technical and popular report.

Site-specific information was compiled for both historic and prehistoric sites from state agencies in Iowa, Minnesota and Wisconsin, and from various local and regional institutions. More than 1,000 historically or architecturally significant sites and districts and, more than 1,400 prehistoric archaeological components were recorded and plotted on base maps. From the site configurations and from other data collected during the course of the records and literature review, a narrative framework for the interpretation of historic and prehistoric sites was developed. Recommendations to enhance the management of the archaeological and historical data base were provided.

Pools 5 and 5-A were combined for this compilation. Only two sites in the two pools are now on the National Register of Historic places. These are (1) The Weaver Mercantile Building in Weaver, Minnesota (Pool 5) and (2) The Fugina House in Fountain City, Wisconsin. Archaeological sites in the combined pools total 72.

INTRODUCTION:

Pools 5 and 5-A were combined for this compilation. Only two sites in the two pools are now on the National Register of Historic Places. These are: (1) The Weaver Mercantile Building in Weaver, Minnesota (Pool 5); and (2) The Fugina House in Fountain City, Wisconsin. Thirty-four sites or locations have been identified and listed in the inventory for Pool 5 and 18 sites and/or structures are noted for Pool 5-A. Figures 1 through 8 provide the locations for these historic sites.

Archaeological sites in the combined pools total 72. Locations for the 72 sites are depicted in Figures 9 through 16. Table 1 provides a summary of the identified components at the 72 sites within these pools. It should be noted that site distributions are not based on comprehensive systematic survey and thus should not be used for predictive statements. Finally, sites categorized as ineligible, unless specifically noted, means simply that they have not been evaluated in terms of National Register criteria.
