FOREWORD

This report was prepared for the US Army Materiel Command at the direction of the Deputy Chief of Staff for Research, Development, and Acquisition. This edition is a continuation of the series of reports that was initiated in 1966.

Each In-House RDTE Activity of the Department of Defense is described on one page in this compilation. The data for 1986 are summarized in tables preceding the main text.

All current DOD RDTE Activities which meet the report requirement of having at least 25 per cent of their budget in RDTE Funds are listed in the contents alphabetically within each department. Some facilities which do not meet the requirement previously noted are also listed by special request. Organizational changes during FY 1986 appear in appendix I.

DOD instruction 7700.9, which has been the basis for this report since its inception, has been replaced by a tri-service regulation, AR 70-63 NAVCOMPTIST 7044.5E, AFR 80-26, DNA 7700.9A, Entitled DOD In-House RDTE Annual Activities Report, 1 September 1981. Appendix II contains many of the definitions used in this report and is provided as an additional aid in use of the report. Appendix III lists selected abbreviations and acronyms. Appendix IV lists selected key words with page references.

Every effort has been made to provide accurate information, particularly fiscal and personnel data. All numbers and statements have been thoroughly examined.

Although considerably more data is accumulated than published in this report, all data is used by numerous organizations such as the Department of Defense, Office of Technology Assessment, Army Audit Agency, various Committees of the Congress, and the General Accounting Office among others. Availability of this data also allows timely and accurate information to be provided without continual recourse to the appropriate field activity.

It is desired that this publication be given widespread distribution in the DOD Laboratories as an internal management document at the Director and Commanding Officer level as well as at the bench level in order to allow personnel an opportunity to familiarize themselves with the functional capabilities of other DOD Laboratories. It is hoped that by this means laboratory scientists and engineers will be encouraged to communicate with each other on common problems of interest to their service laboratories as well as to communicate with laboratories of the other services.

Additional copies of this document may be obtained by writing the Defense Technical Information Center, Building 5, Cameron Station, Alexandria, Virginia 22314.
