SUBJECT: Fiscal Year 1988 Army Study Program

SEE DISTRIBUTION

The attached document presents the major command and staff agency study agendas for Fiscal Year 1988. This year's edition of The Army Study Program (TASP) comprises a wide range of analytical efforts which are intended to address the major issues of the Army under the auspices of Army Regulation 5-5, Army Studies and Analyses.

This is the second consecutive year in which the Army Study Program has been developed and examined with respect to the Critical Army Issues. As a result, comparisons with FY87 are available. In addition, studies are examined with respect to their potential impact upon the Army.

This document also contains several listings of the studies in the annual program. These listings group the studies by sponsor, critical Army issue, functional area, identification code and alphabetically by title.

The FY88 TASP is being provided to organization headquarters. Internal distribution will be the responsibility of those headquarters. In addition, individual requests may be made of this office by contacting Mr. Bill Barr at AUTOVON 227-0026 or COMM 202-697-0026.

EXECUTIVE SUMMARY

This document contains The Army Study Program (TASP) for Fiscal Year 1988. This study program was approved at the Army Study Program Review, 27 September 1987. This review was chaired by the Deputy Under Secretary of the Army (Operations Research) and attended by the Commander, TRADOC and heads of Army Staff Agencies.

This report describes the annual study program in terms of the issues addressed by these studies, functional area, and potential impact upon the Army, as well as other characteristics of studies as contained in the Study Program data base. A comparison of the FY88 study program with study programs from prior years is also provided.)

Data presented were collected from agencies and commands and tabulated and analyzed by the Study Program Management Agency. Salient results of the review follow:

- o There are 361 studies in the FY88 Army Study Program. This is a decrease of 30 percent from FY87.

- o Despite a reduction in the number of studies in TASP, the number of studies addressing major issue areas developed by the Issue Assessment Process increased. About 54 percent of FY88 studies (167) address these issues. All nine major issue areas are addressed.

- o All functional areas are addressed by the FY88 Study program. Over one-half of the studies relate to the functional areas of equipping and sustaining (about the same as FY87).

- o About 69 percent of the FY88 program will be accomplished using the Army's in-house analysis agencies and elements, lower than for the FY87 study program.

- o US Army Training and Doctrine Command (TRADOC) will sponsor 49 percent of the studies in the FY88 Study Program. The remaining studies are distributed among 20 other HQDA staff agencies and Major Commands.

o About one-sixth of the studies in the FY88 Study Program have a potential for directly impacting how major commands and staff agencies function. More than one-half have a potential for contributing to the evaluation or management of programs and projects.

CHAPTER 1

INTRODUCTION

The Army Study Program comprises a wide range of analytical pursuits which address the major issues of the Army. These issues are enumerated annually in the Defense Guidance and The Army Plan. This document contains listings of analytical endeavors which have been identified by Headquarters, Department of the Army, subordinate staff agencies, field operating agencies, and major commands as falling within the purview of Army Regulation 5-5, Army Studies and Analyses.

This FY88 program of planned and ongoing studies consists of 361 study efforts. In accordance with the definition provided in AR 5-5, these studies represent a broad class of analytical activity characterized by the application of the tools of operations or systems analysis to Army problems. They include development of assessments, alternatives, and methodologies and are intended to provide conclusions and recommendations to the decision-makers of the Army so that they can better perform their duties.

Annually, the Study Program Management Agency (SPMA) issues the Study Program Guidance. Focused guidance for the study program is provided through the Issue Assessment Process. In this process, critical issues are derived from the expressed concerns of key individuals from within, and outside of, the Army. Guidance is updated as studies addressing these issues are completed.

Proposed studies are subsequently submitted to SPMA where they are reviewed and presented to the Study Program Coordination Committee for development of the following year's Army Study Program. This document describes the Army Study Program developed for FY88. In conjunction with the annual evaluation of completed studies, this description represents an essential element in the continuing process of constructing a program that is sensitive and responsive to vital Army needs.

Chapter 2 provides an overview of the FY88 Army Study Program in terms of functional area, resources, potential impact upon the Army and other characteristics to allow the reader to gain some insight into the overall scope of the annual study program. Also included in this chapter are comparisons of the FY88 Army Study Program with programs for previous years. The comparisons serve to illuminate changes in direction and emphasis of the annual study programs. Comparisons are based on selected characteristics of studies and compare the figures of both planned and ongoing studies.

Chapter 3 provides a description of critical Army issues developed from the Issue Assessment Process. These issues provide direction and guidance for the Army Study Program. Following this description is a tabular presentation and analysis of the extent to which the FY88 Army Study Program addresses these issues.

By reviewing the tables and data in these two chapters, the reader can draw inferences about the balance, priorities and resource implications of the annual Army Study Program.

Chapters 4 through 7 provide listings of the studies contained in the FY88 program sorted by sponsor, critical issue and by identification code. Appendix A provides a glossary of terms used in the management of the study program. Appendix B contains a list of Army study coordinators with office symbol, telephone numbers, and location. Appendix C provides a list of points of contact for DOD studies and analyses.

CHAPTER 2

FY88 ARMY STUDY PROGRAM OVERVIEW

This chapter presents an overall description of the FY88 Army Study Program. Data are presented in frequency tables, accompanied by findings and interpretations of salient results.

The FY88 Army Study Program comprises 361 studies. This is a reduction from FY87 of more than 30 percent. This difference can be attributed to two fundamental causes. Resources for FY88 studies have been reduced over FY87 levels. This has occurred primarily in the area of contract funding. The timing of this report also is a factor in the number of studies reported. Study programs developed earlier in the year tend to include a large number of studies that are never initiated. This report includes only those efforts that have been resourced for FY88.

The FY88 Program is described below in terms of several attributes. Characteristics examined in this chapter are functional area, resources, impact, and study sponsor.

One of the most significant descriptors of Army studies is the extent to which critical issues are addressed. An overview of Army studies from this perspective is given in chapter 3.

FUNCTIONAL AREA

To capitalize on the functional expertise of the Army Staff, and to facilitate the development of the Army's program in terms useful to the senior decision-makers, nine functional areas have been established into which Army programs are classified. The table below describes the FY88 Army Study Program in terms of the functional area to which each study best applies.

In this and the following tables, N is the number of studies, %N is the percent of studies, and %R is the percent of total resources available to the study program. In order to combine in-house (staff year) and contract (dollar) resources, monetary amounts were converted to contract-equivalent staff years (\$150,000 is equivalent to one staff-year).

FUNCTIONAL AREA	N	%N	%R
Structuring	17	5	3
Manning	51	14	3
Training	51	14	15
Mobilizing & Deploying	32	9	4
Providing Facilities	1	<1	<1
Managing Information	10	3	3
Equipping	146	40	64
Sustaining	41	11	6
Managing	12	3	2
TOTAL	361	100	100

o Almost half of the studies in the FY88 Study Program relate to the functional area of Equipping. Typical of these studies are cost and operational effectiveness analyses (COEAs) and other weapon systems analysis. Manning and Training tie as the second most represented functional areas.

o Equipping is easily the dominant functional area in terms of resources applied (64 percent). Training places as a distant second with only 15 percent of all study resources applying to that functional area.

o The functional area least represented by both studies and resources in the FY88 Study Program is Providing Facilities.

FUNCTIONAL AREA	PERCENT RESOURCES BY YEAR		
	FY86	FY87	FY88
Structuring	11	8	3
Manning	8	6	3
Training	10	15	15
Mobilizing & Deploying	8	3	4
Providing Facilities	1	<1	<1
Managing Information	12	12	3
Equipping	25	42	64
Sustaining	21	11	6
Managing	4	3	2
TOTAL	100	100	100

o When distribution of study resources are viewed over a three-year period, certain trends in the study program emerge. The proportion of resources allocated to studies in the functional area of Equipping have steadily increased by almost 20 percent per year. Conversely, studies in the areas of Sustaining and Manning have decreased in percent of resources dedicated.

SPONSOR

Twenty-one Army organizations will sponsor study efforts in the FY88 Study Program. In the following table, the FY88 Army Study Program is displayed showing sponsoring organizations. For this discussion, HQDA sponsors have been combined into one group. Major commands have been placed in the Other category, with the exceptions of TRADOC and AMC. Of the Major Commands in the Army, these two conduct the greatest number of studies.

<u>SPONSOR</u>	<u>N</u>	<u>%N</u>	<u>%R</u>
HQDA	94	26	14
AMC	27	7	1
TRADOC	176	49	68
Other	64	18	16
Total	361	100	100

o The organization sponsoring the largest number of studies (49%) is Training and Doctrine Command (TRADOC). Together with Headquarters, Department of the Army (HQDA) and the Army Materiel Command (AMC), approximately 82 percent of the 361 studies are accounted for.

o The presence of TRADOC in the FY88 Study Program is even more pronounced when resources are considered. Sixty-eight percent of study resources for FY88 are programmed for TRADOC. This also indicates that TRADOC studies are more resource intensive than studies sponsored by other organizations.

The table below provides a comparison of the FY88 Study Program to the program for previous years, distributed by study sponsor.

NUMBER OF STUDIES BY SPONSOR

SPONSOR	FY85	FY86	FY87	FY88
HQDA	131	173	174	94
AMC	64	41	44	27
TRADOC	212	183	241	176
Other	78	61	61	64
Total	485	458	520	361

o The number of studies in the Army Study Program decreased from 520 in FY87 to 361 in FY88. This reduction is shared among HQDA, TRADOC and AMC. The most significant decrease is in studies sponsored by HQDA.

o The following table indicates that resources for the FY88 Study Program decreased by forty-four percent from FY87. FY88 resource levels are approximately equal to those for FY86.

o The sponsoring organization having the strongest effect on the decrease in study resources was TRADOC; however, TRADOC resources for FY88 remain above those for FY86.

o When FY88 resource levels are computed as a percentage of FY87 resources, HQDA and AMC reductions surpass those for TRADOC. It should be noted that resources depicted in this table are estimated for planned programs. Actual resources for executed programs will vary.

STUDY RESOURCES (TPSY) BY SPONSOR

SPONSOR	FY85	FY86	FY87	FY88
HQDA	342	409	439	226
AMC	74	94	69	19
TRADOC	951	977	1965	1054
Other	119	96	304	253
Total	1486	1576	2777	1552

IMPACT

Studies classified as having a primary impact have an immediate or direct impact upon how a command or agency operates. For example, one study in this group will affect the distribution of equipment based upon minimum levels required for brigade-size rotations. Studies with a secondary impact contribute to the evaluation or management of a program or project. Typical of these studies is an effort to examine echelons above corps aviation maintenance and management and wartime policy. Efforts having a tertiary impact affect other studies or analyses or are conducted to provide insight. One such study will incorporate tasks into force-on force models to represent engineer functions on the battlefield.

<u>IMPACT</u>	<u>N</u>	<u>%N</u>	<u>%R</u>
Primary	57	16	16
Secondary	218	60	63
Tertiary	86	24	21
Total	361	100	100

o As the table above indicates, over half of the studies in the FY88 Study Program are expected to have a secondary impact upon the Army. Studies having a tertiary impact slightly outnumber those with a primary impact.

o The distribution of study resources by impact is virtually identical with the proportion of studies in each category.

The table below depicts the potential impact of the 361 studies in the FY88 program, distributed by study sponsor.

<u>IMPACT</u>	<u>HQDA</u>	<u>AMC</u>	<u>TRADOC</u>	<u>OTHER</u>	<u>TOTAL</u>
Primary	29	10	5	13	57
Secondary	30	11	138	39	218
Tertiary	35	6	33	12	86
Total	94	27	176	64	361

o Differences in the distribution of studies by sponsor is pronounced when the number having a primary impact is considered. TRADOC is relatively low in these studies while a larger proportion of studies sponsored by HQDA and AMC are projected to have a primary impact.

The mission of the sponsoring agency may have an effect on this distribution. The orientation of TRADOC to training studies and evaluation of weapon systems would skew this distribution away from studies having a primary impact.

CHAPTER 3

CRITICAL ARMY ISSUE

The Army Study Guidance is disseminated annually by the Study Program Management Agency. The foundation of this guidance is the Issue Assessment Process (IAP), a procedure which identifies issues of high importance and significance to the Army. These issues, derived from detailed personal interviews with senior Army leaders and key individuals external to the Army, were synthesized into topics amenable to study. During this process, priority issues were classified into nine major issues and further broken down into 24 issues and sub-issues. These are listed below. Each sub-issue is a series of concerns that the study program should now be addressing.

ISSUE ASSESSMENT PROCESS

CRITICAL ISSUES

I. Patterns of System Development

A. Project Management. The Army system of project management in weapons acquisition is currently undergoing substantial change. The PM concept must yield to good management given that each system may go through three or four PMs in its life cycle; it must allow PMs to be neutral rather than advocates for a system and the technology of the system. The concept must allow evaluation of the individual systems as part of the broader function. The present process may be less effective than alternative models. Can improving the PM process solve the problems and, if so, in what specific areas?

B. C3I Hardware-Software Development. The current approach to the development of C3I requires examination. This analysis may include examination of how this issue is handled in industry. System acquisition design strategies which encourage contractors to integrate the hardware and software functions should be investigated.

C. Fielding Policies. How are fielding decisions made? At one extreme, a system can be fielded before its performance is fully tested and understood ("field and fix"). At the other extreme, system deployment can be delayed until complete performance data are gathered. It is inefficient to rely on field remedies yet delays may otherwise be prohibitive. The central concern is the adequacy of the information upon which the fielding decision is made.

D. Life Cycle Management Data. This issue deals with use of the data required and generated in the life cycle management process. The use of this information, of which a voluminous amount is required, may not warrant its continued collection. Studies are being conducted which examine this issue from a research and development perspective. Examination as it applies to other areas is still necessary.

E. Rethinking Failures. There may be a need to rethink ideas or systems which fail to be adopted. Study is needed to address whether an idea or system that has been approved in a requirements document, but which has not been approved for funding in three budget cycles, should be terminated rather than resubmitted.

II. Management of People and Technology

A. Research and Development Support Balance. What is the proper balance between in-house and contract research? This question also needs to be asked about operations and systems analysis. Are there sound strategies that maximize the contributions of the various sources of analysis; that is, in-house and contract? Studies are needed to determine what mix and level of research, development and analysis should be performed by Army laboratories and analytical organizations and what might better be contracted.

B. Foreseeing Technology. The ability of the Army to foresee the development of technology is a critical issue: specifically, with respect to technological developments within the United States, are new organizations or techniques required? The practices of private industry and other services should be examined in analyses addressing this issue.

C. Rate of Introducing New Technology. This issue is concerned with the extent and rate of introducing new technology into weapon systems. The importance of technology needs to be assessed. Should an entire inventory be modernized or should technological improvements be phased in so that some portion of the force is at the "edge" of technology.

D. Technology and the Troops. The thrust of this issue is upon the relationship of technological developments to corresponding demands upon troop composition. There is a need to examine technological requirements and the ability to meet them through recruiting. Studies should address the limits of what can be expected of troops in terms of their exposure to new technology and the corresponding requirements upon the troops.

E. Radical Change in the Army's Capability. How might the Army achieve a radical reduction in the various Tables of Organization and Equipment? Studies addressing this concern would look at how the Army could increase its ability to perform its mission, or continue to perform at its present level, with a substantial reduction in manpower. Fundamental systematic assessment of how the Army fights and how technology might be used to improve fighting efficiency would be useful.

F. Primary Use of a Weapon System. The primary use of weapon systems is training. Study is required to determine whether this should be a consideration in design, storage, and training, and what the impact of this may be.

III. Latin America

This issue is concerned with ongoing U.S. Army planning and study activities related to total U.S./Western Hemisphere relationships including: security assistance, bilateral agreements, host nation support, military exchange programs, counter-terrorism planning, technology transfer programs, etc.

IV. Changes in the U.S. Industrial Base, Resulting in Increased Dependence on Foreign Supplies

In which areas is the CONUS industrial base inadequate for mobilization? There are many steps in the production process between raw material and finished product. Studies should be conducted which identify the vendor levels where the U.S. is dependent upon foreign suppliers. Corrective action should be identified.

V. Role of Automation and Robotics

More insight into the internal and external impact of movement to a high technology Army is needed. Currently, there are studies which address the following aspects of this issue: whether automation and robotics actually are beneficial; planning and management changes necessary for transition to a high-tech Army; the risks and opportunities in the labor force as a result of high technology. Areas for further analysis include: potential application of automation and robotics to warfighting and logistics support; the benefits and risks of applying advanced technology; the effect of automation and robotics upon individuals and societal relationships.

VI. Mission and Strengths of Active and Reserve Components

A. Impact of Reserve Component Mobilization on Industrial Mobilization and Domestic Wartime Functions. The impact of RC mobilization on vital domestic functions is not well understood and is potentially severe. Studies are required to determine alternatives which can minimize this impact. Analyses would consider various levels of mobilization and their impacts on these functions.

B. Most Effective Use of Reserve Component of the Total Army. This addresses whether present policies offer the greatest opportunities for effective use of the Reserve Component. The most effective mix of reserve and active components needs study. Also, the criteria for unit selection during various levels of mobilization need developing.

VII. Status and Role of Chemical and Biological Weapons

This topic is currently the subject of several Army studies and R&D efforts. The primary area of concern which still must be addressed, is the lack of a master plan that would ensure all the current and future efforts are mutually supportive and complimentary in nature. The development of such a plan should be of top priority throughout the chemical community.

VIII. Realistic Measures of Military Force Capability

A. Relation of Information to Force Application. The concern here is to determine the relationship between information and force application. Information, in this context, applies to command and control, C3I, etc. The changes in battle which result from C3I need specification. Some simulations and wargames have been modified to include C3I as a component or to measure the impact of command and control upon combat, combat support, and combat support services.

B. Performance Measures for Other Contributors to Warfighting. Refers to the explicit value to warfighting of support activities such as logistics, medical services and transportation. Common measures of force application for these activities for comparative purposes need development.

C. Definition of Key Functional Areas. What are the proper definitions of the words readiness, capability, sustainability and survivability? These words are variously defined by Army decision-makers and, in fact, may have significantly different meanings at the tactical, operational and strategic levels of war. Agreement is needed on the key words describing Army functional areas and related terms and on the relationships among them and other factors affecting warfighting.

IX. Recruiting, Development and Retention of Competent Personnel

A. Maximum Use of Personnel. Examines the aspects of obtaining the maximum benefit from personnel and includes training, assignments, motivation and the need for specialization.

B. Maximum Competitiveness with Other Employers. An examination of factors which influence Army's attractiveness compared to other employers. There is concern about the extent to which Army is competitive with other employers. Analysis could determine competitiveness with respect to compensation, career patterns and quality of life.

C. Cooperation with Other Employers. An examination of methods of cooperation with industry and universities to attract and hold high-tech people for the Army of the future. Instead of competing with industry for highly qualified personnel, methods of cooperation, such as training in industry and universities, must be explored. Analysis should focus on the cost and benefits of such approaches.

D. Relation of Future Needs to Future Sources. Examination of how the Army can best relate its future personnel needs to its future personnel sources. Analysis should address the impact of advanced technology and changes in the form of warfare. Studies are needed which develop productive uses for currently under-utilized sources of personnel.

CRITICAL ISSUE

To address these issues, the Study Program Management Agency has established a target of dedicating 25 percent of the Army studies to efforts focused on these subjects. In the following table, the distribution of studies in the FY88 program which relate to these issues is given.

STUDIES BY CRITICAL ISSUE
FY87-88

CRITICAL ISSUE	FY87	FY88
I Patterns of System Development	23	10
II Management of People & Technology	18	19
III Latin America	2	2
IV US Industrial Base	0	1
V Automation & Robotics	6	24
VI Active & Reserve Components	2	5
VII Role of Chemical, Biological Weapons	17	22
VIII Measures of Force Capability	34	27
IX Civilian-Military Personnel Issues	22	49
Total	129	167

o Of the 361 studies in the FY88 Study Program, about 46 percent (167) address critical Army issues. All major issue categories and 21 of the 24 issue sub-categories are to be studied.

o Despite a reduction in the overall number of studies in TASP from FY87 to FY88 of over 30 percent, the number of studies addressing critical issues increased. This suggests that the Study Program has become more responsive and focused.

o Although studies relating to personnel issues had the greatest increase from FY87 to FY88, the area which had the greatest proportionate increase was Automation and Robotics. These studies increased fourfold.

o Studies addressing issues of Patterns of System Development dropped by more than half. This is appropriate since many of these concerns were addressed by the DoD reorganization of its acquisition functions.

CHAPTER 6
LISTING OF FY88 STUDIES
BY CRITICAL ISSUE

This chapter provides an alphabetical listing of FY88 Army studies, organized by the critical issue which they address. Issues were developed through the Issue Assessment Process and are described in Appedix B of this report.

A description of the headers and symbols used in the listing can be found in the inside of the back cover and the last page of this document. A glossary of terms is located in Appendix A.

CHAPTER 7

LISTING OF FY88 STUDIES

BY IDENTIFICATION CODE

This chapter presents a listing of all studies contained in the FY88 Army Study Program by project identification code along with the study title. Used as a cross reference, the title of a study may be located when only the identification code is known.

A description of the headers and symbols used in the listing can be found in the inside of the back cover and the last page of this document. A glossary of terms is located in Appendix A.

APPENDIX A

GLOSSARY

Contract Number: A thirteen position number assigned to study contracts, identifying the purchasing office (1-6), the fiscal year of contract (8-9), the type of procurement instrument (9), and serial number (10-13).

Description: A brief narrative description of the scope of the study effort which provides a summary of the effort and the anticipated results.

DTIC Number: The Defense Technical Information Center (DTIC) accession number assigned to each project in the DTIC data base. AR 5-14 requires that all studies be reported to DTIC within 15 days of initiation.

FPDS Code: A four position entry of the Federal Supply Class Code related to the category of Schedule 10 in which a study is reported.

Performer: The organization performing the study.

Project Unique Identification Code (PUIC): A Nine position code which serves to track study efforts throughout their life-cycles.

Sponsor: The MACOM, Command or HQDA staff agency sponsoring the study.

Status: A code indicating the status of a study effort as of the date of submission.

Study: An analytical effort which provides conclusions and recommendations which help with decisions.

Title: A brief descriptive title of the study.

Use: The anticipated end use of a planned or on-going study effort. (For further explanation, see list of symbols, in inside of back cover.)

APPENDIX B

ARMY STUDY COORDINATORS

1. Each Army Staff agency and major command has designated a study coordinator whose duties include:
 - a. Advising the agency head or commander on all matters concerning the conduct and administration of Army Studies and the resources, both dollars and professional staff-years, required for studies.
 - b. Developing the agency or command Army Study Program and the supporting study budget.
 - c. Serving as the agency or command point-of-contact for outside agencies on all study matters.
 - d. Monitoring the agency or command Army study requirements.
 - e. Assisting Study Advisory Group (SAG) members and study action officers in the management of the individual Army Study efforts.
2. A current listing of Army Study Coordinators is provided in this appendix. Any changes to this list should be reported to the Army Study Program Management Agency (SFUS-SPM), Washington, D.C. 20310-0102 at AUTOVON 227-0026 or commercial 202 697-0026.
