INTRODUCTION

Effective targeting of recruiting efforts requires that the Department of Defense understands the backgrounds, attitudes and motivations of young men and women, and their intentions to serve in the military. In the past, two survey series provided data on these issues: the Youth Attitude Tracking Study (YATS) and the Reserve Component Attitude Study (RCAS). The Youth Attitude Tracking Study II (YATS II) is a reconfigured survey begun in 1983 that merges the former YATS and the non-prior service portion of the RCAS into a single study.

This volume presents supplementary tabulations for the 1986 YATS II. These tabulations show the distributions of responses to the questions asked during the 30-minute telephone interview for the study. The interpretive analyses appear in a companion volume, Youth Attitude Tracking Study II: Fall, 1986. In addition, highlights of the interpretive analyses are in Highlights: 1986 Youth Attitude Tracking Study II.

Definitions and Organization of Data Tables

Respondents. Respondents to the 1986 YATS II were drawn from four market groups:

- Young Males aged 16-21,
- Older Males aged 22-24,
- Young Females aged 16-21, and
- Older Females aged 22-24.

Consistent with past YATS surveys, eligible individuals had no prior or current military service and were not beyond the second year of college. Analyses are based on interviews from 5,382 young males, 1,068 older males, 3,191 young females and 1,102 older females

In 1986, there were two changes in the market groups that were studied. First, the older male sample consisted of 22-24 year olds, in contrast to a sample of 22-29 year olds from 1983-1985. Consequently, results for the older males from the present study are not directly comparable to results for 22-29 year olds from the 1983-1985 waves of the study. Second, data collection from females aged 22-24 was initiated in 1986. This group was not included in any YATS II data collection in years prior to 1986.

Tabular Content. Data tables for the 1986 YATS II survey present two types of information:

- Marginal response distributions for each market group, and
- Cross tabulations of questions with the key analysis variable of "composite propensity to serve in the military."

Responses cross tabulated with propensity are presented separately for each market group.

The 1986 YATS II survey assessed propensity to serve in the active military and propensity to serve in the Reserve Components (defined below). To provide maximum information about each type of propensity, tabular results are presented in two parts, one part showing active propensity and the other part showing Reserve propensity. In Part 1 tables, propensity refers to composite propensity to join the active Services; in Part 2 tables, propensity refers to composite propensity to join the National Guard or Reserves.

Measurement of Propensity. The term "propensity" refers to the self-reported likelihood of a respondent enlisting in the military. Composite Active Propensity is based on four questions assessing the likelihood of serving in the Army (Q510 in the questionnaire), the Navy (Q513), the Marine Corps (Q512), or the Air Force (Q511).

These questions were asked with the following format:

Now, I'm going to read you a list of several things which young (men/women) your age might do in the next few years. For each one I read, please tell me how likely it is that you will be doing that.

How likely is it that you will be serving on active duty in the _____ (Army, Navy, Marine Corps, Air Force)? Would you say

Definitely,
Probably,
Probably not, or
Definitely not?

Composite Active Propensity is constructed as the most positive response given to the four questions. For example, an individual who indicated that he would "probably enlist" in the Army, but "probably not enlist" in the Navy, the Air Force, or the Marine Corps was assigned a value of "probably enlist" on the Composite Active Propensity measures. Respondents with values of "definitely enlist" or "probably enlist" on the composite measure are defined as having "positive propensity." Respondents whose values on the composite measure were "probably not," "definitely not," "don't know" or "refuse" are defined as having "negative propensity."

The 1986 YATS II survey also assessed Reserve propensity based on two questions--one about joining the National Guard (Q505) and the other about joining the Reserves (Q507). The questions were as follows:

How likely is it that you will be serving in the _____
(National Guard or Reserves)? Would you say

Definitely,
Probably,
Probably not, or
Definitely not?

A Composite Reserve Propensity measure was formed from these two items and was constructed in the same manner as the Composite Active Propensity measure.

Composite Reserve Propensity computed for the 1986, 1985 and 1984 YATS II tables differs from the Composite Reserve Propensity measure computed for the 1983 YATS II tables. The former are based on the two items noted above whereas the latter is based on six items used in the Reserve Component Attitude Study (RCAS). Thus, results of Reserve propensity in 1983 are not directly comparable to those for 1984-1986. In contrast, Composite Active Propensity is based on the same items for the four years and results are comparable.

Table Format

The Supplementary Tabulations provide information about the distributions of responses for the 1986 YATS II questions. Tables present percentages based on the sample data weighted to yield population counts.¹ Additionally, the bottom row of the tables shows the actual number of respondents on which the weighted estimates in the columns are based. These numbers can be used, roughly, to judge the relative reliability of the estimates; estimates based on small numbers of respondents are less reliable than those based on larger numbers.

Because of considerable variation in the design effects associated with individual questions, generalized standard errors are not provided for the tables. Data from the tables should be used for determining how respondents reacted to individual questions or set of questions and for framing questions about issues that may be of further analytical interest. It is not appropriate to use these data to make comparison statements about significant differences.

¹/ It is necessary to weight the sample results primarily because respondents were chosen with non-random selection probabilities based on the 1986 study's stratified two-stage sample design. In order to include respondents from less-populated areas (MEPS) to support reliable estimates and in order not to waste resources by questioning more respondents from heavily populated areas than are needed to make reliable estimates, sample members were selected with probabilities disproportionate to their representation in the population. Sample weighting basically multiplies the respondents by the inverse of their original selection probabilities to reestablish their impact on estimates proportional to their representation in the population. Then, within each MEPS, the weights are adjusted to account for nonresponding households and nonresponding eligibles identified in a household. In addition, the weights account for multiple households contacted using a single telephone number and for households that could have been contacted using multiple telephone numbers. As a result, the weighted percentages presented in this report are unbiased estimates of national percentages.

A maximum of 12 different subgroups appear in the tables. These are:

- 1) Young males with positive propensity.
- 2) Young males with negative propensity.
- 3) Older males with positive propensity.
- 4) Older males with negative propensity.
- 5) Young females with positive propensity.
- 6) Young females with negative propensity.
- 7) Older females with positive propensity.
- 8) Older females with negative propensity.
- 9) Young males overall (total of groups 1 & 2).
- 10) Older males overall (total of groups 3 & 4).
- 11) Young females overall (total of groups 5 & 6).
- 12) Older females overall (total of groups 7 & 8).

The labels specifying the propensity subgroups are abbreviated. Positive propensity within each market group is designated as "POS PROP" and negative propensity is represented by "NEG PROP." Some questionnaire items were asked only of specific market groups (e.g., older males). In these cases the tables have fewer columns.

Reading the Tables

In most cases, percentages in the tables are column percentages and sum to 100. A few tables, which are specially noted, summarize responses to questions that allowed multiple responses and, consequently, have varying totals. Percentages are within market group and level of propensity for the first eight columns. The four right-most columns present percentages within each market group as a whole. Care must be taken to interpret a percentage within the appropriate subgroup.

The table format used allows direct comparison of the different subgroups. For example, in Table Q404 on page 14, one can see that 58.5 percent of the older males report the 12th grade as their highest grade completed, whereas only 31.0 percent of the young males report the 12th grade as their highest. Similarly, for young males with positive propensity to serve in the active military, 20.2 percent report the 12th grade as the highest grade completed; for young males with negative propensity, 36.1 percent indicate the 12th grade as their highest.

It is important to interpret the column percentages correctly for positive and negative propensity and not to confuse them with row percentages. For example, in Table Q404, if the existing data for positive propensity were row percentages, the interpretation would be that among respondents whose highest grade attended is the twelfth grade, 20.2 percent of young males have positive propensity and 36.1 percent of young males have negative propensity. Clearly, these numbers do not add to 100 percent. Thus, care should be taken not to interpret the tables as if they represented row percentages.

Questionnaire Skip Patterns and Study Respondents

The 1986 YATS II questionnaire is very similar to the 1985 YATS II questionnaire (see cross reference in Appendix A) and was designed to obtain necessary information for the study and at the same time to minimize respondent burden. The latter was accomplished by use of skip patterns within the questionnaire. Thus, respondents only were asked items that were applicable based on their answers to other items. For instance, respondents who said they did not plan to attend school or a training program in the fall (Q407) were not asked about the kind of school in which they would be enrolled (Q408A). The latter question (called a "filtered" question) was asked only of the subset of individuals who were planning to attend school. Accordingly, the numbers of respondents to these filtered questionnaire items are smaller, and the percentages are based only on the relevant subgroup. Questions within a skip pattern can be identified by smaller numbers of respondents and, often, by a parenthetical remark in the table title. Skip pattern instructions appear in the questionnaire (Appendix B).

Parts 1 and 2 of the Supplementary Tabulations are based on the same questionnaire items (403-717) with the exception of one set of items, questions 554-582. Of these items, questions 554-563 apply only to active duty service and appear only in Part 1 tables. Similarly, questions 571-582 apply only to service in the Reserve components and appear only in Part 2 tables. The sample sizes for these subsets of items and for the total study appear below in Table 1.1. Note that except for young males on questions 571-582, all other items were asked of all respondents.

Table 1.1. Question Sets and Sample Respondents

Tabulation Part	Question Sets	Young Males	Older Males	Young Females	Older Females
All respondents	403-525 601-717	5,382	1,068	3,191	1,102
Active only (Part 1)	554-563	5,382	1,068	3,191	1,102
Reserve only (Part 2)	571-582	2,613	1,068	3,191	1,102

Note: Item numbers 526-553, 564-570, and 583-600 were not used in the questionnaire. Table entries indicate the total number of interviews for the question sets. Numbers responding to specific items vary due to missing data and questionnaire routing (skip) patterns.

Part I

Active Service Propensity Tables

The propensity measure used for the tables in this section is Composite Active Propensity. Composite Active Propensity is based on responses to questions regarding the likelihood of serving on active duty in the Army (Q510), Navy (Q513), Marine Corps (Q512), or Air Force (Q511).

The response options for each of the items are "definitely enlist," "probably enlist," "probably not enlist" and "definitely not enlist." Composite Active propensity is the respondent's most positive response to the four items about enlisting in the active military. For example, an individual who indicated that he would "probably enlist" in the Army, but "probably not enlist" in the Navy, the Air Force, or the Marine Corps was assigned a value of "probably enlist" on the Composite Active Propensity measure. Individuals with values of "definitely enlist" or "probably enlist" on the composite measure comprise the positive propensity category shown in the tables. Individuals with values of "probably not enlist," "definitely not enlist," "don't know" or "refuse" comprise the negative propensity category shown in the tables.

Part II

Reserve Component Propensity Tables

The propensity measure used for the tables in this section is Composite Reserve Propensity. Composite Reserve Propensity is based on responses to two questions regarding the likelihood of serving in the National Guard (Q505) or in the Reserves (Q507).

The response options for each of the items are "definitely enlist," "probably enlist," "probably not enlist" and "definitely not enlist." Composite Reserve Propensity is the respondent's most positive response to the two items about enlisting in the Reserve Components. For example, an individual who indicated that he would "probably enlist" in the National Guard, but "probably not enlist" in the Reserves was assigned a value of "probably enlist" on the Composite Reserve Propensity measure. Individuals with values of "definitely enlist" or "probably enlist" on the composite measure comprise the positive propensity category shown in the tables. Individuals with values of "probably not enlist," "definitely not enlist," "don't know" or "refuse" comprise the negative propensity category shown in the tables.

Composite Reserve Propensity presented in these tables is the same as that in the 1985 and 1984 YATS II supplementary tables but differs from the Composite Reserve Propensity measure computed for the 1983 YATS II tables. The 1983 measure was based on six items taken from the Reserve Component Attitude Study (RCAS) rather than the two items used here. Thus, results of Reserve propensity are directly comparable to the 1985 and 1984 results, but not the 1983 results.
