19. ABSTRACT (Continue on reverse if necessary and identify by block number)

The materials presented in this series of research notes were prepared as part of Project A, the Army's current large-scale manpower and personnel effort to improve the selection, classification, and utilization of Army enlisted personnel. This portion of the Project A research dealt with the development and field tryout of task-based MOS-specific knowledge tests, hand-on tests, task performance ratings, and job experience questionnaires for nine Military Occupational Specialties (MOS), and is reported in ARI Technical Report 717. Job Performance domains were derived from Army Occupational Survey Programs (ASOP) results, Soldier's Manuals, and Proponent Agency input. Subject matter expert judgements of task criticality, difficulty, and similarity were used to select tasks for test development. All tests were pilot-tested on Skill Level 1 soldiers and noncommissioned officers. Field tests were conducted among 114-178 soldiers per MOS. Results were used to revise the instruments and to provide evidence of reliability and validity. Proponent agencies provided technical reviews before the field tests and after the instruments were revised. (OVER)

19. Abstract (continued)

Hands-on and knowledge tests exhibited reasonable performance variability, as did the rating scales. Correlations between the two test methods were high, but do not suggest that either should substitute for the other. Rating scales correlated more highly among themselves than with the tests, as would be expected from their surface dissimilarity and affective focus. Job experience emerged as a potentially important factor in explaining performance variability.

The instruments were finalized for the upcoming Concurrent Validation, where they will serve as criterion measures for a new predictor battery designed to supplement the Armed Services Vocational Aptitude Battery (ASVAB).

ARI Technical Report 717, Development and Field Test of Task-Based MOS-Specific Criterion Measures, describes the development and field test of the measures discussed above. This volume presents the following appendixes to that report:

D.1 Sample Task Card For Task Clustering

TASK CONTENT

Here is a set of (number) cards covering the tasks we discussed earlier. We want you to sort them into groups on the basis of what the soldier does in performing the tasks.

Sort the tasks into groups according to your own knowledge of the activities required. Tasks which require similar procedures or principles should be placed in the same group. The objective is to set up groups of tasks so that the task activities tend to be alike within a group but different from one group to another.

You might want to go through the tasks and sort them fairly quickly first. Then go over your groups more carefully and reassign tasks as you think it is necessary. You may want to break large groups into smaller ones, or combine small groups into larger ones.

Take your time and do a careful job. There are no right or wrong answers here, only your own best judgment as a job expert as to how tasks are alike or different.

Because of the variety of tasks, we expect that you will end up with 15 to 25 groups of tasks. But its OK if you believe fewer or more groups are necessary.

When you are through, clip together the task cards in each group and let the group leader know you are finished.

D.2 Instructions For SME Task Clustering (Batch A)

TASK CONTENT

We now want you to do something completely different with the tasks. We want you to sort them into groups on the basis of what the soldier does in performing the tasks. Each task has been printed on a card so that you can sort the tasks by sorting the cards.

Sort the tasks into groups according to your own knowledge of the activities required. Tasks which require similar procedures or principles should be placed in the same group. The objective is to set up groups of tasks so that the task activities tend to be alike within a group but different from one group to another.

To get you started, we have already sorted the tasks from the Soldier's Manual of Common Tasks into six groups based on our previous experience with other MOSs. Look through the tasks in these groups first. You may leave them as they are or rearrange them now or later.

Next, go through the rest of the tasks and sort them by adding them to the common task groups or by creating new groups. After you finish your first pass through the tasks, review your groups, including the common task groups. In this review reassign tasks as you think it is necessary. You may want to break large groups into smaller ones, or combine small groups into larger ones.

Take your time and do a careful job. There are no right or wrong answers here, only your own best judgment as a job expert as to how tasks are alike or different.

Because of the variety of tasks, we expect that you will end up with 15 to 25 groups of tasks. But it's OK if you believe fewer or more groups are necessary.

When you are through, clip together the task cards in each group and let the group leader know you are finished.

D.3 Instructions For SME Task Clustering (Batch B)

Your personnel unit is deployed to Europe as part of a US Corps during a deteriorating political and military situation. The Corps' mission is to defend and maintain the host country's border in the event that hostilities escalate. The enemy approximates a combined arms army and has nuclear and chemical capability. Air parity does exist. The Corps has drawn all equipment and is fully operational. In support of the Corps' Personnel Operations Center, your unit is responsible for supporting the functions of strength accounting, replacement operations, casualty reporting, personnel management, personnel actions and personnel records.

Neutral or increasing tension scenario for MOS 71L.

Your soldiers are assigned to support the activities of the installation Provost Marshal on a large Army post in the mid-western United States. Post activities include a basic training center, an officer/enlisted training school and maneuver units under a separate brigade organization. There is a permanent on-post dependent population of approximately 4,000. Provost activities supported include physical security and crime prevention, investigations, traffic and game warden operations. K-9 section, AWOL apprehension/civil liaison, vehicle and weapons registration and operation of the installation detention facility. 95B personnel also must complete individual soldier training, SQT testing, command and maintenance inspections and team/unit training.

Garrison (CONUS) scenario for MOS 95B

Your tank battalion is assigned to a U.S. Corps in Europe. Hostilities have broken out and the Corps combat units are engaged. The Corp's mission is to defend, then reestablish, the host country's border. Pockets of enemy airborne/heliborne and guerilla elements are operating throughout the Corps sector area. The Corps maneuver terrain is rugged, hilly, and wooded, and weather is expected to be wet and cold. Limited initial and reactive chemical strikes have been employed but nuclear strikes have not been initiated. Air parity does exist.

Combat scenario for MOS 19E

D.4 Sample Scenarios: Neutral, Training, Combat

TASK IMPORTANCE

The first thing we want to do is find out how important you think each of these tasks is. But you will want to know, "Important to what?" So begin by reading the following mission scenario:

(Scenario)

Now . . . put yourself in the shoes of a first-line supervisor and think about what tasks are important for Skill Level One (MOS) soldiers to perform so the unit can accomplish its support mission. The soldiers may be assigned duty positions normally held in the (unit). A good way to look at it is to ask yourself, "If a (MOS) soldier can't do all of these tasks, which ones are the most important for the situation described?"

With this in mind, read through the (number) tasks. Then go back through them and pick out the one task you think is the most important in the situation and put it face down on your right. When you've done that, go through the stack again and pick out the one you think is least important in the situation and put that card face up on your left.

Now do that again for the remaining tasks--pick the one that is most important and put it face down on top of the one on your right, then put the least important face up on the one to your left.

Continue this procedure thinking each time just about the tasks still in the stack you started with and choosing from those the one most important and the one least important. You will be through when all task cards have been divided into two piles. Please be careful to keep the two piles in order as you do this. Let the group leader know when you are finished.

D.5 Instructions For SME Judgments of Task Importance Ratings (Batch A)

TASK IMPORTANCE

The first thing we want to do is find out how important you think each of the (MOS) tasks is. But you will want to know, "Important to what?" So begin by reading the following mission scenario:

(one of three scenarios inserted here)

Now . . . put yourself in the shoes of a first-line supervisor and think about what duties are important for Skill Level One (MOS) soldiers to perform so that the unit can accomplish its mission. The soldiers may be assigned duty positions normally held in the Battalion. A good way to look at it is to ask yourself, "If a (MOS) soldier can't be proficient in all of these tasks, which tasks are the most important for the situation described?"

With this in mind, first read through all of the task titles and descriptions listed on the following pages to get an idea of what tasks are being considered. After you have read all of the tasks, go back to the beginning and describe how important the tasks are for (MOS) soldiers to perform if the unit is to successfully accomplish its mission. Describe the importance of each task by writing on the line to the left of each task the number from the scale below that best tells its importance.

1	2	3	4	5	6	7
Not at all important for unit success	Very little importance for unit success	Some importance for unit success	Moderate importance for unit success	Great importance for unit success	Extreme importance for unit success	Absolutely essential for unit success

D.6 Instructions For SME Judgments of Task Importance Ratings (Batch B).

PERFORMANCE DISTRIBUTION

We want you to consider 11B job tasks from the standpoint of how well typical 11B soldiers can perform them. To do this, first think of a typical group of 10 11B (E1-E4) soldiers from your experience. All should have about 2 years' experience in a battalion and should have been trained in preparation for an ARTEP.

With this group of soldiers in mind, read the first job task statement below and estimate about how many of the 10 soldiers could perform the task all the time. Write that number on the line beside "all of the time" for that task. Then estimate how many of the 10 could never do the task and write that number on the line by "never." Fill in each of the middle three lines on the scale in the same way. The total for the five boxes should equal 10.

Then repeat this procedure for each of the remaining tasks, until all tasks have been judged. Keep the same soldiers in mind for each task.

If you have never seen soldiers perform the task, put a check mark at the end of the scale but still fill out the scale with your best guess as to how many you think could perform at each level.

Out of 10 soldiers, how many can do each task:

APPENDIX E

Instructions For Task Selection

- E.1 Instructions For Initial Selection (Batch A)
- E.2 Instructions For Initial Selection (Batch B)

Task Selection-Phase III (Batch A)

During Phase II of the task selection process, you reviewed your original selections of 35 tasks for the group A MOS in light of the general policy to which the selections seemed to conform. You were asked to give the rationale for selecting or rejecting tasks, and asked also to indicate any changes you wanted to make.

From your comments and changes, we have compiled a master list of all tasks selected by one or more judges in each MOS. We would like you to review your selections again and make changes, using as input the number of judges who selected each task and the number who actively rejected each task, as well as their reasons for selecting or rejecting.

This will be an iterative process, with a goal of reaching a consensus on 35 tasks for each MOS. To this end, the emphasis is now on inter-judge compromise and agreement, rather than conformity to your own general policy for selection. But we ask that you work independently of the other judges.

The lists of tasks for each MOS are attached. For each task that you selected, decide whether you want to retain the task, or whether you want to drop the task and select another task from the master list. Remember, for every task you drop you must select another from the list; for every new task you want to select you must drop one of your previous selections. You will finish with 35 tasks in each MOS.

If your opinion about any task (pro or con) is in the minority and you do not want to change, please note your reasoning in the column marked "comments." Conversely, if your opinion is in the majority and you want to change, please note your reasoning in the "comments" column.

Please be sure that whatever your decision is on a task (select or reject), the reason for your decision is among those listed in the "Reason" column. If your reason is listed, underline or circle it; if your reason is not listed, please write it in. (This step is not necessary for tasks selected by all judges.)

E.1 Instructions For Initial Selection (Batch A)

INSTRUCTIONS FOR SELECTING 30 TASKS

DAY ONE

SMEs from this agency (school) have helped us to identify the tasks that skill level one soldiers perform on the job. SMEs have also provided various information about these tasks. They have rated the importance of these tasks under different conditions. They have judged how difficult it is for typical (MOS) to perform the tasks; and they have sorted the tasks into groups of tasks having similar performance requirements. The results of the SME inputs are summarized in the document that we gave you. We now are asking you as SMEs to help us select 30 tasks that represent the total job of (MOS).

You will choose 30 tasks from a total of (number) tasks. The names of all of the tasks are listed. If you aren't sure what a task is, the supplemental handout gives a brief description of the task. You may refer to the task descriptions any time.

Note that the tasks with similar performance requirements have been grouped into (number) clusters. You must select tasks from each cluster so that we can be certain that all aspects of the (MOS) job are represented. The target number of tasks from each cluster is shown. For Cluster 1 you are to select (number) tasks, for Cluster 2 (number) tasks, and so on.

The first three columns of numbers indicate the importance ratings that SMEs gave to each task under conditions of combat (COMBAT), of increasing international tensions but short of war (TENSION), and at a U.S. post engaged in normal training activities (US/TNG). The higher the number, the more important the task has been rated.

The fourth column (DIFF) indicates how SMEs rated each task for difficulty. A higher number notes that a task is harder for (MOS) soldiers to perform than a task with a lower number.

The fifth column (VARY) indicates the degree to which (MOS) soldiers differ in being able to perform each task. A number higher than 1 suggests that soldiers will differ quite a bit in their ability to do the task. Some can do the task well, some can do part of the task, and some can't do the task very well at all. A number of lower than 1 suggests that (MOS) soldiers tend to perform the task at about the same level of proficiency.

The last column (FREQ) shows the percent of (MOS) soldiers who reported on Army Occupational Surveys that they perform the tasks on the job. As you can see some tasks are performed by most (MOS) soldiers and other tasks are performed by a smaller percentage. The frequencies shown with an asterisk are SME estimates.

E.2 Instructions For Initial Selection (Batch B)

INSTRUCTIONS FOR SELECTING 30 TASKS (Cont'd.)

When selecting the target number of tasks from each cluster, you must consider the ratings and information given. You will have to balance this information with your own experience and knowledge as a SME. In general, the best tasks to select are those that are rated as being important, of moderate difficulty, have relatively higher variability among soldiers, and are performed by a fairly high percentage of (MOS) soldiers. Sometimes you will have to make tradeoffs. For example, you may have to compare a task rated high in importance but with low frequency against a task with a lower importance rating but a high frequency. You will use your best judgment and experience to make your selection.

To the extent possible, we want to assure that all conditions--combat, increasing tension, US garrison--are represented in the selected tasks. For example, you might select a task that is rated highly important under all conditions.

The best way to proceed is to consider each cluster separately. Start with Cluster 1, read through the list of tasks, think a little about what these tasks are, read the description of the tasks in the supplemental handout if you need, consider the rating and frequency data, and then select the target number of tasks from the cluster. Repeat the procedure for Cluster 2.

Are there any questions? If you have a question once you start selecting tasks, please let me know. Begin.
