EXECUTIVE SUMMARY

1. Authority for the Study. Letter, DRCCP-FP, HQ DARCOM, 15 June 1981, subject: Pricing Unfunded Military Labor Cost.
2. Problem Statement. The US Army currently charges 2.7% of FMS workorder funded cost to recoup the expense of unfunded military labor. The problem is that the rate has not been verified since 1974.
3. Objective. This study was undertaken to locate and develop cost data concerning unfunded military labor used in FMS workorders and to compute an adequate surcharge rate; and to design an automated method for determining future surcharge revisions.
4. Limits and Scope. The study addresses only the adequacy of the surcharge rate; one flat rate will continue to be applied to the funded portion of FMS workorders. The study encompasses only installations operating under the Army Industrial Fund.
5. Findings. Unfunded military labor charges are higher for FMS workorders than for other comparable workorders.
6. Recommendations. The Army should revise the surcharge from 2.7% to 5.7% to adequately recoup costs for unfunded military labor used in FMS workorders. The study provides a structured systems analysis diagram which should be used for annual revisions to the surcharge rate.

MAIN REPORT

I. PROBLEM.

The US Army currently charges 2.7% of FMS workorder funded cost to recoup the expense of unfunded military labor. The problem is that the rate has not been verified since 1974.

II. OBJECTIVES.

A. To research data elements used in and files created by the Standard Depot System to determine ways and means of developing costs concerning unfunded military labor for FMS and to compute an adequate surcharge rate for recouping unfunded military labor expense.

B. To design, using a structured systems analysis diagram, a methodology for automating this cost data so that annual reports comparing actual costs with projected reimbursements to the US Government can be furnished to Headquarters DARCOM.

III. BACKGROUND.

A. The maintenance shops within the DARCOM depot system are reputed to have one of the most comprehensive accounting systems used within government, operating, as they do, under regulations controlling the Army Industrial Fund (AIF). Services are sold to customers, and the proceeds are used to pay civilian personnel and to recoup other expenses. However, the depots themselves do not fund the salaries and benefits for military personnel; hence, the term "unfunded military labor" (UML) has come into being. The term means that UML is funded through an agency other than the AIF.

B. In accounting for UML, the depots use Composite Standard Rates rather than the actual pay received by a service member. The Composite Standard Rate

for any rank of officer or grade of enlisted person is the average total cost to the Military Pay and Allowance (MPA) appropriation of maintaining a person of that rank or grade. It currently includes an allowance for retirement pay, other personnel costs, and permanent change of station costs. However, service personnel also receive benefits from appropriations other than MPA, e.g., free medical care, free enlisted housing. The Composite Standard Rate is increased by 8% for officers and 23% for enlisted to cover these additional benefits. The depots charge total UML costs to job orders and to general administrative expense. ARs 37-55, 37-60, and 37-108 provide additional detail.

C. Summary data from the Standard Depot System is passed by Procurement Request Order Number to Headquarters DESCOM and stored in their Master File, Maintenance, by fiscal year. Magnetic tapes containing data on all organic maintenance transactions completed during fiscal years 1979, 1980, and 1981 were requested and received from Headquarters DESCOM. The record format is displayed in Appendix A. The number of records by fiscal year is displayed in Appendix B.

IV. LIMITS AND SCOPE.

A. The study addresses only the adequacy of the current surcharge. Changes to the manner in which the surcharge is applied will not be addressed, i.e., one flat rate will still be applied to the funded portion of FMS orders.

B. The study may produce recommendations for additional information to be included in FMS requisitions and for changes to be programmed into the Standard Depot System to facilitate the automated tracking of surcharge validity.

C. While funds flow and budgetary data may be studied in an attempt to meet the objectives, there will be no audit made. It is not a purpose of this study to determine if actual recoupment is occurring.

D. The study will encompass only AIF installations/depots/activities.

V. ASSUMPTIONS.

A. The analysts assumed that the percentage of unfunded military labor costs applicable to FMS workorders would be the same as the percentage of unfunded military labor costs applicable to all other workorders. This assumption was proved invalid by the data, which suggests that de facto policy requires more management attention be provided to FMS business than to other transactions.

B. No other assumptions were made.

VI. ANALYSIS OF THE DATA.

A. Validity.

1. The files were tested to assure that each record contained a total cost. There were some records in each file which were closed without total costs, funded costs, and unfunded materiel being charged. These records were ignored in subsequent analyses. One record in the FY 1979 file indicated total cost of \$94.00, but no funded cost. This record is thought to be valid and was included in subsequent analyses. Even if invalid, the amount is too small to affect UML percentage calculated to the second decimal position.

2. Next, the files were tested to assure that each record contained a valid major group code and either an equipment category code between 1-9 or a zero in lieu thereof. Zero indicates either that the item does not fit into an established equipment category or that the item is common to two or more equipment categories within a major group. No discrepancies were identified.

B. Formulas and Terms.

PRON - Procurement Request Order Number
VAL - Value
FDV - Funded Dollar Value (funded by AIF)
UMV - Unfunded Materiel Value (funded by a source other than the AIF or by the AIF through another PRON)
UML - Unfunded Military Labor (funded by a source other than the AIF)
GAE_T - General Administrative Expense, total
GAE_F - General Administrative Expense, funded

$$UML = PRON\ VAL - (FDV + UMV)$$

$$\%UML = 100 \times \frac{(UML)}{(FDV)}$$

$$GAE_T - GAE_F = UML\ component\ of\ GAE_T$$

C. Analyses.

1. A profile of all depot maintenance business was developed by stratifying PRONs to Major Groups-Equipment Categories. Overall, the largest programs were in utility aircraft and tanks, accounting for 41% of the business. (Reference Appendix C.)

2. A similar profile for only FMS business was also prepared. Overall, the largest programs were in tanks and non-ballistic missile systems, accounting for 51% of the FMS depot maintenance business. While non-FMS (principally US Army) customers traded in almost every Major Group/Equipment Category, FMS trade was limited to few categories, which varied somewhat from year to year. (Reference Appendix D.) The conclusion drawn by the analysts is that FMS business differs markedly from other depot maintenance business. Figure 1 summarizes Appendices C and D.

	<u>Overall Business</u>	<u>FMS Business</u>	<u>% FMS</u>	<u>% Overall UML Rate</u>	<u>% FMS UML Rate</u>	<u>Increase in FMS UML Rate</u>
FY 79	\$820,702,098	\$14,871,917	1.81	4.35	3.97	-
FY 80	785,298,536	5,588,601	.71	4.02	4.92	24%
FY 81	799,138,572	11,429,943	1.44	4.35	5.67	15%

Figure 1. Overall DAREOM Depot Maintenance Compared to FMS Business

NOTE: (1) The depot maintenance business operates at the \$800M level.
 (2) Annual percentage of FMS business exhibits strong variations.
 (3) Trend in FMS UML rate is sharply upwards. However, the data represents those PRONs completed in each fiscal year, regardless of the year in which the work began. Thus, one may be justified in speculating that the FMS UML rate jumped to 5.67% at the end of FY 79, the computed 4.92% rate being caused by the "carry-over" phenomenon.

3. FMS funding for depot maintenance has been done under three separate customer codes, as follows:

Customer 19 - FMS funded through DESCOM
Customer 23 - Army procurement for FMS
Customer 32 - FMS funded through the MRCs

The analysts were unable to correlate type of funding with UML costs. (Reference Appendix E.)

4. All PRONs for non-FMS customers (Appendix F) and for FMS customers (Appendix G) have been stratified by funded dollar value range. The analysts note that UML charges drop as funded dollar value approaches and exceeds \$1M, but FMS PRONs seldom are this large. Again, FMS business is markedly different from non-FMS business.

5. An analysis was designed to answer the question: "If customers other than FMS purchased exactly the same services as FMS customers did in FY 81, what would be the overall percentage of UML charged to the PRONs?" A comparison will indicate if FMS customers are being charged substantially more UML for their services than are other depot maintenance customers for exactly the same services.

a. A program was developed to operate on only the Major Group/Equipment Categories used by FMS for the three fiscal years, producing comparable non-FMS printouts (Appendix H) and FMS printouts (Appendix I).

b. The values in the different ranges for non-FMS PRONs were adjusted so that funded dollar value for non-FMS PRONs equaled funded dollar value for FMS PRONs, with other dollar values and number of PRONs being adjusted proportionately (Appendix J). This was done to show what the percentage of UML would have been if non-FMS customers had traded in the same ranges and quantities as FMS customers and is shown on the "THEOR" line. Only an analysis for FY 1981 has been done. The Major Group/Equipment Category, Gen Equip - Wtr Trmt, for FMS (page I-15) contains

a single PRON in the 50K-100K range for which there were no corresponding non-FMS values (page H-15); data was manually created by interpolation from the adjacent ranges, with unfunded materiel dollar value being set to zero. Last, a summary page was prepared (Appendix K) showing amounts of UML which would have been charged to non-FMS customers had they ordered the same services as FMS customers.

c. The analysis indicates that the PRONs of non-FMS customers would have been charged only 3.83% vs 5.67% charged FMS customers. The analysts have concluded from the data that FMS business is more expensive to handle in terms of UML costs.

VII. DISCUSSION.

A. Depot maintenance direct labor, whether military or civilian, is commodity oriented rather than customer oriented. For example, the same direct laborers work on tanks regardless of whether they are owned by the US or by foreign countries. If FMS equipment contains special modifications which make a job more difficult, UML and funded civilian labor should both increase at the same ratio. An increase in the UML ratio does not necessarily imply that UML costs are increasing faster than funded labor costs.

B. Depot shops and the organizations planning their workload observe Issue Priority Designators (IPDs) by placing all 1-4 IPDs in Issue Priority Group (IPG) I, indicating high priority, 5-8 IPDs in IPG II indicating medium priority, and remaining PRONs in IPG III indicating low priority. See Figure 2 below.

<u>IPG(IPD)</u>	<u>NON-FMS</u>		<u>FMS</u>
I (1-4)	YES	AVERAGE LABOR COSTS	NO
II (5-8)	YES		NO
III (9-16)	YES		YES > LOW LABOR COSTS

Figure 2. The Depot Maintenance Workload

FMS cases are usually planned for in advance and normally within IPG III. One anticipates that labor would be somewhat less under such circumstances. However, if a glitch develops, caused perhaps by a line stopper or the introduction of higher priority work into the shop, the FMS case assumes a de facto priority much higher than IPG III, because the country can complain through State Department channels. This results in high level visibility which is not desired by depot management. This fact makes depot level FMS maintenance inherently more expensive to process.

C. Appendix J makes comparison of FMS UML percentages with non-FMS UML percentages for a total of 80 separate comparisons by Major Group-Equipment Category-Funded Dollar Value Range. In 60% of the comparisons, FMS UML charges are lower than UML charges made to non-FMS, as one would expect by observation of Figure 2. A summary of these comparisons appears in Figure 3 below.

Page	Col A	Col B	Col C	Col D	Col E

J-15			1		
J-16		1		1	123%
TOTALS	5	43	15	17	

Column A indicates instances in which FMS charges were less than 25% of non-FMS.

Column B indicates instances in which FMS charges were between 25% and 100% of non-FMS.

Column C indicates instances in which FMS charges exceeded non-FMS charges by less than 75%.

Column D indicates instances in which FMS charges exceeded non-FMS charges by more than 75%.

Column E indicates the actual percentages which are counted in Column D.

Figure 3. Comparisons of FMS UML Charges to UML Charges Assigned to PRONs of Non-FMS Customers

In Figure 3, in 22 out of 80 comparisons (28%), FMS UML charges were outside the very wide parameters of $\pm 75\%$, as arbitrarily selected by the analysts. Such wide swings in value suggest that indirect labor is being accounted for as direct labor or that software for allocation of indirect labor is not functioning properly.

D. During the FY 79-81 time period, the use of unfunded military labor in general administrative expense increased by 33 1/3%. (Reference Figure 4 below.) This does not lend support to any inference that depots attempt to charge as much UML as possible to direct labor.

	FY 79*	FY 80*	FY 81*	FY 79-81 Change
Total PRON Value	821	785	799	
Funded Costs	685	663	647	Down 5.5%
Unfunded Mat'l Costs	106	95	124	
Total UML	30	27	28	Down 6.7%
Total GAE	43	42	38	Down 11.6%
Funded GAE	36	35	31	Down 13.9%
UML-GAE Component	6	7	8	Up 33.3%
UML-Other Component	24	20	20	Down 16.7%
* All figures in millions of dollars				

Figure 4. Unfunded Military Labor Component of General Administrative Expense Compared With Other Revenue and Expense

E. Appendix M lists those FMS PRONs having a funded dollar value of at least \$100 and at least three times the average FMS UML charge. The analysts conclude that, if actual UML charges are passed on to FMS customers, above-average amounts may require explanations unless adequate UML costs have been included in the Letter of Offer and Acceptance (LOA).

VIII. RECOMMENDATIONS.

A. The analysts recommend that the UML rate be immediately set to 5.7% and be revised annually in accordance with the following paragraph, and that FMS customers all be charged at this fixed rate, thereby simplifying LOA preparation and avoiding unnecessary explanation.

B. The analysts further recommend that DESCOM be tasked to prepare a computer program based on Appendix L, to be run against the Master File, Maintenance, about the middle of each November. Edit criteria for defining those records to be used in the rate determination are included in Appendix L. The output should be forwarded to the DARCOM Comptroller, DRCCP-FPI, for use in annual updates of UML rates.

APPENDIX L
STRUCTURED SYSTEMS ANALYSIS DIAGRAM

Remark: For computing FMS UML surcharge based on PRONs completed during previous Fiscal Year.

Get Master File, Maintenance

[From 1st PRON record to last
If PRON not CONUS depot shops then next record
If PRON not completed in previous fiscal year then next record
If customer code not equal to "19" or "23" or "32" then next record
Accumulate total cost incurred (TCI)
Accumulate total funded cost incurred (TFCI)
Accumulate unfunded materiel costs (UMC)
Next Record

Percentage UML = $\frac{100 \times (TCI - TFCI - UMC)}{TFCI}$

Print TCI, TFCI, UMC to nearest dollar

Print percentage UML to two decimal positions
