technical and popular report.

Site-specific information was compiled for both historic and prehistoric sites from state agencies in Iowa, Minnesota and Wisconsin, and from various local and regional institutions. More than 1,000 historically or architecturally significant sites and districts and, more than 1,400 prehistoric archaeological components were recorded and plotted on base maps. From the site configurations and from other data collected during the course of the records and literature review, a narrative framework for the interpretation of historic and prehistoric sites was developed. Recommendations to enhance the management of the archaeological and historical data base were provided.

Apparently historical and architectural identification of properties in the Pool 9 study area has not been extensive. Only 3 properties have been listed on the National Register of Historic Places and a fourth is pending. In addition, the total number listed in the inventory is 81 historical/architectural sites; the vast majority which are located within the limits of the City of Lansing, Iowa. The total number of archaeological sites is slightly larger, the inventory list totaling 91 known occurrences.

INTRODUCTION:

Apparently historical and architectural identification of properties in the Pool 9 study area limits has not been extensive. Only 3 properties have been listed on the National Register of Historic Places and a fourth is pending as of the date of this compilation. In addition, the total number listed in the inventory is 81 historical/architectural sites. The great majority of these, whose locations are noted in Figures 1 through 10, occur within the limits of the City of Lansing. Numerous structures are identified by the single number 22.

The total number of archaeological sites is slightly larger, the inventory list totaling 91 known occurrences within the Pool 9 study area. Figures 11 through 20 provide locations of archaeological sites and Table 1 notes the components identified at these sites. It should be noted that site distributions are not based on comprehensive systematic survey and thus should not be used for predictive statements. Finally, sites categorized as ineligible unless specifically noted, means simply that they have not been evaluated in terms of National Register criteria.
