19. ABSTRACT (Continue on reverse if necessary and identify by block number) Anthropometric dimensions measured in 14 major foreign and domestic military and civilian surveys were reviewed in detail for possible inclusion in an anthropometric survey of U.S. Army men and women. Detailed review of each dimension included the following information: a description of the dimension, subject position, and landmarks required; type of instrument used; significant technique differences among different surveys; alternative dimensions that could serve the same function in a data base; summary statistics from surveys that included the dimensions; notation of significant gender or racial differences for the dimension; ease of reproducibility, and factors contributing to reproducibility problems (if any); and a rating (with rationale) of the dimension's relative utility for a U.S. Army data base. Review sheets summarizing this information comprise Volume II of this report. Background information, discussion, and conclusions regarding those dimensions worthy of further consideration for inclusion in a U.S. Army anthropometric data base are presented in Volume I.

SELECTION OF DIMENSIONS FOR AN ANTHROPOMETRIC DATA BASE

VOLUME II: DIMENSION EVALUATION SHEETS

INTRODUCTION

To meet the demands for anthropometric data describing their personnel, the U.S. military services periodically conduct large-scale multipurpose body-size surveys. The central purpose of this study is to provide guidelines for the selection of measurements to be included in a new anthropometric survey currently being planned by the U.S. Army to update its existing data base.

A primary step in selecting dimensions to be recommended for measurement was the critical review of dimensions measured in previous surveys. The following 14 surveys were selected for detailed examination:

- Air Force Women - 1968¹
- Army Aviators - 1970 (male)²
- Army Personnel - 1966 (male)³
- Army Women - 1977 (includes male subsample)⁴
- Australian Tri-Service (RAA) - 1977 (male)⁵
- British Army Surveys (RA) - 1972/76 (male)⁶
- Canadian Forces (CF) - 1974 (male)⁷
- Health and Nutrition Examination Survey (HANES) - 1971/74 (male and female)⁸
- Health Examination Survey (HES) - 1959/62 (male and female)^{9,10}
- Royal Air Force (RAF) - 1970/71 (male)¹¹
- USAF Flying Officers - 1967 (male)¹²
- USN Aviators - 1964 (male)¹³
- Department of Agriculture, Bureau of Home Economics - 1939/40 (female)¹⁴
- Federal Republic of Germany (FRG) - 1970/71 (male)¹⁵

All the dimensions measured in these surveys were studied and evaluated for their potential usefulness in the proposed Army survey. These 14 surveys were chosen on the basis of their sample size ($n > 500$), the number of dimensions measured (representing both highly selective and more comprehensive collections), measuring techniques (representing both U.S. and British methods), and recentness.

Emphasis was placed on military surveys since they were the most likely to contain dimensions of utility for an Army anthropometric data base. The Health Examination Survey (HES) and the Health and Nutrition Examination Survey (HANES) were included since the National Health surveys, conducted every 10 years, provide the only anthropometric data purported to be representative of the U.S. adult civilian population. Though not contemporary, the 1939/40 anthropometric survey of U.S. women sponsored and supervised by the Bureau of Home Economics was added to the list because the dimensions measured in it are often used in the design and construction of women's clothing, and the data resulting from it serve as the basis for garment pattern standards promulgated by the Bureau of Standards. Furthermore, in many respects it serves as a model for subsequent anthropometric surveys of military personnel.

A dimension evaluation sheet was prepared for each of 362 dimensions. These appear in this volume in alphabetical order by dimension name as listed in Table I of Volume I. If a dimension was named differently in the original source(s), its name follows the listed name in parentheses. (Differences in names of types of dimensions such as circumferences vs. girths, breadths vs. widths or diameters, and arcs vs. curvatures are not preserved.)

The surveys under scrutiny fell into three categories -- U.S. military, foreign military, and U.S. civilian. Where a dimension was measured in all three groups of surveys, it is treated three times. Thus, commonly measured variables such as Stature or Weight will appear, in alphabetical order, on three evaluation sheets (e.g. Stature - U.S. military, Stature - foreign military, and Stature - U.S. civilians).

PROCEDURES FOR EVALUATING DIMENSIONS

A detailed explanation of the information recorded on the forms for U.S. military surveys appears below. (The forms for foreign military and U.S. civilian surveys are somewhat truncated since these measurement data have not been analyzed for correlations with U.S. Army data, or race and gender sensitivity.)

- A. 1. DESCRIPTION: a short description of the dimension in lay terms.
- A. 2. BODY POSITION: For obtaining comparable measurements of like dimensions, consistency of body position is often as critical as the definition and interpretation of landmarks. The significant aspects of the position of the body and/or a part of the body that affect the measurement are described for each dimension.

A type of shorthand is used in these descriptions in which the body position for many of the dimensions is indicated by either anthropometric standing or anthropometric sitting. These positions are described below for each survey.

Standard Anthropometric Positions

U.S. Military Anthropometric standing - subject stands erect without military stiffness; weight is distributed equally on both feet; heels together, or as close together as comfortable; head in the Frankfort plane; shoulders relaxed; upper extremities relaxed at sides with palms facing thighs.

Anthropometric sitting - subject sits erect on flat surface; head in the Frankfort plane; feet on an adjustable platform; knees flexed 90 degrees; thighs parallel, arms relaxed; forearms and hands extended forward horizontally.

Bureau of Home Econ. Anthropometric standing - subject stands erect without stiffness with feet as close together as comfortable; head in the Reid's base line (Frankfort plane); palms of hands on thighs.

Anthropometric sitting - Only two dimensions were measured in the sitting position: Sitting Spread Circumference and Bent Knee Circumference. The former was measured with the thighs fully supported by a sitting surface; the feet were unsupported. The latter was measured with the feet supported and the knees flexed 90 degrees.

HANES
HES

Anthropometric standing - subject stands erect, heels together; back against a vertical measuring scale; head in the Frankfort plane; upper extremities hanging at sides.

Anthropometric sitting - subject sits erect; head in the Frankfort plane; heels and knees together; elbows flexed 90 degrees and held at sides; forearms and hands extended forward horizontally.

FRG

Anthropometric standing - subject stands erect with maximum stretch, feet together, and when appropriate, the head is in the Frankfort plane.

Anthropometric sitting - subject sits erect with maximum stretch, and when appropriate, the head is in the Frankfort plane; the thighs are completely supported and the lower legs hang free over the edge of the sitting surface. (No arm position described except where appropriate.)

CF

Anthropometric standing - subject stands erect without stiffness, heels together, head in the Frankfort plane.

Anthropometric sitting - subject sits erect, head in the Frankfort plane, upper arms hanging relaxed, forearms and hands extended forward horizontally. The thighs are parallel to each other and the knees are flexed 90 degrees.

RA

Anthropometric standing - subject stands fully erect, looking straight ahead; the feet are 8 cm. apart.

RAA

Anthropometric standing - subject stands erect looking straight ahead; heels together and back free of a wall.

RAF

Anthropometric standing - subject stands comfortably erect but not rigidly at attention; weight is distributed equally on both feet which are approximately 10 cm. apart.

RA
RAA
RAF

Anthropometric sitting - subject sits erect looking straight ahead; sitting surface is adjusted so that an imaginary line passing through the greater trochanter to the lateral femoral epicondyle is parallel to the floor. The thighs are parallel and the calves vertical with the feet on the floor. The shoulders are relaxed and elbows lightly held against the sides with the forearms extended so that the hands rest on the midthighs. ("Looking straight ahead" is comparable to the Frankfort plane and no distinction between the two is made in the dimension evaluation sheets).

It should be understood that, for a number of dimensions, the statement anthropometric sitting does not include all of the specific body part positions described in the definition. Examples of these are Knee Height Sitting, and Buttock-Knee Length, which are measurements taken on the legs of seated subjects where the anthropometric sitting position of the legs is critical, but the positions of the head and arms are not of particular significance; measurements in body positions defined as anthropometric standing for dimensions such as Buttock Circumference and Trochanteric Height do not require the head to be in the Frankfort plane but do require the other standardized positioning criteria. Significant features of body position and differences affecting the measurement of a dimension are always given in the description of body position in each dimension evaluation sheet.

- A. 3. LANDMARK(S): a mark placed on the body or body-surface feature used to identify the origin, end point, or level of a measurement.
- A. 4. INSTRUMENTS/EQUIPMENT: the instrument and/or equipment used to measure a dimension.
- A. 5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES: a statement calling attention to the differences described in Body Position, Landmark(s), or Instruments/Equipment that may affect the measurements. Differences between measuring techniques are described only for the surveys appearing on a single sheet. Differences between measuring techniques used in the surveys of U.S. military, foreign military, and U.S. civilians are not described. For differences between these categories, see the equivalent dimension evaluation sheet for each category.

ALTERNATIVES: dimensions that can serve a similar function.

- B., C. DATA: filled-in values indicate that the dimension was measured in a specific survey. Coefficients of variation, percentiles, and correlation statistics (with the exception of Stature, Estimated and Weight, Estimated) are given only for the U.S. Army 1966 and 1977 surveys. The data presented on the evaluation sheets for U.S. military personnel and from the HES and HANES surveys are from the Harry G. Armstrong Aerospace Medical Research Laboratory (AAMRL) anthropometric data bank. (The HES and HANES data are from subsamples of 18-45 year old subjects.) The values in the data bank were generated from the raw data of surveys that had been treated with editing routines, such as XVAL and EDIT which were developed by Anthropology Research Project, Inc. (ARP) for AAMRL. Summary statistics and correlation coefficients were calculated from the edited data. Therefore, the data shown on the sheets may not agree exactly with the data in the published reports of the surveys. Data from the other surveys reviewed are from the published reports of the surveys.

All data are in centimeters except for weight which is in kilograms, age which is in years, and slope (shoulder) which is in degrees. The coefficients of variation and the correlation coefficients (r) are dimensionless values.

D. THOUGHT TO BE OF Essential, Useful, OR Marginal VALUE TO A U.S. ARMY ANTHROPOMETRIC DATA BASE:

Marginal dimensions are those of which no known use has been made or that were measured to serve a unique or very limited purpose not considered germane to Army needs.

Useful is the rating given those dimensions of proven benefit in the design of clothing, personal equipment, workspaces, and two- and three-dimensional anthropomorphic analogues.

Essential is the rating assigned to those dimensions that are useful but also: (1) establish overall body size descriptions and distributions of a population and are particularly useful for comparing such distributions between populations, (2) serve as criteria for developing microcosms of populations used for special anthropometric studies including the test and evaluation of end items, (3) are used as key dimensions for the development of sizing systems and for the procurement and issuing of clothing and personal equipment, (4) determine critical design criteria required for the design and layout of workspaces, (5) are required for the development of either computer-generated or three-dimensional anthropomorphic analogues, or (6) may serve as body-size selection or elimination criteria for specific workspaces such as helicopter crewstations.

E. REASON FOR RATING: a statement supporting the ranking of a dimension as being of marginal, useful, or essential value for a U.S. Army data base.

F. RACE SENSITIVE (U.S. Military only): statements concerning the racial sensitivity of dimensions measured on U.S. military personnel are based primarily upon racial analyses of data from the 1965 survey of USAF men¹⁶ and the 1966 Army surveys of U.S. Army, Navy and Marine men.¹⁷ Long and Churchill¹⁶ report the differences between 157 dimensions measured on 343 White and 343 Black men matched by Stature and Weight. (Most men in this sample were between 17 and 21 years old). Comparisons between Whites and Asians* are based on a sample of 97 Whites and 97 Asians matched by Stature and Weight drawn from the 1966 surveys during which 70 dimensions were measured.¹⁷ (These, too, were young men having a mean age of 21.1 years.)

Like comparisons were made between matched samples of 396 Whites and 396 Hispanics measured during the Army's 1966 surveys (their mean age was 20.9 years).¹⁷ The data revealed a slight tendency for Whites to have shorter torsos and longer extremities than Hispanics of like body size, but not enough is yet known about this group to assess the effect of these differences on design.

Since Whites constitute the majority of Army personnel, Whites were considered as the base upon which comparisons were made. That is, a

*Asians as used here are those subjects who classified themselves as: Chinese, Guamanians, Hawaiians, Japanese, Koreans, Filipinos, or simply Asians.¹⁸

typical race sensitive statement reads: "Among Whites, Blacks, and Asians of like body size, Whites tend on the average to have shorter upper extremities than Blacks and longer upper extremities than Asians."

The criterion for declaring a dimension to be race-sensitive is a difference between mean values equaling or exceeding 1.0 cm or one-half of a unit of the standard deviation of measurement for the White sample. Race-sensitive statements for dimensions not measured in a survey from which matched samples were drawn are based on similarities between body dimensions. For example, since matched-sample data demonstrate that Crotch Height is a race sensitive dimension between Whites and Asians, one can assume that Trochanteric Height, which was not measured in the U.S. Army 1966 surveys, also demonstrates a similar degree of sensitivity.

It should be noted that the racial composition of previous survey samples limits the types of racial comparisons that can be made with confidence. Both White and Black men are well represented in military surveys. However, there are too few Asians, Hispanics, and American Indians represented in those surveys to assess in detail the anthropometric uniqueness (or lack thereof) of these populations. Racial differences in body size of military women have never been documented at all. A new survey, demographically representative of the contemporary Army, should shed considerable light on this problem since relatively large samples of each population group, and both sexes, will have been measured by a single team of observers.

GENDER SENSITIVE (U.S. Military only): statements describing dimensions as being gender sensitive, with respect to their significance for design are based primarily on data reported by Robinette et al.¹⁹ This study presents an analysis of anthropometric differences between men and women measured in the 1977 U.S. Army survey of women. [Forty-four dimensions were measured on a subsample of men for the express purpose of obtaining comparable data for men and women (i.e., data having the same inter/intra-observer errors using the same measuring techniques)]. From the subjects measured in this survey, a sample of 204 men and 204 women were matched by Stature and Weight. The same criterion used to classify a dimension as being race-sensitive is used to label a body dimension as gender-sensitive. Since only three head dimensions (Head Length, Head Breadth, Head Circumference) were among the forty-four dimensions measured, the classification of other head and face dimensions as being gender-sensitive was largely based on the authors' judgement. Judgements were based on comparisons of male and female head data from the 1965 and 1967 surveys of USAF men,^{16,12} the 1968 USAF and 1977 U.S. Army surveys of women^{1,4} and the authors' experience in developing sizing systems for personal-protective equipment worn on the head and/or face. No attempt was made to develop matched samples from the U.S. Army and USAF surveys since data generated from matched samples drawn from multiple surveys may be unreliable due to differences in measuring techniques and levels of observer error.

- G. REPRODUCIBILITY: an expression of the demonstrated or anticipated level of repeatability of a measurement, and the reason for the rating if it is B or C. "A" denotes a test/retest correlation ≥ 0.90 ; "B" denotes a

test/retest correlation of 0.80 - 0.89; "C" denotes a test/retest correlation ≤ 0.79 . Reliability studies were conducted during the 1965 survey of Air Force men¹⁶ and the 1977 Australian Tri-Service survey.²⁰ During the Air Force study, 157 dimensions were measured twice on a group of 41 men undergoing basic training. This was primarily a study of intra-observer error. The Australian effort represents both intra- and inter-observer differences of measurements of 32 dimensions measured twice, as the opportunity arose on 50 subjects. The reliability of measurements not taken in either the USAF 1965 or Australian 1977 surveys are estimates based on the authors' judgement as to their similarity to measurements for which test/retest results are available.

- H. PARTICULARLY SENSITIVE TO: a caution that either a landmark definition and/or its location, measuring technique, or subject position requires special attention or presents special problems. (It is, of course, understood that all dimensions are sensitive to one degree or another to the above factors.) Generally, precautionary remarks are made only for those dimensions with a reproducibility rating of A, since problems with dimensions assigned reproducibility ratings of B and C are noted along with the rating.

DIMENSION EVALUATION SHEETS

Dimension evaluation sheets for all dimensions measured in the 14 closely reviewed surveys follow. Abbreviated descriptions of an additional 84 dimensions considered for inclusion in a new Army survey, but not measured in those surveys, appear in the Appendix.

ANTHROPOMETRIC SURVEYS OF U.S. CIVILIANS

VARIABLE NAME: ABDOMINAL EXTENSION ARC

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The horizontal arc between the right and left sides of the abdomen at the level of the greatest protrusion of the abdomen.
2. BODY POSITION: Anthropometric standing.
3. LANDMARK(S): Right and left hip level lines (midway between the anterior and posterior surface profile of the thigh at the level of the lateral protrusions of the greater femoral trochanters); anterior point of the abdomen.
4. INSTRUMENTS/EQUIPMENT: Tape.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN FOLLOWING U.S. CIVILIAN SURVEYS:

ANTHROPOMETRIC SURVEYS OF FOREIGN MILITARY PERSONNEL

VARIABLE NAME: ABDOMINAL EXTENSION DEPTH (STOMACH DEPTH)

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The horizontal distance between the back and the greatest protrusion of the torso below the nipples.
2. BODY POSITION: Anthropometric standing.
3. LANDMARK(S): Anterior point of the torso inferior to the ilion.
4. INSTRUMENTS/EQUIPMENT: Beam caliper.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING FOREIGN MILITARY SURVEYS:

<u>SURVEY</u>	<u>$\bar{X}$</u>	<u>SD</u>	<u>SURVEY</u>	<u>$\bar{X}$</u>	<u>SD</u>
CF	<u>23.72</u>	<u>3.05</u>	RAA	<u> </u>	<u> </u>
FRG	<u> </u>	<u> </u>	RAP	<u> </u>	<u> </u>
RA	<u> </u>	<u> </u>			

C. THOUGHT TO BE OF. Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

- D. REASON FOR THE RATING IN C IS: useful for the design and sizing of single- and lower-body garments; useful for the construction of clothing manikins; useful for the development of anthropomorphic analogues.

E. REPRODUCIBILITY: A ☒ B ☐ C ☐

IF B OR C, THE PROBLEM IS:

- F. PARTICULARLY SENSITIVE TO: the point of respiration at which the measurement is taken; tension of the abdominal muscles.

ANTHROPOMETRIC SURVEYS OF U.S. MILITARY PERSONNEL

VARIABLE NAME: ABDOMINAL EXTENSION DEPTH OVER FOUNDATION GARMENT

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The horizontal distance between the back and the most protruding point of the abdomen of a subject wearing a foundation garment.
2. BODY POSITION: Anthropometric standing.
3. LANDMARK(S): Anterior point of the abdomen.
4. INSTRUMENTS/EQUIPMENT: Beam caliper.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING U.S. SURVEYS:

SURVEY	$\bar{X}$	SD	SURVEY	$\bar{X}$	SD
1 AF Women '68	19.80	2.46	4 USAF '67		
2 Army Women '77			5 US Army '66

5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS:

D. DIMENSION WAS MEASURED IN THE FOLLOWING FOREIGN MILITARY SURVEYS:

<u>SURVEY</u>	<u>$\bar{X}$</u>	<u>SD</u>	<u>SURVEY</u>	<u>$\bar{X}$</u>	<u>SD</u>
CF			RAA		
FRG	<u>10.9</u>	<u>0.6</u>	RAF		
RA					

C. THOUGHT TO BE OF: Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

D. REASON FOR THE RATING IN C IS: useful as one in a series of dimensions required for the development of three-dimensional head and face forms used to guide the design and sizing of equipment worn on the head and on the face.

E. REPRODUCIBILITY: A ☐ B ☒ C ☐

IF B OR C, THE PROBLEM IS: the accuracy and consistency of locating the landmarks; consistency of like pressure applied to the caliper; consistency of maintaining the tips of the caliper on the gonion.

F. PARTICULARLY SENSITIVE TO:

ANTHROPOMETRIC SURVEYS OF U.S. MILITARY PERSONNEL

VARIABLE NAME: BIMALLEOLAR BREADTH (ANKLE BREADTH)

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The horizontal distance between the ankle bones.
2. BODY POSITION: Standing.
3. LANDMARK(S): Medial point of the medial malleolus; lateral point of lateral malleolus.
4. INSTRUMENTS/EQUIPMENT: Sliding caliper.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING U.S. MILITARY SURVEYS:

	SURVEY	$\bar{X}$	SD		SURVEY	$\bar{X}$	SD
1	AF Women '68	_____	_____	4	USAF '67	7.33	0.38
2	Army Women '77	_____	_____	5	US Army '66	_____	_____
3	USN '64	_____	_____	6	Army Av. '70	_____	_____

C. CORRELATION WITH: STATURE WEIGHT AGE
 US Army '66 _____
 US Army '77 _____

COEFFICIENT OF VARIATION: US Army '66 _____
 US Army '77 _____

1st and 99th US ARMY '66 and '77 PERCENTILE VALUES: MALE _____ and _____
 FEMALE _____ and _____

D. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

E. REASON FOR RATING IN D IS: useful for the development of over-the-ankle foot gear; of no demonstrated use for the design and sizing of lower-body garments; not useful for the development of anthropomorphic analogues; also can be used as a measure of skeletal mass.

F. RACE SENSITIVE? YES ☐ NO ☒ GENDER SENSITIVE? YES ☒ NO ☐
 IN WHAT WAY? Among men and women of like body size, men tend on the average to have greater skeletal mass than women.

G. REPRODUCIBILITY: A ☒ B ☐ C ☐

IF B OR C, THE PROBLEM IS:

H. PARTICULARLY SENSITIVE TO the ability to take a horizontal measurement across landmarks at different levels.

ANTHROPOMETRIC SURVEYS OF U.S. MILITARY PERSONNEL

VARIABLE NAME: BIOCULAR BREADTH

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The horizontal distance between the outer corners of the eyes.
2. BODY POSITION: Sitting.
3. LANDMARK(S): External canthi.
4. INSTRUMENTS/EQUIPMENT: Sliding caliper.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING U.S. MILITARY SURVEYS:

SURVEY	$\bar{X}$	SD	SURVEY	$\bar{X}$	SD
1 AF Women '68	<u>9.67</u>	<u>0.49</u>	4 USAF '67	<u>9.17</u>	<u>0.49</u>
2 Army Women '77	<u>9.62</u>	<u>0.50</u>	5 US Army '66	<u> </u>	<u> </u>
3 USN '64	<u>9.43</u>	<u>0.40</u>	6 Army Av. '70	<u> </u>	<u> </u>

C. CORRELATION WITH:	US Army '66	STATURE	WEIGHT	AGE
	US Army '77	<u>.083</u>	<u>.249</u>	<u>-.044</u>

COEFFICIENT OF VARIATION:	US Army '66	<u> </u>
	US Army '77	<u>5.2</u>

1st and 99th US ARMY '66 and '77 PERCENTILE VALUES: MALE and
 FEMALE 8.5 and 10.8

D. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

E. REASON FOR PATING IN D IS: useful for the design of binoculars, goggles, and other eye related devices; useful as one in a series of dimensions required for the development of three-dimensional head and face forms used to guide the design, sizing, procurement and issuing of equipment worn on the head and on the face.

F. RACE SENSITIVE? YES ☒ NO ☐ GENDER SENSITIVE? YES ☒ NO ☐
 IN WHAT WAY? Among White, Black, and Asian males of like face breadths, Whites tend on the average to have narrower spaced eyes than Blacks and Asians. Among men and women of like face breadths, men tend on the average to have broader spaced eyes than women.

G. REPRODUCIBILITY: A ☐ B ☐ C ☒

IF B OR C, THE PROBLEM IS: not a contact measurement; consistency of identifying the landmarks; subject's and anthropometrist's apprehension of measurements taken close to the eye.

H. PARTICULARLY SENSITIVE TO:

ANTHROPOMETRIC SURVEYS OF U.S. MILITARY PERSONNEL

VARIABLE NAME: BISPINOUS BREADTH

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The horizontal distance between the front points of the pelvis.
2. BODY POSITION: Standing erect.
3. LANDMARK(S): Anterior superior iliac spines.
4. INSTRUMENTS/EQUIPMENT: Beam caliper.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING U.S. MILITARY SURVEYS:

SURVEY	$\bar{X}$	SD	SURVEY	$\bar{X}$	SD
1 AF Women '68			4 USAF '67		
2 Army Women '77	<u>23.27</u>	<u>2.20</u>	5 US Army '66		
3 USN '64			6 Army Av. '70		

C. CORRELATION WITH:	US Army '66	STATURE	WEIGHT	AGE
	US Army '77	<u>.377</u>	<u>.579</u>	<u>.286</u>

COEFFICIENT OF VARIATION: US Army '66
US Army '77 9.5

1st and 99th US ARMY '66 and '77 PERCENTILE VALUES: MALE and
FEMALE 18.3 and 29.7

D. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

E. REASON FOR RATING IN D IS: required for the development of a body-link system.

F. RACE SENSITIVE? YES ☒ NO ☐ GENDER SENSITIVE? YES ☒ NO ☐
IN WHAT WAY? Among White and Black males of like body size, Whites tend on the average to have broader pelvis than Blacks. Among men and women of like body size, men tend on the average to have narrower pelvis than women.

G. REPRODUCIBILITY: A ☒ B ☐ C ☐

IF B OR C, THE PROBLEM IS:

H. PARTICULARLY SENSITIVE TO: the definition and location of the landmarks.

ANTHROPOMETRIC SURVEYS OF U.S. MILITARY PERSONNEL

VARIABLE NAME: BITRAGION BREADTH

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The horizontal distance between the tragus of each ear.
2. BODY POSITION: Sitting.
3. LANDMARK(S): Tragia.
4. INSTRUMENTS/EQUIPMENT: Spreading caliper.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING U.S. MILITARY SURVEYS:

SURVEY	$\bar{X}$	SD	SURVEY	$\bar{X}$	SD
1 AF Women '68	<u>12.89</u>	<u>0.50</u>	4 USAF '67	<u>14.25</u>	<u>0.56</u>
2 Army Women '77	<u>12.98</u>	<u>0.53</u>	5 US Army '66	<u>13.50</u>	<u>0.56</u>
3 USN '64	<u>13.99</u>	<u>0.52</u>	6 Army Av. '70	<u>14.17</u>	<u>0.57</u>

C. CORRELATION WITH:	US Army '66	STATURE	WEIGHT	AGE
		<u>.176</u>	<u>.485</u>	<u>.179</u>
	US Army '77	<u>.200</u>	<u>.354</u>	<u>.224</u>

COEFFICIENT OF VARIATION:	US Army '66	<u>4.2</u>
	US Army '77	<u>4.1</u>

1st and 99th US ARMY '66 and '77 PERCENTILE VALUES:	MALE	<u>12.2</u>	and	<u>14.9</u>
	FEMALE	<u>11.6</u>	and	<u>14.2</u>

D. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

E. REASON FOR RATING IN D IS: useful for the design and sizing of equipment worn on the head; useful as one in a series of dimensions required for the development of three-dimensional head forms used to guide the design and sizing of equipment worn on the head.

F. RACE SENSITIVE? YES ☒ NO ☐ GENDER SENSITIVE? YES ☒ NO ☐
 IN WHAT WAY? Among White and Asian males of like body size, Whites tend on the average to have narrower heads than Asians. Among men and women of like body size, men tend on the average to have broader heads than women.

G. REPRODUCIBILITY: A ☒ B ☐ C ☐

IF B OR C, THE PROBLEM IS:

H. PARTICULARLY SENSITIVE TO: tissue compression.

ANTHROPOMETRIC SURVEYS OF U.S. MILITARY PERSONNEL

VARIABLE NAME: BITRAGION-CORONAL ARC

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The vertical surface distance over the top of the head between the tragus of each ear.
2. BODY POSITION: Sitting.
3. LANDMARK(S): Tragia.
4. INSTRUMENTS/EQUIPMENT: Tape.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING U.S. MILITARY SURVEYS:

SURVEY	$\bar{X}$	SD	SURVEY	$\bar{X}$	SD
1 AF Women '68	<u>33.92</u>	<u>1.40</u>	4 USAF '67	<u>35.76</u>	<u>1.26</u>
2 Army Women '77	<u>33.22</u>	<u>1.27</u>	5 US Army '66	<u>35.50</u>	<u>1.22</u>
3 USN '64	<u>35.51</u>	<u>1.32</u>	6 Army Av. '70	<u>35.50</u>	<u>1.22</u>

C. CORRELATION WITH:	US Army '66	STATURE	WEIGHT	AGE
	US Army '77	<u>.300</u>	<u>.381</u>	<u>.021</u>

COEFFICIENT OF VARIATION: US Army '66
US Army '77 3.80

1st and 99th US ARMY '66 and '77 PERCENTILE VALUES: MALE 30.50 and 36.40
FEMALE 30.50 and 36.40

D. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

E. REASON FOR RATING IN D IS: useful for guiding the design of personal equipment such as ear cups that are mounted on a flexible band; useful as one in a series of dimensions required for the development of three-dimensional head and face forms used to guide the design and sizing of equipment worn on the head and on the face.

F. RACE SENSITIVE? YES ☐ NO ☒ GENDER SENSITIVE? YES ☒ NO ☐
IN WHAT WAY? Among men and women of like body size, men tend on the average to be larger than women for this dimension.

G. REPRODUCIBILITY: A ☐ B ☒ C ☐

IF B OR C, THE PROBLEM IS: maintaining the tape on the tragia.

H. PARTICULARLY SENSITIVE TO:

ANTHROPOMETRIC SURVEYS OF FOREIGN MILITARY PERSONNEL

VARIABLE NAME: BITRAGION-CORONAL ARC [TRANSVERSALER KOPFBOGEN (CORONALBOGEN)]

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The vertical surface distance over the top of the head between the tragus of each ear.
2. BODY POSITION: Sitting.
3. LANDMARK(S): Tragia.
4. INSTRUMENTS/EQUIPMENT: Tape.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING FOREIGN MILITARY SURVEYS:

<u>SURVEY</u>	<u>$\bar{X}$</u>	<u>SD</u>	<u>SURVEY</u>	<u>$\bar{X}$</u>	<u>SD</u>
CF	<u>35.41</u>	<u>1.36</u>	RAA	<u>35.43</u>	<u>1.26</u>
FRG	<u>35.0</u>	<u>1.3</u>	RAF		
RA					

C. THOUGHT TO BE OF: Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

- D. REASON FOR THE RATING IN C IS: useful for guiding the design of personal equipment such as ear cups that are mounted on a flexible band; useful as one in a series of dimensions required for the development of three-dimensional head and face forms used to guide the design and sizing of equipment worn on the head and on the face.

E. REPRODUCIBILITY: A ☐ B ☒ C ☐

IF B OR C, THE PROBLEM IS: maintaining the tape on the tragia.

F. PARTICULARLY SENSITIVE TO:

ANTHROPOMETRIC SURVEYS OF U.S. MILITARY PERSONNEL

VARIABLE NAME: BITRACION-MENTON ARC

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The surface distance between the tragus of each ear with the tape passing over the tip of the chin.
2. BODY POSITION: Sitting.
3. LANDMARK(S): Tragia; menton.
4. INSTRUMENTS/EQUIPMENT: Tape.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING U.S. MILITARY SURVEYS:

SURVEY	$\bar{X}$	SD	SURVEY	$\bar{X}$	SD
1 AF Women '68			4 USAF '67	<u>32.65</u>	<u>1.24</u>
2 Army Women '77	<u>29.36</u>	<u>1.31</u>	5 US Army '66		
3 USN '64	<u>32.21</u>	<u>1.27</u>	6 Army Av. '70		

C. CORRELATION WITH:	US Army '66	STATURE	WEIGHT	AGE
	US Army '77	<u>.312</u>	<u>.480</u>	<u>.053</u>

COEFFICIENT OF VARIATION:	US Army '66	
	US Army '77	<u>4.5</u>

1st and 99th US ARMY '66 and '77 PERCENTILE VALUES: MALE and
FEMALE 26.3 and 32.7

D. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

E. REASON FOR RATING IN D IS: useful as one in a series of dimensions required for the development of three-dimensional head and face forms used to guide the design and sizing of equipment worn on the head and on the face.

F. RACE SENSITIVE? YES ☒ NO ☐ GENDER SENSITIVE? YES ☒ NO ☐
IN WHAT WAY? Among White and Black males of like body size, Whites tend on the average to be smaller for this dimension than Blacks. Among men and women of like body size, men tend on the average to have larger faces than women.

G. REPRODUCIBILITY: A ☐ B ☒ C ☐

IF B OR C, THE PROBLEM IS: maintaining the tape on the tragia.

H. PARTICULARLY SENSITIVE TO:

ANTHROPOMETRIC SURVEYS OF U.S. MILITARY PERSONNEL

VARIABLE NAME: BITRAGION-MINIMUM FRONTAL ARC

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The surface distance between the tragus of each ear with the tape passing across the forehead.
2. BODY POSITION: Sitting.
3. LANDMARK(S): Tragia; frontotemporales.
4. INSTRUMENTS/EQUIPMENT: Tape.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING U.S. MILITARY SURVEYS:

SURVEY	$\bar{X}$	SD	SURVEY	$\bar{X}$	SD
1 AF Women '68			4 USAF '67	30.81	1.00
2 Army Women '77	28.40	1.03	5 US Army '66		
3 USN '64	30.21	1.09	6 Army Av. '70		

C. CORRELATION WITH:	US Army '66	US Army '77	STATURE	WEIGHT	AGE
			.400	.440	.056

COEFFICIENT OF VARIATION:	US Army '66	
	US Army '77	3.60

1st and 99th US ARMY '66 and '77 PERCENTILE VALUES: MALE _____ and _____
FEMALE 26.00 and 31.00

D. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

E. REASON FOR RATING IN D IS: useful as one in a series of dimensions required for the development of three-dimensional head and face forms used to guide the design and sizing of equipment worn on the head and on the face.

F. RACE SENSITIVE? YES ☐ NO ☒ GENDER SENSITIVE? YES ☒ NO ☐
IN WHAT WAY? Among men and women of like body size, men tend on the average to have larger faces than women.

G. REPRODUCIBILITY: A ☐ B ☒ C ☐

IF B OR C, THE PROBLEM IS: maintaining the tape on the tragia.

H. PARTICULARLY SENSITIVE TO:

ANTHROPOMETRIC SURVEYS OF U.S. MILITARY PERSONNEL

VARIABLE NAME: BITRAGION-POSTERIOR ARC

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The surface distance between the tragus of each ear with the tape passing over the lower part of the back of the head.
2. BODY POSITION: Sitting.
3. LANDMARK(S): Tragion; USN '64-nuchale; USAF '67-inion.
4. INSTRUMENTS/EQUIPMENT: Tape.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES: different posterior landmarks.

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING U.S. MILITARY SURVEYS:

SURVEY	$\bar{X}$	SD	SURVEY	$\bar{X}$	SD
1 AF Women '68	_____	_____	4 USAF '67	29.45	1.49
2 Army Women '77	_____	_____	5 US Army '66	_____	_____
3 USN '64	31.44	2.10	6 Army Av. '70	_____	_____

C. CORRELATION WITH: STATURE WEIGHT AGE
 US Army '66 _____
 US Army '77 _____

COEFFICIENT OF VARIATION: US Army '66 _____
 US Army '77 _____

1st and 99th US ARMY '66 and '77 PERCENTILE VALUES: MALE _____ and _____
 FEMALE _____ and _____

D. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

E. REASON FOR RATING IN D IS: there is no demonstrated use for this dimension

F. RACE SENSITIVE? YES ☐ NO ☒ GENDER SENSITIVE? YES ☐ NO ☒
 IN WHAT WAY?

G. REPRODUCIBILITY: A ☐ B ☒ C ☐

IF B OR C, THE PROBLEM IS: nuchale is an ill-defined landmark; inion is often difficult to locate precisely on many subjects.

H. PARTICULARLY SENSITIVE TO:

ANTHROPOMETRIC SURVEYS OF U.S. MILITARY PERSONNEL

VARIABLE NAME: BITRAGION-SUBMANDIBULAR ARC

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The diagonal surface distance between the tragus of each ear with the tape passing over the juncture of the chin and neck.
2. BODY POSITION: Sitting.
3. LANDMARK(S): Tragia; chin/neck juncture.
4. INSTRUMENTS/EQUIPMENT: Tape.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING U.S. MILITARY SURVEYS:

SURVEY	$\bar{X}$	SD	SURVEY	$\bar{X}$	SD
1 AF Women '68			4 USAF '67	30.98	1.58
2 Army Women '77	26.49	1.34	5 US Army '66		
3 USN '64	31.22	1.41	6 Army Av. '70		

C. CORRELATION WITH:	US Army '66	STATURE	WEIGHT	AGE
	US Army '77	.252	.507	.222

COEFFICIENT OF VARIATION: US Army '66
US Army '77 5.1

1st and 99th US ARMY '66 and '77 PERCENTILE VALUES: MALE and
FEMALE 23.5 and 29.5

D. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

E. REASON FOR RATING IN D IS: useful as one in a series of dimensions required for the development of three-dimensional head and face forms used to guide the design and sizing of equipment worn on the head and on the face.

F. RACE SENSITIVE? YES ☐ NO ☒ GENDER SENSITIVE? YES ☒ NO ☐
IN WHAT WAY? Among men and women of like body size, men tend on the average to have larger faces than women.

G. REPRODUCIBILITY: A ☐ B ☒ C ☐

IF B OR C, THE PROBLEM IS: maintaining the tape on the tragia; chin-neck juncture may be indistinct on heavier subjects.

H. PARTICULARLY SENSITIVE TO:

ANTHROPOMETRIC SURVEYS OF U.S. MILITARY PERSONNEL

VARIABLE NAME: BITRAGION-SUBNASALE ARC

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The surface distance between the tragus of each ear with the tape passing over the juncture of the nose and the groove of the upper lip.
2. BODY POSITION: Sitting.
3. LANDMARK(S): Tragia; philtrum/nasal septum juncture.
4. INSTRUMENTS/EQUIPMENT: Tape.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING U.S. MILITARY SURVEYS:

SURVEY	$\bar{X}$	SD	SURVEY	$\bar{X}$	SD
1 AF Women '68	_____	_____	4 USAF '67	29.31	1.02
2 Army Women '77	_____	_____	5 US Army '66	_____	_____
3 USN '64	28.68	1.06	6 Army Av. '70	_____	_____

C. CORRELATION WITH: US Army '66 STATURE WEIGHT AGE
US Army '77

COEFFICIENT OF VARIATION: US Army '66
US Army '77

1st and 99th US ARMY '66 and '77 PERCENTILE VALUES: MALE and
FEMALE and

D. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

E. REASON FOR RATING IN D IS: useful as one in a series of dimensions required for the development of three-dimensional head and face forms used to guide the design and sizing of equipment worn on the head and on the face.

F. RACE SENSITIVE? YES ☒ NO ☐ GENDER SENSITIVE? YES ☒ NO ☐
IN WHAT WAY? Among White and Black males of like body size, Whites tend on the average to have a lesser value for this dimension than Blacks. Among men and women of like body size, men tend on the average to have a greater value for this dimension than women.

G. REPRODUCIBILITY: A ☐ B ☒ C ☐

IF B OR C, THE PROBLEM IS: maintaining the tape on the tragia.

H. PARTICULARLY SENSITIVE TO:

ANTHROPOMETRIC SURVEYS OF U.S. MILITARY PERSONNEL

VARIABLE NAME: BIZYGOMATIC BREADTH (FACE BREADTH)

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The maximum horizontal breadth of the upper face.
2. BODY POSITION: Sitting.
3. LANDMARK(S): Zygia.
4. INSTRUMENTS/EQUIPMENT: Spreading caliper.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING U.S. MILITARY SURVEYS:

SURVEY	$\bar{X}$	SD	SURVEY	$\bar{X}$	SD
1 AF Women '68	<u>12.90</u>	<u>0.58</u>	4 USAF '67	<u>14.23</u>	<u>0.52</u>
2 Army Women '77	<u>13.20</u>	<u>0.53</u>	5 US Army '66	<u>13.99</u>	<u>0.56</u>
3 USN '64	<u>13.62</u>	<u>0.70</u>	6 Army Av. '70	<u>13.87</u>	<u>0.53</u>

C. CORRELATION WITH:	US Army '66	STATURE	WEIGHT	AGE
		<u>.186</u>	<u>.531</u>	<u>.190</u>
	US Army '77	<u>.226</u>	<u>.468</u>	<u>.194</u>

COEFFICIENT OF VARIATION:	US Army '66	<u>4.0</u>
	US Army '77	<u>4.0</u>

1st and 99th US ARMY '66 and '77 PERCENTILE VALUES: MALE 12.7 and 15.4
FEMALE 11.9 and 14.6

D. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

E. REASON FOR RATING IN D IS: a key dimension in a series of dimensions required for the development of three-dimensional head and face forms used to guide the design, sizing, procurement and issuing of equipment worn on the head and on the face; useful for the development of anthropomorphic analogues.

F. RACE SENSITIVE? YES ☒ NO ☐ GENDER SENSITIVE? YES ☒ NO ☐
IN WHAT WAY? Among White and Asian males of like body size, Whites tend on the average to have narrower faces than Asians. Among men and women of like body size, men tend on the average to have broader faces than women.

G. REPRODUCIBILITY: A ☒ B ☐ C ☐

IF B OR C, THE PROBLEM IS:

H. PARTICULARLY SENSITIVE TO:

ANTHROPOMETRIC SURVEYS OF FOREIGN MILITARY PERSONNEL

VARIABLE NAME: BIZYGOMATIC BREADTH

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The maximum horizontal breadth of the upper face.
2. BODY POSITION: Sitting.
3. LANDMARK(S): Zygia.
4. INSTRUMENTS/EQUIPMENT: Spreading caliper.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS:

B. DATA INDICATE DIMENSION MEASURED IN THE FOLLOWING FOREIGN MILITARY SURVEYS:

<u>SURVEY</u>	<u>$\bar{x}$</u>	<u>SD</u>	<u>SURVEY</u>	<u>$\bar{x}$</u>	<u>SD</u>
CF	<u>14.12</u>	<u>0.53</u>	RAA	<u> </u>	<u> </u>
FRG	<u>14.3</u>	<u>0.5</u>	RAF	<u> </u>	<u> </u>
RA	<u> </u>	<u> </u>			

C. THOUGHT TO BE OF: Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

D. REASON FOR THE RATING IN C IS: a key dimension in a series of dimensions required for the development of three-dimensional head and face forms used to guide the design, sizing, procurement and issuing of equipment worn on the head and on the face; useful for the development of anthropomorphic analogues.

E. REPRODUCIBILITY: A ☒ B ☐ C ☐

IF B OR C, THE PROBLEM IS:

F. PARTICULARLY SENSITIVE TO:

ANTHROPOMETRIC SURVEYS OF U.S. CIVILIANS

VARIABLE NAME: BUST CIRCUMFERENCE OVER FOUNDATION GARMENT

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The horizontal circumference of the chest over a foundation garment.
2. BODY POSITION: Anthropometric standing.
3. LANDMARK(S): Indeterminate-not clearly defined in the report.
4. INSTRUMENTS/EQUIPMENT: Tape.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN FOLLOWING U.S. CIVILIAN SURVEYS:

<u>SURVEY</u>	<u>$\bar{X}$</u>	<u>SD</u>
BUREAU OF HOME ECONOMICS	<u>*90.55</u>	<u>9.93</u>
HES		
Men	<u> </u>	<u> </u>
Women	<u> </u>	<u> </u>
HANES		
Men	<u> </u>	<u> </u>
Women	<u> </u>	<u> </u>

C. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

D. REASON FOR RATING IN C IS: very few Army women wear foundation garments.

E. REPRODUCIBILITY: A ☒ B ☐ C ☐

IF B OR C, THE PROBLEM IS:

F. PARTICULARLY SENSITIVE TO: the type of foundation garment worn; the point of respiration at which the measurement is taken.

*See Abdominal Extension Circumference Over Foundation Garment - U.S. Civilians.

ANTHROPOMETRIC SURVEYS OF U.S. MILITARY PERSONNEL

VARIABLE NAME: BUST DEPTH

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT.

1. DESCRIPTION: The horizontal distance between the back and the chest at the level of the bust.
2. BODY POSITION: Anthropometric standing.
3. LANDMARK(S): Anterior bustpoint.
4. INSTRUMENTS/EQUIPMENT: Beam caliper.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING U.S. MILITARY SURVEYS:

SURVEY	$\bar{X}$	SD	SURVEY	$\bar{X}$	SD

RA	81.21	4.21			

C. THOUGHT TO BE OF: Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

D. REASON FOR THE RATING IN C IS: a key dimension required for the design, sizing, procurement and issuing of single- and lower-body garments; required for the construction of clothing manikins; useful for the development of anthropomorphic analogues.

E. REPRODUCIBILITY: A ☒ B ☐ C ☐

IF B OR C, THE PROBLEM IS:

F. PARTICULARLY SENSITIVE TO: the degree of pressure of the measuring instrument on the crotch; type of body covering worn (CF, RA, RAA, RAF-briefs; FRG- gym shorts).

ANTHROPOMETRIC SURVEYS OF U.S. CIVILIANS

VARIABLE NAME: CROTCH HEIGHT [sic] (GLUTEAL FURROW HEIGHT)

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The vertical distance between the standing surface and the lowest point of a crease at the buttock/leg juncture.
2. BODY POSITION: Anthropometric standing.
3. LANDMARK(S): Crotch center.*
4. INSTRUMENTS/EQUIPMENT: Anthropometer.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS: CROTCH HEIGHT

B. DIMENSION WAS MEASURED IN FOLLOWING U.S. CIVILIAN SURVEYS:

<u>SURVEY</u>	<u>$\bar{X}$</u>	<u>SD</u>
BUREAU OF HOME ECONOMICS	<u>72.47</u>	<u>4.42</u>
HES		
Men	<u> </u>	<u> </u>
Women	<u> </u>	<u> </u>
HANES		
Men	<u> </u>	<u> </u>
Women	<u> </u>	<u> </u>

C. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

D. REASON FOR RATING IN C IS: Crotch Height is a key dimension for the design, sizing, procurement and issuing of single- and lower-body garments; required for the construction of clothing manikins; useful for the development of anthropomorphic analogues.

E. REPRODUCIBILITY: A ☒ B ☐ C ☐

IF B OR C, THE PROBLEM IS:

F. PARTICULARLY SENSITIVE TO: the degree of pressure of the measuring instrument on the crotch.

*The description of the center landmark in the report is not clear. Evidence strongly indicates that this dimension is actually Gluteal Furrow Height.

ANTHROPOMETRIC SURVEYS OF U.S. MILITARY PERSONNEL

VARIABLE NAME: CROTCH LENGTH

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The surface distance between the front of the waist, through the crotch, over the maximum protrusion of a buttock, and back to the waist above the buttock.
2. BODY POSITION: Anthropometric Standing.
3. LANDMARK(S): Anterior waist; crotch; posterior buttock point; posterior waist vertical to posterior buttock point (waist level-USA '77-preferred; USAF '67-omphalion).
4. INSTRUMENTS/EQUIPMENT: Tape.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING U.S. MILITARY SURVEYS:

SURVEY	$\bar{X}$	SD	SURVEY	$\bar{X}$	SD
1 AF Women '68			4 USAF '67	<u>70.61</u>	<u>4.43</u>
2 Army Women '77	<u>72.92</u>	<u>5.45</u>	5 US Army '66		
3 USN '64			6 Army Av. '70		

C. CORRELATION WITH:	US Army '66	STATURE	WEIGHT	AGE
	US Army '77	<u>.424</u>	<u>.636</u>	<u>.043</u>

COEFFICIENT OF VARIATION: US Army '66 _____
US Army '77 _____

1st and 99th US ARMY '66 and '77 PERCENTILE VALUES: MALE _____ and _____
FEMALE 58.1 and 85.2

D. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

E. REASON FOR RATING IN D IS: useful for the design and sizing of single- and lower-body garments; useful for the construction of clothing manikins.

F. RACE SENSITIVE? YES ☒ NO ☐ GENDER SENSITIVE? YES ☒ NO ☐
IN WHAT WAY? Among Whites and Blacks of like body size, Whites tend on the average to have larger buttocks than Blacks. Among men and women of like body size, men tend on the average to be smaller for this dimension than women.

G. REPRODUCIBILITY: A ☒ B ☐ C ☐

IF B OR C, THE PROBLEM IS:

H. PARTICULARLY SENSITIVE TO: the definition of waist level; the point of respiration at which the measurement is taken; tension of the abdominal muscles; the tension on the tape.

ANTHROPOMETRIC SURVEYS OF FOREIGN MILITARY PERSONNEL

VARIABLE NAME: CROTCH LENGTH

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The vertical surface distance between the front of the waist and the back of the waist with the measuring tape passing through the crotch.
2. BODY POSITION: Anthropometric standing.
3. LANDMARK(S): Waist level: ¹preferred waist level; ²natural indentation.
4. INSTRUMENTS/EQUIPMENT: Tape.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS: CROTCH LENGTH (see U.S. military and civilians)

B. DATA INDICATE DIMENSION MEASURED IN THE FOLLOWING FOREIGN MILITARY SURVEYS:

<u>SURVEY</u>	$\bar{X}$	SD	<u>SURVEY</u>	$\bar{X}^1$	SD ¹	$\bar{X}^2$	SD ²
CF	_____	_____	RAA	_____	_____	_____	_____
FRG	_____	_____	RAF	<u>64.13</u>	<u>5.32</u>	<u>73.47</u>	<u>4.56</u>
RA	_____	_____					

C. THOUGHT TO BE OF: Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

D. REASON FOR THE RATING IN C IS: Crotch length as measured by the U.S. military yields more useful data for the design and sizing of single- and lower-body garments and for the construction of clothing manikins.

E. REPRODUCIBILITY: A ☒ B ☐ C ☐

IF B OR C, THE PROBLEM IS:

F. PARTICULARLY SENSITIVE TO: the definition of waist level; the point of respiration at which the measurement is taken; tension of the abdominal muscles; tension on the tape.

ANTHROPOMETRIC SURVEYS OF U.S. CIVILIANS

VARIABLE NAME: CROTCH LENGTH (TOTAL CROTCH LENGTH)

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The vertical surface distance between the front and back of the waist through the crotch.
2. BODY POSITION: Right leg straight, left leg on support surface (mid-patella height of right leg).
3. LANDMARK(S): Waist level (the average height of the inferior margins of the 12th ribs).
4. INSTRUMENTS/EQUIPMENT: Tape.

5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN FOLLOWING U.S. CIVILIAN SURVEYS:

<u>SURVEY</u>	<u>$\bar{x}$</u>	<u>SD</u>

E. REASON FOR RATING IN D IS: useful for the design of ear cups.

F. RACE SENSITIVE? YES ☒ NO ☐ GENDER SENSITIVE? YES ☒ NO ☐
 IN WHAT WAY? Among White and Black males of like body size, Whites tend on the average to have longer ears than Blacks. Among men and women of like body size, men tend on the average to have longer ears than women.

G. REPRODUCIBILITY: A ☒ B ☐ C ☐

IF B OR C, THE PROBLEM IS:

H. PARTICULARLY SENSITIVE TO: compression of the ear tissue

*n = 37

ANTHROPOMETRIC SURVEYS OF FOREIGN MILITARY PERSONNEL

VARIABLE NAME: EAR LENGTH (OHRLÄNGE)

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The vertical distance between the top and the bottom of the ear.
2. BODY POSITION: Sitting.
3. LANDMARK(S): Supraaurale; subaurale.
4. INSTRUMENTS/ELEMENT: Sliding caliper.
5. SIGNIFICANT DIFFERENCE: MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING FOREIGN MILITARY SURVEYS:

<u>SURVEY</u>	<u>$\bar{X}$</u>	<u>SD</u>	<u>SURVEY</u>	<u>$\bar{X}$</u>	<u>SD</u>
CF			RAA		
FRG	<u>6.5</u>	<u>0.4</u>	RAF		
RA					

C. THOUGHT TO BE OF: Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

D. REASON FOR THE RATING IN C IS: useful for the design of ear cups.

E. REPRODUCIBILITY: A ☒ B ☐ C ☐

IF B OR C, THE PROBLEM IS:

F. PARTICULARLY SENSITIVE TO: compression of the ear tissue.

ANTHROPOMETRIC SURVEYS OF U.S. MILITARY PERSONNEL

VARIABLE NAME: EAR LENGTH ABOVE TRAGION

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The vertical distance between the tragus and the top of the ear.
2. BODY POSITION: Sitting.
3. LANDMARK(S): Tragion; superaurale.
4. INSTRUMENTS/EQUIPMENT: Sliding caliper.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING U.S. MILITARY SURVEYS:

SURVEY	$\bar{X}$	SD	SURVEY	$\bar{X}$	SD
1 AF Women '68	_____	_____	4 USAF '67	2.94	0.29
2 Army Women '77	_____	_____	5 US Army '66	_____	_____
3 USN '64	_____	_____	6 Army Av. '70	_____	_____

C. CORRELATION WITH: STATURE WEIGHT AGE
US Army '66 _____
US Army '77 _____

COEFFICIENT OF VARIATION: US Army '66 _____
US Army '77 _____

1st and 99th US ARMY '66 and '77 PERCENTILE VALUES: MALE _____ and _____
FEMALE _____ and _____

D. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

E. REASON FOR RATING IN D IS: useful as one in a series of dimensions required for the development of three-dimensional head and face forms used to guide the design and sizing of equipment worn on the head and on the face.

F. RACE SENSITIVE? YES ☐ NO ☒ GENDER SENSITIVE? YES ☐ NO ☒
IN WHAT WAY?

G. REPRODUCIBILITY: A ☐ B ☐ C ☒

IF B OR C, THE PROBLEM IS: compression of ear tissue; positioning caliper precisely on tragion.

H. PARTICULARLY SENSITIVE TO

ANTHROPOMETRIC SURVEYS OF U.S. MILITARY PERSONNEL

VARIABLE NAME: EAR PROTRUSION

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The horizontal distance between the head and the point of greatest protrusion of the ear.
2. BODY POSITION: Sitting.
3. LANDMARK(S): Lateral point of the ear.
4. INSTRUMENTS/EQUIPMENT: Sliding caliper.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS: BIAURICULAR BREADTH

B. DIMENSION WAS MEASURED IN THE FOLLOWING U.S. MILITARY SURVEYS:

SURVEY	$\bar{X}$	SD	SURVEY	$\bar{X}$	SD
1 AF Women '68	_____	_____	4 USAF '67	2.16	0.34

FRG	<u>35.0</u>	<u>1.8</u>	RAF	<u>34.28</u>	<u>1.75</u>
RA	<u>34.63</u>	<u>1.88</u>			

C. THOUGHT TO BE OF: Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

D. REASON FOR THE RATING IN C IS: useful for the design and sizing of single- and upper-body garments.

E. REPRODUCIBILITY: A ☐ B ☒ C ☐

IF B OR C, THE PROBLEM IS: the consistency of pressure exerted on the tape; placing and maintaining the tape on the olecranon process.

F. PARTICULARLY SENSITIVE TO:

ANTHROPOMETRIC SURVEYS OF FOREIGN MILITARY PERSONNEL

VARIABLE NAME: ELBOW FUNCTIONAL REACH

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The horizontal distance between the back of the elbow and the tip of the thumb with the upper arm horizontal and stretched laterally and with the elbow bent 90 degrees in a horizontal plane.
2. BODY POSITION: Standing; arm horizontal and stretched laterally; forearm flexed 90 degrees in a horizontal plane; tip of the second finger touching thumb.
3. LANDMARK(S): Olecranon process; tip of thumb.
4. INSTRUMENTS/EQUIPMENT: Measuring rig.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS: FOREARM-HAND LENGTH

B. DIMENSION WAS MEASURED IN THE FOLLOWING FOREIGN MILITARY SURVEYS:

<u>SURVEY</u>	<u>$\bar{X}$</u>	<u>SD</u>	<u>SURVEY</u>	<u>$\bar{X}$</u>	<u>SD</u>
CF	_____	_____	RAA	_____	_____
FRG	_____	_____	RAF	_____	_____
RA	<u>41.12</u>	<u>1.88</u>			

C. THOUGHT TO BE OF: Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

D. REASON FOR THE RATING IN C IS: a useful clearance dimension for the design and layout of confined workspaces, e.g., cockpits; useful for the development of anthropomorphic analogues.

E. REPRODUCIBILITY: A ☒ B ☐ C ☐

IF B OR C, THE PROBLEM IS:

F. PARTICULARLY SENSITIVE TO: pressure of the arm against the wall of the measuring rig.

ANTHROPOMETRIC SURVEYS OF U.S. MILITARY PERSONNEL

VARIABLE NAME: ELBOW REST HEIGHT

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The vertical distance between the sitting surface and the bottom of the elbow bent 90 degrees.
2. BODY POSITION: Anthropometric sitting.
3. LANDMARK(S): Inferior point of the olecranon process.
4. INSTRUMENTS/EQUIPMENT: Anthropometer.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES: The published data of the landmark used are the same. The data indicate that a different interpretation of the landmark was made by the USA and the USAF.

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING U.S. MILITARY SURVEYS:

SURVEY	$\bar{X}$	SD	SURVEY	$\bar{X}$	SD
1 AF Women '68	<u>22.71</u>	<u>2.46</u>	4 USAF '67	<u>25.16</u>	<u>2.61</u>

HANES		
Men	_____	_____
Women	_____	_____

C. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

D. REASON FOR RATING IN C IS: the arm position used in this survey yields a measurement of little or even misleading value.

E. REPRODUCIBILITY: A ☐ B ☒ C ☐

IF B OR C, THE PROBLEM IS: the consistency of the position of the arms; the consistency of maintaining the caliper on the lateral humeral epicondyles.

F. PARTICULARLY SENSITIVE TO: the definition of the landmark; position of the arms.

ANTHROPOMETRIC SURVEYS OF FOREIGN MILITARY PERSONNEL

VARIABLE NAME: ELBOW-ELBOW SPAN (ELLENBOGENSPANWEITE) (INTER-ELBOW SPAN)

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The horizontal distance between the elbows with the upper arms horizontal and stretched laterally and the forearms bent 90 degrees in a horizontal plane.
2. BODY POSITION: Standing erect (FRG-sitting or standing); arms horizontal and stretched laterally, elbows flexed 90 degrees in a horizontal plane.
3. LANDMARK(S): Olecranon process.
4. INSTRUMENTS/EQUIPMENT: FRG-anthropometer; RA, RAF-measuring rig.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING FOREIGN MILITARY SURVEYS:

<u>SURVEY</u>	<u>$\bar{X}$</u>	<u>SD</u>	<u>SURVEY</u>	<u>$\bar{X}$</u>	<u>SD</u>
CF			RAA		
FRG	<u>93.5</u>	<u>4.0</u>	RAF	<u>*99.06</u>	<u>4.26</u>
RA	<u>95.25</u>	<u>4.55</u>			

C. THOUGHT TO BE OF: Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

D. REASON FOR THE RATING IN C IS: useful for the design and layout of seated workspaces particularly in confined areas such as cockpits.

E. REPRODUCIBILITY: A ☒ B ☐ C ☐

IF B OR C, THE PROBLEM IS:

F. PARTICULARLY SENSITIVE TO: the landmark definition; body position.

*The difference between the mean values of the RA and the RAF is inexplicable since the same measuring technique is reported; it most likely reflects a difference in body position, i.e. pressure of the forearm against the wall of the measuring rig.

ANTHROPOMETRIC SURVEYS OF U.S. MILITARY PERSONNEL

VARIABLE NAME: EYE HEIGHT, SITTING

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The vertical distance between the sitting surface and a corner of an eye.
2. BODY POSITION: Anthropometric sitting.
3. LANDMARK(S): USN '64, USA '66-endocanthus; USAF '67, USAF '68, USA '70, USA '77-ectocanthus.
4. INSTRUMENTS/EQUIPMENT: Anthropometer.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING U.S. MILITARY SURVEYS:

SURVEY	$\bar{X}$	SD	SURVEY	$\bar{X}$	SD
1 AF Women '68	<u>73.70</u>	<u>3.06</u>	4 USAF '67	<u>80.95</u>	<u>3.02</u>
2 Army Women '77	<u>73.64</u>	<u>3.46</u>	5 US Army '66	<u>78.72</u>	<u>3.57</u>
3 USN '64	<u>80.18</u>	<u>3.01</u>	6 Army Av. '70	<u>78.80</u>	<u>3.15</u>

C. CORRELATION WITH:	STATURE	WEIGHT	AGE
US Army '66	<u>.653</u>	<u>.359</u>	<u>-.054</u>
US Army '77	<u>.738</u>	<u>.399</u>	<u>.098</u>

COEFFICIENT OF VARIATION:	US Army '66	<u>4.5</u>
	US Army '77	<u>4.7</u>

1st and 99th US ARMY '66 and '77 PERCENTILE VALUES: MALE 70.1 and 87.0
FEMALE 65.3 and 81.6

D. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

E. REASON FOR RATING IN D IS: a key dimension for the design and layout of aircraft cockpits; often required for the design and layout of seated workspaces; required for the development of body-link system; often a key dimension for the development of anthropomorphic analogues.

F. RACE SENSITIVE? YES ☒ NO ☐ GENDER SENSITIVE? YES ☐ NO ☒
IN WHAT WAY? Among Whites, Blacks, and Asians of like body size, Whites tend on the average to have longer torsos than Blacks and shorter torsos than Asians.

G. REPRODUCIBILITY: A ☒ B ☐ C ☐

IF B OR C, THE PROBLEM IS:

H. PARTICULARLY SENSITIVE TO: maintaining the required body position; subject's and anthropometrist's apprehension of measurements taken close to the eyes.

ANTHROPOMETRIC SURVEYS OF FOREIGN MILITARY PERSONNEL

VARIABLE NAME: EYE HEIGHT, SITTING (AUGENHÖHE IM SITZEN)

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The vertical distance between the sitting surface and an eye.
2. BODY POSITION: FRG-sitting erect with maximum stretch, head in the Frankfurt plane; RAA-anthropometric sitting.
3. LANDMARK(S): FRG-endocanthus; RAA-center of pupil.
4. INSTRUMENTS/EQUIPMENT: FRG- anthropometer; RAA- measuring rig.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES: FRG-body position.

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING FOREIGN MILITARY SURVEYS:

<u>SURVEY</u>	<u>$\bar{x}$</u>	<u>SD</u>	<u>SURVEY</u>	<u>$\bar{x}$</u>	<u>SD</u>
CF			RAA	<u>80.18</u>	<u>3.10</u>
FRG	<u>80.2</u>	<u>3.1</u>	RAF		
RA					

C. THOUGHT TO BE OF: Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

D. REASON FOR THE RATING IN C IS: a key dimension for the design and layout of aircraft cockpits; often required for the design and layout of seated workspaces; required for the development of a body-link system; often a key dimension for the development of anthropomorphic analogues.

E. REPRODUCIBILITY: A ☒ B ☐ C ☐

IF B OR C, THE PROBLEM IS:

1. PARTICULARLY SENSITIVE TO: maintaining required body position; subject's and anthropometrist's apprehension of measurements taken close to the eyes.

ANTHROPOMETRIC SURVEYS OF U.S. MILITARY PERSONNEL

VARIABLE NAME: FEMORAL EPICONDYLE BREADTH

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The straight-line distance between the inside and the outside bony projections of the knee. (Strong pressure is used to compress the tissue when taking the measurement.)
2. BODY POSITION: Sitting, knee flexed 90 degrees.
3. LANDMARK(S): Lateral and medial point of the femoral epicondyles.
4. INSTRUMENTS/EQUIPMENT: Spreading caliper.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING U.S. MILITARY SURVEYS:

SURVEY	$\bar{X}$	SD	SURVEY	$\bar{X}$	SD
1 AF Women '68	8.12	0.45	4 USAF '67	9.98	0.45
2 Army Women '77			5 US Army '66		
3 USN '64			6 Army Av. '70		

C. CORRELATION WITH: STATURE WEIGHT AGE
 US Army '66 _____
 US Army '77 _____

COEFFICIENT OF VARIATION: US Army '66 _____
 US Army '77 _____

1st and 99th US ARMY '66 and '77 PERCENTILE VALUES: MALE _____ and _____
 FEMALE _____ and _____

D. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

E. REASON FOR RATING IN D IS: useful only in assessing body composition and body typology.

F. RACE SENSITIVE? YES ☐ NO ☒ GENDER SENSITIVE? YES ☐ NO ☒
 IN WHAT WAY?

G. REPRODUCIBILITY: A ☒ B ☐ C ☐

IF B OR C, THE PROBLEM IS:

H. PARTICULARLY SENSITIVE TO:

ANTHROPOMETRIC SURVEYS OF U.S. MILITARY PERSONNEL

VARIABLE NAME: FIBULAR HEIGHT

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The distance from the standing surface to the top of the fibula (the outside bone of the lower leg).
2. BODY POSITION: Standing.
3. LANDMARK(S): Superior point of the fibula.
4. INSTRUMENTS/EQUIPMENT: Anthropometer.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS: TIBIALE HEIGHT

B. DIMENSION WAS MEASURED IN THE FOLLOWING U.S. MILITARY SURVEYS:

	SURVEY	$\bar{X}$	SD		SURVEY	$\bar{X}$	SD
1	AF Women '68	_____	_____	4	USAF '67	43.87	2.25

COEFFICIENT OF VARIATION: US Army '66 _____
US Army '77 _____

1st and 99th US ARMY '66 and '77 PERCENTILE VALUES: MALE _____ and _____
FEMALE _____ and _____

D. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

F. REASON FOR RATING IN D IS: Tibiale Height is the preferred dimension for the development of a body-link system.

F. RACE SENSITIVE? YES ☒ NO ☐ GENDER SENSITIVE? YES ☐ NO ☒
IN WHAT WAY? Among Whites, Blacks, and Asians of like body size, Whites tend on the average to have shorter legs than Blacks and longer legs than Asians.

G. REPRODUCIBILITY: A ☒ B ☐ C ☐

IF B OR C, THE PROBLEM IS:

H. PARTICULARLY SENSITIVE TO: the accurate location of the landmark.

ANTHROPOMETRIC SURVEYS OF U S. MILITARY PERSONNEL

VARIABLE NAME: FINGER DIAMETER (DIGIT III)

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The greatest diameter of the third finger.

2. BODY POSITION:

3. LANDMARK(S): Maximum diameter of digit III.

4. INSTRUMENTS/EQUIPMENT: Board with graduated holes.

5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING U.S. MILITARY SURVEYS:

	SURVEY	$\bar{X}$	SD		SURVEY	$\bar{X}$	SD
1	AF Women '68	_____	_____	4	USAF '67	_____	_____

C. CORRELATION WITH: US Army '66 STATURE WEIGHT AGE
US Army '77

COEFFICIENT OF VARIATION: US Army '66
US Army '77

1st and 99th US ARMY '66 and '77 PERCENTILE VALUES: MALE and
FEMALE and

D. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

E. REASON FOR RATING IN D IS: useful as one in a series of hand and finger dimensions required for developing sizing systems/programs for gloves.

F. RACE SENSITIVE? YES ☐ NO ☒ GENDER SENSITIVE? YES ☒ NO ☐
IN WHAT WAY? Among men and women of like body size, men tend on the average to have larger fingers than women.

G. REPRODUCIBILITY: A ☐ B ☒ C ☐

IF B OR C, THE PROBLEM IS: the judgment of the minimum size hole digit III can "comfortably" pass through.

H. PARTICULARLY SENSITIVE TO:

ANTHROPOMETRIC SURVEYS OF U.S. MILITARY PERSONNEL

VARIABLE NAME: FOOT BREADTH (BALL OF FOOT BREADTH)

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The distance across the foot between the inside and outside of the ball of the foot. The maximum horizontal breadth of the foot.
2. BODY POSITION: Standing; weight distributed equally on both feet.
3. LANDMARK(S): Lateral and medial points of the foot.
4. INSTRUMENTS/EQUIPMENT: Foot box.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING U.S. MILITARY SURVEYS:

SURVEY	$\bar{X}$	SD	SURVEY	$\bar{X}$	SD
1 AF Women '68	<u>8.87</u>	<u>0.50</u>	4 USAF '67	<u>9.77</u>	<u>0.50</u>

	US Army '77	<u>5.3</u>

1st and 99th US ARMY '66 and '77 PERCENTILE VALUES: MALE 42.7 and 53.8
FEMALE 38.7 and 49.2

D. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

E. REASON FOR RATING IN D IS: required for the design and layout of seated workspaces; required for the development of anthropomorphic analogues.

F. RACE SENSITIVE? YES ☒ NO ☐ GENDER SENSITIVE? YES ☐ NO ☒
IN WHAT WAY? Among Whites, Blacks, and Asians of like body size, Whites tend on the average to have shorter forearms than Blacks and longer forearms than Asians.

G. REPRODUCIBILITY: A ☒ B ☐ C ☐

IF B OR C, THE PROBLEM IS:

H. PARTICULARLY SENSITIVE TO:

ANTHROPOMETRIC SURVEYS OF FOREIGN MILITARY PERSONNEL

VARIABLE NAME: FOREARM-HAND LENGTH (ELBOW-FINGERTIP LENGTH)

A. DESCRIPTION OF DIMENSION AND MEASURING TECHNIQUES:

1. DESCRIPTION: The distance between the back of the elbow and the tip of the middle finger with the upper arm horizontal and stretched laterally and the forearm bent 90 degrees in a horizontal plane.
2. BODY POSITION: Standing erect; arm horizontal and stretched laterally; forearm flexed 90 degrees in a horizontal plane; hand and fingers extended.
3. LANDMARK(S): Dactylion; posterior point of the olecranon process.
4. INSTRUMENTS/EQUIPMENT: Measuring rig.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING FOREIGN MILITARY SURVEYS:

<u>SURVEY</u>	<u>$\bar{X}$</u>	<u>SD</u>	<u>SURVEY</u>	<u>$\bar{X}$</u>	<u>SD</u>

C. THOUGHT TO BE OF: Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

- D. REASON FOR THE RATING IN C IS: required for the design and layout of seated workspaces; a potential criterion for aircraft accommodation; required for the development of anthropomorphic analogues; useful for the design and sizing of single- and upper-body garments.

E. REPRODUCIBILITY: A ☒ B ☐ C ☐

IF B OR C, THE PROBLEM IS:

F. PARTICULARLY SENSITIVE TO:

ANTHROPOMETRIC SURVEYS OF U.S. MILITARY PERSONNEL

VARIABLE NAME: FUNCTIONAL LEG LENGTH (BUTTOCK-HEEL LENGTH)

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The distance along the long axis of the leg between the foot and the back of a subject seated with the leg extended and the heel on the floor.
2. BODY POSITION: Sitting erect; leg extended; foot flexed 90 degrees; heel on the floor.
3. LANDMARK(S): Plantar surface of the foot; posterior surface on the back [Report of USA '70 states waist level (omphalion) is the posterior landmark. This is most likely not so.]
4. INSTRUMENTS/EQUIPMENT: Anthropometer with a foot plate.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES: USA '70-unclothed; USA '77-clothed (269 wore fatigues and boots; 31 wore slacks and shoes).

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING U.S. SURVEYS:

SURVEY	$\bar{X}$	SD	SURVEY	$\bar{X}$	SD
1 AF Women '68			4 USAF '67		
2 Army Women '77	<u>108.92</u>	<u>5.78</u>	5 US Army '66		
3 USN '64			6 Army Av. '70	<u>112.17</u>	<u>4.99</u>

C. CORRELATION WITH:	US Army '66	STATURE	WEIGHT	AGE
	US Army '77	<u>.804</u>	<u>.481</u>	

COEFFICIENT OF VARIATION:	US Army '66	
	US Army '77	<u>5.3</u>

*5th and 95th US ARMY '66 and '77 PERCENTILE VALUES: MALE 99.6 and 118.7
FEMALE 99.6 and 118.7

D. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

E. REASON FOR RATING IN D IS: required for the design and layout of seated workspaces with foot operated controls; a measurement of cockpit accommodation; useful for the development of anthropomorphic analogues.

F. RACE SENSITIVE? YES ☒ NO ☐ GENDER SENSITIVE? YES ☐ NO ☒
IN WHAT WAY? Among Whites, Blacks, and Asians of like body size, Whites tend on the average to have shorter lower extremities than Blacks and longer lower extremities than Asians.

G. REPRODUCIBILITY: A ☐ B ☒ C ☐

IF B OR C, THE PROBLEM IS: consistency of body position (degree of leg extension); consistency of maintaining the anthropometer in its proper alignment.

H. PARTICULARLY SENSITIVE TO

*n = 300

ANTHROPOMETRIC SURVEYS OF FOREIGN MILITARY PERSONNEL

VARIABLE NAME: FUNCTIONAL LEG LENGTH (BUTTOCK-HEEL LENGTH)
(GESASS-BEINLANGE)

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The horizontal distance between the plane of the back and the heel of the outstretched leg.
2. BODY POSITION: RA, RAA, RAF-sitting on the floor, buttock pressed hard against wall, legs fully extended, foot vertical; FRG-sitting erect on sitting surface, leg fully extended, foot vertical.
3. LANDMARK(S): RA, RAA, RAF-back plane, distal point of heel; FRG-posterior point of the buttock; distal point of the heel.
4. INSTRUMENTS/EQUIPMENT: RA, RAA, RAF-measuring rig; FRG-anthropomet
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES: body position-subjects sitting as far back as possible against a back support cannot fully extend their legs.

ALTERNATIVE DIMENSIONS: FUNCTIONAL LEG LENGTH

B. DIMENSION WAS MEASURED IN THE FOLLOWING FOREIGN MILITARY SURVEYS:

<u>SURVEY</u>	<u>$\bar{X}$</u>	<u>SD</u>	<u>SURVEY</u>	<u>$\bar{X}$</u>	<u>SD</u>
CF			RAA	106.27	4.76
FRG	<u>103.2</u>	<u>4.6</u>	RAF	<u>108.99</u>	<u>5.14</u>
RA	<u>107.85</u>	<u>5.41</u>			

C. THOUGHT TO BE OF: Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

D. REASON FOR THE RATING IN C IS: a marginal approximation of functional leg reach required for the design of seated workspaces and of aircraft accommodation. Though the FRG measuring technique yields a closer approximation of functional leg length, Functional Leg Length as measured by U.S. Military is believed to yield a more realistic measurement.

E. REPRODUCIBILITY: A ☐ B ☒ C ☐

IF B OR C, THE PROBLEM IS: RA, RAA, RAF consistency of the body position (degree of leg extension); pressure applied against the buttocks.

F. PARTICULARLY SENSITIVE TO:

ANTHROPOMETRIC SURVEYS OF U.S. MILITARY PERSONNEL

VARIABLE NAME: GLABELLA-TOP OF HEAD

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The vertical distance from a point on the forehead between the eyebrows to the plane of the top of the head.
2. BODY POSITION: Standing; head in the Frankfort plane.
3. LANDMARK(S): Glabella; plane of the back of the head.
4. INSTRUMENTS/EQUIPMENT: Headboard; headboard gauge.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING U.S. MILITARY SURVEYS:

SURVEY	$\bar{X}$	SD	SURVEY	$\bar{X}$	SD
1 AF Women '68			4 USAF '67	9.27	0.97

1st and 99th US ARMY '66 and '77 PERCENTILE VALUES: MALE _____ and _____
 FEMALE _____ and _____

D. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

E. REASON FOR RATING IN D IS: of marginal use for the design and sizing of single- and lower-body garments; Crotch Length is the preferred dimension.

F. RACE SENSITIVE? YES ☒ NO ☐ GENDER SENSITIVE? YES ☒ NO ☐
 IN WHAT WAY? Among White and Black males of like body size, Whites tend on the average to have larger buttocks than Blacks. Among men and women of like body size, men tend on the average to have smaller buttocks than women.

G. REPRODUCIBILITY: A ☒ B ☐ C ☐

IF B OR C, THE PROBLEM IS:

H. PARTICULARLY SENSITIVE TO: the definition of waist level.

ANTHROPOMETRIC SURVEYS OF U.S. MILITARY PERSONNEL

VARIABLE NAME: GLUTEAL FURROW HEIGHT

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The vertical distance between the standing surface and the lowest point of the lowest crease of the buttock/leg juncture.
2. BODY POSITION: Standing erect.
3. LANDMARK(S): Lowest point of the inferior crease of the gluteal furrow.
4. INSTRUMENTS/EQUIPMENT: Anthropometer.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES: None known, but the data from the USAF '68 and the USA '77 surveys indicate a possible difference in landmark interpretation or perhaps they reflect a greater percentage of Blacks in the Army survey.

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING U.S. MILITARY SURVEYS:

SURVEY	$\bar{X}$	SD	SURVEY	$\bar{X}$	SD
1 AF Women '68	<u>72.70</u>	<u>3.96</u>	4 USAF '67	<u>81.11</u>	<u>4.01</u>

IF B OR C, THE PROBLEM IS: the flatness of the hand; the degree of thumb abduction.

H. PARTICULARLY SENSITIVE TO:

ANTHROPOMETRIC SURVEYS OF FOREIGN MILITARY PERSONNEL

VARIABLE NAME: HAND CIRCUMFERENCE (HANDUMFANG)

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The circumference of the hand not including the thumb.
2. BODY POSITION: Hand and fingers extended; fingers together; thumb slightly abducted.
3. LANDMARK(S): Metacarpale laterale; metacarpale mediale; medial point of metacarpale V.
4. INSTRUMENTS/EQUIPMENT: Tape.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING FOREIGN MILITARY SURVEYS:

<u>SURVEY</u>	<u>$\bar{X}$</u>	<u>SD</u>	<u>SURVEY</u>	<u>$\bar{X}$</u>	<u>SD</u>
CF			RAA		
FRG	<u>21.3</u>	<u>1.0</u>	RAF		
RA					

C. THOUGHT TO BE OF: Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

D. REASON FOR THE RATING IN C IS: a key dimension for the design, sizing, procurement and issuing of gloves.

E. REPRODUCIBILITY: A ☐ B ☒ C ☐

IF B OR C, THE PROBLEM IS: the flatness of the hand; the degree of thumb abduction.

F. PARTICULARLY SENSITIVE TO:

ANTHROPOMETRIC SURVEYS OF U.S. MILITARY PERSONNEL

VARIABLE NAME: HAND CIRCUMFERENCE INCLUDING THUMB

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The horizontal circumference of the hand with the tape passing over the base of the thumb.
2. BODY POSITION: Sitting; hand flat on table; thumb lightly touching side of hand.
3. LANDMARK(S): Phalange I; ulnar side of the hand.
4. INSTRUMENTS/EQUIPMENT: Tape.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING U.S. MILITARY SURVEYS:

SURVEY	$\bar{X}$	SD	SURVEY	$\bar{X}$	SD
1 AF Women '68	_____	_____	4 USAF '67	25.75	1.08
2 Army Women '77	_____	_____	5 US Army '66	_____	_____
3 USN '64	25.47	1.13	6 Army Av. '70	_____	_____

C. CORRELATION WITH: STATURE WEIGHT AGE
 US Army '66 _____
 US Army '77 _____

COEFFICIENT OF VARIATION: US Army '66 _____
 US Army '77 _____

1st and 99th US ARMY '66 and '77 PERCENTILE VALUES: MALE _____ and _____
 FEMALE _____ and _____

D. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

E. REASON FOR RATING IN D IS: useful as one in a series of hand and finger dimensions required for the developing of sizing systems/programs for gloves.

F. RACE SENSITIVE? YES ☐ NO ☒ GENDER SENSITIVE? YES ☒ NO ☐
 IN WHAT WAY? Among men and women of like body size, men tend on the average to have larger hands than women.

G. REPRODUCIBILITY: A ☐ B ☒ C ☐

IF B OR C, THE PROBLEM IS: the flatness of the hand; degree of thumb abduction.

H. PARTICULARLY SENSITIVE TO:

ANTHROPOMETRIC SURVEYS OF U.S. MILITARY PERSONNEL

VARIABLE NAME: HAND LENGTH

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The length of the hand.
2. BODY POSITION: Hand supinated; fingers extended.
3. LANDMARK(S): Wrist (USN '64-proximal end of navicular; USA '66, USA '77-distal wrist crease; USAF '67, USAF '68-styilion; USA '70-styilion ulnae); dactyilion.
4. INSTRUMENTS/EQUIPMENT: Sliding caliper.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING U.S. MILITARY SURVEYS:

SURVEY	$\bar{X}$	SD	SURVEY	$\bar{X}$	SD
1 AF Women '68	<u>18.38</u>	<u>0.96</u>	4 USAF '67	<u>19.11</u>	<u>0.82</u>
2 Army Women '77	<u>17.44</u>	<u>0.90</u>	5 US Army '66	<u>19.03</u>	<u>0.96</u>

	FEMALE	<u>5.2</u>	and	<u>7.2</u>

D. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

E. REASON FOR RATING IN D IS: useful as one in a series of dimensions required for the development of shoe lasts.

F. RACE SENSITIVE? YES ☒ NO ☐ GENDER SENSITIVE? YES ☐ NO ☒
 IN WHAT WAY? Among White and Black males of like body size, Whites tend on the av. to have wider and less elongated calcanei than Blacks.

G. REPRODUCIBILITY: A ☐ B ☐ C ☐

IF B OR C, THE PROBLEM IS:

USA '66 USA '77 - A

USA '70 - B: the consistent location of the level and depth at which the measurement is taken.

H. PARTICULARLY SENSITIVE TO:

ANTHROPOMETRIC SURVEYS OF U.S. MILITARY PERSONNEL

VARIABLE NAME: HEEL-ANKLE CIRCUMFERENCE

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: A diagonal circumference of the foot with the tape passing under the tip of the heel and over the calf/foot juncture.
2. BODY POSITION: Standing.
3. LANDMARK(S): Posterior point of the heel; tibialion.
4. INSTRUMENTS/EQUIPMENT: Tape.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING U.S. MILITARY SURVEYS:

SURVEY	$\bar{X}$	SD	SURVEY	$\bar{X}$	SD
1 AF Women '68			4 USAF '67	<u>33.95</u>	<u>1.41</u>

3 USN '64			6 Army Av. '70	<u>33.30</u>	<u>1.57</u>

C. CORRELATION WITH:	US Army '66	STATURE	WEIGHT	AGE
		<u>.571</u>	<u>.630</u>	<u>.044</u>
	US Army '77	<u>.616</u>	<u>.642</u>	<u>.052</u>

COEFFICIENT OF VARIATION:	US Army '66	<u>4.8</u>
	US Army '77	<u>4.7</u>

1st and 99th US ARMY '66 and '77 PERCENTILE VALUES: MALE 30.3 and 38.2
FEMALE 27.7 and 34.6

D. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

E. REASON FOR RATING IN D IS: useful as one in a series of dimensions required for the development of lasts.

F. RACE SENSITIVE? YES ☒ NO ☐ GENDER SENSITIVE? YES ☒ NO ☐
IN WHAT WAY? Among White, Black, and Asian males of like body size, Whites and Asians tend on the average to have less protruding heels than Blacks. Among men and women of like body size, men tend on the average to have larger feet than women.

G. REPRODUCIBILITY: A ☒ B ☐ C ☐

IF B OR C, THE PROBLEM IS:

H. PARTICULARLY SENSITIVE TO: the consistency of placing and maintaining the tape on the heel point.

ANTHROPOMETRIC SURVEYS OF FOREIGN MILITARY PERSONNEL

VARIABLE NAME: HEEL-ANKLE CIRCUMFERENCE, EXTENDED (HEEL-INSTEP CIRCUMFERENCE)

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The circumference of the heel-instep of a subject with a heel raised to maximum height while the toes remain on the standing surface.
2. BODY POSITION: Anthropometric standing.
3. LANDMARK(S): Maximum prominence of the heel; tibialion.
4. INSTRUMENTS/EQUIPMENT: Tape.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING FOREIGN MILITARY SURVEYS:

<u>SURVEY</u>	<u>$\bar{X}$</u>	<u>SD</u>	<u>SURVEY</u>	<u>$\bar{X}$</u>	<u>SD</u>
CF	_____	_____	RAA	_____	_____
FRG	_____	_____	RAF	<u>32.54</u>	<u>1.36</u>
RA	<u>32.20</u>	<u>1.40</u>			

C. THOUGHT TO BE OF: Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

D. REASON FOR THE RATING IN C IS: useful for the design of openings in footwear and single- and lower-body garments with a restricted lower leg opening as found in some protective equipment.

E. REPRODUCIBILITY: A ☒ B ☐ C ☐

IF B OR C, THE PROBLEM IS:

F. PARTICULARLY SENSITIVE TO: degree of heel elevation.

ANTHROPOMETRIC SURVEYS OF U.S. CIVILIANS

VARIABLE NAME: HIGHEST BUST LEVEL BREADTH

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The horizontal distance between points established at the level of the scye above the most prominent protrusion of the breasts.
2. BODY POSITION: Anthropometric standing.
3. LANDMARK(S): Points above the most prominent protrusion of the breasts at the level of the right and the left anterior scye.
4. INSTRUMENTS/EQUIPMENT: Tape.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN FOLLOWING U.S. CIVILIAN SURVEYS:

<u>SURVEY</u>	<u>$\bar{X}$</u>	<u>SD</u>
BUREAU OF HOME ECONOMICS	<u>18.69</u>	<u>2.06</u>
HES		
Men	<u> </u>	<u> </u>
Women	<u> </u>	<u> </u>
HANES		
Men	<u> </u>	<u> </u>

B. DIMENSION WAS MEASURED IN THE FOLLOWING U.S. MILITARY SURVEYS:

SURVEY	$\bar{X}$	SD	SURVEY	$\bar{X}$	SD
1 AF Women '68	_____	_____	4 USAF '67	109.15	4.80
2 Army Women '77	_____	_____	5 US Army '66	106.33	5.37
3 USN '64	_____	_____	6 Army Av. '70	_____	_____

C. CORRELATION WITH:	US Army '66	STATURE	WEIGHT	AGE
	US Army '77	.804	.392	-.016

COEFFICIENT OF VARIATION: US Army '66 5.1
US Army '77 _____

1st and 99th US ARMY '66 and '77 PERCENTILE VALUES: MALE 93.6 and 119.2
FEMALE _____ and _____

D. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

E. REASON FOR RATING IN D IS: useful for the development of anthropomorphic analogues used for high acceleration (including crash) research. This dimension has been used by the Army for the design and sizing of garments but Waist Height is the preferred dimension.

F. RACE SENSITIVE? YES ☒ NO ☐ GENDER SENSITIVE? YES ☐ NO ☒
IN WHAT WAY? Among Whites, Blacks, and Asians of like body size, Whites tend on the average to have shorter lower extremities than Blacks and longer lower ex. emities than Asians.

G. REPRODUCIBILITY. A ☒ B ☐ C ☐

IF B OR C, THE PROBLEM IS:

H. PARTICULARLY SENSITIVE TO: the definition and consistency of locating the landmark.

ANTHROPOMETRIC SURVEYS OF FOREIGN MILITARY PERSONNEL

VARIABLE NAME: ILIOCRISTALE HEIGHT [HÖHE DES DARMBEINKAMMES (CRISTALHÖHE)]

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The vertical distance between the standing surface and the highest point on the crest of the pelvis.
2. BODY POSITION: Anthropometric standing.
3. LANDMARK(S): Iliocristale.
4. INSTRUMENTS/EQUIPMENT: Anthropometer.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING FOREIGN MILITARY SURVEYS:

<u>SURVEY</u>	<u>$\bar{X}$</u>	<u>SD</u>	<u>SURVEY</u>	<u>$\bar{X}$</u>	<u>SD</u>
CF			RAA		
FRG	<u>106.0</u>	<u>4.7</u>	RAF	<u> </u>	<u> </u>
RA	<u> </u>	<u> </u>			

C. THOUGHT TO BE OF: Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

- D. REASON FOR THE RATING IN C IS: used in this survey in conjunction with the bottom of the rib cage to define the level of the waist; useful only for the development of anthropomorphic analogues used for high acceleration (including crash) research. This dimension has been used by the Army for the design and sizing of garments but waist Height is the preferred dimension.

E. REPRODUCIBILITY: A ☒ B ☐ C ☐

IF B OR C, THE PROBLEM IS:

- F. PARTICULARLY SENSITIVE TO: the definition and consistency of locating the landmark.

ANTHROPOMETRIC SURVEYS OF U.S. MILITARY PERSONNEL

VARIABLE NAME: INSTEP CIRCUMFERENCE

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The vertical circumference of the instep.
2. BODY POSITION: Standing.
3. LANDMARK(S): Highest point of the arch of the foot.
4. INSTRUMENTS/EQUIPMENT: Tape.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING U.S. MILITARY SURVEYS:

SURVEY	$\bar{X}$	SD	SURVEY	$\bar{X}$	SD
1 AF Women '68			4 USAF '67	25.69	1.21
2 Army Women '77	23.48	1.25	5 US Army '66	26.56	1.65
3 USN '64			6 Army Av. '70	27.08	1.33

C. CORRELATION WITH:	US Army '66	STATURE	WEIGHT	AGE
		.375	.517	.027
	US Army '77	.462	.592	-.003

COEFFICIENT OF VARIATION:	US Army '66	6.2
	US Army '77	5.4

1st and 99th US ARMY '66 and '77 PERCENTILE VALUES: MALE 22.8 and 30.6
FEMALE 20.8 and 26.8

D. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

E. REASON FOR RATING IN D IS: useful only as one in a series of dimensions required for the development of shoe lasts.

F. RACE SENSITIVE? YES ☒ NO ☐ GENDER SENSITIVE? YES ☒ NO ☐
IN WHAT WAY? Among White and Black males of like body size, Whites tend on the average to have lower arches than Blacks. Among men and women of like body size, men tend on the average to have larger feet than women.

G. REPRODUCIBILITY: A ☐ B ☒ C ☐

IF B OR C, THE PROBLEM IS: consistency of the location of the landmark.

H. PARTICULARLY SENSITIVE TO:

ANTHROPOMETRIC SURVEYS OF FOREIGN MILITARY PERSONNEL

VARIABLE NAME: INSTEP CIRCUMFERENCE (INSTEP-SOLE CIRCUMFERENCE)

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The vertical circumference of the instep.
2. BODY POSITION: CF-standing; RA, RAF-sitting.
3. LANDMARK(S): CF-metatarsale-cuneiform joint; RA, RAF-intermediate cuneiform (Cuneiform II).
4. INSTRUMENTS/EQUIPMENT: Tape.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES: Different definitions of instep landmark.

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING FOREIGN MILITARY SURVEYS:

<u>SURVEY</u>	<u>$\bar{X}$</u>	<u>SD</u>	<u>SURVEY</u>	<u>$\bar{X}$</u>	<u>SD</u>
CF	<u>25.77</u>	<u>1.18</u>	RAA

RA	<u>24.34</u>	<u>1.11</u>			

C. THOUGHT TO BE OF: Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

D. REASON FOR THE RATING IN C IS: used only as one in a series of dimensions required for the development of lasts.

E. REPRODUCIBILITY: A ☐ B ☒ C ☐

IF B OR C, THE PROBLEM IS: consistency of the location of the landmark.

F. PARTICULARLY SENSITIVE TO:

ANTHROPOMETRIC SURVEYS OF U.S. MILITARY PERSONNEL

VARIABLE NAME: INTEROCULAR BREADTH

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The horizontal distance between the inner corners of the eyes.
2. BODY POSITION: Sitting.
3. LANDMARK(S): Endocanthia.
4. INSTRUMENTS/EQUIPMENT: Sliding caliper.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING U.S. MILITARY SURVEYS:

SURVEY	$\bar{X}$	SD	SURVEY	$\bar{X}$	SD
1 AF Women '68	_____	_____	4 USAF '67	3.33	0.28
2 Army Women '77	_____	_____	5 US Army '66	_____	_____
3 USN '64	3.21	0.29	6 Army Av. '70	_____	_____

C. CORRELATION WITH: US Army '66 STATURE WEIGHT AGE
US Army '77

COEFFICIENT OF VARIATION: US Army '66 _____
US Army '77 _____

1st and 99th US ARMY '66 and '77 PERCENTILE VALUES: MALE _____ and _____
FEMALE _____ and _____

D. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

E. REASON FOR RATING IN D IS: useful for the design of eye-related items;
useful as one in a series of dimensions required for the development of
three-dimensional head and face forms used to guide the design and sizing
of equipment worn on the head and on the face.

F. RACE SENSITIVE? YES ☐ NO ☒ GENDER SENSITIVE? YES ☒ NO ☐
IN WHAT WAY? Among men and women of like body size, men tend on the
average to have broader faces than women.

G. REPRODUCIBILITY: A ☐ B ☐ C ☒

IF B OR C, THE PROBLEM IS: not a contact measurement; the distance from the
landmarks that the tips of the sliding caliper are held.

H. PARTICULARLY SENSITIVE TO:

ANTHROPOMETRIC SURVEYS OF U.S. MILITARY PERSONNEL

VARIABLE NAME: INTERPUPILLARY BREADTH

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The horizontal distance between the center of the pupils.
2. BODY POSITION: Sitting.
3. LANDMARK(S): Center of the pupils.
4. INSTRUMENTS/EQUIPMENT: Sliding caliper.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING U.S. MILITARY SURVEYS:

SURVEY	$\bar{X}$	SD	SURVEY	$\bar{X}$	SD
1 AF Women '68			4 USAF '67	<u>6.27</u>	<u>0.36</u>
2 Army Women '77	<u>5.82</u>	<u>0.44</u>	5 US Army '66	<u>6.13</u>	<u>0.40</u>
3 USN '64	<u>6.51</u>	<u>0.28</u>	6 Army Av. '70	<u>5.90</u>	<u>0.35</u>

C. CORRELATION WITH:	US Army '66	US Army '77	STATURE	WEIGHT	AGE
			<u>.138</u>	<u>.218</u>	<u>.128</u>
			<u>.179</u>	<u>.195</u>	<u>.054</u>

COEFFICIENT OF VARIATION:	US Army '66	<u>6.5</u>
	US Army '77	<u>7.6</u>

1st and 99th US ARMY '66 and '77 PERCENTILE VALUES:	MALE	<u>5.2</u>	and	<u>7.1</u>
	FEMALE	<u>4.8</u>	and	<u>6.9</u>

D. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

E. REASON FOR RATING IN D IS: required for the design of binocular optical devices; useful as one in a series of dimensions required for the development of three-dimensional head and face forms used to guide the design of equipment worn on the head and on the face.

F. RACE SENSITIVE? YES ☒ NO ☐ GENDER SENSITIVE? YES ☒ NO ☐
 IN WHAT WAY? Among White, Black, and Asian males of like body size, Whites tend on the average to be smaller for this dimension than Blacks and Asians. Among men and women of like body size, men tend on the average to have broader faces than women.

G. REPRODUCIBILITY: A ☐ B ☒ C ☐

IF B OR C, THE PROBLEM IS: not a contact measurement; the distance from the landmarks that the tips of the sliding caliper are held; the ability of the anthropometrist to sight accurately the landmarks; apprehension of subject and anthropometrist of measurements made close to the eyes.

H. PARTICULARLY SENSITIVE TO:

ANTHROPOMETRIC SURVEYS OF FOREIGN MILITARY PERSONNEL

VARIABLE NAME: INTERPUPILLARY BREADTH (PUPILLENABSTAND)

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The horizontal distance between the centers of the pupils.
2. BODY POSITION: Sitting.
3. LANDMARK(S): Centers of the pupils.
4. INSTRUMENTS/EQUIPMENT: Sliding caliper.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

US Army '77	_____	_____	_____

COEFFICIENT OF VARIATION:

US Army '66	_____
US Army '77	_____

1st and 99th US ARMY '66 and '77 PERCENTILE VALUES:

MALE	_____	and	_____
FEMALE	_____	and	_____

D. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

E. REASON FOR RATING IN D IS: required for the development of anthropomorphic analogues; useful for the design and sizing of garments with knee pockets and knee pleats; useful for the construction of clothing manikins.

F. RACE SENSITIVE? YES ☒ NO ☐ GENDER SENSITIVE? YES ☐ NO ☒
IN WHAT WAY? Among Whites, Blacks, and Asians of like body size, Whites tend on the average to have shorter calves than Blacks and longer calves than Asians.

G. REPRODUCIBILITY: A ☒ B ☐ C ☐

IF B OR C, THE PROBLEM IS:

H. PARTICULARLY SENSITIVE TO: the definition of the landmark; stability of the landmark (subjects may lock their knee causing an upward movement of the patella by as much as 2 cm).

ANTHROPOMETRIC SURVEYS OF U.S. MILITARY PERSONNEL

VARIABLE NAME: KNEE HEIGHT (SUPRAPATELLA) (KNEECAP HEIGHT)

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The vertical distance from the standing surface to the top of the knee cap.
2. BODY POSITION: Standing erect.
3. LANDMARK(S): Suprapatella.
4. INSTRUMENTS/EQUIPMENT: Anthropometer.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS: KNEE HEIGHT (MIDPATELLA)

B. DIMENSION WAS MEASURED IN THE FOLLOWING U.S. MILITARY SURVEYS:

SURVEY	$\bar{X}$	SD	SURVEY	$\bar{X}$	SD
1 AF Women '68			4 USAF '67	<u>52.62</u>	<u>2.56</u>
2 Army Women '77	<u>47.90</u>	<u>2.65</u>	5 US Army '66	<u>52.86</u>	<u>3.25</u>
3 USN '64	<u>53.29</u>	<u>2.66</u>	6 Army Av. '70	<u>51.21</u>	<u>2.70</u>

C. CORRELATION WITH:	STATURE	WEIGHT	AGE
US Army '66	<u>.739</u>	<u>.334</u>	<u>-.002</u>
US Army '77	<u>.848</u>	<u>.426</u>	<u>.054</u>

COEFFICIENT OF VARIATION:	US Army '66	<u>6.1</u>
	US Army '77	<u>5.5</u>

1st and 99th US ARMY '66 and '77 PERCENTILE VALUES: MALE 45.5 and 60.7
FEMALE 42.1 and 54.2

D. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

E. REASON FOR RATING IN D IS: Knee Height (Midpatella) is the preferred dimension since it is the level where Knee Circumference is generally measured.

F. RACE SENSITIVE? YES ☒ NO ☐ GENDER SENSITIVE? YES ☐ NO ☒
IN WHAT WAY? Among Whites, blacks, and Asians of like body size, Whites tend on the average to have shorter calves than Blacks and longer calves than Asians.

G. REPRODUCIBILITY: A ☒ B ☐ C ☐

IF B OR C, THE PROBLEM IS

H. PARTICULARLY SENSITIVE TO: stability of landmark (subjects may lock knee causing an upward movement of the patella by as much as 2 cm).

ANTHROPOMETRIC SURVEYS OF U.S. MILITARY PERSONNEL

VARIABLE NAME: KNEE HEIGHT, SITTING

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The vertical distance from a foot support to the top of the knee of a seated subject.
2. BODY POSITION: Sitting erect; knees flexed 90 degrees; thighs parallel.
3. LANDMARK(S): USN '64, USA '66- "top of the knee"; USAF '67-superior margin of the patella of a standing subject; USA '70, USA '77-5 cm proximal to suprapatella on a seated subject.
4. INSTRUMENTS/EQUIPMENT: Anthropometer.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES: Different landmarks used.

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING U.S. MILITARY SURVEYS:

SURVEY	$\bar{X}$	SD	SURVEY	$\bar{X}$	SD
1 AF Women '68			4 USAF '67	55.76	2.49
2 Army Women '77	50.99	2.60	5 US Army '66	54.06	2.37
3 USN '64	55.50	2.48	6 Army Av. '70	53.00	2.56

C. CORRELATION WITH:	US Army '66	US Army '77	STATURE	WEIGHT	AGE
			.788	.501	.004
			.857	.546	.041

COEFFICIENT OF VARIATION:	US Army '66	5.1
	US Army '77	5.1

1st and 99th US ARMY '66 and '77 PERCENTILE VALUES:	MALE	47.7	and	60.6
	FEMALE	45.5	and	57.3

D. THOUGHT TO BE OF Essential, Use' 1, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

E. REASON FOR RATING IN D IS: required for the design and layout of seated workspaces; required as a seated clearance dimension; required for the development of anthropomorphic analogues.

F. RACE SENSITIVE? YES ☒ NO ☐ GENDER SENSITIVE? YES ☐ NO ☒
 IN WHAT WAY? Among Whites, Blacks, and Asians of like body size, Whites tend on the average to have shorter calves than Blacks and longer calves than Asians.

G. REPRODUCIBILITY. A ☒ B ☐ C ☐

IF B OR C, THE PROBLEM IS:

H. PARTICULARLY SENSITIVE TO: the definition of the landmark.

ANTHROPOMETRIC SURVEYS OF FOREIGN MILITARY PERSONNEL

VARIABLE NAME: KNEE HEIGHT, SITTING

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The vertical distance between the standing surface and the top of the knee of a seated subject.
2. BODY POSITION: Sitting erect; knees flexed 90 degrees; thighs parallel.
3. LANDMARK(S): 7.50 cm. proximal to vertical plate touching the patella.
4. INSTRUMENTS/EQUIPMENT: Measuring rig.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING FOREIGN MILITARY SURVEYS:

<u>SURVEY</u>	<u>$\bar{X}$</u>	<u>SD</u>	<u>SURVEY</u>	<u>$\bar{X}$</u>	<u>SD</u>
CF	_____	_____	RAA	_____	_____
FRG	_____	_____	RAF	<u>55.89</u>	<u>2.54</u>
RA	<u>54.74</u>	<u>2.48</u>			

C. THOUGHT TO BE OF: Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

D. REASON FOR THE RATING IN C IS: required for the design and layout of seated workspaces; required as a seated clearance dimension; required for the development of anthropomorphic analogues.

E. REPRODUCIBILITY: A ☒ B ☐ C ☐

IF B OR C, THE PROBLEM IS:

F. PARTICULARLY SENSITIVE TO: the definition of the landmark.

ANTHROPOMETRIC SURVEYS OF U.S. CIVILIANS

VARIABLE NAME: KNEE HEIGHT, SITTING

A. DESCRIPTION OF DIMENSION AND MEASURING TECHNIQUES:

1. DESCRIPTION: The vertical distance between a foot support and the top of the knee just behind the kneecap.
2. BODY POSITION: Sitting erect; knees flexed 90 degrees; heels and knees together.
3. LANDMARK(S): Immediately proximal to the patella.
4. INSTRUMENTS/EQUIPMENT: Anthropometer.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN FOLLOWING U.S. CIVILIAN SURVEYS:

<u>SURVEY</u>	<u>$\bar{X}$</u>	<u>SD</u>
BUREAU OF HOME ECONOMICS	_____	_____
HES		
Men	<u>54.50</u>	<u>2.86</u>
Women	<u>49.92</u>	<u>2.66</u>
HANES		
Men	_____	_____
Women	_____	_____

C. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

D. REASON FOR RATING IN C IS: required for the design and layout of seated workspaces; required as a seated clearance dimension; required for the development of anthropomorphic analogues.

E. REPRODUCIBILITY: A ☒ B ☐ C ☐

IF B OR C, THE PROBLEM IS:

F. PARTICULARLY SENSITIVE TO: the definition of the landmark.

ANTHROPOMETRIC SURVEYS OF FOREIGN MILITARY PERSONNEL

VARIABLE NAME: KNEE-KNEE BREADTH, CLOSED (KNIEBREITE, GESCHLOSSEN)

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The horizontal distance between the knees held together.
2. BODY POSITION: Sitting; knees together and flexed 90 degrees; feet together.
3. LANDMARK(S): Lateral point on the head of each fibula.
4. INSTRUMENTS/EQUIPMENT: Body caliper.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS: THIGH-THIGH BREADTH, SITTING

B. DIMENSION WAS MEASURED IN THE FOLLOWING FOREIGN MILITARY SURVEYS:

<u>SURVEY</u>	<u>$\bar{X}$</u>	<u>SD</u>	<u>SURVEY</u>	<u>$\bar{X}$</u>	<u>SD</u>
CF			RAA		
FRG	<u>21.1</u>	<u>1.6</u>	RAF		
RA					

C. THOUGHT TO BE OF: Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

D. REASON FOR THE RATING IN C IS: Thigh-Thigh Breadth is the preferred dimension.

E. REPRODUCIBILITY: A ☒ B ☐ C ☐

IF B OR C, THE PROBLEM IS:

F. PARTICULARLY SENSITIVE TO: the force of contact between the knees.

ANTHROPOMETRIC SURVEYS OF FOREIGN MILITARY PERSONNEL

VARIABLE NAME: KNEE-KNEE BREADTH, OPEN (KNIEBREITE, GEOFFNETE)

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The horizontal distance between the spread of the relaxed knees.
2. BODY POSITION: Sitting; feet together and flat on floor; knees abducted to a relaxed, not forced, position.
3. LANDMARK(S): Lateral point of each fibula.
4. INSTRUMENTS/EQUIPMENT: Body caliper.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING FOREIGN MILITARY SURVEYS:

<u>SURVEY</u>	<u>$\bar{X}$</u>	<u>SD</u>	<u>SURVEY</u>	<u>$\bar{X}$</u>	<u>SD</u>
CF			RAA		
FRG	<u>38.7</u>	<u>4.8</u>	RAF		
RA					

C. THOUGHT TO BE OF: Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

- D. REASON FOR THE RATING IN C IS: can be a useful clearance dimension for the design of confined seated workspaces, but the consistency of subject position is believed to be highly variable.

E. REPRODUCIBILITY: A ☐ B ☐ C ☒

IF B OR C, THE PROBLEM IS: the consistency of the degree of relaxation.

F. PARTICULARLY SENSITIVE TO:

ANTHROPOMETRIC SURVEYS OF U.S. MILITARY PERSONNEL

VARIABLE NAME: LATERAL MALLEOLUS HEIGHT

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The vertical distance between the standing surface and the most prominent point on the outside of the ankle bone.
2. BODY POSITION: Standing on table.
3. LANDMARK(S): Lateral point of lateral malleolus.
4. INSTRUMENTS/EQUIPMENT: Measuring block.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING U.S. MILITARY SURVEYS:

SURVEY	$\bar{X}$	SD	SURVEY	$\bar{X}$	SD
1 AF Women '68	6.77	0.59	4 USAF '67	7.04	0.54
2 Army Women '77			5 US Army '66		
3 USN '64			6 Army Av. '70		

C. CORRELATION WITH: STATURE WEIGHT AGE
 US Army '66 _____
 US Army '77 _____

COEFFICIENT OF VARIATION: US Army '66 _____
 US Army '77 _____

1st and 99th US ARMY '66 and '77 PERCENTILE VALUES: MALE _____ and _____
 FEMALE _____ and _____

D. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

E. REASON FOR RATING IN D IS: required for the development of a body-link system; useful for the design and sizing of over-the-ankle footwear; useful for the development of anthropomorphic analogues.

F. RACE SENSITIVE? YES ☐ NO ☒ GEND^R SENSITIVE? YES ☐ NO ☒
 IN WHAT WAY?

G. REPRODUCIBILITY: A ☐ B ☒ C ☐

IF B OR C, THE PROBLEM IS: the consistency and accuracy of locating the landmark; the angle from which the arthropometrist views the measuring block.

H. PARTICULARLY SENSITIVE TO.

ANTHROPOMETRIC SURVEYS OF U.S. MILITARY PERSONNEL

VARIABLE NAME: LIP LENGTH

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The horizontal distance between the corners of the mouth.
2. BODY POSITION: Sitting.
3. LANDMARK(S): Chelia.
4. INSTRUMENTS/EQUIPMENT: Sliding caliper.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING U.S. MILITARY SURVEYS:

SURVEY	$\bar{X}$	SD	SURVEY	$\bar{X}$	SD
1 AF Women '68	<u>4.38</u>	<u>0.42</u>	4 USAF '67	<u>5.23</u>	<u>0.37</u>
2 Army Women '77	<u>5.14</u>	<u>0.43</u>	5 US Army '66	<u> </u>	<u> </u>
3 USN '64	<u> </u>	<u> </u>	6 Army Av. '70	<u> </u>	<u> </u>

C. CORRELATION WITH: STATURE WEIGHT AGE
 US Army '66
 US Army '77

COEFFICIENT OF VARIATION: US Army '66
 US Army '77

1st and 99th US ARMY '66 and '77 PERCENTILE VALUES: MALE and
 FEMALE and

D. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

E. REASON FOR RATING IN D IS: useful as one in a series of dimensions required for the development of three-dimensional face forms used to guide the design and sizing of equipment worn on the face.

F. RACE SENSITIVE? YES ☒ NO ☐ GENDER SENSITIVE? YES ☐ NO ☒
 IN WHAT WAY? Among White and Black males of like body size, Whites tend on the average to have smaller mouths than Blacks.

G. REPRODUCIBILITY: A ☐ B ☐ C ☒

IF B OR C, THE PROBLEM IS: consistency of landmark interpretation; subjects' variability in positioning lips.

H. PARTICULARLY SENSITIVE TO:

ANTHROPOMETRIC SURVEYS OF U.S. MILITARY PERSONNEL

VARIABLE NAME: LIP LENGTH, SMILING

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The horizontal distance between the corners of the mouth of a broadly smiling subject.
2. BODY POSITION: Sitting.
3. LANDMARK(S): Chelia.
4. INSTRUMENTS/EQUIPMENT: Sliding caliper.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING U.S. MILITARY SURVEYS:

SURVEY	$\bar{X}$	SD	SURVEY	$\bar{X}$	SD
1 AF Women '68			4 USAF '67		
2 Army Women '77	<u>5.88</u>	<u>0.56</u>	5 US Army '66		
3 USN '64			6 Army Av. '70		

C. CORRELATION WITH:	US Army '66	STATURE	WEIGHT	AGE
	US Army '77	<u>.029</u>	<u>.183</u>	<u>.103</u>

COEFFICIENT OF VARIATION: US Army '66
US Army '77 9.51

1st and 99th US ARMY '66 and '77 PERCENTILE VALUES: MALE _____ and _____
FEMALE 4.70 and 7.10

D. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

E. REASON FOR RATING IN D IS: used to establish the maximum clearance for the inner seal of a respirator or oxygen mask.

F. RACE SENSITIVE? YES ☒ NO ☐ GENDER SENSITIVE? YES ☐ NO ☒
IN WHAT WAY? Among White and Black males of like body size, Whites tend on the average to have smaller mouths than Blacks.

G. REPRODUCIBILITY: A ☐ B ☐ C ☒

IF B OR C, THE PROBLEM IS: consistency of degree of smile within and between subjects.

H. PARTICULARLY SENSITIVE TO.

ANTHROPOMETRIC SURVEYS OF U.S. MILITARY PERSONNEL

VARIABLE NAME: LIP PROTRUSION-WALL

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The distance between the plane of the back of the head and the most forward point of the lips.
2. BODY POSITION: Standing; head in the Frankfort plane.
3. LANDMARK(S): Anterior lip point; plane of the back of the head.
4. INSTRUMENTS/EQUIPMENT: Headboard; gauge.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS: STOMION-WALL

B. DIMENSION WAS MEASURED IN THE FOLLOWING U.S. MILITARY SURVEYS:

SURVEY	$\bar{X}$	SD	SURVEY	$\bar{X}$	SD
1 AF Women '68	19.30	1.06	4 USAF '67	21.16	0.86
2 Army Women '77			5 US Army '66		
3 N '64			6 Army Av. '70		

C. CORRELATION WITH: STATURE WEIGHT AGE
 US Army '66 _____
 US Army '77 _____

COEFFICIENT OF VARIATION: US Army '66 _____
 US Army '77 _____

1st and 99th US ARMY '66 and '77 PERCENTILE VALUES: MALE _____ and _____
 FEMALE _____ and _____

D. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

E. REASON FOR RATING IN D IS: useful as one in a series of dimensions required for the development of three-dimensional face forms used to guide the design and sizing of equipment worn on the face.

F. RACE SENSITIVE? YES ☒ NO ☐ GENDER SENSITIVE? YES ☐ NO ☒
 IN WHAT WAY? Among White and Black males of like body size, Whites tend on the average to have less prognathism and lip eversion than Blacks.

G. REPRODUCIBILITY: A ☐ B ☒ C ☐

IF B OR C, THE PROBLEM IS: maintaining the head in its required vertical and horizontal (Frankfort plane) orientation.

H. PARTICULARLY SENSITIVE TO:

ANTHROPOMETRIC SURVEYS OF U.S. MILITARY PERSONNEL

VARIABLE NAME: LIP-LIP HEIGHT

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The maximum vertical distance between the upper and lower borders of the closed mouth.
2. BODY POSITION: Sitting.
3. LANDMARK(S): Inferior point of the lower lip; superior point of the upper lip.
4. INSTRUMENTS/EQUIPMENT: Sliding caliper.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING U.S. MILITARY SURVEYS:

SURVEY	$\bar{X}$	SD	SURVEY	$\bar{X}$	SD
1 AF Women '68	_____	_____	4 USAF '67	1.73	0.38

C. CORRELATION WITH: US Army '66 STATURE WEIGHT AGE
US Army '77

COEFFICIENT OF VARIATION: US Army '66
US Army '77

1st and 99th US ARMY '66 and '77 PERCENTILE VALUES: MALE and
FEMALE and

D. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

E. REASON FOR RATING IN D IS: useful as one in a series of dimensions required for the development of three-dimensional head and face forms used to guide the design and sizing of equipment worn on the head and on the face.

F. RACE SENSITIVE? YES ☐ NO ☒ GENDER SENSITIVE? YES ☒ NO ☐
IN WHAT WAY? Among men and women of like body size, men tend on the average to have wider faces than women.

G. REPRODUCIBILITY: A ☐ B ☐ C ☒

IF B OR C, THE PROBLEM IS: identifying the landmarks and maintaining the tips of the caliper on the landmarks.

H. PARTICULARLY SENSITIVE TO:

ANTHROPOMETRIC SURVEYS OF U.S. CIVILIANS

VARIABLE NAME: MAXIMUM THIGH CIRCUMFERENCE (MAXIMUM THIGH GIRTH)

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The maximum horizontal circumference of the thigh.
2. BODY POSITION: Standing erect; feet parted a few centimeters.
3. LANDMARK(S): Level of maximum circumference of the thigh.
4. INSTRUMENTS/EQUIPMENT: Tape.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS: THIGH CIRCUMFERENCE

B. DIMENSION WAS MEASURED IN FOLLOWING U.S. CIVILIAN SURVEYS:

<u>SURVEY</u>	<u>$\bar{X}$</u>	<u>SD</u>
BUREAU OF HOME ECONOMICS	<u>56.49</u>	<u>5.72</u>
HES		
Men	<u> </u>	<u> </u>
Women	<u> </u>	<u> </u>
HANES		
Men	<u> </u>	<u> </u>
Women	<u> </u>	<u> </u>

C. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

D. REASON FOR RATING IN C IS: (Upper) Thigh Circumference and Lower Thigh Circumference describe adequately the circumference of the thigh.

E. REPRODUCIBILITY: A ☒ B ☐ C ☐

IF B OR C, THE PROBLEM IS:

F. PARTICULARLY SENSITIVE TO:

ANTHROPOMETRIC SURVEYS OF U.S. CIVILIANS

VARIABLE NAME: MEDIAL MALLEOLUS CIRCUMFERENCE (ANKLE CIRCUMFERENCE)

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The horizontal circumference of the ankle at the level of the greatest protrusion of the inside ankle bone.
2. BODY POSITION: Sitting with knees flexed 90 degrees.
3. LANDMARK(S): Medial point of the medial malleolus.
4. INSTRUMENTS/EQUIPMENT: Tape.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN FOLLOWING U.S. CIVILIAN SURVEYS:

IF B OR C, THE PROBLEM IS: the accuracy and consistency of locating the landmark, the angle from which the anthropometrist views the measuring instrument.

F. PARTICULARLY SENSITIVE TO:

ANTHROPOMETRIC SURVEYS OF U.S. MILITARY PERSONNEL

VARIABLE NAME: MENTON-CRINION LENGTH

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The vertical distance between the inferior tip of the chin and the hairline.
2. BODY POSITION: Sitting.
3. LANDMARK(S): Menton; crinion.
4. INSTRUMENTS/EQUIPMENT: Sliding caliper.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING U.S. MILITARY SURVEYS:

SURVEY	$\bar{X}$	SD	SURVEY	$\bar{X}$	SD
1 AF Women '68			4 USAF '67		
2 Army Women '77	<u>17.58</u>	<u>0.83</u>	5 US Army '66		
3 USN '64			6 Army Av. '70		

C. CORRELATION WITH:	US Army '66	STATURE	WEIGHT	AGE
	US Army '77	<u>.220</u>	<u>.268</u>	<u>.047</u>

COEFFICIENT OF VARIATION:	US Army '66	
	US Army '77	<u>4.7</u>

1st and 99th US ARMY '66 and '77 PERCENTILE VALUES: MALE 15.6 and 19.5
FEMALE 15.6 and 19.5

D. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

E. REASON FOR RATING IN D IS: useful for specifying the placement of the sealing edge of full-face respirators; useful as one in a series of dimensions required for the development of three-dimensional head and face forms used to guide the design and sizing of equipment worn on the head and on the face.

F. RACE SENSITIVE? YES ☐ NO ☒ GENDER SENSITIVE? YES ☒ NO ☐
IN WHAT WAY? Men often have receding hairlines; women rarely do.

G. REPRODUCIBILITY: A ☐ B ☒ C ☐

IF B OR C, THE PROBLEM IS: consistency of locating the landmarks.

H. PARTICULARLY SENSITIVE TO: the definition of menton.

ANTHROPOMETRIC SURVEYS OF U.S. MILITARY PERSONNEL

VARIABLE NAME: MENTON-SELLION LENGTH (FACE LENGTH)

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The distance between the tip of the chin and the deepest depression of the nasal root.
2. BODY POSITION: Sitting.
3. LANDMARK(S): Menton; sellion.
4. INSTRUMENTS/EQUIPMENT: Sliding caliper.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS: MENTON-TOP OF HEAD minus SELLION TOP OF HEAD

B. DIMENSION WAS MEASURED IN THE FOLLOWING U.S. MILITARY SURVEYS:

SURVEY	$\bar{X}$	SD	SURVEY	$\bar{X}$	SD
1 AF Women '68	<u>10.63</u>	<u>0.61</u>	4 USAF '67	<u>12.03</u>	<u>0.61</u>
2 Army Women '77	<u>10.69</u>	<u>0.57</u>	5 US Army '66	<u>12.03</u>	<u>0.66</u>
3 USN '64			6 Army Av. '70	<u>11.32</u>	<u>0.67</u>

C. CORRELATION WITH:	STATURE	HEIGHT	AGE
US Army '66	<u>.302</u>	<u>.286</u>	<u>.045</u>
US Army '77	<u>.366</u>	<u>.322</u>	<u>.028</u>

COEFFICIENT OF VARIATION:	US Army '66	<u>5.5</u>
	US Army '77	<u>5.3</u>

1st and 99th, US ARMY '66 and '77 PERCENTILE VALUES:	MALE	<u>10.5</u>	and	<u>13.6</u>
	FEMALE	<u>9.6</u>	and	<u>12.0</u>

D. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

E. REASON FOR RATING IN D IS: a key dimension for the design, sizing, procurement and issuing of equipment worn on the face; required as one in a series of dimensions used for the development of three-dimensional face forms used to guide the design of equipment worn on the face; required for the development of anthropomorphic analogues.

F. RACE Sensitive? YES ☐ NO ☒ GENDER SENSITIVE? YES ☒ NO ☐
IN WHAT WAY? Among men and women of like body size, men tend on the average to have longer faces than women.

G. REPRODUCIBILITY: A ☒ B ☐ C ☐

IF B OR C, THE PROBLEM IS:

H. PARTICULARLY SENSITIVE TO the definition and consistency of locating menton; the pressure used on the caliper.

ANTHROPOMETRIC SURVEYS OF FOREIGN MILITARY PERSONNEL

VARIABLE NAME: MENTON-SELLION LENGTH (FACE LENGTH)
(MENTON-NASAL ROOT DEPRESSION) (MORPHOLOGISCHE GESICHTSHÖHE)

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The distance between the tip of the chin and the deepest depression of the nasal root.
2. BODY POSITION: Sitting.
3. LANDMARK(S): Menton; sellion.
4. INSTRUMENTS/EQUIPMENT: Sliding caliper.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING FOREIGN MILITARY SURVEYS:

<u>SURVEY</u>	<u>$\bar{X}$</u>	<u>SD</u>	<u>SURVEY</u>	<u>$\bar{X}$</u>	<u>SD</u>
CF	<u>12.31</u>	<u>0.64</u>	RAA	<u> </u>	<u> </u>
FRG	<u>11.8</u>	<u>0.6</u>	RAF	<u> </u>	<u> </u>
RA	<u> </u>	<u> </u>			

C. THOUGHT TO BE OF: Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

D. REASON FOR THE RATING IN C IS: a key dimension required for the design, sizing, procurement and issuing of equipment worn on the face; required as one in a series of dimensions used for the development of three-dimensional head and face forms used to guide the design of equipment worn on the face; required for the development of anthropomorphic analogues.

E. REPRODUCIBILITY: A ☒ B ☐ C ☐

IF B OR C, THE PROBLEM IS:

F. PARTICULARLY SENSITIVE TO: the definition and consistency of locating menton; the pressure used on the caliper.

ANTHROPOMETRIC SURVEYS OF U.S. MILITARY PERSONNEL

VARIABLE NAME: MENTON-SUBNASALE LENGTH

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The vertical distance from the tip of the chin to the juncture of the nose with the upper lip.
2. BODY POSITION: Sitting.
3. LANDMARK(S): Menton; subnasale.
4. INSTRUMENTS/EQUIPMENT: Sliding caliper.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS: VERTEX-MENTON minus VERTEX-SUBNASALE

B. DIMENSION WAS MEASURED IN THE FOLLOWING U.S. MILITARY SURVEYS:

SURVEY	$\bar{X}$	SD	SURVEY	$\bar{X}$	SD
1 AF Women '68	<u>5.54</u>	<u>0.51</u>	4 USAF '67	<u>6.90</u>	<u>0.53</u>
2 Army Women '77	<u> </u>	<u> </u>	5 US Army '66	<u> </u>	<u> </u>
3 USN '64	<u>7.02</u>	<u>0.59</u>	6 Army Av. '70	<u> </u>	<u> </u>

C. CORRELATION WITH: STATURE WEIGHT AGE
 US Army '66 _____
 US Army '77 _____

COEFFICIENT OF VARIATION: US Army '66 _____
 US Army '77 _____

1st and 99th US ARMY '66 and '77 PERCENTILE VALUES: MALE _____ and _____
 FEMALE _____ and _____

D. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

E. REASON FOR RATING IN D IS: useful as one in a series of dimensions required for the development of three-dimensional head and face forms used to guide the design and sizing of equipment worn on the face; useful with Menton-Sellion Length as an expression of facial proportion.

F. RACE SENSITIVE? YES ☐ NO ☒ GENDER SENSITIVE? YES ☒ NO ☐
 IN WHAT WAY? Among men and women of like body size, men tend on the average to have larger faces than women.

G. REPRODUCIBILITY: A ☐ B ☒ C ☐

IF B OR C, THE PROBLEM IS: the consistency of locating menton; compression of the tissue at both landmarks.

H. PARTICULARLY SENSITIVE TO: the definition of menton.

ANTHROPOMETRIC SURVEYS OF U.S. MILITARY PERSONNEL

VARIABLE NAME: MENTON-TOP OF HEAD

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The vertical distance between the tip of the chin and the plane of the top of the head.
2. BODY POSITION: Standing; head in the Frankfort plane.
3. LANDMARK(S): Menton; plane of the top of the head.
4. INSTRUMENTS/EQUIPMENT: Headboard; headboard gauge.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING U.S. MILITARY SURVEYS:

SURVEY	$\bar{X}$	SD	SURVEY	$\bar{X}$	SD
1 AF Women '68	<u>21.91</u>	<u>1.14</u>	4 USAF '67	<u>22.79</u>	<u>1.02</u>
2 Army Women '77	<u>20.88</u>	<u>1.0</u>	5 US Army '66	<u> </u>	<u> </u>
3 USN '64	<u> </u>	<u> </u>	6 Army Av. '70	<u> </u>	<u> </u>

	STATURE	WEIGHT	AGE
C. CORRELATION WITH: US Army '66	<u> </u>	<u> </u>	<u> </u>
US Army '77	<u>.031</u>	<u>.279</u>	<u>.073</u>

COEFFICIENT OF VARIATION: US Army '66	<u> </u>
US Army '77	<u>4.9</u>

1st and 99th US ARMY '66 and '77 PERCENTILE VALUES: MALE and
FEMALE 16.7 and 23.2

D. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

E. REASON FOR RATING IN D IS: required for the development of anthropomorphic analogues; useful as one in a series of dimensions required for the development of three-dimensional head and face forms used to guide the design and sizing of equipment worn on the head and on the face.

F. RACE SENSITIVE? YES ☐ NO ☒ GENDER SENSITIVE? YES ☒ NO ☐
IN WHAT WAY? Among men and women of like body size, men tend on the average to have larger faces than women.

G. REPRODUCIBILITY: A ☐ B ☒ C ☐

IF B OR C, THE PROBLEM IS: maintaining the head in its required vertical and horizontal (Frankfort plane) orientation; the consistency of locating menton.

H. PARTICULARLY SENSITIVE TO: the definition of menton.

ANTHROPOMETRIC SURVEYS OF FOREIGN MILITARY PERSONNEL

VARIABLE NAME: MENTON-TOP OF HEAD (MENTON-VERTEX)

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The vertical distance between the chin and the plane of the top of the head.
2. BODY POSITION: Sitting; head in the Frankfort plane.
3. LANDMARK(S): Menton; plane of the top of the head.
4. INSTRUMENTS/EQUIPMENT: Head measuring rig.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING FOREIGN MILITARY SURVEYS:

<u>SURVEY</u>	<u>$\bar{X}$</u>	<u>SD</u>	<u>SURVEY</u>	<u>$\bar{X}$</u>	<u>SD</u>
CF	_____	_____	RAA	_____	_____
FRC	_____	_____	RAF	<u>22.95</u>	<u>1.01</u>
RA	<u>22.31</u>	<u>..10</u>			

C. THOUGHT TO BE OF: Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

D. REASON FOR THE RATING IN C IS: required for the development of anthropomorphic analogues; useful as one in a series of dimensions required for the development of three-dimensional head and face forms used to guide the design and sizing of equipment worn on the head and on the face.

E. REPRODUCIBILITY: A ☐ B ☒ C ☐

IF B OR C, THE PROBLEM IS: maintaining the head in its required vertical and horizontal (Frankfort plane) orientation; the consistency of locating menton.

F. PARTICULARLY SENSITIVE TO: the definition of menton.

ANTHROPOMETRIC SURVEYS OF U.S. MILITARY PERSONNEL

VARIABLE NAME: MENTON-WALL

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The horizontal distance between the tip of the chin and the plane of the back of the head.
2. BODY POSITION: Anthropometric standing.
3. LANDMARK(S): Menton; plane of the back of the head.
4. INSTRUMENTS/EQUIPMENT: Headboard; headboard gauge.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS: CHIN PROMINENCE-WALL

B. DIMENSION WAS MEASURED IN THE FOLLOWING U.S. MILITARY SURVEYS:

SURVEY	$\bar{X}$	SD	SURVEY	$\bar{X}$	SD
1 AF Women '68	<u>18.23</u>	<u>1.14</u>	4 USAF '67	<u> </u>	<u> </u>
2 Army Women '77	<u>19.47</u>	<u>1.10</u>	5 US Army '66	<u> </u>	<u> </u>
3 USN '64	<u> </u>	<u> </u>	6 Army Av. '70	<u> </u>	<u> </u>

C. CORRELATION WITH:	US Army '66	STATURE	WEIGHT	AGE
	US Army '77	<u>.192</u>	<u>.340</u>	<u>.039</u>

COEFFICIENT OF VARIATION:	US Army '66
	US Army '77 <u>5.7</u>

1st and 99th US ARMY '66 and '77 PERCENTILE VALUES: MALE and
FEMALE 17.2 and 22.4

D. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

E. REASON FOR RATING IN D IS: useful as one in a series of dimensions required for the development of three-dimensional head and face forms used to guide the design and sizing of equipment worn on the head and on the face.

F. RACE SENSITIVE? YES ☐ NO ☒ GENDER SENSITIVE? YES ☒ NO ☐
IN WHAT WAY? Among men and women of like body size, men tend on the average to have greater head lengths than women and greater distances between facial features and the back plane of the head (usually greater by more than one SD). Although the data here do not support the identification of this dimension as Gender Sensitive, these are probably reflecting differences in definition and interpretation of menton.

G. REPRODUCIBILITY: A ☐ B ☐ C ☒

IF B OR C, THE PROBLEM IS: maintaining the head in its required vertical and horizontal (Frankfort plane) orientation; the consistency of locating menton.

H. PARTICULARLY SENSITIVE TO: the definition of menton.

ANTHROPOMETRIC SURVEYS OF FOREIGN MILITARY PERSONNEL

VARIABLE NAME: MENTON-WALL

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The horizontal distance between the tip of the chin and the plane of the back of the head.
2. BODY POSITION: Sitting; head in the Frankfort plane.
3. LANDMARK(S): Menton; plane of the back of the head.
4. INSTRUMENTS/EQUIPMENT: Head measuring rig.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS: CHIN PROMINENCE-WALL

B. DATA INDICATE DIMENSION MEASURED IN THE FOLLOWING FOREIGN MILITARY SURVEYS:

<u>SURVEY</u>	<u>$\bar{X}$</u>	<u>SD</u>	<u>SURVEY</u>	<u>$\bar{X}$</u>	<u>SD</u>
CF	_____	_____	RAA	_____	_____
FRG	_____	_____	RAF	<u>19.98</u>	_____
RA	<u>19.75</u>	<u>1.22</u>			

C. THOUGHT TO BE OF: Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

D. REASON FOR THE RATING IN C IS: useful as one in a series of dimensions required for the development of three-dimensional head and face forms used to guide the design and sizing of equipment worn on the head and on the face.

E. REPRODUCIBILITY: A ☐ B ☐ C ☒

IF B OR C, THE PROBLEM IS: maintaining the head in its required vertical and horizontal (Frankfort plane) orientation; the consistency of locating menton.

F. PARTICULARLY SENSITIVE TO: the definition of menton.

ANTHROPOMETRIC SURVEY OF U.S. MILITARY PERSONNEL

VARIABLE NAME: METACARPALE III HEIGHT (KNUCKLE HEIGHT)

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The vertical distance between the standing surface and the knuckle of the third finger.
2. BODY POSITION: Standing; arms and hands extended at sides.
3. LANDMARK(S): Phalangion III.
4. INSTRUMENTS/EQUIPMENT: Anthropometer.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS: GRIP AXIS HEIGHT

B. DIMENSION WAS MEASURED IN THE FOLLOWING U.S. MILITARY SURVEYS:

SURVEY	$\bar{X}$	SD	SURVEY	$\bar{X}$	SD
1 AF Women '68			4 USAF '67		
2 Army Women '77	<u>70.99</u>	<u>3.97</u>	5 US Army '66		
3 USN '64			6 Army Av. '70		

C. CORRELATION WITH:	US Army '66	US Army '77	STATURE	WEIGHT	AGE
			<u>.823</u>	<u>.484</u>	<u>.216</u>

COEFFICIENT OF VARIATION:	US Army '66	
	US Army '77	<u>5.6</u>

1st and 99th US ARMY '66 and '77 PERCENTILE VALUES: MALE _____ and _____
FEMALE 61.9 and 79.5

D. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

E. REASON FOR RATING IN D IS: Grip Axis Height is the preferred dimension.

F. RACE SENSITIVE? YES ☒ NO ☐ GENDER SENSITIVE? YES ☐ NO ☒
IN WHAT WAY? Among Whites, Blacks, and Asians of like body size, Whites tend on the average to have shorter upper extremities than Blacks and longer upper extremities than Asians.

G. REPRODUCIBILITY: A ☒ B ☐ C ☐

IF B OR C, THE PROBLEM IS:

H. PARTICULARLY SENSITIVE TO: arm and shoulder position.

ANTHROPOMETRIC SURVEYS OF U.S. MILITARY PERSONNEL

VARIABLE NAME: MID-SHOULDER HEIGHT, SITTING

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The vertical distance from the sitting surface to a point on the shoulder midway between the side of the base of the neck and the tip of the shoulder.
2. BODY POSITION: Anthropometric sitting.
3. LANDMARK(S): Lateral neck point (neck circumference plane: USA '70- inferior to thyroid cartilage perpendicular to long axis of the neck; USAF '67- over anterior point of the thyroid cartilage perpendicular to long axis of the neck; USAF '68- neck/shoulder juncture perpendicular to long axis of the neck; USA '77- neck/shoulder juncture not perpendicular to long axis of neck); acromion.
4. INSTRUMENTS/EQUIPMENT: Anthropometer.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES: different landmarks used to define the neck plane.

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING U.S. MILITARY SURVEYS:

SURVEY	$\bar{X}$	SD	SURVEY	$\bar{X}$	SD
1 AF Women '68	58.0	2.66	4 USAF '67	64.59	2.74
2 Army Women '77			5 US Army '66	62.38	3.18

FEMALE 2.6 and 4.6

D. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

E. REASON FOR RATING IN D IS: useful as one in a series of dimensions required for the development of three-dimensional forms used to guide the design and sizing of equipment worn on the face.

F. RACE SENSITIVE? YES ☒ NO ☐ GENDER SENSITIVE? YES ☐ NO ☒
IN WHAT WAY? Among Whites, Blacks, and Asians of like body size, Whites tend on the average to have lesser nasal breadths than Blacks and greater nasal breadths than Asians.

G. REPRODUCIBILITY: A ☒ B ☐ C ☐

IF B OR C, THE PROBLEM IS:

H. PARTICULARLY SENSITIVE TO: Tissue compression.

ANTHROPOMETRIC SURVEYS OF U.S. MILITARY PERSONNEL

VARIABLE NAME: NASAL ROOT BREADTH

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The breadth of the bridge of the nose measured at a depth midway between the inner corners of the eyes and the deepest depression of the nasal root.
2. BODY POSITION: Sitting.
3. LANDMARK(S): Entocanthion; sellion.
4. INSTRUMENTS/EQUIPMENT: Sliding caliper.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING U.S. MILITARY SURVEYS:

SURVEY	$\bar{X}$	SD	SURVEY	$\bar{X}$	SD
1 AF Women '68			4 USAF '67		
2 Army Women '77			5 US Army '66		
3 USN '64	1.85	0.30	6 Army Av. '70		

C. CORRELATION WITH:		STATURE	WEIGHT	AGE
US Army	'66			
US Army	'77			

COEFFICIENT OF VARIATION: US Army '66 _____
US Army '77 _____

1st and 99th US ARMY '66 and '77 PERCENTILE VALUES: MALE _____ and _____
FEMALE _____ and _____

D. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

E. REASON FOR RATING IN D IS: useful as one in a series of dimensions required for the development of three-dimensional head and face forms used to guide the design and sizing of equipment worn on the head and on the face.

F. RACE SENSITIVE? YES ☒ NO ☐ GENDER SENSITIVE? YES ☐ NO ☒
IN WHAT WAY? Among White, Black, and Asian males of like body size, Whites tend on the average to be smaller for this dimension than Blacks and Asians.

G. REPRODUCIBILITY: A ☐ B ☐ C ☒

IF B OR C, THE PROBLEM IS: the consistency of locating the deepest depression of the nasal root.

H. PARTICULARLY SENSITIVE TO:

ANTHROPOMETRIC SURVEYS OF FOREIGN MILITARY PERSONNEL

VARIABLE NAME: NASION-TOP OF HEAD (NASION-VERTEX)

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The vertical distance between the nasion and the top of the head.
2. BODY POSITION: Sitting; head in the Frankfort plane.
3. LANDMARK(S): Nasion; plane of the top of the head.
4. INSTRUMENTS/EQUIPMENT: Head measuring rig.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS: SELLION-TOP OF HEAD

B. DIMENSION WAS MEASURED IN THE FOLLOWING FOREIGN MILITARY SURVEYS:

<u>SURVEY</u>	<u>$\bar{X}$</u>	<u>SD</u>	<u>SURVEY</u>	<u>$\bar{X}$</u>	<u>SD</u>
CF			RAA		
FRG			RAF	<u>10.63</u>	<u>0.96</u>
RA	<u>10.43</u>	<u>1.07</u>			

C. THOUGHT TO BE OF: Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

D. REASON FOR THE RATING IN C IS: Sellion-Top of Head is the preferred dimension since sellion provides a slightly more functional measure and it is much easier to locate precisely than nasion.

E. REPRODUCIBILITY: A ☐ B ☐ C ☒

IF B OR C, THE PROBLEM IS: maintaining the head in its required vertical and horizontal (Frankfort plane) orientation; nasion is often difficult to locate precisely on many subjects.

F. PARTICULARLY SENSITIVE TO:

ANTHROPOMETRIC SURVEYS OF U.S. MILITARY PERSONNEL

VARIABLE NAME: NECK CIRCUMFERENCE

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The circumference of the neck perpendicular to its long axis.
2. BODY POSITION: Anthropometric standing.
3. LANDMARK(S): USN '64, USA '66, USA '70-inferior to thyroid cartilage; USAF '67-anterior point of the thyroid cartilage.
4. INSTRUMENTS/EQUIPMENT: Tape.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES: Definition of neck plane.

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING U.S. MILITARY SURVEYS:

SURVEY	$\bar{X}$	SD	SURVEY	$\bar{X}$	SD
1 AF Women '68			4 USAF '67	38.34	1.91
2 Army Women '77			5 US Army '66	37.39	2.07
3 USN '64	38.46	1.84	6 Army Av. '70	37.75	2.00

C. CORRELATION WITH:	US Army '66	STATURE	WEIGHT	AGE
	US Army '77	.238	.719	.234

COEFFICIENT OF VARIATION:	US Army '66	5.5
	US Army '77	

1st and 99th US ARMY '66 and '77 PERCENTILE VALUES: MALE 33.0 and 42.6
FEMALE and

D. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

E. REASON FOR RATING IN D IS: a key dimension for the design, sizing, procurement, and issuing of garments with close fitting collars; required for the construction of clothing manikins; required for the development of anthropomorphic analogues.

F. RACE SENSITIVE? YES ☐ NO ☒ GENDER SENSITIVE? YES ☐ NO ☒
IN WHAT WAY?

G. REPRODUCIBILITY: A ☒ B ☐ C ☐

IF B OR C, THE PROBLEM IS:

H. PARTICULARLY SENSITIVE TO: the definition of neck plane.

ANTHROPOMETRIC SURVEYS OF FOREIGN MILITARY PERSONNEL

VARIABLE NAME: NECK CIRCUMFERENCE (HALSUMFANG)

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The circumference of the neck perpendicular to its long axis.
2. BODY POSITION: Anthropometric standing or anthropometric sitting.
3. LANDMARK(S): CF, FRG, RAA-anterior point of thyroid cartilage; RA, RAF-"immediately below the larynx."
4. INSTRUMENTS/EQUIPMENT: Tape.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES: Different definitions of the neck plane.

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING FOREIGN MILITARY SURVEYS:

<u>SURVEY</u>	<u>$\bar{X}$</u>	<u>SD</u>	<u>SURVEY</u>	<u>$\bar{X}$</u>	<u>SD</u>
CF	<u>39.55</u>	<u>2.24</u>	RAA	<u>38.46</u>	<u>2.18</u>
FRG	<u>37.9</u>	<u>1.9</u>	RAF	<u>38.15</u>	<u>1.69</u>
RA	<u>38.19</u>	<u>1.93</u>			

C. THOUGHT TO BE OF: Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

D. REASON FOR THE RATING IN C IS: a key dimension for the design, sizing, procurement and issuing of garments; required for the construction of clothing manikins; required for the development of anthropomorphic analogues.

E. REPRODUCIBILITY: A ☒ B ☐ C ☐

IF B OR C, THE PROBLEM IS:

F. PARTICULARLY SENSITIVE TO: the definition of the neck plane.

ANTHROPOMETRIC SURVEYS OF U.S. MILITARY PERSONNEL

VARIABLE NAME: NECK CIRCUMFERENCE (BASE)

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The circumference of the base of the neck.
2. BODY POSITION: Anthropometric standing.
3. LANDMARK(S): USAF '68-neck plane (perpendicular to the long axis of the neck at the neck/shoulder juncture); USA '77-neck plane at the neck/shoulder juncture (not perpendicular to the long axis of the neck).
4. INSTRUMENTS/EQUIPMENT: Tape.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES: Difference between the plane of measurement.

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING U.S. MILITARY SURVEYS:

	SURVEY	$\bar{X}$	SD		SURVEY	$\bar{X}$	SD
1	AF Women '68	<u>33.75</u>	<u>1.68</u>	4	USAF '67	<u> </u>	<u> </u>

3	USN '64	<u> </u>	<u> </u>	6	Army Av. '70	<u> </u>	<u> </u>

C. CORRELATION WITH:	US Army '66	STATURE	WEIGHT	AGE
	US Army '77	<u>.359</u>	<u>.649</u>	<u>.068</u>

COEFFICIENT OF VARIATION:	US Army '66	<u> </u>
	US Army '77	<u>4.90</u>

1st and 99th US ARMY '66 and '77 PERCENTILE VALUES: MALE and
FEMALE 29.10 and 36.30

D. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

E. REASON FOR RATING IN D IS: useful for the design and sizing of open neck garments; useful for the construction of clothing manikins.

F. RACE SENSITIVE? YES ☐ NO ☒ GENDER SENSITIVE? YES ☐ NO ☒
IN WHAT WAY?

G. REPRODUCIBILITY: A ☐ B ☒ C ☐

IF B OR C, THE PROBLEM IS. the consistency of establishing the neck plane.

H. PARTICULARLY SENSITIVE TO: the definition of the neck plane.

ANTHROPOMETRIC SURVEYS OF U.S. CIVILIANS

VARIABLE NAME: NECK CIRCUMFERENCE (BASE)

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The circumference of the base of the neck.
2. BODY POSITION: Anthropometric sitting.
3. LANDMARK(S): Cervicale; medial extremity of each clavicle.
4. INSTRUMENTS/EQUIPMENT: Fine chain; anthropometer (used to measure the chain).
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN FOLLOWING U.S. CIVILIAN SURVEYS:

<u>SURVEY</u>	<u>$\bar{X}$</u>	<u>SD</u>
BUREAU OF HOME ECONOMICS	<u>38.79</u>	<u>2.36</u>
HES		
Men	<u> </u>	<u> </u>
Women	<u> </u>	<u> </u>
HANES		
Men	<u> </u>	<u> </u>
Women	<u> </u>	<u> </u>

C. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

D. REASON FOR RATING IN C IS: useful for the design and sizing of open-neck garments; useful for the construction of clothing manikins.

E. REPRODUCIBILITY: A ☐ B ☒ C ☐

IF B OR C, THE PROBLEM IS: the definition and establishment of the base of the neck plane (cervicale is difficult to locate precisely on many subjects).

F. PARTICULARLY SENSITIVE TO:

ANTHROPOMETRIC SURVEYS OF U.S. MILITARY PERSONNEL

VARIABLE NAME: NECK-BUSTPOINT LENGTH

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The distance between the side of the base of the neck and the most prominent point of the bust.
2. BODY POSITION: Anthropometric standing.
3. LANDMARK(S): USA '77- lateral neck point [neck level established by placing a thin chain around the neck at its juncture with the shoulders (the plane is not perpendicular with the long axis of the neck)]; USAF '68- lateral neck point (neck level established by adjusting a Texas tie around the neck at its juncture with the shoulders in a plane perpendicular to the long axis of the neck).
4. INSTRUMENTS/EQUIPMENT: Tape.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING U.S. MILITARY SURVEYS:

SURVEY	$\bar{X}$	SD	SURVEY	$\bar{X}$	SD

	US Army '77	<u>8.2</u>

1st and 99th US ARMY '66 and '77 PERCENTILE VALUES: MALE and
FEMALE 21.0 and 30.5

D. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

E. REASON FOR RATING IN D IS: useful for the design and sizing of single- and upper-body garments; useful for the construction of clothing manikins; useful for the development of load-carrying systems.

F. RACE SENSITIVE? YES ☐ NO ☒ GENDER SENSITIVE YES ☐ NO ☒
IN WHAT WAY?

G. REPRODUCIBILITY: A ☒ B ☐ C ☐

IF B OR C, THE PROBLEM IS:

H. PARTICULARLY SENSITIVE TO: the definition of the neck level; the point of respiration at which the measurement is taken; the type and fit of the bra.

ANTHROPOMETRIC SURVEYS OF U.S. CIVILIANS

VARIABLE NAME: NECK-BUSTPOINT LENGTH

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The distance between the side of the base of the neck and the most prominent point of the bust.
2. BODY POSITION: Anthropometric standing.
3. LANDMARK(S): Intersection of the lateral base of the neck (medial extremities of the clavicles and cervicale) and shoulder line [corresponding to the shoulder seam that originates at the lateral base of the neck (the circumference passing across cervicale and each clavicle) at the border of the trapezius, is directed towards acromion, and terminates at its intersection with the scye at the shoulder]; greatest protrusion of the bust.
4. INSTRUMENTS/EQUIPMENT: Tape.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN FOLLOWING U.S. CIVILIAN SURVEYS:

<u>SURVEY</u>	<u>$\bar{X}$</u>	<u>SD</u>
BUREAU OF HOME ECONOMICS	<u>28.02</u>	<u>3.81</u>
HES		
Men	<u> </u>	<u> </u>
Women	<u> </u>	<u> </u>
HANES		
Men	<u> </u>	<u> </u>
Women	<u> </u>	<u> </u>

C. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

D. REASON FOR RATING IN C IS: useful for the design, sizing, procurement and issuing of single- and upper-body garments; useful for the construction of clothing manikins; useful for the development of load-carrying systems.

E. REPRODUCIBILITY: A ☒ B ☐ C ☐

IF B OR C, THE PROBLEM IS:

F. PARTICULARLY SENSITIVE TO: the definition of neck level; the point of respiration at which the measurement is taken; the type and fit of bra (a bandeau was used in this survey).

ANTHROPOMETRIC SURVEYS OF U.S. MILITARY PERSONNEL

VARIABLE NAME: NOSE PROTRUSION

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The straight line distance between the base of the nasal septum and the maximum forward protrusion of the nose.
2. BODY POSITION: Sitting.
3. LANDMARK(S): Subnasale; pronasale.
4. INSTRUMENTS/EQUIPMENT: Sliding caliper.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS: PRONASALE-WALL minus SUBNASALE-WALL

B. DIMENSION WAS MEASURED IN THE FOLLOWING U.S. MILITARY SURVEYS:

SURVEY	$\bar{X}$	SD	SURVEY	$\bar{X}$	SD
1 AF Women '68	_____	_____	4 USAF '67	_____	_____
2 Army Women '77	_____	_____	5 US Army '66	_____	_____
3 USN '64	<u>2.29</u>	<u>0.25</u>	6 Army Av. '70	_____	_____

C. CORRELATION WITH:

	STATURE	WEIGHT	AGE
US Army '66	_____	_____	_____
US Army '77	_____	_____	_____

COEFFICIENT OF VARIATION:

US Army '66	_____
US Army '77	_____

1st and 99th US ARMY '66 and '77 PERCENTILE VALUES:

MALE	_____	and	_____
FEMALE	_____	and	_____

D. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

E. REASON FOR RATING IN D IS: useful for providing accommodation for the nose in equipment worn on the face; useful as one in a series of dimensions required for the development of three-dimensional face forms used to guide the design and sizing of equipment worn on the face.

F. RACE SENSITIVE? YES ☒ NO ☐ GENDER SENSITIVE? YES ☒ NO ☐
IN WHAT WAY? Among White, Black, and Asian males of like body size, Whites tend on the average to have greater protrusion of the nose than Blacks and Asians. Among men and women of like body size, men tend on the average to have larger and more protrusive noses than women.

G. REPRODUCIBILITY: A ☐ B ☐ C ☒

IF B OR C, THE PROBLEM IS: a very difficult measurement to take without unduly compressing the tissue.

H. PARTICULARLY SENSITIVE TO:

ANTHROPOMETRIC SURVEYS OF U.S. MILITARY PERSONNEL

VARIABLE NAME: PALM LENGTH

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The distance between the wrist and the base of the middle finger.
2. BODY POSITION: Hand and fingers fully extended; fingers together.
3. LANDMARK(S): Wrist (USAF '67-stylian; USA '66, USA '70, USA '77-distal wrist crease); crease at the base of digit III.
4. INSTRUMENTS/EQUIPMENT: Sliding caliper.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING U.S. MILITARY SURVEYS:

SURVEY	$\bar{X}$	SD	SURVEY	$\bar{X}$	SD
1 AF Women '68			4 USAF '67	10.83	0.54
2 Army Women '77	9.88	0.52	5 US Army '66	10.59	0.63
3 USN '64			6 Army Av. '70	10.95	0.55

C. CORRELATION WITH:	US Army '66	US Army '77	STATURE	WEIGHT	AGE
			.489	.344	.015
			.585	.340	.044

COEFFICIENT OF VARIATION:	US Army '66	5.9
	US Army '77	5.3

1st and 99th US ARMY '66 and '77 PERCENTILE VALUES: MALE 10.8 and 12.2
FEMALE 10.8 and 12.2

D. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

E. REASON FOR RATING IN D IS: useful as one in a series of dimensions required for the development of sizing system programs for gloves; useful for the development of a body-link system; useful for the development of anthropomorphic analogues.

F. RACE SENSITIVE? YES ☒ NO ☐ GENDER SENSITIVE? YES ☒ NO ☐
IN WHAT WAY? Among White and Black males of like body size, Whites tend on the average to have shorter palms than Blacks. Among men and women of like body size, men tend on the average to have larger hands than women.

G. PROBLEMS: A ☐ B ☐ C ☒

IF OR THE PROBLEM IS consistency of hand and finger extension, location of wrist landmark locations.

H. PARTICULARLY SENSITIVE TO

ANTHROPOMETRIC SURVEYS OF FOREIGN MILITARY PERSONNEL

VARIABLE NAME: PALM LENGTH

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The distance between the wrist and the base of the third finger.
2. BODY POSITION: Hand and fingers fully extended; fingers together.
3. LANDMARK(S): Wrist (first major skin crease proximal to the base of the hypothenar eminence); skin fold at the junction of digit III.
4. INSTRUMENTS/EQUIPMENT: Sliding caliper.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING FOREIGN MILITARY SURVEYS:

Women	<u> </u>	<u> </u>

C. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

D. REASON FOR RATING IN C IS: useful for the design and sizing of single- and upper-body garments; useful for the construction of clothing manikins; useful for the development of load-carrying systems.

E. REPRODUCIBILITY: A ☒ B ☐ C ☐

IF B OR C, THE PROBLEM IS:

F. PARTICULARLY SENSITIVE TO: identification of the spine of the 7th thoracic vertebra (it is difficult to locate precisely on many subjects).

ANTHROPOMETRIC SURVEYS OF U.S. MILITARY PERSONNEL

VARIABLE NAME: POSTERIOR CROTCH LENGTH
(SCROTAL-POSTERIOR WAIST LEVEL CURVATURE OVER BUTTOCK)

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The vertical surface distance between the scrotum/perineal juncture passing over the posterior point of the buttock and the level of the back of the waist above the buttock.
2. BODY POSITION: Standing erect; feet slightly apart.
3. LANDMARK(S): Scrotale (crotch center); waist level (omphalion).
4. INSTRUMENTS/EQUIPMENT: unique metal block with tapes attached.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING U.S. MILITARY SURVEYS:

SURVEY	$\bar{X}$	SD	SURVEY	$\bar{X}$	SD
1 AF Women '68	_____	_____	4 USAF '67	42.63	3.02
2 Army Women '77	_____	_____	5 US Army '66	_____	_____
3 USN '64	_____	_____	6 Army Av. '70	_____	_____

C. CORRELATION WITH: US Army '66 STATURE WEIGHT AGE
US Army '77

COEFFICIENT OF VARIATION: US Army '66
US Army '77

1st and 99th US ARMY '66 and '77 PERCENTILE VALUES: MALE and
FEMALE and

D. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

E. REASON FOR RATING IN D IS: useful for the design and sizing of single- and lower-body garments; useful for the construction of clothing manikins.

F. RACE SENSITIVE? YES ☒ NO ☐ GENDER SENSITIVE? YES ☒ NO ☐
IN WHAT WAY? Among White and Black males of like body size, Whites tend on the average to have larger buttocks than Blacks. Among men and women of like body size, men tend on the average to have smaller buttocks than women.

G. REPRODUCIBILITY: A ☐ B ☒ C ☐

IF B OR C, THE PROBLEM IS: the consistency of the subject placing the special block on scrotale.

H. PARTICULARLY SENSITIVE TO: subject modesty.

ANTHROPOMETRIC SURVEYS OF U.S. MILITARY PERSONNEL

VARIABLE NAME: POSTERIOR NECK LENGTH

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The vertical surface distance between the back of the base of the head and the base of the neck.
2. BODY POSITION: Standing; head in the Frankfort plane.
3. LANDMARK(S): *Inion; cervicale.
4. INSTRUMENTS/EQUIPMENT: Tape.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE MEASUREMENTS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING U.S. MILITARY SURVEYS:

SURVEY	$\bar{X}$	SD	SURVEY	$\bar{X}$	SD
1 AF Women '68	_____	_____	4 USAF '67	13.25	1.69
2 Army Women '77	_____	_____	5 US Army '66	_____	_____
3 USN '64	_____	_____	6 Army Av. '70	_____	_____

C. CORRELATION WITH: STATURE WEIGHT AGE
 US Army '66 _____
 US Army '77 _____

COEFFICIENT OF VARIATION: US Army '66 _____
 US Army '77 _____

1st and 99th US ARMY '66 and '77 PERCENTILE VALUES: MALE _____ and _____
 FEMALE _____ and _____

D. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

E. REASON FOR RATING IN D IS: useful for the design and sizing of single- and upper-body garments; useful for the construction of clothing manikins.

F. RACE SENSITIVE? YES ☐ NO ☒ GENDER SENSITIVE? YES ☐ NO ☒
 IN WHAT WAY?

G. REPRODUCIBILITY: A ☐ B ☐ C ☒

IF B OR C, THE PROBLEM IS: the difficulty of locating inion precisely on many subjects (particularly women); cervicale is difficult to locate precisely on many subjects.

H. PARTICULARLY SENSITIVE TO:

*Nuchale is the preferred landmark although it is also difficult to locate with consistency since there is more than the usual degree of subjectivity with its location.

ANTHROPOMETRIC SURVEYS OF U.S. MILITARY PERSONNEL

VARIABLE NAME: PRONASALE-TOP OF HEAD

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The vertical distance from the tip of the nose to the plane of the top of the head.
2. BODY POSITION: Standing; head in the Frankfort plane.
3. LANDMARK(S): Pronasale; plane of the top of the head.
4. INSTRUMENTS/EQUIPMENT: Headboard; headboard gauge.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING U.S. MILITARY SURVEYS:

SURVEY	$\bar{X}$	SD	SURVEY	$\bar{X}$	SD
1 AF Women '68	<u>14.76</u>	<u>1.17</u>	4 USAF '67	<u>14.74</u>	<u>1.10</u>
2 Army Women '77	<u>13.55</u>	<u>0.99</u>	5 US Army '66	<u> </u>	<u> </u>
3 USN '64	<u> </u>	<u> </u>	6 Army Av. '70	<u> </u>	<u> </u>

C. CORRELATION WITH:	STATURE	WEIGHT	AGE
US Army '66	<u> </u>	<u> </u>	<u> </u>
US Army '77	<u>.234</u>	<u>.179</u>	<u>.106</u>

COEFFICIENT OF VARIATION:	US Army '66	<u> </u>
	US Army '77	<u>7.3</u>

1st and 99th US ARMY '66 and '77 PERCENTILE VALUES: MALE and
 FEMALE 11.4 and 15.7

D. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

E. REASON FOR RATING IN D IS: useful as one in a series of dimensions required for the development of three-dimensional face forms used to guide the design and sizing of equipment worn on the head and on the face.

F. RACE SENSITIVE? YES ☐ NO ☒ GENDER SENSITIVE? YES ☐ NO ☒
 IN WHAT WAY?

G. REPRODUCIBILITY: A ☐ B ☐ C ☒

IF B OR C, THE PROBLEM IS: maintaining the head in its required vertical and horizontal (Frankfort plane) orientation.

H. PARTICULARLY SENSITIVE TO:

ANTHROPOMETRIC SURVEYS OF U.S. MILITARY PERSONNEL

VARIABLE NAME: PRONASALE-WALL

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The distance from the top of the nose to the plane of the back of the head.
2. BODY POSITION: Standing; head in the Frankfort plane.
3. LANDMARK(S): Pronasale; plane of the back of the head.
4. INSTRUMENTS/EQUIPMENT: USN '64, USA '66-beam caliper; USAF '67, USAF '68, USA '77-headboard; headboard gauge.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING U.S. MILITARY SURVEYS:

SURVEY	$\bar{X}$	SD	SURVEY	$\bar{X}$	SD
1 AF Women '68	<u>21.19</u>	<u>0.96</u>	4 USAF '67	<u>22.68</u>	<u>0.75</u>
2 Army Women '77	<u>21.49</u>	<u>0.98</u>	5 US Army '66	<u>22.19</u>	<u>0.83</u>
3 USN '64	<u>22.85</u>	<u>0.76</u>	6 Army Av. '70	<u>22.65</u>	<u>0.78</u>

C. CORRELATION WITH:	US Army '66	US Army '77	STATURE	WEIGHT	AGE
			<u>.297</u>	<u>.297</u>	<u>.12'</u>
			<u>.336</u>	<u>.381</u>	<u>.092</u>

COEFFICIENT OF VARIATION:	US Army '66	<u>3.7</u>
	US Army '77	<u>4.5</u>

1st and 99th US ARMY '66 and '77 PERCENTILE VALUES: MALE 20.2 and 24.1
FEMALE 19.4 and 24.2

D. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

E. REASON FOR RATING IN D IS: useful as one in a series of dimensions required for the development of three-dimensional face forms used to guide the design and sizing of equipment worn on the face.

F. RACE SENSITIVE? YES ☐ NO ☒ GENDER SENSITIVE? YES ☒ NO ☐
IN WHAT WAY? Among men and women of like body size, men tend on the average to have larger heads than women.

G. REPRODUCIBILITY: A ☐ B ☒ C ☐

IF B OR C, THE PROBLEM IS: maintaining the head in its required vertical and horizontal (Frankfort plane) orientation.

H. PARTICULARLY SENSITIVE TO:

ANTHROPOMETRIC SURVEYS OF FOREIGN MILITARY PERSONNEL

VARIABLE NAME: PUPIL-TOP OF HEAD (PUPIL-VERTEX)

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The vertical distance between the center of the pupil and the plane of the top of the head.
2. BODY POSITION: Sitting; head in the Frankfort plane.
3. LANDMARK(S): Center of pupil; plane of the top of the head.
4. INSTRUMENTS/EQUIPMENT: Head measuring rig.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS: EXTERNAL CANTHUS-TOP OF HEAD

B. DIMENSION WAS MEASURED IN THE FOLLOWING FOREIGN MILITARY SURVEYS:

<u>SURVEY</u>	<u>$\bar{X}$</u>	<u>SD</u>	<u>SURVEY</u>	<u>$\bar{X}$</u>	<u>SD</u>
CF			RAA		
FRG			RAF	<u>11.26</u>	<u>0.82</u>
RA	<u>11.06</u>	<u>0.95</u>			

C. THOUGHT TO BE OF: Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

1. REASON FOR THE RATING IN C IS: required for the design of optical devices mounted on head gear, e.g. helmet mounted sights; required to derive Eye Height, Sitting from Sitting Height if the former is not measured (see Eye Height, Sitting); useful as one in a series of dimensions required for the development of three-dimensional head and face forms used to guide the design and sizing of equipment worn on the head and on the face.

E. REPRODUCIBILITY: A ☐ B ☐ C ☒

IF B OR C, THE PROBLEM IS: maintaining the head in its required vertical and horizontal (Frankfort plane) orientation.

F. PARTICULARLY SENSITIVE TO: subject's and anthropometrist's apprehension of measurements taken close to the eyes.

ANTHROPOMETRIC SURVEYS OF U.S. MILITARY PERSONNEL

VARIABLE NAME: RADIALE HEIGHT (ELBOW HEIGHT)

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The vertical distance between the standing surface and the elbow.
2. BODY POSITION: Anthropometric standing.
3. LANDMARK(S): Radiale.
4. INSTRUMENTS/EQUIPMENT: Anthropometer.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING U.S. MILITARY SURVEYS:

SURVEY	$\bar{X}$	SD	SURVEY	$\bar{X}$	SD
1 AF Women '68			4 I'SAF '67	<u>112.29</u>	<u>4.57</u>
2 Army Women '77	<u>102.56</u>	<u>4.80</u>	5 US Army '66		
3 USN '64			6 Army Av. '70		

C. CORRELATION WITH:	US Army '66	STATURE	WEIGHT	AGE
	US Army '77	<u>.931</u>	<u>.579</u>	<u>.241</u>

COEFFICIENT OF VARIATION:	US Army '66	
	US Army '77	<u>4.7</u>

1st and 99th US ARMY '66 and '77 PERCENTILE VALUES: MALE and
FEMALE 92.9 and 114.1

D. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

E. REASON FOR RATING IN D IS: a useful dimension for the design and layout of workspaces; useful for the development of anthropomorphic analogues.

F. RACE SENSITIVE? YES ☒ NO ☐ GENDER SENSITIVE? YES ☐ NO ☒
IN WHAT WAY? Among Whites, Blacks, and Asians of like body size, Whites tend on the average to have shorter upper extremities than Blacks and longer upper extremities than Asians.

G. REPRODUCIBILITY: A ☒ B ☐ C ☐

IF B OR C, THE PROBLEM IS:

H. PARTICULARLY SENSITIVE TO: shoulder and upper extremity position.

ANTHROPOMETRIC SURVEYS OF U.S. MILITARY PERSONNEL

VARIABLE NAME: RADIALE-STYLION LENGTH

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The straight line distance between the elbow and the wrist parallel to the long axis of the forearm.

2. BODY POSITION: Standing.

3. LANDMARK(S): Radiale; stylium.

4. INSTRUMENTS/EQUIPMENT: Beam caliper.

5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING U.S. MILITARY SURVEYS:

SURVEY	$\bar{X}$	SD	SURVEY	$\bar{X}$	SD
1 AF Women '68	<u>23.39</u>	<u>1.37</u>	4 USAF '67	<u>26.88</u>	<u>1.42</u>
2 Army Women '77	<u>24.37</u>	<u>1.47</u>	5 US Army '66	<u> </u>	<u> </u>
3 USN '64	<u> </u>	<u> </u>	6 Army Av. '70	<u> </u>	<u> </u>

C. CORRELATION WITH:	US Army '66	STATURE	WEIGHT	AGE
	US Army '77	<u>.689</u>	<u>.444</u>	<u>.055</u>

COEFFICIENT OF VARIATION:	US Army '66	<u> </u>
	US Army '77	<u>6.0</u>

1st and 99th US ARMY '66 and '77 PERCENTILE VALUES: MALE and
FEMALE 21.2 and 27.9

D. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

E. REASON FOR RATING IN D IS: required for the development of a body-link system.

F. RACE SENSITIVE? YES ☒ NO ☐ GENDER SENSITIVE? YES ☐ NO ☒
IN WHAT WAY? Among Whites, Blacks, and Asians of like body size, Whites tend on the average to have shorter forearms than Blacks and longer forearms than Asians.

G. REPRODUCIBILITY: A ☒ B ☐ C ☐

IF B OR C, THE PROBLEM IS:

H. PARTICULARLY SENSITIVE TO:

ANTHROPOMETRIC SURVEYS OF U.S. MILITARY PERSONNEL

VARIABLE NAME: SAGITTAL ARC

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The surface distance from between the eyebrows and the base of the back of the neck.
2. BODY POSITION: Sitting.
3. LANDMARK(S): USA '70, USA '77, USAF '68, USN '64-glabella, nuchale; USAF '67-glabella; inion.
4. INSTRUMENTS/EQUIPMENT: Tape.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES: Different posterior landmarks used (nuchale preferred).

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING U.S. MILITARY SURVEYS:

SURVEY	$\bar{X}$	SD	SURVEY	$\bar{X}$	SD
1 AF Women '68	<u>34.79</u>	<u>1.49</u>	4 USAF '67	<u>36.64</u>	<u>1.66</u>
2 Army Women '77	<u>33.63</u>	<u>1.55</u>	5 US Army '66	<u>35.88</u>	<u>1.43</u>
3 USN '64	<u>36.90</u>	<u>2.18</u>	6 Army Av. '70	<u>35.88</u>	<u>1.43</u>

C. CORRELATION WITH:	US Army '66	US Army '77	STATURE	WEIGHT	AGE
			<u>.313</u>	<u>.285</u>	<u>.043</u>

COEFFICIENT OF VARIATION:	US Army '66	
	US Army '77	<u>4.6</u>

1st and 99th US ARMY '66 and '77 PERCENTILE VALUES: MALE 30.6 and 38.2
FEMALE 30.6 and 38.2

D. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

E. REASON FOR RATING IN D IS: useful as one in a series of dimensions required for the development of three-dimensional head forms used to guide the design and sizing of equipment worn on the head.

F. RACE SENSITIVE? YES ☐ NO ☒ GENDER SENSITIVE? YES ☐ NO ☒
IN WHAT WAY?

G. REPRODUCIBILITY: A ☐ B ☒ C ☐

IF B OR C, THE PROBLEM IS: the accuracy and consistency of locating nuchale or inion.

H. PARTICULARLY SENSITIVE TO:

ANTHROPOMETRIC SURVEYS OF FOREIGN MILITARY PERSONNEL

VARIABLE NAME: SAGITTAL ARC (SAGITTALER KOPFBOGEN)

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The surface distance from between the eyebrows and the base of the back of the neck.
2. BODY POSITION: Sitting.
3. LANDMARK(S): CF-glabella, nuchale; FRG-glabella, inion.
4. INSTRUMENTS/EQUIPMENT: Tape.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES: Different posterior landmarks used (nuchale is preferred).

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING FOREIGN MILITARY SURVEYS:

<u>SURVEY</u>	<u>$\bar{X}$</u>	<u>SD</u>	<u>SURVEY</u>	<u>$\bar{X}$</u>	<u>SD</u>
CF	36.44	1.98	RAA	_____	_____
FRG	33.2	1.4	RAF	_____	_____
RA	_____	_____			

C. THOUGHT TO BE OF: Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

- D. REASON FOR THE RATING IN C IS: useful as one in a series of dimensions required for the development of three-dimensional head forms used to guide the design, sizing, procurement and issuing of equipment worn on the head.

E. REPRODUCIBILITY: A ☐ B ☒ C ☐

IF B OR C, THE PROBLEM IS: the accuracy and consistency of locating nuchale or inion.

F. PARTICULARLY SENSITIVE TO:

ANTHROPOMETRIC SURVEYS OF U.S. MILITARY PERSONNEL

VARIABLE NAME: SCYE CIRCUMFERENCE (ARM SCYE CIRCUMFERENCE)

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The circumference of the scye (a tailoring term denoting the line followed by the seam of a set-in sleeve).
2. BODY POSITION: Standing; arm slightly abducted.
3. LANDMARK(S): Anterior and posterior scye; acromion except for USAF '67.
4. INSTRUMENTS/EQUIPMENT: Tape.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES: USAF '67-a vertical measurement (the tape does not pass over acromion); USAF '67-tape snug; all others-light contact.

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING U.S. MILITARY SURVEYS:

SURVEY	$\bar{X}$	SD	SURVEY	$\bar{X}$	SD
1 AF Women '68	37.10	2.29	4 USAF '67	48.36	2.79
2 Army Women '77	37.51	2.39	5 US Army '66	44.56	3.26
3 USN '64	44.93	2.67	6 Army Av. '70	44.00	2.57

C. CORRELATION WITH:	US Army '66	US Army '77	STATURE	WEIGHT	AGE
			.271	.703	.239
			.373	.818	.190

COEFFICIENT OF VARIATION:	US Army '66	7.3
	US Army '77	6.4

1st and 99th US ARMY '66 and '77 PERCENTILE VALUES: MALE $\frac{37.7}{32.5}$ and $\frac{53.8}{44.1}$
FEMALE $\frac{32.5}{32.5}$ and $\frac{44.1}{44.1}$

D. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

E. REASON FOR RATING IN D IS: useful for the design and sizing of single- and upper-body garments; useful for the construction of clothing manikins.

F. RACE SENSITIVE? YES ☐ NO ☒ GENDER SENSITIVE? YES ☐ NO ☒
IN WHAT WAY?

G. REPRODUCIBILITY: A ☒ B ☐ C ☐

IF B OR C, THE PROBLEM IS:

H. PARTICULARLY SENSITIVE TO: the definition and location of the scye; tissue compression.

ANTHROPOMETRIC SURVEYS OF U.S. CIVILIANS

VARIABLE NAME: SCYE CIRCUMFERENCE (ARMSCYE GIRTH)

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The circumference of the scye (a tailoring term denoting the line followed by the seam of a set-in sleeve).
2. BODY POSITION: Standing; arm slightly abducted.
3. LANDMARK(S): Midpoint of axilla; posterior scye; anterior scye; shoulder point. [Scye was established with a chalked string. The center of the string was placed under the arm when it was abducted about 30 degrees. The ends of the string crossed the top of the shoulder at shoulder point (midway between acromion and the superior point of the lateral end of the clavicle). Marks were made on the resulting chalk line at shoulder point and at anterior and posterior scye at the level of the fourth thoracic vertebrae.]
4. INSTRUMENTS/EQUIPMENT: Tape.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN FOLLOWING U.S. CIVILIAN SURVEYS:

<u>SURVEY</u>	<u>$\bar{X}$</u>	<u>SD</u>
BUREAU OF HOME ECONOMICS	<u>40.89</u>	<u>3.94</u>
HES		
Men	<u> </u>	<u> </u>
Women	<u> </u>	<u> </u>
HANES		
Men	<u> </u>	<u> </u>
Women	<u> </u>	<u> </u>

C. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

D. REASON FOR RATING IN C IS: useful for the design and sizing of single- and upper-body garments; useful for the construction of clothing manikins.

E. REPRODUCIBILITY: A ☒ B ☐ C ☐

IF B OR C, THE PROBLEM IS:

F. PARTICULARLY SENSITIVE TO: the definition and location of the scye; tissue compression.

ANTHROPOMETRIC SURVEYS OF U.S. CIVILIANS

VARIABLE NAME: SCYE DEPTH

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The vertical surface distance on the spine between the base of the neck and the level of the juncture of the upper arm and the torso.
2. BODY POSITION: Anthropometric standing.
3. LANDMARK(S): Cervicale; posterior scye.
4. INSTRUMENTS/EQUIPMENT: Tape.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN FOLLOWING U.S. CIVILIAN SURVEYS:

<u>SURVEY</u>	<u>$\bar{x}$</u>	<u>SD</u>
BUREAU OF HOME ECONOMICS	<u>19.74</u>	<u>2.13</u>
HES		
Men	<u> </u>	<u> </u>
Women	<u> </u>	<u> </u>
HANES		
Men	<u> </u>	<u> </u>
Women	<u> </u>	<u> </u>

C. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

D. REASON FOR RATING IN C IS: useful for the design and sizing of single- and upper-body garments; useful for the construction of clothing manikins; useful for the design of load-carrying systems.

E. REPRODUCIBILITY: A ☒ B ☐ C ☐

IF B OR C, THE PROBLEM IS:

F. PARTICULARLY SENSITIVE TO: the definition and location of the landmarks (cervicale is difficult to locate precisely on many subjects).

ANTHROPOMETRIC SURVEYS OF U.S. MILITARY PERSONNEL

VARIABLE NAME: SELLION-TOP OF HEAD

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The vertical distance between the nasal root depression and the plane of the top of the head.
2. BODY POSITION: Standing; head in the Frankfort plane.
3. LANDMARK(S): Sellion; plane of the top of the head.
4. INSTRUMENTS/EQUIPMENT: Headboard; headboard gauge.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING U.S. MILITARY SURVEYS:

SURVEY	$\bar{X}$	SD	SURVEY	$\bar{X}$	SD
1 AF Women '68			4 USAF '67	10.75	0.94
2 Army Women '77	10.06	0.93	5 US Army '66		
3 USN '64			6 Army Av. '70		

C. CORRELATION WITH:	US Army '66	STATURE	WEIGHT	AGE
	US Army '77	.156	.180	.081

COEFFICIENT OF VARIATION:	US Army '66	
	US Army '77	9.3

1st and 99th US ARMY '66 and '77 PERCENTILE VALUES: MALE _____ and _____
FEMALE 8.0 and 12.1

D. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

E. REASON FOR RATING IN D IS: useful as one in a series of dimensions required for the development of three-dimensional head and face forms used to guide the design and sizing of equipment worn on the head and on the face.

F. RACE SENSITIVE? YES ☐ NO ☒ GENDER SENSITIVE? YES ☐ NO ☒
IN WH. C. 112?

G. REPRODUCIBILITY: A ☐ B ☐ C ☒

IF B OR C, THE PROBLEM IS: maintaining the head in its required vertical and horizontal (Frankfort plane) orientation.

H. PARTICULARLY SENSITIVE TO:

ANTHROPOMETRIC SURVEYS OF U.S. MILITARY PERSONNEL

VARIABLE NAME: SELLION-WALL

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The horizontal distance between the nasal root depression and the plane of the back of the head.
2. BODY POSITION: Standing; head in the Frankfort plane.
3. LANDMARK(S): Sellion; plane of the back of the head.
4. INSTRUMENTS/EQUIPMENT: USN '64, USA '66-anthropometer; USAF '67, USAF '68, USA '70-headboard; headboard gauge.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING U.S. MILITARY SURVEYS:

SURVEY	$\bar{X}$	SD	SURVEY	$\bar{X}$	SD
1 AF Women '68			4 USAF '67	20.17	0.66
2 Army Women '77	19.13	0.96	5 US Army '66	19.10	0.72
3 USN '64	20.05	0.69	6 Army Av. '70	19.98	0.67

US Army '66	.273	.304	.103
US Army '77	.280	.361	.113

COEFFICIENT OF VARIATION:	US Army '66	3.8
	US Army '77	4.8

1st and 99th US ARMY '66 and '77 PERCENTILE VALUES: MALE 17.4 and 20.8
FEMALE 17.1 and 22.0

D. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

E. REASON FOR RATING IN D IS: useful as one in a series of dimensions required for the development of three-dimensional head and face forms used to guide the design and sizing of equipment worn on the head and on the face.

F. RACE SENSITIVE? YES ☐ NO ☒ GENDER SENSITIVE? YES ☐ NO ☒
IN WHAT WAY?

G. REPRODUCIBILITY: A ☒ B ☐ C ☐

IF B OR C, THE PROBLEM IS:

H. PARTICULARLY SENSITIVE TO: maintaining the head in its required vertical and horizontal (Frankfort plane) orientation.

ANTHROPOMETRIC SURVEYS OF U.S. MILITARY PERSONNEL

VARIABLE NAME: SHOULDER CIRCUMFERENCE

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The maximum horizontal circumference of the shoulders.
2. BODY POSITION: Anthropometric standing.
3. LANDMARK(S): Lateral points of the deltoid muscles.
4. INSTRUMENTS/EQUIPMENT: Tape.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING U.S. MILITARY SURVEYS:

SURVEY	$\bar{X}$	SD	SURVEY	$\bar{X}$	SD
1 AF Women '68	<u>100.41</u>	<u>5.14</u>	4 USAF '67	<u>117.69</u>	<u>5.82</u>
2 Army Women '77	<u>100.36</u>	<u>5.35</u>	5 US Army '66	<u>113.16</u>	<u>6.39</u>
3 USN '64	<u>116.32</u>	<u>5.45</u>	6 Army Av. '70	<u>116.34</u>	<u>6.21</u>

C. CORRELATION WITH:	US Army '66	US Army '77	STATURE	WEIGHT	AGE
			<u>.297</u>	<u>.844</u>	<u>.201</u>
			<u>.331</u>	<u>.833</u>	<u>.138</u>

COEFFICIENT OF VARIATION:	US Army '66	<u>5.6</u>
	US Army '77	<u>5.3</u>

1st and 99th US ARMY '66 and '77 PERCENTILE VALUES: MALE 99.8 and 130.2
FEMALE 89.4 and 113.9

D. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

E. REASON FOR RATING IN D IS: a key dimension for the design, sizing, procurement, and issuing of single- and upper-body garments, particularly for unisex sizing programs; required for the development of anthropomorphic analogues.

F. RACE SENSITIVE? YES ☐ NO ☒ GENDER SENSITIVE? YES ☒ NO ☐
IN WHAT WAY? Among men and women of like body size, men tend on the average to be larger for this dimension than women.

G. REPRODUCIBILITY: A ☒ B ☐ C ☐

IF B OR C, THE PROBLEM IS:

H. PARTICULARLY SENSITIVE TO: the position of the arms and shoulders; the point of respiration at which the measurement is taken.

ANTHROPOMETRIC SURVEYS OF FOREIGN MILITARY PERSONNEL

VARIABLE NAME: SHOULDER CIRCUMFERENCE (SCHULTERUMFANG)

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The maximum horizontal circumference of the shoulders.
2. BODY POSITION: Standing; shoulders retracted; arms relaxed at sides.
3. LANDMARK(S): Lateral points of the deltoid muscles.
4. INSTRUMENTS/EQUIPMENT: Tape.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING FOREIGN MILITARY SURVEYS:

<u>SURVEY</u>	<u>$\bar{X}$</u>	<u>SD</u>	<u>SURVEY</u>	<u>$\bar{X}$</u>	<u>SD</u>
CF			RAA		
FRG	<u>116.6</u>	<u>5.3</u>	RAF		
RA					

C. THOUGHT TO BE OF: Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

- D. REASON FOR THE RATING IN C IS: may be a key dimension for the design, sizing, procurement, and issuing of single- and upper-body garments, particularly for unisex sizing programs; required for the development of anthropomorphic analogues.

E. REPRODUCIBILITY: A ☒ B ☐ C ☐

IF B OR C, THE PROBLEM IS:

- F. PARTICULARLY SENSITIVE TO: position of the arms and shoulders; the point of respiration at which the measurement is taken.

ANTHROPOMETRIC SURVEYS OF U.S. MILITARY PERSONNEL

VARIABLE NAME: SHOULDER LENGTH

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The surface distance between the side of the base of the neck and the tip of the shoulder.
2. BODY POSITION: Anthropometric standing.
3. LANDMARK(S): Acromion; USAF '68, USA '77-lateral point of neck circumference plane (USAF '68-neck/shoulder juncture perpendicular to the long axis of the neck; USA '77-neck/shoulder juncture not perpendicular to the long axis of the neck); USA '66, USAF '67, USA '70-lateral point of the neck/shoulder juncture.
4. INSTRUMENTS/EQUIPMENT: Tape.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES: Definition of landmarks.

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING U.S. MILITARY SURVEYS:

SURVEY	$\bar{X}$	SD	SURVEY	$\bar{X}$	SD
1 AF Women '68	<u>14.66</u>	<u>1.02</u>	4 USAF '67	<u>16.60</u>	<u>1.26</u>
2 Army Women '77	<u>15.00</u>	<u>1.06</u>	5 US Army '66	<u>16.20</u>	<u>1.98</u>
3 USN '64	<u> </u>	<u> </u>	6 Army Av. '70	<u>15.50</u>	<u>1.17</u>

C. CORRELATION WITH:	US Army '66	STATURE	WEIGHT	AGE
		<u>.180</u>	<u>.195</u>	<u>.008</u>
	US Army '77	<u>.373</u>	<u>.247</u>	<u>.008</u>

COEFFICIENT OF VARIATION:	US Army '66	<u>12.2</u>
	US Army '77	<u>7.1</u>

1st and 99th US ARMY '65 and '77 PERCENTILE VALUES:	MALE	<u>11.2</u>	and	<u>20.5</u>
	FEMALE	<u>12.5</u>	and	<u>17.7</u>

D. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

E. REASON FOR RATING IN D IS: useful for the design and sizing of single- and upper-body garments; useful for the construction of clothing manikins; useful for the development of load-carrying systems.

F. RACE SENSITIVE? YES ☐ NO ☒ GENDER SENSITIVE? YES ☐ NO ☒
IN WHAT WAY?

G. REPRODUCIBILITY: A ☐ B ☐ C ☒

IF B OR C, THE PROBLEM IS: the consistency of locating acromion and, particularly, the lateral neck landmark. (Coefficients of variation for this dimension range from 6.5 to 12.2 cm.).

H. PARTICULARLY SENSITIVE TO:

ANTHROPOMETRIC SURVEYS OF U.S. CIVILIANS

VARIABLE NAME: SHOULDER LENGTH

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The surface distance between the side of the base of the neck and a point on the top of the shoulder vertical to the axillary fold.
2. BODY POSITION: Anthropometric standing.
3. LANDMARK(S): Origin and termination of the shoulder line. [Shoulder line corresponds to the shoulder seam that originates at the lateral base of neck circumference (the circumference passing across cervicale and each clavicle) at the border of the trapezius, is directed towards acromion, and terminates at its intersection with scye at the shoulder point (midway between acromion and the superior point of the lateral clavicle)].

4. INSTRUMENTS/EQUIPMENT: Tape.

5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN FOLLOWING U.S. CIVILIAN SURVEYS:

C. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

D. REASON FOR RATING IN C IS: useful for the design and sizing of single- and upper-body garments; useful for the construction of clothing manikins.

E. REPRODUCIBILITY: A ☐ B ☒ C ☐

IF B OR C, THE PROBLEM IS: consistency of head and shoulder position;
consistency of placing the protractor.

F. PARTICULARLY SENSITIVE TO:

ANTHROPOMETRIC SURVEYS OF FOREIGN MILITARY PERSONNEL

VARIABLE NAME: SPAN

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The distance between the tips of the middle fingers with the arms and the hands stretched laterally and horizontally.
2. BODY POSITION: Standing erect; upper extremities stretched laterally and horizontally to the maximum extent.
3. LANDMARK(S): Dactylia.
4. INSTRUMENTS/EQUIPMENT: Measuring rig.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING FOREIGN MILITARY SURVEYS:

<u>SURVEY</u>	<u>$\bar{X}$</u>	<u>SD</u>	<u>SURVEY</u>	<u>$\bar{X}$</u>	<u>SD</u>
CF	_____	_____	RAA	_____	_____
FRG	_____	_____	RAF	<u>182.80</u>	<u>7.34</u>
RA	<u>178.25</u>	<u>7.51</u>			

C. THOUGHT TO BE OF: Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

D. REASON FOR THE RATING IN C IS: a measure of cockpit accommodation; useful as a test of the fit of single- and upper-body garments; useful for the design and layout of workspaces; a useful measure of segment additivity in analogues.

E. REPRODUCIBILITY: A ☐ B ☒ C ☐

IF B OR C, THE PROBLEM IS: consistency of body position.

F. PARTICULARLY SENSITIVE TO:

ANTHROPOMETRIC SURVEYS OF U.S. MILITARY PERSONNEL

VARIABLE NAME: SPHYRION HEIGHT

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The vertical distance between the standing surface and the bottom end of the shin bone.
2. BODY POSITION: Standing.
3. LANDMARK(S): Sphyrion.
4. INSTRUMENTS/EQUIPMENT: Measuring block.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS: SPHYRION (FIBULARE) HEIGHT

B. DIMENSION WAS MEASURED IN THE FOLLOWING U.S. MILITARY SURVEYS:

SURVEY	$\bar{X}$	SD	SURVEY	$\bar{X}$	SD
1 AF Women '68			4 USAF '67		
2 Army Women '77	<u>6.46</u>	<u>0.54</u>	5 US Army '66		
3 USN '64			6 Army Av. '70		

C. CORRELATION WITH:	US Army '66	STATURE	WEIGHT	AGE
	US Army '77	<u>.402</u>	<u>.239</u>	<u>-.073</u>

COEFFICIENT OF VARIATION:	US Army '66	
	US Army '77	<u>8.4</u>

1st and 99th US ARMY '66 and '77 PERCENTILE VALUES: MALE 5.2 and 7.7
FEMALE 5.2 and 7.7

D. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

E. REASON FOR RATING IN D IS: this dimension has been used with Tibiale Height for estimating the calf-link length for the development of anthropomorphic analogues, but Lateral and Medial Femoral Epicondyle Height and Sphyrion (Fibulare) Height more closely approximate this link.

F. RACE SENSITIVE? YES ☐ NO ☒ GENDER SENSITIVE? YES ☐ NO ☒
IN WHAT WAY?

C. REPRODUCIBILITY: A ☐ B ☐ C ☒

IF B OR C, THE PROBLEM IS: the difficulty of precisely locating sphyrion (it is often obscured by heavy ligaments).

H. PARTICULARLY SENSITIVE TO:

ANTHROPOMETRIC SURVEYS OF U.S. MILITARY PERSONNEL

VARIABLE NAME: STATURE

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The vertical distance between the standing surface and the top of the head.
2. BODY POSITION: Anthropometric standing.
3. LANDMARK(S): Top of the head.
4. INSTRUMENTS/EQUIPMENT: Anthropometer.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING U.S. MILITARY SURVEYS:

SURVEY	$\bar{X}$	SD	SURVEY	$\bar{X}$	SD
1 AF Women '68	<u>162.10</u>	<u>6.00</u>	4 USAF '67	<u>177.34</u>	<u>6.19</u>

C. CORRELATION WITH:	STATURE	WEIGHT	AGE
US Army '66	<u> </u>	<u>.488</u>	<u>-.036</u>
US Army '77	<u> </u>	<u>.536</u>	<u>.057</u>

COEFFICIENT OF VARIATION:	US Army '66	<u>3.8</u>
	US Army '77	<u>4.0</u>

1st and 99th US ARMY '66 and '77 PERCENTILE VALUES: MALE 158.9 and 190.3
FEMALE 148.2 and 178.4

D. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

E. REASON FOR RATING IN D IS: a basic dimension of overall body size; a criterion for personnel selection; basic for population comparisons; basic for matching samples and selecting microcosms of populations for studies requiring like population distributions; a key dimension for the design, sizing, procurement and issuing of garments; a primary body clearance dimension for the design and layout of workspaces; required for the development of a body-link system; a key dimension for the development of anthropomorphic analogues; useful for the development of load-carrying systems.

F. RACE SENSITIVE? YES ☐ NO ☒ GENDER SENSITIVE? YES ☐ NO ☒
IN WHAT WAY?

G. REPRODUCIBILITY: A ☒ B ☐ C ☐

IF B OR C, THE PROBLEM IS:

H. PARTICULARLY SENSITIVE TO: the diurnal variation which may be ignored when subjects are measured randomly throughout the day except for those who have recently spent several hours carrying or lifting very heavy loads; in such cases a subject's stature can be reduced as much as 5 cm. owing to vertebral disk compression and increased spinal curvature.

ANTHROPOMETRIC SURVEYS OF FOREIGN MILITARY PERSONNEL

VARIABLE NAME: STATURE (["]KORPERGRÖSSE["])

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The vertical distance between the standing surface and the top of the head.
2. BODY POSITION: CF, RA¹, RAF - anthropometric standing; RA² - a second measurement with the subject's feet together (instead of being parted 8 cm.); FRG - standing erect with maximum stretch, head in the Frankfurt plane.
3. LANDMARK(S): Top of the head.
4. INSTRUMENTS/EQUIPMENT: CF, FRG - anthropometer; RA, RAA - measuring rig; RAF - measuring rig³ and anthropometer⁴ (check U.S. vs. U.K. technique).
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING FOREIGN MILITARY SURVEYS:

SURVEY	$\bar{X}$	SD	$\bar{X}$	SD	SURVEY	$\bar{X}$	SD	$\bar{X}$	SD

FRG	174.5	6.2			RAF	³ 177.44	6.23	⁴ 177.00	6.20
RA	¹ 173.38	6.29	² 173.02	6.25					

C. THOUGHT TO BE OF: Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

- D. REASON FOR THE RATING IN C IS: a basic dimension of overall body size; a criterion for personnel selection; basic for population comparisons; basic for matching samples and selecting microcosms of populations for studies requiring like population distributions; a key dimension for the design, sizing, procurement and issuing of garments; a required clearance dimension for the design and layout of workspaces; required for the development of a body-link system; a key dimension for the development of anthropomorphic analogues; useful for the design and sizing of load-carrying systems.

E. REPRODUCIBILITY: A ☒ B ☐ C ☐

IF B OR C, THE PROBLEM IS:

- F. PARTICULARLY SENSITIVE TO: diurnal variation which may be ignored when subjects are measured randomly throughout the day except for those who have recently spent several hours carrying or lifting very heavy loads; in such cases a subject's stature can be reduced as much as 5 cm. owing to vertebral compression and increased spinal curvature.

DIMENSION EVALUATION SHEET
FOR LARGE SCALE (N > 500)
ANTHROPOMETRIC SURVEYS OF U.S. CIVILIANS

VARIABLE NAME: STATURE

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The vertical distance between the standing surface and the top of the head.
2. BODY POSITION: Bureau of Home Economics - anthropometric standing with buttocks or shoulders just touching the wall; HES and HANES - anthropometric standing with back against a vertical scale.
3. LANDMARK(S): The top of the head.
4. INSTRUMENT(S)/ EQUIPMENT: Bureau of Home Economics - anthropometer; HES and HANES - 3" wide vertical scale; photographic setup; anthropometer.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES: Bureau of Home Econ. - subjects stood with the slightest of support; HES and HANES - subjects stood with back against a vertical scale, were photographed and stature read from the pictures (subjects greater than 190.5 cm were measured with an anthropometer while standing free); subjects measured against a vertical support are almost always taller than when standing free (on men, by an average of about 1.0 cm.).

ALTERNATIVE DIMENSIONS:

		<u>.577</u>	<u>.372</u>	<u>.010</u>
	US Army '77	<u>.571</u>	<u>.422</u>	<u>-.214</u>

COEFFICIENT OF VARIATION:	US Army '66	<u>5.9</u>
	US Army '77	<u>6.4</u>

1st and 99th US ARMY '66 and '77 PERCENTILE VALUES: MALE 71.9 and 94.6
FEMALE 60.3 and 81.5

D. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

E. REASON FOR RATING IN D IS: required for the design and layout of seated workspaces where shoulders may be restrained; required for the development of anthropomorphic analogues; may be a criterion for aircraft accommodation.

F. RACE SENSITIVE? YES ☒ NO ☐ GENDER SENSITIVE? YES ☐ NO ☒
IN WHAT WAY? Among Whites, Blacks, and Asians of like body size, Whites tend on the average to have shorter upper extremities than Blacks and longer upper extremities than Asians.

G. REPRODUCIBILITY: A ☐ B ☒ C ☐

IF B OR C, THE PROBLEM IS: the variability of forward movement of the shoulder girdle; degree of pressure subject exerts against the back support. Data demonstrate well the vagaries of this measurement.

H. PARTICULARLY SENSITIVE TO:

ANTHROPOMETRIC SURVEYS OF FOREIGN MILITARY PERSONNEL

VARIABLE NAME: THUMB TIP REACH (FUNCTIONAL REACH)

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The distance between the plane of the back and the tip of the thumb with the subject's arm and hand extended forward horizontally.
2. BODY POSITION: CF-standing erect; shoulders and buttocks against wall; arm extended horizontally; index finger touches pad of thumb; RA, RAA, RAF-sitting erect (arm and hand position the same as for the CF).
3. LANDMARK(S): Tip of the thumb; plane of the back.
4. INSTRUMENTS/EQUIPMENT: CF-wall scale; RA, RAA, RAF-measuring rig.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES: CF-not designated; RA, RAF-back and buttocks firmly pressed against back support; RAA-shoulders "lightly" touching back support.

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING FOREIGN MILITARY SURVEYS:

<u>SURVEY</u>	<u>$\bar{X}$</u>	<u>SD</u>	<u>SURVEY</u>	<u>$\bar{X}$</u>	<u>SD</u>
CF	<u>79.40</u>	<u>4.24</u>	RAA	<u>78.16</u>	<u>3.51</u>
FRG			RAF	<u>80.17</u>	<u>3.58</u>
RA	<u>77.73</u>	<u>3.91</u>			

C. THOUGHT TO BE OF: Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

D. REASON FOR THE RATING IN C IS: required for the design and layout of seated workspaces where shoulders may be restrained; required for the development of anthropomorphic analogues; may be a criterion for aircraft accommodation.

E. REPRODUCIBILITY: A ☐ B ☒ C ☐

IF B OR C, THE PROBLEM IS: the variability of the forward movement of the shoulder girdle; degree of pressure subject exerts against the back support. Data demonstrate well the vagaries of this measurement.

F. PARTICULARLY SENSITIVE TO:

ANTHROPOMETRIC SURVEYS OF U.S. MILITARY PERSONNEL

VARIABLE NAME: THUMB TIP REACH, EXTENDED (FUNCTIONAL REACH, EXTENDED)

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The distance between the plane of the back of a subject standing erect with back against a wall and the tip of the right thumb, while the right shoulder, arm, hand and thumb are extended forward in a horizontal plane and the left shoulder is in firm contact with the wall.
2. BODY POSITION: Standing erect in a corner; right shoulder moved forward as far as possible while maintaining firm pressure of the left shoulder against the wall; arm, hand, and thumb are extended forward horizontally; index finger touches pad of thumb.
3. LANDMARK(S): Tip of the thumb.
4. INSTRUMENTS/EQUIPMENT: USAF '67-anthropometer; USAF '68 and USA '77-wall scale and block.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES: USA '77-Most subjects wore fatigues and boots (10 percent wore slacks and shoes).

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING U.S. MILITARY SURVEYS:

SURVEY	$\bar{X}$	SD	SURVEY	$\bar{X}$	SD
1 AF Women '68	<u>83.83</u>	<u>4.88</u>	4 USAF '67	<u>99.59</u>	<u>4.51</u>
2 Army Women '77	<u>83.15</u>	<u>5.86</u>	5 US Army '66	<u> </u>	<u> </u>

D. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

E. REASON FOR RATING IN D IS: required for the design and layout of seated workspaces with overhead controls; required for the development of anthropomorphic analogues.

F. RACE SENSITIVE? YES ☒ NO ☐ GENDER SENSITIVE? YES ☐ NO ☒
 IN WHAT WAY? Among Whites, Blacks, and Asians of like body size, Whites tend on the average to have shorter upper extremities than Blacks and longer upper extremities than Asians.

G. REPRODUCIBILITY: A ☐ B ☐ C ☒

IF B OR C, THE PROBLEM IS: consistency of body position (particularly the shoulder); difference between USA '66 and USA '70 mean values inexplicable (USA '66 had 3.3 cm. greater mean Thumb-Tip Reach than USA '70 with both having practically identical mean Statures).

H. PARTICULARLY SENSITIVE TO:

*n = 300.

ANTHROPOMETRIC SURVEYS OF FOREIGN MILITARY PERSONNEL

VARIABLE NAME: VERTICAL THUMB TIP REACH, SITTING

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The vertical distance between the sitting surface and the tip of the thumb touching an index finger of an arm stretched above the head.
2. BODY POSITION: Sitting erect; upper extremity stretched vertically; index finger touching pad of thumb.
3. LANDMARK(S): Tip of the thumb.
4. INSTRUMENTS/EQUIPMENT: Measuring rig.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING FOREIGN MILITARY SURVEY:

<u>SURVEY</u>	<u>$\bar{x}$</u>	<u>SD</u>	<u>SURVEY</u>	<u>$\bar{x}$</u>	<u>SD</u>
CF	_____	_____	RAA	_____	_____
FRC	_____	_____	RAF	<u>138.35</u>	<u>5.53</u>
RA	<u>136.85</u>	<u>5.15</u>			

C. THOUGHT TO BE OF: Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

D. REASON FOR THE RATING IN C IS: required for the design and layout of seated workspaces with overhead controls; required for the development of anthropomorphic analogues.

E. REPRODUCIBILITY: A ☐ B ☐ C ☒

IF B OR C, THE PROBLEM IS: consistency of body position (particularly the shoulders).

F. PARTICULARLY SENSITIVE TO:

ANTHROPOMETRIC SURVEYS OF U.S. MILITARY PERSONNEL

VARIABLE NAME: VERTICAL TRUNK CIRCUMFERENCE

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The vertical circumference of the torso passing over the shoulder, nipple (or bustpoint), through the crotch, and over the posterior point of a buttock.
2. BODY POSITION: Anthropometric standing. (USAF '67-left hand holds tape on anterior torso).
3. LANDMARK(S): Midshoulder; thelion (or bustpoint); posterior buttock point.
4. INSTRUMENTS/EQUIPMENT: Tape.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES: USAF '68, USA '70, USA '77-tape does not lie on the anterior contour of the torso; USAF '67-tape lies on anterior contour of the torso.

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING U.S. MILITARY SURVEYS:

SURVEY	$\bar{X}$	SD	SURVEY	$\bar{X}$	SD
1 AF Women '68	154.43	6.87	4 USAF '67	168.07	7.16
2 Army Women '77	153.82	7.21	5 US Army '66	164.11	8.49
3 USN '64	167.32	6.66	6 Army Av. '70	169.39	7.58

C. CORRELATION WITH:	STATURE	WEIGHT	AGE
US Army '66	.544	.754	.149
US Army '77	.658	.807	.209

COEFFICIENT OF VARIATION:	US Army '66	5.2
	US Army '77	4.7

1st and 99th US ARMY '66 and '77 PERCENTILE VALUES.	MALE 145.4	and 185.9
	FEMALE 136.5	and 171.6

D. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

E. REASON FOR RATING IN D IS: a potential key dimension for the design, sizing, procurement and issuing of single-body garments; required for the construction of clothing manikins; useful for the development of load-carrying systems with crotch straps.

F. RACE SENSITIVE? YES ☒ NO ☐ GENDER SENSITIVE? YES ☒ NO ☐
 IN WHAT WAY? Among Whites and Blacks like body size, Whites tend on the average to have longer torsos than Blacks. Breast configuration affects this measurement.

G. REPRODUCIBILITY: A ☒ B ☐ C ☐

IF B OR C, THE PROBLEM IS:

H. PARTICULARLY SENSITIVE TO: the consistency of placing the tape in the same plane; position of the shoulders; the point of respiration at which the measurement is taken; tension of the abdominal muscle; degree of tension on the tape.

ANTHROPOMETRIC SURVEYS OF FOREIGN MILITARY PERSONNEL

VARIABLE NAME: VERTICAL TRUNK CIRCUMFERENCE (VERTIKALAR UMFANG)
(VERTICAL TRUNK CIRCUMFERENCE - MEAN)*

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The vertical circumference of the trunk passing over the shoulder, nipple, and over a buttock (CF) or between the buttocks (FRG, RAA, RAF) and through the crotch; (*RAA, RAF - means of measurements over right and left shoulders).
2. BODY POSITION: Anthropometric standing.
3. LANDMARK(S): CF, FRG-posterior buttock point, thelion, midshoulder; RAA, RAF-thelion, midshoulder.
4. INSTRUMENTS/EQUIPMENT: Tape.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES: CF, RAA, RAF-tape spans all body hollows; FRG-tape lies on body surface; CF-tape passes over a buttock; FRG, RAA, RAF-tape passes between the buttocks; pressure applied to tape (RAA-"firm pressure" applied to crotch).

ALTERNATIVE DIMENSIONS:

*5th and 95th US ARMY '77 PERCENTILE VALUES: FEMALE and

D. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

E. REASON FOR RATING IN D IS: considered marginal because its use is limited to snug-fitting protective equipment worn primarily in the seated position.

F. RACE SENSITIVE? YES ☐ NO ☒ GENDER SENSITIVE? YES ☒ NO ☐
IN WHAT WAY? Among men and women of like body size, men tend on the average to have larger waists than women.

G. REPRODUCIBILITY: A ☐ B ☒ C ☐

IF B OR C, THE PROBLEM IS: point of respiration at which the measurement is taken; the tension of the abdominal muscles.

H. PARTICULARLY SENSITIVE TO:

ANTHROPOMETRIC SURVEYS OF U.S. MILITARY PERSONNEL

VARIABLE NAME: WAIST DEPTH

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The horizontal distance between the front and the back of the torso at the level of the waist.
2. BODY POSITION: Anthropometric standing.
3. LANDMARK(S): Waist level (USAF '68, USA '77-preferred; USN '64-natural indentation; USAF '67-omphalion).
4. INSTRUMENTS/EQUIPMENT: Beam caliper.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES: Different definitions of waist level.

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING U.S. MILITARY SURVEYS:

SURVEY	$\bar{X}$	SD	SURVEY	$\bar{X}$	SD
1 AF Women '68	<u>17.01</u>	<u>1.67</u>	4 USAF '67	<u>22.31</u>	<u>2.18</u>
2 Army Women '77	<u>18.28</u>	<u>2.18</u>	5 US Army '66	<u> </u>	<u> </u>
3 USN '64	<u>21.72</u>	<u>1.92</u>	6 Army Av. '70	<u> </u>	<u> </u>

C. CORRELATION WITH:	US Army '66	STATURE	WEIGHT	AGE
	US Army '77	<u>.123</u>	<u>.715</u>	<u>.213</u>

COEFFICIENT OF VARIATION:	US Army '66
	US Army '77 <u>12.1</u>

1st and 99th US ARMY '66 and '77 PERCENTILE VALUES: MALE and
FEMALE 14.4 and 25.0

D. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

E. REASON FOR RATING IN D IS: required for the development of anthropomorphic analogues; useful for the construction of clothing manikins; useful for the design and sizing of single- and lower-body garments; useful for the development of load-carrying systems.

F. RACE SENSITIVE? YES ☐ NO ☒ GENDER SENSITIVE? YES ☒ NO ☐
IN WHAT WAY? Among men and women of like body size, men tend on the average to have larger waists than women.

G. REPRODUCIBILITY: A ☒ B ☐ C ☐

IF B OR C, THE PROBLEM IS:

H. PARTICULARLY SENSITIVE TO: the point of respiration at which the measurement is taken; tension of the abdominal muscles.

ANTHROPOMETRIC SURVEYS OF U.S. MILITARY PERSONNEL

VARIABLE NAME: WAIST DEPTH OVER FOUNDATION GARMENT

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The horizontal distance between the front and back of the torso at the level of the waist of a subject wearing a foundation garment.
2. BODY POSITION: Anthropometric standing.
3. LANDMARK(S): Waist level (preferred).
4. INSTRUMENTS/EQUIPMENT: Beam caliper.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING U.S. MILITARY SURVEYS:

E. REASON FOR RATING IN D IS: required to establish the validity of questionnaire surveys of Stature and Weight for detecting significant changes in body-size distributions.

F. RACE SENSITIVE? YES ☐ NO ☒ GENDER SENSITIVE? YES ☐ NO ☒
IN WHAT WAY?

G. REPRODUCIBILITY: A ☐ B ☐ C ☐

IF B OR C, THE PROBLEM IS:

H. PARTICULARLY SENSITIVE TO: individuals who know that their estimate will be checked will presumably respond with more care; time between estimate and its measurement may affect this dimension; (e.g., USAF '67 QE correlations may reflect typical changes between the end of the summer and middle of the winter).

*Estimate (QE) from questionnaire survey administered during Oct. '66; pre-measurement estimate (PME) and measurement made during the survey period (Jan-March '67). (N=196).

ANTHROPOMETRIC SURVEYS OF U.S. MILITARY PERSONNEL

VARIABLE NAME: WRIST CIRCUMFERENCE, DISTAL*

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The circumference of the wrist at a level just below the bony prominences of the wrist.
2. BODY POSITION: Standing; elbow bent to anthropometrist's convenience; hand and fingers extended.
3. LANDMARK(S): Wrist level (USAF '68, USA '77-stylian).
4. INSTRUMENTS/EQUIPMENT: Tape.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES: Different definitions of wrist level.

ALTERNATIVE DIMENSIONS:

B. DIMENSION WAS MEASURED IN THE FOLLOWING U.S. MILITARY SURVEYS:

SURVEY	$\bar{X}$	SD	SURVEY	$\bar{X}$	SD
1 AF Women '68	<u>14.96</u>	<u>0.71</u>	4 USAF '67	<u>17.59</u>	<u>0.92</u>
2 Army Women '77	<u>14.70</u>	<u>0.68</u>	5 US Army '66	<u> </u>	<u> </u>
3 USN '64	<u> </u>	<u> </u>	6 Army Av. '70	<u> </u>	<u> </u>

	STATURE	WEIGHT	AGE
C. CORRELATION WITH: US Army '66	<u> </u>	<u> </u>	<u> </u>
US Army '77	<u>.464</u>	<u>.650</u>	<u>.051</u>

COEFFICIENT OF VARIATION: US Army '66	<u>5.2</u>
US Army '77	<u>4.7</u>

1st and 99th US ARMY '66 and '77 PERCENTILE VALUES: MALE and
FEMALE 13.2 and 16.2

D. THOUGHT TO BE OF Essential, Useful, Marginal VALUE FOR A U.S. ARMY ANTHROPOMETRIC DATA BASE.

E. REASON FOR RATING IN D IS: useful as one in a series of dimensions required for the development of sizing systems/programs for gloves.

F. RACE SENSITIVE? YES ☐ NO ☒ GENDER SENSITIVE? YES ☒ NO ☐
IN WHAT WAY? Among men and women of like body size, men tend on the average to have larger hands than women.

G. REPRODUCIBILITY: A ☒ B ☐ C ☐

IF B OR C, THE PROBLEM IS:

H. PARTICULARLY SENSITIVE TO: Definition of wrist level.

*Distal to ulnar and radial styloid processes.

ANTHROPOMETRIC SURVEYS OF FOREIGN MILITARY PERSONNEL

VARIABLE NAME: WRIST CIRCUMFERENCE, DISTAL* (HANDGELENKUMFANG)

A. THE DIMENSION AND MAJOR ELEMENTS OF ITS MEASUREMENT:

1. DESCRIPTION: The circumference of the wrist at a level just below the bony prominences of the wrist.
2. BODY POSITION: Standing; hand and fingers extended.
3. LANDMARK(S): FRG-stylian, stylian ulnae; RAF-stylian ulnae.
4. INSTRUMENTS/EQUIPMENT: Tape.
5. SIGNIFICANT DIFFERENCES IN MEASURING TECHNIQUES:

APPENDIX
SUPPLEMENTARY LIST OF DIMENSIONS

APPENDIX

SUPPLEMENTARY LIST OF DIMENSIONS

A number of dimensions evaluated in this study were not measured in any of the 14 surveys reviewed in detail. Some of these measurements were found in one or more of the 20 other surveys scrutinized by investigators in the course of the study; others were identified by one or more clothiers, designers, or modelers, as being unavailable but needed for a particular purpose. Following are measurement descriptions for these 84 additional dimensions:

ABDOMINAL EXTENSION HEIGHT, SITTING	The vertical distance between the sitting surface and the anterior point of the abdomen of a seated subject. The landmark is located when the subject is seated.
ABDOMINAL EXTENSION-WALL DEPTH	The horizontal distance between the plane of the back (a wall) and the anterior point of the abdomen of a standing subject.
ACROMION-LATERAL HUMERAL EPICONDYLE LENGTH	The straight-line distance between acromion and the lateral epicondyle of the humerus, measured parallel to the long axis of the arm.
ACROMION-WALL DEPTH	The horizontal distance between the plane of the back of a subject standing with the shoulders against a wall, and the tip of a shoulder (acromion).
ARM REACH FROM WALL, MAXIMUM	The horizontal distance between the plane of the back (a wall) and dactylion of a subject standing with the left shoulder pressed against the wall and the right arm and hand extended as far forward horizontally as possible.
BALL OF HUMERUS-LATERAL HUMERAL EPICONDYLE LENGTH	The vertical distance parallel to the long axis of an arm between the center of the ball of a humerus and its lateral epicondyle.
BIGONION-CHIN PROMINENCE ARC	The surface distance between each corner of the jaw (gonion), passing over the anterior point of the chin. The subject sits.
BIGONION-SUBLABIAL ARC	The surface distance between each corner of the jaw (gonion), passing over the deepest depression between the chin and lower lip (sublabiale).
BITRAGION-CRINION ARC	The surface distance between the right and left tragon passing over the lowest point of the hairline (crinion). The subject sits.
BUSTPOINT/THELION-WALL DEPTH	The horizontal distance between the plane of the back (a wall) of a subject standing with the shoulders against the wall, and the bustpoint (women) or thelion (men).

BUTTOCK-TROCHANTERION, SITTING (HORIZONTAL)	The horizontal distance between a posterior buttock point and trochanterion of a seated subject. The landmarks are located when the subject is seated.
CALF DEPTH	The antero-posterior diameter of a calf of a standing subject at the level of its maximum circumference.
CERVICALE-BACK OF KNEE LENGTH	The distance between cervicale and the back of the knee (midpatella level) of a standing subject. The distance encompasses the superior curvature of the back and passes over the level of the maximum protrusion of the buttocks.
CERVICALE-BUTTOCK LEVEL LENGTH	The distance between cervicale and the level of the maximum protrusion of the buttocks of a standing subject. The distance encompasses the superior curvature of the back.
CERVICALE-TRAGION HEIGHT	The vertical distance between the base of the back of the neck (cervicale) and tragon. The head is in the Frankfort plane.
CHEST DEPTH AT SCYE	The horizontal distance between the back and the chest of a standing subject at the level of the inferior juncture of the arm and the torso (scye).
CHEST HEIGHT, SITTING	The vertical distance between a sitting surface and a bustpoint (women) or thelion (men).
CHIN PROMINENCE-TOP OF HEAD	The vertical distance between the anterior point of the chin to the plane of the top of the head. A headboard is used to measure this dimension. The subject's head is in the Frankfort plane.
ECTOCANTHUS-OTOBASION SUPERIOUS LENGTH	The straight-line distance between the outer corner of an eye and the upper point of the attachment of the ear to the head (otobasion superious).
ELBOW REST HEIGHT, STANDING	The vertical distance between the standing surface, and the bottom of an elbow (olecranon process) flexed 90 degrees. The subject stands erect with the upper arm relaxed at the side and the forearm and hand extended forward horizontally.
EYE HEIGHT	The vertical distance between the standing surface and the outer corner of an eye (ectocanthus).
FIRST PHALANX LENGTH (DIGIT III)	The length of the first segment of the middle finger between the surfaces of the third metacarpal and the second phalanx of a subject's fist.
FIST CIRCUMFERENCE (GRIP AXIS)	The subject's hand is held in a tight fist with the thumb lying over the knuckle of the index finger. The circumference passes over the thumb and the distal ends of the metacarpals.

FUNCTIONAL GRIP REACH	The horizontal distance between the plane of the back (a wall) and a rod gripped vertically in a hand. The subject stands erect with the shoulders against the wall and the arm extended forward horizontally.
FUNCTIONAL GRIP REACH, EXTENDED	The horizontal distance between the plane of the back (a wall) and a rod gripped vertically in a hand. The subject stands erect, extends an arm forward horizontally as far as possible while maintaining the opposite shoulder against the wall.
GONION-TOP OF HEAD	The vertical distance between the corner of a jaw (gonion) and the plane of the top of the head. The subject's head is in the Frankfort plane. A headboard is used to measure this dimension.
GONION-WALL	The horizontal distance between the corner of a jaw (gonion) and the plane of the back of the head. The subject's head is in the Frankfort plane. A headboard is used to measure this dimension.
GRIP AXIS HEIGHT	The vertical distance between a rod gripped horizontally in the subject's fist and the standing surface.
GRIP DIAMETER (OUTSIDE)	The distance between the joint of the first and second phalanges of the thumb and metacarpale III of a subject gripping a graduated cone at the level where the thumb and the tip of digit III just touch.
HALFWAY TO HIP CIRCUMFERENCE LENGTH	One-half of the surface distance between the level of the waist and the level of the hip, measured along the side of a standing subject.
HEAD DIAGONAL MAXIMUM (MENTON-NUCHALE)	The straight-line distance between the chin (menton) and the lower part of the back of the head (nuchale).
HEEL-LATERAL MALLEOLUS (HORIZONTAL) LENGTH	The horizontal distance between the plane of the posterior point of a heel and the lateral point of the lateral malleolus.
ILIOSPINALE-WALL DEPTH	The horizontal distance between the plane of the back (a wall) and an anterior superior iliac spine (iliospinale). The subject stands with the back and buttocks against a wall.
INDEX FINGER LENGTH	The vertical distance between the tip of the index finger and the center of the skin crease at the base of the index finger. The subject's hand and fingers are extended.
KNEE HEIGHT (INFRAPATELLA)	The vertical distance between the standing surface and the bottom of the kneecap (infrapatella) of a standing subject.

LARYNX-WALL DEPTH	The horizontal distance between the plane of the back of the head (a wall) and the most prominent point of the Adam's apple (larynx). The subject stands with the back and the head touching a wall with the head in the Frankfort plane.
LATERAL FEMORAL EPICONDYLE HEIGHT	The vertical distance between the standing surface and the most prominent point on the outside of the knee (lateral femoral epicondyle) of a standing subject.
LATERAL HUMERAL EPICONDYLE-STYLION LENGTH	The vertical distance between the bony prominence of the outside lower end of the upper arm (lateral humeral epicondyle) and the wrist (stylion). The subject's arm is relaxed at the side.
LATERAL NECK HEIGHT	The vertical distance between the standing surface and the side of the neck at its juncture with the shoulder. The subject stands with the head in the Frankfort plane.
LEG INSEAM	The vertical distance measured with a tape (as opposed to an anthropometer used to measure Crotch Height) between the crotch and a standing surface.
LEG OUTSEAM	The distance along the side between the level of the waist and the standing surface. The distance encompasses the curvature of the hips.
MAXIMUM FRONTAL-TOP OF HEAD	The vertical distance between the outside edge of a bony eyebrow (frontosupraorbitale) and the plane of the top of the head. A headboard is used to measure this dimension, and the subject's head is in the Frankfort plane.
MAXIMUM FRONTAL-WALL	The horizontal distance between the outside edge of a bony eyebrow (frontosupraorbitale) and the plane of the back of the head. A headboard is used to measure this dimension, and the subject's head is in the Frankfort plane.
MEDIAL FEMORAL EPICONDYLE HEIGHT	The vertical distance between the standing surface and the most prominent point on the inside of the knee (medial femoral epicondyle) of a standing subject.
MENTON PROJECTION	The straight-line distance between the chin/neck juncture and the tip of the chin (menton). The subject's head is in the Frankfort plane.
MINIMUM FRONTAL-TOP OF HEAD	The vertical distance between the maximum indentation of the temporal crests of the forehead (frontotemporale) and the plane of the top of the head. A headboard is used to measure this dimension, and the subject's head is in the Frankfort plane.
MINIMUM FRONTAL-WALL	The horizontal distance from the maximum indentation of a temporal crest of the forehead (frontotemporale) to the plane of the back of the head. A headboard is used to measure this dimension and the subject's head is in the Frankfort plane.

NASAL ROOT HEIGHT	The vertical distance between the standing surface and the root of the nose (sellion). The subject stands erect with the head in the Frankfort plane.
NUCHALE HEIGHT	The vertical distance between the standing surface and the lowest bony point on the base of the back of the skull (nuchale). The subject stands erect with the head in the Frankfort plane.
OMPHALION-WALL DEPTH	The horizontal distance between the plane of the back (a wall) and the navel (omphalion). The subject stands erect with the back against the wall.
POSTERIOR SUPERIOR ILIAC SPINE HEIGHT	The vertical distance between the standing surface and a posterior superior iliac spine of a subject standing erect.
PUPIL-WALL	The horizontal distance between a pupil and the plane of the back of the head. A headboard is used to measure this dimension, and the subject's head is in the Frankfort plane.
SPHYRION (FIBULARE) HEIGHT	The vertical distance between the standing surface and the bottom of the fibula (Sphyrion Fibulare) of a standing subject.
SPINE-MESOSTERNUM (see CHEST DEPTH)	The distance between the back and the breastbone at the union of the 3rd and 4th sternbrae (of the mesosternum), measured perpendicular to the long axis of a standing subject at the end of normal expiration.
TENTH RIB HEIGHT	The vertical distance between the standing surface and the lowest point of a 10th rib of a standing subject.
THIGH DEPTH	The antero-posterior diameter of the thigh at the level of the thigh/buttock juncture of a standing subject.
TRAGION HEIGHT, SITTING	The vertical distance between the sitting surface and a tracion of a seated subject. The subject's head is in the Frankfort plane.
TRAGION-PUPIL LENGTH	The horizontal distance between the pupil and a tracion of a seated subject. The head is in the Frankfort plane.
TRIGGER POSITION	The distance between the heel of a revolver-like measuring device and the trigger of the device with the subject's index finger on the trigger. The subject uses the preferred hand.
TROCHANTERIC HEIGHT, SITTING	The vertical distance between the sitting surface and the tip of the greater trochanter of the femur (trochanterion) of a seated subject. Trochanterion is located while the subject is in this position.

TROCHANTERION- LATERAL FEMORAL EPICONDYLE LENGTH, SITTING	The horizontal distance between the tip of the greater trochanter of the femur (trochanterion) and the most prominent point on the outside of the knee (lateral femoral epicondyle). The subject sits and the landmarks are located while the subject is in this position.
TROCHANTERION- WALL DEPTH	The horizontal distance between the plane of the buttock (a wall) and the tip of the greater trochanter of the femur (trochanterion). The subject stands erect with the buttocks touching the wall.
UPPER ARM CIRCUMFERENCE	The circumference of the upper arm perpendicular to its long axis at a level one-half the distance between the tip of the shoulder (acromion) and the elbow (olecranon process). This distance is established with the upper arm relaxed at the side with the elbow flexed 90 degrees. The circumference is measured with the arm relaxed at the side.
UPPER EXTREMITY LENGTH	The vertical distance between the tip of the shoulder (acromion) and the tip of the middle finger (dactylion) of a subject standing erect with the arm, hands, and fingers extended at the side.
VERTICAL GRIP REACH, SITTING	The vertical distance between the sitting surface and the center of a rod gripped by the subject with the arm extended vertically over the head.
VERTICAL REACH	The vertical distance from the floor to the tip of the middle finger of a fully extended arm, hand, and fingers.
VERTICAL WRIST HEIGHT	The vertical distance between the standing surface and the wrist of the subject standing with the arm extended vertically over the head.
VERTICAL WRIST HEIGHT, SITTING	The vertical distance between the standing surface and the wrist of a seated subject with the arm and hand extended overhead.
VERTICAL WRIST HEIGHT EXTENDED	The vertical distance between the standing surface and the wrist of a subject standing with the upper extremity extended vertically overhead and the shoulder elevated to its maximum.
VERTICAL WRIST HEIGHT EXTENDED, SITTING	The vertical distance between a sitting surface and the wrist of a subject seated with the shoulder elevated and arm extended overhead.
WAIST DEPTH, SITTING	The antero-posterior diameter of the torso of a seated subject at the level of the navel (omphalion).
WAIST-FLOOR OVER BUTTOCK LENGTH	The distance between the waist and the floor, following the curvature of a buttock to the level of its maximum protrusion, and then dropping vertically to the floor.

WRIST BREADTH (BONE)	The maximum straight-line distance between the radial and ulnar styloid prominences. Pressure is used on the measuring instrument to compress the tissue.
WRIST HEIGHT, SITTING	The vertical distance between the sitting surface and a wrist of a subject sitting with the arm extended downward at the side.
WRIST-CENTER OF GRIP LENGTH	The distance between the wrist and the center of a rod gripped vertically in the subject's fist.
WRIST-INDEX FINGER LENGTH	The distance between the wrist and the tip of the index finger. The subject's hand and fingers are extended.
WRIST-THUMB TIP LENGTH	The horizontal distance between the wrist and the tip of the extended thumb. The index finger touches the pad of the thumb and the forearm and hand are horizontal.
WRIST-WALL LENGTH	The horizontal distance between the plane of the back (a wall) and a wrist. The subject stands erect with the shoulders against the wall and the arm extended forward horizontally.
WRIST-WALL LENGTH, EXTENDED	The horizontal distance between the plane of the back (a wall) and the wrist. The subject stands erect, extends an arm forward horizontally as far as possible while maintaining the opposite shoulder against the wall.
WRIST-WRIST SPAN	The horizontal distance between each wrist of a subject standing erect with the back against a wall. The arms are extended laterally and horizontally to their maximum.
ZYGION-TOP OF HEAD	The vertical distance between the lateral point of the zygomatic arch (zygion) and the plane of the top of the head. A headboard is used to measure this dimension, and the subject's head is in the Frankfort plane.
ZYGION-WALL	The horizontal distance between the lateral point of zygomatic arch (zygion) and the plane of the back of the head. A headboard is used to measure this dimension, and the subject's head is in the Frankfort plane.
ZYGOMA-TOP OF HEAD	The vertical distance between a point on the antero-lateral curvature of the zygomatic bone (zygoma) and the plane of the top of the head. A headboard is used to measure this dimension, and the subject's head is in the Frankfort plane.
ZYGOMA-WALL	The horizontal distance between a point on the antero-lateral curvature of the zygomatic bone (zygoma) and the plane of the back of the head. A headboard is used to measure this dimension and the subjects's head is in the Frankfort plane.
