The Successful Development of the Automatic Testing Facility for Tactical Guided Missiles.

→ Liberation Army Daily, Wang Tenming reports: The automatic testing facility for tactical guided missiles has passed through the evaluation at Beijing on January 23. This is the achievement accomplished by a certain research institute of the tactical guided missile troop by applying the new microprocessor technology.

In order to improve the conventional tactical guided missile testing method of our country, a certain research institute started to develop this particular new technology in 1982. After arduous exploration, it became a success. All experts in the evaluation team considered that the success of this facility's development made an encouraging step in the era of the modernization of our country's weapon testing launch facility. It is not only significant in the sense of improving the combat capability of the tactical missile troops, but also has paved the way for our country to widely apply this new technology.
