19. ABSTRACT (Continue on reverse if necessary and identify by block number)			
A problem confirmation study was performed at Castle AFB and included 21 potential contamination source sites identified in the Phase I Report as requiring field investigation. The potential source sites were grouped into 16 investigation sites including the area of a suspected plume of PCB contamination in groundwater. The field investigations, conducted from October 1984 to April 1985 included installation of 27 new monitor wells and 11 shallow augers, collection of sediment samples from surface soil, shallow borings, and drainage ditches, geophysical surveys of three sites, two rounds of surface and groundwater sampling at water level measurements, and pilot test operations on a Base production well. Analytes tested included volatile organic compounds, TOC, TOX, oil and grease, as well as phenols, nitrate, herbicides and pesticides at selected sites. Of the sixteen sites investigated, three were recommended for further groundwater study, either through continued monitoring at existing wells, or through expansion of the monitoring network. The TOC plume in the groundwater was delineated and recommended for immediate (con't. on back)

OPERATING _____

STATIC _____

WATER LEVEL _____ FT.

TOTAL WELL DEPTH _____ FT.

PUMPING RATE _____ G.P.M.

S.W.L. _____ FT.

TOTAL GALLONS PUMPED _____ G.

WATER COLUMN _____ FT.

5 gallons of lab standard
recipients was circulated through
the sampling line and pump
for 10 mins (50 gals) The pump
was then rinsed with D.I. H₂O
and placed in a 55 gal barrel of
D.I. H₂O. This was pumped through
the system for ten mins.
Samples were taken at 3 mins
6 mins and 10 mins for Ten
analyses

WATER VOLUME _____ G.

X3= _____ G.

FLOW RATE 5 G.P.M.

PUMPING TIME REQUIRED 2 MINS.

ACTUAL PUMPING TIME 20 MINS.
