19. KEY WORDS (Continue on reverse side if necessary and identify by block number) Cultural Resource Management, Archaeology, Intensive Survey, Geomorphology, Woodland		
20. ABSTRACT (Continue on reverse side if necessary and identify by block number) Intensive archaeological survey was conducted at 11 Jd 126, a multi-component archaeological site on the lowland flood plain of the Mississippi River, Jo Daviess County, Illinois by Great Lakes Archaeological Research Center, Inc. during September and October, 1982. The objectives of the survey and testing were to delineate the boundaries of the site, refine the site geomorphology and occupational history, and provide additional information required for management of the site as well as for future research at 11 Jd 126.		

Five archaeological components were identified: (1) a Trempealeau/McGregor Phase component; (2) an Allamakee/Millville Phase component; (3) a Maples Mills component; (4) a Keyes Phase (Effigy Mound) component; and (5) a late 18th century Euro-American component. Sub-surface features at the site, which is buried under recent alluvium include storage pits, sheet midden, and a late 18th century domestic structure. Construction activities at 11 Jd 126 had destroyed a shell midden, and others may occur at the site.

Approximately 90% of 11 Jd 126 remains undisturbed. The recovery of carbonized floral remains, faunal remains, and diagnostic cultural materials from buried, stratified contexts, indicates that the site has high potential for research relating to Middle Woodland, Late Woodland, and 18th century occupation of the lowland flood plain in the Quad-state region.

99. 1. 0

1. The first group of people who are likely to be affected by the proposed project are the local residents who live in the vicinity of the project site. These residents may be affected by the project in a number of ways, including increased traffic, noise, and air pollution. The project may also affect the local economy by creating jobs and increasing the demand for goods and services. The project may also affect the local environment by increasing the demand for water and electricity, and by increasing the amount of waste generated.

1. *Chlorophyll a* (Chl *a*)

• *Chlorophyll a* (Chl *a*) is the primary photosynthetic pigment in all photosynthetic organisms. It is a green pigment that absorbs light energy in the blue and red regions of the visible spectrum. Chl *a* is the most abundant pigment in the chloroplasts of green plants and algae.

1. *Chlorophyll a* (Chl *a*)

where $\mathbf{K} = \mathbf{K}(\mathbf{y})$ is the $d \times d$ matrix of the kernel $k(\mathbf{y})$ evaluated at $\mathbf{y}$, $\mathbf{y} = \mathbf{y}_i$ for $i = 1, \dots, d$.

1. The first step is to identify the problem or question that needs to be answered. This involves understanding the context and the specific requirements of the task.
