20. ABSTRACT (Continue on reverse side if necessary and identify by block number)

This literature search and records review of the Upper Mississippi River Basin (River mile 857.6, above St. Anthony Falls, Minneapolis-St. Paul, Minnesota to Lock & Dam 10, Guttenberg, Iowa) was authorized by the St. Paul District Corps of Engineers as part of its master plan for the 9-foot navigation project. The objectives of the investigation were to: 1. conduct a comprehensive review of existing records and review published and unpublished literature; 2. provide an evaluation of recorded cultural resources; and 3.

UNCLASSIFIED

SECURITY CLASSIFICATION OF THIS PAGE (When Data Entered)

prepare a detailed technical and popular report.

Volume 11 focuses on Pool 10, Guttenberg Iowa. A staggering 333 archaeological sites have been reported in the study are in the Pool 10 environs. This is clearly an artifact of both collector and research bias and should not be interpreted as a realistic differential density of archaeological sites relative to pools 1-9. A single historic district, the St. Feriole Archaeological and Historic District in Prairie du Chien, is listed on the National Register of Historic Places and two additional districts in the City of Guttenberg, Iowa are currently pending.

Remarks:

Originally Lewis reported 895 mounds (107 bear, 67 birds , 98 undetermined, 469 conicals and 154 linear.) These have been destroyed and were not mapped. Lewis mapped the following effigies: Am 76,77,78, and 109. Orr mapped 17 mound groups which were part of this original group. See: 13 Am 81, 105,117,188,148, 150-161.

Location of Collections: Luther College - Decorah, Iowa

National Register Status:

On Register _____, Determined eligible _____, ineligible X

Remarks:

Site is being eroded by the Mississippi River from a talus slope remnant on the eastern base of the bluff line contained within the Effigy Mound National Monument, McGregor, Iowa. The above remnant is mantled by ca. 2' of recent (post 1930) alluvium and channel dredge-sand (spoil). Horizontal erosion (east to west) is dramatic (cf. Preliminary Report on the FTD, 13 AM 210, Village, Luther College, 1975). Recommendations: Immediate considerations for testing.
