13. ABSTRACT (Maximum 200 words) The RADHS program was initiated in 1980 at the suggestion of Frank Press, Science Advisor to the President. The objectives are to stimulate broader interest in minority communities in careers in science and engineering and to establish individual working relationships of students with active researchers who may become helpful mentors when students need advice on college and careers and need letters of recommendations. This initial reprot lists the mentors - their academyn qualifications and specialties 0, who will serve in the AFOSR sponsored 1982 RADHS program directed by ABET.

Frank Press, Science Advisor to the President, stated in a memorandum dated October 23, 1979 that the Nation's and the Government's efforts to recruit and sustain minority students in science and engineering fields seems to have plateaued. Thus, it was suggested that the four departments and three agencies addressed should launch a program of apprenticeships in research laboratories for minority high school students, beginning with the summer of 1980.

In 1979 the Engineers' Council for Professional Development (ECPD) - now the Accreditation Board for Engineering and Technology (ABET) - conducted 53 minority oriented summer programs at 37 schools of engineering, four of which were conducted under a contract with the Air Force Office of Scientific Research (AFOSR). Thus, it was decided that the Air Force Research Apprenticeships for Disadvantaged High Schoolers (RADHS) should augment its Uninitiates Introduction to Engineering (UNITE) program being conducted at Massachusetts Institute of Technology, The University of New Mexico, Ohio State University, and Tuskegee Institute. In 1980 programs were held at each of the schools except MIT, and a total of sixty apprentice-mentors participated in these programs.

In 1980 program directors met on January 9, 1981 with Dr. Irwin Goldstein, an independent evaluator from the University of Maryland, to develop a coordinated program for 1981. The 1980 programs had been advertised by announcements to principals, guidance counselors, and heads of science departments in all high schools located within 250 miles of the participating colleges. For 1981 it was decided to expand the area covered, but contact principals only. ABET printed the materials developed at this meeting as a consensus and made distribution by late February. This was repeated in 1982 following a directors' meeting held in San Diego, CA on February 4-5.

GENE M. NORDBY, TREASURER
UNIVERSITY OF COLORADO—DENVER

RICHARD J. UNGRODT, SECRETARY
MILWAUKEE SCHOOL OF ENGINEERING

RICHARD G. CUNNINGHAM, PAST PRESIDENT
PENNSYLVANIA STATE UNIVERSITY

February 1982

Dear Principal:

This summer the United States Air Force Office of Scientific Research (AFOSR) will sponsor two important Accreditation Board for Engineering and Technology (formerly the Engineers' Council for Professional Development) projects designed to motivate minority high school students to consider pursuing an engineering education.

Knowing of your continued interest in developing the scientific and technological interest of students, we are furnishing you a poster and applications for these programs. The applications may be reproduced, should you need more.

One of the programs - UNITE (Uninitiates Introduction To Engineering) - has been sponsored by AFOSR at one or more colleges of engineering for each of the past seven years. Each participating school includes a visit to an Air Force Research Center in their program.

UNITE is a rigorous one to two-week summer program designed to introduce students to an engineering education and to motivate them to consider engineering as a career. Selected students will be housed and provided three meals per day at no cost, but they must provide their own transportation to and from the college.

The second program - RADHS (Research Apprenticeships for Disadvantaged High Schoolers) - is being sponsored at three colleges of engineering for the third year.

RADHS is a six to ten-week work experience in a research laboratory. The selected students will work as apprentices under a leading engineering researcher at a college of engineering, attend classes in computer programming and report writing, and receive a stipend of \$135 per week. Room and board may be obtained at minimal costs from the three participating colleges.

I thank you in advance for any services you render your students in our recruiting efforts.

Sincerely,
Roy B. Cowin
Roy B. Cowin
Guidance Director
