FORWARD

DOD Directive 5000.4 "OSD Cost Analysis Improvement Group", provided the charter for the Cost Analysis Improvement Group (CAIG) to review and establish criteria, standards, and procedures concerning the preparation and presentation of cost estimates on defense systems to the DSARC and CAIG. In support of this objective, the CAIG has periodically issued guidance for development and presentation of Operating and Support (O&S) cost for OSD review. To date general guidance has been made available for aircraft, ships, and ground combat vehicles.

In consonance with that general guidance, the following sample of a CAIG Operating and Support Cost Estimate Report covering a hypothetical case has been developed to further assist the cost analyst in the preparation of cost estimating reports submitted to the DSARC and CAIG during the acquisition process of a new weapon system.

This sample is not intended to imply the existence of a specific acquisition program. Nor does it imply a preference for one analysis technique over another. The sample is intended to show an example of how Operating and Support Costs can be developed for CAIG review with available data bases and one example of an appropriate format for presentation of cost estimates.

Existing data bases were used only to illustrate the need to relate an estimate to an existing similar system and to ensure a constant relationship between values and the Cost Element Structure. It is not used to promulgate the use of specific data bases. Each case should address that data which is the most complete and accurate for its purposes. Further, the level of detail depicted in this example may be greater or less than that which is available or appropriate to a specific case.

The sample is designed to complement the Cost Analysis Improvement Group's Aircraft Cost Development Guide. Jointly, these two documents can provide the basis for program manager developing a cost estimate that is acceptable for CAIG review.

**EXECUTIVE SUMMARY**

Operating and Support (O&S) costs for the FX and the current F-4E system (baseline) are shown below. These figures are compared to the figures presented to the DSARC at Milestone IIB.

**DSARC IIB to DSARC III Comparison  
FY 80 \$ - Millions, 24PAA/Sqdn**

	DSARC IIB (31FH/PAA/MO) (\$0.50/gal POL)		Current Estimate (24FH/PAA/MO) (\$1.50/gal POL)	
	F-4E	FX	F-4E	FX
\$/Acft/yr	\$1.5	\$ .9	\$1.6	\$1.1
\$/Sqdn/yr	\$ 34.9	\$22.0	\$38.8	\$25.9
15 yr Force O&S	\$24,185.7	\$15,246.0	\$26,888.4	\$17,925.3

The force O&S costs are based on a five year delivery schedule plus ten years of full force operations of 912 PAA . . . .

The costs growth reflected in both the F-4E, baseline and the FX system is due mainly to the unprecedented rise in POL costs. This is in spite of a seven hour per PAA reduction in the projected flying hour program. The current estimate of the FX costs also includes costs covering an increase of 19 maintenance technicians . . . .

Although the FX represents a dramatic increase in performance, O&S costs will decrease by 33%. This is due to . . . .

**GUIDANCE:** THE EXECUTIVE SUMMARY IS A SAMPLE ONE PAGE NARRATIVE PROVIDING THE BOTTON LINE COSTS, FORCE SIZE AND MAJOR COSTS DRIVERS, AND ASSUMPTIONS. INCLUDE A BRIEF EXPLANATION OF DIFFERENCES PREDICTED FROM THE BASELINE SYSTEM AND THE DSARC MILESTONE IIB COST ESTIMATIONS.

## 1. INTRODUCTION

The following cost analysis report is submitted in support of Defense Systems Acquisition Review Council (DSARC) Milestone III review of the FX Program . . . . All values included in this report are in FY 80 dollars unless indicated otherwise.

**GUIDANCE:** IDENTIFY THE MILESTONE MISSION ELEMENT NEEDS STATEMENT (MENS) AND DECISION COORDINATING PAPER (DCP) WITH DATE AND THE BASE YEAR FOR COSTS IN THE INTRODUCTION.

The FX is intended to replace the F-4 in the Tactical Air Force. Although the F-4 is a proven aircraft, it uses 1950s technology in instrumentation, weapons delivery, and power plants . . . .

**GUIDANCE:** INCLUDE A SHORT STATEMENT SUMMARIZING THE MENS/DCP AND ANY SIGNIFICANT DEVIATIONS THAT THE COST ANALYSIS MAKES FROM THE DOCUMENTS.

The purpose of this program is to provide an air combat fighter capable of achieving and maintaining combat theater air superiority as well as providing close air support to ground operations. The FX is intended to . . . .

. . . . Based on a prototype fly-off, the X/Z Corporation was awarded a Full Scale Development (FSD) contract to produce 8 FSD aircraft. The FX met all performance specifications and achieved the lowest operating and support (O&S) cost. The FX is a state-of-the-art aircraft with Heads Up Display (HUD) instrumentation, fly-by-wire flight controls, composite flight control surfaces . . . . In the process of evaluating the risk associated with state-of-the-art technology and to assist in subsystem selection, the FSD aircraft have flown \_\_\_\_ hrs . . . . A photograph of the FX is presented in Figure 1. . . .

O&S costs are computed based on the following force levels:

TAC - 5 wings, 15 squadrons, 360 PAA  
AFE, PACAF&AAC - 5 wings, 15 squadrons, 360 PAA  
\*AFRES & ANG - 16 groups/squadrons, (12UE), 192 PAA  
Combat Crew Trng - 6 squadrons (34UE), 204 PAA

\*Not costed in this report.

The flying hour program is 290 hrs/PAA/year for operational aircraft and 265 hrs/PAA/year for Combat Crew Training aircraft . . . .

**GUIDANCE:** ALSO, OUTLINE THE PROGRAM, ITS STAGE OF DEVELOPMENT, MAJOR SYSTEM PARAMETERS, AND MAJOR POTENTIAL RISKS THAT IMPACT OPERATING AND SUPPORT (O&S) COSTS.

Table 1 presents O&S costs for the baseline aircraft (F-4E) and the FSD FX aircraft. The data is shown for a squadron of 24 aircraft operating for one year. The F-4E was chosen as the baseline aircraft because, although the FX is intended to eventually replace most, if not all, F-4 aircraft, the F-4E most closely matches the mission mixes currently planned for the FX and flown by the FSD aircraft.

In Table 2, the cost estimates at DSARC IIB are presented with the current estimate. Reasons for significant variances from DSARC IIB are also given.

Table 3 presents the O&S costs for the life cycle of the FX with the procurement delivery schedule as listed in the Weapon System Planning Document (WSPD) for FX dated . . . .

These costs are based on a squadron of mature aircraft. To account for non-operating time due to aircraft delivery schedules, all aircraft delivered within a given year are assumed to accrue costs for only half of the year of delivery.

**GUIDANCE:** THE TABLE LISTING THE O&S ANNUAL COSTS FOR A TYPICAL DEPLOYABLE UNIT SHOULD REFLECT THE COST ELEMENT STRUCTURE (CES) ARRIVED AT THROUGH CONSULTATION WITH THE COST ANALYSIS IMPROVEMENT GROUP (CAIG). THE COSTS SHOULD ALSO BE COMPARED TO THOSE PRESENTED TO THE DSARC AT MILESTONE II AND THE COSTS DIFFERENTIALS EXPLAINED. THE O&S COSTS SHOULD ALSO BE PRESENTED BY FISCAL YEAR. THESE FIGURES SHOULD BE IDENTICAL TO THE FIGURES PRESENTED IN THE INTEGRATED PROGRAM SUMMARY (IPS).

Figure 1. FX Aircraft

Individual Training	1177		1089		+ 88	6,8
<b>TOTAL</b>		<b>\$25,866</b>		<b>\$22,042</b>		

Notes on Table 2:

1. Increase is due to the increase of 19 maintenance technicians over the original estimate.
2. Increase is due to the increase in Petroleum, Oils, and Lubricants (POL) costs from \$1.32/gal to \$1.50/gal in constant FY80 dollars.
3. . . . .
6. Increases are due to larger squadron manpower being supported.
7. Flying hour program reduced from 31 to 24. The fuel consumption rate has increased from 645 gal/hr to 703 gal/hr based on actual flight test data on TACs peacetime flying scenario mix . . . .
8. Increase due to updated data base (FY79 vice FY78).
9. Increase due to miscalculation in previous report.

GUIDANCE: \*NOTE: FIGURES ARE ALSO INCLUDED IN ANNEX B OF THE INTEGRATED PROGRAM SUMMARY.

## 2. ASSUMPTIONS AND GROUND RULES

### 2.1 General.

The FX avionics maintenance concept departs from that of previous fighter avionics maintenance concepts. The intermediate avionics maintenance will consist of circuit board remove and replace. Circuit board repair will be done at the Depot circuit board repair facility . . . . This concept results in a reduction in initial spares levels . . . . The interface test adapters (ITA) and the automatic test equipment (ATE) originally programmed have been reduced from 86 to 44 and 60 to 40 respectively to accommodate . . . .

**GUIDANCE:** INCLUDE A GENERAL DESCRIPTION OF SYSTEM CHANGES AND DISCUSS THEIR ANTICIPATED IMPACTS ON O&S COSTS INDICATING THE DEGREE OF CONFIDENCE THAT THE CHANGES ARE PRACTICAL AND COST IMPACTS ARE ACCURATE.

### 2.2 Baseline System.

As in the DSARC II report, the F-4E weapon system is used as the reference system. However, the data base was updated to include the latest year's data. The mission profile of the F-4E most closely resemble that of the FX . . . .

**GUIDANCE:** IDENTIFY THE BASELINE SYSTEM AND EXPLAIN THE RATIONALE USED IN ITS SELECTION. IF THE BASELINE SYSTEM WAS CHANGED FROM DSARC II EXPLAIN FULLY WHY THE CHANGE WAS NECESSARY.

### 2.3 System and Program Characteristics.

Table 4 illustrates aircraft and program characteristics of the alternatives . . . .

**GUIDANCE:** INCLUDE DETAILS OF THE ALTERNATIVE SYSTEM.

TABLE 4. OPERATIONAL TECHNICAL CHARACTERISTICS

<u>Characteristic</u>	<u>Current Estimate</u>
<u>Size (length/wing span) (ft)</u>	49,5/32.8

2.4 Assumptions, Model Inputs, and Rates.

2.4.1 Design Sensitive Values. Table 5 lists the elements that are design-related . . . .

<u>Elements</u>	<u>Value</u>	<u>Source</u>	<u>Opr</u>	<u>Ext</u>
1. Unit Production Costs	\$10.6M	Contractor Estimate	Jim Smith	75124
2. Portion of Flyaway Costs for Material	53%	Contractor Estimate	Jim Smith	75124
3. AMPR Weight	16,400 lbs	PM Projection	John Doe	73124
4. Avionics Weight	2,890 lbs	PM Projection	John Doe	73124
5. Fuel Consumption	703 gal/hr	AFTEC Test Data	John Doe	73124
6. Mean Flight Hours Between Failures	1.77 hours	See Table 9	John Doe	73124
7. Mean Flight Hours Between Unscheduled Maint. (MFHBUMA)	. . .	. . .	. . .	. . .
8. PDM	\$350K/acft	. . .	. . .	. . .

2.4.1.1 Unit Production Costs.

The prototype manufacturing costs was compared with the prototype manufacturing costs of recent aircraft acquisitions and FX unit production costs projected based on other unit production costs . . . .

2.4.1.2 Portion of Flyaway Costs for Material . . . .

2.4.1.8 . . . .

**GUIDANCE:** DIVIDE VALUES USED IN THE COST ESTIMATING MODEL OR ALGORITHMS INTO TABLES DEPENDING ON THE NATURE OF THE PARAMETER INVOLVED.

TABLE 5 CONTAINS ELEMENTS WHICH ARE INHERENT TO THE SYSTEM DESIGN AND ARE DEPENDENT ON HARDWARE CONFIGURATION. FOLLOWING THIS TABLE IS A BRIEF EXPLANATION OF THE DERIVATION OF THE VALUE SELECTED FOR THE PARAMETER.

2.4.2 System Operational Standards.

Table 6 identifies the values used in this analysis which reflect current Air Force policy . . . .

<u>Element</u>	<u>Value</u>	<u>Source</u>	<u>Opr</u>	<u>Ext</u>
1. Average Utilization Rate	24 hr/mo	PM Projection	John Doe	73124
2. Acft per Sqdn	24 acft ops	PM Projection	John Doe	73124
3. Attrition Rate	.87%/acft/yr	PM Projection	John Doaks	77111
4. Pipeline Rate	10% ops acft	PM Projection	Joe Doe	77111
5. PDM Interval	89.5 mo	AF/LEM	Jack Smith	78192
6. . . .	. . . .	. . . .	. . . .	. . . .
7. Crew Ratio	1.25	PM Projection	John Doe	73124

2.4.2.1 Utilization Rate.

The FX will require about the same flying hours as the F-4E to support the training . . . . The use of flight simulation will . . . .

2.4.2.2 Aircraft per Squadron

The Wing Composition is based on current Air Force standards for a Tactical Fighter Squadron . . . .

2.4.2.3 Attrition Rate. . . . .

2.4.2.7 Crew Ratio.

The FX will be an all weather day/night aircraft. In order to support this multi-role weapon system, it will require a crew ratio of . . . .

**GUIDANCE:** LIST THOSE FACTORS ESTABLISHED BY THE USING COMMAND WHICH IMPACT O&S COSTS IN A TABLE. A BRIEF EXPLANATION AND DERIVATION OF THE VALUE SHOWN FOLLOWS THE TABLE.

2.4.3 Standard Values and Rates.

Table 7 lists the standard values and rates used and the source . . . .

<u>Element</u>	<u>Value</u>	<u>Source</u>	<u>Opr</u>	<u>Ext</u>
1. POL Costs	\$1.50/gal	. . . .	Mary Doe	51234
2. Officer Standard Composite Rate	\$27,000	ASD (COMP) Memo	-	-
3. Enlisted Standard Composite Rate	\$11,500	ASD (COMP) Memo	-	-
4. Acft Service Life	15 years	ASD (COMP)	-	-
5. Escalation Factors	variable	ASD (COMP)	-	-
6. Base Year Dollars	FY 80	CAIG	Tom Mix	75631

**GUIDANCE:** HIGHLIGHT THOSE STANDARD VALUES WHICH ARE ESTABLISHED AND GENERALLY ACCEPTED IN A TABLE. THESE VALUES ARE NOT SUBJECT TO INFLUENCE BY THE SYSTEM UNDER CONSIDERATION OR THE USING COMMAND.

### 3. METHODOLOGY

#### 3.1 General.

For this analysis the . . . O&S Cost estimating model was used. A summary of this model is provided in Appendix E . . . .

**GUIDANCE:** IF A GENERALLY APPLICABLE COMPUTERIZED COST ESTIMATING MODEL IS USED FOR THE ANALYSIS INSTEAD OF THE SERIES OF ALGORITHMS LISTED IN APPENDIX D OF THIS REPORT. INCLUDE SUMMARY OF THE MODEL USED, AS WELL AS APPROPRIATE COMPUTER PRODUCTS, IN APPENDIX E OF THE REPORT AND OMIT APPENDIX D.

#### 3.2 Data Sources.

The sources used in defining the baseline costs and the method used in estimating the proposed system's cost are listed in Table 8 for each of the cost elements . . . .

**GUIDANCE:** INCLUDE A MATRIX OF SOURCES AND METHODS IN THE REPORT.

#### 3.3 Derivation of Scalars.

In applying the baseline data to the FX and projecting costs it was necessary to establish a proportional relationship between the two systems. These proportions are explained in the following paragraphs . . . .

**GUIDANCE:** ESTABLISH SOME PROPORTIONAL RELATIONSHIP BETWEEN THE BASELINE SYSTEM AND THE ALTERNATIVES WHEN COST ANALYSIS DATA IS NOT DIRECTLY AVAILABLE FROM THE WEAPON SYSTEM UNDER CONSIDERATION. THIS RELATIONSHIP IS THEN USED TO SCALE THE BASELINE COSTS TO DETERMINE THE ESTIMATED COSTS OF THE ALTERNATIVE SYSTEMS.

##### 3.3.1 Reliability and Maintainability.

For purposes of this costing analysis, Reliability and Maintainability (R&M) data is provided to the two digit Work Unit Code (WUC) levels in Table 9 . . . .

3.3.1.1 Airframe.

The FX is composed of 53% composite material. This is expected to greatly increase the reliability of non critical aircraft components; however, each failure must be expected to require more manhours to repair than current alloys. The increased DMMH per failure will be more than offset by the increased reliability, thereby reducing the DMMH/FH . . . .

3.3.1.2 Fuselage.

See paragraph 3.3.1.1 above.

**GUIDANCE:** DATA FOR THE BASELINE SYSTEM IS USUALLY AVAILABLE TO THE FIVE DIGIT WORK UNIT CODE BREAKOUT, HOWEVER, IT MAY NOT BE AVAILABLE ON THE ALTERNATIVE SYSTEM, OR THE FIVE DIGIT LEVEL OF DETAIL MAY NOT BE APPROPRIATE/SIGNIFICANT. THEREFORE, THE DATA SHOULD BE CONSOLIDATED TO A SIGNIFICANT LEVEL OF DETAIL. THE RATIONALE USED IN DEVELOPING THE WUC SCALARS SHOULD BE BRIEFLY EXPLAINED.

3.3.1.1 Airframe.

The FX is composed of 53% composite material. This is expected to greatly increase the reliability of non critical aircraft components; however, each failure must be expected to require more manhours to repair than current alloys. The increased DMMH per failure will be more than offset by the increased reliability, thereby reducing the DMMH/FH . . . .

3.3.1.2 Fuselage.

See paragraph 3.3.1.1 above.

**GUIDANCE:** DATA FOR THE BASELINE SYSTEM IS USUALLY AVAILABLE TO THE FIVE DIGIT WORK UNIT CODE BREAKOUT, HOWEVER, IT MAY NOT BE AVAILABLE ON THE ALTERNATIVE SYSTEM, OR THE FIVE DIGIT LEVEL OF DETAIL MAY NOT BE APPROPRIATE/SIGNIFICANT. THEREFORE, THE DATA SHOULD BE CONSOLIDATED TO A SIGNIFICANT LEVEL OF DETAIL. THE RATIONALE USED IN DEVELOPING THE WUC SCALARS SHOULD BE BRIEFLY EXPLAINED.

### 3.3.2 Material Costs Scalar.

The material cost scalar of the FX system is 2. Derivation follows:

a. F-4E Procurement: (In Millions)

Year	Costs			Qty	Unit Flyaway Cost (FY80\$)
	Actual	Escalation Rates	FY80\$		
1970	73.4	2.30	168.8	27	6.25
1971	76.5	2.17	166.0	30	5.54
...	...	...	...	...	...
1977	222.3	1.22	271.2	30	9.04
1978	238.0	1.13	268.9	30	8.96

Average Unit Flyaway Costs = \$6.71

b. Labor portion of flyaway costs is not scaled.

c. Material Costs

- (1) F-4E = 38% of flyaway costs  
=  $.38 \times 6.71 = \$2.55M$

Percentage is based on contractor documentation, available from (list Project Officer, Office symbol, extension).

- (2) FX System = \$10.6M = Flyaway Costs (assumed)

The increase in flyaway costs is due to historical cost trends, increased performance requirements, use of advanced technology, and increase in the percentage of overhead due to lower production rates.

Material Costs = 50% of flyaway  
=  $.50 \times \$10.6 = \$5.3M$

The increase in percentage of flyaway costs is based on the use of expensive composite material in the air frame and the use of micro-electronics.

d. Material Cost Scalar

- = FX System Mat + F-4E Mat  
= \$5.3 + \$2.55  
= 2

**GUIDANCE:** MANY OF THE ALTERNATIVE SYSTEM O&S COSTS WHICH CANNOT BE OBTAINED DIRECTLY MAY BE ESTIMATED BY DETERMINING THEIR RELATIONSHIP TO THE TOTAL COSTS OF THE BASELINE SYSTEM. REPLENISHMENT SPARES AND COMPONENT REPAIR ARE BUT TWO EXAMPLES OF SUCH COSTS. THEREFORE, IT IS OFTEN HELPFUL TO ESTABLISH A RELATIONSHIP BETWEEN THE BASELINE COSTS AND THE ESTIMATE OF THE ALTERNATIVE SYSTEM'S FACTORS COSTS.

### 3.3.3 Design/Environment Impact.

Based on a study of maintenance actions covering fighter/attack aircraft, subject: . . . dated . . ., it was found that 78% of the structural failures could have been avoided by redesign . . . as such, the assumption is made that . . . is the applicable factors . . . .

**GUIDANCE:** WHEN APPLYING ESTIMATING FACTORS TO A GIVEN COST, THAT COST CAN SOMETIMES BE SEPARATED INTO TWO PARTS: THOSE WHICH ARE RELATED TO THE DESIGN OF THE COMPONENT IN QUESTION AND THOSE WHICH ARE CONSTANT. INDUCED FAILURES, FALSE REMOVALS, STORAGE AND HANDLING LOSSES ARE EXAMPLES OF CONSTANT COSTS WHICH ARE NOT DIRECTLY DESIGN-RELATED. THESE COSTS SHOULD BE CONSIDERED SEPARATELY IN ORDER TO DETERMINE THE TOTAL COST ESTIMATE.

### 3.4 Like and Similar (L/S) Hardware List.

The technical basis of the improved, FX component repair and replenishment spares cost estimates is a bottoms-up cost factor estimation technique. This technique was facilitated by an analysis recently completed of a total set of functional analogies to the FX 5 digit WUC hardware related to existing aircraft with adequate reliability and maintainability data bases . . . .

These functional analogies are considered valid for costing only and are not intended to replicate the performance characteristics of FX equipment . . . .

A listing of Like and Similar equipment is contained in Appendix B.

### 3.5 POL Consumption.

There are four basic mission profiles anticipated for the FX. They are as follows . . . . Table 10 reflects the approximate percentage for each type sortie and the Petroleum, Oils, and Lubricants (POL) consumptions rates . . . .

TABLE 10. POL CONSUMPTION

<u>Mission</u>	<u>Total, Sorties</u>	<u>Duration</u>	<u>POL</u>	<u>POL/FH</u>
A	10%	4.0 hr	2780 gal	695 gal/FH
B	20%	2.5 hr	1750 gal	700 gal/FH
C	40%	1.0 hr	712 gal	712 gal/FH
D	30%	1.5 hr	1059 gal	706 gal/FH

Average Sortie Duration

A	10%	x	4.0 hr	=	0.4 hr
B	20%	x	2.5 hr	=	0.5 hr
C	40%	x	1.0 hr	=	0.4 hr
D	30%	x	1.5 hr	=	0.45 hr

Average 1.75 hr

% of Total Fly Hours

A	0.4 hr	÷	1.75 hr	=	22.9%
B	0.5 hr	÷	1.75 hr	=	28.5%
C	0.4 hr	÷	1.75 hr	=	22.9%
D	0.45 hr	÷	1.75 hr	=	25.7%

Contribution to Average POL Consumption

A	22.9%	x	695 gal	=	159.2 gal
B	28.5%	x	700 gal	=	199.5 gal
C	22.9%	x	712 gal	=	163.0 gal
D	25.7%	x	706 gal	=	181.4 gal
			Total		703.1 gal/FH

**GUIDANCE:** WHEN THE DERIVATION OF A VALUE USED IN THE COST ANALYSIS IS COMPLEX, PROVIDE A DETAILED EXPLANATION.

4. SENSITIVITY/RISK ANALYSIS

Although the FX system has not been deployed there is sufficient detail known to establish fairly accurate predictions. This coupled with a well-established and accurate data base provides a credible basis for the estimations . . . .

**GUIDANCE:** INCLUDE AN INDICATION OF THE CONFIDENCE IN THE FIGURES PRESENTED.

4.1 General.

Airframe Rework, Reliability and POL appear to present the greatest risk potential . . . .

**GUIDANCE:** DEVELOP A FURTHER, DETAILED ANALYSIS OF THE COST IMPACT OF EACH COST ELEMENT OFFERING A POTENTIAL FOR HIGH COSTS, ESPECIALLY THOSE OF WHICH THE VALUE ESTIMATED FOR THE O&S COST ANALYSIS COULD VARY WIDELY. IDENTIFY THE RANGE OF VALUES SELECTED FOR SENSITIVITY ANALYSIS AND THE RATIONALE FOR SELECTION. PRESENT THE RESULTS USING IDENTICAL GRAPHICAL VALUES WHENEVER POSSIBLE TO FACILITATE A COMPARISON.

4.2

Airframe Rework.

Programmed Depot Maintenance (PDM) costs were developed by the contractor using . . . .

. . . . The estimates were then compared with current aircraft rework costs with the following results:

<u>Acft</u>	<u>Costs Per PDM</u>
F-15A	\$633.24 K
F-4E	\$409.73 K
FX	\$350.00 K
F-105	\$284.34 K
F-106	\$264.54 K
F-16	\$239.47 K
F-5E/F	\$149.97 K
A-7D	\$128.57 K

Although there is little data on depot maintenance of aircraft with a high percentage of composite material, the estimate appears . . . .

The \$650 K per PDM high value and \$240 K low value were selected for their sensitivity analysis because . . . .

	<u>PDM Cost Range</u>		
Cost/PDM	\$240 K	\$350 K	\$650 K
Annual Cost/Sqdn difference	-\$264 K	0	+\$720 K

4.3 Reliability.

The range of reliability values was based on a review of the potential of each subsystem . . . Table 11 identifies the high potential and low values for each subsystem's reliability . . . .

TABLE 11. RELIABILITY SENSITIVITY

<u>Work Unit Code</u>	<u>Mean Flying Hours Between Failures</u>		
	<u>Low Hours</u>	<u>Expected Hours</u>	<u>High Hours</u>

Total	+\$839	-	-\$443

### SUBSYSTEM RELIABILITY

### DEPOT AIRFRAME REWORK (PDM)

FIGURE 2. SENSITIVITY GRAPHS

#### 4.4 POL Sensitivity.

There are two areas of risk associated with POL costs: the uncertainty of unit costs and the fuel consumption of a new weapon system . . . . To place the FX system in the proper perspective, other comparable weapon systems are shown in Figure 3 . . . . (Figures are taken from AFP 173-13 dated 1 Feb 1980.) Based on 290 FH/PAA/YR.

Figure 3. POL Sensitivity Graph

5. SUMMARY

Still to be resolved are the methods of determining and prorating Miscellaneous Operations and Maintenance and Second Destination Transportation Costs. It is anticipated that these methods will be developed and values for these indirect categories validated in the near future.

**GUIDANCE: NOTE ISSUES LEFT UNRESOLVED OR THOSE WHICH WILL RECIEVE CLOSE SCRUTINY IN THE FUTURE.**

## APPENDIX A. UNIT MAINTENANCE PERSONNEL

A.1 General: Since the smallest divisible unit in peacetime is the Tactical Fighter Wing, the wing figures are shown. However, manning for the Unit Type Code (UTC), which is the deployable squadron size unit, are also shown. It is these figures that are used in this costing analysis. . . .

A design that focuses on greater flexibility and quicker turnaround time will allow for increased aircraft utilization. It is expected that . . . . The use of redundancy in avionics down to the circuit board level will . . . . Further, the greater use of composite material will . . . .

**GUIDANCE:** EXPLAIN THE RATIONALE BEHIND MANNING CHANGES TO THE BASELINE SYSTEM. WHEN THE ALTERNATIVE SYSTEM INCORPORATES NEW CONCEPTS OR A RADICAL DEPARTURE FROM EXISTING SYSTEMS/METHODS, EXPLAIN IN DETAIL THE CHANGE AND ITS EXPECTED IMPACT ON MANNING. THIS EXAMPLE FOCUSES ON THE MAINTENANCE ORGANIZATION. THIS DOES NOT IMPLY THAT THE MANPOWER ISSUE WILL ALWAYS BE MAINTENANCE.

### A.2 Aircraft Generating Squadron.

The 16% decrease in maintenance technicians reflects the increase in subsystem reliability and the greater use of built in tests (BIT) which simplify and expedite fault finding. . . .

### A.3 Equipment Maintenance Squadron.

Emphasis during the system design was placed on increased structural integrity and ease of maintenance. . . . The modularity of the aircraft, as well as the engine, will . . . . The use of composite material is especially evident in the manning of the corrosion control function. . . .

### A.4 Component Repair Squadron.

The implementation of the Depot circuit board repair facility has shifted the workload from the intermediate shops to . . . .

**GUIDANCE:** INCLUDE A DETAILED NARRATION OF FACTORS THAT IMPINGE ON MAINTENANCE MANNING, SUCH AS CAPACITY OF FACILITIES, THROWAWAY VS. REPAIR IMPACT, AND MAINTENANCE CONCEPT.

## APPENDIX C

### FX Engine Repair Costs

At the previous Program Review (March 1980), an O&S cost estimate of the FX engine was presented based on data supplied by the manufacturers. This estimate was noted as an area of major concern during the review.

Since that time a study was performed comparing the FX engine to the J-79 engine. This study resulted in a better estimate of the Operating and Support costs (especially at the Depot level) for the new modular engine. The report is entitled, Report for Operating and Support Cost Estimating Factors (Modular Gas Turbine Engines), 10 May, 1980.

The basic approach was to estimate the O&S cost of the FX engine and compare it to the J-79. Individual elements of the J-79 O&S costs were regrouped to form modules similar to the FX engine modules, as shown in Figure C-1.

The Depot level costs calculated refer to the repairs of the engine modules plus repair of whole engines sent to the Depot. Selected Depot reports were used to determine the Depot labor, material and overhead costs for engine repairs. These costs for the J-79 were applied to the manhour data supplied by the contractor to arrive at estimates of engine module repair and whole engine repair which was then normalized to a dollar per flight hour value of \$103.86/FH (FY-80\$).

FX MODULE DEFINITION

MODULE NAME	J-79 COMPONENTS PARTS
Fan Module (LPC)	Front frame Fan stator assembly Fan rotor assembly Variable geometry actuation system
High Pressure Compressor Module (HPC)	Midframe High pressure compressor stator High pressure compressor rotor assembly
Combustor Module (CB)	Combustor casing Combustor liner High pressure turbine nozzle assembly
High Pressure Turbine Module (HPT)	High Pressure turbine rotor
Low Pressure Turbine Module (LPT)	Low pressure turbine casing Low pressure nozzles Exhaust frame Mounting ring Low pressure turbine rotor
Afterburner Module (A/B)	Variable exhaust nozzle assembly and actuators Afterburners assembly
Lower Duct and Engine Accessories Module (Duct & AE)	Lower duct (for bypass air) Accessory gearbox Main fuel system Afterburner fuel system Lubrication system Electrical system Bleed air system

cost = Fixed costs x 290FH = cost/  
acft x 24PAA = cost/sqdn  
\$511/FH - \$435/FH = \$76/FH  
\$76 x 290FH = \$22K/acft/yr  
\$22K x 24PAA = \$529K/sqdn/yr

Baseline (FX depot costs +  
F-4E depot costs)  
\$529K (4083 + 5407)  
\$399K/sqdn/yr

Personnel Acquisition & TrainingAcquisition (AFP 173-13, Table 20)

Crew (AFA Grad)	x	Turnover	x	Cost
Other off (ROTC)	x	Turnover	x	Cost
Enlisted	x	Turnover	x	Cost
30	x	.148	x	\$106,500
32	x	.148	x	\$ 20,792
506	x	.135	x	\$ 3,503
\$472.9K + \$98.5K + 239.3K				
\$811K/sq/yr				

Crew (AFA Grad)	x	Turnover	x	Cost
Other off (ROTC)	x	Turnover	x	Cost
Enlisted	x	Turnover	x	Cost
30	x	.148	x	\$106,500
32	x	.148	x	\$ 20,792
426	x	.135	x	\$ 3,503
\$472.9K + \$98.5K + \$201.5K				
\$773K/sq/yr				

Individual Training (AFP 173-13, Table 41)

Crew	x	Turnover	x	UPT
Non-crew off	x	Turnover	x	\$5496
Non-crew enl	x	Turnover	x	\$7180
30	x	.148	x	\$166,242
32	x	.148	x	5,496
506	x	.135	x	7,180
\$738.1K + \$26.0K + \$490.5K				
\$1,253K/sq/yr				

Crew	x	Turnover	x	UPT
Non-crew off	x	Turnover	x	\$5496
Non-crew enl	x	Turnover	x	\$7180
30	x	.148	x	\$166,242
32	x	.148	x	5,496
426	x	.135	x	7,180
\$738.1K + \$26.0K + \$412.9K				
\$1,177K/sq/yr				

## APPENDIX E. O&S COST ESTIMATING MODEL

### E.1 General.

For this analysis the Air Force . . . model was used . . . . This model is deterministic mathematical model which is preprogrammed and completely structured . . . .

### E.2 Use & Application.

This model has been in use since . . . calculates annual squadron operating costs . . . .

### E.3 Model Logic.

Table E-1 lists the algorithms used in the model logic . . . .

### E.4 Results.

Tables E.2.A through E.2.( ) are the computer products identifying both input values and results for each alternative . . . .

**GUIDANCE:** THE FORMAT USED AND THE INFORMATION PROVIDED IN APPENDIX E DEPEND ON THE COMPUTER MODEL USED. IF APPENDIX E IS USED APPENDIX D WILL BE OMITTED.

TABLE E.2.A. (CONTINUED) ANNUAL SQUADRON OPERATION AND SUPPORT ANALYSIS  
 TIME: 1719.0 Fri 02/08.80 DATA FILE:

RUN RESULTS:

Unit Mission Personnel		6923
Aircrew	845	
Maintenance	4520
