic Change of Australia and New Zealand) conference are reviewed. CLIMANZ meetings aim to bring together groups trying to reconstruct Late Quaternary climates in Australia and New Zealand. Results reported in this conference are compared with earlier results from the 10th INQUA Congress in 1977 and with CLIMAP data. Cooling and warming periods are reported along with periods of windiness and sand dune activity, marine temperature changes, changes in the Southern Oscillation, upwelling, and changes in forest cover. Sub-antarctic data are included in some of the papers reviewed.

35-3366
Recent glacier variations and volcanic eruptions.
Porter, S.C., *Nature*, May 14, 1981, 291(5811), p.139-142, 72 refs.
Glacier oscillation, Volcanic ash, Ice cores.
The injection of volcanic dust and gases into the atmosphere during major eruptions has been advanced to explain short-term variations of climate. A calculated global cooling of 1 K during episodes of intense volcanic activity could lead to a snowline depression sufficient to cause glacier advances equivalent to those of the last several centuries. The hypothesis would therefore be strengthened if a close relationship could be demonstrated between global volcanicity and the pattern of recent glacier variations. Glacier activity in the Northern Hemisphere during much of the past 100 yr shows a lack of synchrony with that in the Southern Hemisphere, but in each hemisphere the sequence of glacier variations matches the acidity recorded in polar ice cores and the frequency of volcanic eruptions in successive latitude belts. This suggests that glaciers fluctuate in response to atmospheric build-up of volcanic aerosols produced during large eruptions and that explosive volcanism may therefore be a major factor in modulating climate on the decadal scale. Data from antarctic ice cores, glaciers, and volcanic activity are used in these comparisons. (Auth. mod.)

35-3367
Glaciation, erosion and uplift over part of East Antarctica.
Wellman, P., et al, *Nature*, May 14, 1981, 291(5811), p.142-144, 20 refs.
Tingey, R.J.
Glacial erosion, Isostasy, Antarctica—East Antarctica.
Isostatic uplift during glaciation and caused by glacial erosion is not well documented because preglacial landscapes, which provide a datum against which glacial erosion and related uplift is measured, are generally either destroyed by glaciation or not recognized. Remnants of such a preglacial land surface are exposed in the Prince Charles Mountains of East Antarctica. We now report that the amount of glacial erosion here is 1.5 km, measured by the difference in level between the preglacial land surface and the present mean (mostly subglacial) rock surface. The isostatic uplift caused by this erosion is about 0.8 km. Both amounts are thought to be well above average for East Antarctica and glaciated areas in general because the region is traversed by East Antarctica's largest outlet glacier system, parts of which are believed to surge periodically. (Auth.)

35-3368
Short-term fluctuations in heavy metal concentrations in antarctic snow.
Landy, M.P., et al, *Nature*, May 14, 1981, 291(5811), p.144-146, 15 refs.
Peel, D.A.
Snow stratigraphy, Impurities, Ice cores, Dust, Metals, Antarctica—Antarctic Peninsula.
Heavy metal variations in polar ice cores may reflect changes in global airborne pollution. Reported profiles from Antarctica and Greenland have shown a much greater variability than can be reasonably accounted for by annual variations. We now report data from a finely resolved sample sequence from a remote plateau region of the Antarctic Peninsula. Variations of similar magnitude to those reported for longer time series occur also on the scale of seasonal changes and even of single snowfalls; these must be controlled by meteorological processes. We conclude that changes in large-scale transport processes and depositional mechanisms on longer time scales may have as important a role as emission rates in generating the concentration profiles observed in deeper ice cores. (Auth. mod.)

35-3369
Mission to Antarctica.
Lorius, C., et al, *CNRS research*, 1979, No.10, p.26-34, 13 refs.
Donnou, D.
Ice cores, Ice drills, Drill core analysis, Climatic changes, Impurities.
The development of equipment for ice core drilling in Antarctica is reviewed, emphasizing electrochemical and thermal techniques. The Dome C drilling operation is described with regard to site selection, site runway preparation, supplying the camp, and the drilling results in terms of core recovery. Details of core analysis are given: chemical components of the samples, dating the samples, determining the nature and extent of polluting agents in the samples, and developing a climatic sequence and variations over the past several thousand years.

Glynn, J.E.
Icebergs, Ice mechanics, Glacier tongues, Calving, Antarctica—Erebus Glacier Tongue.
Several ice tongues are known to exhibit a quasi-cyclic pattern of calving and subsequent regrowth. A mechanism that would seem to explain this type of calving behavior is based on the vibrational characteristics of the system of a buoyant ice plate floating in shallow water. Ocean wave energy, responsible for the motion, is intercepted by the glacier, either directly from open ocean or after transmission through, and subsequent filtering by, sea ice. The glacier also acts as a wave filter, with filtering characteristics depending on the ice thickness. When a dominant frequency occurring in the incident wave spectrum coincides with one of the natural frequencies of the glacier, then a resonant motion will occur. For relatively high modes of oscillation, low level, but sustained cyclic bending stresses may lead to crack propagation and subsequent fatigue failure in the ice. The contribution of other mechanisms which induce tensile stresses in the ice are considered to be very important in an overall view of the calving problem, and some of these mechanisms are discussed in relation to the vibration mechanism. It is possible to view the proposed vibration mechanism as a trigger which raises the resultant stresses in the ice to the point where fracture will occur. (Auth.)

Tundra, Biomass, Plants (botany), Growth.
A comparison of the plant communities from Arctic, sub-Arctic, alpine, sub-Antarctic and Antarctic tundras is presented. The communities classified as Antarctic tundras range from dry grasslands with a total plant production of 840 to 1000 g/sq m to small grass turfs on Signy Island (475 g/sq m) and tow moss communities with 480 to 670 g/sq m annual net production. Compared with those of the Arctic, these levels of production are exceptionally high and well illustrate the difficulties in making biological comparisons between polar regions. Woody species and mosses, as in the Arctic, are important in two of the grassland communities

Some characteristics of the antarctic aerosols.
Hogan, A., et al, International Workshop on Light Scattering by Irregularly Shaped Particles, edited by D.W. Schuermann. New York, Plenum Press, 1980, p.78-86, 4 refs.
DLC QC976.S3157 1979
Snow optics, Ice optics, Ice crystal optics, Aerosols, Refraction, Weddell Sea.
Aerosol concentrations have been systematically measured at the South Pole for five years. These climatological measurements have been supported by vertical and horizontal profiles obtained in summer with aircrafts. Aerosol size data has been obtained with diffusion batteries, electrostatic precipitators, and cascade impactors. There is a strong (5 to 1) seasonal variation in surface aerosol concentrations, with the maximum aerosol concentration generally occurring with the beginning of summer mixing in November. Vertical profiles consistently show the greatest aerosol concentrations to occur in the moist layer, a few hundred meters above the surface, and then diminishing steadily with altitude. Examination of collected particles by light and electron microscopy shows them to be soluble, with refractive index of 1.54 and often with the appearance of flattened drops. The maximum particle radius found was 4 mum and the peak volume concentration occurred at 2 mum radius. The size distributions are of similar slope to those measured over the Weddell Sea by Meszaros and in Tasmania by Bigg. The authors interpret this as evidence that the Southern Ocean and especially the Weddell Sea are the source of these particles. (Auth.)

35-3412
Lakes in the northeastern part of the Siberian Platform. (Ozera Severo-Zapada Sibirskoĭ Platformy),
Parmuzin, Iu.P., et al, Novosibirsk, Nauka, 1981, 'up., In Russian with English table of contents enclosed, 87 refs.

Surface meteorological processes in the Antarctic. (Meteorologische Prozesse in der Grundschicht über der Antarktis).
Helbig, A., *Zeitschrift für Meteorologie*, 1979, 29(2), p.111-122, In German with English and Russian summaries. 53 refs.
Ice sheets, Meteorology, Thermal regime, Wind factors, Boundary layer.
The interaction between the antarctic ice sheet and the atmosphere is explained by some selected meteorological processes in the boundary layer. A survey of the energy exchange is followed by a description of the thermal structure and of the wind regime in the boundary layer and a discussion of the relationship between the vertical temperature gradient and the refraction coefficient in the constant flux layer. Questions about the mass balance, the atmospheric electricity and chemistry are also discussed. (Auth.)

35-3489
Satellite observations of the ice edge in coastal areas from Queen Maud Land to the Filchner Ice Shelf. (Satellitenbeobachtung der Seeisgrenze im Küstengebiet "Königin-Maud-Land" bis "Filchner-Schelfeis").

35-3515
Seasonal growth and accumulation of nitrogen, phosphorus, and potassium by orchardgrass irrigated with municipal waste water.
Palazzo, A.J., *Journal of environmental quality*, Jan.-Mar. 1981, 10(1), MP 1425, p 64-68, 23 refs.
Waste treatment, Water treatment, Irrigation, Land reclamation, Vegetation, Growth, Seasonal variations, Grasses, Nutrient cycle.
A 2-year field study was performed to determine the seasonal growth and nutrient accumulation of a forage grass receiving 7.5 cm/week of domestic primary-treated waste water. The average N and P concentrations in the waste water were 31.5 and 6.1 mg/liter, respectively. An established sward of 'Pennlate' orchardgrass (*Dactylis glomerata* L.) was managed on an annual three-cutting system. Grass samples were taken periodically during the growing season to determine plant dry matter accumulation and uptake of N, P, and K

35-3516
Ice formation in a pipe containing flows in the transition and turbulent regimes.
Gilpin, R.R., *Journal of heat transfer*, May 1981, 103(2), p.363-368, 15 refs.
Ice formation, Pipe flow, Ice structure, Turbulent flow, Ice growth, Friction, Pressure.

35-3517
Periodic growth and decay of a frozen crust over a heat generating liquid layer.
Cheung, F.B., *Journal of heat transfer*, May 1981, 103(2), p.369-375, 11 refs.
Ice growth, Hoarfrost, Heat transfer, Ice melting, Liquids, Analysis (mathematics), Temperature variations.

35-3518
Soviets share polar problem.
Novikov, E., *Alaska industry*, Dec. 1979, 11(12), p.16-17.
Permafrost thickness, Cold weather construction, Engineering, Earthwork, Agriculture.

35-3519
Convection in a porous layer for a temperature dependent viscosity.
Blythe, P.A., et al, *International journal of heat and mass transfer*, Mar. 1981, 24(3), p.497-506, In English with French, German and Russian summaries. 13 refs.
Simpkins, P.G.
Porous materials, Fluid mechanics, Convection, Viscosity, Temperature effects, Saturation, Boundary layer, Analysis (mathematical).

35-3520
Effect of the diffusion field of water vapor and the crystal size on the morphology of ice crystals grown from the vapor phase.
Gonda, T., et al, *Journal of crystal growth*, Apr 1981, 52(1), p 60-63, 14 refs.
Namba, J.
Ice crystal growth, Ice crystal structure, Ice crystal size, Vapor diffusion.

35-3521
Model of rotating convective rolls in water over a freezing front.
Azoum, M.A., *Journal of crystal growth*, Apr 1981, 52(1), p.450-454, 7 refs.
Ice formation, Freezing, Ice water interface, Impurities, Bubbles, Convection, Phase transformations, Temperature effects, Models.

35-3522
Energy exchange at the earth's surface with emphasis on an alpine tundra ecosystem.
Skartveit, A., Reports from the High Mountain Ecology Research Station, Finse, Norway, 1976:1, Bergen, Norway, University, Dec. 1976, 147p., Refs. p 138-143.
Alpine tundra, Heat transfer, Vegetation, Growth, Ecosystems, Meteorological data, Measuring instruments.

35-3523
Lichens of the Alaskan Arctic slope.
Thomson, J.W., Toronto, University of Toronto Press, 1979, 314p., Refs p.301-304.
DLC QK587.5.A4T47
Lichens, Classifications, United States—Alaska—North Slope.

35-3524
Prolonging the service life of concrete in transport structures. (Povyshenie dolgovechnosti betona transportnykh sooruzhenii).
Sheikin, A.E., ed, *Moscow. Institut inzhenerov zheleznodorozhnogo transporta. Trudy*, 1980, Vol.662, 158p., In Russian. For selected papers see 35-3525 through 35-3530. Refs. passim.
Concrete structures, Winter concreting, Concrete placing, Concrete cooling, Concrete strength, Frost resistance, Concrete admixtures, Grouting, Mortars, Cement admixtures, Reinforced concretes, Buildings, Bridges, Tunnels, Pavements.

35-3525
Using the frost resistance criterion in forecasting frost resistance of concretes. (Morozostoikost' betonov i vozmozhnost' ee prognozirovaniia s pomoshch'iu kriteriia morozostoikosti).
Sheikin, A.E., et al, *Moscow. Institut inzhenerov zheleznodorozhnogo transporta. Trudy*, 1980, Vol 662, p.3-17, In Russian. 7 refs.
Dobshits, L.M.
Concrete structures, Reinforced concretes, Freeze thaw cycles, Concrete strength, Frost resistance, Bridges, Tunnels, Pavements.

35-3526
Studying frost resistance of concretes containing combined admixtures with concentrations below design values. (Issledovanie morozostoikosti betonov s kompleksnymi protivomoroznymi dobavkami v kontsentratsiiakh nizhe raschetnykh).
Mamedov, A.A., et al, *Moscow. Institut inzhenerov zheleznodorozhnogo transporta. Trudy*, 1980, Vol.662, p.18-25, In Russian. 3 refs.
Concrete structures, Design, Winter concreting, Concrete admixtures, Concrete strength.

35-3527
Studying strength and frost resistance of mortars containing combined admixtures. (Issledovanie prochnosti i morozostoikosti rastvorov s kompleksnymi dobavkami).
Kuntsevich, O.V., et al, *Moscow. Institut inzhenerov zheleznodorozhnogo transporta. Trudy*, 1980, Vol 662, p.26-34, In Russian. 7 refs
Magomedeminov, I.I.
Winter concreting, Concrete structures, Joints (junctions), Grouting, Mortars, Cement admixtures, Antifreezes, Strength, Frost resistance.

35-3528
Studying the corrosion of steel reinforcement in concretes containing combined admixtures. (Issledovanie protsessov korrozii stal'noi armatury v betonakh s nekotorymi kompleksnymi dobavkami).
Sheikin, A.E., et al, *Moscow. Institut inzhenerov zheleznodorozhnogo transporta. Trudy*, 1980, Vol.662, p.35-44, In Russian. 2 refs.
Winter concreting, Reinforced concretes, Concrete admixtures, Antifreezes, Steels, Corrosion.

35-3529
Induced polarization of concretes, containing antifreeze admixtures, in a direct current field. (Vynuzhdennaia poliarizatsiia betonov s protivomoroznymi dobavkami v postoiannom elektricheskom pole).
Kurushin, A.D., et al, *Moscow. Institut inzhenerov zheleznodorozhnogo transporta. Trudy*, 1980, Vol.662, p.52-58, In Russian.
Afanas'ev, S.G., Kostiaev, P.S.
Winter concreting, Concrete admixtures, Antifreezes, Concrete strength, Electrical properties, Polarization (charge separation), Test equipment, Measuring instruments.

35-3530
Studying properties of concrete placed under winter conditions. (Issledovanie svoistv betonov ulozhennykh v zimnikh usloviiakh).
Abramenko, N.A., *Moscow. Institut inzhenerov zheleznodorozhnogo transporta Trudy*, 1980, Vol.662, p.130-135, In Russian.
Concrete structures, Winter concreting, Concrete placing, Bridges, Concrete cooling, Concrete hardening, Concrete strength, Frost resistance.

35-3531
Utilization of explosive energy in construction. (Ispol'zovanie energii vzryva v stroitel'stve).
Danilenko, I.I., Kiev, Budivel'nik, 1981, 167p., In Russian with English table of contents enclosed 16 refs
Mining, Excavation, Shafts (excavations), Underground facilities, Frozen ground, Ground ice, Frozen fines, Loess, Blasting, Walls, Supports.

35-3532
Equipment for building seepage fills on the Baykal Amur railroad. (Mekhanizatsiia rabot pri sooruzhenii fil'truiushchikh nasypei na BAMe).
Tkachevskii, I.D., et al, *Transportnoe stroitel'stvo*, May 1981, No.5, p.3-5, In Russian.
Gusev, V.V., Pustovalov, A.A.
Earthwork, Construction equipment, Rock fills, Earth fills, Embankments, Thermal insulation, Baykal Amur railroad.

35-3533
Synthetic fabrics for stabilizing slopes of earth structures. (Ispol'zovanie sinteticheskikh poloten dlia povysheniia ustoichivosti zemlianykh sooruzhenii).
Marchenko, A.S., *Transportnoe stroitel'stvo*, May 1981, No.5, p.5-6, In Russian.
Hydraulic structures, Earth dams, Earth fills, Slope stability, Construction materials.

35-3534
Drilling-crane assembly BKTS-1. (Buril'no-kranovaia mashina BKTS-1).
Kir'ianchuk, V.G., et al, *Transportnoe stroitel'stvo*, May 1981, No.5, p.25-27, In Russian.
Bel'kind, M.B., Zhigarev, V.V.
Cranes (hoists), Drills, Permafrost, Design.

35-3535
Problems in providing safe conditions in electrical installations of the Far North. (Nekotorye voprosy obespecheniia uslovii elektrobezopasnosti v elektroustanovkakh raionov Kraiнego Severa).
Al'tshuler, E.B., *Promyshlennaia energetika*, Mar. 1980, No.3, p.34-35, In Russian. 5 refs.
Electric equipment, Electrical grounding, Permafrost physics, Electrical properties, Electric power.

35-3536
Land reclamation in the non-chernozem zone in freezing weather. (Organizatsiia meliorativnykh rabot v zimnikh usloviiakh v Nechernozem'e).
Viksne, A.A., et al, *Gidrotekhnika i melioratsiia*, Feb. 1981, No.2, p.22-24, In Russian.
Khomich, V.A.
Soil freezing, Frost penetration, Land reclamation, Subsurface drainage, Earthwork, Excavation, Equipment.

35-3537
Organizing reclamation work in freezing weather in the Far East. (Organizatsiia meliorativnykh rabot v zimnee vremia na Dal'nem Vostoke).
Chernenok, V.N., *Gidrotekhnika i melioratsiia*, Dec. 1980, No.12, p.10-12, In Russian.
Paludification, Permafrost, Land reclamation, Cold weather construction.

35-3538
Drainage construction in freezing weather. (Opyt stroitel'stva drenazha v zimnikh usloviiakh).
Gontarenko, M.F., et al, *Gidrotekhnika i melioratsiia*, Dec. 1980, No.12, p.43-45, In Russian.
Ruban, V.A.
Land reclamation, Swamps, Drainage, Earthwork, Excavation, Cold weather construction.

35-3539
Development and prospects of space glaciology. (Stanovlenie i perspektivy kosmicheskoi gliatsiologii).
Kotliakov, V.M., *Issledovanie zemli iz kosmosa*, Jan.-Feb. 1981, No.1, p.7-15, In Russian with English summary. 13 refs.
Spacecraft, Photographic reconnaissance, Glaciation, Snow surveys, Snow line, Snow cover distribution, Avalanches, Mudflows, Sea ice, Ice reporting, Ice forecasting.

35-3540
Space survey methods and data in studying exogenic processes in mountains of the Baykal Amur railroad area. (Aerokosmicheskie metody i materialy v izuchenii ekzogennykh protsessov v gornykh raionakh BAMa).
Plastinin, L.A., et al, *Issledovanie zemli iz kosmosa*, Jan.-Feb. 1981, No.1, p.22-26, In Russian with English summary. 5 refs.
Pliusnin, V.M., Stupin, V.P.
Mountains, Remote sensing, Spacecraft, Geocryology, Slope processes, Baykal Amur railroad.

35-3541
Studying microwave emission from a snow cover. (Issledovanie radioteplovogo izlucheniia snezhnykh pokrovov).
Gershenzon, V.E., et al, *Issledovanie zemli iz kosmosa*, Jan.-Feb. 1981, No.1, p.58-62, In Russian with English summary. 11 refs.
Khapin, IU.B., Etkin, V.S.
Snow surveys, Remote sensing, Spacecraft, Airborne equipment, Radiometry, Microwaves.

35-3542
Radiophysical methods of sounding atmosphere and ocean surface from space. (Radiofizicheskie metody zondirovaniia atmosfery i poverkhnosti okeana iz kosmosa).
Gurvich, A.S., et al, *Issledovanie zemli iz kosmosa*, Jan.-Feb. 1981, No.1, p.63-70, In Russian with English summary. 14 refs.
Egorov, S.T., Kutuza, B.G.
Oceanographic surveys, Remote sensing, Spacecraft, Meteorology, Air temperature, Humidity, Ice surveys, Ocean waves, Wind velocity.

35-3543
Compiling a medium-scale vegetation map of the northern Baykal area from space survey data. (Opyt sostavleniia srednemasshtabnoi karty rastitel'nosti Severnogo Pribaikal'ia na osnove aerokosmicheskoi informatsii).
Belov, A.V., *Issledovanie zemli iz kosmosa*, Nov.-Dec. 1980, No 6, p.97-102, In Russian with English summary. 4 refs.
Spaceborne photography, Geobotanical interpretation, Mapping, Vegetation, Baykal Amur railroad, Plant ecology, Ecosystems, USSR—Baykal Lake.

35-3544
Variations in microwave emission of sea ice (numerical modeling). (Variatsii radioteplovogo izlucheniia morskikh l'dov (rezul'taty chislennogo eksperimenta)).
Nikitin, P.A., *Issledovanie zemli iz kosmosa*, Sep.-Oct 1980, No.5, p.56-63, In Russian with English summary. 19 refs.
Spacecraft, Surveys, Radiometry, Sea ice, Microwaves, Radiation, Electrical properties, Mathematical models.

35-3545
Evaluating fire danger in taiga from microwave radiation. (Otsenka pozharnoi opasnosti taezhnykh lesov po radioteplovomu izlucheniiu).
Valendik, E.N., et al, *Issledovanie zemli iz kosmosa*, May-June, 1980, No.3, p.14-19, In Russian with English summary. 9 refs.
Kisiliakhov, E.K., Sukhinin, A.I.
Taiga, Paludification, Forest fires, Forecasting, Microwaves, Radiation.

35-3546
Using space survey data in forecasting flooding of mountain rivers. (Primenenie kosmicheskoi informatsii dlia tselei prognoza stoka polovod'ia gornykh rek).
Vostriakova, N.V., *Issledovanie zemli iz kosmosa*, May-June 1980, No.3, p.20-26, In Russian with English summary. 8 refs.
Mountains, Aerial surveys, Spacecraft, River basins, Snow cover distribution, Snow line, Snow melting, Flood forecasting, Snow water equivalent.

35-3547
Calculating the coefficient of scattering for radio sounding of ice. (O raschete koeffitsienta rasseianiia pri radiozondirovanii l'da).
Nikitin, P.A., *Issledovanie zemli iz kosmosa*, May-June 1980, No.3, p.108-110, In Russian with English summary 4 refs.
Ice surveys, Radio waves, Sea ice, Ice density.

35-3548
Planning the organization of railroad construction. (Proektirovanie organizatsii stroitel'stva zheleznykh dorog).
Paul', V.P., Moscow, Transport, 1980, 167p., In Russian with English table of contents enclosed. 22 refs.
Railroads, Buildings, Embankments, Hydraulic structures, Roads, Bridges, Permafrost beneath structures, Electric power, Design, Work time standards, Construction costs, USSR—Siberia.

35-3549
Methods and equipment for temperature measurements in subsea permafrost.
Osterkamp, T.E., et al, Fairbanks, Alaska, University, Geophysical Institute, Apr. 1981, 32p., 9 refs.
Harrison, W.D.
Subsea permafrost, Permafrost thermal properties, Temperature measurement, Measuring instruments, Frozen ground temperature, Boreholes, Drilling.

35-3550
Bristol Bay environment; a background study of available knowledge.
Arctic Environmental Information and Data Center, Anchorage, Alaska District Corps of Engineers, Feb 1974, 858p., Refs. passim.
Alaska. University. Institute of Social, Economic and Government Research.
Environmental impact, Petroleum industry, Human factors, Climate, Geomorphology, Geology, Oceanography, Hydrology, Marine biology, Economic development, Sea ice, Ice conditions, United States—Alaska—Bristol Bay.

Periglacial processes, Geomorphology, Geocryology, Glaciation, Japan.

35-3557
Glacial geomorphology.
Theakstone, W.H., *Progress in physical geography*, 1980, 4(2), p.241-253, Refs. p.250-253.
Glacier flow, Geomorphology, Rock glaciers, Glacial erosion, Glacial deposits, Glacial hydrology, Glacier beds, Moraines.

35-3558
Periglacial geomorphology and permafrost.
French, H.M., *Progress in physical geography*, 1980, 4(2), p.254-261, 28 refs.
Periglacial processes, Permafrost physics, Geomorphology, Frost heave, Geocryology.

35-3559
Dielectric properties and passive remote sensing of low-salinity sea ice.
Hallikainen, M., *Acta polytechnica Scandinavica, Electrical engineering series*, 1980, No.45, 78p., 93 refs.
Sea ice, Ice electrical properties, Remote sensing, Dielectric properties, Ice salinity, Microwaves, Brightness, Temperature, Radiation balance, Measuring instruments.

35-3560
Trans-Alaska oil pipeline operations: more federal monitoring needed. Report to the Congress of the United States.
U.S General Accounting Office Comptroller General Jan. 6, 1981, 139p, EMD-81-11.
Pipelines, Petroleum transportation, Hot oil lines, Legislation, Monitors, Cost analysis, Petroleum industry.

35-3561
Longitudinal stiffness analyses for the propulsion shafting systems of the polar class icebreakers.
Vassilopoulos, L., et al, *Naval engineers journal*, Apr 1980, 92(2), p 179-195, 15 refs
Hamilton, F.M.
Icebreakers, Vibration, Countermeasures, Ice breaking, Construction, Ice cover thickness, Models.
During the first and second seasons of its deployment in the Antarctic region, the new U.S Coast Guard icebreaker, *Polar Sta* experienced longitudinal vibration problems in the center and wing shaft systems while breaking ice To minimize or eliminate vibration, the USCG initiated several investigations, some of which are discussed in this paper One of the items under study concerned the axial stiffness of the shafting systems that is contributed by the thrust bearings, their housings and the foundations on which they rest Aside from model test studies, numerical assessments were made of these stiffnesses using finite element methods and other techniques The results of all the calculations are reviewed in light of the broader objectives of the overall program and recommendations are given for further investigations that will aid in the understanding of icebreaker vibration problems. (Auth)

35-3562
Computer simulation of airfoil icing without runback.
Lozowski, E.P., et al, AIAA 19th Aerospace Sciences Meeting, St. Louis, Missouri, Jan. 12-15, 1981 Proceedings. AIAA-81-04202, (1981), 8p., 12 refs

Ice sheets, Ice mechanics, Lasers, Ice cover thickness, Glacier mass balance, Altitude, Altimeters.
Major changes in the volume of ice in the continental ice sheets of the Earth have occurred repeatedly. At present it is not known whether the ice sheets of Greenland and Antarctica are growing or shrinking. There is evidence suggesting that rapid ice-sheet changes might be initiated either by internal instability in ice or by external changes (climatic warming). Satellite data on ice dynamics, surface elevation and ice-thickness changes in Greenland and Antarctica are described.

Algae, Colored snow, Cryobiology, Antarctica—Showa Station.
The distribution and seasonal variation of ice algae were investigated in the vicinity of Syowa Station. The plant pigments, chlorophyll-a phaeophytin, were detected from top to bottom of the sea ice. However, proliferation of ice algae occurred most markedly at the bottom of the sea ice, making it brown in autumn and spring. The autumnal outburst of algae was found in the more limited regions covered with newly formed ice rather than in the regions where spring proliferation occurred. The autumnal proliferation of algae also occurred in winter ice as well as in new ice, but algal biomass in old ice was less than in new ice. The annual production of ice algae in the Syowa Station area was assumed as 1.50 to 3.25 kC/sq.m based on the present data of algal biomass. The results show the potential importance of ice algae in the marine ecosystems of the polar regions. (Auth.)

Snow temperature, Snow thermal properties, Meteorological factors, Antarctica—Mizuho Station.
The Japanese Antarctic Research Expedition (JARE) planned a program, POLEX-South, for the duration from 1979 to 1982. This program is composed of three projects: studies of the radiation budget, air-sea-ice interaction, and atmospheric circulation in the Antarctic. The past year's program was limited mainly to measurements of radiation and micrometeorological observations in the lower boundary layer at Mizuho Station. The present report contains the following data of micro-meteorological observations: air temperature; snow surface temperatures, snow temperature, intensity of drifting snow at 1.5 m above the snow surface; surface atmospheric pressure; wind speed at 30 m, 16 m, 8 m, 4 m, 2 m, 1 m and 0.5 m in height, wind direction at 30 m and 2 m in height, humidity at 1.5 m above the snow surface, and thermal flux in snow at 0.1 m, 0.5 m and 1 m in depth. (Auth. mod.)

Snow accumulation, Ice cover thickness, Radio echo soundings, Antarctica—Mizuho Station, Antarctica—Showa Station.
Glaciological and meteorological research by the 20th Japanese Antarctic Research Expedition from Feb. 1979 to Jan. 1980 was carried out mainly at Mizuho Station. Five round trips between Showa Station and Mizuho Station were made for logistic support, and two trips between Mizuho Station and St. Y100 for construction and inspection of the automatic weather station installed at St. Y100. Radio echo sounding for measurement of ice thickness was carried out in Oct. 1979 and Jan. 1980. The present report contains the following data: net accumulation at Mizuho Station, net accumulation along the Routes S, H, Z, G and Y, surface synoptic observations during oversnow traverses, and results of radio echo sounding. (Auth. mod.)

Hydrology and hydrogeochemistry of the south fork, Wright Valley, southern Victoria Land, Antarctica.
Harris, H.J.H., Urbana-Champaign University of Illinois, 1981, 341p., Ph.D. thesis. Bibliography p.227-246.
Hydrology, Hydrogeochemistry, Permafrost hydrology, Antarctica—Don Juan Pond.
Complex, dynamic hydrogeochemical systems involving the transport and fractionation of water and solutes occur in the rocks, surficial materials, and surface waters of the south fork of Wright Valley, situated in the ice-free region of Southern Victoria Land, Antarctica. All of these systems have features reflective of the regional polar desert environment, and particularly of the extreme cold and aridity. Groundwater flow systems overlying impermeable frozen ground occur intermittently in soils along the axis of the south fork and sustain small, intermittent ponds. The flow systems transport solutes, effecting the accumulation of salts in topographic lows. Spatial segregation of elements occurs during the translocation of solutes and is facilitated by evaporation and freezing. Relatively insoluble sulfates tend to accumulate in the upper parts both of flow systems and of soil profiles, relatively soluble chlorides in the lower parts. Don Juan Pond is described in some detail with respect to its location, hydrology, chemical composition, and stable isotope content. (Auth. mod.)

Expeditions, Military operation, Exploration, Ships, Sea ice.
Following a review of early discovery and exploration in Antarctica and brief sketches of some of the prominent veterans of antarctic service, several major events of Operation Highjump are described: aerial photography and mapping projects over Oates Coast, George V Coast and Adelie Coast and in the regions of the Bellingshausen and Amundsen Seas, the tragedy and heroism resulting from the airplane crash which marked the initial phase of the group working the Bellingshausen Sea area, ship operations in the Ross Sea, including the dangerous and unsuccessful submarine activities, and the obstructing effect of poor weather, often anticipated, but sometimes sudden and unexpected. Also discussed at some length are the inter- and intra-service rivalries, politics involved in mounting the expedition, opposing philosophies of expedition goals, personal egos, from several areas of government, sated or unfulfilled. Highjump as the prototype of massive, government funded military service operated antarctic expeditions, successes and failures of the operation.

Proceedings.
Symposium on High-Latitude Climate Systems, Nov. 6-9, 1979, *Monthly weather review*, Dec. 1980, 108(12), p.1935-2091, For individual papers see 35-3643 through 35-3653 or F-24912, F-24914, I-24909 through I-24911, and I-24913. Numerous refs.
Meetings, Polar regions, Climate.
The Symposium was held in Boston under the sponsorship of the American Meteorological Society. The meeting focussed on Arctic and Antarctic climate processes with special emphasis on their relationship to weather and climate in extrapolar regions. Specific topics included the diagnostics of large-scale and synoptic circulation systems, boundary interactions involving the atmosphere-ocean-cryosphere interface, and theoretical studies pertaining to the role of high-latitude processes in large-scale climate dynamics (Auth.)

35-3643
Polar processes and world climate (a brief overview).
Goody, R., *Monthly weather review*, Dec. 1980, 108(12), p.1935-1942, 43 refs.
Polar regions, Climate, Ice cover effect, Ice sheets.
This paper presents evidence relating events taking place in polar regions to the world climate. Mechanisms involving sea ice and polar ice sheets are reviewed and two speculative theories of the Pleistocene Ice Ages are described. (Auth.)

35-3644
Method for coincidentally determining soil hydraulic conductivity and moisture retention characteristics.
Ingersoll, J., *U.S. Army Cold Regions Research and Engineering Laboratory*, Mar. 1981, SR 81-2, 11p., ADA-099 136, 3 refs.
Soil water, Water retention, Permeability, Hydraulics, Conduction, Density (mass/volume), Tensile properties, Glacial deposits, Equipment.
A constant-head permeameter has been modified to include the essential components of a Tempe cell moisture extractor. With this equipment, tests for saturated hydraulic conductivity (permeability), unsaturated hydraulic conductivity and moisture retention characteristics of the soil can be conducted using the same soil sample. The procedure can be used for both absorption and desorption phases. Test results from four different soils (a glacial till, a fine sand, a silt and a coarse sand) are presented. The effects of density on hydraulic conductivity and moisture retention characteristics are shown.

35-3645
Arctic and antarctic climatology of a GLAS general circulation model.
Herman, G.F., et al, *Monthly weather review*, Dec. 1980, 108(12), p.1974-1991, 40 refs.
Johnson, W.T.
Climatology, Atmospheric circulation, Models, Meteorological charts.
The performance of a recent version of the general circulation model used at the Goddard Laboratory for Atmospheric Science is evaluated with particular emphasis on its behavior at high latitudes of the Northern and Southern Hemispheres. Model-generated sea level pressure, 500mb geopotential, and surface air temperature are compared with observed long-term climatologies. Sensible heat, evaporative, and radiative fluxes at the surface, and radiative fluxes at the top of the atmosphere also are compared with observed data. In the Northern Hemisphere the major features that are satisfactorily simulated include the position and intensity of the Aleutian and Icelandic lows in winter, the central Arctic pressure distribution during winter and summer, and the summertime North Atlantic and North Pacific high pressure regimes. The most notable shortcomings of the model include its weak wintertime Asiatic high, and missing meridionality of the 500 mb flow over the North Pacific. The GCM is less successful in simulating the observed climatology of the Southern Hemisphere. The 500 mb circumpolar flow is adequate, but the model does not successfully reproduce the stationary low pressure centers at the surface around the Antarctic continent. (Auth. mod.)

35-3646
Spatial and temporal variations in the south polar surface energy balance.
Weller, G., *Monthly weather review*, Dec. 1980, 108(12), p.2006-2014, 25 refs.
Heat balance, Heat flux, Sea ice distribution, Ice cover thickness.
The surface energy balance in Antarctica is examined by summarizing and comparing field data collected at seven locations in five latitudinal zones, each having different ice surface characteristics which are specified. Satellite records are used to estimate the energy balance of the pack ice zone for which no field data are available. The midwinter energy loss from the ocean to the atmosphere of this zone may be almost an order of magnitude higher than previous estimates, due to a much larger extent of open water as determined from satellite observations. Interannual variations of the energy balance over the continent *appear to be small, as judged from the limited data set, but the* effects of sea ice, the largest year-to-year variable in the energy balance, could not be determined without better satellite-derived information of the sea ice thickness distribution. (Auth.)

Microwave observation of the Weddell polynya.
Carsey, F.D., *Monthly weather review*, Dec. 1980, 108(12), p.2032-2044, 36 refs.
Polynyas, Sea ice, Drift, Antarctica—Weddell Sea.
Satellite microwave image data from Nimbus 5 of the Weddell Sea are examined for the years 1973-77. During the winters of 1974, 1975 and 1976 a polynya or ice-enclosed open water area is observed. It has an area of 2-300,000 sq km and is observed drifting west at about 1 cm/s in the Weddell Sea ice pack. The long-term and short-term behavior of the polynya margin and the regional ice concentration are interpreted in light of several oceanographic and meteorological theories explaining the circulation relevant to its origin, stability and role. It is concluded that water column stability preconditioning alone is a necessary but not significant condition for the existence of the polynya. (Auth.)

Goff, M.A., Nielsen, K.G.
Snow strength, Compressive properties, Snow density, Loads (forces), Snow depth, Drill core analysis.
Snow samples from five 50-ft (15.2m) deep holes, augered adjacent to the west side of DEW Line Station Dye 2 in Greenland, were investigated for density and unconfined compressive strength. Forty-two percent of the recovered cores were tested. Ninety-three percent of the samples tested had a length/diameter ratio greater than 2:1. The loading rate was 2 in./min (51 mm/min). Sample end-effects appeared to influence a high percentage of the failures. The heavily disturbed nature of the material is evidenced in the widely scattered values of density and strength with depth. A minimum and maximum strength value of 31 psi (0.21 MPa) and 1065 psi (7.34 MPa) respectively were obtained from a hole located 50 ft (15.2 m) from the structure. Using an approach similar to that used prior to the Dye-3 move in 1976, a safety factor exceeding 6.5 is obtained against a brittle bearing failure based on a maximum footing design load of 2000 lb/sq ft (96 kPa).

35-3652
Role of polar regions in global climate, and a new parametrization of global heat transport.
Lindzen, R.S., et al, *Monthly weather review*, Dec. 1980, 108(12), p.2064-2079, 29 refs.
Farrell, B.
Climate, Polar regions, Ice cover effect, Heat flux.
Such role as polar regions may have in determining global climate obviously depends on the transport of heat between polar regions and other latitudes. The authors review the way such transport affects climate sensitivity and stability within the context of simple energy balance models. They turn to the development of new heat transport parameterizations wherein radiative equilibrium distributions of temperature with latitude are adjusted on the basis of recently noted properties of Hadley cells and baroclinically unstable eddies.

35-3653
Sea ice simulation based on fields generated by the GLAS GCM.
Parkinson, C.L., et al, *Monthly weather review*, Dec. 1980, 108(12), p.2080-2091, 33 refs.
Herman, G.F.
Sea ice distribution, Ice cover thickness, Air temperature, Atmospheric circulation, Models.
A four-month simulation of the thermodynamic portion of the Parkinson-Washington sea ice model was conducted using atmospheric boundary conditions that were obtained from a precomputed seasonal simulation of the Goddard Laboratory for Atmospheric Sciences General Circulation Model (GLAS GCM). The sea ice thickness and distribution were predicted for the 1 January-30 April period based on the GCM-generated fields of solar and infrared radiation, specific humidity and air temperature at the surface, and snow accumulation. The sensible heat and evaporative fluxes at the surface are mutually consistent with the ground temperatures generated by the ice model and the air temperatures generated by the atmospheric model. In general, in the Northern Hemisphere the predicted ice distributions and the wintertime accretion and southward advance of the pack ice are well simulated. The computed ice thickness in the Southern Hemisphere appears reasonable, but the Antarctic melt season is extended, causing ice coverage to be less than observed in late March and April. (Auth. mod.)

Guymon, G.L., Berg, R.L.
Soil freezing, Phase transformations, Thermal regime, Unfrozen water content, Soil water, Mathematical models.
Phase change effects associated with freezing soils dominate the thermal state of the soil regime Furthermore, freezing of soil water influences the soil moisture regime by providing a moisture sink which tends to draw mobile soil moisture to freezing fronts Consequently, it is critical to general purpose models that soil water phase change effects and the interrelated problem of estimating the moisture sink effects (i.e., conversion of liquid water to ice) be accurately modeled The choice of such a model will not only influence the precision of simulated temperatures and water contents in a freezing soil, but will also have a significant impact on computational efficiency A review of several current models that assume unfrozen water content is functionally related to subfreezing temperatures indicates that within a freezing soil the soil water flow model and heat transport model parameters are restricted in spatial gradients according to the spatial gradient of modeled unfrozen water content. A freezing soil model based on the concept of isothermal phase change of soil water is proposed as an alternative approach

Phase transformations, Freeze thaw cycles, Thermal diffusion, Permafrost heat balance, Latent heat, Pipes (tubes), Analysis (mathematics).
No exact, general, solution exists for phase change in a cylindrical geometry In fact, even approximate solutions are rare and limited in applicability The use of the effective thermal diffusivity concept has allowed a closed form approximate solution to be generated for phase change around a circular cylinder in an indefinite medium The effective diffusivity method permits solutions to be found for phase change problems merely by solving the usually linear, zero latent heat problem analogous to the phase change problem Phase change problems are often intractable with the usual mathematical methods The cylindrical formulae given here are shown to be of acceptable accuracy, for most engineering purposes, over a wide range of parameters No other simple, closed form, approximation is known for the cylindrical system Although the accuracy of the effective diffusivity method has been demonstrated for the cylindrical geometry, application to other geometries must be verified

Paleoclimatology, Climatic changes, Temperature distribution, Heat transfer, Models.
The mechanisms that could explain the warm, equable climate that is believed to have been typical of the mid-Cretaceous (100 million years ago) are quantitatively investigated By performing simulations with a climate model based on zonal energy balance, it is demonstrated that past changes in geography were important in bringing about climatic change. However, the meridional distribution of Cretaceous temperatures cannot be successfully simulated unless additional physical "feedback mechanisms" are included in the model These mechanisms may involve cloud and meridional heat transport changes Paleoclimatologists should reexamine carefully both existing data and their interpretations with regard to reconstruction of Cretaceous tropical and polar surface temperatures Specific references to Antarctica appear occasionally in the text and frequently in the graphs and tables (Auth mod)

Grasses, Growth, Soil stabilization, Gravel, Nutrient cycle, Greenhouses.
Two greenhouse studies were performed with gravel soils to determine the requirements for nitrogen (N), phosphorus (P), and potassium (K) for grass establishment and to assess the establishment performance of 15 types of grasses. The fertilizer study consisted of 30 treatments, each representing a different combination of application rates of N, P, and K. A seed mixture containing 'Nugget' Kentucky bluegrass, Pennlawn red fescue, and annual ryegrass was sown, and the plants were harvested 133 days after sowing Plant leaf and root weights were measured, and soil samples were analyzed for pH, P, K and soluble salts In the grass study, 15 grasses were grown for 76 days All treatments were fertilized at the beginning of the study. Plant establishment was periodically assessed and yields were measured at the end of the study. In the fertilizer study, N and P were shown to be limiting to leaf growth on this soil Applications of P were the most beneficial for root growth Needs for K were less evident, but it was required for maximum leaf growth at the higher application rates of N and P. The greatest yields were recorded when all three elements were applied, while at the lower application rates only N and P were required to promote growth

Effectiveness of land application for phosphorus removal from municipal waste water at Manteca, California.
Iskandar, I K , et al, *Journal of environmental quality*, Oct.-Dec. 1980, 9(4), MP 1444, p 616-621, 18 refs
Syers, J.K.
Soil chemistry, Waste disposal, Water treatment, Irrigation, Waste treatment
The concentrations of dissolved inorganic phosphate (DIP) in soil solution collected at 0 8 and 1 5 m in soils which had received municipal waste water for 4 and 13 years ranged from 7 3 to 13.9 microgram P/ml In some cases, these concentrations were higher than that in the added waste water Sorption studies indicated that the ability of soils from the control site to remove added P from solution was low Waste water addition caused a substantial decrease in the P sorption capacity of surface soils and a marked change in isotherm shape from a curvilinear to an essentially linear isotherm Sorption capacity generally increased down the profile to 60 cm on the treated sites Only a small proportion of the total P accumulated from waste water addition was in the organic form Large amounts of P were extractable by 0 01 M CaCl2, particularly in the upper 45 cm of the profiles receiving waste water Although lack of crop removal of P and a high infiltration rate may be partly responsible for the poor performance of the Manteca system in terms of P removal from waste water, the very low P sorption capacity of the soil is regarded as the major factor

35-3706
Upper ocean temperature, salinity and density in the vicinity of arctic Drift Station *FRAM* 1, March to May 1979.
McPhee, M G , *U S Army Cold Regions Research and Engineering Laboratory*, Mar 1981, SR 81-5, 20p , ADA-098 597, 2 refs.
Oceanography, Salinity, Temperature gradients, Density (mass/volume), Drift stations, Arctic Ocean.
A program designed to measure temperature and conductivity in the upper 270 m of the Arctic Ocean within a 150 km radius of Drift Station FRAM I is described, and data in the form of profiles of temperature, salinity, and density as functions of depth are presented for each of 104 casts made with a portable, self-contained conductivity-temperature-depth instrument Seventy-five of the casts were made away from the ice station at sites reached by helicopter. Details of sampling procedure, instrument calibration, and data organization are given

35-3707
Measure of Arctic sea ice characteristics using microwave scatterometry.
Jackson, B.L., et al, Southeastcon, Roanoke, Va., April 1-4, 1979. Proceedings, New York, Institute of Electrical and Electronics Engineers, 1979, p.278-280, 3 refs.
Jones, W.L., Stanley, W.D.
Sea ice, Ice surface, Remote sensing, Microwaves, Ice cover thickness, Pressure ridges, Backscattering, Measuring instruments.

35-3708
Scourge of surging glaciers.
Croot, D.G , et al, *Geographical magazine*, Mar 1976, 48(6), p.328-334.
Escritt, E.A.
Glacier surges, Ice scoring, Glacier mass balance, Stresses.

35-3709
Theoretical studies on motion of snow kicked up by a snowplow.
Yoshida, Z., *Hokkaido University, Sapporo, Japan Institute of Low Temperature Science. Contributions Series A*, 1980, No.30, 36p., 10 refs.
Snow mechanics, Snow removal, Snow compression, Wave propagation, Velocity, Snow plasticity, Compressive properties, Analysis (mathematics).

35-3710
Observed growth of brash ice in ship's tracks.
Sandkvist, J., *Lulea, Sweden. University. Research report*, 1980, TULEA No.25, Series A, No 42, 23p + 42 figs., In English with Swedish summary. 7 refs.
Icebreakers, Ice breaking, Ice growth, Frazil ice, Ice conditions, Subglacial observations, Channels (waterways), Air temperature.

35-3711
Interglacial water flow: a theory and mathematical models. [Intraglazialer Wasserabfluss. Theorie und Modellrechnungen].
Spring, U., *Zurich. Eidgenössische Technische Hochschule. Versuchsanstalt fur Wasserbau, Hydrologie und Glaziologie Mitteilungen*, 1980, No 48, 197p , In German with English summary. 32 refs.
Glacial hydrology, Water flow, Channels (waterways), Glacial lakes, Glacier mass balance, Runoff, Mathematical models, Theories.

35-3712
Introduction to the basic thermodynamics of cold capillary systems.
Colbeck, S C , *U S Army Cold Regions Research and Engineering Laboratory*, Mar. 1981, 9p., ADA-099 138, 9 refs.
Thermodynamics, Capillarity, Frozen ground thermodynamics, Wet snow, Ice crystal growth, Enthalpy, Analysis (mathematics), Entropy.
The basic principles of phase equilibrium thermodynamics are reviewed These principles are used to derive several useful relations such as osmotic pressure and Kelvin's equation Several examples are given of the application of thermodynamics to cold regions materials such as grain growth in wet snow and capillary condensation in rocks.

35-3713
Modeling of Pleistocene European ice sheets: some experiments with simple mass-balance parameterizations.
Oerlemans, J., *Quaternary research*, Jan. 1981, 15(1), p.77-85, 17 refs.
Pleistocene, Ice sheets, Glacier mass balance, Climate, Mathematical models.

35-3714
Moraines of the Klutlan Glacier, Yukon Territory, Canada: origin, wastage, vegetation succession, lake development, and application to the Late-Glacial of Minnesota.
Wright, H.E., Jr., *Quaternary research*, July 1980, 14(1), p.2-18, 33 refs
Moraines, Glacial deposits, Glacier surges, Origin, Landscape development, Vegetation, Pollen, Glacial geology, Canada—Yukon Territory—Klutlan Glacier.

35-3715
Formation of the neoglacial surge moraines of the Klutlan Glacier, Yukon Territory, Canada.
Driscoll, F.G., Jr., *Quaternary research*, July 1980, 14(1), p.19-30, 21 refs.
Moraines, Glacial deposits, Glacier surges, Canada—Yukon Territory—Klutlan Glacier.

35-3716
Wastage of the Klutlan ice-cored moraines, Yukon Territory, Canada.
Driscoll, F.G., Jr., *Quaternary research*, July 1980, 14(1), p.31-39, 41 refs
Moraines, Glacial deposits, Glacier melting, Ice cover thickness, Ice melting, Climatic factors, Models, Canada—Yukon Territory—Klutlan Glacier.

35-3717
Landform development on moraines of the Klutlan Glacier, Yukon Territory, Canada.
Watson, R.A., *Quaternary research*, July 1980, 14(1), p.50-59, 15 refs.
Moraines, Glacial deposits, Landforms, Landscape development, Glacier melting, Glacial lakes, Karst, Ice melting, Canada—Yukon Territory—Klutlan Glacier.

35-3718
Present flora and vegetation of the moraines of the Klutlan Glacier, Yukon Territory, Canada.
Birks, H., *Quaternary research*, July 1980, 14(1), p.60-86, 52 refs.
Vegetation, Moraines, Glacial deposits, Landscape development, Revegetation, Classifications, Canada—Yukon Territory—Klutlan Glacier.

35-3719
Soil development on recent end moraines of the Klutlan Glacier, Yukon Territory, Canada.
Jacobson, G.L., et al, *Quaternary research*, July 1980, 14(1), p.87-100, 36 refs.
Birks, H.J.B.
Moraines, Soil formation, Soil chemistry, Glacial deposits, Organic soils, Canada—Yukon Territory—Klutlan Glacier.

35-3720
Modern pollen assemblages and vegetational history of the moraines of the Klutlan Glacier and its surroundings, Yukon Territory, Canada.
Birks, H.J.B., *Quaternary research*, July 1980, 14(1), p.101-129, 52 refs
Moraines, Pollen, Vegetation, Glacial deposits, Canada—Yukon Territory—Klutlan Glacier.

35-3721
Limnology of the Klutlan moraines, Yukon Territory, Canada.
Whiteside, M.C., et al, *Quaternary research*, July 1980, 14(1), p.130-148, 26 refs.
Bradbury, J.P., Tarapchak, S.J.
Limnology, Glacial lakes, Moraines, Glacial deposits, Ice melting, Classifications, Canada—Yukon Territory—Klutlan Glacier.

35-3722
Paleolimnology of two lakes in the Klutlan Glacier region, Yukon Territory, Canada.
Bradbury, J.P., et al, *Quaternary research*, July 1980, 14(1), p.149-168, 32 refs.
Whiteside, M.C.
Limnology, Paleoclimatology, Geochemistry, Glacial lakes, Moraines, Glacial deposits, Sediments, Canada—Yukon Territory—Klutlan Glacier.

35-3723
Critical review of analytical approximate solutions for steady state velocities and temperatures in cold ice-sheets.
Lliboutry, L., *Zeitschrift für Gletscherkunde und Glazialgeologie*, 1979, 15(2), p.135-148, With German summary. 26 refs.
Ice sheets, Ice mechanics, Shear strain, Velocity, Viscosity, Ice temperature, Analysis (mathematics).

35-3724
Reconstruction of past velocities of Mer de Glace using Forbes Bands.
Reynaud, L., *Zeitschrift für Gletscherkunde und Glazialgeologie*, 1979, 15(2), p.149-163, With French and German summaries. 8 refs.
Glacier flow, Flow rate, Ablation, Photogrammetry.

35-3725
Avalanche dynamics—what has to be measured. {Lawinendynamik—was muss gemessen werden?},
Körner, H.J., *Zeitschrift für Gletscherkunde und Glazialgeologie*, 1979, 15(2), p.165-173, In German with English summary. 13 refs.
Avalanche mechanics, Turbulent flow, Impact strength, Velocity.

35-3726
Artificial release of avalanches and its influence on the soil cover. {Die künstliche Auslösung von Lawinen und ihr Einfluss auf die Bodendecke},
Christa, R., *Zeitschrift für Gletscherkunde und Glazialgeologie*, 1979, 15(2), p.175-181, In German with English summary. 7 refs.
Avalanche triggering, Avalanche formation, Explosion effects, Soil erosion, Countermeasures.

35-3727
Measurements of avalanches in forests. {Messungen an Lawinen in Wälde},
Fiebiger, G., *Zeitschrift für Gletscherkunde und Glazialgeologie*, 1979, 15(2), p.183-194, In German with English summary. 2 refs.
Avalanche formation, Forest land, Snow accumulation, Snow stratigraphy, Snow cover stability, Slope orientation.

35-3728
Remarks to the orthophoto map "Langtaler Ferner 1971", Scale 1:7500. {Begleitworte zur Orthophotokarte "Langtaler Ferner 1971" im Masstab 1:7500},
Brunner, K., *Zeitschrift für Gletscherkunde und Glazialgeologie*, 1979, 15(2), p.195-199, In German with English summary. 5 refs.
Glaciers, Mapping.

35-3729
Dynamics of crevasse pattern at Lewis Glacier, Mount Kenya.
Hastenrath, S., et al, *Zeitschrift für Gletscherkunde und Glazialgeologie*, 1979, 15(2), p.201-207, In English with German summary. 10 refs
Kruss, P.
Crevasses, Orientation, Glacier flow, Glacier surfaces, Velocity.

35-3730
Results from tracer experiments on the water flow through the Aletschgletscher.
Lang, H., et al, *Zeitschrift für Gletscherkunde und Glazialgeologie*, 1979, 15(2), p.209-218, In English with German summary. 10 refs.
Leibundgut, C., Festel, E.
Glacial hydrology, Water flow, Subglacial drainage, Experimentation.

35-3731
New results of the movement of melt water through the firn in the accumulation area of an alpine glacier (Kesselwandferner, Oetztal Alps). {Neue Ergebnisse zur Bewegung des Schmelzwassers im Firnkörper des Akkumulationsgebietes eines Alpengletschers (Kesselwandferner—Ötztaler Alpen)},
Behrens, H., et al, *Zeitschrift für Gletscherkunde und Glazialgeologie*, 1979, 15(2), p.219-228, In German with English summary. 13 refs.
Glacial hydrology, Subglacial drainage, Firn, Meltwater, Water flow, Water level, Experimentation, Mountain glaciers.

35-3732
Tracing the flow of meltwater in the water table of a temperate glacier. {Ein Tracerexperiment zum Schmelzwasserfluss in der Wassertafel eines temperierten Gletschers},
Ambach, W., et al, *Zeitschrift für Gletscherkunde und Glazialgeologie*, 1979, 15(2), p.229-234, In German with English summary. 7 refs
Eisner, H.
Glacial hydrology, Meltwater, Water flow, Subglacial drainage, Firn, Water table, Experimentation.

35-3733
Glaciers of the Austrian Alps 1978-1979. {Die Gletscher der österreichischen Alpen 1978/79},
Patzelt, G., *Zeitschrift für Gletscherkunde und Glazialgeologie*, 1979, 15(2), p.235-246, In German.
Glacier surveys, Glacier oscillation, Glacier tongues, Austria—Alps.

35-3734
Verifying measurements in the Pasterze Glacier area (Glockner group) in 1979. {Nachmessungen im Bereich der Pasterze (Glocknergruppe) im Jahre 1979},
Wakonigg, H., *Zeitschrift für Gletscherkunde und Glazialgeologie*, 1979, 15(2), p.247-251, In German.
Glacier surveys, Glacier tongues, Glacier alimentation, Snow accumulation, Firn.

35-3735
On the origin of the Arctic aerosol: a statistical approach.
Heidam, N.Z., National Agency of Environmental Protection Air Pollution Laboratory, MST LUFT-A32, Copenhagen, Risoe National Laboratory, Apr. 1980, 11p. + figs., Presented at the Symposium on Arctic Aerosols, University of Rhode Island, May 1980. 2 refs.
Aerosols, Origin, Composition, Polar regions, Statistical analysis.

35-3736
Sublimation and its control in the CRREL permafrost tunnel.
Johansen, N.I., *U.S. Army Cold Regions Research and Engineering Laboratory*, May 1981, SR 81-8, 12p., ADA-101 555, 3 refs.
Chalich, P.C., Wellen, E.W.
Sublimation, Permafrost preservation, Dust control.
The U.S. Army Cold Regions Research and Engineering Laboratory's permafrost tunnel at Fox, near Fairbanks, Alaska, was used to investigate the sublimation process in permafrost silt. The rate of increase in thickness of the dried silt layer from sublimation was found to be approximately 0.023 in (0.058 cm) in 1 month and closely related to the relative humidity in the tunnel. Sublimation prevention studies consisted of evaluation of various membranes to impede the sublimation. Ice was found to show promise as an easily installed, effective membrane when applied as a fine water mist and subsequently left to freeze.

35-3737
Mixing oil with ice.
Manning, A.P., Jr., *Military engineer*, May-June 1981, 73(473), p.185-189
Oil spills, Ice navigation, Ice conditions, Electronic equipment, Ice breaking, Detection.

35-3738
United States Arctic science policy.
Hickok, D.M., et al, American Association for the Advancement of Science, Alaska Division, Feb 1981, 62p., 44 refs

Microparticle concentration variations linked with climatic change: evidence from polar ice cores.
Thompson, L.G., et al, *Science*, May 15, 1981, 212(4496), p.812-815, 17 refs.
Mosley-Thompson, E.
Ice cores, Glaciation, Climatic changes, Climatology, Particles, Aerosols.
The microparticle concentrations in three deep ice cores reveal a substantial increase in the concentration of insoluble particles in the global atmosphere during the latter part of the last major glaciation. The ratio of the average particle concentration in the late glacial strata to that in the Holocene strata is 6/1 for the core from Dome C, Antarctica, 3:1 for the core from Byrd Station, Antarctica, and 12:1 for the core from Camp Century, Greenland. Whether this temporal correlation between increased atmospheric particle load and the lower surface temperatures is directly causal is unknown; however, the variations in these two parameters must be satisfactorily resolved in any successful hypothesis that addresses the causes of climatic change. (Auth.)

Ice temperature, Ice density, Ice electrical properties, Ice composition, Ice cores, Antarctica—Ross Island.
In December of 1977 two drillings 10 m deep each, one next to the other, and a pit 2 m deep were made in the ice cap of James Ross Island. Temperature was determined at a depth of 10 m and the cores extracted yielded continuous profiles of the global beta activity, density, conductivity and contents in deuterium. On the basis of beta horizons of 1965 and 1970 as well as of seasonal variations of density and deuterium it was possible to establish the chronology of snow strata since the year 1965 with an accuracy estimated at one year. The annual average accumulation during the last thirteen years resulted in 0.38 g cm. It seems that there are no peaks of conductivity unquestionably linked with volcanic eruptions of 1967, 1969 and 1970 in the nearby Deception Island. However, these seem to be reflected in an overall increase of conductivity in the period previous to 1970 with respect to the one from 1970 to 1977 (the average value of conductivity in each of these cases is 3.30 microseconds/cm and 2.10 microseconds/cm respectively). Conductivity values as well as the annual average temperature and stable isotopes are similar to those in other Antarctic stations. (Auth. mod.)

Ice electrical properties, Electric charge, Charge transfer, Electric fields, Snowflakes, Atmospheric electricity.
These Proceedings are published to give a full account of the Fifth International Conference on Atmospheric Electricity held in September 1974 in Garmisch Partenkirchen in the Bavarian Alps in Germany. Traditionally, the proceedings of these conferences have served as reference books updating the textbooks and monographs on Atmospheric Electricity. As treated by these conferences, Atmospheric Electricity covers all aspects of this science, including the processes and problems which reach out into the Earth's environment as well as analogous processes on other planets and on the Moon. A history of these conferences, an account of their purpose, and an outline of the scope and the preparation is to be found at the end of these Proceedings. There, also the Business Meetings of the involved organizations are mentioned. The proceedings closely follow the original program and are accordingly organized into sessions. ions, basic research, ions, applied research, application of atmospheric electricity concepts and methods to other facets of meteorology, instrumentation, calibration and data handling; cloud physics, non-convective clouds and precipitation; thunderstorms and showers, global circuit and ten year program, atmosphere-space coupling, solar terrestrial effects and atmospheric electricity on other celestial bodies; physics and lightning and sferics, and atmospheric electricity activities of the Institute for Atmospheric Environmental Research. (Auth. mod.)

Soil mechanics, Soil water, Water retention, Density (mass/volume), Tensile properties, Frost penetration, Temperature effects, Measuring instruments.
Methods for using tensiometers in conjunction with moisture retention characteristic curves for non-destructive soil water measurements are presented for above- and below-freezing situations of engineering interest. Four methods for determining moisture retention characteristics, three tensiometer types, and several methods of recording soil suction are discussed. Procedures for preparing, modifying and installing tensiometers for field use in cold climates are explained. Several examples of moisture retention characteristics are shown, including the effect of soil density on water retention. Examples of soil tension ahead of and behind a frozen soil zone are also presented.

Drill core analysis, Ice cores, Impurities, Paleoclimatology, Antarctica—Amundsen-Scott Station.
A detailed analysis of the particles within a 101-meter firn core from Amundsen-Scott Station was conducted. 6218 samples were analyzed for particle concentration and size distribution. Individual particles within selected sections of the core were examined for morphology and elemental constituents using a scanning electron microscopy and an X-ray energy dispersive system. A 911-year time scale was constructed using the annual cycle of particle concentration. The record of the concentration of insoluble particles with diameters > 0.5 micron reveals a two fold increase during the period A.D. 1450-1850. This period of reduced mean global temperature, the Little Ice Age, was also marked by frequent and explosive volcanic activity. A 911-year record of net annual surface accumulation was constructed from this core using the annual variations in particle concentration. Net accumulation does not show a general trend over the entire 911-year interval, although a 90-year period, A.D. 1597-1686, has consistently low values. This time interval was characterized by the lowest global temperatures during the last thousand years. On the basis of all the data, it is suggested that the South Pole snow strata are recording the fluctuations in the concentration of insoluble particles in the stratosphere, not only in the southern hemisphere, but in the global stratosphere as well. (Auth. mod.)

Taiga, Cryogenic soils, Podsol, Paludification, Meadow soils, Soil profiles, Soil chemistry, Vegetation factors.

35-3824
Typification of central taiga facies in West Siberia according to thermal conditions and the structure of radiation-meteorological fields. (Ordinatsiia srednetaezhnykh fatsii Zapadnoi Sibiri po usloviiam teploobespechennosti i strukture radiatsionno-meteorologicheskikh polei).
Trofimova, I.E., Zakonomernosti formirovaniia elementarnykh geosistem (na primere srednetaezhnykh struktur Sos'vinskogo Priob'ia) (Regularities governing the formation of elementary geosystems (the central taiga sturctures of Sos'vinskoe Priob'e as an example)) edited by V.S. Mikheev, Irkutsk, 1978, p 97-123. In Russian. 10 refs.
DLC GB239.O23Z34
Taiga, Landscape types, Swamps, Plant ecology, Plant physiology, Photosynthesis, Solar radiation, Microclimatology, Radiation balance.

35-3825
Natural resources of the northeastern USSR. (Prirodnye resursy Severo-Vostoka SSSR).
Lozhkin, A.V., ed. Vladivostok, 1976, 152p., In Russian. For selected papers see 35-3826 through 35-3834. Refs passim.
DLC HC337.S525P74
Arctic Ocean, Shores, Climate, Records (extremes), Snow cover distribution, Continuous permafrost, Arctic landscapes, Taiga, Permafrost hydrology, Tundra, Thermokarst lakes, USSR—Magadan.

35-3826
Climatic conditions of the Magadan Region. (Klimaticheskie resursy Magadanskoi oblasti).
Mel'nikova, T.V., Prirodnye resursy Severo-Vostoka SSSR (Natural resources of the northeastern USSR) edited by A.V. Lozhkin, Vladivostok, 1976, p 5-21. In Russian. 3 refs.
DLC HC337.S525P74
Shores, Climate, Records (extremes), Radiation balance, Snow cover distribution, Continuous permafrost, Arctic landscapes, Air temperature, Diurnal variations, Seasonal variations, Meteorological charts, Meteorological data, USSR—Magadan, Arctic Ocean.

35-3827
Representativeness of runoff at the Kolyma Water-Balance Station for the Upper Kolyma territory. (Reprezentativnost' kharakteristik stoka Kolymskoi vodnobalansovoi stantsii dlia territorii verkhnei Kolymy).
Nasybuiin, Sh.S., Prirodnye resursy Severo-Vostoka SSSR (Natural resources of the northeastern USSR) edited by A.V. Lozhkin, Vladivostok, 1976, p.32-41. In Russian. 2 refs.
DLC HC337.S525P74
Polar regions, Landscape types, Taiga, Continuous permafrost, Active layer, Soil water migration, Snow water equivalent, Runoff, Permafrost hydrology, USSR—Kolyma.

35-3828
Snow cover and its melting dates in the central part of Wrangel Island. (Snezhnyi po rov i sroki ego skhoda v tsentral'noi chasti ostrova Vrangelia).
Varich, A.A., Prirodnye resursy Severo-Vostoka SSSR (Natural resources of the northeastern USSR) edited by A.V. Lozhkin, Vladivostok, 1976, p 42-45, In Russian. 1 ref.
DLC HC337.S525P74
Polar regions, Climate, Snow cover distribution, Snow depth, Snow melting, Tundra, Mountains, Slope orientation, USSR—Wrangel Island.

35-3829
Physiography and recent geological processes in the northeastern USSR. (Fiziko-geograficheskaia sreda i sovremennye geologicheskie protsessy na Severo-Vostoke SSSR).
Shumilov, IU.V., Prirodnye resursy Severo-Vostoka SSSR (Natural resources of the northeastern USSR) edited by A.V. Lozhkin, Vladivostok, 1976, p.46-54. In Russian. 11 refs.
DLC HC337.S525P74
Subpolar regions, Geocryology, Rivers, Water chemistry, Alluvium, Frost weathering, Sedimentation, Sediment transport, Solifluction, Alpine tundra, Continuous permafrost.

35-3830
Recent processes which formed the present surface of the Yana-Indigirka Plain. (O nekotorykh protsessakh formirovaniia sovremennoi poverkhnosti IAno-Indigirskoi nizmennosti).
Fgorova, G.N., Prirodnye resursy Severo-Vostoka SSSR (Natural resources of the northeastern USSR) edited by A.V. Lozhkin, Vladivostok, 1976, p 55-65. In Russian. 21 refs
DLC HC337.S525P74
Plains, Active layer, Permafrost depth, Geocryology, Permafrost hydrology, Thermokarst, Alassy, Permafrost structure, Ice wedges, USSR—Yana River, USSR—Indigirka River.

35-3831
Thermokarst lakes in the glacial and fluvio-glacial accumulation plains in the Lower Anadyr lowlands. (Ozernyi termokarst na ravninakh lednikovoi i vodno-lednikovoi akkumuliatsii v Nizhneanadyrskoi nizmennosti).
Riabchun, V.K., Prirodnye resursy Severo-Vostoka SSSR (Natural resources of the northeastern USSR) edited by A.V. Lozhkin, Vladivostok, 1976, p.66-72. In Russian. 9 refs.
DLC HC337.S525P74
Plains, Permafrost structure, Thermokarst lakes, Shores, Solifluction, Permafrost hydrology, Alluvium, Ground ice, Ice formation.

35-3832
Ground ice in massive granite. (Podzemnyi led v granitnom massive).
Gol'dtman, V.G., Prirodnye resursy Severo-Vostoka SSSR (Natural resources of the northeastern USSR) edited by A.V. Lozhkin, Vladivostok, 1976, p 73-76. In Russian 1 ref
DLC HC337.S525P74
Igneous rocks, Fracture zones, Ice formation, Ice veins, Mining.

35-3833
Artificial intrapermafrost taliks for winter water supply in mountains. (Iskusstvennyi mezhmerzlotnyi talik dlia zimnego vodosnabzhenia v usloviiakh gornogo rel'efa).
Gol'dtman, V.G., et al, Prirodnye resursy Severo-Vostoka SSSR (Natural resources of the northeastern USSR) edited by A.V. Lozhkin, Vladivostok, 1976, p.77-84
Motrich, L.T., Kalmykov, P.N
DLC HC337.S525P74
Mountains, Permafrost beneath rivers, Artificial melting, Equipment, Taliks, Permafrost hydrology, Water supply.

35-3834
Young age of some "ancient" moraines in the upper course of the Kolyma River. (O molodom vozraste nekotorykh "drevnikh" moren v verkhov'e reki Kolymy).
Gol'dfarb, IU.I., Prirodnye resursy Severo-Vostoka SSSR (Natural resources of the northeastern USSR) edited by A.V. Lozhkin, Vladivostok, 1976, p 100-106. In Russian. 9 refs.
DLC HC337.S525P74
River basins, Mountain glaciers, Moraines, Age determination, USSR—Kolyma River.

35-3835
Proceedings.
Workshop on Sea Ice Field Measurement, St. John's, Newfoundland, Apr. 29-May 1, 1980. *Memorial University of Newfoundland. Centre for Cold Ocean Resources Engineering C-CORE publication.* Dec 1980. No.80-21. 360p. Refs. passim. For individual papers see 35-3836 through 35-3849.
Allan, A.J., comp, Bazeley, D.P., comp
Sea ice, Ice strength, Ice loads, Ice pressure, Ice friction, Offshore structures, Ice solid interface, Stresses, Strain tests, Hydraulic structures, Measuring instruments.

35-3836
Relationship of stress and strain in sea ice.
Denner, W.W., *Memorial University of Newfoundland. Centre for Cold Ocean Resources Engineering C-CORE publication.* Dec. 1980. No.80-21, p.5-32. 21 refs.
Sea ice, Stress strain diagrams, Drift, Salinity, Ice temperature, Ice mechanics, Ice loads, Ice elasticity, Ice viscosity, Ice strength, Loads (forces).

35-3837
Strain measurements in floating ice platforms.
Anderson, K G , et al. *Memorial University of Newfoundland Centre for Cold Ocean Resources Engineering. C-CORE publication.* Dec. 1980. No.80-21, p.33-53, 13 refs
Perry, C.
Floating ice, Strain tests, Ice elasticity, Loads (forces), Ice cover strength, Flexural strength.

35-3838
Small scale surface strain measurement on sea ice.
Murat, J.R., *Memorial University of Newfoundland Centre for Cold Ocean Resources Engineering. C-CORE publication,* Dec 1980, No.80-21, p.55-74, 16 refs.
Sea ice, Strain tests, Stresses, Flexural strength, Ice creep, Ice strength, Ice cover strength, Loads (forces).

35-3839
Surface strain measuring instruments for use on sea ice.
Goodman, D.G., *Memorial University of Newfoundland. Centre for Cold Ocean Resources Engineering. C-CORE publication,* Dec. 1980, No.80-21, p.75-96, 20 refs.
Glacier ice, Ice strength, Strain tests, Ice surface, Measuring instruments.

35-3840
Recent developments in strainmeter design.
Moore, S., et al, *Memorial University of Newfoundland. Centre for Cold Ocean Resources Engineering. C-CORE publication.* Dec. 1980, No.80-21, p.97-125, 18 refs.
Wadhams, P.
Strain tests, Ice floes, Measuring instruments, Water waves, Ice cover thickness.

35-3841
Measurement of finite strain in sea ice by impulse radar techniques.
Stander, E., et al, *Memorial University of Newfoundland. Centre for Cold Ocean Resources Engineering. C-CORE publication,* Dec. 1980, No 80-21, p.127-164, 17 refs.
Gidney, G.A.
Sea ice, Strain tests, Remote sensing, Radar echoes, Ice optics, Ice crystal size, Ice crystal structure, Ice sheets, Analysis (mathematics).

35-3842
Tubular transducer for in situ stress measurements in sea ice.
Frederking, R , *Memorial University of Newfoundland. Centre for Cold Ocean Resources Engineering. C-CORE publication,* Dec 1980, No.80-21, p.165-192, 9 refs.
Sea ice, Stresses, Strains, Ice loads, Ice strength, Offshore structures, Ice elasticity, Pipes (tubes), Analysis (mathematics), Theories.

35-3843
OSI ice stress sensor.
Johnson, J.B., et al, *Memorial University of Newfoundland. Centre for Cold Ocean Resources Engineering. C-CORE publication,* Dec. 1980, No.80-21, p.193-207, 10 refs
Cox, G.F.N.
Sea ice, Measuring instruments, Ice loads, Ice strength, Stresses, Offshore structures, Ice deformation.

35-3844
Monitoring sea ice ridgebuilding and stresses.
Biswas, N.N., et al, *Memorial University of Newfoundland. Centre for Cold Ocean Resources Engineering C-CORE publication,* Dec 1980, No.80-21, p.209-236, 28 refs.
Sackinger, W.M.
Sea ice, Pressure ridges, Stresses, Drift, Artificial islands, Dynamic loads, Monitors, Fracturing, Seismic surveys.

35-3845
Ship's hull as a test instrument.
Edwards, R., et al, *Memorial University of Newfoundland. Centre for Cold Ocean Resources Engineering. C-CORE publication,* Dec. 1980, No.80-21, p.237-274, 7 refs.
Tam, W., Nawwar, A.M.
Ice loads, Ships, Ice pressure, Impact strength, Strains, Ice solid interface, Measuring instruments, Icebreakers, Ice strength.

35-3846
Calibration testing of *M.V. Arctic* for the measurement of ice breaking loads.
Iyer, S H., *Memorial University of Newfoundland. Centre for Cold Ocean Resources Engineering. C-CORE publication,* Dec. 1980, No.80-21, p.275-302, 2 refs.
Icebreakers, Impact strength, Loads (forces), Strains, Ice loads, Tests, Ice breaking.

35-3847
Field measurement of kinematic friction between ice and rigid structures.
Comfort, G , et al, *Memorial University of Newfoundland. Centre for Cold Ocean Resources Engineering. C-CORE publication,* Dec. 1980, No.80-21, p.303-321, 6 refs.
Nawwar, A.M.
Ice friction, Offshore structures, Steel structures, Ice loads, Sliding, Ice solid interface, Ships, Measuring instruments.

35-3848
Proposed methods for the instrumentation of a small island to measure pack ice forces.
Jones, J.M., *Memorial University of Newfoundland Centre for Cold Ocean Resources Engineering. C-CORE publication,* Dec. 1980, No.80-21, p.323-342, 7 refs.
Pack ice, Ice pressure, Ice loads, Offshore structures, Artificial islands, Impact strength, Drift, Ice strength, Ice conditions, Measuring instruments.

35-3849
Ice force measurements in Finnish lighthouses.
Määttänen, M., *Memorial University of Newfoundland. Centre for Cold Ocean Resources Engineering. C-CORE publication.* ! ec. 1980, No.80-21, p.343-353, 2 refs.
Ice loads, Offshore structures, Impact strength, Ice pressure, Pressure ridges, Ice mechanics, Lighthouses.

35-3850
Effect of electric currents on the nucleation of ice crystals in the melt.
Shichiri, T , et al, *Journal of crystal growth,* Aug. 1981, 54(2), p.207-210, 13 refs
Nagata, T.
Ice crystal nuclei, Nucleation, Electric fields, Ion density (concentration), Supercooling, Water, Temperature effects, Experimentation.

35-3851
Winter worries.
Olcott, J.W., *Business and commercial aviation,* Dec. 1980, 47(6), p.86.
Aircraft icing, Aircraft landing areas, Snow cover effect, Cold weather operation.

35-3852
Use of similitude in analyzing aircraft windshield anti-icing performance.
Ross, R., *Journal of aircraft,* Nov. 1980, 17(11)), p.830-832.
Aircraft icing, Ice prevention, Thermal effects, Ice forecasting, Thermocouples, Mathematical models.

35-3853
Coupling protects snow thrower's motor and power train.
Hogan, B J , *Design news,* Sep 22, 1980, 36(18), p.82-83.
Snow removal, Equipment, Engines, Polymers, Protection.

35-3854
Glacier threatens shipping lanes. *Petroleum engineer international,* Sep. 1980, 52(11), p.10-16.
Glacier ablation, Calving, Ice navigation, Offshore structures, Icebergs, Forecasting, Glacier flow, Monitors.

35-3855
Comparative study of microwave radiometer observations over snowfields with radiative transfer model calculations.
Chang, A T C , et al, *Remote sensing of environment,* Nov. 1980, 10(3), p.215-229, For another version see 34-2358, 18 refs
Shiue, J.C.
Snow cover, Microwaves, Radiometry, Snow water equivalent, Mathematical models.

35-3856
Farmers loop sinkhole.
Sweet, L., et al, *Northern engineer,* Winter 1980, 12(4), p.6-10.
Connor, B.
Ground ice, Roads, Ground thawing, Damage, Permafrost beneath roads, Thermal regime, Peat, Ice melting.

35-3857
Passive solar design elements for the Subarctic.
Zarling, J , *Northern engineer,* Winter 1980, 12(4), p.11-16, 8 refs
Heating, Thermal insulation, Solar radiation, Buildings, Cold weather construction, Design.

35-3858
Highway pavement cracks: an Alaskan overview.
McHattie, R , *Northern engineer,* Winter 1980, 12(4), p.17-21, 1 ref.
Roads, Cracks, Pavements, Damage, Ground thawing, Climatic factors, Fatigue (materials).

35-3859
Detecting massive ground ice in permafrost by geophysical methods.
Osterkamp, T.E , et al, *Northern engineer,* Winter 1980, 12(4), p.27-30, 4 refs.
Jurick, R.W.
Ground ice, Permafrost, Ice detection, Geophysical surveys.

35-3860
Rubber in pavements for ice control.
Esch, D., *Northern engineer,* Winter 1980, 12(4), p.34-39.
Pavements, Ice control, Concrete admixtures, Bitumens, Road icing, Countermeasures, Elastomers.

35-3861
Fluorescent boxes help spot hydrants in Alaskan snow.
Mulvihill, C.E., *Fire engineering,* Jan. 1981, 134(1), p.110-111.
Luminescence, Coatings, Fires, Snow cover effect, Fire hydrants.

35-3862
Criteria for ice prevention in counterflow natural draft cooling towers.
Cooper, J.W., Jr , *Cooling Tower Institute. Journal,* June 1980, 1(1), p.47-53, 2 refs.
Cooling towers, Ice prevention, Water temperature, Thermal regime, Air flow, Ice accumulation, Damage, Countermeasures.

35-3863
Interrelations between the components of forest and swamp ecosystems in the central taiga of the Ural area. (Vzaimosviazi komponentov lesnykh i bolotnykh ekosistem srednei taigi Priural'ia),
Vasilevich, V I , ed, Leningrad, Nauka, 1980, 256p , In Russian with English table of contents enclosed, Refs, p.241-252.
Taiga, Cryogenic soils, Vegetation, Paludification, Plant ecology, Ecosystems, Alpine landscapes, Alpine tundra, Rock streams, USSR—Ural Mountains.

35-3864
Facings of dome-shaped structures built under severe climatic conditions. (Kupol'nye pokrytiia dlia stroitel'stva v usloviiakh surovogo klimata),
Lipnitskii, M E., Leningrad, Stroĭizdat, 1981, 136p , In Russian with English table of contents enclosed. 20 refs.
Concrete structures, Reinforced concretes, Prefabrication, Panels, Steel structures, Wooden structures, Plastics, Foundations, Permafrost beneath structures, Design.

35-3865
Improved method for obtaining the water content values of ice hydrometeors from aircraft and radar data.
Plank, V G , et al, *Journal of applied meteorology,* Nov 1980, 19(11), p.1293-1299, 3 refs.
Berthel, R O., Barnes, A.A., Jr.
Ice crystal optics, Snow crystals, Water content, Liquid phases, Airborne radar, Spectra, Particle size distribution, Precipitation (meteorology).

35-3866
New aspect of the vertical incidence Doppler radar spectrum of ice particle fallspeeds.
Passarelli, R.E., Jr., et al, *Journal of applied meteorology,* Nov 1980, 19(11), p.1318-1322, 8 refs
Srivastava, R.C.
Falling bodies, Ice crystal optics, Snow crystals, Snowfall, Velocity, Radar echoes, Spectra, Particles.

35-3867
Oil, ice and gas.
Workshop on the Behaviour of Oil, Ice and Gas, Toronto, Canada, Oct. 10-11, 1979, Toronto. University. Institute for Environmental Studies, Publication No EE-14, (1980), 169p., Refs. passim. Workshop sessions, p.135-146. General comments, p.147-165. For individual papers see 35-3868 through 35-3881.
Mackay, D., ed, Paterson, S., ed.
Oil spills, Sea ice, Liquid solid interfaces, Environmental impact, Countermeasures, Meetings, Equipment, Crude oil, Natural gas, Beaufort Sea.

35-3868
Summary of AMOP oil-ice-gas interaction studies.
Thornton, D.E., Oil, ice and gas; Proceedings of a workshop held in Toronto, Canada, Oct. 10 and 11, 1979. Edited by D. Mackay and S. Paterson, (1980), p.3-5
Oil spills, Sea ice, Crude oil, Natural gas, Interfaces, Salt ice, Water pollution, Offshore drilling.

35-3869
Countermeasures equipment for ice-covered/ice-infested waters.
Meikle, K.M., Oil, ice and gas; Proceedings of a workshop held in Toronto, Canada, Oct 10 and 11, 1979 Edited by D Mackay and S Paterson, (1980), p.7-11
Oil spills, Sea ice, Subglacial observations, Water pollution, Countermeasures, Equipment, Ice bottom surface.

35-3870
Problems presented by ice cover to oilspill clean-up in the Beaufort Sea.
McGonigal, D., Oil, ice and gas; Proceedings of a workshop held in Toronto, Canada, Oct. 10 and 11, 1979. Edited by D. Mackay and S. Paterson, (1980), p.13-25, 4 refs
Oil spills, Sea ice distribution, Ice cover, Pollution, Countermeasures, Equipment.

35-3871
Research in oil, gas and ice at the University of Toronto.
Mackay, D., et al, Oil, ice and gas; Proceedings of a workshop held in Toronto, Canada, Oct. 10 and 11, 1979. Edited by D. Mackay and S. Paterson, (1980), p.27-31.
Hossain, K., Kisil, A.
Sea ice, Oil spills, Water pollution, Countermeasures, Natural gas, Snow cover, Pollution.

35-3872
Ice and oil research at Hydraulics Research Division, National Water Research Institute.
Tsang, G., Oil, ice and gas, Proceedings of a workshop held in Toronto, Canada, Oct. 10 and 11, 1979. Edited by D. Mackay and S. Paterson, (1980), p.33-35, 4 refs.
Ice floes, Oil spills, Research projects, Laboratories.

35-3873
Proposed study of oil and gas under ice.
Pistruzak, W.M., Oil, ice and gas, Proceedings of a workshop held in Toronto, Canada, Oct. 10 and 11, 1979. Edited by D. Mackay and S. Paterson, (1980), p.37-46.
Oil spills, Ice bottom surface, Natural gas, Subglacial observations, Migration, Offshore drilling, Experimentation.

35-3874
Studies of oil spill behaviour under ice.
Malcolm, J.D., Oil, ice and gas; Proceedings of a workshop held in Toronto, Canada, Oct. 10 and 11, 1979 Edited by D. Mackay and S. Paterson, (1980), p.47-54, 6 refs.
Oil spills, Subglacial observations, Ice bottom surface, Interfaces, Migration, Liquid solid interfaces, Sea water.

35-3875
Disposition of gas/oil mixtures trapped under ice.
Topham, D.R., Oil, ice and gas; Proceedings of a workshop held in Toronto, Canada, Oct. 10 and 11, 1979. Edited by D. Mackay and S. Paterson, (1980), p.55-73.
Oil spills, Ice bottom surface, Subglacial observations, Natural gas, Interfaces, Migration, Ice sheets.

35-3876
Aspects of oil-ice interaction subsequent to the Kurdistan spill.
Reimer, E., Oil, ice and gas; Proceedings of a workshop held in Toronto, Canada, Oct. 10 and 11, 1979. Edited by D. Mackay and S. Paterson, (1980), p.75-86.
Oil spills, Liquid solid interfaces, Pack ice, Migration, Tanker ships, Interstitial ice.

35-3877
Observations of oil behaviour in ice floes and the 1977 *Ethel* H. spill.
Deslauriers, P.C., Oil, ice and gas, Proceedings of a workshop held in Toronto, Canada, Oct. 10 and 11, 1979. Edited by D. Mackay and S. Paterson, (1980), p.87-94, 5 refs.
Ice floes, Oil spills, Liquid solid interfaces, Tanker ships.

35-3878
Field manual for cold-climate oil spills.
Deslauriers, P.C., Oil, ice and gas, Proceedings of a workshop held in Toronto, Canada, Oct. 10 and 11, 1979. Edited by D. Mackay and S Paterson, (1980), p.95-101.
Oil spills, Manuals, Environmental impact, Polar regions, Sea ice, Sea water, Snow composition, Shores, Permafrost, Tundra.

35-3879
Transport and behaviour of a Prudhoe Bay oil spill.
Pritchard, R.S., Oil, ice and gas; Proceedings of a workshop held in Toronto, Canada, Oct. 10 and 11, 1979. Edited by D. Mackay and S. Paterson, (1980), p.103-109, 5 refs
Oil spills, Ice bottom surface, Subglacial observations, Sea ice, Drift, Environmental impact, Migration.

35-3880
U.S. Coast Guard Arctic oil spill research program.
Tebeau, P.A., et al, Oil, ice and gas, Proceedings of a workshop held in Toronto, Canada, Oct. 10 and 11, 1979 Edited by D Mackay and S Paterson, (1980), p.111-128, 4 refs.
Lissauer, I.M.
Oil spills, Ice cover, Shores, Research projects, Liquid solid interfaces, Migration, Detection, Subglacial observations, Climatic factors.

35-3881
Alaskan Beaufort Sea Oilspill Response Body.
Allen, A.A., Oil, ice and gas; Proceedings of a workshop held in Toronto, Canada, Oct. 10 and 11, 1979. Edited by D. Mackay and S. Paterson, (1980), p.129-132.
Oil spills, Subglacial observations, Offshore drilling, Research projects, Organizations.

35-3882
Translational Raman spectrum of hexagonal monocrystalline ice. (Spectre Raman de translation de la glace hexagonale monocristalline).
Faure, P., et al, *Journal of Raman spectroscopy*, Apr 1981, 11(2), p.120-126, In French with English summary. 23 refs.
Chosson, A.
Ice crystal optics, Light scattering, Spectra, Polarization (waves).

35-3883
Coefficient of friction between ice and some construction materials, plastics and coatings.
Oksanen, P., *Helsinki. Valt on teknillinen tutkimuskeskus. Rakennetekniikan laboratorio Tiedonanto*, Apr. 1980, No 7, 73p., 5 refs.
Ice friction, Ice solid interface, Water films, Ice hardness, Ice loads, Ice temperature, Thermal regime, Velocity, Statistical analysis.

35-3884
Propagation measurements due to rain and ice using the OTS satellite over the period January 1979-May 1980.
Dilworth, I.J., et al, *Annales des telecommunications*, Jan.-Feb. 1981, 36(1/2), p.126-132, With French summary. 9 refs.
Evans, B.G.
Wave propagation, Ice crystals, Rain, Telecommunication, Spacecraft, Attenuation, Electric fields, Models, Polarization (waves).

35-3885
Differential propagation constants on slant paths through snow and ice crystals as measured by 16.5 GHz polarization-diversity radar.
Hendry, A., et al, *Annales des telecommunications*, Jan.-Feb. 1981, 36(1/2), p.133-139, With French summary. 11 refs.
McCormick, G.C., Antar, Y.M.M.
Wave propagation, Snow crystals, Ice crystals, Telecommunication, Polarization (waves), Radar surveys, Experimentation.

35-3886
Ice depolarization at 11.7 and 19 GHz on slant paths in Virginia, USA.
Bostian, C.W., et al, *Annales des telecommunications*, Jan.-Feb 1981, 36(1/2), p 148-153, With French summary. 7 refs.
Pratt, T Tsolakis, A.
Wave propagation, Ice crystals, Attenuation, Telecommunication, Depolarization.

35-3887
Peculiarities of polar morpho-lithogenesis on the shelf of the northeastern USSR. (Osobennosti polarnogo morfolitogeneza na shel'fe Severo-Vostoka SSSR).
Pavlidis, IU.A., et al, Kontinental'nye i ostrovnye shel'fy. Rel'ef i osadki (Continental and island shelves Topography and sedimentation) edited by A.A. Aksenov, Moscow, Nauka, 1981, p.33-96, In Russian. Refs. p 91-96.
Ice conditions, Permafrost distribution, Geocryology, Coastal topographic features, Lithology, Sedimentation, Shores, Sediment transport, Subsea permafrost, Landscape types, Arctic Ocean.

35-3888
Road construction manual for engineers. (Spravochnik inzhenera-dorozhnika).
Bochin, V.A., ed, Moscow, Transport, 1980, 511p (Pertinent p.367-498), In Russian with abridged English table of contents enclosed. 68 refs
Roads, Roadbeds, Foundations, Pavements, Permafrost beneath structures, Earthwork, Cold weather construction, Construction materials, Cements, Soil stabilization, Winter maintenance, Snow removal.

35-3889
New data on the phytogeography of Siberia. (Novye dannye o fitogeografii Sibiri).
Krasnoborov, I.M., et al, Novosibirsk, Nauka, 1981, 232p., In Russian For selected papers see 35-3890 through 35-3896. Refs. passim.
Safonova, T.A.
Taiga, Tundra, Plankton, Alpine landscapes, Algae, Plant ecology, Ecosystems, Biomass, Forest tundra, Cryogenic soils, Permafrost beneath rivers, Alpine tundra, Slope orientation, Continuous permafrost, Rivers.

35-3890
Algae in the upper course of the Kiya River basin (Kuznetskiy Alatau). (K flore vodoroslei vodoemov basseina verkhnego techeniia r. Kia (Kuznetskii Alatau)).

Defense meteorological satellite program data. *World Data Center-A for Glaciology (Snow and Ice) Data announcement*, 1981, 81-GLA-01, 4p.
Meteorological data.
The establishment is reported of an adjunct collection of satellite imagery mosaics acquired by WDC-A from the U.S.A.F. Defense Meteorological Satellite Program (DSMP). The operational scheme, the frequency of imagery coverage, the image resolution and usages are described. A map is included showing global coverage sectors and sample marked mosaics are shown. The map outlines the antarctic area coverage and one of the mosaics is of the Antarctic Peninsula and the Ronne Ice Shelf.

Thermal energy exchange between the ice cover and the atmosphere in East Antarctica.
Aver'ianov, V.G., *Polar geography and geology*, Jan.-Mar. 1981, 5(1), p.32-39, For Russian original see 34-2215 or 11F-22883. 7 refs.
Ice sheets, Heat transfer, Heat balance, Solar radiation, Antarctica—Mirnyy Station, Antarctica—Vostok Station.
The author examines the mean annual numerical values of the heat budget of the ice surface, the atmosphere and the ice surface-atmosphere system at the Soviet Antarctic stations of Mirnyy and Vostok. The structure of the heat budget at the stations is discussed. The main source of heat energy at the edge of the ice sheet is the heat from the crystallization of moisture in the atmosphere, and in the central portion of the ice sheet, the advection of heat from the ocean. The common cause of heat loss from both ice surface and atmosphere in the two regions is long-wave radiation. (Auth.)

35-3904
Interannual and long-period variations of ice distribution in the Atlantic sector of the Antarctic.
Dobromyslov, V.V., et al, *Polar geography and geology*, Jan.-Mar. 1981, 5(1), p.40-44, For Russian original see 34-2218 or 11F-22886. 9 refs.
Maslennikov, V.V.
Sea ice distribution, Periodic variations, Ice edge, South Atlantic Ocean.
Variations in the position of the ice edge in the Atlantic sector of the Antarctic are examined both on a month-to-month and a year-to-year basis using satellite imagery for the period 1971-76. A comparison of the data with information on ice distribution in the first half of the 20th century suggests a substantial reduction of ice cover in the 1971-76 period. (Auth.)

Ice sheets and ice melts.
Emiliani, C., *Natural history*, Nov. 1980, 89(11), p.82-91.
Ice sheets, Ice melting, Geologic processes, Sea level, History.
Described in lay terms are the geologic events of flooding or freezing which occur periodically and then subside. Results of these waxings and wanings are the carving of landscapes, raising and lowering of sea levels and water tables, and drifting continents. Such events are described in some detail for North America and to a lesser degree for Antarctica.

Seasonality of Southern Ocean sea ice.
Gordon, A.L., *Journal of geophysical research*, May 20, 1981, 86(C5), p.4193-4197, 38 refs.
Sea ice distribution, Seasonal variations, Heat flux, Ice melting.
The sea ice cover of the Southern Ocean undergoes a rapid decrease from mid-November to mid-January. The atmosphere-to-ocean heat flux is insufficient to account for this melting, even in the presence of the high percentage of open water characteristic of the Southern Ocean sea ice. It is estimated that sea-air heat exchange in the 60S to 70S zone can account for roughly 50% of the required spring heating. The remainder must be supplied by the relatively warm deep water residing below the Southern Ocean pycnocline. Deep-to-surface water heat flux is accomplished by upwelling of the pycnocline due to the regional Ekman divergence of the surface layer and by cross-pycnocline mixing. It is estimated that the required vertical mixing coefficient for the pycnocline is 1.5 sq cm/s. This value is considered realistic in view of the relatively weak pycnocline which is a consequence of low levels of fresh water input to the surface layer. It is suggested that the magnitude of fresh water input is a major factor in determining the degree of seasonality of Southern Ocean sea ice. (Auth.)

Glacier ice, Glacier alimentation, Climatic changes, Glacier flow, Antarctica—Byrd Station.
The response of the accumulation regions of glaciers to changes in accumulation rate and in surface temperature is calculated by considering perturbations to the ice flow. The analysis is limited to glaciers in which flow is dominated by internal shear and not by bottom sliding and for which flowlines are geographically parallel. In general glaciers begin to alter thickness immediately after a change in accumulation rate, but the effect of a change in surface temperature is delayed by the time for this temperature change to penetrate to depth in the glacier. A warming leads to glacial thinning. The amount and timing of the response is very different for different glaciers. Characteristic times are on the order of tens of years for mountain glaciers and tens of thousands of years for the East Antarctic ice sheet. As an example, the theory is applied to the ice sheet near Byrd Station, Antarctica. For hypothetical changes in surface accumulation rate and temperature, rates and amounts of thickness change are calculated, and the measured thinning is probably too fast to have been caused by climatic variation alone. The effects of hypothetical climatic variations on the depth-age and depth-temperature relationships through the ice sheet are also calculated. (Auth.)

Antarctic glacial chronology reflected in the Oligocene through Pliocene sedimentary sector of the Ross Sea.
Balshaw, K.M., Houston, Texas, Rice University, 1981, 140p., Ph.D. thesis. Refs. p.125-135.
Geochronology, Glacial geology, Marine deposits, Bottom sediment, Ice formation, Ice sheets, Antarctica—Ross Sea, Antarctica—West Antarctica.
Sedimentologic evidence from the Ross sea glacial section is combined with evidence from the literature to establish a glacial chronology for the East and West Antarctic subcontinents. The West Antarctic archipelago was completely glaciated by late Oligocene time. Renewed growth and expansion of the Ross Ice Shelf is indicated in the latest Miocene and early Pliocene Ross Sea glacial section. Development of an ice sheet over West Antarctica in the middle Miocene (14 to 10 my B.P.) requires an earlier date of formation for the East Antarctica ice sheet. This is supported by new evidence from subglacial volcanism (Stump et al., 1980). These data suggest that the continental East Antarctic ice sheet formed at 20 my B.P. causing the major eustatic sea level drop reported for that time. The majority of the data reported from Southern Ocean DSDP drill sites supports a glacial build up in the middle Miocene. If the new dates of ice sheet formation are accepted then all of this DSDP data is related to the development of the West Antarctic ice sheet, not the East Antarctic ice sheet, as generally assumed. (Auth. mod.)

35-3916
Preliminary investigation of the physical characteristics of the Vahsel Glacier, Heard Island.
Allison, I.F., *Australian National Antarctic Research Expeditions, ANARE scientific reports, Ser. A (IV) Glaciology*, 1980, No.128, 31p., 17 refs.
Glacier thickness, Glacier oscillation, Glacier ablation, Glacier mass balance, Heard Island.
During February 1971 preliminary measurements were made on the Vahsel Glacier, Heard Island, in the South Indian Ocean. Results are presented of the surface velocity, strain-rate, surface profile, gravimetric ice thickness and ablation rates along a line across the glacier 200 m above sea level (a.s.l.). From the measurements estimates are made of the mass balance and equi

librium state of the glacier Despite the appreciable errors associated with short term measurements the results give a useful indication of the present dynamics of the glacier (Auth)

35-3917
Antarctic research programme of the Federal Republic of Germany.
Germany. Federal Republic Minister for Research and Technology, Bonn, 1981, 169p
Research projects, Antarctica.
The events leading up to the decision by the Federal Republic of Germany to become a signatory nation to the Antarctic Treaty are reviewed, responsible and cooperating German antarctic research agencies and institutions are identified German relationships with SCAR and other signatory nations are outlined and the general German philosophy toward antarctic research is set forth Included in the plans is the establishment of the Alfred Wegener Polar Research Institute in Bremerhaven, a permanent research station on the Ronne Ice Shelf and the construction of a polar research and supply ship Details are given of research plans in astronomy, biological sciences, geodesy, cartography, remote sensing, geology, geophysics, glaciology, upper atmosphere and extraterrestrial physics, meteorology and oceanography and engineering sciences The plans call for many programs to begin in the 1980-81 period and extend through 1985-86, other programs set earlier completion times and still others have a later commence period as facilities to carry out the programs become available.

Albedo of snow for partially cloudy skies.
Choudhury, B.J., et al, *Boundary-layer meteorology*, May 1981, 20(3), p.371-389, Refs p 387-389.
Chang, A.T.C.
Snow optics, Albedo, Cloud cover, Spectra, Grain size, Models.
The albedo of snow for different cloudiness conditions is an important parameter in the Earth's radiation budget analysis and in the study of snowpack's thermal conditions. In this study an efficient approximate method is derived to calculate the incident spectral solar flux and snow-cover albedo in terms of different atmospheric, cloud, and snow parameters. The model is illustrated using representative parameters for the Antarctic coastal regions. The albedo for a clear sky depends inversely on the solar elevation. At high elevations the albedo depends primarily upon the grain size, at low elevation the albedo depends on grain size and shape. The gradient of the albedo-elevation curve increases as the grains become larger and faceted. The albedo for a densely overcast sky is a few percent higher than the clear-sky albedo at high elevations. A simple relationship between grain size and the overcast albedo is obtained. For a set of grain size and shape, the albedo as a function of solar elevation and fractional cloud cover is tabulated (Auth. mod.)

35-3965
Economic effectiveness of optimizing the amount of thermal insulation of buildings. (Ekonomicheskaia effektivnost' optimizatsii urovnia teplozashchity zdanii),
Boguslavskii, L.D., Moscow, Strolizdat, 1981, 102p., In Russian with English table of contents enclosed. 26 refs

Physics of glaciers.
Paterson, W.S.B., Oxford, Pergamon Press, 1981, 380p., Refs. p.351-372. 2nd ed. For 1st ed. see 25-108 or 5F-9521.
Ice sheets, Glacier mass balance, Ice shelves, Glacier flow, Glacial hydrology, Temperature distribution.
Developments in the 12 years since the first edition went to press have made necessary a complete revision of the text Extensive new field data have shown that, although the basic concepts developed in the 1950s still stand, many of them are over-simplified As a result, theories have become more complicated and, in addition, computer modelling has added a new dimension to glacier studies New chapters on ice core studies and glacier hydrology deal with topics that are now of major importance but on which little work had been done when the first edition was written A new chapter on structures and fabrics in glaciers and ice sheets treats a subject to which too little attention was paid in the original book. The chapter entitled Heat Budget and Climatology of Glaciers' amalgamates two closely-related topics that were previously discussed separately while the new Chapter 3 is devoted to the mechanism of ice deformation and the flow law Almost all the other chapters have been extensively rewritten (Auth.)

Welch, R.
Cirques, Geomorphology, Orientation, Photogrammetric surveys, Landforms, Aerial surveys, Antarctica—Victoria Valley.
The morphometry of 56 cirques in the Victoria Valley system was analyzed with the aid of X, Y, Z terrain coordinates obtained by photogrammetric techniques from 1 60,000 scale high-altitude aerial photographs recorded in 1970 Morphometric indexes employed for the analyses included orientation, altitude, area, length, width, relief, and gradient, and the axis, circularity, and relief ratios The cirques in the Victoria Valley system have a dominant northeast orientation, and, with a mean area of 3.1 sq km, are considerably larger than those located in the middle latitudes In numerous instances flat divides have been reduced and headwalls breached, indicating that many cirques are in an advanced stage of development Morphological differences are attributed to the stage of cirque development rather than to variations in cirque orientation and/or lithology These models also permit the thickness of glaciers or sediments occupying the cirques to be estimated (Auth mod)

Maritime services to support polar resource development.
U.S. Maritime Transportation Research Board. Committee on Maritime Services to Support Polar Resource Development. Washington, D.C., National Academy Press, 1981, 78p., Refs. p.72-78.
Economic development, Marine transportation, Ports, Sea ice, Ice navigation, Permafrost, Polar regions.
The report addresses anticipated needs in vessels and facilities to support economic development of polar areas. It looks into what facilities and services are now available; the kinds and extent of resources open to development, the operating environment of cold, sea ice, permafrost, and periods of total darkness. Most of the report deals with the economic development of northern polar areas but an appendix specifically addresses Antarctica. With respect to Antarctica it is concluded that there is little interest in antarctic waters by U.S. commercial fisheries, that antarctic mineral and petroleum resources are more limited and less accessible than those in Arctic waters, that maritime technology developed for Arctic areas would be easy to transfer to antarctic uses, and that an ice-strengthened research vessel is needed to support U.S. antarctic scientific programs.

Report on United States antarctic research activities, February 1980-October 1981. United States antarctic research activities planned for October 1981-September 1982.
National Research Council. Polar Research Board, *National Academy of Science-National Research Council. Report to SCAR*, June 1981, No.23, 79p., Refs. p.52-70.
Research projects, Antarctica.
The report identifies specific projects in progress or planned at specified locations, the instruments being used, and researchers involved with the data. Eleven separate disciplines in the atmospheric and earth sciences programs plus activities in the medical and biological sciences, research vessel operations, and information programs are included. World Data Center A subcenters are identified and located as are members of the Polar Research Board, the U.S. Delegate to SCAR and members of SCAR sub-groups.

Modeling nitrogen transport and transformations in soils: 2. Validation.
Iskandar, I.K., et al, *Soil science*, May 1981, 131(5), MP 1441, p.303-312, 12 refs. For Pt. 1 see 35-4081.
Selim, H.M.
Soil chemistry, Nutrient cycle, Transformations, Waste treatment, Water treatment, Ions, Models, Nitrogen.
The nitrogen model described in Part 1 was evaluated using experimental data from a greenhouse lysimeter study for two soils, Windsor sandy loam and Charlton silt loam. Secondary treated waste water was applied to each soil at the rate of 3.8 centimeters twice weekly for 25 weeks. Furthermore, (15) N-enriched NH_4 cation-N was applied, at the beginning of the experiment, in one waste water application. A mixture of grasses was grown on each lysimeter and was harvested every 2 to 4 weeks. Solution samples were collected and analyzed for N, and the soil water pressure head was monitored frequently at different soil depths. Model predictions agreed well with pressure head data with depth and time, as well as gravimetrically determined soil water content with depth for the two soils. (Auth. mod.)

35-4081
Modeling nitrogen transport and transformations in soils: 1. Theoretical considerations.
Selim, H.M., et al, *Soil science*, Apr 1981, 131(4), MP 1440, p.233-241, 24 refs. For Pt. 2 see 34-4080.
Iskandar, I.K.
Soil chemistry, Nutrient cycle, Transformations, Soil water, Water flow, Waste treatment, Water treatment, Mathematical models.
A numerical model was developed to simulate water and nitrogen transport and transformations through water-unsaturated multilayered soil profiles. The nitrogen transformation processes considered were nitrification, denitrification, immobilization, mineralization, and ionic exchange of ammonium. Plant uptakes of water and nitrogen were also included. An explicit-implicit finite difference approximation method was used to solve the nitrogen transport and transformation equations simultaneously with the water flow equation. Model evaluation and sensitivity analysis for a wide range of values for the rate of nitrification, distribution coefficient for ammonium exchange, and rate of N uptake were investigated. (Auth.)

Water flow, Sea ice distribution, Ice forecasting, Mathematical models, Meetings, Wind factors, Heat balance, Air temperature, Polynyas, Bering Sea, Chukchi Sea.
This publication presents the results of investigations carried out by young scientists of the Arctic and Antarctic Scientific Research institute on problems of polar hydrometeorology, geomorphology, and geophysics. It contains reports read at the fourth annual conference of young specialists of the AANII held on December 24-25, 1973 at Leningrad. The collection deals with a wide range of problems relating to the hydrometeorological regime of the Arctic and the Antarctic, absorption of radio waves in the ionosphere and magnetic activity in the Arctic during magnetospheric substorms. Problems of the nonlinear mechanics of hydrometeorological elements and the geomorphology of northeastern Taimyr are considered. Original installations and instruments for hydrometeorological research are described. (Auth.)

Cornish, C.R., Molenar, J.V , Owens, M.S., Young, L.G.
Snow cover, Chemical composition, Meteorological factors, Seasonal variations, Antarctica—Ross Ice Shelf.
Snow and firn from seven 2-m and two 5-m pits on the Ross Ice Shelf, Antarctica, were analysed for Na, Mg, Ca, K and beta-activity The concentrations of the elements vary with depth, maximum to minimum values covering ranges of 10 1 Changes in concentration for all four elements are coincident in depth at any one site. When concentrations are highest, elemental ratios are close to sea water values indicating a predominantly marine influence At lower concentrations, ratios are different from sea water and Mg, Ca and K are enriched with respect to Na, suggesting that other aerosol sources (e g crustal) may be contributing a proportionately larger fraction Chemical profile characteristics are highly correlated between sites up to 450 km apart, the regression line slopes providing estimates of ratios of snow accumulations at these sites These ratios agree well with independent estimates based on beta-activity measurements and snow stratigraphy. The changes of chemical concentration with depth are attributed to large seasonal meteorological events which influence substantial geographical areas virtually simultaneously. The results suggest autumn as the principal season for maximum concentrations of oceanic elements, being the period of minimum sea-ice extent also (Auth mod)

Ice cores, Ice composition, Minerals, Dust, Climatic changes.
Composition and mass results are presented for the mineral phase in the cores from a 500-m borehole drilled in 1970 in central East Antarctica (Vostok station) The level of the mineral component has varied over the range 0 02-0 40 mg/liter over the last 20,000 years and is correlated with variations in climate The upper horizons in the snow cover have higher dust levels than the middle ones during the historical period, but the increase in dust level began more than 5000 years ago, which cannot be due to Man's activities. Also, the levels of Cu, Zn, Sb, Hg, Pb, Se, and other elements in the current material are below the means, which also shows that human sources have had no effect on the global background state of the atmosphere (Auth)

This paper reports on a study undertaken to determine the hydrologic and hydraulic impacts of a proposed winter navigation demonstration program on the St Lawrence River. The study assessed the impacts of modifying currently operational ice control booms on the levels and flows of Lake Ontario and the St Lawrence River at several locations to control ice jamming and subsequent adverse effects on the Moses-Saunders Power Dam. The study assumed that an ice control boom would be modified to allow vessel transits for winter navigation. A one-dimensional hydraulic transient model that simulated water profiles and flows in the St Lawrence River under both open water and ice covered conditions was utilized to determine the impacts of the increased ice cover thickness downstream caused by this modification. (Auth mod.)

Ice control at navigation locks.
Hanamoto, B., MP 1448, Specialty Conference Water Forum '81, San Francisco, Aug. 10-14, 1981. Proceedings. Vol.2, New York, American Society of Civil Engineers, 1981, p.1088-1095.
Ice control, Ice navigation, Locks (waterways), Bubbling, Tests.
A method for controlling ice at navigation locks is presented. A high-flow air screen placed across the entrance of a lock holds back ice floating downstream or pushed ahead of traffic. The analysis is based on low-flow bubbler systems. The applicability of this analysis to high-flow systems is examined by conducting laboratory tests. (Auth.)

35-4169
Ice control arrangement for winter navigation.
Perham, R.E., MP 1449, Specialty Conference Water Forum '81, San Francisco, Aug. 10-14, 1981. Proceedings. Vol.2, New York, American Society of Civil Engineers, 1981, p.1096-1103, 9 refs.
Ice navigation, Ice control, River ice, Ice jams, Ice booms, Water level.
This paper presents a four-year summary of the main effects of the booms on ice and ship interaction and vice-versa. Throughout the four winter seasons, relatively small quantities of ice were lost over and between the booms. Ships usually slid through without influencing the boom force levels, although, at times, the changes they wrought could be large. One boom needed strengthening and artificial islands were added for ice stability upstream. These devices and frequent icebreaker operations were able to compensate for the ice movement caused by winter navigation in this area.

Mae, S., Murayama, M.
Water pollution, Water treatment, Waste disposal, Sanitary engineering, Antarctica—Mizuho Station.
As long as the activity of Mizuho Station is maintained, it will cause environmental pollution. The authors propose a treatment and disposal system of garbage, feces and waste water as a suitable system adapted for climatic conditions at Mizuho Station. This system involves freezing waste water in blocks and sealing garbage and feces in these blocks. (Auth.)

Kusunoki, K., *Seppyo*, Mar. 1981, 43(1), p.55-61, 3 refs.
Research projects, Glaciology, Meteorites, Antarctica—Showa Station, Antarctica—Mizuho Station.
Japanese Antarctic Research Expedition (JARE) established Showa Station on East Ongul Island in Lützow-Holm Bay in January 1957 and an inland station Mizuho in July 1970. These two stations have been the bases for glaciological work of JARE in conjunction with the research at home laboratories. Field activities of JARE are divided into three periods: the exploratory period from 1957 to February 1969 which was terminated with a successful return trip from Showa Station to the South Pole in the 1968-1969 field season, the second period from 1969 to 1978 is characterized by a systematic glaciological survey of Mizuho Plateau, oversnow traverses, and station glaciology at Mizuho Station where ice core drillings were conducted, from 1978 a three-year programme (POLEX South) is in progress to investigate the air-ice sheet-sea (ice) interactions

Major outcomes in these periods are described briefly with the discovery of meteorites (about 4,000 specimens) near the Yamato Mountains and the Belgica Mountains. Reports on glaciological research and meteorite research in south Victoria Land are appended. (Auth.)

Aerophotographic interpretation of surface features and an estimation of ice discharge at the outlet of the Shirase drainage basin, Antarctica.
Fujii, Y., *Antarctic record,* Mar. 1981, No.72, p.1-15, 9 refs.
Glacier mass balance, Glacier flow, Ice cover thickness, Wind (meteorology) Antarctica—Shirase Glacier.
Aerophotographs taken by the Japanese Antarctic Research Expedition in 1962, 1969, 1975 and 1977 are analyzed to classify distinctive surface structures and katabatic wind regime at the terminus of the Shirase Glacier (70S, 39E). Ice discharge from the Shirase drainage basin is calculated as the sum of ice discharge from three subdivisional drainages with different flow velocities and ice thickness at their outlets. From the displacement of icebergs, the flow velocities of about 2500 m/a and about 360 m/a are obtained for the Shirase Glacier and the sheet flow in the west of the Shirase Glacier, respectively. Thicknesses of the icebergs near the calving front are also obtained by aerophotogrammetry. The total discharge from the Shirase drainage basin is reported to be more accurate than the values by other authors. Subtracting the total discharge from the income previously reported by other authors, the mass budget of the ice sheet in the basin is estimated. (Auth. mod.)

35-4221
Airborne radio echo sounding on the Shirase Glacier and its drainage basin, East Antarctica.
Wada, M., et al, *Antarctic record,* Mar. 1981, No.72, p.16-25, 16 refs.
Mae, S.
Glacier ice, Ice cover thickness, Radio echo soundings, Subglacial observations, Crevasses, Antarctica—Shirase Glacier.
Airborne radio echo sounding carried out on the Shirase Glacier and its drainage basin in January 1980 is described. The new sounder (NIPR-A) was operated at 179 MHZ on board a Pilatus Porter PC-6. Analysis of the continuous records of the sounding gave the bedrock topography along the flow line as well as in several cross sections of the downstream part of the glacier. The intense echo caused by the crevasses in the latter area masked it from the bed and so the depth and profile of the bedrock were obscured. In the lower part near point B (70 deg 20'S, 39 deg 20'E), the bedrock was partly below sea level. The bedrock topography 50 km upstream from B is complicated compared with that of the upper reaches of the Shirase Glacier drainage basin. The ice thickness measurements on the former C route taken by the traverse party in 1974 (C94, 98) coincided well with the present results. (Auth.)

Ship icing, Ice accretion, Ice prevention, Ice forecasting, Sea spray, Ice formation, Wind tunnels, Temperature effects.

35-4223
LNG carrier underwater noise study for Baffin Bay.
Leggat, L.J., et al, Jan. 1981, 14p. + 14 figs., Unpublished manuscript. Presented at the Meeting of the Acoustical Society of America, 1981. 9 refs.
Merklinger, H.M., Kennedy, J.L.
Underwater acoustics, Sound transmission, Wave propagation, Noise (sound), Ice cover effect, Environmental impact.

35-4224
Deep-sea traces from the central Arctic: an analysis of diversity.
Kitchell, J.A., *Deep-sea research,* 1979, Vol.26A, p.1185-1198, 53 refs.
Marine biology, Animals, Fossils, Bottom sediment, Arctic Ocean.

35-4225
U.S. Geological Survey in Alaska; 1981 programs.
Reed, K.M., ed, *U S Geological Survey. Circular,* 1981, No.843, 111p.
Geological surveys, Mapping, Research projects, Natural resources, Water reserves, Minerals, United States—Alaska.

35-4226
Construction of transmission lines for power supply of the Baykal-Amur railroad. [Stroitel'stvo linii elektroperedachi dlia elektrosnabzhenia Baikalo-Amurskoi magistrali],
Petrov, N.K., *Energeticheskoe stroitel'stvo,* May 1981, No 5, p.2-5, In Russian.
Electric power, Transmission lines, Permafrost beneath structures, Power line supports, Foundations, Baykal Amur railroad.

35-4227
Controlling stresses in concrete dams with columnar joints during the concrete placing process. [Regulirovanie napriazhennogo sostoianiia betonnykh plotin so stolbchatoi narezkoi v protsesse vozvedeniia],
Epifanov, A.P., et al, *Energeticheskoe stroitel'stvo,* May 1981, No.5, p.5-8, In Russian. 4 refs
Idel'son, V.B., Sil'nitskii, V.I., Starshinov, S.N.
Concrete structures, Hydraulic structures, Dams, Joints (junctions), Grouting, Permafrost beneath structures, Stresses.

35-4228
Ultrasound technique of determining frost resistance of concretes in hydraulic structures. [Uskorennoe opredelenie morozostoikosti gidrotekhnicheskogo betona ul'trazvukovym metodom],
Filonidov, A.M., *Energeticheskoe stroitel'stvo,* May 1981, No.5, p.14-15, In Russian.
Hydraulic structures, Concrete freezing, Freeze thaw cycles, Frost resistance, Acoustic measurement.

35-4229
Industrialization of the construction of steam power stations in the Far North. [Ob industrializatsii stroitel'stva teplovykh elektrostantsii v raionakh Krainego Severa],
Takh, M.G., *Energeticheskoe stroitel'stvo,* May 1981, No.5, p 26-28, In Russian.
Electric power, Foundations, Piles, Hydraulic structures, Buildings, Concrete structures, Permafrost beneath structures, Cost analysis.

35-4230
Using soft enclosures in power engineering construction. [Ispol'zovanie miagkikh obolochek v energeticheskom stroitel'stve],
Kul'nev, A.N., *Energeticheskoe stroitel'stvo,* May 1981, No.5, p.32-36, In Russian.
Inflatable structures, Snow loads, Wind pressure, Plastics, Polymers, Hydraulic structures, Electric power, Dams, Permafrost beneath structures.

35-4231
Upbuilding ash tailings of the Tom-Usa State Regional Electric Power Plant. [Narashchivanie damb zolootvalov Tom'-Usinskoi GRES],
Bessonov, A.V., *Energeticheskoe stroitel'stvo,* May 1981, No.5, p.37-38, In Russian.
Swamps, Peat, Clay soils, Electric power, Tailings, Dams, Embankments, Hydraulic fill, Construction equipment.

35-4232
Construction of rural transmission lines in swampy areas. [Stroitel'stvo sel'skikh linii elektroperedachi v bolotistoi mestnosti],
IAkunin, I.I., et al, *Energeticheskoe stroitel'stvo,* May 1981, No.5, p.44-47, In Russian.
Ishimov, I.Z.
Swamps, Taiga, Transmission lines, Electric power, Power line supports, Frost heave.

35-4233
Installation of cylindrical reservoirs in the Far North. [Montazh tsilindricheskikh rezervuarov v usloviiakh Krainego Severa],
Leonov, O.N., et al, *Energeticheskoe stroitel'stvo,* May 1981, No.5, p.47-48, In Russian.
Ovchinnikov, I.G.
Gas production, Storage, Reservoirs, Permafrost beneath structures.

35-4234
Modeling approach based on stochastic differential equations, the principle of maximum entropy, and Bayesian inference for parameters.
Tiwari, J.L., Statistical ecology series, Vol.10, Fairland, Md., International Co-operative Publishing House, 1979, p.167-193, Compartmental analysis of ecosystem models. Edited by J.H. Matis, B.C. Patten and G.C. White. Refs. p.189-193.
Ecosystems, Mathematical models, Thermodynamics, Primary productivity, Statistical analysis.

35-4235
Alpine bird communities of western North America: implications for management and research.
Braun, C.E., *U.S. Forest Service. General technical report,* (1980), INT-86, p.280-291, Workshop proceedings: Management of Western Forests and Grasslands for Nongame Birds, Salt Lake City, Utah, Feb. 11-14, 1980. Refs. p.287-291.
Ecosystems, Forest lines, Animals, Mountains, Birds.

35-4236
Semipalmated Sandpiper in Alaska: reproductive strategies and tactics.
Safriel, U.N., *Ibis,* 1980, Vol 122, p 425
Ecosystems, Animals, Tundra, Birds, Behavior.

35-4237
Territory size and composition in relation to resource abundance in Lapland Longspurs breeding in arctic Alaska.
Seastedt, T.R., et al, *Auk,* Jan. 1979, Vol.96, p.131-142, 34 refs.
MacLean, S.F.
Ecosystems, Animals, Climatic factors, Tundra, Birds, Population (statistics), Behavior.

35-4238
Reliability components of pipeline transport. (Sostavliaiushchie nadezhnosti truboprovodnogo transporta),
Ivantsov, D.M., *Stroitel'stvo truboprovodov,* May 1981, No.5, p.13-16, In Russian.
Plains, Paludification, Gas pipelines, Permafrost beneath structures, Frost heave.

35-4239
Organizing pipeline construction in swampy taiga. (Kontseptsiia organizatsii stroitel'stva magistral'nykh truboprovodov v taezhno-bolotistoi mestnosti),
Karpenko, M.P., *Stroitel'stvo truboprovodov,* May 1981, No.5, p 29-31, In Russian.
Taiga, Swamps, Pipelines, Roads, Snow roads, Ice roads.

35-4240
Large components as a basis for the intensification of residential building construction. (Blok-komplekty—osnova intensifikatsii zhilishchnogo stroitel'stva),
Seredin, V.G., et al, *Stroitel'stvo truboprovodov,* May 1981, No.5, p.31-32, In Russian.
Terekhin, A.A.
Petroleum industry, Residential buildings, Prefabrication, Permafrost beneath structures, Construction equipment, Construction materials.

35-4241
Improving the construction of underwater pipelines. (Sovershenstvovanie stroitel'stva podvodnykh truboprovodov),
Basharat'ian, P.P., et al, *Stroitel'stvo truboprovodov,* May 1981, No.5, p.32-33, In Russian.
Ivashchenko, V.V.
Pipe laying, River crossings, Underwater pipelines, Earthwork, Cold weather construction.

35-4242
Industrial method. (Industrial'nym metodom),
Manasypov, F.S., *Stroitel'stvo truboprovodov,* May 1981, No.5, p.33-34, In Russian.
Foundations, Oil recovery, Petroleum transportation, Pipelines, Pumps, Stations, Permafrost beneath structures, Buildings.

35-4243
Innovations suggested by the trust Severtruboprovodstroi. (Predlagaiut ratsionalizatory tresta Severtruboprovodstroi), *Stroitel'stvo truboprovodov,* May 1981, No.5, p.36-38, In Russian.
Earthwork, Excavation, Pipe laying, Anchors, Trenching, Pile driving, Transportation, Swamps, Permafrost.

35-4244
Prospects of using surface supports for elevated pipelines. (Perspektivy primeneniia poverkhnostnykh opor truboprovodov),
Natrov, G.V., et al, *Neftepromyslovoe stroitel'stvo,* 1981, No.7, p.2-3, In Russian.
Roads, Pipeline supports, Piles, Plates, Landscape types, Petroleum industry, Tundra.

35-4245
Modeling temperature regime in different types of ground cross-sections when building earth dams. (Modelirovanie temperaturnogo rezhima v razlichnykh tipakh gruntovykh razrezov pri otsypke nasypei),
Bezrukov, V.F., et al, *Neftepromyslovoe stroitel'stvo,* 1981, No.7, p.18-19, In Russian.
Zharov, L.M.
Petroleum industry, Earthwork, Embankments, Foundations, Earth fills, Peat, Permafrost beneath structures.

35-4246
New method of foundation design for petroleum industry objects in West Siberia. (Novyi sposob obrazovanna osnovanii dlia neftegazopromyslovykh ob"ektov v Zapadnoi Sibiri),
Pavlov, V.I., et al, *Neftepromyslovoe stroitel'stvo,* 1981, No.7, p.23-25, In Russian.
Shpak, D.N.
Site accessibility, Paludification, Foundations, Earth fills, Construction materials.

35-4247
Airborne multifrequency radiometry of sea ice.
Skou, N., *Copenhagen. Polyteknisk laereanstalt Laboratoriet for elektromagnetisk feltteori Document,* Mar. 1980, LD 42, 198p, 18 refs.
Sea ice distribution, Ice conditions, Radiometry, Airborne equipment, Oceanography, Computer programs.

35-4248
Deposition of trace metals and sulfates onto arctic snow.
Davidson, C.I., Pittsburgh, Pa., Carnegie-Mellon University, Jan. 1981, 59p, NSF Grant DPP-7727481, Refs. p.21-24.
Aerosols, Impurities, Snow composition, Air pollution, Precipitation (meteorology), Human factors.

35-4249
Scheiner's halo: evidence for ice Ic in the atmosphere.
Whalley, E., *Science,* Jan. 23, 1981, 211(4479), p.389-390, 24 refs
Ice crystal optics, Ice crystal structure, Extraterrestrial ice, Refraction, Ice crystal nuclei, Sunlight.

35-4250
Infrared (10.6-micron) scattering and extinction in laboratory water and ice clouds.
Sassen, K., *Applied optics,* Jan. 15, 1981, 20(2), p.185-193, 13 refs.
Light scattering, Ice crystal optics, Infrared spectroscopy, Cloud dissipation, Cloud seeding, Cloud droplets, Remote sensing.

35-4251
Protons rush through ice. *New scientist,* Jan. 1, 1981, 89(1234), p.20.
Ice physics, Proton transport.

35-4252
Considerations on the damages caused by snow in Scotch pine plantations. (Gondolatok az erdeifenyő plantázsban bekövetkezett hókárokról),
Mátyás, C., *Az erdő,* June 1981, 30(6), p.270-272, In Hungarian. 2 refs.
Forest canopy, Damage, Snow cover effect, Snow loads.

35-4253
Alaska roadbuilding: just add water. *Engineering news-record,* Feb. 12, 1981, 206(7), p.44.
Ice roads, Cold weather construction.

35-4254
Surface heat loss and frazil ice production in the St. Lawrence River.
Shen, H.T., *Water resources bulletin,* Dec. 1980, 16(6), p.996-1001, 12 refs.
Frazil ice, Ice growth, River ice, Heat loss, Water temperature, Heat transfer, Freezing, Heat flux, Ice friction.

35-4255
Operational applications of sateilite snow cover observations.
Rango, A., *Water resources bulletin,* Dec. 1980, 16(6), p.1066-1073, 18 refs.
Snow cover distribution, Remote sensing, Runoff forecasting, Snowmelt, Stream flow, Seasonal variations, Models.

35-4256
Pulse propagation in the central Arctic Ocean.
Kutschale, H.W., (1981), 33 leaves, Unpublished manuscript. Presented at the 101st Meeting of the Acoustical Society of America, 1981. 22 refs.
Underwater acoustics, Wave propagation, Sound transmission, Ice cover effect, Sea ice, Ice bottom surface.

35-4257
Runoff of deicing salt in Buffalo, New York.
Rumer, R.R., Jr., et al, Symposium on Salt, 4th, Houston, Tex., 1973, Proceedings, Vol.2, edited by A.H. Coogan, Cleveland, Northern Ohio Geological Society, Inc., c1974, p.407-411, 6 refs.
Apmann, R.P., Chien, C.C.
Salting, Chemical ice prevention, Lake water, Runoff, Water chemistry.

35-4258
Basic technical requirements made of motor vehicles destined for use in the North.
Krestovnikov, G.A., et al, *U.S. Army Foreign Science and Technology Center. Technical translation,* Apr 1981, FSTC-HT-48-81, 11p, For Russian original see Avtomobil'naia promyshlennost', 1980, No.2, p 10-12.
Nerush, A.R.
Motor vehicles, Cold weather operation, Temperature effects.

35-4259
Ecology of a black spruce *(Picea mariana)* clonal population in the hemiarctic zone, northern Quebec: population dynamics and spatial development.
Légère, A., et al, *Arctic and alpine research,* Aug 1981, 13(3), p 261-276, 30 refs
Payette, S
Growth, Plant ecology, Distribution, Subarctic regions.

35-4260
Land surface and lake storage during snowmelt runoff in a subarctic drainage system.
FitzGibbon, J.E., et al, *Arctic and alpine research,* Aug. 1981, 13(3), p.277-285, 12 refs.
Dunne, T.
Runoff, Landforms, Snowmelt, Water reserves, Lakes, Drainage, Topographic effects, Hydrology, Surface properties.

35-4261
Radiation balance of melting snow in open boreal forest.
Petzold, D.E., *Arctic and alpine research,* Aug. 1981, 13(3), p.287-293, 6 refs.
Snow melting, Radiation balance, Forest land, Forest canopy, Solar radiation.

35-4262
Channel form and flow characteristics of supraglacial streams, Austre Okstindbreen, Norway.
Knighton, A.D., *Arctic and alpine research,* Aug. 1981, 13(3), p.295-306, 27 refs.
Glacial rivers, Stream flow, Channels (waterways).

35-4263
Mass balance of Peyto Glacier, Alberta, Canada, 1965 to 1978.
Young, G.J., *Arctic and alpine research,* Aug 1981, 13(3), p.307-318, 17 refs.
Glacier mass balance, Snow line, Glacier oscillation, Canada—Alberta—Peyto Glacier.

35-4264
Topoclimatic factors and the development of rock glacier facies, Sangre de Cristo Mountains, southern Colorado.
Morris, S.E., *Arctic and alpine research,* Aug. 1981, 13(3), p 329-338, 31 refs.
Altitude, Rock glaciers, Topographic effects, Climatic factors, Rock mechanics, Solar radiation, Cirques.

35-4265
Frozen drops observed at Fairbanks, Alaska.
Sakurai, K., et al, *Seppyo,* June 1981, 43(2), p.73-76, 5 refs.
Ohtake, T.
Cloud droplets, Freezing nuclei, Ice crystal structure, Supercooled clouds, Air temperature, Temperature effects.

35-4266
Simple snowfall detector employing infrared rays reflection.
Tsubata, I., et al, *Seppyo,* June 1981, 43(2), p.77-82, In Japanese with English summary, 3 refs.
Sorimachi, Y.
Snow melting, Snowfall, Detection, Measuring instruments, Infrared equipment, Reflection.

35-4267
Experimental study of uniaxial compressive strength of segregated ice in soil.
Ohrai, T., et al, *Seppyo,* June 1981, 43(2), p.83-96, In Japanese with English summary, 49 refs.
Takashi, T., Yamamoto, H., Okamoto, J.
Ground ice, Ice lenses, Compressive properties, Ice strength, Loads (forces), Ice growth, Strains, Temperature effects, Experimentation.

35-4268
Ablation study on the Yukikabe snow patch in the Daisetsu Mountains.
Sato, A., et al, *Seppyo,* June 1981, 43(2), p.97-100, In Japanese. 21 refs.
Takahashi, S., Naruse, R., Wakahama, G
Snow cover distribution, Ablation, Mountains.

35-4269
Experimental study on the establishment of road-protecting forest against snow drift for Route 40 at Sarakitomanai, northernmost Hokkaido, Pt. 1.
Saito, S., *Seppyo*, June 1981, 43(2), 101-106, In Japanese. 18 refs.
Snowdrifts, Countermeasures, Protective vegetation, Roads, Trees (plants), Snow accumulation.

35-4270
Canadian field activities in ice engineering, Pt. 1.
Nakawo, M., *Seppyo*, June 1981, 43(2), p.107-114, In Japanese. 24 refs.
Sea ice, Ice islands, Ice surveys, Offshore structures, Engineering, Floating ice, Ice strength, Floating structures, Canada.

35-4271
First artificial snow crystals, (Pt. 3).
Sekido, Y., *Seppyo*, June 1981, 43(2), p 115-122, In Japanese.
Snow crystal growth, Artificial snow, Snow crystal structure.

35-4272
Last decade of activities of the avalanche research group in Japan, Pt. 1.
Nitta, R., *Seppyo*, June 1981, 43(2), p.123-127, In Japanese.
Avalanche formation, Countermeasures, Damage, Accidents.

35-4273
Glaciological research project in the east Queen Maud Land, Antarctica.
Higashi, A., *Seppyo*, June 1981, 43(2), p 129-130, In Japanese. 2 refs.
Glaciology, Ice surveys, Snow surveys, Research projects, Antarctica—Queen Maud Land.
Research activities conducted by the Japanese Antarctic Research Expedition Mizuho Plateau are briefly reported, with emphasis on studies in 1978 made as part of the POLEX-South program. An organization chart is included.

35-4274
Example of nonexistence of a classical solution of the Stefan problem. (Primer nesushchestvovaniia klassicheskogo resheniia zadachi Stefana),
Meirmanov, A.M., *Akademiia nauk SSSR. Doklady*, 1981, 258(3), p.547-549, In Russian. 3 refs.
Stefan problem, Phase transformations, Interfaces, Heat transfer, Mass transfer.

35-4275
Statistical predictability of mean annual air temperature over the northern hemisphere. (Statisticheskaia predskazuemost' srednei godovoi temperatury vozdukha severnogo polushariia),
Prival'skii, V.E., *Akademiia nauk SSSR. Doklady*, 1981, 257(6), p 1342-1345, In Russian. 12 refs.
Weather forecasting, Air temperature, Statistical analysis.

35-4276
Forests and forestry problems in the Baykal Amur railroad area. (Lesa i problemy lesnogo khoziaistva v zone BAMa),
Nikolaiuk, V.A., *Russia. Ministerstvo vysshego i srednego spetsial'nogo obrazovaniia. Izvestiia vysshikh uchebnykh zavedenii. Lesnoi zhurnal*, 1981, No.1, p.6-11, In Russian. 6 refs.
Mountains, Permafrost distribution, Taiga, Permafrost hydrology, Naleds, Slope processes, Avalanches, Protective vegetation, Forest strips, Snow accumulation, Baykal Amur railroad.

35-4277
Regionalization of the USSR by levels of demands for environmental protection measures. (Opyt ralonirovania territorii SSSR po urovniam potrebnosti v prirodookhrannykh meropriiatiiakh),
Chepurko, N.L., et al, *Moscow. Universitet. Vestnik. Seriia 5 Geografiia*, May-June 1981, No.3, p 44-50, In Russian. 9 refs.
Chizhova, V.P.
Landscape types, Environmental protection, Mapping, Tundra, Petroleum industry, Swamps, Slope processes, Charts.

35-4278
Resistance of forest soils to changes induced by oil recovery. (Ustoichivost' tekhnogennoi transformatsii lesnykh pochv pri neftedobyche),
Sointseva, N.P., *Moscow. Universitet. Vestnik. Seriia 5 Geografiia*, May-June 1981, No.3, p.50-58, In Russian. 4 refs.
Oil recovery, Hydrocarbons, Forest soils, Environmental protection, Soil pollution, Landscape types, Petroleum industry, Deserts, Taiga, Tundra.

35-4279
Reusable shelters for maintenance and repair of machines at the Baykal Amur railroad. (Inventarnye ukrytiia dlia obsluzhivaniia i remonta tekhniki na BAMe),
Talts, V.G., *Mekhanizatsiia stroitel'stva*, July 1981, No.7, p.10-12, In Russian.
Construction equipment, Winter maintenance, Storage, Shelters, Heating, Permafrost beneath structures, Baykal Amur railroad.

35-4280
Organizing the construction of the Sayano-Shushenskaya hydroelectric power plant. (Organizatsiia stroitel'stva Saiano-Shushenskoi GES),
Efimenko, A.I., et al, *Energeticheskoe stroitel'stvo*, July 1981, No.7, p.4-11, In Russian.
Sadovskii, S.I.
Hydraulic structures, Electric power, Concrete structures, Dams, Winter concreting.

35-4281
Complex mechanization of concrete works. (Kompleksnaia mekhanizatsiia betonnykh rabot),
Kuperman, V.L., et al, *Energeticheskoe stroitel'stvo*, July 1981, No.7, p.12-15, In Russian.
Hydraulic structures, Electric power, Dams, Concrete structures, Thermal stresses, Joints (junctions), Grouting, Concrete placing, Construction equipment, Cranes (hoists).

35-4282
Tall block technique used in building the Sayano-Shushenskaya dam. (Vozvedenie plotiny Saiano-Shushenskoi GES vysokimi blokami),
Kuperman, V.L., et al, *Energeticheskoe stroitel'stvo*, July 1981, No.7, p.15-18, In Russian.
Hydraulic structures, Dams, Concrete placing, Formwork (construction).

35-4283
Winter concreting. (Proizvodstvo betonnykh rabot v zimnee vremia),
Sadovskii, S.I., et al, *Energeticheskoe stroitel'stvo*, July 1981, No.7, p.19-21, In Russian.
Kuz'min, K.K., Zinchenko, N.A.
Electric power, Hydraulic structures, Dams, Winter concreting, Concrete aggregates, Concrete heating, Concrete placing.

35-4284
Automatically raising shelters for winter concreting. (Samopod"emnyi shater dlia zimnego betonirovaniia),
Kraitser, A.L., et al, *Energeticheskoe stroitel'stvo*, July 1981, No.7, p 21-24, In Russian
Winter concreting, Shelters, Design, Electric power, Dams.

35-4285
Construction of the Ob' River crossing of the 220 kw Polotskaya-Ust'-Balyk overhead line using the railroad bridge. (Sooruzhenie perekhoda VL 220 kV Polotskaia-Ust'-Balyk cherez Ob' po zheleznodorozhnomu mostu),
Shchepetkin, A.N., et al, *Energeticheskoe stroitel'stvo*, July 1981, No 7, , 64-66, In Russian.
Power lines, River crossings, Bridges, Power line supports, Power line icing, Ice loads, Wind factors.

35-4286
Economic effectiveness of using screw piles in foundations of exploratory well rigs. (Ekonomicheskaia effektivnost' primenenia vintovykh svai pri stroitel'stve osnovanii pod razvedochnye burovye na neft' i gaz),
Kolomeitsev, V.T., et al, *Neftepromyslovoe stroitel'stvo*, 1981, No.6, p.14-15, In Russian.
Farkhazov, R.I., Davydov, A.K.
Piles, Petroleum industry, Loess, Peat, Fines, Thixotropy, Exploration, Foundations.

35-4287
Role of transport in the outpost method of economic development of northern USSR. (Rol' transporta v vakhtenno-ekspeditsionnom osvoenii severnykh raionov SSSR),
Gromov, N.N., et al, *Neftepromyslovoe stroitel'stvo*, 1981, No.6, p.25-30, In Russian.
Chudnovskii, A.D.
Subpolar regions, Economic development, Transportation, Petroleum industry, Residential buildings, Foundations, Pipelines.

35-4288
Experimental and analytical method of studying oscillations, stresses and stability of bases beneath foundations of machines. (Eksperimental'no-rashchetnyi metod issledovanii kolebanii napriazhennogo sostoianiia i ustoichivosti osnovanii fundamentov pod mashiny),
Krasnikov, N.D., et al, *Russia. Ministerstvo vysshego i srednego spetsial'nogo obrazovaniia. Izvestiia vysshikh uchebnykh zavedenii. Stroitel'stvo i arkhitektura*, 1981, No 5, p.7-21, In Russian. 16 refs.
Savinov, O.A., Tolkachev, G.S., Eisler, L.A.
Foundations, Soils, Fines, Paludification, Dynamic loads, Thixotropy.

35-4289
Optimization of earthwork planning. (K optimizatsii planov proizvodstva zemlianykh rabot),
Ratskevich, G.I., *Russia. Ministerstvo vysshego i srednego spetsial'nogo obrazovaniia. Izvestiia vysshikh uchebnykh zavedenii. Stroitel'stvo i arkhitektura*, 1981, No.5, p.84-88, In Russian. 1 ref.
Earthwork, Frozen ground, Seasonal freeze thaw, Production engineering, Mathematical models.

35-4290
Freezing of fluids in fully developed turbulent streams in underground channels. (Zatverdevanie zhidkosti pri polnost'iu razvitykh turbulentnykh potokakh v podzemnykh kanalakhj,
Karaush, S.A., et al, *Russia. Ministerstvo vysshego i srednego spetsial'nogo obrazovaniia. Izvestiia vysshikh uchebnykh zavedenii. Stroitel'stvo i arkhitektura*, 1981, No.5, p.117-122, In Russian. 5 refs.
Furman, A.V.
Water pipelines, Underground pipelines, Frozen ground, Seasonal freeze thaw, Active layer, Permafrost beneath structures, Pipeline freezing, Analysis (mathematics).

35-4291
Spreading impregnating compounds over the surface of monolithic reinforced concrete in freezing weather. (Poverkhnostnaia propitka monolitnogo zhelezobetona v zimnikh usloviiakh),
Alekseenko, L.N., et al, *Russia. Ministerstvo vysshego i srednego spetsial'nogo obrazovaniia. Izvestiia vysshikh uchebnykh zavedenii. Stroitel'stvo i arkhitektura*, 1981, No.4, p.67-71, In Russian. 9 refs.
Cherniavskii, V.L.
Reinforced concretes, Waterproofing, Concrete freezing, Freeze thaw cycles, Cold weather construction, Construction materials.

35-4292
Statistical analysis of the high strength steel 12GN2MFAIU. (Statisticheskii analiz svoistv vysokoprochnoi stali marki 12GN2MFAIU),
Mukhanov, K.K., et al, *Russia. Ministerstvo vysshego i srednego spetsial'nogo obrazovaniia. Izvestiia vysshikh uchebnykh zavedenii. Stroitel'stvo i arkhitektura*, 1981, No.4, p.133-136, In Russian. 6 refs.
Ishmeneva, L.N.
Steel structures, Frost resistance, Alloys, Hardness tests.

35-4293
General conditions in arctic areas. (Arktisten alueitten yleiset olosuhteet),
Karri, J., *Helsinki. Valtion teknillinen tutkimuskeskus. Rakenneteknikan laboratorio. Tiedonanto*, Mar. 1981, No.12, 56p. + 5 figs., In Finnish with English summary, 21 refs.
Permafrost distribution, Cold weather construction, Snow surveys, Sea ice, Ice conditions, Meteorological data.

35-4294
C-axes growth rate of ice crystals.

Observations on the stone-banked lobes of Marion Island.
Hall, K., *South African journal of science*, Mar. 1981, 77(3), p.129-131, 12 refs.
Patterned ground, Glacial geology, Marion Island.

Stone-banked lobes occurring on the glacial debris of sub-Antarctic Marion Island, through the altitudinal range 70 m to 450 m above sea level (a.s.l.) are described. From their relationship to past and present climatic conditions, it is concluded that the stone-banked lobes are not a product of the present conditions and that today they are largely inactive. It is tentatively suggested that lobe formation took place during the latter stages of the last glacial and that some were formed immediately upon deglaciation, around 11,000 B.P. (Auth.) Correlation coefficients expressing the possible relationships between various lobe parameters have been derived, which suggest that there is an increase in riser height with increase in lobe length and, at the same time, lobe slope.

35-4297
241Pu/239+240Pu ratios in polar glaciers.
Koide, M., et al. *Earth and planetary science letters*, July 1981, 54(2), p.239-247, 21 refs.
Goldberg, E.D.
Glacier ice, Impurities, Ice composition, Radioactive isotopes, Antarctica—Victoria Land.
The analyses of plutonium isotopes in dated strata of polar ice sheets indicate that the 241Pu/239+240Pu activity ratio produced in the U.S.-dominated nuclear tests during the 1950s was about 26, while that in the U.S.S.R.-dominated weapons tests in the early 1960s was between 12 and 14. This difference provides time horizons for sedimentary deposits. Further, the 239Pu/240Pu ratio may show a similar difference in fallout values from these two periods of weapons testing and may provide an additional, and perhaps more sensitive, chronology for sediments. Data from J-9 and Dome C were used in the analysis to obtain comparative ratios. (Auth.)

35-4298
Primary production under the Ross Ice Shelf, Antarctica.
Horrigan, S.G., *Limnology and oceanography*, Mar. 1981, 26(2), p.378-382, 18 refs.
Ice shelves, Biomass, Marine biology, Antarctica—Ross Ice Shelf.
Primary production, defined as fixation of (14C)bicarbonate, occurs in the waters under the Ross Ice Shelf, Antarctica. About 1.5gC/sq.m is fixed annually. This amount is sufficient to support the observed macrofaunal population and may be due to the activity of chemoautotrophic nitrifying bacteria. (Auth.)

Lakes on George VI Ice Shelf, Antarctica.
Reynolds, J.M., *Polar record*, May 1981, 20(128), p.425-432, 15 refs.
Ice melting, Meltwater, Lakes.
The reasons why melt-water lakes on George VI Ice Shelf form where they do are related to three criteria: mean annual air temperatures in the range -5 to -10C, accumulation rates less than 0.2 Mg/sq.m./yr, and restricted surface drainage and low surface permeability. These criteria may be equally applicable in areas other than George VI Ice Shelf. Two superimposed patterns of meltwater lakes may be distinguished on George VI Ice Shelf. The principal pattern mirrors flowlines on the ice. The first set of lakes is intersected by a second which lies parallel to the prevailing wind and so is thought to be wind induced. Well established lakes tend to be self-perpetuating. (Auth.)

Orheim, O., Wadhams, P.
Icebergs, Ice mechanics, South Sandwich Islands.
It is well known that tabular icebergs breaking off Antarctic ice shelves quickly deteriorate when they move near the Antarctic Convergence. Some of this deterioration can be explained by lateral and bottom melting of the icebergs, and by localized calving of overhanging cliffs along their sides, but the principal mechanisms by which tabular icebergs break up are not fully understood. To investigate some of the problems, the authors organized an expedition to the South Atlantic during the 1980-81 summer season to study the dynamical behaviour of tabular icebergs in response to the sea state. Three tabular bergs were found, boarded, and measured with strain-meters, a tiltmeter, a current meter (rotation), and a vertical accelerometer (heave). Preliminary results are reported. (Auth. mod.)
