PREFACE

The United States Air Force Occupational Measurement Center Training Development Services Division (USAFOMC/OMT) is assigned primary responsibility for developing Training Requirements Analyses (TRAs) for Air Force specialties. TRAs, typically, provide comprehensive data describing specialty training requirements for the 3-, 5-, and 7-skill levels. This TRA, however, focuses on 3-skill level training to facilitate Air Force specialty merger decisions. This is because the impact of a merger on training is most apparent at the 3-skill level. TRA results provide a basis for revision or development of Specialty Training Standards (STSs), initial skill training, on-the-job training (OJT), and Career Development Courses (CDCs). TRAs fulfill most requirements of Steps 1 and 2 of the instructional system development (ISD) model prescribed in AFM 50-2. TRAs assist Air Force officials in making informed, data-based training decisions.

HQ USAF/LEYY requested a comprehensive data-base to support anticipated communications-electronics systems career field training and restructuring decisions. This TRA provides data for the Wideband Communications Equipment, AFSC 304X0; Ground Radio Communications, AFSC 304X4; and Space Communications Systems Equipment/Operator, AFSC 304X6 specialties. The TRA consists of three sections: (a) System Overview--an overall perspective of the Air Force specialty; (b) Task Analysis--detailed training decision data; and (c) Training recommendations--what should be trained, when training should occur and where training should be provided. This TRA has been reviewed by Dr. Linda S. Aslett, Chief of the Operations Branch, USAFOMT/OMT.

Copies of this document are available to Air Force training and management officials. Address requests to USAFOMC/OMT, Randolph AFB, TX 78150-5000.

EXECUTIVE SUMMARY

Background

This TRA was requested by HQ USAF/LEYY to provide comprehensive data to support anticipated restructuring decisions for the Wideband Communications Equipment, AFSC 304X0; Ground Radio Communications, AFSC 304X4; and Space Communications Systems Equipment Operator, AFSC 304X6 specialties. HQ USAF is considering merging two or all three of these specialties. Continued acquisition of equipment which is maintained using the "line replaceable unit" (LRU) approach will simplify and reduce maintenance requirements. This simplification might facilitate a merger and enhance workforce flexibility.

Procedures

In February 1988, HQ USAF/LEYY convened a training conference at Randolph AFB to define the scope of this training requirements analysis (TRA). Before this conference, training issues and concerns were solicited with the assistance of HQ AFCC/LGM. These issues provided a basis for discussion at the February 1988 workshop and served as guidelines for this TRA. The USAF Job Inventories for the three specialties were used as a starting point to develop a TRA task list. Detailed task, skill, and knowledge data were collected by interviewing subject matter experts (SMEs) at locations recommended by HQ AFCC. USAFOMC/OMY Electronics Principles Inventory (EPI) survey results for each of the three AFSCs were also compared. Results of the occupational survey, the EPI, and the detailed training requirements analysis provided an objective basis for the training recommendations presented in this report.

Results

Two kinds of recommendations resulted from this analysis: general recommendations and specific, task-by-task training recommendations. Task-by-task recommendations are formatted to facilitate STS development; SMEs matched TRA tasks to STS line items. Task-by-task recommendations include suggested resident and on-the-job-training (OJT) for the 3-skill level.

Managers and training developers should study both the general and specific training recommendations BEFORE attending the utilization and training workshop (U&TW). This investment of time is essential to allow informed discussion of the issues and recommendations presented in this TRA. A thorough review of this TRA and other information will enable participants to adequately represent the interests of their organizations.

General recommendations resulting from this analysis include:

1. Transfer AFSC 304X0 BISS functions to AFSC 304X5, Television Equipment.
2. Specialty managers should use this report; the separate comparison of BISS, Wideband, and Television Equipment; other data presented at the U&TW; plus their expertise to decide on a merger and send a clear message either way, merge or not.
3. If specialties are merged, continue to emphasize cross utilization training.

4. Conduct a manpower evaluation to determine the number of personnel required to support operational and training requirements during the transition and after the merger.

5. Increase instruction on basic electronics, use of test equipment, and troubleshooting. Several of these items were identified as repeat course deficiencies by training evaluation reports (TERs).

6. Develop QTPs for all major equipment systems.

7. Centralize responsibility for insuring use of QTPs at the unit level with unit training specialists.

8. Update CDCs.

9. Use the AFET program as much as possible.

Detailed information and supporting rationales for each general recommendation are provided on pages 26-28.

INTRODUCTION

↙ This TRA provides data for two purposes. First, it supports anticipated merger decisions for the three specialties. Second, it provides recommendations for resident course and OJT programs. This report is to be used as a decision tool to help Air Force officials establish training requirements and develop training programs. It supports development of Specialty Training Standards (STSs), Air Force Job Qualifications Standards (AFJQSs), Command Job Qualification Standards (CJQSs), Task Training Tables (TTTs), Work Center Assigned Task Lists, Qualification Training Packages (QTPs), and other training specifications and instructional materials. This TRA can be especially useful during training planning conferences or Utilization and Training Workshops (U&TWs) where significant decisions are made. (SDW) ↘

TRA Sections

The TRA consists of three sections:

1. System Overview: Describes the mission, manning, resident training courses, training issues and concerns, and future plans which impact the training of AFSCs 304X0/4/6.
2. Training Recommendations: Two kinds of recommendations resulted from this analysis: general recommendations and specific, task-by-task training recommendations. Task-by-task recommendations are formatted to facilitate STS development; SMEs matched TRA tasks to STS line items. Task-by-task recommendations include suggested resident and OJT training for the 3-skill level.
3. Task Analysis: Describes task analysis procedures and provides a summary of interview results. Detailed task analysis data are provided as Appendix A of this report. Appendix B lists electronic fundamentals and Job Inventory statements associated with each piece of equipment in Appendix A.

SYSTEM OVERVIEW

The system overview provides a synopsis of the 304X0, Wideband Communications Equipment; 304X4, Ground Radio Communications; and the 304X6, Space Communications Systems Equipment, specialties. It examines mission, resident training, future plans, issues, and assignment data. It focuses on training issues related to the present and future direction of these specialties. This information provides managers with an overall training perspective.

Mission and Functions

AFSC 304X0, Wideband Communication Equipment personnel, install, repair, modify, maintain, and operate fixed and transportable wideband communications systems. The types of systems they are responsible for include: tropospheric scatter and line-of-sight radios, multiplex, signaling and termination equipment, and intrusion detection systems.

The Wideband Communications Equipment Occupational Survey Report (OSR), AFPT 90-304-413, November 1988, identifies four major functional groups within the specialty and the percent of survey respondents in each group:

1. Supervisory and Management Personnel (26%)
2. Fixed Wideband Communications Personnel (21%)
 - a. Tropospheric Scatter Radio (12%)
 - b. Microwave Radio (57%)
 - c. Voice Frequency Multiplexer Radio (4%)
 - d. Radio Teletype Multiplexer (19)
 - e. Other (8%)
3. Mobile Wideband Communications Personnel (15%)
 - a. Tropospheric Scatter Radio (7%)
 - b. Microwave Radio (90%)
 - c. Other (2%)
4. Base Intrusion Security System (BISS) Personnel (14%)
 - a. Perimeter Security (76%)
 - b. Structure Security (7%)
 - c. Maintenance Supervisors (6%)
 - d. Other (11%)

The OSR also identifies five minor functional groups:

1. Engineering and Installation (E and I) Personnel (3%)
2. Technical Training Instructors (2%)
3. Teletype Multiplexer Systems Technicians (1%)
4. Close Circuit Television (CCTV) Technicians (1%)
5. Mobility Personnel (1%)

Sixteen percent of the survey respondents could not be grouped.

AFSC 304X4, Ground Radio Communications personnel, install ground radio communication equipment, deploy and activate mobile and transportable ground

radio communications systems, perform preventive maintenance on ground radio communications and related equipment, repair ground radio communications and related equipment, maintain inspection and maintenance records, advise on problems of installing, repairing, overhauling, and modifying ground radio communications and related equipment, and inspect ground radio communications equipment.

The OSR for Ground Radio, AFPT 90-304-492, August 1986, identifies seven functional groups:

1. Ground Radio Maintenance Personnel (49%)
 - a. Shop Maintenance Repairmen (12%)
 - b. Installed Equipment Maintenance Repairmen (10%)
 - c. Air Traffic Control Communications Repairmen (15%)
 - d. Other (12%)
2. Supervisory Personnel (20%)
3. Maintenance and Job Control Personnel (4%)
4. Technical Training Personnel (4%)
5. Quality Control Personnel (3%)
6. Supply Personnel (2%)
7. Engineering and Installation Personnel (1%)

Seventeen percent of the specialty could not be grouped.

AFSC 304X6, Space Communications Systems Equipment personnel, configure earth terminal equipment, establish and maintain communication links via satellite transponder according to satellite schedules and ephemeris data, maintain earth terminal communications systems and configure earth terminal equipment.

Space Communications Systems Equipment personnel or SATCOM maintenance as it is commonly known, has three, 3-skill level "shreds." After attending the common electronics course and SATCOM principles course, personnel attend one of three courses: Defense Satellite Communications Systems (DSCS) at Ft. Gordon, Air Force Satellite Communications (AFSATCOM) at Keesler AFB, Ground Mobile Forces (GMFs) at Keesler AFB. Personnel retain these shreds; 30436A, B, and C, respectively, until they reach the 5-skill level.

The OSR, AFPT 90-304-422, January 1987, identifies seven functional job groups for the 304X6 specialty.

1. DSCS Personnel (35%)
 - a. Fixed (17%)
 - b. CONUS (10%)
 - c. 1st Term (2%)
 - d. 1st Term Overseas (6%)
2. GMF Personnel (18%)
 - a. GMF Personnel (13%)
 - b. GMF Support Personnel (5%)
3. Supervisory/Management Personnel (13%)
4. AFSATCOM (10%)
5. Crew Directors (5%)

6. Instructors (4%)
7. Job Control Personnel (1%)

Fourteen percent of the specialty could not be grouped.

Personnel

Tables 1 through 4 show the distributions of AFSCs 304X0/4/6 personnel. Table 1 gives the number and percent of personnel for each specialty by MAJCOM. Table 2 shows the number and percent AFSC 30436 personnel by shred. Table 3 shows the number and percent of each specialty stationed at CONUS or overseas locations. Table 4 shows the estimated CONUS and overseas distribution of each specialty in January of 1991. The impact of specialty restructuring on personnel distribution should be considered.

The percentages shown in Tables 1 and 2 include 542 slots (data from USAF/LEYA) dedicated to base intrusion security system (BISS) maintenance. This function was added to the Wideband specialty to help correct an overseas imbalance. The imbalance was corrected but other problems resulted. Much of the basic skill and knowledge required to maintain BISS equipment is different than that required to maintain Wideband equipment. (See EPI analysis for the BISS, Wideband, and Television specialties). With 542 slots, the BISS function is large enough to warrant a separate specialty or the BISS function could be transferred to another specialty.

TABLE 1

PERSONNEL DISTRIBUTION BY MAJCOM (DECEMBER 89)

AFSC 304X0

MAJCOM	MISC	PACAF	ATC	USAFE	TAC	AFCC	TOTAL
NUMBER	85	68	80	223	265	2185	2906
PERCENT	2.9	2.3	2.8	7.7	9.1	75.2	100.00

AFSC 304X4

MAJCOM	MISC	ELM	MAC	ATC	USAFE	TAC	ESC	AFC	TOTAL
NUMBER	156	72	81	90	291	401	488	3662	5241
PERCENT	3.0	1.4	1.5	1.7	5.6	7.7	9.3	69.9	100.00

AFSC 304X6

MAJCOM	MISC	SPACE	PACAF	ATC	TAC	USAFE	AFCC	TOTAL
NUMBER	59	52	53	63	66	83	760	1136
PERCENT	5.2	4.6	4.7	5.6	5.8	7.3	66.9	100

Almost 70 percent of each specialty belongs to AFCC. Between 13 percent and 17 percent of each specialty belongs to TAC and USAFE. Nearly 10 percent of AFSC 304X4 personnel belong to ESC. No members of AFSCs 304X0 and 304X6 are assigned to ESC. Finally, AFSC 304X4 is by far the largest specialty of the three. It is nearly five times larger than AFSC 304X6 and nearly twice as large as AFSC 304X0.

TABLE 2

DISTRIBUTION OF AFSC 30436 BY SHRED (DECEMBER 89)

SHRED	DSCS A	AFSATCOM B	GMF C	TOTAL 30436	TOTAL 304X6
NUMBER	110	35	44	189	1136
PERCENT OF ALL 304X6	10	3	4	17	100

Note: Data include personnel separated or retired from approximately 1 June, 1989 through 12 March, 1990.

Shreds are assigned according to which of the three courses students attend. Project analysts could not locate data to indicate the percentages of graduates who are actually assigned to jobs requiring the shreds for which they were trained.

TABLE 3

CONUS - OVERSEAS DISTRIBUTION

(February 1990)

<u>AFSC 304X0</u>	CONUS	OVERSEAS	TOTAL
NUMBER	1575	1137	2712
PERCENT	58.1	41.9	100

<u>AFSC 304X4</u>			
NUMBER	2814	1943	4757
PERCENT	59.2	40.8	100

<u>AFSC 304X6</u>			
NUMBER	624	463	1087
PERCENT	57.4	42.6	100

<u>TOTAL</u>			
NUMBER	1575	3543	8556
PERCENT	58.6	41.4	100

*Data from AFMPC/DPMRAD6

Approximately 60 percent of each specialty is assigned to CONUS locations. Restructuring efforts which include removing BISS personnel from the Wideband Communications specialty may alter this percentage.

Personnel losses for AFSCs 304X0 and 304X4 between February 1990 and January 1991 are estimated at 7 percent (611) of the February 1990 total (8556). Estimated losses are 6 percent for AFSC 304X0 and 9 percent for AFSC 304X4. No losses are anticipated for AFSC 304X6.

TABLE 4

ESTIMATED DISTRIBUTION OF AFSC 304X0/4/6 PERSONNEL

(January 1991)

*Figures were provided by AFMPC/DPMRAD6

Resident Training and Specialty Requirements

Listed below are the 3-skill level resident courses currently offered to the specialties at Keesler AFB, Mississippi. For a description of course prerequisites and content, consult AFR 50-5, USAF Formal Schools. Course length includes electronics principles training.

COURSE NUMBER	COURSE TITLE	COURSE LENGTH
E3ABR30430 002	Apprentice Wideband Communications Equipment Specialist	27 weeks 1 day
E3ABR30434 000	Apprentice Ground Radio Communications Specialist	23 weeks 2 days
E3AQR30436 001	Satellite Communication Principles	20 weeks 4 days
E3ABR30436B 002	Apprentice Satellite Communications Systems Equipment Specialist (AFSATCOM)	26 weeks 4 days
E3ABR30436C 001	Apprentice Satellite Communications Systems Specialist (GMF)	28 weeks 1 day

The following course is provided by the Army at Ft Gordon, Georgia.

E5ABA30436A 002	Apprentice Satellite Communications Systems Equipment Specialist (DSCS) (SATCOM TML AN/FSC-78V/79 and GSC-39)	8 weeks
-----------------	---	---------

Requirements for AFSCs 304X0/4/6 are listed below.

Education:

304X0/4 - completion of high school with courses in physics and mathematics is desirable.

304X6 - completion of high school with courses in algebra, geometry, trigonometry, and physics is desirable.

Training:

304X0 - completion of a basic Wideband Communications Systems Maintenance course is mandatory for award of the semiskilled AFSC.

304X4 - completion of a basic ground radio communications equipment maintenance course is mandatory for award of the semiskilled AFSC. Completion of an advanced Ground Radio Communications Equipment Maintenance course is desirable.

304X6 - completion of a basic Space Communication Systems Equipment course is mandatory for award of the semiskilled AFSC. Completion of a follow-on system specific training course is desirable. Completion of an advanced satellite communications systems equipment course is desirable.

ASVAB Requirements:

304X0/4/6 - A minimum entry score of 67 in electronics is required.

Strength Requirements:

304X0/4 - Must be able to lift at least 60 pounds above head.

304X6 - Must be able to lift at least 40 pounds above head.

Other:

304X0/4/6 - Eligibility for a secret clearance is mandatory. Normal color vision is mandatory for entry into all three AFSC's.

Future Plans

AFSCs 304X0/4/6 will continue replacing their older equipment systems. Most new equipment will move away from individual component repair and continue the trend toward line replaceable units (LRUs) or equipment modules.

Some new equipment designs will incorporate the concept of operator maintenance. In operator maintenance, the role of system operator and maintenance technician is merged. The AN/FSC-78 satellite terminal typifies this concept. Future equipment will exploit this design concept whenever feasible to take advantage of manpower cost savings.

Emerging technologies will dictate learning of new skills and knowledge for AFSC 304X0/4/6 personnel. New BISS equipment requires maintenance of laser equipment, fiber optic systems, and advanced personnel detection and identification systems. Future equipment designs will maximize integration of computer equipment into the system design. Maintenance and use of built-in-test (BIT) and built-in-test-equipment (BITE) will require specialized computer skills and knowledge, for example, the ability to use programming languages for equipment maintenance and operation. Encrypting systems may become subassemblies of equipment items as technology improves electronic protection.

Training Issues

This section reviews and discusses issues which must be considered by AFSC 304X0/4/6 managers. The format for each issue is:

- a. Issue: Issues were developed from interviews and written inputs from Air Staff and MAJCOM officials, and from field level supervisors, trainers, and SMEs.
- b. Discussion: Discussion involves objective, quantifiable information and subjective information gathered during the course of this TRA. Sources of quoted information are identified. Lengthy inputs are paraphrased.

1. MANNING

- a. Issue: Does manning impact the merger decision?
- b. Discussion: Daily operational capability requires a specific minimum number of duty hours to meet assigned missions. Recent and projected personnel losses may reduce manpower levels below this required minimum. HQ AFMPC/DPMRAD6 estimates total manning for AFSCs 304X0/4/6 will decrease from 8556 (February 1990) to 7945 (January 1991). This 611 person loss does not include the early-out loss of fiscal year 1990. Generally, AFSC mergers result in increased OJT time. Will projected manning provide sufficient duty hours to meet both minimum operational requirements and an increase in training requirements?

2. INITIAL SKILL RESIDENT COURSES (3-skill level awarding)

- a. Issue: Is a revision of the basic course content necessary?
- b. Discussion: Restructuring the 304X0/4/6 specialities will probably cause mergers of basic courses. This will require curriculum reviews. Many agencies have suggested how the basic courses should be improved and several items which have merit are listed below for consideration.
 - 1) Emphasize application of fundamental electronic laws with hands-on, problem solving, laboratory exercises in addition to theory. Concentrate less on the equipment training (SETS). Reinforce basic electronics with emphasis on functions instead of types of equipment they will see in the field. (HQ SAC/SCD, AFSC 304X4)
 - 2) Provide more in-depth instruction on test equipment. (2049 CG/LGMT)
 - 3) Increase training time for troubleshooting, reading and using block or schematic diagrams, modulation techniques, transmission lines, antenna and RF propagation theory, using the maintenance data collection system (MDC), and including more soldering practice.

These suggestions are a small sample of the those received from operational commands. They demonstrate there is real interest in improving the initial skill resident courses for AFSCs 304X0/4/6.

These specialties maintain hundreds of pieces of equipment. A merger would make all personnel responsible for all this equipment. Increasing the variety of the equipment which these personnel must maintain increases the importance of stressing basic electronics test equipment and equipment functions. Specific equipment used for training must represent common functions and common systems with emphasis on basic troubleshooting skills applicable to a range of electronic equipment.

HQ ATCs previous two Training Evaluation Reports (TERs) have identified seven specific STS items which fall below the required 80 percent performance level for course graduates. These items, (Table 5) were identified as deficient in the 1985 through 1989 TERs and should receive special attention from course personnel. Four of the seven items refer to test equipment which reinforces the comments above.

TABLE FIVE

TRAINING EVALUATION REPORT REPEAT DEFICIENCY ITEMS

<u>Course</u>	<u>Course Deficiency</u>
E3ABR30430 002	Use Sweep Generators Use Distortion Analyzer
E3ABR30434 000	Troubleshoot HF AM/SSB/ISB Receivers Troubleshoot HF AM/SSB/ISB Transceivers Spectrum Analyzer*
E3AQR30436 001 and E5ABA30436A 002	Align voice multiplexers
E3ABR30436B 001	Identify defective test equipment

* 1985 through 1989 TERs

Another evaluation tool is AF Form 1284, Training Quality Report. An analysis of reports for 1988 and 1989 reveals no significant training deficiencies. However, recent reports suggest graduates of the ground radio school sometimes encounter OJT training problems when assigned to units performing primarily component level repair maintenance.

To summarize, operational commands and their field units want to increase the time spent on basic electronics, test equipment, and troubleshooting and reduce the time spent learning specific equipment (SETS). HQ ATC has identified seven areas of the course which do not adequately address STS line items. Finally, some course graduates experience problems performing component level maintenance. This last point will be important if the Ground Radio specialty is merged because they perform more component level repair according to EPI survey data.

3. BASE INTRUSION SECURITY SYSTEM (BISS)

a. Issue: Where should the responsibility for maintaining BISS lie?

b. Discussion: BISS maintenance is the responsibility of the 304X0 specialty. According to HQ USAF/LEYA this job currently has 542 personnel performing full or part time duties. In February 1990, HQ AFMPC/DPMRAD6 showed 340 personnel assigned to BISS who hold special experience identifier (SEI) 287. However, only 305 of those BISS slots were authorized. BISS maintenance differs from wideband, ground radio, or satellite communications equipment maintenance because it requires different electronic principles. The work they perform may be more similar to that which the television equipment specialty, AFSC 304X5, performs. Electronic principles required by the BISS function of AFSC 304X0 and the television equipment specialty are compared in a separate report available from USAFOMC/OMT. Also, BISS personnel are dissatisfied with the current 3-skill level resident course. The current course does not include instruction on BISS equipment, but a May 1990 course revision will include BISS equipment.

BISS equipment maintenance was placed in the Wideband specialty to reduce the number of short tour assignments and provide greater assignment flexibility for Wideband personnel. Recent equipment improvements have decreased the number of Wideband personnel needed for short tours. Manning figures show Wideband has no overseas imbalance. According to HQ AFMPC/DPMRAD6, BISS manning should remain stable or increase in the foreseeable future.

February 1990 figures from HQ USAF/LEYA show that, at most, BISS comprises 20 percent of Wideband personnel resources. If most BISS personnel are stationed in the CONUS, removing them from Wideband would increase Wideband CONUS manning from 40 to 50 percent.

HQ AFMPC/DPMRAD6 estimates AFSC 304X5, television equipment, will have 388 personnel in November 1990. A specialty with less than 500 members is difficult for HQ AFMPC to effectively manage. The on-going series of 304XX restructure decisions offers functional managers at least two options regarding the future of BISS and TV Equipment.

First, allow the situation to remain as is. This action will not require major changes to the training and assignment systems. It has the disadvantage of allowing BISS personnel to continue working on equipment which is out of the mainstream wideband equipment arena. Also, it allows TV equipment specialty manning to remain below a manageable level.

Second, transfer the duties and responsibilities for BISS to TV equipment. This option's disadvantages are it will require major revision of the training and assignment systems. It has the advantages of combining similar equipment maintenance (cameras, monitors, and TV cable) and adding enough personnel to the TV equipment field to make it manageable for HQ AFMPC. Also, this option has the support of HQ AFMPC/DPMRAD6.

Another concern for functional managers is training. Course E3ABR30430 002 will be updated May 1990 to address the training requirements of BISS. Several new commercial BISS systems are being procured and installed by the Air Force. The Wideband specialty should be closely monitored by AFSC 304X0 functional managers to ensure BISS personnel receive the training required to maintain this new equipment.

4. MERGER

a. Issue: Should AFSCs 304X0/4/6 be combined?

b. Discussion: Almost all personnel contacted during the course of this TRA supported a career field merger. Their main difference of opinion is how difficult it will be to accomplish. Typical comments included:

- 1) No significant problems with the merger. (SAC/SCLMC)
- 2) Merger will work with a great deal of difficulty. (SAC/SCLMC)
- 3) Personnel in AFSCs 304X0/4/6 should be consolidated into one specialty. (1957 CG/CRG)

Please note the first two comments. Both persons are from the same organization and agree the merger will work, but differ on how difficult it will be.

The merger issue has existed since about 1978. Many personnel in the 304X0/4/6 specialties perform duties from one or both of the other specialties. Some of this occurs because of cross utilization training. Others, especially those assigned to locations where slots are not authorized for all three specialties, perform duties from another specialty just to keep their communications site functioning. Many career field personnel believe a merger is inevitable, especially since the merger of NAVAIDS, AFSC 304X1 and Weather, AFSC 302X0. The primary concern of technicians and specialists is how a merger will effect them. Career field management personnel take a broader perspective and concern themselves with merger issues and details, but may not consider the effect of this long standing uncertainty on morale. We believe career field morale will be adversely affected if a decision on career field restructuring is delayed indefinitely. A decision to merge or not to merge should be well publicized to end this uncertainty.

OJT is a critical part of the AFSC 304X0/4/6 training system. All airman receive their 5-, 7-, and 9-skill levels as a result of OJT. The quality of OJT programs often determines the degree of success of Air Force merger projects. The following areas must receive attention if any merger is to succeed.

5. QUALIFICATION TRAINING PACKAGES (QTPs)

a. Issue: How effective are QTPs?

b. Discussion: QTPs are in the field for many systems, but more are needed. Some QTPs are not being fully utilized by specialists or technicians. During field interviews of SMEs, many did not know a QTP existed

for their equipment. Many others had not used the QTPs they had in their files. There appears to be a need to assign responsibility for maintenance and utilization of QTPs to the unit level. Put some teeth in the OJT program.

QTPs can be used as part of the training plan or as refresher training for assigned personnel. This can be accomplished by getting Training Systems Specialists involved with supervisors in setting up standardized training plans for their workcenters. The unit Training Systems Specialists office would be the ideal place to manage these programs.

If properly managed, the use of QTPs can do much to enhance a training program. They can cut down the hours of supervised training required. QTPs can also help produce better trained specialists and technicians and increase the morale of trainees and trainers.

There were 506 tasks analyzed for this TRA. SMEs indicated only 49 percent (252) of those tasks were covered by QTPs. Also, SMEs felt QTPs adequately covered only 58 percent (146) of those 252 tasks. Though these data are not from a random or representative sample, they do indicate some degree of dissatisfaction with QTPs. Representative comments include:

- 1) Qualification Training Packages contain duplication of technical orders. (1957 CS/CRG)
- 2) More emphasis on timely creation of Qualification Training Packages. (1956 CG/LGG)
- 3) Various QTPs utilized are outdated. (2049 CG/LGMT)
- 4) What is needed in a QTP is information that normally can't be found in technical orders or publications. Trainees need to know how to perform a task, but also need to know why it has to be done and what the overall effect will be. (2002 CS/LG)
- 5) QTPs should provide more detail about the equipment. (2037 CS/LGMT)
- 6) QTPs are very helpful and can greatly aid in our training programs, but they are not kept up to date or updated in a timely manner. (1903 CS/LGQ)
- 7) The QTPs should be revised. Most of the AFSC 304X6 QTPs are vague and appear to be only a detailed index to the referenced technical orders, not as an effective learning tool as they could be. (HQ SPCD/LGMK)
- 8) Technological changes frequently cause the QTPs to be outdated. (HQ RCD/LGM)

6. CAREER DEVELOPMENT COURSES (CDCs)

- a. Issue: Do CDCs need to be restructured?

b. Discussion: The discussion below is a summary of headquarters and field unit comments followed by a few quotes of common responses.

1) AFSC 30450. There is far too much information presented in Volume Two of the 30450 CDCs. This volume provides the basic knowledge required to understand newer electronic equipment and is too important to be tested by a one-volume review exercise (VRE). It should be broken into two volumes. (1982 CS/LG)

2) AFSC 30454.

a) This training is adequate but I believe it would be improved by reducing the areas relating to specific equipment and concentrate more on electronic theory. (1957 CG/CRG)

b) The 5-skill level CDCs need to be an extension of basic electronic skills learned in tech school. They need to recap and extend into more detail.

c) Delete the section containing the theory of operation of tubes, we rarely use this in our day-to-day operations. (HQ PCD/LGMG)

d) Add maintenance documentation and supply related tasks to Volume One of the CDC. (HQ PCD/LGMG)

e) This CDC is technically adequate; however, proofreading and editing this CDC can be greatly improved. It takes about four hours to correct all of the mistakes in this CDC, which is a waste of valuable time. This should be distributed with as few mistakes as possible. (1903 CS/LGQ)

3) AFSC 30474.

a) The 7-skill level CDC is good as is. Management is wh. a 7-skill level needs at this point. (1957 CG/CRC)

b) Good, but often written at a lower level than necessary. (1901 CG/LG)

4) AFSC 304X6. The current version of the 304X6 CDCs must be updated, deleting the outdated terminals and adding all the current equipment now in use. (HQ SPCD/LGMK)

The current dates of volumes and supplements are listed below in Table 6.

TABLE 6

DATES OF CDCs AND SUPPLEMENTS BY AFSC

30450		30454		30456	
Volume	Date	Volume	Date	Volume	Date
Supplement		Supplement		Supplement	
01	8404	01	8312	01	8303

S02	8312				
05	8406				
S48	8112				
06	8406				

* Indicates volumes or supplements more than ten years old

AFSC 304X0 and 304X6 CDCs contain study materials dating back to November 1978. The AFSC 304X4 CDC contains study materials dating back to October 1980. Several time consuming changes to these volumes must be posted prior to starting the CDC packages.

7. GENERAL TRAINING ISSUES

The following comments discuss various areas of follow-on training and represent opinions commonly held by career field personnel.

a. The command hands-on training program (CHOT) appears to have many significant advantages. It allows general equipment training for both qualification and upgrade training within a particular career field, i.e., SATCOM. (HQ RCD/LGM)

b. The OJT program for this career field is not producing top notch technicians. This is caused by the lack of spare equipment to work on, the unavailability of training downtime, and the lack of set criteria for the trainers to follow. (HQ SPCD/LGMK)

c. The AFETS/CFS programs are some of the best training in the career fields. These individuals provide in-depth and necessary training to the maintenance personnel. The training ranges from specific equipment to entire systems, all of which is beneficial to the units. (HQ RCD/LGM)

d. Video training is very good. Would like to see more in other equipment/AFSCs. (2068 CS/IG) (The author is referring to interactive video disk.)

TASK ANALYSIS PROCEDURES

Planning

A training planning conference was held 22-26 February, 1988, at Randolph AFB for AFSCs 302X0 and 304X0/1/4/5/6. Representatives agreed that AFCC/LGM would provide a list of systems to be analyzed and locations to be visited. HQ AFCC functional managers provided a list for AFSC's 304X0/4/6 reflecting anticipated phase-outs of old equipment and minimizing TDY costs. This list of systems and locations, became the TDY plan for the TRA. Conference participants agreed upon a top-down approach which would result in the following levels of detail:

Top Down Task Analysis Approach

- System
- Subassembly
- Task
- Activities, Skill, Knowledge.

To ensure uniform coverage of equipment systems, a standard set of four types of tasks was used.

1. Inspect ... system or subassembly
2. Troubleshoot ... system or subassembly
3. Remove or replace ... system, subassembly, or parts
4. Align or adjust ... system or subassembly

Remove or replace tasks were usually subsumed into troubleshoot tasks unless the remove and replace task contained unique skills or knowledge. Other task statements were occasionally written to describe work behavior not included in the standard tasks above.

Systems and Locations

Task analysis interviews were conducted during the period of February through October 1989. Maintenance supervisors selected specialists for the interviews. Supervisors set up interview schedules by matching the most qualified technicians with the tasks identified for analysis. Support by the major command and base representatives was largely responsible for the success of the analysis. USAFOMC analysts visited the following locations.

Andrews	Hickam	Offutt
Aviano	Kapaun	Onizuka
Bergstrom	Keesler	Peterson
Clark	Kelly	Ramstein
F.E. Warren	Lackland	Randolph
Feldberg	Lindsey	Robbins
Gheddi	Lowry	Scott
Goodfellow	Luke	Sheppard
Goughton	McClellan	Tinker
Hellenikon	Mt Corna	

506 tasks were analyzed on the 90 pieces of equipment listed in Appendix A.

Task Analysis Worksheet (TAW)

Figure 1 is an example of a completed Task Analysis Worksheet. A TAW for each task is provided in Appendix A. Each TAW data element is explained below.

1. TASK #: A unique number is assigned to track each TRA task.
2. TASK: A work action. TRA tasks may subsume closely related USAF Job Inventory statements or statements from other sources, such as Task Training Tables (TTT) or Work Center Assigned Task Lists. Each TRA task is documented on a separate TAW.
3. DUTY CODE: Indicates the last two digits of the AFSC which has the primary responsibility for performing this task.
4. TASK STATUS: Indicates the training recommendation for this task. A "K" indicates knowledge level (familiarization) training is recommended. A "P" is used to recommend follow-on training to the performance level. Training may be provided during the initial, 3-skill level, resident course designated by "3R" or during on-the-job-training designated by "OJT." For example, "3R-KP" is a recommendation for knowledge and performance training during the 3-skill level awarding resident course.
5. TIMES ANALYZED: The number of SMEs providing information about this task.
6. TASK NOTES: The following information was collected for each task.
 - a. CONSEQUENCES: What are the consequences of inadequate task performance in terms of:
 - 1) MISSION: NONE, MINOR, SERIOUS
 - 2) EQUIPMENT DAMAGE: NONE, DAMAGE
 - 3) INJURY TO PERSONNEL: NONE, INJURY
 - b. HOW OFTEN: How often is the task performed?
 - c. OJT TRAINABLE: Could this task be trained during OJT to:

- 1) Current Technical School Graduates: YES, NO
- 2) Basic Training Graduates: YES, NO
- d. QTP ADEQUATE: YES, NO, NONE, COMMENTS
- e. QTP REFERENCE(S): QTP number, N/A
- f. TTT: If available, the TTT-recommended skill level for task performance is recorded.
- g. SME OPINION: The skill level at which the interviewed technicians recommend the task be performed.
- h. Other notes may be entered here, as necessary.
7. EQUIPMENT: What equipment, tools, supplies, etc, are required to perform the task?
8. REFERENCES: What references are used to perform the task?
9. CONDITIONS: What special conditions (environmental, time constraints, etc) effect task performance?
10. CUES: What causes you to perform the task? How do you know the task must be performed?
11. STANDARDS: What criteria would the supervisor use to determine the task has been adequately accomplished?
12. OSR DATA: Lists data from the OSR for the JI statements SMEs matched to the TRA task. TASK is the number of the JI statement. TE is the training emphasis rating for the JI statement. 1JOB is the percentage of personnel in their first job who perform the JI statement. 1ENL is the percentage of personnel in their first enlistment who perform the JI statement. 5SKL is the percentage of 5-skill level personnel who perform the JI statement. 7SKL is the percentage of 7-skill level personnel who perform the JI statement. TD is the task difficulty rating for the JI statement. ATI is the automated training indicator from ATCR 52-22 for the JI statement.
13. ACTIVITIES SKILL KNOWLEDGE: TRA analysts interviewed subject matter experts and reviewed technical references to identify activity, skill, and knowledge behaviors required for task performance. The following definitions were used in this TRA.
 - a. Activities are "sets of related behaviors" which have a "common purpose." Activities summarize detailed procedural steps, such as those specified in Technical Orders.
 - b. Skills and knowledge are prerequisite abilities which support task performance but are not themselves part of the steps for accomplishing the task. In this TRA, troubleshoot or fault isolation tasks are classified as knowledge because the essential component of this behavior is the mental ability or decision process used to determine the problem.

Analysis of Commonality

In this section areas of commonality among the three communications specialties are presented. We use two methods to compare these specialties. First, responses by each specialty to the Electronics Principles Inventory (EPI) were compared. A separate EPI analysis is available from USAFOMC/OMTO which compares the BISS function within AFSC 304X0 to the television equipment specialty, AFSC 304X5. Additionally, test equipment used by the BISS and television equipment functions are compared.

Electronics Principles Inventory (EPI). The EPI lists many common electronics skill and knowledge statements. USAFOMC/OMY has administered this inventory to many of the electronics specialties and produced several reports analyzing the results. Those reports can be obtained through USAFOMC/OMY. A complete analysis of electronic principles used by AFSCs 304X0/4/6 is available from USAFOMC/OMT. This analysis reports both the similarities and dissimilarities between specialties and the electronics principles training requirements for these specialties.

Briefly, the AFSCs 304X0/4/6 EPI Analysis indicates all three specialties are similar in their use of electronics principles. Wideband and Space Communications are the most similar. Ground Radio and Space Communications show the greatest differences. As a measure of similarity of use of electronic principles, Table 7 contains EPI item recommendation matches based upon ATCR 52-22 training guidelines.

TABLE 7

EPI ITEM RECOMMENDATION MATCHES BETWEEN SPECIALTIES

	AFSC PAIRS		
	<u>30450-30454</u>	<u>30450-30456</u>	<u>30454-30456</u>
RECOMMENDATION MATCHES	495	539	434
TOTAL ITEMS	712	712	712
MATCHES TO TOTAL EPI QUESTIONS	70%	76%	61%

Excluding other considerations, Wideband and Space Communications are good candidates to be merged first because they are the most similar in their use of electronics principles.

Ground Radio and Space Communications personnel show the greatest difference in electronics principles use in Amplifier Circuits, Power Supplies, Reactive Circuits, and Waveshaping/Generating Circuits. Ground Radio and Wideband personnel show large differences in electronics principles use in Amplifier Circuits and Transmission/Reception Circuits, Devices, and Systems.

Wideband and Space Communications personnel show large differences in only section "D" of the EPI, Power Supplies.

Overall, Ground Radio shows the greatest percentage of personnel using EPI items. Thus, Ground Radio might be described as the most extensive users of electronics principles and skills. Space Communications shows just the opposite. Of the three specialties, they were the least extensive users of electronics principles. However, all three AFSCs were quite similar in the percentages of people using most types of test equipment. Ground Radio is the only specialty with a high percentage of personnel working with microphones and speakers, most types of amplifier circuits, and AM/SSB equipment. Also, Wideband is the only specialty which works with television systems.

Finally, the EPI is only one of several possible indicators of similarities and differences between specialties. It does show how specialties compare in most basic areas of electronics principles. It does not survey the entire job or all a person does. Management should consider all parts of the job before restructuring any specialty. Also, managers should inspect closely the specific areas of large differences between specialties. These areas may hold the key to the success or failure of any action taken based on these results.

The Electronics Fundamentals/Applications (EFA) list is a condensed form of the EPI. An EFA checklist was used to identify some of the skills and knowledge associated with each specific TRA task. SMEs matched EFA statements to tasks. USAFOMC analysts then grouped the statements by system. Appendix B lists equipment and their associated EFA statements.

Statements from the USAF Job Inventories for the three specialties were also matched to TRA tasks. SMEs considered statements from all three inventories and selected the statements they considered related to or included in each TRA task. Not only does this identify units of work associated with a TRA task, it also provides another way to measure the similarity and dissimilarity of the three specialties. Some degree of similarity is indicated if SMEs matched statements from the AFSC 304X4/6 Job Inventories to a TRA task describing work on an AFSC 304X0 piece of equipment. However, matching Job Inventory statements across inventories presents risks. There are problems of context and semantics. Words may not have the same meaning across specialties. Although Job Inventory task statements may appear dissimilar, the skills and knowledge required to perform those tasks may be similar. So, the match of Job Inventory statements to equipment is not as important as the overall findings of similarity and dissimilarity. Appendix B lists equipment and their associated Job Inventory statements.

One method of addressing the similarity of the BISS function and the television equipment specialty is to compare test equipment. Below is a list of equipment common to both the BISS tasks listed in Appendix A and tasks from the 304X5 Training Requirements Analysis published in February of 1989.

Equipment Common to BISS and AFSC 304X5

Attenuator	Logic Probe
Bar Dot Generator	Monitor
Decade Box	Ohm Meter
Degausser	Oscilloscope
Digital Voltmeter	Power Supply
Distortion Analyzer	Signal Generator
Dummy Load	Soldering Kit
Extension Board	Synchronizer Generator
Frequency Counter	Vacuum Tube Voltmeter
Isolation Transformer	

There are also many equipment items which are used by only one group. For example, BISS uses microwave test equipment and television personnel use a variety of film and tape equipment.

TRAINING RECOMMENDATIONS

Purpose

This section of the TRA provides general and specific (task-by-task) training recommendations. These recommendations provide decision makers with the bottom-line results of this TRA. Recommendations are based upon analysis of issues presented in the Systems Overview, occupational survey data, Electronics Principles Inventory survey data, TRA task analysis data, and other information obtained during this study.

General Training Recommendations

1. BISS

Recommendation. Transfer the AFSC 304X0 BISS function to AFSC 304X5, Television Equipment.

Rationale. A comparison of electronic principles indicates the BISS function is more similar to AFSC 304X5 than to AFSC 304X0. In many cases, BISS and Television maintenance require similar test equipment. See BISS issue in Systems Overview portion of this report.

2. MERGER

Recommendation. From a training perspective, these specialties should be merged.

Rationale. These specialties are similar in their use of electronics principles. Wideband, Ground Radio, and Space Communications personnel have been sharing duties because AFCC has emphasized cross utilization training. Nearly all SMEs interviewed for this TRA believed these specialties could be merged. However, training is not the only issue to consider when deciding on a merger. Managers should consider other factors beyond the scope of a TRA. See Merger issue in Systems Overview portion of this report.

3. CROSS UTILIZATION TRAINING

Recommendation. If specialties are merged, continue to emphasize cross utilization training.

Rationale. Cross utilization training has been effective for many units for several years. Many field personnel feel the merger would succeed because cross utilization training has succeeded. See Merger issue in Systems Overview portion of this report.

4. MANNING

Recommendation. If merger is an outcome, conduct a manpower evaluation to determine the number of personnel required to support operational and training requirements during the transition and after the merger.

Rationale. The initial stage of a merger will require increased OJT. This, combined with a projected 7 percent workforce reduction by January 1991 and an unknown reduction due to "early outs," may result in insufficient duty hours to meet requirements. See Manning issue in System Overview portion of this report.

5. BASIC ELECTRONICS COURSES

Recommendation. Increase instruction on basic electronics, use of test equipment, and troubleshooting. Several of these items were identified as repeat course deficiencies by recent training evaluation reports (TERs).

Rationale. These specialties maintain several hundred systems. Increasing the variety of the systems which these personnel must maintain increases the importance of stressing basic electronics, test equipment, and equipment functions instead of specific pieces of equipment. Specific equipment must obviously be used for this training. The equipment chosen should represent common functions and common systems and the emphasis should be on basic troubleshooting skills applicable across a range of electronic equipment.

Most personnel contacted during the project held this view. This recommendation becomes more important if specialties are merged because it would not be feasible to provide resident training for each specific system. See Basic Electronics Courses issue in System Overview portion of this report.

6. QTPs

Recommendation. 1872 SCHS develop QTPs for all major equipment.

Rationale. QTPs are a viable approach to OJT. They formalize and standardize hands-on OJT. See QTP issue in System Overview portion of this report.

7. QTPs

Recommendation. Centralize responsibility for insuring use of QTPs at the unit level with the unit training specialist.

Rationale. Without centralized management at the unit level, QTPs will continue to be under utilized and will remain difficult to properly maintain. See QTP issue in System Overview portion of this report.

8. CDCs

Recommendation. 3300 TCHTW update CDCs.

Rationale. Many of the CDC volumes and supplements are more than ten years old and require revision as well as correction of errors. Most specific equipment material can be covered in QTPs. This would allow CDCs to address material which concerns the entire specialty, such as electronic principles in 5-skill level CDCs and maintenance management

training in 7-skill level CDCs. See CDC issue in System Overview portion of this report.

9. AFETs PROGRAM

Recommendation. Use the AFET program as much as possible.

Rationale. Field personnel indicated AFET provides some of the most valuable training available. See Miscellaneous Training issue in System Overview portion of this report.

Specific Training Recommendations

Specific skill level and training setting recommendations (OJT or resident course) are formatted to assist managers and training developers in revising STSs. This TRA was requested to provide data as a basis for AFSC merger decisions. Therefore, specific training recommendations focus on the 3-skill level.

The following procedures were used to make specific training recommendations. Subject matter experts matched USAF Job Inventory task statements to specific TRA tasks. They also selected the Job Inventory task most representative of each TRA task. Training recommendations for specific TRA tasks are based upon occupational survey data and descriptive task analysis data. Occupational survey data for these representative tasks were used to make preliminary training recommendations in accordance with the decision logic in ATCR 52-22. These recommendations were then modified to reflect additional information collected during TRA task analysis interviews. A full report of the procedures used to make specific training recommendations is available from the USAF Occupational Measurement Center Training Development Services Division. An example is shown in Table 8 and an explanation follows.

TABLE 8

SAMPLE SPECIFIC TRAINING RECOMMENDATIONS

SPECIALTY TRAINING STANDARD (STS)		AFSC 304X4	3 LEVEL	STS	
			CRSE	OJT	ACTION
/ 13. EQUIPMENT MAINTENANCE					
STS ITEMS	A. CHECK MINIMUM PERFORMANCE STANDARDS ON THE FOLLOWING EQUIPMENT				
	(1) TRANSMITTERS				
	\ 13.A.(1)(A) HF AM/SSB/ISB		-		REVIEW
JI TASKS	/ J.I. H0383 A OPERATIONALLY CHECK HF EQUIPMENT (TRA 02740)		KP		
	\ J.I. H0391 A OPERATIONALLY CHECK SIDE BAND EQUIPMENT (TRA 03800)		KP		
TRA TASKS	/ TRA 03800 INSPECT 618T-1 RECEIVER-TRANSMITTER RADIO (J.I. H0391)		KP		
	\ TRA 02740 INSPECT AN/TSC-107 (HF INDEPENDENT SIDEBAND TRANSMITTER (J.I. H0383)		KP		
STS ITEM	- 13.A.(1)(B) VHF AM		2a		NONE
JI TASKS	/ J.I. J0525 A BENCH CHECK UHF TRANSMITTER (TRA 01870)		KP		
	\ J.I. J0529 A BENCH CHECK VHF TRANSMITTER (TRA 01870)		KP		
TRA TASKS	/ TRA 01870 INSPECT AN/GRT-21 VHF AND AN/GRT-22 UHF TRANSMITTERS (J.I. J0525 AND J0529)		KP		

Table 8 shows a portion of the AFSC 304X4 STS. Job Inventory statements and TRA tasks are displayed below each corresponding STS line item. Current training proficiency codes are shown to the right of each STS line item. Training recommendations are shown to the right of each TRA task. The recommended skill level at which training should be provided is designated with a "K," "P," or both. The "K" indicates knowledge level (familiarization) training is recommended. A "P" is used to recommend follow-on training to the performance level. Follow-on training to the performance level may occur in a resident course or OJT. Note: Knowledge-level training DOES NOT imply that hands-on training should not be provided; a "K" indicates the trainee is not fully qualified.

STS recommendations are shown to the right of STS line items in the STS ACTION column. "REVIEW" indicates a recommendation to review the proficiency code for that line item. "REVIEW" is recommended when there is a discrepancy between the current proficiency code and the training recommendations for JI statements and TRA tasks following the line item. "ADD" indicates a recommendation to add the line item to the STS. "NONE" indicates agreement between the current proficiency code and the training recommendations for JI statements and TRA tasks following the line item. For those STS line items with a "REVIEW" recommendation, U&TW attendees should compare the proficiency codes to the recommendations for the JI statements and TRA tasks below that item. Discrepancies between recommendations should be discussed at the U&TW where attendees can decide whether to make the recommended changes.

Managers and training developers should study both the general and specific training recommendations BEFORE attending the utilization and training workshop (U&TW). This investment of time by attendees will allow informed

discussion of the issues and recommendations presented in this training requirements analysis (TRA). Those who attend the U&TW prepared will be able to adequately represent the interests of their organizations.
