technical and popular report.

Site-specific information was compiled for both historic and prehistoric sites from state agencies in Iowa, Minnesota, and Wisconsin, and from various local and regional institutions. More than 1,000 historically or architecturally significant sites and districts, and, more than 1,400 prehistoric archaeological components were recorded and plotted on base maps. From the site configurations and from other data collected during the course of the records and literature review, a narrative framework for the interpretation of historic and prehistoric sites was developed. Recommendations to enhance the management of the archaeological and historical data base were provided. Investigations of archives and literature relating to Pool 7 resulted in the identification of a single bridge that has been nominated and accepted for the National Register of Historic Places. The total historic/architectural site inventory numbers only 37 locations. Archaeological sites, based on the current available data, are more numerous in Pool 7 environs. A total of 97 sites are listed in various archival and literature sources.

INTRODUCTION:

Investigations of archives and literature relating to Pool 7 resulted in the identification of a single bridge that has been nominated and accepted for the National Register of Historic Places. The total historic/architectural site inventory numbers only 37 locations. These locations are indicated in Figures 1 through 5.

Archaeological sites, based on the current available data, are more numerous in the Pool 7 environs. A total of 97 archaeological sites are listed in various archival and literature sources. Locations of these 97 sites are provided in Figures 6 through 10. Table 1 summarized the identified components at these sites. It should be noted that site distributions are not based on comprehensive systematic survey and thus should not be used for predictive statements. Finally, sites categorized as ineligible unless specifically noted, means simply that they have not been evaluated in terms of National Register criteria.
