PREFACE

This product specification covers the work performed under Air Force Contract F33615-80-C-5155 (ICAM Project 6201). This contract is sponsored by the Materials Laboratory, Air Force Systems Command, Wright-Patterson Air Force Base, Ohio. It was administered under the technical direction of Mr. Gerald C. Shumaker, ICAM Program Manager, Manufacturing Technology Division, through Project Manager, Mr. David Judson. The Prime Contractor was Production Resources Consulting of the General Electric Company, Schenectady, New York, under the direction of Mr. Alan Rubenstein. The General Electric Project Manager was Mr. Myron Hurlbut of Industrial Automation Systems Department, Albany, New York.

Certain work aimed at improving Test Bed Technology has been performed by other contracts with Project 6201 performing integrating functions. This work consisted of enhancements to Test Bed software and establishment and operation of Test Bed hardware and communications for developers and other users. Documentation relating to the Test Bed from all of these contractors and projects have been integrated under Project 6201 for publication and treatment as an integrated set of documents. The particular contributors to each document are noted on the Report Documentation Page (DD1473). A listing and description of the entire project documentation system and how they are related is contained in document FTR620100001, Project Overview.

The subcontractors and their contributing activities were as follows:

TASK 4.2

Responsible for IDEF2 support

SofTech

Responsible for IDEF0 support

TASKS 4.3 - 4.9 (TEST BED)

Subcontractors

Role

Boeing Military Aircraft
Company (BMAC)

Responsible for consultation on
applications of the technology
and on IBM computer technology.

Computer Technology
Associates (CTA)

Assisted in the areas of
communications systems, system
design and integration
methodology, and design of the
Network Transaction Manager.

Control Data Corporation
(CDC)

Responsible for the Common Data
Model (CDM) implementation and
part of the CDM design (shared
with DACOM).

D. Appleton Company
(DACOM)

(shared

Responsible for the overall CDM
Subsystem design integration
and test plan, as well as part
of the design of the CDM
with CDC). DACOM also
developed the Integration
Methodology and did the schema
mappings for the Application
Subsystems.

PS 620144700

<u>Subcontractors</u>	<u>Role</u>
Digital Equipment Corporation (DEC)	Consulting and support of the performance testing and on DEC software and computer systems operation.
McDonnell Douglas Automation Company (McAuto)	Responsible for the support and enhancements to the Network Transaction Manager Subsystem during 1984/1985 period.
On-Line Software International (OSI)	Responsible for programming the Communications Subsystem on the IBM and for consulting on the IBM.
Rath and Strong Systems Products (RSSP) (In 1985 became McCormack & Dodge)	Responsible for assistance in the implementation and use of the MRP II package (PIOS) that they supplied.
SofTech, Inc.	Responsible for the design and implementation of the Network Transaction Manager (NTM) in 1981/1984 period.
Software Performance Engineering (SPE)	Responsible for directing the work on performance evaluation and analysis.
Structural Dynamics Research Corporation (SDRC)	Responsible for the User Interface and Virtual Terminal Interface Subsystems.

Prime contractors under other projects who have contributed to Test Bed Technology, their contributing activities and responsible projects are as follows:

<u>Contractors</u>	<u>ICAM Project</u>	<u>Contributing Activities</u>
Boeing Military Aircraft Company (BMAC)	1701, 2201, 2202	Enhancements for IBM node use. Technology Transfer to Integrated Sheet Metal Center (ISMC)

PS 620144700
1 November 1985

<u>Contractors</u>	<u>ICAM Project</u>	<u>Contributing Activities</u>
Control Data Corporation (CDC)	1502, 1701	IISS enhancements to Common Data Model Processor (CDMP)
D. Appleton Company (DACOM)	1502	IISS enhancements to Integration Methodology
General Electric	1502	Operation of the Test Bed and communications equipment.
Hughes Aircraft Company (HAC)	1701	Test Bed enhancements
Structural Dynamics Research Corporation (SDRC)	1502, 1701, 1703	IISS enhancements to User Interface/Virtual Terminal Interface (UI/VTI)
Systran	1502	Test Bed enhancements. Operation of Test Bed.

SECTION 1

SCOPE

1.1 Identification

→ This specification establishes the detailed design of a computer program identified as the Application Interface, hereinafter referred to as AI. The AI is one configuration item of the Integrated Information Support System (IISS) User Interface (UI).

1.2 Functional Summary

→ The AI is a collection of procedures that may be linked with an application to enable it to use the Form Processor (FP) and run in the distributed IISS environment. The AI does this by sending/receiving FP requests through the NTM (Network Transaction Manager) to/from the User Interface Monitor (UIM) of the Form Processor.

2.2 Terms and Abbreviations

American Standard Code for Information Interchange: (ASCII), the character set defined by ANSI X3.4 and used by most computer vendors.

Application Definition Language: an extension of the Forms Definition Language that includes retrieval of database information and conditional actions. It is used to define interactive application programs.

Application Generator: (AG), subset of the IISS User Interface that consists of software modules that generate IISS application code and associated form definitions based on a language input. The part of the AG that generates report programs is called the Report Writer. The part of the AG that generates interactive applications is called the Rapid Application Generator.

Attribute: field characteristic such as blinking, highlighted, black, etc. and various other combinations. Background attributes are defined for forms or windows only. Foreground attributes are defined for items. Attributes may be permanent, i.e., they remain the same unless changed by the application program, or they may be temporary, i.e., they remain in effect until the window is redisplayed.

Buffer Name: the default file in which the buffer will be saved if no file is given on a save command.

Common Data Model: (CDM), IISS subsystem that describes common data application process formats, form definitions, etc. of the IISS and includes conceptual schema, external schemas, internal schemas, and schema transformation operators.

Conceptual Schema: (CS), the standard definition used for all data in the CDM. It is based on IDEF1 information modelling.

Current Cursor Position: the position of the cursor before an edit command or function is issued in the text editor.

Cursor Position: the position of the cursor after any command is issued.

Cut and Paste Buffer: where deleted lines go and the paste and fill edit commands get their data.

Device Drivers: (DD), software modules written to handle I/O for a specific kind of terminal. The modules map terminal specific commands and data to a neutral format. Device Drivers are part of the UI Virtual Terminal.

Display List: is similar to the open list, except that it contains only those forms that have been added to the screen and are currently displayed on the screen.

Display Start Line: the first line in the buffer to be displayed.

Display Size: the number of lines used in the edit area.

Extended Binary Coded Decimal Interchange Code: (EBCDIC), the character set used by a few computer vendors (notably IBM) instead of ASCII.

External Schema: (ES), an application's view of the CDM's conceptual schema.

Field Pointer: indicates the ITEM which contains the current cursor position.

Forms Driven Form Editor: (FD FE), subset of the FE which consists of a forms driven application used to create Form Definition files interactively.

Form Editor: (FE), subset of the IISS User Interface that is used to create definitions of forms. The FE consists of the Forms Driven Form Editor and the Forms Language Compiler.

Forms Language Compiler: (FLAN), subset of the FE that consists of a batch process that accepts a series of forms definition language statements and produces form definition files as output.

Form Processor Text Editor: (FPTE), subset of the Form Processor that consists of software modules that provide text editing capabilities to all users of applications that use the Form Processor.

Item: non-decomposable area of a form in which hard-coded descriptive text may be placed and the only defined areas where user data may be input/output.

Logical Device: a conceptual device which to an application is indistinguishable from a physical device and is then mapped to part or all of a physical device.

Neutral Data Manipulation Language: (NDML), the command language by which the CDM is accessed for the purpose of extracting, deleting, adding, or modifying data.

Open List: a list of all the forms that have been and are currently open for an application process.

Operating System: (OS), software supplied with a computer which allows it to supervise its own operations and manage access to hardware facilities such as memory and peripherals.

Page: instance of forms in windows that are created whenever a form is added to a window.

Paging and Scrolling: a method which allows a form to contain more data than can be displayed with provisions for viewing any portion of the data buffer.

Physical Device: a hardware terminal.

Presentation Schema: (PS), may be equivalent to a form. It is the view presented to the user of the application.

Previous Cursor Position: the position of the cursor when the previous edit command was issued.

Previous Edit Command: the function key pressed before the current one.

Rapid Application Generator: (RAP), part of the Application Generator that generates source code for interactive programs based on a language input.

Report Definition Language: an extension of the Forms Definition Language that includes retrieval and calculation of database information and is used to define reports.

Report Writer: (RW), part of the Application Generator that generates source code for report programs based on a language input.

Select Line: one terminus of the select range.

Select Mode: when on, certain commands will be executed over the lines in the selected range. The commands are (DELETE LINE) and replace.

Subform: a form that is used within another form.

Text Editor: (TE), subset of the IISS User Interface that consists of a file editor that is based on the text editing functions built into the Form Processor.

Top of file: the first line of the buffer.

User Interface Development System: (UIDS), collection of IISS User Interface subsystems that are used by applications programmers as they develop IISS applications. The UIDS includes the Form Editor and the Application Generator.

User Interface Monitor: (UIM), part of the Form Processor that handles messaging between the NTM and the UI. It also provides authorization checks and initiates applications.

User Interface Services: (UIS), subset of the IISS User Interface that consists of a package of routines that aid users in controlling their environment. It includes message management, change password, and application definition services.

Virtual Terminal Interface: (VTI), the callable interface to the VT.

Virtual Terminal Interface Field Map: defines the complete terminal screen by breaking it into pieces of the various forms and items that are displayed. Each area of the terminal screen must be defined as belonging to a particular field in the display list.

Window Manager: a facility which allows the following to be manipulated: size and location of windows, the device on which an application is running, the position of a form within a window. It is part of the Form Processor.

SECTION 3
REQUIREMENTS

3.1 Structural Description

Applications use the AI just as though they were using the User Interface Form Processor. The Application Interface routines have the same calling sequence as the FP routines, but instead of processing the commands the AI creates messages which are sent to the Form Processor by way of the Network Transaction Manager. The Form Processor then processes the command which is contained in the message. This structure allows the application program to run on a machine other than the host of the User Interface. The detailed structure of the Application Interface is illustrated in section 3.10. Figure 3-1 illustrates the relationship between the AI, NTM, FP and an application.

Figure 3-1 AI Interfaces

3.2 Functional Flow

Figure 3-2 is a data flow diagram of the Application Interface.

Figure 3-2 Application Interface Data Flow

3.3 Interfaces

3.3.1 Application Programs

The interface to the application is identical to that of the Form Processor procedures and is documented in the FP User Manual.

3.3.2 Network Transaction Manager

The AI sends and receives messages to and from the UIM via the NTM. Each FP procedure is identified by a unique number in this message. The remainder of the message consists of FP input parameters for an AI send and FP output parameters for an AI receive. These message formats are documented in Appendix A.

1 November 1985

3.3.3 Form Processor

The UIM of the Form Processor receives messages from the NTM, calls the appropriate FP procedure and sends the results back to the AI via the NTM.

3.4 Program Interrupts

This section does not apply to the detailed design of the Application Interface.

3.5 Timing and Sequencing Description

The Application Interface control logic is simple. First, the AI receives input parameters from an application and sends the parameters to the FP via the NTM. Then the AI receives output parameters from the FP via the NTM and returns them to the application. This is illustrated in the flow diagram in section 3.2.

3.6 Special Control Features

The detailed design of the Application Interface does not include any special control features as defined in the ICAM Documentation Standards manual.

3.7 Storage Allocation

This section does not apply to the AI.

3.8 Object Code Creation

The AI routines were compiled with an ANSI COBOL compiler under VAX/VMS. The source is portable to other compilers on machines such as the IBM.

3.9 Adaptation Data

The AI source is portable to other ANSI COBOL compilers.

3.10 Detailed Design Description

3.10.1 Main Program List

The following is a list of all "Main Programs" which are modules that are not called by any other module being

PS 620144700
1 November 1985

documented here. These modules are either program entry points or, if they are hooked into another set of programs via subroutine calls, they are the points the external programs can call and therefore enter through. To differentiate between the two types of entry points, look at the individual Module Documentation (section 3.10.8) and look at Module Type for each of the Main Program modules listed. Note whether the routine is a Program, Subroutine, or Function. If it is a Program, it is truly a main program entry point. If not, then it is merely called by other programs not being documented here.

3.10.4 Include File List

The following is a list of all include files called in by modules being documented here. Each include file has a unique name regardless of the language being used. The purpose of each include file is listed as well. A more complete description of each include file is given in section 3.10.9. The purpose listed is the one that is in the source code of the include file.

A purpose of "**** PURPOSE NOT FOUND BY STRIPPER ****" indicates that a purpose statement was not written into the include file itself. The most common reason for this is that the include file comes from system libraries that were not developed by the project, such as 'C' libraries that are provided with the 'C' compiler.

See section 3.10.6 for a set of lists which show all the modules which call in each of these include files.

3.10.7 Main Program Parts List

The following lists each Main Program listed in 3.10.1 and all the modules which are called either by that module itself or by any of the documented modules which it calls. It is possible for a non-main module to be listed more than once if it is called by multiple modules. The called modules, in this case known as program parts, are marked as to whether they are documented here. If so, the phrase "well-defined module" appears by the module name, if not it is an "external routine". The Purpose of the Main Program module is listed as well.

3.10.8 Module Documentation

The following documentation describes information which is specific to each individual module being documented in this specification as listed in section 3.10.2. It provides a compact way of getting information that would be otherwise buried within each module's source code.

The specific items in this module documentation have the following meanings:

NAME:	Name of program Module.
PURPOSE:	Purpose of Module as detailed in the source code.
LANGUAGE:	Programming language source code is written in. The choices are: VAX-11 FORTRAN C (I/S-1 Workbench 'C') VAX-11 COBOL
MODULE TYPE:	Whether a Program, Subroutine, or Function.
SOURCE FILE:	Name of Source File from file specification.
SOURCE FILE TYPE:	Source File Extension from file specification.
HOST:	Whether this is a host-dependent routine (VAX or IBM) or blank if host-independent.
SUBSYSTEM:	IISS sub-system this file resides in.
SUBDIRECTORY:	Sub-directory of that subsystem in which this file resides.
DOCUMENTATION GROUP:	Name of documentation group of which this source file is a member.
DESCRIPTION:	A description of the module as obtained

PS 620144700
1 November 1985

from the source code.

ARGUMENTS: The arguments with which this routine is called if it is a Subroutine or a Function.

INCLUDE FILES: A list of all the files that are included into this module as well as their purposes.

ROUTINES CALLED: Subroutines or Functions, either documented or external, called by this module, if any.

CALLED DIRECTLY BY: The documented routines which call this module, if any.

USED IN MAIN PROGRAM(S): The documented Main Programs which contain this module in their parts list according to the list in section 3.10.7.

The Module Documentation is arranged alphabetically according to Module Name.

LANGUAGE: VAX-11 COBOL

DESCRIPTION:

MODIFIED 11/2/83 TO INCLUDE RET-CODE-5 *
MODIFIED 1/9/84 TO INCREASE ALL ERROR CODES TO PIC X(5) *
AND TO ELIMINATE ALPHA'S *
MODIFIED 1/26/84 TO ADD RET-CODE FOR GETUSR-NOT-SUCC *
SRV-SUCCESSFUL ADDED FOR GENERIC RETURN *
MODIFIED 2/7/84 TO ADD ERROR CODES FOR ENTRY-NOT-FOUND *
MODIFIED 2/8/84 TO ADD WTHST-NOT-SUCCESSFUL *
MODIFIED 2/20/84 TO ADD TSTMOD NEW CODES. *
MODIFIED 20 AUG 84 INITIALIZE ALL LOCAL VARIABLES TO
SPACES OR 0.
MODIFIED 5/21/85 TO ADD RCL AND FILGEN RETURN CODES

APPLICATION INTERFACE Include File Description

FILE NAME: STDTyp
PURPOSE: STANDARD TYPE DEFINITIONS
LANGUAGE: C

DESCRIPTION:

DESCRIPTION

THIS FILE ENSURES THAT THE FOLLOWING STANDARD TYPES ARE
AVAILABLE:

FLOAT	- SINGLE PRECISION FLOAT
DOUBLE	- DOUBLE PRECISION FLOAT
LONG	- 32 BIT (OR LARGER) SIGNED INTEGER
LBITS	- 32 BITS (OR MORE) FOR BIT MANIPULATION
INT	- NATURAL SIZE SIGNED INTEGER
UNSIGNED	- NATURAL SIZE UNSIGNED INTEGER
BOOL	- NATURAL SIZE LOGICAL (ZERO / NON-ZERO ONLY)
SHORT	- 16 BIT (OR LARGER) SIGNED INTEGER
USHORT	- 16 BIT (OR LARGER) UNSIGNED INTEGER
BITS	- 16 BITS (OR MORE) FOR BIT MANIPULATION
CHAR	- SINGLE MACHINE CHARACTER (REAL CHARACTERS ALWAYS POSITIVE)
TINY	- 8 BIT (OR LARGER) SIGNED INTEGER
UTINY	- 8 BIT (OR LARGER) UNSIGNED INTEGER
TBITS	- 8 BITS (OR MORE) FOR BIT MANIPULATION
TBOOL	- 8 BIT (OR LARGER) LOGICAL (ZERO / NON-ZERO ONLY)
METACHAR	- 16 BIT (OR LARGER) AUGMENTED CHARACTER (SIGNED)
VOID	- FUNCTION THAT RETURNS NO VALUE
FORTTRAN	- STORAGE CLASS FOR FOREIGN (NON-C) ROUTINES OR C ROUTINES WHICH ARE CALLABLE FROM FOREIGN ROUTINES

SINCE NOT ALL COMPILERS SUPPORT USHORT, TINY, AND UTINY,
THE FUNCTIONS

PS 620144700
1 November 1985

USHORT(), TINY(), AND UTINY() SHOULD BE USED WHENEVER
REFERENCING THEM.

IN ADDITION, THE FOLLOWING UTILITY MACROS ARE DEFINED:

LURSHIFT(N, B) - UNSIGNED LONG RIGHT SHIFT
MAX(A, B) - MAXIMUM OF A AND B
MIN(A, B) - MINIMUM OF A AND B

APPLICATION INTERFACE Include File Description

ABS(A) - ABSOLUTE VALUE OF A
STRASN(A, B) - TRANSPORTABLE A = B FOR STRUCTURES
NULL - NULL POINTER VALUE (0)
TRUE - 1
FALSE - 0
SUCCESS - EXIT(SUCCESS) INDICATES SUCCESSFUL
COMPLETION
FAILURE - EXIT(FAILURE) INDICATES ERRORS

THE FOLLOWING SYMBOLS SHOULD BE DEFINED BASED ON THE
COMPILER BEING USED:

USHORT - COMPILER SUPPORTS UNSIGNED SHORT
TINY - COMPILER TREATS CHAR AS SIGNED
UTINY - CHAR IS SIGNED AND COMPILER SUPPORTS
UNSIGNED CHAR
VOID - COMPILER SUPPORTS VOID
FORTRAN - COMPILER SUPPORTS FORTRAN
STRASN - DEFINE APPROPRIATE MACRO
SUCCESS - DEFINE APPROPRIATE VALUE IF NOT 0
FAILURE - DEFINE APPROPRIATE VALUE IF NOT 1

APPENDIX A

FP/AI MESSAGE FORMATS

The following is a COBOL declaration of the message formats used between the AI and the FP.

FP to AI message formats, FP output parameters.

NOTE: All 01 line records correspond to the FP routines being called. For example, ADDELM-FP-RECORD is used in the routine ADDELM.

```
01  ADDELM-FP-RECORD.
    05  ADDELM-ELEMENT-NUMBER    PIC 9(4).
    05  ADDELM-RCODE             PIC X(5).
01  ADDFRM-FP-RECORD REDEFINES ADDELM-FP-RECORD.
    05  ADDFRM-PAGE-NUMBER       PIC 9(4).
    05  ADDFRM-RCODE             PIC X(5).
01  CHGLDV-FP-RECORD REDEFINES ADDELM-FP-RECORD.
    05  CHGLDV-RCODE             PIC X(5).
01  CLSFRM-FP-RECORD REDEFINES ADDELM-FP-RECORD.
    05  CLSFRM-RCODE             PIC X(5).
01  CLSLDV-FP-RECORD REDEFINES ADDELM-FP-RECORD.
    05  CLSLDV-RCODE             PIC X(5).
01  GDATA-FP-RECORD REDEFINES ADDELM-FP-RECORD.
    05  GDATA-BUFFER-LENGTH      PIC 9(4).
    05  GDATA-RCODE              PIC X(5).
    05  GDATA-BUFFER             PIC X(4096).
01  GDATLN-FP-RECORD REDEFINES ADDELM-FP-RECORD.
    05  GDATLN-BUFFER-LENGTH     PIC 9(4).
    05  GDATLN-RCODE             PIC X(5).
01  GETATT-FP-RECORD REDEFINES ADDELM-FP-RECORD.
    05  GETATT-ATTRIBUTE         PIC X(10).
    05  GETATT-RCODE             PIC X(5).
01  GETBAK-FP-RECORD REDEFINES ADDELM-FP-RECORD.
    05  GETBAK-ATTRIBUTE         PIC X(10).
    05  GETBAK-RCODE             PIC X(5).
01  GETCUR-FP-RECORD REDEFINES ADDELM-FP-RECORD.
    05  GETCUR-FIELD-NAME        PIC X(120).
    05  GETCUR-FIELD-TYPE        PIC X.
    05  GETCUR-ROW               PIC 9(4).
    05  GETCUR-COL               PIC 9(4).
    05  GETCUR-RCODE             PIC X(5).
```

```
01 GPAGE-FP-RECORD REDEFINES ADDELM-FP-RECORD.
05 GPAGE-FORM-NAME          PIC X(10).
05 GPAGE-RCODE              PIC X(5).
01 GWINDOW-FP-RECORD REDEFINES ADDELM-FP-RECORD.
05 GWINDOW-TOTAL-PAGES     PIC 9(4).
05 GWINDOW-RCODE           PIC X(5).
01 INQLDV-FP-RECORD REDEFINES ADDELM-FP-RECORD.
05 INQLDV-LOG-DEV-ID       PIC 9(5).
05 INQLDV-RCODE            PIC X(5).
01 OISCR-FP-RECORD REDEFINES ADDELM-FP-RECORD.
05 OISCR-FUNCTION          PIC 9(4).
05 OISCR-RCODE             PIC X(5).
01 OPNFRM-FP-RECORD REDEFINES ADDELM-FP-RECORD.
05 OPNFRM-RCODE            PIC X(5).
01 OPNLDV-FP-RECORD REDEFINES ADDELM-FP-RECORD.
05 OPNLDV-LOG-DEV-ID       PIC 9(5).
05 OPNLDV-RCODE            PIC X(5).
01 OUTSCR-FP-RECORD REDEFINES ADDELM-FP-RECORD.
05 OUTSCR-RCODE            PIC X(5).
01 PARFQN-FP-RECORD REDEFINES ADDELM-FP-RECORD.
05 PARFQN-PAR-NAME         PIC X(120).
05 PARFQN-PAR-TYPE        PIC X.
05 PARFQN-RCODE            PIC X(5).
01 PDATA-FP-RECORD REDEFINES ADDELM-FP-RECORD.
05 PDATA-RCODE             PIC X(5).
01 PUTATT-FP-RECORD REDEFINES ADDELM-FP-RECORD.
05 PUTATT-RCODE            PIC X(5).
01 PUTBAK-FP-RECORD REDEFINES ADDELM-FP-RECORD.
05 PUTBAK-RCODE            PIC X(5).
01 PUTCUR-FP-RECORD REDEFINES ADDELM-FP-RECORD.
05 PUTCUR-RCODE            PIC X(5).
01 PUTLOC-FP-RECORD REDEFINES ADDELM-FP-RECORD.
05 PUTLOC-RCODE            PIC X(5).
01 RMVPAG-FP-RECORD REDEFINES ADDELM-FP-RECORD.
05 RMVPAG-RCODE            PIC X(5).
01 RPLFRM-FP-RECORD REDEFINES ADDELM-FP-RECORD.
05 RPLFRM-RCODE            PIC X(5).
```

AI to FP message format, input parameters.

```
01 INPUT-RECORD.

```

3.10.10 Hierarchy Chart

The following hierarchy charts show the relationships between all of the modules mentioned in the above documentation. A module may call a subroutine several times within its code, but the call will only be shown once as a single relationship on this hierarchy chart. All modules shown at the top of the first page are considered Main Programs as described in section 3.10.1 above.

There is an internal paging scheme as marked by the numbers in the upper right corner of each page. An index after the last page of the chart shows where a routine and its calls are first defined. If a routine has no page reference, it either makes no calls or is an external routine. A continuation box on the end of a tree limb shows where that the tree continues on the page numbered mentioned. A number in a box with a routine name points to the page where the routine is further defined within the hierarchy tree. If there is no number in a box, the routine either makes no calls or is an external routine.

3.11 Program Listings Comments

This information is contained in the Module Descriptions in section 3.10.

SECTION 4
QUALITY ASSURANCE PROVISIONS

4.1 Introduction and Definitions

"Testing" is a systematic process that may be preplanned and explicitly stated. Test techniques and procedures may be defined in advance, and a sequence of test steps may be specified. "Debugging" is the process of isolation and correction of the cause of an error.

"Antibugging" is defined as the philosophy of writing programs in such a way as to make bugs less likely to occur and when they do occur, to make them more noticeable to the programmer and the user. In other words, as much error checking as is practical and possible in each routine should be performed.

4.2 Computer Programming Test and Evaluation

The quality assurance provisions for test consists of the normal testing techniques that are accomplished during the construction process. They consist of design and code walk-throughs, unit testing, and integration testing. These tests are performed by the design team. Structured design, design walk-through and the incorporation of "antibugging" facilitate this testing by exposing and addressing problem areas before they become coded "bugs."
