PREFACE

This product specification covers the work performed under Air Force Contract F33615-80-C-5155 (ICAM Project 6201). This contract is sponsored by the Materials Laboratory, Air Force Systems Command, Wright-Patterson Air Force Base, Ohio. It was administered under the technical direction of Mr. Gerald C. Shumaker, ICAM Program Manager, Manufacturing Technology Division, through Project Manager, Mr. David Judson. The Prime Contractor was Production Resources Consulting of the General Electric Company, Schenectady, New York, under the direction of Mr. Alan Rubenstein. The General Electric Project Manager was Mr. Myron Hurlbut of Industrial Automation Systems Department, Albany, New York.

Certain work aimed at improving Test Bed Technology has been performed by other contracts with Project 6201 performing integrating functions. This work consisted of enhancements to Test Bed software and establishment and operation of Test Bed hardware and communications for developers and other users. Documentation relating to the Test Bed from all of these contractors and projects have been integrated under Project 6201 for publication and treatment as an integrated set of documents. The particular contributors to each document are noted on the Report Documentation Page (DD1473). A listing and description of the entire project documentation system and how they are related is contained in document FTR620100001, Project Overview.

The subcontractors and their contributing activities were as follows:

TASK 4.2

Subcontractors

Role

Boeing Military Aircraft
Company (BMAC)

Reviewer.

D. Appleton Company
(DACOM)

Responsible for IDEF support,
state-of-the-art literature
search.

General Dynamics/
Ft. Worth

Responsible for factory view
function and information
models.

PS 620141330
1 November 1985

Subcontractors

Role

Illinois Institute of
Technology

Responsible for factory view
function research (IITRI)
and information models of
small and medium-size business.

North American Rockwell

Reviewer.

Northrop Corporation

Responsible for factory view
function and information
models.

Pritsker and Associates

Responsible for IDEF2 support.

SofTech

Responsible for IDEFO support.

TASKS 4.3 - 4.9 (TEST BED)

Subcontractors

Role

Boeing Military Aircraft
Company (BMAC)

Responsible for consultation on
applications of the technology
and on IBM computer technology.

Computer Technology
Associates (CTA)

Assisted in the areas of
communications systems, system
design and integration
methodology, and design of the
Network Transaction Manager.

Control Data Corporation
(CDC)

Responsible for the Common Data
Model (CDM) implementation and
part of the CDM design (shared
with DACOM).

D. Appleton Company
(DACOM)

Responsible for the overall CDM
Subsystem design integration
and test plan, as well as part
of the design of the CDM
(shared with CDC). DACOM also
developed the Integration
Methodology and did the schema
mappings for the Application
Subsystems.

Subcontractors

Role

Digital Equipment
Corporation (DEC)

Consulting and support of the
performance testing and on DEC
software and computer systems
operation.

McDonnell Douglas
Automation Company
(McAuto)

Responsible for the support and
enhancements to the Network
Transaction Manager Subsystem
during 1984/1985 period.

On-Line Software
International (OSI)

Responsible for programming the
Communications Subsystem on the
IBM and for consulting on the
IBM.

Rath and Strong Systems
Products (RSSP) (In 1985
became McCormack & Dodge)

Responsible for assistance in
the implementation and use of
the MRP II package (PIOS) that
they supplied.

SofTech, Inc.

Responsible for the design and
implementation of the Network
Transaction Manager (NTM) in
1981/1984 period.

Software Performance
Engineering (SPE)

Responsible for directing the
work on performance evaluation
and analysis.

Structural Dynamics
Research Corporation
(SDRC)

Responsible for the User
Interface and Virtual Terminal
Interface Subsystems.

Other prime contractors under other projects who have
contributed to Test Bed Technology, their contributing
activities and responsible projects are as follows:

Contractors

ICAM Project

Contributing Activities

Boeing Military
Aircraft Company
(BMAC)

1701, 2201,
2202

Enhancements for IBM
node use. Technology
Transfer to Integrated
Sheet Metal Center
(ISMC).

<u>Contractors</u>	<u>ICAM Project</u>	<u>Contributing Activities</u>
Control Data Corporation (CDC)	1502, 1701	IISS enhancements to Common Data Model Processor (CDMP).
D. Appleton Company (DACOM)	1502	IISS enhancements to Integration Methodology.
General Electric	1502	Operation of the Test Bed and communications equipment.
Hughes Aircraft Company (HAC)	1701	Test Bed enhancements.
Structural Dynamics Research Corporation (SDRC)	1502, 1701, 1703	IISS enhancements to User Interface/Virtual Terminal Interface (UI/VTI).
Systran	1502	Test Bed enhancements. Operation of Test Bed.

SECTION 1

SCOPE

1.1 Identification

This specification establishes the design of the "File Utilities Function", one of the major functions of the Configuration Item "Precompiler" to be built and formally accepted by the ICAM Program Office. This CI constitutes one of the subsystems of the Common Data Model Processor (CDMP).

1.2 Functional Summary

The purpose of this Computer Program Configuration Item (CPCI) is to provide file handling capabilities to modules of the CDMP for file create, open, naming, close, delete, send and receive.

The following functions will be performed by the file utilities CPCI by these modules:

1. The module CDDV1 will open, close and delete a file when called. This module uses a FORTRAN subroutine to do the file manipulation.
2. The module CDF01 will provide a unique name for a file when given a host name. These files are used as temporary results files from query processors, aggregators, and conceptual to external transformers.
3. The module CDRF1 will provide a receive file function when given a file by the file send function (CDSF1). It receives file characteristics and instructions and returns file completion information.
4. The module CDSF1 provides a file send function. This function transfers files from host to host by receiving file characteristics and operating instructions. This module passes control to the file receive function (CDRF1).

SECTION 2

DOCUMENTS

2.1 Reference Documents

1. ICAM Documentation Standards: IDS15012000A, 28 December 1981.
2. D. Appleton Co., CDM Administrators Manual: UM620141000, March 1984.
3. D. Appleton, Co., CDM1-IDEF, Model of the Common Data Model: CCS620141000, 15 May 1985.
4. D. Appleton Co., Computer Program Development Specification (DS) for ICAM Integrated Support System (IISS) Configuration Item: NDML Precompiler: DS620141200, October 1984.
5. D. Appleton Co., Embedded NDML Programmer's Reference Manual: PRM620141200, March 1985.
6. Softech, Inc., NTM Programmer's Guide: UM620140001, July 1984.
7. Control Data Corporation, Computer Development Specification (DS) for ICAM Integrated Support System (IISS) Configuration Item: NDDL Command Processor: DS620141100, June 1985.

2.2 Terms and Abbreviations

Attribute Use Class: (AUC)

Conceptual Schema: (CS)

Common Data Model Processor: (CDMP)

Common Data Model: (CDM) Describes common data application process formats, form definitions, etc. of the IISS and includes conceptual schema, external, internal schemas, and schema transformation operators.

Data Field: (DF) An element of data in the external schema. It is by this name that an NDML programmer references

data.

Database Management System: (DBMS)

Distributed Request Supervisor: (DRS) This IISS CDM subsystem configuration item controls the execution of distributed NDML queries and non distributed updates.

Domain: A logical definition of legal attribute class values.

Domain Constraint: Predicate that applies to a single domain.

External Schema: (ES)

Forms: Structured views which may be imposed on windows or other forms. A form is composed of fields where each field is a form, item, or window.

Forms Processor: (FP) A set of callable execution time routines available to an application program for form processing.

Internal Schema: (IS)

Integrated Information Support System: (IISS) A test computing environment used to investigate, demonstrate and test the concepts of information management and information integration in the context of Aerospace Manufacturing. The IISS addresses the problems of integration of data resident on heterogeneous databases supported by heterogeneous computers interconnected via a local Area Network.

Mapping: The correspondence of independent objects in two schemas: ES to CS or CS to IS.

Network Transaction Manager: (NTM) Performs the coordination, communication and housekeeping functions required to integrate the application processes and system services resident on the various hosts into a cohesive system.

Neutral Data Manipulation Language: (NDML) A language developed by the IISS project to provide uniform access to common data, regardless of database manager or distribution criteria. It provides distributed retrieved and single node updates.

PS 620141330
1 November 1985

ORACLE: Relational DBMS based on the SQL (Structured Query Language, a product of ORACLE Corp, Menlo Park, CA). The CDM is an ORACLE database.

Parcel: A sequential file containing sections source code of the input application program.

Request Processor: (RP) A COBOL program that will satisfy a retrieval or update NDML subtransaction against a particular Database Management System.

User Interface: (UI) Controls the user's terminal and interfaces with the rest of the system.

Virtual Terminal Interface: (VTI) Performs the interfacing between different terminals and the UI. This is done by defining a specific set of terminal features and protocols which must be supported by UI software which constitutes the Virtual Terminal Definition. Specific terminals are then mapped against the Virtual Terminal software by specific software modules written for each type of real terminal supported.

SECTION 3

REQUIREMENTS

3.1 Structural Description

The graphic portrayal of this CPCI is included in Section 3.10. This chart shows the hierarchial relationship of each module making up this CPCI.

1. CDDV1 (OPEN, CLOSE, DELETE function) modules

Delete the named file (FDELET).

2. CDF01 (FILE NAMER function) modules

These modules have no subordinate.

3. CDRF1 (FILE RECEIVE FUNCTION) modules

Receive routine for file receive utility (RCVDAT).
Generalized interface to the file name queue server (GENFIL).

File open routine for file receive utility (RCVOPN).
Closes files for the file receive utility (RCVCLS).

4. CDSF1 (FILE SEND FUNCTION) modules

Reading the file unit 30 into buffer (SNDDAT).
Open file "Filenam" and set file unit to 30 (SNDOPN).
Close file unit 30 (SNDCLS).

3.2 Functional Flow

This CPCI implements the logic defined in the Development Specification for this CPCI. Details of inputs/outputs and relationships between modules are found in Section 3.10.

This CPCI has been designated to operate in a batch or interactive mode. It must operate in the system environment established for IISS; that is, the Network Transaction Manager, the communications and the CDMP. Currently, on the module CDF01 (File Namer) has a VAX dependency. This is due to the module creating only VAX file names.

3.3 Interfaces

The diagrams in Section 3.3.1 depict the interface of File Utilities with other CPCI's.

3.3.1 Inputs/Outputs

The following information depicts the inputs and outputs of each module in this CPCI.

MODULE: CDDV1

Requesting Process	OPEN	CDDV1 PS41330
	CLOSE	
	DELETE	
	STATUS	

The file manipulation module, CDDV1, receives a request to open, close, or delete a file from a requesting process.

MODULE: CDF01

		NEXT	
REQUESTING	FILE NAME REQUEST	FILE	NAME
PROCESS		NAMER	PERMANENT
		CDF01	FILE
	FILE NAMES & STATUS	PS41330	LAST
			NAME
		USED	"LAST FILE NAME USED"

A requesting process sends File Name request in the form of a message to the File Name queue server. After generating the next group of names, the File Namer sends a reply message with a status to the requesting process. The file "LAST FILE NAME USED" is assigned for each host.

MODULE: CDRF1 & CDSF1

The File Transfer CI is composed of two functional components, File Send and File Receive.

A requesting process sends a File Transfer message to the File Send at the host where the original file to be transmitted resides. The File Send then sends an initiation message to the File Receive at the host where the file is to be created. After receiving acknowledgement from File Receive the File Send reads the source file and creates messages containing the file data. It transmits these messages to the File Receive where they are reconstructed into a new file. When the file transfer is completed, File Send notifies the requesting process.

3.4 Program Interrupts

Not applicable to this CPCI.

3.5 Timing and Sequencing Description

This CPCI is activated for each file called for by any module or subsystem under the common data model processor (CDMP). The modules under this CPCI are activated individually by the requesting processes.

3.6 Special Control Features

Not applicable to this CPCI.

3.7 Storage Allocation

3.7.1 Database Definition

Not applicable to this CPCI.

3.7.1.1 File Description

One permanent file has been defined for this CPCI. This file is used by the file namer "CDF01" as the "LAST FILE NAME USED". This file is used to periodically record the last file name assigned to each host. It may also use temporary scratch files for such things as input and results.

3.7.1.2 Table Description

All tables used by this CPCI have been defined by the Development Specification for this CPCI.

3.7.1.3 Item Description

Not applicable to this CPCI.

3.8 Object Code Creation

The object code for this CPCI will be created by the system integration team using defined IISS Software Configuration Management procedures. This CPCI will use the COBOL and FORTRAN language compilers.

3.9 Adaptation Data

This CPCI has been using ANSI COBOL and FORTRAN languages. The intent was to provide a transportable system. Any system environment supporting these languages, a virtual memory management schema, the COMM and NTM subsystems of IISS and the ORACLE Database Management System should be able to support this CPCI. Every possible attempt has been made to localize and identify any machine or environment dependent modules through the original design of the IISS and application of Configuration Management Procedures.

3.10 Detail Design Description

The following sections have been computer generated for this CPCI.

3.10.1 Main Program List

The following is a list of all "Main Programs" which are modules that are not called by any other module being documented here. These modules are either program entry points or, if they are hooked into another set of programs via subroutine calls, they are the points the external programs can call and therefore enter through. To differentiate between the two types of entry points, look at the individual Module Documentation (section 3.10.8) and look at Module Type for each of the Main Program modules listed. Note whether the routine is a Program, Subroutine, or Function. If it is a Program, it is truly a main program entry point. If not, then it is merely called by other programs not being documented here.

PS 620141330
1 November 1985

FILE UTILITIES Main Program List

Module Name -----	Purpose -----
CDDV1	OPEN CLOSES AND DELETES FILES
CDF01	THIS PROGRAM GENERATES UNIQUE FILE NAMES
CDFSU	PROGRAM NAME FILE SEND UTILITY UNIT TEST
CDRF1	FILE RECEIVE FUNCTION
CDSF1	FILE SEND FUNCTION
DELFIL	ACT AS A GENERALIZED INTERFACE TO THE FILE DELETE PROGRAM.

PS 620141330
1 November 1985

3.10.2 Module List

The following is a list of all the modules being documented here along with their purpose. Each module has a unique name, no matter what language it was written in.

PS 620141330
1 November 1985

FILE UTILITIES Module List

Module Name -----	Purpose -----
CDDV1	OPEN CLOSES AND DELETES FILES
CDF01	THIS PROGRAM GENERATES UNIQUE FILE NAMES
CDFSU	PROGRAM NAME FILE SEND UTILITY UNIT TEST
CDRF1	FILE RECEIVE FUNCTION
CDSF1	FILE SEND FUNCTION
DELFIL	ACT AS A GENERALIZED INTERFACE TO THE FILE DELETE PROGRAM.
FDELET	DELETE THE NAMED FILE
FILXFR	GENERALIZED INTERFACE TO A FILE TRANSFER
GENFIL	GENERALIZED INTERFACE TO THE FILE NAME QUEUE SERVER
RCVCLS	CLOSES FILES FOR THE FILE RECEIVE UTILITY
RCVDAT	RECEIVE ROUTINE FOR FILE RECEIVE UTILITY
RCVOPN	FILE OPEN ROUTINE FOR FILE RECEIVE UTILITY
SNDCLS	CLOSE FILE UNIT 30
SNDDAT	READING THE FILE UNIT 30 INTO BUFFER
SNDOPN	OPEN FILE "FILNAM" AND SET FILE UNIT TO 30

3.10.3 External Routines List

The following is a list of all routines or functions not documented here that are called by modules that are documented here. The first caller, in alphabetical order, is listed as well. The specification in which any module is documented may be found in the Module Documentation Index (Document Number CM 620100001). See section 3.10.6 for a list of the modules that call each of these external routines.

PS 620141330
1 November 1985

FILE UTILITIES External Routines List

Module Name	First User
-----	-----
CDFUNC	CDSF1
ERRPRO	GENFIL
FOR\$CLOSE	FDELET
FOR\$OPEN	SNDOPN
INITAL	CDSF1
INITEX	CDFSU
ISEND	CDSF1
NSEND	GENFIL
QSEND	CDF01
RCV	CDF01
SIGERR	CDRF1
TRMNAT	CDRF1

3.10.4 Include File List

The following is a list of all include files called in by modules being documented here. Each include file has a unique name regardless of the language being used. The purpose of each include file is listed as well. A more complete description of each include file is given in section 3.10.9. The purpose listed is the one that is in the source code of the include file.

A purpose of "***** PURPOSE NOT FOUND BY STRIPPER *****" indicates that a purpose statement was not written into the include file itself. The most common reason for this is that the include file comes from system libraries that were not developed by the project, such as 'C' libraries that are provided with the 'C' compiler.

See section 3.10.6 for a set of lists which show all the modules which call in each of these include files.

PS 620141330
1 November 1985

FILE UTILITIES Include File List

File Name	Purpose
-----	-----
ALFABET	LETTERS CONTAINED IN THE ENGLISH ALPHABET
CHKCDM	IISS CDMP CHECK STATUS CODES

3.10.7 Main Program Parts List

The following lists each Main Program listed in 3.10.1 and all the modules which are called either by that module itself or by any of the documented modules which it calls. It is possible for a non-main module to be listed more than once if it is called by multiple modules. The called modules, in this case known as program parts, are marked as to whether they are documented here. If so, the phrase "well-defined module" appears by the module name, if not it is an "external routine". The Purpose of the Main Program module is listed as well.

3.10.8 Module Documentation

The following documentation describes information which is specific to each individual module being documented in this specification as listed in section 3.10.2. It provides a compact way of getting information that would be otherwise buried within each module's source code.

The specific items in this module documentation have the following meanings:

NAME:	Name of program Module.
PURPOSE:	Purpose of Module as detailed in the source code.
LANGUAGE:	Programming language source code is written in. The choices are: VAX-11 FORTRAN C (I/S-1 Workbench 'C') VAX-11 COBOL
MODULE TYPE:	Whether a Program, Subroutine, or Function.
SOURCE FILE:	Name of Source File from file specification.
SOURCE FILE TYPE:	Source File Extension from file specification.
HOST:	Whether this is a host-dependent routine (VAX or IBM) or blank if host-independent.
SUBSYSTEM:	IISS sub-system this file resides in.
SUBDIRECTORY:	Sub-directory of that subsystem in which this file resides.
DOCUMENTATION GROUP:	Name of documentation group of which this source file is a member.
DESCRIPTION:	A description of the module as obtained

from the source code.

ARGUMENTS: The arguments with which this routine is called if it is a Subroutine or a Function.

INCLUDE FILES: A list of all the files that are included into this module as well as their purposes.

ROUTINES CALLED: Subroutines or Functions, either documented or external, called by this module, if any.

CALLED DIRECTLY BY: The documented routines which call this module, if any.

USED IN MAIN PROGRAM(S): The documented Main Programs which contain this module in their parts list according to the list in section 3.10.7.

The Module Documentation is arranged alphabetically according to Module Name.

FILE UTILITIES Module Documentation

NAME: CDDV1
PURPOSE: OPEN CLOSES AND DELETES FILES
LANGUAGE: VAX-11 COBOL
MODULE TYPE: PROGRAM
SOURCE FILE: CDDV1
SOURCE FILE TYPE: .COB
HOST: VAX
SUBSYSTEM: CDM
SUBDIRECTORY:
DOCUMENTATION GROUP: PS41330

DESCRIPTION:

-
THIS IS A MAIN PROGRAM WHICH CALLS A
FORTRAN 77 SUBROUTINE TO OPEN AND CLOSE
A FILE BY THE GIVEN NAME AND DELETE IT. THIS IS THE MOST
MACHINE INDEPENDENT METHOD FOR DELETING FILES FOUND.
mod for rel 2.0 standard error handling,
pic 9(5) comp message data length parm.
also, do not need to send a reply back,
-
-

INCLUDE FILES:

ERRCDM - IISS ERROR STATUS CODES FOR CDMP MODULES
CHKCDM - IISS CDMP CHECK STATUS CODES
SRVRET - AS THE RETURN GIVEN A TABLE-FULL ERROR
STDRESP - WS DEFINITION FOR STANDARD STATUS VARIABLE
ERRPRO - PROCESS ERROR INCLUDE FILE

ROUTINES CALLED:

FDELETE - DELETE THE NAMED FILE
ERRPRO

FILE UTILITIES Module Documentation

NAME: CDF01
PURPOSE: THIS PROGRAM GENERATES UNIQUE FILE NAMES
LANGUAGE: VAX-11 COBOL
MODULE TYPE: PROGRAM
SOURCE FILE: CDF01
SOURCE FILE TYPE: .COB
HOST: VAX
SUBSYSTEM: CDM
SUBDIRECTORY:
DOCUMENTATION GROUP: PS41330

DESCRIPTION:

- CDF01 IS A QUEUE SERVER RESIDENT ON ONLY ONE PLACE
IN THE TEST BED. WHEN CALLED WITH A HOST ID, IT WILL
REPLY WITH THE NEXT FILE NAME TO USE FOR TEMPORARY
RESULTS OF QUERY PROCESSORS, AGGREGATORS, AND
THE C TO E TRANSFORMS, ETC.

MOD FOR 2.0
SEND OUT MANY FILE NAMES ON 1 REQUEST
WRAP FILE NUMBERS AROUND AND INCREMENT LETTER
SAVE FILE NAMES USED PERIODICALLY ON A
SAVE-FILE

-

INCLUDE FILES:

ERRCDM - IISS ERROR STATUS CODES FOR CDMP MODULES
CHKCDM - IISS CDMP CHECK STATUS CODES
FNAMES - STORE A GROUP OF FILE NAMES
STDRESP - WS DEFINITION FOR STANDARD STATUS VARIABLE
SRVRET - AS THE RETURN GIVEN A TABLE-FULL ERROR
ALFABET - LETTERS CONTAINED IN THE ENGLISH ALPHABET
ERRPRO - PROCESS ERROR INCLUDE FILE

NAME: CDRF1
PURPOSE: FILE RECEIVE FUNCTION
LANGUAGE: VAX-11 COBOL
MODULE TYPE: PROGRAM
SOURCE FILE: CDRF1
SOURCE FILE TYPE: .COB
HOST: VAX
SUBSYSTEM: CDM
SUBDIRECTORY:
DOCUMENTATION GROUP: PS41330

DESCRIPTION:

- THE FILE RECIEVE FUNCTION ACCEPTS FILES FROM
FILE SEND FUNCTION. IT RECEIVES FILE
CHARACTERISTICS AND OPERATING INSTRUCTIONS
FROM THE FILE SEND PROCESS. FILE RECEIVE
PASSES COMPLETION INFORMATION TO THE FILE
SEND FUNCTION.

mod rel 2.0 - must call "GENFIL" to determine name
of results file, use of 9(5) comp data-length
USE STANDARD ERROR HANDLING AND ALLOW
FOR RESULTS FILE NAME TO BE BLANK.

INCLUDE FILES:

ERRCDM - IISS ERROR STATUS CODES FOR CDMP MODULES
CHKCDM - IISS CDMP CHECK STATUS CODES

3.10.10 Hierarchy Chart

The following hierarchy charts show the relationships between all of the modules mentioned in the above documentation. A module may call a subroutine several times within its code, but the call will only be shown once as a single relationship on this hierarchy chart. All modules shown at the top of the first page are considered Main Programs as described in section 3.10.1 above.

There is an internal paging scheme as marked by the numbers in the upper right corner of each page. An index after the last page of the chart shows where a routine and its calls are first defined. If a routine has no page reference, it either makes no calls or is an external routine. A continuation box on the end of a tree limb shows where that the tree continues on the page numbered mentioned. A number in a box with a routine name points to the page where the routine is further defined within the hierarchy tree. If there is no number in a box, the routine either makes no calls or is an external routine.

SECTION 4

QUALITY ASSURANCE PROVISIONS

4.1 Introduction and Definitions

"Testing" is a systematic process that may be preplanned and explicitly stated. Test techniques and procedures may be defined in advance, and a sequence of test steps may be specified. "Debugging" is the process of isolation and correction of the cause of an error.

"Antibugging" is defined as the philosophy of writing programs in such a way as to make bugs less likely to occur and when they do occur, to make them more noticeable to the programmer and the user. In other words, as much error checking as is practical and possible in each routine should be performed.

4.2 Computer Programming Test and Evaluation

The quality assurance provisions for test consists of the normal testing techniques that are accomplished during the construction process. They consist of design and code walk-throughs, unit testing, and integration testing. These tests are performed by the design team. Structured design, design walk-through and the incorporation of "antibugging" facilitate this testing by exposing and addressing problem areas before they become coded "bugs."
