USER

This file has six zones or tabsets: sequence number, user name, phone, office symbol, arrival date, and a special messages section. The file was planned to expand to fifty new people between each current name. New personnel can be indicated for special treatment. The special messages zone shows a temporary new location along with phone number and expected return date. The currency of this file is essential because relocating personnel often have materials charged to them during their temporary absence.

SELECT DESIRED SERVICE: (XA1

PROFILE

The PROFILE file aids a librarian to direct any unusual questions to the proper individuals. In a sense, it is a detailed directory that could be used by a telephone operator. But, it goes deeper than that. It is planned to be able to connect newly cataloged monographs with the listing of interests as provided by individuals. Information for this file was taken from a form that was circulated to workers and followed up by interviews. Lists of books and periodicals charged to individuals are also used in making a profile. The use of this file as a device to know who is concerned with a specific query is practical. The cost of comparing a profile to new titles entering the library is currently prohibitive.

INDIVIDUAL PROFILE

Name: Frederick E. Suhm
Office Symbol: NCDED-VE
Phone: 353-4763

1. What Districts do you work with? (e.g. Rock Island) All
2. What general areas of interest do you work with? (e.g. flood protection)
Value Engineering Mechanical Design Review
Architect/Engineer Selection Math Models & Econ & Statistics
3. What specific project names to you work with? (e.g. Ellicott Creek)
No specific projects - those with VE studies
 those whose design being done by A/E
 those with pumping station (Flood control)
 regression analysis or econometric models
4. Do you have any other areas of interest? (e.g. pump design)
Pump station design. Economic & statistical analysis
5. What types of documents do you work with? (e.g. design memos)
Letters from Districts requesting selection approval
Design memos
6. Do you take any action with them? (e.g. review, forward to OCE)
Review and recommend approval, disapproval
Review and provide comments on design of pump station
Review VE validations for completeness and authenticity
7. What parts do you examine? (e.g. construction costs)
A/E selection memos & compliance with DAR & other regulations
Design & conformance with standard criteria
VE process and documentation

PROFILE EDITED AND REPLACED.

TITL2

The TITL2 file is a master file of cataloged titles arranged in shelf-list order. There are zones for title, records showing status of OCLC card arrivals, and a field for Library of Congress classification numbers.

When cards arrive the record is modified. When a sufficient quantity of cards have arrived, the library searches a predefined key to prepare a publication of newly cataloged titles in the library.

This file along with the SHELF and CATCHG file produces a very complete listing for use in taking inventory.

SHELF

The SHELF file is a shelf by shelf listing of owned titles.

The zones are for: Library of Congress number, a symbol to show that the year appears in the title page information, year of publication, copy number, property number, approximate cost, requisition number and item number.

This file can be added to information in the TITL2 and CATCHG files to yield an inventory report.

If earlier manual shelf card information is unclear, the computer product will also be unclear.

Notice that the cost zone is only an approximation. For exact cost information, one must see the CATCOST file which contains exact cost and other useful information found on a purchase order.

It should be noted that extra means of access may seem unnecessary until they become useful in conjunction with other files.

CATCHG

The CATCHG file was the first file to be computerized. It allows a librarian to prepare a speedy listing of cataloged titles charged to an individual or department. It also locates a specific book with ease.

The main zones are the Library of Congress number as it appears on the spine of a publication including the year and copy number; the user's name; and, finally, the office symbol for use in profile information.

The file is a prerequisite for statistical analysis of library usage.

CONTIN

The CONTIN file is designed to remind the librarian of the titles to be ordered month by month throughout the year.

One record is composed of a stack of individual records. The first record includes: sequence number, line number, Library of Congress number, and a variable zone. Information on other records constitute: title, when to order, justification, vendor name, vendor street address, vendor city, vendor phone, routed to..., ordered for ..., and final destination.

The file was designed to perform automatic mail labels. Since title information is found in the TITL2 master file, that file cross-references the CONTIN file.

LIST

The LIST file is a standard for forming locally produced Library of Congress numbers. If a report has a number, the standard says to place that number after the year statement: 1978 No. 389S.

This file was nearly dropped from the system until it was realized that a standardized form of the Library of Congress number was useful.

ZONES

<u>ZONES</u>	<u>EXAMPLES</u>	<u>DESCRIPTION</u>

CATCOST

The CATCOST file is meant to list any purchases of monographic titles which are cataloged. Most of the information comes from purchase order forms. Purchase orders need no longer to answer questions on property disposal forms. They can now be discarded confidently because their information is recorded on a computer.

There are seven zones in this file: requisition number and item number, cost code, appropriation code, purchase order number, exact item cost without shipping, shipping charge, and a cost code for fund transfer.

If a Finance and Accounting Center requests action on purchase orders specified by a DACW number, and the library files them by requisition number, the two numbers are quickly related.

Since the retention of purchase orders is no longer required after 2 1/2 years, they can be confidently disposed of after the information is stored on this file.

This file totals individual book costs. Shipping costs can be added separately.

MAGLIST

MAGLIST is the master file for periodicals and services.

Its main categories are: title; subscription period account type; destination; source and sequence number.

Sequence numbers tie together several records from separate files yielding 'superfiles.'

MAGCOST

MAGCOST presents all necessary costing elements for periodicals and services as taken from purchase orders.

It is in this file that exact expiration dates for a subscription are recorded.

Its categories are: sequence number; requisition number; cost code; appropriation code; purchase order number; beginning month and day; years of subscription; and cost.

ROUTE

ROUTE is a file designed to produce routing for each periodical. It provides each mail stop with a list of titles going to individuals in the vicinity. It also lists all periodicals used by an individual. As a procurement tool, it indicates heavy use for any single title. If issues are missing, it provides a list for mailing tracers.

The zones are: sequence number; copy number; and office symbol. This is followed by eight zones for user sequence numbers.

OTHCOST

OTHCOST lists costs for several kinds of materials or services not covered by the monograph or periodical categories. It is for: supplies; adding to an account; certification to receive documents; xeroxing; local travel; memberships; single issues of magazines; maps, drawings; and computer services. To determine whether a purchase order is filed as magazines, monographs, or other, consult the ORDER file. The zones are: requisition number and item number; cost code; appropriation code; purchase order number; exact item cost without shipping; shipping costs; cost code for fund transfers; and a field for various short descriptions.

PIR2

The file is composed of TITL2 and SHELF records. When a book is removed from the collection, SHELF and/or TITL2 records are moved to PIR2. The file furnishes volume count information.

The categories are: Library of Congress catalog number and line number, title; Library of Congress catalog number and line number, subtitle, etc., and volume count; Library of Congress catalog number and line number, edition year, property number, and cost.

ORDER

ORDER is the key transaction file that explains what systems are used for any purchase. (In-depth procedural explanations are found in another publication).

This file is a group of eleven record lines that is designed to provide mail labels and other necessary information. Once entered the printout copy is attached to requisition forms. If the procurement department is located in another city and circumstances permit, a mode of electronic mail can eliminate the need of paperwork and postage.

The fields are: requisition date; publication type; account type; title; estimated cost; justification; office symbol of requester, requester name; vendor name and address; vendor phone.

LAWSHF AND MILSHF

LAWSHF is a shelf listing of law materials purchased by the Civil Works account or received gratis. MILSHF is for titles received from the Judge Advocate General.

Titles must be updated as a service or monographic if specified in the SHELF file.

The SHELF file contains a cross-reference to LAWSHF and MILSHF.

The complete record on any volume is made of multiple lines of records including volume count.

These files are being tested, and will be available in the near future.

LAWOUT AND MILOUT

LAWOUT and MILOUT are exactly like the LAWSHF AND MILSHF files except that these records have been moved from the shelf files to present a list of volumes for disposal. This category of files recommends destruction of volumes.

If a volume enters the system in the LAWSHF file, it exits it in the LAWOUT file when no longer needed.

LAWSAVE AND MILSAVE

LAWSAVE and MILSAVE files recommend to the property disposal unit that lists of these tiles be circulated in accordance with the regulations to other potential users before a destruction order is issued.

FIL
