16. Abstract

This report contains forecasts of aviation activity for 840 airports in the United States for fiscal years 1987-2000. These include 398 airports with FAA air traffic control towers and radar approach control service and 15 FAA contract towers. For each airport, detailed forecasts are made for the four major users of the air traffic system: air carriers, air taxi/commuters, general aviation, and military. Summary tables contain national, FAA regional, and state aviation data and other airport specific highlights. The forecasts have been prepared to meet the budget and planning needs of the constituent units of the FAA headquarters and regional offices and to provide airport-specific information that can be used by state and local aviation authorities, the aviation industry, as a whole, and the general public.

PREFACE

The Federal Aviation Administration (FAA) forecasts of aviation activity are developed annually for use in the Agency's planning and decisionmaking. This report, FAA Terminal Area Forecasts FY 1987 - 2000, presents historical and forecast data for 840 airports. It is a subset of the terminal area forecast data base which contains over 4,000 public use airports, including all airports in the National Plan of Integrated Airport Systems. The data base is accessible on a real time basis by all FAA Regions and by FAA headquarters personnel. In addition, the data can be made available to State and local aviation authorities for use on personal computers.

The FAA uses these forecasts in developing its program plans and assessing the level of resources needed to meet the anticipated demand for its services. In addition, we believe that these forecasts could be used as a helpful planning tool by State and local aviation authorities and the industry in planning airport development and in the accommodation of future aviation needs.

This document will be available to the public through the Government Printing Office. We welcome public comments on the forecasts as well as any suggestions for improving the usefulness of this publication.

Ellen Kranidas

Ellen Kranidas
Director of Aviation Policy and Plans

ACKNOWLEDGMENTS

This report was prepared by the Forecast Branch of the FAA Office of Aviation Policy and Plans. Thomas Henry was the principal analyst responsible for the development of the forecasts. Gene Mercer, Branch Manager, Robert Bowles, Virginia Price, and Earline Burgess also contributed their valuable support.

The computer programs were executed under the direction of Carlton Wine, Manager, Information Systems Branch. Mr. Wine and his staff organized and managed the data bases used to produce the forecasts, updated the computer programs and carried out the computer operations necessary to produce the individual airport forecasts. In particular, Akiro Kondo prepared special computer programs and generated the summary tables.

Special acknowledgments are made to the Regional Planning Officers and Airport District Officers for their assistance in coordinating the regional reviews, state input, and final forecast recommendations. The extensive reviews and comments of the regional offices were extremely important in guiding the Forecast Branch in making adjustments to the preliminary version of the report. Undoubtedly, the effort has enhanced the accuracy and creditability of the final product.

APPENDIX A

FAA TOWERED AIRPORTS

APPENDIX B

DESCRIPTION OF ACTIVITY MEASURES

PART 1: INTRODUCTION AND NATIONAL SUMMARY

SUMMARY HIGHLIGHTS

- Forecasts are presented for 840 airports--of these, 398 are FAA towered airports and radar approach control facilities and 15 are FAA contract towers.

- About 245 towered airports, each with 1,500 or more enplanements, accounted for 382 million air carrier enplanements and 11.2 million air carrier operations.

- The Southern, Western Pacific, and Eastern Regions are forecast to reach 414 million air carrier enplanements and 9.09 million air carrier operations, respectively, by 2000--the largest shares among all regions

- Currently, 95 percent of all air carrier passengers are enplaned at the top 100 air carrier airports.

- The top 100 air carrier airports account for 90 percent of air carrier operations.

- In FY 1985, the top five air carrier airports--Chicago O'Hare, Atlanta, Los Angeles, Dallas/Ft. Worth, and New York Kennedy--enplaned 25 percent of all air carrier passengers and accounted for 19 percent of all air carrier operations.

- Air carrier enplanements, at 384 million in 1985, are forecast to reach over 722 million by 2000.

- In FY 2000, about 57 percent of the air carrier passenger enplanements are expected to occur in the Southern, Western Pacific, and Eastern Regions.

INTRODUCTION

This document presents forecasts of key aviation activity measures for 840 airports through fiscal year 2000. These forecasts are prepared to meet the planning needs of the Federal Aviation Administration (FAA) offices and services concerned with future traffic levels at these facilities. In general, the airports contained in this report are a subset of those contained in the FAA handbook of Location Identifiers. Except for specific regional or state requests, the airports selected for inclusion in the report meet at least one of the following criteria:

- Existing FAA tower;
- Candidate for an FAA tower;
- Currently receiving or expected to receive scheduled air carrier or commuter service; or
- Currently exceeds 60,000 itinerant or 100,000 total aircraft operations

The Terminal Area Forecasts (TAF) report is organized in two sections. The first part is a general summary. It includes summary highlights, the introduction, a brief overview of the forecasting process, and a series of summary tables. The summary tables provide a national overview as well as a comparison among regions.

The second part contains the forecasts for each airport. It is arranged alphabetically by FAA region and, within each region, by state. The airports in each state are listed alphabetically by city. The airport data include summary information for the facility followed by five years of historical data and annual projections for fiscal years 1987 through 2000. In some cases, a comment about current or planned aviation activity at the airport is included. The summary indicates the airport's tower/nontower status, and the number of aircraft based at the airport in 1985 or 1986.

State and regional summary statistics precede the individual airport forecasts. There are five tables that provide regional summaries and state comparisons from fiscal year 1981 through 2000 for air carrier enplaned passengers, air carrier operations, itinerant operations, total operations, and instrument operations.

FORECAST METHODOLOGY

The general approach to the facility forecasts presented in this report is "bottom-up." Growth factors for each aviation activity were applied to the base year (FY 1985) data at individual airports to project annual activity levels through FY 2000. Measures of aviation activity obtained from FAA Aviation Forecasts: Fiscal Years 1986-1997, FAA-APO-86-1 (February 1986) were utilized as control factors and to determine growth rates for some airports. Preliminary projections were modified using forecasts from major hub reports[1] (discussed below) as well as facility-specific information provided by the nine FAA regions.

As a general rule, no expansion of airport facilities has been assumed for this forecast except those recommended by the regions and, in part, noted in the comments. For some airports, the preliminary forecasts were adjusted to account for known operating constraints. When the level of operations at an airport begins to approach the airport's design capacity, delays occur and the airport may become congested. Smaller general aviation aircraft may choose to land at other, less congested airports.

Forecasts at some of the major hubs have been developed and published in special reports. The results have been incorporated in the TAF. These hub forecasts utilized regression models and trend analyses in generating an original set of forecasts of aviation activity. The analysts also accomplished in-depth studies of demographic and economic conditions of the metropolitan areas. In each study, the hub's (or airport's) status with respect to originating or connecting passengers, type of aircraft and fleet composition, markets served, and frequency of service is analyzed, also. General aviation activity is examined from the point of view of the metropolitan area, as a whole, and from the viewpoint of individual airports.

After the hub forecasts are generated and adjustments made, they are compared to forecasts contained in various state and/or airport master plans. In addition, the FAA regional planning offices, state transportation agencies, and airport managers are asked to comment on the forecasts. Information is requested on based aircraft, plans for new runways, new commercial air carrier or commuter/

---

[1] Air traffic hubs are not airports; they are the cities and Metropolitan Statistical Areas (MSA's) or Consolidated Metropolitan Statistical Areas (CMSA's) requiring aviation services and may include more than one airport.

regional service and on airports which are expected to deviate from national trends. Responses are reviewed and the forecasts are revised whenever significant deviations from historical patterns are established. Incorporation of the results of this procedure in the TAF is compatible with the "bottom-up" approach mentioned earlier.

Forecasts of general aviation aircraft operations at some airports were based on state parameters such as population, disposable personal income, and state area and on numbers of based aircraft at the airport. Historical trends were modified in response to changes in availability of airport facilities and services, presence of reliever airports, and the attitudes toward general aviation activity at the subject airport. Additional sources of data included supplementary forecasts of general aviation activity at specific airports and regional forecasts of commuter and air taxi operations. Military operations were held constant at the level of operations reported in 1985 or 1986.

The individual airport instrument operations forecasts reflect assumptions about the increased utilization of avionics by general aviation business aircraft. The FAA regional offices provided updates of based general aviation aircraft and FY 1985 activity at nontowered airports. In addition, other information was received which included the status of plans for new runways and the possibility of new air carrier or commuter service. The assumptions and comments were incorporated in this series of forecasts subject to the constraints imposed by the national forecasts.

Activity Measures Forecast

The activities forecast for each airport include: commercial air carrier, air commuter/regionals, and air taxi enplanements; air carrier, air taxi (including nonscheduled air taxi and scheduled commuter/regional air carriers), general aviation itinerant, and general aviation local operations; and instrument operations. A short description of each activity measure is included in *Appendix B*.

The TAF data base contains over 4,000 public-use airports including all airports in the National Plan of Integrated Airport Systems. Activity levels and forecasts are available for the majority of these airports upon request.

Data Sources

Enplanements are based on data submitted to the Research and Special Programs Administration (RSPA) by the U. S. scheduled and nonscheduled commercial air

carriers on Form 41 reports and by the U.S. air commuter/regional carriers on Form 298-C reports. These data are supplemented by an FAA survey of air taxi operators, by reports of foreign flag traffic from the U. S. Immigration and Naturalization Service, and by state aviation commission's and airport manager's reports. These sources may be used to compile enplanement figures for both towered and nontowered airports.

Historical operations at FAA towered airports are derived from FAA Air Traffic Activity reports. U. S. air carrier departures at nontowered airports were obtained from RSPA Form 41 reports. Other operations at nontowered airports are based on special traffic surveys and on estimates provided in the FAA Airport Master Record FAA Form 5010-1.

Instrument operations handled by FAA towered airports and instrument approaches for all airports are reported in the FAA Air Traffic Activity reports. Region, state, city, airport name, and location identifier (LOCID) as well as an estimate of based aircraft are taken from the FAA Airport Master Record.

The data obtained from these sources and the preliminary forecasts are reviewed by FAA staff at headquarters and at the regional level. Efforts are made to correct and reconcile erroneous or inconsistent data elements prior to production of the final forecasts.

NATIONAL SUMMARY AND COMPARISONS BY REGION

The published TAF includes historical and forecast data for 840 airports through fiscal year 2000. Of this total, 398 airports had FAA air traffic control towers in FY 1985. In addition, there are 15 airports with FAA contract towers. Table 1 shows the distribution of the FAA air traffic control facilities throughout the United States. The largest number of FAA towers are located in the Southern Region (71 towers). California leads all states with 47 towers. Texas and Florida each have 26 towers. An alphabetical listing of all FAA towered airports is presented in Appendix A.

Of the 840 airports included in the TAF, 315 airports (38 percent) registered 1,500 or more air carrier enplanements for FY 1985. In total, there were 11.4 million air carrier operations and 384 million air carrier enplanements in FY 1985. Of the 398 towered airports, 245 had air carrier enplanements of 1,500 or more. These airports accounted for nearly 382 million air carrier enplanements and 11.2 million air carrier operations in 1985. Other towered and nontowered airports had approximately two million air carrier passengers and about 104,800 air carrier operations.

Table 2, Ranking of Air Carrier Airports by Passenger Enplanements, shows a list of the top 100 air carrier airports in order of total passengers enplaned during FY 1985. Approximately 95 percent of all air carrier passengers are enplaned at the top 100 airports. The top five airports-- Chicago, Atlanta, Los Angeles, Dallas-Fort Worth, and New York--enplaned 25.3 percent of all air carrier enplanements. More than 52 percent of all air carrier enplanements in the United States occur at the top 15 busiest air carrier airports.

Tables 3 and 4 provide national summaries and regional comparisons from 1981 through 2000 for all air carrier enplaned passengers and air carrier aircraft operations for all airports published in the TAF. Tables 5 through 7 show itinerant aircraft operations, total aircraft operations, and instrument operations at airports with FAA-operated air traffic control towers and radar approach control facilities. The percent distributions of these various activities among the regions are shown in Tables 8 through 11. The forecasts in this volume do not assume construction of additional runways, runway extensions or other enhancement of the existing facility at specific airports except where mentioned as a footnote to the individual forecasts.

Tables 12, 13, and 14 indicate total, itinerant, and local general aviation aircraft operations for more than 4,000 airports included in the TAF data base.

It is estimated that the TAF data base represents approximately 80 percent of the total general aviation operations.

A summary of growth factors for general aviation itinerant and local operations by region and state for nontowered airports is provided in Table 15. These growth rates may be used as a guide for making or reviewing aviation activity projections at airports that are not included in the published TAF. The number of based aircraft at an airport is sometimes used as an index of actual or potential aviation activity at specific airports or regions. Table 16 presents a summary of based aircraft by states and FAA regions for FY 1985. The total of 177,960 aircraft based at airports included in the TAF data base represents approximately 81 percent of the active general aviation fleet in 1985.

APPENDIX B

DESCRIPTION OF ACTIVITY MEASURES

Air Carrier Enplanements--include originating, stopover, and transfer passengers of U. S. scheduled and nonscheduled commercial air carriers submitted to Research and Special Programs Administration (RSPA) on Form 41 reports. International passengers who disembark at airports to go through customs and then reenplane are included in an airport's count of passenger enplanements. Commercial air carriers are certificated in accordance with FAR Parts 121 or 127 to conduct scheduled services on specified routes. These air carriers may also provide nonscheduled or charter services as a secondary operation.

Air Taxi Enplanements--include survey estimates of nonscheduled air taxi enplanements. Where data are unavailable, enplanement counts are estimated from the number of operations multiplied by an estimated "load-factor" (number of passengers per departure). The air taxi load-factor typically ranges from one to three people.

Commuter/Regional/Air Taxi Operations--aircraft arrivals and departures performed by commuter/regional carriers or air taxi operators certificated in accordance with FAR Part 135.

Commuter/Regional Enplanements--include enplanements on scheduled commercial air commuter/regional carriers reported to RSPA on Form 298-C. Typically, commuter/regional air carriers are certificated in accordance with FAR Part 135, operate aircraft with a maximum of 60 seats, provide at least five round trips per week between two or more points, or carry mail.

General Aviation Operations--all civil aviation aircraft operations except those performed by air carrier, air taxi or commuter/regional aircraft.

Instrument Approaches--a series of predetermined maneuvers for the orderly transfer of an aircraft under instrument flight rules (meteorological or weather related) conditions from the beginning of the initial approach to a landing, or to a point from which a landing may be made visually. The published TAF does not include forecast of annual instrument approaches (AIA's). Historical and forecast data are stored in the data base on the computer and are available from the regional offices or from the Office of Aviation Policy and Plans.

Instrument Operations--occur when an FAA operated terminal control facility handles the arrival, departure, or overflight of an aircraft on an Instrument Flight Rules (IFR) flight plan or provides separation to other aircraft. The data for some facilities include instrument operations for both primary and secondary airports. Primary facilities are FAA towered airports with radar approach control service.

Secondary facilities are airports (towered and nontowered) which receive approach control service from a primary approach control facility. Instrument operations which occur at secondary airports are credited to both the primary facility and the airport where the physical landing or takeoff occurs. Non-IFR instrument counts at existing terminal control area facilities and airports with Stage III of area radar service are included under instrument operations. The instrument operations count include FAA operated military radar approach control facilities (Air Force RAPCON's and Navy RATCF's).

Itinerant Operations--all aircraft operations other than local aircraft operations.

Local Operations--those performed by aircraft that: (1) operate in the local traffic pattern or within sight of the airport; (2) are known to be departing for, or arriving from, flights in local practice areas located within a twenty-mile radius of the airport; or (3) execute simulated instrument approaches or low passes at the airport.

Stage III/Radar Sequencing and Separation Service for VFR Aircraft-- Provision of traffic information, full-time vectoring and sequencing to arriving Visual Flight Rules (VFR) aircraft and separation between all participating aircraft.

Total Operations--the sum of itinerant and local operations. Every takeoff and every landing is counted as an aircraft operation.
