18. SUPPLEMENTARY NOTES Volume III of five volumes <i>Vol 4 5 classified</i>		
19. KEY WORDS (Continue on reverse side if necessary and identify by block number) SOLAR IRRADIANCE SOLAR TRANSMISSION INSOLATION SKY RADIATION ZENITH ANGLE CLEAR SKY IRRADIANCE SOLAR FLUX		
20. ABSTRACT (Continue on reverse side if necessary and identify by block number) Tables are presented for use in determining solar irradiance and sky radiation values needed to calculate maximum lock-on range (MLOR) and maximum acquisition range (AR) from the Manual Version of the IR FTDA. A table for use in determining solar irradiance as a function of terrain elevation is also presented. Errors in computed sea level values of sky radiation as a function of terrain elevation are discussed and found to be small.

TABLE B-3. RATIO OF SOLAR IRRADIANCE (W_{SUN}) ON A 10,000 FT GROUND SURFACE TO THAT WHICH WOULD HAVE BEEN OBSERVED IF THE GROUND WERE AT SEA LEVEL

	COS Z									
	.05	.15	.25	.35	.45	.55	.65	.75	.85	.95
Ground Albedo = 0.15										
	1.33	1.28	1.19	1.15	1.12	1.10	1.10	1.09	1.09	1.09
Ground Albedo = 0.80										
	1.28	1.23	1.15	1.12	1.09	1.08	1.07	1.07	1.07	1.07

For ground surfaces with elevations less than 10,000 ft but more than 2,000 ft, interpolate for the corresponding elevation.

Sky Radiation (W_{SKY})

Fig. B-2 consists of nomograms that produce the clear sky radiation as a function of the forecast surface temperature and dewpoint. Four nomograms cover four different ranges of surface temperature.

These nomograms produce values of the clear sky irradiance for terrain near sea level. At high terrain elevation the irradiance values will differ slightly. The differences may be positive or negative and are a function of elevation, temperature, and dewpoint. Correction tables are under development. The approximate maximum values of the difference will be:

<u>Terrain Elevation (km)</u>	<u>Maximum Difference (watts/m²)</u>	<u>Approximate Percentage of Clear Sky Irradiance</u>
1	5	2
2	11	4
3	15	5

Table B-4 provides corrections that are added to the clear sky irradiance values when cloud cover is forecast. The user enters the table with the amount and height above ground level of the two lowest cloud levels forecast to obtain the correction.

The values for the cloud correction in Table B-4 are strictly valid only for terrain near sea level. At high terrain elevations the cloud corrections will be slightly larger. However, the magnitude of the differences will be small (probably less than 10 watts m⁻²) and does not represent a major error. The largest error will occur with low clouds at high terrain elevations. Estimates of the maximum error incurred by using Table B-4 values at high terrain elevations are:

<u>Terrain Elevation (km)</u>	<u>Maximum Error (watts/m²)</u>	<u>Approximate Percentage of Total Cloudy Sky Irradiance</u>
1	5	1.5
2	8	2.0
3	10	3.0
