June 1988

Pollution Abatement Alternative Technology
Selection System

The 'Discuss With Experts Environmental Problems' (DEEP) Knowledge-Based System: Description and User Guide

by

Diane K. Mann

Gloria Franczak

Lester Pritchard

Mark Cole

The Discuss with Experts Environmental Problems (DEEP) program is a knowledge-based system that offers military installation environmental personnel an easy, informal way to share problems, ideas for solutions, and information on the latest proven pollution abatement technologies. Many environmental problems are specific to geographical location, installation size, climate, or other variables; DEEP enables personnel at widespread geographic locations and diverse levels within the military chain of command to identify common problems and focus on them. In addition, the system contains listings of experts, environmental personnel at each installation, and recommended training courses; call-in information services; and a catalog of installation-specific, unpublished documents that users can order for use as guides in writing their own assessments, contracts, permits, and programs.

This revision supersedes the report dated March 1986. It includes an updated list of topics available in the DEEP knowledge base. This revision also includes additional user commands and demonstrates their use in example sessions.

USER EVALUATION OF REPORT

REFERENCE: USA-CERL TR N-86/09 REVISED, *The 'Discuss With Experts Environmental Problems' (DEEP) Knowledge-Based System: Description and User Guide*

Please take a few minutes to answer the questions below, tear out this sheet, and return it to USA-CERL. As a user of this report, your customer comments will provide USA-CERL with information essential for improving future reports.

1. Does this report satisfy a need? (Comment on purpose, related project, or other area of interest for which report will be used.) _____

2. How, specifically, is the report being used? (Information source, design data or procedure, management procedure, source of ideas, etc.) _____

3. Has the information in this report led to any quantitative savings as far as man-hours/contract dollars saved, operating costs avoided, efficiencies achieved, etc.? If so, please elaborate. _____

4. What is your evaluation of this report in the following areas?

a. Presentation: _____

b. Completeness: _____

c. Easy to Understand: _____

d. Easy to Implement: _____

e. Adequate Reference Material: _____

f. Relates to Area of Interest: _____

g. Did the report meet your expectations? _____

h. Does the report raise unanswered questions? _____

i. General Comments. (Indicate what you think should be changed to make this report and future reports of this type more responsive to your needs, more usable, improve readability, etc.) _____

5. If you would like to be contacted by the personnel who prepared this report to raise specific questions or discuss the topic, please fill in the following information.

Name: _____

Telephone Number: _____

Organization Address: _____

6. Please mail the complete form to:

FOREWORD

This work was performed for the Office of the Assistant Chief of Engineers (OACE) under RDT&E Project 4A762720A896, "Environmental Quality for Construction and Operation of Military Facilities"; Task T2, "Pollution Control Technology"; Work Unit 008, "Pollution Abatement Alternative Technology Selection System."

Additional funding was supplied by Headquarters, U.S. Air Force, Environmental Office, under Work Unit JE8. The Air Force Technical Monitor was MAJ Ray Solomon.

This research was performed by the Environmental (EN) Division, U.S. Army Construction Engineering Research Laboratory (USA-CERL). Dr. R.K. Jain is Chief of USA-CERL-EN. The Technical Editor was Gloria J. Wienke, USA-CERL Information Management Office.

COL Norman C. Hintz is Commander and Director of USA-CERL, and Dr. L.R. Shaffer is Technical Director.

THE 'DISCUSS WITH EXPERTS ENVIRONMENTAL PROBLEMS' (DEEP) KNOWLEDGE-BASED SYSTEM: DESCRIPTION AND USER GUIDE

1 INTRODUCTION

Background

Army Regulation (AR) 200-1 and Air Force Regulation (AFR) 19-1 require the respective military installations to institute environmental protection programs directed towards all environmental media.¹ Designing and implementing these programs is a process that goes far beyond constructing appropriate pollution abatement facilities. Treatment technologies are dynamic and their success depends on careful consideration of many variables. These variables range from the skill and knowledge of operations personnel at a particular installation to the current state-of-the-art limitations of the abatement process selected. The ability to provide effective environmental protection at a given military installation requires both knowledge of Air Force or Army activities/constraints and expert technical judgment by pollution abatement planners.

Several attempts have been made to provide data bases containing state-of-the-art information on alternative technological solutions to pollution problems and on military-unique environmental problems. One of these was the Army Pollution Abatement Program (APAP) data base, that the U.S. Army Corps of Engineers, Huntsville Division created by downloading from commercial bibliographic systems citations that seemed relevant to Army problems. In addition, the U.S. Army Construction Engineering Research Laboratory (USA-CERL) has done much work in developing "problems" and "solutions" data bases of various types in an attempt to address pieces of this puzzle.² Several of these data bases have been developed as a part of the Pollution Abatement Alternative Technology Selection (PAATS) System, which provides information on innovative and alternative approaches to pollution abatement and environmental management.

Earlier data bases designed specifically for military users and their problems had the advantage of being tailored to specific needs. However, the cost of creating and updating these specially adapted data bases has been overwhelming. Cost mounts with the continual monitoring of technical literature; with the analysis, abstraction, and indexing of data; and with the data input and updates necessary to keep the system current. An ideal program would offer data bases relevant to Army and Air Force problems and policy, but without the high costs for monitoring and updating. With the

Bandy et al., *Concept Definition of the Pest Management Component of the Pollution Abatement Management System*, TR N-122/ADA109720 (USA-CERL, 1982); M. Messenger et al., *The National Pollution Discharge Elimination System Permit Management System; Pilot System Description*, TR N-133/ADA119787 (USA-CERL, 1982); R. D. Webster et al., *Development of the Environmental Technical Information System*, TR E-52/ADA009668 (USA-CERL, 1975).

proliferation of office automation and the increased computer literacy of the user group, the potential exists for reducing data development and updating expenses.

Objective

The objective of this effort was to create a knowledge-based communication medium for environmental personnel to access information on the latest pollution abatement technologies and environmental management strategies. The system was to allow for self-contained updating, systematic analysis of alternatives, and selection of optimal technologies.

This revision supersedes the report with the same title and number, dated March 1986. It includes an updated list of topics available in the DEEP knowledge base. This revision also includes additional user commands and demonstrates their use in example sessions.

Approach

Information was collected from environmental officers and other environmental personnel at Air Force and Army installations. Their service requests, program expectations, and time constraints were used to modify and add features to a prototype system. Data obtained from environmentalists and statistics compiled on available technological data from installations were incorporated into a knowledge-based system.

The resulting system, Discuss with Experts Environmental Problems (DEEP), provides (1) a vehicle for communication among environmental personnel, (2) a data base for user contributions and updates, and (3) a variety of information services that can be continuously expanded.

Mode of Technology Transfer

After field testing of DEEP by environmental personnel in the Air Force and the Army, the system will be fielded as part of the Environmental Technical Information System (ETIS).

2 STRUCTURE AND CONTENT

The DEEP Knowledge Base

A knowledge base is an organized collection of information, stored on a computer, that focuses on a particular subject. Although the function of a knowledge base is as an information resource for focusing and refining any number of inquiries into a given topic, it is not a static collection of facts. A knowledge-based system such as DEEP is dynamic and constantly evolving; users actively expand the available store of information by posing and answering questions and making comments on specific topics. A knowledge-based system is a means for managing new ideas as well as a means for storing existing facts.

Knowledge-based systems such as DEEP, which allow user questions, answers, and comments can become self-updating through vigorous use. The fundamental requirement is a broad pool of expertise among the users. Such broad expertise exists among the personnel in Corps offices, military installations, and educational institutions. For example, an entomologist may be on the staff at an Army environmental office, while a hydrologist may be on the staff at an Air Force environmental office. Indications are that collective expertise covers a wide range with many years of experience in different specializations. This experience is invaluable to new people in similar positions at other offices. DEEP offers a quick and easy method of sharing this expertise. A user-active system with the input of experienced and trained environmental personnel assures currency with the latest technologies available for dealing with resources problems and management programs.

Additional features include a catalog of installation-specific unpublished documents, a rated list of environmental courses, a library of rated publications, call-in information services, and computerized information resources.

Knowledge Base Structure

The current structure of the DEEP knowledge base is shown below. The listing is meant only to indicate the broad areas that may be addressed in each section. It is important to emphasize that while this is the current structure, it is completely dynamic and user-driven and thus subject to constant change. The DEEP software supports creation of subtopics at any time by any user and of new topics by the director acting upon the users' suggestions.

Topic	Description
1. air	Air Pollution.
2. asbestos	Problems and solutions.
3. conserve	Conservation and wildlife.
4. culture	CRIS and Cultural Resources (Archeologic and Historic).
5. compliance	ECAMP, ERMA, and other compliance information.
6. manage	Management of Environmental Programs.

- | | |
|--------------|---|
| 7. noise | ICUZ and other Noise Programs. |
| 8. resource | Resource Recovery. |
| 9. solid | Solid Waste. |
| 10. water | Water and Wastewater. |
| 11. catalog | Lists unpublished, installation-specific documents. |
| 12. airforce | Environmental personnel at Air Force installations. |
| 13. expert | Experts available for giving help. |
| 14. army | Environmental personnel at Army Installations. |
| 15. library | Ratings of courses, literature, and services. |
| 16. listings | Temporary assignments and position openings. |
| 17. comment | Comments/suggestions on topic areas or program use. |

3 USER INSTRUCTIONS

DEEP is available as an experimental profile of ETIS. ETIS can be accessed over WATS, TELENET, and commercial telephone lines using almost any kind of computer terminal (see Appendix A).

Accessing ETIS

After assembling a remote terminal, a modem, a connection to a telephone line, and acquiring a login and password from USA-CERL's Environmental Division, ETIS can be accessed by a remote terminal. Dial the system's number (217/333-5067, WATS 800/637-0958). If there is no answer, the entire system is down for maintenance. Upon hearing a steady tone, connect your terminal/modem to the ETIS system as indicated in the manufacturer's instructions. After logging in with the correct name and password, you will receive system messages. Type "etis" at the prompt to start the system. DEEP is one of the systems under Miscellaneous in the main ETIS menu.

General ETIS Commands

These commands can be used throughout ETIS. The items in the left column show how the command is referred to.

<cr> or RETURN	When instructed to do so, depress the return key to initiate the next action.
Ctrl-d	Simultaneously press the control key and the letter d, to exit immediately to the ETIS login.
Ctrl-h	Use this to correct an input error--if the return key has not been pressed. It backs up the cursor one space at a time, erasing each character. This can be done as many times as necessary. Every symbol that has been backspaced over has been removed from the terminal memory. Therefore, if the first digit of a six-digit number has been mistyped, you must depress Ctrl-h six times and then retype all six digits. The corrected symbols will be overprinted on the paper or screen.
Del or Ctrl-s	To stop a long listing, depress the key marked Del (delete) or type a Ctrl-s.
Ctrl-q	If ctrl-s is used, a ctrl-q is necessary to start the listing again.

A path can be set up in your directory that will take you directly into DEEP. After logging in with the correct name and password, all you have to do is type "deep" at the ETIS prompt to enter DEEP without going through the ETIS menu.

The DEEP Software

After the DEEP system has been started, the following menu appears and the appropriate command is typed to accomplish the option desired:

DEEP Command (RETURN to see list):

Type:	To:
talk	Read and write comments on environmental topics.
new	Look at new comments.
pick	Limit the list of topics to read with new command.
help	Instructions on use.
bye	Leave the system.

The complete knowledge bases discussed in Chapter 2 are accessed by choosing "talk" from the menu (see Appendix B). In "talk", notes and responses are entered by using an editor. The DEEP editor is a simple data input routine that accepts one line of input at a time and is ended by putting a period on a line by itself (see Appendix C). DEEP users who are familiar with one of the UNIX editors can specify their preference for those routines when requesting a login to ETIS.

To see only those parts of the knowledge bases that are new since the last access, start the system using the "new" command (see Appendix D) after setting up "pick." If only certain knowledge bases are used routinely, such as hazardous waste and air, the "pick" command is used to select these two knowledge bases. Then every time the "new" command is entered, only those two knowledge bases will be checked for new traffic. The complete listing of knowledge bases can still be accessed by using the "talk" command. The number and combination of knowledge bases selected in "pick" can be altered at any time.

The UNIX "notes" software has been used as a basis for the DEEP system. Complete documentation of the features of this software can be found in the *Notesfile Reference Manual*.³

Commands for reading and writing comments while using the "talk" option:

Use:	To:
space	Show the next page of the note/response.
<CR>	Go to the next note ignoring any response(s) to the current note.

³Raymond B. Essick and Rob Kolstad, *Notesfile Reference Manual*, TR #U1UCDCS-R-82-1081 (University of Illinois, September 8, 1982).

- Go back one screen. If used at the first page of a base note, go to the previous note. If used at the first page of a response, go to the previous response (or the base note from the first response).
- w If typed while looking at a screen of topics, enters a new topic. If typed while looking at note or a note response, enters a response.
- i Return to the list of topics for the major title presently entered.
- q Leave the current topic, go back to the main menu.
- Ctrl-d Return to computer command level, ignoring any further notesfiles in DEEP. No "new" information is updated.

Commands for reading comments while using the "new" option:

- | Use: | To: |
|------|--|
| j | Jump to the next unread note/response. |
| J | Jump to the next unread note, ignoring any further responses in the current note string. |

4 SUMMARY

This report describes a knowledge-based communication system for use by environmental personnel to access information on the latest technologies related to their field. The DEEP knowledge base has been designed to tap the expertise in the Corps of Engineers District and Division offices, the environmental offices at military installations, and various departments at educational institutions by providing an efficient mechanism for enhancing communication among them.

APPENDIX A:

DIALING INTO THE ETIS SYSTEM

To call the computer that DEEP and ETIS run on:

1. Turn on power switches to terminal and modem.
2. Type AT (in capital letters) on your terminal. This command tells the Hayes modem to pay ATtention. The response OK should appear on the screen.
3. Type ATDT followed by the appropriate phone number.

The method of access is shown below. Commands that the user types are in bold print.

```
AT
OK
ATDT9,18006370958
CONNECT
<CR>
U of I Computing Services Office VAX 11/780 (uiucuxc)
4.2 BSD Unix /dev/ttyxx

login: apache
Password: GeroniMO
```

APPENDIX B:

EXAMPLE SESSION

Following is an example session from the DEEP system that portrays the type of interaction the system is designed to support. The horizontal lines set off the contents of a single screen. User inputs are in bold print.

ASK AN EXPERT - BE AN EXPERT

DEEP (Discuss with Experts Environmental Problems) provides easy, informal communication among environmental personnel to identify similar problems, propose solutions, and relay latest proven technologies. The experience and expertise of users builds and updates the data bank.

Creators and users of alternative and innovative technologies are easily accessible because their names and telephone numbers are provided by DEEP plus a description of the environmental staff of each installation.

In addition, copies from a list of unpublished, installation-specific documents can be ordered for use as patterns. Training courses, special services, and library materials are described and rated by users.

Questions about the use of the system should be directed to Dr. Diane Mann at comm 800-USA-CERL.

DEEP Command (RETURN to see list): **<cr>**

Type:	To:
talk	Read and write comments on environmental topics.
new	Look at new comments.
pick	Limit the list of topics to read with the 'new' command.
help	Instructions on use.

DEEP Command (RETURN to see list): **talk <cr>**

Title:	Description:
1. air	Air Pollution.
2. asbestos	Problems and solutions.
3. conserve	Conservation and wildlife.
4. culture	CRIS and Cultural Resources (Archeologic/Historic).
5. compliance	ECAMP, ERMA, and other compliance information.
6. manage	Management of Environmental Programs.
7. noise	ICUZ and other Noise Programs.
8. resource	Resource Recovery.
9. solid	Solid Waste.
10. water	Water and Wastewater.
11. catalog	Lists unpublished, installation-specific documents.
12. airforce	Environmental personnel at Air Force installations.
13. expert	Experts available for giving help.
14. army	Environmental personnel at Army Installations.
15. library	Ratings of courses, literature and services.

WASTE MANAGEMENT USING CATTAILS

1 response

7:45 am Aug 18, 1986

CATTAILS CURATIVE POWERS

Cattails remove iron and other metals from the water and neutralize acid. Because of these curative powers, the lowly cattail has become a favored plant of environmentalists and coal operators working to curb the toxic damage of acid drainage from mines.

The method is still experimental, but about 40 cattail marshes have been started in the last three years. Officials estimate that 100 will be planted this year, stretching from Pennsylvania to Alabama. Others are being established in Montana and Colorado.

According to estimates, the mining industry is spending \$1 million a day to treat acid mine drainage. Other than wetlands, no other technology is available that is cheap, low-maintenance and applicable. Acid drainage is now being treated with caustic soda or limestone, which neutralizes the discharge. A marsh can be built from scratch for about \$20,000, depending on the size.

A 90% success rate for removing iron and a 70% success rate for lowering manganese has been reported. Wetlands can also be used to treat industrial wastes and leaching from sanitary landfills.

<cr> (Because <cr> return is hit instead of space bar, the next note is brought up and the response to note 2 is skipped over)

Note 2
dmann

paats.air
REDUCTION IN AIRBORNE LEAD

8:20 am Apr 27, 1987

Levels of lead in the atmosphere declined 32% between 1984 and 1985 and have dropped 79% since 1976, according to the latest annual survey of air quality trends by the Environmental Protection Agency. The sharp drop in ambient lead levels is due to an 86% reduction in lead emissions since 1976, a direct result of the switch to unleaded gasoline and reduction of lead in leaded gasoline for automobiles, EPA said. Motor vehicles still contribute 73% of the lead air emissions.

(type) w

(Typing w while reading a note starts the process for writing a response to that note. After the response is typed, the user goes to a blank line and types a period to enter the response into the bulletin board)

Edit Response Text:

Enter Message. When done enter a period (.) on a new line.

This is only a test.

(type) .

Do you wish this response to be anonymous? (y/n): (type) y

Do you REALLY wish this response to be anonymous? (y/n): (type) y

(Now you will be shown how the message appears.)

DEEP command (RETURN to see list):

Type:	To:
talk	Read and write comments on environmental topics.
new	Look at new comments.
pick	Limit the list of topics to read with the 'new' command.
help	Instructions on use.
bye	Leave the system.

DEEP command (RETURN to see list): (type) bye <cr>

Session ended.

APPENDIX C:

EXAMPLE SESSION FOR PICK AND NEW

PICK and **NEW**, two of the four options listed in the main menu, are important time-savers for the regular user. Following is an example session from the DEEP system that demonstrates how to use **PICK** and **NEW** in DEEP. The horizontal lines set off the contents of a single screen. User inputs are in bold print.

ASK AN EXPERT - BE AN EXPERT

DEEP (Discuss with Experts Environmental Problems) provides easy, informal *communication among environmental personnel* to identify similar problems, propose solutions, and relay latest proven technologies. The experience and expertise of users builds and updates the data bank.

Creators and users of alternative and innovative technologies are easily accessible because their names and telephone numbers are provided by DEEP plus a description of the environmental staff of each installation.

In addition, copies from a list of unpublished, installation-specific documents can be ordered for use as patterns. Training courses, special services, and library materials are described and rated by users.

Questions about the use of the system should be directed to Dr. Diane Mann at comm 800-USA-CERL.

DEEP Command (RETURN to see list): **<cr>**

Type:	To:
talk	Read and write comments on environmental topics.
new	Look at new comments.
pick	Limit the list of topics to read with the 'new' command.
help	Instructions on use.
bye	Leave the system.

DEEP Command (RETURN to see list): **pick <cr>**

DEEP Command (RETURN to see list): new <cr>

(If no new responses or notes have been added since the user last used the bulletin board, the file titles will be going through very rapidly)

paats.*****

(The *s represent the titles that will be flashed very quickly; these titles may include:

- paats.asbestos
- paats.conserve
- paats.resource
- paats.solid
- paats.water
- paats.catalog
- etc.
- paats.expert

(At the end you will again receive the command prompt)

DEEP Command (RETURN to see list): **bye** <cr>

(User types bye and completes a check of the bulletin board in less than ten seconds if there are no new entries since the last use of the bulletin board.)

Session ended.

(The following example illustrates the use of **NEW**, from the main menu, if a new note has been added since the user last used the bulletin board. Titles will quickly flash by on the screen until the title of the section in which the new note exists is reached.)

Note 1	paats.airforce
dmann	ECAMP Revision

Revision of the ECAMP manual updating sections to 30 November 1987 is being printed and will soon be distributed. A new section - Section X - has been added entitled Natural and Historic Resources Management.

(type) **q**

paats.***** (The *s represent the titles that are flashed quickly.)

DEEP Command (RETURN to see list): **bye** <cr>

(The following example illustrates the use of NEW if a new response has been added since the user last used the bulletin board. Titles will flash by quickly on the screen until the title of the section in which the note with the new response exists is reached. When the note appears on the screen, the user must strike the space bar until new response appears on the screen. If the new response is the second response, the user needs to strike the space bar twice; once to move from the note to response 1 and once to move from response 1 to the new response.)

Note 4 paats.water
afguest Aquifer cleanup

Question: Does a methodology exist which determines the most cost effective location and number of plumbing wells when restoring an aquifer by pumping and treating the ground water?

(Now press the space bar once)

Note 4 paats.water
afguest Response 1 of 4 3:39 pm Feb 12, 1987

Question: Does a methodology exist which determines the most cost effective pumping scheme, that is, what should be the pumping rates, should the rates vary with different wells, should pumping be intermittent?

(Now press the space bar again)

Note 4 paats.water
afguest Response 2 of 4 3:48 pm Feb 12, 1987

Question: Will the concentration of a contaminant in an aquifer increase by desorption if pumping is stopped, and could intermittent pumping allow one to pump when the concentration of the contaminant is high? AFGUEST for last 3 questions is

Lt. Mike Elliott,
HQ. AFFSC/RDVW,
Tyndall, AFB FL. 32403
Phone number (904) 283-4628
Autovon 970-4628

DEEP Command (RETURN to see list): bye <cr>

End of Session.
