NOTICES

Handbook. This Handbook has been published by the Tactical Weapon Guidance and Control Information Analysis Center (GACIAC) as part of its services to the guidance and control community. GACIAC is a DoD Information Analysis Center, administered by the Defense Technical Information Center, operated by IIT Research Institute under Contract No. DLA900-86-C-0022. GACIAC is funded by DTIC, DARPA, and U.S. Army, U.S. Navy, U.S. Air Force Laboratories/Controlling Activities having an interest in tactical weapon guidance and control. The Director of GACIAC is Dr. Robert J. Heaston. The Contracting Officer is Mrs. S. Williams, DESC, Dayton, Ohio. The Contracting Officer's Technical Representative is Mr. Chalmer D. George, AMC Smart Weapons Management Office, ATTN: AMSMI-SW, Redstone Arsenal, Alabama 35898-5222.

FOREWORD

An acronym is a word formed by the initial letters of a name or by combining initial letters or parts of a series of words. The key is that the acronym should sound like a word. Many of our so-called acronyms are not pronounceable as words, even in a foreign language. They are not really acronyms, they are abbreviations. Abbreviations are shortened words, collections of first letters of words, or some arbitrary choice of letters. This handbook is a collection of acronyms and abbreviations (although we will use the word "acronym" generically) relevant to precision guided munitions and associated technologies.

Why do we use so many acronyms? The honest reason is laziness disguised as efficiency. We dislike repeating long names and expressions over and over. A shorter version saves time, takes less space, and requires less effort to write or type. Limited space for computer data field entries also encourages the use of acronyms. Once a person is familiar with an acronym, it is a definite convenience. Acronyms and abbreviations are the specialized language of a discipline and our knowledge of them marks us with the badge of the trade.

The intent in the preparation of this handbook was to capture as many acronyms as possible that had some relationship with the following terms.

- Guidance and control terminology
- Frequency bands
- Electronics and sensors related to PGMs
- U.S. and foreign PGMs
- Notional PGM systems/concepts
- Major DoD organizations interested in PGMs
- PGM related management terms
- All DoD IACs

It was also our intent to state each acronym, indicate what it stood for, give the source of the acronym, and include any pertinent definitions or explanations. We were only partially successful. Rather than wait until we had all of the details for each acronym, we thought it would be appropriate to print the acronyms and what they stand for now. Future editions of this handbook will give more background on each acronym.

The primary source of most of the acronyms was from the proceedings of different workshops, symposia, and conferences that GACIAC supported. Another source was glossaries that various GACIAC investigators have compiled in preparing special study reports. Acronyms were also gleaned from the 40 plus journals and publications that GACIAC reviews regularly for its data base.

Preparation of this PGM Acronym Handbook was the idea of Mrs. Vakare Valaitis. She has been accumulating a list of acronyms for the past several years as part of her vocabulary to use in data base searches. Ms. Mindy Tumarkin assisted her in adapting a computer program to compile the original list prepared by Mrs. Valaitis.

If anyone has any suggestions for acronyms that should be included in future additions, please let us know by phone, scribbled note, list of acronyms letter, or the form included in this handbook. Information on originators of particular acronyms would also be appreciated.

Dr. Robert J. Heaston
Director of GACIAC

THE TACTICAL WEAPON GUIDANCE AND CONTROL INFORMATION ANALYSIS CENTER (GACIAC)

GACIAC is a DoD Information Analysis Center operated by IIT Research Institute under the technical sponsorship of the Joint Service Guidance and Control Committee with members for OUSDRE, Army, Navy, Air Force, and DARPA. The U.S. Army Missile Command provides the Contracting Officer's Technical Representative. Its mission is to assist the tactical weapon guidance and control community by encouraging and facilitating the exchange and dissemination of technical data and information for the purpose of effecting coordination of research, exploratory development, and advanced technology demonstrations. To accomplish this, GACIAC's functions are to:

1. Develop a machine-readable bibliographic data base -- currently containing over 36,000 entries;
2. Collect, review, and store pertinent documents in its field of interest -- the library contains over 11,000 reports;
3. Analyze, appraise and summarize information and data on selected subjects;
4. Disseminate information through the GACIAC Bulletin, bibliographies, state-of-art summaries, technology assessments, handbooks, special reports, and conferences;
5. Respond to technical inquiries related to tactical weapon guidance and control; and
6. Provide technical and administrative support to the Joint Service Guidance and Control Committee (JSGCC).

The products and services of GACIAC are available to qualified industrial users through a subscription plan or individual sales. Government personnel are eligible for products and services under block funding provided by the Army, Navy, Air Force and DARPA. A written request on government stationery is required to receive all the products as a government subscriber.

Further information regarding GACIAC services, products, participation plan, or additional copies of this Handbook may be obtained by writing or calling: GACIAC, IIT Research Institute, 10 West 35th Street, Chicago, Illinois 60616-3799, Area Code 312, 567-4519 or 567-4526.
