Shaped charges fired from air into ice give holes of typical form for cohesive solids. There are only a few reported results from test shots in ice, but supplementary data can be obtained by adjusting the results from tests in ice-bonded soil in accordance with target density. Present indications are that charges with narrow angle cones (appr. 45 deg) can penetrate about 16 cone diameters, giving a hole diameter near mid-depth of about 1/3 of the cone diameter. Charges with wide-angle cones (60-90 deg) might penetrate about 12 cone diameters, giving a hole diameter near mid-depth of about 2/3 cone diameters Optimum standoff in air seems to be around 4 cone diameters. So far, we have no data for shaped charges fired into ice under water.

In early fall 1984, USACRREL conducted a study of airport pavements in cold regions of the United States The most common pavement problems were associated with nontraffic related phenomena and include (1) pre-existing cracks reflecting through asphalt concrete overlays (in two years or less), (2) thermal cracking, and (3) longitudinal cracking (at a construction joint). Most of the airports experienced (1) water pumping up through cracks and joints in the pavements during spring thaw, or (2) additional roughness due to differential frost heave in the winter, or both problems Many airport managers reported that debris was generated at cracks during the winter and spring Several airports experienced problems with lighting in the winter and spring. Many pavement problems can be traced to the evolutionary history of general aviation airports and the lack of consideration for site drainage.

ROOFS, MOISTURE DETECTION, FREEZE THAW CYCLES, DAMAGE, THERMAL EXPANSION, THERMAL EFFECTS.
During 1984 and 1985 airborne infrared roof moisture surveys were conducted of membrane roofs at army installations in Alaska. Many of these roofs were also visually inspected and cored to verify infrared findings Numerous areas of wet insulation were found but often they were small enough and the surrounding roofing system was in good enough condition to warrant removal and replacement of just the wet areas Essentially all moisture entered from the exterior through flaws in the membrane and flashings The lack of problems from internal moisture indicates that current vapor retarders, even though imperfect, are adequate Some "cold regions" appurtenances such as membrane control joints, and insulation breather vents appear to do more harm than good. The protected membrane (upside-down) roofing system is well suited to Alaska but some problems have occurred when the membrane lacks slope to drain Low-strength concrete pavers used for roof ballast have been deteriorated by freeze-thaw action

The upper one-third of the Delaware River is characterized by a steep gradient with a general riffle/pool sequence. Due to seasonal low flows, a considerable volume of ice is generated and transported throughout the winter months During February 1981 a catastrophic breakup ice jam occurred along a reach of the Delaware River near Port Jervis, NY, causing $14 5 million in damages In February 1982 another breakup ice jam occurred at the same location, causing much concern but minimal flooding and damages These events prompted the Philadelphia District, U S Army Corps of Engineers, to conduct an investigation of the Upper Delaware River to determine if some form of ice control structure could be implemented in order to reduce ice jam-induced flooding This paper focuses on the field investigations and analyses performed by the U S Army Cold Regions Research and Engineering Laboratory for the Philadelphia District during the period 1983-1985. The study included both on site and remote monitoring of ice conditions and hydraulic analysis of several ice control structure alternatives

ROOFS, THERMAL INSULATION, POLYMERS, CELLULAR PLASTICS, MOISTURE, TEMPERATURE GRADIENTS, TESTS.
When subjected to a sustained temperature gradient in the presence of moisture in laboratory wetting tests, urethane and expanded polystyrene roof insulations accumulate enough moisture to reduce their insulating ability significantly Extruded polystyrene is quite resistant to moisture in such tests But the vapor drive is not as great in actual roofs, and it may reverse direction, thereby seasonally drying the insulation To determine how well the laboratory tests could predict the wetting rate of insulation in actual protected membrane roofs, extruded and expanded polystyrene and urethane insulations were installed in a protected membrane roof in Hanover, New Hampshire After three years of exposure, little moisture had accumulated in the extruded polystyrene and it still retained essentially all of its initial insulating ability Moisture progressively accumulated in 16-kg/cu m (1-lb cu ft) and 30 kg cu m (1 9-lb cu ft) expanded polystyrene insulations, and at the end of the test they retained only about 30 and 40% of their initial thermal resistance, respectively The urethane accumulated enough moisture to reduce its insulating ability to about 10% of its dry value The laboratory tests provided a valuable indication of the potential long-term moisture gain of these insulations when installed in protected membrane roofs in cold regions

ICE COVER STRENGTH, MILITARY RESEARCH, PROJECTILE PENETRATION, IMPACT STRENGTH, FLEXURAL STRENGTH, BRITTLENESS, PENETRATION TESTS.
Exploratory tests of ice penetration were made by driving small blunt cylinders into semi-infinite ice at normal incidence Three types of laboratory tests were made (1) drop-weight impact (impact speed 1 4-3 1 m/s), (2) high-speed ballistic penetration (impact speed 83-434 m/s), (3) deep penetration at low speed (0 42-4 23 m/s) Penetration by indenters and projectiles could be characterized by the energetics of the process, with little variation of specific energy as penetration speed changed by orders of magnitude For blunt penetrators entering ice at -5 C, specific energy was typically in the range 1 5-15 MJ/cu m Low speed tests provided data on penetration force (and energy) as a function of displacement The test results were compared with other published laboratory data, and with field tests results for bigger projectiles.

40-2659
SNOW WATER CONTENT, PARTICLE SIZE DISTRIBUTION, SLUSH, WET SNOW, SATURATION, STATISTICAL ANALYSIS
The particle size distributions in water-saturated snow are distinctly log-normal at all times The rate of increase of the average volume decreases somewhat with time. Both of these conclusions are contrary to the LSW theory, which should apply to this system Also, the particles are distinctly spheroidal probably prolate These discrepancies might be explained by extending the LSW theory to nonspherical particles with interparticle contacts When normalized to the mean the distribution is invariant with only the mean changing with time

ICE CORES, ICE SAMPLING, EQUIPMENT, FREEZING, WATER TEMPERATURE, COMPRESSIVE PROPERTIES.
This short note describes the equipment and procedures developed to mount end caps on ice-core specimens The system typically achieves end-plane parallelism within 0 5 micron/mm of specimen diameter (i e a total indicator run-out of 0 002 in for a 4 0 in diameter specimen) The essential elements of the system are a holder and an alignment fixture The holder firmly grips the ice core about its circumference by the compression of two series of O-rings The alignment fixture clamps the holder to align the ice core precisely with the end caps To bond the ice to the end cap we form a layer of 0 C water on the end cap, the water freezes immediately upon contact with the ice and forms a strong intimate bond To date, this system has been used to install phenolic end caps on 101 6 mm diameter cores and aluminum end caps on 76 2 mm diameter cores of saline ice A somewhat better tolerance was obtained with the aluminum caps, due primarily to the geometric stability of that material under the prevailing

conditions. These specimens have been successfully tested in uniaxial and triaxial compression, and with appropriate end caps the system should be suitable for preparing tension specimens as well.

The ice forces generated during continuous crushing of an ice sheet against a cylindrical vertical structure vary with time, according to the resistance offered by ice as it fails and clears from the path of the structure. Small-scale experiments were performed to measure the ice forces by pushing rigid cylindrical structures of different diameters at different velocities through an ice sheet. The dominant frequency of ice force variations, defined as the characteristic frequency, was determined from the frequency spectra of the force records The characteristic frequency plot with respect to the velocity-to-thickness ratio reveals a linear relationship, which implies that the average length of the damage zone is proportional to the ice thickness On the basis of the data presented here, the average length of the damage zone is about one-third of the ice thickness

SNOWFALL, LIGHT TRANSMISSION, INFRARED RADIATION, LIGHT SCATTERING, VISIBILITY, WAVE PROPAGATION, PARTICLES.
Wavelength-dependent extinction in the visible and infrared regions of the electromagnetic spectrum has been observed during studies of transmission through falling snow. The wavelength dependence was particularly noticeable during periods of light snowfall. Particles comparable in size to the wavelengths were also present during these periods These particles were assumed to be water droplets, and their extinction cross-sections were determined from Mie scattering calculations The calculations suggest that these particles were responsible for the wavelength-dependent extinction observed during snowfall

SEA ICE, ICE BOTTOM SURFACE, ELECTROMAGNETIC PROPERTIES, ICE STRUCTURE, BRINES, AIR ENTRAINMENT, RADIO ECHO SOUNDING, DIELECTRIC PROPERTIES, ICE PHYSICS, RADAR ECHOES
Sounding of multi-year sea ice, using impulse radar operating in the 80- to 500-MHz frequency band, has revealed that the bottom of this ice cannot always be detected. This paper discusses a field program aimed at finding out why this is so, and at determining the electromagnetic (EM) properties of multi year sea ice It was found that the bottom of the ice could not be detected when the ice structure had a high brine content Because of brine's high conductivity, brine volume dominates the loss mechanism in first-year sea ice, and the same was found true for multi-year ice A two-phase dielectric mixing formula, used by the authors to describe the EM properties of first-year sea ice, was modified to include the effects of the gas pockets found in the multi-year ice This three-phase mixture model was found to estimate the EM properties of the multiyear ice studied over the frequency band of interest.

A literature search indicated that natural freezing may have detrimental effects at uncontrolled hazardous waste sites in the cold-dominated areas because of frost action on buried materials and ion movement in soils Natural and artificial freezing, however, can be used beneficially to concentrate effluents, and to dewater sludges, contaminated sediment and soils The process of artificial ground freezing can also be used as an alternative to temporarily immobilize contaminant transport and potentially for decontamination of soils, sediments and sludges. A cost and economic analysis procedure was developed and used to evaluate ground freezing

WASTE TREATMENT, ARTIFICIAL FREEZING, SOIL FREEZING, FREEZE THAW CYCLES, SOIL POLLUTION, COUNTERMEASURES, WASTE DISPOSAL, ENVIRONMENTAL PROTECTION.
This paper summarizes a preliminary investigation of the potential use of ground freezing technology for contaminant immobilization. Freezing and thawing were found to significantly decrease the volume of soil slurry and increase the permeability of soils Frozen metal-contaminated soils eliminated metal leaching to groundwater under the site Freezing and thawing soils contaminated with moderately volatile organics significantly reduced the soil concentrations of these organics Freezing the soil from the bottom apparently enhanced upward movement of the organics to the soil surface where losses occurred by volatilization The amount lost depended on the mobility of the specific volatile component and was as high as 90% for chloroform, benzene and toluene and as low as 45% for tetrachloroethylene Input to groundwater during freezing and thawing of these organics was much less than the unfrozen (control) treatment Artificial ground freezing for decontamination of soils and for immobilization of contaminants is now being tested on a larger scale

WASTE TREATMENT, SOIL FREEZING, ARTIFICIAL FREEZING, WASTE DISPOSAL, SOIL WATER, THERMAL PROPERTIES, LATENT HEAT, ENVIRONMENT PROTECTION, REFRIGERATION
Ground freezing for hazardous waste containment is an alternative to the traditional and expensive slurry wall or grout curtain barrier technologies The parameters quantified in this analysis of it include thermal properties, refrigeration line spacing, equipment mobilization and freezing time constraints The economics of the process is discussed based on the Poetsch method for ground freezing Vertical drill holes with concentric refrigeration lines are spaced along the desired freezing line A header or manifold system provides coolant to an interior pipe, with the return line being the outer casing A self-contained refrigeration system pumps coolant around the freezing loop Temperature-measuring instrumentation is appropriately placed to monitor the progress of the freeze front.

ICE ISLANDS, GROUNDED ICE, ICE SALINITY, ICE TEMPERATURE, ICE DENSITY, SHEAR STRENGTH, ICE LOADS, ARTIFICIAL ISLANDS, TESTS, OFFSHORE STRUCTURES.
Salinity, temperature, density, and shear strength tests were performed on the confined flooded ice in the 1976-77 East Harrison Bay grounded ice island. The constructed ice had a mean salinity of 13 8 ppt, a mean density of 877 kg/cu m, and a mean horizontal shear strength of 0.74 MPa The shearing resistance of the constructed ice and the sliding resistance of the island on the sea floor were sufficient to prevent the island from being pushed off location by ice movement

ICE MELTING, HEAT TRANSFER, WATER FLOW, ICE TEMPERATURE, ICE SHEETS, WATER TEMPERATURE, CONVECTION.
Experiments were conducted to study the melting of a horizontal ice sheet with a flow of water above it. The experiments were conducted in a refrigerated flume 35 m long with a cross section of 1 2 x 1 2 m. Water depth, temperature, and velocity were varied as well as the temperature and initial surface profile of the ice sheet. It was found that the heat transfer regimes consisted of forced turbulent flow at high Reynolds numbers with a transition to free convection heat transfer at lower Reynolds numbers There was no convincing evidence of a forced laminar regime

PRESSURE RIDGES, ICE STRENGTH, COMPRESSIVE PROPERTIES, LOADS (FORCES), SEA ICE, STRAIN TESTS, TEMPERATURE EFFECTS, PRESSURE, STRESSES.
Fifty-five constant-strain-rate triaxial tests were performed on vertically oriented multi-year pressure ridge samples from the Beaufort Sea. The tests were performed on a closed-loop electrohydraulic testing machine at two nominal strain rates (1/100,000 and 1/1,000 per sec) and two temperatures (-20 and -5 C) In all of the tests the confining pressure was ramped in constant proportion to the applied axial stress. This paper summarizes the sample preparation and testing techniques used in this investigation and presents data on the confined compressive strength and failure strain of the ice. Uniaxial data are also included for comparison

ICE LOADS, ICE FRICTION, OFFSHORE STRUCTURES, ICE BREAKING, ICE SOLID INTERFACE, ICE CONDITIONS.
The contributions of frictional forces to the overall ice forces exerted against sloping structures have been studied before, but their effect on the ice forces against vertical structures has not yet been studied. In this paper, the influence of frictional resistance on the crushing and buckling failure loads of ice sheets against flat, vertical structures is discussed Small-scale experiments were conducted to compare experimental results to those from theoretical formulations The main conclusions of this study are: a) the crushing ice forces increase with increasing coefficient of friction between ice and structure, and b) the buckling failure loads also increase due to changes in boundary condition induced by increasing frictional resistance at the ice/structure interface

ICE LOADS, ICE PRESSURE, OFFSHORE STRUCTURES, IMPACT STRENGTH, PILES, VELOCITY, UREA, EXPERIMENTATION, COMPRESSIVE PROPERTIES.
An experimental study was undertaken of the total force and local pressure generated during the impact of a vertical cylindrical structure against the edge of an ice sheet The test structure was an instrumented cylindrical pile that protruded under a massive ram suspended from two cranes in the form of a bifilar pendulum Measurements were made of impact velocity, total ice force, and pressure at a point on the pile The dependence of normalized maximum ice forces with respect to aspect ratio has the same trend as that for the crushing failure of an ice sheet against a vertical structure The results of this study indicate that the instantaneous maximum pressure can be an order of magnitude higher than the unconfined compressive strength of ice.

ROOFS, CONDENSATION, MOISTURE, VAPOR TRANSFER, AIR FLOW, COUNTERMEASURES, BUILDINGS, DAMAGE, CONSTRUCTION MATERIALS, MAINTENANCE.
Excessive moisture can damage wood, metal, and concrete roof decks, cause bituminous membranes to wrinkle, shrink, split, delaminate and blister and significantly reduce the insulating ability of most roof insulations Low-sloped wood-frame roofs with below-deck insulation have encountered a significant number of condensation problems Few such problems occur for compact membrane roofs without intervening air spaces Air leakage control probably explains the difference However, serious condensation problems occur in some compact membrane roofs, particularly in cold regions For most roofs, upward vapor flow in cold weather is generally exceeded by downward vapor flow in warm weather Thus, the objective is to install "air-vapor retarders to reduce winter wetting to an acceptabl. level Ventilation of the space between the membrane and the retarder is also practiced.

40-3203
ROOFS, MOISTURE DETECTION, THERMAL INSULATION, CONDENSATION, MEASURING INSTRUMENTS.
Roof moisture surveys are conducted with nuclear meters, capacitance meters or infrared scanners. Nuclear meters and capacitance meters take readings at the spots on the roof with points spaced from 5 to 10 feet apart Nuclear meters sense the amount of hydrogen in the roofing system at each spot Since most dry roofs contain hydrocarbons, they do not give zero readings. When water also is present on the roof, nuclear readings increase since water is part hydrogen Capacitance meters create an alternating current electrical field in the roofing system below When there is water in the roof, its dielectric properties change and the reading on the capacitance meter increases Capacitance meters do not "see" deeply (a few inches at most) into the roofing system An infrared scanner senses the temperature of the surface of the roof Wet insulation changes the ability of the roofing system to store and conduct thermal energy, thereby causing changes in its surface temperature which the infrared scanner can detect Instead of a meter reading, the infrared results are presented as shades of brightness on a video monitor This qualitative visual image provides information about every square inch of the roof, but the information is more subjective than the numbers generated at grid points by nuclear or capacitance meters

THERMAL INSULATION, WALLS, HEAT TRANSFER, HEAT FLUX, HEAT LOSS, BUILDINGS, ACCURACY, THERMAL CONDUCTIVITY

This paper addresses the validity of employing heat flow sensors (HFSs) on the indoor surfaces of building walls to determine thermal characteristics. It also reports on the results obtained in the field. Some of the factors affecting HFS measurement accuracy (together with a likely percentage standard deviation attributable to that factor) are as follows: (a) the conductivities of HFS and its surroundings (3%), (b) convection mode changing over the sensor, causing a +21% bias (26%), (c) the mismatch of HFS absorptivity with the surroundings (6%), and (d) thermal contact of the HFS with the surface (1%) A propagation-of-errors analysis indicates that the resulting standard deviation of an HFS measurement would be approximately 10% of the mean of the measurements.

The U.S. Army Cold Regions Research and Engineering Laboratory has recently acquired an instrumented vehicle for the measurement of forces at the tire/surface material interface. The CRREL instrumented vehicle (CIV) is equipped with moment-compensated triaxial load cells mounted in the front wheel assemblies. Forces are measured in the vertical, longitudinal (in the direction of motion) and side directions In addition, accurate wheel and vehicle speeds and rear axle torque and speed are measured Modifications to the vehicle (to facilitate the performance of traction and motion resistance tests) include four lock-out type hubs to allow front-, rear- or four-wheel drive and a dual brake system for front-, rear- or four-wheel braking A minicomputer-based data acquisition system is installed in the vehicle to control data collection and for data processing, analysis and display Discussion of the vehicle includes its operation and use for the evaluation of the tire performance and surface material properties of motion resistance and traction.

A large-diameter open-ended coaxial waveguide has been interfaced with a commercially available time domain reflectometry (TDR) unit for field measurements of the dielectric properties of frozen and thawed soils and ice. A core barrel developed by the U S Army Cold Regions Research and Engineering Laboratory (CRREL) and modified for use in frozen soil was used to auger an annular slot around which the waveguide fits. Time domain traces of waveforms reflected from the sample-air interface and from a metal short are recorded in the field and later analyzed to give complex dielectric permittivity between 0 05 and 1 0 GHz.

Concentrations of HMX, RDX, TNT, and 2,4-DNT are determined in munitions wastewater Aqueous samples are diluted with an equal volume of 76/24 (v/v) methanol-acetonitrile, filtered through a 0 4 micron polycarbonate membrane, and analyzed by reversed-phase HPLC using an LC-8 column with 50/38/12 (v/v/v) water-methanol-acetonitrile. The method provided linear calibration curves to at least several hundred micrograms per liter Detection limits were conservatively estimated to be 26, 22, 14, and 10 microgram/L for HMX, RDX, TNT, and 2,4-DNT, respectively, with corresponding standard deviations of 3.4, 3 3, 4 4, and 4 6 microgram/L up to concentrations of 250 microgram/L At higher concentrations, the percent relative standard deviation values were approximately 2% for HMX and RDX and 4% for TNT and DNT. A ruggedness test involving the major manipulative steps in the procedure indicated that consistent results required glass sample containers, preconditioning of filters, and careful maintenance of sample-to-organic solvent ratio The method was tested with munition wastewater from several Army ammunition plants and found to perform adequately for load and pack wastewaters, wastewater from HMX/RDX manufacture, and contaminated groundwater.

ROCKS, CRACK PROPAGATION, ELASTIC PROPERTIES, TENSILE PROPERTIES, FRACTURING, STRENGTH, TESTS.
Laboratory tests confirm the accuracy of the compliance equations for wedge-loaded, linearly elastic, double cantilever beam test specimens used for the measurement of fracture energy G(I) but show that there are significant discrepancies with theory in tests on rock specimens of the same design. The dependence of the compliance on the length of the crack in the test specimen is not correctly predicted by theory for the experiments done on rock. The axial load applied to the arms of the double cantilever beam as a result of wedge loading reduces Young's modulus by as much as 44% and decreases the measured elastic anisotropy of specimens of granite The experiments show that useful measurements of G(I) can be made on rock provided that the Young's modulus used in the determination of G(I) is measured on the same specimen under the same conditions of loading as are used in the fracture experiments

RADAR ECHOES, WAVE PROPAGATION, GLACIER ICE, ELECTRICAL RESISTIVITY, ANTARCTICA—VICTORIA LAND, GREENLAND.
A new technique for measuring the speed of radar waves in polar ice sheets was developed to investigate a previously reported disagreement between the permittivities of laboratory and glacier ice. The technique involves lowering a cylindrical radar target to several carefully measured depths in a borehole and measuring the travel time of a radar wave transmitted from a surface radar unit to the target in the borehole The experiment was performed at Dome C, East Antarctica, and Dye-3, Greenland, and useable data were collected for target depths between 200 and 800m. After computing the range to the target along a straight ray path and after correcting the travel time for delays in in the radar receiver, the velocities determined from these experiments were found to be in good agreement with the velocities predicted by Robin's empirical formula. The apparent discrepancy between the permittivity of glacier ice, as measured using the radar wide-angle reflection method, and laboratory ice now seems to be due in large part to signal delay in the radar receiver that was ignored in earlier experiments (Auth)

38-1742
ICE SHELVES, FLOW RATE, RADAR ECHOES, ICE COVER THICKNESS, ANTARCTICA—ROSS ICE SHELF, ANTARCTICA—SIPLE COAST, ANTARCTICA—CRARY ICE RISE.
Variations in the amplitude of radar echoes from the bottom of the grid western half of the Ross Ice Shelf have been analyzed. Contrary to the results of a similar analysis performed for the grid eastern sector of the ice shelf, bands of low signal strength downstream from both Crary Ice Rise and the Siple Coast do not correlate with modern flow lines The difference in direction between the radar bands downstream of Crary Ice Rise and the present velocity vectors and the absence of of a comparable trend farther east suggest to us that the grounding line around Crary Ice Rise retreated within the last 1000 years This hypothesis is reinforced by the observation of several domes and hollows in ice thickness downstream of Crary Ice Rise which are similar to a hollow now located in the wake of the ice rise and a dome of its eastern flank. We interpret this as evidence for a rapid increase in flow around the ice rise which carried downstream the ice topography formed around the ice rise Similar but less detailed evidence found downstream of the Siple Coast suggests that there was a regional retreat of the West Antarctic grounding line (Auth)

38-2914
ICE SHELVES, CREVASSES, FLOATING ICE, ICE MECHANICS, ANTARCTICA—ROSS ICE SHELF.
Bottom crevasses are fractures that extend upward into floating ice shelves. They form when seawater penetrates the base of the ice shelf and ruptures the ice up to the level at which englacial stresses equal the stress of the seawater For a freely floating ice shelf, the penetrating level of closely spaced crevasses is estimated at about half the ice thickness h, for an isolated crevasse the level is about p/h 4 However, an analysis of the heights and locations of bottom crevasses in the Ross Ice Shelf shows that none of the crevasses approach the predicted limits, perhaps because the existing theory does not include the back stress which is present in bounded ice shelves By reformulating the theory to include a back stress term, back stress can be evaluated experimentally from radar measurements of crevasse height and ice thickness The magnitude of back stress (2 bars in the grid northwest corner of the ice shelf) suggests the ice shelf is playing an important role in buttressing the inland ice sheet (Auth)

This paper describes the equipment and methodology used to determine the resilient properties of granular soils that exhibit thaw-weakening behavior Such soils suffer a significant loss in stiffness as the result of freezing and thawing and subsequently experience an increase in stiffness during a recovery phase The recovery phase results from gradual desaturation of the thawed soil and is characterized by an increase in the soil moisture tension level. We have developed a means to simulate this freeze-thaw-recovery process in the laboratory that calls for testing specimens several times at soil moisture tension levels corresponding to field observations.

FROST ACTION, MEASURING INSTRUMENTS, PERMAFROST, BENCH MARKS, TOPOGRAPHIC SURVEYS, HYDROLOGY, STRUCTURES, DEFORMATION, DESIGN.
Techniques used for topographic, hydrographic and structural movement surveys are no more accurate than the benchmarks used as reference. In northern areas, frost action can cause substantial vertical movement of benchmarks Benchmarks can also subside or shift in wetland and coastal areas. Various benchmark designs and installation procedures reduce or eliminate movement, but information on the designs and procedures is widely scattered and not available to Corps of Engineers Districts in one report. This paper gives the preliminary results of a synthesis of existing information compiled from surveys of Crops of Engineers Districts and Divisions, U.S. and Canadian government agencies and private industry and from a literature review. A matrix for selecting benchmarks appropriate for various climatic and soil conditions will be prepared from the synthesized information This matrix and a description of the procedures required for installing various types of benchmarks will be available in September 1985.

This paper describes the SNOW-III-WEST experiment and a related study conducted in the Federal Republic of Germany that was designed to increase the understanding of the effects of winter weather on the performance of electro-optical sensor systems in main battle tanks SNOW-III-WEST was conducted at Camp Grayling, Michigan, during December 1984 and January 1985. Its objectives were to document the performance of the M1 tank EO sensor suite in winter and gather data from threat vehicle EO sensors and M1 tank developmental sensors for use in developing system capability comparisons. To accomplish this, an M1 tank gunners primary sight (GPS) was positioned to view and range to vehicular targets at distances out to 1600 m. The GPS contains a day sight, night sight and laser rangefinder. Other U.S. and threat EO systems were co-located with the GPS. Day and night sight imagery through the device optics was recorded using video equipment while simultaneous target observations by the sight operator were documented. Detailed measurements were made to characterize important target scene and environmental factors These included meteorological, airborne-snow, scene illumination, and atmospheric transmission measurements, as well as inherent and apparent visible and infrared target/background signature measurements. PM Smoke's personnel response and evaluation system for target obscuration (PRESTO) was used to document the sight operator's target detection responses.

EFFECTS OF SNOW ON VEHICLE-GENERATED SEISMIC SIGNATURES.
Albert, D.G., Sensor Technology Symposium, 4th, Apr. 26-28, 1983. Report. Vol.1: Unclassified papers, U.S. Army Engineer Waterways Experiment Station, Vicksburg, MS, Environmental Laboratory, July 1984, p.83-109, 9 refs.
40-3531
SNOW COVER EFFECT, MILITARY OPERATION, SEISMIC SURVEYS, ATTENUATION, ACOUSTICS, SEASONAL VARIATIONS, VEHICLES.
Vehicle-generated seismograms recorded under summer and winter conditions at Fort Devens, Massachusetts, are analyzed and compared. The data were recorded using three-component geophones located just beneath the ground surface and microphones mounted on tripods 0.3 m tall Winter data were recorded with a 0.7-m-thick snow cover present at the test site. The 14-track FM field tapes were digitized in the laboratory at a sampling rate of 500 Hz in preparation for filtering and spectral analysis. The filtering effect of the snow cover on the seismic data is striking. Because the acoustic-to-seismic coupled energy is attenuated by the snow, the appearance and frequency content of the recorded ground motion is changed dramatically Automatic vehicle classification algorithms will have to account for these effects if they are to operate successfully in the presence of snow

SOIL FREEZING, HEAT TRANSFER, FREEZE THAW CYCLES, BOUNDARY VALUE PROBLEMS, MATHEMATICAL MODELS, SOIL WATER, THERMAL REGIME, COMPUTER APPLICATIONS, LATENT HEAT, PHASE TRANSFORMATIONS, ROADS.
The Complex Variable Boundary Element Method or CVBEM is used to develop a computer model (CVBFR1) for estimating the location of the freezing front in soil-water phase change problems Because the numerical technique is a boundary integral approach, the control volume thermal regime is modeled with respect to the boundary values and, therefore, the CVBFR1 data entry requirements are significantly less than that ususally required of domain methods such as finite-differences or finite-elements Soil-water phase change along the freezing front is modeled as a simple balance between computed heat flux and the evolution of soil-water volumetric latent heat of fusion.

RIVER FLOW, RIVER ICE, ICE MECHANICS, DRIFT, ICE MODELS, HEAT TRANSFER, EXPERIMENTATION, TEMPERATURE EFFECTS, HYDRAULICS, FREEZEUP.
A thermal modeling criterion for the ice discharge in refrigerated physical river models is presented along with laboratory results. Ice production was evaluated for freshwater and for 0.3% and 1% urea concentrations in water. Discharges of 0.0056 and 0.0094 cu m/s were run in the model river at air temperatures of 5, 10 and 15C Preliminary results show that as the concentration of urea in the water is increased, the model ice outflow increases The measured ice discharge at river outlet and the ice accumulation on the riverbed are both linearly related to the air-water temperature difference The ice accumulation rate on the riverbed was also found to be a linear function of time The freshwater flow had a greater bed accumulation rate than urea-doped solutions A slight increase in model ice production was noted for the higher water flow rates Proper scaling of the ice discharge through a model reach may require relaxing the heat transfer coefficient scaling law because sufficient ice cannot be generated in the river, and ice must be introduced at the inlet of the model By changing the urea concentration in the water or using a separate ice production flume, a wide range of values for the input of model ice discharge can be selected

METAL ICE FRICTION, SLEDS, ICE SURFACE, ICE FRICTION, ICE DETERIORATION, DYNAMIC LOADS, MODELS, EXPERIMENTATION, STATISTICAL ANALYSIS.
The challenge we have been presented with, to perfect the runners of the U.S Bobsled Team's sled for the 1988 Winter Olympics in Calgary, requires an understanding of the experimentation performed by other researchers, the conclusions reached, and the limitations of their findings Most of the ice friction studies to date have been made under more or less idealized conditions. Thus, in the highly dynamic situation of a bobsled or a skier sliding on a rough ice surface, a variety of unknown and disregarded factors may contribute greatly to the friction phenomena. For instance, none of the previous studies addressed the mechanical destruction of the ice surface, though carving or melting a track in the ice could account for most of the frictional energy loss This paper describes the results of a preliminary study performed using a model sled

LANDFORMS, RESERVOIRS, REMOTE SENSING, TOPOGRAPHIC FEATURES, CLASSIFICATIONS, ENVIRONMENT SIMULATION, WATER CHEMISTRY, LAKE WATER, GEOGRAPHY.
The simulated SPOT data acquired from aircraft over the study site had several radiometric characteristics which would not be encountered in the nadir-looking satellite observations These differential scene brightness features were removed from the data. The corrected data were used in two studies to assess their information content for water quality assessment and land cover classification. Both studies indicate that the SPOT data are comparable to high altitude color-infrared aerial photography in digital form. The implication for land cover mapping is that techniques developed for LANDSAT MSS will need to be modified to allow for interactive user input and the use of textural and contextual features in automatic digital classification. The results of the water quality analysis point to the potential of the SPOT data for assessing the presence of materials in the light-interactive zone of the water column

VEGETATION, REMOTE SENSING, SPECTROSCOPY, PHOTOINTERPRETATION, MAPPING, CLASSIFICATIONS, AGRICULTURE, UNITED STATES—MINNESOTA—LAC QUI PARLE.
SPOT High Resolution Visible (HRV) simulated data were obtained over Lac qui Parle, Minnesota, to determine their usefulness for mapping wildlife habitat categories associated with Corps projects. Ground truth data were available from photointerpreted wildlife habitat unit maps and the agricultural crop inventory prepared for the summer of 1983. A geometric correction could not be applied to the data set, so only the spectral reflectance quality of the data was assessed. The sample size of 512 x 512 pixels was selected for the analyses. An unsupervised classification land cover map was generated with the Earth Resources Laboratory Application Software package. The classification was successful in discriminating wheat and alfalfa and other uniformly colored areas, but pasture and corn could not be separated. Also, we were not successful in separation of grasslands and legumes Our results indicated that the 20-m HRV data can be used to photointerpret wildlife habitat using the false color image, but a digital classification cannot be performed To obtain a habitat map using the HRV data would require a multitemporal analysis.

40-3660
SOIL FREEZING, ANALYSIS (MATHEMATICS), BOUNDARY VALUE PROBLEMS, PHASE TRANSFORMATIONS, CONVECTION, STEFAN PROBLEM, TEMPERATURE GRADIENTS, PIPES (TUBES).
Boundary integral equation methods are presented for the solution of some two-dimensional phase change problems. Convection may enter through boundary conditions, but cannot be considered within phase boundaries. A general formulation based on space-time Green's functions is developed using the complete heat equation, followed by a simpler formulation using the Laplace equation. The latter is pursued and applied in detail. An elementary, noniterative system is constructed, featuring linear interpolation over elements on a polygonal boundary Nodal values of the temperature gradient normal to a phase change boundary are produced directly in the numerical solution The system performs well against basic analytical solutions, using these values in the interphase jump condition, with the simplest formulation of the surface normal at boundary vertices. Because the discretized surface changes automatically to fit the scale of the problem, the method appears to offer many of the advantages of moving mesh finite element methods. However, it only requires the manipulation of a surface mesh and solution for surface variables In some applications, coarse meshes and very large time steps may be used, relative to those which would be required by fixed grid domain methods Computations are also compared to original lab data, describing two-dimensional soil freezing with a time-dependent boundary condition Agreement between simulated and measured histories is good

Little is known about the response of terrestrial plants to 2,4,6-trinitrotoluene (TNT). To assess its effects, yellow nutsedge (*Cyperus esculentus* L.) was grown in hydroponic cultures containing TNT concentrations of 0, 10, and 20 mg/L. The deleterious effects of TNT were rapid and occurred at solution concentrations of 5 mg/L and higher. Root growth was most affected, followed by leaves and rhizomes. Root weights were reduced about 95% when grown in the presence of TNT. Plant yields were 54 to 74% lower than the control. The TNT and its metabolites, 4-amino-2,6-dinitrotoluene (4-ADNT), and 2-amino-4,6-dinitrotoluene (2-ADNT) were found throughout the plants. Solutions were continually monitored to ensure that no metabolites were present in solution. Since TNT was the only compound taken up, the metabolites must have formed within the plant. Levels of 4-ADNT exceeded those of 2-ADNT and TNT itself, ranging up to 2200 mg/kg in roots of plants grown in 20 mg/L of TNT. The greatest quantities of all three compounds were found in the rhizomes. Increasing solution TNT levels increased the concentrations and quantities of all three compounds in the plants.

REMOTE SENSING, BLOWING SNOW, ALBEDO, VISIBILITY, AEROSOLS, SOLAR RADIATION, ANTARCTICA—AMUNDSEN-SCOTT STATION.
Ground truth inputs obtained during an antarctic storm were applied to the Dave vector atmospheric model. The spectropolarimetric properties of upwelling atmospheric radiation are quantitatively related to the number of ice crystals in the optical path. At large scattering angles (smaller angles in the plane of vision), the ice crystal scattering produces strong polarization proportional to the concentration. However, at small scattering angles, the ice crystals cause generally small polarization, permitting the generally large polarization properties of the underlying terrestrial surface to be inferred. Ice crystals, by virtue of their edges, scatter differently than spheres and may have scattering cross sections many orders of magnitude greater than an equivalent area sphere. Polarization appears to be a useful adjunct in synoptic passive atmospheric remote sensing. (Auth.)

ICE CRYSTAL GROWTH, SOLUTIONS, TEMPERATURE EFFECTS, FREEZING, DENDRITIC ICE, ANALYSIS (MATHEMATICS).
A finite element solution for ice-crystal growth in subcooled sodium-chloride solution is presented. The freezing process for aqueous solutions requires simultaneous solution of the heat equation in the solid and a complete transport treatment in the liquid region. The moving ice surface in the simulations is continuously tracked via deformable grids. Heat and mass are conserved exactly in the simulations. Specifying the interface temperature based on the constitutional phase diagram is inadequate due to the disparate interfacial growth kinetics for the A-axis and C-axis of the ice crystal. Herein we apply radiation type boundary conditions on the ice interface which maintain temperature close to equilibrium along a fast-growth axis, but allow subcooled conditions to prevail along a slow-growth axis. This preliminary report concentrates on problem formulation and one-dimensional verification of the method against analytic solutions.

PERFORMANCE BASED TIRE SPECIFICATION SYSTEM FOR MILITARY WHEELED VEHICLES.
Blaisdell, G.L., U.S. Army Survivable Tire Symposium, Carson City, NV, Nov. 4-8, 1985. Proceedings, (1985), p.277-280, 2 refs.
40-3884
TIRES, MILITARY EQUIPMENT, VEHICLES, DESIGN.
Most military wheeled vehicles continue to utilize the NDCC tire, despite its extremely low tread life and relatively poor performance. Current tire technology has far surpassed that available when the NDCC tire was designed, yet the Army continues, on all but its newest vehicles, to apply this tire. With such a disparity between the NDCC tire and what is commercially available, and with the potential now to design a tire for numerous specific performance areas, how does the Army determine what tire it should use for a particular vehicle? In answering this question, a working group was formed, and a new tire specification was developed. This system is based not on specific design features in as much as is possible, but on critical areas of tire performance. This system takes into account the vehicle's mission profile and the necessity of certain minimum levels of performance for various conditions.

TIRES, MILITARY EQUIPMENT, MILITARY TRANSPORTATION, VEHICLES.
A demonstration of the use of commercially available radial tires on the Army's 5 ton dump truck is currently in progress at Wildflecken, Germany. One construction company, Company C of the 54th Engineering Battalion, has approximately half of its trucks equipped with radial tires and half with the standard military tires. The purpose of the demonstration is to identify the improved off-road high way, and tread wear performance of the commercial radial tire compared to the bias ply, non-directional cross country tire that has been the US Army standard tire for some forty years. Some information relative to fuel usage and rolling resistance are provided.

SURFACE TEMPERATURE, INFRARED PHOTOGRAPHY, ELECTRONIC EQUIPMENT, LASERS.
A new technique has been recently introduced that combines time-lapse video techniques with those of thermal imaging. As a result, dynamic thermal events can be recorded in fast or slow motion and played back at expanded or compressed rates compatible with digital enhancement and analysis techniques. The enhancement techniques are used to improve the capability for pattern recognition as well as for the rapid extraction of maximum, minimum and average surface temperatures. The equipment necessary to assemble and operate a typical time lapse thermal imaging system is described along with some examples of practical and research applications. The capabilities, limitations, and future possibilities are also discussed.

A study to examine orographic effects on atmospheric icing intensity is being conducted on two remote mountaintops in the northeastern United States. The study involves the collection and transmission of meteorological data, including wind speed and direction, precipitation, humidity, temperature, and icing rate. Remote sites are located on Lowe Mountain and Cannon Mountain, both situated in the White Mountains of New Hampshire. State-of-the-art instrumentation, consisting of hot cross wire wind sensors, humidity probes, ice detectors and electronic rain gauges, is interfaced with on-site data loggers. The data are transmitted from these remote sites by a specially designed radio telemetry system, consisting of a Tucson Amateur Packet Radio Terminal Node Controller (TNC) and a Motorola radio link.

POWER LINE ICING, ICE REMOVAL, ICE BREAKING, WIND VELOCITY, EXPERIMENTATION.
Two wires of similar diameter (about 1 cm) but with different twisting resistance or torsional rigidity were tested under

otherwise similar environmental ice conditions at the summit of Mt. Washington. It was found that the more rotationally rigid (stiffer) wire affected both the mode of ice buildup and showed some capability of deicing itself in moderate wind conditions. The lesser ice buildup on the stiffer wire is apparently related to the suppression of dynamic twisting oscillations in the wire, oscillations which were apparent in the softer wire. The softer wire showed heavier ice buildup with the wire at the center of a cylindrical accretion. The stiff wire showed less ice buildup on the windward side with the development of an elliptical accretion due to semi-static rotation of the wire. Deicing of the stiffer wire apparently took place by breaking of the ice after it slowly rotated into the wind by several possible mechanisms. The increased drag on the ice as it moved into the wind creates a bending moment which apparently exceeded the failure stress of the ice near where it was attached to the wire. The ice fails and drops off the wire and the cycle then repeats itself.

ICING, TOWERS, HOARFROST, TRANSMISSION LINES, PRECIPITATION (METEOROLOGY), DAMAGE, COST ANALYSIS.
Rime icing and freezing precipitation are of concern to the radio and television broadcasting industry. This paper discusses the results of a study seeking to document the severity and extent of transmitter tower icing and related problems in the northeastern United States. Information was obtained via mail questionnaire and telephone interviews with eighty-five station owners and engineers concerning 118 different stations. Results show that television and FM broadcasters are seriously impacted, yet AM operators are, in general, only slightly affected by expected New England icing levels. Combined annual costs for icing protection and icing related repairs averaged $121, $402, and $3066 for AM, FM, and TV stations, respectively. None of the AM stations polled employ any icing protection measures, whereas all the TV stations do.

WASTE TREATMENT, WATER TRFATMENT, WATER POLLUTION, LAND RECLAMATION, VEGETATION, EXPERIMENTATION, MODELS.
The efficiency in removing 12 trace organics from wastewater was studied on an outdoor, prototype overland flow land treatment system. More than 94% of each substance was removed at an application rate of 6 cm/h (0.12 cu m/h/m of width). The % removals declined as application rates were increased. Removal from solution was described by first-order kinetics. A model based on the two-film theory was developed using three properties of each substance (the Henry's constant, the octanol-water partition coefficient and the molecular weight) and two system parameters (average water depth and residence time). The dependence of the removal process on temperature was consistent with the known dependence of Henry's constant and diffusivity on temperature. The model was tested on a second overland flow system

REVEGETATION, VEGETATION, PIPELINES, INTRODUCED PLANTS, GRASSES, UNITED STATES—ALASKA.
The Trans-Alaska Pipeline System for transporting crude oil from Prudhoe Bay to Valdez has recently been completed. The Alaskan Natural Gas Transportation System for transporting gas from Prudhoe Bay to the "Lower 48" is under construction. The rights-of-way of both these major pipelines traverse the arctic and subarctic climatic zones, where severe environmental conditions require specialized measures for revegetating disturbed terrain. On the oil pipeline right-of-way an aggressive grass seeding and fertilizing program was used for revegetation, while on the natural gas pipeline natural reinvasion will be encouraged. These different approaches reflect different management goals and changing technologies as revegetation research progresses in the far north. This paper presents some of the implications of these methods for long-term restoration of disturbed terrestrial areas.

POWER LINE ICING, ICE LOADS, ICE ACCRETION, WIND PRESSURE, UNFROZEN WATER CONTENT, SUPERCOOLED CLOUDS, WIND VELOCITY, TESTS.
During the winter of 1982-83 measurements of combined icing and wind loading, along with in-cloud liquid water content and droplet size, were obtained on a simulated power line test span at the 2000-meter summit of Mt. Washington, New Hampshire. Icing loads were measured using a triaxial load cell which resolves three perpendicular force components of the wire tension. Wind speeds were obtained from a vaned pitot-static tube located near one end of the test wire. Wind and gravity loading of the test span was obtained for winds up to 80 m/s. The in-line loading, a combination of wind and gravity loads, rang d up to 2300 N for ice accretions of up to 19 cm in diameter. Some indications were found that rougher rime ice accretions had higher drag than glaze accretions

40-3992
BUILDINGS, THERMAL INSULATION, HEAT TRANSFER, WALLS, HEAT FLUX, MANUALS, ROOFS, COLD WEATHER CONSTRUCTION
This paper compares *in situ* measurements of R-values R(e) with R-values obtained from handbook calculations for 19 Army buildings in Colorado, Washington, and Alaska. The R-values were measured with heat flux and temperature sensors, with data averaged and recorded for several days. The handbook calculations rely on borings in the construction, depth probes, boroscope inspection, and as-built drawings. A subjective measure of certainty about the construction reflects the quality of this information. Examination of selected study cases indicated that convection is a frequent heat transfer mechanism in fibrous insulation, in both walls and attics. Thermal bridges were also evident from the measurements. Air leakage and moisture were not significant causes of (delta)R. Measurements of R-values were found to be in good agreement with handbook values, where knowledge of the construction is good and where convection and thermal bridges are not major effects.

ICE JAMS, HYDROLOGY, RIVER ICE, SNOWMELT, THERMAL ANALYSIS, RIVER FLOW.
The hydrologic aspects of ice jams have received very little attention. This paper examines hydrologic information that is important for analyzing ice jam flooding problems, such as flow measurements under the ice cover and winter stage rating curves, frequency analysis of winter flow records, watershed cooling and natural river thermal regimes, ice discharge and snowmelt runoff prediction. The significance of each of these areas is addressed and suggested research opportunities are examined. During the last 30 years, the major emphasis has been placed on understanding the hydraulics and mechanics of ice jams and determining their "flood" levels. However, a parameter that should be known with reasonable accuracy is the flow discharge at the ice jam location.

ICEBOUND RIVERS, ICE FORECASTING, RIVER ICE, FREEZEUP, ICE FORMATION, LONG RANGE FORECASTING, ANALYSIS (MATHEMATICS), AIR TEMPERATURE, WATER TEMPERATURE, SAINT LAWRENCE RIVER.
In this study a method for making long-range forecasts of freeze-up dates in rivers is developed. The method requires the initial water temperature at an upstream station, the long-range air temperature forecast, the predicted mean flow velocity in the river reach, and water temperature response parameters. The water temperature response parameters can be either estimated from the surface heat exchange coefficient and the average flow depth or determined empirically from recorded air and water temperature data. The method is applied to the St. Lawrence River between Kingston, Ontario, and Massena, New York, and is shown to be capable of forecasting the freeze-up data

39-3284
ICE STRENGTH, PRESSURE RIDGES, COMPRESSIVE PROPERTIES, POROSITY, TESTS.
A recent series of tests on the uniaxial compressive strength of ice samples taken from multiyear pressure ridges allows the testing of several hypotheses concerning the variation in strength within and between ridges. The data set consists of 218 strength tests performed at two temperatures (-5 and -20 C) and two strain rates (.001 and .00005/s). There was no significant difference between the strength of the ice from the ridge sails and the ice from the ridge keels when tested under identical conditions. As the total porosity of the ice from the sails is higher by 40 percent than the ice from the keels, the lack of a significant difference is believed to result from the large variations in the structure of the ice which occur randomly throughout the cores. A three-level analysis of variance model was used to study the variations in strength between 10 different ridges, between cores located side by side in a given ridge, and between samples from the same core. In all cases the main factor contributing to the observed variance was the differences within cores. This is not surprising considering the rather extreme local variability in the structure of ice in such ridges. There was no reason at the 5 percent level of significance to doubt the hypothesis that the different cores at the same site and and the different ridges have equal strength means

39-3286
ICE DETERIORATION, FLOATING ICE, ICE COVER STRENGTH, ICE MELTING, HEAT TRANSFER, SOLAR RADIATION, ALBEDO, THERMAL REGIME, POROSITY.
The deterioration of floating ice covers is analyzed to determine under what conditions the ice cover loses strength due to internal melting. The analysis considers the interaction between sensible heat transfer and long wave radiation loss

at the surface, the surface albedo, the short wave radiation penetration and absorption and the unsteady heat conduction within the ice. The thermal analysis then leads to a determination of the porosity of the ice that allows strength analysis to be made using beam-type analyses The results provide criteria to determine when and how rapidly the ice cover loses strength and under what conditions it will regain the original strength associated with an ice cover of full integrity.

CHANNELS (WATERWAYS), ICE COVER EFFECT, WATER FLOW, BOTTOM TOPOGRAPHY, SANDS, FLOW RATE, BOTTOM ICE, SEDIMENT TRANSPORT, TESTS, ANALYSIS (MATHEMATICS).
The objective of this study was to examine the effects of adding an ice cover to flow in a movable bed channel A series of five tests at four water discharges were conducted in a 36-m-long recirculating flume facility that is 1 2 m wide and 0 6 m deep. After uniform, equilibrium conditions were established for a flow of water with a free surface, essentially identical runs were repeated with the addition of smooth and rough ice covers. All tests were run at room temperature, approximately 19 C, with simulated ice covers. The sediment was a uniform, 0.45-mm-diameter quartz sand and bed forms were in the ripple and dune regimes The major variables examined in this paper include bed form height, wavelength, Manning's roughness and sediment discharge.

ICE DEFORMATION, COMPRESSIVE PROPERTIES, ICE CRYSTAL STRUCTURE, SEA ICE, VISCOELASTIC MATERIALS, MODELS, STRESS STRAIN DIAGRAMS, ANALYSIS (MATHEMATICS).
Two constitutive formulations are used to represent the constitutive behavior of columnar sea ice under variable path compressive loadings The first is a single integral representation which has been successfully used to model viscoelastic materials. This representation is a convenient form for describing nonlinear rate dependent properties and is mathematically more tractable than multiple integral representations or nonlinear differential relations The second constitutive formulation is an elastic-viscoplastic relation which defines the instantaneous strain rate in terms of several microdynamical variables (compressive mobile dislocation density, tensile mobile dislocation density, and specific microcrack surface area).

RIVER FLOW, SUBGLACIAL DRAINAGE, CHANNELS (WATERWAYS), FRAZIL ICE, RIVER ICE, ICEBOUND RIVERS, ICE BOTTOM SURFACE, SEDIMENT TRANSPORT, VELOCITY, UNITED STATES—ALASKA—TANANA RIVER.
Repetitive surveys and measurements from 1983 through 1986 of the ice-covered Tanana River near Fairbanks, Alaska, have shown that flow occurs in sub-ice channels that are separated by longitudinal bars composed of stratified, partly consolidated frazil ice of varying type and distribution In contrast to hanging dams, these frazil bars extend up- and downstream parallel to flow as well as from the base of the ice cover to the bed, and act as lateral walls for the sub-ice channels Individual sub-ice channels may branch and reunite, thus forming a braided pattern beneath the ice cover Longitudinal frazil bars apparently develop at locations characterized by lower velocities, such as where currents are diverted by irregularities in the bed or in the base of the ice cover.

FRAZIL ICE, ICE MECHANICS, ICE GROWTH, AGGREGATES, GRAIN SIZE, ABRASION, UNITED STATES—ALASKA—TANANA RIVER.
A unique form of frazil ice aggregate, the frazil ice pebble, occurs in large quantities in the Tanana River near Fairbanks, Alaska. Frazil pebbles consist of a mixture of individual particles, including other aggregates, which are bound together to form a consolidated, compact mass that is similar in appearance to water-worn stream pebbles Frazil pebbles have been found incorporated into the ice cover, in transport beneath the ice cover and in frazil deposits They range in length from less than 5 mm to greater than 150 mm. Internally, grains composing the frazil pebbles do not possess a preferred C-axis orientation, but appear to show an alignment related to grain size and shape

The uppermost 140 miles of the Salmon River generates great quantities of frazil ice throughout Idaho's cold winters. A freeze-up ice jam forms at a slackwater region 27 miles downstream of the city of Salmon, Idaho every winter, and often progresses upstream to the city As the ice jam moves through Salmon, the river level can rise 6 to 8 feet and cause extensive flooding Flooding has occurred at least 32 times since 1900, and the 1982 flood caused $1,000,000 in damages

One of the tasks in the Corps of Engineers River Ice Management (RIM) program is to develop an ice prow capable of creating nearly ice-free channels in the vicinity of locks and dams on the Illinois and Ohio Rivers. Based on a literature survey the selected concept was that of a barge type attachment to be mounted ahead of a towboat The prow is equipped with ice knives, and has a gently sloping bottom equipped with deflector vanes The paper presents the results of model resistance tests which served to select the vane configuration and number of ice knives A prototype of the prow is under final design for construction, field testing and demonstration are scheduled for winter 1986-87

ICE MODELS, ICE WATER INTERFACE, SEA ICE, THERMODYNAMICS, SEASONAL VARIATIONS, HEAT FLUX, CONVECTION, ICE MELTING, FREEZING, ANALYSIS (MATHEMATICS), GREENLAND SEA.
A thermodynamic coupled ice-mixed layer model, designed to study the seasonal cycle of the ice-ocean interactions in the Greenland Sea is presented. The sea-ice model assumes a constant ice thickness and considers only the variations of ice compactness under the effect of the atmospheric and oceanic heat fluxes. The mixed-layer model predicts the rate of penetrative convection within the water column as a result of both the surface buoyancy flux and the mechanical energy input The mixed layer is embedded in a three-dimensional primitive equations model which calculates the ocean velocity field and its contribution to the time evolution of the temperature-salinity distribution, and also, following Adamec et al. (1981), helps in describing the pycnocline characteristics at the mixed layer base. The model has been tested without advection or horizontal diffusion through a five-years simulation. The annual entrainment-retreat cycle of the mixed layer is well reproduced together with the advance-decay cycle of the ice cover. The horizontal distribution of the mixed layer depth is in agreement with our knowledge of the effect of an ice cover upon a mainly buoyancy driven oceanic convection.

ICE LOADS, OFFSHORE STRUCTURES, DRIFT, OFFSHORE LANDFORMS, ICE PRESSURE, ICE MECHANICS, SEA ICE, ICE COVER THICKNESS, PRESSURE RIDGES, BERING STRAIT.
The information obtained in this study revealed that a massive icefoot appears to form around Fairway Rock each winter This icefoot is the result of ice impinging against the island, failing, and subsequently piling up, forming ridges up to 15 m high. The icefoot varies from less than 10 m to over 100 m wide The slope of the inner ridges averages 33 degrees while the slope of the outer face of the icefoot can exceed 70 degrees This is apparently the result of nongrounded ice rubble having slumped or been cleaved off. The instructive findings are, as anticipated, that ice rubble formation around a large structure placed in "deep" water will not extend appreciably beyond the width of the structure, and therefore will not add significantly to its effective diameter. In order for this to be so, the submarine slope needs to be relatively steep At Fairway Rock, it is reasonable to assume that the shallowest submarine slope was at or near the angle of repose of the rock talus.

41-261
ICE CRACKS, REGELATION.
The thermodynamics of air- and vapor-filled microfractures in ice is described Simple models of healing are constructed assuming the cracks are spheroidal The healing of air-filled cracks is rate limited by vapor diffusion through the air, while the healing of vapor-filled cracks is rate limited by heat flow through the ice Therefore vapor-filled cracks heal more rapidly Vapor-filled cracks of less than 5 mm radius and an initial aspect ratio of 1000 can heal to a 1/e decay diurnally Larger cracks weaken the most, heal more slowly, and are effective longer A temperature gradient imposed on the ice should accelerate healing, especially in a vapor-filled crack that is oriented perpendicular to the temperature gradient

Current code provisions for drift snow loads on multilevel roofs are examined in light of recent research results from a statistical study of approximately 350 drift load case histories. New provisions are proposed in which the design drift load is a function of the length of the upper-level roof and the 50-yr mean recurrence interval ground snow load. It is felt that these new proposed provisions result in a design drift load with a mean recurrence interval of about 50 yrs.

MICROSTRUCTURE, ROCKS, TENSILE PROPERTIES, FRACTURING, GRAIN SIZE, MINERALOGY, SCANNING ELECTRON MICROSCOPY, TESTS, CRACKING (FRACTURING).
The resistance of rock to tensile fracture may be measured by its fracture energy G(I), which is found to range from 40 to 200 J/sq m in tests on nine types of sedimentary and crystalline rock. Differences in microstructure among the rocks tested are the principal cause of differences in the steady state value of G(I), in the distance that a crack must advance before steady state fracturing is attained, and in the amplitude of the fluctuation of G(I) that accompanies crack advance. When nearly continuous surfaces of weakness are present, as in the Salem limestone, G(I) is low and attains steady state after only a small amount of crack advance. When a preexisting, interconnected network of microcracks is exploited by the fracture process, G(I) is large, and steady state is attained only after extended crack propagation. The sensitivity of G(I) to crack speed and the presence of water is low under the test conditions used in all the rocks examined. However, the magnitude of G(I) measured in a given type of rock depends on the configuration of the test specimen and on components of stress near the crack tip that do not influence crack growth in linearly elastic materials. The conditions under which G(I) can be considered a material property are therefore restricted.

NATURAL CONVECTION IN SLOPING POROUS LAYERS.
Powers, D.J., et al, International Conference on Finite Elements in Water resources, 6th, Lisboa, Portugal, June 1986. Proceedings. Edited by A. Sá da Costa, et al, Berlin, Computational Mechanics Publication, [1986], p.697-710, 11 refs.
O'Neill, K.
41-608
POROUS MATERIALS, HEAT TRANSFER, CONVECTION, FLUID FLOW, HEATING, SLOPE ORIENTATION, ANALYSIS (MATHEMATICS), SATURATION.
2-D finite difference simulations of natural convection in a laterally confined, saturated porous medium show distinctive cell patterns and heat transfer characteristics when the medium is inclined relative to the horizontal. A perfectly horizontal layer heated from below exhibits the classical Benard type convection cells, while a vertical medium heated on one side forms a single Rayleigh cell. Progressing from the horizontal to the vertical one sees an evolution of cell forms, each typically featuring a pattern of cell types which alternate longitudinally along the slope. Benard cells rotating in harmony with the Rayleigh forces grow, eventually consuming their weakened counter-rotating neighbors. The latter gradually diminish to the status of transition cells between the dominant types which flank them. Identifiable transitions in flow configuration and cell morphology cause dramatic changes in the efficiency of transverse heat transfer through the layer. These changes have previously been interpreted only as scatter in experimental data.

ICE LOADS, PIERS, BRIDGES, ICE PHYSICS, ICE STRENGTH, ICE DEFORMATION, ICE CRACKS, DESIGN, IMPACT STRENGTH, MODELS.
The force that river ice exerts on bridge piers has been studied in the field and with models in the laboratory. Ice forces are a function of the strength, thickness, failure mode and velocity of the ice, the ice-structure interaction and the geometry of the structure. Results of field measurements on the Yukon and Ottauquechee Rivers are discussed. Results of laboratory tests on vertical structures and sloping structures are presented. Ice failure in crushing, bending (both up and down) and splitting has been observed in the laboratory and the ice forces associated with each mode are presented. A discussion of the measured ice forces with regard to the existing design codes is given.

O'Neill, K.
41-659
PHASE TRANSFORMATIONS, FREEZING, HEAT TRANSFER, STEFAN PROBLEM, BOUNDARY LAYER, COMPUTER APPLICATIONS, TEMPERATURE EFFECTS, ANALYSIS (MATHEMATICS), MODELS.
The transfinite mapping technique of automatic mesh generation is used with finite elements to solve for two-dimensional heat conduction phase change on a moving mesh. The governing equation is transformed to account for mesh motion, so that coefficients remain attached to moving nodes. The energy conserving attachment of mesh boundaries to phase boundaries avoids approximation across surfaces of discontinuity, and facilitates application of a physical jump condition there. That condition drives boundary motion, while evolution of the interior mesh is determined from boundar, node motion via the transfinite mappings. Analytical and computed solutions compare well for the problem of freezing in a corner. Some limitations of both the mapping scheme and this moving finite element system are identified. In conjunction with the latter, a Von Neumann type analysis of the governing equation is outlined, and approximate relations are developed between Stefan number and a numerical Peclet number based on mesh velocity.

41-1028
SNOW CRYSTAL STRUCTURE, METAMORPHISM (SNOW), SNOW WATER CONTENT, FREEZE THAW CYCLES, CLASSIFICATIONS, SEASONAL VARIATIONS.
Snow cover crystals must be classified in a physically meaningful way. Previous classification systems are not sufficiently detailed or not based on sufficient knowledge of the physical processes. A new system is proposed based on our current knowledge of the physical processes of metamorphism. As more information about snow metamorphism is developed, the labels attached to snow grains should evolve too. Two levels of classification are proposed here. For practical purposes only a few terms like rounded and faceted are necessary, but for a more complete description a more detailed system is also given. The most basic description given in the table could be useful to many practitioners, while the more complete description given in the appendix will be necessary for many purposes.

PERMAFROST PRESERVATION, DRILLING, ENVIRONMENTAL IMPACT, VEGETATION, GROUND ICE, THERMAL REGIME, GROUND THAWING, PERMAFROST THERMAL PROPERTIES, REVEGETATION, THAW DEPTH.
Former exploratory drilling sites in the National Petroleum Reserve—Alaska, are examples of the long-term physical modifications resulting from disturbance of perennially frozen terrain. Camp construction and drilling activities in the late 1940s/early 1950s resulted in disturbances which can be grouped by their first modification to the site and its thermal regime trampling of vegetation, killing the vegetative cover, removal of the vegetative mat, or removal of the vegetation and soil. Removal of the vegetation led to the most extensive modifications at all sites, but the subsequent response to disturbance between sites varied with primarily four factors (1) ground ice volume, (2) distribution and size of massive ground ice, (3) material properties during thaw, and (4) relief, including progressive changes during thaw subsidence. Variations in response time resulted from the influence of these factors on the type and activity of degradational processes that ensued. Physical stability is required for growth of vegetation and thermal equilibration, and has taken over 30 yr to attain in ice-rich, thaw-unstable areas. Ice-poor, thaw-stable materials in undrained or low relief areas required an estimated 5 to 10 yr for stability; thaw depth measurements suggest that certain of these areas have also equilibrated thermally.

41-1285
SNOW TEMPERATURE, SURFACE TEMPERATURE, SNOW COVER, METEOROLOGICAL FACTORS, HYGROMETERS, DEW POINT, WATER VAPOR, SATURATION, VAPOR TRANSFER, LATENT HEAT, MEASURING INSTRUMENTS.
Because a snow cover is so tenuous, measuring its surface temperature is not easy. The surface is ill-defined and easily disturbed; in situ transducers commonly used for other surfaces are, thus, generally inappropriate for snow. We therefore describe a hygrometric method of measuring the snow-surface temperature. The advantages are that the method is non-invasive, that its accuracy depends only weakly on the surface structure, and that it is reliable even in bright sunlight. The key assumption is that the air at a snow surface is in saturation with the snow, the dew-point temperature of air right at the snow surface is thus the surface temperature. Consequently, under a fairly wide range of conditions we can, in effect, measure the surface temperature by measuring the dew-point temperature 10 cm above the surface. We develop a theoretical justification for the hygrometric measurement, discuss the meteorological parameters that affect the accuracy of the method, and compare hygrometer data with more traditional measurements.

WASTE TREATMENT, WATER TREATMENT, LAND RECLAMATION, SOIL POLLUTION, COUNTERMEASURES, DEGRADATION, CHEMICAL ANALYSIS.
A 2 yr study was performed on an outdoor, prototype, slow-rate system to determine the removal efficiency for 16 organic substances in wastewater. The 16 organics were chloroform, benzene, toluene, chlorobenzene, bromoform, m-dichlorobenzene, dibromochloromethane, penthane, hexane, nitrobenzene, m-nitrotoluene, diethylphthalate, PCB 1242, napthalene, phenanthrene and pentachlorophenol The initial concentration of each of these substances in the wastewater was approx 50 microgram/l. Initial removal was via volatilization during spray application. The final concentration of substances after spraying correlated well with their calculated liquid-phase transfer coefficients and the substances' initial concentration losses were up to 70% for the most volatile components

SUITABILITY OF POLYVINYL CHLORIDE WELL CASINGS FOR MONITORING MUNITIONS IN GROUND WATER.
Parker, L V , et al, Summer 1986, 6(3), p 92-98, 27 refs.
Jenkins, T.F.
41-1345
WELL CASINGS, GROUND WATER, SOLUTIONS, MONITORS, MATERIALS, DEGRADATION, SOIL MICROBIOLOGY
A number of samples of polyvinyl chloride (PVC) well casings used for ground water monitoring that varied in schedule, diameter, or manufacturer were placed in contact with low concentrations of aqueous solutions of TNT, RDX, HMX and 2,4-DNT for 80 days Analysis indicated that there was more loss of TNT and HMX with the PVC casing than with the glass controls, but that the amount lost was, for the most part, equivalent among different types A second experiment was performed to determine if these losses were due to sorption or if biodegradation was involved Several different ground water conditions were simulated by varying salinity, initial pH and dissolved oxygen content The only case where there was an increased loss of any substance due to the presence of PVC casing was with the TNT solution under nonsterile conditions The extent of loss was small, however, considering the length of the equilibration period This increased loss is thought to be associated with increased microbial degradation rather than sorption

THERMAL INSULATION, WALLS, HEAT FLUX, HOUSES, MOISTURE METERS, CELLULAR MATERIALS, MEASURING INSTRUMENTS, RESINS.
Two retrofit wall insulations were the subject of in-situ R-value measurement and economic assessment of their success for energy conservation. Ft Lewis, Washington, installed cellulose fiber insulation in the walls of more than 1000 housing units where moisture potentially presented a problem Ft Monmouth, New Jersey, added an exterior expanded polystyrene foam insulation system to its many concrete masonry buildings These represent retrofit insulation methods that have yet to be applied to thousands of military frame and masonry buildings The R-value measurement included the use of thermography, heat flux transducers, thermocouples and data acquisition equipment Holes bored in walls gave independent confirmation of composition of the construction layers. Boroscope inspection of wall interiors and moisture meter readings of framing sought evidence of moisture and confirmation of voids in cellulose insulation Measurements of the same or similar buildings occurred approximately a year apart. The economic assessment employed Department of Army life-cycle cost criteria

41-1482
POWER LINE ICING, ICE ACCRETION, ICE LOADS, TRANSMISSION LINES, WIND VELOCITY, MATHEMATICAL MODELS.
Although numerical models have been developed to predict the increase in load on transmission lines due to atmospheric icing, there are very few data available with which to verify them experimentally The accretion of ice on a wire is a complex three-dimensional phenomenon involving torsion of the wire under the accretion weight, vibration, and breaking of some of the ice. In particular, the Mt. Washington test site used for our experiments experiences strong winds that cause high loads, vibrations, and breaking of ice chunks Load measurements for a few wire-icing events are analyzed to determine the functional relationship between icing load and time, and how this compares with the predictions of some available numerical models Results indicate that loads for steady icing conditions tend to increase exponentially with time

ICE JAMS, ICE BREAKUP, RIVER ICE, ICE CONDITIONS, ICE DAMS, ICE COVER EFFECT, RIVER FLOW, ICE COVER THICKNESS, FLOODING, COUNTERMEASURES, WATER WAVES.
An ice management strategy is being developed for a reach of the Hudson River that experienced ice jam flooding during the 1983-84 winter Preliminary field studies have focused on developing a technique to induce the breakup of an ice cover or ice jam by releasing water from an upstream dam During these studies, a series of abrupt releases generated long-period river waves of different magnitudes, durations and spacings that caused changes in river level, flow velocity, and integrity of the ice cover. By monitoring the river elevation and ice cover at several locations, we have found that each of these wave parameters affected the response of the ice cover The steepness of the wave front depends upon the initial river stage and the amplitude of the release, and is an important parameter affecting the stability of the ice cover The sequence of events leading to breakup of the relatively thin ice cover on the Hudson was identical to that reported for other rivers having different physical characteristics and much thicker ice These studies have revealed that pulsed releases of a practical magnitude were effective in removing the ice cover from the reach and provided basic data for analysis of river ice cover breakup

METEOROLOGICAL INSTRUMENTS, COMPUTER APPLICATIONS, ICE DETECTION, ICE LOADS, POWER LINE ICING, PROTECTION, THERMISTORS, RADIO COMMUNICATION, TRANSMISSION LINES, WIND FACTORS.
Methods are delineated whereby the outputs of ten different sensors used in a study of wind and ice loading on a cable are protected from Radio Frequency Interference (RFI) and severe weather, and processed for logging on a computer. Twelve separate signals from two types of ice detector, two types of cable load cell (including one tri-axial load cell), a pitot-static anemometer, a wind vane and a thermistor are introduced into a Digital Equipment Corporation MINC-11/23 computer Four of these signals, which would otherwise be incompatible, are conditioned for acceptance by the computer. The signals represent high-speed, consecutive samplings of rapidly changing parameters at a sampling frequency controlled by an operator Sampled data are logged on a printout and are transferred to magnetic tape for off-site analyses. These methods operate successfully on the summit of Mount Washington, a location known for its harsh weather, in an environment with poor electrical ground and relatively high radio and television frequency interference.

ICE CREEP, RHEOLOGY, SEA ICE, MICROSTRUCTURE, ICE STRENGTH, STRESS STRAIN DIAGRAMS, COMPRESSIVE PROPERTIES, POROSITY, GRAIN SIZE, PRESSURE RIDGES, ICE CRYSTAL STRUCTURE
The rheological properties of columnar multi-year ridge ice tested under uniaxial compression at -5C and -20C are analyzed in terms of the material microstructure. Microstructural parameters considered included porosity and grain size. Strain rates were varied from 1 100,000/sec to 1/100 sec. A single integral representation was used to model the uniaxial material constitutive equation Results show a definite effect of porosity and strain rate on the mechanical behavior However, grain size was not found to significantly affect properties, probably because the grain sizes tested for columnar sea ice were all quite large (d=10 to 40 mm) The rheological properties also showed some nonlinearities which have not been observed in nonsaline ice Finally, a viscoplastic representation is recommended as a formulation which might be better suited for characterizing the properties of sea ice

41-1751
ATMOSPHERIC CIRCULATION, ATMOSPHERIC COMPOSITION, AEROSOLS.
Parameters observed and reported here are primarily ozone mixing ratios, maximum and minimum ozone amounts noted near the ITCZ; antarctic aerosol concentrations and transport. Uniform aerosol concentrations were observed in the Antarctic troposphere, except in the vicinity of cirrus layers aloft, and in moist or cloudy layers near the surface Enhanced ozone mixing ratios occurred in troughs about the periphery of Antarctica, and in slightly turbulent layers near mountains Ozone and aerosol concentrations observed over a wide geographic area of Antarctica were stratified into two altitude classes, and the results mapped Ozone concentrations in the mid troposphere (550 to 400 mb levels) were small and nearly invariant over the interior of Antarctica Ozone concentrations in the upper tropospheric (400-300 mb) layers varied greatly, and became quite large over troughs and about the periphery of Antarctica, and in the vicinity of high mountains Ozone exchange appears quite vigorous in the upper troposphere and frequent aerosol exchange occurs in the lower troposphere, but the stability of the middle troposphere inhibits mixing among these levels Vertical profiles of aerosol concentration indicate an aerosol decrease of 25 particles/cu cm/Km in clear air over Antarctica Moist and/or cloudy air over and near the Ross and Weddell Seas is enhanced with aerosols relative to this dry profile. Moist layers over the interior of Antarctica are also enhanced in aerosol concentration in comparison with dry antarctic air (Auth. mod)

A North Polar region consisting of most of the Scandinavian countries and the major water bodies surrounding these nations was included in a study on the regional and seasonal distributions of low pressure surface weather systems The region was divided into six zones approximately similar in area, and surface weather maps for three random years were obtained for detailed analysis of daily occurrences of surface lows that passed through these zones. The survey included the lowest isobaric pressure that identified the low, the intensity of the pressure gradient, the zone (or zones) in which the low was located, the frontal system associated with the low and its direction of movement The results of this comprehensive data set were then summarized and seasonal and regional variations of these lows and their characteristics were obtained.

SALT ICE, SEA ICE, SIMULATION, ICE STRUCTURE, DIELECTRIC PROPERTIES
Saline ice slabs removed from ice sheets grown in an outdoor pool have been studied and related to the complex relative dielectric permittivity. The saline ice closely simulated Arctic sea ice in its structural and salinity characteristics which were regularly monitored in a number of ice sheets grown during the winters of 1983-1984 and 1984-1985 *In-situ* transmission measurements at similar frequencies were also made on the ice sheet itself using antennas located above and beneath the ice The slab measurements were made during warming from -28 C to -2 C on slabs grown during the winter of 1983-1984 (4 75 GHz) and during a warming and cooling cycle over a slightly larger temperature range on slabs grown during the winter, 1984-1985 (4 80 and 9.50 GHz) Results from the two winters are compared and the differences analyzed The *in-situ* measurements showed extremely high attenuation for the young (<12 cm) brine-rich ice. Good agreement was found between data for the more desalinated samples and theoretical values predicted by a previously proposed dielectric mixing model that was modified to account for the brine pocket geometry observed in thin sections, and also by including a bulk conductivity term to account for the observed loss (Auth. mod.)

Jezek, K.C.
41-1976
ICE SHEETS, ICE DEFORMATION, ICE STRUCTURE, RADIO ECHO SOUNDINGS, GREENLAND—DYE 3.
The deformation of layering into folds is modeled for a linear viscous medium moving over a décollement Folds are generated by flow variations caused by relief on the décollement, variations in friction, or both. The model is applied to folds forming now in the Greenland ice sheet near Dye 3, for which more complete data are available than for analogous solid earth situations and for which the décollement is at or near the bed The folds (wavelength 4-8 km) are detected by radio reflection sounding Measured surface deformation and deformation rate are used with the radar results to test the theory Calculated fold amplitude is only 20% less than that measured, which indicates that the theory is substantially correct Inversion of the data to calculate basal drag and velocity variations is not helpful for near Dye 3 because many different basal boundary conditions can lead to the observed deformations

SOIL COMPOSITION, SOIL CHEMISTRY, METALS, SOLUTIONS, MODELS
Several kinetic models, including irreversible and reversible 1st, 2nd, and *n*th order models, and several equilibrium models, including the linear, Langmuir, two-surface Langmuir, and Freundlich models, were evaluated for their ability to describe the retention/release of Cr, Cd, and Hg by various soils. The retention/release data were obtained using a batch exction method In general, no single-reaction kinetic model fit the data over the entire time and concentration ranges studied for any of the metals or soils The relationship between the amount of metal retained by the soil and the concentration of metal in solution was described by either the two-surface Langmuir or Freundlich models A significant fraction of the metals retained by the soil was not released to solution and was not exchangeable, indicating that some irreversible retention of the metals occurred The results suggest that a multi-reaction model consisting of irreversible and reversible kinetic models is needed to fit all the data

POLYNYAS, SEA ICE, HEAT TRANSFER, TURBULENT BOUNDARY LAYER, MATHEMATICAL MODELS
To develop a unified method for parameterizing the turbulent transfer from open water surrounded by pack ice, a reanalysis has been made of data reported in the literature on momentum and heat transfer over Arctic leads and polynyas. The neutral stability value of the 10-m drag coefficient, 1 49 X .001, is independent of wind speed and open-water fetch for winds from 1 to 10 m/s and fetches from 7 to 500 m. The neutral stability value of the 10-m transfer coefficient for sensible heat, CHN10, is parameterized with the nondimensional fetch. No compelling reason was found to believe that the bulk transfer coefficient for latent heat is different from CHN10 which implies that horizontal homogeneity may not be a severe constraint for evaluating scalar transfer coefficients The bulk transfer coefficients actually used in modeling turbulent transfer over leads and polynyas are derivable if the atmospheric stability is known. Lastly, a simple formula is developed for estimating one of the fetch factors from an easily obtainable bulk Richardson number (Auth mod.)

ICE CRYSTAL STRUCTURE, ICE ELECTRICAL PROPERTIES, MICROWAVES, SEA ICE, ICE SALINITY, DIELECTRIC PROPERTIES, ICE PHYSICS.
The crystalline structure, salinity characteristics, and microwave dielectric properties of artificially grown saline ice are presented The ice was grown in an outdoor pool containing salt water of 23-25 per mill salinity. The structure and salinity profiles of this ice sheet closely simulated those found in arctic first-year sea ice The complex relative dielectric permittivity of slabs removed from the ice sheet was measured at 4.75 GHz as a function of temperature. The slabs were placed between open-end waveguide radiators, and dielectric properties were calculated from the forward scattering coefficient The results show both the real and imaginary parts to vary almost in direct proportion to the brine volume with values for imaginary showing more variation, and are compared with the previous work of others on actual sea ice samples

ICE CROSSINGS, ICE COVER STRENGTH, SNOW (CONSTRUCTION MATERIAL), FREEZING, HEAT TRANSFER, BEARING STRENGTH, WATER, ICE COVER THICKNESS, SNOW DEPTH.
The role of snow in the construction of ice bridges is discussed It is shown that it has limited value as a structural reinforcement and then only by adding water and freezing the resulting slurry Equations are presented detailing the energy transfer during freezing of a water layer vs a water-snow slurry and the times involved with each Natural ice thickening is inhibited by the insulating property of the snow, but snow can be used effectively as either a leveling or wearing surface. The snow should be of uniform depth and not mounded or windrowed to avoid deflecting the ice away from the water surface. This would substantially weaken the carrying capacity of the ice bridge

The interaction of a sloping structure with a slowly moving ice sheet usually results in bending failure of the ice The resulting ice blocks are large in area in comparison to their thickness However, when the velocity of the moving ice increases, the failure mode changes from bending to shear or crushing, resulting in very small pieces This phenomenon has been observed both in the laboratory and in the field As yet, no theoretical treatment has been presented to explain this transition. In this paper, a theoretical formulation of the problem is presented in which the ice sheet is treated as an ice beam moving against a sloping structure The resulting differential equation was solved by the finite element method, and the solution is presented in non-dimensional form.

41-2364
SNOW SURFACE, ICE SURFACE, ROUGHNESS COEFFICIENT, WIND VELOCITY, SNOW AIR INTERFACE, ICE AIR INTERFACE.
Although the bulk aerodynamic transfer coefficients for sensible *(CH)* and latent *(CE)* heat over snow and sea ice surfaces are necessary for accurately modeling the surface energy budget, they have been measured rarely. This paper, therefore, presents a theoretical model that predicts neutral-stability values of *CH* and *CE* as functions of the wind speed and a surface roughness parameter The crux of the model is establishing the interfacial sublayer profiles of the scalars, temperature and water vapor, over aerodynamically smooth and rough surfaces on the basis of a surface-renewal model in which turbulent eddies continually scour the surface, transferring scalar contaminants across the interface by molecular diffusion Matching these interfacial sublayer profiles with the semi-logarithmic inertial sublayer profiles yields the roughness lengths for temperature and water vapor. When coupled with a model for the drag coefficient over snow and sea ice based on actual measurements, these roughness lengths lead to the transfer coefficients *CE* is always a few percent larger than *CH* Both decrease monotonically with increasing wind speed for speeds above 1 m/s, and both increase at all wind speeds as the surface gets rougher Both, nevertheless, are almost always between 001 and 0015.

ICE SALINITY, COMPRESSIVE PROPERTIES, ICE STRENGTH, STRESSES, STRAINS, TEMPERATURE EFFECTS, TESTS, ICE CRYSTAL STRUCTURE, ICE MECHANICS, SEA ICE.
A series of unconfined and confined constant strain rate compression tests were performed on columnar, saline ice samples grown in the laboratory The tests were done at three temperatures (-3, -5 and -10 C) and two strain rates (2 1/50 and 1/1000 per s) The confined compression tests were conducted in a conventional triaxial cell designed to ramp the confining pressure in constant proportion to the axial stress being applied to the cylindrical sample. The ratio of the confining pressure to the axial stress in our tests was 0 25, 0.50 or 0.75. This paper summarizes the results of these tests and compares them to previously obtained first-year sea ice test data We also compare the crystal structure of the saline ice grown in the laboratory and naturally occurring first-year sea ice In general, the structural composition and mechanical behavior of the two ice types are similar, indicating that the results obtained from tests on columnar saline ice grown in the laboratory reflect the behavior of first-year sea ice.

SEA ICE, ICE PHYSICS, ICE STRUCTURE, FRAM STRAIT.
It is estimated that 84 percent of the ice exiting the Arctic Basin through Fram Strait during June and July 1984 was multiyear ice and that a large percentage of this ice is ridged or otherwise deformed While freeboard and thickness data, together with salinity measurements on cores, usually sufficed to distinguish between first and multiyear floes, preliminary identification could usually be made on the basis of snow cover measurements with snow cover being much thicker on multiyear ice. Cores from the top half meter of multiyear floes were generally very much harder and more transparent than cores from first-year floes Age estimates of multiyear floes, based on petrographic and salinity characteristics of cores, did not exceed 4 to 5 years for any of the floes that were observed exiting Fram Strait

A brief review of significant advances in the field of sea ice mechanics in the United States is presented in this paper. Emphasis is on ice forces on structures, as the subject relates to development of oil and gas resources in the southern Beaufort Sea. The main topics discussed here are mechanical properties, ice-structure interaction, modeling of sea ice drift, and oil industry research activities Significant advances in the determination of ice properties are the development of testing procedures to obtain consistent results. Using stiff testing machines, researchers have been able to identify the existence of tensile and compressive strengths on different parameters, e.g., strain rate, temperature, grain size, c-axis orientation, porosity, and state of stress (uniaxial or multiaxial) Now reliable data exist on the tensile and compressive strengths of first-year and multi-year sea ice.

Essential aspects of sea ice dynamics of the Arctic and Antarctic on the geophysical scale were reviewed and the role of ice dynamics in air-sea-ice interaction was discussed The review is divided into the following components a) a discussion of the momentum balance describing ice drift, b) an examination of the nature of sea ice rheology on the geophysical scale, c) an analysis of the relationship between ice strength and ice thickness characteristics, and d) a discussion of the role of ice dynamics in the atmosphere-ice-ocean system Because of the unique, highly nonlinear nature of sea-ice interaction, special attention is given to the ramifications of ice interaction on sea ice motion and deformation These ramifications are illustrated both by analytic solution and by numerical model results. In addition, the role of ice dynamics in the atmosphere-ice-ocean system is discussed in light of numerical modeling experiments, including a fully coupled ice-ocean model of the Arctic-Greenland-Norwegian seas

This report describes a method for using commercially available thermistors to make *in-situ* thermal conductivity measurements with commonly available electronic equipment The emphasis is on use of a single thermistor to measure thermal conductivities of soils and building insulations Calibration techniques are explained and examples provided. Limitations on this technique are discussed, including material grain size, amount of material needed for a valid measurement, and temperature stability necessary Specific examples of the use of this technique are provided for both soil measurements and building material measurements Data analysis is discussed, including a statistical approach to finding the thermal conductivity in large volumes of material

PERMAFROST BENEATH ROADS, CULVERTS, EMBANKMENTS, DRAINAGE, GRAVEL, THERMAL INSULATION, THAW DEPTH, GROUND THAWING, PERMAFROST THERMAL PROPERTIES.
During the summers of 1981 and 1982, the thaw *regime* of gravel roads and the performance of culverts were observed in the Prudhoe Bay and Kuparuk River oilfields northern Alaska. This relatively flat to gently rolling coastal plain is covered by shallow lakes, drained lake basins and interconnecting ice-wedge polygons Depth of seasonal thaw of the predominantly fine-grained soils is less than 50 cm The permafrost temperature is about -10 C A combination of visual frost tube readings and temperature measurements were obtained in the roadbed, in an area immediately adjacent to an insulated culvert, and in areas undisturbed by construction Gravel roads up to 2 m thick thaw completely and thaw penetrates into the consolidated active layer. Where depth of thaw exceeds the thickness of the active layer, ice-rich permafrost begins to thaw. Adjacent to the roads, newly formed surface troughs indicate melting of the underlying ice wedges Shallow impoundments form on the upslope sides of roads where culverts have not been adequately sited or installed. More standardized practices for culvert placement, installation, and maintenance are desirable to minimize disruption of natural drainage.

ICING, VEHICLES, STATIC LOADS, ICE LOADS, ICE COVER STRENGTH, BEARING STRENGTH, *OSCILLATIONS, TESTS.*
Parked vehicles with running engines, or motor driven machinery, subject an ice cover to a static load and to a relatively small oscillatory force, that is caused by the moving parts. Since for the driving frequencies in question the dominant feature is fatigue of the ice cover, while it is undergoing non-elastic time-dependent deflections, an experimental program was initiated to study this phenomenon by running a series of tests in one of the cold rooms at CRREL. An electronically driven shaker placed on the ice cover was used to simulate the dynamic case. A loading device of the same weight and base shape was used as a static control in the tests. Each test consisted of placing these two objects on an ice cover and recording how their vertical displacements vary with time, for a fixed driving frequency of the shaker. A comparison of these two curves established the effect of the oscillating force component. Eight tests were conducted. It was found that for urea ice covers and driving frequencies of 1, 10 and 30 Hz (60, 600, and 1800 rpm) the vibrating shaker increased the vertical downward displacements and substantially decreased the time to breakthrough.

ICE ACOUSTICS, SEA ICE, ICE BOTTOM SURFACE, ACOUSTIC MEASUREMENT, SOUND TRANSMISSION, SCATTERING.
Acoustical reflection and scattering properties of the underside of undeformed sea ice which was grown in an outdoor pond were studied Echo amplitude fluctuations of normal incidence sonar pings (100-800 kHz) were measured as the sonars moved horizontally under the ice and accumulated into echo amplitude histograms The Rice probability density function (PDF) was fit to the data and the resultant statistical parameter was combined with the Eckart acoustical scattering theory to estimate an rms roughness of the water/ice interface to be 0 3 mm Because the ice thin sections showed the ice to be porous and permeable at the interface with dendrites 0 5 mm thick, it appeared that the dendrites controlled the scattering The average reflection coefficient was of the order 0 05 The low reflection coefficient (low compared to the 0 35 value which is predicted from the bulk properties of sea ice) was attributed to the dendritic structure which was porous and permeable at the water/ice interface. From the data and modeling done, scattering, and, hence, echo fluctuations, for normal incidence sonars of various frequencies and beamwidths were also predicted

The cheapest deicing chemical to procure--salt—is one of the most effective freezing point depressants, but it can also be one of the most costly where material degradation results from electrolytic corrosion Damage to pavements, primarily bridge decks and elevated highways, and the high cost of repair or rehabilitation, has spurred the search for effective but non-detrimental deicing chemicals The most promising material is calcium magnesium acetate (CMA) which tests made to date have shown to exhibit little or no corrosion potential, under generally-occurring conditions, and to have an acceptable melting action The nature of salt action on concrete and characteristics for a chemical to serve as an effective deicing agent are reviewed Also, candidate chemicals other than CMA are discussed Research to improve chemical control of snow and ice, both underway and proposed, is reviewed, and the outlook for reduced damage to structures is assessed

RECRYSTALLIZATION, ICE CRYSTAL STRUCTURE. ICE DEFORMATION, ICE STRENGTH, ICE CRYSTAL NUCLEI, ICE MELTING, PRESSURE.
Results are presented of annealing recrystallization in both naturally and laboratory deformed ice Thin section techniques were used to follow the progress of recrystallization which, in the case of highly compressed ice pellets annealed at -3 C, showed that as soon as any new crystal was nucleated in the deformed ice matrix it retained its lattice orientation over the duration of the recrystallization. Laboratory annealing at ambient pressures of highly deformed, strongly oriented crystal ice from cores deep in the Antarctic Ice Sheet resulted in growth of very large crystals exhibiting c-axis orientations very much degraded with respect to the original ice Textures and fabrics of the same ice annealed at 200 bars confining pressure closely resembled those observed in ice undergoing dynamic (annealing) recrystallization at 190-200 bars overburden pressure near the base of the ice sheet, which at this location in Antarctica was at pressure melting (Auth)

ICE CRYSTAL GROWTH, ICE CRYSTAL STRUCTURE, GRAIN SIZE, AIR ENTRAINMENT, BUBBLES, TESTS
Tests were performed at -1 C evaluate the effects of a free surface and the thickness dimensions of thin sections on the growth of grains in fine-grained, pore-rich, strain free polycrystalline ice Results show that negligible growth of grains occurs when the mean size of grains is more than 1 5 to 2 times the section thickness Grain growth in thicker sections was significant for the fact that grain boundary migration, leading to 3-4 fold increases in average grain size, was virtually unaffected by the presence of large numbers of bubbles in the ice Nor was there any evidence to indicate any concentrating of bubbles along migrating boundaries Grain boundary grooving was a characteristic feature of most sections undergoing grain growth This implies actual migration of grooves during grain growth The fact that the total length of grooves decreased with increasing grain size also implies some process of groove consumption during grain growth Three dimensional grain growth measurements in bulk samples compared favorably with those obtained from sections two to three times thicker than the mean grain diameter (Auth)

ICE DRILLS, THERMAL DRILLS, PENETRATION TESTS, ICE COVER THICKNESS, OFFSHORE DRILLING, WATER TEMPERATURE, OFFSHORE STRUCTURES, EQUIPMENT.
A portable hot-water drilling system has been developed for conducting detailed thickness surveys of multi-year sea ice. Primary components of the system are a propane-fired water heater and a twin-piston pump which is driven by a small gasoline engine When assembled, the system is mounted on a sled which can be moved across relatively smooth ice surfaces by two persons The system components easily fit inside a BELL 205 or 212 helicopter for movement to other locations. A field program in April and May 1986 proved the viability of the system for rapidly penetrating multi-year sea ice in relatively cold ambient temperatures The prototype drill penetrated ice at rates of 3 m/min A 43-cm-diameter ring can be quickly substituted for the normal drilling probe This ring is useful for making larger holes through the ice for the release or recovery of instruments Overall performance of the drilling system was highly satisfactory during the field investigations Future systems, however, will incorporate fuel oil burners and higher-pressure pumps to achieve higher penetration rates as well as to take advantage of more readily available fuel sources

OCEAN CURRENTS, SEA ICE, ICE WATER INTERFACE, MATHEMATICAL MODELS
A coupled ice-ocean model suitable for simulating ice-ocean circulation over a seasonal cycle is developed by coupling a dynamic thermodynamic sea ice model with a multilevel baroclinic ocean model This model is used to investigate the effect of ocean circulation on seasonal sea ice simulations by carrying out a simulation of the Arctic, Greenland and Norwegian seas The ocean model contains a linear term that damps the ocean's temperature and salinity towards climatology The damping term was chosen to have a three-year relaxation time, equivalent to the adjustment time of the pack ice. No damping, however, was applied to the uppermost layer of the ocean model, which is in direct contact with the moving pack ice This damping procedure allows seasonal and shorter time-scale variability to be simulated in the ocean, but does not allow the model to drift away from ocean climatology on longer time scales For the standard experiment, an initial integration of five years was performed at one-day time steps and a 1.45 deg by 1.45 deg resolution in order to obtain a cycle equilibrium. For comparison, a five-year simulation with an ice-only model, and shorter one-year sensitivity simulations without surface salt fluxes and without ocean currents, were also carried out. Input fields consisted of climatological surface air temperatures and mixing ratios, together with daily geostrophic winds from 1979 Operational features of the model are described and an analysis is given in terms of the advance and retreat of the ice edge, ice melt fluxes, heat transport and atmospheric heat balance. ICE CORES, ICE SALINITY, ICE COMPOSITION, ICE SHELVES, ICE PHYSICS, ANTARCTICA—MCMURDO SOUND.
During the austral summers of 1976-77 and 1978-79, several ice cores were taken from the McMurdo Ice Shelf brine zone to investigate its thermal, physical, and chemical properties Chemical analyses of brine samples from the youngest (uppermost) brine wave show that, except for the advancing front, it contains sea salts in normal sea-water proportions Further inland, deeper and older brine layers, though highly saline (S>200 per mill), are severely depleted in (SO4)2-/Na+ ratio being an order of magnitude less than that of normal sea-water Consideration of the solubility of alternative salts, together with analyses of Na+, K+, Ca2+, Mg2+, (SO4)2-, and Cl- concentrations, shows that the sulfate depletion is probably due to selective precipitation of mirabilite, Na2SO4 10H2O The location of the inland boundary of brine penetration is closely related to the depth at which the brine encounters the firn/ice transition However, a small but measurable migration of brine is still occurring in otherwise impermeable ice, this is attributed to eutectic dissolution of the ice by concentrated brine as it moves into deeper and warmer parts of the McMurdo Ice Shelf (Auth)

ICE PHYSICS, SEA ICE, ICE EDGE, SNOW COVER EFFECT, ICE COVER THICKNESS, ICE SALINITY, ICE CRYSTAL STRUCTURE, SEASONAL VARIATIONS, FRAM STRAIT.
The physical properties of sea ice in the Fram Strait region of the Greenland Sea were examined during June and July 1984 in conjunction with the Marginal Ice Zone Experiment field program Most of the ice sampled within Fram Strait during this period was multiyear Thicknesses and other properties indicated that none of the multiyear ice was older than 4 to 5 years Snow cover on the multiyear ice averaged 29 cm, while that on first-year ice averaged only 8 cm deep This difference may be related to enhanced sublimation of the snow on the thinner first-year ice The salinity profiles of first-year ice clearly show the effects of ongoing brine drainage in that profiles from cores drilled later in the experiment are substantially less saline than earlier cores Thin section examinations of crystal structure indicate that about 75% of the ice consisted of congelation ice with typically columnar type crystal structure The remaining 25% consisted of granular ice with only a few occurrences of snow ice The granular ice consisted primarily of frazil, found in small amounts at the top of floes but mainly observed in multiyear ridges The horizontally oriented crystal c axes showed various degrees of alignment ranging from no alignment to strong alignments in which the alignment direction changed with depth, implying a change in floe orientation with respect to the ocean current at the ice-water interface during ice growth Evidence of crystal retexturing was observed in the upper meter of nearly every multiyear core This retexturing, consisting of grain boundary smoothing and nearly complete obliteration of the ice platelet-brine layer substructure, is attributed to summer warming

ICE MECHANICS, DRIFT, ICE FLOES, ICE CONDITIONS, MICROWAVES, OCEAN CURRENTS, ICE EDGE, ANALYSIS (MATHEMATICS)
In this paper, mesoscale (10 km) ice kinematics data obtained during the drift phase of the 1983 Marginal Ice Zone Experiment are analyzed The measurements were made with a microwave transponder system accurate to better than 1 m From the point of view of granular media theory, the ice pack was close to ideal Over the scale of the array the pack was quite regular, with floes of relatively uniform size closely packed together The main external driving force for the ice was the ocean current. Simultaneous current measurements were made at three of the strain array sites The ice behaved in a relatively rigid manner, with more shear than dilatation occurring Least squares fits of the strain rate tensor showed the deformation field to be quite homogeneous Superimposed on the rigid motion were smaller fluctuations with a spectrum falling off proportional to frequency to the power of -3/2 to -2 Close examination of individual strain lines showed rather discontinuous distance changes more representative of plastic slip rather than floe bumping Although a substantial signal at the inertial period was present in the absolute drift, no clear peaks at this period occurred in the spectra of the strain rate tensor invariants Analysis of the spatial variation of the underlying ocean currents revealed quite a different picture from that of the ice kinematics In particular, the current field exhibited a much greater spatial variability than the ice motion, with considerable variance at the inertial period Coherence between the ice and ocean differential velocity was small for all frequencies Overall, the rigid interactive character of the compact ice cover prevented most of the differential ocean currents from being transferred to the differential ice motion

ICE MECHANICS, ICE FLOES, ICE EDGE, ICE DEFORMATION, STRESSES, RHEOLOGY, MATHEMATICAL MODELS, PACK ICE.
A collisional rheology for an idealized two-dimensional flow of a fragmented ice field is derived This fragmented ice field is modeled as an assembly of identical smooth disks Collisions between neighboring disks are caused by the mean deformation field These collisions transfer momentum which produces the internal stresses in the deforming ice field By equating the collisional energy losses to the deformational energy, a relationship between the stress and strain rate is quantified To demonstrate the essential idea, an analytical derivation is first given under quite restricted assumptions A Monte Carlo simulation is then developed to provide a more general approach for the analysis It is found that the collisional stresses are proportional to the square of disk diameter and the square of the deformation rate The magnitude of stresses is also found to increase rapidly as the collisional restitution of disks increases The collisional rheology yields zero tensile strength. The associated normal flow rule commonly used in the plastic rheology is not valid in the collisional rheology It is found that the collisional stresses are very small Consequently, the resulting stress divergence is estimated to be much lower than the air stress typically encountered in the marginal ice zone However, these collisional stresses become singular as the maximum compactness is reached, indicating that a different mechanism may exist in that extreme.

Considerable attention has been given to the subject of motion resistance of tires traveling in virgin snow. Trailing tires (those that follow in the rut of a preceding wheel) are generally assumed to provide negligible motion resistance. Levels of resistance for trailing tires were measured with the CRREL Instrumented Vehicle operating in two snow conditions. Using this vehicle, two methods of measuring trailing tire resistance have been explored. Good agreement was found between the methods. A very different balance of leading-tire to trailing-tire resistance was also found for the two snows. For both snows, it is seen that it is not appropriate to assume that trailing-tire resistance is negligible.

TURBULENT BOUNDARY LAYER, SNOW SURFACE, SNOW AIR INTERFACE, WIND VELOCITY, AIR TEMPERATURE, HUMIDITY.
Time series were measured of the turbulent fluctuations in longitudinal *(u)* and vertical *(w)* velocity and in temperature *(t)* and humidity *(q)* with fast-responding sensors in the near-neutrally stable surface layer over a snow-covered field. These series yielded individual spectra, *u-w, w-t, w-q,* and *t-q* cospectra, and phase and coherence spectra for nondimensional frequencies *(fz/U)* from roughly 0.001 to 10. This is, thus, one of the most extensive spectral sets ever collected over a snow-covered surface. With the exception of the *u-w* cospectra, all of the spectra and cospectra displayed the expected dependence on frequency in an inertial or inertial-convective subrange. At this complex site, turbulence alone determines the spectra and cospectra at high frequency, while at low frequency, the spectra and cospectra reflect a combination of topographically generated turbulence and, probably, internal waves. From the measured temperature and humidity spectra and the *t-q* cospectra, refractive index spectra for light of 0.55 micron and millimeter wavelengths were computed, the first such spectra obtained over snow. From the *u, t* and *q* spectra, the surface sensible *(Hs)* and latent *(Hl)* heat fluxes were estimated using the inertial-dissipation technique. Aspects of these computed and estimated values are discussed. (Auth. mod.)

ICE OPTICS, SNOW OPTICS, SEA ICE, BRINES, ALBEDO, SCATTERING, ICE SPECTROSCOPY, ICE COVER EFFECT, TEMPERATURE EFFECTS.
Optically sea ice is a complex material with an intricate and highly variable structure which includes brine pockets, air bubbles, brine channels and internal platelet boundaries. Large variations in the optical properties of the surface layer can occur on horizontal scales of only a few meters, complicating efforts to quantify larger scale interactions between shortwave radiation and the ice-ocean system. Radiative transfer in sea ice is dominated at visible wavelengths by scattering rather than absorption. Because scattering in the ice is essentially independent of wavelength, spectral variations in the optical properties are primarily the result of differences in absorption. Observations show that albedos are particularly sensitive to the presence of liquid water in the surface layers, the effect being most pronounced at wavelengths above 600 nm. Albedos and extinction coefficients in the ice vary inversely with brine volume, and thus temperature. Below the eutectic point, precipitation of solid salts causes a sharp increase in scattering and corresponding increases in albedo and absorption. Biological activity in natural sea ice often affects light transmission and absorption, particularly in coastal regions and in the southern ocean. Phase function measurements indicate that the scattering distribution in sea ice is only weakly dependent on wavelength and brine volume.

ICE OPTICS, SNOW OPTICS, SEA ICE, ANALYSIS (MATHEMATICS), ALBEDO, SOLAR RADIATION, ICE MICROSTRUCTURE, BRINES, TEMPERATURE EFFECTS, GRAIN SIZE.
Radiative transfer models of sea ice applied to date range from a simple Bouguer-Lambert representation for net downwelling irradiance through 16 stream models which takes into account detailed variations in ice microstructure. Both sea ice and snow are strongly multiple scattering media with single scattering albedos well above 0.9 through the visible and into the near infrared. Parameter studies indicate that the optical properties of sea ice are controlled by the density of brine and vapor inclusions which in general undergo substantial seasonal changes. Melting and brine drainage are the principal causes of these variations. For ice below -5 C, temperature effects are relatively weak unless the T(ice) drops below the eutectic point. The optical properties of snow depend primarily on grain size, the bulk density, and the presence of impurities such as carbon soot. The theoretical models appear to be able to reproduce observations quite well and have revealed that soot or dust contamination of snow appears to be prevalent even in the Arctic.

SNOWFALL, PRECIPITATION GAGES, SNOW OPTICS, MEASURING INSTRUMENTS, DISTRIBUTION.
The most common quantitative measurement of falling snow is the precipitation rate. The time resolution of conventional mechanical snow gauges is poor, and their accuracy in measuring light snowfall is severely limited. An optical device designed to give an accurate instantaneous measurement of rain rate has been modified to operate in falling snow. Snow rates are inferred from statistical averages of intensity fluctuations caused by snow particles as they fall through a beam of light. Test results show that the optical device is extremely sensitive to light snowfall and may be a significant improvement over mechanical techniques to measure snow precipitation rates.

RIVER ICE, ICE CONDITIONS, HYDROLOGY, WATERSHEDS, STATISTICAL ANALYSIS, DEGREE DAYS, FREEZING, DAMS, LOCKS (WATERWAYS), UNITED STATES—OHIO RIVER.
Daily ice conditions observed on the Ohio River at Cincinnati for the winters of 1874-75 through 1985-86 were analyzed. The amount of ice on the river, except during particularly cold winters, has decreased since 1900. The decline has been especially significant starting around 1930. Investigation of the severity of each winter, using the number of freezing degree-days as an index, revealed no systematic temperature trends over the 112 years of record. Associations between number of days with river ice and concurrent accumulated freezing degree-days over 20- or 11-winter increments were investigated. The results showed that between the winters of 1934-35 and 1963-64 considerably more freezing degree-days were required to produce ice, but the trend has reversed slightly since then. This decreasing trend in observed ice has occurred during a period of basin development, as indicated by a sample population, the construction of large locks and dams, and an increase in navigation tonnage on the river. The increase in heated discharge into the river corresponding with basin development and the construction of large locks and dams have probably had the most significant impacts.

ALCOHOL CALORIMETRY FOR MEASURING THE LIQUID WATER FRACTION OF SNOW.
Fisk, D.J., Eastern Snow Conference, 43rd, 1986, 1987, p.163-166, 2 refs.
42-227
SNOW WATER CONTENT, TEMPERATURE MEASUREMENT, SNOW ICE INTERFACE, UNFROZEN WATER CONTENT, CALORIMETERS, LATENT HEAT, ICE VOLUME, SPECIFIC HEAT, MEASURING INSTRUMENTS.
Equipment and procedure have been devised for measuring the liquid water/ice ratio of snow. The measurement is based on the temperature depression observed on dissolving a 25 g snow sample at 0 C in 80 g methanol at 0 C. The masses of the sample and alcohol are held constant, and the heat of solution of 25 water in 80 g methanol at zero deg is constant, so the or / variable is the water/ice ratio in the sample. The solution process occurs quickly enough that it is essentially adiabatic. The latent heat of fusion of up to 8.3 g ice is supplied by the heat of solution of the water in the alcohol. The heat of fusion of any ice above 8 3 g is supplied by a decrease in the solution temperature. Since the total latent heat of fusion varies linearly with ice content, and the solution specific heat is virtually constant, the final solution temperature also varies linearly with sample ice content.

SNOW WATER CONTENT, SNOW COVER, UNFROZEN WATER CONTENT, TEMPERATURE MEASUREMENT, MELTWATER, TESTS.
The amount and distribution of liquid water is important for assessing the mechanical strength, meltwater generation and meltwater transmission in snow cover. It also has a profound effect on the performance of active and passive remote sensing systems operating the microwave and millimeter wave region of the electromagnetic spectrum. Recently, an alcohol calorimeter method of measuring liquid water has been reported which is simpler than the freezing calorimeter. It is of interest to intercompare the two methods to show equivalence and to assess the errors of each. The intercomparison was made in a laboratory cold room with homogeneous snow having a mass liquid water content from 0% to 15%. The intercomparison shows that the two methods are equivalent and that the experimental errors associated with the measurements are consistent with what is expected from an error analysis of each method.

WASTE TREATMENT, FOREST LAND, WATER TREATMENT, LAND RECLAMATION, IRRIGATION, COST ANALYSIS, MAINTENANCE.
Land treatment of municipal wastewater on forest land has been practiced experimentally for over twenty years and on a full-scale basis for over ten. The technology of land application consists of sprinkler irrigation using solid-set (fixed) sprinklers. Most sprinkler systems have been installed in existing forests using either buried or aboveground laterals. Design guidance for sprinkler spacing and operating pressures for solid-set systems in forests is presented. Costs of installed forest land application systems are also given. Costs and design factors are reviewed for systems at Snoqualmie Pass, Washington; Wolfeboro, New Hampshire; Lake of the Pines, California; Clayton County, Georgia; and State College, Pennsylvania. Operation and maintenance costs are provided for systems at Clayton County, Georgia; West Dover, Vermont, and Kennett Square, Pennsylvania. Reduction of the cost of future systems can be accomplished by minimizing the amount of effluent storage provided. Most forest systems can operate with thirty days storage or less. New technology and new plantations can allow reductions in the cost of wastewater application. Potential revenue from tree harvest can also reduce overall costs.

RIVER ICE, ICE CONDITIONS, REMOTE SENSING, MAPPING, LANDSAT, AERIAL SURVEYS, PHOTOGRAPHY, ICE NAVIGATION.
As part of the Corps of Engineers River Ice Management Program, Landsat imagery and low-altitude video imagery were used to map ice conditions along the Ohio, Allegheny, Monongahela, Illinois, and Kankakee Rivers. The imagery was analyzed using photointerpretation techniques. Landsat imagery was used to map river ice from 1972 through 1984. The video imagery was used from 1984 to 1987. Ice conditions on these rivers can change rapidly, often daily, and the areal extent of ice is typically greatest from mid-Jan to mid-Feb. In spite of the small-scale and limited coverage of Landsat imagery, it is useful for analysis of general river ice conditions, especially during severe winters when ice becomes extensive Video imagery is an economical means of documenting river ice conditions, although cloud cover, inclement weather, and low ceilings restrict opportunities for more frequent coverage. It also can provide near-real-time data when extreme ice conditions cause navigation emergencies.

ICE COMPOSITION, FIRN, CHEMICAL PROPERTIES, ANTARCTICA AMUNDSEN-SCOTT STATION.
Measurements of meltwater pH from annual layers of South Pole firn and ice samples ranging in age from 40 to 2000 years BP show that precipitation at this remote site has a higher natural acidity than that expected from atmospheric

equilibrium with CO2 The average pH of deaerated (CO2-free) samples was 5 64, while air-equilibrated samples averaged 5 37, a pH that is about a factor of two more acidic than the expected background pH of 5 65 The observed "excess" acidity can be accounted for by sulphur and nitrogen cation levels in the samples originating from non-anthropogenic H2SO4 and HNO3 Because of the presence of these naturally occurring acids in South Pole precipitation, a pH of 5.4 is considered a more representative baseline reference pH for acid precipitation studies. ICING, STRUCTURES, METEOROLOGICAL FACTORS, HOARFROST, GLAZE, FROST, MEASURING INSTRUMENTS, ICE DETECTION.
The accumulation of rime and glaze ice on structures depends on meteorological variables such as wind, precipitation rate, air temperature, fog density and atmospheric moisture content However, highly accurate measurements of meteorological variables during periods of icing (including wet snow) that occur in the cold regions of the world are for the most part unavailable due to instrumentation failure or geographic remoteness For the last 5 years, USACRREL has been modifying, testing, and utilizing state-of-the-art sensors and recording systems for measuring winter environmental conditions. This paper discusses meteorological sensors (including ice detectors) used in adverse cold environments, including the mountainous areas of the northeastern United States. One of the state-of-the-art site-specific sensor packages, the newly developed Environmental Instruments Model 200 Dual Processor Meteorological System has been thoroughly evaluated during periods of adverse weather and icing The system has no moving parts, but incorporates two static pair heated resistive sensing elements for measuring wind speed and direction, a platinum resistance thermometer for temperature, and a pressure transducer for atmospheric pressure. Results obtained and problem areas encountered using a number of different sensors in adverse weather conditions at both the CRREL snow-field experiment test sites and high elevation winter icing experiment sites are discussed

ICE DETECTION, ICING, ICE ACCRETION, STRUCTURES, AIR TEMPERATURE, WIND VELOCITY, UNFROZEN WATER CONTENT, CLOUD DROPLETS, MEASURING INSTRUMENTS.
Several seasons of icing data have been collected under natural icing conditions on the summit of Mt Washington, New Hampshire Two models of the Rosemount Ice Detector were evaluated in the context of providing icing intensity data under various conditions Average temperature, wind-speed, liquid water content and median droplet diameter were also recorded for each icing event, the latter two parameters being provided by rotating multicylinders A measure of icing rate has been calculated from the liquid water content and the wind speed, and has been compared to the ice detector cycling rates For detectors with long heat-on times the upper limit (maximum cycling rate) of the detector is easily reached under natural conditions The detector with long heat-on times also exhibits problems at higher temperatures At environmental temperatures near freezing, the probe takes considerable time to cool below freezing and begin to again accumulate ice Thus a maximum cycle rate is reached under these conditions which can be well below the actual icing rate Under prolonged icing conditions, ice accumulations on the unheated parts of the probe and support structure can interfere with the airflow past the probe, significantly changing the collection efficiency Under extreme conditions, this can result in a complete lack of cycling The problems associated with application of the ice detector cycling rates as a measure of accretion rates on more complex objects are also discussed In particular, the fact that the collection efficiency is so strongly dependent on the droplet size distribution may limit its usefulness

Ice accreted on high-speed rotors operating in supercooled fog can be thrown off by centrifugal force, creating severe unbalance and dangerous projectiles. A simple force balance analysis indicates that the strength of accreted ice and its adhesive strength can be obtained by measuring the thickness of the accretion, the location of the separation, the rotor speed and the density. Such an analysis was applied to field and laboratory observations of self-shedding events The results agree reasonably well with other observations

ICE ACCRETION, POWER LINE ICING, TRANSMISSION LINES, WIND PRESSURE, ANALYSIS (MATHEMATICS), AIR FLOW, COMPUTER APPLICATIONS, ICE FORECASTING, MODELS, SUPERCOOLING.
A time-dependent computer model capable of predicting the accretion of rime ice on a wire free to rotate is described A finite element technique is used to obtain the air velocity field adjacent to the wire. A local collision efficiency is calculated for several radial sectors of the wire by tracking supercooled water droplets of various sizes until they collide with the wire The asymmetric buildup of ice causes the wire to rotate, changing the flow field around the wire and the rate of ice accretion The finite element technique is a very effective method of analyzing this problem because the ice accretion shape is not limited to a simple geometric shape The drag force is computed as a function of time to investigate the forces acting on the wire during an icing event Model results are presented including comparisons of icing simulations of wires of various rigidities and lengths

UNDERGROUND FACILITIES, DETECTION, RADAR ECHOES, MEASURING INSTRUMENTS, PENETRATION TESTS
Hand-held detectors and ground penetrating radar systems have been field evaluated to determine their effectiveness in locating underground objects and utilities. The hand-held detectors are limited to locating either metallic or nonmetallic (by radio transmitter) lines and are best suited to tracing such lines To trace such lines, at least a vague idea of their location must be known or a point of physical access must be available Ground penetrating radar (GPR), on the other hand, has the capability to detect both metallic and nonmetallic objects without prior knowledge of their presence. However, as presently configured, GPRs have certain deficiencies that resulted in poor performance in field evaluation tests. The best system detected only 60% of the metallic and 36% of the nonmetallic objects that were present in our test site We therefore have development efforts underway or completed to improve the capabilities of GPRs These efforts include optimum GPR source signal, high-power focused antenna, and signal processing-image reconstruction software.

ROOFS, LEAKAGE, INFRARED RECONNAISSANCE, MOISTURE DETECTION, THERMAL INSULATION, TEMPERATURE VARIATIONS.
Newly constructed roofs can develop leaks as soon as they are built, but these leaks may not manifest themselves inside the building until after the warranty has expired High resolution infrared scanners can be used during the warranty period to locate the wet insulation resulting from these leaks. When combined with detailed visual examination, infrared surveys can help to determine who is responsible for the leak If the leak is the result of a design or workmanship error, then the building owner is saved the expense of pursuing remedial repairs on a new roof.

ICE FORMATION, ICING, METEOROLOGICAL INSTRUMENTS, HOARFROST, MODELS, CLIMATIC FACTORS, AIR TEMPERATURE, FREEZE THAW CYCLES
Adverse weather that induces riming and glaze formations severely affects most conventional meteorological field sensors and frequently causes system failure Such conditions include temperatures near or just below freezing, frozen precipita-

tion and excessive humidity. These conditions usually accompany major synoptic events which in most cases go unrecorded because of 1) the remoteness of the high elevations where extreme icing and wind normally occur, and 2) the failure of the instrumentation required to characterize the adverse weather.

EXTINCTION COEFFICIENT FOR A DISTRIBUTION OF ICE FOG PARTICLES.
Jordan, R., Electro Optical Systems Atmospheric Effects Library/Tactical Weather Intelligence (EOSAEL/TWI) Conference, 7th, Las Cruces, NM, Dec. 2-4, 1986. Proceedings, U.S. Army Atmospheric Sciences Laboratory, 1987, p.527-539, 15 refs.
42-1035
ICE FOG, INFRARED RADIATION, ELECTROMAGNETIC PROPERTIES, ATTENUATION, PARTICLE SIZE DISTRIBUTION, MATHEMATICAL MODELS.
An approximation model is derived for the attenuation of visible and infrared radiation through ice fog. Assuming spherical particles and single scattering, a formula for estimating the extinction efficiency factor has been developed by combining the approaches of Hart-Montroll and Nussenzveig-Wiscombe. With the use of a Maxwell function to describe the size distribution of ice fog particles, a theoretical integration over the distribution is possible. The resulting extinction coefficient is a function of the mode radius of the distribution, the wavelength of the incident radiation, and the complex refractive index of ice. Its simple formulation provides an efficient means of scaling infrared to visible attenuation.

SNOWFALL, SNOW WATER EQUIVALENT, MILITARY OPERATION, SNOW ACCUMULATION, VISIBILITY, SNOWSTORMS, REMOTE SENSING.
Snowfall intensities are currently classified by the National Weather Service Meteorological stations as "light, moderate and heavy" using visibility as a criterion. However, snowfall occurs with other obscurants, such as fog, making it extremely difficult to determine the actual snowfall intensity, therefore any criterion dependent on visibility alone should only be used as a guide. This paper presents a more quantitative method of determining snowfall using snow depth accumulation rate (cm/hr) and total hourly water equivalent (mm) as criteria. Intensive snowfall accumulation rates and water equivalent amounts were determined at the SNOW experiments at Fort Ethan Allen, Vermont, during the winters of 1980-81 and 1981-82, and at Camp Grayling, Michigan, during the winters of 1983-84 and 1984-85. These data are used to validate the preliminary snowfall intensity model.

ICE LOADS, PROPELLERS, ICE NAVIGATION, ICE FLOES, ICE CONDITIONS, ICE SOLID INTERFACE, VELOCITY, ICE DENSITY, FRICTION, TESTS.
Results of a laboratory study on ice-propeller interaction conducted with a model icebreaker are presented. The tests were made in ice-free water, precut channels with regularly shaped ice floes of different sizes, and brash-filled ice channels. The test results showed that the propeller torque and its standard deviation increased with both ice floe size and ship speed. The dominant frequency in the torque fluctuations was found to be either the propeller speed or the ratio of ship speed to floe width. The effect of ice ingestion on propeller thrust could not be determined because of malfunction of the thrust component of the propeller dynamometer. The results suggest that difference in ice density and in ice-hull friction coefficient between model tests and full scale trials may be at least partially responsible for the lack of agreement between torque and powering requirements predicted from model propulsion test results and those measured during full-scale trials.

CONFIDENCE IN HEAT FLUX TRANSDUCER MEASUREMENTS OF BUILDINGS.
Flanders, S.N., 1985, 91(1), p.515-531, 12 refs.
42-1375
HEAT TRANSFER, BUILDINGS, HEAT FLUX, TEMPERATURE MEASUREMENT, MEASURING INSTRUMENTS.
Confidence in the validity of heat flux transducer (HFT) measurements is sufficiently high that ASTM is preparing a standard practice for the use of HFTs on buildings. A key issue the standard practice will address is how to adjust the calibration of the HFT to the thermal environment of the measurement. Confidence in the use of HFTs is based in part on a propagation of error analysis of key thermal influences on the accuracy of measurement. The user can expect the HFT to render a standard deviation of 10% of the heat flux measured. Field measurements confirm this expectation. However, the variety of heat flux mechanisms inherent in building construction requires that the investigator choose the measuring situation carefully. Convection, even in "fully insulated" spaces, can cause unexpected lateral heat flux and results that are difficult to interpret. More work should be done with HFTs to investigate convection in walls and attics, as well as to investigate other lateral heat flux transfer mechanisms.

SNOWFALL, INFRARED RADIATION, LIGHT SCATTERING, SNOW CRYSTALS, AEROSOLS, VISIBILITY, ICE CRYSTALS, PRECIPITATION (METEOROLOGY), WIND VELOCITY, TESTS, CLOUD DISSIPATION.
Field tests conducted with EA 5763 in Hanover, NH, Hollis, ME and E. Corinth, VT show that an order of magnitude more screener is removed and deposited at the surface within 30 m downwind during snowfall than under clear-air conditions. Relative amounts of screener deposited by diffusion gravitation under clear conditions were inversely proportional to the wind speed above a threshold value of about 1 m/s. A direct linear relationship exists between the mass precipitation rate and the fraction of smoke cloud scavenged by stellar, spatial dendritic, and clustered snow crystals. The scavenging efficiency does not appear to depend strongly on snow or ice crystal type although scatter in the data and the limited number (6) of tests may have masked any relationship. Snow is four to five times more efficient than raindrops in scavenging EA 5763 from smoke clouds.

METEOROLOGICAL INSTRUMENTS, AIR TEMPERATURE, HUMIDITY, AIRPLANES, MEASURING INSTRUMENTS, TESTS, TEMPERATURE EFFECTS, ACCURACY.
A small, lightweight, low power consuming instrument designed to measure atmospheric temperature and relative humidity from an unmanned aerial vehicle (UAV) was flight tested. The measurements obtained from the UAV instrument were compared with those obtained from balloon borne instruments. The balloons were launched prior to and just after the UAV flights. Although the measurement accuracy of the UAV instrument could not be established during these tests, the temperature and relative humidity variations noted were consistent with those obtained from the balloon instruments. The temperature variations conformed to the expected lapse rates. Laboratory tests on the performance of the instrument package under varying, particularly cold, temperatures were conducted to determine the environmental effects on instrument sensitivity, accuracy and time constants. Results of these tests are presented.

ACOUSTIC-TO-SEISMIC COUPLING THROUGH A SNOW LAYER.
Peck, L., July 1987, SR 87-12, Snow Symposium, 6th, Hanover, NH, Aug. 1986. Proceedings, p.47-55, ADB-115 486.
42-1408
ACOUSTICS, SNOW COVER EFFECT, SEISMOLOGY, SOUND WAVES, SOIL MECHANICS, MILITARY OPERATION, FROST PENETRATION, EXPERIMENTATION.
The excitation of ground motion by airborne sound is termed acoustic-to-seismic coupling. The occurrence of acoustic-to-seismic coupling degrades the performance of a seismic sensor unless its contribution to the ground motion is compensated for, while it is the basis of aircraft detection and ranging by means of an acoustic/seismic sensor. The variation in acoustic-to-seismic coupling due to the winter environment must be known and understood so that the effects of the winter environment can be incorporated in the design and employment of sensor systems.

42-1411
ATTENUATION, LIGHT SCATTERING, RADIATION, SNOWFALL, LIGHT TRANSMISSION, MEASURING INSTRUMENTS, RAIN, FOG.
The extinction coefficient is a measure of the attenuation of radiation as it propagates through the atmosphere. Techniques for measuring the extinction coefficient in optical wavelength regions are of interest, since many military devices detect visible and infrared radiation emitted or reflected by distant targets. Experimental results comparing extinction coefficients measured with a forward scatter meter and a transmissometer show that it is feasible to use a forward scatter meter to measure extinction in winter precipitation (snow, rain and fog).

INFRARED RADIATION, VISIBILITY, LIGHT TRANSMISSION, CLOUD COVER, TEMPERATURE EFFECTS, SOUNDING, COMPUTER APPLICATIONS.
The potential for using measurements of infrared radiation from the Earth's surface in the wavelength range of 8-14 micron to obtain an estimate of infrared extinction is examined. The system depends on the reduction of detected radiation with increasing distance from the observed objects. The effects of cloud cover and the temperature and emissivity dependence are considered. Limitations on the operational range are presented. This paper also presents a technique using a video image and computer processing to obtain a measure of visual range from the observed contrast differences in the image. A priori knowledge of scene contrast when visibility is known can be compared with the scene contrast obtained under arbitrary conditions to estimate visibility. A slightly different approach to obtain visual range views horizon and terrain simultaneously. A contrast measurement can then be used to determine visual range if the distance to the horizon is known.

ICE CRYSTAL GROWTH, SUPERCOOLED CLOUDS, RADAR ECHOES, ANALYSIS (MATHEMATICS), BACKSCATTERING, TEMPERATURE EFFECTS, PRECIPITATION (METEOROLOGY), UNFROZEN WATER CONTENT.
Ice particles falling through supercooled clouds accrete water droplets fast enough to melt or a substantial temperature increase. During conditions of just wet growth of fair snow graupel particles, the temperature rise can reach several degrees. These wet ice particles would take hundreds of meters to refreeze after falling below the cloud. Thus wet ice particles can fall through subfreezing air below a supercooled cloud and enhance radar backscattering. While this effect is possible with clouds the liquid content of fogs is too low to produce more than a few tenths of a degree rise in the temperature of falling ice particles. Furthermore, only extensive clouds have a sufficient liquid water content to give a 1 degree temperature rise.

FRAZIL ICE, ICE CONTROL, TURBULENT FLOW, ICE FORMATION, STREAMS, FREEZEUP, HEAT TRANSFER, ICE CRYSTALS, RIVER ICE, ICE PHYSICS, ICE MECHANICS.
This paper presents a selective overview of the research into frazil ice The development of theory, instrumentation, and control structures has not proceeded on parallel course for all stages of frazil evolution. The earliest, dynamic stage of frazil formation is probably the best described, yet there has as yet been no application of this theory to a practical situation A fundamental understanding of frazil formation could lead to means of disrupting the formation, such as by artificial seedings, modification of the fluid turbulence, etc The development of instrumentation, has increased our ability to view and sample frazil, but as yet has not provided much benefit for the design and siting of ice control structures. To date, the succes.ful use of ice control structures relies heavily on the insight of experienced field engineers. Theory or instrumentation has not made their job easier, but the potential is large A major task now is the synthesis of existing theory and instrumentation for application in ice control

HEAT TRANSFER, FREEZING, THAWING, HEAT BALANCE, PHASE TRANSFORMATIONS, SOIL FREEZING, PERMAFROST, FREEZE THAW CYCLES, ANALYSIS (MATHEMATICS).
One of the most difficult and yet most interesting areas of heat transfer is conduction (or convection) with freezing or thawing. The inherent non-linearity of the problem along with the unknown moving interface precludes exact solutions for most practical cases. This has spurred great effort to devise approximate solution methods which are accurate and of general application. Many of the known exact solutions are listed here along with a brief discussion of two approximate methods: the quasi-static and the heat balance integral. Space limitations rule out the inclusions of such useful variational methods as that of Biot or of a treatment in more detail.

FREEZEUP, FRAZIL ICE, ICE SOLID INTERFACE, ICE ADHESION, HEAT TRANSFER, ICE FORMATION, MATHEMATICAL MODELS, DRAINAGE.
The freezeup of trash racks by frazil ice occurs in a sequence that has not been quantitatively described. Because of the difficulty in observation and measurement, very little is quantitatively known about the concentration of frazil ice at the intake, the mechanism(s) of underwater ice adhesion, the deposition efficiency of frazil ice, the contribution of different heat transfer modes to the ice growth on the rack, and the relationship of the head loss through the rack to the flow velocity as a function of the mass of ice present. A comparison of the ice generation by conduction and convection with the mass of ice deposited on the rack from the flow indicates that deposition is the most significant mode of ice formation on the rack. Based on this, and other assumptions, a first generation mathematical model that describes the head loss through a trash rack during freezeup is developed. The mathematical model is developed for the case of a trash rack through which a constant discharge is maintained. The model is applied to laboratory data with good results The laboratory data were obtained by modelling a section of a trash rack in a flume located in a cold room. Frazil ice produced in the flume caused the rack to freeze up while a constant discharge was maintained. The mathematical model can be used to suggest means, both structural and operational, of extending the time until total freezeup of a trash rack occurs Improvements in the mathematical model are suggested.

ICE DEFORMATION, ICE CRYSTAL STRUCTURE, STRAINS, GRAIN SIZE, TESTS, STRESS STRAIN DIAGRAMS.
This paper presents and discusses the results of constant deformation-rate tests on laboratory-prepared polycrystalline ice. Strain-rates ranged from 0 000,000,1 to 0.1/s, grain-size ranged from 1.5 to 5.8 mm, and the test temperature was -5 C. At strain-rates between 0 000,000,1 and 0.001/s, the stress-strain-rate relationship followed a power law with an exponent of n=4.3 calculated without regard to grain-size However, a reversal in the grain-size effect was observed below a transition point near 0.000,004/s the peak stress increased grain-size, while above the transition point the peak stress decreased with increasing grain-size. This latter trend persisted to the highest strain-rates observed. At strain-rates above 0 001/s the peak stress became independent of strain-rate. The unusual trends exhibited at the lower strain-rates are attributed to the influence of the grain-size on the balance of the operative deformation mechanisms Dynamic recrystallization appears to intervene in the case of the finer-grained material and serves to lower the peak stress At comparable strain-rates, however, the large-grained material still experiences internal micro-fracturing, and thin sections reveal extensive deformation in the grain-boundary regions that is quite unlike the appearance of the strain-induced boundary migration characteristic of the fine-grained material

RIVER ICE, ICE COVER THICKNESS, SCATTERING, REMOTE SENSING, PROFILES, EQUIPMENT, LAKE ICE, SURFACE ROUGHNESS, FRAZIL ICE.

The ice-thickness profiling performance of a helicopter-mounted short-pulse radar operating at approximate center frequencies of 600 and 900 MHz was assessed. The antenna packages were mounted 1.2 m off the skid of a small helicopter whose speed and altitude were varied from about 1.8 to 9 m/s and 3 to 12 m. Clutter from the helicopter offered minimal interference with the ice data. Data were acquired in Alaska over lakes (as a proving exercise) and two rivers, whose conditions varied from open water to over 1 5 m of solid ice with numerous frazil-ice formations. The most readily interpretable data were acquired when the ice or snow surface was smooth. Detailed surface investigations on the Tanana River revealed good correlations of echo delay with solid ice depth, but an insensitivity to frazil-ice depth due to its high water content On the Yukon River, coinciding temporally coherent surface and bottom reflections were associated with solid ice and smooth surfaces All cases of incoherent surface returns (scatter) occurred over ice rubble. Rough-surface scattering was always followed by the appearance of bottom scattering but, in many cases, including a hanging-wall formation of solid frazil ice, bottom scattering occurred beneath coherent, smooth-surface reflections Areas of incoherent bottom scattering investigated by drilling revealed highly variable ice conditions, including frazil ice The minimum ice thickness that could be resolved from the raw data was about 0 2 m with the 600 MHz antenna and less than 0 15 m with the 900 MHz antenna

ICE COVER THICKNESS, SEA ICE, ICE FLOES, PHOTOGRAPHY.
The entire width of the antarctic sea ice zone was traversed in the vicinity of 0 deg longitude from July 18 to Sep 10, 1986. Ice thicknesses were measured by direct drilling, by helicopter profiling using an Exstar 100-MHz impulse radar system and by aerial photography The results of the point measurements (drilling) are reported in this paper together with an indication of how the radar and photography data will be used to extend them so as to yield area-averaged ice thickness distributions. The main ice type across the entire width of the ice cover was consolidated pancake ice occurring in vast floes, this formed out of a 250-km-wide band at the advancing ice edge which comprised a concentrated field of individual pancakes in a matrix of frazil ice Preferred thicknesses of undeformed floes were 40-60 cm of ice covered with 5-15 cm of snow The individual pancakes attained almost all of this thickness before consolidation, subsequent congelation growth was slow, estimated at 0 4 cm/d. The floes contained much small-scale roughness on the upper and lower surfaces due to rafting of pancakes at the time of consolidation, but pressure ridging was modest except in the far south A few very thick (8-11 m) multiyear floes were observed embedded in the pack at latitudes beyond 66S (Auth)

SNOW COVER, SNOW HYDROLOGY, AVALANCHES, HISTORY.
The history of snow-cover research is divided into 4 distinct periods. Before 1900 there were systematic observations of snow but the tools were just being developed to begin serious research. From 1900 to 1936, many investigations were made because of the practical considerations of snow hydrology and snow avalanches Individuals began the assessment of snow water equivalent for forecasting run-off and the observation of snow structure and texture. Quantitative and physical investigations quickened after government-sponsored laboratories were established in 1936, the same year as the founding of the International Glaciological Society From 1936 through the 1960s, many detailed investigations were made into snow's physical properties and behavior Professional societies organized national and regional meetings, and published the results of snow research Many more laboratories became involved as knowledge about snow was developed and applied to run-off forecasting and avalanche defense Snow research surged again during the 1970s with the establishment of a new generation of snow scientists using more advanced theory, computers, and instrumentation As demands continue for solutions to snow problems with new emphasis on old themes, snow research generates knowledge about snow for a wide variety of applications

ICE STRENGTH, FLEXURAL STRENGTH, FRACTURING, ICE CRYSTAL STRUCTURE, ICE LOADS, GRAIN SIZE, ICE CRACKS.
The four-point-bend loading configuration is used here to study the flexural strength and fracture toughness of macrocrystalline S1 type freshwater ice The emphasis in this investigation was to minimize testing errors, prepare geometrically similar specimens milled to good accuracy, and to use a mechanical and repeatable method of notch formation The question under study is Would a wide scatter in flexural strengths and fracture toughness results still occur in S1 ice if the inaccuracies in specimen preparation and variations in notch acuity were minimized, and if the specimen size were increased significantly? The basic tenet then is that any scatter would be predominantly due to crystal orientation effects, grain size effects, variations in the predominant c-axis orientations, as well as both specimen size and specimen geometry.

Laboratory tests have been conducted with two full-size, two-phase commercial thermosyphons in an atmospheric wind tunnel at the U.S. Army CRREL. The test variables were wind speed and evaporator inclination angle. The air speed ranged from 0 to 5.2 m/s. The evaporator angles were varied from 0 to 12 deg measured from the horizontal. The effect of nearby walls on thermosyphon performance was also investigated. Tests were conducted with walls oriented parallel, at 45 deg and at right angles to the air flow direction. The air temperature for all tests was about -18 C. Test results are presented with thermal conductance of the thermosyphon as a function of wind speed and evaporator inclination angle The heat transfer conductance was found to increase with increasing wind speed and increasing evaporator inclination angle.

LOW TEMPERATURE TESTS, HEAT TRANSFER, WIND VELOCITY, TEMPERATURE EFFECTS, EQUIPMENT, WATER FLOW, ICE GROWTH, MEASURING INSTRUMENTS.
The exposure of portable electronic data logging equipment to extreme low temperatures usually leads to system failure To overcome this difficulty at northern remote sites, the use of a thermosyphon to transfer energy stored in the ground to an insulated instrument shelter was tested. The results of the test showed that the thermosyphon maintained the instrument shelter well above the outdoor ambient air temperature during cold spells Laboratory tests were conducted with two-phase full-size thermosyphons to freeze water in a test basin The test variables were wind speed and water velocity A single-phase thermosyphon was also tested for growing ice The heat transfer conductances of the thermosyphons were estimated for various wind speeds The use of thermosyphons placed in rivers has been proposed to collect transported frazil ice to augment ice dam formation or prevent frazil ice from interacting with downstream hydraulic structures. Laboratory tests were conducted with model two-phase thermosyphons in a refrigerated flume to test this concept Frazil ice was generated upstream of a thermosyphon array placed across the flume perpendicular to the flow The ability to collect frazil was determined by measuring the head loss across the array with time. Comparisons were made with an array of solid aluminum rods with the same dimension as the model thermosyphons. The influence of wind was also investigated

FLOATING ICE, LOADS (FORCES), ICE ELASTICITY, ANALYSIS (MATHEMATICS), PRESSURE.
First, the meaning of Young's modulus for a floating ice cover is discussed. A method often used for determining the average modulus of the cover, E(av), consisting of loading an ice cover vertically with a rigid disc, is then presented and a possible shortcoming of the calculation method used is pointed out. It is related to the fact that the contact pressure distribution between disc and ice cover is generally not known. To clarify this issue, a comparative study was conducted to establish the effect of related pressure distributions on the calculated E(av)-value. It was found that the limiting cases—like the uniformly distributed pressure and the uniform line distribution along the disc boundary—yield E(av) that are close to each other. Also, for the range of parameters under consideration, the E(av) obtained using the solution for a concentrated force is close The paper concludes by showing how the generated graphs may be used to simplify the calculation of E(av) for an ice cover.

ICE CRACKS, ICE CRYSTAL STRUCTURE, GRAIN SIZE, CRACK PROPAGATION, ANISOTROPY, TESTS, MODELS.
This paper examines in detail two likely mechanisms of microcrack formation in polycrystalline ice and pays special attention to the grain size dependencies of each mechanism Under consideration are the Zener-Stroh dislocation pileup mechanism and an elastic mechanism based on the anisotropy of the ice lattice. Calculations for the pileup mechanism indicate that although the dislocation velocity is relatively low, a critical-sized pileup can form under plausible test conditions Quantification of the elastic anisotropy mechanism indicates that it operates over approximately the same stress levels as the pileup mechanism and exhibits the same grain size dependency. The results of observations on the microcracking of laboratory-prepared freshwater ice having randomly oriented equiaxed grains are used to test the model predictions. The work gives detailed descriptions of the methods used to quantify each model

42-2412
THERMAL INSULATION, BUILDINGS, HEAT TRANSFER, MILITARY FACILITIES, CONVECTION, HEAT FLUX, ACCURACY, ECONOMIC ANALYSIS, THERMAL CONDUCTIVITY
As-built drawings and handbook calculations of R values are often inadequate bases for investment decisions regarding improved insulation of U.S. Army buildings. Reported field and laboratory experience indicates that a technique employing surface-mounted heat flux sensors (HFSs) in conjunction with infrared thermography (IRT) can yield reliable estimates of R values This technique employs IRT to position HFSs and thermocouples at representative locations on walls and roofs or attics to acquire heat flow and temperature data for estimating R values This paper reports on the application of this technique at Ft. Carson, Colorado, and Ft. Richardson, Alaska, to 8 family housing units, a temporary office building, and a barracks Infrared thermography of these buildings detected few thermal anomalies, but measurement of several walls with HFSs and thermocouples (typically at 6 locations spaced vertically on each wall) revealed significant variation in estimated R values, this variation is attributable to convection, even within fully insulated walls This is significant for proper placement of sensors and indicates that installed fibrous insulation can lack the ability to quell convection. The insulating ability of walls containing poorly installed mineral fiber batt insulation was much worse than would be indicated by the design handbook values Some attic insulation performed exactly as expected; some was at least 40% worse than expected.

SOIL CREEP, ICE CREEP, FROZEN GROUND MECHANICS, ICE MECHANICS, RHEOLOGY, MATHEMATICAL MODELS, STRESSES, TEMPERATURE EFFECTS.
A new method was developed for determining creep parameters, particularly the time to failure, from a single linear plot in which an individual creep curve forms a straight line for primary and tertiary creep. Secondary creep is considered to be a principal point on this line that predetermines the onset of failure The times to failure can be predicted, even when creep tests are not complete, by extrapolating information obtained for primary creep Based upon T H. Jacka's test data, prediction of creep strain was evaluated using the constitutive equation of A M Fish for entire creep and compared with the modified Sinha equation of M F. Ashby and P Duval for attenuating creep as well as with models for primary and secondary creep It is shown that the shape of the creep curves, and thus the creep parameters, varies with stress, temperature, and other factors Hence, a family of creep curves cannot be described by a constitutive equation with a single set of creep parameters that do not take into account these variations without loss in the accuracy of the creep strain calculations

BOREHOLES, SURFACE MIGRATION, REMOTE SENSING, ICE MECHANICS, VELOCITY, TOPOGRAPHIC FEATURES, DRILLING, GREENLAND—CAMP CENTURY.
Directional surveys of the bore-hole at Camp Century, Greenland were made in 1966, 1967 and 1969. From these surveys a surface velocity of 5 5 m/yr in the direction 10 deg was computed The position of the 60 m meteorological tower near the bore-hole was measured in 1977 and 1986 with satellite navigation equipment These measurements show a surface velocity of 3 5 m/yr in the direction 235 deg. Measurement of the surface topography in 1986 shows the bore-hole is situated on a local sloping ice divide A differential magnetometer was used to locate the drill tower Hand augering verified the location and showed the drill tower was buried 6.5 to 7 m beneath the 1986 snow surface, as expected from the depth-age relation The casing was not identified Extension of the casing to the snow surface and resurvey of the bore-hole will provide urgently needed information on the variation of ice flow with depth

ICE COVER THICKNESS, SUBGLACIAL OBSERVATIONS, ELECTROMAGNETIC PROSPECTING, AIRBORNE RADAR, SNOW COVER THICKNESS, ICE CONDITIONS, SOUNDING, SEA ICE, PROFILES, UNITED STATES—ALASKA PRUDHOE BAY
A study was made in May 1985 to determine the feasibility of using an airborne electromagnetic sounding system for profiling sea ice thickness and the sub ice water depth and conductivity The study was made in the area of Prudhoe Bay, Alaska The multifrequency airborne electromagnetic sounding system consisted of control and recording electronics and an antenna The electronics module was installed in a helicopter, and the 7 m long tubular antenna was towed beneath the helicopter at about 35 m above the ice surface. For this electromagnetic system, both first-year and second-year sea ice could be profiled, but the resolution of ice thickness decreased as the ice became rough. This decrease was associated with the large footprint of the system, which effectively smoothed out the sea ice relief Under-ice water depth was determined, as was seawater conductivity The results of the feasibility study were encouraging, and further system development is therefore warranted.

FAST ICE, ICE PILEUP, ICE OVERRIDE, ICE LOADS, OCEAN CURRENTS, WIND FACTORS, SEASONAL VARIATIONS, ICE SHEETS, PRESSURE RIDGES.
An overview of shore ice pile-up and ride-up observations is presented and the forces associated with ice rubble formation are discussed Historical and recent observations indicate that the onshore movement of ice is generally a spring or fall event associated with wind and/or water driving forces The occurrence of this phenomenon is relatively unpredictable and has resulted in the destruction of structures and loss of life The analytical and experimental work undertaken to date tends to show that low driving forces per unit width can cause shore ice pile-up or ride-up, but that high concentrated forces can occur during such events along local areas of resistance An analysis of the ice sheet failure process is given which indicates that the average ice rubble building force per unit width is a function of rubble height, to a power between 1 and 2, depending on the total ice sheet width undergoing failure

METAL SNOW FRICTION, WATER FILMS, SNOW COVER, SNOW MELTING, GRAIN SIZE, TEMPERATURE EFFECTS, VELOCITY, SHEAR STRENGTH, FRICTION, ANALYSIS (MATHEMATICS).
Three components of the kinetic friction of snow are described but only the lubricated component of friction is treated in detail. This component depends upon the thickness of water films which support a slider on snow grains over a small fraction of its area The thickness of the film decreases with ambient temperature in a manner which is sensitive to the thermal conductivity of the slider. The minimum value of friction at any temperature is reached at an intermediate value of speed because friction decreases as the slider first begins to move and the films form but then increases at higher speeds because of the shear resistance At sub-freezing temperatures a small area in the front part of the slider is dry and the friction is high. Once the water film is formed it increases in thickness towards an equilibrium value which can be very sensitive to slider properties, speed, and temperature. It appears that the mechanisms may be very different for hydrophobic and hydrophilic sliders From the equations derived here it is clear why friction decreases with repeated passes over the same snow.

Numerous examples of synthetic aperture radar (SAR) imagery of ice sheets are shown and prominent features of glaciological importance which appear in the images are discussed. Features which can be identified include surface undulations, ice-flow lines, crevasses, icebergs, lakes, and streams (even lakes and streams which are inactive or covered by snow), and possibly, the extent of the ablation and wet snow zones SAR images presented here include both L-band data from the Seasat satellite and X-band data from an airborne radar These two data sets overlap at a part of eastern Greenland where a direct comparison can be made between two images Comparison is also made between SAR and Landsat images in western Greenland. It is concluded that SAR and Landsat are highly complementary instruments, Landsat images contain minimal distortion while SAR's all-weather, day/night capability plus its ability to penetrate snow provide glaciologists with an additional and very powerful tool for research.

ICE FLOES, ELECTROMAGNETIC PROSPECTING, SEA ICE, ICE COVER THICKNESS, DIELECTRIC PROPERTIES, BRINES, ATTENUATION.
"Impulse" radar and ice property data were obtained on a second-year sea ice floe These data were used to develop a relationship for estimating the ice thickness from just the two-way time-of-flight of the impulse radar electromagnetic wavelet traveling from the surface to the ice "bottom" and back to the surface The relationship developed allows estimation of the thickness of sea ice from about 1 to 8 m, with or without a snow cover The data revealed that the apparent dielectric constant of sea ice decreased with increasing ice thickness until the thickness reached about 4 m For sea ice thicker than 4 m, the apparent dielectric constant became relatively constant With the use of a model for determining the electromagnetic properties of sea ice from its physical properties, as determined from ice cores, the electromagnetic properties were calculated versus depth The model results were then compared with the electromagnetic properties determined from field measurements The two results were in good agreement

ICE FORECASTING, DRIFT, ICE CONDITIONS, ICE EDGE, SEASONAL VARIATIONS, MODELS, SEA ICE.
The Polar Ice Prediction System (PIPS) is an ice forecasting model run on a daily basis at the U S Navy's Fleet Numerical Oceanographic Center (FNOC). The model was originally developed by Hibler (1979) and subsequently modified by Preller (1985) to run on FNOC's Cyber 205 Atmospheric forcing fields are derived from the Naval Operational Global Atmospheric Prediction System (NOGAPS). PIPS is run on a 127-km resolution 47 x 25 grid, which covers the entire Arctic Basin and substantial parts of the Greenland and Norwegian Seas The system produces forecasts of ice drift, thickness, concentration and divergence at 24-hr intervals out to 144 hr (6 days). Although PIPS is run on a daily basis, the concentration field is initialized weekly using a digitized version of the concentration analysis field prepared by the Naval Polar Oceanography Center at Suitland, Maryland The system's ability to forecast ice drift, concentration and ice edge location was assessed for the period, from June 15 to October 15, 1986. The PIPS drift predictions were generally excessive, although the predicted drift directions were reasonable Mean concentration differences between the PIPS forecasts and the analyses were about 12% Although ice edge location was reasonably predicted in most cases, the model demonstrated a trend of rapid ice retreat in the Chukchi and East Siberian Seas that was unrealistic.

Experiments were conducted to determine the accuracy of calculating ice loads on offshore structures using ice stress measurements and a surface integral method Biaxially-sensitive stress sensors were installed near an ice sheet edge and a flat plate instrumented indentor was pushed against the ice edge to simulate a distributed load on the boundary of a semi-infinite plate Two experiments were conducted The first determined the agreement between stress measurements and calculated results for the corresponding analytic solution and examined the accuracy of the surface integral method. The second examined the influence of cracks in the ice sheet on the accuracy of the surface integral method The measured ice stresses were of the same order but less than those calculated using theory The calculated indentor loads using the plane surface integration were within 8 to 30% of the measured loads. Calculated loads using a cylindrical integration surface were only within 40 to 50% of the measured loads due to stress sensor resolution limitations. The surface integral method is a viable way to calculate structural ice loads using in-situ stress measurements. Accuracy of the load calculations is limited by the fidelity of representing the stress along the surface of the integration using widely-spaced stress measurements

During the spring of 1985, 23 biaxial ice stress sensors were deployed at seven sites around Mukluk, a man-made gravel island in Harrison Bay in the Beaufort Sea The maximum measured compressive and tensile stresses were 240 and 340 kPa, respectively However, stresses were usually less than 100 kPa and seldom exceeded 200 kPa There were no major storms, and net ice motions varied from 1 6 to 5 3 m during the measurement program. While significant warming of the ice sheet occurred during the latter part of the study, thermal ice stresses were much lower than those previously measured in Mackenzie Bay This may be due to the fact that the ice in Harrison Bay was more saline and had a lower modulus and yield strength than the ice in Mackenzie Bay.

FROZEN GROUND PHYSICS, SOIL STRUCTURE, MICROSTRUCTURE, SCANNING ELECTRON MICROSCOPY, X RAY ANALYSIS, CLAY, POROSITY, ICE SUBLIMATION, CHEMICAL ANALYSIS, GRAIN SIZE.
Physical properties of bentonite, dickite and sand samples for freezing experiments were examined with a scanning electron microscope (SEM), and elemental compositions were measured with an energy dispersive x-ray (EDX) analyzer. Bentonite from Umiat, Alaska, is a typical cold-regions swelling clay with thin, crumpled and folded structures The soil samples with relatively high water contents were frozen, and the frozen characteristics were examined with the SEM equipped with a cold stage SEM images of frozen bentonite and dickite showed characteristic segregated ice and coagulated soil patterns formed during freezing processes and porous structures formed during the sublimation stage of ice in frozen soils. However, frozen sand showed no typical ice segregation and sand grain coagulation because of the large grain size The freeze sublimation process of frozen clay and silt increases the permeability to water vapor because of the porous structure formation.

42-4064
UNFROZEN WATER CONTENT, SOIL WATER, FROZEN GROUND, TEMPERATURE EFFECTS, DIELECTRIC PROPERTIES, EXPERIMENTATION, NUCLEAR MAGNETIC RESONANCE, REFLECTIVITY, WATER CONTENT.
A laboratory testing program was carried out to compare two independent methods for determining the unfrozen water content of soils With the TDR method, the unfrozen water content is inferred from a calibration curve of apparent dielectric constant versus volumetric water content, determined by experiment Previously, precise calibration of the TDR technique was hindered by the lack of a reference comparison method, which NMR now offers This has provided a much greater scope for calibration, including a wide range of soil types and temperature (unfrozen water content) The results of the testing program yielded a relationship between dielectric constant and volumetric unfrozen water content that is largely unaffected by soil type, although a subtle but apparent dependency on the texture of the soil was noted. It is suggested that this effect originates from the lower valued dielectric constant for adsorbed soil water. In spite of this, the general equation presented may be considered adequate for most practical purposes The standard error estimate is 0 015 cu cm/cu cm, although, if desirable, this may be reduced by calibrating for individual soils Brief guidelines on system and probe design are offered to help ensure that use of the TDR method will give results consistent with the relationship presented

FROZEN GROUND PHYSICS, ELECTRICAL PROPERTIES, BOREHOLES, GROUND ICE, FROZEN GROUND TEMPERATURE, DIELECTRIC PROPERTIES, ATTENUATION, SEDIMENTS, WATER CONTENT.
The dielectric constant and attenuation rate of short radiowave pulses in frozen Fairbanks silt have been measured between boreholes 12 m deep and spaced between 4.4 and 17.6 m. The ranges for volumetric ice content and temperature were 44 to 79% and -6.0 (surface, early Apr.) to -0.7 C (bottom) respectively. The pulses lasted approximately 30 ns, had a power spectrum centered near 100 MHz, and were transmitted and received at the same depth. Dielectric constants were determined from the propagation time delay of the the leading edge and there was no significant dispersion. Attenuation rates (dB/m) were determined by comparing signal levels received between different borehole pairs and were adjusted for geometric spreading losses. Concurrent borehole dc resistivity measurements allowed estimates of the separate contributions of various loss mechanisms. The results show the dielectric constant to vary between 4.3 and 7.0 and to correlate well with the volumetric ice content, but not with temperature. Average attenuation rates at any particular depth varied between 1.4 and 4.0 dB/m. The lowest values occurred in the sections with the higher ice content. No more than 0.8 dB/m could be ascribed to conductive absorption losses, suggesting that scattering is an important loss mechanism.

DISCONTINUOUS PERMAFROST, PERMAFROST THERMAL PROPERTIES, ELECTRICAL RESISTIVITY, FROZEN GROUND PHYSICS, BOREHOLES, SEDIMENTS, UNFROZEN WATER CONTENT, GRAIN SIZE, FROZEN GROUND TEMPERATURE.
Electrical resistivity and temperature were measured in two 12.2-m-deep boreholes in interior Alaska in perennially frozen ice-rich silt and in coarse-grained alluvium. Seasonal temperature and resistivity changes were most noticeable in the upper 6 m at both sites, with resistivity varying more than several thousand ohm-m during one year. Resistivity profiles were compared with lithology, temperature and moisture content. At the alluvium site resistivity and grain size strongly correlated. Values ranging over 10,000 ohm-m occurred with coarse-grained material and values an order of magnitude lower occurred in the fine-grained material section. At the ice-rich silt site, resistivity values were generally lower, but in agreement with values for the fine-grained part of the alluvial section. Lithologic variations in the discontinuous permafrost zone can be as important as the high permafrost temperatures and correspondingly large unfrozen water contents in accounting for significant seasonal resistivity changes in fine-grained sediment.

SUBSEA PERMAFROST, PERMAFROST DISTRIBUTION, TUNDRA, MODELS, PERMAFROST PHYSICS, SHORELINE MODIFICATION, ELECTRICAL RESISTIVITY, SOUNDING, SHORE EROSION, UNITED STATES—ALASKA—PRUDHOE BAY.
Electrical resistivity measurements, at three sites in Prudhoe Bay, Alaska, were made to provide an understanding of marine modification to coastal permafrost, and to evaluate D.C. resistivity techniques for coastal subsea permafrost studies. The measurements were made using Wenner electrical resistivity soundings. Profiles extended 2.8 km offshore and inland beyond the last signs of tundra modification by coastal processes. Offshore measurements were made with a floating cable, and inland measurements were made using driven electrodes. The observations indicate that the electrical properties of permafrost beneath the coastal bluff and adjacent tundra are rapidly modified by coastal erosion and periodic flooding during storms. Along one control line, apparent resistivity changes corresponded with the configuration of the top of ice-bonded permafrost observed by Baker (1987). Modeling supported by the control data permitted a close interpretation of the position of the top of ice-bounded subsea permafrost and provided a range of real resistivities for offshore materials.

FROST HEAVE, PILE EXTRACTION, PIPELINE SUPPORTS, SHEAR STRESS, LOADS (FORCES), ACTIVE LAYER, ADHESION, FOUNDATIONS, AIR TEMPERATURE, FROZEN GROUND TEMPERATURE, UNITED STATES—ALASKA—FAIRBANKS.
The magnitude and variation of forces and shear stresses, caused by frost heaving in Fairbanks silt and the adfreeze effects of a surface ice layer and a gravel layer, were determined as a function of depth along the upper 2.75 m of a pipe pile and an H pile for three consecutive winter seasons (1982-1985). The peak frost heaving forces on the H pile during each winter were 752, 790 and 802 kN. Peak frost heaving forces on the pipe pile of 1118 and 1115 kN were determined only for the second and third winter seasons. Maximum average shear stresses acting on the pipe pile were 627 and 972 kPa for the second and third winter seasons. The surficial ice layer may have contributed 15 to 20% of the peak forces measured on the piles. The gravel layer on the H pile contributed about 35% of the peak forces measured.

NEW FREEZING TEST FOR DETERMINING FROST SUSCEPTIBILITY.
Chamberlain, E.J., International Conference on Permafrost, 5th, Trondheim, Norway, Aug. 2-5, 1988. Proceedings, Vol.2. Edited by K. Senneset, Trondheim, Norway, Tapir Publishers, [1988], p.1045-1050, 6 refs.
42-4174
FROST RESISTANCE, SOIL FREEZING, PAVEMENTS, FROST HEAVE, ARTIFICIAL FREEZING, TESTS, FREEZE THAW CYCLES, TEMPERATURE CONTROL, EQUIPMENT.
A new freezing test for determining the frost susceptibility of soils used in pavement systems is designed to supplant the standard CRREL freezing test. This new test cuts the time required to determine frost susceptibility in half. It also allows for the determination of both the frost heave and thaw weakening susceptibilities and considers the effects of freeze-thaw cycling. The new freezing test also eliminates much of the variability in test results by completely automating the temperature control and the data observations.

MP 2369
USE OF GEOTEXTILES TO MITIGATE FROST HEAVE IN SOILS.
Henry, K., International Conference on Permafrost, 5th, Trondheim, Norway, Aug. 2-5, 1988. Proceedings, Vol.2. Edited by K. Senneset, Trondheim, Norway, Tapir Publishers, [1988], p.1096-1101, 14 refs.
42-4183
FROST HEAVE, FROZEN GROUND MECHANICS, MATERIALS, GRAIN SIZE, WATER TABLE, COUNTERMEASURES, SOIL WATER MIGRATION, CAPILLARITY, POROSITY.
One potential use of geotextiles is horizontal placement in soil above the water table to act as a capillary break or barrier to mitigate frost heave. A capillary break works because larger pore sizes and/or wetting angles of the material than surrounding soil result in lower unsaturated hydraulic conductivity and lowered height of capillary rise of water. This reduces frost heave by limiting the rate of upward water migration. Five series of open-system, unidirectional frost-heave tests were run in which 3 nonwoven polypropylene geotextiles were tested for their ability to mitigate frost heave. Certain fabrics were successful in reducing frost heave by as much as 85%. Test results also indicate that the optimum fabric thickness required to mitigate frost heave is a function of soil type as well as properties of the geotextile.

MP 2370
EFFECT OF VARIABLE THERMAL PROPERTIES ON FREEZING WITH AN UNFROZEN WATER CONTENT.
Lunardini, V.J., International Conference on Permafrost, 5th, Trondheim, Norway, Aug. 2-5, 1988. Proceedings, Vol.2. Edited by K. Senneset, Trondheim, Norway, Tapir Publishers, [1988], p.1127-1132, 17 refs.
42-4189
FREEZING POINTS, THERMAL CONDUCTIVITY, UNFROZEN WATER CONTENT, HEAT TRANSFER, PERMAFROST THERMAL PROPERTIES, PHASE TRANSFORMATIONS, TEMPERATURE EFFECTS, GROUND THAWING, ANALYSIS (MATHEMATICS).
While many materials undergo phase change at a fixed temperature, the variation of unfrozen water with temperature causes a soil system to freeze or thaw over a finite temperature range. Exact and approximate solutions are given for conduction phase change of plane layers of soil with unfrozen water contents that vary linearly and quadratically with temperature. The temperatures and phase change depths are found to vary significantly from those predicted for the constant temperature (Neumann) problem. The thermal conductivity and specific heat of the soil within the mushy zone varied as a function of unfrozen water content. The effect of specific heat is negligible and the effect of variable thermal conductivity can be accounted for by a proper choice of thermal properties used in the constant thermal property solution.

MP 2371
TRIAXIAL COMPRESSIVE STRENGTH OF FROZEN SOILS UNDER CONSTANT STRAIN RATES.
Zhu, Y., et al, International Conference on Permafrost, 5th, Trondheim, Norway, Aug. 2-5, 1988. Proceedings, Vol.2. Edited by K. Senneset, Trondheim, Norway, Tapir Publishers, [1988], p.1200-1205b, 10 refs.

GROUND THAWING, SOIL WATER MIGRATION, FROZEN GROUND, WATER CONTENT, TESTS, ICE LENSES, FROST HEAVE, ICE FORMATION.
Open and closed system tests on prefrozen silt and clay were conducted to investigate moisture migration in frozen soils during thawing. In all tests, an increase in water content just below the thawing front was observed. In some cases, a thawing fringe, ice lenses and frost heave were recorded. Water migration into the frozen part of thawing soil was greatly reduced after a continuous ice lens had formed across a sample. A regelation mechanism for ice formation in frozen soil during thawing is suggested.

Two step freeze tests were conducted during which 136 radiographs were taken These were used to test the feasibility of utilizing X-rays as a nondestructive method for observing changes in a soil's physical and mechanical properties due to frost heave. The radiographs were analyzed using computer image processing techniques to measure the position of lead spheres embedded in the soil column and to examine the spatial distribution of intensity changes of the transmitted X-rays. An analysis of the attenuation properties of frozen soil is presented. A linear correlation between the soil's attenuation of X-rays and the amount of heave and consolidation is determined. This relationship is utilized to compute strain distribution profiles.

ICE LOADS, PILE STRUCTURES, OFFSHORE STRUCTURES, ICE PRESSURE, ICE SOLID INTERFACE, PILE EXTRACTION, TESTS, CONSTRUCTION MATERIALS, STRESSES.
Water level variations caused by wind, tides or seiche action during periods of open water seldom test the integrity of marine structures Yet these same variations combined with an ice sheet may severely damage or completely destroy the same structures Light-duty, pile-founded dock structures, typical of marinas, are especially susceptible to this type of environmental damage As a wave passes under the ice sheet, the piles impede the free-floating response of the ice sheet Subsequently the piles are subjected to an uplifting force equivalent to the hydrostatic force associated with the ice sheet deflection Over the course of a winter this repeated loading may incrementally extract the pile from its foundation This laboratory study used a two-step approach for investigating the uplifting ice force phenomenon First, a testing technique that reproduced the ice condition surrounding a prototype pile was developed In the second phase, the testing technique was used to evaluate methods of passively protecting the piles from induced uplift. Highlights of the tests are reported here, but a complete discussion of the test series, including observation and force records on the individual tests are reported by Zabilansky (1987)

FRAZIL ICE, ICE FORMATION, ICE PHYSICS, ICE NAVIGATION, CHANNELS (WATERWAYS), ICE JAMS, WATER FLOW, ICE STRENGTH, MEASURING INSTRUMENTS.
With the increased utilization of flood plains, navigation and power generation in northern climates, it becomes increasingly important to understand the engineering characteristics of frazil ice accumulations Frazil is generated and accumulates over large areas in waterways Navigation through such great amounts of frazil will be impeded Power generation suffers from the restricted flow caused by frazil accumulation. Having been generated in large quantities and attached as underhanging dams, frazil significantly increases flooding potentials through channel restrictions and an increase in the total ice volume in a waterway. Techniques for measuring the physical properties of frazil ice are presented These data will assist in predicting the flow patterns and the jamming potential in a waterway. The properties include porosity, density, vane shear strength, permeability and a measure of the structural strength (expressed through plate load bearing, dilatometer, and penetrometer or rammsonde data). Further characteristics include remote sensing of the accumulation and flow profiling beneath the accumulations. Examples of the acquired data are given

RIVER ICE, ICE BREAKUP, ICE JAMS, WATER FLOW, RIVER FLOW, DAMS, VELOCITY, ICE CONDITIONS, UNITED STATES—NEW YORK—HUDSON RIVER.
Field studies of a reach of the Hudson River have focused on developing a technique to induce the controlled breakup of an ice cover or ice jam by releasing water from an upstream dam A series of abrupt dam releases generated long-period river waves of different magnitudes, durations and spacings that caused changes in river stage, water surface slope, flow velocity, energy gradient of the flow, and integrity of the ice cover. We monitored river stage and ice cover response at several locations, and repeated the stage measurements with the same releases during open water conditions These studies have revealed that pulsed releases of a practical magnitude were effective in removing the ice cover from the reach, and they provide basic data for more general analysis of river ice cover breakup.

SNOW CRYSTAL GROWTH, SNOWFALL, ICE CRYSTAL STRUCTURE, ICE CRYSTAL GROWTH, PRECIPITATION (METEOROLOGY), TEMPERATURE EFFECTS, HUMIDITY.
Typical snowfalls in eastern Canada and the northeastern United States are associated with complex and deep weather systems Attempts to apply the ice crystal habit characterization of Nakaya, and Magono and Lee, to determine the temperature and humidity regimes where the snow originates often fail due to these complexities Precipitation in the polar regions occurs in and beneath well-stratified layers, which are much less complex and permit more direct comparison of snow crystal type to the temperature humidity regime Many of these precipitation events occur in conjunction with clouds that approximate the conditions at the leading edge of midlatitude warm fronts, although the cloud is only a few hundred meters above the surface It has been possible to calculate the growth rate of primary ice crystals in these conditions from fundamental concepts Additional cases have been observed where ice crystal optical phenomena have been quite precisely associated with ice crystal type and temperature-humidity regime Analysis of polar ice crystal falls indicates that there is sufficient and continuous production of small, plate-type crystals that can survive falls through layers below

RUNOFF FORECASTING, SNOWMELT, WATER TEMPERATURE, MELTWATER, STREAMS, MODELS.
For the 1986 snowmelt season at the W-3 subwatershed of the Sleepers River Research Watershed, a technique was developed to quantify the volume and timing of snowmelt runoff using stream water temperature. A method reported by Kobayashi (1985) for separation of the snowmelt hydrograph was tested. A method employing air temperature and solar radiation was developed which was used to calibrate the SSARR model Improvements in the predictive capabilities of SSARR were attained using this method

43-398
ICE JAMS, CLIMATIC FACTORS, AIR TEMPERATURE, RIVER ICE, PRECIPITATION (METEOROLOGY), METEOROLOGICAL FACTORS, UNITED STATES—SOUTH DAKOTA—WHITE RIVER.
Weather records for stations in South Dakota for the winter months from 1921-1984 were examined to detect any long-term trends, and to determine possible relationships between climate and ice-jam occurrence on the White River. Analysis of the observed average monthly winter air temperatures at Kennebec, South Dakota, revealed warmer Decembers and Januaries occurring between 1930 and 1950 Five of the seven ice-jam winters that were studied in detail occurred after 1950, and during this period significantly lower temperatures were recorded in Jan. However, no consistent pattern between below-normal seasonal freezing temperatures, or above-normal precipitation amounts, and ice-jams was noted

ICE BREAKUP, RIVER ICE, FLOODS, RIVER FLOW, ICE CONDITIONS, DAMAGE, BRIDGES, ICE CONTROL, STATISTICAL ANALYSIS, ICE JAMS, UNITED STATES—VERMONT—CONNECTICUT RIVER.
The Cornish-Windsor bridge is the longest covered bridge in the United States and has significant historical value At a large peak flow, dynamic ice breakup of the Connecticut River can threaten the bridge and cause flood damage in the town of Windsor, Vermont. Throughout the 1985-86 winter we regularly monitored ice conditions, including a midwinter dynamic ice breakup on 27 January, and conducted a series of controlled release tests over the operating range of the turbines at Wilder Dam upstream These observations were analyzed in light of more than 60 years of temperature and discharge records Our analysis indicates that river regulation presents alternatives for ice management that would minimize the probability of bridge damage and flooding during breakup The flow can be regulated early in the winter to promote the growth of a stable ice cover, minimizing the total ice production in the reach In the weeks prior to breakup, sustained releases and above freezing air temperatures cause melting, weakening and gradual breakup of the ice, greatly reducing the flooding potential Also it is possible to produce a controlled ice breakup at lower stage and discharge than now occurs during major natural events All of these ice control alternatives have associated power production costs

Winter field experiments associating snowfall intensity, crystal habit and snowcover backgrounds with the operational effectiveness of electromagnetic systems have been conducted at five locations in northeastern U S over the past 7 years The purpose of this report is to determine if climatic regimes (including snowfall and snow depths) similar to these five sites exist in critical military areas of central Europe, specifically in Germany This study compiles data on total seasonal

snowfall amounts, mean maximum snow depths, and average mid-winter air temperatures so that comparisons based on regional distributions could be made. Statistical relationships between these terrain features were used to make maps which show the regional distribution of these parameters for Germany and a large region of northeastern United States.

Battlefield weather forecasters ideally require similar, if not greater, amounts and qualities of data than peacetime forecasters. In conflicts the quality, type and amount of data available, however, will be inadequate and will be a function of battle zone size, location, season, time of day and elapsed time. The forecast problem is most difficult during winter operations when icing, snowfall, fog, or combinations thereof can result from subtle meso- and micro-scale changes in weather. This report reviews current weather forecast requirements for remote regions and suggests a conceptual approach for ideal forecast procedures when normal data flows are interrupted.

SEA ICE, ICE GROWTH, ICE SALINITY, ICE COVER STRENGTH, ICE COVER THICKNESS, MODELS.
A simulation scheme is developed that estimates salinity profiles for first-year sea ice during the growth season as a function of the growth history of the ice. The model considers the dependence of the initial ice salinity on ice growth velocity and seawater salinity and also the subsequent drainage of brine from the ice. The equation for ice growth assumes a linear temperature profile within the ice and is driven by surface heat balance equations that are based on smoothed climatic data for the central Arctic Basin. The estimated salinity profiles are in good agreement with natural profiles. Although temperature and salinity profiles depend upon the time of the year when ice growth is initiated, the brine volume profiles which they specify are essentially a unique function of ice thickness; a conclusion that holds even when the insulative effects of snow are considered. The temperature and brine volume profiles are then utilized to calculate the ice strength and elastic modulus profiles, which in turn specify the composite mechanical properties of the ice sheets. Significant differences, which are largest for thin ice sheets, are observed between ice sheet properties as calculated using composite plate theory and properties calculated from uniform plate theory and average ice properties. These results provide a justification for the practice, common within the ice modeling community, of parameterizing the mechanical behavior of pack ice on the basis of the ice thickness distribution.

RIVER ICE, ICE CONDITIONS, AERIAL SURVEYS, FREEZEUP, ICE BREAKUP, POLYNYAS, OFFSHORE LANDFORMS, CANADA—YUKON RIVER.
Aerial reconnaissance of the ice regime over some 800 km of the Yukon River, from Lake Laberge to the U.S.-Yukon border, was carried out over two years. The paper describes the nature and rate of freeze-up and break-up progression observed in the two years, and the number and distribution of polynyas in mid-winter. The latter were found to be closely related to the presence of islands. Freeze-up progressed reasonably steadily over the whole reach after initial lodgement occurred some 700 km downstream of Lake Laberge. Break-up had a totally different character in the two halves of the reach: downstream it was rapid and dynamic; upstream it was slow and thermal. It is concluded that field observations are still essential to develop an understanding of the ice regime of a river reach.

SUBMARINES, ICE PHYSICS, ICE NAVIGATION, FLOATING ICE, MILITARY OPERATION, ICE COVER EFFECT, ICE MECHANICS, ICE CONDITIONS, ICE CROSSINGS, BEARING STRENGTH, ICE STRENGTH.
To operate effectively in the cold regions, technology must be developed to contend with floating ice. Of particular importance are the morphology and physical properties of the ice cover. Long-term statistics on ice formation, growth, decay, ice extent, pressure ridges, etc., need to be obtained for areas of interest, theoretical models describing these processes need to be developed as well. Not only are such statistics required for U.S. and allied waters, but also for enemy waters where we may possibly operate, or at least assess the enemy's operating capability. Remote sensing of ice features and ice thickness from both aircraft and satellites is a means of obtaining ice statistics and rapid real-time measurements, additional studies on the electromagnetic properties of ice will enhance this capability. Constitutive laws and failure criteria need to be developed to solve analytical ice engineering problems. This requires that work on the mechanical properties of ice continue, with emphasis on multi-axial tests, tests at higher temperatures, and fracture mechanics. It is critical that any analytical work be supported by scale-model tests and full-scale field measurement programs. In all ice studies more attention should be given to the ice structure and the ice air and brine content. Without this information it is difficult to interpret the results and compare them to those of other investigators. Finally, conventional equipment should be tested in the field, evaluated for arctic applications, and, if necessary, redesigned.

VEHICLES, SNOW COVER EFFECT, SOIL STRENGTH, TRANSPORTATION, MOBILITY, TRAFFICABILITY, TOPOGRAPHIC FEATURES, TRACKED VEHICLES, ENVIRONMENTS, WEATHER, CLIMATIC FACTORS, IMPACT STRENGTH.
In the arctic regions mobility of vehicles is frequently influenced more by the environmental (climatic) conditions than by the terrain. Weather has a profound effect on the performance of the vehicle, on the efficiency of the operator, and on the characteristics of the terrain, however, this effect produces mixed results. Mobility over many arctic terrains, such as muskeg, tundra with abundant lakes and meandering, braided streams, is greatly improved during the winter when the soil and water bodies are frozen and the terrain micro-relief features are masked by the snow cover. Thus, the arctic environment, while degrading the performance of people and machines, can be beneficial to the terrain trafficability characteristics. It is ironic, therefore, that as the environment becomes more pleasant for the people and the vehicles during summer it has an unfavorable effect, due to thawing, on the trafficability of many types of arctic terrains. It can be generalized, therefore, that in the winter most mobility problems in the Arctic are caused by the environment (weather), while during the summer most mobility problems are caused by the terrain characteristics.

COLD WEATHER CONSTRUCTION, UTILITIES, MILITARY FACILITIES, SNOWDRIFTS, MAINTENANCE, DESIGN, METEOROLOGICAL DATA, WATER SUPPLY, WASTE TREATMENT.
Research conducted on a wide variety of topics from habitability to roof leaks has played an important role in improving the design, construction, operation and maintenance of buildings and utilities in very cold regions. Documents such as the *Cold Climates Utilities Manual* have facilitated implementation of research findings. Other improvements have been the result of innovation by manufacturers and practicing engineers. Nonetheless, buildings are still being built that are uncomfortable or unsafe to live in. Others have chronic moisture problems or deteriorate much more rapidly than expected. Pipes still freeze and effluent quality does not always meet standards. Additional research is needed since new materials, systems and processes are available that can solve some problems but pose others.

Tests were performed to assess the effects of low temperatures (-50 C) and low temperature thermal cycling (10 cycles at -180 C to 24 C) on the mechanical properties of fiberglass-epoxy and graphite-epoxy composite laminates. Results of these tests show various degrees of degradation of these materials. At low temperatures, strengths associated with fiber-dominated modes of failure show decreases while those of matrix-dominated modes of failure show increases. Composites subjected to low temperature thermal cycling show strength reduction in matrix-dominated failure modes and strength increase in fiber-dominated modes. These results conform to the microcrack-growth-based damage mechanism of composite materials.

43-1215
SNOW CRYSTAL GROWTH, SNOW WATER CONTENT, ICE CRYSTAL GROWTH, METAMORPHISM (SNOW), FREEZE THAW CYCLES, CLASSIFICATIONS, UNFROZEN WATER CONTENT, TEMPERATURE GRADIENTS, ANALYSIS (MATHEMATICS).
Knowledge of the growth of ice crystals in both wet and dry snow has evolved steadily over many years. Dry snow is characterized by rounded crystals growing slowly at low temperature gradients. Wet snow is characterized by clusters of grains at low liquid contents and poorly bonded slush at high liquid contents. Melt-freeze cycles greatly influence wet snow as well. Information was first gained through field observations, then laboratory tests, and then physical modeling. Advances have been made through application of phase-equilibrium thermodynamics and knowledge of ice crystal growth although much remains to be learned about the slow growth of ice crystals over a range of temperatures. The grain-to-grain nature of vapor flow in dry snow is complicated by the geometry of snow and this topic is being studied through stereology. Given recent advances in our understanding of snow metamorphism, a reclassification of snow seems necessary.

SNOW THERMAL PROPERTIES, CONVECTION, SNOW WATER CONTENT, VAPOR DIFFUSION, SNOW HEAT FLUX, SNOW DEPTH, TEMPERATURE GRADIENTS, METAMORPHISM (SNOW), DEPTH HOAR, TEMPERATURE VARIATIONS.
Dry snow, under the influence of strong temperature gradients, metamorphoses to depth hoar. This process requires a vapor flux through the snow, which can be driven by diffusion or convection. Convection in natural snow covers has been suggested but never previously detected. A three-dimensional array of 103 thermistors was monitored through the winter of 1984-85 to try to detect convection. A convection event lasting 8 days occurred in early winter during which large horizontal temperature gradients were measured. Because the snow was a nearly perfect, horizontally homogeneous layer, these temperature variations could only have been caused by convection. Analysis of possible sources of error in the temperature measurements, such as vertical misplacement of the thermistors, indicates that the observed temperature variations would have required uncertainties in vertical position five times larger than were observed and thermistors that moved up and down with time. Rayleigh number calculations indicated that it reached its critical value only during the period in which the large horizontal temperature gradients were present and convection was occurring.

WASTE TREATMENT, WATER TREATMENT, EVAPORATION, LAND RECLAMATION, WATER TEMPERATURE, MATHEMATICAL MODELS.
The removal of a number of trace organics from wastewater was studied on an outdoor prototype overland flow land treatment system. For most of the substances, the observed removal rate could be described by the sum of two mass transport-limited first order processes representing volatilization and sorption. A model was developed by non-linear multiple regression analysis in which the observed removal rate constants were regressed against three properties of each substance -Henry's constant, octanol-water partition coefficient and molecular weight. The dependence of the removal processes on water temperature was also determined but not included in the initial model. The observed decrease in removal rate as the temperature declines is supported by the known dependence of Henry's constant and diffusivity on temperature.

Laboratory tests were conducted with two full-size, two-phase commercial thermosyphons in an atmospheric wind tunnel at the U.S. Army Cold Regions Research and Engineering Laboratory. The test variables were air velocity and evaporator slope angle. The air velocity ranged from 0 to 5.2 m/s. The evaporator angles were varied from 0 to 12 deg., measured from the horizontal. The effect of nearby walls on thermosyphon performance was also investigated. The air temperature for all tests was about -18 C. Test results are presented with thermal conductance of the thermosyphon as a function of air velocity and evaporator slope angle. The use of thermosyphons in a slab-on-grade foundation design on permafrost was modeled using the finite element technique. Depth of thaw within the fill decreases with increased thermosyphon conductance and increased insulation thickness. The simulations indicate that it is slightly better to place the thermosyphon evaporator vertically towards the fill base.

ROCK MECHANICS, STRESSES, MEASURING INSTRUMENTS.
This report summarizes the studies of the Vibrating Wire Stressmeter (VWS) in a high temperature environment in Climax granite considered for use as a nuclear waste repository. The study also included calibration tests of the meter in Barre granite, aluminum, and Lucite under uniaxial, biaxial and triaxial stress fields. Biaxial tests were performed by setting stressmeters into cylindrical rock cores loaded hydrostatically around their periphery, leaving the ends unloaded. Triaxial tests were conducted by repeating the biaxial tests, with the addition of end loading. The effects of temperature on calibration characteristics were evaluated by conducting uniaxial, biaxial and triaxial tests in the range from room temperature to 100 C. The results showed that the uniaxial stress sensitivity factor for a rock can vary over a wide margin. For Climax granite it varied from 2.7 to 4.5. The stressmeter setting preload has a major influence on the sensitivity factor and, to reduce this influence, an optimum preloading of the stressmeter must be ensured. The temperature rise increased the sensitivity factor under biaxial and triaxial loading significantly (up to 25%) but very little (less than 5%) under uniaxial loading.

The Cornish-Windsor bridge is the longest covered bridge in the United States and has significant historical value. Dynamic ice breakup of the Connecticut River can threaten the bridge and cause flood damage in Windsor, VT. We monitored ice conditions throughout the 1985-86 winter, observed a mid-winter dynamic ice breakup, conducted controlled release tests during both open water and ice cover conditions, and analyzed more than 60 years of temperature and discharge records. River regulation presents alternatives for ice management that would minimize water levels during breakup. In this paper we develop the basis of a method to produce a controlled ice breakup at lower stage and discharge that occur during major natural events.

MICROBIOLOGY, ALGAE, PLANKTON, PACK ICE, ICE DEFORMATION, ANTARCTICA—WEDDELL SEA.

Pressure ridges—the ice pileups above and below the ice surface that result from pack ice deformation—apparently contribute unique environments for the development of ice microbial communities. The significance of pressure-ridge communities to the total productivity of the pack ice is linked to the level of deformation resulting in increased ridge density of one region compared to another. In this article, two mechanisms are described which can lead to the development of microbial communities near pressure ridges. The first mechanism is associated with the initial ridge formation process which occurs during deformation periods in the interior regions of the pack ice. The second effect arises after the ridges have formed and is related to floe breakup processes near the ice edge in the decay phase of the pack ice cycle.

RP-HPLC analytical methods were developed to determine trace levels of nitroaromatics, nitramines, tetrazene, and nitroguanidine in soil and water. The method to determine nitroaromatics and nitramines in soil has been thoroughly tested with soils from a wide variety of sites, and it has been found to be reliable and inexpensive to implement. A full-scale collaborative test proved that acceptable performance criteria were attainable in everyday use. Methods for tetrazene and nitroguanidine have not been evaluated by a full-scale collaborative test because few areas need to be tested for contamination by these compounds. Methods will continue to be developed at CRREL as the need arises for other military-unique compounds.

ICE SHEETS, ICE MODELS, ICE DENSITY, DATA PROCESSING, RADAR.

A method for calculating the impulse response of a layered dielectric is used to investigate the effect of near-surface density stratification on the interpretation of radar-altimetry data collected over ice sheets. Results are computed for a model consisting of a measured density profile that is artificially interrupted by an ice layer inserted at successively greater depths. The incident radar signal is modeled by a 20 ns long pulse modulated at 1 GHz. Analysis using a simple scheme for estimating the one-way travel time of the wave indicates as much as a 2 ns (equivalent to 60 cm in range) apparent time delay for a density profile that has been modified by inclusion of an ice layer relative to the ice-layer-free case. This suggests that layering may be a factor in interpreting repeated altimeter measurements of the ice sheets in terms of net growth or decay. (Auth.)

ICE GROWTH, ICE SALINITY, TANKS (CONTAINERS), MICROWAVES, SEA ICE, RADIOMETRY, ICE COVER THICKNESS, SPECTRA, ICE OPTICS, ICE SURFACE, SURFACE ROUGHNESS

The present set of observations suggests several phenomena of interest for interpreting microwave signatures of natural sea ice. During initial ice growth, interference fringe effects can occur both from changing ice thickness and snow or frost which may prove useful in interpreting layer thicknesses. A simulation of multiyear ice was attempted by allowing the ice to desalinate, but the resulting emissivity spectrum was more characteristic of lake ice. A multiyearlike spectrum was obtained when rubble was deposited on the ice surface.

COLD WEATHER CONSTRUCTION, BITUMINOUS CONCRETES, VISCOSITY, CRACKS, ROAD MAINTENANCE, THERMAL STRESSES, FREEZING INDEXES, AIR TEMPERATURE, CONCRETE STRENGTH, TENSILE PROPERTIES, LOW TEMPERATURE TESTS, PENETRATION.

The U.S. Army Corps of Engineers specifies low viscosity or commonly called "soft grade" asphalts for use in cold regions. These soft grade asphalts are primarily used for controlling low temperature cracking in some parts of northern U.S. and Canada. The Corps, besides specifying the usual asphalt specifications, also defines the allowable temperature susceptibility of the asphalt using the Penetration Viscosity Number (PVN) index. It specifies a minimum PVN of -0.5 in moderately cold areas and -0.2 in regions where the design freezing index is greater than 3000 deg F days. Field studies have been conducted that clearly show the benefits of using soft grade asphalt for minimizing low temperature cracking in cold regions, however, field studies relating rutting to asphalt type are scarce. A major concern is whether or not soft grade asphalts are susceptible to rutting during the hot summer months. A literature review and field study was conducted by the U.S. Army Cold Regions Research and Engineering Laboratory (USACRREL) on the performance of pavements constructed with soft grade asphalts. The results of the literature review and field studies are presented in this paper.

The Central Wisconsin Airport was first opened in 1969 with a 6700-ft runway. In 1972 a 5500-ft runway was added. In 1973, the original runway was extended to 7500-ft and several ramps and taxiways have been added since. Since its opening, several segments of the runway and taxiway pavements have been severely damaged by differential frost heaving where highly weathered bedrock was close to the surface. A repair and reconstruction program involving most of the damaged areas was completed during the mid-1980's. During reconstruction the bedrock was excavated to a depth of at least 4 ft below subgrade. Observations of frost action on both the preconstruction and post-construction pavements were made to evaluate the adequacy of the repairs. Little or no frost heave occurred in the newly repaired pavements.

The distribution of heat transfer coefficients induced at the underside of floating ice covers by flow developers submerged beneath the ice cover are reported. The experiments consisted of suspending flow developers (submersible electric motors with propellers) beneath an ice sheet and measuring either the melted profile or the rate of hole enlargement to obtain the heat transfer coefficient. The results may be made comparable to existing empirical results for impinging air-jet heat transfer by proper consideration of the Prandtl number and by relating the initial induced flow to the equivalent flow from a submerged orifice.

PERMAFROST, PILE STRUCTURES, SUPPORTS, PRESSURE, WELL CASINGS, TEMPERATURE VARIATIONS, CONCRETE STRUCTURES, SEASONAL VARIATIONS, LOADS (FORCES), HEAT PIPES, SANDS, FREEZING, ANALYSIS (MATHEMATICS).
Pressure buildup due to internal freezeback of saturated sand in permafrost pile supports should be considered in the design of pile support casings. The internal pressure buildup is caused by nonuniform freezing resulting from seasonal temperature variations and the fact that the pile supports are partially buried in permafrost. An analytical elastic model is developed to determine the internal freezeback pressure in the support casing. The stability of a top concrete sealer or plug is also studied. Different internal freezeback geometries are considered to simulate the freezeback process of the early design consideration of filling the casing with saturated sand fill. The computed results are compared with the allowable shear resistance of the concrete sealer. With a completely saturated and confined system, the freezeback pressure exerted on the casing and the concrete sealer is significant for all freezeback geometries. The results indicate that an undersaturated sand fill or a saturated fill only to the ground level with an air cap should be used to protect both the casing and the concrete sealer.

During the summer of 1986, a 2900-ft (883.88-m) long runway, a taxiway and a parking apron were constructed at Newton Field in Jackman, ME. The runway pavement section consists of 2-1/2 in. (6.35 cm) of asphalt concrete, 12 in. (30.5 cm) of base course, 2 in. (5.08 cm) of extruded polystyrene insulation and a 1-in. (2.54 cm) sand leveling course. The structure is sloped to drain to a 5 to 7-1/2 ft (1.52 to 2.29 m) deep longitudinal edge drain on the north side of the runway. Jackman has a design freezing index of approximately 2570 F-days (1428 C-days). The subgrade soil is a sandy, silty, clayey material of significant frost susceptibility. The water table at Newton Field is relatively shallow, increasing potential frost and drainage problems. Temperature sensors were installed during construction and temperatures in the pavement structure were monitored during the winter and spring of 1986-1987, 1987-1988. In the summer of 1987, a weir was installed to monitor the flow from the outlet pipe for about one/half of the runway length. In 1988 an investigation of the edge drain was begun. Correlations between the existing subsurface soil and water table conditions, precipitation, thaw depth and drain outflow are under investigation, and further instrumentation of the site is planned to determine the effectiveness of the system in a frozen or partially frozen state.

PAVEMENTS, THERMAL INSULATION, FROST PENETRATION, FROST HEAVE, FROST RESISTANCE, FREEZING INDEXES, DAMAGE, COUNTERMEASURES, RUNWAYS, DESIGN, TEMPERATURE EFFECTS, TEMPERATURE DISTRIBUTION.
In the 1986 reconstruction of Newton Field, Jackman, Me, a 2-in.-thick layer of extruded polystyrene thermal insulation was placed beneath the runway, taxiway and parking apron. Concurrently, and less than 1 mile northwest of the airport, the first 150 ft of Nichols Road was reconstructed to a conventional, noninsulated cross section. The purposes of the ensuing study are (a) to evaluate the effectiveness of the insulation in preventing frost penetration into the subgrade resulting in frost action damage, (b) to compare test results of insulated Newton Field with those of similarly monitored noninsulated Nichols Road, and (c) to reexamine present design procedures for thickness and depth of insulation based upon both the field observations and comparisons to theoretical predictions. Monitoring throughout the 1986-1987 and 1987-1988 winters included measurements of air and subsurface temperatures, groundwater levels, pore-water pressures and pavement surface elevations.

RIVER ICE, ICE CONDITIONS, ICEBOUND RIVERS, FREEZEUP, CHANNELS (WATERWAYS), BOTTOM ICE, ENVIRONMENT, BOTTOM TOPOGRAPHY, ICE DAMS, FRAZIL ICE, HEAT FLUX, ICE MELTING, AIR ENTRAINMENT.
One possible cause for winter mortality of salmonids is freezing of the bed material where the fry and parr are residing in a dormant state. Typical habitat reaches in streams of the White Mountains of New Hampshire and the Green Mountains of Vermont were established as study sites. The sites averaged 200 m long, ranged in width from 10 to 30 m, and represented channel configurations of riffle, run, pool and cascade. The interaction of ice with different channel geomorphic configurations was examined. Winter monitoring techniques included magnetic induction conductivity, high-frequency radar and hand augers to acquire ground truth data. The freeze-up processes were documented with 35-mm photography.

RIVER ICE, ICE FORMATION, RIVER FLOW, ICE COVER THICKNESS, ICE PHYSICS, CLIMATIC EFFECTS, VELOCITY, EXPERIMENTATION, FRAZIL ICE, POROSITY.
A line array 16 ft wide x 50 ft long was tested in a small Vermont mountain river late in 1980 to determine its ability to form a surface ice cover during the period when the site would normally remain as open water. Though it had little effect on the overall ice cover development on the river, a stable ice cover formed a week or so earlier on the line array. Site characteristics were seen to affect the line array. Water velocities adjacent to the lines were measured and varied from 2.3 to 3.6 ft/s. By Dec 30 solid ice thickness on the array varied from 1.13 to

1.33 ft, which would be typical of lake ice for the same weather conditions

ICE SCORING, RIVER ICE, BOTTOM SEDIMENT, HYDRAULIC STRUCTURES, WATER LEVEL, ICE JAMS, PIPELINES, PIERS, TESTS, ICE BREAKUP, VELOCITY.
While the potential for scouring of a river bed during an ice jam event has often been cited as a cause for concern in association with pipeline crossings, bridge piers and other hydraulic structures, almost nothing is known about the subject Significant changes in the river bed might also influence the formation of the jam itself and the water levels that result. This paper describes preliminary flume experiments to examine the effects of a floating accumulation of ice on a movable bed channel. The experiments consisted of establishing a uniform free-surface open channel flow just below the threshold of bed motion, and then installing artificial ice jams of assumed geometries and monitoring the resulting scour patterns

ICE JAMS, RIVER ICE, RIVER FLOW, TOPOGRAPHIC EFFECTS, STREAM FLOW, VELOCITY, TESTS.
River bends have been reported as major locations for the initiation and development of ice jams. Bends are characterized by nonuniform channel cross sections with velocity fields affected by centrifugal acceleration. The alterations to the streamwise and transverse velocity fields are factors influencing the initiation and development of ice jams in river bends The streamwise and transverse velocity distributions through a river bend were examined in order to assess ice jamming potential. Tests were conducted under open water, and smooth and rough artificial ice cover conditions. The effects of the above variables on the streamwise and transverse velocity profiles in a river bend are discussed

RIVER ICE, FRAZIL ICE, ICE GROWTH, ANIMALS.
Literature describing the winter habitat of Atlantic salmon *(Salmo salar)* is reviewed Causes of winter mortality of salmonids are proposed. Four factors considered detrimental to overwinter survival include 1) crowding of juveniles into smaller areas due to freeze-up ice cover formation and reduction of available habitat, 2) migration of fish due to overcrowding, 3) solid ice growth into the substrate, thereby freezing the redds and the juvenile fish, and 4) high velocity flows that occur during ice cover breakup and ice jam releases An analytical treatment of the ice front progressing into the substrate is presented and a realistic example is given to confirm the hypothesis that the freezing of redds is a high potential source for egg and juvenile losses Frazil ice accumulation under the ice cover on the bed is detrimental to salmonid survival because it accelerates solid ice growth. Increases in overwinter survival have been shown to be directly linked to the amount of adequate winter shelter. Winter shelter includes two key elements: silt-free rubble substrate and adequate flows

SEA ICE, FLOATING ICE, ICE COVER THICKNESS.
Measurement of characteristic length of floating ice sheets was made by landing a helicopter on the ice sheet and measuring the change in slope on the ice surface near the point of loading. The noise from the swells in the water underneath the ice caused considerable difficulties in measuring the changes in slopes. Only two successful measurements could be made when the ice thicknesses were 0.8 m and 0 63 m. The ratios of characteristic length to ice thickness were about 11 8 m, and the effective modulus of elasticity was 1.65 GPa and 1.24 GPa

This paper describes a clamping system that provides a means to alternate freely between tensile and compressive uniaxial loads on an ice specimen. The fixture is hydraulically activated and is used in conjunction with a closed-loop testing system. It is self-aligning, holds the specimen rigidly in place and imparts no detectable bending moment to the specimen when it is activated The testing methodology centered on this device has proven to be very efficient and reliable. Results of several of the initial experiments employing this device are also presented These include examples of the effect of loading frequency and grain size on hysteresis, the effect of strain level on the secant modulus for both tensile and compressive loading and an example of tensile failure following compressive loading in a regime characterized by a high degree of microcracking

FLOATING ICE, ICE STRENGTH, BEARING STRENGTH, ICE SHEETS, ICE DEFORMATION, MATERIALS, ICE COVER THICKNESS, TESTS, LOADS (FORCES), ICE CRACKS.
Laboratory tests were conducted on floating freshwater ice sheets reinforced with a high-strength polymeric mesh (Geogrid) The mesh was frozen into the ice sheets Bearing capacity tests were conducted on each ice sheet The thickness of the ice sheets varied from 3 to 13 cm and the dynamic loads varied from 1 3 to 23 kN Comparisons to tests on ice without the grid were made. For the ice sheets tested, Geogrid reinforcement increased the bearing capacity of thin (49 mm) ice up to 38% and of thicker ice (96 mm) about 10-15%. Failure of the ice with Geogrid reinforcement was very local, whereas failure of the ice without Geogrid was catastrophic and over a large area. Displacement of the ice is compared to theory for plates on an elastic foundation.

Floating model (urea) ice sheets were penetrated vertically up with cylindrical indentors of different shapes (flat, truncated-conical and conical) and diameters (76 mm, 152 mm and 305 mm) and in different ambient temperatures (0, 10, 20 F). Our experimental results show that there is no effect of indentor shape or size on the ice penetration forces. From dimensional analysis, a relationship is obtained for maximum ice penetration force in terms of the specific weight of water, the ice thickness and the upward flexural strength. From the measured deflections of the ice sheet at a few points along a radial line during penetration tests, the buoyancy force is calculated independently of the total measured force. By subtracting the buoyancy force from the total measured force, the inertial force is obtained Plots of these forces are given for a few tests

ICE STRENGTH, ICE HARDNESS, ICE CRACKS, CRACKING (FRACTURING), ARTIFICIAL ICE, FLOATING STRUCTURES, ANALYSIS (MATHEMATICS).
A series of 30 fracture toughness tests were performed on laboratory-grown S2 columnar freshwater ice at high homologous temperatures (-2 to 0 C) The floating double cantilever beam specimen used and the monitoring of the crack mouth opening displacement in addition to the applied load provided a means for obtaining an apparent fracture toughness, an effective elastic modulus, a lower-bound estimate of the crack speed, and a side-loaded flexural strength of the ice. An expression for the apparent fracture toughness as a function of the applied load, specimen geometry, and ice thickness was developed using a finite element program. This allowed comparison with previously published values for the toughness of freshwater ice The small range of scatter in apparent fracture toughness values as well as the ability to measure other mechanical properties of the ice indicates the usefulness of such tests.

43-2923
NUCLEATION, ICE RELAXATION, TENSILE PROPERTIES, GRAIN SIZE, MATHEMATICAL MODELS, TEMPERATURE EFFECTS.
This paper describes the development of a model for the flexural strength of S2 freshwater ice in simple bending under isothermal conditions. The model applies to the case of nucleation-controlled failure and addresses temperature and grain size effects The derivation balances the energy supplied by stress relaxation with the energy required to overcome the barrier to crack nucleation and the energy to form new surface area The nucleation barrier, which is not yet fully specified, can be determined from experimental results and appears to be independent of temperature for the flexural case under consideration The physical reasoning behind the model leads to a mathematical form that differs somewhat from the expression generally used to represent similar experimental results The conceptual basis for the model draws from observations on the flexural tests, from published microscopic observations for ice and from the literature on nucleation theory The model predictions compare favorably with published experimental results for the flexural strength as a function of temperature in the range of -1 to -19 C and as a function of grain size in the range of 0 002 to 0 006 m

DAMS, RESERVOIRS, ICE FORMATION, ICE COVER, ICE CONDITIONS.
On the Missouri River, downstream of Oahe Dam, an ice cover forms, accumulates and retreats in response to varying air temperatures, varying and daily peaking discharges of up to 1400 cu m/s, and varying water temperatures of the release. Extreme accumulations of this ice in some years have caused flooding due to the increased stage associated with the resistance of the ice cover. A simulation of the accumulation and retreat of the ice cover has been constructed, including the variability of the discharge, water temperature, and air temperatures, and compared and calibrated against available data. A discussion of the various approximations used in the simulation is presented together with an assessment of the improvements that occur when various parts of the simulation are treated in more detail, such as using hourly energy budgets rather than daily averages based on a simple bulk heat transfer coefficient

43-3027
WATER FLOW, CHANNELS (WATERWAYS), SEDIMENT TRANSPORT, ICE COVER EFFECT, ALLUVIUM, FORECASTING.
The formation of an ice cover on an alluvial system results in significant changes in the flow regime due to the interaction between the ice cover, fluid flow, fluid properties, sediment and bedforms For the case of uniform flow in a rigid channel, the addition of an ice cover of uniform thickness and surface roughness would typically result in an increase in water depth and a reduction in water velocity and bed shear Such a flow can be conceptually split along a hypothetical plane of zero shear located approximately at the point of maximum velocity in any vertical profile If this concept could be extended to flow over a movable bed, then existing free surface sediment transport theory could be applied to the lower layer by treating it as a distinct "open channel" case To test the practicability of using this lower layer approach to predict sediment transport and resistance to flow in an ice covered channel, a series of tests were conducted at various discharges in a laboratory flume The sediment was a uniform, 0 45-mm-diameter quartz sand and bedforms were in the ripple and dune regimes For each discharge, a run was initiated by establishing uniform flow under a simulated ice cover Once the lower layer depth and discharge were determined, a corresponding open water flow was established leaving other parameters unchanged The ice covered and free surface flows were then compared based on sediment discharge, bed form geometry, and energy slope to determine the applicability of the lower layer approach

43-3031
FORECASTING, WATER TEMPERATURE, WATERSHEDS, AIR WATER INTERACTIONS, RIVER ICE, MATHEMATICAL MODELS.
The water temperature of a river at any point reflects how the upstream watershed responds to heat transfer with the environment. The ability to model this response provides a way to forecast future river water temperatures, which could be an important part of an ice forecasting program. This paper presents a model of the watershed response. In the model the overall environmental heat transfer is calculated based on two terms- one linearly dependent on the difference between the water and air temperature. The response of the watershed is determined by analyzing the past records of air and water temperature From these records, monthly or seasonal response coefficients for the watershed are determined. Forecasts of future air temperature, along with the known water temperature at the time of the forecast, are used to forecast water temperature. Water temperature can be forecast for any future data, however, in practice the accuracy is limited by the current limitations of air temperature forecasts. The model is applied to the Ohio River, and results are shown as hindcasts of water temperature based on the actual recorded air temperatures, and hindcasts of "likely ice periods" based on the actual recorded data The model can be used to forecast likely ice periods in large and small watersheds, is designed to be used with real-time water temperature measurements and is particularly useful for forecasting tributary water temperatures as boundary conditions for more elaborate models.

VELOCITY, ICE JAMS, ICE FLOES, RIVER ICE, RIVER FLOW, SIMULATION.
The velocity field through a river bend is greatly affected by its channel curvature, primarily by the action of centrifugal acceleration. The streamwise velocity gradient is responsible for a nonuniform distribution of centrifugal forces, which results in a radial circulation River bends have long been reported as the locations for the initiation and development of ice jams These radial velocities affect the transport and deposition of bed material and/or ice in the bend, resulting in nonuniform depths and ice thicknesses over a cross section. The streamwise and transverse velocity profiles through a 90 deg bend of a laboratory flume were examined. A variety of discharge, bed roughness, and water surface conditions were tested, including smooth and rough simulated ice covers The effects of each variable on the velocity field were identified

ICE CRYSTAL STRUCTURE, GEOCHRONOLOGY, ANTARCTICA—ALLAN HILLS.
While searching for meteorites in the Allan Hills region during the austral summer of 1982-1983, a small, walnut-sized meteorite was discovered with just its tip protruding above the ice surface. The meteorite appeared to be still embedded in the original ice and becoming exposed for the first time at the ablation surface If this interpretation were proved correct, this would be the first example observed in Antarctica of an emerging stone, a discovery of special importance because the terrestrial age of the meteorite would be the same as that of the enclosing ice This study was undertaken to determine if the crystalline properties of the ice were consistent with the notion that the ice enclosing the meteorite is coeval with the terrestrial age of the meteorite Following remeasurement and photography the ice block was split apart by wedging and the meteorite removed The ice was then cut in three mutually perpendicular directions in order to evaluate the three dimensional picture of the crystal/bubble structure of the ice It is concluded from the analysis that the meteorite was, in fact, just emerging at the ablation surface when it was discovered. Laboratory methods were developed to demonstrate and evaluate the feasibility of using artificial soil freezing as a cost-effective technique in general site decontamination This effort is part of CRREL's artificial freezing research program for hazardous waste management The study attempted to quantify parameters which influence contaminant transport in soils during freezing Among the influencing parameters, freezing rate was found to be the most significant Contaminant movement profiles in soils during freezing were measured Laboratory column studies showed a significant mobility of volatile organics, such as benzene, chloroform and toluene, when Lebanon silty soil contaminated with these organics was frozen from the bottom up A range of 25-67% reduction in contaminant concentration was measured in

the frozen soil sample when subjected to an average freezing rate of 0.25 cm/day, with the concentration increase found just around the freezing front. However, a corresponding 25-67% increase in concentration ahead of the freezing front was not obtained as expected, due to contaminant losses through volatilization, biodegradation and sorption. A mathematical correlation was established between the contaminant relative change in concentration and their octanol-water partition coefficients. The well-correlated relationship strongly suggests the dependence of the freezing-induced mobility of the specific organic contaminant component on its octanol-water value.

Recently, artificial freezing has been identified as a potential and plausible technique for treating soil contamination as well as for general site decontamination. As part of the overall CRREL artificial freezing research program for toxic and hazardous waste management and control in cold regions, a large-scale prototype testing facility has been constructed to study and evaluate contaminant movement in soils during freezing. The contaminants proposed to be used for the study include volatile organics, such as chloroform, toluene, and benzene, and non-volatile organics, such as TNT and RDX. Variation in contaminant concentration during freezing would be obtained by soil coring and sampling tubes in different locations. Contaminant concentration would be determined using a gas chromatograph/mass spectrometer and high-precision liquid chromatograph.

In the past few years, CRREL has been investigating the use of artificial freezing as an innovative technique for soil decontamination. A preliminary laboratory study was conducted specifically to evaluate and analyze the possibility of mobilizing different types of contaminants by freezing in Lebanon silt. Contaminants investigated were explosive residues most extensively found at the U.S. Army ammunition plants as well as volatile organic compounds (VOCs), such as chloroform and toluene. Explosives studied were 2,4,6-trinitrotoluene (TNT), hexahydro-1,3,5-trinitro-1,3,5-triazine (RDX), octahydro-1,3,5,7-tetranitro-1,3,5,7-tetrazocine (HMX), 2,6-dinitrotoluene (2,6-DNT), ortho-nitrotoluene (O-NT), and meta-nitrotoluene (M-NT) Preliminary data from the laboratory column studies suggested that there was a certain degree of movement of both explosives and VOCs when soil columns of Lebanon silt saturated with these contaminants were frozen unidirectionally from the bottom up. Slopes of the control and frozen soil concentration profiles were statistically analyzed and a comparison between them was made One freeze cycle at an average freezing rate of 0.5 cm/day was used. Insignificant amounts of movement (<10% change) were observed for RDX, HMX and TNT. Relatively greater movements (20-40% change) were observed for 2,6 DNT, O-NT, M-NT, toluene and chloroform For given freezing rate, freeze-thaw cycles, soil and moisture content, it was hypothesized from this and other previous experimental data that the ability to move any contaminant by freezing strongly depends on the type, initial concentration level and the soil/chemical interaction of the contaminant.

DUST, DETECTION, REMOTE SENSING, MEASURING INSTRUMENTS.

A new remote operating sensor for accurate and continuous monitoring of dust settlement rate is described. The system was developed for monitoring settled dust in underground coal mines, but it is conceived that it can also be used for monitoring dust deposition in many other situations. The design is based upon vibrating wire technology, which makes the device insensitive to lead wire resistance, contact resistance, ground leakage, and humidity, which are common instrument problems in any field environment. The portable readout is microprocessor based, and can read up to 10 remote sensors connected through a switch module. Dust loading on the sensors is read directly in mg/sq cm. In use, the 10 sensors can be placed at various locations, and all can be monitored with their cables terminating at a central station where the switch module is located. The maximum permissible distance of the sensors from the readout is about 1.6 km. The readout unit weighs 4 kg and is rugged and splash-proof. Both the sensor and the readout unit were tested for shock and vibration, and both met military standards. The sensors are temperature compensated and can detect changes in dust loading as small as 0.5 mg/sq m. The total range of the sensor is 0 to 500 mg/sq cm. The paper describes the principle by which the sensors operate, the assembly procedures, and the results of sensor calibration, stability and repeatability tests. The details of the readout unit are also described.

The split Hopkinson bar is an analysis tool that allows material characteristics to be determined under high strain rate loading conditions (50 to 1000 strains per second). In the techniques described, the material under test is cooled with liquid nitrogen flowing through coils surrounding the test specimen. The technique incorporates computer control over the data collection and analysis so the material properties are determined rapidly. To illustrate the capability of the testing method, a demonstration using ice as a material is included.

The U.S. Geological Survey (USGS) has been charged with the responsibility of evaluating the petroleum potential of the National Petroleum Reserve in Alaska (NPRA) This work had already been initiated by the U S Navy, from whom the NPRA was transferred to the Department of the Interior To help fulfill its responsibility, the USGS in Feb 1977 started an engineering geology program to provide the geotechnical support necessary for the exploration program. The USGS requested the U S. Army Waterways Experiment Station (WES) at Vicksburg, MS, and the U S Army Cold Regions Research and Engineering Laboratory (CRREL) at Hanover, NH, to conduct studies to obtain the physical parameters required to evaluate and solve some of the geotechnical and engineering problems. All of the NPRA is underlain by permafrost, and thus virtually all of the engineering and geotechnical problems encountered during the construction of the well sites and subsequent drilling were associated with permafrost. The widespread occurrence of permafrost containing large amounts of near-surface ground ice in the form of wedges, masses, and intergranular ice required that construction activity not disturb the thermal regime of the ground surface, because such disturbance could lead to thawing of permafrost Once the permafrost was thawed, ground subsidence, sediment flow, and impassable conditions would result Construction problems were compounded by the necessity that all construction in the NPRA be done during the winter months to meet the environmental requirements Therefore, the engineering geology program consistently addressed the impact of the environment on the facilities and the effect of the facilities on the environment

Benson, C.S.

44-395

FLOODS, GLACIAL LAKES, ICE DAMS, FLOODING, SUBGLACIAL DRAINAGE, GLACIAL HYDROLOGY, UNITED STATES—ALASKA—STRANDLINE LAKE.

Jökulhlaups, or outburst floods, have occurred every 1 to 5 yr from Strandline Lake, one of the largest glacier-dammed lakes in North America. They flood the Beluga River, which was once in an undeveloped region but now is spanned by bridges and power lines leading to Alaska's largest urban area. In 1982, a study of the mechanisms that produce these jökulhlaups was initiated to improve the ability to predict them and thereby to mitigate their damages. Reliable precursors appear to be development of a distinct calving embayment in the lobe of the Triumvirate Glacier, which dams Strandline Lake, and formation of a number of supraglacier pools. Contour maps made from photos taken immediately before and after the jökulhlaup of Sep. 17, 1982 indicate that over 95% of the lake drained, releasing about 700,000,000 cu m of water. The lake is dammed by a glacier lobe that fractures and subsides during a jökulhlaup, which indicates that the release mechanism is hydrostatic lifting of ice off a subglacial spillway; the exposed areas surrounding the glacier margins suggest that the spillway may be controlled by bedrock. Large variations occur in the refilling period of Strandline Lake. Modifications of subglacial drainage into Strandline Lake as a result of jökulhlaups, combined with complex sub- and marginal drainage patterns, appear to exert controls which are not understood but which contribute to the variable filling rates.

44-396

POLYMERS, CONCRETE PAVEMENTS, CONCRETES, TEMPERATURE EFFECTS, COLD WEATHER PERFORMANCE, COMPRESSIVE PROPERTIES, FLEXURAL STRENGTH, CONCRETE AGGREGATES, CONCRETE CURING.

This report discusses laboratory engineering tests that were performed to determine the properties of polymer concrete under cold conditions The polymer tested was Percol-S, a three-part polyurethane resin, catalyst amounts were adjusted so that samples set at approximately 30 seconds. The 11 conditions tested involved variations of three factors: (1) ambient temperature (35, 15, 0, or -20 deg F); (2) cure time prior to testing (30 minutes or 24 hours), and (3) moisture content of the aggregate (dry or wet). Flexural strength was determined at all conditions Tests of compressive strength, chord modulus of elasticity, and Poisson's ratio were performed at each temperature on samples prepared with dry aggregate and cured for 30 minutes. Results of the compressive strength, flexural strength, and modulus of elasticity tests, which all decreased with temperature, remained above the 30-minute minimum requirements at temperatures from 35 to 0 deg F, but dropped off sharply at the -20 deg F condition. Samples prepared with wet aggregate had much lower flexural strengths than samples prepared with dry aggregate and met the minimum requirements only at the 35 deg F condition. Poisson's ratio, which increased with colder temperatures, remained within the specified range at 35 deg F and 15 deg F and exceeded the specifications at colder temperatures.

ICE ACCRETION, AIRCRAFT ICING, MEASUREMENT, TEMPERATURE EFFECTS.

The shape of ice accreted on the leading edge of aircraft wings and other structures varies extensively depending on the growth regime in which accretion takes place. This shape feeds back to control the rate of additional accretion. In order to provide numerical information for further analysis of ice accretion, the thickness distribution of accreted ice grown on cylindrical rotor blades under the laboratory conditions was measured Measurements were made every 1 cm in the radial direction and at every 6 deg interval around the axis of the cylindrical blades Photographs of the

accreted ice were used to identify the growth regime, surface roughness, and the extent of iced area that could not be obtained from thickness measurements by mechanical contact. Extensive liquid migration was observed above -11 C in both radial and tangential directions on the rotor Evidence of liquid water persisted down to -20 C, however

44-416
LIGHTNING, COMPUTERIZED SIMULATION, STATISTICAL ANALYSIS.
It is well known that lightning bolts trace a zig-zag course between clouds or from cloud to ground. This course is apparently determined during the development of "leader strokes" through which the bolt advances. This paper proposes a model for the development of such a leader stroke. Assumptions used in this model are: 1. A uniform global electric field exists between cloud and ground or cloud and cloud. 2. Electric cells of various strengths and sizes are randomly distributed in the vicinity of the tip of a leader. 3. An electric charge is supplied to the tip of the leader stroke through the previous stroke to increase the electric field around the tip. 4. When the field strength between the advancing tip and one of the cells becomes strong enough, discharge between the tip and the cell takes place, advancing the leader stroke to the cell. Monte Carlo computer simulation of such a model in two and three dimensions has produced patterns with a striking resemblance to published photographs of lightning bolts. Statistical analysis of the data generated by the simulation produced by changing various parameters indicated that certain information can be gained by analyzing those photographs For instance, an increase in general electric field strength results in a less tortuous track with longer steps, while a larger cell size distribution results in more ragged tracks By comparing the statistical analysis of lightning stroke shapes obtained from photographs with observed field conditions causing the strokes, various parameters such as field strength and cell size could be estimated.

44-420
SOIL WATER MIGRATION, FROZEN GROUND MECHANICS, FROST HEAVE, FILTERS.
This study utilizes soil specimens prepared with geotextiles subjected to unidirectional standard frost heave tests Results indicate that geotextiles can reduce frost heave. Characteristics that influence capillary behavior include pore size distribution and structure of the fabric as well as surface properties of the fibers. Furthermore, fabric thickness appears to influence performance as a capillary barrier. Currently, little is known about fiber surface properties and there are no standard tests to evaluate characteristics such as wetting angle Test observations indicate the importance of quantifying fabric pore size and the wetting angle of fibers in the fabric so that their influence on capillary behavior can be quantified.

44-421
HEAT FLUX, MEASUREMENT, SURFACE ROUGHNESS, ANALYSIS (MATHEMATICS).
Eddy-correlation, inertial-dissipation, flux-gradient, or bulk-aerodynamic methods—the traditional micrometeorological ways of measuring the turbulent surface fluxes of momentum and sensible and latent heat—all yield point estimates of the fluxes Even over surfaces that are only slightly inhomogeneous, however, such point estimates can be unrepresentative of average surface conditions. Wyngaard and Clifford (1978) and Coulter and Wesely (1980), among others, have therefore suggested that path-averaging electro-optical systems could be used to obtain surface-averaged fluxes, but until now no one has shown how to obtain both sensible and latent heat fluxes from path-averaging instruments without the necessity of also making some point measurements A two-wavelength, electro-optical technique is described that can distinguish temperature and humidity effects and thus can yield path-averaged sensible and latent heat fluxes without requiring associated point measurements

WATER SUPPLY, REMOTE SENSING.
In the past 5 years there has been rapid advancement in the use of remote sensing in the area of water resource management. Satellite image data are now available from operational systems such as the NOAA and SPOT satellites In addition the Landsat series of satellites have taken data over a major portion of the globe. Many procedures and methods have been developed to analyze digital satellite data but the techniques to use them operationally for evaluating water resources on a global scale are in their infancy A discussion of the methods used by the Corps of Engineers to address water related topics is presented to illustrate how world communities must learn to use remote sensing for collection of data required to manage their water resources.

RIVER ICE, ICE BREAKUP, ICE JAMS, RIVER FLOW, ICE CONTROL, FLOOD CONTROL.
The entire range of ice breakup behavior, from thermal to dynamic, described and classified, to provide order to this complex process The theory and model of Ferrick *et al* (1986) are refined, building on the concept of an intrinsic relationship between river waves and dynamic ice breakup. A force balance is developed for a common dynamic breakup behavior. Empirical criteria that quantify the resistance to breakup of an ice cover are obtained from a case study and compared with published values. Sensitivity studies of ice breakup with the completed model demonstrate insights that follow from the theory presented, and the intuitive nature of the results This framework for understanding river ice processes provides the option for ice management by river regulation, and focuses on the potential for control of ice breakup The concept of controlled breakup involves a release of water from a dam that moves the ice downstream of locations with a high potential for damages during breakup. The abrupt, short-duration characteristics of the controlled release, patterned after those of unregulated river breakup, minimize both the volume of water required to cause breakup and the water levels at breakup The open water created by the breakup collects heat that increases the rate of melting of the ice The benefits of successful regulation include the prevention of flooding, minimum erosion and decreased potential for ice damage to structures during breakup without adverse affects on the environment

TOWERS, ICING, ICE REMOVAL, LOW FREQUENCIES, VIBRATION.

Laboratory and field experiments showed that structurally safe levels of low-frequency, high-amplitude (LFHA) vibrations imparted directly to transmission towers under cold temperatures were ineffective in removing appreciable amounts of atmospheric ice. In general, limited ice removal from the test structures occurred only during resonant-mode frequencies when vibration amplitudes were greatest. More importantly, the same vibrations that were incapable of ice removal were structurally damaging to the 18-m-tall guyed towers. Damage resulted in the form of broken welds and crossbracing and cracked tower legs. Experiments with a surface coating showed that while the bond strength of the ice was reduced, debonding and ice removal was still limited to small areas close to the vibration source. Vibrations preceded by melting at the ice/metal interface and weakening of the ice cover by solar radiation led to rapid and extensive ice removal. The possibility of deicing by a combination of vibrations, heat, and/or surface coatings is worthy of additional investigation.

Generation of boundary-fitted orthogonal coordinates is accomplished by mapping the irregular region in physical space onto a square in the transformed space, where an elliptic equation is solved to find interior physical coordinate locations. It is usual practice to employ rules or restrictions on the distortion function governing the coordinate transformation from physical to transformed space. This can allow control of node spacing on the interior of the region, at the expense of arbitrary specification of node locations along the boundaries. In problems involving internal flows, the specification of boundary node locations is important. This paper investigates some implications of a standard rule used for specification of the distortion function, and explores a simple technique that achieves complete boundary correspondence by allowing natural values of the distortion function to exist on the interior. Sample grids are generated to compare the results of the two techniques.

LOW TEMPERATURE RESEARCH, COLD WEATHER TESTS, LABORATORIES, TEST CHAMBERS, LOW TEMPERATURE TESTS, BUILDINGS, REFRIGERATION.
The U.S. Army Cold Regions Research and Engineering Laboratory has a new controlled environment test facility, the Frost Effects Research Facility (FERF), now in use. The 29,000 sq f (2942 sq m) building comprises a principal test area 182 ft (55 m) long by 45 ft (14 m) wide incorporating 12 test basins, adjacent mobilization areas and equipment rooms, for a total width of 102 ft (31 m), plus fully enclosed ramp areas at each end of the building. Surface panels are used to freeze pavement and soils for the pavement, utility, soil sensor, and mobility test programs. Liquid-to-air heat exchangers are used to test hardware inside enclosures erected in the test basins or on the mobilization area. Currently, coolant is available at -35 deg, 0 deg and +90 deg F (38, -18 and 38 C), allowing test temperatures ranging from -35 F (-37 C) to +90 F (32 C). Lower temperatures can be achieved by using portable units in conjunction with the facility's permanent system

ICE STRENGTH, ICE CRACKS, FLEXURAL STRENGTH, TESTS, ICE COVER THICKNESS.
A series of 42 fracture toughness tests was performed on laboratory-grown S2 columnar freshwater ice at high homologous temperatures (-2 to 0 C). The floating double cantilever beam specimen used and the monitoring of the crack mouth opening displacement in addition to the applied load provided a means for obtaining an apparent fracture toughness, an effective elastic modulus, a lower-bound estimate of the crack speed, and a side-loaded flexural strength of the ice. An expression for the apparent fracture toughness as a function of the applied load, specimen geometry, and ice thickness was developed using a finite-element program. This allowed comparison with previously published values for the toughness of freshwater ice. The small range of scatter in apparent fracture toughness values as well as the ability to measure other mechanical properties of the ice indicates the usefulness of such tests

HEAT FLUX, CONDUCTION, THERMAL CONDUCTIVITY, ANALYSIS (MATHEMATICS), SNOW THERMAL PROPERTIES.
The approximate heat balance integral method (HBIM) is extended to the case of variable properties media such as snow. The case of linear variation of thermal conductivity was investigated. An alternative heat balance integral method (AHBIM) was developed. Both constant surface temperature and surface heat flux were considered. Comparison of temperature distribution from HBIM, AHBIM and the extension of the analytical solution of Jaeger was given for the case of constant surface temperature. In general, for small values of time, results agree quite well with the analytical solution but as time increases, the difference becomes more pronounced. AHBIM with a quadratic temperature profile gave a somewhat better result especially when the value of *eta* is small. For specific property function of $F(eta) = e^{sup\ eta}$, closed form solutions were obtained. The results were compared with those from HBIM, AHBIM and the analytical method used proved exceptionally well with the analytical especially for large values of time

FROZEN GROUND, UNFROZEN WATER CONTENT, HYDRAULICS, SOIL WATER.
Unfrozen water content and hydraulic conductivity data were obtained for an air-free frozen Alaskan silt using a new form of an ice sandwich dilatometer/permeameter that was designed to allow control of effective stress in the granular matrix through appropriate adjustments of pressure in liquid surrounding a specimen confined as in a triaxial test apparatus. Experimental complications included temporary loss of conductivity during prolonged periods of equilibrium (no flow) after each temperature step immediately followed by very slow but continuing decay, as if without limit. When a formula of the Brooks and Corey type was fitted to unfrozen water content data, hydraulic conductivities inferred from the formula parameter, through the model of Mualem, provided an acceptable description of observed conductivity values, as measured immediately after the equilibrium period

MATERIALS, LOW TEMPERATURE TESTS, TENSILE STRENGTH, COLD STRESS, POLYMERS, FRACTURING.

Samples of unidirectional graphite-epoxy composites were subjected to 0, 10 and 100 thermal cycles after which tensile stresses, perpendicular to the fiber axes, were applied until the sample failed. The measured tensile strength of these materials was found to decrease with thermal cycling. Sections of the failed surface were examined with the scanning electron microscope (SEM) and showed that the failure surface of the epoxy matrix becomes progressively smoother as the number of thermal cycles is increased. The appearance of a smoother fracture surface and the concomitant decrease in transverse tensile strength with increasing number of thermal cycles suggest different failure mechanisms for the cycled and uncycled specimens. It is postulated that for the cycled composites, failure by interfacial debonding is initiated in fiber-rich areas at a lesser load than for the uncycled composites. In uncycled composites the failure path is thought to follow relatively epoxy-rich zones.

SLUDGES, WASTE TREATMENT, DESIGN, STRUCTURES, SEASONAL FREEZE THAW, COLD WEATHER OPERATIONS, MOISTURE TRANSFER, TEMPERATURE EFFECTS, ANALYSIS (MATHEMATICS).

A new unit operation called a sludge freezing bed is proposed for dewatering sludges produced by treatment facilities in cold regions. This unit operation uses natural freeze-thaw to condition the sludge for dewatering. It can dewater all types of aqueous sludges up to a depth of 2.0 m. Basic construction details are identified, and procedures for operating the bed are discussed. Equations for predicting the design depth are presented along with an example of how they can be used. Convection was found to be the controlling heat transfer mechanism during freezing. Solar radiation, ambient air temperature, and the thermal conductivity of the settled sludge layer over the frozen sludge are important parameters controlling the thawing rate. Data from various sludge freezing operations indicate that the design equations are valid.

RESIDENTIAL BUILDINGS, AIR FLOW, MILITARY FACILITIES, VENTILATION, AIR POLLUTION.

A 2963 cu m residence for transient military personnel at Fort Richardson, AK, was subjected to a passive perfluorocarbon tracer gas measurement of air exchange for 3 days. The building was treated as having three separate zones corresponding to the three floors. Each zone received constant tracer gas emission sources of the same type of gas unique to that zone. The concentrations of each tracer gas were measured throughout the building. As a consequence, it was possible to calculate the average air exchange of each zone with each other zone and the outdoors. The measurement took place during a period when the average temperature of -19 C varied approximately 5 C up or down. The first and second floors had air exchange rates of 0.21 and 0.28 ach (air changes per hour), respectively, whereas the basement had 0.70 ach. The higher exchange rate for the basement was attributed to the configuration of the main entry doors and interior doors, which allowed cold air to descend to the basement, but discouraged mixing on the first floor. The measurement was significant because it represents the upper end of building size and complexity that lends itself to this measurement technique. Measurement precision was good. The accuracy depended on adequate mixing and on minimum variation of wind and outdoor temperature. Both objectives were met reasonably well.

MP 2558
VAPOR RETARDERS FOR CONTROL SUMMER CONDENSATION.
Tobiasson, W., ASHRAE/DOE/BTECC/CIBSE Conference on the Thermal Performance of the Exterior Envelopes of Buildings, 4th, Orlando, FL, Dec. 4-7, 1989. Proceedings, Atlanta, GA, American Society of Heating, Refrigerating and Air-Conditioning Engineers, 1989, p.660-669, 4 refs.
44-1361
BUILDINGS, VAPOR BARRIERS, WALLS, THERMAL INSULATION, CONDENSATION, COUNTERMEASURES, AIR FLOW, INDOOR CLIMATES.

Prior work by the CRREL has indicated that vapor retarders are needed in cold regions to avoid detrimental accumulation of moisture in walls whenever the winter wetting potential exceeds 0.6 in. of Hg/month (20.3 kPa/month). In the hot, humid regions of the United States the summer wetting potential ranges up to 0.9 in. of Hg/month (30.4 kPa/month). Summer wetting potentials of 0.3 through 0.9 in. of Hg/month (1.34 through 3.04 kPa/month) have been mapped. The zone south of the "0.6" isoline (i.e., a portion of the coasts of Texas and Louisiana and much of southern Florida) may be a reasonable representation of where air-conditioned buildings need vapor retarders to defend against summer wetting from outside air. However, feedback is solicited on which isoline best corresponds to the collective expertise of designers and builders. Problems associated with summer condensation are often related to wetting of exterior cladding and subsequent solar heating, not just simple vapor drive. Nonetheless, in some hot humid areas, vapor retarders may be used.

SNOW AIR INTERFACE, SNOW THERMAL PROPERTIES, ANALYSIS (MATHEMATICS), AIR FLOW, ATMOSPHERIC PRESSURE, WIND FACTORS, SNOW SURFACE.

Strong winds can disrupt the thermal regime in seasonal snow because of the variation in surface pressure associated with surface features like dunes and ripples. Topographical features of shorter wavelengths produce stronger surface flows, but the flow decays rapidly with depth. Longer-wavelength features produce weaker surface flows but the flow decays more slowly with depth. The flow may only be strong enough to disrupt the temperature field for features of wavelengths on the scale of meters or tens of meters at wind speeds of 10 m/s or more. Other possible causes of windpumping have been examined but they do not appear to be as significant. Rapid pressure perturbations due to turbulence produce very little displacement of the air because of the high frequency and low amplitude. Barometric pressure changes cause compression and expansion of the air in the pore space, but the rate is too low to have much effect.

As pavement design and evaluation procedures become increasingly complex, additional instrumentation and more frequent observations may be necessary to provide the data required to verify and refine these more sophisticated procedures. This additional instrumentation may be increased numbers of previously used devices or more sophisticated equipment to measure parameters not monitored in the past. For example, subsurface temperatures and frost heave have been measured at the pavement surface for years. Within about the last 10 years we have also measured *in-situ* moisture contents versus depth and time, but an inexpensive and universal device for making these measurements is not yet available. In this paper, measurements currently made, measurements we plan to make in the next few years, and measurements we would like to make but have not because the necessary equipment is not available, are discussed.

FROST PENETRATION, PAVEMENTS, SUBGRADE SOILS, THERMOCOUPLES, THERMISTORS, ELECTRICAL RESISTIVITY, FROST RESISTANCE, TEMPERATURE DISTRIBUTION, SEASONAL VARIATIONS, TESTS, MEASURING INSTRUMENTS, SALINITY, SUBSURFACE INVESTIGATIONS, ANTIFREEZES.

Because of freezing point depression and isothermal springtime conditions, frost penetration measurements using temperature-sensing devices can become unreliable. In recognition of this problem two frost penetration sensors that depend on changes in resistivity were tested. Tests were conducted on a parking area with an asphalt-concrete surface where salt was periodically applied as part of snow removal operations. For comparison, data were obtained from a resistivity probe, a thermocouple probe and a thermistor probe. Results indicated that measuring temperature to determine frost penetration can lead to large errors under some conditions, for instance when salt has been applied or when frost is coming out of the ground in spring. The resistivity probe performed reliably during the entire measurement program. Conclusions from this study indicate that resistivity probes have definite advantages that should be considered when future frost penetration measurement programs are designed.

This report describes a recently patented method for using commercially available thermistors to make *in-situ* thermal conductivity measurements with commonly available electronic equipment such as digital voltmeters. The emphasis is on the use of a single thermistor to measure the thermal conductivity of soils. Calibration techniques are explained and examples provided. Limits on this technique are discussed, including measurement range, material grain size, the amount of material needed for a valid measurement, and temperature stability. Specific examples of the use of this technique are provided for thermal conductivity measurements of soils, building materials, and the sludges in a sewage treatment plant. Data analysis is provided including a statistical approach to finding the thermal conductivity in large volumes of material.

METEOROLOGICAL DATA, COLD WEATHER OPERATION, MEASURING INSTRUMENTS, CLIMATIC FACTORS, SNOW SURVEYS, COMPUTER APPLICATIONS, TEMPERATURE DISTRIBUTION, TEMPERATURE EFFECTS, EQUIPMENT.
The northern temperate climatic zones experience a varying scenario of winter environmental extremes of cold, icing, and precipitation, which severely influence people, equipment and operations. Even instruments used to measure cold and/or wet adverse environments may be incapable of operation if employed during severe cold weather. It is important to know the equipment's environmental restrictions and to evaluate the frequency and duration of disabling weather. In some instances, functional impairments persist after the causative meteorological conditions have subsided, e.g. glaze, rime and heavy snow and ice accumulation. For over 25 years, CRREL has studied environmental conditions in winter weather. These efforts have concentrated on providing field-measured meteorological data and historical climatological data, as well as instrumentation support for many experiments conducted throughout cold regions of the Northern Hemisphere. These efforts have involved characterizing atmospheric conditions as well as surface conditions. Some of the measurements made are snow temperature profiles, depth of the snow on the ground with varying terrain and vegetation, temperature at the snow/ground interface, near-surface ground temperature and wind profiles, snow cover properties, solar radiation, visibility and sky conditions.

PAVEMENTS, FREEZE THAW CYCLES, LOADS (FORCES) COMPRESSIVE PROPERTIES, DEFORMATION, WATER CONTENT, TEMPERATURE EFFECTS, TESTS, STRESSES, GROUND THAWING, MEASURING INSTRUMENTS, ANALYSIS (MATHEMATICS).
Resilient moduli for pavements subject to freezing and thawing can be obtained from laboratory repeated load triaxial tests. We have found that for the frozen condition, the resilient modulus is very sensitive to temperature or unfrozen water content. For the thawed condition, the modulus is primarily dependent upon the water content or moisture stress. The modulus is also dependent upon the applied stresses, particularly for the newly thawed condition and the recovery period that follows. We empirically relate the moduli to the environmental and stress conditions using a multiple linear regression analysis. Resilient moduli obtained with this procedure typically vary over 3 or 4 orders of magnitude for a complete freeze-thaw cycle. It is difficult to obtain meaningful data for the thawed condition where the pore pressure is greater than or equal to zero. The empirical equations are used in elastic layered models to calculate pavement deflections.

SOIL CHEMISTRY, SOIL POLLUTION, SOIL COMPOSITION, WATER POLLUTION, IONS, ANALYSIS (MATHEMATICS).
We studied the retention of 15 elements by 11 soils from 10 soil orders to determine the effects of element and soil properties on the magnitude of the Freundlich parameters *Kd* and *n*. The magnitude of *Kd* and *n* was related to both soil and element properties. Strongly retained elements such as Cu, Hg, Pb, V, and P had the highest *Kd* values. The transition metal cations Co and Ni had similar *Kd* and *n* values, as did the group IIB elements Zn and Cd. Oxyanion species tended to have lower *n* values than did cation species. Soil pH and CEC were significantly correlated with log *Kd* values for cation species. High pH and high CEC soils retained greater quantities of the cation species than did low pH and low CEC soils. A significant negative correlation between soil pH and the Freundlich parameter *n* was observed for cation species, whereas a significant positive correlation between soil pH and *n* for Cr(VI) was found. Greater quantities of anion species were retained by soils with high amounts of amorphous iron oxides, aluminum oxides, and amorphous material than were retained by soils with low amounts of these minerals. Several anion species were not retained by high pH soils. Despite the facts that element retention by soils is the result of many interacting processes and that many factors influence retention, significant relationships among retention parameters and soil and element properties exist even among soils with greatly different characteristics.

RESEARCH PROJECTS, ENGINEERING
The Arctic and cold regions of the United States present many unique and difficult engineering problems that demand a coordinated fundamental research program. As a response to the Arctic Research and Policy Act, the National Science Board commissioned a study (the Colwell Report) that examined the role of the National Science Foundation (NSF) in polar regions. The report's recommendation 14 called for the conduct of basic engineering research in polar regions and suggested it be a specifically targeted research component within the Engineering Directorate of NSF. The report presents the type of fundamental research programs that would aid in the solution of long-term cold regions engineering problems. Over 40 participants in a 2-1/2-day period suggested 14 research programs within four broad groupings --offshore technology, watersheds, rivers, and coastal zones, facilities infrastructure technology, and transportation infrastructure technology.

DAMS, LOCKS (WATERWAYS), ICE CONTROL, ELECTRIC POWER, ICE PREVENTION, ICE REMOVAL, ICE GROWTH, ANALYSIS (MATHEMATICS).
Assessed here are the feasibilities of using several unconventional power sources for ice control in navigation locks and dams. Included in this assessment are sensible heat from groundwater, solar power, wind power and portable hydroelectric-power sources. Operation of lock and dam installations is made troublesome and risky by ice growth along lock walls and by freezing of gates to ice covers. Considerable amounts of power are required for force ice control, and therefore, local operators are interested in utilizing economical alternative power sources other than that generated by commercial power utilities. However, the present study concludes that of all unconventional power sources, portable hydroelectric-power is the most viable. Groundwater is at best of marginal viability, and solar and wind power sources are unreliable.

Orcutt, J A.
44-1877
SNOW ACOUSTICS, SOUND TRANSMISSION, SOUND WAVES, ANALYSIS (MATHEMATICS).
Theoretical predictions are made of the effect of an absorbing ground surface on acoustic impulsive waveforms propagating in a homogeneous atmosphere for frequencies below 500 Hz. The lower frequencies of the pulse are enhanced as the effective flow resistivity of the ground surface decreases and as the propagation distance increases. The pulse waveforms and peak amplitude decay observed for propagation distances of 40 to 270 m over grassland were satisfactorily matched by calculations using an assumed effective flow resistivity of 200 kN/s/ 0001 m. Measurements over snow gave much greater amplitude decay rates, and the waveforms were radically changed in appearance, being dominated by the lower frequencies. These waveforms were satisfactorily matched only when a layered ground was incorporated into the calculations; then, an assumed surface effective flow resistivity of 20 kN/s/ 0001 m gave good agreement with the observed waveforms and peak amplitude decay.

SOIL FREEZING, SOIL WATER, LOAMS, UNFROZEN WATER CONTENT, GROUND ICE, FROZEN GROUND TEMPERATURE, SOIL TEMPERATURE, TEMPERATURE EFFECTS, ANALYSIS (MATHEMATICS).
Unfrozen water content as a function of temperature was measured in the laboratory using pulsed nuclear magnetic resonance (PNMR) for a Windsor sandy loam soil The PNMR data were related to previously measured soil moisture retention data through the modified Clausius-Clapeyron equation, with suitable adjustment for surface tension. The transformed measured unfrozen water content data and the previously measured soil moisture retention data were expressed by a Brooks and Corey type of equation with the required set of regression parameters determined It was found that a single set of parameters were sufficient to correctly express the behavior of these data when suitable constraints were imposed on the unfrozen water content data Additional insight into the traditional form of expressing unfrozen water content data is presented in terms of air or ice entry pressure.

ICE ADHESION, SHEAR STRENGTH, COATINGS, ICE REMOVAL, ICE PREVENTION, SHIP ICING, ICE SOLID INTERFACE, ICE GROWTH, PROTECTIVE COATINGS, TESTS, TEMPERATURE EFFECTS, SEA SPRAY, METEOROLOGICAL FACTORS.
This paper discusses a study that was undertaken to discriminate between four icephobic coatings for ease of ice removal The method of discrimination was to compare the shear force required to remove a buildup of freshwater ice from flat plate test surfaces measuring 22.9 x 38.1 cm Twelve replicates each of the four different coatings and two different control surfaces (a total of 72 samples) were subjected to spray icing in an environmental chamber The samples were iced and shear tested at -10 C The tests were performed using a constant displacement rate of 0.0381 cm/s This shear rate ensured a brittle failure at the ice/coating interface and produced virtually 100% ice removal in every test. Results showed that all four of the experimental coatings exhibited higher mean shear values than either of the two controls. Although the mean shear values for the various coatings were very similar in absolute magnitude, ranging from 71 to 119 kPa, statistical analysis showed that there was a significant difference in coating performance with greater than 96% confidence. The relative standard deviation in shear values ranged from 15 to 29% of the total stress. The distinction is emphasized between deicing and anti-icing surfaces relative to coating performance

ICE MECHANICS, FLOATING ICE, DYNAMIC PROPERTIES, LOADS (FORCES), ICE DEFORMATION, BEARING STRENGTH, OFFSHORE STRUCTURES, VELOCITY, MODELS, OFFSHORE DRILLING, ICE ROADS, TESTS
This paper describes a finite-element model of a floating ice sheet subjected to rapid vertical indentation We modeled the ice sheet using small-deflection, elastic-plate theory and modeled the fluid using incompressible potential flow The objectives were to assess the validity of this coupled model to predict indentor loads and to determine the relative importance of fluid inertia versus ice-sheet inertia The model's validity is assessed by comparing its predictions with previously obtained laboratory data. It is found that the model yields reasonably good predictions of indentor loads and sheet deflection profiles provided the ice sheet's characteristic length is reduced to account for damage caused by large deflection The model also clearly demonstrates the predominance of fluid inertia over ice-sheet inertia for the case of rapid vertical indentation Indeed, it was found that the ice sheet essentially behaves as a massless, elastic plate on a fluid foundation.

FLOATING STRUCTURES, ICE MECHANICS, ICE CONDITIONS, WATER WAVES, ICE STRENGTH, IMPACT STRENGTH, OFFSHORE STRUCTURES, ICEBERGS, WAVE PROPAGATION, STATISTICAL ANALYSIS, TESTS, VELOCITY.
This paper describes an experimental study at model scale of wave-induced impacts of bergy bits with a floating oil production platform intended for use on the Grand Banks of Newfoundland, Canada The tests in the 58 m wave tank were conducted at Memorial University using techniques developed in an earlier pilot study but refined in the present program to improve data quality. The objective was to collect and analyze a statistically valid set of bergy bit impact velocities and locations, with a view to providing the design information necessary to ice-strengthen the platform It is concluded from the study that (1) open-water iceberg significant velocities can provide conservative estimates of the significant impact velocities, (2) relative motion between the platform and the iceberg tends, on average, to mitigate impacts, (3) the berg rotational kinetic energy at the time of an impact is a small portion of the translational kinetic energy; (4) the most probable impact location on the platform is the upper corner of the pontoon facing the oncoming waves, (5) wave diffraction from the structure can reduce impact velocities and change iceberg trajectories, and (6) wave diffraction has more influence on the smaller bergy bit, resulting in fewer impacts The paper compares the impact results obtained for this floating production platform with results obtained previously for a more transparent, exploration-style semi-submersible.

ICE LOADS, ICE SALINITY, STRESS STRAIN DIAGRAMS, LOADS (FORCES), COMPRESSIVE PROPERTIES, ICE ELASTICITY, TENSILE PROPERTIES, MEASURING INSTRUMENTS, EXPERIMENTATION, ICE CORES, TEMPERATURE EFFECTS.
This paper describes the initial experimental results on the cyclic loading of saline ice specimens obtained under fully reversed (tension-compression) uniaxial loading conditions The apparatus used to grip the 100-mm-dia ... specimens is similar to one described in Cole and Gould (1989) for performing reversed direct stress tests on 50-mm-diameter specimens Results were obtained for sinusoidally varying axial stresses ranging from 0.3 to 0.9 MPa and for loading frequencies in the range of 0.0025 to 10 Hz. The test temperatures were -10 and -20 C The specimens were saline ice cores taken from an outdoor facility at CRREL. The ice exhibited varying degrees of inelastic behavior under all conditions experienced in these experiments the initial cycle of loading at frequencies in the range of 0.1 to 10 Hz resulted in closed hysteresis loops, while lower frequencies produced open loops The net strain at the end of the open hysteresis loops was virtually all recovered within a short time after the end of a single loading cycle for the 100s period waveforms However, for the loading periods of 1000 and 4000s the bulk of the strain required to close the hysteresis loop was generally not recoverable The loading sequences were such that all specimens ultimately failed in tension with the fracture occurring in the deformation measurement gauge length

PERMAFROST, FREEZE THAW CYCLES, DRILLING, SATURATION, POROSITY, GAS WELLS, OIL WELLS, MATHEMATICAL MODELS, WELL CASINGS, SOIL COMPACTION, UNFROZEN WATER CONTENT.
In permafrost, the initial undisturbed degree of saturation can be significantly reduced when subjected to several cycles of thaw-subsidence and freezeback usually encountered during oil/gas well drilling and production operations The changes in saturation and the resulting undersaturation should be considered in the analysis and modelling of permafrost properties Consideration of the reduction in saturation is lacking in most of the published freezeback and thaw-subsidence models A mathematical relation is derived to evaluate the undersaturation in the permafrost at the beginning of each freezeback process during several thaw-subsidence-freezeback cycles The undersaturation is related to the initial unfrozen water content and the permafrost compaction caused by thaw-subsidence. The mathematical analysis shows how the effects of the initial unfrozen water content and the permafrost compaction due to subsidence can be taken into account in determining the freezeback pressures. A relationship for the initial gas fraction is also developed which can be incorporated in the freezeback model Furthermore, upper limits are established for the permafrost compaction or thaw consolidation (volumetric strain) for various possible conditions that may be encountered

ICE ACCRETION, ICING RATE, ALTITUDE, MOUNTAINS, WIND FACTORS, TOPOGRAPHIC EFFECTS, CLOUD COVER, ICE FORMATION, MEASUREMENT, MEASURING INSTRUMENTS, FROST, UNITED STATES—NEW HAMPSHIRE—MOUNT WASHINGTON.
Atmospheric rime icing, resulting primarily from supercooled cloud droplet impaction on objects at the Earth's surface, was monitored and analyzed as a function of elevation on the west faces of Madonna Peak and Mount Mansfield in the Green Mountains, Vermont, and at the summit of Mount Washington, New Hampshire. Measurements were made of ice accretion rates on passive, manually operated collection baskets and automatic ice detectors Icing rates increase exponentially with elevation above about 800 m, with secondary controls of rate suggested by microtopographic relief exposure. The illustrated dependence of icing rate upon elevation is largely a function of New England wind and cloud regimes and differs from other selected mountainous locations. The relationships presented may help assess the magnitude of frozen moisture inputs to high-elevation mountain ecosystems

Ion-pairing reversed phase-high performance liquid chromatography methods were developed to determine tetrazene in water and soil. Determinations were achieved using an LC-18 column, a mobile phase of 2/3 v/v methanol-water containing 0 01 M 1-decane-sulfonic acid sodium salt, and a UV detector set at 280 nm. The pH of the mobile phase was adjusted to 3 with glacial acetic acid, which was optimal for separation of tetrazene from potential interferences by other explosives The retention time for tetrazene was 2.8 minutes A linear model with zero intercept was found to adequately describe the calibration data for concentration ranges of 6.1 to 122 micrograms/L for water samples and 0 204 to 40 8 micrograms/g for soil samples Tetrazene was found to be unstable in an aqueous medium at room temperature Concentrations decreased by 96-100% over 24 hours The rate of degradation was reduced significantly when solutions were maintained near 0 deg C.

ICE BOOMS, ICE PRESSURE, BUOYANCY, MODELS, MATHEMATICAL MODELS, COMPUTER PROGRAMS
A model of the ice restraint forces in a floating ice boom having rectangular cross-sectional boom units has been developed. By knowing the boom unit dimensions, buoyancy, and anchor characteristics, one can predict the boom's ability to restrain ice up to certain force levels. In operation, a boom unit tends to be upset by the force coupling that develops between ice forces and structure forces that generally are not collinear, the rectangular unit resists being overturned by virtue of its righting moment that increases with tilt, up to a limit The model is very important now that alternative materials to replace Douglas fir in the boom unit show more economic and technical promise For the first time an ice boom can be designed and engineered in a fully comprehensive manner. Ice restraint forces and righting moments are given in dimensionless terms, Fr* and M*, respectively, as $Fr^* = M^* 2p/G$ where p and G relate to the geometry of interaction between the boom unit, the ice and the structure Laboratory tests show that the model yields conservative values of ice restraint capacity, i e minimums for a prototype.

GROUND MOTION INDUCED BY AN ACOUSTIC PULSE, AND ITS WINTERTIME VARIATIONS.
Peck, L., International Symposium on Long Range Sound Propagation and Coupling into the Ground, 3rd, Jackson, MS, Mar. 28-30, 1988 Proceedings, Vol 2, National Center for Physical Acoustics, 1988, p.361-385, 7 refs.
43-3211
SOIL STRUCTURE, FROZEN GROUND PHYSICS, SEASONAL VARIATIONS, SNOW ACOUSTICS, FREEZE THAW CYCLES
Results are presented from a field program conducted in 1985/86 to investigate the changes in acoustically coupled ground motion due to the presence of snow and/or frozen ground The acoustic source was blank pistol fire. The addition of a 6-cm-deep layer of snow to bare ground causes a greater reduction in the amplitude of coupled ground motion than does tripling the snow depth from 6 cm to 18 cm The amplitude of coupled ground motion is 80-90% lower in hard frozen sand (sand frozen when saturated) than it is in dry unfrozen sand.

CLIMATE, WINTER, CLIMATIC FACTORS, AIR TEMPERATURE, SNOWFALL, SNOW DENSITY, SNOW DEPTH, VISIBILITY
Smart weapon systems rely on the capability of electro-optical sensors to locate targets embedded in winter backgrounds Field experiments on the operational effectiveness of such systems have been conducted at several locations in the eastern United States Key meteorological parameters summarized for evaluating these winter experiments are freezing temperatures, frequency of freeze-thaw cycles, snow cover properties, ceiling height, and visibility. This paper summarizes the climatic parameters for the U.S locations and compares them with the same parameters for sites in Europe. Relationships among the conditions at sites with winters of varying severity were examined so that a range in regional variations of the environment could be established

43-3214
STORMS, SYNOPTIC METEOROLOGY, CRYSTALS, VISIBILITY, SNOWFALL, STATISTICAL ANALYSIS
Winter battlefield weather forecasters must predict, in addition to routine weather parameters, E-O extinctions produced by snowfall During the SNOW ONE and ONE-A experiments at Ethan Allen Firing Range, VT, and SNOW TWO and THREE experiments at Camp Grayling, MI, snowfall and weather variables were measured during 38 storms This paper measures relationships between visibility, crystal habit, snowfall rates, synoptic patterns, and concurrent surface weather conditions during these SNOW experiments Coastal and lake effect local storms, and storms with columnar crystals,

were most often associated with reduced visibility. The relationships, tested statistically, may help forecasters better predict visibility-degrading snowfall conditions from synoptic patterns.

FREE AND FORCED CONVECTION HEAT TRANSFER IN WATER OVER A MELTING HORIZONTAL ICE SHEET.
Lunardini, V.J., Offshore and Arctic Engineering Seminar in Korea (post-OMAE), 1986. Proceedings, Korea Institute of Machinery and Metals, 1986, p.42-51, 24 refs.
43-3218
CONVECTION, HEAT TRANSFER, ICE SHEETS, ICE MELTING, ICE WATER INTERFACE.
Experiments were conducted to study the melting of a horizontal ice sheet with a flow of water above it. The experiments were conducted in a refrigerated flume 35 m long with a cross section of 1.2 x 1 2 m Water depth, temperature and velocity were varied as well as the temperature and initial surface profile of the ice sheet It was found that the heat transfer regimes consisted of forced turbulent flow at high Reynolds numbers with a transition to free convection heat transfer at lower Reynolds numbers There was no convincing evidence of a forced laminar regime The data were correlated for each of the regimes with the Reynolds number, or Gr/Re2 5, used to characterize the different kinds of heat transfer For very low water velocities over a horizontal ice sheet, the melting heat flux does not drop below the value for the free convection case as long as the water temperature exceeds 3 4 C This is significant since the free convection melting heat flux values far exceed those for laminar forced convection. At the low velocities the melting flux was not dependent upon the fluid temperature until the water temperature dropped below 3.4 C. The heat transfer was found to significantly exceed that of non-melting systems for the same flow regimes This was attributed to increased free stream turbulence, thermal instability due to the density maximum of water near 4 C, and the turbulent eddies associated with the generation of a wavy ice surface during the melting

SOME PECULIARITIES OF CREEP BEHAVIOR OF FROZEN SILT.
Fish, A.M., International Conference on Offshore Mechanics and Arctic Engineering, 8th, The Hague, Netherlands, Mar. 19-23, 1989. Proceedings. Vol.1, New York, American Society of Mechanical Engineers, 1989, p 721-724, 9 refs.
43-3222
FROZEN GROUND MECHANICS, FROZEN GROUND STRENGTH, SOIL CREEP, RHEOLOGY.
A study has been conducted on creep of frozen Fairbanks silt at a constant temperature of -2 C The entire creep process (primary, secondary and tertiary) is described by means of two rheological characteristics the time parameter lambda and the viscous failure strain C (the product of the minimum strain rate ém and the time of failure tm) A new method is presented for determining these parameters and the time to failure from a single linear plot in which each individual creep curve forms a straight line for both primary and tertiary creep. Secondary creep is considered to be a principal point on this line that predetermines the onset of failure The two parameters of the straight line (the intersection with the ordinate and the slope) define the magnitudes of the creep parameters. It was found that the shapes of the creep curves, and thus the creep parameters of frozen soil, strongly depend upon stress. Although theoretically the time parameter lambda can change from 0 to 1, only variations of lambda between 0 6 and 0 8 can be observed in short-term creep tests. It is also shown that parameter C does not retain a constant value The absolute value of C varies between 3 and 9%, and its variations with stress correspond to Maxwell's distribution The stress dependencies of the creep parameters developed in this paper make it possible to extrapolate the values obtained in short-term tests at high stresses for long-term creep at small stresses It is shown that the errors in creep strain calculations may be up to an order of magnitude if stress variations of creep parameters are ignored.

SEA ICE, CLOUDS (METEOROLOGY), ICE OPENINGS, BACKSCATTERING.
Remote sensing using an airborne infrared lidar has shown an unexpected capability to detect open leads (linear openings) in Arctic sea ice and their associated meteorology in winter Here we show that vertical profiles of backscattered radiation demonstrate strong returns from hydrometeor plumes originating from leads having a surface water temperature near -1.8 C. Recently refrozen leads are also distinguishable by the lidar backscatter from adjacent thicker, older sea ice Wide leads release enough energy to create buoyant plumes which penetrate the Arctic boundary layer inversion, transporting heat and moisture into the troposphere. These results show that the role of the Arctic as a global heat sink may need to be re-evaluated, and that lead plumes have a significant effect on the radiation budget

LIGHT TRANSMISSION, SNOWFALL, CLOUD CHAMBERS, SNOW OPTICS, TIME FACTOR.
Recent experimental and theoretical work has shown that falling snow can remove appreciable amounts of aerosols from obscurant clouds Field measurements of scavenging efficiencies for brass infrared screener averaged 30% for various snow crystal types Although increases in transmission and visibility resulting from snow scavenging of particles have been calculated and modeled, quantitative transmission measurements have not previously been conducted In order to perform such transmission measurements, a dynamic obscurant cloud chamber was constructed, through which an upward flow of controlled concentrations of brass screener was maintained. The chamber roof was opened to permit falling snowflakes to scavenge particles from the upward-moving obscurant cloud. A 633-nm He-Ne laser transmissometer system with silicon detectors monitored transmission through the chamber over a 1-m path length at two heights, 1 5 m apart. The difference in transmittance between the two levels is a measure of the amount of obscurant removed This experimental arrangement is able to measure the rate of scavenging upon electro-optical (E/O) transmission for precipitation rates as light as 0 08 g/sq m-s (0 18 mm hr water equivalent). Results verify earlier predictions of reduced effectiveness of infrared screeners during precipitation Field tests conducted during 1987-88 winter snowstorms using brass screener indicate that smoke particle scavenging can cause relative transmission increases of as much as 5-15% for each minute of exposure to snowfall

THEORIES, LIGHT TRANSMISSION, SNOWFALL, SNOW OPTICS, SNOWFLAKES.
Falling snow has been observed to collect screener materials with relatively good efficiency. This paper describes a semiempirical theory that predicts the rate at which falling snow diminishes screener concentration. The theory incorporates snowflake size distributions, suspended snow concentration, snowfall rate, optical transmission and meteorological parameters from the SNOW experiments These parameters are used, along with fall velocities from the work of O'Brien, Locatelli and Hobbs, and Mellor, to calculate the volume of air swept by falling snow, as a function of precipitation rate. Calculations are performed using this theory to predict screener scavenging rates, these indicate that very light snow falls are capable of halving smoke concentrations in hundreds of seconds

WET SNOW, SNOWFALL, TRANSMISSION, WAVE PROPAGATION, SNOW CRYSTAL STRUCTURE, PRECIPITATION (METEOROLOGY).
Examination of visible, infrared, and millimeter wave attenuation by falling snow during the coastal snowstorm of Dec 13-14, 1985 at Ft Hollis, ME, (SNOW IV) indicates a peculiarity in transmission that may have resulted from a snow/rain phase change During this period the type of precipitation changed, while the surface temperatures and the low-level vertical temperature profile fluctuated around 0 C Analyses of the transmission data over a portion of the snowstorm indicate that the infrared and visible attenuations were less than the millimeter-wave attenuation These results from SNOW IV are compared with those from moderate to heavy wet snowfalls during previous SNOW experiments. Previous results indicate that millimeter-wave radiation is normally attenuated less than visible or infrared radiation by moderate to heavy snowfall Meteorological data and observations of snow crystal habit in similar storms that occurred during all of the SNOW experiments are analyzed to examine transmission/precipitation-phase-change relationships

ROOFS, ENGINEERING, SNOW DEPTH, DRAINAGE, ICING, SNOW SLIDES, VENTILATION, DESIGN, SLOPES, THERMAL INSULATION, MELTWATER.
Roofs continue to be a problem in cold regions even though many excellent membrane and water-shedding systems are available. Dead flat roofs of any type are a design mistake In cold regions, membrane roofs should have a slope of 1/4 in./ft and should drain internally It is usually best to slope roofs by inclining the frame rather than using tapered insulation. Most water-shedding roofs drain to cold eaves and are thus subject to ice dam problems Such problems can be minimized by designing a "cold" ventilated roof, by insulating it well, by minimizing the overhang at the eaves, by increasing the roof slope and by providing an unobstructed slippery surface from which snow will slide However, when using slippery-surfaced systems, it is essential to provide a place for the snow to slide where it will not endanger people or damage property.

SEA ICE, FRAZIL ICE, ICE FORMATION, ICE GROWTH, ANTARCTICA—WEDDELL SEA.
Development and physical properties of sea ice in the central and eastern Weddell Sea are reported Major elements of the glaciological part of this study include continuous shipborne observations of sea-ice conditions and occasional helicopter reconnaissance flights, extensive measurements of snow and ice thicknesses at daily ice stations, and detailed analyses of sampled ice cores from each ice station. Textural investigations of the sampled ice revealed the dominance of frazil ice in the central Weddell Sea and the occurrence of an additional ice class, called platelet ice, together with the commonly known frazil and congelation ice in the coastal region of the eastern Weddell Sea These results, in combination with the visual ice observations, reveal two major mechanisms for sea-ice generation in the Antarctic, which were not sufficiently well accounted for in previous investigations. In the central Weddell Sea, a cycle of pancake-ice formation and its growth into consolidated floes seems to be the dominant process of the advancing sea-ice edge. In the coastal waters, the growing sea-ice cover consists, to a considerable degree, of ice platelets which are formed in the underlying water column in front of the ice-shelf edges Thus, congelation-ice growth, which is mainly controlled by atmospheric, thermodynamic forcing, seems to be of less importance in the central and southeastern Weddell Sea than, for example, in the Arctic Basin (Auth.)

FROZEN GROUND STRENGTH, FROZEN GROUND COMPRESSION, STRESS STRAIN DIAGRAMS, SOIL SURVEYS.
At the request of the Ballistic Missile Office, the US Army Engineer Waterways Experiment Station conducted surficial soil studies at four locations in the Malmstrom siting area in Montana. The purpose of this work was to support vehicle stability analyses associated with nuclear environment definitions for the Air Force's proposed Hard Mobile Launcher basing mode for a Small Intercontinental Ballistic Missile. This report documents the results of a study conducted by personnel of the US Army Cold Regions Research and Engineering Laboratory to characterize the frozen strengths of the soils encountered at four off-road sites. Presented are the results of static laboratory triaxial compression tests conducted chiefly on frozen undisturbed samples obtained from the upper 20 inches of each site. Multiple linear regression analyses of these data were conducted to identify relationships between the soil strength at each site and moisture content, density, temperature, and confining pressure.

FRAZIL ICE, SEA ICE, ICE PRESSURE, ICE DEFORMATION, ICE STRENGTH, STRAIN TESTS, ANTARCTICA—WEDDELL SEA.
Unconfined, uniaxial compression tests were performed on frazil sea ice samples collected in the Weddell Sea, Antarctica. The tests were done at a constant strain rate of 0.001/s and at temperatures of -3, -5 and -10 C. Data from the frazil ice tests were compared to results from tests done under the same conditions on transversely isotropic, columnar saline ice The approximate grain sizes of the frazil and columnar ice were 1 and 10 mm, respectively. The results of this work indicate that the frazil ice generally has a higher strength than columnar ice loaded in the plane of the sheet. Tests done by other researchers on freshwater, equiaxed polycrystalline ice have also shown the compressive strength to vary inversely with grain size. Application of this relationship to the sea ice tested indicates that the results from these freshwater ice tests at a strain rate of 0.001/s cannot be directly extended to explain the variation in compressive strength between the frazil and columnar sea ice. We speculate that this may be due to either (1) the influence that the increased ductility of sea ice has on the relationship between strength and grain size at 0.001/s, (2) that another microstructural parameter (e.g. the thickness of the ice between brine inclusions) may be the controlling factor in determining sea ice strength, or (3) that the dominant mechanisms driving deformation vary with each ice type. (Auth.)

METAL ICE FRICTION, ICE SOLID INTERFACE, MODELS, ICE STRENGTH, PROPELLERS, ICE THICKNESS.
Results of resistance and propulsion tests in level ice of a model of the Canadian R-class icebreaker for two values of the ice-hull friction factor are presented. The increase in ice resistance due to increased ice friction was significant for thick, weak ice, but negligible in thin and strong ice. Also, the increase in the friction factor had no detectable effect on propeller performance. Ice-propeller interaction had little effect on the model thrust coefficient, but a strong one on the torque coefficient and the average thrust deduction factor Comparison of the test results with full-scale trial data showed that ice-propeller interaction was more severe at model scale than at full scale for ice thickness up to about 0.7 m. For thicker ice, model and field data were in very good agreement.

SEA ICE, ICE THICKNESS, REMOTE SENSING, ELECTROMAGNETIC PROSPECTING.
Airborne remote measurement of sea ice thickness has been an elusive goal Many sensing systems have been tried and evaluated, including impulse radar All these systems were found to have limited capabilities at best. We are now evaluating airborne electromagnetic induction technology, which has long been used for mineral prospecting. Two field studies have been made in the Arctic. One study has been done using a relatively standard 7-m-long, 1/2-m-diameter helicopter-towed antenna, and one using a lighter down-sized antenna only 3 m long and 1/3 m in diameter. The airborne sea ice thickness sounding profiles obtained indicated that the thickness could be estimated but the resolution decreased as the ice became rough This decrease was associated with the large footprint of the system, which effectively smoothed out the sea ice relief However, it was found that the average ice thickness estimated by airborne electromagnetic sounding for a given flight track was in reasonable agreement with the average ice thickness determined by direct drill hole measurement. Examples of the ice thickness profiles obtained by airborne sounding and direct drill hole sounding are presented and compared Future development of the airborne system is discussed

SNOW THERMAL PROPERTIES, SNOW SURFACE TEMPERATURE, SNOW HEAT FLUX, SNOW AIR INTERFACE, SNOW COMPACTION, MODELS, SNOW COVER EFFECT, THERMAL EFFECTS.
This paper describes a Snow-Covered Terrain Thermal Model for predicting snow surface temperatures. To characterize snow-covered terrain, the model uses at most two distinct snow layers over a ground layer. The snow layers correspond to combinations of new snow, old snow, or compacted snow. Based on a transmission line theory analogy, the model calculates the characteristic impedance of the snow/ground combination. Using this characteristic impedance, the model calculates thermal inertia, a bulk volumetric property which relates the thermal response of the combination to time-varying heat input at the snow surface. The model uses standard meteorological observations to calculate the net heat transferred across the air/snow interface. This paper also presents comparisons of modeled snow surface temperature predictions with SNOW-II measured snow surface temperatures. The ALBE WS001 Weapon Systems Performance Tactical Decision Aid being developed by the US Army Atmospheric Sciences Laboratory will incorporate the Snow-Covered Terrain Thermal Model.

SANDS, ACOUSTIC MEASUREMENT, SEISMOLOGY, FROZEN GROUND PHYSICS, MILITARY OPERATION, COLD WEATHER OPERATION, SOIL TEMPERATURE.
The variation of acoustically induced ground motion with the freeze/thaw state of the ground was investigated in Feb.-Mar. 1986. A test chamber of the CRREL Frost Effects Research Facility containing a sand layer 0.7 m deep was outfitted with a movable roof and one movable wall. With the roof and wall in place, freezing of the sand was accomplished by blowing cold air into the chamber. Arrays of thermocouples indicated the depth to which the sand had frozen. Ground motion induced by blank fire from a .22 caliber pistol was monitored with geophones at depths of 0 to 45 cm in the sand. The results presented are for simulated winter or transitional ground conditions. (The sand, either dry (ambient moisture content) or saturated, was unfrozen, frozen or transitioning through freezing or thawing.) Potential effects of the freeze/thaw state of the ground on the performance of seismic sensor systems are discussed.

SNOWFALL, SNOW OPTICS, VISIBILITY, AEROSOLS, SMOKE GENERATORS, SNOW AIR INTERFACE, MODELS.
A model is developed to describe the scavenging of smoke particles by snow. The concentration of smoke produced by rapid burst grenades is approximated by an exponential decay and for this case the reduction in the obscuration time is derived in terms of the snow scavenging efficiency and the smoke decay rate. Measurements of the snow scavenging efficiency are used to predict the reduction in obscuration time in typical winter scenarios. Results show that snow scavenging may significantly reduce the effectiveness of grenade screening smokes.

SNOWFALL, SNOW OPTICS, VISIBILITY, AEROSOLS, SMOKE GENERATORS, LIGHT TRANSMISSION, SNOW AIR INTERFACE.
Preliminary studies have shown that smoke screens produced in falling snow can be reduced in effectiveness through scavenging processes. It is of interest therefore to determine the falling snow conditions under which scavenging processes may significantly increase the transmittance through a smoke screen and at the same time provide sufficient visibility for targets to be detected that would not be observed otherwise. The purpose of this paper is to present the results of a parametric study conducted to identify the significance of the various parameters that can affect smoke screen transmittance performance in falling snow. Results show that conditions often exist under which falling snow can play a major role in affecting smoke screen performance and the ranges at which targets can be detected.

SNOWFALL, ATMOSPHERIC ATTENUATION, MICROWAVES, SNOW AIR INTERFACE, ELECTROMAGNETIC PROPERTIES, RADIATION ABSORPTION, WET SNOW, PRECIPITATION (METEOROLOGY), TRANSMISSION, PROPAGATION, RADAR.
Comparisons of visible, infrared and millimeter wave attenuation by falling snow at SNOW IV, Hollis, Maine, indicate that as the snowstorm of Dec. 13-14, 1985 passed the site a snow crystal phase change (snow to rain) occurred. Mixed precipitation types were observed during this period. As the air mass approached the Hollis, Maine, area the near-surface upper air profile and surface temperatures averaged near 0 C. Analyses of the transmission data over a portion of the snowstorm show less infrared and visible attenuation than millimeter wave attenuation. These results are not consistent with those obtained for previous snow experiment storm analyses, i.e. normally millimeter wave radiation is attenuated less by moderate to heavy snowfalls than visible and infrared radiation. Data and analyses are presented in this paper, comparing concurrent snow crystal habit and meteorological data (both upper air and surface conditions) with transmission measurements to examine this phase change relationship.

SNOW COVER EFFECT, RADIO ECHO SOUNDINGS, MICROWAVES, BACKSCATTERING, RADAR ECHOES, SNOW COVER STRUCTURE, WET SNOW, SNOW AIR INTERFACE, SNOW SURVEYS.
A series of experiments was performed to determine radar scattering amplitude variations in dry and wet snow. Two frequency modulated continuous wave (FMCW) radars were used in this investigation. These radars were mounted side by side on a gantry approximately 5 m above the snow field and with a depression angle of 80 degrees. The dimensions of the snow field were 30 x 15 m. The two radar systems could be scanned across the 15-m width of the snow field automatically and moved lengthwise by hand. Backscatter measurements of dry and wet snow were made to determine the variation of radar backscatter cross section as a function of liquid water content. Backscatter measurements were also made after insertion of an aluminum plate into the snow cover at various depths to determine whether there was any variation in the 35-GHz backscatter due to the reduction of volume scattering.

SLUDGES, FREEZING, WASTE TREATMENT, THERMAL CONDUCTIVITY, FREEZE THAW CYCLES, WATER TREATMENT.
The time needed to naturally thaw sludge in a freezing bed depends on the thermal conductivity of the settled sludge layer deposited on the thawing sludge. The objective of this research is to measure the thermal conductivity of this layer. Six different sludges are tested, and it is found that thermal conductivity decreases with increasing solids concentration. At normal solids concentrations, the thermal conductivity is found to be about .0005 calories/cm/sec/deg C.

Snow accumulation and ablation in the frost range of the Himalayan Mountains accounts for a considerable portion of winter and spring streamflow from the Upper Yamuna River Basin. To quantify this contribution, the Central Water Commission (CWC) of India has been collecting hydrometeorological data and conducting snow surveys in the Sundli Nala Watershed, a small tributary of the Pabar River that drains into the Upper Yamuna River system. Hydrometeorological data from the Sundli Nala watershed, from Dec. to Mar. for the years 1984-1988, were input into the two snowmelt options of the Streamflow Synthesis and Reservoir Regulation (SSARR) model to determine the relationship of snowmelt runoff to observed discharge. For this period, the observed streamflow data indicated that snowmelt did not contribute significantly to the overall yearly discharge. Losses due to sublimation and evapotranspiration decrease the effect of snowmelt runoff. A large portion of the remaining available meltwater infiltrates to baseflow. This study provides for the first time a better understanding of the snowmelt dynamics in this region of the world. The data base being developed in the Sundli Nala can be used to calibrate the hydrologic forecasting model being developed by the Indian CWC to manage the water resources for the Upper Yamuna River.

SNOW CRYSTAL GROWTH, SNOW SURFACE TEMPERATURE, SOLAR RADIATION, DEPTH HOAR, RADIATION ABSORPTION, SNOW COVER STRUCTURE.
The temperature field is derived for a sinusoidally varying surface temperature with varying solar radiation penetration. The growth rates of snow crystals are calculated to explain the rapidly growing layers of faceted crystals (i.e. depth hoar) that form just below the surface at high altitudes and in polar snow. The solutions also show that a layer of wet snow can exist just below the surface even on days when the surface temperature remains sub-freezing.

THEORIES, HEAT TRANSFER, THERMAL CONDUCTIVITY, FREEZING, CONDUCTION.
Freezing of water or melting of ice are phenomena that underlie many important scientific and engineering studies of cold regions Mathematical methods of treating these phase-change heat transfer problems are critical to understanding and dealing with the problems that freeze-thaw causes. This review deals only with systems for which conduction is the basic heat transfer mode or for which the solutions can be obtained in terms of conduction-like problems While convection is an important heat transfer mode, it can often be neglected without significant error Exact solutions are noted where available, but since these are quite limited for phase-change problems, references to approximate solutions are listed in some detail The approximate methods are the perturbation method, which leads to quasi-stationary techniques, and heat balance integral method.

HEAT TRANSFER, WATER FLOW, ICE WATER INTERFACE, FLOW RATE, EXPERIMENTATION, ICE MELTING, THERMISTORS, ACCURACY.
Experiments have shown that heat transfer is greater for water flowing over ice than for water flowing over flat plates without ice. The mechanisms which contribute to this increased heat transfer are not completely understood One possible cause is the density inversion of water at 4 C. In order to investigate this effect on heat transfer, a small open-channel flume was designed so th xperiments could be conducted with the flume bed at temperatures slightly above 0 C with no ice present For fully developed turbulent flow (Reynolds numbers greater than 20,000), heat transfer correlations initially showed higher heat transfer rates than those obtained from experiments in flume with large aspect ratios Velocity profile corrections, to account for the aspect ratio, were applied to the data, which then agreed more closely with the results from wider flumes The results indicate that the density inversion of water could account for most of the increased turbulent heat transfer rate observed between melting and nonmelting systems

ROOF DESIGN IN COLD REGIONS.
Tobiasson, W., Corps of Engineers Structural Engineering Conference, St. Louis, Missouri, June 27-July 1, 1988, Vol.2. Washington, D.C., Directorate of Engineering and Construction, 1989, p.1029-1037.
43-4412
ROOFS, DESIGN, CONDENSATION, DRAINAGE, SNOW SLIDES.
Roofs continue to be a problem in cold regions even though many excellent membrane and water-shedding systems are available. Compact (tightly built) systems suffer far fewer condensation problems than do framed roofing systems that tend to leak much more air Air leakage, not vapor diffusion, is the cause of most condensation problems. Dead flat roofs of any type are a design mistake. In cold regions, membrane roofs should have a slope of 1/4 in /ft and should drain internally. It is usually best to slope all roofs by inclining the frame rather than using tapered insulation Most water-shedding roofs drain to cold eaves and are thus subject to ice dam problems Such problems can be minimized by designing a "cold" ventilated roof, by insulating it well, by minimizing the overhang at the eaves, by increasing the roof slope and by providing an unobstructed slippery surface from which snow will slide However, when using slippery-surfaced systems, it is essential to provide a place for the snow to slide where it will not endanger people or damage property.

SEA ICE, MICROWAVES, ICE PHYSICS, RADIOMETRY, ICE COVER, ANTARCTICA—WEDDELL SEA.

The microwave radiative characteristics of the Weddell Sea ice were investigated from the R/V *Polarstern* during winter 1986 through, approximately, 3000 km of ice, from the marginal ice zone to the coastal region and back. Radiometer measurements at 6, 10, 18, 37, and 90 GHz in vertical and horizontal polarizations were complemented by visual and video observations and measurements, at 60 station, of ice physical characteristics. Two distinct types of ice cover were observed in the marginal ice zone, small pancakes evenly distributed during the southbound leg, and ice bands with wet pancakes during the northbound leg Other ice types observed were first-year ice covered by varying thicknesses and states of snow cover, and new and young ice found mainly in leads and polynyas Analysis of the data shows a large variability in the multispectral microwave emissivities of these ice types, especially at 90 GHz Overall, however, at 18 GHz and lower frequencies, the emissivities of thick and cold first-year ice are relatively stable with standard deviations of about 0 02 At the marginal ice zone, the emissivity of the ice cover is a lot less predictable and could cause large uncertainties in ice concentration estimates. The use of the 90-GHz channel in combination with a lower-frequency channel shows strong potential for more detailed characterization of the ice cover including the identification of various forms of new ice and the quantification of varying snow cover and roughness (Auth. mod.)

SNOW TEMPERATURE, SURFACE TEMPERATURE, SNOW COMPACTION, HEAT BALANCE, SNOW COVER, SNOW THERMAL PROPERTIES, LATENT HEAT, MATHEMATICAL MODELS, TEMPERATURE VARIATIONS.

This paper describes a simplified model for predicting the surface temperature of a snow cover By separate application of the model to natural snow and snow compacted by a moving vehicle, it is possible to determine the thermal contrast between the two surfaces. Inputs to the model utilize routine meteorological observations and certain initial characteristics of the snow cover and underlying ground. Established energy transfer equations are used to describe the heat balance in the snow cover and are solved by the method of finite differences, wherein the snow is divided into layers, and the temperature structure is evolved over time in finite time increments. While the methodology of more elaborate energy and mass balance models is closely followed, snow cover in the current model is described in only three layers, providing a closed-form mathematical solution that requires little computer time

43-4636
LIGHT (VISIBLE RADIATION), SNOW COVER EFFECT, WIND VELOCITY, AIR TEMPERATURE, HUMIDITY, TURBULENT FLOW, SPECTRA, CLIMATIC FACTORS, TEMPERATURE VARIATIONS, SNOW AIR INTERFACE, ANALYSIS (MATHEMATICS), MEASURING INSTRUMENTS.

At SNOW-TWO fast responding instruments were used to measure the turbulent fluctuations in the wind speed, temperature, and humidity in the atmospheric surface layer over snow. Two crossed hot-film anemometers yielded the turbulent longitudinal (u) and vertical (w) components of the wind vector. A fine-wire platinum resistance thermometer and a Lyman-alpha hygrometer gave the turbulent temperature (t) and humidity (q) fluctuations, respectively Spectra of u and w have inertial subranges that are typical of velocity spectra measured in the atmospheric surface layer. The t and q spectra and the t-q cospectra all have distinct inertial-convective subranges These are rarely found in simultaneous t and q spectra because the measurements are difficult Consequently, this seems to be a high quality set of temperature and humidity spectra Diverse u, w, t, and q spectra and the t-q cospectra collapse into universal forms when nondimensionalized with appropriate dissipation rates for velocity and the individual scalar and when the turbulence frequency is properly scaled From the t and q spectra and the t-q cospectra the first refractive index spectra for visible and millimeter wavelength light ever measured over snow are computed

The U S Army Cold Regions Research and Engineering Laboratory (CRREL), with technical assistance from the Dartmouth College Physics Department, has developed a radio-frequency soil moisture sensor that measures the electrical resistance and capacities of a soil sample and converts the readings to volumetric water content The solid-state sensor is mechanically rigid, small, and lightweight It can obtain soil moisture and frost data in near real time and can be interfaced with communications systems for remote interrogation. The soil moisture sensor was laboratory tested and its accuracy was calculated at 3% The data also indicated that the sensor readings were independent of soil type and density. The next step for fielding the sensor was to test it under real winter battlefield conditions

Measurements were made of the angular distribution of power scattered from a diffuse reflector illuminated by a laser beam. Probability density functions of normalized signal strength for near normal scattering were also compiled Experiments were made on dry, wet and ice-covered planar targets The results show that the diffuse component of scattered power from a wet or ice-covered target is reduced by an amount proportional to the inverse of the square of the index of refraction of the layer—a result consistent with simple theory. Backscattered radiation from a water or ice-covered target is enhanced over that from a dry target in the region about a cone centered on the line normal to the target. The aperture of the cone was greater for the ice-coated target. The difference may be due to small air bubbles in the ice Because the surfaces of many military targets behave as diffuse reflectors, a simple calculation was made showing the effects of water and ice on laser rangefinder performance. A combination of theoretical and empirical results shows that the return from water and ice-coated targets will be stronger than that from dry targets in the near-zero-degree backscatter direction As the angle of incidence increases to about 20 deg the coated targets will return almost a factor of two less power than the dry target.

ICING, ICE ACCRETION, ICE DETECTION, ICING RATE, PRECIPITATION (METEOROLOGY), SYNOPTIC METEOROLOGY.
The atmospheric icing climatologies of two New England mountaintops with different elevations are compared. Mount Mansfield in northern Vermont and Mount Washington in New Hampshire. Atmospheric icing, as measured with Rosemount ice detectors, is twice as frequent on Mount Washington with about 12 to 20 times greater intensities and 25 to 50 times more accretion as on Mount Mansfield Most of Mount Mansfield icing events are of low intensity, with periods between icing events averaging 35 to 45 hours on both peaks. Return intervals of ice events by length, intensity, and accretion amount are tabulated. Approximately one-half of all severe icing on the two peaks occurs during and immediately after cold front passages. Icing is most intense when lows are about 450 km to the east and high pressure centers are more than about 450 km distant Prolonged accretion periods occur when coastal and inland storms merge or follow closely.

BUILDINGS, VENTILATION, AIR FLOW, AIR LEAKAGE, MEASUREMENT, INDOOR CLIMATES, MILITARY FACILITIES, WIND FACTORS, COLD WEATHER TESTS, SAMPLING.
The air change rates of five buildings (four barracks and one vehicle maintenance garage) were measured, using the tracer gas dilution technique. The median air change rate for all zones measured was close to 0 5 air change per hour (ACH) The range of air change rates was between 0 05 and 1.75 ACH. Most of this range was attributable to variation in the effective ess of the buildings' ventilation systems. Outdoor temperatures were between -15 and -20 deg C (5 and -4 deg F). The wind was calm for all but one barracks measurement. The maintenance facility, a large single-zone building, permitted good results from the tracer gas technique The barracks, multizone buildings, varied in the ease with which the tracer gas technique could be applied. The barracks ventilation systems were in operation when air cha ge measurements were made These systems incorporated air-to-air heat exchangers with intakes and exhausts mounted in rooftop penthouses

Hazardous waste treatment and disposal is one of the major environmenal concerns In the United States alone, about 50 million tons of hazardous waste is produced each year Clay liners and clay caps are commonly recommended and used for containing and covering hazardous and toxic waste as well as solid municipal waste The purpose of the liners is to impede the flow of contaminants to ground water and to sorb the chemicals, thus protecting the ground water from contamination The purpose of the caps is to prevent water infiltration into the contaminated soil and the release of toxic gases The objective of this study is to investigate the effect of freeze-thaw cycling on the permeability and structure of compacted clay soils used as caps or barriers for containing hazardous waste materials.

ALL TERRAIN VEHICLES, PERMAFROST, ENVIRONMENTAL IMPACT, COUNTERMEASURES, SOIL STRUCTURE, DAMAGE, PROTECTION, UNITED STATES—ALASKA.
Use of off-road vehicles in permafrost-affected terrain of Alaska has increased sharply over the past two decades Until the early 1960s, most ORV use was by industry or government, which employed heavy vehicles such as industrial tractors and tracked carriers Smaller, commerc ORVs became available in the 1960s, with the variety and number in use rapidly increasing. Wheeled and tracked ORVs, many used exclusively for recreation or subsistence harvesting by individuals, are now ubiquitous in Alaska This increased use has led to concern over the cumulative effects of such vehicles on vegetation, soils, and environmental variables including off-site values Factors affecting impact and subsequent restoration include specific environmental setting, vegetation, presence and ice content of permafrost, microtopography, vehicle design, weight, and ground pressure, traffic frequency, season of traffic, and individual operator practices Approaches for mitigating adverse effects of ORVs include regulation and zoning, terrain analysis and sensitivity mapping, route selection, surface protection, and operator training

Unfrozen water content as a function of temperature was measured in the laboratory using pulsed nuclear magnetic

resonance (PNMR) for 16 undisturbed frozen cores acquired from the Northwest Alaska Pipeline Company Chilled Gas Test Facility The cores were then remolded and brought to their original densities and water contents, and unfrozen water content as a function of temperature was again measured over three warming and cooling cycles It was found that differences in unfrozen water contents between the undisturbed warming and cooling curves depended upon relative degree of saturation and its effect on soil structure Only slight changes occurred during the three warming curves of the remolded soil, indicating minor freezing and thawing consequences on the soil structure

Sonar echo amplitude data have been collected at kilohertz carrier frequencies from the underside of different sea ice types Histograms of normal incidence echo amplitudes were formed from over 90 samples of each ice type Experiments were conducted on saline ice grown in an outdoor pond under relatively controlled conditions at CRREL and on the sea ice cover in the Fram Strait Analysis shows marked variations (about a factor of 5) in the magnitude of the coherent reflection coefficients as congelation ice at the bottom of an ice sheet evolves from a growing dendritic interface to an ablating, thermally altered interface Larger differences (about a factor of 10) are observed between growing congelation ice and slush ice, used to simulate frazil Transmission measurements through thin ice indicate that important attenuation processes are associated with basal dendritic structure resulting in a high attenuation regime (5 dB/cm at 200 kHz) in roughly the bottom 10 cm of growing sea ice and low attenuation regime (0 1 dB/cm) consisting of the overlying ice These results indicate that important variations in acoustic regime exist in areas where different ice types are intermingled

ICE MECHANICS, DRIFT, ICE NAVIGATION, MILITARY OPERATION, ICE PHYSICS, ICE CRYSTAL STRUCTURE, GRAIN SIZE, SEA ICE, ICE FORECASTING, MATHEMATICAL MODELS, TESTS.
The approach to developing mechanistically-based predictive models discussed in this paper is by no means trivial Ideally, a stepwise approach should be taken This would first involve the determination of the micromechanical processes involved in the deformation of the ice We would begin by studying these processes in a relatively simple material, freshwater, equiaxed ice, and progress to the most complicated ice type, aligned, columnar sea ice Once the phenomena of deformation were well understood over the range of loading and environmental conditions, the attention would focus towards the development of a mathematical, mechanistically-based model of the ice behavior The model would require input about the loading scenario (e g. surfacing submarine sail, ship travelling through the ice sheet, convergence of ice sheets), the appropriate environmental conditions, and the corresponding physical properties of the ice The predictive model would first be verified using scale-model test results and, once the accuracy of the model was proven, application would be extended to field conditions The capabilities of the model to predict loads in the field would be evaluated by comparison of the predicted to actual stress measurements determined during field experiments

POLYNYAS, HEAT TRANSFER, MOISTURE TRANSFER, AIR WATER INTERACTIONS, PACK ICE, CONVECTION, HEAT FLUX, AIRPLANES, NAVIGATION, TEMPERATURE EFFECTS, HUMIDITY.
Wintertime leads and polynyas are ternfic sources of heat and moisture. Described here are some of the environmental effects of these large heat and moisture fluxes For example, the air near the water surface is supersaturated, the resulting fog can limit visibility, rime ice forms prolifically on any downwind structure, and for large leads and polynyas, massive plumes of condensate particles can alter the radiation budget of the downwind surface Convectively driven turbulence fostered by the large fluxes enhances the vertical mixing For large open water areas, the convection may be intense enough to jostle low-flying aircraft

44-3295
SOIL FREEZING, FROST HEAVE, ICE GROWTH, SOIL WATER MIGRATION, ANALYSIS (MATHEMATICS), GROUND ICE.
The steady growth of a segregated ice layer in freezing soils is studied mathematically under three distinct and representative hypotheses on the properties of the frozen fringe, chosen among many such hypotheses reported in the literature. It was found that the condition of steady growth is determined by the temperature gradient in the unfrozen part of the soil at the 0 (C) isotherm and the temperature gradient in the ice layer at the interface between the ice layer and the frozen fringe in all three hypothetical models studied The transport equation of water in the frozen fringe was found to be the major factor determining the condition of steady growth This is the first of a two-part presentation on the subject, the experimental aspects of the study will be presented in a second paper

Rand, J.H.
44-3541
ICE DETECTION, FRAZIL ICE, UNDERWATER ICE, WATER INTAKES, MEASURING INSTRUMENTS, WATER FLOW, FLOW MEASUREMENT, ELECTRICAL RESISTIVITY, HYDRAULIC STRUCTURES, DESIGN, FLOW RATE, REMOTE SENSING.
A new underwater frazil-ice detector developed at USACRREL is described The detector can operate remotely and independently It can automatically start de-icing procedures and alert operators to the presence of frazil The detector operates by measuring the flow rate through a small intake screen upon which frazil ice can accumulate The intake screen is, in effect, a miniature trash rack that will freeze up much sooner than the actual trash rack. The detector was tested in the laboratory and in the field with good results, it is economical, and is built largely with off-the-shelf items

SEA ICE, ICE COVER THICKNESS, RADAR ECHOES, SNOW DEPTH, MEASUREMENT, SNOW COVER, ICE ELECTRICAL PROPERTIES, DIELECTRIC PROPERTIES, ELECTROMAGNETIC WAVES, ICE FLOES, REFLECTIVITY.
Two second-year sea ice floes were probed using "impulse" radar sounding and direct drilling methods The resulting two-way time-of-flight of the impulse radar EM wavelet, traveling from the surface to the ice "bottom" and back to the surface, was compared with snow and ice thickness data obtained from a drill hole From this comparison, simple relationships are presented that provide an estimate of the thickness of sea ice, between about 1 and 8 m thick, with or without a snow cover The data revealed that the apparent dielectric constant of the sea ice decreased with increasing ice thickness, from a value of about 7 for ice 1 m thick, to about 3.5 for ice 6 m thick.

DISCONTINUOUS PERMAFROST, SUSPENDED SEDIMENTS, SNOWMELT, UNITED STATES—ALASKA—FAIRBANKS.
For the 1985 snowmelt runoff season, discharge, specific conductance and total suspended solids are compared on Glenn Creek, located near Fairbanks, AK, and underlain by permafrost Discharge was measured continuously, and specific conductance and total suspended solids concentration were measured at 2-hour intervals over the entire snowmelt season Specific conductance decreased rapidly following initial streamflow and after 6 days reached a minimum, which held nearly constant for the remainder of the snowmelt runoff season Suspended solids concentration was less than 50 mg/l over the entire rising limb of the seasonal snowmelt hydrograph and, with the exception of a small spike of 166 mg/l on the day of the peak discharge, remained low until the third day following the peak discharge At that time, although discharge had dropped to 33% of the peak flow, a rapid flushing of the channel occurred, with solids concentration rising from less than 50 mg/l to 1337 mg/l in a single day The flushing period lasted four days, during which time diurnal fluctuations in concentration were well defined, with peak values decreasing daily until on the fifth day the peak concentration was under 200 mg/l By using water temperature data collected in 1983, the diurnal fluctuations in solids concentration and water temperature are shown to be consistent.

The Transantarctic Mountains of East Antarctica provide a new milieu for retrieval of ice-core records. Here are reported the initial findings from the first of these records, the Dominion Range ice-core record. Sites such as the Dominion Range are valuable for the recovery of records detailing climate change, volcanic activity, and changes in the chemistry of the atmosphere. The unique geographic location of this site and a relatively low accumulation rate combine to provide a relatively long record of change for this potentially sensitive climatic region As such, information concerning the site and general core characteristics are presented, including ice surface, ice thickness, bore-hole temperature, mean annual net accumulation, crystal size, crystal fabric, oxygen-isotope composition, and examples of ice chemistry and isotopic composition of trapped gases. SLOPES, WATER FLOW, SURFACE DRAINAGE, WATER TREATMENT, GRASSES, WASTE TREATMENT, LAMINAR FLOW, ANALYSIS (MATHEMATICS), SLOPE ORIENTATION, MODELS, FLOW RATE, HYDRAULICS, SURFACE PROPERTIES.
The overland flow system involves applying wastewater to the upper elevation of a carefully prepared grassed slope The wastewater flows down the surface of the slope through the grass, it is collected at the bottom of the slope and may be discharged to a stream or, perhaps, to a rapid infiltration site. While flowing down the slope, some loss in volume occurs due to evapotranspiration and infiltration, although these losses are usually small due to the short length of slope employed and the impervious nature of soils which favor this method of treatment The hydraulics of shallow flow down wide grassed channels has received some attention when the flow regime is turbulent The U.S Environmental Protection Agency sponsored Storm Management Model uses the Manning equation to describe shallow overland flow, but this approach is suspect when the flow occurs in the laminar regime. Experimental measurements by the Corps of Engineers show that overland flow occurs in the laminar regime with the Reynolds number less than 226 based on depth of flow, which may be no more than 0 01 m, and less than 20 based on grass diameter, taken as 0 001 m A model of the hydraulic behavior of wastewater as it flows down the slope of an overland flow system is developed

VEHICLE WHEELS, COLD WEATHER PERFORMANCE, TRACTION, AIRCRAFT LANDING AREAS, TIRES, DESIGN, RUBBER ICE FRICTION, VEHICLES.
A brief study was performed to investigate the suitability of service vehicles equipped with a unique omni-directional wheel operating aboard aircraft carriers in northern latitudes, where ice and snow on the flight deck is not uncommon This study addressed the comparative performance of the omni-directional wheel, a bias-ply highway tire as used on current Navy MD-3 aircraft tow vehicles, a typical non-pneumatic forklift truck tire, and an automotive radial-ply all-season tire. The tires were tested for driving traction levels on prepared ice, hard-packed snow, and fresh shallow snow. In general, the omni-directional wheel showed superior performance to the forklift truck tire and the bias-ply highway tire. The radial all-season tire, however, outperforms the omni-directional wheel in traction on slippery surfaces The omni-directional wheel was found to be well-behaved during traction testing and shows promise for operation on winter surfaces. Recommendations are provided that might further improve omni-directional wheel performance on snow and ice.

Sludges are easily separated into solid and liquid fractions by freezing and thawing. Water and wastewater treatment plants in cold climate areas can take advantage of this process by freezing and thawing sludge during the winter and summer seasons in a new unit operation called a sludge freezing bed. The purpose of this study was to measure the dewaterability of freeze-thaw conditioned sludges and measure how well they drain at various depths Typical water treatment, anaerobically digested and aerobically digested sludges were tested. The main conclusion of this study was that up to 2.0 m of these sludges could be applied to a freezing bed

Nondestructive measurement and analysis of moisture absorption and migration in polyurethane insulation material subjected to a prolonged water exposure were performed using a dual-energy gamma-ray device The parameters influencing moisture absorption by a given type of insulation were found to include (a) the insulation density, (b) the insulation thickness, (c) the presence of a vapor barrier or jacket, (d) the type of insulation jacket and (e) the time of exposure to moisture With time, the variation of any of these factors would cause a change in moisture gradient across the insulation thickness For this investigation, the effects of the insulation thickness, exposure time to moisture and the presence of a vapor jacket were evaluated and quantified for polyurethane insulation. Also, a preliminary test was performed with a frozen polystyrene breadboard to evaluate the measurement accuracy by the gamma-ray method in determining nondestructively the insulation moisture content and profile.

The purpose of these studies was to compare PVC, PTFE, SS 304 and SS 316 well casings for monitoring metals and organic compounds in well water Review of the literature revealed that these commonly used well casing materials had not been studied concurrently. These studies used well casings manufactured specifically for ground water monitoring and water obtained from a 76-m-deep domestic well in Weathersfield, VT. No attempt was made to maintain dissolved oxygen, carbon dioxide, temperature, pH or redox potential levels representative of ground water, and this undoubtedly had an effect on analyte speciation Because of these factors, the static laboratory conditions, and exposure of freshly cut surfaces on the well casings, the results will not quantitatively predict what might occur under field conditions. Nevertheless, since spiked analytes varied relative to the control by more than 10% after only 8 hours of exposure, and leaching experiments showed analyte concentrations greater than 5% of the present EPA drinking water quality standards, it is the authors' opinion that there is a basis for concern, especially for shallow wells with a slow recharge.

TRACTORS, COLD WEATHER PERFORMANCE, MECHANICAL TESTS, TRACKED VEHICLES, TRACTION, SNOW COMPACTION, LOGISTICS, SURFACE PROPERTIES
The newly marketed Caterpillar agriculture tractor, called the Challenger 65, was evaluated in snow covered terrain to determine its potential as a prime mover for operations in Antarctica. Three vehicle configurations were tested with the standard belt, with the standard belt carrying studs, and with a specially constructed wide track to improve flotation Rolling resistance and drawbar pull were measured on ice, hard packed snow and in deep, relatively soft snow General handling and ride were evaluated qualitatively It was found that the tractor is rugged, well constructed, is easy to operate and has the normal ride quality associated with vehicles having short wheelbases. The results of the evaluation are very encouraging and led to the conclusion that the machine should receive serious consideration for application in the Antarctic for transport problems that may soon appear that involve the use of sled trains.

Field observations made during the Mar. 1988 BEPERS (Bothnian Experiment in Preparation for ERS-1) remote sensing experiment allow limited characterizations of the temperature, salinity, structure and physical property profiles of the different types of brackish ice that forms in the Bay of Bothnia. During the sampling period, undeformed fast ice thicknesses varied from 40 to 60 cm in the bay to the east of Umeå, Sweden, with somewhat thicker ice occurring in the northernmost, nearly fresh, portions of the bay. Ice salinities were generally less than 1 per mill and the ice temperatures were usually higher than -3.5 C. Although most of the ice examined was simple columnar congelation ice, a variety of c-axis fabrics were observed, including random, vertical and horizontal (random and aligned) orientations. There was no obvious pattern to the geographic arrangement of these fabrics. Brine volume profiles are used to estimate representative ice property profiles. Comparisons are made between the properties of ice from the Bay of Bothnia and those of more typical sea ice from the Arctic Ocean at similar ice thicknesses. A variety of structural factors contributing to specific areas of higher radar return in the bay are also discussed.

SEA ICE DISTRIBUTION, ICE COVER THICKNESS, SNOW COVER EFFECT, PACK ICE, ICE DENSITY, LOADS (FORCES), SNOW DEPTH, SURFACE PROPERTIES, MODELS, ANTARCTICA—WEDDELL SEA.
In model simulations of seasonal pack ice growth in both polar regions (e.g., Maykut and Untersteiner 1971, Semtner 1976, Hibler 1979), the snow cover is treated essentially as an insulating layer that inhibits ice growth because of its lower conductivity than pack ice. In the Winter Weddell Sea Project-86, on the cruise of the West German vessel *Polarstern*, several factors were found that negate this behavior predicted by the models. Relatively thin sea ice (40-60 cm) forms initially in Antarctica during the ice edge advance. Surface roughness features act as snow fences and, under the action of relatively high winds (40 knots in frequent storms), the snow cover is shifted around over periods of hours to a few days. Wind-blown snowdrifts build to 1 m or greater thicknesses in a few hours. Snow of this depth can easily depress the existing ice cover surface below sea level, and flooding of the snow cover followed by sub-freezing temperatures leads to a superimposed snow-ice layer on the top surface. The remaining snow cover is redistributed in the next storm within a few days to continue the process. Two sets of measurements showed the general nature of this process. The first, a series of 4000 ice thickness measurements, showed about 17% of the holes drilled had the ice surface at or below sea level at the time of the measurement, sometimes accompanied by slush pools on the surface. Sea ice cores analyzed for oxygen isotopes independently confirmed that the top 10-20 cm of the intact cores was derived from seawater-flooded snow in several cases. It was estimated that the snow cover increases mean sea ice thickness in Antarctica by 20-30% (10-20 cm) over model predictions by this flooding-infiltration-refreezing ice growth mechanism. (Auth.)

SEA ICE, ICE PHYSICS, ICE CRYSTAL STRUCTURE, ICE FORMATION, METEOROLOGICAL FACTORS, OCEANOGRAPHY, GRAIN SIZE, PHOTOGRAPHY, COMPUTER APPLICATIONS, ANTARCTICA—WEDDELL SEA.
The physical and biological properties of sea ice are governed to a large extent by its texture. The texture of a sea-ice cover, on the other hand, is controlled by the meteorological and oceanographic conditions under which growth took place. Textural analysis can thus provide insight into the formation and development of sea ice, and at the same time it represents the central link between the evolution and the properties of an ice cover. Studies of sea-ice thin sections taken from the Weddell Sea have generally relied on subjective, qualitative evaluations of texture. Aside from c-axis distributions determined with a Rigsby stage, textural characteristics such as grain size or shape are usually not evaluated because the procedure is time-consuming (as is determination of c-axis distribution) or even impossible. The complex texture of sea ice—with intertwining grains of diverse shapes, numerous inclusions of brine and gases between and within grains, and sub-grain boundaries—often defies common notions of "grains," "grain size," etc. The introduction of automatic texture analysis might be helpful in overcoming the difficulties outlined above. The method allows quantification of textures, permitting direct comparison between large numbers of samples, which is difficult or impossible to achieve through qualitative examination. Automatic texture analysis also overcomes personal bias inherent in conventional methods by collecting and considering all the information (i.e., all gray values) available for one thin section. (Auth.)

SEA ICE, ICE STRUCTURE, ICE COMPOSITION, ICE CORES, CHEMICAL ANALYSIS, ICE SALINITY, SEA WATER.
Detailed chemical and structural profiles were determined for 10 first-year and 10 multiyear ice cores collected in the southern Beaufort Sea during Apr. and May 1986 and 1987. Concentrations of Cl, Br and SO4 were determined with a Dionex ion chromatograph using standard techniques. An eluent of 1.125 mM sodium bicarbonate and 3.5 mM of sodium carbonate was used. Concentrations of Na, Ca, K and Mg were determined by atomic absorption spectrophotometry using standard techniques (Perkin-Elmer 1976). Nutrient analyses (PO4, SiO4, NO3, NO2 and NH4) were conducted following the techniques of Glibert and Loder (1977) on the 1986 samples and those of Whitledge et al. (1981) on the 1987 samples. Chlorophyll a analyses were conducted using the techniques of Strickland and Parsons (1972). Detailed descriptions of the analysis and blank studies can be found in Meese (1988). The objectives of the study included determination of what, if any, chemical and/or physical trends exist in sea ice in the southern Beaufort Sea and to determine the extent of chemical fractionation in the ice.

ICE SPECTROSCOPY, ICE OPTICS, LIGHT TRANSMISSION, REFLECTION, WAVE PROPAGATION, ABSORPTION, ICE THERMAL PROPERTIES, REMOTE SENSING, GEOPHYSICAL SURVEYS, THERMODYNAMICS, ICE COMPOSITION, ICE COVER THICKNESS, MODELS, SNOW DEPTH.
The reflection, absorption, and transmission of light at visible and near-infrared wavelengths is important for a number of geophysical problems. Light reflection is an important parameter in remote sensing studies, absorption is significant to ice thermodynamics, and transmission strongly influences biological activity in and under the ice. The focus on this paper is on the spectral (wavelength region 400-1000 nm) reflection and transmission of light by spatially inhomogeneous sea ice covers investigated using a two-stream, multilayer radiative transfer model. The model is computationally simple and utilizes available experimental data on the optical properties of sea ice. The ice cover is characterized as a layered medium composed of selections from nine distinct snow and ice types. Two cases are presented illustrating values of spectral albedo, transmittance, and transmitted PAR (photosynthetically active radiation) for a uniform ice cover as it melts and for a spatially inhomogeneous ice cover. The importance of ice thickness and surface conditions on the spectral reflected and transmitted radiation fields is demonstrated.

Sonar echo amplitude data have been collected at carrier frequencies of 188 and 120 kHz from the underside of different sea ice types. Histograms of normal incidence echo amplitudes were formed from over 90 samples of each ice type. Experiments were conducted on saline ice grown in an outdoor pond under relatively controlled conditions at CRREL and on the sea ice cover in the Fram Strait. Analysis shows marked variations (about a factor of 5) in the magnitude of the coherent reflection coefficients as congelation ice at the bottom of an ice sheet evolves from a growing dendritic interface to an ablating, thermally altered interface. Larger differences (about a factor of 10) are observed between growing congelation ice and slush ice, used to simulate frazil. These results indicate that important variations in acoustic regime exist in areas where different ice types are intermingled.

FRAZIL ICE, ICE STRENGTH, COMPRESSIVE PROPERTIES, SEA ICE, STRAIN TESTS, ICE CRYSTAL STRUCTURE, GRAIN SIZE, TESTS, ICE MICROSTRUCTURE, STRESSES, ANTARCTICA—WEDDELL SEA.
Unconfined, uniaxial compression tests were performed on frazil sea ice samples collected in the Weddell Sea. The tests were done at a constant strain rate of 1/100 1/s and at temperatures of -3, -5 and -10 C. Data from the frazil ice tests were compared to results from tests done under the same conditions on transversely isotropic, columnar saline ice. The approximate grain sizes of the frazil and columnar ice were 1 and 10 mm, respectively. The results of this work indicate that the frazil ice generally has a higher strength than columnar ice loaded in the plane of the sheet. Tests done by other researchers on freshwater, equiaxed polycrystalline ice have also shown the compressive strength to vary inversely with grain size. Application of this relationship to the sea ice tested indicates that the results from these freshwater ice tests at a strain rate of 1/100 1/s cannot be directly extended to explain the variation in compressive strength between the frazil and columnar sea ice. It is speculated that this may be due to 1) the influence that the increased ductility of sea ice has on the relationship between strength and grain size at 1/100 1/s, 2) that another microstructural parameter (e.g., the thickness of the ice between brine inclusions) may be the controlling factor in determining sea ice strength, or 3) that the dominant mechanisms driving deformation vary with each ice type. A report is given on a large-scale survey of the Weddell Sea pack ice and water column carried out during the Winter

Weddell Sea Project 1986 (WWSP '86) from midwinter to austral spring. It was concluded that the incorporation of *Neogloboquadrina pachyderma* into sea ice is related to ice formation processes, and that their incorporation into the ice is not necessarily accidental but may indicate an overwintering strategy. These observations can have implications for the use of *N. pachyderma* as a marker for water masses, since foraminifers growing in the ice may have a different isotopic configuration from those living in seawater only. Remote sensing using an airborne infrared lidar has shown an unexpected capability to detect open leads (linear openings) in arctic sea ice and their associated meteorology in winter. It is shown that vertical profiles of backscattered radiation demonstrate strong returns from hydrometeor plumes originating from leads having a surface water temperature near -1.8 C. Recently refrozen leads are also distinguishable by the lidar backscatter from adjacent thicker, older sea ice. Wide leads release enough energy to create buoyant plumes which penetrate the arctic boundary layer inversion, transporting heat and moisture into the troposphere. These results show that the role of the Arctic as a global heat sink may need to be re-evaluated, and that lead plumes have a significant effect on the radiation budget.

POLYNYAS, WIND FACTORS, SEA ICE, ICE MECHANICS, LATENT HEAT, CLIMATIC FACTORS, DISTRIBUTION, DRIFT, BERING SEA.

The relationship of winds derived from mesoscale meteorological networks to polynya sizes and orientations was investigated. Defense Meteorological Satellite Program imagery was merged with atmospheric pressure network data from the Bering Sea for Mar. 1988. During the month, wind systems drove sea ice southward, creating and maintaining polynyas south of St. Lawrence, St. Matthew, and Nunivak Islands. Existing land stations, the deployment of a moored pressure buoy south of the ice edge, and a new automated weather station on St. Matthew Island have allowed the "creation" of meso-networks that surround these lee-shore polynyas. This analysis (rather than synoptic) has shown that polynya lengths and orientations can be simply related to the mesonet computed geostrophic winds. The typical time lag between the onset of a geostrophic wind and the appearance of "windsock" type tracking of the polynyas is 24 hours.

During a multinational remote sensing experiment in May 1987, the NASA Airborne Oceanographic Lidar (AOL) was used to collect profiles of the sea ice surface topography in the eastern Arctic. A Global Positioning System (GPS) receiver was used to provide aircraft positioning to an accuracy of about 50 m. The AOL is a pulsed laser that provides a profile free of phase shift discontinuities common to continuous wave lasers. Similar to other laser data, however, the aircraft altitude variation requires removal from the profile prior to calculation of the ice surface roughness statistics. As with previous data, there remains an uncertainty as to the freeboard level of the ice after the aircraft motion has been removed, thus small-scale roughness statistics are considered unreliable. However, statistics of pressure ridges can be generated with confidence. The statistical results of ridges from this data set consisting mainly of ridge height and frequency distributions, compare well with previous results obtained from this area of the Arctic. Consistent with previous findings, the AOL data indicate that while the regional mean ridge heights from the area north of Greenland are similar to those reported for other parts of the Arctic, the average kilometer contains substantially more ridges than have been observed in other Arctic locations.

In this paper the possibility of extracting geophysical information about the great ice sheets from passive microwave data is explored. This work was stimulated by calculations done by Zwally (1977) who showed that typical snow grain sizes at the surface of the ice sheet measurably influence the microwave emissivity of the near surface. This result led to speculation that ice-sheet-wide accumulation rates could be estimated by using empirical relations between grain size and accumulation rate, but little quantitative progress has been made towards that goal using single channel radiometer data alone. Data from the Scanning Multichannel Microwave Radiometer are now in a convenient format for analysis, prompting us to perform a qualitative analysis of the 18- and 37-GHz vertically and horizontally polarized data in the context of Zwally's earlier work. An additional premise of the investigation is that this analysis can be simplified by hypothesizing that large-scale glaciologic regimes have characteristic surfaces controlled by local environmental conditions. In turn, characteristic surface properties contribute to unique microwave signatures. To test whether a segmentation of the SMMR data set into particular glacial regimes could be used to identify differences between the physical properties of each regime, mean monthly brightness temperatures were examined at 18- and 37-GHz for both horizontal and vertical polarizations over five areas. Measurable differences were found between brightness temperature trends for the different areas that were attributed, in part, to fluctuations in the large-scale surface temperature field of the ice sheet. Results from the use of airborne electromagnetic induction technology for profiling sea ice thickness are presented. The airborne sea ice thickness soundings indicated that the thickness could be estimated but the resolution decreased as the ice became rough. However, it was found that the average ice thickness estimated by airborne electromagnetic sounding for a given flight track was in reasonable agreement with the average ice thickness determined by direct drill hole measurement. Examples of the ice thickness profiles obtained by airborne sounding and direct drill hole sounding are presented and compared. Future development of the airborne system is discussed.

ICE MODELS, SEA ICE, CAVITATION, OCEANS, CLIMATIC CHANGES, ICE COVER EFFECT, RHEOLOGY, SEA WATER, ICE COVER THICKNESS, FLUID DYNAMICS, ICE MECHANICS.

The motivation for the present work is the development of a sea ice rheology parameterization that retains most of the essential physics of large-scale drift, yet is conceptually simple and computationally fast enough to be useful for long-term climate studies. The approach is to reformulate the velocity correction method of Sikiforos et al (1967) and Parkinson and Washington (1979) and obtain the so-called cavitating fluid rheology. The rationale is that pack ice can be viewed as a two-phase medium (in two dimensions), one phase being ice and the other open water. The open water phase is considered to have no strength and so convergence will reduce the area of open water. The ice phase has some strength and so convergence is restricted if no open water is present. Divergence, on the other hand, is unhindered and causes open water to be created. In the model discussed here, the ice pack is assumed to have no shear strength which, although counterintuitive, has certain advantages first, the model is much simpler, and second, a more robust (and realistic) circulation of the ice is maintained for wind fields averaged over periods of days or weeks. By incorporating the cavitating fluid rheology into a complete dynamic-thermodynamic sea ice model and performing several three year simulations of the arctic sea ice cover, the effect of various parameters and time step lengths can be evaluated. Comparison with the more complete viscous-plastic model of Hibler (1979), which includes shear strength, yields insight into the effects of this simplified parameterization.

Two thermistor strings were installed through the ice to measure ice temperatures and determine oceanic heat fluxes as the Arctic Environmental Drifting Buoy drifted from the Arctic Basin into the Greenland Sea. Ice temperature data between Dec 14, 1987 and Jan 2, 1988 were retrieved. During this period the AEDB progressed from approximately 81N 4'E to 77N 5'W. This constituted the most rapid displacement of the entire drift, coinciding with the entry of the floe into the marginal ice zone of Fram Strait. Once in the MIZ, water temperatures increased, most notably at a depth of 16 m, where values changed from -1.8 C to more than 2 C. Bottom ablation rates of 34 mm/day were observed between 21 and 28 Dec. During this excursion into warmer water, the oceanic heat flux increased by a factor of 18, from 7W/sq m to 128W/sq m.

During the 1984 and 1985 winter seasons, radar backscatter measurements were performed on artificial sea ice at the U.S. Army Cold Regions Research and Engineering Laboratory (CRREL) at Hanover, NH. Radar data were collected at selected frequencies in the 4-17 GHz region for incidence angles from 0 to 60 deg with like and cross polarizations. These measurements were performed on smooth, tough, bare and snow-covered saline ice and open water. Backscattering from ice increased with its thickness until the ice was about 1 cm thick and then decreased gradually with further growth. Rough ice and snow-covered ice gave similar returns at 13.6 GHz, but the scattering coefficients of snow-covered ice were lower than that of rough ice at 9.6 GHz. Depolarized scattering from smooth, thin ice and water were much lower than from rough ice and snow-covered ice.

It appears there has been very little exploitation of salting out with water-miscible solvents for extraction of organic solutes from water Although this technique is known to many chemists, we found no specific literature references to salting-out of organic compounds as a prelude to their determination in water, save one recent abstract This technique has, however, been used for a number of years for extraction of metal-chelates into organic solvents prior to atomic absorption, high-performance liquid chromatography, polarographic, or colorimetric analysis. So, although we freely acknowledge that the technique itself is not new, we do feel that its potential applications in organic trace analysis of water have not been properly appreciated or utilized. We describe here just one of many possible examples, which has found considerable utility in our laboratory.

SOIL TESTS, VEHICLES, PERFORMANCE, SOIL STRENGTH, TRACTION, GROUND THAWING, SHEAR PROPERTIES, SOIL WATER, ACCURACY.

The CRREL Instrumented Vehicle (CIV), and shear annulus, direct shear and triaxial compression test devices were used to measure the strength of thawed and thawing soil. These strength values can be used in simple traction models to predict the tractive performance of vehicles Strength was evaluated in terms of the parameters c and phi based on the Mohr Coulomb failure criterion It is proposed here that an instrumented vehicle is best suited for terrain characterization for mobility studies because the conditions created by a tire slipping on a soil surface are exactly duplicated The c and phi values from the shear annulus were found to overpredict traction because of the low normal stress applied by the annulus and the curved nature of the failure envelope Of all the tests, the direct shear test yields the highest phi value This was most likely because the test was run at a slow deformation rate, under drained conditions The triaxial test results were the most similar to those from the vehicle All test methods show phi increasing with soil moisture up to the plastic limit of the soil and then decreasing Phi as measured with the vehicle was also found to be strongly influenced by the thaw depth

ICE CRYSTAL STRUCTURE, ORIENTATION, ANALYSIS (MATHEMATICS), ICE CRYSTAL OPTICS.

In this paper a quantitative analysis of uniaxial crystal orientation data is developed Though the method is general, we focus on the application of the analysis to ice fabrics The crystal orientation data are represented as points on the surface of a unit sphere. An orthogonal least-squares error measure is used to develop equations that define the closest plane and line through the data while retaining all coordinate directions as independent variables For comparison, a parallel development is presented of the standard dependent variable least-squares determination of the best plane. The orthogonal error measure quantifies the goodness-of-fit to the data of all approximate representations Finally, a technique is developed to generalize from the standard Schmidt net presentation of data in the xy-plane to a presentation in any of the three planes defined by the Cartesian coordinate system.

Operational winter meteorology deals with problems that depend on the area, volume or number of snowflakes in the air. The irregular shape of typical aggregated snowflakes requires special techniques for calculation of area, volume or number from mass precipitation data. Atmospheric aerosols, paint pigments, and other fine particles have very irregular shapes but are several orders of magnitude smaller than snowflakes The statistical techniques developed to describe these fine particles can be applied to snowflakes to estimate the visibility, rate of surface coverage and other area- or volume-dependent operational parameters It appears that these techniques can be broadly applied to generalization of the physical properties of airborne snow

SNOW COVER, SNOW COMPOSITION, CHEMICAL PROPERTIES, SNOW IMPURITIES, MIGRATION, SAMPLING, PRECIPITATION (METEOROLOGY), POLLUTION.
It is inviting to use snowpack sampling as a technique to collect precipitation specimens, and to evaluate chemical precipitation theories or source-receptor pollution transport models with the results of specimen analysis. Such snowpack sampling would allow a posteriori collection of representative samples for analysis, rather than requiring multi-point multitime collections by several observers, through a long precipitation period. An experiment has been initiated to investigate chemical behavior in snowpack.

ICE OPENINGS, CLOUD DROPLETS, AIR WATER INTERACTIONS, LIDAR, AEROSOLS, POLYNYAS, ANALYSIS (MATHEMATICS), HUMIDITY.
With an airborne lidar, massive plumes of condensate particles rising from wintertime leads in the Arctic Ocean have been observed. Some of these plumes reached an altitude of 4 km; some extended over 200 km down-wind from their surface source. Here we invert the lidar equation and use lidar backscatter data to infer particle concentrations within two such plumes. Assuming that the plumes consist of supercooled water droplets of radius 5 micron, typical concentrations of 300,000-600,000 droplets/cu m just above the leads is estimated Concentrations within the plumes can still be as high as 10,000 droplets/cu m at an altitude of 3 km and 200 km down-wind from some leads Had it been assumed that the plume particles are ice spheres of radius 40 microns, concentrations would be just 100 times less than these.

SEA ICE DISTRIBUTION, ICE MELTING, SOLAR RADIATION, MATHEMATICAL MODELS, ICE WATER INTERFACE, ICE COVER THICKNESS, ICE AIR INTERFACE, ICE MODELS, ICE EDGE.
Sea ice covering the polar oceans is only a thin veneer whose areal extent can undergo large and rapid variations in response to relatively small changes in thermal forcing Positive feedback between variations in ice extent and global albedo has the potential to amplify small changes in climate Particularly difficult to model is the summer decay and retreat of the ice pack which is strongly influenced by shortwave radiation entering the upper ocean through leads Most models assume that all of this energy is expended in lateral melting at floe edges. In reality, only a portion of shortwave radiation contributes directly to lateral melting, with the remainder going to bottom ablation and warming of the water. This partitioning of shortwave radiation affects not only the magnitude, but also the character of the predicted ice decay, reducing the change in ice concentration and enhancing the thinning of the ice and the storage of heat in the water. In this paper an analytical model is presented which includes many of these processes and is stable regardless of time step, making it suitable for use in climate simulations

HEAT TRANSFER, HEAT SOURCES, SEWAGE TREATMENT, HEAT RECOVERY, WATER TREATMENT, WASTE TREATMENT.
Water-source heat pumps have been installed in two waste treatment buildings at Ft Greely, AK. These heat pumps use primary effluent as a source of heat. Intermediate loops circulating an ethylene glycol/water mixture are used to transfer heat from the effluent heat exchangers to the heat pump evaporators. In one case, heat exchange is accomplished via an embossed panel heat exchanger immersed directly in the effluent. In the other case, the effluent heat exchanger is a plate-and-frame unit

44-4264
SEA ICE, ICE COVER, ICE OPTICS, LIGHT TRANSMISSION, ICE MODELS, MATHEMATICAL MODELS, REFLECTION, ICE SURFACE, ICE COVER THICKNESS.
The focus of this paper is on the reflection and transmission of light by spatially inhomogeneous and temporally varying sea ice covers This is investigated using a two-stream, multilayer radiative transfer model in the wavelength region from 400 to 1000 nm The model is computationally simple and utilizes the available experimental data on the optical properties of sea ice The ice cover is characterized as a layered medium composed of selections from nine distinct snow and ice types. Three case studies are presented illustrating values of spectral albedo, transmittance, and transmitted photosynthetically active radiation (PAR) for (1) a spatially inhomogeneous ice cover, (2) a uniform ice cover as it undergoes a melt cycle, and (3) a temporally changing spatially variable ice cover Results indicate that small-scale horizontal variations in snow depth and ice thickness can cause light transmission to change over 3 orders of magnitude. Dramatic changes in light reflection and transmission are predicted in the early part of the melt season as the ice cover evolves from an opaque, snow-covered medium to translucent bare or ponded ice

ICEBREAKERS, METAL ICE FRICTION, ICE NAVIGATION, ANALYSIS (MATHEMATICS).
This paper presents the results of resistance and propulsion tests in level ice of a 1:20 scale model of the Canadian Coast Guard R-class icebreaker at two ice-hull friction coefficients, performed at several ice testing facilities in various countries under the aegis of the Committee on Performance of Ships in Ice-covered Waters of the International Towing Tank Conference (ITTC). There is good agreement overall among the test results obtained at the various facilities The differences that do remain should be attributed to differences in experimental techniques and types of model ice used at the participating laboratories An increase in hull roughness led to an increase in ice resistance as expected, but had no effect on the propeller characteristics While the thrust coefficient in ice was nearly the same as in clear water, the torque coefficient and thrust deduction factor were much greater in level ice than in clear water and nearly constant Full-scale ship performance predicted from the resistance test results of the rougher model and the propulsion characteristics in clear water was in good agreement overall with available field trial data Predicted performance using the ice resistance of the rougher model and the model propeller characteristics in ice was usually below that observed at full scale This would indicate that ice-propeller interaction is excessive during model propulsion tests, or that the effect of ice entrainment on propeller performance is greater at model scale than at full scale Ice-propeller interaction remains a domain where further research is needed

SEA ICE, SALT ICE, ICE SALINITY, ICE SURVEYS, REMOTE SENSING, ICE TEMPERATURE, ICE STRUCTURE, BOTHNIA, BAY.
Field observations made during the Mar 1988 BEPERS (Bothnian Experiment in Preparation for the ERS-1 satellite) remote sensing experiment allow limited characterizations of the temperature, salinity, structure and physical property profiles of the brackish ice that forms in the Bay of Bothnia. During the sampling period, undeformed fast ice thicknesses varied from 40 to 60 cm in the Bay to the east of Umeå, Sweden, with somewhat thicker ice occurring in the northernmost, nearly fresh, portions of the Bay. Ice salinities were generally less than 1 per mill and the ice temperatures were usually warmer than -3.5 C. Although most of the ice examined was simple congelation ice, a variety of c-axis fabrics were observed including random, vertical and horizontal (random and aligned) orientations There was no obvious pattern to the geographic arrangement of these fabrics. Brine volume profiles are used to estimate representative ice property profiles. Comparisons are made between the properties of ice from the Bay of Bothnia and those of more typical sea ice from the Arctic Ocean at similar ice thicknesses A variety of structural factors contributing to specific areas of high radar return in the bay are also discussed

Turbulent heat flux from Arctic leads (1979, p.57-91) MP 1340
Estimation of heat and mass fluxes over Arctic leads (1980, p 2057-2063) MP 1410
Effects of volume averaging on spectra measured with a Lyman-alpha hygrometer (1981, p 467-475) MP 1728
Observations of condensate profiles over Arctic leads with a hot-film anemometer (1981, p.437-460) MP 1479
On the differences in ablation seasons of arctic and antarctic sea ice (1982, p 440-447) MP 1517
Sensible and latent heat fluxes and humidity profiles following a step change in surface moisture (1982, 18p.) CR 82-12
Evaluation of Vaisala's MicroCORA Automatic Sounding System (1982, 17p.) CR 82-28
On the differences in ablation seasons of Arctic and Antarctic sea ice (1982, 9p.) CR 82-33
Atmospheric boundary layer measurements in the Weddell Sea (1982, p.113-115) MP 1610
Comment on 'Water drag coefficient of first-year sea ice' by M P. Langleben (1983, p.779-782) MP 1577
Reports of the U.S.-U.S.S.R. Weddell Polynya Expedition, October-November 1981 Volume 7. Surface-level meteorological data (1983, 32p.) SR 83-14
Reports of the U.S.-U.S.S.R. Weddell Polynya Expedition, October-November 1981, Volume 6: Upper-air data (1983, 288p.) SR 83-13
Atmospheric turbulence measurements at SNOW-ONE-B (1983, p 81-87) MP 1846
Simple boom assembly for the shipboard deployment of air-sea interaction instruments (1983, 14p.) SR 83-28
Atmospheric boundary-layer modification, drag coefficient, and surface heat flux in the antarctic marginal ice zone (1984, p 649-661) MP 1667
Variation of the drag coefficient across the Antarctic marginal ice zone (1984, p 63-71) MP 1784
Atmosphere subgroup discussions (1984, p.97-98) MP 2603
Simple boom assembly for the shipboard deployment of air-sea interaction instruments (1984, p.227-237) MP 1752
New method for measuring the snow-surface temperature (1984, p 161-169) MP 1867
Heat and moisture advection over antarctic sea ice (1985, p.736-746) MP 1888
Energy exchange over antarctic sea ice in the spring (1985, p 7199-7212) MP 1889
New method of measuring the snow-surface temperature (1986, p 139-156) MP 2166
Measurements of refractive index spectra over snow (1986, p 248-260) MP 2212
Calibrating cylindrical hot-film anemometer sensors (1986, p.283-298) MP 1860
Spectra and cospectra of atmospheric turbulence over snow (1986, p 219-233) MP 2661
Theory for the scalar roughness and the scalar transfer coefficients over snow and sea ice (1986, 19p.) CR 86-09
Bulk transfer coefficients for heat and momentum over leads and polynyas (1986, p 1875-1883) MP 2187
Theory for the scalar roughness and the scalar transfer coefficients over snow and sea ice (1987, p 159-184) MP 2195
Comment on "Atmospheric boundary layer modification in the marginal ice zone" by T J Bennett, Jr and K Hunkins (1987, p 3965-3969) MP 2394
Spectral measurements in a disturbed boundary layer over snow (1987, p 1912-1939) MP 2254
Spectral measurements in a disturbed boundary layer over snow (1987, 41p.) CR 87-21
Estimating turbulent surface heat fluxes over polar, marine surfaces (1988, p 65-68) MP 2448
Estimating Cn square over snow and sea ice from meteorological quantities (1988, p 258-267) MP 2440

AUTHOR INDEX

Andreas, E.L. *(cont.)*
Estimating averaging times for point and path-averaged measurements of turbulence spectra (1988, p 295-304) MP 2434
Estimating Cn square over snow and sea ice from meteorological data (1988, p 481-495) MP 2393
Atmospheric stability from scintillation measurements (1988, p.2241-2246) MP 2386
Theory for a two-wavelength measurement of the path-averaged turbulent surface heat flux (1988, p.219-220) MP 2526
On the Kolmogorov Constants for the temperature-humidity cospectrum and the refractive index spectrum (1988, p.2399-2406) MP 2437
Two-wavelength method of measuring path-averaged turbulent surface heat fluxes (1989, p.280-292) MP 2648
Lidar detection of leads in Arctic sea ice (1989, p 530-532) MP 2602
Thermal and size evolution of sea spray droplets (1989, 37p.) CR 89-11
Year of Bowen ratios over the frozen Beaufort Sea (1989, p.12,721-12,724) MP 2508
Time constants for the evolution of sea spray droplets (1989, p.147-149) MP 2555
Refractive index structure parameter for a year over the frozen Beaufort Sea (1989, p 667-679) MP 2575
Comments on "A physical bound on the Bowen ratio" (1989, p.1252-1254) MP 2560
Environment of wintertime leads and polynyas (1989, p 273-288) MP 2689
Lidar detection of leads in arctic sea ice (1990, p.119-123) MP 2733
Prospects for measuring path-averaged turbulent heat fluxes using scintillation at three wavelengths (1990, p.74-77) MP 2696
Lidar-derived particle concentrations in plumes from arctic leads (1990, p 9-12) MP 2758

Resistance coefficients from velocity profiles in ice-covered shallow streams (1982, p 236-247) MP 1540
Force measurements and analysis of river ice break up (1982, p 303-336) MP 1739
Hydraulic model study of Port Huron ice control structure (1982, 59p) CR 82-34
Performance of the Allegheny River ice control structure, 1983 (1984, 15p) SR 84-13
Controlling river ice to alleviate ice jam flooding (1984, p 524-528) MP 1795

AUTHOR INDEX

Deck, D.S. *(cont.)*
Controlling river ice to alleviate ice jam flooding (1984, p 69-76) MP 1185
DeCoff, G.W.
Data reduction of GOES information from DCP networks (1989, 15p.) SR 89-29
Dehn, W.F.
Islands of grounded sea ice (1976, 24p.) CR 76-04
Islands of grounded sea ice (1976, p.35-50) MP 987
Delaney, A.J.
Airborne resistivity and magnetometer survey in northern Maine for obtaining information on bedrock geology (1976, 19p.) CR 76-37
Selected examples of radiohm resistivity surveys for geotechnical exploration (1977, 16p.) SR 77-01
Preliminary evaluation of new LF radiowave and magnetic induction resistivity units over permafrost terrain (1977, p.39-42) MP 925
Interaction of a surface wave with a dielectric slab discontinuity (1978, 10p.) CR 78-08
Shallow electromagnetic geophysical investigations of permafrost (1978, p.501-507) MP 1101
Electrical ground impedance measurements in the United States between 200 and 415 kHz (1978, 92p.) MP 1221
Electromagnetic geophysical survey at an interior Alaska permafrost exposure (1979, 7p.) SR 79-14
Detection of Arctic water supplies with geophysical techniques (1979, 30p.) CR 79-15
Effects of seasonal changes and ground ice on electromagnetic surveys of permafrost (1979, 24p.) CR 79-23
Delineation and engineering characteristics of permafrost beneath the Beaufort Sea (1979, p.93-115) MP 1287
Low-frequency surface impedance measurements at some glacial areas in the United States (1980, p.1-9) MP 1280
HF to VHF radio frequency polarization studies in sea ice at Pt. Barrow, Alaska (1980, p.225-245) MP 1324
Delineation and engineering characteristics of permafrost beneath the Beaufort Sea (1981, p.125-157) MP 1428
Hyperbolic reflections on Beaufort Sea seismic records (1981, 16p.) CR 81-02
VHF electrical properties of frozen ground near Point Barrow, Alaska (1981, 18p.) CR 81-13
Delineation and engineering characteristics of permafrost beneath the Beaufort Sea (1981, p.137-156) MP 1600
Measurement of ground dielectric properties using wide-angle reflection and refraction (1982, 11p.) CR 82-06
Laboratory measurements of soil electric properties between 0.1 and 5 GHz (1982, 12p.) CR 82-10
Dielectric properties of thawed active layers overlying permafrost using radar at VHF (1982, p 618-626) MP 1547
Improving electric grounding in frozen materials (1982, 12p.) SR 82-13
Electrical properties of frozen ground at VHF near Point Barrow, Alaska (1982, p.485-492) MP 1572
Radar profiling of buried reflectors and the groundwater table (1983, 16p.) CR 83-11
Field dielectric measurements of frozen silt using VHF pulses (1984, p.29-37) MP 1774
Dielectric measurements of frozen silt using time domain reflectometry (1984, p 39-46) MP 1775
Conductive backfill for improving electrical grounding in frozen soils (1984, 19p.) SR 84-17
Large-size coaxial waveguide time domain reflectometry unit for field use (1984, p.428-431) MP 2048
Radar investigations above the trans-Alaska pipeline near Fairbanks (1984, 15p.) CR 84-27
Mapping resistive seabed features using DC methods (1985, p.136-147) MP 1918
Dielectric studies of permafrost using cross-borehole VHF pulse propagation (1985, p.3-5) MP 1951
Galvanic methods for mapping resistive seabed features (1985, p 91-92) MP 1955
Model studies of surface noise interference in ground-probing radar (1985, 23p.) CR 85-19
Short-pulse radar investigations of freshwater ice sheets and brash ice (1986, 10p.) CR 86-06
Morphology, hydraulics and sediment transport of an ice-covered river. Field techniques and initial data (1986, 37p.) CR 86-11
Preparation and description of a research geophysical borehole site containing massive ground ice near Fairbanks, Alaska (1987, 15p.) SR 87-07
Airborne river-ice thickness profiling with helicopter-borne UHF short-pulse radar (1987, p.330-340) MP 2312
Field observations of mine detection in snow using UHF short-pulse radar (1987, 24p.) SR 87-19
Borehole investigations of the electrical properties of frozen silt (1988, p.910-915) MP 2364
Seasonal variations in resistivity and temperature in discontinuous permafrost (1988, p 927-932) MP 2365
D.C. resistivity along the coast at Prudhoe Bay, Alaska (1988, p 988-993) MP 2366
Investigations of dielectric properties of some frozen materials using cross-borehole radiowave pulse transmissions (1989, 18p.) CR 89-04
Water detection in the coastal plains of the Arctic National Wildlife Refuge using helicopter-borne short pulse radar (1989, 25p.) CR 89-07
Coastal subsea permafrost and bedrock observations using dc resistivity (1989, 13p.) CR 89-13
River-ice mounds on Alaska's North Slope (1989, p.288-290) MP 2563
Demont, W.
Controlled river ice cover breakup; part 1. Hudson River field experiments (1986, p.281-291) MP 2391
Controlled river ice cover breakup; part 2. Theory and numerical model studies (1986, p.293-305) MP 2392
Study of dynamic ice breakup on the Connecticut River near Windsor, Vermont (1987, p.163-177) MP 2400
Options for management of dynamic ice breakup on the Connecticut River near Windsor, Vermont (1988, 16p.) CR 88-01
Development of a dynamic ice breakup control method for the Connecticut River near Windsor, Vermont (1988, p.221-233) MP 2510
Dynamic ice breakup control for the Connecticut River near Windsor, Vermont (1988, p 245-258) MP 2449
Dempsey, B.J.
Projected thermal and load-associated distress in pavements incorporating different grades of asphalt cement (1978, p.403-437) MP 1209
Asphalt concrete for cold regions; a comparative laboratory study and analysis of mixtures containing soft and hard grades of asphalt cement (1980, 55p.) CR 80-05
Dempsey, J.P.
Fracture toughness of model ice (1986, p.365-376) MP 2125
Flexure and fracture of macrocrystalline S1 type freshwater ice (1988, p.39-46) MP 2318
Experimental determination of the fracture toughness of urea model ice (1988, p.289-297) MP 2348
Fracture of S2 columnar freshwater ice: floating double cantilever beam tests (1988, p.152-161) MP 2493
Fracture experiments on freshwater and urea model ice (1988, 152p.) MP 2502
Fracture toughness of columnar freshwater ice from large scale DCB tests (1989, p.7-20) MP 2545
Deneke, F.J.
Upland aspen/birch and black spruce stands and their litter and soil properties in interior Alaska (1976, p.33-44) MP 867
Fate and effects of crude oil spilled on permafrost terrain. First year progress report (1976, 18p.) SR 76-15
DenHartog, S.L.
Cantilever beam tests on reinforced ice (1976, 12p.) CR 76-07
Failure of an ice bridge (1976, 13p.) CR 76-29
Air photo interpretation of a small ice jam (1977, p.705-719) MP 935
Aerial photointerpretation of a small ice jam (1977, 17p.) SR 77-32
Firn quake (a rare and poorly explained phenomenon) (1982, p.173-174) MP 1571
Aircraft operations in the Arctic (1987, p.271-272) MP 2422
Thermosyphon for horizontal applications (1988, p.319-321) MP 2444

Experimental investigation of potential icing of the space shuttle external tank (1982, 305p.) CR 82-25
Fluid dynamic analysis of volcanic tremor (1982, 12p.) CR 82-32
Source mechanism of volcanic tremor (1982, p.8675-8683) MP 1576
On zero-inertia and kinematic waves (1982, p.1381-1387) MP 2053
Analysis of diffusion wave flow routing model with application to flow in tailwaters (1983, 31p.) CR 83-07
Unsteady river flow beneath an ice cover (1983, p 254-260) MP 2079
Modeling rapidly varied flow in tailwaters (1984, p.271-289) MP 1711
Observations of volcanic tremor at Mount St. Helens volcano (1984, p.3476-3484) MP 1770
Analysis of rapidly varying flow in ice-covered rivers (1984, p.359-368) MP 1833
Analysis of river wave types (1985, p 209-220) MP 1875
Analysis of river wave types (1985, 17p) CR 85-12
Hudson River ice management (1985, p.96-110) MP 2174
Controlled river ice cover breakup, part 1. Hudson River field experiments (1986, p.281-291) MP 2391
Controlled river ice cover breakup; part 2 Theory and numerical model studies (1986, p 293-305) MP 2392
River wave response to the friction-inertia balance (1987, p 764-769) MP 2237
Study of dynamic ice breakup on the Connecticut River near Windsor, Vermont (1987, p.163-177) MP 2400
Options for management of dynamic ice breakup on the Connecticut River near Windsor, Vermont (1988, 16p) CR 88-01
Development of a dynamic ice breakup control method for the Connecticut River near Windsor, Vermont (1988, p.221-233) MP 2510
Perturbation solution of the flood problem Discussion and author's reply (1988, p 346-349) MP 2536
Dynamic ice breakup control for the Connecticut River near Windsor, Vermont (1988, p.245-258) MP 2449
Vector analysis of ice petrographic data (1989, p.129-141) MP 2754
Framework for control of dynamic ice breakup by river regulation (1989, 14p.) CR 89-12
Framework for control of dynamic ice breakup by river regulation (1989, p.79-92) MP 2537

Ficklin, W.
Chemical, physical and structural properties of estuarine ice in Great Bay, New Hampshire (1987, p 833-840) MP 2251

Fish, A.M.
Acoustic and pressuremeter methods for investigation of the rheological properties of ice (1978, 196p) MP 1988
Kinetic nature of the long term strength of frozen soils (1980, p.95-108) MP 1450
Acoustic emissions during creep of frozen soils (1982, p.194-206) MP 1495
Comparative analysis of the USSR construction codes and the US Army technical manual for design of foundations on permafrost (1982, 20p) CR 82-14
Deformation and failure of frozen soils and ice at constant and steadily increasing stresses (1982, p 419-428) MP 1553
Thermal patterns in ice under dynamic loading (1983, p 240-243) MP 1742
Comparison of U.S.S.R. codes and U.S. Army manual for design of foundations on permafrost (1983, p.3-24) MP 1682
Thermodynamic model of creep at constant stresses and constant strain rates (1983, 18p.) CR 83-33
Creep model for constant stress and constant strain rate (1984, p.1009-1012) MP 1766
Thermodynamic model of creep at constant stress and constant strain rate (1984, p 143-161) MP 1771
Tertiary creep model for frozen sands (discussion) (1984, p.1373-1378) MP 1810
Creep strength, strain rate, temperature and unfrozen water relationship in frozen soil (1985, p.29-36) MP 1928
Shape of creep curves in frozen soils and polycrystalline ice (1987, p 623-629) MP 2329
Some peculiarities of creep behavior of frozen silt (1989, p.721-724) MP 2601

Radar backscattering from artificially grown sea ice (1989, p.259-264) MP 2667
Gogte, M.
Mean characteristics of asymmetric flows: application to flow below ice jams (1981, p.342-350) MP 1733
Asymmetric plane flow with application to ice jams (1983, p.1540-1556) MP 1645
Golden, K.M.
Modeling of anisotropic electromagnetic reflection from sea ice (1980, p.247-294) MP 1325
Modeling of anisotropic electromagnetic reflection from sea ice (1980, 15p.) CR 80-23
Sea ice studies in the Weddell Sea aboard USCGC Polar Sea (1980, p 84-96) MP 1431
Modeling of anisotropic electromagnetic reflections from sea ice (1981, p.8107-8116) MP 1469
Physical and structural characteristics of Weddell Sea pack ice (1987, 70p.) CR 87-14
Goldstein, N.
Pavement icing detector—final report (1987, 26p. + append.) MP 2263
Gooch, G.
Ice jam problems at Oil City, Pennsylvania (1981, 19p.) SR 81-09
Ottauquechee River—analysis of freeze-up processes (1982, p.2-37) MP 1738
Performance of the Allegheny River ice control structure, 1983 (1984, 15p.) SR 84-13
Construction and calibration of the Ottauquechee River model (1985, 10p.) SR 85-13
Gooch, G.E.
Salmon River ice jam control studies: interim report (1990, 8p.) SR 90-06
Goodman, D.J.
4th report of working group on testing methods in ice (1984, p.1-41) MP 1886
Goodwin, C.
Computer simulation of the snowmelt and soil thermal regime at Barrow, Alaska (1975, p 709-715) MP 857
Goodwin, C.W.
Potential responses of permafrost to climatic warming (1984, p.92-105) MP 1710
Gordon, A.L.
Antarctic sea ice microwave signatures and their correlation with *in situ* ice observations (1984, p.662-672) MP 1668
Gordon, B.E.
Comparative near-millimeter wave propagation properties of snow or rain (1983, p.115-129) MP 1690
Attenuation and backscatter for snow and sleet at 96, 140, and 225 GHz (1984, p 41-52) MP 1864
Gordon, R.B.
Measurement of the resistance of imperfectly elastic rock to the propagation of tensile cracks (1985, p.7827-7836) MP 2052
Microstructure and the resistance of rock to tensile fracture (1985, p.11,533-11,546) MP 2157
Gould, L.D.
System for mounting end caps on ice specimens (1985, p.362-365) MP 2016
Uniaxial tension/compression tests on ice—preliminary results (1989, p.37-41) MP 2482
Govoni, J.W.
Morphological investigations of first-year sea ice pressure ridge sails (1981, p 1-12) MP 1465
Physical and structural characteristics of sea ice in McMurdo Sound (1981, p 94-95) MP 1542
Physical and structural characteristics of antarctic sea ice (1982, p 113-117) MP 1548
Baseline water quality measurements at six Corps of Engineers reservoirs, Summer 1981 (1982, 55p.) SR 82-30
Ice growth on Post Pond, 1973-1982 (1983, 25p.) CR 83-04
Field measurements of combined icing and wind loads on wires (1983, p.205-215) MP 1637
Surface roughness of Ross Sea pack ice (1983, p 123-124) MP 1764
Method of detecting voids in rubbled ice (1984, p 183-188) MP 1772
Structure of first-year pressure ridge sails in the Prudhoe Bay region (1984, p 115-135) MP 1837
Combined icing and wind loads on a simulated power line test span (1984, p.173-182) MP 2114
Analysis of selected ice accretion measurements on a wire at Mt. Washington (1985, p 34-43) MP 2173
Computer interfacing of meteorological sensors in a severe weather and high RFI environment (1985, p 205-211) MP 2175
Comparison of winter climatic data for three New Hampshire sites (1986, 78p.) SR 86-05
Reliable, inexpensive radio telemetry system for the transfer of meteorological and atmospheric data from mountain-top sites (1986, 6p.) MP 2107
Conductor twisting resistance effects on ice build-up and ice shedding (1986, 8p + figs.) MP 2108
Icing and wind loading on a simulated power line (1986, p 23-27) MP 2206
Portable hot water ice drill (1986, p 549-564) MP 2202
Portable hot-water ice drill (1987, p 57-64) MP 2236
Meteorological instrumentation for characterizing atmospheric icing (1987, p 23-30) MP 2276
Temperature and structure dependence of the flexural strength and modulus of freshwater model ice (1988, 43p.) CR 88-06
Update on portable hot-water sea ice drilling (1989, p.175-178) MP 2479
Sea ice ridging in the Ross Sea, Antarctica, as compared with sites in the Arctic (1989, p.4984-4988) MP 2490
Gow, A.J.
Gas inclusions in the Antarctic ice sheet and their glaciological significance (1975, p.5101-5108) MP 847
Islands of grounded sea ice (1976, 24p.) CR 76-04
Compressibility characteristics of compacted snow (1976, 47p.) CR 76-21
Dynamics of near-shore ice (1976, p.9-34) MP 1380
Islands of grounded sea ice (1976, p.35-50) MP 987
Some characteristics of grounded floebergs near Prudhoe Bay, Alaska (1976, p 169-172) MP 1118
Some characteristics of grounded floebergs near Prudhoe Bay, Alaska (1976, 10p.) CR 76-34
Rheological implications of the internal structure and crystal fabrics of the West Antarctic ice sheet as revealed by deep core drilling at Byrd Station (1976, 25p.) CR 76-35
Rheological implications of the internal structure and crystal fabrics of the West Antarctic ice sheet as revealed by deep core drilling at Byrd Station (1976, p.1665-1677) MP 1382
Growth history of lake ice in relation to its stratigraphic, crystalline and mechanical structure (1977, 24p.) CR 77-01
Flexural strength of ice on temperate lakes (1977, p 247-256) MP 1063
Studies of the movement of coastal sea ice near Prudhoe Bay, Alaska, U.S.A. (1977, p 533-546) MP 1066
Nearshore ice motion near Prudhoe Bay, Alaska (1977, p.23-31) MP 1162
Dielectric constant and reflection coefficient of the snow surface and near-surface internal layers in the McMurdo Ice Shelf (1977, p.137-138) MP 1011
Subsurface measurements of the Ross Ice Shelf, McMurdo Sound, Antarctica (1977, p.146-148) MP 1013
Internal structure of fast ice near Narwahl Island, Beaufort Sea, Alaska (1977, 8p.) CR 77-29
Effect of freezing and thawing on the permeability and structure of soils (1978, p.31-44) MP 1080
Flexural strength of ice on temperate lakes—comparative tests of large cantilever and simply supported beams (1978, 14p.) CR 78-09
Preferred crystal orientations in the fast ice along the margins of the Arctic Ocean (1978, 24p.) CR 78-13
Creep rupture at depth in a cold ice sheet (1978, p.733) MP 1168
Ultrasonic measurements on deep ice cores from Antarctica (1978, p.48-50) MP 1202
Ultrasonic velocity investigations of crystal anisotropy in deep ice cores from Antarctica (1979, 16p.) CR 79-10
Effect of freezing and thawing on the permeability and structure of soil (1979, p.73-92) MP 1225
On the origin of stratified debris in ice cores from the bottom of the Antarctic ice sheet (1979, p 185-192) MP 1272
Ultrasonic velocity investigations of crystal anisotropy in deep ice cores from Antarctica (1979, p 4865-4874) MP 1239
Crystal alignments in the fast ice of Arctic Alaska (1979, 21p.) CR 79-22
Subsurface measurements of McMurdo Ice Shelf (1979, p.79-80) MP 1338
Relationship of ultrasonic velocities to c-axis fabrics and relaxation characteristics of ice cores from Byrd Station, Antarctica (1979, p.147-153) MP 1282
Margin of the Greenland ice sheet at Isua (1979, p.155-165) MP 1281
Crystal alignments in the fast ice of Arctic Alaska (1980, p 1137-1146) MP 1277
Time-priority studies of deep ice cores (1980, p 91-102) MP 1308
Planetary and extraplanetary event records in polar ice caps (1980, p 18-27) MP 1461
Sea ice studies in the Weddell Sea aboard USCGC Polar Sea (1980, p 84-96) MP 1431
Ground-truth observations of ice-covered North Slope lakes images by radar (1981, 17p.) CR 81-19
Nitrogenous chemical composition of antarctic ice and snow (1981, p.79-81) MP 1541
Physical and structural characteristics of sea ice in McMurdo Sound (1981, p 94-95) MP 1542
Physical and structural characteristics of antarctic sea ice (1982, p 113-117) MP 1548
Brine zone in the McMurdo Ice Shelf, Antarctica (1982, p.166-171) MP 1550
Nitrate fluctuations in antarctic snow and firn: potential sources and mechanisms of formation (1982, p 243-248) MP 1551
Brine zone in the McMurdo Ice Shelf, Antarctica (1982, 28p.) CR 82-39
South Pole ice core drilling, 1981-1982 (1982, p 89-91) MP 1621
Ice growth on Post Pond, 1973-1982 (1983, 25p.) CR 83-04
Chemical fractionation of brine in the McMurdo Ice Shelf, Antarctica (1983, 16p.) CR 83-06
Baseline acidity of ancient precipitation from the South Pole (1984, 7p.) CR 84-15
On small-scale horizontal variations of salinity in first-year sea ice (1984, p.6505-6514) MP 1761
Flexural strengths of freshwater model ice (1984, p.73-82) MP 1826
Quiet freezing of lakes and the concept of orientation textures in lake ice sheets (1984, p.137-149) MP 1828
Crystalline structure of urea ice sheets used in modeling in the CRREL test basin (1984, p 241-253) MP 1835
Crystalline structure of urea ice sheets used in modeling experiments in the CRREL test basin (1984, 48p.) CR 84-24
Sea ice properties (1984, p 82-83) MP 2136
Physical properties of sea ice in the Greenland Sea (1985, p.177-188) MP 1903
Simulated sea ice used for correlating the electrical properties of the ice with its structural and salinity characteristics (1985, p.76-82) MP 1910
Laboratory studies of acoustic scattering from the underside of sea ice (1985, p 87-91) MP 1912
Pressure ridge morphology and physical properties of sea ice in the Greenland Sea (1985, p 214-223) MP 1932
Structure of ice in the central part of the Ross Ice Shelf, Antarctica (1985, p 39-44) MP 2110
Orientation textures in ice sheets of quietly frozen lakes (1986, p 247-258) MP 2118
Crystal structure of Fram Strait sea ice (1986, p.20-29) MP 2221
Chemical fractionation of brine in the McMurdo Ice Shelf, Antarctica (1986, p 307-313) MP 2239
Optical characterization of sea ice structure using polarized light techniques (1986, p 264-271) MP 2257
Microwave dielectric, structural, and salinity properties of simulated sea ice (1986, p.832-839) MP 2188
Acoustical reflection and scattering from the underside of laboratory grown sea ice: measurements and predictions (1986, p.1486-1494) MP 2222
Structure and dielectric properties at 4.8 and 9.5 GHz of saline ice (1986, p.14,281-14,303) MP 2182
Annealing recrystallization in laboratory and naturally deformed ice (1987, p.(C1)271-(C1)276) MP 2230
Restraints on thin section analysis of grain growth in unstrained polycrystalline ice (1987, p.(C1)277-(C1)281) MP 2231
Crystal structure and salinity of sea ice in Hebron Fiord and vicinity, Labrador (1987, 18p.) CR 87-04
Physical properties of sea ice discharged from Fram Strait (1987, p.436-439) MP 2284
Physical properties of summer sea ice in the Fram Strait (1987, p 6787-6803) MP 2240
Chemical, physical and structural properties of estuarine ice in Great Bay, New Hampshire (1987, p.833-840) MP 2251
Physical properties of summer sea ice in the From Strait, June-July 1984 (1987, 81p.) CR 87-16
Baseline acidity of precipitation at the South Pole during the last two millennia (1987, p 789-792) MP 2275
Physical and structural characteristics of Weddell Sea pack ice (1987, 70p.) CR 87-14
Microwave and structural properties of saline ice (1987, 36p.) CR 87-20
Temperature and structure dependence of the flexural strength and modulus of freshwater model ice (1988, 43p.) CR 88-06
Correlation function study for sea ice (1988, p.14,055-14,063) MP 2511
Emerging meteoric crystalline structure of the enclosing ice (1989, p 87-91) MP 2503
Structure and temperature dependence of the flexural properties of laboratory freshwater ice sheets (1989, p.249-270) MP 2652
Radar backscattering from artificially grown sea ice (1989, p 259-264) MP 2667
High frequency acoustical properties of saline ice (1989, p.9-23) MP 2686
US global ice core research program West Antarctica and beyond (1989, 32p.) MP 2709
Internal structure composition and properties of brackish ice from the Bay of Bothnia during the BEPERS-88 experiment (1989, p 1318-1333) MP 2763
Dominion Range ice core, Queen Maud Mountains, Antarctica—general site and core characteristics with implications (1990, p 11-16) MP 2707
Internal structure, composition and properties of brackish ice from the Bay of Bothnia (1990, p 5-15) MP 2725
Acoustical and morphological properties of undeformed sea ice laboratory and field results (1990, p.67-75) MP 2730
Radar backscatter measurements over saline ice (1990, p 603-615) MP 2741
Sea ice in the polar regions (1990, p 47-122) MP 2750

Comparison of EPA and USATHAMA detection capability estimators (1988, p.405-418) MP 2455
Influence of well casing materials on chemical species in ground water (1988, p.450-461) MP 2456
Increased transmission through brass obscurant clouds during snowfall (1988, p.489-496) MP 2605
Snow-smoke interaction (1988, p 497-506) MP 2607
Dynamic aerosol flow chamber (1988, 13p.) SR 88-21
Influence of well casing composition on trace metals in ground water (1989, 18p.) SR 89-09
Does snow have ion chromatographic properties (1989, p.165-171) MP 2755
Comparisons of low concentration measurement capability estimates in trace analysis: method detection limit and certified reporting limit (1989, 21p.) SR 89-20
Leaching of metal pollutants from four well casings used for ground-water monitoring (1989, 11p.) SR 89-32
Influence of ground water monitoring well casings on metals and organic compounds in well water (1989, 9p.) MP 2717
Influence of casing materials on trace-level chemicals in well water (1990, 11p.) MP 2720

Hibler, W.D., III
Mesoscale deformation of sea ice from satellite imagery (1973, 2p.) MP 1120
Classification and variation of sea ice ridging in the Arctic basin (1974, p.127-146) MP 1022
Meso-scale strain measurements on the Beaufourt sea pack ice (AIDJEX 1971) (1974, p 119-138) MP 1035
Statistical variations in Arctic sea ice ridging and deformation rates (1975, p J1-J16) MP 850
Measurement of sea ice drift far from shore using LANDSAT and aerial photographic imagery (1975, p 541-554) MP 849
Height variation along sea ice pressure ridges and the probability of finding "holes" for vehicle crossings (1975, p.191-199) MP 848
Techniques for using LANDSAT imagery without references to study sea ice drift and deformation (1976, p 115-135) MP 1059
20-yr oscillation in eastern North American temperature records (1976, p 484-486) MP 889
Thickness and roughness variations of arctic multiyear sea ice (1976, 25p.) CR 76-18
Techniques for studying sea ice drift and deformation at sites far from land using LANDSAT imagery (1976, p.595-609) MP 866
Misgivings on isostatic imbalance as a mechanism for sea ice cracking (1976, p 85-94) MP 1379
Seasonal variations in apparent sea ice viscosity on the geophysical scale (1977, p.87-90) MP 900
Studies of the movement of coastal sea ice near Prudhoe Bay, Alaska, U S A (1977, p 533-546) MP 1066
Examination of the viscous wind-driven circulation of the Arctic ice cover over a two year period (1977, p 95-133) MP 983
Modeling pack ice as a viscous-plastic continuum: some preliminary results (1977, p 46-55) MP 1164
Finite element formulation of a sea ice drift model (1977, p 67-76) MP 1165
Model simulation of near shore ice drift, deformation and thickness (1978, p.33-44) MP 1010
Measurement of mesoscale deformation of Beaufort sea ice (AIDJEX-1971) (1978, p.148-172) MP 1179
Some results from a linear-viscous model of the Arctic ice cover (1979, p 293-304) MP 1241
Dynamic thermodynamic sea ice model (1979, p 815-846) MP 1247
20-yr cycle in Greenland ice core records (1979, p 481-483) MP 1245
Documentation for a two-level dynamic thermodynamic sea ice model (1980, 35p.) SR 80-08
Numerical modeling of sea ice in the seasonal sea ice zone (1980, p.299-356) MP 1296
Sea ice growth, drift, and decay (1980, p 141-209) MP 1298
Nonsteady ice drift in the Strait of Belle Isle (1980, p 177-186) MP 1364
Modeling a variable thickness sea ice cover (1980, p 1943-1973) MP 1424

MIZEX—a program for mesoscale air-ice-ocean interaction; experiments in Arctic marginal ice zones 1 Research strategy (1981, 20p) SR 81-19
Preliminary results of ice modeling in the East Greenland area (1981, p 867-878) MP 1458
On modeling mesoscale ice dynamics using a viscous plastic constitutive law (1981, p.1317-1329) MP 1526
Modeling pressure ridge buildup on the geophysical scale (1982, p.141-155) MP 1590
On modeling the Weddell Sea pack ice (1982, p 125-130) MP 1549
On modeling seasonal and interannual fluctuations of arctic sea ice (1982, p.1514-1523) MP 1579
Numerical simulation of the Weddell Sea pack ice (1983, p.2873-2887) MP 1592
On forecasting mesoscale ice dynamics and build-up (1983, p.110-115) MP 1625
MIZEX—a program for mesoscale air-ice-ocean interaction experiments in Arctic marginal ice zones 2. A science plan for a summer Marginal Ice Zone Experiment in the Fram Strait/Greenland Sea. 1984 (1983, 47p) SR 83-12
Marginal ice zones: a description of air-ice-ocean interactive processes, models and planned experiments (1984, p.133-146) MP 1673
MIZEX—a program for mesoscale air-ice-ocean interaction experiments in Arctic marginal ice zones 3. Modeling the marginal ice zone (1984, 99p) SR 84-07
Large-scale ice/ocean model for the marginal ice zone (1984, p.1-7) MP 1778
East Greenland Sea ice variability in large-scale model simulations (1984, p 9-14) MP 1779
On the role of ice interaction in marginal ice zone dynamics (1984, p.23-29) MP 1781
Mechanism for floe clustering in the marginal ice zone (1984, p.73-76) MP 1785
Ocean circulation its effect on seasonal sea-ice simulations (1984, p.489-492) MP 1700
Role of sea ice dynamics in modeling CO2 increases (1984, p 238-253) MP 1749
Model simulation of 20 years of northern hemisphere sea-ice fluctuations (1984, p.170-176) MP 1767
Ice dynamics (1984, 52p) M 84-03
MIZEX 83 mesoscale sea ice dynamics initial analysis (1984, p 19-28) MP 1811
On the rheology of a broken ice field due to floe collision (1984, p 29-34) MP 1812
MIZEX 84 mesoscale sea ice dynamics. post operations report (1984, p 66-69) MP 1257
Modeling of Arctic sea ice characteristics relevant to naval operations (1984, p 67-91) MP 1994
Numerical modeling of sea ice dynamics and ice thickness characteristics. A final report (1985, 50p) CR 85-05
Numerical simulation of Northern Hemisphere sea ice variability, 1951-1980 (1985, p 4847-4865) MP 1882
Modeling sea-ice dynamics (1985, p 549-579) MP 2001
Role of plastic ice interaction in marginal ice zone dynamics (1985, p.11,899-11,909) MP 1544
On estimating ice stress from MIZEX 83 ice deformation and current measurements (1986, p 17-19) MP 2220
Large-scale ice-ocean modeling (1986, p 165-184) MP 2142
Ice dynamics (1986, p 577-640) MP 2211
Variability of Arctic sea ice drafts (1986, p 237-256) MP 2198
Mesoscale sea ice deformation in the East Greenland marginal ice zone (1987, p 7060-7070) MP 2241
Role of floe collisions in sea ice rheology (1987, p.7085-7096) MP 2242
Diagnostic ice-ocean model (1987, p.987-1015) MP 2238
Coupled air-ice-ocean models (1987, p 131-137) MP 2412
Evaluation of an operational ice forecasting model during summer (1988, p 159-174) MP 2347
On modeling the energetics of the ridging process (1989, p 175-178) MP 2483
Effect of ice pressure on marginal ice zone dynamics (1989, p 514-521) MP 2522
Cavitating fluid sea ice model (1990, p 239-242) MP 2738
On modeling the barochinic adjustment of the Arctic Ocean (1990, p 247-250) MP 2739

Hicks, J.R.
Propane dispenser for cold fog dissipation system (1973, 38p) MP 1033
Compressed air seeding of supercooled fog (1976, 9p) SR 76-09
Use of compressed air for supercooled fog dispersal (1976, p 1226-1231) MP 1614
Laboratory studies of compressed air seeding of supercooled fog (1977, 19p) SR 77-12

Hinchey, M.J.
Wave-induced bergy bit motion near a floating oil production platform (1990, p 205-215) MP 2580

Hinz, C.
Correlation of Freundlich *Kd* and *n* retention parameters with soils and elements (1989, p 370-379) MP 2570

Hirai, A.
Microcomputer-based image-processing system (1988, p.249-252) MP 2385

Hirayama, K.
Investigation of ice forces on vertical structures (1974, 153p) MP 1041
Standardized testing methods for measuring mechanical properties of ice (1981, p.245-254) MP 1556
Determination of the flexural strength and elastic modulus of ice from *in situ* cantilever-beam tests (1982, p 37-47) MP 1568
Determining the characteristic length of model ice sheets (1982, p.99-104) MP 1570
Experimental determination of the buckling loads of floating ice sheets (1983, p.260-265) MP 1626
Experiments on ice ride-up and pile-up (1983, p 266-270) MP 1627
Properties of urea-doped ice in the CRREL test basin (1983, 44p) CR 83-08
Ice forces on model bridge piers (1983, 11p.) CR 83-19

Hironaka, M.C.
Detecting underground objects/utilities (1987, p.36-43) MP 2281

Hnatiuk, J.
Destruction of ice islands with explosives (1978, p.753-765) MP 1018
Study of several pressure ridges and ice islands in the Canadian Beaufort Sea (1978, p 519-532) MP 1187
Sea ice pressure ridges in the Beaufort Sea (1978, p 249-271) MP 1132
Multi year pressure ridges in the Canadian Beaufort Sea (1979, p.107-126) MP 1229
Multi-year pressure ridges in the Canadian Beaufort Sea (1981, p.125-145) MP 1514

Ho, S.C.
Effect of seasonal soil conditions on the reliability of the M15 land mine (1984, 35p) SR 84-18

Hobbie, J.E.
Arctic limnology. a review (1973, p.127-168) MP 1007
Environmental analyses in the Kootenai River region, Montana (1976, 53p) SR 76-13

Wastewater reuse at Livermore, California (1976, p 514-531) MP 870
Land treatment of wastewater—case studies of existing disposal systems at Quincy, Washington and Manteca, California (1976, 36p) MP 920
Reclamation of wastewater by application on land (1976, 15p) MP 896
Wastewater renovation by a prototype slow infiltration land treatment system (1976, 44p.) CR 76-19
Impact of urban wastewater reuse in cold regions on land treatment systems (1976, 32p) MP 2452
Urban waste as a source of heavy metals in land treatment (1976, p 417-432) MP 977
Delineation and engineering characteristics of permafrost beneath the Beaufort Sea (1977, p.385-395) MP 1074
Preliminary evaluation of 88 years rapid infiltration of raw municipal sewage at Calumet, Michigan (1977, p 489-510) MP 976
Wastewater reuse at Livermore, California (1977, p.511-531) MP 979
Evaluation of existing systems for land treatment of wastewater at Manteca, California, and Quincy, Washington (1977, 34p) CR 77-24
Delineation and engineering characteristics of permafrost beneath the Beaufort Sea (1977, p.432-440) MP 1077
Wastewater treatment alternative needed (1977, p.82-87) MP 968
Delineation and engineering characteristics of permafrost beneath the Beaufort Sea (1977, p.518-521) MP 1201
Distribution and properties of road dust and its potential impact on tundra along the northern portion of the Yukon River-Prudhoe Bay Haul Road Chemical composition of dust and vegetation (1978, p.110-111) MP 1116
Chemistry of interstitial water from subsea permafrost, Prudhoe Bay, Alaska (1978, p.92-98) MP 1385
Soil lysimeters for validating models of wastewater renovation by land application (1978, 11p.) SR 78-12
Evaluation of N models for prediction of No3-N in percolate water in land treatment (1978, p.163-169) MP 1148
Nitrogen behavior in land treatment of wastewater: a simplified model (1978, p.171-179) MP 1149
Overview of existing land treatment systems (1978, p.193-200) MP 1150
Simulation of the movement of conservative chemicals in soil solution (1978, p.371-380) MP 1156
Effect of waste water reuse in cold regions on land treatment systems (1978, p.361-368) MP 1144
Geochemistry of subsea permafrost at Prudhoe Bay, Alaska (1978, 70p.) SR 78-14
Construction and performance of platinum probes for measurement of redox potential (1978, 8p.) SR 78-27
Computer file for existing land application of wastewater systems: a user's guide (1978, 24p.) SR 78-22
Evaluation of nitrification inhibitors in cold regions land treatment of wastewater. Part 1. Nitrapyrin (1979, 25p.) SR 79-18
Field methods and preliminary results from subsea permafrost investigations in the Beaufort Sea, Alaska (1979, p 207-213) MP 1591
Documentation of soil characteristics and climatology during five years of wastewater application to CRREL test cells (1979, 82p) SR 79-23
Selected design parameters of existing systems for land application of liquid waste—a computer file (1979, p.65-88) MP 1415
Use of 15N to study nitrogen transformations in land treatment (1979, 32p) SR 79-31
Improved enzyme kinetic model for nitrification in soils amended with ammonium. 1. Literature review (1980, 20p) CR 80-01
Disinfection of wastewater by microwaves (1980, 15p) SR 80-01
Simplified model for prediction of nitrogen behavior in land treatment of wastewater (1980, 49p) CR 80-12
Dynamics of NH4 and NO3 in cropped soils irrigated with wastewater (1980, 20p) SR 80-27
Effectiveness of land application for phosphorus removal from municipal waste water at Manteca, California (1980, p.616-621) MP 1444
Modeling nitrogen transport and transformations in soils: 1. Theoretical considerations (1981, p 233-241) MP 1440
Modeling nitrogen transport and transformations in soils 2. Validation (1981, p 303-312) MP 1441
Limnological investigations: Lake Koocanusa, Montana. Pt. 5. Phosphorus chemistry of sediments (1981, 9p.) SR 81-15
Soil microbiology (1981, p 38-44) MP 1753
Evaluation of a compartmental model for prediction of nitrate leaching losses (1981, 24p) CR 81-23
Effect of soil temperature and pH on nitrification kinetics in soils receiving a low level of ammonium enrichment (1981, 27p) SR 81-33
Overview of models used in land treatment of wastewater (1982, 27p) SR 82-01
Evaluation of a simple model for predicting phosphorus removal by soils during land treatment of wastewater (1982, 12p.) SR 82-14
User's index to CRREL land treatment computer programs and data files (1982, 65p) SR 82-26
Optimization model for land treatment planning, design and operation Part 1. Background and literature review (1983, 35p) SR 83-06

AUTHOR INDEX

Optimization model for land treatment planning, design and operation. Part 2. Case study (1983, 30p.) SR 83-07
Corps of Engineers land treatment of wastewater research program: an annotated bibliography (1983, 82p) SR 83-09
Mathematical simulation of nitrogen interactions in soils (1983, p.241-248) MP 2051
Land treatment research and development program. synthesis of research results (1983, 144p) CR 83-20
WASTEN. a model for nitrogen behaviour in soils irrigated with liquid waste (1984, p 96-108) MP 1762
Impact of dredging on water quality at Kewaunee Harbor, Wisconsin (1984, 16p) CR 84-21
User's guide for the BIBSORT program for the IBM-PC personal computer (1985, 61p) SR 85-04
Economics of ground freezing for management of uncontrolled hazardous waste sites (1985, 15p) MP 2030
Potential use of artificial ground freezing for contaminant immobilization (1985, 10p) MP 2029
Effect of freezing on the level of contaminants in uncontrolled hazardous waste sites Part 1. Literature review and concepts (1985, p.122-129) MP 2028
Ion and moisture migration and frost heave in freezing Morin clay (1986, p.1014) MP 1970
Corps of Engineers Land Treatment Research and Development program (1986, p.17-18) MP 2149
Effect of freezing on the level of contaminants in uncontrolled hazardous waste sites. Part 1: literature review (1986, 33p) SR 86-19
Retention and release of metals by soils—evaluation of several models (1986, p.131-154) MP 2186
Ground freezing controls hazardous waste (1987, p 455-456) MP 2270
Experimental methods for decontaminating soils by freezing (1988, 12p) MP 2513
Prototype testing facilities for field evaluation of contaminant transport in freezing soils (1988, 29p) MP 2514
Modeling the transport of chromium (VI) in soil columns (1989, p 996-1004) MP 2670
Use of innovative freezing technique for *in-situ* treatment of contaminated soils (1989, p.489-498) MP 2515
Correlation of Freundlich *Kd* and *n* retention parameters with soils and elements (1989, p 370-379) MP 2570
Effect of freeze-thaw cycles on the permeability and macrostructure of soils (1990, p 145-155) MP 2678

ISTVS Workshop on Measurement and Evaluation of Tire Performance under Winter Conditions, Alta, Utah, Apr. 11-14, 1983

Proceedings of the ISTVS Workshop on Measurement and Evaluation of Tire Performance under Winter Conditions, Alta, Utah, 11-14, April 1983 (1985, 177p) SR 85-15

Itagaki, K.

Improved millivolt-temperature conversion tables for copper constantan thermocouples. 32F reference temperature (1976, 66p) SR 76-18
De-icing of radomes and lock walls using pneumatic devices (1977, p 467-478) MP 1064
Mass transfer along ice surfaces observed by a groove relaxation technique (1977, p 34-37) MP 1091
Laboratory experiments on lock wall deicing using pneumatic devices (1977, p 53-68) MP 974
Abnormal internal friction peaks in single-crystal ice (1977, 15p) SR 77-23
Icing on ships and stationary structures under maritime conditions—a preliminary literature survey of Japanese sources (1977, 22p) SR 77-27
Dielectric properties of dislocation-free ice (1978, p 207-217) MP 1171
Charged dislocation in ice 1 Existence and charge density measurement by X-ray topography (1978, 12p) CR 79-25
Laboratory experiments on icing of rotating blades (1979, p 85-92) MP 1236
Fracture behavior of ice in Charpy impact testing (1980, 13p) CR 80-13
Charged dislocation in ice 2 Contribution of dielectric relaxation (1982, 15p) CR 82-07
Experimental investigation of potential icing of the space shuttle external tank (1982, 305p) CR 82-25
Adhesion of ice to polymers and other surfaces (1983, p.241-252) MP 1580
Studies of high-speed rotor icing under natural conditions (1983, p.117-123) MP 1635
Implications of surface energy in ice adhesion (1983, p 41-48) MP 1672
Self-shedding of accreted ice from high-speed rotors (1983, p.1-6) MP 1719
Possibility of anomalous relaxation due to the charged dislocation process (1983, p 4261-4264) MP 1669
Effect of X-ray irradiation on internal friction and dielectric relaxation of ice (1983, p 4314-4317) MP 1670
Mechanical ice release processes 1. Self-shedding from high-speed rotors (1983, 8p) CR 83-26
Icing rate on stationary structures under marine conditions (1984, 9p) CR 84-12
Polyethylene glycol as an ice control coating (1984, 11p) CR 84-28
Ice accretion under natural and laboratory conditions (1985, p.225-228) MP 2009
Dynamic friction of bobsled runners on ice (1985, 26p) MP 2082
Friction of solids on ice (1986, 4p) MP 2179
Natural rotor icing on Mount Washington, New Hampshire (1986, 62p) CR 86-10
Dielectric properties of strained ice. 1: Effect of plastic straining (1987, p.143-147) MP 2356
Dielectric properties of strained ice. 2: Effect of sample preparation method (1987, p.149-153) MP 2357
Preliminary study of friction between ice and sled runners (1987, p 297-301) MP 2358
Self-shedding of accreted ice from high-speed rotors (1987, p 95-100) MP 2278
Parameters affecting the kinetic friction of ice (1987, p.552-561) MP 2258
What makes thunderbolts zig and zag (1988, p 22-27) MP 2524
Thickness distribution of accreted ice grown on rotor blades under laboratory conditions (1988, p.152-156) MP 2523
Dynamic friction of a metal runner on ice. 1. Model sled test (1989, 17p) CR 89-14

Izquierdo, M.

Humidity and temperature measurements obtained from an unmanned aerial vehicle (1987, p 35-45) MP 2293
Slant path extinction and visibility measurements from an unmanned aerial vehicle (1987, p 115-126) MP 2296

Jackson, G.

Concurrent remote sensing of arctic sea ice from submarine and aircraft (1989, 20p) MP 2697

Jackson, L.

Operation of the U.S Combat Support Boat (USCSBMK 1) on an ice-covered waterway (1984, 28p.) SR 84-05

Jackson, T.J.

Survey of methods for soil moisture determination (1979, 74p.) MP 1639

Jacobs, S.S.

Structure of ice in the central part of the Ross Ice Shelf, Antarctica (1985, p 39-44) MP 2110

Jacobson, S.

Preliminary investigations of the kinetics of nitrogen transformation and nitrosamine formation in land treatment of wastewater (1979, 59p) SR 79-04

Jain, A.

Inlet current measured with Seasat-1 synthetic aperture radar (1980, p.35-37) MP 1443
Inlet current measured with Seasat-1 synthetic aperture radar (1980, p.35-37) MP 1481

Janoo, V.C.

Laboratory investigations of low temperature cracking susceptibility of asphalt concrete (1987, p.397-415) MP 2233
Use of low viscosity asphalts in cold regions (1989, p.70-80) MP 2462
State of the art of pavement response monitoring systems for roads and airfields (1989, 401p) SR 89-23
Use of soft grade asphalts in airfields and highway pavements in cold regions (1990, 47p) SR 90-12

Janosi, Z.

Mobility working group report (1987, p 273-274) MP 2423

Janowicz, R.

Ice regime reconnaissance, Yukon River, Yukon (1984, p 1059-1073) MP 2406

Jellinek, H.H.G.

Ice removal from the walls of navigation locks (1976, p 1487-1496) MP 888
Ice releasing block-copolymer coatings (1978, p.544-551) MP 1141

Jenkins, T.F.

Continuous monitoring of total dissolved gases, a feasibility study (1975, p.101-105) MP 851
Effect of sediment organic matter on migration of various chemical constituents during disposal of dredged material (1976, 183p) MP 967
Wastewater renovation by a prototype slow infiltration land treatment system (1976, 44p.) CR 76-19
Fate and effects of crude oil spilled on permafrost terrain First year progress report (1976, 18p.) SR 76-15
Composition of vapors evolved from military TNT as influenced by temperature, solid composition, age and source (1977, 25p) SR 77-16
Wastewater treatment alternative needed (1977, p 82-87) MP 968
Fate and effects of crude oil spilled on permafrost terrain. Second annual progress report, June 1976 to July 1977 (1977, 46p) SR 77-44
Methodology for nitrogen isotope analysis at CRREL (1978, 57p.) SR 78-08
Performance of overland flow land treatment in cold climates (1978, p 61-70) MP 1152
Physical, chemical and biological effects of crude oil spills on black spruce forest, interior Alaska (1978, p 305-323) MP 1185
Fate of crude and refined oils in North Slope soils (1978, p 339-347) MP 1186
Five-year performance of CRREL land treatment test cells, water quality plant yields and nutrient uptake (1978, 24p) SR 78-26
International and national developments in land treatment of wastewater (1979, 28p) MP 1420
Land application of wastewater effect on soil and plant potassium (1979, p.309-312) MP 1228
Use of 15N to study nitrogen transformations in land treatment (1979, 32p) SR 79-31
Pilot scale study of overland flow land treatment in cold climates (1979, p.207-214) MP 1279
Prototype overland flow test data: June 1977-May 1978 (1979, 91p.) SR 79-35
Wastewater treatment in cold regions by overland flow (1980, 14p) CR 80-07
Fate and effects of crude oil spilled on subarctic permafrost terrain in interior Alaska (1980, 128p) MP 1310
Removal of volatile trace organics from wastewater by overland flow land treatment (1980, p.211-224) MP 1313
Removal of organics by overland flow (1980, 9p.) MP 1362
Rational design of overland flow systems (1980, p 114-121) MP 1400
Forage grass growth on overland flow systems (1980, p.347-354) MP 1402
Fate and effects of crude oil spilled on subarctic permafrost terrain in interior Alaska (1980, 67p) CR 80-29
Overland flow. removal of toxic volatile organics (1981, 16p) SR 81-01
Toxic volatile organics removal by overland flow land treatment (1981, 14p) MP 1421
Winter air pollution at Fairbanks, Alaska (1981, p 512-528) MP 1395
Seven-year performance of CRREL slow-rate land treatment prototypes (1981, 25p.) SR 81-12
Wastewater treatment by a prototype slow rate land treatment system (1981, 44p) CR 81-14
Vegetation selection and management for overland flow systems (1982, p 135-154) MP 1511
Development of a rational design procedure for overland flow systems (1982, 29p.) CR 82-02
Relationship between the ice and unfrozen water phases in frozen soil as determined by pulsed nuclear magnetic resonance and physical desorption data (1982, 8p) CR 82-15
Mobility of water in frozen soils (1982, c15p) MP 2012
Removal of trace organics by overland flow (1982, p.176-184) MP 2442
Method for measuring enriched levels of deuterium in soil water (1982, 12p) SR 82-25
Baseline water quality measurements at six Corps of Engineers reservoirs, Summer 1981 (1982, 55p) SR 82-30
Transport of water in frozen soil 1. Experimental determination of soil-water diffusivity under isothermal conditions (1982, p 221-226) MP 1629
Assessment of the treatability of toxic organics by overland flow (1983, 47p) CR 83-03
Transport of water in frozen soil. 2. Effects of ice on the transport of water under isothermal conditions (1983, p 15-26) MP 1601
Relationship between the ice and unfrozen water phases in frozen soils as determined by pulsed nuclear resonance and physical desorption data (1983, p 37-46) MP 1632
Soil-water diffusivity of unsaturated frozen soils at subzero temperatures (1983, p.889-893) MP 1664
Transport of water in frozen soil. 1. Experimental determination of soil-water diffusivity under isothermal conditions (1983, 8p) CR 83-22
Impact of dredging on water quality at Kewaunee Harbor, Wisconsin (1984, 16p) CR 84-21
Transport of water in frozen soil. 5, Method for measuring the vapor diffusivity when ice is absent (1984, p.172-179) MP 1819
Impact of slow-rate land treatment on groundwater quality: toxic organics (1984, 36p) CR 84-30
Reverse phase HPLC method for analysis of TNT, RDX, HMX and 2,4-DNT in munitions wastewater (1984, 95p.) CR 84-29
Potential use of artificial ground freezing for contaminant immobilization (1985, 10p) MP 2029
Toxic organics removal kinetics in overland flow land treatment (1985, p 707-718) MP 2111
Suitability of polyvinyl chloride pipe for monitoring TNT, RDX, HMX and DNT in groundwater (1985, 27p) SR 85-12
Comparison of extraction techniques and solvents for explosive residues in soil (1985, 33p) SR 85-22
Reversed-phase high-performance liquid chromatographic determination of nitroorganics in munitions wastewater (1986, p 170-175) MP 2049
Interlaboratory evaluation of high-performance liquid chromatographic determination of nitroorganics in munition plant wastewater (1986, p 176-182) MP 2050
Suitability of polyvinyl chloride well casings for monitoring munitions in ground water (1986, p 92-98) MP 2171
Removal of trace-level organics by slow-rate land treatment (1986, p 1417-1426) MP 2170
Of Overland flow wastewater treatment at Easley, S.C. (1986, p 1078-1079) MP 2300
Losses of explosives residues on disposable membrane filters (1987, 25p) SR 87-02
Comparison of extraction techniques for munitions residues in soil (1987, p 1326-1331) MP 2350
Development of an analytical method for explosive residues in soil (1987, 51p) CR 87-07
Comparison of methanol and tetraglyme as extraction solvents for determination of volatile organics in soil (1987, 26p) SR 87-22

Jenkins, T.F. *(cont.)*
Analytical method for determining tetrazane in water (1987, 34p.) SR 87-25
Evaluation of disposable membrane filter units for sorptive losses and sample contamination (1988, p.45-52) MP 2328
Development of analytical methods for military-unique compounds (1988, p 370-380) MP 2454
Comparison of EPA and USATHAMA detection capability estimators (1988, p 405-418) MP 2455
Influence of well casing materials on chemical species in ground water (1988, p.450-461) MP 2456
Development of an analytical method for the determination of explosive residues in soil Part II Additional development and ruggedness testing (1988, 46p.) CR 88-08
Analytical method for determining tetrazene in soil (1988, 22p.) SR 88-15
Improved RP-HPLC method for determining nitroaromatics and nitramines in water (1988, 36p.) SR 88-23
Development of an analytical method for the determination of explosive residues in soil Part 3 Collaborative test results and final performance evaluation (1989, 89p.) CR 89-09
Comparisons of low concentration measurement capability estimates in trace analysis: method detection limit and certified reporting limit (1989, 21p.) SR 89-20
Ion-pairing RP-HPLC method for determining tetrazene in water and soil (1989, p.159-179) MP 2593
Analytical methods for detecting military-unique compounds (1989, p 13-14) MP 2713
Influence of ground water monitoring well casings on metals and organic compounds in well water (1989, 9p.) MP 2717
Evaluation of four well casing materials for monitoring selected trace level organics in ground water (1989, 29p.) CR 89-18
Liquid chromatographic method for determination of extractable nitroaromatic and nitramine residues in soil (1989, p 890-899) MP 2586
Influence of casing materials on trace-level chemicals in well water (1990, 11p.) MP 2720
Salting-out solvent extraction for preconcentration of neutral organic solutes from water (1990, p.1355-1356) MP 2743

Jewell, W.
Engineering assessment of aquaculture systems for wastewater treatment an overview (1980, p 1-12) MP 1423

Jezek, K.C.
Measurements of radar wave speeds in polar glaciers using a down-hole radar target technique (1983, p.199-208) MP 2057
Recent changes in the dynamic condition of the Ross Ice Shelf, Antarctica (1984, p 409-416) MP 2058
Modified theory of bottom crevasses used as a means for measuring the buttressing effect of ice shelves on inland ice sheets (1984, p 1925-1931) MP 2059
Calculating borehole geometry from standard measurements of borehole inclinometry (1984, 18p.) SR 84-15
Ice flow leading to the deep core hole at Dye 3, Greenland (1984, p.185-190) MP 1824
Reconsideration of the mass balance of a portion of the Ross Ice Shelf, Antarctica (1984, p 381-384) MP 1919
Discrete reflections from thin layers of snow and ice (1984, p.323-331) MP 1871
Radar measurements of borehole geometry on the Greenland and Antarctic ice sheets (1985, p 242-251) MP 1817
Rheology of glacier ice (1985, p.1335-1337) MP 1844
Geophysical survey of subglacial geology around the deep-drilling site at Dye 3, Greenland (1985, p.105-110) MP 1941
Laboratory studies of acoustic scattering from the underside of sea ice (1985, p 87-91) MP 1912
Acoustic waves incident on a seawater/sea ice interface (1985, 10p.) SR 85-10
Effects of water and ice layers on the scattering properties of diffuse reflectors (1986, p.259-269) MP 2664
Acoustical reflection and scattering from the underside of laboratory grown sea ice: measurements and predictions (1986, p 1486-1494) MP 2222
Folding in the Greenland ice sheet (1987, p 485-493) MP 2185
Remote sensing of ice and snow (review) (1987, p 51) MP 2429
Glaciological investigations using the synthetic aperture radar imaging system (1987, p.11-19) MP 2342
Alaska synthetic aperture radar (SAR) facility project (1987, p 593-596) MP 2408
Effects of water and ice layers on the scattering properties of diffuse reflectors (1987, p.5143-5147) MP 2301
Polar communications status and recommendations Report of the Science Working Group (1987, 29p.) MP 2322
Radioglaciology by V.V Bogorodskii, et al (1988, p 55-56) MP 2338
Effect of stratigraphy on radar-altimetry data collected over ice sheets (1988, p 60-63) MP 2458
Can relict crevasse plumes on antarctic ice shelves reveal a history of ice-stream fluctuation (1988, p 77-82) MP 2460
High frequency acoustical properties of saline ice (1989, p 9 23) MP 2686
Acoustical and morphological properties of undeformed sea ice laboratory and field results (1990, p.67-75) MP 2730
Antarctic ice sheet brightness temperature variations (1990, p 217-223) MP 2736

Johannessen, O.
On estimating ice stress from MIZEX 83 ice deformation and current measurements (1986, p.17-19) MP 2220

Johannessen, O.M.
MIZEX—a program for mesoscale air-ice-ocean interaction; experiments in Arctic marginal ice zones. 1 Research strategy (1981, 20p.) SR 81-19
MIZEX—a program for mesoscale air-ice-ocean interaction experiments in Arctic marginal ice zones. 2. A science plan for a summer Marginal Ice Zone Experiment in the Fram Strait/Greenland Sea. 1984 (1983, 47p.) SR 83-12
Marginal ice zones a description of air-ice-ocean interactive processes, models and planned experiments (1984, p.133-146) MP 1673
MIZEX a program for mesoscale air-ice-ocean interaction experiments in Arctic marginal ice zones. 5. MIZEX 84 summer experiment PI preliminary reports (1984, 176p.) SR 84-29

Johansen, N.I.
Sublimation and its control in the CRREL permafrost tunnel (1981, 12p.) SR 81-08

Johnsen, S.J.
Climatic oscillations depicted and predicted by isotope analyses of a Greenland ice core (1971, p.17-22) MP 998
Oxygen isotope profiles through the Antarctic and Greenland ice sheets (1972, p 429-434) MP 997
Stable isotope profile through the Ross Ice Shelf at Little America V, Antarctica (1977, p.322-325) MP 1095
20-yr cycle in Greenland ice core records (1979, p 481-483) MP 1245

Johnson, A.J.
Revegetation and selected terrain disturbances along the trans-Alaska pipeline, 1975-1978 (1981, 115p.) CR 81-12

Johnson, A.W.
Tundra disturbances and recovery following the 1949 exploratory drilling, Fish Creek, Northern Alaska (1978, 81p.) CR 78-28
Reconnaissance observations of long-term natural vegetation recovery in the Cape Thompson region, Alaska, and additions to the checklist of flora (1985, 75p.) CR 85-11

Johnson, J.B.
Surface integral method for determining ice loads on offshore structures from *in situ* measurements (1983, p 124-128) MP 2056
Stress measurements in ice (1983, 31p.) CR 83-23
Frost jacking forces on H and pipe piles embedded in Fairbanks silt (1984, 42p + append.) MP 2271
Preferential detection of sound by persons buried under snow avalanche debris as compared to persons on the overlying surface (1984, p 42-47) MP 1920
In-ice calibration tests for an elongated, uniaxial brass ice stress sensor (1985, p.244-249) MP 1859
Frost heave forces on piling (1985, 2p.) MP 1732
Kadluk ice stress measurement program (1985, p 88-100) MP 1899
Frost jacking forces on H and pipe piles embedded in Fairbanks silt (1985, p 125-133) MP 1930
Audibility within and outside deposited snow (1985, p.136-142) MP 1960
In-ice calibration tests for an elongate, uniaxial brass ice stress sensor (1985, p 506-510) MP 1966
Verification tests for a stiff inclusion stress sensor (1987, p 81-88) MP 2223
Field observations of thermal convection in a subarctic snow cover (1987, p 105-118) MP 2439
Verification tests of the surface integral method for calculating structural ice loads (1988, p 449-456) MP 2353
Mukluk ice stress measurement program (1988, p 457-463) MP 2354
Ice stress measurements around offshore structures (1988, p 55-59) MP 2611
Techniques for gas gun studies of shock wave attenuation in snow (1988, p 657-660) MP 2543
Frost heave forces on H and pipe foundation piles (1988, p 1039-1044) MP 2367
Measurement of frost heave forces on H-piles and pipe piles (1988, 49p.) CR 88-21

Johnson, L.
Landsat digital analysis of the initial recovery of the Kokolik River tundra fire area, Alaska (1979, 15p.) MP 1638
Recovery and active layer changes following a tundra fire in northwestern Alaska (1983, p 543-547) MP 1660
Revegetation along pipeline rights-of-way in Alaska (1984, p 254-264) MP 2113

Johnson, L.A.
Revegetation in arctic and subarctic North America a literature review (1976, 32p.) CR 76-15
Fate and effects of crude oil spilled on permafrost terrain First year progress report (1976, 18p.) SR 76-15
Revegetation and erosion control observations along the Trans Alaska Pipeline 1975 summer construction season (1977, 36p.) SR 77-08
Fate and effects of crude oil spilled on permafrost terrain. Second annual progress report, June 1976 to July 1977 (1977, 46p.) SR 77-44
1977 tundra fire in the Kokolik River area of Alaska (1978, p 54-58) MP 1125
Biological restoration strategies in relation to nutrients at a subarctic site in Fairbanks, Alaska (1978, p.460-466) MP 1100
1977 tundra fire at Kokolik River, Alaska (1978, 11p.) SR 78-10
Effects of winter military operations on cold regions terrain (1978, 34p.) SR 78-17
Physical, chemical and biological effects of crude oil spills on black spruce forest, interior Alaska (1978, p.305-323) MP 1185
Fate and effects of crude oil spilled on subarctic permafrost terrain in interior Alaska (1980, 128p.) MP 1310
LANDSAT digital analysis of the initial recovery of burned tundra at Kokolik River, Alaska (1980, p 263-272) MP 1391
Revegetation and restoration investigations (1980, p.129-150) MP 1353
Fate and effects of crude oil spilled on subarctic permafrost terrain in interior Alaska (1980, 67p.) CR 80-29
Chena River Lakes Project revegetation study—three-year summary (1981, 59p.) CR 81-18
Patterns of vegetation recovery after tundra fires in northwestern Alaska, U S A. (1987, p 461-469) MP 2374
Management of northern gravel sites for successful reclamation: a review (1987, p.530-536) MP 2375
Effects of all-terrain vehicle traffic on tundra terrain near Anaktuvuk Pass, Alaska (1988, 12p.) SR 88-17

Studies of the movement of coastal sea ice near Prudhoe Bay, Alaska, U.S A. (1977, p 533-546) MP 1066
Unconfined compression tests on snow a comparative study (1977, 27p.) SR 77-20
Study of a grounded floeberg near Reindeer Island, Alaska (1977, 9p.) MP 1751
Brazil tensile strength tests on sea ice: a data report (1977, 39p.) SR 77-24
Detection of moisture in construction materials (1977, 9p.) CR 77-25
Nearshore ice motion near Prudhoe Bay, Alaska (1977, p.23-31) MP 1162
Dielectric constant and reflection coefficient of the snow surface and near-surface internal layers in the McMurdo Ice Shelf (1977, p 137-138) MP 1011
Iceberg thickness profiling using an impulse radar (1977, p 140-142) MP 1012
Subsurface measurements of the Ross Ice Shelf, McMurdo Sound, Antarctica (1977, p 146-148) MP 1013
Dynamics of near-shore ice (1977, p 411-424) MP 1076
Dynamics of near-shore ice (1977, p 503-510) MP 1200
Iceberg thickness and crack detection (1978, p.131-145) MP 1128
Destruction of ice islands with explosives (1978, p.753-765) MP 1018
Iceberg thickness profiling (1978, p.766-774) MP 1019
Axial double point-load tests on snow and ice (1978, 11p.) CR 78-01
Radar anisotropy of sea ice due to preferred azimuthal orientation of the horizontal c-axes of ice crystals (1978, p.171-201) MP 1111
Radar profile of a multi-year pressure ridge fragment (1978, p 59-62) MP 1126
Study of several pressure ridges and ice islands in the Canadian Beaufort Sea (1978, p.519-532) MP 1187
Sea ice pressure ridges in the Beaufort Sea (1978, p 249-271) MP 1132
Dynamics of near-shore ice (1978, p.11-22) MP 1205
Recent ice observations in the Alaskan Beaufort Sea federal-state lease area (1978, p.7-12) MP 1252
Radar anisotropy of sea ice due to preferred azimuthal orientation of horizontal c axes of ice crystals (1978, p 6037-6046) MP 1139
Measurement of mesoscale deformation of Beaufort sea ice (AIDJEX-1971) (1978, p.148-172) MP 1179
Dynamics of near-shore ice (1978, p 230-233) MP 1619
Remote detection of water under ice-covered lakes on the North Slope of Alaska (1978, p.448-458) MP 1214
Remote detection of massive ice in permafrost along the Alyeska pipeline and the pump station feeder gas pipeline (1979, p.268-279) MP 1175
Remote detection of a freshwater pool off the Sagavanirktok River delta, Alaska (1979, p 161-164) MP 1224
Icebergs an overview (1979, 7p.) SR 79-21
Multi year pressure ridges in the Canadian Beaufort Sea (1979, p.107-126) MP 1229
Ice pile-up and ride-up on Arctic and subarctic beaches (1979, p.127-146) MP 1230
Anisotropic properties of sea ice in the 50- to 150-MHz range (1979, p 5749-5759) MP 1258
Dynamics of near-shore ice (1979, p.181-207) MP 1291
Oil pooling under sea ice (1979, p.310-323) MP 1289
Anisotropic properties of sea ice in the 50-150 MHz range (1979, p 324-353) MP 1620
Subsurface measurements of McMurdo Ice Shelf (1979, p 79-80) MP 1338
Shore ice pile-up and ride-up: field observations, models, theoretical analyses (1980, p 209-298) MP 1295
Radio-echo sounding in the Allan Hills, Antarctica, in support of the meteorite field program (1980, 9p.) SR 80-23
Investigations of sea ice anisotropy, electromagnetic properties, strength and under-ice current orientation (1980, p.109-153) MP 1323
Investigations of sea ice anisotropy, electromagnetic properties, strength, and under-ice current orientation (1980, 18p.) CR 80-20
Pooling of oil under sea ice (1981, p 912-922) MP 1459
Sea ice piling at Fairway Rock, Bering Strait, Alaska, observations and theoretical analysis (1981, p 985-1000) MP 1460
Sea ice rubble formations off the northeast Bering Sea and Norton Sound coasts of Alaska (1981, p 1348-1363) MP 1527
Dynamics of near-shore ice (1981, p.125-135) MP 1599
Multi-year pressure ridges in the Canadian Beaufort Sea (1981, p 125-145) MP 1514
Ice pile-up and ride-up on arctic and subarctic beaches (1981, p 247-273) MP 1538
Sea ice rubble formations in the Bering Sea and Norton Sound, Alaska (1981, 23p.) SR 81-34
High-resolution impulse radar measurements for detecting sea ice and current alinement under the Ross Ice Shelf (1981, p 96-97) MP 1543
Brine zone in the McMurdo Ice Shelf, Antarctica (1982, p 166-171) MP 1550
Bering Strait sea ice and the Fairway Rock icefoot (1982, 40p.) CR 82-31
Effects of conductivity of high-resolution impulse radar sounding, Ross Ice Shelf, Antarctica (1982, 12p.) CR 82-42
Brine zone in the McMurdo Ice Shelf, Antarctica (1982, 28p.) CR 82-39
Shore ice ride-up and pile-up features Part 1 Alaska's Beaufort Sea coast (1983, 51p.) CR 83-09
Chemical fractionation of brine in the McMurdo Ice Shelf, Antarctica (1983, 16p.) CR 83-06
Detection of cavities under concrete pavement (1983, 41p.) CR 83-18
Characteristics of multi-year pressure ridges (1983, p.173-182) MP 1698
Sea ice on the Norton Sound and adjacent Bering Sea coast (1983, p 654-666) MP 1699
Electromagnetic properties of sea ice (1984, 32p.) CR 84-02
Electromagnetic properties of sea ice (1984, p 53-75) MP 1776

AUTHOR INDEX

Forces associated with ice pile-up and ride-up (1984, p.239-262) MP 1887
Shore ice ride-up and pile-up features Part 2 Alaska's Beaufort Sea coast—1983 and 1984 (1984, 28p. + map) CR 84-26
Authors' response to discussion on. Electromagnetic properties of sea ice (1984, p.95-97) MP 1822
Measuring multi-year sea ice thickness using impulse radar (1985, p.55-67) MP 1916
Impulse radar sounding of frozen ground (1985, p 28-40) MP 1952
Analysis of wide-angle reflection and refraction measurements (1985, p 53-60) MP 1953
Ice island fragment in Stefansson Sound, Alaska (1985, p.101-115) MP 1900
Apparent unconfined compressive strength of multi-year sea ice (1985, p.116-127) MP 1901
Investigation of the electromagnetic properties of multi-year sea ice (1985, p 151-167) MP 1902
Electromagnetic measurements of multi-year sea ice using impulse radar (1985, 26p) CR 85-13
Sea ice and the Fairway Rock icefoot (1985, p 25-32) MP 2145
Electromagnetic measurements of multi-year sea ice using impulse radar (1986, p 67-93) MP 2020
Chemical fractionation of brine in the McMurdo Ice Shelf, Antarctica (1986, p.307-313) MP 2239
Modeling the electromagnetic property trends in sea ice and example impulse radar and frequency-domain electromagnetic ice thickness sounding results (1986, p 57-133) MP 2197
Electromagnetic property trends in sea ice, Part 1 (1987, 45p) CR 87-06
Modeling the electromagnetic property trends in sea ice, Part 1 (1987, p 207-235) MP 2330
Airborne electromagnetic sounding of sea ice thickness and sub-ice bathymetry (1987, p 289-311) MP 2332
Airborne electromagnetic sounding of sea ice thickness and sub-ice bathymetry (1987, 40p) CR 87-23
Onshore ice pile-up and ride-up: observations and theoretical assessment (1988, p.108-142) MP 2336
Airborne measurement of sea ice thickness and subice bathymetry (1988, p 111-120) MP 2345
Electromagnetic measurements of a second-year sea ice floe (1988, p.121-136) MP 2346
Airborne sea ice thickness sounding (1939, p.1042-1052) MP 2623
Estimating sea ice thickness using time-of-flight data from impulse radar soundings (1989, 10p) CR 89-22
Sea ice thickness measurement using a down-sized airborne electromagnetic-sounding system (1989, p.394-424) MP 2693
Development of an airborne sea ice thickness measurement system and field test results (1989, 47p) CR 89-19
Airborne measurement of sea ice thickness using electromagnetic induction during LIMEX 89 (1990, p 309-315) MP 2590
Airborne sea ice thickness sounding (1990, p 225-229) MP 2737
Sea ice thickness versus impulse radar time-of-flight data (1990, p 91-98) MP 2704
Investigation of the LIZ-3 Dew Line Station water supply lake (1990, 10p) SR 90-11

Rational design of overland flow systems (1980, p.114-121) MP 1400
Forage grass growth on overland flow systems (1980, p.347-354) MP 1402
Spray application of wastewater effluent in a cold climate: performance evaluation of a full-scale plant (1980, p.620-626) MP 1403
Overland flow: removal of toxic volatile organics (1981, 16p.) SR 81-01
Toxic volatile organics removal by overland flow land treatment (1981, 14p.) MP 1421
Vegetation selection and management for overland flow systems (1982, p.135-154) MP 1511
Development of a rational design procedure for overland flow systems (1982, 29p.) CR 82-02
Overland flow: an alternative for wastewater treatment (1982, p.181-184) MP 1506
Evaluating the heat pump alternative for heating enclosed wastewater treatment facilities in cold regions (1982, 23p.) SR 82-10
Energy conservation at the West Dover, Vermont, water pollution control facility (1982, 18p.) SR 82-24
Heating enclosed wastewater treatment facilities with heat pumps (1982, p.262-280) MP 1976
Assessment of the treatability of toxic organics by overland flow (1983, 47p.) CR 83-03
Heat recovery from primary effluent using heat pumps (1985, p.199-203) MP 1978
Of: Overland flow wastewater treatment at Easley, S.C. (1986, p.1078-1079) MP 2300
Evaluation of the Shasta waterless system as a remote site sanitation facility (1987, 24p.) SR 87-16
New approach for sizing rapid infiltration systems (1988, p.211-215) MP 2323
Rational design of sludge freezing beds (1988, p.575-581) MP 2343
Developing a thawing model for sludge freezing beds (1988, p.1426-1430) MP 2372
Predicting freezing design depth of sludge-freezing beds (1988, p.145-156) MP 2461
Development and design of sludge freezing beds (1988, 49p.) CR 88-20
Dewaterability of freeze-thaw conditional sludges (1989, p.237-241) MP 2616
Thermal conductivity of sludges (1989, p.241-245) MP 2632
Hydraulic model of overland flow on grass covered slopes (1989, p.569-578) MP 2710
Development and design of sludge freezing beds (1989, p.799-808) MP 2556
Sludge dewatering by natural freeze-thaw (1990, p.116-122) MP 2714

Martel, J.
New approach for sizing rapid infiltration systems (discussion and closure) (1989, p.879-882) MP 2712

Marten, G.C.
Uptake of nutrients by plants irrigated with municipal wastewater effluent (1978, p.395-404) MP 1151

Martin, R.J., III
Mechanisms of crack growth in quartz (1975, p.4837-4844) MP 855

Martin, R.T.
Mechanical properties of polycrystalline ice: an assessment of current knowledge and priorities for research (1979, 16p.) MP 1207
Application of the Andrade equation to creep data for ice and frozen soil (1979, p.29-36) MP 1802

Martin, S.
MIZEX—a program for mesoscale air-ice-ocean interaction; experiments in Arctic marginal ice zones. 1. Research strategy (1981, 20p.) SR 81-19

Martin, W.
Ice strength estimates from submarine topsounder data (1989, p.425-426) MP 2691

Martinson, C.R.
Sediment displacement in the Ottauquechee River—1975-1978 (1980, 14p.) SR 80-20
Analysis of velocity profiles under ice in shallow streams (1981, p.94-111) MP 1397
Method for measuring brash ice thickness with impulse radar (1981, 10p.) SR 81-11
Resistance coefficients from velocity profiles in ice-covered shallow streams (1982, p.236-247) MP 1540
Mine detection using non-sinusoidal radar. Part 1: Spatial analysis of laboratory test data (1984, 99p.) SR 84-22
Determining the characteristic length of floating ice sheets by moving loads (1985, p.155-159) MP 1855
Impulse radar sounding of level first-year sea ice from an icebreaker (1985, 9p.) SR 85-21
Development of a river ice prow (1988, 26p.) CR 88-09
Radar profiling of Newton Airfield in Jackman, Maine (1989, 9p.) SR 89-04
Ice reinforced with Geogrid (1989, p.179-185) MP 2484
Model tests in ice of a Canadian Coast Guard R-class icebreaker: high friction model (1989, 41p.) SR 89-25

Marvin, E.L.
Arctic construction: working group report (1987, p.311-314) MP 2426

Radiation and evaporation heat loss during ice fog conditions (1975, p.18-27) MP 1051
Thermal pollution studies of French Creek, Eielson AFB, Alaska (1976, 5p.) CR 76-14
Debris of the Chena River (1976, 14p.) CR 76-26
Failure of an ice bridge (1976, 13p.) CR 76-29
Suppression of ice fog from cooling ponds (1976, 78p.) CR 76-43
Fate and effects of crude oil spilled on permafrost terrain. First year progress report (1976, 18p.) SR 76-15
Utility distribution systems in Sweden, Finland, Norway and England (1976, 121p.) SR 76-16
Utility distribution practices in northern Europe (1977, p.70-95) MP 928
Freeze damage prevention in utility distribution lines (1977, p.221-231) MP 929
Freeze damage protection for utility lines (1977, p.12-16) MP 953
Ice fog suppression using monomolecular films (1977, p.361-367) MP 956
Yukon River breakup 1976 (1977, p.592-596) MP 960
Ice breakup on the Chena River 1975 and 1976 (1977, 44p.) CR 77-14
Investigation of slumping failure in an earth dam abutment at Kotzebue, Alaska (1977, 21p.) SR 77-21
Fate and effects of crude oil spilled on permafrost terrain. Second annual progress report, June 1976 to July 1977 (1977, 46p.) SR 77-44
Fresh water supply for a village surrounded by salt water—Point Hope, Alaska (1978, 18p.) SR 78-07
Physical, chemical and biological effects of crude oil spills on black spruce forest, interior Alaska (1978, p.305-323) MP 1185
Ice fog suppression using reinforced thin chemical films (1978, 23p.) CR 78-26
Ice fog suppression using thin chemical films (1979, 44p.) MP 1192
Ice forces on the Yukon River bridge—1978 breakup (1979, 40p.) MP 1304
Case study: fresh water supply for Point Hope, Alaska (1979, p.1029-1040) MP 1222
Fate and effects of crude oil spilled on subarctic permafrost terrain in interior Alaska (1980, 128p.) MP 1310
Waste heat utilization through soil heating (1980, p.105-120) MP 1363
Ice fog suppression in Arctic communities (1980, p.54-65) MP 1357
Fate and effects of crude oil spilled on subarctic permafrost terrain in interior Alaska (1980, 67p.) CR 80-29
Ice force measurement on the Yukon River bridge (1981, p.749-777) MP 1396

McGaw, R.
Proposed size classification for the texture of frozen earth materials (1975, 10p.) MP 921
Development of a remote-reading tensiometer/transducer system for use in subfreezing temperatures (1976, p.31-45) MP 897
Simple procedure to calculate the volume of water remaining unfrozen in a freezing soil (1976, p.114-122) MP 899
Periodic structure of New Hampshire silt in open-system freezing (1977, p.129-136) MP 902
Improved drainage and frost action criteria for New Jersey pavement design Phase 2: Frost action (1978, 80p.) SR 78-09
Thermal properties and regime of wet tundra soils at Barrow, Alaska (1978, p.47-53) MP 1096
Mobility of water in frozen soils (1982, c15p.) MP 2012
Investigation of transient processes in an advancing zone of freezing (1983, p.821-825) MP 1663
Full-cycle heating and cooling probe method for measuring thermal conductivity (1984, 8p.) MP 1891

McGee, I.E.
Critical comparison of moving average and cumulative summation control charts for trace analysis data (1987, 57p.) SR 87-21

McGilvary, W.R.
Vertical lifting and penetration of floating ice sheets with cylindrical indentors (1989, p.104) MP 2688
Dynamic analysis of a floating ice sheet undergoing vertical indentation (1990, p.195-203) MP 2579

McGrew, S.G.
Dielectric properties at 4.75 GHz of saline ice slabs (1985, p.83-86) MP 1911
Microwave dielectric, structural, and salinity properties of simulated sea ice (1986, p.832-839) MP 2188

Structure and dielectric properties at 4.8 and 9.5 GHz of saline ice (1986, p.14,281-14,303) MP 2182

Microwave and structural properties of saline ice (1987, 36p.) CR 87-20

McKenna, C.

Reference guide for building diagnostics equipment and techniques (1986, 148p.) MP 2226

McKenna, C.M.

Reference guide for building diagnostics equipment and techniques (1989, 64p.) SR 89-27

McKim, H.L.

Arctic and subarctic environmental analysis (1972, p 28-30) MP 1119

Arctic and subarctic environmental analyses using ERTS-1 imagery. Progress report Dec. 72-June 73 (1973, 75p.) MP 1003

Arctic and subarctic environmental analyses utilizing ERTS-1 imagery (1973, 5p.) MP 1611

Mesoscale deformation of sea ice from satellite imagery (1973, 2p.) MP 1120

Arctic and subarctic environmental analyses utilizing ERTS-1 imagery. Bimonthly progress report, 23 Aug. - 23 Oct. 1973 (1973, 3p.) MP 1030

Arctic and subarctic environmental analyses utilizing ERTS-1 imagery. Bimonthly progress report, 23 Oct. - 23 Dec. 1973 (1973, 6p.) MP 1031

Arctic and subarctic environmental analysis utilizing ERTS-1 imagery. Final report June 1972-Feb. 1974 (1974, 128p.) MP 1047

New England reservoir management: Land use/vegetation mapping in reservoir management (Merrimack River basin) (1974, 30p.) MP 1039

Near real time hydrologic data acquisition utilizing the LANDSAT system (1975, p 200-211) MP 1055

Islands of grounded ice (1975, p.213-216) MP 852

Applications of remote sensing for Corps of Engineers programs in New England (1975, 8p. + 14 figs. and tables) MP 913

Wastewater reuse at Livermore, California (1976, p.511-531) MP 870

Remote sensing of land use and water quality relationships—Wisconsin shore, Lake Michigan (1976, 47p.) CR 76-30

Development of a remote-reading tensiometer/transducer system for use in subfreezing temperatures (1976, p.31-45) MP 897

Skylab imagery: Application to reservoir management in New England (1976, 51p.) SR 76-07

Environmental analyses in the Kootenai River region, Montana (1976, 53p.) SR 76-13

Preliminary analysis of water equivalent/snow characteristics using LANDSAT digital processing techniques (1977, 16 leaves) MP 1113

Applications of remote sensing in the Boston Urban Studies Program, Parts I and II (1977, 36p.) CR 77-13

Wastewater reuse at Livermore, California (1977, p.511-531) MP 979

Use of the Landsat data collection system and imagery in reservoir management and operation (1977, c150p.) MP 1114

Effect of inundation on vegetation at selected New England flood control reservoirs (1978, 13p.) MP 1169

Computer processing of Landsat digital data and sensor interface development for use in New England reservoir management (1978, 61p.) SR 78-06

Use of remote sensing to quantify construction material and to define geologic lineaments, Dickey-Lincoln School Lakes Project, Maine (1978, 9 leaves) MP 1167

Water resources by satellite (1978, p.164-169) MP 1090

Performance of overland flow land treatment in cold climates (1978, p 61-70) MP 1152

Growth and nutrient uptake of forage grasses when receiving various application rates of wastewater (1978, p.157-163) MP 1153

Microbiological aerosols from a field source during sprinkler irrigation with wastewater (1978, p 273-280) MP 1154

Mass water balance during spray irrigation with wastewater at Deer Creek Lake land treatment site (1978, 43p.) SR 79-29

Development of a simplified method for field monitoring of soil moisture (1978, p.40-44) MP 1194

Snow cover mapping in northern Maine using LANDSAT digital processing techniques (1979, p 197-198) MP 1510

Land treatment systems and the environment (1979, p 201-225) MP 1414

International and national developments in land treatment of wastewater (1979, 28p.) MP 1420

Bacterial aerosols from a field source during multiple-sprinkler irrigation Deer Creek Lake State Park, Ohio (1979, 64p.) SR 79-32

Survey of methods for soil moisture determination (1979, 74p.) MP 1639

Environmental analysis of the Upper Susitna River Basin using Landsat imagery (1980, 41p.) CR 80-04

Materials availability study of the Dickey-Lincoln dam site (1980, p.158-170) MP 1316

Remote sensing of water quality using an airborne spectroradiometer (1980, p.1353-1362) MP 1491

Review of techniques for measuring soil moisture *in situ* (1980, 17p.) SR 80-31

Infiltration characteristics of soils at Apple Valley, Minn.; Clarence Cannon Dam, Mo; and Deer Creek Lake, Ohio, land treatment sites (1980, 41p.) SR 80-36

Hydraulic characteristics of the Deer Creek Lake land treatment site during wastewater application (1981, 37p.) CR 81-07

Wastewater applications in forest ecosystems (1982, 22p.) CR 82-19

Microbiological aerosols from a field-source wastewater irrigation system (1983, p 65-75) MP 1578

Landsat-4 thematic mapper (TM) for cold environments (1983, p 179-186) MP 1651

Extraction of topography from side-looking satellite systems—a case study with SPOT simulation data (1983, p 535-550) MP 1695

Use of radio frequency sensor for snow/soil moisture water content measurement (1983, p 33-42) MP 1689

Hydrologic forecasting using Landsat data (1983, p.159-168) MP 1691

Integration of Landsat land cover data into the Saginaw River Basin geographic information system for hydrologic modeling (1984, 19p.) SR 84-01

Water quality monitoring using an airborne spectroradiometer (1984, p 353-360) MP 1718

Using Landsat data for snow cover/vegetation mapping (1984, p II(140)-II(144)) MP 1975

Potential use of SPOT HRV imagery for analysis of coastal sediment plumes (1984, p.199-204) MP 1744

Spatial analysis in recreation resource management for the Berlin Lake Reservoir Project (1984, p 209-219) MP 2084

Ohio River main stem study: the role of geographic information systems and remote sensing in flood damage assessments (1984, p.265-281) MP 2083

USACRREL's snow, ice, and frozen ground research at the Sleepers River Research Watershed (1984, p 229-240) MP 2071

Use of remote sensing for the U.S. Army Corps of Engineers dredging program (1985, p.1141-1150) MP 1890

Catalog of Corps of Engineers structure inventories suitable for the acid precipitation-structure material study (1985, 40p.) SR 85-01

Evaluation of SPOT HRV simulation data for Corps of Engineers applications (1985, p 61-71) MP 2184

Comparison of SPOT simulator data with Landsat MSS imagery for delineating water masses in Delaware Bay, Broadkill River, and adjacent wetlands (1985, p 1123-1129) MP 1909

Evaluating trafficability (1985, p.474-475) MP 2023

Potential of remote sensing in the Corps of Engineers dredging program (1985, 42p.) SR 85-20

Evaluating trafficability (1986, p 237-239) MP 2662

Remote sensing and water resources (1987, p.186-190) MP 2535

Use of SPOT HRV data in a Corps dredging operation in Lake Erie (1987, p 49-58) MP 2548

Snow hydrology in the upper Yamuna basin, India (1988, p.84-93) MP 2633

Use of SPOT HRV data in the Corps of Engineers dredging program (1988, p.1295-1299) MP 2528

QuickDraw data structures for image processing (1989, 17p.) SR 89-08

Interfacing geographic information system data with real-time hydrologic forecasting models (1989, p 857-861) MP 2527

Multiband imaging systems (1990, 10p.) SR 90-15

Mellor, M. *(cont.)*
Destruction of ice islands with explosives (1978, p 753-765) MP 1018
Some elements of iceberg technology (1978, 31p.) CR 78-02
Large mobile drilling rigs used along the Alaska pipeline (1978, 23p.) SR 78-04
Investigation of ice clogged channels in the St. Marys River (1978, 73p.) MP 1170
Mechanics of cutting and boring Part 8. Dynamics and energetics of continuous belt machines (1978, 24p.) CR 78-11
Study of several pressure ridges and ice islands in the Canadian Beaufort Sea (1978, p.519-532) MP 1187
Undersea pipelines and cables in polar waters (1978, 34p.) CR 78-22
Mechanical properties of polycrystalline ice an assessment of current knowledge and priorities for research (1979, 16p.) MP 1207
Towing ships through ice-clogged channels by warping and kedging (1979, 21p.) CR 79-21
The iceberg cometh (1979, p 66-75) MP 1305
Icebreaking concepts (1980, 18p.) SR 80-02
High-force towing (1980, p 231-240) MP 1275
Some aspects of Soviet trenching machines (1980, 13p.) SR 80-07
Mechanical properties of polycrystalline ice (1980, p 217-245) MP 1302
Mechanical properties of polycrystalline ice: an assessment of current knowledge and priorities for research (1980, p 263-275) MP 1328
Ship resistance in thick brash ice (1980, p 305-321) MP 1329
Mechanics of cutting and boring. Part 5. Dynamics and energetics of indentation tools (1980, 82p.) CR 80-21
Cyclic loading and fatigue in ice (1981, p 41-53) MP 1371
Subsea trenching in the Arctic (1981, p 843-882) MP 1464
Standardized testing methods for measuring mechanical properties of ice (1981, p 245-254) MP 1556
Subsea trenching in the Arctic (1981, 31p.) CR 81-17
Mechanics of cutting and boring Part 7: Dynamics and energetics of axial rotation machines (1981, 38p.) CR 81-26
Deformation and failure of ice under constant stress or constant strain-rate (1982, p 201-219) MP 1525
Glacier mechanics (1982, p 455-474) MP 1532
Breaking ice with explosives (1982, 64p.) CR 82-40
Stress/strain/time relations for ice under uniaxial compression (1983, p 207-230) MP 1587
Protection of offshore arctic structures by explosives (1983, p.310-322) MP 1605
Mechanical behavior of sea ice (1983, 105p.) M 83-1
Snow concentration and effective air density during snowfalls (1983, p 505-507) MP 1769
Strain measurements on dumbbell specimens (1983, p.75-77) MP 1683
Mechanical properties of ice in the Arctic seas (1984, p 235-259) MP 1674
Summary of the strength and modulus of ice samples from multi-year pressure ridges (1984, p.126-133) MP 1679
Mechanical properties of multi-year sea ice. Phase 1: Test results (1984, 105p.) CR 84-09
Mechanical properties of multi-year sea ice Testing techniques (1984, 39p.) CR 84-08
Icebreaking by gas blasting (1984, p 93-102) MP 1827
4th report of working group on testing methods in ice (1984, p 1-41) MP 1886
Shopper's guide to ice penetration (1984, p 1-35) MP 1992
Penetration of shaped charges into ice (1984, p 137-148) MP 1995
Ice penetration tests (1984, p 209-240) MP 1996
Summary of the strength and modulus of ice samples from multi-year pressure ridges (1985, p.93-98) MP 1848
Mechanical properties of multi-year sea ice Phase 2 Test results (1985, 81p.) CR 85-16
Ice penetration tests (1985, p.223-236) MP 2014
Ice-coring augers for shallow depth sampling (1985, 22p.) CR 85-21
Blasting and blast effects in cold regions Part 1 Air blast (1985, 62p.) SR 85-25
Revised guidelines for blasting floating ice (1986, 37p.) SR 86-10
Concentration and flux of wind-blown snow (1986, 16p.) SR 86-11
Mechanical behavior of sea ice (1986, p 165-281) MP 2210
Blasting and blast effects in cold regions Part 2 underwater explosions (1986, 56p.) SR 86-16
Some developments in shaped charge technology (1986, 29p.) SR 86-18
Drill bits for frozen fine-grained soils (1986, 33p.) SR 86-27
Equipment for making access holes through arctic sea ice (1986, 34p.) SR 86-32
Deviation of guidelines for blasting floating ice (1987, p 193-206) MP 2247
Hard-surface runways in Antarctica (1988, 87p.) SR 88-13
Vehicles for freight-hauling and for science traverses in Antarctica (1988, Var. p.) MP 2504
Eruptions from under-ice explosions (1988, 26p.) SR 88-14
Deployment of floating bridges in ice-covered rivers (1988, 38p.) SR 88-20
Planing machines for building runways on ice (1989, 8p. + attachments) MP 2505
Blasting and blast effects in cold regions. Part 3. explosions in ground materials (1989, 62p.) SR 89-15
Introduction to drilling technology (1989, p.95-114) MP 2591
First impressions of the comet drilling problem (1989, p 229-232) MP 2592
Airfields on antarctic glacier ice (1989, 97p.) CR 89-21
Merry, C.J.
Correlation and quantification of airborne spectrometer data to turbidity measurements at Lake Powell, Utah (1970, p 1309-1316) MP 1271
New England reservoir management: Land use/vegetation mapping in reservoir management (Merrimack River basin) (1974, 30p.) MP 1039
Islands of grounded ice (1975, p.213-216) MP 852
Applications of remote sensing for Corps of Engineers programs in New England (1975, 8p + 14 figs and tables) MP 913
Skylab imagery: Application to reservoir management in New England (1976, 51p.) SR 76-07
Environmental analyses in the Kootenai River region, Montana (1976, 53p.) SR 76-13
Preliminary analysis of water equivalent/snow characteristics using LANDSAT digital processing techniques (1977, 16 leaves) MP 1113
Applications of remote sensing in the Boston Urban Studies Program, Parts I and II (1977, 36p.) CR 77-13
Airborne spectroradiometer data compared with ground water-turbidity measurements at Lake Powell, Utah: correlation and quantification of data (1977, 38p.) SR 77-28
Use of the Landsat data collection system and imagery in reservoir management and operation (1977, c150p.) MP 1114
Land treatment module of the CAPDET program (1977, 4p.) MP 1112
Effect of inundation on vegetation at selected New England flood control reservoirs (1978, 13p.) MP 1169
Computer processing of Landsat digital data and sensor interface development for use in New England reservoir management (1978, 61p.) SR 78-06
Use of remote sensing to quantify construction material and to define geologic lineaments, Dickey-Lincoln School Lakes Project, Maine (1978, 9 leaves) MP 1167
Use of remote sensing techniques and other information sources in regional site selection of potential land treatment areas (1978, p. 107-119) MP 1146
Computer procedure for comparison of land treatment and conventional treatment preliminary designs, cost analysis and effluent quality predictions (1978, p 335-340) MP 1155
Snow cover mapping in northern Maine using LANDSAT digital processing techniques (1979, p.197-198) MP 1510
Environmental analysis of the Upper Susitna River Basin using Landsat imagery (1980, 41p.) CR 80-04
Materials availability study of the Dickey-Lincoln dam site (1980, p 158-170) MP 1316
Remote sensing of water quality using an airborne spectroradiometer (1980, p 1353-1362) MP 1491
Snowpack estimation in the St John River basin (1980, p 467-486) MP 1799
Use of Landsat data for predicting snowmelt runoff in the upper Saint John River basin (1983, p 519-533) MP 1694
Extraction of topography from side-looking satellite systems --a case study with SPOT simulation data (1983, p 535-550) MP 1695
Land treatment processes within CAPDET (Computer-assisted procedure for the design and evaluation of wastewater treatment systems) (1983, 79p.) SR 83-26
Hydrologic forecasting using Landsat data (1983, p 159-168) MP 1691
Integration of Landsat land cover data into the Saginaw River Basin geographic information system for hydrologic modeling (1984, 19p.) SR 84-01
Water quality monitoring using an airborne spectroradiometer (1984, p 353-360) MP 1718
Using Landsat data for snow cover/vegetation mapping (1984, p II(140)-II(144)) MP 1975
Potential use of SPOT HRV imagery for analysis of coastal sediment plumes (1984, p 199-204) MP 1744
Wildlife habitat mapping in Lac qui Parle, Minnesota (1984, p 205-208) MP 2085
Spatial analysis in recreation resource management for the Berlin Lake Reservoir Project (1984, p 209-219) MP 2084
Ohio River main stem study: the role of geographic information systems and remote sensing in flood damage assessments (1984, p 265-281) MP 2083
Use of remote sensing for the U.S. Army Corps of Engineers dredging program (1985, p 1141-1150) MP 1890
Catalog of Corps of Engineers structure inventories suitable for the acid precipitation-structure material study (1985, 40p.) SR 85-01
Analysis of the Revere, Quincy and Stamford structure data bases for predicting building material distribution (1985, 35p.) SR 85-07
Evaluation of SPOT HRV simulation data for Corps of Engineers applications (1985, p 65-71) MP 2184
Comparison of SPOT simulator data with Landsat MSS imagery for delineating water masses in Delaware Bay, Broadkill River, and adjacent wetlands (1985, p 1123-1129) MP 1909
Description of the building materials data base for New Haven, Connecticut (1985, 129p.) SR 85-19
Potential of remote sensing in the Corps of Engineers dredging program (1985, 42p.) SR 85-20
Regression models for predicting building material distribution in four northeastern cities (1985, 50p.) SR 85-24
Description of the building materials data base for Pittsburgh, Pennsylvania (1986, 87p.) SR 86-08
Description of the building materials data base for Portland, Maine (1986, 83p.) SR 86-13
Description of the building materials data base for Cincinnati, Ohio (1986, 85p.) SR 86-31
Instructions for completing a field worksheet for inventorying building materials (1986, 25p.) SR 86-33
Use of Landsat digital data for snow cover mapping in the upper Saint John River basin, Maine (1987, 68p.) CR 87-08
Remote sensing and water resources (1987, p.186-190) MP 2535
Use of SPOT HRV data in a Corps dredging operation in Lake Erie (1987, p 49-58) MP 2548
Development of a geographic information system for the Saylorville River Basin, Iowa (1987, p 265-269) MP 2549
CRREL's experiences of remote sensing technology transfer to the Corps user (1987, p 271-273) MP 2550
Effects of filtering and classification routines on different resolution imagery in distinguishing land use classes (1988, p.57-58) MP 2534
Use of SPOT HRV data in the Corps of Engineers dredging program (1988, p 1295-1299) MP 2528
Statistical analysis of building wall materials distribution in four northeastern cities (1989, 156p.) SR 89-01
Interfacing geographic information system data with real-time hydrologic forecasting models (1989, p 857-861) MP 2527
Multiband imaging systems (1990, 10p.) SR 90-15
Metz, M.C.

Frazil ice formation in turbulent flow (1978, p.219-234) MP 1135
Measurement of the shear stress on the underside of simulated ice covers (1990, 11p.) CR 90-24

Monis, R.H.
Red and near-infrared spectral reflectance of snow (1975, p.345-360) MP 872
Detecting structural heat losses with mobile infrared thermography. Part 4: Estimating quantitative heat loss at Dartmouth College, Hanover, New Hampshire (1976, 9p.) CR 76-33
Infrared thermography of buildings: qualitative analysis of window infiltration loss, Federal Office Building, Burlington, Vermont (1977, 17p.) SR 77-29
Infrared thermography of buildings: Qualitative analysis of five buildings at Rickenbacker Air Force Base, Columbus, Ohio (1977, 21p.) SR 77-26
Comparative testing system of the applicability for various thermal scanning systems for detecting heat losses in buildings (1978, p.B71-B90) MP 1212
Roof response to icing conditions (1979, 46p.) CR 79-17
Thermal patterns in ice under dynamic loading (1983, p.240-243) MP 1742
Thermal (2-5.6 micron) emittance of diathermanous materials as a function of optical depth, critical angle and temperature (1984, p.209-220) MP 1863
Time-lapse thermography: a unique electronic imaging application (1984, p.84-88) MP 2103
Emittance: a little understood image deception in thermal imaging applications (1985, p.72-78) MP 1962
Thermal emissivity of diathermanous materials (1985, p.872-878) MP 1963
Reference guide for building diagnostics equipment and techniques (1986, 148p.) MP 2226
Test of a prototype advanced thermal imaging system (1989, p.81-82) MP 2645
Reference guide for building diagnostics equipment and techniques (1989, 64p.) SR 89-27

Mordey, D.
Field tests of the kinetic friction coefficient of sea ice (1985, 20p.) CR 85-17
Laboratory and field studies of ice friction coefficient (1986, p.389-400) MP 2126

Murphey, B.R.
Chemical migration in snowpack (1989, p.282-286) MP 2757

Murphy, B.
Calibrating cylindrical hot-film anemometer sensors (1986, p.283-298) MP 1860
Bulk transfer coefficients for heat and momentum over leads and polynyas (1986, p.1875-1881) MP 2187

Murphy, D.
U.S. tundra biome publication list (1983, 24p.) SR 83-29

AUTHOR INDEX

Murray, B.M.
Reconnaissance observations of long-term natural vegetation recovery in the Cape Thompson region, Alaska, and additions to the checklist of flora (1985, 75p) CR 85-11

Murray, D.F.
Tundra disturbances and recovery following the 1949 exploratory drilling, Fish Creek, Northern Alaska (1978, 81p.) CR 78-28
Coastal tundra at Barrow (1980, p 1-29) MP 1356
Reconnaissance observations of long-term natural vegetation recovery in the Cape Thompson region, Alaska, and additions to the checklist of flora (1985, 75p) CR 85-11

Murrmann, R.P.
Trace gas analysis of Arctic and subarctic atmosphere (1971, p.199-203) MP 908
Land treatment of wastewater—case studies of existing disposal systems at Quincy, Washington and Manteca, California (1976, 36p.) MP 920
Effect of sediment organic matter on migration of various chemical constituents during disposal of dredged material (1976, 183p.) MP 967
Composition of vapors evolved from military TNT as influenced by temperature, solid composition, age and source (1977, 25p) SR 77-16
Evaluation of existing systems for land treatment of wastewater at Manteca, California, and Quincy, Washington (1977, 34p) CR 77-24

Nadeau, P.H.
UV radiational effects on: Martian regolith water (1977, 89p.) MP 1072

Nakano, Y.
Prediction and validation of temperature in tundra soils (1971, p.193-197) MP 907
Theory and numerical analysis of moving boundary problems in the hydro-dynamics of porous media (1978, p.125-134) MP 1343
Soil lysimeters for validating models of wastewater renovation by land application (1978, 11p) SR 78-12
Evaluation of the moving boundary theory in Darcy's flow through porous media (1978, p 142-151) MP 1147
Simulation of the movement of conservative chemicals in soil solution (1978, p.371-380) MP 1156
Water movement in a land treatment system of wastewater by overland flow (1979, p.185-206) MP 1285
Application of recent results in functional analysis to the problem of water tables (1979, p.185-190) MP 1269
Traveling wave solutions of saturated-unsaturated flow through porous media (1980, p 117-122) MP 1278
Application of recent results in functional analysis to the problem of wetting fronts (1980, p 314-318) MP 1307
Particular solutions to the problem of horizontal flow of water and air through porous media near a wetting front (1980, p 81-85) MP 1341
Particular solutions to the problem of vertical flow of water and air through porous media near a water table (1980, p.124-133) MP 1342
Traveling wave solution to the problem of simultaneous flow of water and air through homogeneous porous media (1981, p 57-64) MP 1419
Relationship between the ice and unfrozen water phases in frozen soil as determined by pulsed nuclear magnetic resonance and physical desorption data (1982, 8p) CR 82-15
Mobility of water in frozen soils (1982, 215p) MP 2012
Use of similarity solutions for the problem of a wetting front - a question of unique representation (1982, p.156-166) MP 1840
Transport of water in frozen soil 1 Experimental determination of soil-water diffusivity under isothermal conditions (1982, p.221-226) MP 1629
Transport of water in frozen soil. 2. Effects of ice on the transport of water under isothermal conditions (1983, p.15-26) MP 1601
Relationship between the ice and unfrozen water phases in frozen soils as determined by pulsed nuclear resonance and physical desorption data (1983, p.37-46) MP 1632
Asymptotic behaviour of solutions to the problem of wetting fronts in one-dimensional, horizontal and infinite porous media (1983, p 71-78) MP 1720
Soil-water diffusivity of unsaturated frozen soils at subzero temperatures (1983, p.889-893) MP 1664
Water migration due to a temperature gradient in frozen soil (1983, p 951-956) MP 1666
Transport of water in frozen soil 1. Experimental determination of soil-water diffusivity under isothermal conditions (1983, 8p) CR 83-22
Similarity solutions to the second boundary value problem of unsaturated flow through porous media (1983, p 205-213) MP 1721
Transport of water in frozen soil 3 Experiments on the effects of ice content (1984, p 28-34) MP 1841
Role of heat and water transport in frost heaving of fine-grained porous media under negligible overburden pressure (1984, p 93-102) MP 1842
Transport of water in frozen soil 4 Analysis of experimental results on the effects of ice content (1984, p 58-66) MP 1843
Transport of water in frozen soil 5, Method for measuring the vapor diffusivity when ice is absent (1984, p 172-179) MP 1819
Similarity solutions of the Cauchy problem of horizontal flow of water through porous media for experimental determination of diffusivity (1985, p 26-31) MP 1881
Role of phase equilibrium in frost heave of fine-grained soil under negligible overburden pressure (1985, p 50-68) MP 1896
Transport of water in frozen soil 6. Effects of temperature (1987, p.44-50) MP 2213
Method for measuring the rate of water transport due to temperature gradients in unsaturated frozen soils (1988, p 412-417) MP 2362
Nonlinear problems in the study of water movement in frozen soils (1989, p 383-393) MP 2719
Quasi-steady problems in freezing soils: 1. analysis on the steady growth of an ice layer (1990, p.207-226) MP 2695
Transport of water due to a temperature gradient in unsaturated frozen clay (1990, p.57-75) MP 2701

Nakato, T.
Laboratory investigation of the mechanics and hydraulics of river ice jams (1976, 97p) MP 1060
Laboratory investigation of the mechanics and hydraulics of river ice jams (1977, 45p) CR 77-09
Unconventional power sources for ice control at locks and dams (1989, p.107-126) MP 2572

Nakazawa, N.
Results from indentation tests on freshwater ice (1988, p.341-350) MP 2495

Narita, S.
Comparative model tests in ice of a Canadian Coast Guard R-class icebreaker (1989, p.1/1-1/18) MP 2751
Comparative model tests in ice of a Canadian Coast Guard R-class icebreaker (1990, p.31-52) MP 2762

National Research Council. Ad Hoc Study Group on Ice Segregation and Frost Heaving
Ice segregation and frost heaving (1984, 72p) MP 1809

National Research Council. Committee on Arctic Seafloor Engineering
Understanding the Arctic sea floor for engineering purposes (1982, 141p) SR 82-25

National Research Council. Polar Research Board. Committee on Permafrost
Opportunities for permafrost-related research associated with the Trans-Alaska Pipeline System (1975, 37p) MP 1122

Neave, K.G.
Delineation and engineering characteristics of permafrost beneath the Beaufort Sea (1979, p.93-115) MP 1287
Delineation and engineering characteristics of permafrost beneath the Beaufort Sea (1981, p.125-157) MP 1428
Hyperbolic reflections on Beaufort Sea seismic records (1981, 16p) CR 81-02
Delineation and engineering characteristics of permafrost beneath the Beaufort Sea (1981, p.137-156) MP 1600
Subsea permafrost in Harrison Bay, Alaska, an interpretation from seismic data (1982, 62p) CR 82-24
Seismic velocities and subsea permafrost in the Beaufort Sea, Alaska (1983, p.894-898) MP 1665
Determining distribution patterns of ice-bonded permafrost in the U.S. Beaufort Sea from seismic data (1984, p 237-258) MP 1839
Some aspects of interpreting seismic data for information on shallow subsea permafrost (1985, p.61-65) MP 1954

Neill, C.R.
Overview of Tanana River monitoring and research studies near Fairbanks, Alaska (1984, 98p. + 5 appends) SR 84-37

Nelson, F.
Observations on ice-cored mounds at Sukakpak Mountain, south central Brooks Range, Alaska (1983, p 91-96) MP 1653

Nemerich, J.
Comparative near-millimeter wave propagation properties of snow or rain (1983, p 115-129) MP 1690
Attenuation and backscatter for snow and sleet at 96, 140, and 225 GHz (1984, p 41-52) MP 1864

Nevel, D.E.
Ice forces on vertical piles (1972, p 104-114) MP 1024
Ice forces on model structures (1975, p.400-407) MP 363
Ice forces on simulated structures (1975, p.387-396) MP 864
Interpretation of the tensile strength of ice under triaxial stress (1976, p.375-387) MP 996
Interpretation of the tensile strength of ice under triaxial stresses (1976, 9p) CR 76-05
Creep theory for a floating ice sheet (1976, 98p) SR 76-04
Ice forces on vertical piles (1977, 9p) CR 77-10
Icebreaker simulation (1977, 9p) CR 77-16
Concentrated loads on a floating ice sheet (1977, p 237-245) MP 1062
Bearing capacity of river ice for vehicles (1978, 22p) CR 78-03
Safe ice loads computed with a pocket calculator (1979, p 205-223) MP 1249
Bending and buckling of a wedge on an elastic foundation (1980, p 278-288) MP 1303
Review of buckling analyses of ice sheets (1980, p 131-146) MP 1322

Computer modeling of time-dependent rime icing in the atmosphere (1983, 74p) CR 83-02

Oliphant, J.L.
Relationship between the ice and unfrozen water phases in frozen soil as determined by pulsed nuclear magnetic resonance and physical desorption data (1982, 8p) CR 82-15
Comparison of unfrozen water contents measured by DSC and NMR (1982, p 115-121) MP 1594

Mobility of water in frozen soils (1982, c15p) MP 2012

Method for measuring enriched levels of deuterium in soil water (1982, 12p) SR 82-25

Transport of water in frozen soil. 1. Experimental determination of soil-water diffusivity under isothermal conditions (1982, p.221-226) MP 1629

Assessment of the treatability of toxic organics by overland flow (1983, 47p) CR 83-03

Transport of water in frozen soil. 2. Effects of ice on the transport of water under isothermal conditions (1983, p.15-26) MP 1601

Relationship between the ice and unfrozen water phases in frozen soils as determined by pulsed nuclear resonance and physical desorption data (1983, p.37-46) MP 1632

Effect of unconfined loading on the unfrozen water content of Manchester silt (1983, 17p) SR 83-18

Soil-water diffusivity of unsaturated frozen soils at subzero temperatures (1983, p 889-893) MP 1664

Water migration due to a temperature gradient in frozen soil (1983, p.951-956) MP 1666

Transport of water in frozen soil. 1. Experimental determination of soil-water diffusivity under isothermal conditions (1983, 8p) CR 83-22

Isothermal compressibility of water mixed with Na-saturated montmorillonite (1983, p 45-50) MP 2066

Transport of water in frozen soil· 3. Experiments on the effects of ice content (1984, p.28-34) MP 1841

Effects of low temperatures on the growth and unfrozen water content of an aquatic plant (1984, 8p) CR 84-14

Transport of water in frozen soil· 4 Analysis of experimental results on the effects of ice content (1984, p.58-66) MP 1843

Effects of soluble salts on the unfrozen water contents of the Lanzhou, P.R.C., silt (1984, 18p) CR 84-16

Effects of magnetic particles on the unfrozen water content of frozen soils determined by nuclear magnetic resonance (1984, p 63-73) MP 1790

Deuterium diffusion in a soil-water-ice mixture (1984, 11p) SR 84-27

Experimental measurement of channeling of flow in porous media (1985, p.394-399) MP 1967

Effects of soluble salts on the unfrozen water contents of the Lanzhou, PRC, silt (1985, p.99-109) MP 1933

Water migration in unsaturated frozen morin clay under linear temperature gradients (1985, p.111-122) MP 1934

Experimental study on factors affecting water migration in frozen morin clay (1985, p.123-128) MP 1897

Model for dielectric constants of frozen soils (1985, p 46-57) MP 1926

Prediction of unfrozen water contents in frozen soils by a two-point or one-point method (1985, p 83-87) MP 1929

Soil-water potential and unfrozen water content and temperature (1985, p.1-14) MP 1932

Toxic organics removal kinetics in overland flow land treatment (1985, p.707-718) MP 2111

Factors affecting water migration in frozen soils (1987, 16p) CR 87-09

Olsen, R.O.

Comparative near-millimeter wave propagation properties of snow or rain (1983, p.115-129) MP 1690

O'Neill, K.

Analysis of coupled heat and moisture flow in an unsaturated soil (1979, p.304-309) MP 1259

Numerical solutions for rigid-ice model of secondary frost heave (1980, p.656-669) MP 1454

Continuously deforming finite elements for the solution of parabolic problems, with and without phase change (1981, p.81-96) MP 1493

Bottom heat transfer to water bodies in winter (1981, 8p) SR 81-18

Highly efficient, oscillation free solution of the transport equation over long times and large spaces (1981, p 1665-1675) MP 1497

One-dimensional transport from a highly concentrated, transfer type source (1982, p.27-36) MP 1489

Numerical solutions for a rigid-ice model of secondary frost heave (1982, 11p) CR 82-13

Mobility of water in frozen soils (1982, c15p) MP 2012

Simple fixed mesh finite element solution of two-dimensional phase change problems (1983, p 653-658) MP 1584

Physics of mathematical frost heave models a review (1983, p.275-291) MP 1588

2-d transient freezing in a pipe with turbulent flow, using a continually deforming mesh with finite elements (1983, p.102-112) MP 1893

Solution of 2-d axisymmetric phase change problems on a fixed mesh, with zero width phase change zone (1983, p.134-146) MP 1894

Boundary integral equation solution of moving boundary phase change problems (1983, p 1825-1850) MP 2093

Use of transfinite mappings with finite elements on a moving mesh for two-dimensional phase change (1983, p.85-110) MP 2161

Fixed mesh finite element solution for cartesian two-dimensional phase change (1983, p 436-441) MP 1702

Computation of porous media natural convection flow and phase change (1984, p 213-229) MP 1895

Exploration of a rigid ice model of frost heave (1985, p.281-296) MP 1880

Thermal convection in snow (1985, 61p) CR 85-09

Experiments on thermal convection in snow (1985, p.43-47) MP 2006

Finite element simulation of ice crystal growth in subcooled sodium-chloride solutions (1985, p.527-532) MP 2100

Transient two-dimensional phase change with convection, using deforming finite elements (1985, p 229-243) MP 2162

Theory of natural convection in snow (1985, p 10,641-10,649) MP 1957

Moving boundary—moving mesh analysis of phase change using finite elements with transfinite mappings (1986, p 591-607) MP 2159

Natural convection in sloping porous layers (1986, p.697-710) MP 2158

Finite element simulation of planar instabilities during solidification of an undercooled melt (1987, p.81-111) MP 2585

Information systems planning study (1987, 48p) SR 87-23

XYFREZ.4 user's manual (1987, 55p) SR 87-28

Signal-processing algorithm for the extraction of thin freshwater-ice thickness from short pulse radar data (1990, p 137-145) MP 2698

Onstott, R.G.

Surface-based scatterometer results of Arctic sea ice (1979, p.78-85) MP 1260

100 MHz dielectric constant measurements of snow cover dependence on environmental and snow pack parameters (1985, p 829-834) MP 1913

Radar backscatter measurements over saline ice (1990, p 603-615) MP 2741

Opitz, B.K.

Environmental factors and standards for atmospheric obscurants, climate and terrain (1987, 137p) MP 2309

Buckling analysis of wedge-shaped floating ice sheets (1979, p 797-810) MP 1232
Shore ice pile-up and ride-up field observations, models, theoretical analyses (1980, p 209-298) MP 1295
Review of buckling analyses of ice sheets (1980, p.131-146) MP 1322
Nonsteady ice drift in the Strait of Belle Isle (1980, p.177-186) MP 1364
Sea ice piling at Fairway Rock, Bering Strait, Alaska: observations and theoretical analysis (1981, p.985-1000) MP 1460
Ice pile-up and ride-up on arctic and subarctic beaches (1981, p 247-273) MP 1538
Port Huron ice control model studies (1982, p 361-373) MP 1530
Model study of Port Huron ice control structure; wind stress simulation (1982, 27p.) CR 82-09
Bering Strait sea ice and the Fairway Rock icefoot (1982, 40p.) CR 82-31
Determining the characteristic length of model ice sheets (1982, p.99-104) MP 1570
Hydraulic model study of Port Huron ice control structure (1982, 59p.) CR 82-34
Experimental determination of the buckling loads of floating ice sheets (1983, p 260-265) MP 1626
Experiments on ice ride-up and pile-up (1983, p.266-270) MP 1627
Ice forces on model marine structures (1983, p.778-787) MP 1606
Dynamic buckling of floating ice sheets (1983, p 822-833) MP 1607
Ice forces on model bridge piers (1983, 11p.) CR 83-19
Measurement of ice forces on structures (1983, p.139-155) MP 1641
Ice action on two cylindrical structures (1983, p.159-166) MP 1643
Ice action on pairs of cylindrical and conical structures (1983, 35p.) CR 83-25
Ice force measurements on a bridge pier in the Ottauquechee River, Vermont (1983, 6p.) CR 83-32
Experimental determination of buckling loads of cracked ice sheets (1984, p 183-186) MP 1687
Ice action on two cylindrical structures (1984, p.107-112) MP 1741
Dependence of crushing specific energy on the aspect ratio and the structure velocity (1984, p 363-374) MP 1708
Crushing ice forces on cylindrical structures (1984, p 1-9) MP 1834
Structure of first-year pressure ridge sails in the Prudhoe Bay region (1984, p 115-135) MP 1837
Forces associated with ice pile-up and ride-up (1984, p 239-262) MP 1887
Computational mechanics in arctic engineering (1984, p 351-374) MP 2072
Ice forces on inclined model bridge piers (1984, p 1167-1173) MP 2407
Buckling analysis of cracked, floating ice sheets (1984, 28p.) SR 84-23
Ice forces on rigid, vertical, cylindrical structures (1984, 36p.) CR 84-33
Determining the characteristic length of floating ice sheets by moving loads (1985, p.155-159) MP 1855
Sheet ice forces on a conical structure: an experimental study (1985, p 46-54) MP 1915
Arctic ice and drilling structures (1985, p.63-69) MP 2119
Sheet ice forces on a conical structure an experimental study (1985, p.643-655) MP 1906
Sea ice and the Fairway Rock icefoot (1985, p.25-32) MP 2145
Characteristic frequency of force variations in continuous crushing of sheet ice against rigid cylindrical structures (1986, p.1-12) MP 2018
Some effects of friction on ice forces against vertical structures (1986, p 528-533) MP 2036
Impact ice force and pressure An experimental study with urea ice (1986, p 569-576) MP 2037
Fracture toughness of model ice (1986, p 365-376) MP 2125
Flexural and buckling failure of floating ice sheets against structures (1986, p.339-359) MP 2134
Dynamic analysis of failure modes on ice sheets encountering sloping structures (1987, p.281-284) MP 2194
Advances in ice mechanics—1987 (1987, 49p.) MP 2207
Advances in sea ice mechanics in the USA (1987, p 37-49) MP 2208
Measurement of characteristic length of floating ice sheets (1987, n.p. (Ch.7)) MP 2480
Flexural and buckling failure of floating ice sheets against structures (1987, p.53-73) MP 2315
Proceedings, Vol.4 (1988, 348p.) MP 2317
Onshore ice pile-up and ride-up: observations and theoretical assessment (1988, p 108-142) MP 2336
Experimental determination of the fracture toughness of urea model ice (1988, p 289-297) MP 2348
Verification tests of the surface integral method for calculating structural ice loads (1988, p 449-456) MP 2353
Fracture of S2 columnar freshwater ice- floating double cantilever beam tests (1988, p.152-161) MP 2493
Results from indentation tests on freshwater ice (1988, p 341-350) MP 2495
Fracture experiments on freshwater and urea model ice (1988, 152p.) MP 2502
Ice-induced vibrations of structures (1989, p.189-221) MP 2492
Proceedings of the eighth International Conference on Offshore Mechanics and Arctic Engineering, 1989 Volume 4 (1989, 476p.) MP 2481
Interaction forces during vertical penetration of floating ice sheets with cylindrical indentors (1989, p 377-382) MP 2485
Fracture toughness of columnar freshwater ice from large scale DCB tests (1989, p 7-20) MP 2545
Vertical lifting and penetration of floating ice sheets with cylindrical indentors (1989, p 104) MP 2688
Ice force measurements on a bridge pier in a small river (1989, p.1419-1427) MP 2764
Proceedings. Vol.4 (1990, 339p.) MP 2584
Dynamic analysis of a floating ice sheet undergoing vertical indentation (1990, p 195-203) MP 2579

Technology transfer opportunities for the construction engineering community: materials and diagnostics (1986, 54p) SR 86-01

Tedrow, J.C.F.
Pedologic investigations in northern Alaska (1973, p 93-108) MP 1005

Templeton, M.K.
Numerical simulation of atmospheric ice accretion (1979, p 44-52) MP 1235
Computer modeling of atmospheric ice accretion (1979, 36p) CR 79-04

Thomas, R.E.
Cost of land treatment systems (1979, 135p) MP 1387
EPA policy on land treatment and the Clean Water Act of 1977 (1980, p.452-460) MP 1418

Thomas, R.H.
Rheology of glacier ice (1985, p 1335-1337) MP 1844

Thompson, T.W.
Progress report on 25 cm radar observations of the 1971 AIDJEX studies (1972, p.1-16) MP 989
Thomson, C.
Data reduction of GOES information from DCP networks (1989, 15p.) SR 89-29
Thorndike, A.S.
Snow and ice (1975, p.435-441, 475-487) MP 844
Thurmond, V.L.
Geochemistry of freezing brines Low-temperature properties of sodium chloride (1987, 11p) CR 87-13
Tibusi, F.
Humidity and temperature measurements obtained from an unmanned aerial vehicle (1987, p.35-45) MP 2293
Tice, A.R.
Prediction of unfrozen water contents in frozen soils from liquid determinations (1976, 9p) CR 76-08
Simple procedure to calculate the volume of water remaining unfrozen in a freezing soil (1976, p.114-122) MP 899
Mars soil-water analyzer- instrument description and status (1977, p.149-158) MP 912
Determination of unfrozen water in frozen soil by pulsed nuc'ear magnetic resonance (1978, p.149-155) MP 1097
Water vapor adsorption by sodium montmorillonite at -5C (1978, p 638-644) MP 981
Phase composition measurements on soils at very high water contents by pulsed nuclear magnetic resonance technique (1978, p.11-14) MP 1210
Viking GCMS analysis of water in the Martian regolith (1978, p.55-61) MP 1195
Analysis of water in the Martian regolith (1979, p 33-38) MP 1409
Low temperature phase changes in montmorillonite and nontronite at high water contents and high salt contents (1980, p.139-144) MP 1330
Unfrozen water contents of submarine permafrost determined by nuclear magnetic resonance (1980, p 400-412) MP 1412
Relationship between the ice and unfrozen water phases in frozen soil as determined by pulsed nuclear magnetic resonance and physical desorption data (1982, 8p) CR 82-15
Comparison of unfrozen water contents measured by DSC and NMR (1982, p 115-121) MP 1594
Mobility of water in frozen soils (1982, c15p) MP 2012
Method for measuring enriched levels of deuterium in soil water (1982, 12p.) SR 82-25
Transport of water in frozen soil 1 Experimental determination of soil-water diffusivity under isothermal conditions (1982, p.221-226) MP 1629
Transport of water in frozen soil. 2. Effects of ice on the transport of water under isothermal conditions (1983, p.15-26) MP 1601
Relationship between the ice and unfrozen water phases in frozen soils as determined by pulsed nuclear resonance and physical desorption data (1983, p 37-46) MP 1632
Effect of unconfined loading on the unfrozen water content of Manchester silt (1982, 17p.) SR 83-18
Soil-water diffusivity of unsaturated frozen soils at subzero temperatures (1983, p 889-893) MP 1664
Water migration due to a temperature gradient in frozen soil (1983, p.951-956) MP 1666
Transport of water in frozen soil 1 Experimental determination of soil-water diffusivity under isothermal conditions (1983, 8p.) CR 83-22
Transport of water in frozen soil: 3 Experiments on the effects of ice content (1984, p 28-34) MP 1841
Effects of low temperatures on the growth and unfrozen water content of an aquatic plant (1984, 8p) CR 84-14
Transport of water in frozen soil: 4. Analysis of experimental results on the effects of ice content (1984, p 58-66) MP 1843
Effects of soluble salts on the unfrozen water contents of the Lanzhou, P.R.C., silt (1984, 18p) CR 84-16
Effects of magnetic particles on the unfrozen water content of frozen soils determined by nuclear magnetic resonance (1984, p 63-73) MP 1790
Deuterium diffusion in a soil-water-ice mixture (1984, 11p) SR 84-27
Transport of water in frozen soil. 5, Method for measuring the vapor diffusivity when ice is absent (1984, p.172-179) MP 1819
Experimental measurement of channeling of flow in porous media (1985, p 394-399) MP 1967
Effects of soluble salts on the unfrozen water contents of the Lanzhou, PRC, silt (1985, p 99-109) MP 1933
Water migration in unsaturated frozen morin clay under linear temperature gradients (1985, p 111-122) MP 1934
Experimental study on factors affecting water migration in frozen morin clay (1985, p 123-128) MP 1897
Thawing of frozen clays (1985, p 1-9) MP 1923
Prediction of unfrozen water contents in frozen soils by a two-point or one-point method (1985, p 83-87) MP 1929
Soil-water potential and unfrozen water content and temperature (1985, p.1-14) MP 1932
Transport of water in frozen soil 6 Effects of temperature (1987, p 44-50) MP 2213
Factors affecting water migration in frozen soils (1987, 16p) CR 87-09
Method for measuring the rate of water transport due to temperature gradients in unsaturated frozen soils (1988, p 412-417) MP 2362
Measurement of the unfrozen water content of soils: a comparison of NMR and TDR methods (1988, p.473-477) MP 2363
Comparison of soil freezing curve and soil water curve data for Windsor sandy loam (1988, 37p.) CR 88-26
Measurement of the unfrozen water content of soils- comparison of NMR and TDR methods (1988, 11p.) CR 88-18
Unfrozen water contents of undisturbed and remolded Alaskan silt as determined by nuclear magnetic resonance (1988, 17p) CR 88-19
Unfrozen water contents of six antarctic soil materials (1989, p 353-366) MP 2470
Comparison of soil freezing curve and soil water curve data for Windsor sandy loam (1989, p 2205-2210) MP 2577
Unfrozen water contents of undisturbed and remolded Alaskan silt (1989, p.103-111) MP 2683
Predicting unfrozen water content behavior using freezing point depression data (1990, p.54-60) MP 2677
Transport of water due to a temperature gradient in unsaturated frozen clay (1990, p.57-75) MP 2701
Tien, C.
Approximate analysis of melting and freezing of a drill hole through an ice shelf in Antarctica (1975, p.421-432) MP 861
Heat transfer characteristics of melting and refreezing a drill hole through an ice shelf in Antarctica (1976, 15p) CR 76-12
Tieszen, L.L.
Seasonal cycles and relative levels of organic plant nutrients under Arctic and alpine conditions (1971, p 55-57) MP 904
Ecological effects of oil spills and seepages in cold-dominated environments (1971, p 61-65) MP 905
Comparative investigation of periodic trends in carbohydrate and lipid levels in Arctic and alpine plants (1972, p.40-45) MP 1376
Vegetative research in arctic Alaska (1973, p 169-198) MP 1008
Arctic ecosystem: the coastal tundra at Barrow, Alaska (1980, 571p) MP 1355
Analysis of processes of primary production in tundra growth forms (1981, p.285-356) MP 1433
Tilton, P.
Extending the useful life of DYE-2 to 1986. Part 2. 1979 findings and final recommendations (1980, 37p) SR 80-13
Timco, G.W.
Working group on ice forces. 4th state-of-the-art report (1989, 385p) SR 89-05
Ting, J.M.
Application of the Andrade equation to creep data for ice and frozen soil (1979, p 29-36) MP 1802
Tobiasson, W.
CRREL is developing new snow load design criteria for the United States (1976, p.70-72) MP 947
Life-cycle cost effectiveness of modular megastructures in cold regions (1976, p 760-776) MP 892
CRREL roof moisture survey, Pease AFB Buildings 33, 116, 122 and 205 (1977, 10p) SR 77-02
Update on snow load research at CRREL (1977, p.9-13) MP 1142
Reinsulating old wood frame buildings with urea-formaldehyde foam (1977, p 478-487) MP 958
Hand-held infrared systems for detecting roof moisture (1977, p.261-271) MP 1390
Maintaining buildings in the Arctic (1977, p 244-251) MP 1508
Infrared detective: thermograms and roof moisture (1977, p 41-44) MP 961
Roof moisture survey, ten State of New Hampshire buildings (1977, 29p) CR 77-31
CRREL roof moisture survey, Building 208 Rock Island Arsenal (1977, 6p) SR 77-43
Construction on permafrost at Longyearbyen on Spitsbergen (1978, p 884-890) MP 1108
Details behind a typical Alaskan pile foundation (1978, p 891-897) MP 1109
Detecting wet roof insulation with a hand-held infrared camera (1978, p A9-A15) MP 1213
Summary of Corps of Engineers research on roof moisture detection and the thermal resistance of wet insulation (1978, 6p) SR 78-29
Estimated snow, ice, and rain load prior to the collapse of the Hartford Civic Center arena roof (1979, 32p) SR 79-09
Roof moisture survey--U S Military Academy (1979, 8 refs) SR 79-16
Extending the useful life of DYE-2 to 1986, Part 1, Preliminary findings and recommendations (1979, 15p) SR 79-27
Snow studies associated with the sideways move of DYE-3 (1979, p 117-124) MP 1312
CRREL roof moisture survey, Pease AFB buildings 35, 63, 93, 112, 113, 120 and 220 (1980, 31p) SR 80-14
Roof leaks in cold regions: school at Chevak, Alaska (1980, 12p) CR 80-11
Extending the useful life of DYE-2 to 1986. Part 2: 1979 findings and final recommendations (1980, 37p) SR 80-13
Roofs in cold regions: Marson's Store, Claremont, New Hampshire (1980, 13p.) SR 80-25
Moisture gain and its thermal consequence for common roof insulations (1980, p 4-16) MP 1361
Roofs in cold regions (1980, 21p) MP 1408
Venting of built-up roofing systems (1981, p.16-21) MP 1498
Roof moisture survey: Reserve Center Garage, Grenier Field, Manchester, N.H. (1981, 18p.) SR 81-31
Roof moisture surveys (1982, p.163-166) MP 1505
Designing with wood for a lightweight air-transportable Arctic shelter: how the materials were tested and chosen for design (1982, p.385-397) MP 1558
Roof moisture surveys current state of the technology (1983, p 24-31) MP 1628
Locating wet cellular plastic insulation in recently constructed roofs (1983, p 168-173) MP 1729
Can wet roof insulation be dried out (1983, p 626-639) MP 1509
Comparison of aerial to on-the-roof infrared moisture surveys (1983, p.95-105) MP 1709
Water supply and waste disposal on permanent snow fields (1984, p.401-413) MP 1714
Secondary stress within the structural frame of DYE-3. 1978-1983 (1984, 44p) SR 84-26
Water supply and waste disposal on permanent snowfields (1985, p.344-350) MP 1792
Roof moisture surveys: yesterday, today and tomorrow (1985, p 438-443 + figs) MP 2040
Condensation control in low-slope roofs (1985, p 47-59) MP 2039
Aerial roof moisture surveys (1985, p.424-425) MP 2022
Lessons learned from examination of membrane roofs in Alaska (1986, p 277-290) MP 2003
Airborne roof moisture surveys (1986, p 45-47) MP 2139
Protected membrane roofing systems (1986, p.49-50) MP 2140
Vapor drive maps of the U.S A (1986, 7p. + graphs) MP 2041
Vents and vapor retarders for roofs (1986, 11p) MP 2246
Proposed code provisions for drifted snow loads (1986, p 2080-2092) MP 2148
Cold regions roof design (1987, p 457-458) MP 2243
Wetting of polystyrene and urethane roof insulations in the laboratory and on a protected membrane roof (1988, p 108-119) MP 2337
Vents and vapor retarders for roofs (1987, p 80-90) MP 2352
Buildings and utilities in very cold regions: overview and research needs (1987, p 299-303) MP 2424
Vibration analysis of a DEW Line station (1988, p.1513-1518) MP 2341
Wetting of polystyrene and urethane roof insulations in the laboratory and on a protected membrane roof (1988, p 421-430) MP 2011
Wood-frame roofs and moisture (1988, p 33-37) MP 2340
Method for conducting airborne infrared roof moisture surveys (1988, p 50-61) MP 2436
Buildings and utilities in very cold regions. overview and research needs (1988, p 4-11) MP 2552
Changes coming in snow load design criteria (1989, p.413-418) MP 2612
Roof design in cold regions (1989, p.462-472) MP 2613
Perspective ground loads and mapping (1989, p 512-513) MP 2614
Changes coming in snow load design criteria (1989, p 918-920) MP 2650
Roof design in cold regions (1989, p.1029-1037) MP 2651
Roofer: a management tool for maintaining built-up roofs (1989, p 6-10) MP 2488
Vapor retarders for membrane roofing systems (1989, p.31-37) MP 2489
ROOFER, a management tool for maintaining built-up roofs (1989, 9p) MP 2576
Vapor retarders to control summer condensation (1989, p 566-572) MP 2558
Tobin, T.M.
Technique for producing strain-free flat surfaces on single crystals of ice comments on Dr H Bader's letter and Dr K Itagaki's letter (1973, p 519-520) MP 1000
Mass transfer along ice surfaces observed by a groove relaxation technique (1977, p 34-37) MP 1091
Tomita, H.
Survey of airport pavement distress in cold regions (1986, p 41-50) MP 2002
Statement of research needs to address airport pavement distress (1987, p 981-1012) MP 2234
Townsend, R.A.
Some observations on the character of snow (1987, p 48-53) MP 2397

Trachler, G.M.
USACRREL precise thermistor meter (1985, 34p) SR 85-26
Trivett, N.B.A.
Snowpack estimation in the St. John River basin (1980, p 467-486) MP 1799

Upland aspen/birch and black spruce stands and their litter and soil properties in interior Alaska (1976, p.33-44) MP 867
Tryde, P.
Intermittent ice forces acting on inclined wedges (1977, 26p.) CR 77-26
Standardized testing methods for measuring mechanical properties of ice (1981, p 245-254) MP 1556
Tucker, W.B.
Classification and variation of sea ice ridging in the Arctic basin (1974, p.127-146) MP 1022
Measurement of sea ice drift far from shore using LANDSAT and aerial photographic imagery (1975, p 541-554) MP 849
Techniques for using LANDSAT imagery without references to study sea ice drift and deformation (1976, p.115-135) MP 1059
Techniques for studying sea ice drift and deformation at sites far from land using LANDSAT imagery (1976, p 595-609) MP 866
Seasonal variations in apparent sea ice viscosity on the geophysical scale (1977, p 87-90) MP 900
Computer routing of unsaturated flow through snow (1977, 44p) SR 77-10
Studies of the movement of coastal sea ice near Prudhoe Bay, Alaska, U S A. (1977, p 533-546) MP 1066
Examination of the viscous wind-driven circulation of the Arctic ice cover over a two year period (1977, p 95-133) MP 983
Nearshore ice motion near Prudhoe Bay, Alaska (1977, p 23-31) MP 1162
Characterization of the surface roughness and floe geometry of the sea ice over the continental shelves of the Beaufort and Chukchi Seas (1977, p 32-41) MP 1163
Computer model of municipal snow removal (1977, 7p) CR 77-30
Computer simulation of urban snow removal (1979, p 293-302) MP 1238
Sea ice ridging over the Alaskan continental shelf (1979, 24p) CR 79-08
Some results from a linear-viscous model of the Arctic ice cover (1979, p 293-304) MP 1241
Sea ice ridging over the Alaskan continental shelf (1979, p.4885-4897) MP 1240
Preliminary results of ice modeling in the East Greenland area (1981, p 867-878) MP 1458
Morphological investigations of first-year sea ice pressure ridge sails (1981, p 1-12) MP 1465
Application of a numerical sea ice model to the East Greenland area (1981, 109p) MP 1535
Application of a numerical sea ice model to the East Greenland area (1982, 40p) CR 82-16
Comparison of sea ice model results using three different wind forcing fields (1983, 11p) CR 83-17
Comparison of different sea level pressure analysis fields in the East Greenland Sea (1983, p.1084-1088) MP 1737
CRREL investigations relevant to offshore petroleum production in ice-covered waters (1983, p 207-215) MP 2086
Current procedures for forecasting aviation icing (1983, 31p) SR 83-24
Atmospheric boundary-layer modification, drag coefficient, and surface heat flux in the antarctic marginal ice zone (1984, p 649-661) MP 1667
Army research could reduce dangers posed by sea ice (1984, p.20-24) MP 2168
Some simple concepts on wind forcing over the marginal ice zone (1984, p 43-48) MP 1783
Variation of the drag coefficient across the Antarctic marginal ice zone (1984, p 63-71) MP 1784
On small-scale horizontal variations of salinity in first-year sea ice (1984, p 6505-6514) MP 1761
Method of detecting voids in rubbled ice (1984, p 183-188) MP 1772
Structure of first-year pressure ridge sails in the Prudhoe Bay region (1984, p.115-135) MP 1837
Sea ice properties (1984, p 82-83) MP 2136
Determining the characteristic length of floating ice sheets by moving loads (1985, p 155-159) MP 1855
Preliminary simulation stud; of sea ice induced gouges in the sea floor (1985, p 126-135) MP 1917
Kadluk ice stress measurement program (1985, p 88-100) MP 1899
Physical properties of sea ice in the Greenland Sea (1985, p 177-188) MP 1903
Numerical simulation of ice gouge formation and infilling on the shelf of the Beaufort Sea (1985, p 393-407) MP 1904
Pressure ridge morphology and physical properties of sea ice in the Greenland Sea (1985, p 214-223) MP 1935
Numerical simulation of sea ice induced gouges on the shelves of the polar oceans (1985, p.259-265) MP 1939
Crystal structure of Fram Strait sea ice (1986, p.20-29) MP 2221
Variability of Arctic sea ice drafts (1986, p 237-256) MP 2198
Portable hot water ice drill (1986, p 549-564) MP 2202
Preliminary simulation of the formation and infilling of sea ice gouges (1986, p 259-268) MP 2218
Physical properties of sea ice discharged from Fram Strait (1987, p 436-439) MP 2204
Portable hot-water ice drill (1987, p 57-64) MP 2236
Physical properties of summer ses ice in the Fram Strait (1987, p.6787-6803) MP 2240
Ice detector measurements compared to meteorological parameters in natural icing conditions (1987, p.31-37) MP 2277
Physical properties of summer sea ice in the Fram Strait, June-July 1984 (1987, 81p) CR 87-16
Corps of Engineers research in Arctic and Arctic-related environmental sciences (1987, p.81-87) MP 2411
Information systems planning study (1987, 48p) SR 87-23
Evaluation of an operational ice forecasting model during summer (1988, p.159-174) MP 2347
Overview of the physical properties of sea ice (1988, p 71-85) MP 2635
Update on portable hot-water sea ice drilling (1989, p 175-178) MP 2479
Oceanic heat flux in the Fram Strait measured by a drifting buoy (1989, p 995-998) MP 2531
Concurrent remote sensing of arctic sea ice from submarine and aircraft (1989, 20p.) MP 2697
Proceedings (1989, 475p) SR 89-39
Use of the mechanical properties of ice in the development of predictive models (1989, p 87-99) MP 2687
Ice strength estimates from submarine topsounder data (1989, p 425-426) MP 2691
Recent measurements of sea ice topography in the eastern Arctic (1990, p.132-136) MP 2735
Oceanic heat flux in the Fram Strait measured by a drifting buoy (1990, p.291-296) MP 2740
Sea ice in the polar regions (1990, p.47-122) MP 2750
Tulastra, R.L.
Near real time hydrologic data acquisition utilizing the LANDSAT system (1975, p 200-211) MP 1055

Ablation
Ablation seasons of arctic and antarctic sea ice. Andreas, E.L., et al, (1982, p.440-447) MP 1517
On the differences in ablation seasons of Arctic and Antarctic sea ice. Andreas, E.L., et al, (1982, 9p) CR 82-33
Energy exchange over antarctic sea ice in the spring. Andreas, E.L., et al, (1985, p 7199-7212) MP 1889

Absorption
Water absorption of insulation in protected membrane roofing systems. Schaefer, D., (1976, 15p) CR 76-38
Nondestructive evaluation of moisture migration in insulation material. Ayorinde, O A, (1989, p 111-121) MP 2716
Theoretical estimates of light reflection and transmission by spatially inhomogeneous and temporally varying ice covers Perovich, D.K., (1990, p.45-49) MP 2729

Absorptivity
Light-colored surfaces reduce thaw penetration in permafrost. Berg, R.L., et al, (1977, p 86-99) MP 954
Effects of moisture and freeze-thaw on rigid thermal insulations. Kaplar, C.W, (1978, p 403-417) MP 1085

Accuracy
Is advanced technology "the gateway to irresponsibility" Zufelt, J.E, (1989, p 434-437) MP 2529
Satellite data collection platforms for temperature measurements Daly, S.F., et al, (1989, 14p) SR 89-37

Acoustic measurement
Rheology of ice. Fish, A M., (1978, 196p) MP 1988
Acoustic emission response in polycrystalline materials. St. Lawrence, W.F., (1979, p 223-228) MP 1246
Acoustic emission and deformation response of finite ice plates. Xirouchakis, P.C., et al, (1981, p 123-133) MP 1436
Analysis of acoustical features of laboratory grown sea ice Stanton, T K., et al, (1986, p 1486-1494) MP 2222
Acoustically induced ground motion in sand under winter conditions. Peck, L., (1989, p 37-54) MP 2626
Observations of low-frequency acoustic-to-seismic coupling in the summer and winter. Albert, D.G., et al, (1989, p.352-359) MP 2654
Ice strength estimates from submarine topsounder data. DiMarco R., et al, (1989, p 425-426) MP 2691

Acoustic measuring instruments
Some characteristics of grounded floebergs near Prudhoe Bay, Alaska. Kovacs, A., et al, (1976, p.169-172) MP 1118
Grounded floebergs near Prudhoe Bay, Alaska Kovacs, A, et al, (1976, 10p) CR 76-34

Acoustics
International Workshop on the Seasonal Sea Ice Zone, Monterey, California, Feb 26-Mar.1, 1979. Andersen, B G., ed, (1980, 357p) MP 1292
Acoustic emissions during creep of frozen soils Fish, A M, e al, (1982, p.194-206) MP 1495
Effect of snow on vehicle-generated seismic signatures Albert, D.G., (1987, p 881-887) MP 2229
Acoustic-to-seismic coupling through a snow layer Peck, L, (1987, p 47-55) MP 2294
Recent research on acoustic to seismic coupling Albert, D G., (1987, p 223-225) MP 2418
Seismic and acoustic wave propagation. working group report. Albert, D G, et al, (1987, p 253-255) MP 2419
Acoustic emissions from composites at decreasing temperatures. Dutta, P.K, et al, (1988, p 1090-1095) MP 2430
Experimental and theoretical studies of acoustic-to-seismic coupling Albert, D G., (1988, p 19-31) MP 2432
Seismic/acoustic experiments at SNOW IV Peck, L, (1989, p 155-157) MP 2646

Active layer
Permafrost and active layer on a northern Alaskan road Berg, R.L., et al, (1978, p 615-621) MP 1102
Human-induced thermokarst at old drill sites in northern Alaska. Lawson, D E, et al, (1978, p.16-23) MP 1254
Geophysics in the study of permafrost Scott, W.J, et al, (1979, p 93-115) MP 1266
Neumann solution applied to soil systems Lunardini, V J, (1980, 7p) CR 80-22
Dielectric properties of thawed active layers. Arcone, S A., et al, (1982, p 618-626) MP 1547
Long-term active layer effects of crude oil spilled in interior Alaska. Collins, C.M., (1983, p 175-179) MP 1656
Recovery and active layer changes following a tundra fire in northwestern Alaska Johnson, L, et al, (1983, p.543-547) MP 1660
Potential responses of permafrost to climatic warming Goodwin, C W., et al, (1984, p.92-105) MP 1710
Permafrost, snow cover and vegetation in the USSR Bigl, S.R., (1984, 128p) SR 84-36

Adhesive strength
Seeking low ice adhesion. Sayward, J.M., (1979, 83p) SR 79-11

Admixtures
Grouting of soils in cold environments a literature search. Johnson, R., (1977, 49p) SR 77-42

Adsorption
Water vapor adsorption by sodium montmorillonite at -5C. Anderson, D M, et al, (1978, p 638-644) MP 981
Analysis of water in the Martian regolith. Anderson, D.M., et al, (1979, p 33-38) MP 1409
Summary of the adsorption force theory of frost heaving. Takagi, S., (1980, p 233-236) MP 1332
Adsorption force theory of frost heaving Takagi, S, (1980, p 57-81) MP 1334
Comments on "Modeling adsorption/desorption kinetics of pesticides in a soil suspension". Leggett, D C., (1989, p 231) MP 2532

Aerial photographs
Meso-scale strain measurements on the Beaufort sea pack ice (AIDJEX 1971). Hibler, W D., III, et al, (1974, p.119-138) MP 1035
Remote sensing program required for the AIDJEX model Weeks, W.F, et al, (1974, p 22-44) MP 1040

Aerial photography
Seasonal regime and hydrological significance of stream icings in central Alaska. Kane, D.L, et al, (1973, p.528-540) MP 1026
Land use/vegetation mapping in reservoir management Cooper, S., et al, (1974, 30p) MP 1039

Aerial reconnaissance
Meso-scale strain measurements on the Beaufort sea pack ice (AIDJEX 1971). Hibler, W.D, III, et al, (1974, p.119-138) MP 1035

Aerial surveys
Correlation and quantification of airborne spectrometer data to turbidity measurements at Lake Powell, Utah Merry, C J, (1970, p 1309-1316) MP 1271
Applications of remote sensing in New England. McKim, H L., et al, (1975 8p. + 14 figs. and tables) MP 913
Remote measurement of sea ice drift Hibler, W D, III, et al, (1975, p 541-554) MP 849
Land use and water quality relationships, eastern Wisconsin. Haugen, R.K, et al, (1976, 47p) CR 76-30
Skylab imagery Application to reservoir management in New England. McKim, H L, et al, (1976, 51p) SR 76-07
Applications of remote sensing in the Boston Urban Studies Program, Parts I and II. Merry, C.J, et al, (1977, 36p.) CR 77-13
Investigation of an airborne resistivity survey conducted at very low frequency. Arcone, S.A., (1977, 48p) CR 77-20
Water quality measurements at Lake Powell, Utah Merry, C.J., (1977, 38p) SR 77-28
Aerial photointerpretation of a small ice jam. DenHartog, S.L, (1977, 17p) SR 77-32
Aerial photography of Cape Cod shoreline changes Gatto, L.W, (1978, 49p) CR 78-17
Estuarine processes and intertidal habitats in Grays Harbor, Washington. a demonstration of remote sensing techniques Gatto, L.W., (1978, 79p) CR 78-18
VLF airborne resistivity survey in Maine. Arcone, S A, (1978, p.1399-1417) MP 1166
Measurement of mesoscale deformation of Beaufort sea ice (AIDJEX-1971). Hibler, W.D., III, et al, (1978, p 148-172) MP 1179
Mapping of the LANDSAT imagery of the Upper Susitna River Gatto, L.W, et al, (1980, 41p) CR 80-04
Ice regime reconnaissance, Yukon River, Yukon Gerard, R, et al, (1984, p 1059-1073) MP 2406
Potential of remote sensing in the Corps of Engineers dredging program McKim, H.L., et al, (1985, 42p) SR 85-20
Method for conducting airborne infrared roof moisture surveys Tobiasson, W., (1988, p 50-61) MP 2436
Sea ice ridging in the Ross Sea, Antarctica, as compared with sites in the Arctic. Weeks, W F., et al, (1989, p 4984-4988) MP 2490
Ice runways near the South Pole Switzinbank, C, (1989, 42p) SR 89-19
Development of an airborne sea ice thickness measurement system and field test results Kovacs, A, et al, (1989, 47p.) CR 89-19

Aerosols
Propane dispenser for cold fog dissipation system Hicks, J R, et al, (1973, 38p) MP 1033
Aerosols in Greenland snow and ice Kumai, M, (1977, p.341-350) MP 1725
Elemental analyses of ice crystal nuclei and aerosols Kumai, M, (1977, 5p.) MP 1191
Measurement and identification of aerosols collected near Barrow, Alaska. Kumai, M, (1978, 6p) CR 78-20
Microbiological aerosols during wastewater irrigation Bausum, H T., et al, (1978, p.273-280) MP 1154
Health aspects of water reuse in California Reed, S C., (1979, p.434-435) MP 1404
Bacterial aerosols resulting from wastewater irrigation in Ohio Bausum, H.T., et al, (1979, 64p) SR 79-32
Chemical obscurant tests during winter, environmental fate. Cragin, J.H., (1982, 9p) SR 82-19
Microbiological aerosols from waste water Bausum, H T, et al, (1983, p 65-75) MP 1578
Chemical obscurant tests during winter. Environmental fate. Cragin, J H, (1983, p 267-272) MP 1760
Aerosol growth in a cold environment. Yen, Y.-C, (1984, 21p) CR 84-06
Catalog of smoke/obscurant characterization instruments. O'Brien, H.W., et al, (1984, p 77-82) MP 1865
Acidity of snow and its reduction by alkaline aerosols. Kumai, M, (1985, p 92-94) MP 2008
Aerosol exchange in the remote troposphere Hogan, A W., (1986, p.197-213) MP 2180
Chemical properties of snow in the northeastern United States Kumai, M., (1987, p (C1)625-(C1)630) MP 2232
Scavenging of infrared screener EA 5763 by falling snow Cragin, J H., et al, (1987, p 13-20) MP 2292
Dynamic aerosol flow chamber Hewitt, A D., (1988, 13p) SR 88-21
Application of aerosol physics to snow research. Hogan, A.W., (1989, p 201-207) MP 2756
Effect of aerosols on pH of snow Kumai, M, (1990, p 17-30) MP 2675

Agriculture
Symposium on land treatment of wastewater, CRREL, Aug. 1978. (1978, 2 vols) MP 1145
Energy and costs for agricultural reuse of wastewater. Sletten, R S, et al, (1980, p 339-346) MP 1401

Air cushion vehicles
Some effects of air cushion vehicle operations on deep snow. Abele, G, et al, (1972, p 214-241) MP 887
Height variation along sea ice pressure ridges Hibler, W.D., III, et al, (1975, p.191-199) MP 848
Arctic environment and the Arctic surface effect vehicle Sterrett, K.F., (1976, 28p.) CR 76-01
Effects of hovercraft, wheeled and tracked vehicle traffic on tundra Abele, G, (1976, p 186-215) MP 1123
Evaluation of an air cushion vehicle in Northern Alaska. Abele, G, et al, (1976, 7p) MP 894
Air-cushion vehicle effects on surfaces of Alaska's Arctic Slopes Slaughter, C.W., (1976, p 272-279) MP 1384
Hovercraft ground contact directional control devices Abele, G., (1976, p 51-59) MP 875
Air cushion vehicle ground contact directional control devices Abele, G, et al, (1976, 15p) CR 76-45
Arctic transportation operational and environmental evaluation of an air cushion vehicle in northern Alaska Abele, G., et al, (1977, p 176-182) MP 985
Effects of low ground pressure vehicle traffic on tundra at Lonely, Alaska Abele, G, et al, (1977, 32p) SR 77-31
Long-term effects of off-road vehicle traffic on tundra terrain Abele, G, et al, (1984, p 283-294) MP 1820
Mobility working group report. Blaisdell, G L, et al, (1987, p 273 274) MP 2423

Air entrainment
Gas inclusions in the Antarctic ice sheet Gow, A J, et al, (1975, p.5101-5108) MP 847
Soft drink bubbles Cragin, J H., (1983, p 71) MP 1736

Air flow
Water and air horizontal flow in porous media Nakano, Y., (1980, p.81-85) MP 1341
Water and air vertical flow through porous media Nakano, Y, (1980, p 124-133) MP 1342
Traveling wave solution to the problem of simultaneous flow of water and air through homogeneous porous media. Nakano, Y., (1981, p.57-64) MP 1419
Thermosyphons and foundation design in cold regions Haynes, F D, et al, (1988, p 251-259) MP 2443
Investigation into the post-stable behavior of a tube array in cross-flow. Lever, J H., et al, (1989, p 457-465) MP 2561
Tracer gas measurement of air exchange in buildings Flanders, S N, et al, (1989, p.433-444) MP 2557
Air change measurements of five Army buildings in Alaska. Flanders, S.N, (1990, p.53-63) MP 2676
Friction loss through a uniform snow layer Yen, Y.C, (1990, p 83-90) MP 2703

Air leakage
Vents and vapor retarders for roofs. Tobiasson, W., (1986, 11p.) MP 2246
Vents and vapor retarders for roofs. Tobiasson, W., (1987, p.80-90) MP 2352
Vapor retarders for membrane roofing systems. Tobiasson, W., (1989, p 31-37) MP 2489

Air pollution
Winter air pollution at Fairbanks, Alaska. Coutts, H J., et al, (1981, p.512-528) MP 1395
Atmospheric pollutants in snow cover runoff Colbeck, S C., (1981, p.1-10) MP 1586
Atmospheric pollutants in snow cover runoff. Colbeck, S.C., (1981, p.1383-1388) MP 1487
Engine starters in winter. Coutts, H.J., (1981, 37p.) SR 81-32
Chemical obscurant tests during winter; environmental fate. Cragin, J.H., (1982, 9p.) SR 82-19
Low temperature automotive emissions. Coutts, H.J., (1983, 2 vols.) MP 1703
Catalog of smoke/obscurant characterization instruments O'Brien, H W., et al, (1984, p.77-82) MP 1865
Chemical properties of snow in the northeastern United States. Kumai, M., (1987, p (C1)625-(C1)630) MP 2232

Air temperature
Selected climatic and soil thermal characteristics of the Prudhoe Bay region. Brown, J., et al, (1975, p.3-12) MP 1054
Surface temperature data for Atkasook, Alaska summer 1975. Haugen, R K., et al, (1976, 25p.) SR 76-01
20-yr oscillation in eastern North American temperature records Mock, S J., et al, (1976, p.484-486) MP 889
Compressive and shear strengths of fragmented ice covers Cheng, S T., et al, (1977, 82p.) MP 951
Midwinter temperature regime and snow occurrence in Germany. Bilello, M.A., et al, (1978, 56p.) CR 78-21
Maximum thickness and subsequent decay of lake, river and fast sea ice in Canada and Alaska. Bilello, M.A., (1980, 160p.) CR 80-06
Summer air temperature and precipitation in northern Alaska. Haugen, R K., et al, (1980, p 403-412) MP 1439
Sea-ice atmosphere interactions in the Weddell Sea using drifting buoys. Ackley, S F., (1981, p 177-191) MP 1427
Climate of remote areas in north-central Alaska 1975-1979 summary. Haugen, R.K., (1982, 110p.) CR 82-35
Surface meteorology US/USSR Weddell Polynya Expedition, 1981 Andreas, E.L., et al, (1983, 32p.) SR 83-14
Relationships between estimated mean annual air and permafrost temperatures in North-Central Alaska Haugen, R.K., et al, (1983, p.462-467) MP 1658
Spectra and cospectra of atmospheric turbulence over snow Andreas, E L., (1986, p 219-233) MP 2661
Humidity and temperature measurements obtained from an unmanned aerial vehicle. Ballard, H., et al, (1987, p 35-45) MP 2293
Ice jams and the winter climate near White River, SD. Bilello, M.A., (1987, p.154-162) MP 2399
Spectral measurements in a disturbed boundary layer over snow. Andreas, E.L., (1987, p 1912-1939) MP 2254
Regional climatic trends in northern New England Haugen, R K., et al, (1988, p 64-71) MP 2748
Comparative studies of the winter climate at selected locations in Europe and the United States Bates, R.E., et al, (1989, p 283-293) MP 2598
Year of Bowen ratios over the frozen Beaufort Sea. Andreas, E L., (1989, p 12,721-12,724) MP 2508
Three-wavelength scintillation measurement of turbulent heat fluxes Andreas, E L., (1990, p 74-77) MP 2696

Air water interactions
Problems of the seasonal sea ice zone Weeks, W F., (1980, p.1-35) MP 1293
Forecasting river water temperatures. Daly, S F., (1988, p 180-188) MP 2500
Time constants for the evolution of sea spray droplets Andreas, E.L., (1989, p.147-149) MP 2555
Comments on "A physical bound on the Bowen ratio" Andreas, E L., (1989, p 1252-1254) MP 2560
Environment of wintertime leads and polynyas Andreas, E.L., (1989, p.273-288) MP 2689
Lidar-derived particle concentrations in plumes from arctic leads Andreas, E.L., et al, (1990, p.9-12) MP 2758

Airborne equipment
Airborne E-phase resistivity surveys of permafrost. Sellmann, P V., et al, (1974, p 67-71) MP 1046
Remote sensing plan for the AIDJEX main experiment Weeks, W F., et al, (1975, p 21-48) MP 862
Atmosphere subgroup discussions. Andreas, E L., (1984, p 97-98) MP 2603
Airborne roof moisture surveys Tobiasson, W., (1986, p 45-47) MP 2139
Airborne measurement of sea ice thickness and subice bathymetry. Kovacs, A., et al, (1988, p.111-120) MP 2345
Measurement of sea ice thickness using electromagnetic induction Holladay, J S., et al, (1990, p 309-315) MP 2590
Airborne sea ice thickness sounding Kovacs, A., et al, (1990, p 225-229) MP 2737

Airborne radar
Investigation of an airborne resistivity survey conducted at very low frequency. Arcone, S A., (1977, 48p.) CR 77-20
Detection of moisture in construction materials. Morey, R.M., et al, (1977, 9p.) CR 77-25
Inlet current measured with Sea-at-1 synthetic aperture radar. Shemdin, O.H., et al, (1980, p 35-37) MP 1481
Electromagnetic subsurface measurements. Dean, A.M., Jr., (1981, 19p.) SR 81-23
Airborne electromagnetic sounding of sea ice thickness and sub-ice bathymetry. Kovacs, A., et al, (1987, p 289-311) MP 2332
Radioglaciology by V.V. Bogorodskiĭ, et al. Jezek, K.C., (1988, p 55-56) MP 2338
Airborne radar survey of a brash ice jam in the St. Clair River. Daly, S.F., et al, (1989, 17p.) CR 89-02
Water detection in coastal plains using helicopter-borne short pulse radar. Arcone, S A., et al, (1989, 25p.) CR 89-07
Measurement of sea ice thickness using electromagnetic induction. Holladay, J S., et al, (1990, p 309-315) MP 2590

Aircraft icing
Interaction of a surface wave with a dielectric slab discontinuity. Arcone, S.A., et al, (1978, 10p.) CR 78-08
Potential icing of the space shuttle external tank Ferrick, M G., et al, (1982, 305p.) CR 82-25
Computer modeling of time-dependent rime icing in the atmosphere Lozowski, E P., et al, (1983, 74p.) CR 83-02
Studies of high-speed rotor icing under natural conditions Itagaki, K., et al, (1983, p 117-123) MP 1635
Self-shedding of accreted ice from high-speed rotors Itagaki, K., (1983, p 1-6) MP 1719
Current procedures for forecasting aviation icing. Tucker, W B., (1983, 31p.) SR 83-24
Ice accretion under natural and laboratory conditions. Itagaki, K., et al, (1985, p.225-228) MP 2009
Utilization of Unmanned Aerial Vehicles in the ALBE Thrust Greeley, H.P., et al, (1986, p 249-257) MP 2663
Natural rotor icing on Mount Washington, New Hampshire Itagaki, K., et al, (1986, 62p.) CR 86-10
Prediction of winter battlefield weather effects Ryerson, C.C., et al, (1988, p.357-362) MP 2402
Thickness distribution of accreted ice grown on rotor blades Itagaki, K., et al, (1988, p 152-156) MP 2423

Aircraft landing areas
Propane dispenser for cold fog dissipation system Hicks, J.R., et al, (1973, 38p.) MP 1033
Runway site survey, Pensacola Mountains, Antarctica Kovacs, A., et al, (1977, 45p.) SR 77-14
Design considerations for airfields in NPRA Crory, F.E., et al, (1978, p.441-458) MP 1086
Storm drainage design considerations in cold regions Lobacz, E F., et al, (1978, p 474-489) MP 1088
Construction of temporary airfields in NPRA Crory, F E., (1978, p 13-15) MP 1253
Aircraft operations in the Arctic. DenHartog, S L., (1987, p 271-272) MP 2422
Hard-surface runways in Antarctica. Mellor, M., (1988, 87p.) SR 88-13
Improved techniques for construction of snow roads and airstrips Lee, S.M., et al, (1988, 99p.) SR 88-18
Airfields in Arctic Alaska Crory, F.E., (1988, p.49-55) MP 2451

Airplanes
Report on ice fall from clear sky in Georgia October 26, 1959. Harrison, L P., et al, (1960, 31p. plus photographs) MP 1017
Operation of the CRREL prototype air transportable shelter Flanders, S N., (1980, 73p.) SR 80-10
Humidity and temperature measurements obtained from an unmanned aerial vehicle. Ballard, H., et al, (1987, p 35-45) MP 2293
Aircraft operations in the Arctic DenHartog, S L., (1987, p.271-272) MP 2422
Mobility working group report Blaisdell, G.L., et al, (1987, p.273-274) MP 2423

Airports
The strength of natural and processed snow Abele, G., (1975, p 176-186) MP 1058
Design of airfield pavements for seasonal frost and permafrost conditions Berg, R.L., et al, (1978, 18p.) MP 1189
Snow and ice roads in the Arctic. Johnson, P.R., (1979, p 1063-1071) MP 1223
Snow and ice control on railroads, highways and airports Minsk, L D., et al, (1981, p 671-706) MP 1447
Drainage facilities of airfields and heliports in cold regions Lobacz, E F., et al, (1981, 56p.) SR 81-22
Survey of airport pavement distress in cold regions Vinson, T.S., et al, (1986, p 41-50) MP 2002
Deformation of pavements during freeze thaw cycles Johnson, T.C., et al, (1986, 138p.) CR 86-13
Frost action on roads and airfields Johnson, T.C., et al, (1986, 45p.) CR 86-18
Freeze thaw tests of road and airfield subgrade soils Cole, D M., et al, (1987, 36p.) CR 87-02
Airport pavement distress in cold regions Vinson, T S., et al, (1987, p 981-1012) MP 2234
Foundation technology in cold regions Quinn, W.F., (1987, p 305-310) MP 2425
Airfields in Arctic Alaska. Crory, F.E., (1988, p.49-55) MP 2451
Performance of pavement at Central Wisconsin Airport. Stark, J., et al, (1989, p 92-103) MP 2463
State of the art of pavement response monitoring systems for roads and airfields. (1989, 401p.) SR 89-23

Albedo
Meteorological variation of atmospheric optical properties in an antarctic storm. Egan, W.G., et al, (1986, p.1155-1165) MP 2099
Snowmelt increase through albedo reduction. Colbeck, S.C., (1988, 11p.) SR 88-26
Two-stream multilayer, spectral radiative transfer model for sea ice. Perovich, D.K., (1989, 17p.) CR 89-15

Algae
Sea ice and ice algae relationships in the Weddell Sea. Ackley, S.F., et al, (1978, p 70-71) MP 1203
Standing crop of algae in the sea ice of the Weddell Sea region Ackley, S F., et al, (1979, p.269-281) MP 1242
Physical, chemical and biological properties of winter sea ice in the Weddell Sea. Clarke, D B., et al, (1982, p.107-109) MP 1609
Physical mechanism for establishing algal populations in frazil ice Garrison, D.L., et al, (1983, p.363-365) MP 1717
Relative abundance of diatoms in Weddell Sea pack ice. Clarke, D B., et al, (1983, p.181-182) MP 1786
Morphology and ecology of diatoms in sea ice from the Weddell Sea Clarke, D B., et al, (1984, 41p.) CR 84-05
Sea ice and biological activity in the Antarctic Clarke, D B., et al, (1984, p 2087-2095) MP 1701
Ice nucleation activity of antarctic marine microorganisms. Parker, L V., et al, (1985, p 126-128) MP 2217
Sea-ice pressure ridge microbial communities. Ackley, S.F., (1988, p.172-174) MP 2450

All terrain vehicles
Ecological and environmental consequences of off-road traffic in northern regions Brown, J., (1976, p 40-53) MP 1383
Hovercraft ground contact directional control devices Abele, G., (1976, p 51-59) MP 875
Vehicle damage to tundra soil and vegetation Walker, D A., et al, (1977, 49p.) SR 77-17
Ecological impact of vehicle traffic on tundra. Abele, G., (1981, p 11-37) MP 1463
Effects of all terrain vehicles on tundra Racine, C., et al, (1988, 12p.) SR 88-17
Use of off-road vehicles and mitigation of effects in Alaska permafrost environments a review Slaughter, C.W., et al, (1990, p 63-72) MP 2682

Alpine landscapes
Terrain analysis from space shuttle photographs of Tibet Kreig, R A., et al, (1986, p 400-409) MP 2097

Alpine tundra
Climatic and dendroclimatic indices in the discontinuous permafrost zone of the Central Alaskan Uplands Haugen, R K., et al, (1978, p 392-398) MP 1099

Altitude
Atmospheric icing rates with elevation on northern New England mountains, U S A Ryerson, C.C., (1990, p 90-97) MP 2589

Analysis (mathematics)
Buckling pressure of an elastic floating plate. Takagi, S., (1978, 49p.) CR 78-14
Evaluation of the moving boundary theory. Nakano, Y., (1978, p 142-151) MP 1147
Some Bessel function identities arising in ice mechanics problems Takagi, S., (1979, 13p.) CR 79-27
Remote sensing of revegetation of burned tundra, Kokolik River, Alaska Hall, D K., et al, (1980, p 263-272) MP 1391
Water and air vertical flow through porous media. Nakano, Y., (1980, p 124-133) MP 1342
One-dimensional transport from a highly concentrated, transfer type source O'Neill, K., (1982, p 27-36) MP 1489
Boundary integral equation solution for phase change problems. O'Neill, K., (1983, p 1825-1850) MP 2093
Multivariable regression algorithm. Blaisdell, G L., et al, (1983, 41p.) SR 83-32
Mathematical modeling of river ice processes. Shen, H.T., (1984, p 554-558) MP 1973
Correlation function study for sea ice. Lin, F.C., et al, (1988, p 14,055-14,063) MP 2511
Heat conduction in snow Yen, Y.C., (1989, p 21-32) MP 2546
Comments on "A physical bound on the Bowen ratio". Andreas, E L., (1989, p.1252-1254) MP 2550

Anchors
Stake driving tools a preliminary survey Kovacs, A., et al, (1977, 43p.) SR 77-13
Towing ships through ice-clogged channels by warping and kedging Mellor, M., (1979, 21p.) CR 79-21
Vibration analysis of a DEW Line station Haynes, F D., et al, (1988, p 1513-1518) MP 2341
Imjin River ice boom Perham, R.E., (1988, 10p.) SR 88-22

Anemometers
Calibrating cylindrical hot-film anemometer sensors. Andreas, E L , et al, (1986, p.283-298) MP 1860

Animals
Ecological investigations of the tundra biome in the Prudhoe Bay Region, Alaska. Brown, J., ed, (1975, 215p) MP 1053
Influence of grazing on Arctic tundra ecosystems Batzli, G.O , et al, (1976, p.153-160) MP 970
Arctic ecosystem the coastal tundra at Barrow, Alaska. Brown, J., ed, (1980, 571p) MP 1355
Point Barrow, Alaska, USA. Brown, J., (1981, p 775-776) MP 1434
River ice and salmonids. Walsh, M., et al, (1986, p D-4 1-D-4.26) MP 2477
Winter habitats of salmon and trout. Calkins, D J , (1989, 9p) SR 89-34

Anisotropy
Internal structure and crystal fabrics of the West Antarctic ice sheet. Gow, A J., et al, (1976, 25p) CR 76-35
Radar anisotropy of sea ice Kovacs, A., et al, (1978, p 171-201) MP 1111
Radar anisotropy of sea ice. Kovacs, A., et al, (1978, p 6037-6046) MP 1139
Ultrasonic investigation on ice cores from Antarctica. Kohnen, H . et al, (1979, 16p) CR 79-10
Ultrasonic investigation on ice cores from Antarctica. Kohnen, H., et al, (1979, p 4865-4874) MP 1239
Anisotropic properties of sea ice Kovacs, A., et al, (1979, p 5749-5759) MP 1258
Anisotropic properties of sea ice in the 50-150 MHz range. Kovacs, A , et al, (1979, p 324-353) MP 1620
Physical properties of sea ice and under-ice current orientation. Kovacs, A., et al, (1980, p 109-153) MP 1323
Polarization studies in sea ice Arcone, S A , et al, (1980, p 225-245) MP 1324
Modeling of anisotropic electromagnetic reflection from sea ice. Golden, K.M., et al, (1980, p 247-294) MP 1325
Sea ice anisotropy, electromagnetic properties and strength Kovacs, A., et al, (1980, 18p) CR 80-20
Modeling of anisotropic electromagnetic reflection from sea ice. Golden, K.M., et al, (1980, 15p) CR 80-23
Modeling of anisotropic electromagnetic reflections from sea ice. Golden, K.M., et al, (1981, p 8107-8116) MP 1469
Shear strength anisotropy in frozen saline and freshwater soils Chamberlain, E J , (1985, p 189-194) MP 1931

ANTARCTICA
Antarctic ice sheet. Mellor, M., (1961, 50p) M I-B1
Climatology of Antarctic regions Wilson, C., (1968, 77p) M I-A3c
Methods of building on permanent snowfields. Mellor, M , (1968, 43p) M III-A2a

Antarctica
Review of sea-ice weather relationships in the Southern Hemisphere. Ackley, S.F , (1981, p.127-159) MP 1426
Boom for shipboard deployment of meteorological instruments. Andreas, E L , et al, (1983, 14p) SR 83-28
Simple boom for use in measuring meteorological data from a ship. Andreas, E L , et al, (1984, p 227-237) MP 1752
Waste management practices of the United States Antarctic Program. Reed, S.C., et al, (1989, 28p) SR 89-3
Compacted-snow runways design and construction guidelines for Antarctica Russell-Head, D S., et al, (1989, 68p) SR 89-10
Airfields on antarctic glacier ice. Mellor, M , et al, (1989, 97p) CR 89-21
US global ice core research program West Antarctica and beyond. Grootes, P M., et al, (1989, 32p) MP 2709

—Allan Hills
Radio echo sounding in the Allan Hills, Antarctica Kovacs, A , (1980, 9p) SR 80-23
Emerging meteorite crystalline structure of the enclosing ice Gow, A J., et al, (1989, p 87-91) MP 2503

—Amundsen-Scott Station
Nitrogenous chemical composition of antarctic ice and snow Parker, B C , et al, (1981, p 79-81) MP 1541
South Pole ice core drilling, 1981-1982. Kuivinen, K C., et al, (1982, p 89-91) MP 1621
Baseline acidity of ancient precipitation from the South Pole Cragin, J H , et al, (1984, 7p) CR 84-15
Meteorological variation of atmospheric optical properties in an antarctic storm Egan, W G , et al, (1986, p 1155-1165) MP 2099
Baseline acidity of South Pole precipitation Cragin, J H , et al, (1987, p 789-792) MP 2275
Hard-surface runways in Antarctica Mellor, M , (1988, 87p) SR 88-13
Improved techniques for construction of snow roads and airstrips Lee, S M., et al, (1988, 99p) SR 88-18
Improving snow roads and airstrips in Antarctica Lee, S M , et al, (1989, 18p) SR 89-22

—Amundsen Sea
West antarctic sea ice. Ackley, S F , (1984, p 88-95) MP 1818

—Beacon Valley
Examining antarctic soils with a scanning electron microscope Kumai, M., et al, (1976, p 249-252) MP 931

—Byrd Station
Oxygen isotope profiles through ice sheets Johnsen, S.J , et al, (1972, p.429-434) MP 997
Gas inclusions in the Antarctic ice sheet Gow, A J , et al, (1975, p 5101-5108) MP 847
Resurvey of the "Byrd" Station, Antarctica, drill hole Garfield, D.E., et al, (1976, p.29-34) MP 846
Internal structure and crystal fabrics of the West Antarctic ice sheet. Gow, A J., et al, (1976, 25p.) CR 76-35
Crystal fabrics of West Antarctic ice sheet Gow, A J , et al, (1976, p.1665-1677) MP 1382
Ultrasonic measurements on deep ice cores from Antarctica. Gow, A.J., et al, (1978, p.48-50) MP 1202
Ultrasonic investigation on ice cores from Antarctica Kohnen, H , et al, (1979, 16p) CR 79-10
Ultrasonic investigation on ice cores from Antarctica. Kohnen, H., et al, (1979, p 4865-4874) MP 1239
Ultrasonic tests of Byrd Station ice cores Gow, A J., et al, (1979, p.147-153) MP 1282
Time-priority studies of deep ice cores Gow, A J , (1980, p.91-102) MP 1308

—Crary Ice Rise
Changes in the Ross Ice Shelf dynamic condition. Jezek, K C , (1984, p 409-416) MP 2058

—Dome C
Borehole geometry on the Greenland and Antarctic ice sheets Jezek, K.C., (1985, p 242-251) MP 1817

—East Antarctica
Nitrate fluctuations in antarctic snow and firn Parker, B C., et al, (1982, p 243-248) MP 1551

—Folger, Cape
Internal properties of the ice sheet at Cape Folger by radio echo sounding Keliher, T E , et al, (1978, 12p) CR 78-04
Ice sheet internal reflections Ackley, S F., et al, (1979, p.5675-5680) MP 1319

—Howe, Mount
Ice runways near the South Pole. Swithinbank, C., (1989, 42p) SR 89-19

—Little America Station
Ultrasonic investigation on ice cores from Antarctica. Kohnen, H., et al, (1979, 16p) CR 79-10
Ultrasonic investigation on ice cores from Antarctica. Kohnen, H , et al, (1979, p 4865-4874) MP 1239

—Marie Byrd Land
Surface-wave dispersion in Byrd Land Acharya, H K., (1972, p 955-959) MP 992
Byrd Land quaternary volcanism. LeMasurier, W.E , (1972, p 139-141) MP 994

—McMurdo Ice Shelf
Dielectric constant and reflection coefficient of snow surface layers in the McMurdo Ice Shelf Kovacs, A , et al, (1977, p 137-138) MP 1011
Subsurface measurements of the Ross Ice Shelf, McMurdo Sound, Antarctica Kovacs, A., et al, (1977, p.146-148) MP 1013
Brine zone in the McMurdo Ice Shelf, Antarctica. Kovacs, A , et al, (1982, p 166-171) MP 1550
McMurdo Ice Shelf brine zone Kovacs, A , et al, (1982, 28p) CR 82-39

—McMurdo Sound
Iceberg thickness and crack detection Kovacs, A , (1978, p 131-145) MP 1128
Axial double point-load tests on snow and ice Kovacs, A , (1978, 11p) CR 78-01
Subsurface measurements of McMurdo Ice Shelf Gow, A J., et al, (1979, p 79-80) MP 1338
Physical and structural characteristics of sea ice in McMurdo Sound Gow, A J , et al, (1981, p 94-95) MP 1542
Chemical fractionation of brine in the McMurdo Ice Shelf Cragin, J.H., et al, (1983, 16p) CR 83-06
Physical mechanism for establishing algal populations in frazil ice. Garrison, D L , et al, (1983, p.363-365) MP 1717
Sea ice microbial communities in Antarctica Garrison, D L , et al, (1986, p 243-250) MP 2026
Chemical fractionation of brine in McMurdo Ice Shelf Cragin, J H , et al, (1986, p.307-313) MP 2239

—McMurdo Station
Hard-surface runways in Antarctica Mellor, M , (1988, 87p) SR 88-13
Improved techniques for construction of snow roads and airstrips Lee, S M , et al, (1988, 99p) SR 88-18
Planing machines for building runways on ice Mellor, M., (1989, 8p + attachments) MP 2505
Waste management practices in Antarctica Sletten, R S., et al, (1989, p.122-130) MP 2464
Improving snow roads and airstrips in Antarctica. Lee, S M., et al, (1989, 18p) SR 89-22

—Mill Glacier
Ice runways near the South Pole Swithinbank, C , (1989, 42p) SR 89-19

—Pensacola Mountains
Runway site survey, Pensacola Mountains, Antarctica Kovacs, A , et al, (1977, 45p) SR 77-14

—Queen Maud Mountains
Dominion Range ice core characteristics, Antarctica Mayewski, P A , et al, (1990, p 11-16) MP 2707

—Ross Ice Shelf
Stability of Antarctic ice Weertman, J , (1975, p.159) MP 1042
Stable isotope profile through the Ross Ice Shelf at Little America V, Antarctica. Dansgaard, W , et al, (1977, p.322-325) MP 1095
Ross Ice Shelf Project drilling, October-December 1976 Rand, J H , (1977, p 150-152) MP 1061
Ross Ice Shelf Project environmental impact statement July, 1974. Parker, B.C , et al, (1978, p.7-36) MP 1075
Core drilling through Ross Ice Shelf Zotikov, I.A , et al, (1979, p 63-64) MP 1337
Ross Ice Shelf bottom ice structure. Zotikov, I.A , et al, (1979, p 65-66) MP 1336
Radar detection of sea ice and current alinement under the Ross Ice Shelf Morey, R M , et al, (1981, p.96-97) MP 1543
Effects of conductivity on high-resolution impulse radar sounding Morey, R M , et al, (1982, 12p) CR 82-42
Changes in the Ross Ice Shelf dynamic condition Jezek, K.C , (1984, p.409-416) MP 2058
Modified theory of bottom crevasses Jezek, K.C , (1984, p 1925-1931) MP 2059
Mass balance of a portion of the Ross Ice Shelf Jezek, K C., et al, (1984, p 381-384) MP 1919
Rheology of glacier ice Jezek, K C , et al, (1985, p 1335-1337) MP 1844

—Ross Sea
Surface roughness of Ross Sea pack ice Govoni, J W., et al, (1983, p 123-124) MP 1764
West antarctic sea ice Ackley, S.F., (1984, p 88-95) MP 1818
Sea ice ridging in the Ross Sea, Antarctica, as compared with sites in the Arctic. Weeks, W F., et al, (1989, p.4984-4988) MP 2490

—Siple Coast
Changes in the Ross Ice Shelf dynamic condition. Jezek, K C , (1984, p.409-416) MP 2058

—South Pole
Composition and structure of South Pole snow crystals. Kumai, M , (1976, p 833-841) MP 853

—Victoria Land
Antarctic soil studies using a scanning electron microscope Kumai, M , et al, (1978, p 106-112) MP 1386
Radar wave speeds in polar glaciers Jezek, K.C., et al, (1983, p 199-208) MP 2057
Unfrozen water contents of six antarctic soil materials. Anderson, D M., et al, (1989, p 353-366) MP 2470

—Vostok Station
Nitrogenous chemical composition of antarctic ice and snow. Parker, B C , et al, (1981, p 79-81) MP 1541

—Weddell Sea
Choanoflagellata from the Weddell Sea, summer 1977 Buck, K R , (1980, 26p) CR 80-16
Choanoflagellates from the Weddell Sea. Buck, K R., (1981, p 47-54) MP 1453
CRREL 2-inch frazil ice sampler. Rand, J H , (1982, 8p) SR 82-09
Physical and structural characteristics of antarctic sea ice. Gow, A J , et al, (1982, p 113-117) MP 1548
On modeling the Weddell Sea pack ice Hibler, W D , III, et al, (1982, p.125-130) MP 1549
Numerical simulation of the Weddell Sea pack ice. Hibler, W.D., III, et al, (1983, p 2873-2887) MP 1592
Surface meteorology US/USSR Weddell Polynya Expedition, 1981. Andreas, E L , et al, (1983, 32p) SR 83-14
US/USSR Weddell Polynya expedition, Upper air data, 1981. Andreas, E L , (1983, 288p) SR 83-13
Physical mechanism for establishing algal populations in frazil ice Garrison, D L , et al, (1983, p.363-365) MP 1717
Elemental compositions and concentrations of microspherules in snow and pack ice from the Weddell Sea Kumai, M , et al, (1983, p 128-131) MP 1777
Relative abundance of diatoms in Weddell Sea pack ice. Clarke, D B , et al, (1983, p 181-182) MP 1786
Antarctic sea ice microwave signatures Comiso, J C., et al, (1984, p 662-672) MP 1668
Morphology and ecology of diatoms in sea ice from the Weddell Sea Clarke, D B , et al, (1984, 41p) CR 84-05
Sea ice and biological activity in the Antarctic Clarke, D B , et al, (1984, p.2087-2095) MP 1701
Drag coefficient across the Antarctic marginal ice zone Andreas, E L , et al, (1984, p 63-71) MP 1784
Sea ice data buoys in the Weddell Sea. Ackley, S.F , et al, (1984, 19p) CR 84-11
Ice dynamics Hibler, W D , III, (1984, 52p) M 84-03
Heat and moisture advection over antarctic sea ice Andreas, E L , (1985, p 736-746) MP 1888
Weddell-Scotia Sea MIZ, October 1984 Crasey, F D , et al, (1986, p 3920-3924) MP 1536
Sea ice microbial communities in Antarctica Garrison, D L , et al, (1986, p 243-250) MP 2026
Ice dynamics Hibler, W D., III, (1986, p 577-640) MP 2211
Sea-ice investigations during the Winter Weddell Sea Project Ackley, S F., et al, (1987, p 88-89) MP 2491
Physical and structural characteristics of Weddell Sea pack ice Gow, A J , et al, (1987, 70p) CR 87-14

Antarctica
—Weddell Sea *(cont.)*
Sea-ice pressure ridge microbial communities Ackley, S.F., (1988, p.172-174) MP 2450
Development of sea ice in the Weddell Sea Lange, M.A., et al, (1989, p 92-96) MP 2615
Elastic properties of frazil ice from the Weddell Sea, Antarctica Lange, M.A., et al, (1989, p 208-217) MP 2620
Compressive strength of antarctic frazil ice Richter-Menge, J.A., et al, (1989, p 269-278) MP 2621
Passive microwave *in situ* observations of winter Weddell Sea ice. Comiso J.C., et al, (1989, p 10,891-10,905) MP 2655
Snow cover effects on antarctic sea ice thickness Ackley, S.F., et al, (1990, p 16-21) MP 2726
Physical properties of sea ice from the Weddell Sea Eicken, H., et al, (1990, p 23-32) MP 2727
Comparison of the compressive strength of antarctic frazil ice and laboratory-grown columnar ice Richter-Menge, J.A., et al, (1990, p.79-84) MP 2731
Sea ice, a habitat for the foraminifer *Neogloboquadrina pachyderma?*. Dieckmann, G., et al, (1990, p 86-92) MP 2732
—Wright Valley
Examining antarctic soils with a scanning electron microscope Kumai, M., et al, (1976, p 249-252) MP 931
Antennas
Deicing a satellite communication antenna Hanamoto, B., et al, (1980, 14p) SR 80-18
Atmospheric icing on communication masts in New England Mulherin, N., (1986, 46p.) CR 86-17
Rime meteorology in the Green Mountains Ryerson, C.C., (1987, 46p.) CR 87-01
New England mountain icing climatology Ryerson, C.C., (1988, 35p.) CR 88-12
Atmospheric icing and broadcast antenna reflections Ryerson, C.C., (1988, 13p) CR 88-11
Antifreezes
Winter maintenance research needs Minsk, L.D., (1975, p 36-38) MP 950
Freezing and thawing tests of liquid deicing chemicals on selected pavement materials. Minsk, L.D., (1979, p 51-58) MP 1220
Predicting unfrozen water content behavior of a soil Black, P.B., et al, (1990, p 54-60) MP 2677
Antifreeze admixtures for cold weather concreting Preliminary test results Korhonen, C.J., et al, (1990, 8p) MP 2742
Arctic environment
Progress report on ERTS data on Arctic environment Anderson, D.M., et al, (1972, 3p) MP 991
Arctic lanadscapes
Arctic transportation operational and environmental evaluation of an air cushion vehicle in northern Alaska. Abele, G., et al, (1977, p 176-182) MP 985
Arctic landscapes
Environmental setting, Barrow, Alaska Brown, J., (1970, p 50-64) MP 945
Trends in carbohydrate and lipid levels in Arctic plants McCown, B.H., et al, (1972, p 40-45) MP 1376
Arctic environment and the Arctic surface effect vehicle. Sterrett, K.F., (1976, 28p) CR 76-01
Upland forest and its soil and litters in interior Alaska Troth, J.L., et al, (1976, p 33-44) MP 867
Revegetation in arctic and subarctic North America—a literature review Johnson, L.A., et al, (1976, 32p) CR 76-15
Ecological and environmental consequences of off-road traffic in northern regions Brown J., (1976, p 40-53) MP 1383
Air-cushion vehicle effects on surfaces of Alaska's Arctic Slopes Slaughter, C.W., (1976, p 272-279) MP 1384
Canol Pipeline Project a historical review. Ueda, H.T., et al, (1977, 32p) SR 77-34
Biological restoration strategies in relation to nutrients at a subarctic site in Fairbanks, Alaska Johnson, L.A., (1978, p 460-466) MP 1100
Scientific challenges at the poles Welch, J.P., et al, (1987, p 23-26) MP 2228
Arctic Ocean
Arctic Ocean temperature, salinity and density, March-May 1979. McPhee, M.G., (1981, 20p) SR 81-05
Understanding the Arctic sea floor for engineering purposes (1982, 141p) SR 83-25
Science program for an imaging radar receiving station in Alaska. Weller, G., et al, (1983, 45p) MP 1884
Mechanical properties of ice in the Arctic seas Weeks, W.F., et al, (1984, p 235-259) MP 1674
Shore ice override and pileup features, Beaufort Sea Kovacs, A., (1984, 28p + map) CR 84-26
Sea ice penetration in the Arctic Ocean Weeks, W.F., (1984, p.17 65) MP 1993
Physical properties of the sea ice cover Weeks, W.F., (1986, p 87-102) MP 2047
Remote sensing of the Arctic seas Weeks, W.F., et al, (1986, p 59-64) MP 2117
Alaska synthetic aperture radar (SAR) facility project Carsey, F., et al, (1987, p 593-596) MP 2408
Arctic soils
Pedologic investigations in northern Alaska Tedrow, J.C.F., (1973, p.93-108) MP 1005
Arctic topography
Morphology of the North Slope Walker, H.J., (1973, p 49-52) MP 1004
Arctic vegetation
Vegetative research in arctic Alaska Johnson, P.L., et al, (1973, p 169-198) MP 1008
Artificial freezing
Thermal and creep properties for frozen ground construction. Sanger, F.J., et al, (1978, p 95-117) MP 1624
Thermal and creep properties for frozen ground construction. Sanger, F.J., et al, (1979, p 311-337) MP 1227
Mechanical properties of frozen ground. Ladanyi, B., et al, (1979, p 7-18) MP 1726
Freezing of soil with surface convection. Lunardini, V.J., (1982, p 205-212) MP 1595
Initial stage of the formation of soil-laden ice lenses Takagi, S., (1982, p 223-232) MP 1596
Solution of phase change problems O'Neill, K., (1983, p.134-146) MP 1894
Ground freezing for management of hazardous waste sites Sullivan, J.M., Jr., et al, (1985, 15p) MP 2030
Potential use of artificial ground freezing for contaminant immobilization. Iskandar, I.K., et al, (1985, 10p) MP 2029
Classification and laboratory testing of artificially frozen ground Sayles, F.H., et al, (1987, p 22-48) MP 2227
Ground freezing controls hazardous waste Iskandar, I.K., (1987, p 455-456) MP 2270
Experimental methods for decontaminating soils by freezing Ayorinde, O.A., et al, (1988, 12p.) MP 2513
Freezing a temporary roadway for transport of a 3000 ton dragline Maishman, D., et al, (1988, p 357-365) MP 2378
Contaminant transport in freezing soils. Ayorinde, O.A., et al, (1988, 29p) MP 2514
Freezing technique for *in-situ* treatment of contaminated soils Ayorinde, O.A., et al, (1989, p 489-498) MP 2515
Artificial ice
Mass transfer along ice surfaces Tobin, T.M., et al, (1977, p 34-37) MP 1091
Crystalline structure of urea ice sheets used in modeling in the CRREL test basin Gow, A.J., (1984, p 241-253) MP 1835
Fracture experiments on freshwater and urea model ice. Bentley, D.L., et al, (1988, 152p) MP 2502
Correlation function study for sea ice Lin, F.C., et al, (1988, p 14,055-14,063) MP 2511
Radar backscattering from artificially grown sea ice Bredow, J., et al, (1989, p 259-264) MP 2667
Radar backscatter measurements over saline ice. Gogineni, S., et al, (1990, p 603-615) MP 2741
Artificial islands
Foundations of structures in polar waters Chamberlain, E.J., (1981, 16p) SR 81-25
Offshore mechanics and Arctic engineering, symposium, 1983 (1983, 813p) MP 1581
Mukluk ice stress measurement program Cox, G.F.N., et al, (1988, p 457-463) MP 2354
Artificial melting
Bubbler induced melting of ice covers Kerbar, R., et al, (1978, p 362-366) MP 1160
Artificial nucleation
Ice crystal formation and supercooled fog dissipation Kumai, M., (1982, p 579-587) MP 1539
Atmospheric attenuation
Millimeter-wave performance during mixed precipitation Bates, R.E., et al, (1989, p 113-120) MP 2630
Three-wavelength scintillation measurement of turbulent heat fluxes Andreas, E.L., (1990, p 74-77) MP 2696
ATMOSPHERIC CIRCULATION
Radioactive fallout in northern regions Wilson, C., (1967, 35p) M I-A3d
Climatology of the cold regions of the northern hemisphere. Wilson, C., (1967, 141p) M I-A3a
Climatology of Antarctic regions Wilson, C., (1968, 77p) M I-A3c
Atmospheric circulation
Sea ice atmosphere interactions in the Weddell Sea using drifting buoys. Ackley, S.F., (1981, p 177-191) MP 1427
Atmospheric turbulence measurements at SNOW-ONE-B Andreas, E.L., (1983, p 81-87) MP 1846
Drag coefficient across the Antarctic marginal ice zone. Andreas, E.L., et al, (1984, p 63-71) MP 1784
Low pressure weather systems in and around Norwegian waters Bilello, M.A., (1986, p 53-66) MP 2181
Aerosol exchange in the remote troposphere Hogan, A.W., (1986, p 197-213) MP 2180
Atmospheric composition
Trace gas analysis of Arctic and subarctic atmosphere Murrmann, R.P., (1971, p 199-203) MP 908
Aerosol exchange in the remote troposphere Hogan, A.W., (1986 p 197-213) MP 2180
Atmospheric density
Snow concentration and effective air density during snowfalls Mellor, M., (1983, p 505-507) MP 1769
Atmospheric physics
Estimating Cn square over snow and sea ice from meteorological quantities Andreas, E.L., (1988, p 258-267) MP 2440
Estimating Cn square over snow and sea ice from meteorological data. Andreas, E.L., (1988, p 481-495) MP 2393
Atmospheric stability from scintillation measurements Andreas, E.L., (1988, p 2241-2246) MP 2386
Atmospheric pressure
Depth of water-filled crevasses that are closely spaced. Robin, G. de Q., et al, (1974, p 543-544) MP 1038
Sea-ice atmosphere interactions in the Weddell Sea using drifting buoys Ackley, S.F., (1981, p 177-191) MP 1427
Comparison of different sea level pressure analysis fields in the East Greenland Sea. Tucker, W.B., (1983, p 1084-1088) MP 1737
Low pressure weather systems in and around Norwegian waters Bilello, M.A., (1986, p 53-66) MP 2181
Atomic absorption
Blank corrections for ultratrace atomic absorption analysis. Cragin, J.H., et al, (1979, 5p) CR 79-03
ATTENUATION
Explosions and snow Mellor, M., (1965, 34p) M III-A3a
Attenuation
Visible propagation in falling snow as a function of mass concentration and crystal type Lacombe, J., et al, (1983, p 103-111) MP 1757
Comparative near-millimeter wave propagation properties of snow or rain Nemarich, J., et al, (1983, p 115-129) MP 1690
Utilization of the snow field test series results for development of a snow obscuration primer. Ebersole, J.F., et al, (1983, p 209-217) MP 1692
Attenuation and backscatter for snow and sleet at 96, 140, and 225 GHz. Nemarich, J., et al, (1984, p 41-52) MP 1864
Catalog of smoke/obscurant characterization instruments. O'Brien, H.W., et al, (1984, p 77-82) MP 1865
Approach to snow propagation modeling Koh, G., (1984, p 247-259) MP 1869
Laboratory studies of acoustic scattering from the underside of sea ice Jezek, K.C., et al, (1985, p 87-91) MP 1912
Snow mass extinction coefficient Koh, G., (1986, p 35-38) MP 2659
Effect of snow on vehicle-generated seismic signatures Albert, D.G., (1987, p 881-887) MP 2229
Forward scatter meter for measuring extinction in adverse weather Koh, G., (1987, p 81-84) MP 2295
High frequency acoustical properties of saline ice. Jezek, K.C., et al, (1989, p 9-23) MP 2686
Augers
Kinematics of axial rotation machines Mellor, M., (1976, 45p) CR 76-16
Conventional land mines in winter Richmond, P.W., (1984, 23p) SR 84-30
Prototype drill for core sampling fine-grained perennially frozen ground Brockett, B.E., et al, (1985, 29p) CR 85-01
Ice-coring augers for shallow depth sampling. Rand, J.H., et al, (1985, 22p) CR 85-21
Auger bit for frozen fine-grained soil Sellmann, P.V., et al, (1986, 13p) SR 86-36
Bit design improves augers Sellmann, P.V., et al, (1987, p 453-454) MP 2269
Drilling in frozen ground, bitumens and concretes Sellmann, P.V., et al, (1988, 10p) SR 88-08
AVALANCHE COUNTERMEASURES
Avalanches Mellor, M., (1968, 215p) M III-A3d
Avalanche deposits
Detection of sound by persons buried under snow avalanche. Johnson, J.B., (1984, p 42-47) MP 1920
Avalanche formation
Acoustic emission response of snow St Lawrence, W.F., (1980, p 209-216) MP 1366
AVALANCHE MECHANICS
Avalanches Mellor, M., (1968, 215p) M III-A3d
Avalanche mechanics
Acoustic emissions in the investigation of avalanches St Lawrence, W.F., (1977, p VII/24-VII/33) MP 1630
Dynamics of snow avalanches Mellor, M., (1978, p 753-792) MP 1070
AVALANCHE TRIGGERING
Avalanches Mellor, M., (1968, 215p) M III-A3d
Avalanche triggering
Analysis of non-steady plastic shock waves in snow Brown, R.L., (1980, p 279-287) MP 1354
Acoustic emission response of snow St Lawrence, W.F., (1980, p 209-216) MP 1366
Avalanche wind
Dynamics of snow avalanches Mellor, M., (1978, p 753-792) MP 1070
AVALANCHES
Avalanches Mellor, M., (1968, 215p) M III-A3d

Avalanches
Dynamics of snow and ice masses. Colbeck, S C , ed, (1980, 468p) MP 1297
History of snow-cover research. Colbeck, S.C., (1987, p.60-65) MP 2316
Snow properties and processes. Colbeck, S C., (1987, p 145-150) MP 2413

Backscattering
Imaging radar observations of frozen Arctic lakes. Elachi, C., et al, (1976, p.169-175) MP 1284
Surface-based scatterometer results of Arctic sea ice Onstott, R.G., et al, (1979, p.78-85) MP 1260
Comparative near-millimeter wave propagation properties of snow or rain. Nemarich, J , et al, (1983, p.115-129) MP 1690
Attenuation and backscatter for snow and sleet at 96, 140, and 225 GHz. Nemarich, J., et al, (1984, p 41-52) MP 1864
Effects of water and ice on the scattering of diffuse reflectors. Jezek, K C , et al, (1986, p 259-269) MP 2664
Observations of the backscatter from snow at millimeter wavelengths Berger, R H , et al, (1986, p 311-316) MP 2665
Comments on the characteristics of *in situ* snow at millimeter wavelengths. Walsh, J , et al, (1986, p 317-320) MP 2666
Scattering at mm wavelengths from *in situ* snow Walsh, J , et al, (1986, p.1 6.1-1 6.2) MP 2141
Two-stream approximation to radiative transfer in falling snow. Koh, G., (1988, p 463-470) MP 2604
Overview of obscuration in the cold environment Berger, R H , et al, (1988, p 537-555) MP 2609
Lidar detection of leads in Arctic sea ice. Schnell, R C , et al, (1989, p.530-532) MP 2602
Radar backscattering from artificially grown sea ice. Bredow, J., et al, (1989, p 259-264) MP 2667
Radar backscatter measurements over saline ice. Goginent, S , et al, (1990, p 603-615) MP 2741

Bacteria
Health aspects of water reuse in California Reed, S C., (1979, p.434-435) MP 1404
Disinfection of wastewater by microwaves Iskandar, I K , et al, (1980, 15p) SR 80-01
Microbiological aerosols from waste water. Bausum, H T , et al, (1983, p 65-75) MP 1578
Sea ice microbial communities in Antarctica. Garrison, D.L , et al, (1986, p.243-250) MP 2026

Balloons
Aerostat icing problems Hanamoto, B , (1983, 29p) SR 83-23

Baltic Sea
Size and shape of ice floes in the Baltic Sea in spring Leppäranta, M., (1983, p.127-136) MP 2061

—Bothnia, Bay
Physical properties of brackish ice, Bay of Bothnia Weeks, W.F , et al, (1990, p 5-15) MP 2725

Banks (waterways)
Sediment displacement in the Ottauquechee River—1975-1978 Martinson, C.R., (1980, 14p) SR 80-20
Bank erosion of U S. northern rivers Gatto, L.W , (1982, 75p) CR 82-11
Reservoir bank erosion caused and influenced by ice cover Gatto, L.W., (1982, 26p) SR 82-31
Bank recession of Corps of Engineers reservoirs Gatto, L.W., et al, (1983, 103p) SR 83-30
Erosion of perennially frozen streambanks Lawson, D E , (1983, 22p.) CR 83-29
Tanana River monitoring and research studies near Fairbanks, Alaska Neill, C R , et a', (1984, 98p + 5 appends) SR 84-37
Bank recession of the Tanana River, Alaska Gatto, L.W., (1984, 59p) MP 1746
Bank recession and channel changes of the Tanana River, Alaska. Gatto, L.W., et al, (1984, 98p) MP 1747
Erosion analysis of the Tanana River, Alaska Collins, C M , (1984, 8p. + figs) MP 1748
Bank erosion, vegetation and permafrost, Tanana River near Fairbanks. Gatto, L.W., (1984, 53p) SR 84-21
Reservoir bank erosion caused by ice Gatto, L.W , (1984, p 203-214) MP 1787
Shoreline erosion processes Orwell Lake, Minnesota Reid, J R , (1984, 101p) CR 84-32
Bank conditions and erosion along selected reservoirs Gatto, L W , et al, (1987, p 143-154) MP 2196
Techniques for measuring reservoir bank erosion Gatto, L W., (1988, 27p) SR 88-03

Bathymetry
Coastal marine geology of the Beaufort, Chukchi and Bering Seas Gatto, L W , (1980, 357p) SR 80-05

Bearing strength
Piles in permafrost for bridge foundations Crory, F E , et al, (1967, 41p) MP 1411
Bearing capacity of floating ice plates. Kerr, A.D , (1976, p 229-268) MP 884
Nondestructive testing of in-service highway pavements in Maine Smith, N., et al, (1979, 22p) CR 79-06
Snow studies associated with the sideways move of DYE-3. Tobiasson, W , (1979, p 117-124) MP 1312
Sulfur foam as insulation for expedient roads Smith, N , et al, (1979, 21p) CR 79-18
Evaluation of ice-covered water crossings. Dean, A M., Jr., (1980, p.443-453) MP 1348
Structural evaluation of porous pavement in cold climate. Eaton, R.A , et al, (1980, 43p) SR 80-39
Full-depth and granular base course design for frost areas Eaton, R.A., et al, (1983, p 27-39) MP 1492
Ice reinforced with Geogrid. Haynes, F.D., et al, (1989, p.179-185) MP 2484
Dynamic analysis of a floating ice sheet undergoing vertical indentation McGilvary, W R., et al, (1990, p 195-203) MP 2579

Bearing tests
Effect of freeze-thaw cycles on resilient properties of fine-grained soils Johnson, T.C , et al, (1978, 19p) MP 1082
Freeze thaw effect on resilient properties of fine soils Johnson, T.C , et al, (1979, p 247-276) MP 1226

Beaufort Sea
Delineation and engineering characteristics of permafrost beneath the Beaufort Sea Sellmann, P.V , et al, (1976, p 391-408) MP 1377
Engineering properties of submarine permafrost near Prudhoe Bay. Chamberlain, E J , et al, (1978, p 629-635) MP 1104
Subsea permafrost study in the Beaufort Sea, Alaska Sellmann, P.V., et al, (1979, p 207-213) MP 1591
Distribution and properties of subsea permafrost of the Beaufort Sea. Sellmann, P.V , et al, (1979, p 93-115) MP 1287
Permafrost distribution on the continental shelf of the Beaufort Sea Hopkins, D.M , et al, (1979, p 135-141) MP 1288
Hyperbolic reflections on Beaufort Sea seismic records Neave, K.G , et al, (1981, 16p.) CR 81-02
Delineation and engineering of subsea permafrost, Beaufort Sea. Sellmann, P.V., et al, (1981, p 137-156) MP 1600
Foundations of structures in polar waters Chamberlain, E.J., (1981, 16p) SR 81-25
Site investigations and submarine soil mechanics in polar regions Chamberlain, E J , (1981, 18p) SR 81-24
Alaska's Beaufort Sea coast ice ride-up and pile-up features Kovacs, A., (1983, 51p) CR 83-09
Seismic velocities and subsea permafrost in the Beaufort Sea, Alaska. Neave, K.G., et al, (1983, p 894-898) MP 1665
Ice scoring on the Alaskan shelf of the Beaufort Sea Weeks, W.F , et al, (1983, 34p + map) CR 83-21
Summary of the strength and modulus of ice samples from multi-year pressure ridges Cox, G F.N , et al, (1984, p.126-133) MP 1679
Variation of ice strength within and between multiyear pressure ridges in the Beaufort Sea. Weeks, W.F., (1984, p 134-139) MP 1680
Some probabilistic aspects of ice gouging on the Alaskan Shelf of the Beaufort Sea Weeks, W F , et al, (1984, p 213-236) MP 1838
Determining distribution patterns of ice-bonded permafrost in the U S Beaufort Sea from seismic data Neave, K G , et al, (1984, p 237-258) MP 1839
Subsea permafrost distribution on the Alaskan shelf Sellmann, P.V., et al, (1984, p 75-82) MP 1852
Shore ice override and pileup features, Beaufort Sea Kovacs, A , (1984, 28p. + map) CR 84-26
Structure, salinity and density of multi-year sea ice pressure ridges Richter-Menge, J.A , et al, (1985, p.194-198) MP 1857
Compressive strength of pressure ridge ice samples Richter-Menge, J A , et al, (1985, p 465-475) MP 1877
Study of sea ice induced gouges in the sea floor. Weeks, W F., et al, (1985, p.126-135) MP 1917
Ice gouge formation and infilling. Beaufort Sea Weeks, W F , et al, (1985, p 393-407) MP 1904
Structure, salinity and density of multi-year sea ice pressure ridges Richter-Menge, J A , et al, (1985, p 493-497) MP 1965
Monitoring seasonal changes in seafloor temperature and salinity. Sellmann, P.V., et al, (1986, p 110-114) MP 2147
Preliminary simulation of the formation and infilling of sea ice gouges Weeks, W F , et al, (1986, p 259-268) MP 2218
Mukluk ice stress measurement program Cox, G F N , et al, (1988, p.457-463) MP 2354
Seafloor temperature and thermal conductivity Sellmann, P.V., et al, (1989, 19p) CR 89-01
Sea ice ridging in the Ross Sea, Antarctica, as compared with sites in the Arctic Weeks, W.F , et al, (1989, p 4984-4988) MP 2490
Chemical and structural properties of sea ice in the southern Beaufort Sea Meese, D A , (1989, 294p) MP 2656
Refractive index structure parameter for a year over the frozen Beaufort Sea. Andreas, E L , (1989, p 667-679) MP 2575
Chemical and structural properties of sea ice in the southern Beaufort Sea Meese, D A , (1989, 134p) CR 89-25

Bench marks
Vertically stable benchmarks a synthesis of existing information Gatto, L W , (1985, p 179-188) MP 2069
Benchmark design and installation a synthesis of existing information Gatto, L W., (1987, 73p) SR 87-10

Bering Sea
Sea ice rubble formations off the NE Bering Sea and Norton Sound. Kovacs, A., (1981, p.1348-1363) MP 1527
Wind-generated polynyas off the coasts of the Bering Sea islands. Kozo, T L., et al, (1990, p 126-132) MP 2734

Bering Strait
Bering Strait sea ice and the Fairway Rock icefoot. Kovacs, A , et al, (1982, 40p) CR 82-31
Sea ice and the Fairway Rock icefoot. Kovacs, A., et al, (1985, p.25-32) MP 2145

Bibliographies
Bibliography of the Barrow, Alaska, IBP ecosystem model. Brown, J., (1970, p 65-71) MP 946
Mechanics of ice Glen, J W., (1975, 43p.) M II-C2b
Bearing capacity of floating ice plates Kerr, A D., (1976, p.229-268) MP 884
Bibliography on harbor and channel design in cold regions Haynes, F D., (1976, 32p.) CR 76-03
Infrared thermography of buildings an annotated bibliography. Marshall, S J , (1977, 21p) SR 77-09
Bibliography of soil conservation activities in USSR permafrost areas Andrews, M., (1977, 116p) SR 77-07
Bibliography of permafrost soils and vegetation in the USSR. Andrews, M., (1978, 175p) SR 78-19
Infrared thermography of buildings—a bibliography with abstracts. Marshall, S J., (1979, 67p) SR 79-01
Bibliography on techniques of water detection in co d regions. Smith, D W., comp, (1979, 75p) SR 79-10
Cold Regions Science and Technology Bibliography Cummings, N.H., (1981, p.73-75) MP 1372
Mobility bibliography Liston, N , comp, (1981, 313p) SR 81-29
Bibliography on glaciers and permafrost, China, 1938-1979 Shen, J., ed, (1982, 44p) SR 82-20
Corps of Engineers land treatment of wastewater research program an annotated bibliography Parker, L.V , et al, (1983, 82p) SR 83-09
U S tundra biome publication list. Brown, J , et al, (1983, 29p) SR 83-29
User's guide for the BIBSORT program for the IBM-PC personal computer. Kyriakakis, T., et al, (1985, 61p.) SR 85-04
Topical databases· Cold Regions Technology on-line. Liston, N , et al, (1985, p 12-15) MP 2027

Biomass
Bibliography of the Barrow, Alaska, IBP ecosystem model. Brown, J , (1970, p 65-71) MP 946
Primary productivity in sea ice of the Weddell region Ackley, S F., et al, (1978, 17p) CR 78-19
Arctic ecosystem. the coastal tundra at Barrow, Alaska. Brown, J , ed, (1980, 571p) MP 1355
Sea ice studies in the Weddell Sea aboard USCGC Polar Sea. Ackley, S F , et al, (1980, p 84-96) MP 1431
Analysis of processes of primary production in tundra growth forms Tieszen, L.L., et al, (1981, p 285-356) MP 1433
Limnology and primary productivity, Lake Koocanusa, Montana Woods, P F., et al, (1982, 106p) SR 82-15
Sea ice a habitat for the foraminifer *Neogloboquadrina pachyderma?* Dieckmann, G , et al, (1990, p 86-92) MP 2732

Bitumens
Thermal and load-associated distress in pavements Johnson, T.C , et al, (1978, p 403-437) MP 1209
Asphalt concrete for cold regions Dempsey, B J., et al, (1980, 55p) CR 80-05
Roofs in cold regions Marson's Store, Claremont, New Hampshire Tobiasson, W , et al, (1980, 13p) SR 80-25
Fabric installation to reduce cracking on runways Eaton, R A , et al, (1981, 26p) SR 81-10
Roof moisture surveys Tobiasson, W , et al, (1981, 18p) SR 81-31
Stabilization of fine-grained soil for road and airfield construction Danyluk, L S , (1986, 37p) SR 86-21

Bituminous concretes
Freeze-thaw tests of liquid deicing chemicals on selected pavement materials Minsk, L D , (1977, 16p) CR 77-28
Temperature effects in compacting an asphalt concrete overlay. Eaton, R A., et al, (1978, p 146-158) MP 1083
Effects of subgrade preparation upon full depth pavement performance in cold regions Eaton, R A , (1978, p 459-473) MP 1087
Resiliency of subgrade soils during freezing and thawing. Johnson, T C , et al, (1978, 59p) CR 78-23
Design of airfield pavements for seasonal frost and permafrost conditions Berg, R L , et al, (1978, 18p) MP 1189
Thermal and load-associated distress in pavements Johnson, T.C , et al, (1978, p 403-437) MP 1209
Full-depth pavement considerations in seasonal frost areas Eaton, R A , et al, (1979, 24p) MP 1188
Asphalt concrete for cold regions Dempsey, B J , et al, (1980, 55p) CR 80-05
Field cooling rates of asphalt concrete overlays at low temperatures Eaton, R A , et al, (1980, 11p) CR 80-10
Structural evaluation of porous pavement in cold climate Eaton, R.A , et al, (1980, 43p.) SR 80-39

Bituminous concretes *(cont.)*
Effect of color and texture on the surface temperature of asphalt concrete pavements Berg, R L , et al, (1983, p 57-61) MP 1652
Comparison of three compactors used in pothole repair. Snelling, M.A., et al, (1984, 14p) SR 84-31
Frost heave of full-depth asphalt concrete pavements. Zomerman, I , et al, (1985, p.66-76) MP 1927
Resilient moduli of soil specimens in the frozen and thawed states. Johnson, T C , et al, (1986, 62p) CR 86-12
Low temperature cracking susceptibility of asphalt concrete. Janoo, V.C , et al, (1987, p 397-415) MP 2233
Summary of proper cold weather pavement repair methods Eaton, R A , (1987, p 1013-1027) MP 2235
Use of low viscosity asphalts in cold regions. Janoo, V.C., (1989, p 70-80) MP 2462
Use of soft grade asphalts in airfields and highway pavements in cold regions. Janoo, V.C., (1990, 47p) SR 90-12

Blasting
Dynamic in-situ properties test in fine-grained permafrost. Blouin, S.E , (1977, p.282-313) MP 963
Testing shaped charges in unfrozen and frozen silt in Alaska. Smith, N , (1982, 10p) SR 82-02
Blasting and blast effects in cold regions Part 1: Air blast Mellor, M., (1985, 62p) SR 85-25
Blasting and blast effects in cold regions Part 3: explosions in ground materials Mellor, M , (1989, 62p) SR 89-15

BLOWING SNOW
Blowing snow. Mellor, M., (1965, 79p) M III-A3c

Blowing snow
Snow Symposium, 1st, Hanover, NH, Aug 1981 (1982, 324p) SR 82-17
Snow Symposium, 2nd, 1982 (1983, 295p) SR 83-04
Performance and optical signature of an AN/VVS-1 laser rangefinder in falling snow: Preliminary test results Lacombe, J., (1983, p 253-266) MP 1759
Utilization of the snow field test series results for development of a snow obscuration primer Ebersole, J F , et al, (1983, p 209-217) MP 1692
Helicopter snow obscuration sub-test Ebersole, J F , (1984, p.359-376) MP 2094
Clear improvement in obscuration Palmer, R A , (1985, p.476-477) MP 2067
Meteorological variation of atmospheric optical properties in an antarctic storm. Egan, W.G , et al, (1986, p 1155-1165) MP 2099

Booms (equipment)
Boom for shipboard deployment of meteorological instruments. Andreas, E.L , et al, (1983, 14p) SR 83-28
Simple boom for use in measuring meteorological data from a ship. Andreas, E L., et al, (1984, p 227-237) MP 1752

Borehole instruments
Resurvey of the "Byrd" Station, Antarctica, drill hole Garfield, D.E., et al, (1976, p 29-34) MP 846
Dynamics and energetics of parallel motion tools for cutting and boring Mellor, M , (1977, 85p) CR 77-07
Design for cutting machines in permafrost. Mellor, M , (1978, 24p) CR 78-11
Ice drilling technology Holdsworth, G , ed, (1984, 142p) SR 84-34

Boreholes
Melting and freezing of a drill hole through the Antarctic shelf ice Tien, C , et al, (1975, p 421-432) MP 861
Heat transfer in drill holes in Antarctic ice Yen, Y -C , et al, (1976, 15p) CR 76-12
Geodetic positions of borehole sites in Greenland Mock, S J , (1976, 7p) CR 76-41
Permafrost beneath the Beaufort Sea Sellmann, P V , et al, (1978, p 50-74) MP 1206
Distribution and properties of subsea permafrost of the Beaufort Sea Sellmann, P V , et al, (1979, p 93-115) MP 1287
Permafrost distribution on the continental shelf of the Beaufort Sea Hopkins, D M , et al, (1979, p 135-141) MP 1288
Calculating borehole geometry Jezek, K C , et al, (1984, 18p) SR 84-15
Ice flow leading to the deep core hole at Dye 3, Greenland Whillans, I M , et al, (1984, p 185-190) MP 1824
Borehole geometry on the Greenland and Antarctic ice sheets Jezek, K C , (1985, p 242-251) MP 1817
Dielectric studies of permafrost Arcone, S A , et al, (1985, p 3-5) MP 1951
Preparation of geophysical borehole site with ground ice. Fairbanks, AK Delaney, A J , (1987, 15p) SR 87-07
Camp Century survey 1986 Gundestrup, N S , et al, (1987, p 281-288) MP 2331
Borehole investigations of the electrical properties of frozen silt Arcone, S A , et al, (1988, p.910-915) MP 2364

Bothnia, Bay
Field studies of brackish ice to compare with satellite data Weeks, W.F., et al, (1989, p 1318-1333) MP 2763

Bottom ice
Ice blockage of water intakes Carey, K L , (1979, 27p) MP 1197
Oil pooling under sea ice Kovacs, A , (1979, p 310-323) MP 1289
Ross Ice Shelf bottom ice structure. Zotikov, I A , et al, (1979, p 65-66) MP 1336
Ice cover distribution in Vermont and New Hampshire Atlantic salmon rearing streams Calkins, D.J , et al, (1988, p.85-96) MP 2473

Bottom sediment
1977 CRREL-USGS permafrost program Beaufort Sea Alaska, operational report. Sellmann, P V , et al, (1977, 19p) SR 77-41
Permafrost beneath the Beaufort Sea Sellmann, P.V., et al, (1978, p.50-74) MP 1206
Overconsolidated sediments in the Beaufort Sea Chamberlain, E J , (1978, p.24-29) MP 1255
Penetration tests in subsea permafrost, Prudhoe Bay, Alaska Blouin, S E , et al, (1979, 45p) CR 79-07
Distribution and properties of subsea permafrost of the Beaufort Sea Sellmann, P.V , et al, (1979, p 93-115) MP 1287
Permafrost distribution on the continental shelf of the Beaufort Sea Hopkins, D.M., et al, (1979, p.135-141) MP 1288
Distribution and features of bottom sediments in Alaskan coastal waters Sellmann, P.V., (1980, 50p) SR 80-15
Sediment displacement in the Ottauquechee River—1975-1978. Martinson, C.R., (1980, 14p) SR 80-20
Characteristics of permafrost beneath the Beaufort Sea Sellmann, P.V., et al, (1981, p 125-157) MP 1428
Hyperbolic reflections on Beaufort Sea seismic records Neave, K G , et al, (1981, 16p) CR 81-02
Subsea trenching in the Arctic Mellor, M., (1981, p.843-882) MP 1464
Bottom heat transfer to water bodies in winter O'Neill, K , et al, (1981, 8p) SR 81-18
Subsea permafrost in Harrison Bay, Alaska Neave, K.G , et al, (1982, 62p) CR 82-24
Potential use of SPOT HRV imagery for analysis of coastal sediment plumes. Band, L E , et al, (1984, p 199-204) MP 1744
Mapping resistive seabed features using DC methods. Sellmann, P.V., et al, (1985, p 136-147) MP 1918
Ice gouge formation and infilling, Beaufort Sea Weeks, W.F., et al, (1985, p 393-407) MP 1904
Freeze thaw consolidation of sediments, Beaufort Sea, Alaska Lee, H J , et al, (1985, 83p) MP 2025
Preliminary study of scour under an ice jam. Wuebben, J L , (1988, p 177-192) MP 2475

Bottom topography
Ice scoring on the Alaskan shelf of the Beaufort Sea Weeks, W.F , et al, (1983, 34p + map) CR 83-21
Some probabilistic aspects of ice gouging on the Alaskan Shelf of the Beaufort Sea Weeks, W F , et al, (1984, p 213-236) MP 1838
Study of sea ice induced gouges in the sea floor Weeks, W F , et al, (1985, p 126-135) MP 1917
Ice gouge formation and infilling, Beaufort Sea Weeks, W F , et al, (1985, p 393-407) MP 1904
Laboratory study of flow in an ice-covered sand bed channel Wuebben, J L., (1986, p 3-14) MP 2123
Analysis of a short pulse radar survey of revetments along the Mississippi River. Arcone, S A., (1989, 20p) MP 2692
On modeling the baroclinic adjustment of the Arctic Ocean Hibler, W.D , III, (1990, p 247-250) MP 2739

Boundary layer
Abiotic overview of the Tundra Biome Program, 1971 Weller, G , et al, (1971, p 173-181) MP 906
Oceanic boundary-layer features and oscillation at drift stations McPhee, M G , (1980, p 870-884) MP 1369
Nonsteady ice drift in the Strait of Belle Isle Sodhi, D S , et al, (1980, p 177-186) MP 1364
Approximate solution to Neumann problem for soil systems Lunardini, V J., et al, (1981, p 76-81) MP 1494
Sea ice drag laws and boundary layer during rapid melting. McPhee, M G , (1982, 17p) CR 82-04
Atmospheric dynamics in the antarctic marginal ice zone Andreas, E L., et al, (1984, p 649-661) MP 1667
Stefan problem in a finite domain Takagi, S , (1985, 28p) SR 85-08
Heat conduction phase change problems Albert, M R , et al, (1986, p 591-607) MP 2159
Spectral measurements in a disturbed boundary layer over snow Andreas, E L , (1987, 41p) CR 87-21

Boundary value problems
Viscous wind-driven circulation of Arctic sea ice Hibler, W D , III, et al, (1977, p 95-133) MP 983
Moving boundary problems in the hydrodynamics of porous media Nakano, Y., (1978, p 125-134) MP 1343
In-plane deformation of non-coaxial plastic soil Takagi, S , (1978, 28p) CR 78-07
Buckling pressure of an elastic floating plate Takagi, S (1978, 49p) CR 78-14
Hydraulic model investigation of drifting snow Wuebben, J L , (1978, 29p) CR 78-16
Evaluation of the moving boundary theory Nakano, Y , (1978, p 142-151) MP 1147
Effect of the oceanic boundary layer on the mean drift of pack ice application of a simple model McPhee, M G , (1979, p 388-400) MP 1198
Steady in plane deformation of noncoaxial plastic soil Takagi, S , (1979, p 1049-1072) MP 1218
Grain clusters in wet snow Colbeck, S.C., (1979, p.371-384) MP 1267
Application of recent results in functional analysis to the problem of water tables Nakano, Y., (1979, p 185-190) MP 1269
Functional analysis of the problem of wetting fronts Nakano, Y , (1980, p 314-318) MP 1307
Water and air horizontal flow in porous media. Nakano, Y , (1980, p 81-85) MP 1341
Water and air vertical flow through porous media. Nakano, Y., (1980, p 124-133) MP 1342
Deforming finite elements with and without phase change. Lynch, D R., et al, (1981, p.81-96) MP 1493
Boundary integral equation solution for phase change problems O'Neill, K , (1983, p 1825-1850) MP 2093
Boundary value problem of flow in porous media. Nakano, Y , (1983, p 205-213) MP 1721
Modeling two-dimensional freezing. Albert, M.R., (1984, 45p) CR 84-10

Bridges
Piles in permafrost for bridge foundations Crory, F E , et al, (1967, 41p) MP 1411
Failure of an ice bridge. DenHartog, S L., et al, (1976, 13p) CR 76-29
Ice breakup on the Chena River 1975 and 1976 McFadden, T., et al, (1977, 44p) CR 77-14
Arching of model ice floes at bridge piers Calkins, D.J., (1978, p 495-507) MP 1134
Ice forces on the Yukon River bridge—1978 breakup. Johnson, P.R., et al, (1979, 40p) MP 1304
Single and double reaction beam load cells for measuring ice forces Johnson, P R , et al, (1980, 17p) CR 80-25
Ice force measurement on the Yukon River bridge. McFadden, T , et al, (1981, p.749-777) MP 1396
Snow and ice control on railroads, highways and airports Minsk, L D , et al, (1981, p 671-706) MP 1447
Ice engineering for civil work: baseline study Carey, K L., et al, (1983, 91p.) MP 2441
Ice action on pairs of cylindrical and conical structures. Kato, K., et al, (1983, 35p) CR 83-25
Ice forces on a bridge pier, Ottauquechee River, Vermont Sodhi, D.S., et al, (1983, 6p) CR 83-32
Ice forces on inclined model bridge piers Haynes, F D., et al, (1984, p 1167-1173) MP 2407
Ice forces on bridge piers Haynes, F D , (1986, p 83-101) MP 2160
Tactical bridging during winter: 1986 Korean bridging exercise Coutermarsh, B A , (1987, 23p.) SR 87-13
Imjin River ice boom Perham, R E , (1988, 10p) SR 88-22
Dynamic ice breakup control for the Connecticut River near Windsor, Vermont. Ferrick, M G , et al, (1988, p 245-258) MP 2449
Factors affecting rates of ice cutting with a chain saw. Coutermarsh, B.A., (1989, 14p.) SR 89-24
Ice force measurements on a bridge pier in a small river. Sodhi, D S , et al, (1989, p 1419-1427) MP 2764
Winter bridging exercise on thick ice, Fort McCoy, Wisconsin, 1988 Coutermarsh, B A , (1990, 24p) SR 90-10

Brines
Subsurface measurements of the Ross Ice Shelf, McMurdo Sound, Antarctica Kovacs, A., et al, (1977, p 146-148) MP 1013
Subsurface measurements of McMurdo Ice Shelf Gow, A J , et al, (1979, p.79-80) MP 1338
Modeling of anisotropic electromagnetic reflection from sea ice. Golden, K M , et al, (1980, p 247-294) MP 1325
Sea ice anisotropy, electromagnetic properties and strength. Kovacs, A , et al, (1980, 18p) CR 80-20
Brine zone in the McMurdo Ice Shelf, Antarctica Kovacs, A , et al, (1982, p 160-171) MP 1550
Equations for determining the gas and brine volumes in sea ice samples Cox, G.F.N , et al, (1982, 11p) CR 82-30
McMurdo Ice Shelf brine zone Kovacs, A , et al, (1982, 28p) CR 82-39
Equations for determining gas and brine volumes in sea ice Cox, G F.N., et al, (1983, p.306-316) MP 2055
Horizontal salinity variations in sea ice Tucker, W B , et al, (1984, p 6505-6514) MP 1761
Electromagnetic measurements of sea ice Kovacs, A , et al, (1986, p 67-93) MP 2020
Geochemistry of freezing brines Thurmond, V.L., et al, (1987, 11p) CR 87-13

Brittleness
Brittleness of reinforced concrete structures under arctic conditions Kivekäs, L et al, (1986, 20p) CR 86-02

Bubbles
Continuous monitoring of total dissolved gases, a feasibility study Jenkins, T F , (1975, p 101-105) MP 851
Gas inclusions in the Antarctic ice sheet Gow, A J., et al, (1975, p 5101-5108) MP 847
Point source bubbler systems to suppress ice. Ashton, G D , (1979, 12p) CR 79-12
Performance of the USCGC *Katmai Bay* icebreaker. Vance, G P , (1980, 28p) CR 80-08
Soft drink bubbles Cragin, J H , (1983, p 71) MP 1736

Thermal and size evolution of sea spray droplets. Andreas, E.L., (1989, 37p) CR 89-11

Bubbling

Numerical simulation of air bubbler systems. Ashton, G.D., (1977, p.765-778) MP 936

Numerical simulation of air bubbler systems Ashton, G.D., (1978, p.231-238) MP 1618

Bubbler induced melting of ice covers Kerbar, R., et al, (1978, p 362-366) MP 1160

Point source bubbler systems to suppress ice. Ashton, G.D., (1979, p 93-100) MP 1326

Ice control at navigation locks. Hanamoto, B., (1981, p.1088-1095) MP 1448

Performance of a point source bubbler under thick ice Haynes, F.D., et al, (1982, p 111-124) MP 1529

Bubblers and pumps for melting ice Ashton, G.D., (1986, p 223-234) MP 2133

High-flow air-screen bubbler systems to control ice in locks Rand, J.H., (1988, p 34-43) MP 2496

Elements of floating-debris control systems Perham, R.E., (1988, 54p + append) MP 2453

Building codes

Analysis of roof snow load case studies, uniform loads O'Rourke, M., et al, (1983, 29p) CR 83-01

Foundations on permafrost, US and USSR design and practice. Fish, A.M., (1983, p 3-24) MP 1682

Changes coming in snow load design criteria Tobiasson, W., (1989, p.413-418) MP 2612

Buildings

Management of power plant waste heat in cold regions Aamot, H.W.C., (1975, p 22-24) MP 942

Detecting structural heat losses with mobile infrared thermography, Part IV. Munis, R.H., et al, (1976, 9p.) CR 76-33

Temporary environment. Cold regions habitability. Bechtel, R.B., et al, (1976. 162p) SR 76-10

Energy conservation in buildings Ledbetter, C.B., (1976, 8p) SR 76-17

Computer derived heat requirements for buildings in cold regions Bennett, F.L., (1977, 113p) SR 77-03

Guidelines for architectural programming of office settings Ledbetter, C.B., (1977, 14p) SR 77-05

Infrared thermography of buildings an annotated bibliography. Marshall, S.J., (1977, 21p) SR 77-09

Ice engineering facility heated with a central heat pump system. Aamot, H.W.C., et al, (1977, 4p) MP 939

Measuring unmetered steam use with a condensate pump cycle counter. Johnson, P.R., (1977, p 434-442) MP 957

Reinsulating old wood frame buildings with urea-formaldehyde foam Tobiasson, W., et al, (1977, p 478-487) MP 958

Waste heat recovery for building heating Sector, P.W., (1977, 24p) SR 77-11

Architects and scientists in research for design of buildings in Alaska. Ledbetter, C.B., (1977, 8p.) CR 77-23

Maintaining [illegible]s in the Arctic Tobiasson, W., et al, (1977, p 2[illegible] MP 1508

Infrared thermography of buildings Munis, R.H., et al, (1977, 17p) SR 77-29

Infrared thermography of buildings Munis, R.H., et al, (1977, 21p) SR 77-26

Temporary protection of winter construction Bennett, F.L., (1977, 41p) SR 77-39

Architectural programming Making socially responsive architecture more accessible Ledbetter, C.B., (1978, 7p) SR 78-02

Kotzebue hospital—a case study Crory, F.E., (1978, p 342-359) MP 1084

Construction on permafrost at Longyearbyen on Spitsbergen, Tobiasson, W., (1978, p 884-890) MP 1108

Details behind a typical Alaskan pile foundation Tobiasson, W., et al, (1978, p 891-897) MP 1109

Thermo. scanning systems for detecting building heat loss Grot, R.A., et al, (1978, p B71-B90) MP 1212

Infrared thermography of buildings--a bibliography with abstracts Marshall, S.J., (1979, 67p) SR 79-01

Infrared thermography of buildings 1977 Coast Guard survey Marshall, S.J., (1979, 40p) SR 79-20

Post occupancy evaluation of a planned community in Arctic Canada Bechtel, R.B., et al, (1980, 27p) SR 80-06

Roof leaks in cold regions school at Chevak, Alaska Tobiasson, W., et al, (1980. 12p) CR 80-11

Time constraints on measuring building R-values Flanders, S.N., (1980. 30p) CR 80-15

Post occupancy evaluation for communities in hot or cold regions. Bechtel, R.B., et al, (1980. 57p) SR 80-29

U.S.-Soviet seminar on building under cold climates and on permafrost (1980, 365p) SR 80-40

Measuring building R-values for large areas Flanders, S.N., et al, (1981, p 137-138) MP 1388

Least life-cycle costs for insulation in Alaska Flanders, S.N., et al, (1982, 47p) CR 82-27

Toward in-situ building R value measurement Flanders, S.N., et al, (1984, 13p) CR 84-01

Deteriorated concrete panels on buildings at Sondrestrom, Greenland. Korhonen, C., (1984, 11p) SR 84-12

Measuring thermal performance of building envelopes nine case studies Flanders, S.N., (1985, 16p) CR 85-07

Structure data bases for predicting building material distribution. Merry, C.J., et al, (1985, 35p) SR 85-07

Deteriorated building panels at Sondrestrom, Greenland. Korhonen, C., (1985, p.7-10) MP 2017

Measured and expected R-values of 19 building envelopes Flanders, S.N., (1985, p 49-57) MP 2115

Confidence in heat flux transducer measurements of buildings Flanders, S.N., (1985, p.515-531) MP 2290

Models for predicting building material distribution in NE cities. Merry, C.J., et al, (1985, 50p) SR 85-24

Megastructures for mobilization Flanders, S.N., (1986, p 10-11) MP 2153

Reference guide for building diagnostics equipment and techniques McKenna, C., et al, (1986, 148p) MP 2226

Measuring building R-values with thermography and heat flux sensors Flanders, S.N., (1987, 29p) SR 87-06

Measured insulation improvement potential for ten U.S Army buildings. Flanders, S.N., (1987, p.202-220) MP 2327

Arctic construction working group report Marvin, E.L., et al, (1987, p 311-314) MP 2426

Composite buildings for military bases Flanders, S.N., (1988, 25p) CR 88-04

Distribution of building materials exposed to acid rain. Merry, C.J., et al, (1989, 156p) SR 89-01

Unique new cold weather testing facility. Eaton, R.A., (1989, p 335-342) MP 2468

Reference guide for building diagnostics equipment and techniques McKenna, C.M., et al, (1989, 64p.) SR 89-27

Vapor retarders to control summer condensation Tobiasson, W., (1989, p 566-572) MP 2558

Air change measurements of five Army buildings in Alaska Flanders, S.N., (1990, p 53-63) MP 2676

Buoyancy

Modeling ice restraint forces in an ice boom Perham, R.E., (1988, p.198-206) MP 2596

Caissons

Kadluk ice stress measurement program Cox, G.F.N., (1987, p.100-107) MP 2298

Calorimeters

Snow calorimetric measurement at SNOW-ONE Fisk, D., (1982, p 133-138) MP 1986

Calving

Physical and structural characteristics of sea ice in McMurdo Sound. Gow, A.J., et al, (1981, p.94-95) MP 1542

Canada

—Labrador

Generation of runoff from subarctic snowpacks. Dunne, T., et al, (1976, P.677-685) MP 883

—Labrador—Hebron Fiord

Sea-ice crystal structure and salinity, Hebron Fiord, Labrador. Gow, A.J., (1987, 18p) CR 87-04

—Northwest Territories—Mackenzie River

Ice jam research needs Gerard, R., (1984, p.181-193) MP 1813

—Saint Lawrence River

Remote sensing of frazil and brash ice in the St Lawrence River. Dean, A.M., Jr., (1977, 19p) CR 77-08

St Lawrence River freeze-up forecast Shen, H.T., et al, (1984, p 177-190) MP 1713

Computer simulation of ice cover formation in the Upper St. Lawrence River. Shen, H.T., et al, (1984, p.227-245) MP 1814

Field investigation of St Lawrence River hanging ice dams Shen, H.T., et al, (1984, p 241-249) MP 1830

Unified degree-day method for river ice cover thickness simulation Shen, H.T., et al, (1985, p 54-62) MP 2065

—Yukon River

Ice regime reconnaissance, Yukon River, Yukon Gerard, R., et al, (1984, p 1059-1073) MP 2406

Capillarity

Water flow through heterogeneous snow. Colbeck, S.C., (1979, p 37-45) MP 1219

Introduction to the basic thermodynamics of cold capillary systems Colbeck, S.C., (1981, 9p) SR 81-06

Carbohydrates

Trends in carbohydrate and lipid levels in Arctic plants McCown, B.H., et al, (1972, p 40-45) MP 1376

Carbon dioxide

Carbon dioxide dynamics on the Arctic tundra Coyne, P.I., et al, (1971, p 48-52) MP 903

Carbon dioxide exchange in tundra vegetation. Coyne, P.I., et al, (1972, p 36-39) MP 1375

Case for comparison and standardization of carbon dioxide reference gases Kelley, J.J., et al, (1973, p 163-181) MP 964

CO2 effect on permafrost terrain Brown, J., et al, (1982, 30p) MP 1546

West antarctic sea ice Ackley, S.F., (1984, p 88-95) MP 1818

Potential responses of permafrost to climati warming Goodwin, C.W., et al, (1984, p.92-105) MP 1710

Cavitation

Detection of cavities under concrete pavement Kovacs, A., et al, (1983, 41p) CR 83-18

Some developments in shaped charge technology Mellor, M., (1986, 29p.) SR 86-18

Effect of ice pressure on marginal ice zone dynamics Flato, G.M., et al, (1989, p 514-521) MP 2522

Cavitating fluid sea ice model. Flato, G.M., et al, (1990, p 239-242) MP 2738

Cell morphology

Trends in carbohydrate and lipid levels in Arctic plants. McCown, B.H., et al, (1972, p.40-45) MP 1376

Cellular materials

Influence of insulation upon frost penetration beneath pavements Eaton, R.A., et al, (1976, 41p) SR 76-06

Sulfur foam as insulation for expedient roads Smith, N., et al, (1979, 21p) CR 79-18

Cellular plastics

Evaluation of MESL membrane—puncture, stiffness, temperature, solvents. Sayward, J.M., (1976, 60p.) CR 76-22

Reinsulating old wood frame buildings with urea-formaldehyde foam. Tobiasson, W., et al, (1977, p.478-487) MP 958

Moisture detection in roofs with cellular plastic insulation Korhonen, C., et al, (1982, 22p) SR 82-07

Locating wet cellular plastic insulation in recently constructed roofs. Korhonen, C., et al, (1983, p.168-173) MP 1729

Wetting of polystyrene and urethane roof insulations Tobiasson, W., et al, (1987, p 108-119) MP 2337

Cement admixtures

Asphalt concrete for cold regions Dempsey, B.J., et al, (1980, 55p) CR 80-05

Stabilization of fine-grained soil for road and airfield construction. Danyluk, L.S., (1986, 37p) SR 86-21

Cements

Cements for structural concrete in cold regions. Johnson, R., (1977, 13p) SR 77-35

Resins and non-portland cements for construction in the cold. Johnson, R., (1980, 19p) SR 80-35

Cold weather construction materials; Part 2—Regulated-set cement for cold weather concreting, field validation of laboratory tests Houston, B.J., et al, (1981. 33p.) MP 1466

Channels (waterways)

Bibliography on harbor and channel design in cold regions. Haynes, F.D., (1976, 32p) CR 76-03

Investigation of water jets for lock wall deicing. Calkins, D.J., et al, (1976, p G2/13-22) MP 865

Ice removal from the walls of navigation locks Frankenstein, G.E., et al, (1976, p.1487-1496) MP 888

Topological properties of some trellis pattern channel networks Mock, S.J., (1976, 54p) CR 76-46

Ice arching and the drift of pack ice through restricted channels Sodhi, D.S., (1977, 11p) CR 77-18

Lock wall deicing studies Hanamoto, B., ed, (1977, 68p.) SR 77-22

Investigation of ice clogged channels in the St. Marys River. Mellor, M., et al, (1978, 73p) MP 1170

Ice arching and the drift of pack ice through channels. Sodhi, D.S., et al, (1978, p 415-432) MP 1138

River channel characteristics at selected ice jam sites in Vermont. Gatto, L.W., (1978, 52p) CR 78-25

Turbulent heat transfer from a river to its ice cover Haynes, F.D., et al, (1979, 5p) CR 79-13

Towing ships through ice-clogged channels by warping and kedging Mellor, M., (1979, 21p) CR 79-21

Clearing ice-clogged shipping channels Vance, G.P., (1980, 13p) CR 80-28

Effects of ice on coal movement via the inland waterways Lunardini, V.J., et al, (1981, 72p) SR 81-13

Sediment load and channel characteristics in subarctic upland catchments Slaughter, C.W., et al, (1981, p 39-48) MP 1518

River ice suppression by side channel discharge of warm water. Ashton, G.D., (1982, p 65-80) MP 1528

Application of HEC-2 for ice-covered waterways Calkins, D.J., et al, (1982, p 241-248) MP 1575

On zero-inertia and kinematic waves Katopodes, N.D., (1982, p.1381-1387) MP 2053

Effect of vessel size on shorelines along the Great Lakes channels Wuebben, J.L., (1983, 62p) SR 83-11

Application of a block copolymer solution to ice-prone structures Hanamoto, B., (1983, p 155-155) MP 1636

Methods of ice control Frankenstein, G.E., et al, (1983, p.204-215) MP 1642

Bank recession and channel changes of the Tanana River, Alaska Gatto, L.W., et al, (1984, 98p) MP 1747

Modeling rapidly varied flow in tailwaters Ferrick, M.G., et al, (1984, p 271-289) MP 1711

Operation of the U.S. Combat Support Boat (USCSBMK 1) on an ice-covered waterway. Stubstad, J., et al, (1984, 2[illegible]) SR 84-05

Use of remote sensing for the U.S. Army Corps of Engineers dredging program. McKim, H.L., et al, (1985, p.1141-1150) MP 1890

Laboratory study of flow in an ice-covered sand bed channel Wuebben, J.L., (1986, p 3-14) MP 2123

Sub-ice channels and frazil bars, Tanana River, Alaska Lawson, [illegible], et al, (1986, p 465-474) MP 2129

Computer-controlled data acquisition system for a hydraulic flume Zabilansky, L.J., (1988, p 453-460) MP 2349

Ice cover distribution in Vermont and New Hampshire Atlantic salmon rearing streams Calkins, D.J., et al, (1988, p 85-96) MP 2473

Effects of an ice cover on flow in a movable bed channel Wuebben, J.L., (1988, p 137-146) MP 2499

Charge transfer
Possibility of anomalous relaxation due to the charged dislocation process Itagaki, K., (1983, p 4261-4264) MP 1669

Charts
Geoecological mapping scheme for Alaskan coastal tundra. Everett, K.R., et al, (1978, p 359-365) MP 1098

Chemical analysis
Report on ice fall from clear sky in Georgia October 26, 1959 Harrison, L.P., et al, (1960, 31p. plus photographs) MP 1017
Salinity variations in sea ice Cox, G.F.N., et al, (1974, p 109-122) MP 1023
Vanadium and other elements in Greenland ice cores Herron, M.M., et al, (1976, 4p) CR 76-24
Treatment of primary sewage effluent by rapid infiltration Satterwhite, M.B., et al, (1976, 15p) CR 76-49
Composition of vapors evolved from military TNT. Leggett, D.C., et al, (1977, 25p) SR 77-16
Atmospheric trace metals and sulfate in the Greenland Ice Sheet. Herron, M.M., et al, (1977, p 915-920) MP 949
Vanadium and other elements in Greenland ice cores Herron, M.M., et al, (1977, p 98-102) MP 1092
Dating annual layers of Greenland ice. Langway, C.C., Jr., et al, (1977, p 302-306) MP 1094
Delineation and engineering characteristics of permafrost beneath the Beaufort Sea. Sellmann, P.V., et al, (1977, p 432-440) MP 1077
Chemical composition of haul road dust and vegetation Iskandar, I.K., et al, (1978, p 110-111) MP 1116
Geochemistry of subsea permafrost at Prudhoe Bay, Alaska Page, F.W., et al, (1978, 70p) SR 78-14
Blank corrections for ultratrace atomic absorption analysis Cragin, J.H., et al, (1979, 5p) CR 79-03
Winter air pollution at Fairbanks, Alaska Coutts, H.J., et al, (1981, p 512-528) MP 1395
Wastewater treatment by a prototype slow rate land treatment system. Jenkins, T.F., et al, (1981, 44p) CR 81-14
Halocarbons in water using headspace gas chromatography. Leggett, D.C., (1981, 13p) SR 81-26
Nitrogenous chemical composition of antarctic ice and snow Parker, B.C., et al, (1981, p 79-81) MP 1541
Chemical obscurant tests during winter. Environmental fate. Cragin, J.H., (1983, p 267-272) MP 1760
Nitrogen behavior in soils irrigated with liquid waste. Selim, H.M., et al, (1984, p 96-108) MP 1762
Snow chemistry of obscurants released during SNOW-TWO/Smoke Week VI Cragin, J.H., (1984, p 409-416) MP 1873
Description of the building materials data base for Portland, Maine Merry, C.J., et al, (1986, 83p) SR 86-13
Low temperature effects on organophosphonates Britton, K.B., (1986, 47 refs) SR 86-38
Comparison of extraction techniques for munitions residues in soil. Jenkins, T.F., et al, (1987, p 1326-1331) MP 2350
Chemical analysis of hazardous wastes McGee, I.E., et al, (1987, 57p) SR 87-21
Analytical method for determining tetrazene in soil Walsh, M.E., et al, (1988, 22p) SR 88-15
Chemical and structural properties of sea ice in the southern Beaufort Sea Meese, D.A., (1989, 294p) MP 2656
Determination of explosive residues in soil Part 3. Bauer, C.F., et al, (1989, 89p) CR 89-09
Low concentration measurement capability in trace analysis Grant, C.L., et al, (1989, 21p) SR 89-20
Ion-pairing RP-HPLC method for determining tetrazene in water and soil Walsh, M.E., et al, (1989, p 159-179) MP 2593
Analytical methods for detecting military-unique compounds Jenkins, T.F., et al, (1989, p 13-14) MP 2713
Influence of well casings on well water Hewitt, A.D., et al, (1989, 9p) MP 2717
Chromatographic determination of nitroaromatic residues in soil. Jenkins, T.F., et al, (1989, p 890-899) MP 2586
Chemical and structural properties of sea ice in the southern Beaufort Sea Meese, D.A., (1990, p 32-35) MP 2728
Solvent extraction for solute preconcentration from water. Leggett, D.C., et al, (1990, p 1355-1356) MP 2743

Chemical composition
Forage grass growth on overland flow systems Palazzo, A.J., et al, (1980, p 347-354) MP 1402
Spray application of waste-water effluent in a cold climate Cassell, E.A., et al, (1980, p 620-626) MP 1403
Phosphorus chemistry of sediments of Lake Koocanusa, Montana. Iskandar, I.K., et al, (1981, 9p) SR 81-15
Sorption of chemical agents and simulants Leggett, D.C., (1987, 15p) SR 87-18
Octanol-water partition coefficients for organophosphonates Britton, K.B., et al, (1988, 24p) SR 88-11

Chemical ice prevention
Use of de-icing salt possible environmental impact Minsk, L.D., (1973, p 1-2) MP 1037
Freeze thaw tests of liquid deicing chemicals on selected pavement materials. Minsk, L.D., (1977, 16p) CR 77-28
Ice releasing block copolymer coatings Jellinek, H.H.G. et al, (1978, p 544-551) MP 1141
Current research on snow and ice removal in the United States. Minsk, L.D., (1978, p.21-22) MP 1199
Ice fog suppression using reinforced thin chemical films McFadden, T., et al, (1978, 23p) CR 78-26
Noncorrosive methods of ice control. Minsk, L.D., (1979, p.133-162) MP 1265
Ice fog suppression in Arctic communities. McFadden, T., (1980, p 54-65) MP 1357
Optimizing deicing chemical application rates Minsk, L.D., (1982, 55p) CR 82-18

Chemical properties
Chemical obscurant tests during winter, environmental fate Cragin, J.H., (1982, 9p) SR 82-19
Building materials and acid precipitation. Merry, C.J., et al, (1985, 40p) SR 85-01
Structure data bases for predicting building material distribution Merry, C.J., et al, (1985, 35p) SR 85-07
Acidity of snow and its reduction by alkaline aerosols. Kumai, M., (1985, p 92-94) MP 2008
Description of the building materials data base for New Haven, Connecticut Merry, C.J., et al, (1985, 129p.) SR 85-19
Chemical properties of snow in the northeastern United States. Kumai, M., (1987, p (Cl)625-(Cl)630) MP 2232
Baseline acidity of South Pole precipitation Cragin, J.H., et al, (1987, p 789-792) MP 2275
Persistence of chemical agents on the winter battlefield. Leggett, D.C., (1987, 20p) CR 87-12
Does snow have ion chromatographic properties Hewitt, A.D., et al, (1989, p.165-171) MP 2755
Chemical migration in snowpack Murphey, B.B., et al, (1989, p 282-286) MP 2757
Effect of aerosols on pH of snow Kumai, M., (1990, p 17-30) MP 2675

Chemical reactions
Ice fog suppression using monomolecular films McFadden, T., (1977, p 361-367) MP 956
UV radiational effects on: Martian regolith water Nadeau, P.H., (1977, 89p) MP 1072
Second progress report on oil spilled on permafrost McFadden, T., et al, (1977, 46p) SR 77-44
Increasing the effectiveness of soil compaction at below-freezing temperatures Haas, W.M., et al, (1978, 58p) SR 78-25
Ice fog suppression using thin chemical films McFadden, T., et al, (1979, 44p) MP 1192
Grouting silt and sand at low temperatures—a laboratory investigation Johnson, R., (1979, 33p) CR 79-05

Chemistry
Evaporation of chemical agents from ice and sn[illegible] Leggett, D.C., (1988, 10p) CR 88-03
Decontamination of chemical agents on the winter battlefield Parker, L.V., (1988, 48p) CR 88-07

China
National Chinese Conference on Permafrost, 2nd, 1981 Brown, J., et al, (1982, 58p) SR 82-03
Bibliography on glaciers and permafrost, China, 1938-1979 Shen, J., ed, (1982, 44p) SR 82-20
U.S. permafrost delegation visit to China, July 1984. Brown, J., (1985, 137p) SR 85-09

Chukchi Sea
Subsea permafrost distribution on the Alaskan shelf Sellmann, P.V., et al, (1984, p 75-82) MP 1852
Sea ice ridging in the Ross Sea, Antarctica, as compared with sites in the Arctic Weeks, W.F., et al, (1989, p 4984-4988) MP 2490

Civil engineering
Role of research in developing surface protection measures for the Arctic Slope of Alaska Johnson, P.R., (1978, p.202-205) MP 1068

Classifications
Proposed size classification for the texture of frozen earth materials McGaw, R., (1975, 10p) MP 921
Topological properties of some trellis pattern channel networks Mock, S.J., (1976, 54p) CR 76-46
Icebergs an overview Kovacs, A., (1979, 7p) SR 79-21
Frost susceptibility of soil, review of index tests Chamberlain, E.J., (1982, 110p) MP 1557

Clay minerals
Composition and structure of South Pole snow crystals Kumai, M., (1976, p 833-[illegible]) MP 853
Applications of thermal analysis to cold regions Sterrett, K.F., (1976, p 167-181) MP 890
Water vapor adsorption by sodium montmorillonite at -5C Anderson, D.M., et al, (1978, p 638-644) MP 981

Clay soils
Ecological baseline on the Alaskan haul road Brown, J., ed, (1978, 131p) SR 78-13
Overconsolidated sediments in the Beaufort Sea Chamberlain, E.J., (1978, p 24-29) MP 1255
Electron microscope investigations of frozen and unfrozen bentonite Kumai, M., (1979, 14p) CR 79-28
Overconsolidation effects of ground freezing Chamberlain, E.J., (1980, p 325-337) MP 1452
Water migration in frozen clay under linear temperature gradients Xu, X., et al, (1985, p 111-122) MP 1934
Experimental study on factors affecting water migration in frozen morin clay Xu, X., et al, (1985, p 123-128) MP 1897
Ion and moisture migration and frost heave in freezing Morin clay Qiu, G., et al, (1986, p.1014) MP 1970
Physical changes in clays due to frost action Chamberlain, E.J., (1989, p 863-893) MP 2595
Effect of freeze thaw cycles on soils. Chamberlain, E., et al, (1990, p.145-155) MP 2678

Clays
Isothermal compressibility of water mixed with montmorillonite Oliphant, J.L., et al, (1983, p.45-50) MP 2066
Thawing of frozen clays Anderson, D.M., et al, (1985, p.1-9) MP 1923
Evaluation of the X-ray radiography efficiency for heaving and consolidation observation. Akagawa, S., (1988, p 23-28) MP 2376

Climate
Selected climatic and soil thermal characteristics of the Prudhoe Bay region Brown, J., et al, (1975, p 3-12) MP 1054
Antarctic sea ice dynamics and its possible climatic effects Ackley, S.F., et al, (1976, p 53-76) MP 1378
Environmental atlas of Alaska Hartman, C.W., et al, (1978, 95p) MP 1204
Winter surveys of the upper Susitna River, Alaska Bilello, M.A., (1980, 30p) SR 80-19
Coastal tundra at Barrow. Brown, J., et al, (1980, p.1-29) MP 1356
Environment of the Alaskan Haul Road Brown, J., (1980, p 3-52) MP 1350
Hydrology and climatology of a drainage basin near Fairbanks, Alaska Haugen, R.K., et al, (1982, 34p) CR 82-26
Climate of remote areas in north-central Alaska: 1975-1979 summary. Haugen, R.K., (1982, 110p) CR 82-35
Climate at CRREL, Hanover, New Hampshire Bates, R.E., (1984, 78p) SR 84-24
Comparative studies of the winter climate at selected locations in Europe and the United States Bates, R.E., et al, (1989, p 283-293) MP 2598

Climatic changes
Greenland climate changes shown by ice core Dansgaard, W., et al, (1971, p 17-22) MP 998
Study of climatic elements occurring concurrently Bilello, M.A., (1976, p 23-30) MP 1613
CO2 effect on permafrost terrain Brown, J., et al, (1982, 30p) MP 1546
West antarctic sea ice. Ackley, S.F., (1984, p 88-95) MP 1818
Potential responses of permafrost to climatic warming Goodwin, C.W., et al, (1984, p.92-105) MP 1710
Role of sea ice dynamics in modeling CO2 increases Hibler, W.D., III, (1984, p 238-253) MP 1749
Regional climatic trends in northern New England Haugen, R.K., et al, (1988, p 64-71) MP 2748
US global ice core research program West Antarctica and beyond Grootes, P.M., et al, (1989, 32p) MP 2709
Cavitating fluid sea ice model Flato, G.M., et al, (1990, p 239-242) MP 2738

Climatic factors
Roofs in cold regions Tobiasson, W., (1980, 21p) MP 1408
U.S.-Soviet seminar on building under cold climates and on permafrost (1980, 365p) SR 80-40
Tundra and analogous soils Everett, K.R., et al, (1981, p 139-179) MP 1405
Introduction to abiotic components in tundra Brown, J., (1981, p 79) MP 1432
Climatic factors in cold regions surface conditions Bilello, M.A., (1985, p.508-517) MP 1961
Utilization of Unmanned Aerial Vehicles in the ALBE Thrust Greeley, H.P., et al, (1986, p 249-257) MP 2663
Ice jams and the winter climate near White River, SD. Bilello, M.A., (1987, p 154-162) MP 2399
Prediction of winter battlefield weather effects Ryerson, C.C. et al, (1988, p 357-362) MP 2402
Comparative studies of the winter climate at selected locations in Europe and the United States Bates, R.E., et al, (1989, p 283-293) MP 2598
Cold regions weather data systems Bates, R.E., et al, (1989, p 139-145) MP 2568
Proceedings (1990, 318p) SR 90-01

CLIMATOLOGY
Climatology of the cold regions of the northern hemisphere, I Wilson, C., (1967, 141p) M I-A3a
Climatology of Antarctic regions Wilson, C., (1968, 77p) M I-A3c
Climatology of the cold regions of the northern hemisphere, II Wilson, C., (1969, 158p) M I-A3b

Climatology
Surface temperature data for Atkasook, Alaska summer 1975 Haugen, R.K., et al, (1976, 25p) SR 76-01
Environmental analyses in the Kootenai River region, Montana McKim, H.L., et al, (1976, 53p) SR 76-13
Study of climatic elements occurring concurrently Bilello, M.A., (1976, p 23-30) MP 1613
Soil characteristics and climatology during wastewater application at CRREL Iskandar, I.K., et al, (1979, 82p) SR 79-23
International Workshop on the Seasonal Sea Ice Zone, Monterey, California, Feb 26-Mar 1, 1979 Andersen, B.G., ed (1980, 357p) MP 1292

Arctic research of the United States, Vol 4 (1990, 120p) MP 2765

Cloud chambers

Increased transmission, ...rough brass obscurant clouds during snowfall Hewitt, A D., et al, (1988, p 489-496) MP 2605

Dynamic aerosol flow chamber. Hewitt, A D., (1988, 13p) SR 88-21

Cloud droplets

Lidar-derived particle concentrations in plumes from arctic leads Andreas, E L., et al, (1990, p 9-12) MP 2758

Cloud seeding

Compressed air seeding of supercooled fog Hicks, J.R., (1976, 9p) SR 76-09

Laboratory studies of compressed air seeding of supercooled fog. Hicks, J R., et al, (1977, 19p) SR 77-12

Clouds (meteorology)

Polarization of skylight Bohren, C., (1984, p 261-265) MP 1794

Lidar detection of leads in Arctic sea ice. Schnell, R C., et al, (1989, p 530-532) MP 2602

Coal

Effects of ice on coal movement via the inland waterways Lunardini, V J., et al, (1981, 72p) SR 81-13

Coastal topographic features

Coastal marine geology of the Beaufort, Chukchi and Bering Seas Gatto, L.W., (1980, 357p) SR 80-05

Shore ice pile-up and ride-up field observations, models, theoretical analyses Kovacs, A., et al, (1980, p.209-298) MP 1295

Coastal subsea permafrost and bedrock observations using dc resistivity. Sellmann, P.V., et al, (1989, 13p) CR 89-13

Coatings

Evaluation of shear strength of freshwater ice adhered to icephobic coatings. Mulherin, N.D., (1990, p.149-154) MP 2578

Cohesion

Seeking low ice adhesion Sayward, J M., (1979, 83p) SR 79-11

COLD CHAMBERS

Cold room studies on frost susceptible soils (1950, 25p) ACFEL MP BL 1

Cold storage

Polar ice-core storage facility Langway, C C., Jr., (1976, p.71-75) MP 874

Cold stress

Effect of cold weather on productivity. Abele, G., (1986, p.61-66) MP 2152

Cold tolerance

Aquatic plant growth in relation to temperature and unfrozen water content Palazzo, A J., et al, (1984, 8p) CR 84-14

COLD WEATHER CONSTRUCTION

Effects of permafrost on engineering Stearns, S R., (1966, 77p) M I-A2

Methods of building on permanent snowfields Mellor, M., (1958, 43p) M III-A2a

Investigation and exploitation of snowfield sites Mellor, M., (1969, 57p) M III-A2b

Foundations of structures in cold regions Sanger, F J., (1969, 91p) M III-C4

Utilities on permanent snowfields Mellor, M., (1969, 42p) M III-A2d

Cold weather construction

Life-cycle cost effectiveness of modular megastructures in cold regions Wang, L R-L., et al, (1976, p 760-776) MP 892

Computer derived heat requirements for buildings in cold regions Bennett, F L., (1977, 113p) SR 77-03

Observation and analysis of protected membrane roofing systems Schaefer, D., et al, (1977, 40p) CR 77-11

Mid-winter installation of protected membrane roofs in Alaska Aamot, H W.C., (1977, 5p) CR 77-21

Architects and scientists in research for design of buildings in Alaska Ledbetter, C B., (1977, 8p) CR 77-23

Winter earthwork construction in Upper Michigan Haas, W M., et al, (1977, 59p) SR 77-40

Temporary protection of winter construction Bennett, F L., (1977, 41p) SR 77-39

Roof construction under wintertime conditions a case study Bennett, F.L., (1978, 34p) SR 78-24

Communication in the work place an ecological perspective Ledbetter, C B., (1979, 19p) SR 79-03

Snow and ice roads in the Arctic Johnson, P R., (1979, p 1063-1071) MP 1223

Extending the useful life of DYE-2 to 1986, Part I Tobiasson, W., et al, (1979, 15p) SR 79-27

Snow fortifications as protection against shaped charge antitank projectiles Farrell, D R., (1980, 19p) SR 80-11

Construction of an embankment with frozen soil Botz, J J., et al, (1980, 105p) SR 80-21

Time constraints on measuring building R values Flanders, S N., (1980, 10p) CR 80-15

Snow pads for pipeline construction in Alaska Johnson, P R., et al, (1980, 28p) CR 80-17

Use of piling in frozen ground Crory, F E., (1980, 21 p) MP 1407

Roofs in cold regions Tobiasson, W., (1980, 21p) MP 1408

Construction of foundations in permafrost Linell, K A., et al, (1980, 310p) SR 80-34

Soviet construction under difficult climatic conditions Assur, A., (1980, p 47-53) MP 1345

Resins and non-portland cements for construction in the cold Johnson, R., (1980, 19p) SR 80-35

U S -Soviet seminar on building under cold climates and on permafrost (1980, 365p) SR 80-40

Regulated set concrete for cold weather construction Sayles, F.H., et al, (1980, p 291-314) MP 1359

Excavation of frozen materials Moore, H E., et al, (1980, p 323-345) MP 1360

Window performance in extreme cold. Flanders, S N., et al, (1981, p 396-408) MP 1393

Drainage facilities of airfields and heliports in cold regions Lobacz, E F., et al, (1981, 56p) SR 81-22

Piling in frozen ground Crory, F.E., (1982, p 112-124) MP 1722

Comparative analysis of the USSR construction codes and the US Army technical manual for design of foundations on permafrost Fish, A M., (1982, 20p) CR 82-14

Window performance in extreme cold Flanders, S N., et al, (1982, 21p) CR 82-38

Chena Flood Control Project and the Tanana River near Fairbanks, Alaska Buska, J S., et al, (1984, 11p. + figs) MP 1745

Ice forces on rigid, vertical, cylindrical structures Sodhi, D.S., et al, (1984, 36p) CR 84-33

Cold factor. Abele, G., (1985, p 480-481) MP 2024

Cold climate utilities manual Smith, D W., ed, (1986, var p) MP 2135

Effect of cold weather on productivity Abele, G., (1986, p 61-66) MP 2152

Arctic and subarctic construction general provisions. Lobacz, E F., (1986, 75p) SR 86-17

Effects of cold environment on rapid runway repairs Abele, G., (1986, p 1-9) MP 2169

Engineering surveys along the Trans-Alaska Pipeline Gudfrey, R N., et al, (1986, 85p) SR 86-28

Summary of proper cold weather pavement repair methods Eaton, R.A., (1987, p 1013-1027) MP 2235

Benchmark design and installation: a synthesis of existing information. Gatto L W., (1987, 73p) SR 87-10

Mechanical and physical properties of soils in cold regions Chamberlain, E J., (1987, p.155-161) MP 2415

Buildings and utilities in very cold regions overview and research needs Tobiasson, W., (1987, p 299-303) MP 2424

Foundation technology in cold regions Quinn, W F., (1987, p.305-310) MP 2425

Arctic construction working group report Marvin, E L., et al, (1987, p 311-314) MP 2426

Buildings and utilities in very cold regions overview and research needs Tobiasson, W., (1988, p 4-11) MP 2552

Thermosyphons and foundation design in cold regions Haynes, F D., et al, (1988, p 251-259) MP 2443

Thermosyphon for horizontal applications DenHartog, S L., (1988, p 319-321) MP 2444

Airfields in Arctic Alaska Crory, F.E., (1988, p 49-55) MP 2451

Use of low viscosity asphalts in cold regions Janoo, V.C., (1989, p 70-80) MP 2462

Performance of pavement at Central Wisconsin Airport Stark, J., et al, (1989, p 92-103) MP 2463

Rebuilding infrastructure for pleasure boating Wortley, C A., et al, (1989, p 188-201) MP 2466

Unique new cold weather testing facility Eaton, R A., (1989, p 335-342) MP 2468

Unfrozen water contents of six antarctic soil materials Anderson, D M., et al (1989, p 353-366) MP 2470

Ice runways near the South Pole Swithinbank C., (1989, 42p) SR 89-19

COLD WEATHER OPERATION

Water supply in cold regions Alter A J., (1969, 85p) M III-C5a

Sewerage and sewage disposal in cold regions Alter, A J., (1969, 106p) M III-C5b

Cold weather operation

Regionalized feasibility study of cold weather earthwork Roberts, W S., (1976, 190p) SR 76-02

Storm drainage design considerations in cold regions Lobacz, E F., et al, (1978, p 474-489) MP 1088

Effects of winter military operations on cold regions terrain Abele, G., et al, (1978, 34p) SR 78-17

Snow fortifications as protection against shaped charge antitank projectiles Farrell, D R., (1980, 19p) SR 80-11

Engine starters in winter Coutts, H J., (1981, 3"p) SR 81-32

CRREL instrumented vehicle for cold regions mobility measurements Blaisdell, G L., (1982, 11p) MP 1515

Low temperature automotive emissions Coutts, H J., (1983, 2 vols) MP 1703

Observations during BRIMFROST 83 Bouzoun J R., et al, (1984, 36p) SR 84-10

Maintaining frosty facilities Reed, S C., et al, (1985, p 9-15) MP 1949

Some recent developments in vibrating wire rock mechanics instrumentation. Dutta, P K., (1985, 12p) MP 1968

Cold weather O&M. Reed, S C., et al, (1985, p 10-15) MP 2070

Tank E/O sensor system performance in winter, an overview. Lacombe, J., et al, (1985, 26p) MP 2073

Measurement and evaluation of tire performance under winter conditions Blaisdell, G L., (1985, p 198-228) MP 2387

Cold factor Abele, G., (1985, p.480-481) MP 2024

Use and application of PRESTO in Snow-III West Stallings, E.S., et al, (1986, p 11-24) MP 2658

Cold climate utilities manual Smith, D W., ed, (1986, var.p) MP 2135

Corps of Engineers research in the Arctic Smallidge, P D., et al, (1987, p 81-87) MP 2411

Aircraft operations in the Arctic DenHartog, S L., (1987, p 271-272) MP 2422

Mobility working group report Blaisdell, G L., et al, (1987, p 273-274) MP 2423

SNOW III WEST field experiment report Volume I Lacombe, J., et al, (1988, 170p) SR 88-28

Preliminary design guide for arctic equipment Walsh, M.R., et al, (1989, 35p) SR 89-13

Cold regions weather data systems Bates, R E., et al, (1989, p 139-145) MP 2568

Cold weather performance

Effect of snow cover on obstacle performance of vehicles Hanamoto, B., (1976, p 121-140) MP 933

Field performance of a subarctic utilidor. Reed, S C., (1977, p 448-468) MP 930

Effects of subgrade preparation upon full depth pavement performance in cold regions Eaton, R A., (1978, p.459-473) MP 1087

Construction equipment problems and procedures: Alaska pipeline project. Hanamoto, B., (1978, 14p) SR 78-11

Performance of overland flow land treatment in cold climates. Jenkins, T.F., et al, (1978, p 61-70) MP 1152

Wastewater treatment in cold regions by overland flow. Martel, C J., et al, (1980, 14p) CR 80-07

Operation of the CRREL prototype air transportable shelter. Flanders, S N., (1980, 73p) SR 80-10

Spray application of waste-water effluent in a cold climate. Cassell, E A., et al, (1980, p 620-626) MP 1403

Structural evaluation of porous pavement in cold climate Eaton, R A., et al, (1980, 43p) SR 80-39

Cold regions testing of an air-transportable shelter. Flanders, S N., (1981, 20p) CR 81-16

Mine/countermine problems during winter warfare. Lunardini, V.J., ed, (1981, 43p) SR 81-20

Shallow snow model for predicting vehicle performance. Harrison, W L., (1981, 21p) CR 81-20

Case study of land treatment in a cold climate—West Dover, Vermont Bouzoun, J.R., et al, (1982, 96p) CR 82-44

Optical engineering for cold environments Aitken, G W., ed, (1983, 225p) MP 1646

Utility services for remote military facilities Reed, S C., et al, (1984, 66p) SR 84-14

Wetlands for wastewater treatment in cold climates Reed, S C., et al, (1984, 9p + figs) MP 1945

Prevention of freezing of wastewater treatment facilities. Reed, S C., et al, (1985, 49p) SR 85-11

ISTVS workshop on tire performance under winter conditions, 1983 (1985, 177p) SR 85-15

Need for snow tire characterization and evaluation Yong, R N., et al (1985, p 1-2) MP 2043

Vehicle for cold regions mobility measurements Blaisdell, G L., (1985, p 9-20) MP 2044

Winter tire tests 1980-81 Blaisdell, G L., et al, (1985, p 135-151) MP 2045

Radial tire and traction and performance on ice and in snow. Rogers, T., et al, (1986, 20p) SR 86-07

Effect of cold weather on productivity. Abele, G., (1986, p 61-66) MP 2152

Cold-temperature characterization of polymer concrete. Bigl, S R., (1986, 46p) MP 2521

Airport pavement distress in cold regions Vinson, T S., et al, (1987, p 981-1012) MP 2234

Structural fiber composite materials for cold regions Dutta, P K., (1988, p 124-134) MP 2405

Performance of an omni-directional wheel on snow and ice Blaisdell, G S., (1989, 21p + appends) MP 2711

Evaluation of the Caterpillar Challenger tractor for use in Antarctica Blaisdell, G L., et al, (1989, 12p + figs) MP 2718

Wheeled versus tracked vehicle snow mobility test program Green, C E., et al, (1989, 19p) MP 2715

Porous portland cement concrete as an airport runway overlay Korhonen, C., et al, (1989, 20p) SR 89-12

Land mines in winter Richmond, P W., (1989, 10p) SR 89-11

Impact of the winter environment on infrared target signatures Lacombe, J., (1989, n p) MP 2587

Cold weather survival

Effects of soil covers on late-fall seedings of four tall fescue varieties Palazzo, A J., (1989, 5p) SR 89-17

Cold weather tests

Waste water reuse in cold regions Iskandar, I K., (1978, p 361-368) MP 1144

Cold weather tests *(cont.)*
Nondestructive testing of in-service highway pavements in Maine Smith, N., et al, (1979, 22p) CR 79-06
Construction and performance of membrane encapsulated soil layers in Alaska. Smith, N., (1979, 27p) CR 79-16
Land treatment of waste water in cold climates. Jenkins, T.F., et al, (1979, p.207-214) MP 1279
Air-transportable Arctic wooden shelters. Flanders, S.N., et al, (1982, p.385-397) MP 1558
Blisters in built-up roofs due to cold weather Korhonen, C., et al, (1983, 12p) SR 83-21
Mine detection using non-sinusoidal radar: laboratory tests Dean, A.M., Jr., et al, (1984, 99p) SR 84-22
Radial tire and traction aid performance on ice and in snow. Rogers, T., et al, (1986, 20p) SR 86-07
Unique new cold weather testing facility Eaton, R.A., (1988, p.745-750) MP 2542
Instrumented vehicle for the measurement of mobility parameters Blaisdell, G.L., (1988, p.377-388) MP 2486
Impact of the winter environment on infrared target signatures. Lacombe, J., (1989, np) MP 2587

Compacting
Temperature effects in compacting an asphalt concrete overlay. Eaton, R.A., et al, (1978, p 146-158) MP 1083

Composition
Acoustic emissions from composites at decreasing temperatures. Dutta, P.K., et al, (1988, p.1090-1095) MP 2430

Compressed air
Use of compressed air for supercooled fog dispersal Weinstein, A.I., et al, (1976, p 1226-1231) MP 1614

Compressive properties
Laboratory investigation of the mechanics and hydraulics of river ice jams Tatinclaux, J.C., et al, (1977, 45p) CR 77-09
Strength of frozen silt as a function of ice content and dry unit weight. Sayles, F.H., et al, (1980, p.109-119) MP 1451
Regulated set concrete for cold weather construction Sayles, F.H., et al, (1980, p 291-314) MP 1359
Investigation of the snow adjacent to Dye-2, Greenland. Ueda, H.T., et al, (1981, 23p) SR 81-03
Measuring mechanical properties of ice Schwarz, J., et al, (1981, p 245-254) MP 1556
Acoustic emissions from polycrystalline ice. St. Lawrence, W.F., et al, (1982, 15p) CR 82-21
Creep behavior of frozen silt under constant uniaxial stress. Zhu, Y., et al, (1983, p 1507-1512) MP 1805
Isothermal compressibility of water mixed with montmorillonite. Oliphant, J.L., et al, (1983, p 45-50) MP 2066
Summary of the strength and modulus of ice samples from multi-year pressure ridges Cox, G.F.N., et al, (1984, p 126-133) MP 1679
Variation of ice strength within and between multiyear pressure ridges in the Beaufort Sea Weeks, W.F., (1984, p.134-139) MP 1680
Preliminary examination of the effect of structure on the compressive strength of ice samples from multi-year pressure ridges Richter, J.A., et al, (1984, p 140-144) MP 1685
Influence of grain size on the ductility of ice Cole, D.M., (1984, p 150-157) MP 1686
Mechanical properties of multi-year sea ice Testing techniques Mellor, M., et al, (1984, 39p) CR 84-08
Compressive strength of frozen silt. Zhu, Y., et al, (1984, p 3-15) MP 1773
Crushing ice forces on cylindrical structures. Morris, C.E., et al, (1984, p 1-9) MP 1834
Grain size and the compressive strength of ice Cole, D.M., (1985, p 220-226) MP 1858
Strength and modulus of ice from pressure ridges Cox, G.F.N., et al, (1985, p 93-98) MP 1848
Structure and the compressive strength of ice from pressure ridges Richter, J.A., et al, (1985, p 99-102) MP 1849
Compressive strength of pressure ridge ice samples Richter-Menge, J.A., et al, (1985, p 465-475) MP 1877
Triaxial compression testing of ice Cox, G.F.N., et al, (1985, p 476-488) MP 1878
Pressure ridge strength in the Beaufort Sea Weeks, W.F., (1985, p 167-172) MP 2121
Mechanical properties of multi-year pressure ridge samples Richter-Menge, J.A., (1985, p 244-251) MP 1936
Grain size and the compressive strength of ice Cole, D.M., (1985, p 369-374) MP 1907
Confined compressive strength of multi-year pressure ridge sea ice samples Cox, G.F.N., et al, (1986, p 365-373) MP 2035
Compressive deformation of columnar sea ice Brown, R.L., et al, (1986, p 241-252) MP 2124
Compressive behavior of saline ice Richter-Menge, J.A., (1986, p 331-350) MP 2200
Confined compressive strength of horizontal first-year sea ice samples Richter-Menge, J.A., (1987, p 197-207) MP 2193
Results from indentation tests on freshwater ice Sodhi, D.S., et al, (1988, p 341-350) MP 2495
Triaxial compressive strength of frozen soils under constant strain rates Zhu, Y., et al, (1988, p 1200-1205) MP 2371
Confined compressive strength of multi-year pressure ridge sea ice samples Cox, G.F.N., et al, (1988, p.295-301) MP 2403
Uniaxial tension/compression tests on ice—preliminary results. Cole, D.M., et al, (1989, p 37-41) MP 2482
Effect of ice pressure on marginal ice zone dynamics Flato, G.M., et al, (1989, p 514-521) MP 2522
Resilient modulus determination for frost conditions Chamberlain, E.J., et al, (1989, p 320-333) MP 2569
Cyclic loading of saline ice: initial experimental results Cole, D.M., (1990, p 265-271) MP 2581
Comparison of the compressive strength of antarctic frazil ice and laboratory-grown columnar ice Richter-Menge, J.A., et al, (1990, p 79-84) MP 2731

COMPRESSIVE STRENGTH
Mechanical properties of sea ice. Weeks, W.F., et al, (1967, 80p) M II-C3

Compressive strength
Mechanics and hydraulics of river ice jams. Tatinclaux, J.C., et al, (1976, 97p) MP 1060
Effect of temperature on the strength of frozen silt Haynes, F.D., et al, (1977, 27p) CR 77-03
Measuring the uniaxial compressive strength of ice Haynes, F.D., et al, (1977, p 213-223) MP 1027
Unconfined compression tests on snow, a comparative study. Kovacs, A., et al, (1977, 27p) SR 77-20
Compressive and shear strengths of fragmented ice covers Cheng, S.T., et al, (1977, 82p) MP 951
Axial double point-load tests on snow and ice. Kovacs, A., (1978, 11p) CR 78-01
Increasing the effectiveness of soil compaction at below-freezing temperatures Haas, W.M., et al, (1978, 58p) SR 78-25
Effect of temperature on the strength of snow-ice. Haynes, F.D., (1978, 25p) CR 78-27
Grouting silt and sand at low temperatures—a laboratory investigation. Johnson, R., (1979, 33p) CR 79-05
Grouting silt and sand at low temperatures Johnson, R., (1979, p 937-950) MP 1078
Temperature effect on the uniaxial strength of ice. Haynes, F.D., (1979, p 667-681) MP 1231

Computer applications
Flexible pavement resilient surface deformations. Smith, N., et al, (1975, 13 leaves) MP 1264
Landsat data for watershed management. Cooper, S., et al, (1977, c150p) MP 1114
Safe ice loads computed with a pocket calculator Nevel, D.E., (1979, p 205-223) MP 1249
Conference on Computer and Physical Modeling in Hydraulic Engineering, 1980 Ashton, G.D., ed, (1980, 492p) MP 1321
Topical databases Cold Regions Technology on-line. Liston, N., et al, (1985, p 12-15) MP 2027
Computer interfacing of meteorological sensors in severe weather Rancourt, K., et al, (1985, p 205-211) MP 2175
Data acquisition in USACRREL's flume facility Daly, S.F., et al, (1985, p 1053-1058) MP 2089
Cazenovia Creek Model data acquisition system Bennett, B.M., et al, (1985, p 1424-1429) MP 2090
Instrumentation for an uplifting ice force model Zabilansky, L.J., (1985, p 1430-1435) MP 2091
Is advanced technology "the gateway to irresponsibility" Zufelt, J.E., (1989, p.434-437) MP 2529

Computer programs
Long distance heat transmission with steam and hot water Aamot, H.W.C., et al, (1976, 39p) MP 938
Computer program for determining electrical resistance in nonhomogeneous ground Arcone, S.A., (1977, 16p) CR 77-02
Computer derived heat requirements for buildings in cold regions Bennett, F.L., (1977, 113p) SR 77-03
Computer routing of unsaturated flow through snow Tucker, W.B., et al, (1977, 44p) SR 77-10
Finite element model of transient heat conduction Guymon, G.L., et al, (1977, 167p) SR 77-38
Land treatment model of the CAPDET program Merry, C.J., et al, (1977, 4p) MP 1112
Computer procedure for comparing wastewater treatment systems Spaine, P.A., et al, (1978, p 335-340) MP 1155
Computer file for existing land application of wastewater systems Iskandar, I.K., et al, (1978, 24p) SR 78-22
Design of liquid waste land application Iskandar, I.K., (1979, p 65-88) MP 1415
Multivariable regression algorithm Blaisdell, G.L., et al, (1983, 41p) SR 83-32
Numerical simulation of sea ice induced gouges on the shelves of the polar oceans Weeks, W.F., et al, (1985, p 259-265) MP 1938
Fortran subroutines for zero-phase digital frequency filters Albert, D.G., (1986, 26p) SR 86-04
Tracking freezing front movement using boundary element method Hromadka, T.V., II, (1987, 58p) SR 87-08
Information systems planning study Atkins, R.T., et al, (1987, 48p) SR 87-23
XYTREZ-4 user's manual O'Neill, K., (1987, 55p) SR 87-28
Phase change heat transfer program for microcomputers Buzzell, G.M., et al, (1988, p 645-650) MP 2383
Computer-generated graphics of river ice conditions Bilello, M.A., et al, (1988, p 211-219) MP 2509
QuickDraw data structures for image processing LaPotin, P.J., et al, (1989, 17p) SR 89-08

Computerized simulation
Computer simulation of the snowmelt and soil thermal regime at Barrow, Alaska. Outcalt, S.I., et al, (1975, p.709-715) MP 857
Computer modeling of terrain modifications in the arctic and subarctic. Outcalt, S.I., et al, (1977, p 24-32) MP 971
Finite element model of transient heat conduction Guymon, G.L., et al, (1977, 167p) SR 77-38
Computer model of municipal snow removal Tucker, W.B., (1977, 7p) CR 77-30
Bubbler induced melting of ice covers Kennar, R., et al, (1978, p 362-366) MP 1160
Computer simulation of urban snow removal. Tucker, W.B., et al, (1979, p 293-302) MP 1238
Numerical modeling of sea ice in the seasonal sea ice zone. Hibler, W.D., III, (1980, p 299-356) MP 1296
Dynamic simulations of iceberg-seabed interactions Bass, D.W., et al, (1989, p 137-151) MP 2684
Simulation of oil slicks in rivers and lakes. Shen, H.T., et al, (1990, 29p) CR 90-01

Computers
Microcomputer-based image-processing system Perovich, D.K., et al, (1988, p 249-252) MP 2385

Concrete admixtures
Cements for structural concrete in cold regions Johnson, R., (1977, 13p) SR 77-35
Antifreeze admixtures for cold weather concreting Preliminary test results Korhonen, C.J., et al, (1990, 8p) MP 2742

Concrete curing
Detection of moisture in construction materials. Morey, R.M., et al, (1977, 9p) CR 77-25
Cements for structural concrete in cold regions. Johnson, R., (1977, 13p) SR 77-35

Concrete durability
Freeze-thaw tests of liquid deicing chemicals on selected pavement materials. Minsk, L.D., (1977, 16p) CR 77-28
Fabric installation to reduce cracking on runways. Eaton, R.A., et al, (1981, 26p) SR 81-10

Concrete heating
Regulated set concrete for cold weather construction. Sayles, F.H., et al, (1980, p 291-314) MP 1359

Concrete pavements
Freezing and thawing tests of liquid deicing chemicals on selected pavement materials Minsk, L.D., (1979, p 51-58) MP 1220
Detection of cavities under concrete pavement. Kovacs, A., et al, (1983, 41p) CR 83-18
Salt action on concrete Sayward, J.M., (1984, 69p) SR 84-25
Cold-temperature characterization of polymer concrete Bigl, S.R., (1986, 46p) MP 2521
Porous portland cement concrete as an airport runway overlay. Korhonen, C., et al, (1989, 20p) SR 89-12

Concrete placing
Cold weather construction materials. Part 2—Regulated-set cement for cold weather concreting, field validation of laboratory tests Houston, B.J., et al, (1981, 33p) MP 1466

Concrete strength
Cements for structural concrete in cold regions Johnson, R., (1977, 13p) SR 77-35
Regulated set concrete for cold weather construction Sayles, F.H., et al, (1980, p 291-314) MP 1359
Structural evaluation of porous pavement in cold climate Eaton, R.A., et al, (1980, 43p) SR 80-39
Fabric installation to reduce cracking on runways Eaton, R.A., et al, (1981, 26p) SR 81-10
Cold weather construction materials, Part 2 -Regulated-set cement for cold weather concreting, field validation of laboratory tests Houston, B.J., et al, (1981, 33p) MP 1466
Deteriorated concrete panels on buildings at Sondrestrom, Greenland Korhonen, C., (1984, 11p) SR 84-12
Chemical solutions to the chemical problem Minsk, L.D., (1985, p 238-243) MP 2224
Brittleness of reinforced concrete structures under arctic conditions Kivekas, L., et al, (1985, p 111-121) MP 2272
Low temperature cracking susceptibility of asphalt concrete. Janoo, V.C., et al, (1987, p 397-415) MP 2253
Porous portland cement concrete as an airport runway overlay Korhonen, C., et al, (1989, 20p) SR 89-12

Concrete structures
Deteriorated concrete panels on buildings at Sondrestrom, Greenland Korhonen, C., (1984, 11p) SR 84-12
Brittleness of reinforced concrete structures under arctic conditions Kivekas, L., et al, (1985, 28 + 14p) MP 1969
Brittleness of reinforced concrete structures under arctic conditions Kivekas, L., et al, (1986, 20p) CR 86-02

Concretes
Cold-temperature characterization of polymer concrete Bigl, S.R., (1986, 46p) MP 2521

Condensation
Condensation control in low-slope roofs Tobiasson, W., (1985, p.47-59) MP 2039
Vapor drive maps of the U.S.A. Tobiasson, W., et al, (1986, 7p. + graphs) MP 2041
Roof design in cold regions. Tobiasson, W., (1989, p.1029-1037) MP 2651

Conduction
Soil hydraulic conductivity and moisture retention features. Ingersoll, J., (1981, 11p) SR 81-02
Heat conduction in snow. Yen, Y.C., (1989, p 21-32) MP 2546

Conservation
Energy conservation in buildings. Ledbetter, C.B., (1976, 8p.) SR 76-17

Construction
Haines-Fairbanks pipeline design, construction and operation. Garfield, D.E., et al, (1977, 20p) SR 77-04
Environmental engineering, Yukon River-Prudhoe Bay Haul Road. Brown, J., ed, (1980, 187p.) CR 80-19
Environment of the Alaskan Haul Road Brown, J., (1980, p.3-52) MP 1350
Haul Road performance and associated investigations in Alaska. Berg, R.L., (1980, p.53-100) MP 1351
Revegetation along roads and pipelines in Alaska. Johnson, L.A., (1980, p.129-150) MP 1353

Construction costs
Life-cycle cost effectiveness of modular megastructures in cold regions. Wang, L.R.-L., et al, (1976, p.760-776) MP 892

Construction equipment
Specialized pipeline equipment. Hanamoto, B., (1978, 30p.) SR 78-05
Construction equipment problems and procedures- Alaska pipeline project. Hanamoto, B., (1978, 14p) SR 78-11
Excavation of frozen materials. Moore, H.E., et al, (1980, p.323-345) MP 1360
Planing machines for building runways on ice. Mellor, M., (1989, 8p. + attachments) MP 2505

Construction materials
Detection of moisture in construction materials. Morey, R.M., et al, (1977, 9p) CR 77-25
Remote sensing for reconnaissance of proposed construction site. McKim, H.L., et al, (1978, 9 leaves) MP 1167
Roof construction under wintertime conditions: a case study. Bennett, F.L., (1978, 34p) SR 78-24
Mechanical properties of frozen ground. Ladanyi, B., et al, (1979, p.7-18) MP 1726
Time constraints on measuring building R-values. Flanders, S.N., (1980, 30p.) CR 80-15
Remote sensing for earth dam site selection and construction materials. Merry, C.J., et al, (1980, p 158-170) MP 1316
Resins and non-portland cements for construction in the cold. Johnson, R., (1980, 19p) SR 80-35
Cold weather construction materials; Part 2—Regulated-set cement for cold weather concreting, field validation of laboratory tests. Houston, B.J., et al, (1981, 33p.) MP 1466
In-situ thermal conductivity measurements. Atkins, R.T., (1983, 38p.) MP 2214
Building materials and acid precipitation Merry, C.J., et al, (1985, 40p.) SR 85-01
Structure data bases for predicting building material distribution. Merry, C.J., et al, (1985, 35p.) SR 85-07
Description of the building materials data base for New Haven, Connecticut. Merry, C.J., et al, (1985, 129p.) SR 85-19
Models for predicting building material distribution in NE cities. Merry, C.J., et al, (1985, 50p.) SR 85-24
Construction engineering community- materials and diagnostics. (1986, 54p.) SR 86-01
Construction materials data base for Pittsburgh, PA Merry, C.J., et al, (1986, 87p) SR 86-08
Description of the building materials data base for Portland, Maine Merry, C.J., et al, (1986, 83p) SR 86-13
Description of the building materials data base for Cincinnati, Ohio. Merry, C.J., et al, (1986, 65p) SR 86-31
Inventorying building materials Merry, C.J., (1986, 25p) SR 86-33
Acoustic emissions from composites at decreasing temperatures. Dutta, P.K., et al, (1988, p 1090-1095) MP 2430
On the design of polymeric composite structures for cold regions applications. Lord, H.W., et al, (1988, p 435-458) MP 2395
Structural fiber composite materials for cold regions Dutta, P.K., (1988, p 124-134) MP 2405
Distribution of building materials exposed to acid rain Merry, C.J., et al, (1989, 156p) SR 89-01
Fiber composite materials in an arctic environment Dutta, P.K., (1989, p 216-225) MP 2559
Simple and economical thermal conductivity measurement system. Atkins, R.T., (1989, p 108-116) MP 2566

Continuous belt machines
Kinematics of continuous belt machines Mellor, M., (1976, 24p) CR 76-17

Continuous permafrost
Permafrost and active layer on a northern Alaskan road Berg, R.L., et al, (1978, p 615-621) MP 1102
Bibliography of permafrost soils and vegetation in the USSR. Andrews, M., (1978, 175p.) SR 78-19

Convection
Heat transfer over a vertical melting plate. Yen, Y.-C., et al, (1977, 12p) CR 77-32
Free convection heat transfer characteristics in a melt water layer. Yen, Y.-C., (1980, p.550-556) MP 1311
Transport equation over long times and large specs. O'Neill, K., (1981, p.1665-1675) MP 1497
Boundary integral equation solution for phase change problems. O'Neill, K., (1983, p.1825-1850) MP 2093
Computation of porous media natural convection flow and phase change. O'Neill, K., et al, (1984, p.213-229) MP 1895
Experiments on thermal convection in snow. Powers, D., et al, (1985, p 43-47) MP 2006
Theory of natural convection in snow Powers, D., et al, (1985, p 10,641-10,649) MP 1957
Convective heat transfer in water over melting ice sheet. Lunardini, V.J., (1986, p.42-51) MP 2600
Field observations of thermal convection in a subarctic snow cover. Johnson, J.B., et al, (1987, p 105-118) MP 2439

Conversion tables
Improved millivolt-temperature conversion tables for copper constantan thermocouples. 32F reference temperature. Stallman, P.E., et al, (1976, 66p) SR 76-18

Cooling
Performance of a thermosyphon with an inclined evaporator and vertical condenser. Zarling, J.P., et al, (1984, p.64-68) MP 1677
Heating and cooling method for measuring thermal conductivity. McGaw, R., (1984, 8p) MP 1891
Laboratory tests and analysis of thermosyphons with inclined evaporator sections. Zarling, J.P., et al, (1985, p.31-37) MP 1853
Thermal stabilization of permafrost with thermosyphons. Zarling, J.P., et al, (1990, p.323-328) MP 2583

Cooling rate
Temperature effects in compacting an asphalt concrete overlay. Eaton, R.A., et al, (1978, p.146-158) MP 1083
Field cooling rates of asphalt concrete overlays at low temperatures. Eaton, R.A., et al, (1980, 11p.) CR 80-30
International Symposium on Cold Regions Heat Transfer, 1989. (1989, 314p.) MP 2636

Cooling systems
Ice engineering complex adopts heat pump energy system Aamot, H.W.C., (1977, p 25-26) MP 893
Experimental scaling study of an annular flow ice-water heat sink. Stubstad, J.M., et al, (1977, 54p.) CR 77-15
Some experiences with tunnel entrances in permafrost. Linell, K.A., et al, (1978, p 813-819) MP 1107
Waste heat utilization through soil heating. McFadden, T., et al, (1980, p 105-120) MP 1363

Core samplers
Subsurface explorations in permafrost areas. Cass, J.R., Jr., (1959, p 31-41) MP 885
Drilling and coring of frozen ground in northern Alaska, Spring 1979. Lawson, D.E., et al, (1980, 14p) SR 80-12
Development of a frazil ice sampler. Brockett, B.E., et al, (1986, 12p) SR 86-37

Corrosion
Salt action on concrete. Sayward, J.M., (1984, 69p) SR 84-25
Chemical solutions to the chemical problem Minsk, L.D., (1985, p 238-244) MP 2224

Cost analysis
Propane dispenser for cold fog dissipation system. Hicks, J.R., et al, (1973, 38p) MP 1033
Management of power plant waste heat in cold regions. Aamot, H.W.C., (1975, p 22-24) MP 942
Protected membrane roofs in cold regions. Aamot, H.W.C., et al, (1976, 27p.) CR 76-02
Evaluation of an air cushion vehicle in Northern Alaska. Abele, G., et al, (1976, 7p) MP 894
Long distance heat transmission with steam and hot water Aamot, H.W.C., et al, (1976, 39p) MP 938
Some economic benefits of ice booms. Perham, R.E., (1977, p.570-591) MP 959
Waste heat recovery for building heating. Sector, P.W., (1977, 24p) SR 77-11
Installation of loose-laid inverted roof system at Fort Wainwright, Alaska Schaefer, D., (1977, 27p) SR 77-18
Investigation of ice clogged channels in the St Marys River Mellor, M., et al, (1978, 73p) MP 1170
Cost-effective use of municipal wastewater treatment ponds Reed, S.C., et al, (1979, p.177-200) MP 1413
Cost of land treatment systems. Reed, S.C., et al, (1979, 135p) MP 1387
Cost of ice damage to shoreline structures during navigation Carey, K.L., (1980, 33p) SR 80-22
Least life-cycle costs for insulation in Alaska Flanders, S.N., et al, (1982, 47p) CR 82-27
Simple design procedure for heat transmission system piping Phetteplace, G., (1985, p 1748-1752) MP 1942
Simulation of district heating systems for piping design Phetteplace, G., (1989, 27p) MP 2746
Optimal sizing of district heating pipes Phetteplace, G., (1989, 25p) MP 2747

Countermeasures
Ice fog suppression using monomolecular films. McFadden, T., (1977, p.361-367) MP 956
Fabric installation to reduce cracking on runways Eaton, R.A., et al, (1981, 26p) SR 81-10
Stabilizing fire breaks in tundra vegetation Patterson, W.A., III, et al, (1981, p.188-189) MP 1804
Decontamination of chemical agents on the winter battlefield. Parker, L.V., (1988, 48p) CR 88-07
Use of off-road vehicles and mitigation of effects in Alaska permafrost environments- a review Slaughter, C.W., et al, (1990, p 63-72) MP 2682

Crack propagation
Mechanisms of crack growth in quartz. Martin, R.J., III, et al, (1975, p 4837-4844) MP 855
Resistance of elastic rock to the propagation of tensile cracks. Peck, L., et al, (1985, p.7827-7836) MP 2052

Cracking (fracturing)
Thermal and load-associated distress in pavements. Johnson, T.C., et al, (1978, p 403-437) MP 1209
Asphalt concrete for cold regions Dempsey, B.J., et al, (1980, 55p) CR 80-05
Acoustic emission and deformation response of finite ice plates. Xirouchakis, P.C., et al, (1981, p 123-133) MP 1436
Fabric installation to reduce cracking on runways Eaton, R.A., et al, (1981, 26p) SR 81-10
Airport pavement distress in cold regions. Vinson, T.S., et al, (1987, p.981-1012) MP 2234
Fracture of S2 columnar freshwater ice: floating double cantilever beam tests Bentley, D.L., et al, (1988, p 152-161) MP 2493
Fracture experiments on freshwater and urea model ice. Bentley, D.L., et al, (1988, 152p) MP 2502
Performance of pavement at Central Wisconsin Airport. Stark, J., et al, (1989, p 92-103) MP 2463
Use of soft grade asphalts in airfields and highway pavements in cold regions Janoo, V.C., (1990, 47p) SR 90-12

Cracks
Firn quake (a rare and poorly explained phenomenon). Den Hartog, S.L., (1982, p.173-174) MP 1571
Use of low viscosity asphalts in cold regions. Janoo, V.C., (1989, p 70-80) MP 2462

Creep
Isua, Greenland: glacier freezing study. Ashton, G.D., (1978, p 256-264) MP 1174
Application of the Andrade equation to creep data for ice and frozen soil. Ting, J.M., et al, (1979, p 29-36) MP 1802
Creep model for constant stress and constant strain rate. Fish, A.M., (1984, p 1009-1012) MP 1766
Creep of a strip footing on ice-rich permafrost Sayles, F.H., (1985, p 29-51) MP 1731

Creep properties
Thermal and creep properties for frozen ground construction. Sanger, F.J., et al, (1978, p.95-117) MP 1624
Thermal and creep properties for frozen ground construction. Sanger, F.J., et al, (1979, p 311-337) MP 1227

CREVASSE DETECTION
Oversnow transport. Mellor, M., (1963, 58p. plus appends.) M III-A4

Crevasses
Small-scale strain measurements on a glacier surface. Colbeck, S.C., et al, (1971, p 237-243) MP 993
Depth of water-filled crevasses of glaciers Weertman, J., (1973, p 139-145) MP 1044
Depth of water-filled crevasses that are closely spaced Robin, G. de Q., et al, (1974, p 543-544) MP 1038
Iceberg thickness and crack detection Kovacs, A., (1978, p 131-145) MP 1128
Modified theory of bottom crevasses Jezek, K.C., (1984, p 1925-1931) MP 2059
Can relict crevasse plumes on antarctic ice shelves reveal a history of ice-stream fluctuation MacAyeal, D.R., et al, (1988, p 77-82) MP 2460

Cryobiology
Sea ice and ice algae relationships in the Weddell Sea Ackley, S.F., et al, (1978, p 70-71) MP 1203
Standing crop of algae in the sea ice of the Weddell Sea region. Ackley, S.F., et al, (1979, p 269-281) MP 1242
Choanoflagellata from the Weddell Sea, summer 1977. Buck, K.R., (1980, 26p) CR 80-16
Physical mechanism for establishing algal populations in frazil ice Garrison, D.L., et al, (1983, p 363-365) MP 1717
Relative abundance of diatoms in Weddell Sea pack ice Clarke, D.B., et al, (1983, p 181-182) MP 1786
Sea ice and biological activity in the Antarctic Clarke, D.B., et al, (1984, p 2087-2095) MP 1701
Sea ice microbial communities in Antarctica Garrison, D.L., et al, (1986, p 243-250) MP 2026

Cryogenic processes
Morphology of the North Slope Walker, H.J., (1973, p 49-52) MP 1004

Cryogenic soils
Bibliography of soil conservation activities in USSR permafrost areas Andrews, M., (1977, 116p) SR 77-07
Antarctic soil studies using a scanning electron microscope. Kumai, M., et al, (1978, p 106-112) MP 1386
Bibliography of permafrost soils and vegetation in the USSR Andrews, M., (1978, 175p.) SR 78-19

Crystal growth
Simulation of planar instabilities during solidification Sullivan, J.M., Jr., et al, (1987, p.81-111) MP 2585

Crystal orientation
Structural growth of lake ice. Gow, A J., et al, (1977, 24p.) CR 77-01

Crystal study techniques
Producing strain-free flat surfaces on single crystals of ice. comments. Tobin, T.M., (1973, p.519-520) MP 1000

Crystals
Synoptic meteorology, crystal habit, and snowfall rates in Northeastern snowstorms. Ryerson, C C., et al, (1989, p.335-345) MP 2599

Cubic ice
Abnormal internal friction peaks in single-crystal ice Stallman, P.E., et al, (1977, 15p.) SR 77-23

Culverts
Interaction of gravel, surface drainage and culverts with permafrost. Brown, J., et al, (1984, 35p.) MP 2215

Cutting tools
Kinematics of axial rotation machines Mellor, M., (1976, 45p.) CR 76-16
Kinematics of continuous belt machines. Mellor, M., (1976, 24p) CR 76-17

Damage
Ecological effects of oil spills and seepages in cold-dominated environments. McCown, B H., et al, (1971, p.61-65) MP 905
Effects of hovercraft, wheeled and tracked vehicle traffic on tundra. Abele, G., (1976, p 186-215) MP 1123
De-icing using lasers Lane, J.W., et al, (1976, 25p) CR 76-10
Air-cushion vehicle effects on surfaces of Alaska's Arctic Slopes. Slaughter, C.W., (1976, p 272-279) MP 1384
[illegible]ile damage to tundra soil and vegetation Walker, D.A., e[illegible] al, (1977, 49p) SR 77-17
Ef[illegible] of low ground pressure vehicle traffic on tundra at Lo[illegible]ey, Alaska. Abele, G., et al, (1977, 32p) SR 77-31
Second progress report on oil spilled on permafrost. McFadden, T., et al, (1977, 46p) SR 77-44
Inundation of vegetation in New England. McKim, H L., et al, (1978, 13p.) MP 1169
1977 tundra fire at Kokolik River, Alaska. Hall, D K., et al, (1978, 11p) SR 78-10
Effects of low ground pressure vehicle traffic on tundra. Abele, G., et al, (1978, 63p) SR 78-16
Effects of winter military operations on cold regions terrain Abele, G., et al, (1978, 34p) SR 78-17
Crude oil spills on black spruce forest Jenkins, T.F., et al, (1978, p.305-323) MP 1185
Undersea pipelines and cables in polar waters. Mellor, M., (1978, 34p) CR 78-22
Bibliography of permafrost soils and vegetation in the USSR Andrews, M., (1978, 175p.) SR 78-19
Tundra recovery since 1949 near Fish Creek, Alaska Lawson, D.E., et al, (1978, 81p) CR 78-28
Physical and thermal disturbance and protection of permafrost. Brown, J., et al, (1979, 42p) SR 79-05
Cost of ice damage to shoreline structures during navigation. Carey, K L., (1980, 33p) SR 80-22
Effects of a tundra fire on soil and vegetation Racine, C., (1980, 21p) SR 80-37
Crude oil spills on subarctic permafrost in interior Alaska. Johnson, L.A., et al, (1980, 67p) CR 80-29
Pothole primer, a public administrator's guide to understanding and managing the pothole problem Eaton, R.A., coord, (1981, 24p) MP 1416
Ecological impact of vehicle traffic on tundra Abele, G., (1981, p.11-37) MP 1463
Surface disturbance and protection during economic development of the North. Brown, J., et al, (1981, 88p) MP 1467
Alaska Good Friday earthquake of 1964. Swinzow, G K., (1982, 26p) CR 82-01
Potholes: the problem and solutions Eaton, R A., (1982, p.160-162) MP 1504
Effects of inundation on six varieties of turfgrass. Erbisch, F.H., et al, (1982, 25p.) SR 82-12
Long-term effects of off-road vehicle traffic on tundra terrain Abele, G., et al, (1984, p 283-294) MP 1820

Dams
Ice breakup on the Chena River 1975 and 1976 McFadden, T., et al, (1977, 44p.) CR 77-14
Working group on ice forces on structures. Carstens, T., ed, (1980, 146p.) SR 80-26
Limnology of Lake Koocanusa, MT, the 1967-1972 study Bonde, T J H., et al, (1982, 184p.) SR 82-21
Tailwater flow conditions. Ferrick, M G., et al, (1983, 31p.) CR 83-07
Modeling rapidly varied flow in tailwaters Ferrick, M G., et al, (1984, p 271-289) MP 1711
Design and performance of water-retaining embankments in permafrost Sayles, F H., (1984, p 31-42) MP 1850
Survey of ice problem areas in navigable waterways Zufelt, J., et al, (1985, 32p) SR 85-02
Embankment dams on permafrost Sayles, F H, (1987, 109p.) SR 87-11
Ice formation downstream of Oahe Dam—1987-1988 winter Ashton, G.D., (1988, 37p) MP 2506
Ice cover formation downstream of a reservoir. Ashton, G.D., (1988, p.189-198) MP 2498
Effect of Toston dam on upstream ice conditions. Ashton, G.D., (1989, 9p) SR 89-16
Unconventional power sources for ice control at locks and dams Nakato, T., et al, (1989, p 107-126) MP 2572

Data processing
Remote sensing plan for the AIDJEX main experiment. Weeks, W.F., et al, (1975, p.21-48) MP 862
Analysis of snow water equivalent using LANDSAT data. Merry, C.J., et al, (1977, 16 leaves) MP 1113
Automatic data collection equipment for oceanographic application Dean, A M., Jr., (1978, p 1111-1121) MP 1028
Multivariable regression algorithm Blaisdell, G L., et al, (1983, 41p) SR 83-32
User's guide for the BIBSORT program for the IBM-PC personal computer. Kyriakakis, T., et al, (1985, 61p) SR 85-04
Arctic research of the United States, Vol 2. (1988, 76p) MP 2379
Alaska SAR facility: an update. Weller, G., et al, (1988, p 27-31) MP 2380
QuickDraw data structures for image processing LaPotin, P J., et al, (1989, 17p) SR 89-08
Interfacing geographic data with real-time hydrologic forecasting models Eagle, T.C., et al, (1989, p 857-861) MP 2527
Data reduction of GOES information from DCP networks. DeCoff, G.W., et al, (1989, 15p) SR 89-29

Data transmission
Near real time hydrologic data acquisition utilizing the LANDSAT system McKim, H.L., et al, (1975, p 200-211) MP 1055
Communication in the work place: an ecological perspective. Ledbetter, C.B., (1979, 19p) SR 79-03
Landsat data collection platform, south central Alaska. Haugen, R.K., et al, (1979, 17 refs.) SR 79-02
CRREL's experiences of remote sensing technology transfer to the Corps user. Merry, C.J., (1987, p.271-273) MP 2550
Satellite data collection platforms for temperature measurements Daly, S F., et al, (1989, 14p.) SR 89-37

Decomposition
Proceedings 1972 Tundra Biome symposium. (1972, 211p) MP 1574

Decontamination
Decontamination of chemical agents on the winter battlefield. Parker, L.V., (1988, 48p) CR 88-07

Defects
Guide to managing the pothole problem on roads. Eaton, R A., et al, (1981, 24p) SR 81-21

Deformation
Technique for measuring radial deformation during repeated load triaxial testing. Cole, D.M., (1978, p 426-429) MP 1157
Pavement deflection after freezing and thawing. Chamberlain, E.J., (1981, 10p) CR 81-15
Blisters in built-up roofs due to cold weather. Korhonen, C., et al, (1983, 12p) SR 83-21
Resilient modulus determination for frost conditions. Chamberlain, E.J., et al, (1989, p 320-333) MP 2569

Degradation
Modifications of permafrost, East Oumalik, Alaska. Lawson, D E., (1982, 33p) CR 82-36
On the design of polymeric composite structures for cold regions applications Lord, H W., et al, (1988, p 435-458) MP 2395

Degree days
Unified degree-day method for river ice cover thickness simulation. Shen, H T., et al, (1985, p.54-62) MP 2065
Thin ice growth Ashton, G D., (1989, p.564-566) MP 2657

Delaware Bay
Remote sensing data for water masses in Delaware Bay and adjacent wetlands Ackleson, S G., et al, (1985, p.1123-1129) MP 1909

Density (mass/volume)
Temperature effects in compacting an asphalt concrete overlay Eaton, R A., et al, (1978, p.146-158) MP 1083
Soil infiltration on land treatment sites Abele, G., et al, (1980, 41p.) SR 80-36
Arctic Ocean temperature, salinity and density, March-May 1979 McPhee, M G., (1981, 20p) SR 81-05
Laboratory and field use of soil tensiometers above and below 0 deg C Ingersoll, J., (1981, 17p) SR 81-07
Approximate solution to conduction freezing with density variation Lunardini, V J., (1983, p 43-45) MP 1598

Depth hoar
Growth of faceted crystals in a snow cover Colbeck, S C., (1982, 19p) CR 82-29

Design
Architectural programming: Making socially responsive architecture more accessible Ledbetter, C B., (1978, 7p) SR 78-02
Some aspects of Soviet trenching machines Mellor, M., (1980, 13p) SR 80-07
Compacted-snow runways: design and construction guidelines for Antarctica. Russell-Head, D S., et al, (1989, 68p) SR 89-10
Roof design in cold regions. Tobiasson, W., (1989, p.1029-1037) MP 2651
Development and design of sludge freezing beds Martel, C.J., (1989, p.799-808) MP 2556
Remote water-temperature measurement. Daly, S., (1989, 6p) MP 2722
New approach for sizing rapid infiltration systems (discussion and closure) Reed, S C., et al, (1989, p 879-882) MP 2712

Design criteria
Snow load design criteria for the United States. Tobiasson, W., et al, (1976, p.70-72) MP 947
Bibliography on harbor and channel design in cold regions. Haynes, F.D., (1976, 32p) CR 76-03
Changes coming in snow load design criteria. Tobiasson, W., (1[illegible].9, p 413-418) MP 2612
Changes coming in snow load design criteria. Tobiasson, W., (1989, p.918-920) MP 2650
Simulation of district heating systems for piping design. Phetteplace, G., (1989, 27p.) MP 2746
Optimal sizing of district heating pipes. Phetteplace, G., (1989, 25p) MP 2747
Preliminary design guide for arctic equipment. Walsh, M R., et al, (1989, 35p) SR 89-13

Detection
Detecting wet roof insulation with a hand-held infrared camera. Korhonen, C., et al, (1978, p A9-A15) MP 1213
Research on roof moisture detection. Tobiasson, W., et al, (1978, 6p) SR 78-29
Bibliography on techniques of water detection in cold regions. Smith, D.W., comp, (1979, 75p) SR 79-10
Detection of Arctic water supplies with geophysical techniques. Arcone, S.A., et al, (1979, 30p.) CR 79-15
Roof moisture survey. Korhonen, C., et al, (1980, 31p) SR 80-14
Detection of sound by persons buried under snow avalanche. Johnson, J.B., (1984, p.42-47) MP 1920
Detection of buried utilities Bigl, S R., et al, (1984, 36p.) CR 84-31
Locating buried utilities. Bigl, S R., (1985, 48p) SR 85-14
Mine detection in cold regions using short-pulse radar. Arcone, S A., (1985, 16p) SR 85-23
Construction engineering community: materials and diagnostics. (1986, 54p.) SR 86-01
Effects of water and ice on the scattering of diffuse reflectors. Jezek, K.C., et al, (1986, p 259-269) MP 2664
Detecting underground objects/utilities. Hironaka, M.C., et al (1987, p 36-43) MP 2281
Preliminary development of a fiber optic sensor for TNT. Zhang, Y., et al, (1988, 16p.) SR 88-04
Experimental and theoretical studies of acoustic-to-seismic coupling. Albert, D G., (1988, p.19-31) MP 2432
Analytical method for determining tetrazene in soil. Walsh, M.E., et al, (1988, 22p.) SR 88-15
Detection of coarse sediment movement using radio transmitters. Chache, E.F., Jr., et al, (1989, p 367-373(B)) MP 2752
Single fiber measurements for remote optical detection of TNT Zhang, Y., et al, (1989, 7p.) SR 89-18

Detonation waves
Review of antitank obstacles for winter use. Richmond, P.W., (1984, 12p) CR 84-25

Detroit River
Water quality during winter river navigation seasons. Sletten, R.S., (1988, 56p) SR 88-10

Deuterium oxide ice
Mass transfer along ice surfaces. Tobin, T.M., et al, (1977, p.34-37) MP 1091

Dielectric properties
Electrical resistivity profile of permafrost. Hoekstra, P., (1974, p 28-34) MP 1045
Excavating rock, ice, and frozen ground by electromagnetic radiation. Hoekstra, P., (1976, 17p.) CR 76-36
Internal properties of the ice sheet at Cape Folger by radio echo sounding Kelher, T E., et al, (1978, 12p) CR 78-04
Interaction of a surface wave with a dielectric slab discontinuity. Arcone, S A., et al, (1978, 10p) CR 78-08
Anisotropic properties of sea ice Kovacs, A., et al, (1979, p 5749-5759) MP 1258
Liquid distribution and the dielectric constant of wet snow Colbeck, S C., (1980, p 21-39) MP 1349
VHF electrical properties of frozen ground near Point Barrow, Alaska Arcone, S A., et al, (1981, 18p) CR 81-13
Ground dielectric properties Arcone, S A., et al, (1982, 11p) CR 82-06
Laboratory measurements of soil electric properties between 0.1 and 5 GHz. Delaney, A J., et al, (1982, 12p) CR 82-10
Dielectric properties of thawed active layers Arcone, S A., et al, (1982, p 618-626) MP 1547
Effect of X-ray irradiation on internal friction and dielectric relaxation of ice Itagaki, K., et al, (1983, p 4314-4317) MP 1670
Field dielectric measurements of frozen silt using VHF pulses Arcone, S A., et al, (1984, p 29-37) MP 1774

Dielectric measurements of frozen silt using time domain reflectometry. Delaney, A J., et al, (1984, p 39-46) MP 1775
Coaxial waveguide reflectometry for frozen ground and ice. Delaney, A J., et al, (1984, p 428-431) MP 2048
Dielectric studies of permafrost. Arcone, S A., et al, (1985, p 3-5) MP 1951
Analysis of wide-angle reflection and refraction measurements. Morey, R.M., et al, (1985, p 53-60) MP 1953
Structure and dielectric properties at 4 8 and 9.5 GHz of saline ice Arcone, S A., et al, (1986, p.14,281-14,303) MP 2182
Single-horn reflectometry for *in situ* dielectric measurements at microwave frequencies. Arcone, S A., et al, (1988, p.89-92) MP 2333
Electromagnetic measurements of a second-year sea ice floe Kovacs, A., et al, (1988, p 121-136) MP 2346
Unfrozen water content of soils. Smith, M W., et al, (1988, 11p) CR 88-18
Correlation function study for sea ice. Lin, F.C., et al, (1988, p 14,055-14,063) MP 2511
Investigations of dielectric properties of some frozen materials. Arcone, S A., et al, (1989, 18p) CR 89-04
Estimating sea ice thickness using data from impulse radar soundings. Kovacs, A., et al, (1989, 10p) CR 89-22

Diffusion

Transport equation over long times and large spaces. O'Neill, K., (1981, p.1665-1675) MP 1497
Wetting fronts in porous media. Nakano, Y., (1983, p 71-78) MP 1720
Soil-water diffusivity of unsaturated frozen soils at subzero temperatures. Nakano, Y., et al, (1983, p 889-893) MP 1664
Diffusivity of horizontal water flow through porous media Nakano, Y., (1985, p 26-31) MP 1881
Transport of water in frozen soil 6. Effects of temperature Nakano, Y., et al, (1987, p 44-50) MP 2213
Effects of water and ice layers on the scattering properties of diffuse reflectors. Jezek, K.C., et al, (1987, p.5143-5147) MP 2301

Discontinuous permafrost

Geophysical methods for hydrological investigations in permafrost regions. Hoekstra, P., (1976, p.75-90) MP 932
Climatic and dendroclimatic indices in the discontinuous permafrost zone of the Central Alaskan Uplands. Haugen, R K., et al, (1978, p.392-398) MP 1899
Permafrost and active layer on a northern Alaskan road Berg, R L., et al, (1978, p 615-621) MP 1182
Bibliography of permafrost soils and vegetation in the USSR. Andrews, M., (1978, 175p) SR 78-19
Sediment load and channel characteristics in subarctic upland catchments. Slaughter, C.W., et al, (1981, p 39-48) MP 1518
Runoff from a small subarctic watershed, Alaska Chacho, E.F., et al, (1983, p.115-120) MP 1654
Mitigative and remedial measures for chilled pipelines in discontinuous permafrost Sayles, F H., (1984, p.61-62) MP 1974
Seasonal variations in resistivity and temperature in discontinuous permafrost Delaney, A J., et al, (1988, p 927-932) MP 2365
Water and suspended solids discharge during snowmelt Chacho, E.F., Jr., (1990, p.167-173) MP 2765

Dislocations (materials)

Dielectric properties of dislocation-free ice Itagaki, K., (1978, p 207-217) MP 1171
X-ray measurement of charge density in ice Itagaki, K., (1978, 12p) CR 79-25
Charged dislocation in ice 2 Contribution of dielectric relaxation Itagaki, K., (1982, 15p) CR 82-07

docks

Ice engineering O'Steen, D A., (1980, p 41-47) MP 1602
Rebuilding infrastructure for pleasure boating Wettley, C.A., et al, (1989, p 188-201) MP 2466

Doped ice

Properties of urea-doped ice in the CRREL test basin Hirayama, K., (1983, 44p) CR 83-08

Drainage

Topological properties of some trellis pattern channel networks Mock, S J., (1976, 54p) CR 76-46
Roof loads resulting from rain-on-snow Colbeck, S C., (1977, 19p) CR 77-12
Storm drainage design considerations in cold regions Lobacz, E F., et al, (1978, p 474-489) MP 1088
Frost action in New Jersey highways Berg, R L., et al, (1978, 80p) SR 78-09
Study of water drainage from columns of snow Denoth, A., et al, (1979, 19p) CR 79-01
Drainage network of a subarctic watershed Bredthauer, S R., et al, (1979, 9p) SR 79-19
Drainage network analysis of a subarctic watershed Bredthauer, S R., et al, (1979, p 349-359) MP 1274
Hydraulic characteristics of the Deer Creek Lake land treatment site during wastewater application Abele, G., et al, (1981, 37p) CR 81-07
Potholes the problem and solutions Eaton, R A., (1982, p.160-162) MP 1504
Roof moisture surveys Tobiasson, W., (1982, p 163-166) MP 1505
Hydrology and climatology of a drainage basin near Fairbanks, Alaska Haugen, R K., et al, (1982, 34p) CR 82-26
Interaction of gravel, surface drainage and culverts with permafrost. Brown, J., et al, (1984, 35p) MP 2215
Rating unsurfaced roads. Eaton, R A., et al, (1987, 34p) SR 87-15
Deep frost effects on a longitudinal edge drain Allen, W L., (1989, p 343-352) MP 2469
Roof design in cold regions Tobiasson, W., (1989, p.462-472) MP 2613
Roof design in cold regions. Tobiasson, W., (1989, p 1029-1037) MP 2651

Dredging

Effect of open water disposal of dredged sediments Blom, B E., et al, (1976, 183p) MP 967
Consolidating dredged material by freezing and thawing. Chamberlain, E.J., (1977, 94p) MP 978
Densification by freezing and thawing of fine material dredged from waterways Chamberlain, E J., et al, (1978, p 622-628) MP 1103
Subsea trenching in the Arctic. Mellor, M., (1981, 31p) CR 81-17
Restoration of acidic dredge soils with sewage sludge and lime Palazzo, A J., (1983, 11p) CR 83-28
Impact of dredging on water quality at Kewaunee Harbor, Wisconsin Iskandar, I K., et al, (1984, 16p) CR 84-21
Use of remote sensing for the U.S. Army Corps of Engineers dredging program McKim, H L., et al, (1985, p 1141-1150) MP 1890
Potential of remote sensing in the Corps of Engineers dredging program. McKim, H L., et al, (1985, 42p) SR 85-20
Use of SPOT HRV data in a Corps dredging operation in Lake Erie. Merry, C.J., et al, (1987, p 49-55) MP 2548
Use of SPOT HRV data in the Corps of Engineers dredging program Merry, C.J., et al, (1988, p 1295-1299) MP 2528

Drift

Results of the US contribution to the Joint US/USSR Bering Sea Experiment Campbell, W J., et al, (1974, 197p) MP 1032
Meso-scale strain measurements on the Beaufort sea pack ice (AIDJEX 1971) Hibler, W D., III, et al, (1974, p.119-138) MP 1035
Ice dynamics, Canadian Archipelago and adjacent Arctic Basin Ramseier, R O., et al, (1975, p 853-877) MP 1585
Remote measurement of sea ice drift Hibler, W D., III, et al, (1975, p.541-554) MP 849
Sea ice drift and deformation from LANDSAT imagery Hibler, W.D., III, et al, (1976, p 115-135) MP 1059
Techniques for studying sea ice drift and deformation at sites far from land using LANDSAT imagery Hibler, W D., III, et al, (1976, p 595-609) MP 866
Sea ice conditions in the Arctic Weeks, W F., (1976, p 173-205) MP 910
Seasonal variations in apparent sea ice viscosity on the geophysical scale Hibler, W D., III, et al, (1977, p 87-90) MP 900
Dynamics of near-shore ice Kovacs, A., et al, (1977, p 151-163) MP 1073
Ice arching and the drift of pack ice through restricted channels Sodhi, D S., (1977, 11p) CR 77-18
Nearshore ice motion near Prudhoe Bay, Alaska Tucker, W B., et al, (1977, p 23-31) MP 1162
Finite element formulation of a sea ice drift model Sodhi, D S., et al, (1977, p 67-76) MP 1165
Dynamics of near-shore ice Kovacs, A., et al, (1977, p 503-510) MP 1200
Ice arching and the drift of pack ice through channels Sodhi, D S., et al, (1978, p 415-432) MP 1138
Dynamics of near-shore ice Kovacs, A., et al, (1978, p 11-22) MP 1205
Measurement of mesoscale deformation of Beaufort sea ice (AIDJEX-1971) Hibler, W D., III, et al, (1978, p 149-172) MP 1179
Effect of the oceanic boundary layer on the mean drift of pack ice application of a simple model McPhee, M G., (1979, p 381-400) MP 1198
Drifting buoy measurements on Weddell Sea pack ice Ackley, S F., (1979, p 106-108) MP 1339
Oceanic boundary-layer features and oscillation at drift stations McPhee, M G., (1980, p 270-284) MP 1369
Sea ice growth, drift, and decay Hibler W D., III, (1980, p 141-209) MP 1298
Nonsteady ice drift in the Strait of Belle Isle Sodhi, D S., et al, (1980, p 177-186) MP 1364
Continuum sea ice model for a global climate model Ling, C H., et al, (1980, p 187-196) MP 1622
Sea ice studies in the Weddell Sea aboard USCG Polar Sea Ackley, S F., et al, (1980, p 84-96) MP 1431
Modeling a variable thickness sea ice cover Hibler, W D., III, (1980, p 1943-1973) MP 1424
Sea-ice atmosphere interactions in the Weddell Sea using drifting buoys Ackley, S F., (1981, p 177-191) MP 1427
Preliminary results of ice modeling in the East Greenland area. Tucker, W B., et al, (1981, p 867-878) MP 1458
Application of a numerical sea ice model to the East Greenland area Tucker, W.B., (1981, 109p) MP 1535
Dynamics of near-shore ice Kovacs, A., et al, (1981, p 125-135) MP 1599
Sea ice drag laws and boundary layer during rapid melting. McPhee, M G., (1982, 17p) CR 82-04
Application of a numerical sea ice model to the East Greenland area. Tucker, W.B., (1982, 40p) CR 82-16
Offshore mechanics and Arctic engineering, symposium, 1983 (1983, 813p) MP 1581
Numerical simulation of the Weddell Sea pack ice Hibler, W D., III, et al, (1983, p 2873-2887) MP 1592
Offshore petroleum production in ice-covered waters. Tucker, W B., (1983, p 207-215) MP 2086
Modeling of ice discharge in river models. Calkins, D.J., (1983, p 285-290) MP 2081
East Greenland Sea ice variability in large-scale model simulations Walsh, J E., et al, (1984, p 9-14) MP 1779
Mechanism for floe clustering in the marginal ice zone. Lepparanta, M., et al, (1984, p 73-76) MP 1785
Sea ice data buoys in the Weddell Sea. Ackley, S F., et al, (1984, 18p) CR 84-11
Model simulation of 20 years of northern hemisphere sea-ice fluctuations Walsh, J E., et al, (1984, p.170-176) MP 1767
Ice dynamics Hibler, W D., III, (1984, 52p) M 84-03
Mechanical properties of sea ice a status report. Weeks, W F., et al, (1984, p 135-198) MP 1800
Sea ice penetration in the Arctic Ocean. Weeks, W.F., (1984, p 37-65) MP 1993
Arctic sea ice and naval operations Hibler, W D., III, et al, (1984, p 67-91) MP 1994
Numerical modeling of sea ice dynamics and ice thickness. Hibler, W D., III, (1985, 50p) CR 85-05
Numerical simulation of Northern Hemisphere sea ice variability, 1951-1980 Walsh, J E., et al, (1985, p.4847-4865) MP 1882
Sea ice and the Fairway Rock icefoot Kovacs, A., et al, (1985, p 25-32) MP 2145
Large-scale ice-ocean modeling. Hibler, W D., III, (1986, p.165-184) MP 2142
Ice dynamics Hibler, W D., III, (1986, p 577-640) MP 2211
Mesoscale sea ice deformation in the East Greenland marginal ice zone Lepparanta, M., et al, (1987, p 7060-7070) MP 2241
Alaska SAR facility Weeks, W F., et al, (1988, p 103-110) MP 2344
Evaluation of an operational ice forecasting model during summer Tucker, W B., et al, (1988, p 159-174) MP 2347
Effect of ice pressure on marginal ice zone dynamics Flato, G M., et al, (1989, p 514-521) MP 2522
Models of the mechanical properties of ice Richter-Menge, J A., et al, (1989, p 87-99) MP 2687
On modeling the basinwide adjustment of the Arctic Ocean Hibler, W D., III, (1990, p 247-250) MP 2739

Drift stations

Some results from a linear-viscous model of the Arctic ice cover Hibler, W D., III, et al, (1979, p 293-304) MP 1241
Arctic Ocean temperature, salinity and density, March-May 1979 McPhee, M G (1981, 20p) SR 81-05
Air-sea-ocean interaction experiments in Arctic marginal ice zones (1984, 56p) SR 84-28
Mesoscale air-sea-ocean interaction experiments Johannessen, O M., ed, (1984, 176p) SR 84-29
Oceanic heat flux in the Fram Strait measured by a drifting buoy Perovich, D K., et al, (1990, p 291-296) MP 2740

Drill core analysis

Byrd Land quaternary volcanism LeMasurier, W E., (1972, p 139-141) MP 994
Gas inclusions in the Antarctic ice sheet Gow, A J., et al, (1975, p 5101-5108) MP 847
Internal structure and crystal fabrics of the West Antarctic ice sheet Gow, A J., et al, (1976, 25p) CR 76-35
Delineation and engineering characteristics of permafrost beneath the Beaufort Sea Sellmann, P V., et al, (1975, p 53-80) MP 919
Delineation and engineering characteristics of permafrost beneath the Beaufort Sea Sellmann, P V., et al, (1977, p 412-440) MP 1077
1977 CRREL-USGS permafrost program Beaufort Sea, Alaska, operational report Sellmann, P V., et al, (1977, 19p) SR 77-41
Delineation and engineering characteristics of permafrost beneath the Beaufort Sea Sellmann, P V., et al, (1977, p 518-521) MP 1201
Engineering properties of submarine permafrost near Prudhoe Bay Chamberlain, E J., et al, (1978, p 629-633) MP 1104
Geochemistry of subsea permafrost at Prudhoe Bay, Alaska Page, H W., et al, (1978, 70p) SR 78-14
Permafrost beneath the Beaufort Sea, near Prudhoe Bay, Alaska Sellmann, P V., et al, (1979, p 1481-1491) MP 1211

Drill core analysis *(cont.)*
Stratified debris in Antarctic ice cores. Gow, A.J., et al, (1979, p.185-192) MP 1272
20-yr cycle in Greenland ice core records. Hibler, W.D., III, et al, (1979, p.481-483) MP 1245
Antifreeze-thermodrilling, central Ross Ice Shelf. Zotikov, I.A., (1979, 12p) CR 79-24
Ultrasonic tests of Byrd Station ice cores. Gow, A.J., et al, (1979, p.147-153) MP 1282
Margin of the Greenland ice sheet at Isua. Colbeck, S.C., et al, (1979, p.155-165) MP 1281
Features of permafrost beneath the Beaufort Sea. Sellmann, P.V., et al, (1980, p 103-110) MP 1344
Time-priority studies of deep ice cores. Gow, A.J., (1980, p.91-102) MP 1308
Characteristics of permafrost beneath the Beaufort Sea. Sellmann, P.V., et al, (1981, p.125-157) MP 1428
US global ice core research program West Antarctica and beyond. Grootes, P.M., et al, (1989, 32p) MP 2709
Dominion Range ice core characteristics, Antarctica. Mayewski, P.A., et al, (1990, p 11-16) MP 2707

Drilling
Subsurface explorations in permafrost areas. Cass, J.R., Jr., (1959, p.31-41) MP 885
General considerations for drill system design Mellor, M., et al, (1976, p.77-111) MP 856
USA CRREL shallow drill. Rand, J.H., (1976, p 133-137) MP 873
Dynamics and energetics of parallel motion tools for cutting and boring. Mellor, M., (1977, 85p) CR 77-07
Ross Ice Shelf Project drilling, October-December 1976. Rand, J.H., (1977, p.150-152) MP 1061
Large mobile drilling rigs used along the Alaska pipeline. Sellmann, P.V., et al, (1978, 23p) SR 78-04
Ross Ice Shelf Project environmental impact statement July, 1974. Parker, B.C., et al, (1978, p 7-36) MP 1075
Engineering properties of submarine permafrost near Prudhoe Bay. Chamberlain, E.J., et al, (1978, p 629-635) MP 1104
Core drilling through Ross Ice Shelf. Zotikov, I.A., et al, (1979, p 63-64) MP 1337
Danish deep drill; progress report: February-March 1979. Rand, J.H., (1980, 37p.) SR 80-03
Drilling and coring of frozen ground in northern Alaska, Spring 1979. Lawson, D.E., et al, (1980, 14p.) SR 80-12
Mechanics of cutting and boring in permafrost Mellor, M., (1980, 82p) CR 80-21
South Pole ice core drilling, 1981-1982 Kuivinen, K.C., et al, (1982, p 89-91) MP 1621
Calculating borehole geometry Jezek, K.C., et al, (1984, 18p) SR 84-15
Arctic ice and drilling structures Sodhi, D.S., (1985, p 63-69) MP 2119
Response of permafrost to disturbance. Lawson, D.E., (1986, p.1-7) MP 2165
Drilling in frozen ground, bitumens and concretes. Sellmann, P.V., et al, (1988, 10p) SR 88-08
Engineering geology studies on the National Petroleum Reserve in Alaska. Kachadoorian, R., et al, (1988, p.899-922) MP 2519
Introduction to drilling technology. Mellor, M., (1989, p.95-114) MP 2591
Undersaturation in thawed permafrost at the beginning of freezeback. Ayorinde, O.A., (1990, p 317-321) MP 2582

Drilling fluids
Sorption of military explosive contaminants on bentonite drilling muds Leggett, D.C., (1985, 33p) CR 85-18

Drills
Stake driving tools: a preliminary survey Kovacs, A., et al, (1977, 43p) SR 77-13
Transverse rotation machines for cutting and boring in permafrost Mellor, M., (1977, 36p) CR 77-19
Mechanics of cutting and boring in permafrost Mellor, M., (1981, 38p.) CR 81-26
Prototype drill for core sampling fine-grained perennially frozen ground. Brockett, B.E., et al, (1985, 29p) CR 85-01
Drill bits for frozen fine-grained soils. Sellmann, P.V., et al, (1986, 33p.) SR 86-27
Auger bit for frozen fine-grained soil Sellmann, P.V., et al, (1986, 13p) SR 86-36

Drops (liquids)
Numerical simulation of atmospheric ice accretion Ackley, S.F., et al, (1979, p 44-52) MP 1235
Heat and mass transfer from freely falling drops at low temperatures Zarling, J.P., (1980, 14p) CR 80-18
Condensate profiles over Arctic leads. Andreas, E.L., et al, (1981, p 437-460) MP 1479
Persistence of chemical agents on the winter battlefield Leggett, D.C., (1987, 20p) CR 87-12
Thermal and size evolution of sea spray droplets Andreas, E.L., (1989, 37p.) CR 89-11

Drying
Can wet roof insulation be dried out. Tobiasson, W., et al, (1983, p 626-639) MP 1509

Dust
Changes in the composition of atmospheric precipitation Cragin, J.H., et al, (1977, p.617-631) MP 1079
Chemical composition of haul road dust and vegetation. Iskandar, I.K., et al, (1978, p.110-111) MP 1116
Road dust along the Haul Road, Alaska. Everett, K.R., (1980, p.101-128) MP 1352
Vibrating wire technology for settled dust monitoring. Dutta, P.K., et al, (1988, p.71-82) MP 2516

Dust control
Sublimation and its control in the CRREL permafrost tunnel. Johansen, N.I., (1981, 12p) SR 81-08

Dusting
Snowmelt incr. use through albedo reduction. Colbeck, S.C., (1988, 11p.) SR 88-26

DYNAMIC LOADS
Ice pressure on engineering structures. Michel, B., (1970, 71p) M III-B1b

Dynamic loads
Repetitive loading tests on membrane enveloped road sections during freeze thaw. Smith, N., et al, (1977, p.171-197) MP 962
Technique for measuring radial deformation during repeated load triaxial testing. Cole, D.M., (1978, p 426-429) MP 1157
Freeze thaw loading tests on membrane enveloped road sections. Smith, N., et al, (1978, p.1277-1288) MP 1158
Critical velocities of a floating ice plate subjected to in-plane forces and a moving load Kerr, A.D., (1979, 12p) CR 79-19
Volumetric constitutive law for snow under strain. Brown, R.L., (1979, 13p.) CR 79-20
Cyclic loading and fatigue in ice. Mellor, M., et al, (1981, p 41-53) MP 1371
On the buckling force of floating ice plates. Kerr, A.D., (1981, 7p) CR 81-09
Dynamic ice-structure interaction analysis for narrow vertical structures. Eranti, E., et al, (1981, p 472-479) MP 1456
Acoustic emissions from polycrystalline ice St. Lawrence, W.F., et al, (1982, p.183-199) MP 1524
Dynamic ice-structure interaction during continuous crushing. Määttänen, M., (1983, 48p.) CR 83-05
Dynamic buckling of floating ice sheets Sodhi, D.S., (1983, p 822-833) MP 1607
Thermal patterns in ice under dynamic loading Fish, A.M., et al, (1983, p.240-243) MP 1742
Dependence of crushing specific energy on the aspect ratio and the structure velocity. Sodhi, D.S., et al, (1984, p.363-374) MP 1708
Determining the characteristic length of floating ice sheets by moving loads. Sodhi, D.S., et al, (1985, p.155-159) MP 1855
Ice beam moving against a sloping structure. Sodhi, D.S., (1987, p 281-284) MP 2194

Dynamic properties
Dynamic aerosol flow chamber. Hewitt, A.D., (1988, 13p) SR 88-21
Dynamic analysis of a floating ice sheet undergoing vertical indentation. McGilvary, W.R., et al, (1990, p 195-203) MP 2579

Earth dams
Construction and performance of the Hess creek earth fill dam, Livengood, Alaska. Simoni, O.W., (1973, p 23-34) MP 859
Slumping failure of an Alaskan earth dam. Collins, C.M., et al, (1977, 21p) SR 77-21
Remote sensing for earth dam site selection and construction materials. Merry, C.J., et al, (1980, p.158-170) MP 1316
Embankment dams on permafrost in the USSR. Johnson, T.C., et al, (1980, 59p.) SR 80-41

Earth fills
Construction and performance of the Hess creek earth fill dam, Livengood, Alaska Simoni, O.W., (1973, p.23-34) MP 859

Earth movement
Analysis of explosively generated ground motions using Fourier techniques Blouin, S.E., et al, (1976, 86p) CR 76-28

Earthquakes
Environmental consequences of 1964 Alaska earthquake in Portage, Alaska Ovenshine, A.T., et al, (1974, p.3-9) MP 2409
Placer River Silt—an intertidal deposit caused by the 1964 Alaska earthquake Ovenshine, A.T., et al, (1976, p 151-162) MP 2410
Hydraulic transients: a seismic source in volcanoes and glaciers. St. Lawrence, W.F., et al, (1979, p 654-656) MP 1181
Alaska Good Friday earthquake of 1964. Swinzow, G.K., (1982, 26p) CR 82-01
Fluid dynamic analysis of volcanic tremor. Ferrick, M.G., et al, (1982, 12p) CR 82-32
Source mechanism of volcanic tremor. Ferrick, M.G., et al, (1982, p 8675-8683) MP 1576

Earthwork
Regionalized feasibility study of cold weather earthwork Roberts, W.S., (1976, 190p) SR 76-02
Winter earthwork construction in Upper Michigan Haas, W.M., et al, (1977, 59p.) SR 77-40
Some aspects of Soviet trenching machines Mellor, M., (1980, 13p) SR 80-07
Construction of an embankment with frozen soil. Botz, J.J., et al, (1980, 105p.) SR 80-21
Excavation of frozen materials. Moore, H.E., et al, (1980, p 323-345) MP 1360

Echo sounding
Variability of Arctic sea ice drafts. Tucker, W.B., et al, (1986, p.237-256) MP 2198
High frequency acoustical properties of saline ice. Jezek, K.C., et al, (1989, p.9-23) MP 2686

Ecology
Ecological baseline on the Alaskan haul road. Brown, J., ed, (1978, 131p) SR 78-13
International Workshop on the Seasonal Sea Ice Zone, Monterey, California, Feb. 26-Mar 1, 1979. Andersen, B.G., ed, (1980, 357p.) MP 1292
Winter habitats of salmon and trout. Calkins, D.J., (1989, 9p.) SR 89-34
Sea ice a habitat for the foraminifer *Neogloboquadrina pachyderma?*. Dieckmann, G., et al, (1990, p 86-92) MP 2732
Arctic research of the United States, Vol.4. (1990, 120p.) MP 2765

Economic analysis
Regionalized feasibility study of cold weather earthwork. Roberts, W.S., (1976, 190p.) SR 76-02

Economic development
International arctic research programs. Chung, J.S., comp, (1989, 74p) SR 89-21
U.S. Federal arctic research Devine, J.S., et al, (1989, p 65-74) MP 2671

Economics
Towing icebergs. Lonsdale, H.K., et al, (1974, p.2) MP 1020
Some economic benefits of ice booms. Perham, R.E., (1977, p.570-591) MP 959

Ecosystems
Tundra biome program. Brown, J., (1970, p.1278) MP 881
Tundra biome applies new look to ecological problems in Alaska. Brown, J., (1970, p.9) MP 880
Word model of the Barrow ecosystem. Brown, J., et al, (1970, p.41-43) MP 943
Synthesis and modeling of the Barrow, Alaska, ecosystem. Coulombe, H.N., et al, (1970, p 44-49) MP 944
Bibliography of the Barrow, Alaska, IBP ecosystem model. Brown, J., (1970, p 65-71) MP 946
Influence of grazing on Arctic tundra ecosystems. Batzli, G.O., et al, (1976, p.153-160) MP 970
Geobotanical atlas of the Prudhoe Bay region, Alaska. Walker, D.A., et al, (1980, 69p.) CR 80-14
Arctic ecosystem: the coastal tundra at Barrow, Alaska. Brown, J., ed, (1980, 571p.) MP 1355
Coastal tundra at Barrow. Brown, J., et al, (1980, p.1-29) MP 1356
Tundra and analogous soils Everett, K.R., et al, (1981, p 139-179) MP 1405
Introduction to abiotic components in tundra. Brown, J., (1981, p.79) MP 1432
Point Barrow, Alaska, USA. Brown, J., (1981, p.775-776) MP 1434
U.S. tundra biome publication list. Brown, J., et al, (1983, 29p) SR 83-29

Education
Technology transfer. Eaton, R., (1990, p 25) MP 2721

Elastic properties
Flexible pavement resilient surface deformations. Smith, N., et al, (1975, 13 leaves) MP 1264
Resiliency of subgrade soils during freezing and thawing. Johnson, T.C., et al, (1978, 59p) CR 78-23
Photoelastic instrumentation—principles and techniques. Roberts, A., et al, (1979, 153p) SR 79-13
Bending and buckling of a wedge on an elastic foundation. Nevel, D.E., (1980, p.278-288) MP 1303
Effect of freezing and thawing on resilient modulus of granular soils. Cole, D.M., et al, (1981, p 19-26) MP 1484
Resistance of elastic rock to the propagation of tensile cracks Peck, L., et al, (1985, p 7827-7836) MP 2052
Fiber composite materials in an arctic environment. Dutta, P.K., (1989, p 216-225) MP 2559

Elastic waves
Observations of volcanic tremor at Mount St. Helens volcano. Fehler, M., (1984, p 3476-3484) MP 1770

Electric charge
X-ray measurement of charge density in ice. Itagaki, K., (1978, 12p) CR 79-25
Possibility of anomalous relaxation due to the charged dislocation process Itagaki, K., (1983, p 4261-4264) MP 1669

Electric equipment
Simplified method for monitoring soil moisture. Walsh, J.E., et al, (1978, p 40-44) MP 1194
Mapping resistive seabed features using DC methods Sellmann, P.V., et al, (1985, p 136-147) MP 1918
Phase change heat transfer program for microcomputers. Buzzell, G.M., et al, (1988, p 645-650) MP 2383

Electric fields
Interaction of a surface wave with a dielectric slab discontinuity. Arcone, S.A., et al, (1978, 10p) CR 78-08

VLF airborne resistivity survey in Maine. Arcone, S A., (1978, p.1399-1417) MP 1166
Distortion of model subsurface radar pulses in complex dielectrics. Arcone, S.A., (1981, p 855-864) MP 1472
Electric heating
Methods to reduce ice accumulation on miter gate recess walls. Rand, J.H., et al, (1989, 5p.) MP 2723
Reduced winter leakage in gates with J-seals Rand, J.H., et al, (1989, 3p.) MP 2724
Electric power
Losses from the Fort Wainwright heat distribution system. Phetteplace, G., et al, (1981, 29p.) SR 81-14
Ice growth and circulation in Kachemak Bay, Alaska. Daly, S F., (1982, p (C)1-(C)9) MP 1501
Unconventional power sources for ice control at locks and dams. Nakato, T., et al, (1989, p 107-126) MP 2572
Electrical grounding
Improving electric grounding in frozen materials. Delaney, A.J., et al, (1982, 12p.) SR 82-13
Observations during BRIMFROST '83 Bouzoun, J.R., et al, (1984, 36p.) SR 84-10
Conductive backfill for improving electrical grounding in frozen soils. Sellmann, P.V., et al, (1984, 19p.) SR 84-17
Electrical measurement
Technique for measuring radial deformation during repeated load triaxial testing Cole, D.M., (1978, p 426-429) MP 1157
Catalog of smoke/obscurant characterization instruments. O'Brien, H.W., et al, (1984, p.77-82) MP 1865
ELECTRICAL PROPERTIES
Snow as a material Bader, H., et al, (1962, 79p.) M II-B
Electrical properties
Shallow electromagnetic geophysical investigations of permafrost. Arcone, S A., et al, (1978, p.501-507) MP 1101
Electrical properties of frozen ground, Point Barrow, Alaska Arcone, S.A., et al, (1982, p 485-492) MP 1572
Natural electrical potentials that arise when soils freeze. Yarkin, I.G., (1986, 24p.) SR 86-12
Borehole investigations of the electrical properties of frozen silt Arcone, S A., et al, (1988, p 910-915) MP 2364
Electrical prospecting
Shallow electromagnetic geophysical investigations of permafrost. Arcone, S A., et al, (1978, p.501-507) MP 1101
Electrical resistivity
Conductivity and surface impedance of sea ice McNeill, D., et al, (1971, 19p plus diagrams) MP 1071
Electrical resistivity profile of permafrost Hoekstra, P., (1974, p 28-34) MP 1045
Airborne E-phase resistivity surveys of permafrost. Sellmann, P.V., et al, (1974, p 67-71) MP 1046
Electrical ground impedance measurements in Alaskan permafrost regions. Hoekstra, P., (1975, 60p.) MP 1049
Bedrock geology survey in northern Maine. Sellmann, P.V., et al, (1976, 19p.) CR 76-37
Structural growth of lake ice. Gow, A.J., et al, (1977, 24p.) CR 77-01
Computer program for determining electrical resistance in nonhomogeneous ground Arcone, S A., (1977, 16p.) CR 77-02
Selected examples of radiohm resistivity surveys for geotechnical exploration. Hoekstra, P., et al, (1977, 16p.) SR 77-01
Numerical studies for an airborne VLF resistivity survey Arcone, S A., (1977, 10p.) CR 77-05
Evaluation of electrical equipment for measuring permafrost distribution Sellmann, P.V., et al, (1977, p 39-42) MP 925
Investigation of an airborne resistivity survey conducted at very low frequency. Arcone, S.A., (1977, 48p.) CR 77-20
VLF airborne resistivity survey in Maine. Arcone, S A., (1978, p.1399-1417) MP 1166
Electrical ground impedance Arcone, S A., et al, (1978, 92p.) MP 1221
Geophysics in the study of permafrost Scott, W.J., et al, (1979, p 93-115) MP 1266
Electrical resistivity of frozen ground Arcone, S.A., (1979, p 32-37) MP 1623
Bibliography on techniques of water detection in cold regions. Smith, D.W., comp, (1979, 75p.) SR 79-10
Determination of frost penetration by soil resistivity measurements Atkins, R T., (1979, 24p.) SR 79-22
Break-up of the Yukon River at the Haul Road Bridge, 1979. Stephens, C.A., et al, (1979, 22p + Figs.) MP 1315
Measurements of ground resistivity. Arcone, S A., (1982, p 92-110) MP 1513
Improving electric grounding in frozen materials Delaney, A J., et al, (1982, 12p.) SR 82-13
Radar wave speeds in polar glaciers. Jezek, K C., et al, (1983, p 199-208) MP 2057
Conductive backfill for improving electrical grounding in frozen soils. Sellmann, P.V., et al, (1984, 19p.) SR 84-17
DC resistivity measurements of model saline ice sheets Arcone, S.A., (1987, p.845-849) MP 2308
Seasonal variations in resistivity and temperature in discontinuous permafrost Delaney, A J., et al, (1988, p.927-932) MP 2365
Coastal subsea permafrost and bedrock observations using dc resistivity. Sellmann, P.V., et al, (1989, 13p.) CR 89-13
Determination of frost penetration by soil resistivity measurements. Atkins, R.T., (1989, p 87-100) MP 2565
Electricity
Utility distribution systems in Sweden, Finland, Norway and England Aamot, H.W.C., et al, (1976, 121p.) SR 76-16
Electromagnetic properties
Excavating rock, ice, and frozen ground by electromagnetic radiation. Hoekstra, P., (1976, 17p.) CR 76-36
Radar anisotropy of sea ice. Kovacs, A., et al, (1978, p 6037-6046) MP 1139
Anisotropic properties of sea ice in the 50-150 MHz range. Kovacs, A., et al, (1979, p 324-353) MP 1620
Physical properties of sea ice and under-ice current orientation Kovacs, A., et al, (1980, p 109-153) MP 1323
Modeling of anisotropic electromagnetic reflection from sea ice. Golden, K.M., et al, (1980, p 247-294) MP 1325
Review of techniques for measuring soil moisture *in situ*. McKim, H L., et al, (1980, 17p.) SR 80-31
Sea ice anisotropy, electromagnetic properties and strength Kovacs, A., et al, (1980, 18p.) CR 80-20
Modeling of anisotropic electromagnetic reflection from sea ice. Golden, K.M., et al, (1980, 15p.) CR 80-23
Modeling of anisotropic electromagnetic reflections from sea ice Golden, K.M., et al, (1981, p 8107-8116) MP 1469
SNOW-ONE-A; Data report. Aitken, G.W., ed, (1982, 641p.) SR 82-08
Geometry and permittivity of snow Colbeck, S.C., (1982, p.113-131) MP 1985
Performance and optical signature of an AN/VVS-1 laser rangefinder in falling snow: Preliminary test results Lacombe, J., (1983, p 253-266) MP 1759
Characterization of snow for evaluation of its effect on electromagnetic wave propagation. Berger, R.H., (1983, p 35-42) MP 1648
Progress in methods of measuring the free water content of snow. Fisk, D.J., (1983, p 48-51) MP 1649
Electromagnetic properties of sea ice. Morey, R M., et al, (1984, 32p.) CR 84-02
Electromagnetic properties of sea ice Morey, R M., et al, (1984, p 53-75) MP 1776
Electromagnetic pulse propagation in dielectric slabs. Arcone, S A., (1984, p.1763-1773) MP 1991
Discussion Electromagnetic properties of sea ice by R.M. Morey, A. Kovacs and G F N. Cox Arcone, S A., (1984, p.93-94) MP 1821
Authors' response to discussion on Electromagnetic properties of sea ice Morey, R.M., et al, (1984, p.95-97) MP 1822
Performance of microprocessor-controlled snow crystal replicator. Koh, G., (1984, p 107-111) MP 1866
Electromagnetic properties of multi-year sea ice Morey, R.M., et al, (1985, p.151-167) MP 1902
Electromagnetic measurements of multi-year sea ice using impulse radar Kovacs, A., et al, (1985, 26p.) CR 85-13
Electromagnetic measurements of sea ice Kovacs, A., et al, (1986, p 67-93) MP 2020
Electromagnetic properties of sea ice. Kovacs, A., et al, (1986, p 57-133) MP 2197
Electromagnetic property trends in sea ice, Part 1. Kovacs, A., et al, (1987, 45p.) CR 87-06
Extinction coefficient for a distribution of ice fog particles Jordan, R., (1987, p 527-539) MP 2286
Modeling the electromagnetic property trends in sea ice: Part 1 Kovacs, A., et al, (1987, p 207-235) MP 2330
Two-stream multilayer, spectral radiative transfer model for sea ice Perovich, D K., (1989, 17p.) CR 89-15
Electromagnetic prospecting
Geophysical methods for hydrological investigations in permafrost regions. Hoekstra, P., (1976, p.75-90) MP 932
Evaluation of electrical equipment for measuring permafrost distribution Sellmann, P.V., et al, (1977, p 39-42) MP 925
Geophysics in the study of permafrost Scott, W J., et al, (1979, p 93-115) MP 1266
Electromagnetic survey in permafrost Sellmann, P V., et al, (1979, 7p.) SR 79-14
Electrical resistivity of frozen ground Arcone, S A., (1979, p 32-37) MP 1623
Electromagnetic surveys of permafrost Arcone, S A., et al, (1979, 24p.) CR 79-23
Electromagnetic subsurface measurements Dean, A M., Jr., (1981, 19p.) SR 81-23
Measurements of ground resistivity Arcone, S A., (1982, p 92-110) MP 1513
Snow and fog particle size measurements Berger, R.H., (1982, p 47-58) MP 1982
Airborne electromagnetic sounding of sea ice thickness and sub-ice bathymetry Kovacs, A., et al, (1987, p 289-311) MP 2332
Airborne measurement of sea ice thickness and subice bathymetry. Kovacs, A., et al, (1988, p.111-120) MP 2345
Electromagnetic measurements of a second-year sea ice floe Kovacs, A., et al, (1988, p.121-136) MP 2346
Airborne sea ice thickness sounding Kovacs, A., et al, (1989, p 1042-1052) MP 2623
Sea ice thickness measurement Kovacs, A., et al, (1989, p 394-424) MP 2693
Measurement of sea ice thickness using electromagnetic induction Holladay, J S., et al, (1990, p 309-315) MP 2590
Airborne sea ice thickness sounding Kovacs, A., et al, (1990, p 225-229) MP 2737
Electron microscopy
Aerosols in Greenland snow and ice Kumai, M., (1977, p 341-350) MP 1725
Elemental analyses of ice crystal nuclei and aerosols. Kumai, M., (1979, 5p.) MP 1191
Antarctic soil studies using a scanning electron microscope. Kumai, M., et al, (1978, p 106-112) MP 1386
Measurement and identification of aerosols collected near Barrow, Alaska. Kumai, M., (1978, 6p.) CR 78-20
Electron microscope investigations of frozen and unfrozen bentonite. Kumai, M., (1979, 14p.) CR 79-28
Ice crystal formation and supercooled fog dissipation. Kumai, M., (1982, p 579-587) MP 1539
Electronic equipment
Effects of conductivity on high-resolution impulse radar sounding. Morey, R.M., et al, (1982, 12p.) CR 82-42
Meteorological and snow cover measurements at Grayling, Michigan. Bates, R.E., et al, (1985, p 212-229) MP 2176
Embankments
Thermoinsulating media within embankments on perennially frozen soil Berg, R.L., (1976, 161p.) SR 76-03
Light-colored surfaces reduce thaw penetration in permafrost. Berg, R L., et al, (1977, p 86-99) MP 954
Construction of an embankment with frozen soil. Botz, J.J., et al, (1980, 105p.) SR 80-21
Embankment dams on permafrost in the USSR. Johnson, T.C., et al, (1980, 59p.) SR 80-41
Comparison of two-dimensional domain and boundary integral geothermal models with embankment freeze-thaw field data Hromadka, T V., II, et al, (1983, p 509-513) MP 1659
Interaction of gravel, surface drainage and culverts with permafrost. Brown, J., et al, (1984, 35p.) MP 2215
Design and performance of water-retaining embankments in permafrost Sayles, F H., (1984, p.31-42) MP 1850
Embankment dams on permafrost Sayles, F H., (1987, 109p.) SR 87-11
Engine starters
Engine starters in winter Coutts, H.J., (1981, 37p.) SR 81-32
Engineering
Icings developed from surface water and ground water Carey, K L., (1973, 71p.) M III-D3
Sea ice engineering Assur, A., (1976, p.231-234) MP 986
Delineation and engineering characteristics of permafrost beneath the Beaufort Sea. Sellmann, P.V., et al, (1977, p.385-395) MP 1074
Proceedings of the Second International Symposium on Cold Regions Engineering Burdick, J., ed, (1977, 597p.) MP 952
Engineering properties of snow. Mellor, M., (1977, p 15-66) MP 1015
Engineering properties of sea ice Schwarz, J., et al, (1977, p 499-531) MP 1065
Undersea pipelines and cables in pola: waters Mellor, M., (1978, 34p.) CR 78-22
Ice engineering O'Steen, D.A., (1980, p 41-47) MP 1602
Problems of the seasonal sea ice zone Weeks, W F., (1980, p.1-35) MP 1293
Conference on Computer and Physical Modeling in Hydraulic Engineering, 1980 Ashton, G.D., ed, (1980, 492p.) MP 1321
Haul Road performance and associated investigations in Alaska Berg, R L., (1980, p 53-100) MP 1351
Characteristics of permafrost beneath the Beaufort Sea. Sellmann, P V., et al, (1981, p 125-157) MP 1428
Ice engineering for civil work baseline study. Carey, K.L., et al, (1983, 91p.) MP 2441
Computational mechanics in arctic engineering Sodhi, D S., (1984, p 351-374) MP 2072
Permafrost Benson, C., et al, (1986, p 99-106) MP 2156
Cold climate utilities manual Smith, D W., ed, (1986, var p.) MP 2135
River and lake ice engineering Ashton, G D., ed, (1986, 485p.) MP 2144
Perspectives in ice technology Ashton, G.D., (1986, 4p.) MP 2288
International Conference on Snow Engineering, 1st, July 1988, (1989, 573p.) SR 89-06
Roof design in cold regions Tobiasson, W., (1989, p 462-472) MP 2613

Engineering *(cont.)*
Cold regions engineering research—strategic plan. Carlson, R.F., et al, (1989, p 172-190) MP 2571
Engineering geology
Delineation and engineering characteristics of permafrost beneath the Beaufort Sea. Sellmann, P.V., et al, (1976, p 53-60) MP 919
Distribution and properties of subsea permafrost of the Beaufort Sea. Sellmann, P.V., et al, (1979, p 93-115) MP 1287
Cold Regions Science and Technology Bibliography. Cummings, N H., (1981, p.73-75) MP 1372
Engines
Construction equipment problems and procedures Alaska pipeline project. Hanamoto, B., (1978, 14p) SR 78-11
Low temperature automotive emissions Coutts, H J., (1983, 2 vols) MP 1703
Enthalpy
Introduction to the basic thermodynamics of cold capillary systems. Colbeck, S C., (1981, 9p) SR 81-06
Solution of phase change problems O'Neill, K., (1983, p.134-146) MP 1894
Environment simulation
Numerical simulation of atmospheric ice accretion Ackley, S.F., et al, (1979, p.44-52) MP 1235
Computer simulation of urban snow removal Tucker, W B., et al, (1979, p 293-302) MP 1238
Ocean circulation its effect on seasonal sea-ice simulations. Hibler, W.D., III, et al, (1984, p 489-492) MP 1700
Numerical simulation of Northern Hemisphere sea ice variability, 1951-1980. Walsh, J.E., et al, (1985, p 4847-4865) MP 1882
ENVIRONMENTAL IMPACT
Symposium on fire in the northern environment. Slaughter, C.W., ed, (1971, 275p) MP 878
Environmental impact
Ecological effects of oil spills and seepages in cold-dominated environments McCown, B H., et al, (1971, p 61-65) MP 905
Thermal energy and the environment. Crosby, R L., et al, (1975, 3p + 2p. figs) MP 1480
Evaluation of an air cushion vehicle in Northern Alaska Abele, G., et al, (1976, 7p) MP 894
Ecological and environmental consequences of off-road traffic in northern regions. Brown, J., (1976, p 40-53) MP 1383
Air-cushion vehicle effects on surfaces of Alaska's Arctic Slopes. Slaughter, C.W., (1976, p 272-279) MP 1384
Hovercraft ground contact directional control devices. Abele, G., (1976, p.51-59) MP 875
Land treatment of wastewater at Manteca, Calif., and Quincy, Washington. Iskandar, I.K., et al, (1977, 34p) CR 77-24
Effects of low ground pressure vehicle traffic on tundra at Lonely, Alaska. Abele, G., et al, (1977, 32p) SR 77-31
Second progress report on oil spilled on permafrost McFadden, T., et al, (1977, 46p) SR 77-44
Ross Ice Shelf Project environmental impact statement July, 1974 Parker, B C., et al, (1978, p.7-36) MP 1075
Effects of winter military operations on cold regions terrain Abele, G., et al, (1978, 34p) SR 78-17
Plant recovery from Arctic oil spills Walker, D A., et al, (1978, p 242-259) MP 1184
Crude oil spills on black spruce forest Jenkins, T F., et al, (1978, p 305-323) MP 1185
Bibliography of permafrost soils and vegetation in the USSR Andrews, M., (1978, 175p) SR 78-19
Tundra recovery since 1949 near Fish Creek Alaska Lawson, D E., et al, (1978, 81p) CR 78-28
Noncorrosive methods of ice control Minsk, L D., (1979, p 133-162) MP 1265
Crude oil spills on subarctic permafrost in interior Alaska Johnson, L A., et al, (1980, 128p) MP 1310
Remote sensing of revegetation of burned tundra, Kokolik River, Alaska Hall, D K., et al, (1980 p 263 2[illegible] MP 1391
Road dust along the Haul Road, Alaska Everett, K R., (1980, p.101-128) MP 1352
Winter air pollution at Fairbanks, Alaska Coutts, H J., et al, (1981, p 512-528) MP 1395
Ecological impact of vehicle traffic on tundra Abele, G., (1981, p 11-37) MP 1463
Ice growth and circulation in Kachemak Bay, Alaska Daly, S.F., (1982, p (C)1-(C)9) MP 1501
Long-term active layer effects of crude oil spilled in interior Alaska. Collins, C M., (1983, p 175-179) MP 1656
Hydrologic modeling from Landsat land cover data McKim, H L., et al, (1984, 19p) SR 84-01
Response of permafrost to disturbance Lawson, D E., (1986, p 1-7) MP 2165
Disturbance and recovery of arctic Alaskan tundra terrain Walker, D A., et al, (1987, 63p) CR 87-11
Chemical analysis of hazardous wastes McGee, I E., et al, (1987, 57p) SR 87-21
Development of analytical methods for military-unique compounds Walsh, M.E., et al, (1988, p 370-380) MP 2454
Effects of all terrain vehicles on tundra. Racine, C., et al, (1988, 12p) SR 88-17
Waste management practices in Antarctica Sletten, R.S., et al, (1989, p 122-130) MP 2564
Influence of well casing composition on trace metals in ground water Hewitt, A D., (1989, 18p) SR 89-09
Comments on "Modeling adsorption/desorption kinetics of pesticides in a soil suspension". Leggett, D C., (1989, p.231) MP 2532
Use of off-road vehicles and mitigation of effects in Alaska permafrost environments a review Slaughter, C W., et al, (1990, p 63-72) MP 2682
Environmental protection
Tundra biome applies new look to ecological problems in Alaska. Brown, J., (1970, p.9) MP 880
Land disposal, state of the art Reed, S C., (1973, p.229-261) MP 1392
Symposium: geography of polar countries, selected papers and summaries Brown, J., ed, (1977, 61p) SR 77-06
Municipal sludge management environmental factors Reed, S.C., ed, (1977, Var. p) MP 1406
Role of research in developing surface protection measures for the Arctic Slope of Alaska Johnson, P.R., (1978, p 202-205) MP 1068
Surface protection measures for the Arctic Slope, Alaska. Johnson, P R., (1978, p 202-205) MP 1519
Ground pressures exerted by underground explosions Johnson, P.R., (1978, p 284-290) MP 1520
Biological restoration strategies in relation to nutrients at a subarctic site in Fairbanks, Alaska Johnson, L.A., (1978, p 460-466) MP 1100
Workshop on Environmental Protection of Permafrost Terrain Brown, J., et al, (1980, p 30-36) MP 1314
Building materials and acid precipitation. Merry, C.J., et al, (1985, 40p) SR 85-01
Vegetation recovery in the Cape Thompson region, Alaska Everett, K R., et al, (1985, 75p) CR 85-11
Description of the building materials data base for Cincinnati, Ohio. Merry, C.J., et al, (1986, 85p) SR 86-31
Inventorying building materials. Merry, C.J., (1986, 25p.) SR 86-33
Comparison of EPA and USATHAMA detection capability estimators Grant, C.L., et al, (1988, p 405-418) MP 2455
Arctic research of the United States, Vol 4 (1990, 120p) MP 2765
Environmental tests
Guidelines for architectural programming of office settings Ledbetter, C B., (1977, 14p) SR 77-05
Analytical methods for detecting military-unique compounds Jenkins, T F., et al, (1989, p 13-14) MP 2713
Influence of well casings on well water Hewitt, A D., et al, (1989, 9p) MP 2717
Environments
Arctic environmental factors affecting army operations Sater, J.E., ed, (1962, 11p) MP 984
Tundra biome program. Brown, J., (1970, p 1278) MP 881
Tundra biome applies new look to ecological problems in Alaska Brown, J., (1970, p.9) MP 880
Environmental setting, Barrow, Alaska Brown, J., (1970, p 50-64) MP 945
Case for comparison and standardization of carbon dioxide reference gases Kelley, J J., et al, (1973, p 163-181) MP 964
Arctic and subarctic environmental analyses utilizing ERTS-1 imagery. Anderson, D M., et al, (1973, 5p) MP 1611
Arctic and subarctic environmental analyses from ERTS imagery. Anderson, D M., et al, (1973, 6p) MP 1031
High-latitude basins as settings for circumpolar environmental studies Slaughter, C W., et al, (1975, p IV/57-IV/68) MP 917
Applications of remote sensing in New England McKim, H L., et al, (1975, 8p + 14 figs and tables) MP 913
Temporary environment. Cold regions habitability Bechtel, R.B., et al, (1976, 162p) SR 76-10
Notes on conducting the behavior setting survey by interview method Ledbetter, C.B., (1976, 33p) SR 76-14
Arctic transportation operational and environmental evaluation of an air cushion vehicle in northern Alaska Abele, G., et al, (1977, p 176-182) MP 985
Architects and scientists in research for design of buildings in Alaska Ledbetter, C.B., (1977, 8p) CR 77-23
UV radiational effects on Martian regolith water Nadeau, P H., (1977, 89p) MP 1072
Ecology on the Yukon-Prudhoe haul road Brown, J., ed, (1978, 131p) MP 1115
Communication in the work place an ecological perspective Ledbetter, C B., (1979, 19p) SR 79-03
Environment of the Alaskan Haul Road Brown, J., (1980, p 3-52) MP 1350
Environmental mapping of the Arctic National Wildlife Refuge, Alaska Walker, D A., et al, (1982, 59p + 2 maps) CR 82-37
Environments and standards for military operation Opitz, B K., et al, (1987, 137p) MP 2309
Equipment
Some aspects of Soviet trenching machines Mellor, M., (1980, 13p) SR 80-07
Mechanics of cutting and boring in permafrost. Mellor, M., (1980, 82p) CR 80-21
Snow removal equipment Minsk, L.D., (1981, p 648-670) MP 1446
Snow and ice control on railroads, highways and airports Minsk, L.D., et al, (1981, p 671-706) MP 1447
Mechanics of cutting and boring in permafrost. Mellor, M., (1981, 38p) CR 81-26
Ice engineering facility. Zabilansky, L.J., et al, (1983, 12p. + fig) MP 2088
Performance of a thermosyphon with an inclined evaporator and vertical condenser. Zarling, J.P., et al, (1984, p 64-68) MP 1677
System for mounting end caps on ice specimens Cole, D.M., et al, (1985, p.362-365) MP 2016
Pneumatically de-iced ice detector—final report, phase 2, part 1. Franklin, C.H., et al, (1986, 9p. + append.) MP 2249
Unique new cold weather testing facility. Eaton, R.A., (1989, p 335-342) MP 2468
Preliminary design guide for arctic equipment Walsh, M.R., et al, (1989, 35p) SR 89-13
Erosion
Some effects of air cushion vehicle operations on deep snow. Abele, G., et al, (1972, p.214-241) MP 887
Road construction and maintenance problems in central Alaska. Clark, E F., et al, (1976, 36p) SR 76-08
Bank erosion of U S northern rivers Gatto, L.W., (1982, 75p) CR 82-11
Erosion control
Revegetation and erosion control of the Trans-Alaska Pipeline. Johnson, L A., et al, (1977, 36p) SR 77-08
Utilization of sewage sludge for terrain stabilization in cold regions. Gaskin, D A., et al, (1977, 45p) SR 77-37
ERTS imagery
Arctic and subarctic environmental analysis through ERTS-1 imagery. Anderson, D M., et al, (1972, p 28-30) MP 1119
Arctic and subarctic environmental analyses utilizing ERTS-1 imagery. Anderson, D.M., et al, (1973, 5p) MP 1611
Mesoscale deformation of sea ice from satellite imagery. Anderson, D.M., et al, (1973, 2p) MP 1120
Arctic and subarctic environmental analyses Anderson, D M., et al, (1973, 3p) MP 1030
Arctic and subarctic environmental analyses from ERTS imagery Anderson, D M., et al, (1973, 6p) MP 1031
ERTS mapping of Arctic and subarctic environments. Anderson, D.M., et al, (1974, 128p) MP 1047
Islands of grounded ice. Kovacs, A., et al, (1975, p 213-216) MP 852
Estuaries
Estuarine processes and intertidal habitats in Grays Harbor, Washington: a demonstration of remote sensing techniques Gatto, L.W., (1978, 79p) CR 78-18
Physical properties of estuarine ice in Great Bay, New Hampshire. Meese, D A., et al, (1987, p 833-840) MP 2251
Evaporation
Radiation and evaporation heat loss during ice fog conditions. McFadden, T., (1975, p 18-27) MP 1051
Removal of trace organics by overland flow Leggett, D C., et al, (1982, p 176-184) MP 2442
Laboratory tests and analysis of thermosyphons with inclined evaporator sections Zarling, J P., et al, (1985, p 31-37) MP 1853
Heat transfer characteristics of thermosyphons with inclined evaporator sections Haynes, F D., et al, (1986, p 285-292) MP 2034
Ice surface hydrolysis of diisopropylfluorophosphate (DFP) Leggett, D C., (1987, p.809-815) MP 2457
Evaporation of chemical agents from ice and snow Leggett, D C., (1988, 10p) CR 88-03
Thermosyphons and foundation design in cold regions. Haynes, F.D., et al, (1988, p 251-259) MP 2443
Thermosyphon for horizontal applications DenHartog, S L., (1988, p 319-321) MP 2444
Excavation
Investigation and exploitation of snowfield sites Mellor, M., (1969, 57p) M III-A2b
Kinematics of axial rotation machines Mellor, M., (1976, 45p) CR 76-16
Kinematics of continuous belt machines Mellor, M., (1976, 24p) CR 76-17
Excavating rock, ice, and frozen ground by electromagnetic radiation Hockstra, P., (1976, 17p) CR 76-36
Permafrost excavating attachment for heavy bulldozers Garfield, D.E., et al, (1977, p 144-151) MP 955
Transverse rotation machines for cutting and boring in permafrost. Mellor, M., (1977, 36p) CR 77-19
Pavement recycling using a heavy bulldozer mounted pulverizer. Eaton R A., et al, (1977, 12p + appends) SR 77-30
Design for cutting machines in permafrost Mellor, M., (1978, 24p) CR 78-11
Undersea pipelines and cables in polar waters Mellor, M., (1978, 34p) CR 78-22
Mechanics of cutting and boring in permafrost Mellor, M., (1980, 82p) CR 80-21
Excavation of frozen materials Moore, H.L., et al, (1980, p 323-345) MP 1360

Expeditions
Arctic research in the United States, Vol 3 (1989, 72p) MP 2653
Arctic research of the United States, Vol.3. (1989, 71p) MP 2530

Experimental data
Arching of two block sizes of model ice floes. Calkins, D.J., et al, (1976, 11p) CR 76-42
Heat transfer over a vertical melting plate. Yen, Y.-C., et al, (1977, 12p.) CR 77-32

Exploration
Tundra recovery since 1949 near Fish Creek, Alaska. Lawson, D.E., et al, (1978, 81p) CR 78-28

EXPLOSION EFFECTS
Explosions and snow. Mellor, M., (1965, 34p) M III-A3a

Explosion effects
Ice-cratering experiments Blair Lake, Alaska. Kurtz, M K., et al, (1966, Various pagings) MP 1034
Analysis of explosively generated ground motions using Fourier techniques. Blouin, S E., et al, (1976, 86p) CR 76-28
Dynamic in-situ properties test in fine-grained permafrost Blouin, S E., (1977, p 282-313) MP 963
Destruction of ice islands with explosives. Mellor, M., et al, (1978, p.753-765) MP 1018
Ground pressures exerted by underground explosions. Johnson, P.R., (1978, p 284-290) MP 1520
High-explosive cratering in frozen and unfrozen soils in Alaska. Smith, N., (1980, 21p.) CR 80-09
Impact fuse performance in snow (Initial evaluation of a new test technique) Aitken, G W., et al, (1980, p 31-45) MP 1347
Analysis of non-steady plastic shock waves in snow. Brown, R.L., (1980, p.279-287) MP 1354
Block motion from detonations of buried near-surface explosive arrays. Blouin, S.E., (1980, 62p) CR 80-26
Prediction of explosively driven relative displacements in rocks. Blouin, S E., (1981, 23p.) CR 81-11
Testing shaped charges in unfrozen and frozen silt in Alaska. Smith, N., (1982, 10p.) SR 82-02
Breaking ice with explosives. Mellor, M., (1982, 64p) CR 82-40
Frozen soil characteristics that affect land mine functioning Richmond, P.W., (1983, 18p) SR 83-05
Blasting and blast effects in cold regions. Part 1 Air blast. Mellor, M., (1985, 62p) SR 85-25
Revised guidelines for blasting floating ice. Mellor, M., (1986, 37p.) SR 86-10
Blasting and blast effects in cold regions. Part 2 underwater explosions Mellor, M., (1986, 56p) SR 86-16
Eruptions from under-ice explosions. Mellor, M., et al, (1988, 26p.) SR 88-14
Blasting and blast effects in cold regions. Part 3 explosions in ground materials. Mellor, M., (1989, 62p) SR 89-15

Explosives
Use of explosives in removing ice jams. Frankenstein, G.E., et al, (1970, 10p) MP 1021
Composition of vapors evolved from military TNT Leggett, D C., et al, (1977, 25p) SR 77-16
Block motion from detonations of buried near-surface explosive arrays Blouin, S E., (1980, 62p) CR 80-26
Mine/countermine problems during winter warfare. Lunardini, V.J., ed, (1981, 43p) SR 81-20
Breaking ice with explosives Mellor, M., (1982, 64p) CR 82-40
Review of the propagation of inelastic pressure waves in snow. Albert, D.G., (1983, 26p) CR 83-13
Seasonal soil conditions and the reliability of the M15 land mine. Richmond, P.W., et al, (1984, 35p) SR 84-18
Explosive obscuration sub-test results at the SNOW-TWO field experiment Ebersole, J F., et al, (1984, p 347-354) MP 1872
Penetration of shaped charges into ice Mellor, M., (1984, p 137-148) MP 1995
Chemical analysis of munitions wastewater Jenkins, T F., et al, (1984, 95p) CR 84-29
Explosives in soils and sediments Cragin, J H., et al, (1985, 11p) CR 85-15
Explosive residues in soil. Jenkins, T.F., et al, (1985, 33p) SR 85-22
Sorption of military explosive contaminants on bentonite drilling muds. Leggett, D C., (1985, 33p) CR 85-18
Losses of explosives residues on disposable membrane filters Jenkins, T F., et al, (1987, 25p) SR 87-02
Development of an analytical method for explosive residues in soil. Jenkins, T.F., et al, (1987, 51p) CR 87-07
Analytical method for determining tetrazene in water Walsh, M E., et al, (1987, 34p) SR 87-25
Analytical method for determining tetrazene in soil. Walsh, M E., et al, (1988, 22p.) SR 88-15
Eruptions from under-ice explosions Mellor, M., et al, (1988, 26p.) SR 88-14
Determining nitroaromatics and nitramines in water Jenkins, T F., et al, (1988, 36p) SR 88-23
Development of a membrane for *in situ* optical detection of TNT. Zhang, Y., et al, (1988, 6p) SR 88-24
Ice-water partition coefficients for RDX and TNT Taylor, S., (1989, 10p) CR 89-08
Single fiber measurements for remote optical detection of TNT. Zhang, Y., et al, (1989, 7p) SR 89-18
Determination of explosive residues in soil Part 3. Bauer, C.F., et al, (1989, 89p) CR 89-09
Analytical methods for detecting military-unique compounds Jenkins, T.F., et al, (1989, p.13-14) MP 2713
Low-temperature effects on systems for composting explosives-contaminated soils. Ayorinde, O A., et al, (1989, 18p) SR 89-38
Environmental transformation of nitroaromatics and nitramines. Walsh, M E., (1990, 21p) SR 90-02
Fate and transport of contaminants in frozen soils Ayorinde, O.A., et al, (1990, p 202-211) MP 2679

Extraterrestrial ice
Colloquium on Water in Planetary Regoliths, Hanover, N.H., Oct. 5-7, 1976. (1977, 161p) MP 911
Mars soil-water analyzer: instrument description and status Anderson, D.M., et al, (1977, p.149-158) MP 912
First impressions of the comet drilling problem. Mellor, M., (1989, p 229-232) MP 2592

Falling bodies
Airborne-Snow Concentration Measuring Equipment Lacombe, J., (1982, p 17-46) MP 1981

FALLOUT
Radioactive fallout in northern regions. Wilson, C., (1967, 35p.) M I-A3d

Fast ice
Dynamics of near-shore ice. Weeks, W.F., et al, (1976, p.9-34) MP 1380
Grounded ice along the Alaskan Beaufort Sea coast. Kovacs, A., (1976, 21p) CR 76-32
Dynamics of near-shore ice Kovacs, A., et al, (1977, p 106-112) MP 924
Movement of coastal sea ice near Prudhoe Bay Weeks, W F., et al, (1977, p.533-546) MP 1066
Decay patterns of land-fast sea ice in Canada and Alaska Bilello, M.A., (1977, p.1-10) MP 1161
Internal structure of fast ice near Narwahl Island Gow, A.J., et al, (1977, 8p) CR 77-29
Dynamics of near-shore ice. Kovacs, A., et al, (1977, p 411-424) MP 1076
Preferred crystal orientations in Arctic Ocean fast ice Weeks, W.F., et al, (1978, 24p) CR 78-13
Sea ice north of Alaska Kovacs, A., (1978, p 7-12) MP 1252
Dynamics of near-shore ice Kovacs, A., et al, (1978, p 230-233) MP 1619
Crystal alignments in the fast ice of Arctic Alaska Weeks, W.F., et al, (1979, 21p) CR 79-22
Oil pooling under sea ice Kovacs, A., (1979, p 310-323) MP 1289
Maximum thickness and subsequent decay of lake, river and fast sea ice in Canada and Alaska Bilello, M.A., (1980, 160p) CR 80-06
Shore ice pile-up and ride-up field observations, models, theoretical analyses Kovacs, A., et al, (1980, p 209-298) MP 1295
Polarization studies in sea ice Arcone, S A., et al, (1980, p 225-245) MP 1324
Alaska's Beaufort Sea coast ice ride-up and pile-up features Kovacs, A., (1983, 51p) CR 83-09
Shoreline erosion and shore structure damage on the St Marys River Wuebben, J L., (1983, 36p) SR 83-15
Onshore ice pileup and override. Kovacs, A., et al, (1988, p 108-142) MP 2336

Fatigue (materials)
Cyclic loading and fatigue in ice. Mellor, M., et al, (1981, p 41-53) MP 1371

Films
Ice fog suppression using monomolecular films McFadden, T., (1977, p.361-367) MP 956

Filters
Fortran subroutines for zero-phase digital frequency filters Albert, D G., (1986, 26p) SR 86-04
Losses of explosives residues on disposable membrane filters Jenkins, T F., et al, (1987, 25p) SR 87-02
Evaluation of disposable membrane filter units for sorptive losses and sample contamination Walsh, M E., et al, (1988, p 45-52) MP 2328
Geotextiles and a new way to use them Henry, K., (1988, p 214-222) MP 2525

Fines
Densification by freezing and thawing of fine material dredged from waterways Chamberlain, E J., et al, (1978, p 622-628) MP 1103

Fires
Utilities on permanent snowfields Mellor, M., (1969, 42p) M III-A2d
Symposium on fire in the northern environment Slaughter, C W., ed, (1971, 275p) MP 878
1977 tundra fire in the Kokolik River area of Alaska. Hall, D K., et al, (1978, p 54-58) MP 1125
1977 tundra fire at Kokolik River, Alaska Hall, D K., et al, (1978, 11p) SR 78-10
Recovery of the Kokolik River tundra area, Alaska Hall, D.K., et al, (1979, 15p) MP 1038
Remote sensing of revegetation of burned tundra, Kokolik River, Alaska Hall, D K., et al, (1980, p 263-272) MP 1391
Effects of a tundra fire on soil and vegetation Racine, C., (1980, 21p) SR 80-37
Stabilizing fire breaks in tundra vegetation. Patterson, W.A., III, et al, (1981, p 188-189) MP 1804
Recovery and active layer changes following a tundra fire in northwestern Alaska Johnson, L., et al, (1983, p 543-547) MP 1660
Vegetation recovery after tundra fires in northwestern Alaska. Racine, C., et al, (1987, p 461-469) MP 2374

Firn
USA CRREL shallow drill. Rand, J.H., (1976, p.133-137) MP 873
Subsurface measurements of the Ross Ice Shelf, McMurdo Sound, Antarctica. Kovacs, A., et al, (1977, p.146-148) MP 1013
Nitrogenous chemical composition of antarctic ice and snow. Parker, B C., et al, (1981, p.79-81) MP 1541
Firn quake (a rare and poorly explained phenomenon). Den-Hartog, S.L., (1982, p 173-174) MP 1571
Baseline acidity of South Pole precipitation Cragin, J H., et al, (1987, p.789-792) MP 2275

FIRNIFICATION
Greenland ice sheet. Bader, H., (1961, 18p) M I-B2

Firnification
Sintering and compaction of snow containing liquid water Colbeck, S.C., et al, (1979, p.13-32) MP 1190

FLEXURAL STRENGTH
Mechanical properties of sea ice Weeks, W F., et al, (1967, 80p) M II-C3

Flexural strength
Flexural strength of ice on temperate lakes Gow, A.J., (1977, p.247-256) MP 1063
Flexural strength of ice on temperate lakes Gow, A.J., et al, (1978, 14p.) CR 78-09
Nondestructive testing of in-service highway pavements in Maine Smith, N., et al, (1979, 22p) CR 79-06
Bending and buckling of a wedge on an elastic foundation. Nevel, D E., (1980, p.278-288) MP 1303
Ice characteristics in Whitefish Bay and St Marys River in winter. Vance, G.P., (1980, 27p) SR 80-32
Acoustic emission and deformation response of finite ice plates. Xirouchakis, P.C., et al, (1981, p 385-394) MP 1455
Breakup of solid ice covers due to rapid water level variations. Billfalk, L., (1982, 17p) CR 82-03
Flexural strength and elastic modulus of ice. Tatinclaux, J.C., et al, (1982, p.37-47) MP 1568
Determining the characteristic length of model ice sheets. Sodhi, D S., et al, (1982, p 99-104) MP 1570
Ice forces on model marine structures Haynes, F D., et al, (1983, p.778-787) MP 1606
Flexural strengths of freshwater model ice Gow, A J., (1984, p.73-82) MP 1826
Sheet ice forces on a conical structure an experimental study Sodhi, D.S., et al, (1985, p 46-54) MP 1915
Uplifting forces exerted by adfrozen ice on marine piles Christensen, F.T., et al, (1985, p.529-542) MP 1905
Sheet ice forces on a conical structure; an experimental study. Sodhi, D S., et al, (1985, p 643-655) MP 1906
Flexural and buckling failure of floating ice sheets against structures. Sodhi, D S., (1986, p 339-359) MP 2134
Flexural and buckling failure of floating ice sheets against structures Sodhi, D S., (1987, p 53-73) MP 2315
Flexure and fracture of macrocrystalline S1 type freshwater ice Dempsey, J.P., et al, (1988, p 39-46) MP 2318
Growth of EG/AD/S model ice in a small tank. Borland, S L., (1988, p 47-53) MP 2319
Effects of temperature and structure of ice on its flexural strength. Gow, A J., et al, (1988, 43p) CR 88-06
Ship model testing in level ice an overview. Tatinclaux, J C., (1988, 30p) Cr 88-15
Fracture toughness of columnar freshwater ice Bentley, D L., et al, (1989, p 7-20) MP 2545
Penetration of floating ice sheets with cylindrical indentors Sodhi, D S., et al, (1989, p 104) MP 2688

Floating ice
Bearing capacity of floating ice plates Kerr, A D., (1976, p 229-268) MP 884
Cantilever beam tests on reinforced ice. Ohstrom, E.G., et al, (1976, 12p) CR 76-07
Creep theory for a floating ice sheet Nevel, D E., (1976, 98p) SR 76-04
Arching of two block sizes of model ice floes Calkins, D J., et al, (1976, 11p) CR 76-42
Concentrated loads on a floating ice sheet Nevel, D E., (1977, p 237-245) MP 1062
Integrated approach to the remote sensing of floating ice. Campbell, W J., et al, (1977, p 445-487) MP 1069
Compressive and shear strengths of frigmented ice covers Cheng, S T., et al, (1977, 82p) MP 951
Viscoelasticity of floating ice plates subjected to a circular load Takagi, S., (1978, 32p) CR 78-05
Bearing capacity of river ice for vehicles Nevel, D E., (1978, 22p) CR 78-03
Buckling pressure of an elastic floating plate Takagi, S., (1978, 49p) CR 78-14
Entrainment of ice floes into a submerged outlet Stewart, D M., et al, (1978, p 291-299) MP 1137
Horizontal forces exerted by floating ice on structures Kerr, A D., (1978, 9p) CR 78-15
Problems of offshore oil drilling in the Beaufort Sea Weller, G., et al, (1978, p 4-11) MP 1250

Floating ice *(cont.)*

Buckling analysis of wedge-shaped floating ice sheets. Sodhi, D S., (1979, p.797-810) MP 1232

Critical velocities of a floating ice plate subjected to in-plane forces and a moving load. Kerr, A.D., (1979, 12p.) CR 79-19

Ice laboratory facilities for solving ice problems. Frankenstein, G.E., (1980, p.93-103) MP 1301

Evaluation of ice-covered water crossings. Dean, A.M., Jr., (1980, p.443-453) MP 1348

On the buckling force of floating ice plates. Kerr, A.D., (1981, 7p.) CR 81-09

Asymmetric flows: application to flow below ice jams Gogus, M., et al, (1981, p 342-350) MP 1733

Force distribution in a fragmented ice cover. Daly, S F., et al, (1982, p 374-387) MP 1531

Determining the characteristic length of model ice sheets. Sodhi, D.S., et al, (1982, p 99-104) MP 1570

Application of HEC-2 for ice-covered waterways Calkins, D.J., et al, (1982, p 241-248) MP 1575

Hydraulic model study of Port Huron ice control structure Calkins, D.J., et al, (1982, 59p.) CR 82-34

Buckling loads of floating ice on structures Sodhi, D.S., et al, (1983, p 260-265) MP 1626

Experiments on ice ride-up and pile-up. Sodhi, D.S., et al, (1983, p.266-270) MP 1627

Dynamic buckling of floating ice sheets. Sodhi, D S., (1983, p 822-833) MP 1607

First-generation model of ice deterioration. Ashton, G D., (1983, p.273-278) MP 2080

Deterioration of floating ice covers. Ashton, G.D., (1984, p.26-33) MP 1676

Experimental determination of buckling loads of cracked ice sheets. Sodhi, D.S., et al, (1984, p.183-186) MP 1697

Modified theory of bottom crevasses. Jezek, K.C., (1984, p 1925-1931) MP 2059

Force distribution in a fragmented ice cover. Stewart, D M., et al, (1984, 16p.) CR 84-07

Forces associated with ice pile-up and ride-up. Sodhi, D S., et al, (1984, p 239-262) MP 1887

Buckling analysis of cracked, floating ice sheets Adley, M.D., et al, (1984, 28p.) SR 84-23

Determining the characteristic length of floating ice sheets by moving loads. Sodhi, D S., et al, (1985, p 155-159) MP 1855

Deterioration of floating ice covers Ashton, G.D., (1985, p 177-182) MP 2122

Techniques for measurement of snow and ice on freshwater Adams, W.P., et al, (1986, p 174-222) MP 2000

Ice cover research—present state and future needs Kerr, A.D., et al, (1986, p 384-399) MP 2004

Revised guidelines for blasting flowing ice Mellor, M., (1986, 37p.) SR 86-10

Flexural and buckling failure of floating ice sheets against structures. Sodhi, D S., (1986, p 339-359) MP 2134

Measurement of characteristic length of floating ice sheets Sodhi, D.S., (1987, n p (Ch 7)) MP 2480

Flexural and buckling failure of floating ice sheets against structures. Sodhi, D S., (1987, p 53-73) MP 2315

DOD floating ice problems Cox, G F N., (1987, p 151-154) MP 2414

On the determination of the average Young's modulus for a floating ice cover. Kerr, A.D., et al, (1988, p 39-43) MP 2324

Elements of floating-debris control systems Perham, R E., (1988, 54p + appends.) MP 2453

Imjin River ice boom. Perham, R E., (1988, 10p.) SR 88-22

Flow developers for melting ice—experimental results Ashton, G D., (1989, p 151-160) MP 2465

Ice reinforced with Geogrid. Haynes, F D., et al, (1989, p.179-185) MP 2484

Penetration of floating ice sheets with cylindrical indentors Sodhi, D.S., (1989, p 377-382) MP 2485

Effect of ice pressure on marginal ice zone dynamics Flato, G.M., et al, (1989, p 514-521) MP 2522

Refractive index structure parameter for a year over the frozen Beaufort Sea Andreas, E.L., (1989, p 667-679) MP 2575

Penetration of floating ice sheets with cylindrical indentors Sodhi, D.S., et al, (1989, p 104) MP 2688

Dynamic analysis of a floating ice sheet undergoing vertical indentation. McGilvary, W R., et al, (1990, p.195-203) MP 2579

Floating structures

Righting moment in a rectangular ice boom timber or pontoon. Perham, R E., (1978, p 273-289) MP 1136

Wave-induced bergy bit motion near a floating platform. Mak, L.M., et al, (1990, p.205-215) MP 2580

Flood control

Construction on permafrost at Longyearbyen on Spitsbergen Tobiasson, W., (1978, p 884-890) MP 1108

Ice jam problems at Oil City, Pennsylvania Deck, D.S., et al, (1981, 19p.) SR 81-09

Tanana River monitoring and research studies near Fairbanks, Alaska Neill, C.R., et al, (1984, 98p + 5 appends.) SR 84-37

Chena Flood Control Project and the Tanana River near Fairbanks, Alaska Buska, J S., et al, (1984, 11p + figs.) MP 1745

Bank recession of the Tanana River, Alaska Gatto, L.W., (1984, 59p.) MP 1746

Bank recession and channel changes of the Tanana River, Alaska. Gatto, L.W., et al, (1984, 98p.) MP 1747

Erosion analysis of the Tanana River, Alaska. Collins, C M., (1984, 8p. + figs.) MP 1748

Potential solution to ice jam flooding. Salmon River, Idaho Earickson, J., et al, (1986, p 15-25) MP 2131

Calibrating HEC-2 in a shallow, ice-covered river. Calkins, D J., et al, (1986, 25 refs.) SR 86-34

Floating debris control; a literature review. Perham, R.E., (1987, 22p + 41p. of append.) MP 2252

Ice formation downstream of Oahe Dam—1987-1988 winter. Ashton, G.D., (1988, 37p.) MP 2506

Perturbation solution of the flood problem. Discussion and author's reply. Ferrick, M.G., (1988, p 346-349) MP 2536

Framework for control of dynamic ice breakup by river regulation Ferrick, M G., et al, (1989, 14p.) CR 89-12

Flood forecasting

Hydrologic modeling from Landsat land cover data McKim, H.L., et al, (1984, 19p.) SR 84-01

Ice-related flood frequency analysis, application of analytical estimates. Gerard, R., et al, (1984, p.85-101) MP 1712

Perturbation solution of the flood problem. Discussion and author's reply Ferrick, M G., (1988, p 346-349) MP 2536

Flooding

Inundation of vegetation in New England. McKim, H.L., et al, (1978, 13p.) MP 1169

Land treatment systems and the environment McKim, H.L., et al, (1979, p 201-225) MP 1414

Removal of organics by overland flow. Martel, C.J., et al, (1980, 9p.) MP 1362

Rational design of overland flow systems. Martel, C.J., et al, (1980, p 114-121) MP 1400

Energy and costs for agricultural reuse of wastewater. Sletten, R S., et al, (1980, p 339-346) MP 1401

Forage grass growth on overland flow systems Palazzo, A J., et al, (1980, p 347-354) MP 1402

Overland flow: removal of toxic volatile organics Jenkins, T.F., et al, (1981, 16p.) SR 81-01

Effects of inundation on six varieties of turfgrass Erbisch, F H., et al, (1982, 25p.) SR 82-12

Ice jams and flooding on Ottauquechee River, VT Bates, R., et al, (1982, 25p.) SR 82-06

Controlling river ice to alleviate ice jam flooding Deck, D.S., (1984, p 524-528) MP 1795

Salmon River ice jams Cunningham, L.L., et al, (1984, p 529-533) MP 1796

Potential solution to ice jam flooding. Salmon River, Idaho. Earickson, J., et al, (1986, p 15-25) MP 2131

Jökulhlaups from ice-dammed Strandline Lake, Alaska. Sturm, M., et al, (1987, p 79-94) MP 2307

Jökulhlaups from Strandline Lake, Alaska (especially the 1982 event) Sturm, M., et al, (1989, 19p.) MP 2520

Floods

Landsat data analysis for New England reservoir management Merry, C.J., et al, (1978, 61p.) SR 78-06

Port Huron ice control model studies Calkins, D J., et al, (1982, p 361-373) MP 1530

Controlling river ice to alleviate ice jam flooding Deck, D S., (1984, p 69-76) MP 1885

Geographic features and floods of the Ohio River Edwardo, H A., et al, (1984, p 265-281) MP 2083

Cold facts of ice jams case studies of mitigation methods Calkins, D J., (1984, p 39-47) MP 1793

Ice jam flood prevention measures, Lamoille River, Hardwick VT Calkins, D J., (1985, p 149-168) MP 1940

Study of dynamic ice breakup on the Connecticut River near Windsor, Vermont. Ferrick, M G., et al, (1987, p 163-177) MP 2400

Jökulhlaups from Strandline Lake, Alaska (especially the 1982 event) Sturm, M., et al, (1989, 19p.) MP 2520

Flow measurement

Resurvey of the "Byrd" Station, Antarctica, drill hole. Garfield, D E., et al, (1976, p 29-34) MP 846

Flow rate

Temperature and flow conditions during the formation of river ice Ashton, G.D., et al, (1970, 12p.) MP 1723

Stability of Antarctic ice Weertman, J., (1975 p 159) MP 1042

Analysis of velocity profiles under ice in shallow streams Calkins, D J., et al, (1981, p 94-111) MP 1397

Harnessing frazil ice Perham, R E., (1981, p 227-237) MP 1398

One-dimensional transport from a highly concentrated, transfer type source O'Neill, K., (1982, p 27-36) MP 1489

Ottauquechee River analysis of freeze-up processes Calkins, D J., et al, (1982, p 2-37) MP 1738

Asymmetric plane flow with application to ice jams Tatinclaux, J C., et al, (1983, p 1540-1556) MP 1645

Changes in the Ross Ice Shelf dynamic condition Jezek, K C., (1984, p 409-416) MP 2058

Analysis of infiltration results at proposed North Carolina wastewater treatment site. Abele, G., et al, (1984, 24p.) SR 84-11

Constitutive relations for a planar, simple shear flow of rough disks Shen, H H., et al, (1985, 17p.) CR 85-20

Heat transfer from water flowing through a chilled-bed open channel Richmond, P W., et al, (1989, p 51-58) MP 2649

Fluid dynamics

Fluid dynamic analysis of volcanic tremor Ferrick, M.G., et al, (1982, 12p.) CR 82-32

Source mechanism of volcanic tremor. Ferrick, M.G., et al, (1982, p 8675-8683) MP 1576

Calculation of advective mass transport in heterogeneous media. Daly, C J., (1983, p.73-89) MP 1677

Automatic finite element mesh generator. Albert, M.R., et al, (1987, 27p.) CR 87-18

Orthogonal curvilinear coordinate generation for internal flows. Albert, M R., (1988, p 425-433) MP 2540

Fluid flow

Transport equation over long times and large spaces O'Neill, K., (1981, p.1665-1675) MP 1497

Source mechanism of volcanic tremor Ferrick, M.G., et al, (1982, p 8675-8683) MP 1576

Computation of porous media natural convection flow and phase change O'Neill, K., et al, (1984, p.213-229) MP 1895

On the pressure drop through a uniform snow layer. Yen, Y.C., (1988, 10p.) CR 88-14

Fluid mechanics

River ice. Ashton, G.D., (1978, p 369-392) MP 1216

Orthogonal curvilinear coordinate generation for internal flows Albert, M R., (1988, p 425-433) MP 2540

Fog

Airborne snow and fog distributions Berger, R.H., (1982, p 217-273) MP 1562

Snow and fog particle size measurements. Berger, R H., (1982, p 47-58) MP 1982

Fog dispersal

Propane dispenser for cold fog dissipation system Hicks, J R., et al, (1973, 38p.) MP 1033

Compressed air seeding of supercooled fog Hicks, J R., (1976, 9p.) SR 76-02

Use of compressed air for supercooled fog dispersal. Weinstein, A.I., et al, (1976, p.1226-1231) MP 1614

Suppression of ice fog from cooling ponds. McFadden, T., (1976, 78p.) CR 76-43

Ice fog suppression using reinforced thin chemical films. McFadden, T., et al, (1978, 23p.) CR 78-26

Ice fog suppression using thin chemical films. McFadden, T., et al, (1979, 44p.) MP 1192

Ice fog suppression in Arctic communities McFadden, T., (1980, p 54-65) MP 1357

Ice crystal formation and supercooled fog dissipation. Kumai, M., (1982, p 579-587) MP 1539

Fog formation

Suppression of ice fog from cooling ponds McFadden, T., (1976, 78p.) CR 76-43

Forecasting

Prediction and validation of temperature in tundra soils. Brown, J., et al, (1971, p 193-197) MP 907

Premoval during land treatment of wastewater Ryden, J C., et al, (1982, 12p.) SR 82-14

Hydrologic forecasting using Landsat data Merry, C J., et al, (1983, p.159-168) MP 1691

Forecasting river water temperatures Daly, S.F., (1988, p 180-188) MP 2500

Interfacing geographic data with real-time hydrologic forecasting models Eagle, T C., et al, (1989, p 857-861) MP 2527

Forest ecosystems

Wastewater applications in forest ecosystems McKim, H L., et al, (1982, 22p.) CR 82-19

FOREST FIRES

Symposium on fire in the northern environment. Slaughter, C W., ed, (1971, 275p.) MP 878

Forest land

Energy balance and runoff from a subarctic snowpack. Price, A G., et al, (1976, 29p.) CR 76-27

Symposium on land treatment of wastewater, CRREL, Aug. 1978 (1978, 2 vols.) MP 1145

Technology and costs of wastewater application to forest systems Crites, R W., et al, (1986, p 349-355) MP 2266

Forest land treatment with municipal wastewater in New England Reed, S C., et al, (1986, p 420-430) MP 2280

Forest soils

Upland forest and its soils and litters in interior Alaska Troth, J L., et al, (1976, p 33-44) MP 867

Forest tundra

Climatic and dendroclimatic indices in the discontinuous permafrost zone of the Central Alaskan Islands Haugen, R K., et al, (1978, p 392-398) MP 1099

Crude oil spills on black spruce forest Jenkins, T.F., et al, (1978, p 305-323) MP 1185

Fortifications

Defensive works of subarctic snow Johnson, P R., (1977, 23p.) CR 77-06

Test of snow fortifications Farrell, D.R., (1979, 15p.) SR 79-33

Snow fortifications as protection against shaped charge antitank projectiles. Farrell, D.R., (1980, 19p.) SR 80-11

Winter field fortifications Farrell, D., (1986, 50p.) SR 86-25

Foundations

Piles in permafrost for bridge foundations. Crory, F.E., et al, (1967, 41p.) MP 1411

FOUNDATIONS

Foundations of structures in cold regions. Sanger, F.J., (1969, 91p.) M III-C4

Foundations and subsurface structures in snow. Mellor, M., (1969, 54p.) M III-A2c

Foundations

Field performance of a subarctic utilidor Reed, S.C., (1977, p.448-468) MP 930

Baseplate design and performance mortar stability report. Aitken, G.W., (1977, 28p.) CR 77-22

Kotzebue hospital—a case study. Crory, F.E., (1978, p.342-359) MP 1084

Construction on permafrost at Longyearbyen on Spitsbergen. Tobiasson, W., (1978, p.884-890) MP 1108

Details behind a typical Alaskan pile foundation Tobiasson, W., et al, (1978, p.891-897) MP 1109

Snow studies associated with the sideways move of DYE-3. Tobiasson, W., (1979, p.117-124) MP 1312

Bending and buckling of a wedge on an elastic foundation Nevel, D.E., (1980, p.278-288) MP 1303

Use of piling in frozen ground. Crory, F.E., (1980, 21 p.) MP 1407

Construction of foundations in permafrost. Linell, K.A., et al, (1980, 310p.) SR 80-34

Design of foundations in areas of significant frost penetration Linell, K.A., et al, (1980, p.118-184) MP 1358

Foundations of structures in polar waters. Chamberlain, E.J., (1981, 16p.) SR 81-25

Foundations on permafrost, US and USSR design and practice. Fish, A.M., (1983, p.3-24) MP 1682

Foundations in permafrost and seasonal frost; Proceedings. (1985, 62p.) MP 1730

Frost jacking forces on H and pipe piles embedded in Fairbanks silt. Johnson, J.B., et al, (1985, p.125-133) MP 1930

Heat transfer characteristics of thermosyphons with inclined evaporator sections Haynes, F.D., et al, (1986, p.285-292) MP 2034

Foundation technology in cold regions. Quinn, W.F., (1987, p.305-310) MP 2425

Arctic construction working group report. Marvin, E.L., et al, (1987, p.311-314) MP 2426

Thermosyphons and foundation design in cold regions Haynes, F.D., et al, (1988, p.251-259) MP 2443

Thermal stabilization of permafrost with thermosyphons Zarling, J.P., et al, (1990, p.323-328) MP 2583

Fracture zones

Investigation of ice forces on vertical structures. Hirayama, K., et al, (1974, 153p.) MP 1041

Fracturing

Creep rupture at depth in a cold ice sheet. Colbeck, S.C., et al, (1978, p.733) MP 1168

Fracture behavior of ice in Charpy impact testing Itagaki, K., et al, (1980, 13p.) CR 80-13

Investigation of the acoustic emission and deformation response of finite ice plates. Xirouchakis, P.C., et al, (1981, 19p.) CR 81-06

Acoustic emission and deformation response of finite ice plates. Xirouchakis, P.C., et al, (1981, p.385-394) MP 1455

Acoustic emission and deformation of ice plates Xirouchakis, P.C., et al, (1982, p.129-139) MP 1589

Acoustic emissions from polycrystalline ice. St Lawrence, W.F., et al, (1982, 15p.) CR 82-21

Microstructure and the resistance of rock to tensile fracture. Peck, L., et al, (1985, p.11,533-11,546) MP 2157

Fracture toughness of model ice Dempsey, J.P., et al, (1986, p.365-376) MP 2125

Effect of grain size on the internal fracturing of polycrystalline ice. Cole, D.M., (1986, 71p.) CR 86-05

Flexure and fracture of macrocrystalline S1 type freshwater ice Dempsey, J.P., et al, (1988, p.39-46) MP 2318

Fram Strait

Crystal structure of Fram Strait sea ice. Gow, A.J., et al, (1986, p.20-29) MP 2221

Winter marginal ice zone experiment, Fram Strait/Greenland Sea, 1987/89 Davidson, K., ed, (1986, 53p.) SR 86-09

Physical properties of sea ice discharged from Fram Strait Gow, A.J., et al, (1987, p.436-439) MP 2204

Physical properties of summer sea ice in the Fram Strait Tucker, W.B., et al, (1987, p.6787-6803) MP 2240

Oceanic heat flux in the Fram Strait measured by a drifting buoy. Perovich, D.K., et al, (1989, p.995-998) MP 2531

Frazil ice

Remote sensing of frazil and brash ice in the St Lawrence River. Dean, A.M., Jr., (1977, 19p.) CR 77-08

Remote sensing of accumulated frazil and brash ice. Dean, A.M., Jr., (1977, p.693-704) MP 934

Frazil ice formation in turbulent flow. Müller, A., et al, (1978, p.219-234) MP 1135

Characteristics of ice on two Vermont rivers Deck, D.S., (1978, 30p.) SR 78-30

Ice blockage of water intakes Carey, K.L., (1979, 27p.) MP 1197

Accelerated ice growth in rivers Calkins, D.J., (1979, 5p.) CR 79-14

Modeling of ice in rivers. Ashton, G.D., (1979, p.14/1-14/26) MP 1335

Freshwater ice growth, motion, and decay Ashton, G.D., (1980, p.261-304) MP 1299

Harnessing frazil ice Perham, R.E., (1981, p.227-237) MP 1398

Hydraulic model study of a water intake under frazil ice conditions. Tantillo, T.J., (1981, 11p.) CR 81-03

Tests of frazil collector lines to assist ice cover formation. Perham, R.E., (1981, p.442-448) MP 1488

Field investigations of a hanging ice dam. Beltaos, S., et al, (1982, p.475-488) MP 1533

CRREL 2-inch frazil ice sampler Rand, J.H., (1982, 8p.) SR 82-09

Physical and structural characteristics of antarctic sea ice. Gow, A.J., et al, (1982, p.113-117) MP 1549

Liquid sampler Rand, J.H., (1982, 4 col.) MP 2374

Properties of sea ice in the coastal zones of the polar oceans Weeks, W.F., et al, (1983, p.25-41) MP 1604

Frazil ice Daly, S.F., (1983, p.218-223) MP 2078

Physical mechanism for establishing algal populations in frazil ice Garrison, D.L., et al, (1983, p.363-365) MP 1717

Relative abundance of diatoms in Weddell Sea pack ice. Clarke, D.B., et al, (1983, p.161-182) MP 1786

Sea ice and biological activity in the Antarctic. Clarke, D.B., et al, (1984, p.2087-2095) MP 1701

Frazil ice dynamics. Daly, S.F., (1984, 46p.) M 84-01

Performance of the Allegheny River ice control structure, 1983 Deck, D.S., et al, (1984, 15p.) SR 84-13

Modeling intake peformance under frazil ice conditions. Dean, A.M., Jr., (1984, p.559-563) MP 1797

Rise pattern and velocity of frazil ice Wuebben, J.L., (1984, p.297-316) MP 1816

Dynamics of frazil ice formation. Daly, S.F., et al, (1984, p.161-172) MP 1829

Frazil ice formation Ettema, R., et al, (1984, 44p.) CR 84-18

St. Lawrence River hanging ice dams, winter 1983-1984. Shen, H.T., et al, (1984, 85p.) MP 2178

USACRREL precise thermistor meter Trachier, G.M., et al, (1985, 34p.) SR 85-26

Frazil ice measurements in CRREL's flume facility Daly, S.F., et al, (1986, p.427-438) MP 2127

Structure to form an ice cover on river rapids in winter Perham, R.E., (1986, p.439-450) MP 2128

Sub-ice channels and frazil bars, Tanana River, Alaska Lawson, D.E., et al, (1986, p.465-474) MP 2129

Frazil ice pebbles, Tanana River, Alaska. Chacho, E.F., et al, (1986, p.475-483) MP 2130

Field techniques for obtaining engineering characteristics of frazil ice accumulations. Dean, A.M., Jr., (1986, p.265-278) MP 2290

River ice and salmonids Walsh, M., et al, (1986, p.D-4.1-D-4.26) MP 2477

Development of a frazil ice sampler Brockett, B.E., et al, (1986, 12p.) SR 86-37

Sea-ice investigations during the Winter Weddell Sea Project Ackley, S.F., et al, (1987, p.88-89) MP 2491

Evolution of frazil ice in rivers and streams research and control Daly, S.F., (1987, p.11-16) MP 2303

Modelling trash rack freezeup by frazil ice Daly, S.F., (1987, p.101-106) MP 2305

Frazil ice deposits and water channels beneath an ice-covered river Arcone, S.A., et al, (1987, 12p.) CR 87-17

Frazil ice in rivers and streams Daly, S.F., (1987, p.19-26) MP 2381

Intake design for ice conditions Ashton, G.D., (1988, p.107-138) MP 2518

Computer-controlled data acquisition system for a hydraulic flume Zabilansky, L.J., (1988, p.453-460) MP 2349

Development of sea ice in the Weddell Sea. Lange, M.A., et al, (1989, p.92-96) MP 2615

Elastic properties of frazil ice from the Weddell Sea, Antarctica Lange, M.A., et al, (1989, p.208-217) MP 2620

Compressive strength of antarctic frazil ice Richter-Menge, J.A., et al, (1989, p.269-278) MP 2621

Time estimation for maximum supercooling in dynamic frazil ice formation Daly, S.F., et al, (1989, 13p.) SR 89-26

Cryogenic sampling of frazil ice deposits Chacho, E.F., Jr., et al, (1989, 6p.) SR 89-28

Freezeup dynamics of a frazil ice screen Axelson, K.D., (1990, 8p.) SR 90-04

In-situ sampling and characterization of frazil ice deposits Lawson, D.E., et al, (1990, p.193-205) MP 2694

Comparison of the compressive strength of antarctic frazil ice and laboratory-grown columnar ice Richter-Menge, J.A., et al, (1990, p.79-84) MP 2731

Development of an underwater frazil-ice detector Daly, S.F., et al, (1990, p.77-82) MP 2702

Salmon River ice jam control studies: interim report. Axelson, K.D., et al, (1990, 8p.) SR 90-06

Freeze drying

Isothermal compressibility of water mixed with montmorillonite. Oliphant, J.L., et al, (1983, p.45-50) MP 2066

Explosives in soils and sediments Cragin, J.H., et al, (1985, 11p.) CR 85-15

Dewaterability of freeze-thaw conditional sludges. Martel, C.J., (1989, p.237-241) MP 2616

Sludge dewatering by natural freeze-thaw. Martel, C.J., (1990, p.116-122) MP 2714

Freeze thaw cycles

Consolidating dredged material by freezing and thawing. Chamberlain, E.J., (1977, 94p.) MP 978

Effect of freeze-thaw cycles on resilient properties of fine-grained soils. Johnson, T.C., et al, (1978, 19p.) MP 1082

Freeze thaw effect on the permeability and structure of soils. Chamberlain, E.J., et al, (1978, p.31-44) MP 1080

Load tests on membrane-enveloped road sections. Smith, N., et al, (1978, 16p.) CR 78-12

Densification by freezing and thawing of fine material dredged from waterways. Chamberlain, E.J., et al, (1978, p.622-628) MP 1103

Resiliency of silt under asphalt during freezing and thawing. Johnson, T.C., et al, (1978, p.662-668) MP 1106

Waterproofing strain gages for low ambient temperatures. Garfield, D.E., et al, (1978, 20p.) SR 78-15

Overconsolidated sediments in the Beaufort Sea. Chamberlain, E.J., (1978, p.24-29) MP 1255

Freeze thaw effect on the permeability and structure of soils. Chamberlain, E.J., et al, (1979, p.79-92) MP 1225

Freeze thaw effect on resilient properties of fine soils. Johnson, T.C., et al, (1979, p.247-276) MP 1226

Stratified debris in Antarctic ice cores. Gow, A.J., et al, (1979, p.185-192) MP 1272

Sulfur foam as insulation for expedient roads Smith, N., al, (1979, 21p.) CR 79-18

Design of foundations in areas of significant frost penetration. Linell, K.A., et al, (1980, p.118-184) MP 1358

Approximate solution to Neumann problem for soil systems. Lunardini, V.J., et al, (1981, p.76-81) MP 1494

Cylindrical phase change approximation with effective thermal diffusivity Lunardini, V.J., (1981, p.147-154) MP 1438

Effect of freezing and thawing on resilient modulus of granular soils Cole, D.M., et al, (1981, p.19-26) MP 1484

Deforming finite elements with and without phase change. Lynch, D.R., et al, (1981, p.81-96) MP 1493

Phase change around a circular cylinder. Lunardini, V.J., (1981, p.598-600) MP 1507

Guide to managing the pothole problem on roads. Eaton, R.A., et al, (1981, 24p.) SR 81-21

Heat conduction with phase changes Lunardini, V.J., (1981, 14p.) CR 81-25

Potholes the problem and solutions Eaton, R.A., (1982, p.160-162) MP 1504

Piling in frozen ground Crory, F.E., (1982, p.112-124) MP 1722

Understanding the Arctic sea floor for engineering purposes. (1982, 141p.) SR 83-25

Conduction phase change beneath insulated heated or cooled structures. Lunardini, V.J., (1982, 40p.) CR 82-22

Full-depth and granular base course design for frost areas. Eaton, R.A., et al, (1983, p.27-39) MP 1422

Solution of two-dimensional freezing and thawing problems. O'Neill, K., (1983, p.653-658) MP 1584

Approximate phase change solutions for insulated buried cylinders Lunardini, V.J., (1983, p.25-32) MP 1593

Freezing and thawing heat balance integral approximations. Lunardini, V.J., (1983, p.30-37) MP 1597

Approximate solution to conduction freezing with density variation Lunardini, V.J., (1983, p.43-45) MP 1598

Computer models for two-dimensional transient heat conduction. Albert, M.R., (1983, 66p.) CR 83-12

Field tests of a frost-heave model. Guymon, G.L., et al, (1983, p.409-414) MP 1657

Comparison of two-dimensional domain and boundary integral geothermal models with embankment freeze-thaw field data Hromadka, T.V., II, et al, (1983, p.509-513) MP 1659

Fixed mesh finite element solution for cartesian two-dimensional phase change O'Neill, K., (1983, p.436-441) MP 1702

Simple model of ice segregation using an analytic function to model heat and soil-water flow. Hromadka, T.V., II, et al, (1984, p.99-104) MP 2104

Design implications of subsoil thawing Johnson, T.C., et al, (1984, p.45-103) MP 1706

Accumulation, characterization, and stabilization of sludges for cold regions lagoons Schneiter, R.W., et al, (1984, 40p.) SR 84-08

Conductive backfill for improving electrical grounding in frozen soils Sellmann, P.V., et al, (1984, 19p.) SR 84-17

Design and performance of water-retaining embankments in permafrost Sayles, F.H., (1984, p.31-42) MP 1850

New classification system for the seasonal snow cover Colbeck, S.C., (1984, p.179-181) MP 1921

Salt action on concrete Sayward, J.M., (1984, 69p.) SR 84-25

Freeze thaw cycles *(cont.)*

Radar investigations above the trans-Alaska pipeline near Fairbanks. Arcone, S A., et al, (1984, 15p) CR 84-27

Automateri soils freezing test. Chamberlain, E J., (1985, 5p) MP 1892

Hydraulic properties of selected soils. Ingersoll, J., et al, (1985, p 26-35) MP 1925

Potential use of artificial ground freezing for contaminant immobilization. Iskandar, I.K., et al, (1985, 10p) MP 2029

Seasonal variations in pavement performance Johnson, T.C., (1985, c21p) MP 2076

Freeze thaw consolidation of sediments, Beaufort Sea, Alaska. Lee, H.J., et al, (1985, 83p) MP 2025

Model of freezing front movement. Hromadka, T.V., II, et al, (1985, 9p.) MP 2077

Survey of airport pavement distress in cold regions Vinson, T.S., et al, (1986, p 41-50) MP 2002

Lessons learned from examination of membrane roofs in Alaska. Tobiasson, W., et al, (1986, p 277-290) MP 2003

Effects of freeze thaw cycles on granular soils for pavements. Cole, D.M., et al, (1986, 70p) CR 86-04

Engineering surveys along the Trans-Alaska Pipeline. Godfrey, R.N., et al, (1986, 85p) SR 86-28

Deformation of pavements during freeze thaw cycles. Johnson, T.C., et al, (1986, 138p) CR 86-13

Resilient moduli of soil specimens in the frozen and thawed states. Johnson, T.C., et al, (1986, 62p) CR 86-12

Frost action on roads and airfields. Johnson, T.C., et al, (1936, 45p.) CR 86-18

Mechanical and physical properties of soils in cold regions Chamberlain, E.J., (1987, p.155-161) MP 2415

Snow/ice/frozen ground properties: working group report. Sterrett, K.F., et al, (1987, p.163-166) MP 2416

Developing a thawing model for sludge freezing beds Martel, C.J., (1988, p 1426-1430) MP 2372

On the design of polymeric composite structures for cold regions applications. Lord, H.W., et al, (1988, p 435-458) MP 2395

Unfrozen water content of undisturbed frozen silt. Tice, A.R., et al, (1988, 17p) CR 88-19

Snowmelt increase through albedo reduction. Colbeck, S.C., (1988, 11p) SR 88-26

Predicting freezing design depth of sludge-freezing beds Martel, C.J., (1988, p.145-156) MP 2461

Response of runway pavement to freeze thaw cycles. Allen, W.L., et al, (1989, 31p) SR 89-02

Physical changes in clays due to frost action Chamberlain, E.J., (1989, p 863-893) MP 2595

Monitoring pavement performance in seasonal frost areas Berg, R.L., (1989, p.10-19) MP 2564

Resilient modulus determination for frost conditions Chamberlain, E.J., et al, (1989, p 320-333) MP 2569

Undersaturation in thawed permafrost at the beginning of freezeback. Ayorinde, O.A., (1990, p 317-321) MP 2582

Proceedings (1990, 318p) SR 90-01

Effect of freeze-thaw cycles on soils Chamberlain, E., et al, (1990, p.145-155) MP 2678

Fate and transport of contaminants in frozen soils Ayorinde, O A., et al, (1990, p.202-211) MP 2679

FREEZE THAW INDEXES

Heat exchange at the ground surface. Scott, R.F., (1964, 49p. plus append) M II-A1

Freeze thaw tests

Melting and freezing of a drill hole through the Antarctic shelf ice Tien, C., et al, (1975, p 421-432) MP 861

Remote-reading tensiometer for use in subfreezing temperatures. McKim, H L., et al, (1976, p.31-45) MP 897

Repetitive loading tests on membrane enveloped road sections during freeze thaw. Smith, N., et al, (1977, p 171-197) MP 962

Freeze-thaw tests of liquid deicing chemicals on selected pavement materials Minsk, L.D., (1977, 16p) CR 77-28

Effects of moisture and freeze-thaw on rigid thermal insulations Kaplar, C.W., (1978, p.403-417) MP 1085

Freeze thaw loading tests on membrane enveloped road sections Smith, N., et al, (1978, p 1277-1288) MP 1158

Overconsolidation effects of ground freezing Chamberlain, E J., (1980, p.325-337) MP 1452

Neumann solution applied to soil systems Lunardini, V.J., (1980, 7p) CR 80-22

Simulating frost action by using an instrumented soil column Ingersoll, J., et al, (1981, p 34-42) MP 1485

Comparative evaluation of frost-susceptibility tests Chamberlain, E.J., (1981, p 42-52) MP 1486

Phase change around insulated buried pipes: quasi-steady method Lunardini, V.J., (1981, p 201-207, MP 1496

Freeze-thaw test to determine the frost susceptibility of soils Chamberlain, E.J., (1987, 90p) SR 87-1

Freeze thaw tests of road and airfield subgrade soils Cole, D M., et al, (1987, 36p) CR 87-02

Influence of thermal cycling on fiber composites Dutta, P.K., et al, (1988, p 141-147) MP 2435

Structural fiber composite materials for cold regions Dutta, P.K., (1988, p.124-134) MP 2405

Response of advanced composite space materials to thermal cycling. Dutta, P.K., et al, (1988, p.506-517) MP 2478

Development and design of sludge freezing beds. Martel, C.J., (1988, 49p) CR 88-20

Sludge dewatering by natural freeze-thaw. Martel, C.J., (1990, p.116-122) MP 2714

Freezeup

Seasonal regime and hydrological significance of stream icings in central Alaska. Kane, D.L., et al, (1973, p.528-540) MP 1026

Ice formation and breakup on Lake Champlain Bates, R.E., (1980, p.125-143) MP 1429

Ottauquechee River—analysis of freeze-up processes Calkins, D.J., et al, (1982, p.2-37) MP 1738

St Lawrence River freeze-up forecast. Shen, H T., et al, (1984, p.177-190) MP 1713

Forecasting water temperature decline and freeze-up in rivers. Shen, H.T., et al, (1984, 17p.) CR 84-19

Ice jam research needs. Gerard, R., (1984, p.181-193) MP 1813

Numerical simulation of freeze-up on the Ottauquechee River. Calkins, D.J., (1984, p 247-277) MP 1815

Ice regime reconnaissance, Yukon River, Yukon. Gerard, R., et al, (1984, p.1059-1073) MP 2406

Transient two-dimensional phase change. Albert, M.R., et al, (1985, p 229-243) MP 2162

Instrumentation for an uplifting ice force model. Zabilansky, L.J., (1985, p 1430-1435) MP 2091

St Lawrence River freeze-up forecast Foltyn, E.P., et al, (1986, p 467-481) MP 2120

Modelling trash rack freezeup by frazil ice Daly, S F., (1987, p 101-106) MP 2305

Ice cover distribution in Vermont and New Hampshire Atlantic salmon rearing streams. Calkins, D.J., et al, (1988, p 85-96) MP 2473

FREEZING

Freezing process and mechanics of frozen ground. Scott, R.F., (1969, 65p) M II-D1

Freezing

Heat and mass transfer from freely falling drops at low temperatures Zarling, J P., (1980, 14p) CR 80-18

Synoptic meteorology during the SNOW-ONE-A Field Experiment Bilello, M A., (1983, 80p.) SR 83-10

Two-dimensional heat conduction phase change. Albert, M R., et al, (1983, p 85-110) MP 2161

Modeling two-dimensional freezing. Albert, M R., (1984, 45p) CR 84-10

Technique for observing freezing fronts. Colbeck, S.C., (1985, p 13-20) MP 1861

Prevention of freezing of wastewater treatment facilities. Reed, S C., et al, (1985, 49p.) SR 85-11

Heat conduction phase change problems. Albert, M R., et al, (1986, p 591-607) MP 2159

Problems and opportunities with winter wastewater treatment. Reed, S C., (1986, p 16-20) MP 2205

Conduction heat transfer with freezing/thawing. Lunardini, V J., (1987, p 55-64) MP 2304

Geochemistry of freezing brines. Thurmond, V.L., et al, (1987, 11p) CR 87-13

Rational design of sludge freezing beds. Martel, C.J., (1988, p 575-581) MP 2343

Thermal conductivity of sludges Vesilind, P.A., et al, (1989, p 241-245) MP 2632

International Symposium on Cold Regions Heat Transfer, 1989 (1989, 314p) MP 2636

Freezing indexes

Drainage and frost action criteria for a pavement design Berg, R L., (1979, 51p) SR 79-15

Freezing nuclei

Studies of high-speed rotor icing under natural conditions Itagaki, K., et al, (1983, p 117-123) MP 1635

Freezing points

Bottom heat transfer to water bodies in winter O'Neill, K., et al, (1981, 8p) SR 81-18

Effect of variable thermal properties on freezing with an unfrozen water content Lunardini, V J., (1988, p 1127-1132) MP 2370

Chemical aspects of soil freezing Henry, K., (1988, 8p) CR 88-17

Freezing potential (electrical)

Electrical freezing potential of soils Kelsh, D J et al, (1988, 9p) CR 88-10

Freezing rate

Thin ice growth Ashton, G.D., (1989, p 564-566) MP 2657

Friction

Comment on 'Water drag coefficient of first-year sea ice' by M P Langleben Andreas, E L., et al, (1983, p 779-782) MP 1577

Constitutive relations for a planar, simple shear flow of rough disks Shen, H H., et al, (1985, 17p) CR 85-20

FROST ACTION

Freezing process and mechanics of frozen ground Scott, R F (1969, 65p) M II-D1

Frost action

Frost action in New Jersey highways Berg, R L., et al, (1978, 80p) SR 78-09

Small scale testing of soils for frost action Sayward, J M., (1979, p 223-231) MP 1309

Soil tests for frost action and water migration. Sayward, J.M., (1979, 17 p) SR 79-17

Construction of foundations in permafrost. Linell, K.A., et al, (1980, 310p.) SR 80-34

Pothole primer; a public administrator's guide to understanding and managing the pothole problem. Eaton, R.A., coord, (1981, 24p) MP 1416

Simulating frost action by using an instrumented soil column. Ingersoll, J., et al, (1981, p.34-42) MP 1485

Computer models for two-dimensional steady-state heat conduction. Albert, M R., et al, (1983, 90p) CR 83-10

Revised procedure for pavement design under seasonal frost conditions Berg, R., et al, (1983, 129p) SR 83-27

Frost action and its control Berg, R L., ed, (1984, 145p) MP 1704

Deteriorated building panels at Sondrestrom, Greenland. Korhonen, C., (1985, p.7-10) MP 2017

Vertically stable benchmarks, a synthesis of existing information. Gatto, L.W., (1985, p 179-188) MP 2069

Arctic and subarctic construction. general provisions. Lobacz, E.F., (1986, 75p) SR 86-17

Frost action predictive techniques: an overview of research results. Johnson, T.C., et al, (1986, p.147-161) MP 2267

Performance of pavement: at Central Wisconsin Airport. Stark, J., et al, (1989, p.92-103) MP 2463

Deep frost effects on a longitudinal edge drain. Allen, W.L., (1989, p 343-352) MP 2469

Physical changes in clays due to frost action. Chamberlain, E.J., (1989, p 863-893) MP 2595

State of the art of pavement response monitoring systems for roads and airfields (1989, 401p.) SR 89-23

Data acquisition: first the FERF then the world. Knuth, K.V., (1989, p 136-138) MP 2567

Frost forecasting

Relationships between January temperatures and the winter regime in Germany Bilello, M A., et al, (1979, p.17-27) MP 1218

FROST HEAVE

Cold room studies on frost susceptible soils. (1950, 25p.) ACFEL MP BL 1

Foundations of structures in cold regions. Sanger, F.J., (1969, 91p) M III-C4

Frost heave

Heat and moisture flow in freezing and thawing soils—a field study Berg, R.L., (1975, p 148-160) MP 1612

Influence of insulation upon frost penetration beneath pavements. Eaton, R A., et al, (1976, 41p.) SR 76-06

Galerkin finite element analog of frost heave. Guymon, G L., et al, (1976, p.111-113) MP 898

Mathematical model to predict frost heave Berg, R.L., et al, (1977, p 92-109) MP 1131

Segregation freezing as the cause of suction force for ice lens formation Takagi, S., (1978, p 45-51) MP 1081

Segregation freezing as the cause of suction force for ice lens formation Takagi, S., (1978, 13p) CR 78-06

Effects of subgrade preparation upon full depth pavement performance in cold regions Eaton, R A., (1978, p 459-473) MP 1087

Frost action in New Jersey highways Berg, R L., et al, (1978, 80p) SR 78-09

Design of airfield pavements for seasonal frost and permafrost conditions. Berg, R.L., et al, (1978, 58p) MP 1189

Thermal and load-associated distress in pavements. Johnson, T C., et al, (1978, p 403-437) MP 1209

Full-depth pavement considerations in seasonal frost areas. Eaton, R.A., et al, (1979, 24p) MP 1188

Small-scale testing of soils for frost action Sayward, J M., (1979, p 223-231) MP 1309

Soil tests for frost action and water migration. Sayward, J M., (1979, 17 p) SR 79-17

Mathematical model to correlate frost heave of pavements. Berg, R L., et al, (1980, 49p) CR 80-10

Frost heave in an instrumented soil column Berg, R.L., et al, (1980, p 211-221) MP 1331

Summary of the adsorption force theory of frost heaving Takagi, S., (1980, p 233-236) MP 1332

Frost heave model based upon heat and water flux Guymon, G L., et al, (1980, p 253-262) MP 1333

Adsorption force theory of frost heaving Takagi, S., (1980, p 57-81) MP 1334

Numerical solutions for rigid ice model of secondary frost heave O'Neill, K., et al, (1980, p 656-669) MP 1454

Construction of foundations in permafrost Linell, K A., et al, (1980, 310p) SR 80-34

Results from a mathematical model of frost heave Guymon G L., et al (1981, p 26) MP 1483

Comparative evaluation of frost-susceptibility tests Chamberlain, E J., (1981, p 42-52) MP 1486

CRREL frost heave test, USA Chamberlain, E J., et al, (1981, p 55-62) MP 1499

Ice segregation in a frozen soil column Guymon, G L., et al (1981, p 127-140) MP 1534

Frost susceptibility of soil, review of index tests Chamberlain, E J., (1981, 110p) M 81-02

Numerical solutions for a rigid ice model of secondary frost heave O'Neill, K., et al, (1982, 11p) CR 82-13

Relationship between the ice and unfrozen water phases in frozen soil Tice, A R., et al, (1982, 9p) CR 82-15

Initial stage of the formation of soil-laden ice lenses. Takagi, S., (1982, p.223-232) MP 1596
Frost susceptibility of soil, review of index tests. Chamberlain, E.J., (1982, 110p.) MP 1557
Frost heave model. Hromadka, T.V., II, et al. (1982, p.1-10) MP 1567
Full-depth and granular base course design for frost areas. Eaton, R.A., et al, (1983, p.27-39) MP 1692
Physics of mathematical frost heave models: a review. O'Neill, K., (1983, p.275-291) MP 1588
Frost heave of saline soils. Chamberlain, E.J., (1983, p.121-126) MP 1655
Field tests of a frost-heave model. Guymon, G.L., et al, (1983, p.409-414) MP 1657
Frozen soil-water diffusivity under isothermal conditions. Nakano, Y., et al, (1983, 8p.) CR 83-22
Revised procedure for pavement design under seasonal frost conditions. Berg, R., et al, (1983, 129p.) SR 83-27
Offshore mechanics and Arctic engineering symposium, 1984. (1984, 3 vols.) MP 1675
Two-dimensional model of coupled heat and moisture transport in frost heaving soils. Guymon, G.L., et al, (1984, p.91-98) MP 1678
Simple model of ice segregation using an analytic function to model heat and soil-water flow. Hromadka, T.V., II, et al, (1984, p.99-104) MP 2104
Frost action and its control. Berg, R.L., ed. (1984, 145p.) MP 1704
Designing for frost heave conditions. Crory, F.E., et al, (1984, p.22-44) MP 1705
Survey of methods for classifying frost susceptibility. Chamberlain, E.J., et al, (1984, p.104-141) MP 1707
Frost jacking forces on H and pipe piles embedded in Fairbanks silt. Johnson, J.B., (1984, 42p + appends.) MP 2271
Role of heat and water transport in frost heaving of porous soils. Nakano, Y., et al, (1984, p.93-102) MP 1842
Ice segregation and frost heaving. (1984, 72p.) MP 1809
Status of numerical models for heat and mass transfer in frost-susceptible soils. Berg, R.L., (1984, p.67-71) MP 1851
Mitigative and remedial measures for chilled pipelines in discontinuous permafrost. Sayles, F.H., (1984, p.61-62) MP 1974
Heat and moisture transfer in frost-heaving soils. Guymon, G.L., et al, (1984, p.336-343) MP 1765
Exploration of a rigid ice model of frost heave. O'Neill, K., et al, (1985, p.281-296) MP 1880
Automated soils freezing test Chamberlain, E.J., (1985, 5p.) MP 1892
Frost heave forces on piling. Esch, D.C., et al, (1985, 2p.) MP 1732
Phase equilibrium in frost heave of fine-grained soil. Nakano, Y., et al, (1985, p.50-68) MP 1896
Stefan problem in a finite domain. Takagi, S., (1985, 28p.) SR 85-08
Soil freezing response: influence of test conditions. McCabe, E.Y., et al, (1985, p.49-58) MP 1990
Experimental study on factors affecting water migration in frozen morin clay. Xu, X., et al, (1985, p.123-128) MP 1897
Partial verification of a thaw settlement model Guymon, G.L., et al, (1985, p.18-25) MP 1924
Hydraulic properties of selected soils Ingersoll, J., et al, (1985, p.26-35) MP 1925
Frost heave of full-depth asphalt concrete pavements Zoerman, J., et al, (1985, p.66-76) MP 1927
Frost jacking forces on H and pipe piles embedded in Fairbanks silt. Johnson, J.B., et al, (1985, p.125-133) MP 1930
Ion and moisture migration and frost heave in freezing Morin clay. Qiu, G., et al, (1986, p.1014) MP 1970
Natural electrical potentials that arise when soils freeze. Yarkin, I.G., (1986, 24p.) SR 86-12
Frost action predictive techniques: an overview of research results Johnson, T.C., et al, (1986, p.147-161) MP 2267
Evaluation of selected frost-susceptibility test methods. Chamberlain, E.J., (1986, 51p.) CR-86-14
Frost action on roads and airfields Johnson, T.C., et al, (1986, 45p.) CR 86-18
Freeze-thaw test to determine the frost susceptibility of soils Chamberlain, E.J., (1987, 90p.) SR 87-1
Bank conditions and erosion along selected reservoirs Gatto, L.W., et al, (1987, p.143-154) MP 2196
Benchmark design and installation: a synthesis of existing information Gatto, L.W., (1987, 73p.) SR 87-10
Foundation technology in cold regions Quinn, W.F., (1987, p.305-310) MP 2425
Evaluation of the X-ray radiography efficiency for heaving and consolidation observation Akagawa, S., (1988, p.23-28) MP 2376
Geotextiles and a new way to use them Henry, K., (1988, p.214-222) MP 2525
Frost heave forces on H and pipe foundation piles Buska, J.S., et al, (1988, p.1039-1044) MP 2367
New freezing test for determining frost susceptibility Chamberlain, E.J., (1988, p.1045-1050) MP 2368
Use of geotextiles to mitigate frost heave in soils Henry, K., (1988, p.1096-1101) MP 2369
Electrical freezing potential of soils. Kelsh, D.J., et al, (1988, 9p.) CR 88-10
Chemical aspects of soil freezing. Henry, K., (1988, 8p.) CR 88-17
Measurement of frost heave forces on H-piles and pipe piles. Johnson, J.B., et al, (1988, 49p.) CR 88-21
Response of runway pavement to freeze thaw cycles. Allen, W.L., et al, (1989, 31p.) SR 89-02
Comparison of insulated and noninsulated pavements. Kestler, M., et al, (1989, p.367-378) MP 2471
Radar profiling of Newton Airfield in Jackman, Maine. Martinson, C.R., (1989, 9p.) SR 89-04
Data acquisition: first the FERF then the world. Knuth, K.V., (1989, p.136-138) MP 2567
Steady growth of ice layer in freezing soils. Nakano, Y., (1990, p.207-226) MP 2695
X-ray photography of the frozen fringe of freezing soil. Akagawa, S., (1990, 69p.) SR 90-05
Case study of potential causes of frost heave. Henry, K.S., (1990, 35p.) SR 90-09
Frost mounds
Ice-cored mounds at Sukakpak Mountain, Brooks Range. Brown, J., et al, (1983, p.91-96) MP 1653
Frost penetration
Influence of insulation upon frost penetration beneath pavements. Eaton, R.A., et al, (1976, 41p.) SR 76-06
Mathematical model to predict frost heave. Berg, R.L., et al, (1977, p.92-109) MP 1131
Frost action in New Jersey highways. Berg, R.L., et al, (1978, 80p.) SR 78-09
Design of airfield pavements for seasonal frost and permafrost conditions. Berg, R.L., et al, (1978, 18p.) MP 1189
Full-depth pavement considerations in seasonal frost areas. Eaton, R.A., et al, (1979, 24p.) MP 1188
Drainage and frost action criteria for a pavement design. Berg, R.L., (1979, 51p.) SR 79-15
Determination of frost penetration by soil resistivity measurements. Atkins, R.T., (1979, 24p.) SR 79-22
Mathematical model to correlate frost heave of pavements. Berg, R.L., et al, (1980, 49p.) CR 80-10
Construction of an embankment with frozen soil. Botz, J.J., et al, (1980, 105p.) SR 80-21
Frost heave in an instrumented soil column. Berg, R.L., et al, (1980, p.211-221) MP 1331
Construction of foundations in permafrost. Linell, K.A., et al, (1980, 310p.) SR 80-34
Field studies of membrane encapsulated soil layers with additives. Eaton, R.A., et al, (1980, 46p.) SR 80-33
Laboratory and field use of soil tensiometers above and below 0 deg C. Ingersoll, J., (1981, 17p.) SR 81-07
Full-depth and granular base course design for frost areas. Eaton, R.A., et al, (1983, p.27-39) MP 1692
Field tests of a frost-heave model. Guymon, G.L., et al, (1983, p.409-414) MP 1657
Comparison of two-dimensional domain and boundary integral geothermal models with embankment freeze-thaw field data. Hromadka, T.V., II, et al, (1983, p.509-513) MP 1659
Designing for frost heave conditions. Crory, F.E., et al, (1984, p.22-44) MP 1705
Evaluating trafficability McKim, H.L., (1985, p.474-475) MP 2023
Arctic and subarctic construction: general provisions. Lobacz, E.F., (1986, 75p.) SR 86-17
Predicting freezing design depth of sludge-freezing beds. Martel, C.J., (1988, p.145-156) MP 2461
Deep frost effects on a longitudinal edge drain Allen, W.L., (1989, p.343-352) MP 2469
Comparison of insulated and noninsulated pavements Kestler, M., et al, (1989, p.367-378) MP 2471
Monitoring pavement performance in seasonal frost areas Berg, R.L., (1989, p.10-19) MP 2564
Determination of frost penetration by soil resistivity measurements. Atkins, R.T., (1989, p.87-100) MP 2565
Proceedings. (1990, 318p.) SR 90-01
Frost protection
Evaluation of MESL membrane--puncture, stiffness, temperature, solvents. Sayward, J.M., (1976, 60p.) CR 76-22
Utility distribution practices in northern Europe McFadden, T., et al, (1977, p.70-95) MP 928
Construction and performance of membrane encapsulated soil layers in Alaska Smith, N., (1979, 27p.) CR 79-16
Revised procedure for pavement design under seasonal frost conditions Berg, R., et al, (1983, 129p.) SR 83-27
Pavement design for seasonal frost conditions Berg, R.L., (1988, 12p.) MP 2547
Response of runway pavement to freeze thaw cycles Allen, W.L., et al, (1989, 31p.) SR 89-02
Frost resistance
Full-depth pavement considerations in seasonal frost areas Eaton, R.A., et al, (1979, 24p.) MP 1188
Field studies of membrane encapsulated soil layers with additives Eaton, R.A., et al, (1980, 46p.) SR 80-33
Comparative evaluation of frost-susceptibility tests Chamberlain, E.J., (1981, p.42-52) MP 1486
CRREL frost heave test, USA Chamberlain, E.J., et al, (1981, p.55-62) MP 1499
Frost action and its control Berg, R.L., ed. (1984, 145p.) MP 1704
Survey of methods for classifying frost susceptibility. Chamberlain, E.J., et al, (1984, p.104-141) MP 1707
Status of numerical models for heat and mass transfer in frost-susceptible soils. Berg, R.L., (1984, p.67-71) MP 1851
Stabilization of fine-grained soil for road and airfield construction. Danyluk, L.S., (1986, 37p.) SR 86-21
Evaluation of selected frost-susceptibility test methods. Chamberlain, E.J., (1986, 51p.) CR-86-14
Frost action on roads and airfields. Johnson, T.C., et al, (1986, 45p.) CR 86-18
Freeze-thaw test to determine the frost susceptibility of soils. Chamberlain, E.J., (1987, 90p.) SR 87-1
New freezing test for determining frost susceptibility. Chamberlain, E.J., (1988, p.1045-1050) MP 2368
Comparison of insulated and noninsulated pavements. Kestler, M., et al, (1989, p.367-378) MP 2471
Determination of frost penetration by soil resistivity measurements. Atkins, R.T., (1989, p.87-100) MP 2565
Use of soft grade asphalts in airfields and highway pavements in cold regions. Janoo, V.C., (1990, 47p.) SR 90-12
Frost weathering
Bank conditions and erosion along selected reservoirs. Gatto, L.W., et al, (1987, p.143-154) MP 2196
Frozen fines
Strength and deformation of frozen silt. Haynes, F.D., (1978, p.655-661) MP 1105
Resiliency of silt under asphalt during freezing and thawing. Johnson, T.C., et al, (1978, p.662-668) MP 1106
Frozen gravel
Permafrost excavating attachment for heavy bulldozers. Garfield, D.E., et al, (1977, p.144-151) MP 955
Design considerations for airfields in NPRA. Crory, F.E., et al, (1978, p.441-458) MP 1086
Frozen ground
Subsurface explorations in permafrost areas. Cass, J.R., Jr., (1959, p.31-41) MP 805
FROZEN GROUND
Characteristics of the cold regions. Gerdel, R.W., (1969, 51p.) M I-A
Frozen ground
Proposed size classification for the texture of frozen earth materials. McGaw, R., (1975, 10p.) MP 921
Stake driving tools: a preliminary survey. Kovacs, A., et al, (1977, 43p.) SR 77-13
Second progress report on oil spilled on permafrost. McFadden, T., et al, (1977, 46p.) SR 77-44
Determination of unfrozen water in frozen soil by pulsed nuclear magnetic resonance Tice, A.R., et al, (1978, p.149-155) MP 1097
Terminal ballistics in cold regions materials. Aitken, G.W., (1978, 6p.) MP 1182
Some aspects of Soviet trenching machines. Mellor, M., (1980, 13p.) SR 80-07
Nose shape and L/D ratios and projectile penetration in frozen soil. Richmond, P.W., (1980, 21p.) SR 80-17
Watershed modeling in cold regions. Stokely, J.L., (1980, 241p.) MP 1471
National Chinese Conference on Permafrost, 2nd, 1981 Brown, J., et al, (1982, 58p.) SR 82-03
Relationship between the ice and unfrozen water phases in frozen soil. Tice, A.R., et al, (1982, 8p.) CR 82-15
Effects of ice content on the transport of water in frozen soils. Nakano, Y., et al, (1984, p.28-34) MP 1841
Effects of ice content on the transport of water in frozen soil. Nakano, Y., et al, (1984, p.58-66) MP 1843
Conventional land mines in winter. Richmond, P.W., (1984, 23p.) SR 84-30
Transport of water in frozen soil. Nakano, Y., et al, (1984, p.172-179) MP 1819
Unfrozen water content in frozen ground. Xu, X., et al, (1985, p.83-87) MP 1929
Experimental and theoretical studies of acoustic-to-seismic coupling Albert, D.G., (1988, p.19-31) MP 2432
Observations of moisture migration in frozen soils during thawing Cheng, G., et al, (1988, p.308-312) MP 2373
Measurement of the unfrozen water content of soils: a comparison of NMR and TDR methods. Smith, M.W., et al, (1988, p.473-477) MP 2363
Octanol-water partition coefficients for organophosphonates. Britton, K.B., et al, (1988, 24p.) SR 88-11
Unfrozen water content of undisturbed frozen silt. Tice, A.R., et al, (1988, 17p.) CR 88-19
Investigations of dielectric properties of some frozen materials Arcone, S.A., et al, (1989, 18p.) CR 89-04
Unfrozen water contents of undisturbed and remolded Alaskan silt Tice, A.R., et al, (1989, p.103-111) MP 2683
Hydraulic conductivity and unfrozen water content of frozen silt Black, P.B., et al, (1990, p.323-329) MP 2551
Fate and transport of contaminants in frozen soils Ayorinde, O.A., et al, (1990, p.202-211) MP 2679
Frozen ground chemistry
Ionic migration and weathering in frozen Antarctic soils Ugolini, F.C., et al, (1973, p.461-470) MP 941
Frozen ground compression
Increasing the effectiveness of soil compaction at below-freezing temperatures Haas, W.M., et al, (1978, 48p.) SR 78-25

Frozen ground compression *(cont.)*
Deformation and failure of frozen soils and ice due to stresses. Fish, A.M., (1982, p.419-428; MP 1553
Frozen strength characterization of NH&S test sites in Montana. Chamberlain, E.J., et al, (1988, var. p.; MP 2617

FROZEN GROUND MECHANICS
Freezing process and mechanics of frozen ground. Scott, R.F., (1969, 65p.; M II-D1

Frozen ground mechanics
Seismic exploration in cold regions. Roethlisberger, H., (1972, 138p.; M II-A2a
Heat and moisture flow in freezing and thawing soils—a field study. Berg, R.L., (1975, p.148-160; MP 1612
Finite element model of transient heat conduction. Guymon, G.L., et al, (1977, 167p.; SR 77-38
Effect of freeze-thaw cycles on resilient properties of fine-grained soils. Johnson, T.C., et al, (19?? 19p.; MP 1002
Thermal and creep properties for frozen ground construction. Sanger, F.J., et al, (1978, p.95-117; MP 1624
Freeze thaw effect on resilient properties of fine soils. Johnson, T.C., et al, (1979, p.247-276; MP 1226
Thermal and creep properties for frozen ground construction. Sanger, F.J., et al, (1979, p.311-337; MP 1227
Application of the Andrade equation to creep data for ice and frozen soil. Ting, J.M., et al, (1979, p.29-36; MP 1802
Grouting silt and sand at low temperatures. Johnson, R., (1979, p.937-950; MP 1978
Mechanical properties of frozen ground. Ladanyi, B., et al, (1979, p.7-18; MP 1726
High-explosive cratering in frozen and unfrozen soils in Alaska. Smith, N., (1980, 21p.; CR 80-09
Dynamic testing of free field stress gages in frozen soil. Aitken, G.W., et al, (1980, 26p.; SR 80-30
Overconsolidation effects of ground freezing. Chamberlain, E.J., (1980, p.325-337; MP 1452
Construction of foundations in permafrost. Linell, K.A., et al, (1980, 310p.; SR 80-34
Simulating frost action by using an instrumented soil column. Ingersoll, J., et al, (1981, p.34-42; MP 1485
Site investigations and submarine soil mechanics in polar regions. Chamberlain, E.J., (1981, 18p.; SR 81-24
Thermal properties of soils. Farouki, O.T., (1981, 136p.; M 81-01
Deformation and failure of frozen soils and ice due to stresses. Fish, A.M., (1982, p.419-428; MP 1553
Frozen soil characteristics that affect land mine functioning. Richmond, P.W., (1983, 18p.; SR 83-05
Creep behavior of frozen silt under constant uniaxial stress. Zhu, Y., et al, (1983, p.1507-1512; MP 1805
Frozen soil-water diffusivity under isothermal conditions. Nakano, Y., et al, (1983, 8p.; CR 83-22
Thermodynamic model of soil creep at constant stresses and strains. Fish, A.M., (1983, 18p.; CR 83-33
Creep behavior of frozen silt under constant uniaxial stress. Zhu, Y., et al, (1984, p.33-48; MP 1807
Modeling the resilient behavior of frozen soils using unfrozen water content. Cole, D.M., (1984, p.823-834; MP 1715
Thermodynamic model of creep at constant stress and constant strain rate. Fish, A.M., (1984, p.143-161; MP 1771
Tertiary creep model for frozen sands (discussion) Fish, A.M., et al, (1984, p.1373-1378; MP 1810
Foundations in permafrost and seasonal frost; Proceedings. (1985, 62p.; MP 1730
Seasonal variations in pavement performance Johnson, T.C., (1985, c21p.; MP 2076
Creep and strength behavior of frozen silt in uniaxial compression. Zhu, Y., et al, (1987, 67p.; CR 87-10
Shape of creep curves in frozen soils and polycrystalline ice. Fish, A.M., (1987, p.623-629; MP 2329
Mechanical and physical properties of soils in cold regions. Chamberlain, E.J., (1987, p.155-161; MP 2415
State of the art: mechanical properties of frozen soil. Sayles, F.H., (1988, p.143-165; MP 2377
Geotextiles and a new way to use them. Henry, K., (1988, p.214-222; MP 2525
Use of geotextiles to mitigate frost heave in soils Henry, K., (1988, p.1096-1101; MP 2369
Some peculiarities of creep behavior of frozen silt Fish, A.M., (1989, p.721-724; MP 2601
Nonlinear problems in the study of water movement in frozen soils. Nakano, Y., (1989, p.383-393; MP 2719

Frozen ground physics
Evaluation of methods for calculating soil thermal conductivity Farouki, O., (1972, 90p.; CR 82-08
Applications of thermal analysis to cold regions Sterrett, K.F., (1976, p.167-181; MP 890
Calculating unfrozen water content of frozen soils McGaw, R., et al, (1976, p.114-122; MP 899
Computer program for determining electrical resistance in nonhomogeneous ground Arcone, S.A., (19??, 16p.; CR 77-02
NMR phase composition measurements on moist soils Tice, A.R., et al, (1978, p.11-14; MP 1210
Electrical resistivity of frozen ground Arcone, S.A., (1979, p.32-37; MP 1623
Determination of frost penetration by soil resistivity measurements. Atkins, R.T., (1979, 24p.; SR 79-22
Electron microscope investigations of frozen and unfrozen bentonite. Kumai, M., (1979, 14p.; CR 79-28
Thermal diffusivity of frozen soil. Haynes, F.D., et al, (1980, 30p.; SR 80-30
VHF electrical properties of frozen ground near Point Barrow, Alaska. Arcone, S.A., et al, (1981, 18p.; CR 81-13
Phase change around a circular cylinder. Lunardini, V.J., (1981, p.598-600; MP 1507
Heat conduction with phase changes. Lunardini, V.J., (1981, 14p.; CR 81-25
Acoustic emissions during creep of frozen soils. Fish, A.M., et al, (1982, p.194-206; MP 1695
Understanding the Arctic sea floor for engineering purposes. (1982, 141p.; SR 83-25
Mobility of water in frozen soils. Lunardini, V.J., et al, (1982, c15p.; MP 2012
Electrical properties of frozen ground, Point Barrow, Alaska. Arcone, S.A., et al, (1982, p.485-492; MP 1572
Transport of water in frozen soil, Part I. Nakano, Y., et al, (1982, p.221-226; MP 1629
Physics of mathematical frost heave models: a review. O'Neill, K., (1983, p.275-291; MP 1508
Effects of ice on the water transport in frozen soil. Nakano, Y., et al, (1983, p.15-26; MP 1601
Relationship between ice and unfrozen water in frozen soils. Tice, A.R., et al, (1983, p.37-46; MP 1632
Water migration due to a temperature gradient in frozen soil. Oliphant, J.L., et al, (1983, p.951-956; MP 1666
Offshore mechanics and Arctic engineering symposium, 1984, (1984, 3 vols.; MP 1675
Two-dimensional model of coupled heat and moisture transport in frost heaving soils. Guymon, G.L., et al, (1984, p.91-98; MP 1678
Field dielectric measurements of frozen silt using VHF pulses. Arcone, S.A., et al, (1984, p.29-37; MP 1774
Dielectric measurements of frozen silt using time domain reflectometry. Delaney, A.J., et al, (1984, p.39-46; MP 1775
Conductive backfill for improving electrical grounding in frozen soils. Sellmann, P.V., et al, (1984, 19p.; SR 84-17
Effects of magnetic particles on the unfrozen water content in soils. Tice, A.R., et al, (1984, p.63-73; MP 1790
Pulse transmission through frozen silt. Arcone, S.A., (1984, 9p.; CR 84-17
Snow, ice and frozen ground research at the Sleepers River, VT. Pangburn, T., et al, (1984, p.229-240; MP 2071
Deuterium diffusion in a soil-water-ice mixture. Oliphant, J.L., et al, (1984, 11p.; SR 84-27
Coaxial waveguide reflectometry for frozen ground and ice. Delaney, A.J., et al, (1984, p.428-431; MP 2048
Impulse radar sounding of frozen ground. Kovacs, A., et al, (1985, p.28-40; MP 1952
Effects of soluble salts on the unfrozen water content in silt. Tice, A.R., et al, (1985, p.99-109; MP 1933
Water migration in frozen clay under linear temperature gradients. Xu, X., et al, (1985, p.111-122; MP 1934
Experimental study on factors affecting water migration in frozen morin clay. Xu, X., et al, (1985, p.123-128; MP 1897
Model for dielectric constants of frozen soils. Oliphant, J.L., (1985, p.46-57; MP 1926
Frozen ground physics. Fish, A.M., (1985, p.29-36; MP 1928
Factors affecting water migration in frozen soils. Xu, X., et al, (1987, 16p.; CR 87-09
Mechanical and physical properties of soils in cold regions. Chamberlain, E.J., (1987, p.155-161; MP 2415
Snow/ice/frozen ground properties. working group report Sterrett, K.F., et al, (1987, p.163-166; MP 2416
Ground motion induced by an acoustic pulse, and its wintertime variations. Peck, L., (1988, p.361-385; MP 2597
State of the art: mechanical properties of frozen soil Sayles, F.H., (1988, p.143-165; MP 2377
Microstructure of frozen soils examined by SEM kumai, M., (1988, p.390-395; MP 2361
Borehole investigations of the electrical properties of frozen silt. Arcone, S.A., et al, (1988, p.910-915; MP 2364
Physical changes in clays due to frost action Chamberlain, E.J., (1989, p.363-393; MP 2595
Acoustically induced ground motion in sand under water conditions Peck, L., (1989, p.37-54; MP 2626
Proceedings (1990, 318p.; SR 90-01

Frozen ground settling
Overconsolidation effects of ground freezing Chamberlain, E.J., (1980, p.325-337; MP 1452
Comparative analysis of the USSR construction codes and the US Army technical manual for design of foundations on permafrost Fish, A.M., (1982, 20p.; CR 82-14

Frozen ground strength
Excavating rock, ice, and frozen ground by electromagnetic radiation Hoekstra, P., (1976, 17p.; CR 76-36
Effect of temperature on the strength of frozen silt Haynes, F.D., et al, (1977, 22p.; CR 77-03
Permafrost excavating attachment for heavy bulldozers Garfield, D.E., et al, (1977, p.144-151; MP 955
Ground pressures exerted by underground explosions. Johnson, P.R., (1978, p.284-290; MP 1520
Mechanical properties of frozen ground. Ladanyi, B., et al, (1979, p.7-18; MP 1726
Construction of an embankment with frozen soil. Butz, J.J., et al, (1980, 105p.; SR 80-21
Use of piling in frozen ground. Crory, F.E., (1980, 21 p.; MP 1607
Kinetic nature of the long term strength of frozen soils. Fish, A.M., (1980, p.95-108; MP 1480
Strength of frozen silt as a function of ice content and dry unit weight. Sayles, F.H., et al, (1980, p.109-119; MP 1451
Overconsolidation effects of ground freezing. Chamberlain, E.J., (1980, p.325-337; MP 1452
Small caliber projectile penetration in frozen soil. Richmond, P.W., (1980, p.801-823; MP 1490
Phase change around a circular pipe. Lunardini, V.J., (1980, 18p.; CR 80-27
Design of foundations in areas of significant frost penetration. Linell, K.A., et al, (1980, p.118-184; MP 1358
Excavation of frozen materials. Moore, H.E., et al, (1980, p.323-345; MP 1360
Acoustic emissions during creep of frozen soils. Fish, A.M., et al, (1982, p.194-206; MP 1695
Alaska Good Friday earthquake of 1964. Swinnow, G.K., (1982, 26p.; CR 82-01
Testing shaped charges in unfrozen and frozen silt in Alaska. Smith, N., (1982, 16p.; SR 82-02
Piling in frozen ground. Crory, F.E., (1982, p.112-124; MP 1722
Deformation and failure of frozen soils and ice due to stresses. Fish, A.M., (1982, p.419-428; MP 1553
Comparison of unfrozen water contents measured by DSC and NMR. Oliphant, J.L., et al, (1982, p.115-121; MP 1594
Freezing of soil with surface convection. Lunardini, V.J., (1982, p.205-212; MP 1595
Initial stage of the formation of soil-laden ice lenses. Takagi, S., (1982, p.223-232; MP 1596
Effect of loading on the unfrozen water content of silt. Oliphant, J.L., et al, (1983, 17p.; SR 83-10
Creep behavior of frozen silt under constant uniaxial stress. Zhu, Y., et al, (1983, p.1507-1512; MP 1805
Erosion of perennially frozen streambanks. Lawson, D.E., (1983, 22p.; CR 83-29
Compressive strength of frozen silt. Zhu, Y., et al, (1984, p.3-15; MP 1773
Seasonal soil conditions and the reliability of the M15 land mine. Richmond, P.W., et al, (1984, 35p.; SR 84-10
Shear strength in the zone of freezing in saline soils. Chamberlain, E.J., (1985, p.566-574; MP 1879
Strain rate effect on the tensile strength of frozen silt. Zhu, Y., et al, (1985, p.153-157; MP 1880
Frozen ground physics. Fish, A.M., (1985, p.29-36; MP 1928
Shear strength anisotropy in frozen saline and freshwater soils. Chamberlain, E.J., (1985, p.189-194; MP 1931
Repeated load triaxial testing of frozen and thawed soils. Cole, D.M., et al, (1985, p.166-170; MP 2008
Tensile strength of frozen silt. Zhu, Y., et al, (1986, p.15-28; MP 1971
Effects of freeze thaw cycles on granular soils for pavements. Cole, D.M., et al, (1986, 70p.; CR 86-06
Some developments in shaped charge technology. Meller, M., (1986, 29p.; SR 86-18
Auger bit for frozen fine-grained soil. Sellmann, P.V., et al, (1986, 13p.; SR 86-36
Classification and laboratory testing of artificially frozen ground Sayles, F.H., et al, (1987, p.22-48; MP 2227
Creep and strength behavior of frozen silt in uniaxial compression Zhu, Y., et al, (1987, 67p.; CR 87-10
Tensile strength of frozen silt. Zhu, Y., et al, (1987, 23p.; CR 87-15
CRREL Hopkinson bar apparatus. Datta, P.K., et al, (1987, 29p.; SR 87-24
Freezing a temporary roadway for transport of a 3000 ton dragline. Mashman, D., et al, (1988, p.357-365; MP 2378
Drilling in frozen ground, bitumens and concretes. Sellmann, P.V., et al, (1988, 10p.; SR 88-08
Triaxial compressive strength of frozen soils under constant strain rates Zhu, Y., et al, (1988, p.1200-1205; MP 2371
Frozen strength characterization of NH&S test sites in Montana Chamberlain, E.J., et al, (1988, var. p.; MP 2617
Unfrozen water contents of six antarctic soil materials. Anderson, D.M., et al, (1989, p.353-366; MP 2470
Some peculiarities of creep behavior of frozen silt. Fish, A.M., (1989, p.721-724; MP 2601
Blasting and blast effects in cold regions. Part 3. explosions in ground materials Meller, M., (1989, 62p.; SR 89-15
Strength of soils and rocks at low temperatures Sellmann, P.V., (1989, p.189-190; MP 2605

Frozen ground temperature
Slumping failure of an Alaskan earth dam Collins, C.M., et al, (1977, 21p.; SR 77-21

Freezing of soil with surface convection. Lunardini, V.J., (1982, p.205-212;) MP 1995

Relationship between ice and unfrozen water in frozen soils. Tice, A.R., et al, (1983, p.37-46;) MP 1632

Relationships between estimated mean annual air and permafrost temperatures in North-Central Alaska. Haugen, R.K., et al, (1983, p.462-467;) MP 1650

Design implications of subsoil thawing. Johnson, T.C., et al, (1984, p.45-103;) MP 1706

Prototype drill for core sampling fine-grained perennially frozen ground. Brockett, B.E., et al, (1985, 29p.;) CR 85-01

Review of analytical methods for ground thermal regime calculations. Lunardini, V.J., (1985, p.206-257;) MP 1922

Frozen ground physics. Fish, A.M., (1985, p.29-36;) MP 1928

Soil-water potential and unfrozen water content and temperature. Xu, X., et al, (1985, p.1-16;) MP 1932

Drill bits for frozen fine-grained soils. Sellmann, P.V., et al, (1986, 33p.;) SR 86-27

Transport of water in frozen soil 6. Effects of temperature. Nakano, Y., et al, (1987, p.44-50;) MP 2213

Tracking freezing front movement using boundary element method. Hromadka, T.V., II, (1987, 54p.;) SR 87-08

Rate of water transport due to temperature gradients in frozen soils. Nakano, Y., et al, (1988, p.412-417;) MP 2362

Unfrozen water contents of ice antarctic soil materials. Anderson, D.M., et al, (1989, p.352-366;) MP 2470

Frozen ground thermodynamics

Segregation-freezing temperature as the cause of suction force. Takagi, S., (1977, p.59-66;) MP 901

Segregation freezing as the cause of suction force for ice lens formation. Takagi, S., (1978, p.45-51;) MP 1001

Thermal and creep properties for frozen ground construction. Sanger, F.J., et al, (1978, p.95-117;) MP 1624

Thermal and creep properties for frozen ground construction. Sanger, F.J., et al, (1979, p.311-337;) MP 1227

Introduction to the basic thermodynamics of cold capillary systems. Colbeck, S.C., (1981, 9p.;) SR 81-06

Thermal properties of soils. Farouki, O.T., (1981, 136p.;) M 81-01

Thermodynamic model of soil creep at constant stresses and strains. Tuma, A.M., (1983, 18p.;) CR 83-33

Heat distribution research. Phetteplace, G., (1986, p.2-;) MP 2150

Model of heat and soil-water flow coupled by soil-water phase change. Hromadka, T.V., II, (1987, 126p.;) SR 87-09

Frozen lakes

Imaging radar observations of frozen Arctic lakes. Elachi, C., et al, (1976, p.169-175;) MP 1284

Investigation of the LIZ-3 Dew Line Station water supply lake. Kovacs, A., (1990, 10p.;) SR 90-11

Frozen rock strength

Blasting and blast effects in cold regions. Part 3 explosives in ground materials. Mellor, M., (1989, 62p.;) SR 89-15

Strength of soils and rocks at low temperatures. Sellmann, P.V., (1989, p.189-190;) MP 2685

Frozen rock temperature

Engineering properties of subarctic permafrost near Prudhoe Bay. Chamberlain, E.J., et al, (1978, p.629-635;) MP 1104

Frozen sand

Design considerations for airfields in NPRA. Croxy, F.E., et al, (1978, p.441-458;) MP 1086

Fuel transport

Effects of ice on coal movement via the inland waterways. Lunardini, V.J., et al, (1981, 72p.;) SR 81-13

Fuels

Low temperature automotive emissions. Coretti, H.J., (1983, 2 vols.;) MP 1703

Gas chromatography

Vapor pressure of TNT by gas chromatography. Leggett, D.C., (1977, p.83-90;) MP 915

Gas inclusions

Continuous monitoring of total dissolved gases, a feasibility study. Jenkins, T.F., (1975, p.101-105;) MP 851

Gas inclusions in the Antarctic ice sheet. Gow, A.J., et al, (1975, p.5101-5108;) MP 847

Viking GCMS analyses of water in the Martian regolith. Anderson, D.M., et al, (1978, p.55-61;) AP 1195

Equations for determining the gas and brine volumes in sea ice samples. Cox, G.F.N., et al, (1982, 1 ;) CR 82-30

Mathematical simulation of nitrogen interactions in soils. Selim, H.M., et al, (1983, p.241-248;) MP 2051

Equations for determining gas and brine volumes in sea ice. Cox, G.F.N., et al, (1983, p.306-316;) MP 2055

Gases

Trace gas analysis of Arctic and subarctic atmosphere. Murmansk, R.P., (1971, p.199-201;) MP 908

Mercury contamination of water samples. Cragin, J.H., (1979, p.313-319;) MP 1270

Geobotanical interpretation

Geobotanical studies on the Taku Glacier anomaly. Heusser, C.J., et al, (1956, p.224-239;) MP 1215

Environmental mapping of the Arctic National Wildlife Refuge, Alaska. Walker, D.A., et al, (1982, 64p. + 2 maps;) CR 82-37

Vegetation of Beechey Point, Alaska. Walker, D.A., et al, (1987, 63p.;) CR 87-05

Geochemistry

Geochemistry of freezing brines. Thurmond, V.L., et al, (1987, 11p.;) CR 87-13

Geochronology

Emerging meteorite: crystalline structure of the enclosing ice. Gow, A.J., et al, (1969, p.87-91;) MP 2503

Geodetic surveys

Geodetic positions of borehole sites in Greenland. March, S.J., (1976, 7p.;) CR 76-41

GEOLOGIC STRUCTURES

Geology and physiography of cold regions. Stearns, S.R., (1965, 40p.;) M I-A1

Geologic structures

Investigation of an airborne resistivity survey conducted at very low frequency. Arcone, S.A., (1977, 48p.;) CR 77-20

Remote sensing for reconnaissance of proposed construction site. McKim, H.L., et al, (1978, 9 leaves;) MP 1167

Proceedings of the second planetary water and polar processes colloquium, 1978. (1978, 209p.;) MP 1193

Remote sensing for earth dam site selection and construction materials. Merry, C.J., et al, (1980, p.158-170;) MP 1316

Fox permafrost tunnel: a late Quaternary geologic record in central Alaska. Hamilton, T.D., et al, (1988, p.948-969;) MP 2355

Geology

Bedrock geology survey in northern Maine. Sellmann, P.V., et al, (1976, 19p.;) CR 76-37

Geomorphology

Morphology of the North Slope. Walker, H.J., (1973, p.49-52;) MP 1006

Geobotanical atlas of the Prudhoe Bay region, Alaska. Walker, D.A., et al, (1980, 69p.;) CR 80-14

Tundra and analogous soils. Everett, K.R., et al, (1981, p.139-179;) MP 1405

Sediment load and channel characteristics in subarctic upland catchments. Slaughter, C.W., et al, (1981, p.39-48;) MP 1518

Ice-cored mounds at Sukakpak Mountain, Brooks Range. Brown, J., et al, (1983, p.91-96;) MP 1653

Periglacial landforms and processes, Kenai Mts., Alaska. Bailey, P.K., (1985, 60p.;) SR 85-03

Geophysical surveys

Geophysical methods for hydrological investigations in permafrost regions. Hoekstra, P., (1976, p.75-90;) MP 932

Bedrock geology survey in northern Maine. Sellmann, P.V., et al, (1976, 19p.;) CR 76-37

Selected examples of radiohm resistivity surveys for geotechnical exploration. Hoekstra, P., et al, (1977, 16p.;) SR 77-01

Geophysics in the study of permafrost. Scott, W.J., et al, (1979, p.93-115;) MP 1266

Electromagnetic survey in permafrost. Sellmann, P.V., et al, (1979, 7p.;) SR 79-14

Electrical resistivity of frozen ground. Arcone, S.A., (1979, p.32-37;) MP 1623

Subsea permafrost study in the Beaufort Sea, Alaska. Sellmann, P.V., et al, (1979, p.207-213;) MP 1991

Geophysics of subglacial geology at Dye 3, Greenland. Jezek, K.C., et al, (1985, p.105-110;) MP 1901

Workshop on Permafrost Geophysics, Golden, Colorado, 23-24 October 1984. Brown, J., ed, (1985, 112p.;) SR 85-05

Review of methods for generating synthetic seismograms. Peck, L., (1985, 34p.;) CR 85-10

Preparation of geophysical borehole site with ground ice. Fairbanks, AK, Delaney, A.J., (1987, 15p.;) SR 87-07

Antarctic ice sheet brightness temperature variations. Jezek, K.C., et al, (1990, p.217-223;) MP 2736

Germany

Snowfall amounts and snow depths in Germany and NE USA. Bates, R.E., et al, (1988, p.107-117;) MP 2001

—Munich

Frozen precipitation and weather, Munchen Riem, West Germany. Bilello, M.A., (1984, 47p.;) SR 84-32

Glacial deposits

Influence of irregularities of the bed of an ice sheet on deposition rate of till. Nobles, L.H., et al, (1971, p.117-126;) MP 1009

Sediments of the western Matanuska Glacier. Lawson, D.E., (1979, 112p.;) CR 79-09

Debris entrainment ice and glacial deposits. Lawson, D.E., (1979, p.629-635;) MP 1276

Diamictons at the margin of the Matanuska Glacier, Alaska. Lawson, D.E., (1981, p.78-84;) MP 1462

Deposits in the glacial environment. Lawson, D.E., (1981, 16p.;) CR 81-27

Subaerial sediment flows of the Matanuska Glacier, Alaska. Lawson, D.E., (1982, p.279-300;) MP 1096

Direct filtration of streamborne glacial silt. Ross, M.D., et al, (1982, 17p.;) CR 82-23

Pebble fabric in an ice-rafted diamicton. Dowdeswell, E.K., et al, (1985, p.691-704;) MP 1959

Glaciers and sediment. Bertage, A., et al, (1986, p.43-49;) MP 2154

Glacigenic reconcentration related to mass-movement processes. Lawson, D.E., (1989, p.147-160;) MP 2672

Glacial features

Influence of irregularities of the bed of an ice sheet on deposition rate of till. Nobles, L.H., et al, (1971, p.117-126;) MP 1009

Glacial geology

Sediments of the western Matanuska Glacier. Lawson, D.E., (1979, 112p.;) CR 79-09

Geophysics of subglacial geology at Dye 3, Greenland. Jezek, K.C., et al, (1985, p.105-110;) MP 1901

Glacial hydrology

Short-term forecasting of water run-off from snow and ice. Colbeck, S.C., (1977, p.571-588;) MP 1007

Glaciers and sediment. Bertage, A., et al, (1986, p.53-69;) MP 2154

Jökulhlaups from Strandline Lake, Alaska (especially the 1982 event). Sturm, M., et al, (1989, 19p.;) MP 2520

Glacial lakes

Jökulhlaups from ice-dammed Strandline Lake, Alaska. Sturm, M., et al, (1987, p.79-94;) MP 2307

Jökulhlaups from Strandline Lake, Alaska (especially the 1982 event). Sturm, M., et al, (1989, 19p.;) MP 2520

Glacial rivers

Direct filtration of streamborne glacial silt. Ross, M.D., et al, (1982, 17p.;) CR 82-23

Permafrost. Benson, C., et al, (1986, p.99-106;) MP 2156

Glacial till

Influence of irregularities of the bed of an ice sheet on deposition rate of till. Nobles, L.H., et al, (1971, p.117-126;) MP 1009

Sediments of the western Matanuska Glacier. Lawson, D.E., (1979, 112p.;) CR 79-09

Glacier ablation

Influence of irregularities of the bed of an ice sheet on deposition rate of till. Nobles, L.H., et al, (1971, p.117-126;) MP 1009

Subaerial sediment flow of the Matanuska Glacier, Alaska. Lawson, D.E., (1982, p.279-300;) MP 1096

Glacier beds

Geophysics of subglacial geology at Dye 3, Greenland. Jezek, K.C., et al, (1985, p.105-110;) MP 1901

Glacier flow

Geobotanical studies on the Taku Glacier anomaly. Heusser, C.J., et al, (1956, p.224-239;) MP 1215

Approach roads, Greenland 1955 program. (1959, 100p.;) MP 1522

Small-scale strain measurements on a glacier surface. Colbeck, S.C., et al, (1971, p.237-243;) MP 993

Influence of irregularities of the bed of an ice sheet on deposition rate of till. Nobles, L.H., et al, (1971, p.117-126;) MP 1009

Ice, Greenland: glacier freezing study. Ashton, G.D., (1978, p.256-264;) MP 1174

Ultrasonic investigation on ice cores from Antarctica. Kohnen, H., et al, (1979, 16p.;) CR 79-10

Glacier mechanics. Mellor, M., (1982, p.455-476;) MP 1532

Borehole geometry on the Greenland and Antarctic ice sheets. Jezek, K.C., (1985, p.242-251;) MP 1817

Recent glacier-volcano interactions on Mt. Redoubt, Alaska. Sturm, M., et al, (1988, 18p.;) MP 2431

GLACIER ICE

Snow and ice on the earth's surface. Mellor, M., (1964, 16?p.;) M II-C1

Characteristics of the cold regions. Gerdel, R.W., (1969, 51p.;) M I-A

Glacier ice

Influence of irregularities of the bed of an ice sheet on deposition rate of till. Nobles, L.H., et al, (1971, p.117-126;) MP 1009

C-14 and other isotope studies on natural ice. Oeschger, H., et al, (1972, p.D70-D95;) MP 1052

Depth of water-filled crevasses that are closely spaced. Robin, G. de Q., et al, (1974, p.543-548;) MP 1038

Changes in the composition of atmospheric precipitation. Cragin, J.H., et al, (1977, p.617-631;) MP 1079

Oxygen isotopes in the basal zone of Matanuska Glacier. Lawson, D.E., et al, (1978, p.673-685;) MP 1177

Radar wave speeds in polar glaciers. Jezek, K.C., et al, (1983, p.199-208;) MP 2057

Rheology of glacier ice. Jezek, K.C., et al, (1985, p.1333-1335;) MP 1866

Radioglaciology by V.V. Bogorodskii, et al. Jezek, K.C., (1985, p.55-56;) MP 2330

Airfields on antarctic glacier ice. Mellor, M., et al, (1989, 97p.;) CR 89-21

Dennison Range ice core characteristics, Antarctica. Mayewski, P.A., et al, (1990, p.11-16;) MP 2707

Glacier mass balance

Planetary and extraplanetary event records in polar ice caps. Zeller, E.J., et al, (1980, p.15-27;) MP 1461

Recent glacier volcano interactions on Mt. Redoubt, Alaska. Sturm, M., et al, (1988, 18p.;) MP 2431

Glacier melting

Approach roads, Greenland 1955 program. (1959, 100p.;) MP 1522

Glacier melting *(cont.)*
Subaerial sediment flow of the Matanuska Glacier, Alaska. Lawson, D.E., (1982, p.279-300); MP 1006
Glacier oscillation
Glaciology's grand unsolved problem. Weertman, J., (1976, p.284-286); MP 1056
Deposits in the glacial environment. Lawson, D.E., (1981, 16p.); CR 81-27
Snow cover and glacier variations. Colbeck, S.C., ed, (1989, 111p.); MP 2672
Glacier surfaces
Jökulhlaup involving a pothoted glacier in AK. Sturm, M., et al, (1990, p.125-126); MP 2708
Glacier surveys
Radio echo sounding in the Allan Hills, Antarctica. Kovacs, A., (1980, 9p.); SR 80-23
Bibliography on glaciers and permafrost, China, 1958-1979. Shen, J., ed, (1982, 44p.); SR 82-20
Glacier thickness
Radio echo sounding in the Allan Hills, Antarctica. Kovacs, A., (1980, 9p.); SR 80-23
Glaciers
Seismic exploration in cold regions. Roethlisberger, H., (1972, 136p.); M III-A2a
Water flow through veins in ice. Colbeck, S.C., (1976, 5p.); CR 76-06
Hydraulic translucence a seismic source in volcanoes and glaciers. St. Lawrence, W.F., et al, (1979, p.654-656); MP 1181
Dynamics of snow and ice masses. Colbeck, S.C., ed, (1980, 468p.); MP 1297
GLACIOLOGY
Snow and ice on the earth's surface. Mellor, M., (1964, 163p.); M III-C1
Glaciology
Snow and ice. Colbeck, S.C., et al, (1975, p.435-441, 475-487); MP 844
Danish deep drill, progress report February-March 1979. Rand, J.H., (1980, 37p.); SR 80-03
1979 Greenland Ice Sheet Program. Phase I coring operation. Rand, J.H., (1980, 18p.); SR 80-24
Cold Regions Science and Technology Bibliography. Cummings, N.H., (1981, p.73-75); MP 1372
Deposits in the glacial environment. Lawson, D.E., (1981, 16p.); CR 81-27
Bibliography on glaciers and permafrost, China, 1958-1979. Shen, J., ed, (1982, 44p.); SR 82-20
Proceedings of the Symposium on Applied Glaciology, 2nd, 1982. (1983, 316p.); MP 2054
Glaciological investigations using the synthetic aperture radar imaging system. Bindschadler, R.A., et al, (1987, p.11-19); MP 2342
Alaska synthetic aperture radar (SAR) facility project. Carsey, F., et al, (1987, p.593-596); MP 2608
Grain size
Antarctic soil studies using a scanning electron microscope. Kumai, M., et al, (1978, p.106-115); MP 1306
Grain changes in wet snow. Colbeck, S.C., (1979, p.371-384); MP 1567
Influence of grain size on the ductility of ice. Cole, D.M., (1984, p.150-157); MP 1686
Grain size and the compressive strength of ice. Cole, D.M., (1985, p.220-226); MP 1850
Grain size and the compressive strength of ice. Cole, D.M., (1985, p.369-374); MP 1907
Crack nucleation in polycrystalline ice. Cole, D.M., (1985, p.76-87); MP 2325
Mechanical properties of multi-year sea ice. Richter-Menge, J.A., et al, (1985, 27p.); CR 85-05
Grasses
Urban waste as a source of heavy metals in land treatment. Iskandar, I.K., (1976, p.617-632); MP 977
Effects of wastewater application on forage grasses. Palazzo, A.J., (1976, 5p.); CR 76-39
Effects of wastewater on the growth and chemical composition of forages. Palazzo, A.J., (1977, p.171-180); MP 975
Adaptability of forage grasses to wastewater irrigation. Palazzo, A.J., et al, (1978, p.157-163); MP 1153
Effects of wastewater and sludge on turfgrasses. Palazzo, A.J., (1978, 11p.); SR 78-20
Land application of wastewater: effect on soil and plant potassium. Palazzo, A.J., et al, (1979, p.309-312); MP 1228
Revegetation at two construction sites in New Hampshire and Alaska. Palazzo, A.J., et al, (1980, 21p.); CR 80-03
Forage grass growth on overland flow systems. Palazzo, A.J., et al, (1980, p.347-354); MP 1602
Plant growth on a gravel soil greenhouse studies. Palazzo, A.J., et al, (1981, 8p.); SR 81-04
Seasonal growth and uptake of micronutrients by orchardgrass irrigated with wastewater. Palazzo, A.J., et al, (1981, 9p.); CR 81-08
Revegetation along the trans-Alaska pipeline, 1974-1978. Johnson, A.J., (1981, 11p.); CR 81-12
Chena River Lakes Project revegetation study, three-year summary. Johnson, L.A., et al, (1981, 44p.); CR 81-18
Wastewater treatment and plant growth. Palazzo, A.J., (1982, 21p.); SR 82-05
Effects of inundation on six varieties of turfgrass. Erbach, F.H., et al, (1982, 25p.); SR 82-12
Effects of soil covers on late-fall seedings of four tall fescue varieties. Palazzo, A.J., (1989, 5p.); SR 89-17
Gravel
Selected examples of radiofrequency surveys for geotechnical exploration. Hochstra, P., et al, (1977, 16p.); SR 77-01
Revegetation at two construction sites in New Hampshire and Alaska. Palazzo, A.J., et al, (1980, 21p.); CR 80-03
Plant growth on a gravel soil greenhouse studies. Palazzo, A.J., et al, (1981, 8p.); SR 81-04
Management of northern gravel sites for successful reclamation: a review. Johnson, L.A., (1987, p.555-556); MP 2375
Grazing
Weed model of the Barrow ecosystem. Brown, J., et al, (1970, p.61-63); MP 943
Influence of grazing on Arctic tundra ecosystems. Batzli, G.O., et al, (1976, p.153-160); MP 979
Great Lakes
Effect of vessel size on shorelines along the Great Lakes channels. Wuebben, J.L., (1983, 62p.); SR 83-11
Water quality during winter river navigation seasons. Stevens, R.S., (1988, 54p.); SR 88-10
Simulation of oil slicks in rivers and lakes. Shen, H.T., et al, (1990, 29p.); CR 90-01
GREENLAND
Methods of building on permanent snowfields. Mellor, M., (1968, 43p.); M III-A2a
Greenland
Greenland climate changes shown by ice core. Dansgaard, W., et al, (1971, p.17-22); MP 998
Oxygen isotope profiles through ice sheets. Johnsen, S.J., et al, (1972, p.629-634); MP 997
Study of piles installed in polar snow. Kovacs, A., (1976, 132p.); CR 76-23
Vanadium and other elements in Greenland ice cores. Herron, M.M., et al, (1976, 4p.); CR 76-36
Geodetic positions of borehole sites in Greenland. Mock, S.J., (1976, 7p.); CR 76-41
Atmospheric trace metals and sulfate in the Greenland Ice Sheet. Herron, M.M., et al, (1977, p.915-920); MP 909
Vanadium and other elements in Greenland ice cores. Herron, M.M., et al, (1977, p.98-102); MP 1092
1979 Greenland Ice Sheet Program. Phase I: coring operation. Rand, J.H., (1980, 18p.); SR 80-24
Application of a numerical sea ice model to the East Greenland seas. Tucker, W.B., (1981, 109p.); MP 1535
Application of a numerical sea ice model to the East Greenland seas. Tucker, W.B., (1982, 46p.); CR 82-16
Developing a water well for the ice backfilling of DYE-3. Rand, J.H., (1982, 19p.); SR 82-32
Radar wave speeds in polar glaciers. Jezek, K.C., et al, (1983, p.199-208); MP 2057
Deterioration of concrete panels on buildings at Sondrestrom, Greenland. Korhonen, C., (1984, 11p.); SR 84-12
Calculating borehole geometry. Jezek, K.C., et al, (1984, 18p.); SR 84-15
Ice flow leading to the deep core hole at Dye 3, Greenland. Whillans, I.M., et al, (1984, p.185-196); MP 1838
Secondary stress within the structural frame of DYE-3. 1978-1983. Ueda, H.T., et al, (1984, 44p.); SR 84-26
Borehole geometry on the Greenland and Antarctic ice sheets. Jezek, K.C., (1985, p.242-251); MP 1817
Geophysics of subglacial geology at Dye 3, Greenland. Jezek, K.C., et al, (1985, p.165-176); MP 1941
Deterioration building panels at Sondrestrom, Greenland. Korhonen, C., (1985, p.7-16); MP 2017
Glaciological investigations using the synthetic aperture radar imaging system. Bindschadler, R.A., et al, (1987, p.11-19); MP 2342
US global ice core research program: West Antarctica and beyond. Gow, A.J., et al, (1989, 32p.); MP 2709
—Camp Century
Camp Century, survey 1966. Gundestrup, N.S., et al, (1967, p.281-288); MP 2331
—Camp Tuto
Approach roads, Greenland 1955 program. (1969, 109p.); MP 1522
—Dye 3
Folding in the Greenland ice sheet. Whillans, I.M., et al, (1985, p.485-491); MP 2185
Greenland Sea
Physical properties of the ice cover of the Greenland Sea. Weeks, W.F., (1982, 27p.); SR 82-28
Marginal Ice Zone Experiment, Fram Strait Greenland Sea, 1984. Johannessen, O.M., ed, (1985, 67p.); SR 85-12
Comparison of different sea level pressure analysis fields in the East Greenland Sea. Tucker, W.B., (1985, p.2654-2658); MP 1737
East Greenland Sea ice variabilities in large-scale model simulations. Walsh, J.E., et al, (1984, p.9-26); MP 1779
Physical properties of sea ice in the Greenland Sea. Tucker, W.B., et al, (1985, p.177-188); MP 1963
Pressure ridge and sea ice properties Greenland Sea. Tucker, W.B., et al, (1985, p.216-225); MP 1935
Winter marginal ice zone experiment, Fram Strait/Greenland Sea, 1987/89. Davidson, K., ed, (1990, 93p.); SR 86-09
Coupled ice-mixed layer model for the Greenland Sea. Hosseini, M.N., (1986, p.225-260); MP 2143
Physical properties of summer sea ice in the Fram Strait, June-July 1984. Gow, A.J., et al, (1987, 81p.); CR 87-16
Ground ice
Morphology of the North Slope. Walker, H.J., (1973, p.49-52); MP 1004
Proposed size classification for the texture of frozen earth materials. McGaw, R., (1975, 12p.); MP 921
On the origin of pingos—a comment. Mackay, J.R., (1976, p.295-298); MP 916
Pipeline haul road between Livengood and the Yukon River. Berg, R.L., et al, (1976, 73p.); SR 76-11
Segregation-freezing temperature as the cause of suction force. Takagi, S., (1977, p.59-66); MP 901
Periodic structure of New Hampshire silt in open-system freezing. McGaw, R., (1977, p.129-136); MP 902
Segregation freezing as the cause of suction force for ice lens formation. Takagi, S., (1978, p.45-52); MP 1081
Segregation freezing as the cause of suction force for ice lens formation. Takagi, S., (1978, 13p.); CR 78-06
Determination of unfrozen water in frozen soil by pulsed nuclear magnetic resonance. Tice, A.R., et al, (1978, p.149-155); MP 1097
Remote sensing of massive ice in permafrost along pipelines in Alaska. Kovacs, A., et al, (1979, p.268-279); MP 1175
Electromagnetic survey in permafrost. Sellmann, P.V., et al, (1979, 7p.); SR 79-14
Freshwater pool in ice-deficient zone in Alaskan river delta. Kovacs, A., et al, (1979, p.161-166); MP 1226
Electromagnetic surveys of permafrost. Arcone, S.A., et al, (1979, 26p.); CR 79-23
Drilling and coring of frozen ground in northern Alaska, Spring 1979. Lawson, D.E., et al, (1980, 14p.); SR 80-12
Strength of frozen silt as a function of ice content and dry unit weight. Sayles, F.H., et al, (1980, p.609-619); MP 1451
Numerical solutions for rapid-ice model of secondary frost heave. O'Neill, K., et al, (1980, p.656-669); MP 1484
Comparative evaluation of frost-susceptibility tests. Chamberlain, E.J., (1981, p.42-52); MP 1486
Detection of model subsurface radar pulses in complex dielectrics. Arcone, S.A., (1981, p.855-864); MP 1472
Configuration of ice in frozen media. Colbeck, S.C., (1982, p.116-123); MP 1512
Initial stage of the formation of soil-laden ice lenses. Takagi, S., (1982, p.223-235); MP 1596
Electrical properties of frozen ground, Point Barrow, Alaska. Arcone, S.A., et al, (1982, p.455-462); MP 1572
Transport of water in frozen soil, Part I. Nakano, Y., et al, (1982, p.221-226); MP 1620
Effects of ice on the water transport in frozen soil. Nakano, Y., et al, (1983, p.15-26); MP 1680
Relationship between ice and unfrozen water in frozen soils. Tice, A.R., et al, (1983, p.37-46); MP 1632
Ice-cored mounds at Sukakpak Mountain, Brooks Range, Brown, J., et al, (1983, p.91-98); MP 1683
Ground ice in perennially frozen sediments, northern Alaska. Lawson, D.E., (1983, p.695-700); MP 1661
Seismic velocities and subsea permafrost in the Beaufort Sea, Alaska. Neave, K.G., et al, (1983, p.894-898); MP 1646
Two-dimensional model of coupled heat and moisture transport in frost heaving soils. Guymon, G.L., et al, (1984, p.91-99); MP 1670
Sample model of ice segregation using an analytic function to model heat and soil-water flow. Hromadka, T.V., II, et al, (1984, p.99-104); MP 2006
Effects of ice content on the transport of water in frozen soils. Nakano, Y., et al, (1984, p.29-34); MP 1881
Compressive strength of frozen silt. Zhu, Y., et al, (1984, p.3-15); MP 1773
Field dielectric measurements of frozen silt using VHF pulses. Arcone, S.A., et al, (1984, p.29-37); MP 1774
Dielectric measurements of frozen silt using time domain reflectometry. Delaney, A.J., et al, (1984, p.29-36); MP 1775
Effects of ice content on the transport of water in frozen soil. Nakano, Y., et al, (1984, p.58-66); MP 1843
Ice segregation and frost heaving. (1984, 72p.); MP 1809
Applications of a rigid ice model of frost heave. O'Neill, K., et al, (1984, p.281-296); MP 1880
Dielectric studies of permafrost. Arcone, S.A., et al, (1984, p.1-9); MP 1951
Impulse radar sounding of frozen ground. Kovacs, A., et al, (1984, p.28-36); MP 1952
Geophysical methods for mapping cryotectonic features. Sellmann, P.V., et al, (1984, p.91-92); MP 1955
Preparation of geophysical borehole site with ground ice. Fairbanks, AK. Delaney, A.J., (1987, 15p.); SR 87-07
Borehole investigations of the electrical properties of frozen silt. Arcone, S.A., et al, (1988, p.920-931); MP 2366

Ground thawing
Permafrost and active layer on a northern Alaskan road. Berg, R.L., et al. (1978, p.615-621); MP 1002
Resiliency of subgrade soils during freezing and thawing. Johnson, T.C., et al. (1978, 59p.); CR 78-23
Newmark solution applied to soil systems. Lunardini, V.J. (1980, 7p.); CR 80-22
Effect of freezing and thawing on resilient modulus of granular soils. Cole, D.M., et al. (1981, p.19-26); MP 1486
CO_2 effect on permafrost terrain. Brown, J., et al. (1982, 36p.); MP 1546
Dielectric properties of thawed active layers. Arcone, S.A., et al. (1982, p.618-626); MP 1547
Freezing and thawing: heat balance integral approximations. Lunardini, V.J., (1981, p.30-37); MP 1597
Ground ice in perennially frozen sediments, northern Alaska. Lawson, D.E., (1983, p.695-700); MP 1661
Thawing beneath insulated structures on permafrost. Lunardini, V.J., (1983, p.750-755); MP 1662
Design implications of subsoil thawing. Johnson, T.C., et al. (1984, p.45-102); MP 1706
Design and performance of water-retaining embankments on permafrost. Snyder, F.H., (1984, p.31-42); MP 1859
Shoreline erosion processes: Orwell Lake, Minnesota. Reed, J.R., (1985, 102p.); SR 86-32
Thawing of frozen clays. Anderson, D.M., et al. (1985, p.1-9); MP 1923
Partial verification of a thaw settlement model. Guymon, G.L., et al. (1985, p.18-25); MP 1926
Model for dielectric constants of frozen soils. Oliphant, J.L., (1985, p.46-57); MP 1936
Repeated load triaxial testing of frozen and thawed soils. Cole, D.M., et al. (1985, p.166-176); MP 2008
Effects of freeze-thaw cycles on granular soils for pavements. Cole, D.M., et al. (1986, 70p.); CR 86-04
Exact solution for melting of frozen soil with flow consolidation. Lunardini, V.J., (1987, p.97-102); MP 2191
Exothermic curing of frozen materials. Garfield, D.E., et al. (1987, p.131-138); MP 2364
Foundation technology in cold regions. Quam, W.F., (1987, p.305-320); MP 2425
Observations of moisture migration in frozen soils during thawing. Cheng, G., et al. (1988, p.360-372); MP 2573
Freezing and thawing of soils in cylindrical coordinates. Lunardini, V.J., (1989, p.235-248); MP 2996
Physical changes in clays due to frost action. Chamberlain, E.J., (1989, p.363-369); MP 2995
Vehicle mobility on thawing soils. Shoop, S.A., (1989, 16p.); SR 89-31

Ground water
Icings developed from surface water and ground water. Carey, K.L., (1973, 21p.); M III-B3
Fungal infiltration of primary sewage effluent at Fort Devens, Massachusetts. Satterwhite, M.B., et al. (1976, 34p.); CR 76-08
Land treatment of wastewater at Manteca, Calif., and Quincy, Washington. Iskander, I.K., et al. (1977, 36p.); CR 77-26
Fresh water supply for an Alaskan village. McFadden, T., et al. (1978, 18p.); SR 78-07
Viking GCMS analysis of water in the Martian regolith. Anderson, D.M., et al. (1978, p.5146); MP 1195
Bibliography on techniques of water detection in cold regions. Smith, D.W., comp. (1979, 59p.); SR 79-10
Detection of Arctic water supplies with geophysical techniques. Arcone, S.A., et al. (1979, 30p.); CR 79-15
Freshwater flood radar-detected over an Alaskan river delta. Kovacs, A., et al. (1979, p.161-164); MP 1226
Strength of frozen silt as a function of ice content and dry unit weight. Sayles, F.H., et al. (1968, p.189-215); MP 1451
Improved Boussinesq groundwater flow equation. Daly, C.J., et al. (1981, p.135-141); MP 1670
Relationship between the ice and unfrozen water phases in frozen soil. Tice, A.R., et al. (1982, 9p.); CR 82-15
Evaluation of procedures for determining selected aquifer parameters. Daly, C.J., (1982, 206p.); CR 82-41
Mathematical simulation of nitrogen interactions in soils. Selim, H.M., et al. (1983, p.241-248); MP 2051
Field tests of a frost-heave model. Guymon, G.L., et al. (1983, p.209-216); MP 1657
Investigations of permafrost processes in an advancing zone of freezing. McGaw, R., et al. (1983, p.821-825); MP 1663
Calculation of advective mass transport in heterogeneous media. Daly, C.J., (1983, p.[illegible]); MP 1697
Procedure for calculating groundwater flow lines. Daly, C.J., (1984, 42p.); SR 84-09
Impact of slow-rate land treatment on groundwater quality near Hermiston, Oregon. Parker, L.V., et al. (1984, 36p.); CR 84-30
Polyvinyl chloride pipes and ground water chemistry. Parker, L.V., et al. (1985, 27p.); SR 85-12
Polyvinyl chloride well casings for ground water monitoring. Parker, L.V., et al. (1986, p.92-98); MP 2171
Analytical method for determining tritium in water. Walsh, M.E., et al. (1987, 18p.); SR 87-25
Preliminary development of a fiber optic sensor for TNT. Zhang, Y., et al. (1988, 29p.); SR 88-04
Influence of well casing materials on chemical species in ground water. Parker, L.V., et al. (1988, p.459-461); MP 2456
Development of a membrane for in-situ optical detection of TNT. Zhang, Y., et al. (1988, 6p.); SR 88-24
Influence of well casing composition on trace metals in ground water. Hewitt, A.D. (1987, 11p.); SR 89-09
Leaching of metal pollutants from well casings. Hewitt, A.D., (1989, 11p.); SR 89-32
Influence of well casings on well water. Hewitt, A.D., et al. (1989, 9p.); MP 2717
Well casings for monitoring trace organics in ground water. Parker, L.V., et al. (1989, 29p.); CR 89-18
Surface changes in well casings exposed to organic pollutants. Taylor, S., et al. (1990, 14p.); SR 90-07
Influence of casing materials on trace-level chemicals in well water. Parker, L.V., et al. (1990, 11p.); MP 2726

Grounded ice
Ice entrapment of ice islands in Baffinbay Bight. Kovacs, A., et al. (1971, 66 leaves); MP 1301
Islands of grounded ice. Kovacs, A., et al. (1975, p.211-216); MP 892
Study of a grounded iceberg near Reindeer Island, Alaska. Kovacs, A., (1977, 9p.); MP 1751
Problems of offshore oil drilling in the Beaufort Sea. Weller, G., et al. (1978, p.6-11); MP 1250
Sea ice piling at Fairway Rock, Bering Strait, Alaska. Kovacs, A., et al. (1981, p.993-1000); MP 1460
Mass balance of a portion of the Ross Ice Shelf. Jenkins, K.C., et al. (1984, p.301-316); MP 1919
Ice properties in a grounded multi-grade ice island. Cox, G.F.N., et al. (1986, p.135-142); MP 2032

Grouting
Grouting of soils in cold environments: a literature search. Johnson, R., (1977, 69p.); SR 77-42
Grouting silt and sand at low temperatures--a laboratory investigation. Johnson, R., (1979, 33p.); CR 79-05
Grouting silt and sand at low temperatures. Johnson, R., (1979, p.637-650); MP 1078

Growth
Analysis of governance of primary production in tundra growth forms. Tieszen, L.L., et al. (1981, p.235-256); MP 1433
Seasonal growth and accumulation of N, P, and K by grass emerged with winter. Palazzo, A.J., (1981, p.64-66); MP 1425
Plant growth on a gravel soil greenhouse studies. Palazzo, A.J., et al. (1981, 8p.); SR 81-08
Seasonal growth and uptake of nutrients by orchardgrass emerged with winter rye. Palazzo, A.J., et al. (1981, 14p.); CR 81-08
Chena River Lakes Project revegetation study: three-year summary. Johnson, L.A., et al. (1982, 39p.); CR 81-18
Vegetation selection and management for overland flow systems. Palazzo, A.J., et al. (1982, p.135-156); MP 1511
Wastewater treatment and plant growth. Palazzo, A.J., (1982, 31p.); SR 82-05
Effects of inundation on the vegetation of tundra. Estbeck, F.H., et al. (1982, 24p.); SR 82-12
Wastewater applications in forest ecosystems. Milner, H.L., et al. (1982, 22p.); CR 82-19
Vegetation on two adjacent tundra habitats, northern Alaska. Reed, D.A., (1983, p.199-206); MP 2064
Seasonal growth on a cold environment. [illegible] (1984, 21p.); CR 84-06

Hammers
Static driving tests: a preliminary survey. Kovacs, A., et al. (1977, 63p.); SR 77-13

Haze
Observation and background dynamics in and over snow. Hogan, A.W., (1969, p.181-194); MP 2417

Health
Health aspects of water reuse in California. Reed, S.C., (1979, p.431-434); MP 1004
Health aspects of land treatment. Reed, S.C., (1979, 63p.); MP 1309

HEAT BALANCE
Heat exchange at the ground surface. Scott, R.F., (1964, 69p. plus appendix); M II-A1
Climatology of the cold regions of the northern hemisphere. I. Wilson, C., (1967, 16p.); M I-A1a
Climatology of Antarctic regions. Wilson, C., (1961, 7p.); M I-A1c

Heat balance
Approximate solution to Neumann problem for soil systems. Lunardini, V.J., et al. (1981, p.[illegible]); MP 1494
Freezing and thawing: heat balance integral approximations. Lunardini, V.J., (1981, p.30-37); MP 1597
Thermal measurements in snow. Jordan, R., et al. (1986, p.181-191); MP 2060

Heat flux
Measuring building R-values for large areas. Flanders, S.N., et al. (1981, p.137-150); MP 1396
Bottom heat transfer to water bodies in winter. O'Neill, K., et al. (1981, 8p.); SR 81-18
Using sea ice to measure vertical heat flux in the marginal Ice Zone. Maykut, G.A., et al. (1982, p.[illegible]); MP 1521
Heat flowers, humidity profiles and surface humidity. Anderson, E.A., (1982, 18p.); CR 82-12
Growth of faceted crystals in a snow cover. Colbeck, S.C., (1982, 23p.); CR 82-19
Growth of black ice, snow ice and snow thickness, subarctic basins. Lepparanta, M., (1983, p.59-70); MP 2063
Freezing in a pipe with turbulent flow. Albert, M.R., et al. (1983, p.103-111); MP 1893
Atmospheric dynamics in the antarctic marginal ice zone. Andreas, E.L., et al. (1984, p.649-661); MP 1667
Two-pi sensor building R-value measurement. Flanders, S.N., et al. (1984, 17p.); CR 84-04
Measuring thermal performance of building envelopes: nine case studies. Flanders, S.N., (1985, 36p.); CR 85-07
Energy exchange over antarctic sea ice in the spring. Andreas, E.L., et al. (1985, p.2199-2211); MP 1889
Heat flow sensors on walls--what can we learn. Flanders, S.N., (1985, p.160-169); MP 2042
Confidence in heat flux transducer measurements of buildings. Flanders, S.N., (1985, p.515-531); MP 2290
In-situ assessment of two remote sensing systems. Flanders, S.N., (1986, p.32-44); MP 2172
Measuring building R-values with thermography and heat flux sensors. Flanders, S.N., (1987, 29p.); SR 87-06
Estimating turbulent surface heat fluxes over polar, marine surfaces. Andreas, E.L., (1988, p.65-68); MP 2608
Measurement of the path-averaged turbulent surface heat flux. Andreas, E.L., (1988, p.219-226); MP 2526
Two-wavelength method of measuring path-averaged turbulent surface heat fluxes. Andreas, E.L., (1989, p.288-292); MP 2648
Oceanic heat flux in the Fram Strait measured by a drifting buoy. Pinkerton, D.K., et al. (1989, p.995-998); MP 2531
Heat conduction in snow. Yen, Y.C., (1989, p.21-32); MP 2546
Oceanic heat flux in the Fram Strait measured by a drifting buoy. Pinkerton, D.K., et al. (1990, p.291-296); MP 2749
Three-wavelength scintillation measurement of turbulent heat fluxes. Andreas, E.L., (1990, p.76-77); MP 2696

Heat loss
Radiation and evaporation heat loss during ice fog conditions. McFadden, T., (1975, p.18-27); MP 1051
Thermal energy and the environment. Crosby, R.L., et al. (1975, 3v. & 2p. figs.); MP 1480
Antarctic sea ice dynamics and its possible climatic effects. Ackley, S.F., et al. (1976, p.53-76); MP 1379
Detecting structural heat losses with mobile infrared thermographs, Part IV. Munis, R.H., et al. (1976, 9p.); CR 76-33
Computer derived heat requirements for buildings in cold regions. Bennett, F.L., (1977, 113p.); SR 77-03
Observations and analysis of evaporative membrane cooling systems. Schaefer, D., et al. (1977, 44p.); CR 77-11
Measuring unmetered steam use with a condensate pump cycle counter. Johnson, P.R., (1977, p.434-442); MP 957
Remodeling old wood frame buildings with urea-formaldehyde foam. Johnson, W., et al. (1977, p.478-487); MP 958
Infrared thermography of buildings. Munis, R.H., et al. (1977, 17p.); SR 77-29
Infrared thermography of buildings. Munis, R.H., et al. (1977, 21p.); SR 77-36
Thermal scanning systems for detecting building heat loss. Gast, R.A., et al. (1978, p.821-829); MP 1212
Infrared thermography of buildings: a bibliography with abstracts. Marshall, S.J., (1979, 67p.); SR 79-01
Infrared thermography of buildings, 1977 Coast Guard survey. Marshall, S.J., (1979, 60p.); SR 79-20
Losses from the Fort Wainwright heat distribution system. Pfertsplace, G., et al. (1981, 29p.); SR 81-16
Transient analysis of heat transmission systems. Pfertsplace, G., (1982, 91p.); CR 81-26
Heat loss from the central heat distribution system, Fort Wainwright. Pfertsplace, G., (1982, 20p.); MP 1980
Heat losses from the central heat distribution system at Fort Wainwright. Pfertsplace, G., (1982, p.369-378); MP 2310
Heat and moisture advection over polynyas and ice. Andreas, E.L., (1981, p.[illegible]); MP 1888

Heat pipes
Applications of heat pipes on the Trans-Alaska Pipeline. Heuer, C.J., (1976, 25p.); SR 76-26
Computer models for two-dimensional transient heat conduction. Albert, M.R., (1981, 66p.); CR 81-12
Simulation of district heating systems for piping design. Pfertsplace, G., (1980, 27p.); MP 2746
Optimal sizing of district heating pipes. Pfertsplace, G., (1980, 29p.); MP 2747

Heat pumps
Waste heat recovery for building heating. Bevier, P.W., (1977, 26p.); SR 77-11

Heat recovery
Management of power plant waste heat in cold regions. Ashton, H.W.C., (1976, p.21-26); MP 962
Ice engineering: complex adapts heat pump energy system. Ashton, H.W.C., (1977, p.21-26); MP 993
Ice engineering facility heated with a central heat pump system. Ashton, H.W.C., et al. (1977, 67p.); MP 999
Waste heat recovery for building heating. Bevier, P.W., (1977, 26p.); SR 77-11

Heat recovery *(cont.)*
Experimental scaling study of an annular flow ice-water heat sink. Stubstad, J.M., et al, (1977, 54p) CR 77-15
Waste heat recovery for heating purposes. Phetteplace, G, (1978, p.30-33) MP 1256
Design procedures for underground heat sink systems. Stubstad, J M, et al, (1979, 186p. in var. pagns) SR 79-08
Waste heat utilization through soil heating. McFadden, T., et al, (1980, p.105-120) MP 1363
Heat pumps to recover heat from waste treatment plants Martel, C J, et al, (1982, 23p) SR 82-10
Heat recovery from primary effluent using heat pumps Phetteplace, G, et al, (1985, p 199-203) MP 1978
Primary effluent as a heat source for heat pumps. Phetteplace, G E, et al, (1988, p 141-146) MP 2445

Heat sinks
Design procedures for underground heat sink systems Stubstad, J.M., et al, (1979, 186p in var. pagns) SR 79-08
Ice heat sinks Part 1. Vertical systems. Lunardini, V.J, (1986, 107p) SR 86-14
Ice heat sinks. Part 2. Horizontal systems Lunardini, V.J., (1986, 104p) SR 86-26
Condensing steam tunnel heat sinks. Lunardini, V.J., (1986, 29p) SR 86-24

Heat sources
Thermal energy and the environment. Crosby, R.L., et al, (1975, 3p. + 2p. figs.) MP 1480
Waste heat utilization through soil heating. McFadden, T., et al, (1980, p 105-120) MP 1363
Primary effluent as a heat source for heat pumps. Phetteplace, G.E., et al, (1988, p.141-146) MP 2445
Primary effluent as a heat source for heat pumps. Phetteplace, G.E, et al, (1989, p 12-17) MP 2760

Heat transfer
Formation of ice ripples on the underside of river ice covers Ashton, G.D., (1971, 157p) MP 1243
Heat transfer in drill holes in Antarctic ice Yen, Y.-C., et al, (1976, 15p) CR 76-12
Numerical simulation of air bubbler systems Ashton, G D, (1977, p.765-778) MP 936
Experimental scaling study of an annular flow ice-water heat sink. Stubstad, J.M., et al, (1977, 54p) CR 77-15
Mathematical model to predict frost heave. Berg, R.L., et al, (1977, p.92-109) MP 1131
Maintaining buildings in the Arctic. Tobiasson, W., et al, (1977, p.244-251) MP 1508
Heat transfer over a vertical melting plate. Yen, Y.-C., et al, (1977, 12p) CR 77-32
Permafrost and active layer on a northern Alaskan road Berg, R.L., et al, (1978, p 615-621) MP 1102
Numerical simulation of air bubbler systems. Ashton, G.D, (1978, p.231-238) MP 1618
Fundamentals of ice lens formation Takagi, S., (1978, p.235-242) MP 1173
Heat and moisture flow in unsaturated soils O'Neill, K, (1979, p 304-309) MP 1259
Design procedures for underground heat sink systems Stubstad, J.M., et al, (1979, 186p in var. pagns) SR 79-08
Turbulent heat transfer from a river to its ice cover Hynes, F.D, et al, (1979, 5p.) CR 79-13
Accelerated ice growth in rivers Calkins, D J, (1979, 5p) CR 79-14
Point source bubbler systems to suppress ice Ashton, G D, (1979, 12p) CR 79-12
Snow accumulation, distribution, melt, and runoff. Colbeck, S.C., et al, (1979, p 465-468) MP 1233
Application of heat pipes on the Trans-Alaska Pipeline Heuer, C E, (1979, 27p) SR 79-26
Dynamic thermodynamic sea ice model Hibler, W D, III, (1979, p 815-846) MP 1247
Turbulent heat flux from Arctic leads. Andreas, E.L., et al, (1979, p.57-91) MP 1340
Point source bubbler systems to suppress ice Ashton, G D, (1979, p 93-100) MP 1326
Suppression of river ice by thermal effluents Ashton, G.D, (1979, 23p) CR 79-30
Mathematical model to correlate frost heave of pavements Berg, R L, et al, (1980, 49p) CR 80-10
Documentation for a two-level dynamic thermodynamic sea ice model Hibler, W D, III, (1980, 35p) SR 80-08
Frost heave model based upon heat and water flux. Guymon, G L, et al, (1980, p 253-262) MP 1333
Adsorption force theory of frost heaving Takagi, S, (1980, p.57-81) MP 1334
Thermodynamics of snow metamorphism due to variations in curvature Colbeck, S.C, (1980, p 291-301) MP 1368
Free convection heat transfer characteristics in a melt water layer Yen, Y.-C, (1980, p 550-556) MP 1311
Heat and mass transfer from freely falling drops at low temperatures Zarling, J P, (1980, 14p) CR 80-18
Phase change around a circular pipe. Lunardini, V.J, (1980, 18p) CR 80-27
Thermal diffusivity of frozen soil Haynes, F D, et al, (1980, 30p.) SR 80-38
Estimation of heat and mass fluxes over Arctic leads. Andreas, E L, (1980, p 2057-2063) MP 1410
Heat transfer in cold climates. Lunardini, V.J., (1981, 731p) MP 1435
Results from a mathematical model of frost heave. Guymon, G.L., et al, (1981, p 2-6) MP 1483
Phase change around a circular cylinder. Lunardini, V.J, (1981, p 598-600) MP 1507
Bottom heat transfer to water bodies in winter. O'Neill, K., et al, (1981, 8p.) SR 81-18
Phase change around insulated buried pipes quasi-steady method Lunardini, V J., (1981, p.201-207) MP 1496
Ice segregation in a frozen soil column Guymon, G L, et al, (1981, p 127-140) MP 1534
Heat conduction with phase changes. Lunardini, V J, (1981, 14p) CR 81-25
One-dimensional transport from a highly concentrated, transfer type source. O'Neill, K., (1982, p 27-36) MP 1489
On the temperature distribution in an air-ventilated snow layer. Yen, Y.-C., (1982, 10p.) CR 82-05
Theory of thermal control and prevention of ice in rivers and lakes. Ashton, G.D., (1982, p 131-185) MP 1554
Freezing of soil with surface convection Lunardini, V J, (1982, p 205-212) MP 1595
Ottauquechee River—analysis of freeze-up processes. Calkins, D J., et al, (1982, p 2-37) MP 1738
Frost heave model. Hromadka, T.V, II, et al, (1982, p.1-10) MP 1567
Freezing of semi-infinite medium with initial temperature gradient. Lunardini, V J., (1983, p 649-652) MP 1583
Solution of two-dimensional freezing and thawing problems O'Neill, K., (1983, p 653-658) MP 1584
Approximate phase change solutions for insulated buried cylinders Lunardini, V J, (1983, p.25-32) MP 1593
Approximate solution to conduction freezing with density variation Lunardini, V J., (1983, p 43-45) MP 1598
Computer models for two-dimensional transient heat conduction. Albert, M.R, (1983, 66p) CR 83-12
Predicting lake ice decay Ashton, G D, (1983, 4p) SR 83-19
Transient heat flow and surface temperatures of a built-up roof. Korhonen, C, (1983, 20p.) SR 83-22
Thawing beneath insulated structures on permafrost. Lunardini, V J, (1983, p.750-755) MP 1662
Thermal patterns in ice under dynamic loading Fish, A M., et al, (1983, p.240-243) MP 1742
Freezing in a pipe with turbulent flow. Albert, M.R., et al, (1983, p 102-112) MP 1893
Two-dimensional heat conduction phase change. Albert, M.R., et al, (1983, p 85-110) MP 2161
Increased heat flow due to snow compaction the simplistic approach Colbeck, S.C., (1983, p 227-229) MP 1693
Fixed mesh finite element solution for cartesian two-dimensional phase change. O'Neill, K., (1983, p.436-444) MP 1702
West antarctic sea ice. Ackley, S.F., (1984, p 88-95) MP 1818
Deterioration of floating ice covers. Ashton, G D., (1984, p 26-33) MP 1676
Two-dimensional model of coupled heat and moisture transport in frost heaving soils Guymon, G L., et al, (1984, p.91-98) MP 1678
Simple model of ice segregation using an analytic function to model heat and soil-water flow. Hromadka, T V., II, et al, (1984, p 99-104) MP 2104
Aerosol growth in a cold environment. Yen, Y.-C., (1984, 21p) CR 84-06
Designing for frost heave conditions Crory, F.E., et al, (1984, p 22-44) MP 1705
Freezing of a semi-infinite medium with initial temperature gradient Lunardini, V.J, (1984, p.103-106) MP 1740
Frazil ice dynamics. Daly, S.F., (1984, 46p) M 84-01
Modeling two-dimensional freezing Albert, M R., (1984, 45p) CR 84-10
Ice cover melting in a shallow river Calkins, D.J., (1984, p 255-265) MP 1763
Role of heat and water transport in frost heaving of porous soils Nakano, Y, et al, (1984, p.93-102) MP 1842
Dynamics of frazil ice formation Daly, S F., et al, (1984, p 161-172) MP 1829
Status of numerical models for heat and mass transfer in frost-susceptible soils. Berg, R.L., (1984, p 67-71) MP 1851
Frazil ice formation. Ettema, R., et al, (1984, 44p) CR 84-18
Ice bands in turbulent pipe flow Ashton, G D., (1984, 7p) MP 2087
Heat and moisture transfer in frost-heaving soils Guymon, G.L., et al, (1984, p 336-343) MP 1765
Ice deterioration Ashton, G.D., (1984, p 31-38) MP 1791
Laboratory tests and analysis of thermosyphons with inclined evaporator sections Zarling, J P., et al, (1985, p.31-37) MP 1853
Thermal convection in snow Powers, D J., et al, (1985, 61p.) CR 85-09
Partial verification of a thaw settlement model Guymon, G.L, et al, (1985, p 18-25) MP 1924
Review of analytical methods for ground thermal regime calculations. Lunardini, V.J., (1985, p 204-257) MP 1922
Experiments on thermal convection in snow Powers, D, et al, (1985, p.43-47) MP 2006
Heat flow sensors on walls—what can we learn. Flanders, S.N, (1985, p.140-149) MP 2042
Measured and expected R-values of 19 building envelopes. Flanders, S N, (1985, p 49-57) MP 2115
Transient two-dimensional phase change. Albert, M.R., et al, (1985, p 229-243) MP 2162
Confidence in heat flux transducer measurements of buildings. Flanders, S.N., (1985, p.515-531) MP 2290
Model of freezing front movement. Hromadka, T.V, II, et al, (1985, 9p) MP 2077
Heat transfer in water over a melting ice sheet. Lunardini, V.J., (1986, p.227-236) MP 2033
Heat transfer characteristics of thermosyphons with inclined evaporator sections Haynes, F D., et al, (1986, p 285-292) MP 2034
Heat transfer in water flowing over a horizontal ice sheet. Lunardini, V.J., et al, (1986, 81p) CR 86-03
Heat distribution research Phetteplace, G, (1986, p 2-3) MP 2150
Water-source heat pumps Phetteplace, G, (1986, p 14-15) MP 2151
Natural convection in sloping porous layers Powers, D J., et al, (1986, p.697-710) MP 2158
Heat transfer in a freezing shaft wall. Liandi, F., (1986, 24p.) CR 86-08
Condensing steam tunnel heat sinks. Lunardini, V.J., (1986, 29p.) SR 86-24
Roughness and transfer coefficients over snow and sea ice. Andreas, E L, (1986, 19p) CR 86-09
Bulk transfer coefficients for heat and momentum over leads and polynyas Andreas, E.L., et al, (1986, p.1875-1883) MP 2187
Convective heat transfer in water over melting ice sheet. Lunardini, V.J., (1986, p 42-51) MP 2600
Heat transfer of a thermosyphon. Zarling, J.P., et al, (1987, p.79-84) MP 2190
Model of heat and soil-water flow coupled by soil-water phase change Hromadka, T.V, II, (1987, 124p) SR 87-09
International Symposium on Cold Regions Heat Transfer, 1987 (1987, 270p) MP 2302
Conduction heat transfer with freezing/thawing. Lunardini, V.J, (1987, p.55-64) MP 2304
Measured insulation improvement potential for ten U.S. Army buildings. Flanders, S.N., (1987, p.202-220) MP 2327
Automatic finite element mesh generator Albert, M R, et al, (1987, 27p) CR 87-18
Heat conduction in a medium with variable properties. Yen, Y.-C, (1987, 18p) CR 87-19
Thermal instability and heat transfer characteristics in water-/ice systems. Yen, Y.-C, (1987, 33p) CR 87-22
XYFREZ.4 user's manual. O'Neill, K, (1987, 55p) SR 87-28
Heat transfer performance of commercial thermosyphons with inclined evaporator sections Haynes, F.D., et al, (1988, p 275-280) MP 2320
On the application of thermosyphons in cold regions. Zarling, J P., et al, (1988, p 281-286) MP 2321
Heat conduction with freezing or thawing Lunardini, V.J., (1988, 329p) M 88-01
On the effect of the 4 C density maximum on melting heat transfer. Yen, Y.-C, (1988, p 362-367) MP 2382
Phase change heat transfer program for microcomputers Buzzell, G M., et al, (1988, p 645-650) MP 2383
Primary effluent as a heat source for heat pumps Phetteplace, G E., et al, (1988, p 141-146) MP 2445
Effect of variable thermal properties on freezing with an unfrozen water content Lunardini, V J., (1988, p.1127-1132) MP 2370
Thermosyphon for horizontal applications DenHartog, S.L., (1988, p 319-321) MP 2444
Flow developers for melting ice—experimental results Ashton, G D., (1989, p 151-160) MP 2465
Freezing and thawing of soils in cylindrical coordinates. Lunardini, V J, (1989, p 185-208) MP 2594
International Symposium on Cold Regions Heat Transfer, 1989. (1989, 314p) MP 2636
Cold regions heat transfer. Cheng, K C, et al, (1989, p 1-25) MP 2637
Review of phase conduction with freezing Lunardini, V J., (1989, p 27-32) MP 2638
Heat transfer from water flowing through a chilled-bed open channel Richmond, P W, et al, (1989, p 51-58) MP 2649
Primary effluent as a heat source for heat pumps Phetteplace, G E, et al, (1989, p 12-17) MP 2760
Environment of wintertime leads and polynyas Andreas, E.L., (1989, p 273-288) MP 2689
Thermal stabilization of permafrost with thermosyphons Zarling, J P., et al, (1990, p 323-328) MP 2583

Heat transfer coefficient
Heat transfer between water jets and ice blocks Yen, Y.-C., (1976, p 299-307) MP 882
International Symposium on Cold Regions Heat Transfer, 1989. (1989, 314p.) MP 2636

Heat transmission
Long distance heat transmission with steam and hot water. Aamot, H.W.C., et al, (1976, 39p) MP 938
Heat transmission with steam and hot water. Aamot, H.W.C., et al, (1978, p.17-23) MP 1956
Heat loss from the central heat distribution system, Fort Wainwright. Phetteplace, G., (1982, 20p) MP 1980
Simplified design procedures for heat transmission system piping. Phetteplace, G., (1985, p.451-456) MP 1979
Simple design procedure for heat transmission system piping. Phetteplace, G., (1985, p 1748-1752) MP 1942
HEATING
Utilities on permanent snowfields Mellor, M., (1969, 42p) M III-A2d
Heating
Management of power plant waste heat in cold regions. Aamot, H.W.C., (1975, p 22-24) MP 942
Utility distribution systems in Sweden, Finland, Norway and England. Aamot, H.W.C., et al, (1976, 121p) SR 76-16
Energy conservation in buildings Ledbetter, C B., (1976, 8p) SR 76-17
Ice engineering complex adopts heat pump energy system. Aamot, H.W.C., (1977, p.25-26) MP 893
Computer derived heat requirements for buildings in cold regions Bennett, F.L., (1977, 113p) SR 77-03
Ice engineering facility heated with a central heat pump system. Aamot, H.W.C, et al, (1977, 4p.) MP 939
Waste heat recovery for building heating. Sector, P.W., (1977, 24p) SR 77-11
Solving problems of ice-blocked drainage facilities Carey, K.L., (1977, 17p) SR 77-25
Temporary protection of winter construction. Bennett, F L., (1977, 41p) SR 77-39
Waste heat recovery for heating purposes Phetteplace, G., (1978, p.30-33) MP 1256
Deicing a satellite communication antenna. Hanamoto, B., et al, (1980, 14p.) SR 80-18
Waste heat utilization through soil heating. McFadden, T., et al, (1980, p.105-120) MP 1363
Transient analysis of heat transmission systems. Phetteplace, G., (1981, 53p) CR 81-24
Heat loss from the central heat distribution system, Fort Wainwright. Phetteplace, G., (1982, 20p) MP 1980
Heating enclosed wastewater treatment facilities with heat pumps. Martel, C J., et al, (1982, p.262-280) MP 1976
Heat losses from the central heat distribution system at Fort Wainwright. Phetteplace, G., (1982, p.308-328) MP 2310
Heating and cooling method for measuring thermal conductivity. McGaw, R., (1984 8p) MP 1891
Water-source heat pumps. Phetteplace, G., (1986, p 14-15) MP 2151
Simulation of district heating systems for piping design. Phetteplace, G., (1989, 27p) MP 2746
Optimal sizing of district heating pipes Phetteplace, G., (1989, 25p) MP 2747
International Symposium on Cold Regions Heat Transfer, 1989. (1989, 314p) MP 2636
Reference guide for building diagnostics equipment and techniques. McKenna, C M., et al, (1989, 64p) SR 89-27
Height finding
Height variation along sea ice pressure ridges Hibler, W.D, III, et al, (1975, p.191-199) MP 848
Helicopters
Interaction of a surface wave with a dielectric slab discontinuity. Arcone, S A., et al, (1978, 10p.) CR 78-08
Laboratory experiments on icing of rotating blades Ackley, S.F., et al, (1979, p 85-92) MP 1236
Computer modeling of atmospheric ice accretion Ackley, S.F., et al, (1979, 36p) CR 79-04
Ice adhesion tests on coatings subjected to rain erosion Minsk, L.D., (1980, 14p) SR 80-28
Helicopter snow obscuration sub-test Ebersole, J F, (1984, p 359-376) MP 2094
Self-shedding of accreted ice from high-speed rotors. Itagaki, K., (1987, p 95-100) MP 2278
High pressure tests
Lock wall deicing with high velocity water jet at Soo Locks, Mi. Calkins, D.J., et al, (1977, p 23-35) MP 973
Icebreaking by gas blasting. Mellor, M., (1984, p 93-102) MP 1827
History
Canol Pipeline Project: a historical review. Ueda, H.T., et al, (1977, 32p) SR 77-34
Overview of existing land treatment systems Iskandar, I.K., (1978, p 193-200) MP 1150
History of snow-cover research. Colbeck, S.C., (1987, p 60-65) MP 2316
Cold regions heat transfer. Cheng, K C, et al, (1989, p.1-25) MP 2637
Hoarfrost
Dielectric properties of dislocation-free ice. Itagaki, K., (1978, p 207-217) MP 1171
Communication tower icing in the New England region Mulherin, N., et al, (1986, 7p) MP 2109
Rime meteorology in the Green Mountains. Ryerson, C.C., (1987, 46p) CR 87-01
Climatology of rime accretion in the Green and White Mountains. Ryerson, C.C., (1987, p.267-272) MP 2284
On the micrometeorology of surface hoar growth on snow in mountainous area. Colbeck, S.C., (1988, p.1-12) MP 2359
Houses
Post occupancy evaluation of a planned community in Arctic Canada. Bechtel, R.B., et al, (1980, 27p) SR 80-06
Post occupancy evaluation for communities in hot or cold regions Bechtel, R B., et al, (1980, 57p) SR 80-29
In-situ assessment of two retrofit insulations Flanders, S.N., (1986, p.32-44) MP 2172
Human factors
Notes on conducting the behavior setting survey by interview method. Ledbetter, C.B., (1976, 33p.) SR 76-14
Computer modeling of terrain modifications in the arctic and subarctic. Outcalt, S I., et al, (1977, p 24-32) MP 971
Small communities result in greater satisfaction. Ledbetter, C.B., (1977, 15p) SR 77-36
Construction equipment problems and procedures: Alaska pipeline project. Hanamoto, B., (1978, 14p) SR 78-11
Bibliography of permafrost soils and vegetation in the USSR Andrews, M., (1978, 175p) SR 78-19
Human-induced thermokarst at old drill sites in northern Alaska. Lawson, D.E., et al, (1978, p.16-23) MP 1254
Tundra recovery since 1949 near Fish Creek, Alaska Lawson, D E., et al, (1978, 81p) CR 78-28
Communication in the work place an ecological perspective. Ledbetter, C.B., (1979, 19p) SR 79-03
Physical and thermal disturbance and protection of permafrost Brown, J., et al, (1979, 42p.) SR 79-05
Surface disturbance and protection during economic development of the North Brown, J, et al, (1981, 88p.) MP 1467
Disturbance and recovery of arctic Alaskan tundra terrain. Walker, D.A., et al, (1987, 63p.) CR 87-11
Is advanced technology "the gateway to irresponsibility". Zufelt, J.E., (1989, p 434-437) MP 2529
Human factors engineering
Temporary environment. Cold regions habitability Bechtel, R.B, et al, (1976, 162p) SR 76-10
Guidelines for architectural programming of office settings. Ledbetter, C.B., (1977, 14p) SR 77-05
Buildings and utilities in very cold regions. overview and research needs. Tobiasson, W., (1988, p 4-11) MP 2552
HUMIDITY
Climatology of the cold regions of the northern hemisphere, II. Wilson, C., (1969, 158p) M I-A3b
Humidity
Effects of volume averaging on spectra measured with a hygrometer. Andreas, E.L., (1981, p 467-475) MP 1728
Surface meteorology US/USSR Weddell Polynya Expedition, 1981. Andreas, E L, et al, (1983, 32p) SR 83-14
New method for measuring the snow-surface temperature. Andreas, E.L., (1984, p 161-169) MP 1867
Spectra and cospectra of atmospheric turbulence over snow. Andreas, E.L., (1986, p.219-233) MP 2661
Humidity and temperature measurements obtained from an unmanned aerial vehicle. Ballard, H., et al, (1987, p 35-45) MP 2293
Spectral measurements in a disturbed boundary layer over snow. Andreas, E.L., (1987, p 1912-1939) MP 2254
Kolmogorov Constants for temperature, humidity, and refractive index spectra. Andreas, E L., (1988, p 2399-2406) MP 2437
Three-wavelength scintillation measurement of turbulent heat fluxes Andreas, E.L, (1990, p 74-77) MP 2696
Hummocks
Growth and flowering of tussocks in northcentral Alaska Haugen, R K, et al, (1984, p.10-11) MP 1950
Hydraulic fill
Construction and performance of the Hess creek earth fill dam, Livengood, Alaska. Simoni, O.W., (1973, p 23-34) MP 859
Hydraulic jets
Cutting ice with high pressure water jets Mellor, M., et al, (1973, 22p.) MP 1001
Heat transfer between water jets and ice blocks. Yen, Y.-C., (1976, p.299-307) MP 882
Hydraulic structures
Ice forces on model structures Zabilansky, L J., et al, (1975, p 400-407) MP 863
Third International Symposium on Ice Problems, 1975 Frankenstein, G E., ed, (1975, 627p) MP 845
Passage of ice at hydraulic structures. Calkins, D.J., et al, (1976, p 1726-1736) MP 966
Hydraulic model investigation of drifting snow. Wuebben, J L., (1978, 29p) CR 78-16
Undersea pipelines and cables in polar waters Mellor, M., (1978, 34p) CR 78-22
Working group on ice forces on structures Carstens, T, ed, (1980, 146p) SR 80-26
Hydraulic model study of a water intake under frazil ice conditions Tantillo, T J., (1981, 11p) CR 81-03
Foundations of structures in polar waters Chamberlain, E J., (1981, 16p) SR 81-25
Hydraulic model study of Port Huron ice control structure. Calkins, D J., et al, (1982, 59p) CR 82-34
Structure to form an ice cover on river rapids in winter Perham, R.E., (1986, p 439-450) MP 2128
Corps of engineers seek ice solutions Frankenstein, G.E, (1987, p.5-7) MP 2219
Floating debris control, a literature review Perham, R E., (1987, 22p + 41p. of append.) MP 2252
Working group on ice forces 3rd state-of-the-art report. Sanderson, T J.O., ed, (1987, 221p) SR 87-17
Data acquisition for refrigerated physical model Zufelt, J.E., (1987, p.338-341) MP 2351
Preliminary study of scour under an ice jam. Wuebben, J L, (1988, p 177-192) MP 2475
Assessment of hydraulic structures in a stream after seasonal ice run. Calkins, D J., et al, (1989, 12p) MP 2744
Analysis of a short pulse radar survey of revetments along the Mississippi River. Arcone, S A., (1989, 20p) MP 2692
Hydraulics
Mechanics and hydraulics of river ice jams Tatinclaux, J C., et al, (1976, 97p) MP 1060
Conference on Computer and Physical Modeling in Hydraulic Engineering, 1980. Ashton, G D., ed, (1980, 492p) MP 1321
Rational design of overland flow systems. Martel, C J., et al, (1980, p.114-121) MP 1400
Measurement of the shear stress on the underside of simulated ice covers Calkins, D J., et al, (1980, 11p) CR 80-24
Traveling wave solution to the problem of simultaneous flow of water and air through homogeneous porous media Nakano, Y., (1981, p.57-64) MP 1419
Soil hydraulic conductivity and moisture retention features. Ingersoll, J., (1981, 11p) SR 81-02
Hydraulic characteristics of the Deer Creek Lake land treatment site during wastewater application. Abele, G., et al, (1981, 37p) CR 81-07
Data acquisition in USACRREL's flume facility. Daly, S.F., et al, (1985, p.1053-1058) MP 2089
Hydraulic conductivity and unfrozen water content of frozen silt. Black, P.B., et al, (1990, p 323-329) MP 2551
Ice cover effect on river flow Ashton, G.D, (1990, 24p) SR 90-08
Hydrocarbons
Fate of crude and refined oils in North Slope soils Sexstone, A., et al, (1978, p.339-347) MP 1186
Halocarbons in water using headspace gas chromatography. Leggett, D.C., (1981, 13p) SR 81-26
Hydrodynamics
Moving boundary problems in the hydrodynamics of porous media. Nakano, Y., (1978, p.125-134) MP 1343
Remote sensing data for water masses in Delaware Bay and adjacent wetlands. Ackleson, S G., et al, (1985, p.1123-1129) MP 1909
Controlled river ice cover breakup; part 2 Theory and numerical model studies. Ferrick, M G, et al, (1986, p.293-305) MP 2392
Hydrogen
Method for measuring enriched levels of deuterium in soil water. Oliphant, J L., et al, (1982, 12p) SR 82-25
Hydrogen peroxide
UV radiational effects on. Martian regolith water. Nadeau, P.H., (1977, 89p) MP 1072
Hydrologic cycle
Seasonal regime and hydrological significance of stream icings in central Alaska Kane, D L., et al, (1973, p.528-540) MP 1026
Hydrology
Spray application of waste-water effluent in a cold climate Cassell, E A., et al, (1980, p 620-626) MP 1403
Cold Regions Science and Technology Bibliography Cummings, N H., (1981, p 73-75) MP 1372
Introduction to abiotic components in tundra Brown, J, (1981, p 79) MP 1432
Sediment load and channel characteristics in subarctic upland catchments. Slaughter, C W., et al, (1981, p 39-48) MP 1518
Evaluation of procedures for determining selected aquifer parameters Daly, C.J., (1982, 104p) CR 82-41
Tailwater flow conditions Ferrick, M.G., et al, (1983, 31p) CR 83-07
Hydrologic forecasting using Landsat data. Merry, C J., et al, (1983, p 159-168) MP 1691
Hydrologic modeling from Landsat land cover data McKim, H.L., et al, (1984, 19p) SR 84-01
Hydrologic aspects of ice jams Calkins, D J., (1986, p 603-609) MP 2116
Interfacing geographic data with real-time hydrologic forecasting models Eagle, T C., et al, (1989, p 857-861) MP 2527
Hydrolysis
Ice surface hydrolysis of diisopropylfluorophosphate (DFP) Leggett, D C., (1987, p 809-815) MP 2457
Hygrometers
Effects of volume averaging on spectra measured with a hygrometer Andreas, E L., (1981, p 467-475) MP 1728
New method for measuring the snow-surface temperature Andreas, E.L., (1984, p.161-169) MP 1867

Ice

Photomacrography of artifacts in transparent materials. Marshall, S.J., (1976, 31p) CR 76-40

Dynamics of snow and ice masses. Colbeck, S C., ed, (1980, 468p.) MP 1297

Ice accretion

Ice accumulation on ocean structures. Minsk, L.D., (1977, 42p.) CR 77-17

Ice accretion on ships Itagaki, K., (1977, 22p) SR 77-27

Numerical simulation of atmospheric ice accretion. Ackley, S.F., et al, (1979, p 44-52) MP 1235

Laboratory experiments on icing of rotating blades. Ackley, S.F., et al, (1979, p 85-92) MP 1236

Computer modeling of atmospheric ice accretion. Ackley, S.F., et al, (1979, 36p) CR 79-04

Icing on structures. Minsk, L D , (1980, 18p) CR 80-31

Tests of frazil collector lines to assist ice cover formation Perham, R E , (1981, p 442-448) MP 1488

Computer modeling of time-dependent rime icing in the atmosphere Lozowski, E.P., et al, (1983, 74p) CR 83-02

Atmospheric icing of structures Minsk, L.D., ed, (1983, 366p.) SR 83-17

Field measurements of combined icing and wind loads on wires. Govoni, J W , et al, (1983, p 205-215) MP 1637

Self-shedding of accreted ice from high-speed rotors. Itagaki, K., (1983, p.1-6) MP 1719

Mechanical ice release from high-speed rotors Itagaki, K., (1983, 8p) CR 83-26

Assessment of ice accretion on offshore structures Minsk, L.D., (1984, 12p.) SR 84-04

Atmospheric icing on sea structures. Makkonen, L., (1984, 92p) M 84-02

Combined icing and wind loads on a simulated power line test span. Govoni, J.W , et al, (1984, p 173-182) MP 2114

Arctic thermal design. Lunardini, V.J., (1985, p.70-75) MP 2167

Ice accretion under natural and laboratory conditions. Itagaki, K., et al, (1985, p 225-228) MP 2009

Measurement of icing on offshore structures. Minsk, L D., (1985, p 287-292) MP 2010

Ice accretion measurement on a wire at Mt Washington McComber, P., et al, (1985, p 34-43) MP 2173

Transfer of meteorological data from mountain-top sites Govoni, J.W., et al, (1986, 6p) MP 2107

Icing and wind loading on a simulated power line. Govoni, J.W., et al, (1986, p.23-27) MP 2206

Ice detector measurements compared to meteorological data Tucker, W.B., et al, (1987, p.31-37) MP 2277

Self-shedding of accreted ice from high-speed rotors. Itagaki, K., (1987, p 95-100) MP 2278

Ice accretion and aerodynamic loading of transmission lines. Egelhofer, K.Z., et al, (1987, p 103-109) MP 2279

Climatology of rime accretion in the Green and White Mountains Ryerson, C.C , (1987, p 267-272) MP 2284

Intake design for ice conditions Ashton, G D , (1988, p.107-138) MP 2518

Atmospheric icing and broadcast antenna reflections. Ryerson, C C., (1988, 13p) CR 88-11

Thickness distribution of accreted ice grown on rotor blades Itagaki, K., et al, (1988, p 152-156) MP 2523

Atmospheric icing climatologies of two New England mountains. Ryerson, C.C., (1988, p 1261-1281) MP 2669

Density of natural ice accretions related to nondimensional icing parameters Jones, K F , (1990, p 477-496) MP 2705

Atmospheric icing rates with elevation on northern New England mountains, U S.A. Ryerson, C C , (1990, p 90-97) MP 2589

Ice acoustics

Ultrasonic investigation on ice cores from Antarctica Kohnen, H , et al, (1979, 16p) CR 79-10

Ultrasonic investigation on ice cores from Antarctica Kohnen, H , et al, (1979, p 4865-4874) MP 1239

Investigation of the acoustic emission and deformation response of finite ice plates. Xirouchakis, P.C , et al, (1981, 19p) CR 81-06

Acoustic emission and deformation response of finite ice plates Xirouchakis, P C , et al, (1981, p 385-394) MP 1455

Acoustic emission and deformation of ice plates Xirouchakis, P.C , et al, (1982, p 129-139) MP 1589

Acoustic emissions from polycrystalline ice St Lawrence, W F., et al, (1982, p.183-199) MP 1524

Acoustic emissions from polycrystalline ice. St Lawrence, W.F., et al, (1982, 15p.) CR 82-21

Polycrystalline ice creep in relation to applied stresses Cole, D.M., (1983, p 614-621) MP 1582

Laboratory studies of acoustic scattering from the underside of sea ice. Jezek, K C , et al, (1985, p 87-91) MP 1912

Analysis of acoustical features of laboratory grown sea ice Stanton, T K , et al, (1986, p 1486-1494) MP 2222

High frequency acoustical properties of saline ice Jezek, K.C., et al, (1989, p.9-23) MP 2686

Acoustics and morphology of undeformed sea ice. Jezek, K.C., et al, (1990, p 67-75) MP 2730

Ice adhesion

Seeking low ice adhesion. Sayward, J.M., (1979, 83p) SR 79-11

Ice adhesion tests on coatings subjected to rain erosion. Minsk, L.D., (1980, 14p) SR 80-28

Adhesion of ice to polymers and other surfaces Itagaki, K., (1983, p 241-252) MP 1580

Mechanisms for ice bonding in wet snow accretions on power lines Colbeck, S C., et al, (1983, p.25-30) MP 1633

Implications of surface energy in ice adhesion Itagaki, K., (1983, p 41-48) MP 1672

Uplifting forces exerted by adfrozen ice on marine piles Christensen, F T , et al, (1985, p 529-542) MP 1905

Modelling trash rack freezeup by frazil ice Daly, S.F., (1987, p 101-106) MP 2305

Evaluation of shear strength of freshwater ice adhered to icephobic coatings Mulhern, N D., (1990, p 149-154) MP 2578

Ice air interface

Air-ice-ocean interaction in Arctic marginal ice zones. Wadhams, P., ed, (1981, 20p) SR 81-19

Configuration of ice in frozen media. Colbeck, S C , (1982, p.116-123) MP 1512

Marginal Ice Zone Experiment, Fram Strait/Greenland Sea, 1984 Johannessen, O M., ed, (1983, 47p) SR 83-12

Marginal ice zones: a description of air-ice-ocean interactive processes, models and planned experiments Johannessen, O.M., et al, (1984, p.133-146) MP 1673

Modeling the marginal ice zone Hibler, W.D , III, ed, (1984, 99p) SR 84-07

On the role of ice interaction in marginal ice zone dynamics. Leppäranta, M , et al, (1984, p 23-29) MP 1781

Atmosphere subgroup discussions. Andreas, E L., (1984, p 97-98) MP 2603

Air-ice ocean interaction in Arctic marginal ice zones: MIZEX-West Wadhams, P , ed, (1985, 119p) SR 85-06

Ice dynamics Hibler, W.D., III, (1986, p.577-640) MP 2211

Theory for scalar roughness and transfer coefficients over snow and ice Andreas, E L., (1987, p 159-184) MP 2195

Comment on "Atmospheric boundary layer modification in the marginal ice zone" by T J Bennett, Jr. and K. Hunkins Andreas, E L., (1987, p 3965-3969) MP 2394

Coupled air-ice-ocean models. Hibler, W.D , III, (1987, p 131-137) MP 2412

Estimating turbulent surface heat fluxes over polar, marine surfaces Andreas, E L., (1988, p 65-68) MP 2448

Thin ice growth Ashton, G.D , (1989, p 564-566) MP 2657

Year of Bowen ratios over the frozen Beaufort Sea Andreas, E L., (1989, p 12,721-12,724) MP 2508

Comments on "A physical bound on the Bowen ratio". Andreas, E.L., (1989, p.1252-1254) MP 2560

Ice bearing capacity

Failure of an ice bridge. DenHartog, S L , et al, (1976, 13p.) CR 76-29

Concentrated loads on a floating ice sheet Nevel, D E , (1977, p 237-245) MP 1062

Ice blasting

Icebreaking concepts Mellor, M , (1980, 18p) SR 80-02

Breaking ice with explosives Mellor, M., (1982, 64p.) CR 82-40

Protection of offshore arctic structures by explosives. Mellor, M., (1983, p 310-322) MP 1605

Icebreaking by gas blasting Mellor, M , (1984, p 93-102) MP 1827

Revised guidelines for blasting floating ice. Mellor, M , (1986, 37p) SR 86-10

Blasting and blast effects in cold regions Part 2. underwater explosions Mellor, M., (1986, 56p) SR 86-16

Deviation of guidelines for blasting floating ice Mellor, M., (1987, p 193-206) MP 2247

Tactical bridging during winter 1986 Korean bridging exercise. Coutermarsh, B.A., (1987, 23p.) SR 87-13

Blasting and blast effects in cold regions Part 3. explosions in ground materials Mellor, M., (1989, 62p) SR 89-15

Ice booms

Application of ice engineering and research to Great Lakes problems. Freitag, D.R., (1972, p 131-138) MP 1615

Forces on an ice boom in the Beauharnois Canal Perham, R E , et al, (1975, p 397-407) MP 858

Passage of ice at hydraulic structures Calkins, D J., et al, (1976, p.1726-1736) MP 966

Arching of two block sizes of model ice floes. Calkins, D.J , et al, (1976, 11p) CR 76-42

Force estimate and field measurements of the St Marys River ice booms Perham, R E , (1977, 26p.) CR 77-04

Some economic benefits of ice booms Perham, R.E., (1977, p 570-591) MP 959

Ice and ship effects on the St. Marys River ice booms Perham, R E , (19 '8, p 222-230) MP 1617

Righting momen in a rectangular ice boom timber or pontoon Perham, R.E , (1978, p 273-289) MP 1136

Performance of the St Marys River ice booms, 1976-77 Perham, R.E , (1978, 13p) CR 78-24

Modeling hydrologic impacts of winter navigation Daly, S F., et al, (1981, p.1073-1080) MP 1445

Ice control arrangement for winter navigation. Perham, R.E., (1981, p.1096-1103) MP 1449

Force distribution in a fragmented ice cover. Daly, S.F., et al, (1982, p 374-387) MP 1531

Force measurements and analysis of river ice break up. Deck, D.S , (1982, p 303-336) MP 1739

Ice sheet retention structures. Perham, R.E , (1983, 33p.) CR 83-30

Navigation ice booms on the St. Marys River. Perham, R.E., (1984, 12p) CR 84-04

Force distribution in a fragmented ice cover. Stewart, D.M , et al, (1984, 16p.) CR 84-07

Performance of the Allegheny River ice control structure, 1983. Deck, D.S., et al, (1984, 15p.) SR 84-13

Controlling river ice to alleviate ice jam flooding Deck, D.S., (1984, p.524-528) MP 1795

Ice sheet retention structures. Perham, R.E , (1984, p.339-348) MP 1832

Controlling river ice to alleviate ice jam flooding Deck, D.S , (1984, p 69-76) MP 1985

Determining the effectiveness of a navigable ice boom Perham, R.E., (1985, 28p) SR 85-17

Upper Delaware River ice control—a case study. Zufelt, J.E., et al, (1986, p.760-770) MP 2005

Modeling ice restraint forces in an ice boom Perham, R.E , (1988, p.198-206) MP 2596

Imjin River ice boom. Perham, R.E , (1988, 10p.) SR 88-22

Ice bottom surface

Formation of ice ripples on the underside of river ice covers. Ashton, G.D., (1971, 157p) MP 1243

Some characteristics of grounded floebergs near Prudhoe Bay, Alaska. Kovacs, A., et al, (1976, p 169-172) MP 1118

Grounded floebergs near Prudhoe Bay, Alaska. Kovacs, A., et al, (1976, 10p) CR 76-34

Analysis of velocity profiles under ice in shallow streams. Calkins, D J., et al, (1981, p 94-111) MP 1397

Pooling of oil under sea ice. Kovacs, A., et al, (1981, p 912-922) MP 1459

Electromagnetic subsurface measurements Dean, A M , Jr., (1981, 19p) SR 81-23

Ice flow leading to the deep core hole at Dye 3, Greenland. Whillans, I M , et al, (1984, p.185-190) MP 1824

Measuring multi-year sea ice thickness using impulse radar. Kovacs, A., et al, (1985, p 55-67) MP 1916

Electromagnetic properties of multi-year sea ice Morey, R.M., et al, (1985, p.151-167) MP 1902

Laboratory studies of acoustic scattering from the underside of sea ice Jezek, K C., et al, (1985, p 87-91) MP 1912

Electromagnetic measurements of multi-year sea ice using impulse radar Kovacs, A , et al, (1985, 26p) CR 85-13

Electromagnetic measurements of sea ice Kovacs, A , et al, (1986, p 67-93) MP 2020

Analysis of acoustical features of laboratory grown sea ice. Stanton, T K., et al, (1986, p 1486-1494) MP 2222

Flow developers for melting ice—experimental results. Ashton, G.D , (1989, p 151-160) MP 2465

Concurrent remote sensing of arctic sea ice from submarine and aircraft Wadhams, P , et al, (1989, 20p) MP 2697

High frequency acoustical properties of saline ice Jezek, K.C., et al, (1989, p 9-23) MP 2686

Radar surveying of the bottom surface of ice covers Arcone, S A., et al, (1990, p.30-39) MP 2766

ICE BREAKING

Ice pressure on engineering structures Michel, B , (1970, 71p) M III-B1b

Ice breaking

Cutting ice with high pressure water jets Mellor, M , et al, (1973, 22p) MP 1001

Ice forces on vertical piles Nevel, D E , et al, (1977, 9p) CR 77-10

Icebreaker simulation Nevel, D E , (1977, 9p) CR 77-16

Investigation of ice clogged channels in the St Marys River Mellor, M., et al, (1978, 73p) MP 1170

Icebreaking concepts Mellor, M , (1980, 18p) SR 80-02

Ice characteristics in Whitefish Bay and St Marys River in winter Vance, G P., (1980, 27p) SR 80-32

Vibrations caused by ship traffic on an ice-covered waterway. Haynes, F.D , et al, (1981, 27p) CR 81-05

Breaking ice with explosives. Mellor, M., (1982, 64p) CR 82-40

Protection of offshore arctic structures by explosives Mellor, M., (1983, p 310-322) MP 1605

Navigation ice booms on the St Marys River Perham, R E., (1984, 12p) CR 84-04

Ice resistance tests on two models of the WTGB icebreaker Tatinclaux, J C , et al, (1984, p 627-638) MP 1716

Operation of the U S Combat Support Boat (USCSBMK 1) on an ice-covered waterway Stubstad, J , et al, (1984, 28p) SR 84-05

Icebreaking by gas blasting Mellor, M., (1984, p 93-102) MP 1827

Workshop on Ice Penetration Technology, Hanover, NH, June 12-13, 1984. (1984, 345p) SR 84-33
Mechanics of ice cover breakthrough. Kerr, A.D., (1984, p.245-262) MP 1997
Surfacing submarines through ice. Assur, A., (1984, p.309-318) MP 1998
Propulsion tests in level ice on a model of a 140-ft WTGB icebreaker. Tatinclaux, J.C., (1985, 13p) CR 85-04
Level ice breaking by a simple wedge. Tatinclaux, J.C., (1985, 46p.) CR 85-22
Some effects of friction on ice forces against vertical structures Kato, K., et al, (1986, p.528-533) MP 2036
Ice floe distribution in the wake of a simple wedge Tatinclaux, J.C., (1986, p 622-629) MP 2038
Design and model testing of a river ice prow. Tatinclaux, J.C., (1986, p 137-150) MP 2132
Development of a river ice-prow. Part ? Tatinclaux, J.C., (1988, p 44-52) MP 2497
Fracture experiments on freshwater and urea model ice. Bentley, D.L, et al, (1988, 152p) MP 2502

Ice breakup

Ice-cratering experiments Blair Lake, Alaska Kurtz, M K, et al, (1966, Various pagings) MP 1034
Yukon River breakup 1976 Johnson, P., et al, (1977, p.592-596) MP 960
Ice breakup on the Chena River 1975 and 1976. McFadden, T., et al, (1977, 44p) CR 77-14
Ice decay patterns on a lake, a river and coastal bay in Canada. Bilello, M A, (1977, p 120-127) MP 969
Sea ice and ice algae relationships in the Weddell Sea. Ackley, S.F, et al, (1978, p 70-71) MP 1203
Ice forces on the Yukon River bridge—1978 breakup Johnson, P R., et al, (1979, 40p) MP 1304
Break-up dates for the Yukon River; Pt.1 Rampart to Whitehorse, 1896-1978. Stephens, C.A, et al, (1979, c50 leaves) MP 1317
Break-up dates for the Yukon River, Pt 2 Alakanuk to Tanana, 1883-1978 Stephens, C A., et al, (1979, c50 leaves) MP 1318
Modeling of ice in rivers Ashton, G D, (1979, p 14/1-14/26) MP 1335
Break-up of the Yukon River at the Haul Road Bridge 1979 Stephens, C.A., et al, (1979, 22p + Figs.) MP 1315
Forecasting ice formation and breakup on Lake Champlain Bates, R.E., et al, (1979, 21p) CR 79-26
Freshwater ice growth, motion, and decay Ashton, G D, (1980, p.261-304) MP 1299
Ice formation and breakup on Lake Champlain Bates, R.E., (1980, p 125-143) MP 1429
Ice jams and meteorological data for three winters, Ottauquechee River, Vt. Bates, R.E, et al, (1981, 27p) CR 81-01
Ice force measurement on the Yukon River bridge. McFadden, T., et al, (1981, p.749-777) MP 1396
Breakup of solid ice covers due to rapid water level variations. Billfalk, L., (1982, 17p) CR 82-03
Field investigations of a hanging ice dam. Beltaos, S, et al, (1982, p.475-488) MP 1533
Force measurements and analysis of river ice break up. Deck, D S., (1982, p 303-336) MP 1739
Unsteady river flow beneath an ice cover. Ferrick, M.G., et al, (1983, p 254-260) MP 2079
Ice jam research needs Gerard, R., (1984, p.181-193) MP 1813
Analysis of rapidly varying flow in ice-covered rivers Ferrick, M.G, (1984, p.359-368) MP 1833
Ice regime reconnaissance, Yukon River, Yukon Gerard, R., et al, (1984, p 1059-1073) MP 2406
Mathematical modeling of river ice processes Shen, H.T., (1984, p.554-558) MP 1973
Hudson River ice management. Ferrick, M.G., et al, (1985, p 96-110) MP 2174
Construction and calibration of the Ottauquechee River model Gooch, G, (1985, 10p) SR 85-13
Cazenovia Creek Model data acquisition system Bennett, B M., et al, (1985, p 1424-1429) MP 2090
Controlled river ice cover breakup, part 1 Hudson River field experiments Ferrick, M.G, et al, (1986, p 281-291) MP 2391
Controlled river ice cover breakup, part 2 Theory and numerical model studies Ferrick, M G, et al, (1986, p.293-305) MP 2392
Study of dynamic ice breakup on the Connecticut River near Windsor, Vermont. Ferrick, M G, et al, (1987, p 163-177) MP 2400
Dynamic ice breakup on the Connecticut River, VT Ferrick, M G, et al, (1988, 16p) CR 88-01
Development of a dynamic ice breakup control method for the Connecticut River near Windsor, Vermont Ferrick, M G., et al, (1988, p 221-233) MP 2510
Elements of floating-debris control systems Perham, R E, (1988, 54p. + appends) MP 2453
Dynamic ice breakup control for the Connecticut River near Windsor, Vermont. Ferrick, M.G, et al, (1988, p 245-258) MP 2449
Assessment of hydraulic structures in a stream after seasonal ice run Calkins, D J, et al, (1989, 12p) MP 2744
Framework for control of dynamic ice breakup by river regulation. Ferrick, M G, et al, (1989, 14p.) CR 89-12
Framework for control of dynamic ice breakup by river regulation. Ferrick, M.G, et al, (1989, p 79-92) MP 2537
Penetration of floating ice sheets with cylindrical indentors Sodhi, D S., et al, (1989, p.104) MP 2688

Ice composition

Vanadium and other elements in Greenland ice cores. Herron, M.M, et al, (1976, 4p.) CR 76-24
Changes in the composition of atmospheric precipitation. Cragin, J.H., et al, (1977, p 617-631) MP 1079
Vanadium and other elements in Greenland ice cores. Herron, M.M, et al, (1977, p.98-102) MP 1092
Stable isotope profile through the Ross Ice Shelf at Little America V, Antarctica Dansgaard, W, et al, (1977, p.322-325) MP 1095
Subsurface measurements of the Ross Ice Shelf, McMurdo Sound, Antarctica. Kovacs, A, et al, (1977, p.146-148) MP 1013
Subsurface measurements of McMurdo Ice Shelf Gow, A.J, et al, (1979, p 79-80) MP 1338
Nitrogenous chemical composition of antarctic ice and snow. Parker, B C, et al, (1981, p 79-81) MP 1541
Physical properties of the ice cover of the Greenland Sea Weeks, W.F., (1982, 27p) SR 82-28
Physical, chemical and biological properties of winter sea ice in the Weddell Sea Clarke, D B., et al, (1982, p 107-109) MP 1609
Chemical fractionation of brine in the McMurdo Ice Shelf Cragin, J H., et al, (1983, 16p) CR 83-06
Morphology and ecology of diatoms in sea ice from the Weddell Sea. Clarke, D B., et al, (1984, 41p) CR 84-05
Sea ice and biological activity in the Antarctic Clarke, D B, et al, (1984, p.2087-2095) MP 1701
Baseline acidity of ancient precipitation from the South Pole Cragin, J H., et al, (1984, 7p.) CR 84-15
Structure of ice in the central part of the Ross Ice Shelf, Antarctica. Zotikov, I.A, et al, (1985, p 39-44) MP 2110
Physical properties of the sea ice cover. Weeks, W F, (1986, p 87-102) MP 2047
Crystal structure of Fram Strait sea ice. Gow, A J., et al, (1986, p 20-29) MP 2221
Chemical fractionation of brine in McMurdo Ice Shelf Cragin, J.H, et al, (1986, p 307-313) MP 2239
On the profile properties of undeformed first-year sea ice Cox, G.F N., et al, (1986, p.257-330) MP 2199
Low temperature effects on organophosphonates Britton, K.B, (1986, 47 refs) SR 86-38
Physical properties of estuarine ice in Great Bay, New Hampshire. Meese, D.A, et al, (1987, p 833-840) MP 2251
Baseline acidity of South Pole precipitation Cragin, J H, et al, (1987, p 789-792) MP 2275
Evaporation of chemical agents from ice and snow Leggett, D.C, (1988, 10p) CR 88-03
Mechanical properties of multi-year sea ice Richter-Menge, J A., et al, (1988, ?7p) CR 88-05
Chemical and structural properties of sea ice in the southern Beaufort Sea. Meese, D A, (1989, 294p) MP 2656
Chemical and structural properties of sea ice in the southern Beaufort Sea Meese, D.A, (1989, 134p) CR 89-25
Dominion Range ice core characteristics, Antarctica Mayewski, P A., et al, (1990, p 11-16) MP 2707
Physical properties of brackish ice, Bay of Bothnia Weeks, W F, et al, (1990, p 5-15) MP 2725
Chemical and structural properties of sea ice in the southern Beaufort Sea. Meese, D A, (1990, p 32-35) MP 2728

Ice compression

Application of ice engineering and research to Great Lakes problems Freitag, D R., (1972, p 131-138) MP 1615
Measuring the uniaxial compressive strength of ice Haynes, F.D., et al, (1977, p 213-223) MP 1027

Ice conditions

Ice dynamics, Canadian Archipelago and adjacent Arctic basin Ramseier, R O, et al, (1975, p.853-877) MP 1585
Statistical variations in Arctic sea ice ridging and deformation rates Hibler, W D, III, (1975, p J1-J16) MP 850
Winter thermal structure and ice conditions on Lake Champlain, Vermont Bates, R E, (1976, 22p) CR 76-13
Dynamics of near-shore ice Weeks, W F, et al, (1976, p 267-275) MP 922
Sea ice conditions in the Arctic Weeks, W F, (1976, p 173-205) MP 910
Remote sensing of frazil and brash ice in the St Lawrence River. Dean, A.M, Jr, (1977, 19p) CR 77-08
Remote sensing of accumulated frazil and brash ice Dean, A M, Jr, (1977, p 693-704) MP 934
Report of the ITTC panel on testing in ice, 1978 Frankenstein, G E., et al, (1978, p.157-179) MP 1140
Break-up dates for the Yukon River, Pt 1 Rampart to Whitehorse, 1896-1978 Stephens, C.A., et al, (1979, c50 leaves) MP 1317
Overview on the seasonal sea ice zone Weeks, W.F, et al, (1979, p 320-337) MP 1320
Winter thermal structure, ice conditions and climate of Lake Champlain Bates, R E, (1980, 26p.) CR 80-02
Ice laboratory facilities for solving ice problems Frankenstein, G E, (1980, p 93-103) MP 1301
Continuum sea ice model for a global climate model. Ling, C.H, et al, (1980, p.187-196) MP 1622
Clearing ice-clogged shipping channels Vance, G P, (1980, 13p.) CR 80-28
Hyperbolic reflections on Beaufort Sea seismic records. Neave, K G., et al, (1981, 16p) CR 81-02
Hydraulic model study of a water intake under frazil ice conditions Tantillo, T.J., (1981, 11p) CR 81-03
Summer conditions in the Prudhoe Bay area, 1953-75 Cox, G F N, et al, (1981, p.799-808) MP 1457
Sea ice piling at Fairway Rock, Bering Strait, Alaska. Kovacs, A, et al, (1981, p.985-1000) MP 1460
Ice distribution and winter ocean circulation, Kachemak Bay, Alaska. Gatto, L.W, (1981, 43p) CR 81-22
River ice suppression by side channel discharge of warm water. Ashton, G D, (1982, p 65-80) MP 1528
Ice distribution and water circulation, Kachemak Bay, Alaska. Gatto, L.W., (1982, p 421-435) MP 1569
Understanding the Arctic sea floor for engineering purposes. (1982, 141p) SR 83-25
Bering Strait sea ice and the Fairway Rock icefoot. Kovacs, A., et al, (1982, 40p.) CR 82-31
Observations of pack ice properties in the Weddell Sea Ackley, S F, et al, (1982, p 105-106) MP 1608
Atmospheric boundary layer measurements in the Weddell Sea Andreas, E.L., (1982, p 113-115) MP 1610
Sea ice state during the Weddell Sea Expedition. Ackley, S F, et al, (1983, 6p. + 59p) SR 83-2
Offshore mechanics and Arctic engineering, symposium, 1983. (1983, 813p) MP 1581
Lake water intakes under icing conditions Dean, A.M., Jr., (1983, 7p) CR 83-15
Landsat-4 thematic mapper (TM) for cold environments Gervin, J.C., et al, (1983, p 179-186) MP 1651
Spaceborne SAR and sea ice a status report. Weeks, W.F., (1983, p 113-115) MP 2225
Ice jams in shallow rivers with floodplain flow. Calkins, D.J., (1983, p 538-548) MP 1644
Science program for an imaging radar receiving station in Alaska Weller, G., et al, (1983, 45p) MP 1884
Marginal ice zones a description of air-ice-ocean interactive processes, models and planned experiments. Johannessen, O M, et al, (1984, p.133-146) MP 1673
Model tests on two models of WTGB 140-foot icebreaker Tatinclaux, J C, (1984, 17p) CR 84-03
Offshore mechanics and Arctic engineering symposium, 1984. (1984, 3 vols) MP 1675
Ice observation program on the semisubmersible drilling vessel SEDCO 708 Minsk, L.D., (1984, 14p) SR 84-02
East Greenland Sea ice variability in large-scale model simulations. Walsh, J.E., et al, (1984, p 9-14) MP 1779
On the decay and retreat of the ice cover in the summer MIZ. Maykut, G.A., (1984, p 15-22) MP 1780
On the role of ice interaction in marginal ice zone dynamics. Leppäranta, M, et al, (1984, p 23-29) MP 1781
Drag coefficient across the Antarctic marginal ice zone. Andreas, E.L, et al, (1984, p 63-71) MP 1784
Mechanism for floe clustering in the marginal ice zone Leppäranta, M, et al, (1984, p 73-76) MP 1785
Ice-related flood frequency analysis application of analytical estimates. Gerard, R, et al, (1984, p 85-101) MP 1712
Model simulation of 20 years of northern hemisphere sea-ice fluctuations. Walsh, J.E, et al, (1984, p 170-176) MP 1767
Modeling intake peformance under frazil ice conditions. Dean, A.M, Jr, (1984, p 559-563) MP 1797
Ice regime reconnaissance, Yukon River, Yukon. Gerard, R, et al, (1984, p 1059-1073) MP 2406
Reservoir bank erosion caused by ice Gatto, L W, (1984, p 203-214) MP 1787
MIZEX 83 mesoscale sea ice dynamics: initial analysis Hibler, W.D, III, et al, (1984, p.19-28) MP 1811
MIZEX 84 mesoscale sea ice dynamics post operations report Hibler, W D, III, et al, (1984, p 66-69) MP 1257
Offshore Mechanics and Arctic Engineering Symposium, 4th, 1985 (1985, 2 vols) MP 2105
Unified degree-day method for river ice cover thickness simulation Shen, H T, et al, (1985, p 54-62) MP 2065
Propulsion tests in level ice on a model of a 140-ft WTGB icebreaker Tatinclaux, J C, (1985, 13p) CR 85-04
Kadluk ice stress measurement program Johnson, J B, et al, (1985, p 88-100) MP 1899
Ice conditions on the Ohio and Illinois rivers, 1972-1985. Gatto, L.W., (1985, p 856-861) MP 1914
Hudson River ice management Ferrick, M G, et al, (1985, p 96-110) MP 2174
Upper Delaware River ice control a case study Zufelt, J E, et al, (1986, p.760-770) MP 2005
Offshore Mechanics and Arctic Engineering Symposium, 5th, 1986 (1986, 4 vols) MP 2031
Remote sensing of the Arctic seas. Weeks, W F, et al, (1986, p.59-64) MP 2117
Ice problems associated with rivers and reservoirs Benson, C, et al, (1986, p 70-98) MP 2155
Design and model testing of a river ice prow Tatinclaux, J C, (1986, p 137-150) MP 2132
Ice atlas, 1984-1985 Ohio River, Allegheny River, Monongahela River Gatto, L W, et al, (1986, 185p) SR 86-23

Ice conditions *(cont.)*
River ice mapping with Landsat and video imagery. Gatto, L.W , et al, (1987, p.352-363) MP 2273
Alaska synthetic aperture radar (SAR) facility project Carsey, F., et al, (1987, p 593-596) MP 2408
Analysis of 112 years of ice conditions observed on the Ohio River at Cincinnati Daly, S F , et al, (1987, p.70-79) MP 2260
Ice atlas 1985-86 of five rivers of the USA. Gatto, L W , et al, (1987, 367p.) SR 87-20
DOD floating ice problems Cox, G F.N , (1987, p 151-154) MP 2414
Arctic construction working group report Marvin, E.L , et al, (1987, p.311-314) MP 2426
Ice conditions along the Ohio River, 1972-1985. Gatto, L.W., (1988, 162p) SR 88-01
Evaluation of an operational ice forecasting model during summer. Tucker, W.B , et al, (1988, p.159-174) MP 2347
Ice conditions along the Allegheny and Monongahela Rivers Gatto, L.W., (1988, 106p.) SR 88-06
Inventory of ice problem sites and remedial ice control structures. Perham, R E., (1988, 9p) SR 88-07
Ice cover distribution in Vermont and New Hampshire Atlantic salmon rearing streams Calkins, D J., et al, (1988, p 85-96) MP 2473
Computer-generated graphics of river ice conditions Bilello, M.A , et al, (1988, p 211-219) MP 2509
Rebuilding infrastructure for pleasure boating Wortley, C.A., et al, (1989, p.188-201) MP 2466
Ice conditions along Illinois Waterway, 1972-1985 Gatto, L.W., (1989, 112p.) CR 89-20
Wave-induced bergy bit motion near a floating platform Mak, L.M., et al, (1990, p 205-215) MP 2580

Ice (construction material)
Engineering properties of sea ice. Schwarz, J., et al, (1977, p 499-531) MP 1065
Role of research in developing surface protection measures for the Arctic Slope of Alaska Johnson, P R , (1978, p.202-205) MP 1068

ICE CONTROL
Snow removal and ice control Mellor, M., (1965, 37p) M III-A3b

Ice control
Use of explosives in removing ice jams Frankenstein, G E , et al, (1970, 10p) MP 1021
Application of ice engineering and research to Great Lakes problems Freitag, D.R , (1972, p 131-138) MP 1615
Icings developed from surface water and ground water Carey, K.L., (1973, 71p) M III-D3
Numerical simulation of air bubbler systems Ashton, G D , (1977, p.765-778) MP 936
Some economic benefits of ice booms Perham, R.E , (1977, p 570-591) MP 959
Solving problems of ice-blocked drainage facilities. Carey, K.L., (1977, 17p) SR 77-25
Storm drainage design considerations in cold regions Lobacz, E.F , et al, (1978, p 474-489) MP 1088
Ice and ship effects on the St. Marys River ice booms Perham, R.E., (1978, p 222-230) MP 1617
Numerical simulation of air bubbler systems Ashton, G D , (1978, p 231-238) MP 1618
Current research on snow and ice removal in the United States Minsk, L.D , (1978, p 21-22) MP 1199
Noncorrosive methods of ice control. Minsk, L D., (1979, p.133-162) MP 1265
Suppression of river ice by thermal effluents Ashton, G D , (1979, 23p) CR 79-30
Harnessing frazil ice Perham, R.E , (1981, p 227-237) MP 1398
Snow and ice control on railroads, highways and airports Minsk, L D., et al, (1981, p 671-706) MP 1447
Modeling hydrologic impacts of winter navigation Daly, S.F , et al, (1981, p 1073-1080) MP 1445
Ice control at navigation locks. Hanamoto, B , (1981, p.1088-1095) MP 1448
Ice control arrangement for winter navigation Perham, R E., (1981, p.1096-1103) MP 1449
Port Huron ice control model studies. Calkins, D.J , et al, (1982, p.361-373) MP 1530
Model study of Port Huron ice control structure, wind stress simulation Sodhi, D.S , et al, (1982, 27p) CR 82-09
Theory of thermal control and prevention of ice in rivers and lakes. Ashton, G D , (1982, p 131-185) MP 1554
Force measurements and analysis of river ice break up Deck, D.S., (1982, p 303-336) MP 1739
Optimizing deicing chemical application rates Minsk, L.D , (1982, 55p) CR 82-18
Hydraulic model study of Port Huron ice control structure Calkins, D.J., et al, (1982, 59p) CR 82-34
How effective are icephobic coatings Minsk, L D , (1983, p 93-95) MP 1634
Methods of ice control. Frankenstein, G E , et al, (1983, p 204-215) MP 1642
Ice sheet retention structures Perham, R E , (1983, 33p) CR 83-30
Navigation ice booms on the St Marys River Perham, R E , (1984, 12p) CR 84-04
Performance of the Allegheny River ice control structure, 1983. Deck, D.S , et al, (1984, 15p) SR 84-13
Controlling river ice to alleviate ice jam flooding. Deck, D S., (1984, p 524-528) MP 1795
Methods of ice control for winter navigation in inland waters Frankenstein, G.E., et al, (1984, p.329-337) MP 1831
Ice sheet retention structures. Perham, R.E , (1984, p 339-348) MP 1832
Controlling river ice to alleviate ice jam flooding Deck, D.S , (1984, p 69-76) MP 1885
Cold facts of ice jams: case studies of mitigation methods. Calkins, D J , (1984, p.39-47) MP 1793
Polyethylene glycol as an ice control coating Itagaki, K., (1984, 11p) CR 84-28
Survey of ice problem areas in navigable waterways. Zufelt, J., et al, (1985, 32p) SR 85-02
Ice jam flood prevention measures, Lamoille River, Hardwick VT. Calkins, D.J., (1985, p.149-168) MP 1940
Cazenovia Creek Model data acquisition system. Bennett, B M., et al, (1985, p.1424-1429) MP 2090
Upper Delaware River ice control—a case study. Zufelt, J E , et al, (1986, p.760-770) MP 2005
Snow and ice prevention in the United States Minsk, L.D , (1986, p 37-42) MP 1874
Evolution of frazil ice in rivers and streams: research and control. Daly, S.F., (1987, p 11-16) MP 2303
Dynamic ice breakup on the Connecticut River, VT. Ferrick, M G , et al, (1988, 16p) CR 88-01
Intake design for ice conditions. Ashton, G.D , (1988, p.107-138) MP 2518
Inventory of ice problem sites and remedial ice control structures Perham, R.E , (1988, 9p) SR 88-07
Development of a river ice prow Tatinclaux, J C , et al, (1988, 26p) CR 88-09
High-flow air-screen bubbler systems to control ice in locks. Rand, J.H , (1988, p 34-43) MP 2496
Development of a river ice-prow. Part 2. Tatinclaux, J.C., (1988, p 44-52) MP 2497
Development of a dynamic ice breakup control method for the Connecticut River near Windsor, Vermont. Ferrick, M.G , et al, (1988, p 221-233) MP 2510
Ice control in river harbors and fleeting areas Perham, R.E., (1988, 7p) SR 88-12
Dynamic ice breakup control for the Connecticut River near Windsor, Vermont. Ferrick, M G., et al, (1988, p 245-258) MP 2449
Unconventional power sources for ice control at locks and dams Nakato, T., et al, (1989, p.107-126) MP 2572
Freezeup dynamics of a frazil ice screen. Axelson, K.D., (1990, 8p) SR 90-04
Salmon River ice jam control studies interim report Axelson, K.D., et al, (1990, 8p.) SR 90-06

Ice cores
Greenland climate changes shown by ice core. Dansgaard, W., et al, (1971, p 17-22) MP 998
Oxygen isotope profiles through ice sheets Johnsen, S J , et al, (1972, p 429-434) MP 997
Byrd Land quaternary volcanism LeMasurier, W E., (1972, p.139-141) MP 994
Polar ice-core storage facility Langway, C C., Jr , (1976, p.71-75) MP 874
Vanadium and other elements in Greenland ice cores Herron, M.M , et al, (1976, 4p.) CR 76-24
Changes in the composition of atmospheric precipitation. Cragin, J H , et al, (1977, p 617-631) MP 1079
Vanadium and other elements in Greenland ice cores Herron, M M , et al, (1977, p.98-102) MP 1092
Dating annual layers of Greenland ice Langway, C C , Jr., et al, (1977, p 302-306) MP 1094
Aerosols in Greenland snow and ice. Kumai, M., (1977, p 341-350) MP 1725
Primary productivity in sea ice of the Weddell region Ackley, S F , et al, (1978, 17p) CR 78-19
Ultrasonic measurements on deep ice cores from Antarctica. Gow, A J., et al, (1978, p 48-50) MP 1202
Ultrasonic investigation on ice cores from Antarctica. Kohnen, H , et al, (1979, 16p) CR 79-10
Stratified debris in Antarctic ice cores Gow, A.J , et al, (1979, p.185-192) MP 1272
Ultrasonic investigation on ice cores from Antarctica Kohnen, H , et al, (1979, p.4865-4874) MP 1239
20-yr cycle in Greenland ice core records Hibler, W D , III, et al, (1979, p 481-483) MP 1245
Ice sheet internal reflections. Ackley, S F , et al, (1979, p 5675-5680) MP 1319
Subsurface measurements of McMurdo Ice Shelf Gow, A.J., et al, (1979, p.79-80) MP 1338
Antifreeze-thermodrilling, central Ross Ice Shelf. Zotikov, I.A., (1979, 12p) CR 79-24
Danish deep drill, progress report February-March 1979 Rand, J H., (1980, 37p) SR 80-03
Time-priority studies of deep ice cores Gow, A J , (1980, p 91-102) MP 1308
South Pole ice core drilling, 1981-1982 Kuivinen, K C , et al, (1982, p 89-91) MP 1621
Chemical fractionation of brine in the McMurdo Ice Shelf Cragin, J.H , et al, (1983, 16p) CR 83-06
Sea ice and biological activity in the Antarctic Clarke, D B , et al, (1984, p 2087-2095) MP 1701
Army research could reduce dangers posed by sea ice Tucker, W.B , (1984, p.20-24) MP 2168
Baseline acidity of ancient precipitation from the South Pole. Cragin, J.H., et al, (1984, 7p) CR 84-15
Sea ice properties. Tucker, W.B., et al, (1984, p.82-83) MP 2136
Ice drilling technology. Holdsworth, G , ed, (1984, 142p.) SR 84-34
Ice drilling and coring systems—a retrospective view Sellmann, P.V , et al, (1984, p.125-127) MP 1999
System for mounting end caps on ice specimens Cole, D M , et al, (1985, p.362-365) MP 2016
Structure of ice in the central part of the Ross Ice Shelf, Antarctica. Zotikov, I.A , et al, (1985, p.39-44) MP 2110
Chemical fractionation of brine in McMurdo Ice Shelf. Cragin, J.H , et al, (1986, p 307-313) MP 2239
Sea-ice investigations during the Winter Weddell Sea Project. Ackley, S.F., et al, (1987, p.88-89) MP 2491
Chemical and structural properties of sea ice in the southern Beaufort Sea Meese, D.A , (1989, 294p) MP 2656
US global ice core research program West Antarctica and beyond. Grootes, P.M., et al, (1989, 32p) MP 2709
Dominion Range ice core characteristics, Antarctica. Mayewski, P A., et al, (1990, p 11-16) MP 2707
Chemical and structural properties of sea ice in the southern Beaufort Sea. Meese, D.A., (1990, p.32-35) MP 2728

Ice coring drills
General considerations for drill system design Mellor, M., et al, (1976, p.77-111) MP 856
USA CRREL shallow drill. Rand, J.H , (1976, p.133-137) MP 873
Ross Ice Shelf Project drilling, October-December 1976. Rand, J.H., (1977, p.150-152) MP 1061
Core drilling through Ross Ice Shelf. Zotikov, I A , et al, (1979, p 63-64) MP 1337
Danish deep drill, progress report: February-March 1979. Rand, J H , (1980, 37p) SR 80-03
South Pole ice core drilling, 1981-1982. Kuivinen, K.C., et al, (1982, p 89-91) MP 1621
Ice drilling technology Holdsworth, G., ed, (1984, 142p.) SR 84-34
Ice-coring augers for shallow depth sampling. Rand, J.H., et al, (1985, 22p.) CR 85-21

Ice cover
Environmental analyses in the Kootenai River region, Montana. McKim, H.L., et al, (1976, 53p) SR 76-13
Water resources by satellite McKim, H.L , (1978, p 164-169) MP 1090
Towing ships through ice-clogged channels by warping and kedging. Mellor, M , (1979, 21p) CR 79-21
Winter surveys of the upper Susitna River, Alaska. Bilello, M.A., (1980, 30p.) SR 80-19
Electromagnetic subsurface measurements. Dean, A.M , Jr., (1981, 19p) SR 81-23
Explosive obscuration sub-test results at the SNOW-TWO field experiment. Ebersole, J.F , et al, (1984, p 347-354) MP 1872
Structure to form an ice cover on river rapids in winter. Perham, R E., (1986, p.439-450) MP 2128
Microcomputer-based image-processing system Perovich, D.K , et al, (1988, p.249-252) MP 2385
Light reflection and transmission by sea ice covers. Perovich, D.K , (1990, p.9557-9567) MP 2761

Ice cover effect
Antarctic sea ice dynamics and its possible climatic effects. Ackley, S F , et al, (1976, p 53-76) MP 1378
Suppression of ice fog from cooling ponds. McFadden, T., (1976, 78p) CR 76-43
Ice and navigation related sedimentation. Wuebben, J.L., et al, (1978, p 393-403) MP 1133
Turbulent heat transfer from a river to its ice cover Haynes, F D., et al, (1979, 5p) CR 79-13
Analysis of velocity profiles under ice in shallow streams Calkins, D.J., et al, (1981, p.94-111) MP 1397
Effects of ice on coal movement via the inland waterways. Lunardini, V.J., et al, (1981, 72p) SR 81-13
Application of HEC-2 for ice-covered waterways. Calkins, D.J., et al, (1982, p 241-248) MP 1575
Reservoir bank erosion caused and influenced by ice cover. Gatto, L W., (1982, 26p) SR 82-31
Using the DWOPER routing model to simulate river flows with ice Daly, S F , et al, (1983, 19p) SR 83-01
Unsteady river flow beneath an ice cover Ferrick, M G , et al, (1983, p 254-260) MP 2079
Bank recession of Corps of Engineers reservoirs Gatto, L.W., et al, (1983, 103p) SR 83-30
West antarctic sea ice. Ackley, S F , (1984, p 88-95) MP 1818
Operation of the U S. Combat Support Boat (USCSBMK I) on an ice-covered waterway Stubstad, J , et al, (1984, 28p) SR 84-05
Nitrogen removal in wastewater ponds. Reed, S C., (1984, 26p) CR 84-13
Analysis of rapidly varying flow in ice-covered rivers Ferrick, M G , (1984, p 359-368) MP 1833
Effect of ice cover on hydropower production Yapa, P.D , et al, (1984, p 231-234) MP 1876
Electromagnetic pulse propagation in dielectric slabs Arcone, S A , (1984, p.1763-1773) MP 1991

Surfacing submarines through ice. Assur, A., (1984, p 309-318) MP 1998

Erosion of northern reservoir shores Lawson, D.E., (1985, 198p) M 85-01

Winter tire tests, 1980-81. Blaisdell, G.L., et al, (1985, p 135-151) MP 2045

Heat transfer in water flowing over a horizontal ice sheet. Lunardini, V.J., et al, (1986, 81p) CR 86-03

Effects of water and ice on the scattering of diffuse reflectors Jezek, K.C., et al, (1986, p 259-269) MP 2664

Laboratory study of flow in an ice-covered sand bed channel. Wuebben, J.L., (1986, p 3-14) MP 2123

Morphology, hydraulics and sediment transport of an ice-covered river. Lawson, D.E., et al, (1986, 37p) CR 86-11

DOD floating ice problems Cox, G.F.N., (1987, p.151-154) MP 2414

Seismic and acoustic wave propagation working group report. Albert, D.G., et al, (1987, p.253-255) MP 2419

Estimating Cn square over snow and sea ice from meteorological quantities Andreas, E.L., (1988, p.258-267) MP 2440

Estimating Cn square over snow and sea ice from meteorological data. Andreas, E.L., (1988, p 481-495) MP 2393

Effects of an ice cover on flow in a movable bed channel Wuebben, J.L., (1988, p 137-146) MP 2499

Antitank obstacles for winter use Richmond, P.W., (1988, 11p) SR 88-19

Using the Ground Emplaced Mine Scattering System in winter. Richmond, P.W., et al, (1988, 13p) SR 88-27

Assessment of hydraulic structures in a stream after seasonal ice run. Calkins, D.J., et al, (1989, 12p.) MP 2744

High frequency acoustical properties of saline ice. Jezek, K.C., et al, (1989, p 9-23) MP 2686

Cavitating fluid sea ice model. Flato, G.M., et al, (1990, p 239-242) MP 2738

Ice cover effect on river flow. Ashton, G.D., (1990, 24p) SR 90-08

ICE COVER STRENGTH

Mechanical properties of sea ice Weeks, W.F., et al, (1967, 80p.) M II-C3

Ice cover strength

Failure of an ice bridge. DenHartog, S.L., et al, (1976, 13p) CR 76-29

Force estimate and field measurements of the St Marys River ice booms Perham, R.E., (1977, 26p) CR 77-04

Laboratory investigation of the mechanics and hydraulics of river ice jams Tatinclaux, J.C., et al, (1977, 45p) CR 77-09

Ice cover forces on structures Kerr, A.D., (1978, p 123-134) MP 879

Ice thickness-tensile stress relationship for load-bearing ice Johnson, P.R., (1980, 11p) SR 80-09

Evaluation of ice-covered water crossings Dean, A.M., Jr., (1980, p 443-453) MP 1348

Ice characteristics in Whitefish Bay and St. Marys River in winter. Vance, G.P., (1980, 27p) SR 80-32

Ice force measurement on the Yukon River bridge McFadden, T., et al, (1981, p 749-777) MP 1396

On the buckling force of floating ice plates. Kerr, A.D., (1981, 7p.) CR 81-09

Flow velocity profiles in ice-covered shallow streams. Calkins, D.J., et al, (1982, p 236-247) MP 1540

In-situ measurements of the mechanical properties of ice Tatinclaux, J.C., (1982, p 326-334) MP 1555

Flexural strength and elastic modulus of ice Tatinclaux, J.C., et al, (1982, p.37-47) MP 1568

Ice properties in the Greenland and Barents Seas during summer. Overgaard, S., et al, (1983, p 142-164) MP 2062

Model tests on two models of WTGB 140-foot icebreaker Tatinclaux, J.C., (1984, 17p) CR 84-03

Deterioration of floating ice covers Ashton, G.D., (1984, p 26-33) MP 1676

Variation of ice strength within and between multiyear pressure ridges in the Beaufort Sea. Weeks, W.F., (1984, p 134-139) MP 1680

Model tests in ice of a Canadian Coast Guard R-class icebreaker. Tatinclaux, J.C., (1984, 24p) SR 84-06

Ice deterioration Ashton, G.D., (1984, p 31-38) MP 1791

Workshop on Ice Penetration Technology, Hanover, NH, June 12-13, 1984 (1984, 345p) SR 84-33

Shopper's guide to ice penetration Mellor, M., (1984, p 1-35) MP 1992

Penetration of shaped charges into ice Mellor, M., (1984, p 137-148) MP 1995

Mechanics of ice cover breakthrough Kerr, A.D., (1984, p 245-262) MP 1997

Deterioration of floating ice covers Ashton, G.D., (1985, p 177-182) MP 2122

Ice penetration tests Garcia, N.B., et al, (1985, p 223-236) MP 2014

In-ice calibration tests for an elongate, uniaxial brass ice stress sensor. Johnson, J.B., (1985, p 506-510) MP 1966

Ice cover research present state and future needs Kerr, A.D., et al, (1986, p 384-399) MP 2004

Crushing of ice sheet against rigid cylindrical structures Sodhi, D.S., et al, (1986, p.1-12) MP 2018

Second Workshop on Ice Penetration Technology, 1986, (1986, 659p.) SR 86-30

Variability of Arctic sea ice drafts. Tucker, W.B., et al, (1986, p 237-256) MP 2198

On the profile properties of undeformed first year sea ice Cox, G.F.N., et al, (1986, p 257-330) MP 2199

Contribution of snow to ice bridges Coutermarsh, B.A., et al, (1987, p.133-137) MP 2192

Numerical simulation of first-year sea ice Cox, G.F.N., et al, (1988, p 12,449-12,460) MP 2404

Flexural properties of freshwater ice sheets. Gow, A.J., et al, (1989, p 249-270) MP 2652

ICE COVER THICKNESS

Antarctic ice sheet Mellor, M., (1961, 50p) M I-B1

Greenland ice sheet. Bader, H., (1961, 18p) M I-B2

Ice cover thickness

Salinity variations in sea ice. Cox, G.F.N., et al, (1974, p.109-122) MP 1023

Remote sensing program required for the AIDJEX model. Weeks, W.F., et al, (1974, p 22-44) MP 1040

Stability of Antarctic ice. Weertman, J., (1975, p.159) MP 1042

Remote sensing plan for the AIDJEX main experiment Weeks, W.F., et al, (1975, p 21-48) MP 862

Thickness and roughness variations of arctic multiyear sea ice Ackley, S.F., et al, (1976, 25p) CR 76-18

Sea ice properties and geometry. Weeks, W.F., (1976, p 137-171) MP 918

Radar imagery of ice covered North Slope lakes. Weeks, W.F., et al, (1977, p 129-136) MP 923

Remote sensing of accumulated frazil and brash ice. Dean, A.M., Jr., (1977, p 693-704) MP 934

Sea ice thickness profiling and under-ice oil entrapment. Kovacs, A., (1977, p.547-550) MP 940

Ice decay patterns on a lake, a river and coastal bay in Canada Bilello, M.A., (1977, p.120-127) MP 569

Decay patterns of land-fast sea ice in Canada and Alaska. Bilello, M.A., (1977, p.1-10) MP 1161

Iceberg thickness profiling using an impulse radar. Kovacs, A., (1977, p.140-142) MP 1012

Subsurface measurements of the Ross Ice Shelf, McMurdo Sound, Antarctica Kovacs, A., et al, (1977, p 146-148) MP 1013

Sea ice studies in the Weddell Sea region aboard USCGC *Burton Island*. Ackley, S.F., (1977, p 172-173) MP 1014

Delineation and engineering characteristics of permafrost beneath the Beaufort Sea Sellmann, P.V., et al, (1977, p 432-440) MP 1077

Iceberg thickness and crack detection. Kovacs, A., (1978, p.131-145) MP 1128

Iceberg thickness profiling. Kovacs, A., (1978, p 766-774) MP 1019

Physical measurement of ice jams 1976-77 field season. Wuebben, J.L., et al, (1978, 19p) SR 78-03

Radar profile of a multi-year pressure ridge fragment. Kovacs, A., (1978, p 59-62) MP 1126

Profiles of pressure ridges and ice islands in the Beaufort Sea Hnatiuk, J., et al, (1978, p 519-532) MP 1187

Dynamics of near-shore ice. Kovacs, A., et al, (1978, p 1-22) MP 1205

Remote detection of water under ice-covered lakes on the North Slope of Alaska. Kovacs, A., (1978, p 448-458) MP 1214

Characteristics of ice on two Vermont rivers Deck, D.S., (1978, 30p) SR 78-30

Laboratory experiments on icing of rotating blades Ackley, S.F., et al, (1979, p 85-92) MP 1236

Accelerated ice growth in rivers Calkins, D.J., (1979, 5p) CR 79-14

Dynamic thermodynamic sea ice model Hibler, W.D., III, (1979, p 815-846) MP 1247

Break-up of the Yukon River at the Haul Road Bridge 1979 Stephens, C.A., et al, (1979, 22p + Figs) MP 1315

Dynamics of near-shore ice. Kovacs, A., et al, (1979, p.181-207) MP 1291

Point source bubbler systems to suppress ice Ashton, G.D., (1979, p 93-100) MP 1326

Icebreaking concepts. Mellor, M., (1980, 18p.) SR 80-02

Evaluation of ice deflectors on the USCG icebreaker *Polar Star*. Vance, G.P., (1980, 37p) SR 80-04

Performance of the USCGC *Katmai Bay* icebreaker Vance, G.P., (1980, 28p) CR 80-08

Maximum thickness and subsequent decay of lake, river and fast sea ice in Canada and Alaska Bilello, M.A., (1980, 160p) CR 80-06

Sea ice growth, drift, and decay Hibler, W.D., III, (1980, p 141-209) MP 1298

Evaluation of ice-covered water crossings Dean, A.M., Jr., (1980, p 443-453) MP 1348

Ice characteristics in Whitefish Bay and St Marys River in winter Vance, G.P., (1980, 27p) SR 80-32

Modeling a variable thickness sea ice cover Hibler, W.D., III, (1980, p 1943-1973) MP 1424

Method for measuring brash ice thickness with impulse radar Martinson, C.R., et al, (1981, 10p) SR 81-11

Pooling of oil under sea ice Kovacs, A., et al, (1981, p 912-922) MP 1459

Morphology of sea ice pressure ridge sails Tucker, W.B., et al, (1981, p.1-12) MP 1465

Ice-covered North Slope lakes observed by radar Weeks, W.F., et al, (1981, 17p) CR 81-19

Modeling pressure ridge buildup on the geophysical scale Hibler, W.D., III, (1982, p 141-153) MP 1590

Breakup of solid ice covers due to rapid water level variations Billfalk, L., (1982, 17p.) CR 82-03

Performance of a point source bubbler under thick ice Haynes, F.D., et al, (1982, p.111-121) MP 1529

Effects of conductivity on high-resolution impulse radar sounding. Morey, R.M., et al, (1982, 12p) CR 82-42

Numerical simulation of the Weddell Sea pack ice Hibler, W.D., III, et al, (1983, p 2873-2887) MP 1592

Properties of urea-doped ice in the CRREL test basin. Hirayama, K., (1983, 44p) CR 83-09

Collapsible restraint for measuring tapes Ueda, H.T., (1983, 12 col) MP 2335

Ice properties in the Greenland and Barents Seas during summer Overgaard, S., et al, (1983, p.142-164) MP 2062

Lake ice decay Ashton, G.D., (1983, p.83-86) MP 1684

Changes in the Ross Ice Shelf dynamic condition Jezek, K.C., (1984, p 409-416) MP 2058

Dependence of crushing specific energy on the aspect ratio and the structure velocity Sodhi, D.S., et al, (1984, p 363-374) MP 1708

On the role of ice interaction in marginal ice zone dynamics Leppäranta, M., et al, (1984, p 23-29) MP 1781

Ice jams in shallow rivers with floodplain flow Discussion Beltaos, S., (1984, p 370-371) MP 1798

Computer simulation of ice cover formation in the Upper St Lawrence River Shen, H.T., et al, (1984, p 227-245) MP 1814

Structure of first-year pressure ridge sails in the Prudhoe Bay region. Tucker, W.B., et al, (1984, p 115-135) MP 1837

Shopper's guide to ice penetration. Mellor, M., (1984, p.1-35) MP 1992

Determining the characteristic length of floating ice sheets by moving loads Sodhi, D.S., et al, (1985, p 155-159) MP 1855

Unified degree-day method for river ice cover thickness simulation Shen, H.T., et al, (1985, p 54-62) MP 2065

Numerical modeling of sea ice dynamics and ice thickness Hibler, W.D., III, (1985, 50p) CR 85-05

Sheet ice forces on a conical structure an experimental study Sodhi, D.S., et al, (1985, p 46-54) MP 1915

Measuring multi-year sea ice thickness using impulse radar. Kovacs, A., et al, (1985, p 55-67) MP 1916

Numerical simulation of Northern Hemisphere sea ice variability, 1951-1980 Walsh, J.E., et al, (1985, p.4847-4865) MP 1882

Electromagnetic properties of multi-year sea ice Morey, R.M., et al, (1985, p.151-167) MP 1902

Role of plastic ice interaction in marginal ice zone dynamics Leppäranta, M., et al, (1985, p 11,809-11,909) MP 1544

Impulse radar sounding of level first-year sea ice from an icebreaker Martinson, C.R., (1985, 9p) SR 85-21

Short-pulse radar investigations of freshwater ice sheets and brash ice. Arcone, S.A., et al, (1986, 10p) CR 86-06

Electromagnetic properties of sea ice Kovacs, A., et al, (1986, p.57-133) MP 2197

Variability of Arctic sea ice drafts Tucker, W.B., et al, (1986, p.237-256) MP 2198

Portable hot water ice drill Tucker, W.B., et al, (1986, p 549-564) MP 2202

Calibrating HEC-2 in a shallow, ice-covered river Calkins, D.J., et al, (1986, 25 refs) SR 86-34

Sea-ice investigations during the Winter Weddell Sea Project Ackley, S.F., et al, (1987, p 88-89) MP 2491

Airborne electromagnetic sensing of sea ice thickness Becker, A., et al, (1987, 77p) MP 2673

Portable hot-water ice drill Tucker, W.B., et al, (1987, p 57-64) MP 2236

Measurement of characteristic length of floating ice sheets Sodhi, D.S., (1987, n.p. (Ch.7)) MP 2480

Airborne river-ice thickness profiles Arcone, S.A., et al, (1987, p.330-340) MP 2312

Airborne electromagnetic sounding of sea ice thickness and sub-ice bathymetry Kovacs, A., et al, (1987, p 289-311) MP 2332

Ice thickness distribution across the Atlantic sector of the Antarctic Ocean in midwinter. Wadhams, P., et al, (1987, p 14,535-14,552) MP 2314

Sea ice thickness and sub-ice bathymetry. Kovacs, A., et al, (1987, 40p) CR 87-23

Airborne measurement of sea ice thickness and subice bathymetry Kovacs, A., et al, (1988, p 111-120) MP 2345

Electromagnetic measurements of a second-year sea ice floe Kovacs, A., et al, (1988, p 121-136) MP 2346

Preliminary results of an experiment using a 16 ft x 50 ft long frazil collector line array Perham, R.E., (1988, p 139-156) MP 2474

Numerical simulation of first-year sea ice Cox, G.F.N., et al, (1988, p 12,449-12,460) MP 2404

Injun River ice boom Perham, R.E., (1988, 10p) SR 88-22

Ice cover thickness *(cont.)*
Using the Ground Emplaced Mine Scattering System in winter Richmond, P W , et al, (1988, 1 p) SR 88-27
Thin ice growth. Ashton, G.D., (1989, p 564-566) MP 2657
Fracture toughness of columnar freshwater ice. Bentley, D L , et al, (1989, p 7-20) MP 2545
Concurrent remote sensing of arctic sea ice from submarine and aircraft Wadhams, P , et al, (1989, 20p) MP 2697
River-ice mounds on Alaska's North Slope Arcone, S.A , et al, (1989, p.288-290) MP 2563
Penetration of floating ice sheets with cylindrical indentors Sodhi, D.S , et al, (1989, p 104) MP 2688
Sea ice thickness measurement Kovacs, A , et al, (1989, p.394-424) MP 2693
Ice strength estimates from submarine topsounder data DiMarco R., et al, (1989, p 425-426) MP 2691
Development of an airborne sea ice thickness measurement system and field test results Kovacs, A , et al, (1989, 77p) CR 89-19
Algorithm for extraction of ice-thickness data from short pulse radar signals Rick, L , et al, (1990, p 137-145) MP 2698
Measurement of sea ice thickness using electromagnetic induction Holladay, J S , et al, (1990, p.309-315) MP 2590
Snow cover effects on antarctic sea ice thickness Ackley, S F., et al, (1990, p 16-21) MP 2726
Airborne sea ice thickness sounding Kovacs, A , et al, (1990, p.225-229) MP 2737
Sea ice thickness versus impulse radar time-of-flight data Kovacs, A , et al, (1990, p 91-98) MP 2704
Radar surveying of the bottom surface of ice covers Arcone, S A., et al, (1990, p 30-39) MP 2766
Sea ice in the polar regions Gow, A J , et al, (1990, p 47-122) MP 2750

Ice cracks
Investigation of ice forces on vertical structures Hirayama, K., et al, (1974, 153p) MP 1041
Misgivings on the static imbalance as a mechanism for sea ice cracking Ackley, S F., et al, (1976, p 85-94) MP 1379
Iceberg thickness and crack detection Kovacs, A., (1978, p.131-145) MP 1128
Mechanical properties of polycrystalline ice Mellor, M , (1980, p.217-245) MP 1302
Bending and buckling of a wedge on an elastic foundation Nevel, D.E., (1980, p 278-288) MP 1303
Fracture behavior of ice in Charpy impact testing Itagaki, K , et al, (1980, 13p) CR 80-13
Acoustic emission and deformation response of finite ice plates. Xirouchakis, P.C , et al, (1981, p 123-133) MP 1436
Acoustic emission and deformation response of finite ice plates Xirouchakis, P C , et al, (1981, p 385-394) MP 1455
Study on the tensile strength of ice as a function of grain size Currier, J.H., et al, (1983, 38p) CR 83-14
Influence of grain size on the ductility of ice. Cole, D M , (1984, p.150-157) MP 1686
Experimental determination of buckling loads of cracked ice sheets Sodhi, D S , et al, (1984, p.183-186) MP 1687
Dependence of crushing specific energy on the aspect ratio and the structure velocity Sodhi, D S , et al, (1984, p 363-374) MP 1708
Grain growth and the creep behavior of ice Cole, D M , (1985, p.187-189) MP 1862
Theory of microfracture healing in ice Colbeck, S C , (1986, p 89-95) MP 2146
Fracture toughness of model ice Dempsey, J.P , et al, (1986, p.365-376) MP 2125
Effect of grain size on the internal fracturing of polycrystaline ice. Cole, D M , (1986, 71p) CR 86-05
Small-scale projectile penetration in saline ice Cole, D M , et al, (1986, p 415-438) MP 2201
Crack nucleation in polycrystalline ice Cole, D M , (1988 p.79-87) MP 2325
Fracture toughness of urea model ice Bentley, D L , et al, (1988, p 289-297) MP 2348
Verification tests of the surface integral method for calculating structural ice loads Johnson, J B , et al, (1988, p 449-456) MP 2353
Fracture of S2 columnar freshwater ice floating double cantilever beam tests Bentley, D.L , et al, (1988, p 152-161) MP 2493
Fracture toughness of columnar freshwater ice Bentley, D L., et al, (1989, p 7-20) MP 2545

ICE CREEP
Mechanical properties of sea ice Weeks, W F , et al, (1967, 80p) M II-C3

Ice creep
Mechanics of ice Glen, J W , (1975, 43p) M II-C2b
Creep theory for a floating ice sheet Nevel, D E , (1976, 98p) SR 76-04
Geodetic positions of borehole sites in Greenland Mock, S J , (1976, 7p) CR 76-41
Rheology of ice. Fish, A.M , (1978, 196p) MP 1988
Creep rupture at depth in a cold ice sheet Colbeck, S C , et al, (1978, p.733) MP 1168
Polycrystalline ice mechanics. Hooke, R.L., et al, (1979, 16p) MP 1207
Some promising trends in ice mechanics. Assur, A , (1980, p 1-15) MP 1300
Mechanical properties of polycrystalline ice. Mellor, M., (1980, p 217-245) MP 1302
Mechanical properties of polycrystalline ice. Hooke, R L , et al, (1980, p 263-275) MP 1328
Cyclic loading and fatigue in ice Mellor, M , et al, (1981, p 41-53) MP 1371
Glacier mechanics Mellor, M , (1982, p 455-474) MP 1532
Polycrystalline ice creep in relation to applied stresses Cole, D.M , (1983, p 614-621) MP 1582
Stress/strain/time relations for ice under uniaxial compression. Mellor, M., et al, (1983, p.207-230) MP 1587
Stress measurements in ice Cox, G F N., et al, (1983, 31p) CR 83-23
Relationship between creep and strength behavior of ice at failure Cole, D.M., (1983, p 189-197) MP 1681
Effect of stress application rate on the creep behavior of polycrystalline ice Cole, D M , (1983, p.454-459) MP 1671
Influence of grain size on the ductility of ice. Cole, D M , (1984, p 150-157) MP 1686
Grain growth and the creep behavior of ice. Cole, D M , (1985, p 187-189) MP 1862
Evaluation of the rheological properties of columnar ridge sea ice. Brown, R.L , et al, (1986, p 55-66) MP 2177
Shape of creep curves in frozen soils and polycrystalline ice Fish, A.M , (1987, p 623-629) MP 2329

Ice crossings
Height variation along sea ice pressure ridges Hibler, W.D., III, et al, (1975, p 191-199) MP 848
Ice thickness-tensile stress relationship for load-bearing ice. Johnson, P R., (1980, 11p) SR 80-09
Evaluation of ice-covered water crossings Dean, A.M , Jr., (1980, p 443-453) MP 1348
Snow in the construction of ice bridges Coutermarsh, B A , et al, (1985, 12p) SR 85-18
Contribution of snow to ice bridges Coutermarsh, B A , et al, (1987, p 133-137) MP 2192
Winter bridging exercise on thick ice Fox McCoy, Wisconsin, 1988 Coutermarsh, B A , (1990 24p) SR 90-10

Ice crystal formation
Compressed air seeding of supercooled fog Hicks, J.R , (1976, 9p) SR 76-09
Use of compressed air for supercooled fog dispersal Weinstein, A I , et al, (1976, p 1226-1231) MP 1614

Ice crystal growth
Crystal alignments in the fast ice of Arctic Alaska Weeks, W.F., et al, (1979, 21p) CR 79-22
Introduction to the basic thermodynamics of cold capillary systems Colbeck, S C , (1981, 9p) SR 81-06
Configuration of ice in frozen media Colbeck, S C , (1982, p 116-123) MP 1512
Ice crystal morphology and growth rates at low supersaturations and high temperatures Colbeck, S C , (1983, p 2677-2682) MP 1537
Theory of metamorphism of dry snow Colbeck, S C , (1983, p 5475-5482) MP 1603
Frazil ice. Daly, S F , (1983, p 218-223) MP 2078
Frazil ice dynamics Daly, S F , (1984, 46p.) M 84-01
Comments on "Theory of metamorphism of dry snow" by S C Colbeck Sommerfeld, R A , (1984, p 4963-4965) MP 1800
Dynamics of frazil ice formation Daly, S F , et al, (1984, p.161-172) MP 1829
Ice crystal growth in subcooled NaCl solutions Sullivan, J M , Jr , et al, (1985, p 527-532) MP 2100
Temperature dependence of the equilibrium form of ice Colbeck, S C , (1985, p 72[illegible]) MP 19[illegible]
Growth, structure, and properties of sea ice [illegible] et al, (1986, p 9-164) [illegible]
Grain growth in unstrained polycrystalline ice [illegible] w, A J , (1987, p (C1)277-(C1)281) MP 2231
Snow metamorphism and classification Colbeck, S C , (1987, p 1-35) MP 2265
Wet precipitation in subfreezing air below cloud influences radar backscattering. Colbeck, S C [illegible], p 135-144) MP 2297
Metamorphism and classification of seasonal snow crystals Colbeck, S C , (1987, p 3-34) MP 2438

Ice crystal model
Apparent anomaly in freezing of ordinary water Swinzow, G K , (1976, 23p) CR 76-20
Ice crystal formation and supercooled fog dissipation Kumai, M , (1982, p 579-587) MP 1539
Frazil ice dynamics Daly, S F , (1984, 46p) M 84-01

Ice crystal optics
Near-infrared reflectance of snow-covered substrates O'Brien, H W , et al, (1981, 17p) CR 81-21

Ice crystal structure
Growth and mechanical properties of river and lake ice Ramseier, R O , (1972, 243p) MP 1883
Physics of ice Glen, J W , (1974 81p) M II-C2a
Crystal fabrics of West Antarctic ice sheet Gow, A J , et al, (1976, p 1665-1677) MP 1382
Flexural strength of ice in temperate lakes Gow, A J , (1977, p 247-256) MP 1063
Abnormal internal friction peaks in single-crystal ice. Stallman, P.E , et al, (1977, 15p) SR 77-23
Radar anisotropy of sea ice Kovacs, A., et al, (1978, p 171-201) MP 1111
Preferred crystal orientations in Arctic Ocean fast ice. Weeks, W.F , et al, (1978, 24p) CR 78-13
Ultrasonic measurements on deep ice cores from Antarctica. Gow, A.J , et al, (1978, p 48-50) MP 1202
X-ray measurement of charge density in ice. Itagaki, K., (1978, 12p) CR 79-25
Radar anisotropy of sea ice. Kovacs, A., et al, (1978, p 6037-6046) MP 1139
Ultrasonic investigation on ice cores from Antarctica. Kohnen, H., et al, (1979, 16p) CR 79-10
Ultrasonic investigation on ice cores from Antarctica. Kohnen, H et al, (1979, p 4865-4874) MP 1239
Anisotropic properties of sea ice. Kovacs, A., et al, (1979, p 5749-5756) MP 1258
Crystal alignments in the fast ice of Arctic Alaska Weeks, W F., et al, (1979, 21p) CR 79-22
Anisotropic properties of sea ice in the 50-150 MHz range. Kovacs, A et al, (1979, p 324-353) MP 1620
Crystal alignments in the fast ice of Arctic Alaska Weeks, W.F., et al, (1980, p.1137-1146) MP 1277
Sea ice anisotropy, electromagnetic properties and strength Kovacs, A., et al, (1980, 18p) CR 80-20
Acoustic emission and deformation response of finite ice plates Xirouchakis, P.C , et al, (1981, p 385-394) MP 1455
Growth, structure, and properties of sea ice. Weeks, W.F., et al, (1982, 130p) M 82-01
Configuration of ice in frozen media. Colbeck, S C , (1982, p.116-123) MP 1512
Acoustic emissions from polycrystalline ice St Lawrence, W.F , et al, (1982, p 183-199) MP 1524
Acoustic emissions from polycrystalline ice. St Lawrence, W F , et al, (1982, 15p) CR 82-21
Polycrystalline ice creep in relation to applied stresses Cole, D M , (1983, p 614-621) MP 1582
Ice crystal morphology and growth rates at low supersaturations and high temperatures Colbeck, S C., (1983, p.2677-2682) MP 1537
Properties of sea ice in the coastal zones of the polar oceans Weeks, W F., et al, (1983, p 25-41) MP 1604
Study on the tensile strength of ice as a function of grain size. Currier, J.H , et al, (1983, 38p) CR 83-14
Snow characterization at SNOW-ONE-B Berger, R.H , et al, (1983, p 155-195) MP 1847
Utilization of the snow field test series results for development of a snow obscuration primer. Ebersole, J.F , et al, (1983, p 209-217) MP 1692
Compressive strength of frozen silt Zhu, Y , et al, (1984, p 3-15) MP 1773
Mechanical properties of sea ice a status report Weeks, W F , et al, (1984, p 135-198) MP 1808
Quiet freezing of lakes and the concept of orientation textures in lake ice sheets Gow, A J , (1984, p.137-149) MP 1828
Crystalline structure of urea ice sheets used in modeling in the CRREL test basin Gow, A.J , (1984, p 241-253) MP 1835
Crystalline structure of urea ice sheets Gow, A J , (1984, 48p) CR 84-24
Structure and the compressive strength of ice from pressure ridges Richter, J A , et al, (1985, p 99-102) MP 1849
Ice electrical properties Gow, A.J , (1985, p 79-82) MP 1910
Temperature dependence of the equilibrium form of ice Colbeck, S C , (1985, p 726-732) MP 1939
Orientation textures in ice sheets of quietly frozen lakes Gow, A J , (1986, p 247-258) MP 2118
Crystal structure of Fram Strait sea ice Gow, A J , et al, (1986, p 20-29) MP 2221
Observations of the backscatter from snow at millimeter wavelengths Berger, R H , et al, (1986, p 311-316) MP 2665
Compressive deformation of columnar sea ice Brown, R.L , et al, (1986, p 241-252) MP 2124
Laboratory and field studies of ice friction coefficient Tatinclaux, J C , et al, (1986, p 389-400) MP 2126
Growth, structure, and properties of sea ice Weeks, W F , et al, (1986, p 9-164) MP 2209
Effect of grain size on the internal fracturing of polycrystalline ice Cole, D M., (1986, 71p) CR 86-05
Optical properties of sea ice structure Gow, A J , (1986, p 264-271) MP 2257
Microwave dielectric, structural and salinity properties of sea ice Arcone, S A., et al, (1986, p 832-839) MP 2188
Triaxial testing of first-year sea ice Richter-Menge, J A , et al, (1986, 41p) CR 86-16
Confined compressive strength of horizontal first-year sea ice samples. Richter-Menge J A , (1987, p 197-207) MP 2193
Annealing recrystallization in laboratory and naturally deformed ice Gow, A J et al, (1987, p (C1)271-(C1)276) MP 2230
Grain growth in unstrained polycrystalline ice Gow, A J , (1987, p (C1)277-(C1)281) MP 2231
Sea-ice crystal structure and salinity, Hebron Fiord, Labrador Gow, A.J., (1987 18p) CR 87-04

Dielectric properties of strained ice. 2 Effect of sample preparation method. Itagaki, K., et al, (1987, p 149-153) MP 2357

Physical properties of summer sea ice in the Fram Strait, June-July 1984. Gow, A.J., et al, (1987, 81p.) CR 87-16

Strain rate and grain-size effects in ice Cole, D M., (1987, p.274-280) MP 2311

Some observations on the character of snow. Townsend, R.A., et al, (1987, p 48-53) MP 2397

Flexure and fracture of macrocrystalline S1 type freshwater ice. Dempsey, J.P., et al, (1988, p 39-46) MP 2318

Crack nucleation in polycrystalline ice. Cole, D.M., (1988, p.79-87) MP 2325

Emerging meteorite: crystalline structure of the enclosing ice Gow, A.J., et al, (1989, p 87-91) MP 2503

Vector analysis of ice petrographic data Ferrick, M G, et al. (1989, p 129-141) MP 2754

Models of the mechanical properties of ice. Richter-Menge, J.A., et al, (1989, p.87-99) MP 2687

Physical properties of sea ice from the Weddell Sea Eicken, H., et al, (1990, p 28-32) MP 2727

Ice crystals

Producing strain-free flat surfaces on single crystals of ice comments. Tobin, T.M., (1973, p.519-520) MP 1000

Measuring the uniaxial compressive strength of ice Haynes, F.D., et al, (1977, p 213-223) MP 1027

Effect of temperature and strain rate on the strength of polycrystalline ice Haynes, F.D., (1977, p 107-111) MP 1127

Dielectric properties of dislocation-free ice Itagaki, K., (1978, p.207-217) MP 1171

Polycrystalline ice mechanics. Hooke, R.L., et al, (1979, 16p.) MP 1207

Dynamics of near-shore ice. Kovacs, A., et al, (1979, p.181-207) MP 1291

Preparation of polycrystalline ice specimens for laboratory experiments Cole, D M., (1979, p 153-159) MP 1327

Mechanical properties of polycrystalline ice Mellor, M., (1980, p 217-245) MP 1302

Mechanical properties of polycrystalline ice Hooke, R.L., et al, (1930, p 263-275) MP 1328

Cyclic loading and fatigue in ice. Mellor, M., et al, (1981, p 41-53) MP 1371

Charged dislocation in ice 2 Contribution of dielectric relaxation. Itagaki, K., (1982, 15p.) CR 82-07

Attenuation and backscatter for snow and sleet at 96, 140, and 225 GHz Nemanich, J., et al, (1984, p 41-52) MP 1864

Structure of ice in the central part of the Ross Ice Shelf, Antarctica Zotikov, I A., et al (1985, p 39-44) MP 2110

Ice cutting

Cutting ice with high pressure water jets Mellor, M., et al, (1973, 22p.) MP 1001

Development of large ice saws Garfield, D E., et al, (1976, 14p.) CR 76-47

Dynamics and energetics of parallel motion tools for cutting and boring Mellor, M., (1977, 85p.) CR 77-07

Transverse rotation machines for cutting and boring in permafrost. Mellor, M., (1977, 36p.) CR 77-19

Design for cutting machines in permafrost Mellor, M., (1978, 24p.) CR 78-11

Icebreaking concepts Mellor, M., (1980, 18p.) SR 80-02

Mechanics of cutting and boring in permafrost Mellor, M., (1980, 82p.) CR 80-21

Equipment for making access holes through arctic sea ice Mellor, M., (1986, 34p.) SR 86-32

Tactical bridging during winter 1986 Korean bridging exercise. Coutermarsh, B A., (1987, 23p.) SR 87-13

Exothermic cutting of frozen materials Garfield, D.E., et al, (1987, p 181-183) MP 2264

Planing machines for building runways on ice Mellor, M., (1989, 8p + attachments) MP 2505

Penetration of floating ice sheets with cylindrical indentors Sodhi, D S., (1989, p 377-382) MP 2485

Experiments on the cutting process in ice Ueda H T, et al, (1989, 36p.) CR 89-05

Factors affecting rates of ice cutting with a chain saw Coutermarsh, B A., (1989, 14p.) SR 89-24

Winter bridging exercise on thick ice Fort McCoy, Wisconsin, 1988. Coutermarsh, B A., (1990, 24p.) SR 90-10

Ice dams

Field investigations of a hanging ice dam Beltaos, S., et al, (1982, p.475-488) MP 1533

Field investigation of St Lawrence River hanging ice dams Shen, H.T., et al, (1984, p 241-249) MP 1830

St Lawrence River hanging ice dams, winter 1983 1984 Shen, H T., et al, (1984, 85p.) MP 2178

Structure to form an ice cover on river rapids in winter Perham, R E., (1986, p 439-450) MP 2128

Jökulhlaups from ice-dammed Strandline Lake, Alaska Sturm, M., et al, (1987, p 79-94) MP 2393

Jökulhlaups from Strandline Lake, Alaska (especially the 1982 event) Sturm, M., et al, (1989, 19p.) MP 2520

Ice dating

C-14 and other isotope studies on natural ice Oeschger, H., et al, (1972, p D70-D92) MP 1052

Dating annual layers of Greenland ice. Langway, C C, Jr., et al, (1977, p 302-306) MP 1094

Stable isotope profile through the Ross Ice Shelf at Little America V, Antarctica. Dansgaard, W., et al, (1977, p.322-325) MP 1095

Ice deformation

Small-scale strain measurements on a glacier surface Colbeck, S C., et al, (1971, p 257-263) MP 993

Meso-scale strain measurements in the Beaufort sea pack ice (AIDJEX 1971) Hibler, W D., III, et al, (1974, p 119-136) MP 1035

Statistical variations in Arctic ice ridging and deformation rates Hibler, W D., III, (1976) MP 850

Remote measurement of ice deformation by D.D., III, et al, (1975, p 541-[illegible]) MP 849

Sea ice drift and deformation from imagery Hibler, W.D., III, et al, (1[illegible]) MP 1059

Techniques for studying sea ice motion and deformation at sites far from land using LANDSAT imagery Hibler, W D., III, et al, (1976, p 595-609) MP 866

Crystal fabrics of West Antarctic ice sheet. Gow, A.J., et al, (1976, p.1665-1677) MP 1382

Dynamics of near-shore ice [illegible]es, A., et al, (1977, p 151-163) MP 1071

Modeling pack ice as a viscous-plastic continuum. Hibler, W.D., III, (1977, p 46-55) MP 1164

Arching of model ice floes at ridge piers Calkins, D J., (1978, p 495-507) MP 1134

Measurement of mesoscale deformation of Beaufort sea ice (AIDJEX-1971) Hibler, W D., III, et al, (1978, p 148-172) MP 1179

Polycrystalline ice mechanics Hooke, R L., et al, (1979, 16p.) MP 1207

Sea ice ridging over the Alaskan continental shelf. Tucker, W B., et al, (1979, 24p.) CR 79-08

Sea ice ridging over the Alaskan continental shelf. Tucker, W B., et al, (1979, p 4885-4897) MP 1240

Mass-balance aspects of Weddell Sea pack ice Ackley, S F., (1979, p 391-405) MP 1286

Bending and buckling of a wedge on an elastic foundation Nevel, D.E., (1980, p 278-288) MP 1303

Mechanical properties of polycrystalline ice Hooke, R.L., et al, (1960, p 263-275) MP 1328

Investigation of the acoustic emission and deformation response of finite ice plates Xirouchakis, P.C., et al, (1981, 19p.) CR 81-06

Acoustic emission and deformation of ice plates Xirouchakis, P C., et al, (1982, p 129-[illegible]) MP 1589

Ice behavior under constant stress and strain Mellor, M., et al, (1982, p.201-219) MP 1525

Deformation and failure of frozen soils and ice due to stresses Fish, A M., (1982, p 419-428) MP 1553

[illegible]mining the characteristic length of floating ice sheets by [illegible]g loads Sodhi, D S., et al, (1985, p 155-159) MP 1859

On estimating ice stress from MIZEX 83 ice deformation and current measurements. Leppäranta, M., et al, (1986, p 17-19) MP 2220

Compressive deformation of columnar sea ice. Brown, K L., et al, (1986, p 241-252) MP 2124

Small-scale projectile penetration in saline ice Cole, D M., et al, (1986, p.415-438) MP 2201

Folding in the Greenland ice sheet. Whillans, I M., et al, (1987, p 485-493) MP 2185

Strain-rate and grain-size effects in ice Cole, D M., (1987, p 274-280) MP 2311

Sea-ice pressure ridge microbial communities Ackley, S F., (1988, p 172-174) MP 2450

Profile properties of undeformed first-year sea ice Cox, G F N., et al, (1988, 57p.) CR 88-13

Ice reinforced with Geogrid Haynes, F D., et al, (1989, p 179-185) MP 2484

Compressive strength of antarctic frazil ice Richter-Menge, J A., et al, (1989, p 269-278) MP 2621

Dynamic analysis of a floating ice sheet undergoing vertical indentation McGilvary, W R., et al, (1990, p 195-203) MP 2579

W F Weeks Sea Ice Symposium, San Francisco, CA Dec 1988 Ackley, S F., ed, (1990, 299p.) M 90-01

Ice density

Investigation of ice islands in Babbage Bight Kovacs, A., et al, (1971 16 leaves) MP 1381

Misgivings in isostatic imbalance as a mechanism for sea ice cracking. Ackley, S F., et al, (1975, p 85-94) MP 1379

Sintering and compaction of snow containing liquid water Colbeck, S C., et al, (1979, p 13-32) MP 1190

Ice characteristics in Whitefish Bay and St Marys River in winter Vance, G P., (1980, 27p.) SR 80-32

Review of thermal properties of snow, ice and sea ice Yen, Y-C., (1981, 27p.) CR 81-10

Equations for determining the gas and brine volumes in sea ice samples Cox, G F N., et al, (1982, 11p.) CR 82-30

Equations for determining gas and brine volumes in sea ice Cox, G.F.N., et al, (1983, p 306-316) MP 2055

Structure, salinity and density of multi-year sea ice pressure ridges. Richter-Menge, J A., et al, (1985, p 194-198) MP 1857

Mechanical properties of multi-year pressure ridge samples Richter-Menge, J A., (1985, p 244-251) MP 1936

Structure, salinity and density of multi-year sea ice pressure ridges Richter-Menge, J A., et al, (1985, p 493-497) MP 1965

Ice properties in a grounded man-made ice island Cox, G F N., et al, (1986, p 135-142) MP 2032

Effect of stratigraphy on radar-altimetry data collected over ice sheets Jezek, K C., et al, (1988, p 60-63) MP 2458

Density of natural ice accretions related to nondimensional icing parameters Jones, K.F., (1990, p 477-496) MP 2705

Snow cover effects on antarctic sea ice thickness Ackley, S F., et al, (1990, p.16-21) MP 2726

Ice detection

Remote sensing of massive ice in permafrost along pipelines in Alaska Kovacs, A., et al, (1979, p 268-279) MP 1175

Method of detecting voids in rubbled ice. Tucker, W B., et al (1984, p 183-[illegible]8) MP 1772

Impulse radar sounding of frozen ground Kovacs, A., et al, (1985, p 28-40) MP 1952

Computer interfacing of meteorological sensors in severe weather. Rancourt, K., et al, (1985, p.205-211) MP 2175

Comparison of winter climatic data for three New Hampshire sites Govoni, J W., et al, (1986, 78p.) SR 86-05

Pneumatically de-iced ice detector—final report, phase 2, part 1 Franklin, C H., et al, (1986, 9p + appendices) MP 2249

Rime meteorology in the Green Mountains. Ryerson, C C., (1987, 46p.) CR 87-01

Pavement icing detector—final report Goldstein, N., et al, (1987, 26p + append.) MP 2263

Ice detector measurements compared to meteorological data Tucker, W.B., et al, (1987, p 31-37) MP 2277

Frazil ice deposits and water channels beneath an ice-covered river Arcone S A., et al, (1987, 12p.) CR 87-17

New England mountain icing climatology. Ryerson, C C., (1988, 35p.) CR 88-12

Atmospheric icing and broadcast antenna reflections Ryerson, C.C., (1988, 13p.) CR 88-11

Development of an underwater frazil-ice detector Daly, S F., et al, (1990, p 77-82) MP 2702

Ice deterioration

Ice decay patterns on a lake, a river and coastal bay in Canada. Bilello, M A., (1977, p 120-127) MP 969

Decay patterns of land-fast sea ice in Canada and Alaska Bilello, M A., (1977, p 1-10) MP 1161

Break-up dates for the Yukon River, Pt 1 Rampart to Whitehorse, 1896-1978 Stephens, C A., et al, (1979, c50 leaves) MP 1317

Maximum thickness and subsequent decay of lake, river and fast sea ice in Canada and Alaska Bilello, M A., (1980, 160p.) CR 80-06

Ice growth on Post Pond, 1973-1982 Gow, A J., et al, (1983, 25p.) CR 83-04

Predicting lake ice decay Ashton, G D., (1983, 4p.) SR 83-19

First-generation model of ice deterioration Ashton, G D., (1983, p 273-278) MP 2080

Deterioration of floating ice covers Ashton, G D., (1984, p 26-33) MP 1676

Ice deterioration Ashton, G D., (1984, p 31-38) MP 1791

Deterioration of floating ice covers Ashton, G D., (1985, p.177-182) MP 2122

Ice drills

Melting and freezing of a drill hole through the Antarctic shelf ice Tien, C., et al, (1975, p 421-432) MP 861

1979 Greenland Ice Sheet Program Phase I, casing operation Rand, J.H., (1980, 18p.) SR 80-24

Calculating borehole geometry Jezek, K C., et al, (1984, 18p.) SR 84-15

Shopper's guide to ice penetration Mellor, M., (1984, p 1-35) MP 1992

Ice drilling and coring systems a retrospective view. Sellmann, P.V., et al, (1984, p 125-127) MP 1999

Portable hot water ice drill Tucker, W B et al, (1986, p.549-564) MP 2207

Equipment for making access holes through arctic sea ice. Mellor, M., (1986, 34p.) SR 86-32

Portable hot-water ice drill Tucker, W B., et al, (1987, p 57-64) MP 2236

Update on portable hot-water sea ice drilling Govoni, J W., et al, (1989, p 175-178) MP 2479

Ice edge

Margin of the Greenland ice sheet [illegible] Colbeck, S C., et al, (1979 p [illegible]) MP 1281

Physical oceanography of the seasonal sea ice zone McPhee M G., (1980 p 9[illegible]) MP 1294

Choanoflagellata from the Weddell Sea, summer 1977 Buck, K R., (1980, 26p.) CR 80-16

Air-ice-ocean interaction in Arctic marginal ice zones Wadhams, P., ed, (1981, 20p.) SR 81-19

Atmospheric dynamics in the antarctic marginal ice zone Andreas, E L., et al, (1984, p 649-661) MP 1667

Marginal ice zones a description of air ice ocean interactive processes, models and planned experiments Johannessen, O M., et al, (1984, p 133-146) MP 1673

Ice edge *(cont.)*
Modeling the marginal ice zone. Hibler, W D , III, ed, (1984, 99p.) SR 84-07
On the role of ice interaction in marginal ice zone dynamics. Leppäranta, M., et al, (1984, p 23-29) MP 1781
Analysis of linear ice ice models with an ice margin. Leppäranta, M., (1984, p.31-36) MP 1782
Some simple concepts on wind forcing over the marginal ice zone. Tucker, W.B , (1984, p.43-48) MP 1783
Drag coefficient across the Antarctic marginal ice zone. Andreas, E.L., et al, (1984, p 63-7', MP 1784
Mechanism for floe clustering in the marginal ice zone Leppäranta, M., et al, (1984, p.73-76) MP 1785
Ocean circulation: its effect on seasonal sea-ice simulations Hibler, W.D., III, et al, (1984, p.489-492) MP 1790
Air-ice-ocean interaction experiments in Arctic marginal ice zones. (1984, 56p) SR 84-28
Mesoscale air-ice-ocean interaction experiments. Johannessen, O.M., ed, (1984, 176p) SR 84-29
Heat and moisture advection over antarctic sea ice Andreas, E L., (1985, p.736-746) MP 1888
Role of plastic ice interaction in marginal ice zone dynamics. Leppäranta, M., et al. (1985, p 11,899-.1,909) MP 1544
Weddell-Scotia Sea MIZ October 1984. Crasey, F D., et al, (1986, p.3920-3924) MP 1525
MIZEX—a program for mesoscale air-ice-ocean interaction experiments in Arctic marginal ice zones MI/EX bulletin 7. (1986, 88p) SR 86-03
On estimating ice stress from MIZEX 83 ice deformation and current measurements Leppäranta, M., et al (1986, p.17-19) MP 2220
Winter marginal ice zone experiment, Fram Strait/Greenland Sea, 1987/89. Davidson, K., ed, (1986, 53p) SR 86-09
Comment on "Atmospheric boundary layer modification in the marginal ice zone" by T J Bennett, Jr. and K Hunkins Andreas, E.L., (1987, p 3965-3969) MP 2394
Physical properties of summer sea ice in the Fram Strait. Tucker, W.B , et al, (1987, p 6787-6805) MP 2240
Role of floe collisions in sea ice rheology Shen, H.H , et al, (1987, p 7085-7096) MP 2242
Estimating turbulent surface heat fluxes over polar, marine surfaces Andreas, E L., (1988, p.65-68) MP 2448
Effect of ice pressure on marginal ice zone dynamics. Flato, G.M., et al, (1989, p.514-521) MP 2522
Oceanic heat flux in the Fram Strait measured by a drifting buoy. Perovich, D.K., et al, (1990, p 291-296) MP 2740

Ice elasticity
Mechanics of ice. Glen, J.W., (1975, 43p) M III-62b
Concentrated loads on a floating ice sheet Nevel, D E., (1977, p 237-245) MP 1062
Mechanical properties of polycrystalline ice Mellor, M (1980, p 217-245) MP 1302
Acoustic emission and deformation response of finite ice plates. Xirouchakis, P.C , et al, (1981, p 123-133) MP 1436
Measuring mechanical properties of ice. Schwarz, J., et al, (1981, p 245-254) MP 1556
In-situ measurements of the mechanical properties of ice. Tatinclaux, J.C., (1982, p 326-334) MP 1555
Flexural strength and elastic modulus of ice Tatinclaux, J C., et al, (1982, p 37-47) MP 1568
Determining the characteristic length of model ice sheets. Sodhi, D S , et al, (1982, p 99-104) MP 1570
Mechanical behavior of sea ice. Mellor, M , (1983, 105p.) M 83-1
Stress measurements in ice. Cox, G.F.N., et al, (1983, 31p) CR 83-23
Growth of EG/AD; model ice in a small tank. Borland, S L., (1988, p.47-) MP 2319
On the determination of the average Young's modulus for a floating ice cover. Keir, A.D., et al (1988, p 39-43) MP 2324
Elastic properties of frazil ice from the Weddell Sea, Antarctica. Lange, M.A , et al, (1989, p 208-217) MP 2620
Cyclic loading of saline ice: initial experimental results Colz, D M. (1990, p 265-271) MP 2581

Ice electrical properties
Engineering properties of sea ice Schwarz, J , et al, (1977, p 495-531) MP 1065
Dielectric constant and reflection coefficient of snow surface layers in the McMurdo Ice Shelf. Kovacs, A , et al, (1977, p.137-138) MP 1011
Internal properties of the ice sheet at Cape Folger by radio echo sounding Kelliher, T E , et al, (1978, 12p) CR 78-04
Interaction of a surface wave with a dielectric slab discontinuity Arcone, S A , et al, (1978, 10p) CR 78-08
Dielectric properties of dislocation-free ice Itagaki, K., (1978, p 207-217) MP 1171
X-ray measurement of charge density in ice Itagaki, K , (1978, 12p) CR 79-25
Break-up of the Yukon River at the Haul Road Bridge, 1979 Stephens, C.A., et al, (1979, 22p. + Figs) MP 1315
Oil pooling under sea ice Kovacs, A , (1979, p 310-323) MP 1289
Anisotropic properties of sea ice in the 50-150 MHz range Kovacs, A , et al, (1979, p 324-353) MP 1620
Distortion of model subsurface radar pulses in complex dielectrics Arcone, S A , (1981, p 855-864) MP 1472
Growth, structure, and properties of sea ice. Weeks, W.F , et al, (1982, 130p) M 82-01
Charged dislocation in ice. 2. Contribution of dielectric relaxation. Itagaki, K , (1982, 15p) CR 82-07
Possibility of anomalous relaxation due to the charged dislocation process Itagaki, K., (1983, p.4261-4264) MP 1669
Effect of X-ray irradiation on internal friction and dielectric relaxation of ice Itagaki, K., et al, (1983, p.4314-4317) MP 1670
Electromagnetic properties of sea ice. Morey, R.M., et al, (1984, 32p.) CR 84-02
Electromagnetic properties of sea ice Morey, R M , et al, (1984, p.53-75) MP 1776
Coaxial waveguide reflectometry for frozen ground and ice. Delaney, A.J., et al, (1984, p 428-431) MP 2048
Discussion. Electromagnetic properties of sea ice by R M Morey, A Kovacs and G F N. Cox. Arcone, S A , (1984, , 93-94) MP 1821
Authors' response to discussion on Electromagnetic properties of sea ice. Morey, R M , et al, (1984, p.95-97) MP 1822
Electromagnetic properties of multi-year sea ice Morey, R M , et al, (1985, p 151-167) MP 1902
Ice electrical properties Gow, A.J., (1985, p 76-82) MP 1910
Dielectric properties at 4.75 GHz of saline ice slabs Arcone, S A , et al, (1985, p 83-86) MP 1911
Growth, structure, and properties of sea ice. Weeks, W.F., et al, (1986, p.9-164) MP 2209
Microwave dielectric, structural and salinity properties of sea ice Arcone, S A., et al, (1986, p 832-839) MP 2188
Dielectric properties of strained ice. 1. Effect of plastic straining Itagaki, K , (1987, p.143-147) MP 2356
Dielectric properties of strained ice. 2. Effect of sample preparation method. Itagaki, K., et al, (1987, p 149-153) MP 2357
Electromagnetic property trends of sea ice, Part 1. Kovacs, A , et al, (1987, 45p) CR 87-06
Microwave and structural properties of saline ice Gow, A J., et al, (1987, 36p) CR 87-20
DC resistivity measurements of model saline ice sheets. Arcone, S.A , (1987, p 845-849) MP 2308

Ice erosion
Sediment displacement in the Ottauquechee River—1975-1978 Martinson, C.R , (1980, 14p) SR 80-20
Reservoir bank erosion caused and influenced by ice cover. Gatto, L.W., (1982, 26p) SR 82-31
Reservoir bank erosion caused by ice. Gatto, L.W , (1984, p 203-214) MP 1787

Ice floes
AIDJEX aerial observations Thompson, T W , et al, (1972, p 1-16, MP 989
Dynamics of near-shore ice Weeks, W F , et al, (1976, p 9-34) MP 1380
Laboratory investigation of the mechanics and hydraulics of river ice jams. Tatinclaux, J C , et al, (1977, 45p) CR 77-09
Study of a grounded floeberg near Reindeer Island, Alaska Kovacs, A., (1977, 9p) MP 1751
Arching of model ice floes at bridge piers Calkins, D J., (1978, p 495-507) MP 1134
Modeling of ice in rivers Ashtor, G D , (1979, p 14/1-14/26) MP 1335
Break-up of the Yukon River at the Haul Road Bridge, 1979 Stephens, C.A , et al, (1979, 22p + Figs) MP 1315
Freshwater ice growth, motion, and decay. Ashton, G D., (1980, p 261-304) MP 1299
Method for measuring brash ice thickness with impulse radar. Martinson, C R., et al, (1981, 10p) SR 81-11
Force distribution in a fragmented ice cover. Daly, S F , et al, (1982, p.374-387) MP 1531
Physical and structural characteristics of antarctic sea ice Gow, A J et al, (1982, p 113-117) MP 1548
Characteristics of multi-year pressure ridges Kovacs, A , (1983, p 173-182) MP 1698
Size and shape of ice floes in the Baltic Sea in spring Leppäranta, M , (1983, p 127-136) MP 2061
Ice forces on a bridge pier, Ottauquechee River, Vermont. Sodhi, D S., et al, (1983, 6p) CR 83-32
Force distribution in a fragmented ice cover. Stewart, D M , et al, (1984, 16p) CR 84-07
Mechanism for floe clustering in the marginal ice zone Leppäranta, M., et al, (1984, p 73-76) MP 1785
On the rheology of a broken ice field due to floe collision Shen, H , et al, (1984, p 29-34) MP 1812
Ice block stability. Daly, S.F., (1984, p 544-548) MP 1972
Level ice breaking by a simple wedge Tatinclaux, J.C , (1985, 46p) CR 85-22
Ice floe distribution in the wake of a simple wedge Tatinclaux, J.C , (1986, p 622-629) MP 2038
Mesoscale sea ice deformation in the East Greenland marginal ice zone Leppäranta, M , et al, (1987, p 7060-7070) MP 2241
Role of floe collisions in sea ice rheology. Shen, H H., et al, (1987, p 7085-7096) MP 2242
Physical properties of summer sea ice in the Fram Strait, June July 1984. Gow, A J , et al, (1987, 81p) CR 87-16
Ice thickness distribution across the Atlantic sector of the Antarctic Ocean in midwinter. Wadhams, P , et al, (1987, p.14,535-14,552) MP 2314
Electromagnetic measurements of a second-year sea ice floe. Kovacs, A , et al, (1988, p 121-136) MP 2346
Laboratory study of transverse velocities and ice jamming in a river bend Zufelt, J.E., et al, (1988, p 189-197) MP 2501
Estimating sea ice thickness using data from impulse radar soundings Kovacs, A , et al, (1989, 10p) CR 89-22

ICE FOG
Climatology of the ice fog regions of the northern hemisphere, II. Wilso C., (1969, 158p) M I-A3b

Ice fog
Radiation and evaporation heat loss during ice fog conditions. McFadden, T., (1975, p 18-27) MP 1051
Suppression of ice fog from cooling ponds McFadden, T., (1976, 78p) CR 76-43
Ice fog suppression using monomolecular films McFadden, T , (1977, p 361-367) MP 956
Ice fog suppression using reinforced thin chemical films. McFadden, T , et al, (1978, 23p) CR 78-26
Ice fog suppression using thin chemical films McFadden, T., et al, (1979, 44p) MP 1192
Ice fog suppression in Arctic communities McFadden, T., (1980, 54-65) MP 1357
Suppression of ice fog from the Fort Wainwright, Alaska, cooling pond Walker, K E , et al, (1982, 34p) SR 82-22
Ice fog as an electro-optical obscurant. Koh, G , (1985, 11p) CR 85-08
Extinction coefficient for a distribution of ice fog particles Jordan, R , (1987, p 535-539) MP 2286
Obscuration and background dynamics in and over snow. Hogan, A.W., (1987, p 181-185) MP 2417

Ice forecasting
Ice accretion on ships Itagaki, K , (1977, 22p) SR 77-27
Ice formation and breakup on Lake Champlain Bates, R E., (1980 p 125-143) MP 1429
Current procedures for forecasting aviation icing Tucker, W B , (1983, 31p) SR 83-24
Ice conditions on the Ohio and Illinois rivers, 1972-1985 Gatto, L.W., (1985, p 856-861) MP 1914
St Lawrence River freeze-up forecast Foltyn, E.P., et al, (1986, p 467-481) MP 2120
Evaluation of an operational ice forecasting model during summer Tucker, W B , et al, (1988, p 159-174) MP 2347

Ice formation
Temperature and flow conditions during the formation of river ice. Ashton, G D , et al, (1970, 12p) MP 1723
Icings developed from surface water and ground water, Carey, K L., (1973, 71p) M III-D3
Seasonal regime and hydrological significance of stream icings in central Alaska Kane, D L , et al, (1973, p 528-540) MP 1026
River ice problems Burgi H L., et al, (1974, p 1-15) MP 1002
Apparent anomaly in freezing of ordinary water Swinzow, G K , (1976, 23p) CR 76-20
Ice accumulation on ocean structures Minsk L D , (1977, 42p) CR 77-(
Segregation freezing as the cause of suction force for ice lens formation Takagi, S , (1978, 13p) CR 78-06
Fundamentals of ice lens formation Takagi, S , (1978 p 235-242) MP 1173
Frazil ice formation in turbulent flow Müller, A., et al, (1978, p 219-234) MP 1135
Remote sensing of massive ice in permafrost along pipelines in Alaska. Kovacs, A et al, (1979, p 268-279) MP 1175
River ice Ashton, G D , (1979, p.38-45) MP 1178
Modeling of ice in rivers. Ashton, G.D , (1979, p 14/1-14/26) MP 1335
Forecasting ice formation and breakup on Lake Champlain Bates, R E., et al, (1979, 21p) CR 79-26
Winter thermal structure, ice conditions and climate of Lake Champlain Bates, R E., (1980, 26p) CR 80-02
Extending the useful life of DYE-2 to 1986 Tobiasson, W., et al, (1980, 37p.) SR 80-13
Sea ice growth, drift and decay Hibler, W D , III, (1980, p 141-209) MP 1298
Freshwater ice growth, motion, and decay Ashton, G D., (1980, p 261-304) MP 1299
Ice formation and breakup on Lake Champlain. Bates, R.E , (1980, p 125-143) MP 1429
Numerical solutions for rigid-ice model of secondary frost heave O Neill, K , et al, (1980, p 656-669) MP 1454
Ice jams and meteorological data for three winters, Ottauquechee River, Vt Bates, R E., et al, (1981, 27p) CR 81-01
Sea ice piling at Fairway Rock, Bering Strait, Alaska Kovacs, A , et al, (1981, p 985-1000, MP 1460
Sea ice rubble formations off the N.E. Bering Sea and Norton Sound Kovacs, A , (1981, p 1348-1361) MP 1527
Ice segregation in a frozen soil column Guymon, G L , et al (1981, p 127-140) MP 1534

Tests of frazil collector lines to assist ice cover formation. Perham, R.E., (1981, p 442-448) MP 1488
Initial stage of the formation of soil-laden ice lenses Takagi, S., (1982, p.223-232) MP 1596
Case study of land treatment in a cold climate—West Dover, Vermont. Bouzoun, J.R., et al, (1982, 96p) CR 82-44
Growth of black ice, snow ice and snow thickness, subarctic basins. Leppäranta, M., (1983, p.59-70) MP 2063
Characteristics of multi-year pressure ridges. Kovacs, A., (1983, p 173-182) MP 1698
Physical mechanism for establishing algal populations in frazil ice. Garrison, D L., et al, (1983, p.363-365) MP 1717
Mechanics of ice jam formation in rivers. Ackermann, N.L., et al, (1983, 14p.) CR 83-31
Ice observation program on the semisubmersible drilling vessel SEDCO 708. Minsk, L.D., (1984, 14p) SR 84-02
St. Lawrence River freeze-up forecast. Shen, H T., et al, (1984, p.177-190) MP 1713
Icing rate on stationary structures under marine conditions Itagaki, K., (1984, 9p) CR 84-12
Forecasting water temperature decline and freeze-up in rivers Shen, H.T., et al, (1984, 17p) CR 84-19
Ice jam research needs. Gerard, R., (1984, p 181-193) MP 1813
Computer simulation of ice cover formation in the Upper St. Lawrence River. Shen, H T., et al, (1984, p.227-245) MP 1814
Frazil ice formation. Ettema, R., et al, (1984, 44p) CR 84-18
Ice bands in turbulent pipe flow. Ashton, G.D., (1984, 7p) MP 2087
Mathematical modeling of river ice processes Shen, H T., (1984, p.554-558) MP 1973
Technique for observing freezing fronts. Colbeck, S C., (1985, p.13-20) MP 1861
Grain growth and the creep behavior of ice. Cole, D.M., (1985, p 187-189) MP 1862
Data acquisition in USACRREL's flume facility. Daly, S.F., et al, (1985, p 1053-1058) MP 2089
Pneumatically de-iced ice detector—final report, phase 2, part I. Franklin, C H., et al, (1986, 9p + append) MP 2249
Field techniques for obtaining engineering characteristics of frazil ice accumulations. Dean A.M., Jr., (1986, p 265-278) MP 2390
Meteorological system performance in icing conditions Bates, R.E., (1987, p 73-86) MP 2285
International Symposium on Cold Regions Heat Transfer, 1987. (1987, 270p) MP 2302
Evolution of frazil ice in rivers and streams research and control. Daly, S.F., (1987, p.11-16) MP 2303
Intake design for ice conditions. Ashton, G.D., (1988, p.107-138) MP 2518
Computer-controlled data acquisition system for a hydraulic flume. Zabilansky, L.J., (1988, p 453-460) MP 2349
Ice formation downstream of Oahe Dam—1987 1988 winter. Ashton, G.D., (1988, 37p) MP 2506
Preliminary results of an experiment using a 16 ft x 50 ft long frazil collector line array. Perham, R.E., (1988, p 139-156) MP 2474
Ice cover formation downstream of a reservoir Ashton, G.D., (1988, p 189-198) MP 2498
Development of sea ice in the Weddell Sea Lange, M.A., et al, (1989, p 92-96) MP 2615
International Symposium on Cold Regions Heat Transfer, 1989. (1989, 314p) MP 2636
Cold regions heat transfer Cheng, K.C., et al, (1989, p 1-25) MP 2637
Time estimation for maximum supercooling in dynamic frazil ice formation Daly, S F., et al, (1989, 13p.) SR 89-26

ICE FLOES

Snow and ice on the earth's surface. Mellor, M., (1964, 163p) M II-C1

Ice friction

Engineering properties of sea ice. Schwarz, J., et al, (1977, p 499-531) MP 1065
Abnormal internal friction peaks in single-crystal ice Stallman, F.E., et al, (1977, 15p) SR 77-23
Ship resistance in thick brash ice. Mellor, M., (1980, p 305-321) MP 1329
Model tests in ice of a Canadian Coast Guard R-class icebreaker. Tatinclaux, J C., (1984, 24p) SR 84-06
Laboratory investigation of the kinetic friction coefficient of ice Forland, K.A., et al, (1984, p 19-28) MP 1825
Kinetic friction coefficient of ice. Forland, K A., et al, (1985, 40p) CR 85-06
Sheet ice forces on a conical structure an experimental study Sodhi, D.S., et al, (1985, p 46-54) MP 1915
Field tests of the kinetic friction coefficient of sea ice Tatinclaux, J.C., et al, (1985, 20p) CR 85-17
Level ice breaking by a simple wedge Tatinclaux, J C., (1985, 46p) CR 85-22
Dynamic friction of bobsled runners on ice Huber, N.P., et al, (1985, 26p) MP 2082
Some effects of friction on ice forces against vertical structures. Kato, K., et al, (1986, p 528-533) MP 2036
Laboratory and field studies of ice friction coefficient Tatinclaux, J.C., et al, (1986, p 389-400) MP 2126
Friction of solids on ice. Huber, N P., et al, (1986, 4p.) MP 2179
Preliminary study of friction between ice and sled runners. Itagaki, K., et al, (1987, p 297-301) MP 2358
Parameters affecting the kinetic friction of ice. Akkok, M., et al, (1987, p 552-561) MP 2258
Effect of pressure on kinetic friction of ice Tatinclaux, J.C., (1989, p.127-134) MP 2680

Ice growth

Growth and mechanical properties of river and lake ice Ramseier, R O., (1972, 243p) MP 1883
Structural growth of lake ice. Gow, A.J., et al, (1977, 24p) CR 77-01
Seasonal variations in apparent sea ice viscosity on the geophysical scale. Tubler, W.D., III, et al, (1977, p 87-90) MP 900
Characteristics of ice on two Vermont rivers. Deck, D.S., (1978, 30p) SR 78-30
River ice. Ashton, G.D., (1979, p 38-45) MP 1178
Accelerated ice growth in rivers Calkins, D.J., (1979, 5p) CR 79-14
Ice formation and breakup on Lake Champlain Bates, R E., (1980, p 125-143) MP 1429
Application of a numerical sea ice model to the East Greenland area. Tucker, W.B., (1981, 109p) MP 1535
Tests of frazil collector lines to assist ice cover formation. Perham, R E., (1981, p.442-448) MP 1488
Ice growth and circulation in Kachemak Bay, Alaska Daly, S F., (1982, p (C)1-(C)9) MP 1501
Using sea ice to measure vertical heat flux in the ocean McPhee, M G., et al, (1982, p. 071-2074) MP 1521
Ice growth on Post Pond, 1973-1982. Gow, A.J., et al, (1983, 35p) CR 83-04
Frazil ice measurements in CRREL's flume facility. Daly, S F., et al, (1986, p 429-438) MP 2127
Structure to form an ice cover on river rapids in winter. Perham, R.E., (1987, p 439-450) MP 2128
Frazil ice, cobbles, Tanana River, Alaska Chacho, E.F., et al, (1987, p 475-483) MP 2130
River ice and salmonids Walsh, M., et al, (1986, p D-4 1-D-4.26) MP 2477
Frazil ice deposits and water channels beneath an ice-covered river. Arcone, S A., et al, (1987, 12p) CR 87-17
Multifrequency passive microwave observation of saline ice grown in a tank Grenfell, T C., et al, (1988, p.1687-1690) MP 2459
Numerical simulation of first-year sea ice Cox, G F N., et al, (1988, p 12,449-12,460) MP 2494
Development of sea ice in the Weddell Sea Lange, M A., et al, (1989, p 92-96) MP 2615
Thin ice growth. Ashton, G D., (1989, p 564-566) MP 2657
Acoustics and morphology of undeformed sea ice Jezek, K.C., et al, (1990, p 67-75) MP 2730
Sea ice a habitat for the foraminifer *Neogloboquadrina pachyderma*? Dieckmann, G., et al, (1990, p 86-92) MP 2732

Ice hardness

Laboratory investigation of the kinetic friction coefficient of ice. Forland, K A., et al, (1984, p.19-28) MP 1825
Fracture of S2 columnar freshwater ice: floating double cantilever beam tests Bentley, D.L., et al, (1988, p.152-161) MP 2493

Ice heat flux

Ice heat sinks Part 1 Vertical systems Lunardini, V J., (1986, 107p) SR 86-14
Ice heat sinks Part 2 Horizontal systems Lunardini, V J., (1986, 104p) SR 86-26
International Symposium on Cold Regions Heat Transfer, 1989 (1989, 314p) MP 2636
Year of Bowen ratios over the frozen Beaufort Sea Andreas, E.L., (1989, p.12,721-12,724) MP 2508

Ice islands

Investigation of ice islands in Babbage Bight. Kovacs, A., et al, (1971, 46 leaves) MP 1381
Islands of grounded sea ice Kovacs, A., et al, (1976, 24p) CR 76-04
Dynamics of near-shore ice Weeks, W F., et al, (1976, p 9-34) MP 1380
Islands of grounded sea ice. Kovacs, A., et al, (1976, p 35-50) MP 987
Iceberg thickness and crack detection Kovacs, A., (1978, p 131-145) MP 1128
Destruction of ice islands with explosives Mellor, M., et al, (1978, p 753-765) MP 1018
Profiles of pressure ridges and ice islands in the Beaufort Sea Hnatiuk, J., et al, (1978, p 519-532) MP 1187
Mechanical properties of ice in the Arctic seas Weeks, W F., et al, (1984, p 235-259) MP 1674
Ice island fragment in Stefansson Sound, Alaska Kovacs, A., (1985, p 101-115) MP 1900
Ice properties in a grounded man made ice island Cox, G F N., et al, (1986, p 135-142) MP 2032

Ice jams

Use of explosives in removing ice jams Frankenstein, G.E., et al, (1970, 10p) MP 1021
River ice problems Burgi, P H., et al, (1974, p 1-15) MP 1002
Third International Symposium on Ice Problems, 1975 Frankenstein, G.E., ed, (1975, 627p.) MP 845
Mechanics and hydraulics of river ice jams Tatinclaux, J.C., et al, (1976, 97p) MP 1060
Potential river ice jams at Windsor, Vermont Calkins, D.J., et al, (1976, 31p) CR 76-31
Laboratory investigation of the mechanics and hydraulics of river ice jams Tatinclaux, J C., et al, (1977, 45p) CR 77-09
Air photo interpretation of a small ice jam. DenHartog, S.L., (1977, p.705-719) MP 935
Ice arching and the drift of pack ice through restricted channels. Sodhi, D.S., (1977, 11p.) CR 77-18
Aerial photointerpretation of a small ice jam. DenHartog, S L., (1977, 17p.) SR 77-32
Physical measurement of ice jams 1976-77 field season. Wuebben, J.L., et al, (1978, 19p.) SR 78-03
Investigation of ice clogged channels in the St. Marys River. Mellor, M., et al, (1978, 73p) MP 1170
Physical measurements of river ice jams Calkins, D J., (1978, p 693-695) MP 1159
River channel characteristics at selected ice jam sites in Vermont Gatto, L.W., (1978, 52p) CR 78-25
River ice Ashton, G D., (1979, p 38-45) MP 1178
Modeling of ice in rivers Ashton, G.D., (1979, p.14/1-14/26) MP 1335
Freshwater ice growth, motion, and decay. Ashton, G.D., (1980, p 261-304) MP 1299
Ice jams and meteorological data for three winters, Ottauquechee River, Vt. Bates, R E., et al, (1981, 27p.) CR 81-01
Ice jam problems at Oil City, Pennsylvania Deck, D S., et al, (1981, 19p) SR 81-09
Modeling hydrologic impacts of winter navigation. Daly, S.F., et al, (1981, p.1073-1080) MP 1445
Ice control arrangement for winter navigation. Perham, R.E., (1981, p 1096-1103) MP 1449
Asymmetric flows application to flow below ice jams Gögüs, M., et al, (1981, p 342-350) MP 1733
Port Huron ice control model studies Calkins, D.J., et al, (1982, p 361-373) MP 1530
Ice jams and flooding on Ottauquechee River, VT Bates, R., et al, (1982, 25p) SR 82-06
Ice engineering for civil work baseline study Carey, K L., et al, (1983, 91p) MP 2441
Ice jams in shallow rivers with floodplain flow Calkins, D J., (1983, p 538-548) MP 1644
Asymmetric plane flow with application to ice jams Tatinclaux, J.C., et al, (1983, p 1540-1556) MP 1645
Mechanics of ice jam formation in rivers Ackermann, N.L., et al, (1983, 14p) CR 83-31
Ice-related flood frequency analysis: application of analytical estimates. Gerard, R., et al, (1984, p 85-101) MP 1712
Ice cover melting in a shallow river Calkins, D J., (1984, p 255-265) MP 1763
Ice jams in shallow rivers with floodplain flow Discussion Beltaos, S., (1984, p 370-371) MP 1798
Method of detecting voids in rubbled ice Tucker, W.B., et al, (1984, p 183-188) MP 1772
Controlling river ice to alleviate ice jam flooding Deck, D S., (1984, p 524-528) MP 1795
Salmon River ice jams Cunningham, L.L., et al, (1984, p 529-533) MP 1796
Ice jam research needs Gerard, R., (1984, p 181-193) MP 1813
Controlling river ice to alleviate ice jam flooding. Deck, D S., (1984, p 69-76) MP 1885
Cold facts of ice jams case studies of mitigation methods. Calkins, D J., (1984, p 39-47) MP 1793
Ice jam flood prevention measures, Lamoille River, Hardwick VT. Calkins, D J., (1985, p.149-168) MP 1940
Hudson River ice management Ferrick, M G., et al, (1985, p 96-110) MP 2174
Construction and calibration of the Ottauquechee River model. Gooch, G., (1985, 10p) SR 85-13
Cazenovia Creek Model data acquisition system Bennett, B M., et al, (1985, p 1424-1429) MP 2090
Upper Delaware River ice control—a case study Zufelt, J.E., et al, (1986, p 760-770) MP 2005
Ice interaction with the U S Army ribbon bridge Coutermarsh, B A., (1986, 18p) CR 86-01
Hydrologic aspects of ice jams Calkins, D J., (1986, p 603-609) MP 2116
Potential solution to ice jam flooding Salmon River, Idaho Earickson, J., et al, (1986, p 15-25) MP 2131
Controlled river ice cover breakup, part I Hudson River field experiments Ferrick, M G., et al, (1986, p 281-291) MP 2391
Corps of engineers seek ice solutions Frankenstein, G E., (1987, p 5-7) MP 2219
Ice jams and the winter climate near White River, SD Bilello, M A., (1987, p 154-162) MP 2399
Preliminary study of scour under an ice jam Wuebben, J L., (1988, p 177-192) MP 2475
Transverse velocities and ice jamming potential in a river bend Zufelt, J L., (1988, p 193-207) MP 2476
Laboratory study of transverse velocities and ice jamming in a river bend Zufelt, J L., et al, (1988, p 189-197) MP 2501

Ice jams *(cont.)*
Development of a dynamic ice breakup control method for the Connecticut River near Windsor, Vermont. Ferrick, M.G., et al, (1988, p.221-233) MP 2510
Dynamic ice breakup control for the Connecticut River near Windsor, Vermont. Ferrick, M.G., et al, (1988, p 245-258) MP 2449
Airborne radar survey of a brash ice jam in the St. Clair River. Daly, S F., et al, (1989, 17p.) CR 89-02
Effect of Toston dam on upstream ice conditions. Ashton, G.D., (1989, 9p) SR 89-16
Framework for control of dynamic ice breakup by river regulation. Ferrick, M.G, et al, (1989, 14p) CR 89-12
Salmon River ice jam control studies- interim report Axelson, K.D., et al, (1990, 8p.) SR 90-06

Ice lenses
Segregation-freezing temperature as the cause of suction force. Takagi, S., (1977, p.59-66) MP 901
Segregation freezing as the cause of suction force for ice lens formation. Takagi, S., (1978, p 45-51) MP 1081
Segregation freezing as the cause of suction force for ice lens formation. Takagi, S., (1978, 13p) CR 78-06
Fundamentals of ice lens formation. Takagi, S., (1978, p.235-242) MP 1173
Mechanical properties of frozen ground Ladanyi, B, et al, (1979, p.7-18) MP 1726
Numerical solutions for rigid-ice model of secondary frost heave. O'Neill, K., et al, (1980, p 656-669) MP 1454
Initial stage of the formation of soil-laden ice lenses. Takagi, S, (1982, p 223-232) MP 1596
Field tests of a frost-heave model. Guymon, G.L., et al, (1983, p 409-414) MP 1657
Investigation of transient processes in an advancing zone of freezing. McGaw, R., et al, (1983, p 821-825) MP 1663
Ice segregation and frost heaving. (1984, 72p) MP 1809
Exploration of a rigid ice model of frost heave O'Neill, K., et al, (1985, p 281-296) MP 1880

Ice loads
Structures in ice infested water. Assur, A., (1972, p.93-97) MP 1016
Investigation of ice forces on vertical structures. Hirayama, K., et al, (1974, 153p) MP 1041
Third International Symposium on Ice Problems, 1975 Frankenstein, G E., ed, (1975, 627p) MP 845
Bibliography on harbor and channel design in cold regions Haynes, F.D., (1976, 32p) CR 76-03
Passage of ice at hydraulic structures Calkins, D.J., et al, (1976, p 1726-1736) MP 966
Force estimate and field measurements of the St Marys River ice booms. Perham, R.E., (1977, 26p) CR 77-04
Yukon River breakup 1976 Johnson, P., et al, (1977, p 592-596) MP 960
Intermittent ice forces acting on inclined wedges Tryde, P., (1977, 26p.) CR 77-26
Ice and ship effects on the St Marys River ice booms Perham, R.E., (1978, p 222-230) MP 1617
Ice cover forces on structures. Kerr, A D., (1978, p 123-134) MP 879
Ice forces on the Yukon River bridge—1978 breakup Johnson, P.R., et al, (1979, 40p) MP 1304
Loading on the Hartford Civic Center roof before collapse Redfield, R, et al, (1979, 32p) SR 79-09
Modeling of ice in rivers Ashton, G D., (1979, p 14/1-14/26) MP 1335
Buckling analysis of wedge-shaped floating ice sheets Sodhi, D.S., (1979, p 797-810) MP 1232
Ice thickness-tensile stress relationship for load-bearing ice. Johnson, P.R., (1980, 11p) SR 80-09
Ice engineering. O'Steen, D A., (1980, p 41-47) MP 1602
Cost of ice damage to shoreline structures during navigation Carey, K.L., (1980, 33p) SR 80-22
Ice laboratory facilities for solving ice problems Frankenstein, G E., (1980, p 93-103) MP 1301
Working group on ice forces on structures Carstens, T, ed, (1980, 146p) SR 80-26
Review of buckling analyses of ice sheets Sodhi, D.S., et al, (1980, p.131-146) MP 1322
Single and double reaction beam load cells for measuring ice forces. Johnson, P R., et al, (1980, 17p) CR 80-25
Icing on structures. Minsk, L.D., (1980, 18p) CR 80-31
Ice force measurement on the Yukon River bridge. McFadden, T., et al, (1981, p.749-777) MP 1396
Investigation of the acoustic emission and deformation response of finite ice plates Xirouchakis, P.C., et al, (1981, 19p) CR 81-06
On the buckling force of floating ice plates Kerr, A D., (1981, 7p.) CR 81-09
Modeling hydrologic impacts of winter navigation Daly, S F., et al, (1981, p 1073-1080) MP 1445
Acoustic emission and deformation response of finite ice plates. Xirouchakis, P.C., et al, (1981, p 385-394) MP 1455
Dynamic ice-structure interaction analysis for narrow vertical structures Eranti, E., et al, (1981, p 472-479) MP 1456
State of the art of ship model testing in ice Vance, G P., (1981, p 693-706) MP 1573
Foundations of structures in polar waters. Chamberlain, E.J., (1981, 16p) SR 81-25
Sea ice rubble formations in the Bering Sea and Norton Sound, Alaska Kovacs, A., (1981, 23p.) SR 81-34
Port Huron ice control model studies Calkins, D.J., et al, (1982, p 361-373) MP 1530
Force measurements and analysis of river ice break up. Deck, D.S., (1982, p 303-336) MP 1739
On forecasting mesoscale ice dynamics and build-up Hibler, W.D., III, et al, (1983, p.110-115) MP 1625
Method for determining ice loads on offshore structures. Johnson, J B., (1983, p 124-128) MP 2056
Buckling loads of floating ice on structures. Sodhi, D S., et al, (1983, p 260-265) MP 1626
Protection of offshore arctic structures by explosives. Mellor, M., (1983, p 310-322) MP 1605
Dynamic buckling of floating ice sheets. Sodhi, D.S., (1983, p 822-833) MP 1607
Effect of vessel size on shorelines along the Great Lakes channels Wuebben, J.L., (1983, 62p) SR 83-11
Atmospheric icing of structures. Minsk, L.D., ed, (1983, 366p.) SR 83-17
Field measurements of combined icing and wind loads on wires. Govoni, J.W., et al, (1983, p.205-215) MP 1637
Ice forces on model bridge piers. Haynes, F.D., et al, (1983, 11p) CR 83-19
Measurement of ice forces on structures Sodhi, D.S., et al, (1983, p 139-155) MP 1641
Methods of ice control. Frankenstein, G.E., et al, (1983, p 204-215) MP 1642
Ice action on two cylindrical structures. Kato, K., et al, (1983, p 159-166) MP 1643
Offshore petroleum production in ice-covered waters. Tucker, W.B., (1983, p 207-215) MP 2066
Ice engineering for civil work: baseline study. Carey, K.L., et al, (1983, 91p.) MP 2441
Ice action on pairs of cylindrical and conical structures. Kato, K., et al, (1983, 35p) CR 83-25
Ice forces on a bridge pier, Ottauquechee River, Vermont Sodhi, D.S., et al, (1983, 6p) CR 83-32
Mechanical properties of ice in the Arctic seas. Weeks, W F., et al, (1984, p 235-259) MP 1674
Ice resistance tests on two models of the WTGB icebreaker. Tatinclaux, J C., et al, (1984, p 627-658) MP 1716
Ice action on two cylindrical structures Kato, K., et al, (1984, p 107-112) MP 1741
Force distribution in a fragmented ice cover Stewart, D M., et al, (1984, 16p) CR 84-07
Offshore oil in the Alaskan Arctic Weeks, W.F., et al, (1984, p 371-378) MP 1743
Laboratory investigation of the kinetic friction coefficient of ice. Forland, K.A., et al, (1984, p.19-28) MP 1825
Evaluation of a biaxial ice stress sensor Cox, G.F.N., (1984, p 349-361) MP 1836
Forces associated with ice pile-up and ride-up Sodhi, D S., et al, (1984, p 239-262) MP 1887
Computational mechanics in arctic engineering. Sodhi, D.S., (1984, p 351-374) MP 2072
Combined icing and wind loads on a simulated power line test span Govoni, J W., et al, (1984, p.173-182) MP 2114
Ice forces on inclined model bridge piers Haynes, F D., et al, (1984, p 1167-1173) MP 2407
Buckling analysis of cracked, floating ice sheets. Adley, M D., et al, (1984, 28p) SR 84-23
Ice forces on rigid, vertical, cylindrical structures. Sodhi, D S., et al, (1984, 36p) CR 84-33
Offshore Mechanics and Arctic Engineering Symposium, 4th, 1985. (1985, 2 vols) MP 2105
In-ice calibration tests for an elongated, uniaxial brass ice stress sensor Johnson, J B., (1985, p 244-249) MP 1859
Sheet ice forces on a conical structure, an experimental study Sodhi, D S., et al, (1985, p 46-54) MP 1915
Arctic ice and drilling structures Sodhi, D S., (1985, p 63-69) MP 2119
Kadluk ice stress measurement program Johnson, J B., et al, (1985, p 88-100) MP 1899
Compressive strength of multi-year sea ice Kovacs, A., (1985, p 116-127) MP 1901
Sheet ice forces on a conical structure, an experimental study Sodhi, D S., et al, (1985, p 643-655) MP 1906
Real time measurements of uplifting ice forces Zabilansky, L.J., (1985, p 253-259) MP 2092
Ice accretion measurement on a wire at Mt. Washington McComber, P., et al, (1985, p 34-43) MP 2173
Computer interfacing of meteorological sensors in severe weather Rancourt, K., et al, (1985, p 205-211) MP 2175
Instrumentation for an uplifting ice force model Zabilansky, L.J., (1985, p 1430-1435) MP 2091
Sea ice and the Fairway Rock icefoot Kovacs, A., et al, (1985, p 25-32) MP 2145
In-ice calibration tests for an elongate, uniaxial brass ice stress sensor Johnson, J B., (1985, p 506-510) MP 1966
Vibration analysis of the Yamachiche lightpier Haynes, F D., (1986, p 238-241) MP 1989
Ice cover research—present state and future needs Kerr, A D., et al, (1986, p 384-399) MP 2004
Crushing of ice sheet against rigid cylindrical structures. Sodhi, D S., et al, (1986, p 1-12) MP 2018
Offshore Mechanics and Arctic Engineering Symposium, 5th, 1986. (1986, 4 vols.) MP 2031
Ice properties in a grounded man-made ice island. Cox, G F.N., et al, (1986, p.135-142) MP 2032
Some effects of friction on ice forces against vertical structures. Kato, K., et al, (1986, p 528-533) MP 2036
Impact ice force and pressure- An experimental study with urea ice. Sodhi, D S., et al, (1986, p 569-576) MP 2037
Vibration analysis of the Yamachiche Lightpier. Haynes, F D., (1986, p.9-18) MP 2253
Ice forces on bridge piers. Haynes, F.D., (1986, p 83-101) MP 2160
Icing and wind loading on a simulated power line. Govoni, J W., et al, (1986, p 23-27) MP 2206
Model study of ice forces on a single pile Zabilansky, L.J., (1986, p 77-87) MP 2388
Static and dynamic ice loads on the Yamachiche Bend lightpier, 1984-86. Frederking, R., et al, (1986, p.115-126) MP 2389
International Offshore Mechanics and Arctic Engineering Symposium, 1987. (1987, 4 vols) MP 2189
Ice beam moving against a sloping structure. Sodhi, D.S., (1987, p.281-284) MP 2194
Advances in ice mechanics—1987. (1987, 49p) MP 2207
Advances in sea ice mechanics in the USA. Sodhi, D.S., et al, (1987, p 37-49) MP 2208
Effect of oscillatory loads on the bearing capacity of floating ice covers Kerr, A D., et al, (1987, p 219-224) MP 2216
Mechanical properties of multi-year sea ice. Richter-Menge, J A., et al, (1987, p 121-153) MP 2428
Effect of ice-floe size on propeller torque in ship-model tests. Tatinclaux, J C., (1987, p 291-298) MP 2289
Kadluk ice stress measurement program. Cox, G.F.N., (1987, p 100-107) MP 2298
Mechanical properties of multi-year pressure ridge ice. Richter-Menge, J.A., (1987, p 108-119) MP 2299
Working group on ice forces 3rd state-of-the-art report. Sanderson, T.J.O., ed, (1987, 221p) SR 87-17
Flexural and buckling failure of floating ice sheets against structures. Sodhi, D.S., (1987, p 53-73) MP 2315
Conference on Offshore Mechanics and Arctic Engineering, 7th, 1988, Vol 4. (1988, 348p) MP 2317
Onshore ice pileup and override Kovacs, A., et al, (1988, p 108-142) MP 2336
Verification tests of the surface integral method for calculating structural ice loads Johnson, J.B., et al, (1988, p 449-456) MP 2353
Mukluk ice stress measurement program Cox, G F.N., et al, (1988, p.457-463) MP 2354
Model study of uplifting ice forces the instrumentation. Zabilansky, L.J., (1988, p.745-748) MP 2487
Mukluk ice stress measurement program Cox, G.F.N., (1988, p 11-15) MP 2618
Working group on ice forces 4th state-of-the-art report. Timco, G.W., ed, (1989, 385p) SR 89-05
Ice-induced vibrations of structures Sodhi, D S., (1989, p 189-221) MP 2492
Conference on offshore mechanics and Arctic engineering, 8th, 1989. (1989, 476p) MP 2481
On modeling the energetics of the ridging process. Hopkins, M A., et al, (1989, p 175-178) MP 2483
Penetration of floating ice sheets with cylindrical indentors. Sodhi, D S., (1989, p 377-382) MP 2485
Ice force measurements on a bridge pier in a small river. Sodhi, D S., et al, (1989, p 1419-1427) MP 2764
Conference on offshore mechanics and arctic engineering, 9th, 1990 (1990, 339p) MP 2584
Cyclic loading of saline ice: initial experimental results. Cole, D M., (1990, p 265-271) MP 2581

Ice mechanics
Growth and mechanical properties of river and lake ice Ramseier, R.O., (1972, 243p) MP 1883

ICE MECHANICS
Impact of spheres on ice Closure Yen, Y.-C., et al, (1972, p 473) MP 988

Ice mechanics
Arctic marine navigation and ice dynamics- summary findings Weeks, W F., (1973, p 86-99) MP 2274
Mesoscale deformation of sea ice from satellite imagery Anderson, D.M., et al, (1973, 2p) MP 1120
River ice problems Burgi, P H., et al, (1974, p.1-15) MP 1002
Results of the US contribution to the Joint US/USSR Bering Sea Experiment Campbell, W J., et al, (1974, 197p) MP 1032
Ice dynamics, Canadian Archipelago and adjacent Arctic basin Ramseier, R O., et al, (1975, p 853-877) MP 1585
Mechanics of ice Glen, J W., (1975, 43p) M H-C2b
Sea ice engineering Assur, A., (1976, p 231-234) MP 986
Interpretation of the tensile strength of ice under triaxial stress Nevel, D E., et al, (1976, p 375-387) MP 996

Mechanics and hydraulics of river ice jams. Tatinclaux, J C., et al, (1976, 97p) MP 1060

Creep theory for a floating ice sheet. Nevel, D E., (1976, 98p.) SR 76-04

Dynamics of near-shore ice. Weeks, W.F., et al, (1976, p.9-34) MP 1300

Passage of ice at hydraulic structures. Calkins, D.J., et al, (1976, p.1726-1736) MP 966

Potential river ice jams at Windsor, Vermont. Calkins, D.J., et al, (1976, 31p) CR 76-31

Internal structure and crystal fabrics of the West Antarctic ice sheet. Gow, A.J., et al, (1976, 25p) CR 76-35

Sea ice properties and geometry. Weeks, W.F., (1976, p.137-171) MP 918

Structural growth of lake ice. Gow, A.J., et al, (1977, 24p) CR 77-01

Dynamics of near-shore ice. Kovacs, A., et al, (1977, p.106-112) MP 924

Laboratory investigation of the mechanics and hydraulics of river ice jams. Tatinclaux, J.C., et al, (1977, 45p.) CR 77-09

Air photo interpretation of a small ice jam. DenHartog, S L., (1977, p.705-719) MP 935

Engineering properties of sea ice. Schwarz, J., et al, (1977, p.499-531) MP 1065

Movement of coastal sea ice near Prudhoe Bay. Weeks, W.F., et al, (1977, p 533-546) MP 1066

Dynamics of near-shore ice Kovacs, A., et al, (1977, p.411-424) MP 1076

Some elements of iceberg technology. Weeks, W.F., et al, (1978, p 45-98) MP 1616

Model simulation of near shore ice drift, deformation and thickness. Hibler, W D., III, (1978, p 33-44) MP 1010

Axial double point-load tests on snow and ice. Kovacs, A., (1978, 11p.) CR 78-01

Report of the ITTC panel on testing in ice, 1978. Frankenstein, G.E., et al, (1978, p.157-179) MP 1140

River ice Ashton, G D., (1978, p.369-392) MP 1216

Polycrystalline ice mechanics Hooke, R L., et al, (1979, 16p.) MP 1207

Ice forces on the Yukon River bridge—1978 breakup. Johnson, P.R., et al, (1979, 40p.) MP 1304

Dynamics of near-shore ice Kovacs, A., et al, (1979, p.181-207) MP 1291

Some Bessel function identities arising in ice mechanics problems. Takagi, S., (1979, 13p.) CR 79-27

Ultrasonic tests of Byrd Station ice cores. Gow, A.J., et al, (1979, p.147-153) MP 1282

Documentation for a two-level dynamic thermodynamic sea ice model Hibler, W D., III, (1980, 35p.) SR 80-06

Some promising trends in ice mechanics. Assur, A., (1980, p 1-15) MP 1300

Ice laboratory facilities for solving ice problems. Frankenstein, G.E., (1980, p.93-103) MP 1301

Mechanical properties of polycrystalline ice. Mellor, M., (1980, p 217-245) MP 1302

Mechanical properties of polycrystalline ice Hooke, R L., et al, (1980, p 263-275) MP 1328

Ship resistance in thick brash ice Mellor, M., (1980, p 305-321) MP 1329

Measurement of the shear stress on the underside of simulated ice covers Calkins, D J., et al, (1980, 11p.) CR 80-24

Dynamic ice-structure interaction analysis for narrow vertical structures. Eranti, E., et al, (1981, p.472-479) MP 1456

Modeling mesoscale ice dynamics. Hibler, W.D., III, et al, (1981, p 1317-1329) MP 1526

Measuring mechanical properties of ice. Schwarz, J., et al, (1981, p.245-254) MP 1556

Dynamics of near-shore ice. Kovacs, A., et al, (1981, p.125-135) MP 1599

Growth, structure, and properties of sea ice Weeks, W.F., et al, (1982, 130p.) M 82-01

Ice behavior under constant stress and strain Mellor, M., et al, (1982, p 201-219) MP 1525

Port Huron ice control model studies Calkins, D J., et al, (1982, p.361-373) MP 1530

Glacier mechanics. Mellor, M., (1982, p.455-474) MP 1532

In-situ measurements of the mechanical properties of ice Tatinclaux, J C., (1982, p.326-334) MP 1555

Ottauquechee River--analysis of freeze-up processes Calkins, D J., et al, (1982, p 2-37) MP 1738

Physical properties of the ice cover of the Greenland Sea Weeks, W.F., (1982, 27p.) SR 82-28

Hydraulic model study of Port Huron ice control structure Calkins, D J., et al, (1982, 59p.) CR 82-34

Stress-strain-time relations for ice under uniaxial compression. Mellor, M., et al, (1983, p 207-230) MP 1587

Numerical simulation of the Weddell Sea pack ice Hibler, W.D., III, et al, (1983, p 2873-2887) MP 1592

On forecasting mesoscale ice dynamics and build-up Hibler, W D., III, et al, (1983, p 110-115) MP 1625

Mechanical behavior of sea ice Mellor, M., (1983, 105p.) M 83-1

Sea ice model in wind forcing fields Tucker, W B., (1983, 11p.) CR 83-17

Sea ice on the Norton Sound and adjacent Bering Sea coast Kovacs, A., (1983, p 654-666) MP 1699

Modeling of ice discharge in river models. Calkins, D.J., (1983, p 285-290) MP 2081

Spaceborne SAR and sea ice: a status report. Weeks, W.F., (1983, p.113-115) MP 2225

Relationship between creep and strength behavior of ice at failure. Cole, D M., (1983, p.189-197) MP 1681

Mechanics of ice jam formation in rivers. Ackermann, N L., et al, (1983, 14p.) CR 83-31

Thermodynamic model of soil creep at constant stresses and strains. Fish, A M., (1983, 18p.) CR 83-33

Marginal ice zones: a description of air-ice-ocean interactive processes, models and planned experiments. Johannessen, O.M., et al, (1984, p.133-146) MP 1673

Mechanical properties of ice in the Arctic seas. Weeks, W.F., et al, (1984, p 235-259) MP 1674

Modified theory of bottom crevasses. Jezek, K C., (1984, p.1925-1931) MP 2059

Frazil ice dynamics. Daly, S.F., (1984, 46p.) M 84-01

Mechanical properties of multi-year sea ice. Phase 1: Test results. Cox, G F.N., et al, (1984, 105p.) CR 84-09

Modeling the marginal ice zone. Hibler, W.D., III, ed, (1984, 99p.) SR 84-07

Large-scale ice/ocean model for the marginal ice zone. Hibler, W.D., III, et al, (1984, p.1-7) MP 1778

East Greenland Sea ice variability in large-scale model simulations. Walsh, J E., et al, (1984, p.9-14) MP 1779

On the role of ice interaction in marginal ice zone dynamics. Leppäranta, M., et al, (1984, p 23-29) MP 1781

Some simple concepts on wind forcing over the marginal ice zone. Tucker, W B., (1984, p 43-48) MP 1783

Mechanical properties of multi-year sea ice. Testing techniques. Mellor, M., et al, (1984, 39p.) CR 84-08

Role of sea ice dynamics in modeling CO2 increases. Hibler, W.D., III, (1984, p.238-253) MP 1749

Ice flow leading to the deep core hole at Dye 3, Greenland. Whillans, I M., et al, (1984, p 185-190) MP 1824

Ice dynamics. Hibler, W.D., III, (1984, 52p.) M 84-03

Mechanical properties of sea ice: a status report. Weeks, W.F., et al, (1984, p.135-198) MP 1808

Rise pattern and velocity of frazil ice. Wuebben, J L., (1984, p 297-316) MP 1816

Laboratory investigation of the kinetic friction coefficient of ice. Forland, K.A., et al, (1984, p 19-28) MP 1825

Forces associated with ice pile-up and pile-up Sodhi, D.S., et al, (1984, p.239-262) MP 1887

Computational mechanics in arctic engineering. Sodhi, D.S., (1984, p.351-374) MP 2072

Static determination of Young's modulus in sea ice. Richter-Menge, J A., (1984, p.283-286) MP 1789

Air-ice-ocean interaction experiments in Arctic marginal ice zones. (1984, 56p.) SR 84-28

MIZEX 83 mesoscale sea ice dynamics. initial analysis. Hibler, W.D., III, et al, (1984, p.19-28) MP 1811

On the rheology of a broken ice field due to floe collision. Shen, H., et al, (1984, p.29-34) MP 1812

Crystalline structure of urea ice sheets. Gow, A.J., (1984, 48p.) CR 84-24

Shore ice override and pileup features, Beaufort Sea Kovacs, A., (1984, 28p. + map) CR 84-26

MIZEX 84 mesoscale sea ice dynamics post operations report Hibler, W D., III, et al, (1984, p.66-69) MP 1257

Arctic sea ice and naval operations. Hibler, W.D., III, et al, (1984, p 67-91) MP 1994

Surfacing submarines through ice Assur, A., (1984, p 309-318) MP 1998

Rheology of glacier ice Jezek, K C., et al, (1985, p.1335-1337) MP 1844

Numerical modeling of sea ice dynamics and ice thickness Hibler, W D., III, (1985, 50p.) CR 85-05

Air-ice ocean interaction in Arctic marginal ice zones MIZEX-West Wadhams, P., ed, (1985, 119p.) SR 85-06

Mechanical properties of multi-year pressure ridge samples Richter-Menge, J A., (1985, p 244-251) MP 1936

Modeling sea-ice dynamics. Hibler, W D., III, (1985, p 549-579) MP 2001

Grain size and the compressive strength of ice. Cole, D M., (1985, p 369-374) MP 1907

Mechanical properties of multi-year sea ice Phase 2 Test results. Cox, G F.N., et al, (1985, 81p.) CR 85-16

On estimating ice stress from MIZEX 83 ice deformation and current measurements Leppäranta, M., et al, (1986, p 17-19) MP 2220

Frazil ice pebbles, Tanana River, Alaska Chacho, E F., et al, (1986, p 475-483) MP 2130

Growth, structure, and properties of sea ice Weeks, W F., et al, (1986, p 9-164) MP 2209

Mechanical behavior of sea ice Mellor, M., (1986, p 165-281) MP 2210

Ice dynamics Hibler, W D., III, (1986, p 577-640) MP 2211

On the profile properties of undeformed first-year sea ice Cox, G F N., et al, (1986, p 257-330) MP 2199

Triaxial testing of first-year sea ice Richter Menge, J A., et al, (1986, 41p.) CR 86-16

Verification tests for a stiff inclusion stress sensor Cox, G F N., et al, (1987, p 81-85) MP 2223

Advances in ice mechanics 1987 (1987, 49p.) MP 2207

Advances in sea ice mechanics in the USA. Sodhi, D.S., et al, (1987, p.37-49) MP 2208

Sea ice structure and mechanical properties. Richter-Menge, J A., et al, (1987, 30p.) CR 87-03

Corps of engineers seek ice solutions. Frankenstein, G.E., (1987, p.5-7) MP 2219

Mesoscale sea ice deformation in the East Greenland marginal ice zone. Leppäranta, M., et al, (1987, p.7060-7070) MP 2241

Role of floe collisions in sea ice rheology. Shen, H.H., et al, (1987, p.7085-7096) MP 2242

Mechanical properties of multi-year sea ice. Richter-Menge, J A., et al, (1987, p.121-153) MP 2428

Mechanical properties of multi-year pressure ridge ice. Richter-Menge, J A., (1987, p 108-119) MP 2299

Shape of creep curves in frozen soils and polycrystalline ice. Fish, A M., (1987, p.623-629) MP 2329

Coupled air-ice-ocean models. Hibler, W.D., III, (1987, p.131-137) MP 2412

DOD floating ice problems. Cox, G F.N., (1987, p.151-154) MP 2414

Conference on Offshore Mechanics and Arctic Engineering, 7th, 1988, Vol.4 (1988, 348p.) MP 2317

Mechanical properties of multi-year sea ice. Richter-Menge, J A., et al, (1988, 27p.) CR 88-05

Ice stress measurements around offshore structures. Johnson, J.B., (1988, p.55-59) MP 2611

Profile properties of undeformed first-year sea ice. Cox, G F.N., et al, (1988, 57p.) CR 88-13

Mechanical properties of multi-year sea ice. Richter-Menge, J A., (1988, p.54-61) MP 2619

Working group on ice forces. 4th state-of-the-art report. Timco, G.W., ed, (1989, 385p.) SR 89-05

Conference on offshore mechanics and Arctic engineering, 8th, 1989. (1989, 476p.) MP 2681

Effect of ice pressure on marginal ice zone dynamics. Flato, G.M., et al, (1989, p.514-521) MP 2522

Proceedings. (1989, 475p.) SR 89-39

Models of the mechanical properties of ice. Richter-Menge, J A., et al, (1989, p.87-99) MP 2687

Conference on offshore mechanics and arctic engineering, 9th, 1990. (1990, 339p.) MP 2584

Dynamic analysis of a floating ice sheet undergoing vertical indentation. McGilvary, W.R., et al, (1990, p.195-203) MP 2579

Wave-induced bergy bit motion near a floating platform. Mak, L.M., et al, (1990, p.205-215) MP 2580

Measurement of sea ice thickness using electromagnetic induction. Holladay, J.S., et al, (1990, p.309-315) MP 2590

Wind-generated polynyas off the coasts of the Bering Sea islands. Kozo, T L., et al, (1990, p.126-132) MP 2734

On modeling the baroclinic adjustment of the Arctic Ocean. Hibler, W D., III, (1990, p 247-250) MP 2739

Ice melting

Towing icebergs. Lonsdale, H K., et al, (1974, p.2) MP 1020

Physics of ice Glen, J W., (1974, 81p.) M II-C2a

Heat transfer in drill holes in Antarctic ice. Yen, Y.-C., et al, (1976, 15p.) CR 76-12

Heat transfer between water jets and ice blocks Yen, Y.-C., (1976, p 299-307) MP 882

Short-term forecasting of water run-off from snow and ice. Colbeck, S C., (1977, p 571-588) MP 1067

Heat transfer over a vertical melting plate. Yen, Y.-C., et al, (1977, 12p.) CR 77-32

Bubbler induced melting of ice covers. Kerbar, R., et al, (1978, p.362-366) MP 1160

Point source bubbler systems to suppress ice Ashton, G D., (1979, 12p.) CR 79-12

Case study: fresh water supply for Point Hope, Alaska. McFadden, T., et al, (1979, p 1029-1040) MP 1222

Point source bubbler systems to suppress ice Ashton, G D., (1979, p 93-100) MP 1326

Maximum thickness and subsequent decay of lake, river and fast sea ice in Canada and Alaska Bilello, M A., (1980, 160p.) CR 80-06

Freshwater ice growth, motion, and decay Ashton, G D., (1980, p 261-304) MP 1299

Continuum sea ice model for a global climate model Ling, C H., et al, (1980, p.187-196) MP 1622

Ablation seasons of arctic and antarctic sea ice Andreas, E L., et al, (1982, p 440-447) MP 1517

Sea ice drag laws and boundary layer during rapid melting McPhee, M G., (1982, 17p.) CR 82-04

Performance of a point source bubbler under thick ice Haynes, F D., et al, (1982, p 111-124) MP 1529

On the differences in ablation seasons of Arctic and Antarctic sea ice Andreas, E L., et al, (1982, 9p.) CR 82-33

Developing a water well for the ice backfilling of DYE 2 Rand, J H., (1982, 19p.) SR 82-32

Soft drink bubbles Cragin, J H., (1983, p 71) MP 1736

Field tests of a frost-heave model Guymon, G L., et al, (1983, p 409-414) MP 1657

Lake ice decay Ashton, G D., (1983, p 85-86) MP 1684

Determination of floating ice covers Ashton, G D., (1984, p 26-33) MP 1676

Ice melting *(cont.)*

On the decay and retreat of the ice cover in the summer MIZ. Maykut, G.A., (1984, p.15-22) MP 1700

Temperature and interface morphology in a melting ice-water system. Yen, Y.-C., (1984, p.305-325) MP 1727

Ice cover melting in a shallow river. Calkins, D.J., (1984, p.255-265) MP 1763

Ice deterioration. Ashton, G.D., (1984, p.31-[illegible]) MP 1791

Deterioration of floating ice covers. Ashton, G.D., (1985, p.177-182) MP 2122

Chemical solutions to the chemical problem. Mirsk, L.D., (1985, p.238-244) MP 2224

Heat transfer in water over a melting ice sheet. Lunardini, V.J., (1986, p.227-236) MP 2833

MIZEX—a program for mesoscale air-ice-ocean interaction experiments in Arctic marginal ice zones. MIZEX bulletin 7. (1986, 88p.) SR 86-03

Bubblers and pumps for melting ice. Ashton, G.D., (1986, p.223-234) MP 2133

Convective heat transfer in water over melting ice sheet. Lunardini, V.J., (1986, p.42-51) MP 2600

Preliminary study of friction between ice and sled runners. Itagaki, K., et al. (1987, p.297-301) MP 2358

International Symposium on Cold Regions Heat Transfer, 1987. (1987, 270p.) MP 2302

Exothermic cutting of frozen materials. Garfield, D.E., et al. (1987, p.181-183) MP 2266

On the effect of the 4 C density maximum on melting heat transfer. Yen, Y.-C., (1988, p.362-367) MP 2382

Flow developers for melting ice—experimental results. Ashton, G.D., (1989, p.151-160) MP 2465

Oceanic heat flux in the Fram Strait measured by a drifting buoy. Perovich, D.K., et al. (1990, p.291-296) MP 2740

Shortwave radiation and open water in models of sea ice decay. Perovich, D.K., et al. (1990, p.242-246) MP 2759

Ice models

Structures in ice infested water. Assur, A., (1972, p.93-97) MP 1016

Classification and variation of sea ice ridging in the Arctic basin. Hibler, W.D., III, et al. (1974, p.127-146) MP 1022

Remote sensing program required for the AIDJEX model. Weeks, W.F., et al. (1974, p.22-44) MP 1040

Modeling pack ice as a viscous-plastic continuum. Hibler, W.D., III. (1977, p.44-55) MP 1164

Model simulation of near shore ice drift, deformation and thickness. Hibler, W.D., III. (1978, p.33-44) MP 1010

Sea ice pressure ridges in the Beaufort Sea. Wright, B.D., et al. (1978, p.249-271) MP 1132

Arching of model ice floes at bridge piers. Calkins, D.J., (1978, p.495-507) MP 1134

Ice arching and the drift of pack ice through channels. Sodhi, D.S., et al. (1978, p.415-432) MP 1138

Some results from a linear-viscous model of the Arctic ice cover. Hibler, W.D., III, et al. (1979, p.293-304) MP 1241

Numerical modeling of sea ice in the seasonal sea ice zone. Hibler, W.D., III. (1980, p.299-356) MP 1296

Some promising trends in ice mechanics. Assur, A., (1980, p.1-15) MP 1300

Preliminary results of ice modeling in the East Greenland area. Tucker, W.B., et al. (1981, p.867-875) MP 1458

Numerical solutions for a rigid-ice model of secondary frost heave. O'Neill, K., et al. (1982, 11p.) CR 82-13

On modeling the Weddell Sea pack ice. Hibler, W.D., III, et al. (1982, p.125-130) MP 1549

Application of a numerical sea ice model to the East Greenland area. Tucker, W.B., (1982, 60p.) CR 82-16

Modeling fluctuations of arctic sea ice. Hibler, W.D., III, et al. (1982, p.1514-1523) MP 1579

Numerical simulations of the Weddell Sea pack ice. Hibler, W.D., III, et al. (1983, p.2873-2887) MP 1592

Sea ice model in wind forcing fields. Tucker, W.B., (1983, 11p.) CR 83-17

First-generation model of ice deterioration. Ashton, G.D., (1983, p.273-278) MP 2000

Modeling of ice discharge in river models. Calkins, D.J., (1983, p.285-290) MP 2001

Ice resistance tests on two models of the WTGB icebreaker. Tatinclaux, J.C., et al. (1984, p.627-636) MP 1716

Modeling the marginal ice zone. Hibler, W.D., III, ed. (1984, 99p.) SR 84-07

East Greenland Sea ice variability in large-scale model simulations. Walsh, J.E., et al. (1984, p.9-14) MP 1779

Analyses of linear sea ice models with an ice margin. Lepparanta, M., (1984, p.31-36) MP 1782

Role of sea ice dynamics in modeling CO_2 increases. Hibler, W.D., III. (1984, p.238-253) MP 1769

Model simulations of 20 years of northern hemisphere sea-ice fluctuations. Walsh, J.E., et al. (1984, p.170-179) MP 1767

Crystalline structure of sea ice sheets used in modeling at the CRREL test basin. Gow, A.J., (1984, p.241-245) MP 1835

Exploration of a rigid ice model of frost heave. O'Neill, K., et al. (1985, p.281-296) MP 1880

Numerical simulation of Northern Hemisphere sea ice variability, 1951-1980. Walsh, J.E., et al. (1985, p.4847-4865) MP 1882

Modeling sea-ice dynamics. Hibler, W.D., III. (1985, p.549-579) MP 2001

Role of plastic ice interaction in marginal ice zone dynamics. Lepparanta, M., et al. (1985, p.11,899-11,909) MP 1566

Ice interaction with the U.S. Army ribbon bridge. Cotter-marsh, B.A., (1986, 18p.) CR 86-01

Coupled ice-mixed layer model for the Greenland Sea. Houssais, M.N., (1986, p.225-260) MP 2143

Electromagnetic properties of sea ice. Kovacs, A., et al. (1986, p.57-133) MP 2197

Coupled air-ice-ocean models. Hibler, W.D., III. (1987, p.131-137) MP 2412

Growth of EG/AD/S model ice in a small tank. Borland, S.L., (1988, p.47-53) MP 2319

Fracture toughness of urea model ice. Bentley, D.L., et al. (1988, p.289-297) MP 2368

Effect of stratigraphy on radar-altimetry data collected over ice sheets. Jezek, K.C., et al. (1988, p.60-63) MP 2458

Can relict crevasse plumes on antarctic ice shelves reveal a history of ice-stream fluctuation. MacAyeal, D.R., et al. (1988, p.77-82) MP 2460

Fracture experiments on freshwater and urea model ice. Bentley, D.L., et al. (1988, 152p.) MP 2502

Profile properties of undeformed first-year sea ice. Cox, G.F.N., et al. (1988, 57p.) CR 88-13

Ship model testing in level ice: an overview. Tatinclaux, J.C., (1988, 30p.) Cr 88-15

Model study of uplifting ice forces: the instrumentation. Zabilansky, L.J., (1988, p.745-748) MP 2487

On modeling the energetics of the ridging process. Hopkins, M.A., et al. (1989, p.175-178) MP 2683

Framework for control of dynamic ice breakup by river regulation. Ferrick, M.G., et al. (1989, 14p.) CR 89-12

Effect of ice pressure on marginal ice zone dynamics. Flato, G.M., et al. (1989, p.514-521) MP 2522

Penetration of floating ice sheets with cylindrical indenters. Sodhi, D.S., et al. (1989, p.104) MP 2600

Density of natural ice accretions related to meteorological icing parameters. Jones, K.F., (1990, p.477-496) MP 2705

Cavitating fixed sea ice model. Flato, G.M., et al. (1990, p.239-242) MP 2738

Ice navigation

Arctic marine navigation and ice dynamics—summary findings. Weeks, W.F., (1973, p.86-99) MP 2274

Third International Symposium on Ice Problems, 1975. Frankenstein, G.E., ed. (1975, 627p.) MP 845

Icebreaker simulation. Nevel, D.E., (1977, 9p.) CR 77-16

Ice and navigation related sedimentation. Wuebben, J.L., et al. (1978, p.393-403) MP 1133

Report of the ITTC panel on testing in ice, 1978. Frankenstein, G.E., et al. (1978, p.157-179) MP 1140

Performance of the St. Marys River ice booms, 1976-77. Perham, R.E., (1978, 13p.) CR 78-24

Break-up dates for the Yukon River, Pt.1. Rampart to Whitehorse, 1896-1978. Stephens, C.A., et al. (1979, c50 leaves) MP 1317

Evaluation of ice deflectors on the USCG icebreaker *Polar Star*. Vance, G.P., (1980, 37p.) SR 80-04

Cost of ice damage to shoreline structures during navigation. Carey, K.L., (1980, 33p.) SR 80-22

Ice laboratory facilities for solving ice problems. Frankenstein, G.E., (1980, p.93-103) MP 1301

Clearing ice-clogged shipping channels. Vance, G.P., (1980, 13p.) CR 80-28

Modeling hydrologic impacts of winter navigation. Daly, S.F., et al. (1981, p.1073-1080) MP 1445

Ice control at navigation locks. Hanamoto, B., (1981, p.1085-1095) MP 1448

Ice control arrangement for winter navigation. Perham, R.E., (1981, p.1096-1110) MP 1449

Hydraulic model study of Port Huron ice control structure. Calkins, D.J., et al. (1982, 54p.) CR 82-34

Marginal Ice Zone Experiment, Fram Strait. Greenland Sea, 1984. Johannessen, O.M., ed. (1985, 47p.) SR 85-12

Methods of ice control. Frankenstein, G.E., et al. (1985, p.204-215) MP 1642

Ice engineering facility. Zabilansky, L.J., et al. (1985, 12p. + fig.) MP 2088

Marginal ice zones: a description of air-ice-ocean interactive processes, models and planned experiments. Johannessen, O.M., et al. (1986, p.133-166) MP 1673

Navigation ice booms on the St. Marys River. Perham, R.E., (1986, 12p.) CR 86-04

Model tests in ice of a Canadian Coast Guard Pollar ice-breaker. Tatinclaux, J.C., (1986, 24p.) SR 86-06

Methods of ice control for water navigation in inland waters. Frankenstein, G.E., et al. (1986, p.126-135) MP 1831

Arctic sea ice and naval operations. Hosler, W.D., III, et al. (1986, p.87-91) MP 1994

Survey of ice problem areas in navigable waterways. Jones, J., et al. (1986, 32p.) SR 85-02

Determining the effectiveness of a navigable ice boom. Perham, R.E., (1986, 28p.) SR 85-17

Design and model testing of a river ice prow. Tatinclaux, J.C., (1986, p.137-150) MP 2132

International Offshore Mechanics and Arctic Engineering Symposium, 1987. (1987, 4 vols.) MP 2189

Effect of ice-floe size on propeller torque in ship-model tests. Tatinclaux, J.C., (1987, p.291-298) MP 2289

DOD floating ice problems. Cox, G.F.N., (1987, p.151-154) MP 2414

Ice conditions along the Ohio River, 1972-1985. Gunn, L.W., (1988, 162p.) SR 88-01

Inventory of ice problem sites and remedial ice control structures. Perham, R.E., (1988, 9p.) SR 88-07

Development of a river ice prow. Tatinclaux, J.C., et al. (1988, 26p.) CR 88-09

Water quality during winter river navigation seasons. Sletten, R.S., (1988, 56p.) SR 88-10

Development of a river ice-prow. Part 2. Tatinclaux, J.C., (1989, p.44-52) MP 2697

Ice control in river harbors and fleeting areas. Perham, R.E., (1988, 7p.) SR 88-12

Deployment of floating bridges in ice-covered rivers. Metzler, M., et al. (1988, 35p.) SR 88-20

Ice observations on the Allegheny and Monongahela rivers. Bilello, M.A., et al. (1988, 43p.) SR 88-25

Proceedings. (1989, 475p.) SR 88-39

Models of the mechanical properties of ice. Richter-Menge, J.A., et al. (1989, p.87-99) MP 2687

Comparative model tests in ice of a Canadian Coast Guard R-class icebreaker. Tatinclaux, J.C., et al. (1990, p.31-52) MP 2762

Ice needles

Small-scale testing of soils for frost action. Sayward, J.M., (1979, p.223-231) MP 1309

Soil tests for frost action and water migration. Sayward, J.M., (1979, 17 p.) SR 79-17

Ice nuclei

Elemental analyses of ice crystal nuclei and aerosols. Kumai, M., (1977, 5p.) MP 1191

Frazil ice formation in turbulent flow. Muller, A., et al. (1978, p.219-234) MP 1135

Ice openings

Lidar detection of leads in Arctic sea ice. Schnell, R.C., et al. (1989, p.530-532) MP 2002

Lidar-derived particle concentrations in plumes from arctic leads. Andreas, E.L., et al. (1990, p.9-12) MP 2750

Ice optics

Optical properties of salt ice. Lane, J.W., (1975, p.363-372) MP 856

Modeling of anisotropic electromagnetic reflection from sea ice. Golden, K.M., et al. (1990, p.247-296) MP 1325

Ice and snow optics in the polar oceans, Pt.1. Perovich, D.K., et al. (1986, p.232-241) MP 2295

Ice and snow optics in the polar oceans, Pt.2. Grenfell, T.C., et al. (1986, p.242-251) MP 2296

Optical properties of sea ice structure. Gow, A.J., (1986, p.264-271) MP 2297

Effects of water and ice layers on the scattering properties of diffuse reflectors. Jezek, K.C., et al. (1987, p.5163-5167) MP 2301

Two-stream multilayer, spectral radiative transfer model for sea ice. Perovich, D.K., (1989, 17p.) CR 89-15

Theoretical estimates of light reflection and transmission by spatially inhomogeneous and temporally varying ice covers. Perovich, D.K., (1990, p.45-49) MP 2739

Light reflection and transmission by sea ice covers. Perovich, D.K., (1990, p.9557-9567) MP 2761

Ice override

Experiments on ice ride-up and pile-up. Sodhi, D.S., et al. (1983, p.266-270) MP 1627

Alaska's Beaufort Sea coast ice ride-up and pile-up features. Kovacs, A., (1983, 51p.) CR 83-09

Sea ice on the Norton Sound and adjacent Bering Sea coast. Kovacs, A., (1983, p.658-666) MP 1699

Forces associated with ice pile-up and ride-up. Sodhi, D.S., et al. (1984, p.250-262) MP 1887

Shore ice override and pileup features, Beaufort Sea. Kovacs, A., (1984, 28p. + map) CR 84-26

Offshore ice pileup and override. Kovacs, A., et al. (1984, p.108-142) MP 2336

Ice physics

Physics of ice. Glen, J.W., (1974, 81p.) M II-Cln

Snow and ice. Colbeck, S.C., et al. (1975, p.455-461, 475-487) MP 866

Magnetic and acoustic ambulance as a mechanism for sea ice cracking. Ackley, S.F., et al. (1976, p.85-94) MP 1379

Grounded ice along the Alaskan Beaufort Sea coast. Kovacs, A. (1976, 21p.) CR 76-32

Sea ice properties and geometry. Weeks, W.F., (1976, p.137-171) MP 918

Sea ice conditions in the Arctic. Weeks, W.F., (1976, p.176-206) MP 910

Seasonal variations in apparent sea ice viscosity on the geophysical scale. Hibler, W.D., III, et al. (1977, p.87-96) MP 980

Ice and snow at high altitudes. Mellor, M., (1977, 10p.) MP 1121

Review of Ice Physics by P.V. Hobbs. Ackley, S.F., (1977, p.161-182) MP 937

Abnormal internal friction peaks in single-crystal ice. Stallman, P.E., et al. (1977, 15p.) SR 77-23

Some elements of iceberg technology. Weeks, W.F., et al. (1978, p.45-98;) MP 1616

Internal properties of the ice sheet at Cape Folger by radio echo sounding. Kelleher, T.E., et al. (1978, 12p.; CR 78-04

Computer modeling of atmospheric ice accretion. Ackley, S.F., et al. (1979, 36p.) CR 79-04

Some results from a linear-viscous model of the Arctic ice cover. Hibler, W.D., III, et al. (1979, p.293-304;) MP 1241

Overview on the seasonal sea ice zone. Weeks, W.F., et al. (1979, p.320-337;) MP 1320

Ice sheet internal reflections. Ackley, S.F., et al. (1979, p.5675-5680;) MP 1319

Crystal alignments in the fast ice of Arctic Alaska. Weeks, W.F., et al. (1980, p.1157-1164;) MP 1277

Conference on Computer and Physical Modeling in Hydraulic Engineering, 1980. Ashton, G.D., ed. (1980, 492p.; MP 1321

Heat and mass transfer from freely falling drops at low temperatures. Zuelig, J.P., (1963, 14p.; CR 80-18

Sea ice: the potential of remote sensing. Weeks, W.F., (1981, p.39-48;) MP 1466

Modeling pressure ridge buildup on the geophysical scale. Hibler, W.D., III, (1982, p.141-155;) MP 1590

Physical properties of the ice cover of the Greenland Sea. Weeks, W.F., (1982, 27p.; SR 82-28

Chemical fractionation of brine in the McMurdo Ice Shelf. Cragin, J.H., et al. (1983, 16p.; CR 83-06

Thermal patterns in ice under dynamic loading. Fish, A.M., et al. (1983, p.260-263;) MP 1742

Stress measurements in ice. Cox, G.F.N., et al. (1983, 31p.; CR 83-23

Possibility of anomalous relaxations due to the charged dislocation process. Engelis, K., (1983, p.4261-4264;) MP 1669

Effect of X-ray irradiation on internal friction and dielectric relaxation of ice. Engelis, K., et al. (1983, p.4314-4317;) MP 1670

Army research could reduce dangers posed by sea ice. Tucker, W.B., (1984, p.20-24;) MP 2168

4th report of working group on testing methods in ice. Earle, E.N., et al. (1984, p.1-41;) MP 1886

Mesoscale ice-ocean-ice interaction experiments. Johannessen, O.M., ed. (1984, 176p.; SR 84-29

Sea ice properties. Tucker, W.B., et al. (1984, p.82-85;) MP 2136

Discrete reflections from thin layers of snow and ice. Jezek, K.C., et al. (1984, p.323-331;) MP 1871

Ice island fragment in Stefansson Sound, Alaska. Kovacs, A., (1985, p.101-115;) MP 1900

Physical properties of sea ice in the Greenland Sea. Tucker, W.B., et al. (1985, p.177-181;) MP 1903

Pressure ridge and sea ice properties Greenland Sea. Tucker, W.B., et al. (1985, p.214-223;) MP 1935

Climatic factors in cold regions surface conditions. Bilello, M.A., (1985, p.508-517;) MP 1961

Physical properties of the sea ice cover. Weeks, W.F., (1986, p.87-102;) MP 2047

Winter marginal ice zone experiments, Fram Strait, Greenland Sea, 1987-89. Davidson, K., ed. (1986, 57p.; SR 86-09

River and lake ice engineering. Ashton, G.D., ed. (1986, 485p.; MP 2144

Ice forces on bridge piers. Haynes, F.D., (1986, p.93-101;) MP 2160

Chemical fractionation of brine in McMurdo Ice Shelf. Cragin, J.H., et al. (1986, p.367-373;) MP 2239

Perspectives in ice technology. Ashton, G.D., (1986, 6p.; MP 2286

Field techniques for obtaining engineering characteristics of frazil ice accumulations. Daly, S.M., Jr., (1986, p.265-278;) MP 2299

Advances in sea ice mechanics in the USA. Sodhi, D.S., et al. (1987, p.37-69;) MP 2308

Physical properties of sea ice discharged from Fram Strait. Cox, G.F.N., et al. (1987, p.456-459;) MP 2204

Physical properties of summer sea ice in the Fram Strait. Tucker, W.B., et al. (1987, p.675-680;) MP 2260

Physical properties of extensive sea ice in Great Bay, New Hampshire. Meese, D.A., et al. (1987, p.533-536;) MP 2251

Physical properties of summer sea ice in the Fram Strait, June-July 1984. Cox, G.F.N., et al. (1987, 81p.; CR 87-12

Physical and structural characteristics of Weddell Sea pack ice. Cox, G.F.N., et al. (1987, 50p.; CR 87-14

Modeling the electromagnetic properties/signatures of sea ice. Part 1. Kovacs, A., et al. (1987, p.26-35;) MP 2330

DOD floating ice problems. Cox, G.F.N., (1987, p.141-154;) MP 2418

Single-layer reflectometers for in-situ dielectric measurements at microwave frequencies. Vickers, S.S., et al. (1988, p.89-92;) MP 2393

Conference on Offshore Mechanics and Arctic Engineering, 7th, 1988, Vol. 4. (1988, 445p.; MP 2317

Overview of the physical properties of sea ice. Tucker, W.B., (1988, p.71-88;) MP 2435

Preliminary results of an experiment using a 16-ft x 98-ft long fixed collector line array. Perham, R.E., (1988, p.149-156;) MP 2474

Passive microwave in situ observations of winter Weddell Sea ice. Comiso, J.C., et al. (1989, p.10,891-10,905;) MP 2655

Proceedings. (1989, 475p.; SR 89-39

Models of the mechanical properties of ice. Richter-Menge, J.A., et al. (1989, p.87-99;) MP 2687

W.F. Weeks Sea Ice Symposium, San Francisco, CA, Dec. 1988. Ackley, S.F., ed. (1990, 299p.; M 90-01

Physical properties of brackish ice, Bay of Bothnia. Weeks, W.F., et al. (1990, p.5-15;) MP 2725

Physical properties of sea ice from the Weddell Sea. Eicken, H., et al. (1990, p.28-32;) MP 2727

Ice pileup

International Workshop on the Seasonal Sea Ice Zone, Monterey, California, Feb. 26-Mar.1, 1979. Anderson, B.G., ed. (1980, 357p.; MP 1292

Shore ice pile-up and ride-up: field observations, models, theoretical analyses. Kovacs, A., et al. (1980, p.209-298;) MP 1295

Sea ice piling at Fairway Rock, Bering Strait, Alaska. Kovacs, A., et al. (1981, p.985-1000;) MP 1460

Dynamics of near-shore ice. Kovacs, A., et al. (1981, p.125-135;) MP 1599

Modeling pressure ridge buildup on the geophysical scale. Hibler, W.D., III, (1982, p.141-155;) MP 1590

On forecasting mesoscale ice dynamics and build-up. Hibler, W.D., III, et al. (1983, p.110-113;) MP 1625

Experiments on ice ride-up and pile-up. Sodhi, D.S., et al. (1983, p.266-270;) MP 1627

Alaska's Beaufort Sea coast ice ride-up and pile-up features. Kovacs, A., (1983, 51p.; CR 83-09

Sea ice on the Norton Sound and adjacent Bering Sea coast. Kovacs, A., (1983, p.654-666;) MP 1699

Method of detecting voids in rubbled ice. Tucker, W.B., et al. (1984, p.183-188;) MP 1772

Forces associated with ice pile-up and ride-up. Sodhi, D.S., et al. (1984, p.259-262;) MP 1887

Shore ice override and pileup features, Beaufort Sea. Kovacs, A., (1984, 28p. + map; CR 84-26

Onshore ice pileup and override. Kovacs, A., et al. (1988, p.108-142;) MP 2336

Ice plasticity

Seismic exploration in cold regions. Roethlisberger, H., (1972, 139p.; M 11-A2a

Preliminary results of ice modeling in the East Greenland area. Tucker, W.B., et al. (1981, p.867-872;) MP 1458

Modeling mesoscale ice dynamics. Hibler, W.D., III, et al. (1981, p.1317-1329;) MP 1526

Ice dynamics. Hibler, W.D., III, (1984, 52p.; M 84-03

Dielectric properties of strained ice. I. Effect of plastic straining. Engelis, K., (1987, p.143-147;) MP 2356

ICE PRESSURE

Ice pressure on engineering structures. Michel, B., (1970, 71p.; M III-B1b

Ice pressure

Ice forces on vertical piles. Nevel, D.E., et al. (1972, p.104-114;) MP 1024

Structures in ice-covered waters. Ames, A., (1972, p.93-97;) MP 1046

Depth of water-filled crevasses of glaciers. Weertman, J., (1973, p.139-145;) MP 1068

Classification and variation of sea ice ridging in the Arctic basin. Hibler, W.D., III, et al. (1974, p.127-146;) MP 1022

Ice forces on model structures. Zabilansky, L.J., et al. (1975, p.400-407;) MP 863

Statistical variations in Arctic sea ice ridging and deformation rates. Hibler, W.D., III, (1975, p.31-51;) MP 850

Ice forces on simulated structures. Zabilansky, L.J., et al. (1975, p.387-390;) MP 864

Forces on an ice boom in the Pennsylvania Canal. Perham, R.E., et al. (1975, p.397-407;) MP 858

Gas inclusions in the Antarctic ice sheet. Gow, A.J., et al. (1975, p.5101-5108;) MP 847

Freeze damage prevention in utility distribution lines. McFadden, T., (1977, p.222-231;) MP 929

Ice forces on vertical piles. Nevel, D.E., et al. (1977, 9p.; CR 77-10

Freeze damage prevention for utility lines. McFadden, T., (1977, p.12-16;) MP 953

Interaction of ice forces along an inclined wedge. Tryde, P., (1977, 26p.; CR 77-26

Ice and ship effects on the St. Marys River ice booms. Perham, R.E., (1978, p.223-230;) MP 1617

Ice cover forces on structures. Kerr, A.D., (1978, p.123-132;) MP 879

Sawing of model ice floes at bridge piers. Calkins, D.J., (1978, p.655-667;) MP 1134

Horizontal forces exerted by floating ice on structures. Kerr, A.D., (1978, 92p.; CR 78-15

Performance of the St. Marys River ice booms, 1976-77. Perham, R.E., (1978, 17p.; CR 78-26

River ice. Ashton, G.D., (1979, p.369-492;) MP 1216

Ice forces on the Yukon River bridge. 1978 breakup. Johnson, P.R., et al. (1979, 80p.; MP 1304

Buckling analysis of wedge-shaped floating ice sheets. Sodhi, D.S., (1979, p.797-810;) MP 1232

Ice-ring shear through ice-rigged channels by warping and wedging. Meese, M., (1979, 21p.; CR 79-21

Cost of ice damage to shoreline structures during navigation. Carey, K.L., (1980, 33p.; SR 80-22

Working group on ice forces on structures. Carstens, T., ed. (1980, 144p.; SR 80-26

Review of buckling analyses of ice sheets. Sodhi, D.S., et al. (1980, p.131-146;) MP 1322

Ship resistance in thick brash ice. Mellor, M., (1980, p.305-321;) MP 1329

Ice force measurement on the Yukon River bridge. McFadden, T., et al. (1981, p.749-777;) MP 1396

Dynamic ice-structure interaction analysis for narrow vertical structures. Eranti, E., et al. (1981, p.472-479;) MP 1456

State of the art of ship model testing in ice. Vance, G.P., (1981, p.693-706;) MP 1573

Sea ice rubble formations in the Bering Sea and Norton Sound, Alaska. Kovacs, A., (1981, 23p.; SR 81-34

Force measurements and analysis of river ice breakup. Deck, D.S., (1982, p.303-336;) MP 1739

Bering Strait sea ice and the Fairway Rock icefoot. Kovacs, A., et al. (1982, 40p.; CR 82-31

Dynamic ice-structure interaction during continuous crushing. Määttänen, M., (1983, 48p.; CR 83-05

Ice forces on model marine structures. Haynes, F.D., et al. (1983, p.778-787;) MP 1486

Dynamic buckling of floating ice sheets. Sodhi, D.S., (1983, p.822-833;) MP 1607

Ice forces on model bridge piers. Haynes, F.D., et al. (1983, 11p.; CR 83-19

Measurement of ice forces on structures. Sodhi, D.S., et al. (1983, p.139-155;) MP 1641

Ice action on two cylindrical structures. Kato, K., et al. (1983, p.159-166;) MP 1643

Characteristics of multi-year pressure ridges. Kovacs, A., (1983, p.173-182;) MP 1698

Ice forces on a bridge pier, Ottauquechee River, Vermont. Sodhi, D.S., et al. (1983, 6p.; CR 83-32

Ice action on two cylindrical structures. Kato, K., et al. (1984, p.107-112;) MP 1741

Dependence of crushing specific energy on the aspect ratio and the structure velocity. Sodhi, D.S., et al. (1984, p.363-374;) MP 1788

Crushing ice forces on cylindrical structures. Morris, C.E., et al. (1984, p.1-9;) MP 1836

Ice forces on inclined model bridge piers. Haynes, F.D., et al. (1984, p.1167-1177;) MP 2007

Preliminary investigations of thermal ice pressures. Cox, G.F.N., (1984, p.221-229;) MP 1788

Ice forces on rigid, vertical, cylindrical structures. Sodhi, D.S., et al. (1984, 36p.; CR 84-33

Ice block stability. Daly, S.F., (1984, p.544-548;) MP 1972

Sheet ice forces on a conical structure: an experimental study. Sodhi, D.S., et al. (1985, p.46-54;) MP 1915

Sheet ice forces on a conical structure, an experimental study. Sodhi, D.S., et al. (1985, p.643-655;) MP 1986

Experience with a biaxial ice stress sensor. Cox, G.F.N., (1985, p.252-258;) MP 1937

Instrumentation for an updating ice force model. Zabilansky, L.J., (1985, p.1430-1435;) MP 2091

Ice cover research--present state and future needs. Kerr, A.D., et al. (1986, p.384-399;) MP 2006

Impact ice force and pressure. An experimental study with sheet ice. Sodhi, D.S., et al. (1986, p.569-576;) MP 2037

Flexural and buckling failure of floating ice sheets against structures. Sodhi, D.S., (1986, p.339-359;) MP 2134

Model study of ice forces on a single pile. Zabilansky, L.J., (1986, p.77-87;) MP 2308

Corps of engineers sea ice solutions. Frankenstein, G.E., (1987, p.5-7;) MP 2219

Kadlik ice stress measurement program. Cox, G.F.N., (1987, p.100-107;) MP 2298

Ice stress measurements around offshore structures. Johnson, J.B., (1988, p.55-59;) MP 2611

Results from indentation tests on freshwater ice. Sodhi, D.S., et al. (1988, p.341-350;) MP 2095

Modeling ice resistant forces on an ice boom. Perham, R.E., (1988, p.194-206;) MP 2096

Mukluk ice stress measurement program. Cox, G.F.N., (1988, p.11-15;) MP 2618

Working group on ice forces. 4th state-of-the-art report. Timco, G.W., ed. (1989, 51p.; SR 89-05

Compressive strength of anisotropic frazil ice. Richter-Menge, J.A., et al. (1989, p.269-278;) MP 2621

Effect of ice pressure on marginal ice zone dynamics. Pease, G.M., et al. (1989, p.516-521;) MP 2522

Effect of pressure on kinetic friction of ice. Tabandeh, J.C., (1989, p.127-135;) MP 2680

Ice prevention

Ice removal from the walls of navigation locks. Frankenstein, G.E., et al. (1976, p.1487-1496;) MP 888

Numerical simulation of air bubbler systems. Ashton, G.D., (1977, p.764-778;) MP 936

Ice accumulation on ocean structures. Mizuki, I.D., (1977, 82p.; CR 77-17

Lock wall drawing. Hausmann, B., (1977, p.7-16;) MP 972

Numerical simulation of air bubbler systems. Ashton, G.D., (1978, p.231-242;) MP 1618

Ice prevention *(cont.)*
Seeking low ice adhesion Sayward, J.M., (1979, 83p) SR 79-11
Freezing problems with wintertime wastewater spray irrigation. Bouzoun, J R., (1979, 12p.) SR 79-12
Deicing a satellite communication antenna Hanamoto, B., et al, (1980, 14p) SR 80-18
Ice adhesion tests on coatings subjected to rain erosion. Minsk, L.D., (1980, 14p) SR 80-28
Icing on structures Minsk, L D, (1980, 18p) CR 80-31
Hydraulic model study of a water intake under frazil ice conditions. Tantillo, T.J., (1981, 11p.) CR 81-03
River ice suppression by side channel discharge of warm water. Ashton, G D, (1982, p 65-80) MP 1528
Performance of a point source bubbler under thick ice. Haynes, F D, et al, (1982, p.111-124) MP 1529
Lake water intakes under icing conditions. Dean, A.M., Jr., (1983, 7p.) CR 83-15
How effective are icephobic coatings. Minsk, L D., (1983, p.93-95) MP 1634
Aerostat icing problems Hanamoto, B., (1983, 29p.) SR 83-23
Ice observation program on the semisubmersible drilling vessel SEDCO 708 Minsk, L.D., (1984, 14p) SR 84-02
Atmospheric icing on sea structures Makkonen, L., (1984, 92p) M 84-02
Polyethylene glycol as an ice control coating Itagaki, K., (1984, 11p.) CR 84-28
Methods to reduce ice accumulation on miter gate recess walls. Rand, J.H., et al, (1989, 5p) MP 2723
Reduced winter leakage in gates with J-seals Rand, J.H., et al, (1989, 3p) MP 2724
Evaluation of shear strength of freshwater ice adhered to icephobic coatings. Mulherin, N D., (1990, p 149-154) MP 2578

Ice push
Ice pile-up and ride-up on Arctic and subarctic beaches Kovacs, A., et al, (1979, p 127-146) MP 1230
Ice pile-up and ride-up on arctic and subarctic beaches Kovacs, A., et al, (1981, p.247-273) MP 1538
Bank conditions and erosion along selected reservoirs Gatto, L W, et al, (1987, p 143-154) MP 2196

Ice rafting
Pebble fabric in an ice-rafted diamicton. Domack, E.W., et al, (1985, p 577-591) MP 1959
Bank conditions and erosion along selected reservoirs. Gatto, L.W., et al, (1987, p 143-154) MP 2196

Ice refrigeration
Isua, Greenland glacier freezing study. Ashton, G D, (1978, p 256-264) MP 1174

Ice relaxation
Charged dislocation in ice. 2 Contribution of dielectric relaxation. Itagaki, K, (1982, 15p) CR 82-07
Possibility of anomalous relaxation due to the charged dislocation process Itagaki, K, (1983, p 4261-4264) MP 1669
Effect of X-ray irradiation on internal friction and dielectric relaxation of ice Itagaki, K, et al, (1983, p 4314-4317) MP 1670
Discussion Electromagnetic properties of sea ice by R M Morey, A Kovacs and G F.N Cox Arcone, S A, (1984, p.93-94) MP 1821
Authors' response to discussion on Electromagnetic properties of sea ice Morey, R M, et al, (1984, p 95-97) MP 1822
Dielectric properties of strained ice 1: Effect of plastic straining Itagaki, K, (1987, p 143-147) MP 2356
Strain energy failure criterion for S2 freshwater ice in flexure Cole, D.M, (1988, p 206-215) MP 2494

Ice removal
Use of explosives in removing ice jams Frankenstein, G E, et al, (1970, 10p) MP 1021
Winter maintenance research needs Minsk, L D, (1975, p 36-38) MP 950
De-icing using lasers. Lane, J W, et al, (1976, 25p) CR 76-10
Investigation of water jets for lock wall deicing. Calkins, D.J., et al, (1976, p G2/13-22) MP 865
Ice removal from the walls of navigation locks Frankenstein, G.E, et al, (1976, p 1487-1496) MP 888
De-icing of radomes and lock walls using pneumatic devices Ackley, S F, et al, (1977, p 467-478) MP 1064
Ice accumulation on ocean structures Minsk, L.D, (1977, 42p) CR 77-17
Lock wall deicing studies Hanamoto, B, ed, (1977, 68p) SR 77-22
Lock wall deicing. Hanamoto, B., (1977, p 7-14) MP 972
Lock wall deicing with high velocity water jet at Soo Locks, Mi Calkins, D J, et al, (1977, p 23-35) MP 973
Laboratory experiments on lock wall deicing using pneumatic devices Itagaki, K, et al, (1977, p 53-68) MP 974
Interaction of a surface wave with a dielectric slab discontinuity Arcone, S A., et al, (1978, 10p) CR 78-08
Ice releasing block-copolymer coatings Jellinek, H H G, et al, (1978, p 544-551) MP 1141
Current research on snow and ice removal in the United States Minsk, L.D, (1978, p 21-22) MP 1199
Seeking low ice adhesion. Sayward, J.M., (1979, 83p) SR 79-11
Point source bubbler systems to suppress ice Ashton, G.D., (1979, 12p) CR 79-12
Freezing and thawing tests of liquid deicing chemicals on selected pavement materials Minsk, L.D., (1979, p 51-58) MP 1220
Point source bubbler systems to suppress ice Ashton, G.D., (1979, p.93-100) MP 1326
Clearing ice-clogged shipping channels. Vance, G.P., (1980, 13p) CR 80-28
Self-shedding of accreted ice from high-speed rotors Itagaki, K, (1983, p 1-6) MP 1719
Mechanical ice release from high-speed rotors. Itagaki, K, (1983, 8p.) CR 83-26
Strategies for winter maintenance of pavements and roadways. Minsk, L.D., et al, (1984, p.155-167) MP 1964
Snow and ice prevention in the United States Minsk, L D., (1986, p 37-42) MP 1874
Conductor twisting resistance effects on ice build-up and ice shedding. Govoni, J.W., et al, (1986, 8p + figs.) MP 2108
Pneumatically de-iced ice detector—final report, phase 2, part 1 Franklin, C H, et al, (1986, 9p + appends) MP 2249
Harbor design for ice conditions Wortley, C A., (1987, p 14-15) MP 2588
Self-shedding of accreted ice from high-speed rotors. Itagaki, K, (1987, p.95-100) MP 2278
Development of a river ice prow Tatinclaux, J C, et al, (1988, 26p) CR 88-09
Ice removal from broadcast towers by low-frequency vibrations Mulherin, N.D., et al, (1988, 6p) MP 2538
Deployment of floating bridges in ice-covered rivers Mellor, M., et al, (1988, 38p) SR 88-20
Evaluation of shear strength of freshwater ice adhered to icephobic coatings Mulherin, N.D., (1990, p 149-154) MP 2578

Ice reporting
Meso-scale strain measurements on the Beaufourt sea pack ice (AIDJEX 1971). Hibler, W.D., III, et al, (1974, p.119-138) MP 1035
Measurement of mesoscale deformation of Beaufort sea ice (AIDJEX-1971). Hibler, W D, III, et al, (1978, p 148-172) MP 1179
Data reduction of GOES information from DCP networks DeCoff, G.W., et al, (1989, 15p) SR 89-29

Ice resistivity
Conductivity and surface impedance of sea ice McNeill, D, et al, (1971, 19p plus diagrams) MP 1071

Ice roads
Mechanical properties of snow used as construction material Wuori, A.F., (1975, p 157-164) MP 1057
Cantilever beam tests on reinforced ice Ohstrom, E.G., et al, (1976, 12p) CR 76-07
Surface protection measures for the Arctic Slope, Alaska Johnson, P.R., (1978, p 202-205) MP 1519
Snow and ice roads in the Arctic Johnson, P R, (1979, p 1063-1071) MP 1223
Ice thickness-tensile stress relationship for load-bearing ice Johnson, P R., (1980, 11p) SR 80-09

Ice runways
Mechanical properties of snow used as construction material. Wuori, A F, (1975, p 157-164) MP 1057
The strength of natural and processed snow Abele, G, (1975, p 176-186) MP 1058
Runway site survey, Pensacola Mountains, Antarctica Kovacs, A, et al, (1977, 45p) SR 77-14
Hard-surface runways in Antarctica Mellor, M, (1988, 87p) SR 88-13
Improved techniques for construction of snow roads and airstrips Lee, S M, et al, (1988, 99p) SR 88-18
Planing machines for building runways on ice Mellor, M, (1989, 8p + attachments) MP 2505
Ice runways near the South Pole Swithinbank, C, (1989, 42p) SR 89-19
Airfields on antarctic glacier ice. Mellor, M, et al, (1989, 97p) CR 89-21

Ice salinity
Sea ice studies in the Weddell Sea region aboard USCGC *Burton Island* Ackley, S F, (1977, p 172-173) MP 1014
Modeling of anisotropic electromagnetic reflections from sea ice Golden, K M, et al, (1981, p 8107-8116) MP 1469
Growth, structure, and properties of sea ice Weeks, W F, et al, (1982, 130p) M 82-01
Using sea ice to measure vertical heat flux in the ocean McPhee, M G, et al, (1982, p 2071-2074) MP 1521
Equations for determining the gas and brine volumes in sea ice samples Cox, G F N, et al, (1982, 11p) CR 82-30
McMurdo Ice Shelf brine zone Kovacs, A, et al, (1982, 28p) CR 82-39
Chemical fractionation of brine in the McMurdo Ice Shelf Cragin, J.H., et al, (1983, 16p) CR 83-06
Ice properties in the Greenland and Barents Seas during summer Overgaard, S, et al, (1983, p 142-164) MP 2062
Thermal expansion of saline ice Cox, G.F.N, (1983, p.425-432) MP 1768
Horizontal salinity variations in sea ice. Tucker, W.B., et al, (1984, p 6505-6514) MP 1761
Structure, salinity and density of multi-year sea ice pressure ridges Richter-Menge, J.A., et al, (1985, p.194-198) MP 1857
Ice electrical properties Gow, A.J., (1985, p 76-82) MP 1910
Dielectric properties at 4.75 GHz of saline ice slabs. Arcone, S.A., et al, (1985, p.83-86) MP 1911
Structure, salinity and density of multi-year sea ice pressure ridges Richter-Menge, J.A., et al, (1985, p 493-497) MP 1965
Ice properties in a grounded man-made ice island Cox, G F N, et al, (1986, p.135-142) MP 2032
Chemical fractionation of brine in McMurdo Ice Shelf. Cragin, J H., et al, (1986, p.307-313) MP 2239
Sea ice salinity and porosity changes during storage. Cox, G.F.N, et al, (1986, p 371-375) MP 2244
Compressive behavior of saline ice Richter-Menge, J A., (1986, p.331-350) MP 2200
Small-scale projectile penetration in saline ice Cole, D M, et al, (1986, p 415-438) MP 2201
Microwave dielectric, structural and salinity properties of sea ice. Arcone, S A., et al (1986, p 832-839) MP 2188
Sea-ice crystal structure and salinity, Hebron Fiord, Labrador. Gow, A.J., (1987, 18p) CR 87-04
Microwave and structural properties of saline ice. Gow, A.J, et al, (1987, 36p) CR 87-20
Multifrequency passive microwave observation of saline ice grown in a tank Grenfell, T C., et al, (1988, p 1687-1690) MP 2459
Profile properties of undeformed first-year sea ice Cox, G.F N., et al, (1988, 57p) CR 88-13
Numerical simulation of first-year sea ice. Cox, G.F.N., et al, (1988, p.12,449-12,460) MP 2404
Field studies of brackish ice to compare with satellite data. Weeks, W.F, et al, (1989, p 1318-1333) MP 2763
Cyclic loading of saline ice: initial experimental results. Cole, D.M, (1990, p 265-271) MP 2581

Ice sampling
Preparation of polycrystalline ice specimens for laboratory experiments Cole, D M., (1979, p 153-159) MP 1327
System for mounting end caps on ice specimens Cole, D.M, et al, (1985, p 362-365) MP 2016
Development of a frazil ice sampler. Brockett, B.E, et al, (1986, 12p) SR 86-37
Dielectric properties of strained ice 2 Effect of sample preparation method Itagaki, K, et al, (1987, p 149-153) MP 2357
Update on portable hot-water sea ice drilling Govoni, J.W., et al, (1989, p 175-178) MP 2479
Cryogenic sampling of frazil ice deposits Chacho, E.F., Jr., et al, (1989, 6p) SR 89-28
First impressions of the comet drilling problem Mellor, M, (1989, p 229-232) MP 2592

Ice scoring
Study of a grounded floeberg near Reindeer Island, Alaska. Kovacs, A, (1977, 9p) MP 1751
Distribution and features of bottom sediments in Alaskan coastal waters Sellmann, P V, (1980, 50p) SR 80-15
Sediment displacement in the Ottauquechee River—1975-1978 Martinson, C.R., (1980, 14p) SR 80-20
Dynamics of near-shore ice. Kovacs, A., et al, (1981, p 125-135) MP 1599
Subsea trenching in the Arctic Mellor, M, (1981, 31p) CR 81-17
Ice scoring on the Alaskan shelf of the Beaufort Sea. Weeks, W F, et al, (1983, 34p + map) CR 83-21
Offshore oil in the Alaskan Arctic. Weeks, W.F., et al, (1984, p 371-378) MP 1743
Some probabilistic aspects of ice gouging on the Alaskan Shelf of the Beaufort Sea Weeks, W F, et al, (1984, p 213-236) MP 1838
Study of sea ice induced gouges in the sea floor. Weeks, W F, et al, (1985, p 126-135) MP 1917
Ice gouge formation and infilling, Beaufort Sea Weeks, W F, et al, (1985, p 393-407) MP 1904
Numerical simulation of sea ice induced gouges on the shelves of the polar oceans Weeks, W F., et al, (1985, p.259-265) MP 1938
Ice gouge hazard analysis. Lanan, G A., et al, (1986, p 57-66) MP 2106
Preliminary simulation of the formation and infilling of sea ice gouges Weeks, W F, et al, (1986, p.259-268) MP 2218
Bank conditions and erosion along selected reservoirs Gatto, L W, et al, (1987, p 143-154) MP 2196
Preliminary study of scour under an ice jam Wuebben, J L, (1988, p 177-192) MP 2475
Dynamic simulations of iceberg-seabed interactions Bass, D W, et al, (1989, p 137-151) MP 2684

Ice sheets
Oxygen isotope profiles through ice sheets Johnsen, S J, et al, (1972, p 429-434) MP 997
Surface-wave dispersion in Byrd Land Acharya, H K, (1972, p.955-959) MP 992

Stability of Antarctic ice. Weertman, J., (1975, p 159) MP 1042

Snow and ice. Colbeck, S.C., et al, (1975, p 435-441, 475-487) MP 844

Gas inclusions in the Antarctic ice sheet. Gow, A.J., et a (1975, p 5101-5108) MP 84.

Glaciology's grand unsolved problem. Weertman, J., (1976, p 284-286) MP 1056

Resurvey of the "Byrd" Station, Antarctica, drill hole. Garfield, D.E., et al, (1976, p.29-34) MP 846

Internal structure and crystal fabrics of the West Antarctic ice sheet. Gow, A.J, et al, (1976, 25p.) CR 76-35

Geodetic positions of borehole sites in Greenland. Mock, S.J., (1976, 7p) CR 76-41

Crystal fabrics of West Antarctic ice sheet. Gow, A.J., et al, (1976, p.1665-1677) MP 1382

Atmospheric trace metals and sulfate in the Greenland Ice Sheet. Herron, M M., et al, (1977, p.915-920) MP 949

Changes in the composition of atmospheric precipitation. Cragin, J.H., et al, (1977, p 617-631) MP 1079

Internal properties of the ice sheet at Cape Folger by radio echo sounding Keliher, T.E., et al, (1978, 12p) CR 78-04

Creep rupture at depth in a cold ice sheet Colbeck, S C, et al, (1978, p.733) MP 1168

Ultrasonic investigation on ice cores from Antarctica. Kohnen, H, et al, (1979, 16p) CR 79-10

Extending the useful life of DYE-2 to 1986, Part 1 Tobiasson, W., et al, (1979, 15p.) SR 79-27

Ultrasonic investigation on ice cores from Antarctica Kohnen, H., et al, (1979, p 4865-4874) MP 1239

Ice sheet internal reflections Ackley, S F, et al, (1979, p 5675-5680) MP 1319

Ultrasonic tests of Byrd Station ice cores. Gow, A J, et al, (1979, p.147-153) MP 1282

Margin of the Greenland ice sheet at Isua. Colbeck, S C., et al, (1979, p.155-165) MP 1281

Some promising trends in ice mechanics Assur, A., (1980, p.1-15) MP 1300

Review of buckling analyses of ice sheets Sodhi, D S., et al, (1980, p.131-146) MP 1322

Dynamics of snow and ice masses Colbeck, S.C, ed, (1980, 468p.) MP 1297

Planetary and extraplanetary event records in polar ice caps. Zeller, E J, et al, (1980, p 18-27) MP 1461

Alaska Good Friday earthquake of 1964 Swinzow, G K, (1982, 26p.) CR 82-01

Determining the characteristic length of model ice sheets. Sodhi, D.S., et al, (1982, p.99-104) MP 1570

Ice sheet retention structures. Perham, R E., (1983, 33p) CR 83-30

Experimental determination of buckling loads of cracked ice sheets Sodhi, D S, et al, (1984, p.183-186) MP 1687

Ice sheet retention structures Perham, R E., (1984, p 339-348) MP 1832

Borehole geometry on the Greenland and Antarctic ice sheets Jezek, K C, (1985, p 242-251) MP 1817

Determining the characteristic length of floating ice sheets by moving loads Sodhi, D.S, et al, (1985, p 155-159) MP 1855

Kadluk ice stress measurement program. Johnson, J B, et al, (1985, p 88-100) MP 1899

Sheet ice forces on a conical structure: an experimental study Sodhi, D.S., et al, (1985, p.643-655) MP 1906

Convective heat transfer in water over melting ice sheet Lunardini, V.J., (1986, p 42-51) MP 2600

Folding in the Greenland ice sheet Whillans, I M, et al, (1987, p 485-493) MP 2185

Glaciological investigations using the synthetic aperture radar imaging system Bindschadler, R A, et al, (1987, p 11-19) MP 2342

Effect of stratigraphy on radar-altimetry data collected over ice sheets Jezek, K C, et al, (1988, p 60-63) MP 2458

Ice-induced vibrations of structures Sodhi, D.S., (1989, p.189-221) MP 2492

Ice reinforced with Geogrid Haynes, F D, et al, (1989, p.179-185) MP 2484

Penetration of floating ice sheets with cylindrical indentors Sodhi, D.S, et al, (1989, p 104) MP 2688

Antarctic ice sheet brightness temperature variations Jezek, K C., et al, (1990, p 217-223) MP 2736

Ice shelves

Stability of Antarctic ice. Weertman, J, (1975, p.159) MP 1042

Snow and ice Colbeck, S C, et al, (1975, p 435-441, 475-487) MP 844

Melting and freezing of a drill hole through the Antarctic shelf ice. Tien, C, et al, (1975, p 421-432) MP 861

Glaciology's grand unsolved problem Weertman, J, (1976, p 284-286) MP 1056

Heat transfer in drill holes in Antarctic ice Yen, Y-C, et al, (1976, 15p.) CR 76-12

Engineering properties of sea ice Schwarz, J, et al, (1977, p 499-531) MP 1065

Stable isotope profile through the Ross Ice Shelf at Little America V, Antarctica. Dansgaard, W, et al, (1977, p.322-325) MP 1095

Dielectric constant and reflection coefficient of snow surface layers in the McMurdo Ice Shelf. Kovacs, A, et al, (1977, p.137-138) MP 1011

Subsurface measurements of the Ross Ice Shelf, McMurdo Sound, Antarctica. Kovacs, A, et al, (1977, p 146-148) MP 1013

Ross Ice Shelf Project drilling, October-December 1976. Rand, J.H., (1977, p.150-152) MP 1061

Some elements of iceberg technology Weeks, W F, et al, (1978, p 45-98) MP 1616

Ross Ice Shelf Project environmental impact statement July, 1974. Parker, B.C., et al, (1978, p.7-36) MP 1075

Core drilling through Ross Ice Shelf Zotikov, I A, et al, (1979, p 63-64) MP 1337

Antifreeze-thermodrilling, central Ross Ice Shelf Zotikov, I A., (1979, 12p.) CR 79-24

Dynamics of snow and ice masses. Colbeck, S.C, ed, (1980, 468p) MP 1297

Radar detection of sea ice and current alinement under the Ross Ice Shelf. Morey, R.M., et al, (1981, p 96-97) MP 1543

Brine zone in the McMurdo Ice Shelf, Antarctica Kovacs, A., et al, (1982, p 166-171) MP 1550

McMurdo Ice Shelf brine zone. Kovacs, A, et al, (1982, 28p) CR 82-39

Chemical fractionation of brine in the McMurdo Ice Shelf Cragin, J H, et al, (1983, 16p) CR 83-06

Changes in the Ross Ice Shelf dynamic condition Jezek, K.C., (1984, p 409-416) MP 2058

Modified theory of bottom crevasses. Jezek, K.C, (1984, p 1925-1931) MP 2059

Mass balance of a portion of the Ross Ice Shelf Jezek, K.C., et al, (1984, p.381-384) MP 1919

Rheology of glacier ice. Jezek, K C., et al, (1985, p.1335-1337) MP 1844

Numerical simulation of sea ice induced gouges on the shelves of the polar oceans. Weeks, W.F, et al, (1985, p 259-265) MP 1938

Structure of ice in the central part of the Ross Ice Shelf, Antarctica. Zotikov, I A., et al, (1985, p.39-44) MP 2110

Chemical fractionation of brine in McMurdo Ice Shelf Cragin, J.H., et al, (1986, p 307-313) MP 2239

Can relict crevasse plumes on antarctic ice shelves reveal a history of ice-stream fluctuation MacAyeal, D.R, et al, (1988, p 77-82) MP 2460

Ice solid interface

Radar imagery of ice covered North Slope lakes Weeks, W.F., et al, (1977, p 129-136) MP 923

Seeking low ice adhesion Sayward, J.M., (1979, 83p) SR 79-11

Working group on ice forces on structures Carstens, T, ed, (1980, 146p) SR 80-26

Dynamic ice-structure interaction analysis for narrow vertical structures Eranti, E., et al, (1981, p.472-479) MP 1456

Frost susceptibility of soil, review of index tests Chamberlain, E J., (1981, 110p) M 81-02

Frost susceptibility of soil, review of index tests. Chamberlain, E J., (1982, 110p) MP 1557

Dynamic ice-structure interaction during continuous crushing. Määttänen, M, (1983, 48p) CR 83-05

Adhesion of ice to polymers and other surfaces Itagaki, K, (1983, p 241-252) MP 1580

On forecasting mesoscale ice dynamics and build-up Hibler, W.D., III, et al, (1983, p.110-115) MP 1625

Method for determining ice loads on offshore structures. Johnson, J.B., (1983, p.124-128) MP 2056

Buckling loads of floating ice on structures Sodhi, D S, et al, (1983, p 260-265) MP 1626

Experiments on ice ride-up and pile-up. Sodhi, D S, et al, (1983, p 266-270) MP 1627

Ice forces on model marine structures Haynes, F.D, et al, (1983, p 778-787) MP 1606

Ice forces on model bridge piers Haynes, F D, et al, (1983, 11p) CR 83-19

Ice action on two cylindrical structures Kato, K, et al, (1983, p 159-166) MP 1643

Implications of surface energy in ice adhesion Itagaki, K., (1983, p 41-48) MP 1672

Offshore mechanics and Arctic engineering symposium, 1984 (1984, 3 vols) MP 1675

Experimental determination of buckling loads of cracked ice sheets. Sodhi, D S, et al, (1984, p 183-186) MP 1687

Ice action on two cylindrical structures. Kato, K, et al, (1984, p 107-112) MP 1741

Modeling the resilient behavior of frozen soils using unfrozen water content. Cole, D M, (1984, p 823-834) MP 1715

Laboratory investigation of the kinetic friction coefficient of ice Forland, K.A, et al, (1984, p 19-28) MP 1825

Crushing ice forces on cylindrical structures Morris, C E, et al, (1984, p 1-9) MP 1834

Computational mechanics in arctic engineering Sodhi, D S, (1984, p 351-374) MP 2072

Kinetic friction coefficient of ice Forland, K A., et al, (1985, 40p) CR 85-06

Real-time measurements of uplifting ice forces Zabilansky, L J, (1985, p 253-259) MP 2092

In-ice calibration tests for an elongate, uniaxial brass ice stress sensor Johnson, J B, (1985, p 506-510) MP 1966

Crushing of ice sheet against rigid cylindrical structures Sodhi, D.S., et al, (1986, p 1-12) MP 2018

Ice interaction with the U S. Army ribbon bridge. Coutermarsh, B A, (1986, 18p) CR 86-01

Flexural and buckling failure of floating ice sheets against structures. Sodhi, D.S, (1986, p.339-359) MP 2134

Friction of solids on ice. Huber, N P., et al, (1986, 4p) MP 2179

Ice beam moving against a sloping structure Sodhi, D.S., (1987, p 281-284) MP 2194

Parameters affecting the kinetic friction of ice Akkok, M, et al, (1987, p.552-561) MP 2258

Modelling trash rack freezeup by frazil ice. Daly, S F, (1987, p 101-106) MP 2305

Fracture toughness of urea model ice. Bentley, D.L, et al, (1988, p 289-297) MP 2348

Working group on ice forces. 4th state-of-the-art report Timco, G.W., ed, (1989, 385p) SR 89-05

Ice-induced vibrations of structures Sodhi, D.S., (1989, p 189-221) MP 2492

Penetration of floating ice sheets with cylindrical indentors. Sodhi, D.S., (1989, p 377-382) MP 2485

Model tests on an icebreaker at two friction factors Tatinclaux, J.C, (1989, p.774-784) MP 2622

Evaluation of shear strength of freshwater ice adhered to icephobic coatings Mulherin, N D., (1990, p.149-154) MP 2578

Ice spectroscopy

Colloquium on Water in Planetary Regoliths, Hanover, N H, Oct. 5-7, 1976. (1977, 161p.) MP 911

Thermal patterns in ice under dynamic loading Fish, A M, et al, (1983, p.240-243) MP 1742

Electromagnetic properties of sea ice Morey, R M., et al, (1984, p 53-75) MP 1776

Theoretical estimates of light reflection and transmission by spatially inhomogeneous and temporally varying ice covers. Perovich, D K, (1990, p 45-49) MP 2729

Ice strength

Interpretation of the tensile strength of ice under triaxial stress. Nevel, D.E., et al, (1976, p 375-387) MP 996

Interpretation of the tensile strength of ice under triaxial stresses. Nevel, D.E, et al, (1976, 9p) CR 76-05

Cantilever beam tests on reinforced ice Ohstrom, E G, et al, (1976, 12p) CR 76-07

Sea ice properties and geometry Weeks, W F., (1976, p 137-171) MP 918

Force estimate and field measurements of the St Marys River ice booms Perham, R E, (1977, 26p) CR 77-04

Measuring the uniaxial compressive strength of ice. Haynes, F D., et al, (1977, p.213-223) MP 1027

Effect of temperature and strain rate on the strength of polycrystalline ice Haynes, F D, (1977, p 107-111) MP 1127

Bearing capacity of river ice for vehicles Nevel, D.E, (1978, 22p) CR 78-03

Buckling pressure of an elastic floating plate Takagi, S., (1978, 49p) CR 78-14

Rheology of ice. Fish, A.M, (1978, 196p) MP 1988

Horizontal forces exerted by floating ice on structures Kerr, A.D, (1978, 9p) CR 78-15

Effect of temperature on the strength of snow-ice. Haynes, F.D, (1978, 25p) CR 78-27

Polycrystalline ice mechanics. Hooke, R.L., et al, (1979, 16p) MP 1207

Ice forces on the Yukon River bridge—1978 breakup Johnson, P.R, et al, (1979, 40p) MP 1304

Safe ice loads computed with a pocket calculator Nevel, D E, (1979, p 205-223) MP 1249

Application of the Andrade equation to creep data for ice and frozen soil Ting, J M, et al, (1979, p.29-36) MP 1802

Temperature effect on the uniaxial strength of ice. Haynes, F D., (1979, p 667-681) MP 1231

Physical properties of sea ice and under-ice current orientation Kovacs, A., et al, (1980, p 109-153) MP 1323

Mechanical properties of polycrystalline ice Mellor, M, (1980, p.217-245) MP 1302

Review of buckling analyses of ice sheets. Sodhi, D S., et al, (1980, p 131-146) MP 1322

Sea ice growth, drift, and decay Hibler, W D, III, (1980, p 141-209) MP 1298

Sea ice anisotropy, electromagnetic properties and strength. Kovacs, A, et al, (1980, 18p) CR 80-20

Cyclic loading and fatigue in ice. Mellor, M, et al, (1981, p 41-53) MP 1371

Modeling pressure ridge buildup on the geophysical scale. Hibler, W D., III, (1982, p.141-155) MP 1590

Deformation and failure of frozen soils and ice due to stresses Fish, A M, (1982, p 419-428) MP 1553

Determining the characteristic length of model ice sheets Sodhi, D S, et al, (1982, p.99-104) MP 1570

Adhesion of ice to polymers and other surfaces Itagaki, K, (1983, p 241-252) MP 1580

Properties of urea-doped ice in the CRREL test basin Hirayama, K, (1983, 44p) CR 83-08

Properties of sea ice in the coastal zones of the polar oceans Weeks, W F, et al, (1983, p 25-41) MP 1604

Study on the tensile strength of ice as a function of grain size Currier, J H., et al, (1983, 38p) CR 83-14

Ice strength *(cont.)*
How effective are icephobic coatings. Minsk, L.D., (1983, p.93-95) MP 1634
Mechanical behavior of sea ice Mellor, M., (1983, 105p) M 83-1
Measurement of ice forces on structures. Sodhi, D.S., et al, (1983, p 139-155) MP 1641
Implications of surface energy in ice adhesion. Itagaki, K., (1983, p.41-48) MP 1672
Characteristics of multi-year pressure ridges Kovacs, A., (1983, p.173-182) MP 1698
Relationship between creep and strength behavior of ice at failure Cole, D M, (1983, p 189-197) MP 1681
Mechanical properties of ice in the Arctic seas. Weeks, W.F., et al, (1984, p.235-259) MP 1674
Summary of the strength and modulus of ice samples from multi-year pressure ridges Cox, G.F N, et al, (1984, p.126-133) MP 1679
Variation of ice strength within and between multiyear pressure ridges in the Beaufort Sea. Weeks, W.F., (1984, p.134-139) MP 1680
Preliminary examination of the effect of structure on the compressive strength of ice samples from multi-year pressure ridges. Richter, J A., et al, (1984, p.140-144) MP 1685
Influence of grain size on the ductility of ice Cole, D.M, (1984, p 150-157) MP 1686
Ice resistance tests on two models of the WTGB icebreaker Tatinclaux, J C., et al, (1984, p 627-638) MP 1716
Army research could reduce dangers posed by sea ice Tucker, W.B., (1984, p 20-24) MP 2168
Dependence of crushing specific energy on the aspect ratio and the structure velocity Sodhi, D S, et al, (1984, p.363-374) MP 1708
Mechanical properties of multi-year sea ice Phase 1 Test results. Cox, G F.N., et al, (1984, 105p) CR 84-09
Mechanical properties of sea ice a status report Weeks, W.F., et al, (1984, p.135-198) MP 1808
Flexural strengths of freshwater model ice Gow, A J, (1984, p.73-82) MP 1826
4th report of working group on testing methods in ice Earle, E N., et al, (1984, p 1-41) MP 1886
Ice forces on inclined model bridge piers Haynes, F.D., et al, (1984, p 1167-1173) MP 2407
Ice penetration tests Garcia, N B, et al, (1984, p.209-240) MP 1996
Tensile strength of multi-year pressure ridge sea ice samples Cox, G F N, et al, (1985, p 186-193) MP 1856
Grain size and the compressive strength of ice. Cole, D M., (1985, p 220-226) MP 1858
Strength and modulus of ice from pressure ridges Cox, G.F.N., et al, (1985, p 93-98) MP 1848
Structure and the compressive strength of ice from pressure ridges. Richter, J A., et al, (1985, p.99-102) MP 1849
Compressive strength of pressure ridge ice samples Richter-Menge, J A, et al, (1985, p 465-475) MP 1877
Triaxial compression testing of ice. Cox, G F N., et al, (1985, p 476-488) MP 1878
Propulsion tests in level ice on a model of a 140-ft WTGB icebreaker. Tatinclaux, J C, (1985, 13p) CR 85-04
Pressure ridge strength in the Beaufort Sea Weeks, W F, (1985, p.167-172) MP 2121
Ice island fragment in Stefansson Sound, Alaska. Kovacs, A, (1985, p 101-115) MP 1900
Compressive strength of multi-year sea ice Kovacs, A., (1985, p 116-127) MP 1901
Experience with a biaxial ice stress sensor Cox, G F N., (1985, p 252-258) MP 1937
Grain size and the compressive strength of ice Cole, D.M, (1985, p 369-374) MP 1907
Tensile strength of multi-year pressure ridge sea ice samples Cox, G F N, et al, (1985, p 375-380) MP 1908
Mechanical properties of multi-year sea ice. Phase 2. Test results Cox, G F.N., et al, (1985, 81p) CR 85-16
Confined compressive strength of multi-year pressure ridge sea ice samples Cox, G F N, et al, (1986, p 365-373) MP 2035
Fracture toughness of model ice Dempsey, J.P., et al, (1986, p 365-376) MP 2125
Flexural and buckling failure of floating ice sheets against structures. Sodhi, D S., (1986, p 339-359) MP 2134
Evaluation of the rheological properties of columnar ridge sea ice Brown, R L., et al, (1986, p 55-66) MP 2177
Mechanical behavior of sea ice Mellor, M, (1986, p 165-281) MP 2210
Some developments in shaped charge technology Mellor, M, (1986, 29p) SR 86-18
Controlled river ice cover breakup, part 2 Theory and numerical model studies Ferrick, M.G, et al, (1986, p 293-305) MP 2392
Compressive behavior of saline ice Richter-Menge, J.A, (1986, p 331-350) MP 2200
Triaxial testing of first-year sea ice Richter-Menge, J.A., et al, (1986, 41p) CR 86-16
Confined compressive strength of horizontal first-year sea ice samples Richter-Menge, J A., (1987, p 197-207) MP 2193
Advances in ice mechanics—1987 (1987, 49p) MP 2207
Advances in sea ice mechanics in the USA Sodhi, D S, et al, (1987, p.37-49) MP 2208
Mechanical properties of multi-year sea ice. Richter-Menge, J.A, et al, (1987, p.121-153) MP 2428
Saline ice penetration a joint CRREL-NSWC test program Cole, D M, et al, (1987, 34p) SR 87-14
CRREL Hopkinson bar apparatus Dutta, P.K., et al, (1987, 29p) SR 87-24
Flexure and fracture of macrocrystalline S1 type freshwater ice Dempsey, J.P, et al, (1988, p.39-46) MP 2318
Growth of EG/AD/S model ice in a small tank Borland, S.L., (1988, p 47-53) MP 2319
Effects of temperature and structure of ice on its flexural strength. Gow, A.J., et al, (1988, 43p) CR 88-06
Fracture of S2 columnar freshwater ice floating double cantilever beam tests. Bentley, D.L., et al, (1988, p 152-161) MP 2493
Confined compressive strength of multi-year pressure ridge sea ice samples Cox, G F N, et al, (1988, p 295-301) MP 2403
Fracture experiments on freshwater and urea model ice. Bentley, D L, et al, (1988, 152p) MP 2502
Profile properties of undeformed first-year sea ice. Cox, G.F.N., et al, (1988, 57p) CR 88-13
Imjin River ice boom Perham, R.E., (1988, 10p) SR 88-22
Ship model testing in level ice: an overview. Tatinclaux, J C., (1988, 30p) Cr 88-15
Working group on ice forces 4th state-of-the-art report Timco, G W, ed, (1989, 385p) SR 89-05
Uniaxial tension/compression tests on ice—preliminary results. Cole, D.M, et al, (1989, p 37-41) MP 2482
Ice reinforced with Geogrid. Haynes, F D., et al, (1989, p.179-185) MP 2484
Compressive strength of antarctic frazil ice Richter-Menge, J.A., et al, (1989, p 269-278) MP 2621
Model tests on an icebreaker at two friction factors Tatinclaux, J.C., (1989, p 774-784) MP 2622
Effect of ice pressure on marginal ice zone dynamics Flato, G.M, et al, (1989, p.514-521) MP 2522
Fracture toughness of columnar freshwater ice. Bentley, D L, et al, (1989, p 7-20) MP 2545
Sea ice thickness measurement Kovacs, A., et al, (1989, p 394-424) MP 2693
Ice strength estimates from submarine topsounder data. DiMarco R, et al, (1989, p 425-426) MP 2691
Wave-induced bergy bit motion near a floating platform Mak, L.M, et al, (1990, p 205-215) MP 2580
Comparison of the compressive strength of antarctic frazil ice and laboratory-grown columnar ice Richter-Menge, J A, et al, (1990, p 79-84) MP 2731

Ice structure
Report on ice fall from clear sky in Georgia October 26, 1959 Harrison, L P, et al, (1960, 31p. plus photographs) MP 1017
Investigation of ice islands in Babbage Bight. Kovacs, A, et al, (1971, 46 leaves) MP 1381
Classification and variation of sea ice ridging in the Arctic basin Hibler, W D, III, et al, (1974, p 127-146) MP 1022
Results of the US contribution to the Joint US/USSR Bering Sea Experiment Campbell, W J., et al, (1974, 197p) MP 1032
Some characteristics of grounded floebergs near Prudhoe Bay, Alaska Kovacs, A., et al, (1976, p.169-172) MP 1118
Grounded floebergs near Prudhoe Bay, Alaska Kovacs, A, et al, (1976, 10p) CR 76-34
Internal structure and crystal fabrics of the West Antarctic ice sheet Gow, A J, et al, (1976, 25p) CR 76-35
Structural growth of lake ice Gow, A.J., et al, (1977, 24p) CR 77-01
Engineering properties of sea ice. Schwarz, J., et al, (1977, p.499-531) MP 1065
Compressive and shear strengths of fragmented ice covers Cheng, S T, et al, (1977, 82p) MP 951
Internal structure of fast ice near Narwahl Island Gow, A J, (1977, 8p) CR 77-29
Dynamics of near-shore ice Kovacs, A, et al, (1977, p 411-424) MP 1076
Oxygen isotopes in the basal zone of Matanuska Glacier Lawson, D E, et al, (1978, p 673-685) MP 1177
Dynamics of near-shore ice Kovacs, A, et al, (1978, p 11-22) MP 1205
Problems of offshore oil drilling in the Beaufort Sea Weller, G., et al, (1978, p 4-11) MP 1250
Multi year pressure ridges in the Canadian Beaufort Sea Wright, B, et al, (1979, p 107-126) MP 1229
Dynamics of near-shore ice Kovacs, A, et al, (1979, p 181-207) MP 1291
Ross Ice Shelf bottom ice structure. Zotikov, I A., et al, (1979, p 65 66) MP 1336
Pebble orientation ice and glacial deposits. Lawson, D E, (1979, p 629 645) MP 1276
Preparation of polycrystalline ice specimens for laboratory experiments Cole, D M, (1979, p 153-159) MP 1327
Margin of the Greenland ice sheet at Isua Colbeck, S C, et al, (1979, p 155-165) MP 1281
Dynamic ice-structure interaction analysis for narrow vertical structures Eranti, E, et al, (1981, p 472-479) MP 1456
Morphology of sea ice pressure ridge sails Tucker, W B, et al, (1981, p 1-12) MP 1465
Multi-year pressure ridges in the Canadian Beaufort Sea Wright, B, et al, (1981, p 125-145) MP 1514
Physical and structural characteristics of sea ice in McMurdo Sound. Gow, A.J., et al, (1981, p 94-95) MP 1542
Physical properties of the ice cover of the Greenland Sea. Weeks, W F., (1982, 27p) SR 82-28
Physical, chemical and biological properties of winter sea ice in the Weddell Sea. Clarke, D.B, et al, (1982, p.107-109) MP 1609
Frazil ice Daly, S.F., (1983, p 218-223) MP 2078
First-generation model of ice deterioration. Ashton, G D., (1983, p 273-278) MP 2080
Variation of ice strength within and between multiyear pressure ridges in the Beaufort Sea. Weeks, W.F., (1984, p 134-139) MP 1680
Preliminary examination of the effect of structure on the compressive strength of ice samples from multi-year pressure ridges. Richter, J A, et al, (1984, p.140-144) MP 1685
Structure of first-year pressure ridge sails in the Prudhoe Bay region Tucker, W.B, et al, (1984, p.115-135) MP 1837
Structure, salinity and density of multi-year sea ice pressure ridges. Richter-Menge, J A., et al, (1985, p 194-198) MP 1857
Measuring multi-year sea ice thickness using impulse radar. Kovacs, A, et al, (1985, p 55-67) MP 1916
Pressure ridge and sea ice properties Greenland Sea Tucker, W B., et al, (1985, p 214-223) MP 1935
Structure, salinity and density of multi-year sea ice pressure ridges Richter-Menge, J.A., et al, (1985, p.493-497) MP 1965
Electromagnetic measurements of sea ice Kovacs, A, et al, (1986, p 67-93) MP 2020
Physical properties of the sea ice cover Weeks, W F, (1986, p 87-102) MP 2047
Optical properties of sea ice structure Gow, A J, (1986, p 264-271) MP 2257
On the profile properties of undeformed first-year sea ice. Cox, G.F N, et al, (1986, p 257-330) MP 2199
Structure and dielectric properties at 4 8 and 9 5 GHz of saline ice Arcone, S.A, et al, (1986, p.14,281-14,303) MP 2182
Folding in the Greenland ice sheet. Whillans, I.M., et al, (1987, p 485-493) MP 2185
Sea ice structure and mechanical properties Richter-Menge, J A, et al, (1987, 30p) CR 87-03
Physical properties of sea ice discharged from Fram Strait. Gow, A J., et al, (1987, p 436-439) MP 2204
Physical properties of estuarine ice in Great Bay, New Hampshire. Meese, D.A, et al, (1987, p 833-840) MP 2251
Physical and structural characteristics of Weddell Sea pack ice Gow, A J, et al, (1987, 70p) CR 87-14
Microwave and structural properties of saline ice Gow, A.J, et al, (1987, 36p) CR 87-20
Mechanical properties of multi-year sea ice Richter-Menge, J A., et al, (1988, 27p) CR 88-05
Microcomputer-based image-processing system. Perovich, D K, et al, (1988, p 249-252) MP 2385
Effects of temperature and structure of ice on its flexural strength Gow, A J, et al, (1988, 43p) CR 88-06
High frequency acoustical properties of saline ice. Jezek, K C., et al, (1989, p 9-23) MP 2686
Physical properties of brackish ice, Bay of Bothnia. Weeks, W F., et al, (1990, p 5-15) MP 2725
Chemical and structural properties of sea ice in the southern Beaufort Sea. Meese, D A, (1990, p 32-35) MP 2728
Acoustics and morphology of undeformed sea ice. Jezek, K.C, et al, (1990, p 67-75) MP 2730
Lidar detection of leads in arctic sea ice. Schnell, R C., et al, (1990, p 119-123) MP 2733
Sea ice in the polar regions Gow, A.J., et al, (1990, p.47-122) MP 2750

Ice surface
Physics of ice Glen, J.W, (1974, 81p) M II-C2a
Sea ice growth, drift, and decay Hibler, W D, III, (1980, p.141-209) MP 1298
Sea ice rubble formations off the NE Bering Sea and Norton Sound Kovacs, A., (1981, p 1348-1363) MP 1527
Surface roughness of Ross Sea pack ice Govoni, J W, et al, (1983, p 123-124) MP 1764
Drag coefficient across the Antarctic marginal ice zone Andreas, E L, et al, (1984, p 63-71) MP 1784
Dynamic friction of bobsled runners on ice Huber, N P, et al, (1985, 26p) MP 2082
Theory for scalar roughness and transfer coefficients over snow and ice Andreas E L., (1987, p 159-184) MP 2195
Scientific challenges at the poles. Welch, J P., et al, (1987, p 23-26) MP 2228
Ice surface hydrolysis of diisopropylfluorophosphate (DFP) Leggett D C, (1987, p 809-815) MP 2457
Refractive index structure parameter for a year over the frozen Beaufort Sea. Andreas, E L., (1989, p 667-679) MP 2575
Concurrent remote sensing of arctic sea ice from submarine and aircraft Wadhams, P, et al, (1989, 20p) MP 2697
River-ice mounds on Alaska's North Slope Arcone, S A, et al, (1989, p 288-290) MP 2563

Recent measurements of sea ice topography in the eastern Arctic Krabill, W.B., et al, (1990, p 132-136) MP 2735

Antarctic ice sheet brightness temperature variations. Jezek, K.C., et al, (1990, p 217-223) MP 2736

Radar backscatter measurements over saline ice. Gogineni, S., et al, (1990, p 603-615) MP 2741

ICE SURVEYS

Surveys of river and lake ice. Michel, B., (1971, 131p.) M III-B1a

Ice surveys

Notes and quotes from snow and ice observers in Alaska. Bilello, M.A., (1979, p 116-118) MP 1631

Bibliography on glaciers and permafrost, China, 1938-1979. Shen, J., ed, (1982, 44p) SR 82-20

Proceedings of the Symposium on Applied Glaciology, 2nd, 1982. (1983, 314p) MP 2054

Ice engineering facility. Zabilansky, L.J., et al, (1983, 12p + fig) MP 2088

Field investigation of St. Lawrence River hanging ice dams. Shen, H.T., et al, (1984, p 241-249) MP 1830

Snow, ice and frozen ground research at the Sleepers River, VT. Pangburn, T, et al, (1984, p 229-240) MP 2071

Topical databases. Cold Regions Technology on-line. Liston, N., et al, (1985, p 12-15) MP 2027

Techniques for measurement of snow and ice on freshwater Adams, W.P., et al, (1986, p.174-222) MP 2000

Remote sensing of ice and snow (review) Jezek, K.C., (1987, p 51) MP 2429

Corps of Engineers research in the Arctic Smallidge, P.D., et al, (1987, p 81-87) MP 2411

Snow/ice/frozen ground properties, working group report Sterrett, K.F., et al, (1987, p 163-166) MP 2416

Satellite remote sensing in Arctic for 1990's Weeks, W.F., et al, (1989, p 510-530) MP 2699

Development of an airborne sea ice thickness measurement system and field test results Kovacs, A., et al, (1989, 47p.) CR 89-19

Field studies of brackish ice to compare with satellite data Weeks, W.F., et al, (1989, p.1318-1333) MP 2763

ICE TEMPERATURE

Antarctic ice sheet. Mellor, M, (1961, 50p) M I-B1

Greenland ice sheet Bader, H., (1961, 18p) M I-B2

Ice temperature

Nearshore ice motion near Prudhoe Bay, Alaska Tucker, W.B., et al, (1977, p 23-31) MP 1162

Equations for determining the gas and brine volumes in sea ice samples Cox, G.F.N, et al, (1982, 11p.) CR 82-30

Surface meteorology US/USSR Weddell Polynya Expedition, 1981. Andreas, E.L., et al, (1983, 32p) SR 83-14

Preliminary investigation of thermal ice pressures. Cox, G.F.N., (1984, p 221-229) MP 1788

Ice properties in a grounded man-made ice island Cox, G.F.N., et al, (1986, p.135-142) MP 2032

Effects of temperature and structure of ice on its flexural strength Gow, A.J., et al, (1988, 43p) CR 88-06

Profile properties of undeformed first-year sea ice Cox, G.F.N., et al, (1988, 57p) CR 88-13

Antarctic ice sheet brightness temperature variations Jezek, K.C., et al, (1990, p 217-223) MP 2736

Oceanic heat flux in the Fram Strait measured by a drifting buoy. Perovich, D.K., et al, (1990, p 291-296) MP 2740

Ice thermal properties

Influence of irregularities of the bed of an ice sheet on deposition rate of till. Nobles, L.H, et al, (1971, p.117-126) MP 1009

River ice problems Burgi, P.H, et al, (1974, p 1-15) MP 1002

Engineering properties of sea ice. Schwarz, J, et al, (1977, p.499-531) MP 1065

Winter thermal structure, ice conditions and climate of Lake Champlain. Bates, R.E, (1980, 26p) CR 80-02

Documentation for a two-level dynamic thermodynamic sea ice model. Hibler, W.D, III, (1980, 35p) SR 80-08

Review of thermal properties of snow, ice and sea ice Yen, Y.-C, (1981, 27p) CR 81-10

Growth, structure, and properties of sea ice Weeks, W.F., et al, (1982, 130p) M 82-01

Thermal patterns in ice under dynamic loading. Fish, A.M., et al, (1983, p 240-243) MP 1742

Preliminary investigation of thermal ice pressures Cox, G.F.N, (1984, p 221-229) MP 1788

Growth, structure, and properties of sea ice. Weeks, W.F., et al, (1986, p.9-164) MP 2209

Theoretical estimates of light reflection and transmission by spatially inhomogeneous and temporally varying ice covers Perovich, D.K., (1990, p 45-49) MP 2729

Ice thickness

Airborne sea ice thickness sounding Kovacs, A., et al, (1989, p.1042-1052) MP 2623

Ice volume

Ground ice in perennially frozen sediments, northern Alaska. Lawson, D.E, (1983, p.695-700) MP 1661

Ice water interface

Formation of ice ripples on the underside of river ice covers. Ashton, G.D., (1971, 157p) MP 1243

Radar imagery of ice covered North Slope lakes Weeks, W.F, et al, (1977, p 129-136) MP 923

Experimental scaling study of an annular flow ice-water heat sink. Stubstad, J.M., et al, (1977, 54p) CR 77-15

Effect of the oceanic boundary layer on the mean drift of pack ice, application of a simple model. McPhee, M.G, (1979, p 388-400) MP 1198

Turbulent heat transfer from a river to its ice cover. Haynes, F.D, et al, (1979, 5p.) CR 79-13

Problems of the seasonal sea ice zone. Weeks, W.F, (1980, p 1-35) MP 1293

Physical oceanography of the seasonal sea ice zone. McPhee, M.G., (1980, p.93-132) MP 1294

Modeling of anisotropic electromagnetic reflection from sea ice. Golden, K.M., et al, (1980, p.247-294) MP 1325

Nonsteady ice drift in the Strait of Belle Isle. Sodhi, D.S., et al, (1980, p.177-186) MP 1364

Free convection heat transfer characteristics in a melt water layer. Yen, Y.-C., (1980, p.550-556) MP 1311

Air-ice-ocean interaction in Arctic marginal ice zones Wadhams, P., ed, (1981, 20p) SR 81-19

Ice-covered North Slope lakes observed by radar. Weeks, W.F., et al, (1981, 17p) CR 81-19

Frost susceptibility of soil, review of index tests. Chamberlain, E.J., (1981, 110p.) CR 81-02

Frost susceptibility of soil, review of index tests. Chamberlain, E.J., (1982, 110p.) MP 1557

Soft drink bubbles Cragin, J.H, (1983, p 71) MP 1736

Relationship between ice and unfrozen water in frozen soils Tice, A.R., et al, (1983, p.37-46) MP 1632

Properties of sea ice in the coastal zones of the polar oceans. Weeks, W.F., et al, (1983, p 25-41) MP 1604

Marginal Ice Zone Experiment, Fram Strait/Greenland Sea, 1984. Johannessen, O.M., ed, (1983, 47p) SR 83-12

Marginal ice zones: a description of air-ice-ocean interactive processes, models and planned experiments Johannessen, O.M., et al, (1984, p.133-146) MP 1673

Modeling the marginal ice zone Hibler, W.D, III, ed, (1984, 99p) SR 84-07

Large-scale ice/ocean model for the marginal ice zone. Hibler, W.D., III, et al, (1984, p.1-7) MP 1778

On the decay and retreat of the ice cover in the summer MIZ. Maykut, G.A., (1984, p.15-22) MP 1780

On the role of ice interaction in marginal ice zone dynamics. Leppäranta, M., et al, (1984, p 23-29) MP 1781

Ocean circulation: its effect on seasonal sea-ice simulations Hibler, W.D., III, et al, (1984, p 489-492) MP 1700

Temperature and interface morphology in a melting ice-water system. Yen, Y.-C., (1984, p 305-325) MP 1727

Technique for observing freezing fronts Colbeck, S.C., (1985, p.13-20) MP 1861

Air-ice ocean interaction in Arctic marginal ice zones MIZEX-West. Wadhams, P., ed, (1985, 119p) SR 85-06

Acoustic waves incident on a seawater/sea ice interface. Jezek, K.C., (1985, 10p.) SR 85-10

Large-scale ice-ocean modeling Hibler, W.D., III, (1986, p.165-184) MP 2142

Coupled ice-mixed layer model for the Greenland Sea. Houssais, M.N, (1986, p 225-260) MP 2143

Convective heat transfer in water over melting ice sheet. Lunardini, V.J., (1986, p.42-51) MP 2600

Diagnostic ice-ocean model Hibler, W.D, III, et al, (1987, p.987-1015) MP 2238

Thermal instability and heat transfer characteristics in water-/ice systems. Yen, Y.-C, (1987, 33p) CR 87-22

Coupled air-ice-ocean models Hibler, W.D, III, (1987, p.131-137) MP 2412

Alaska SAR facility Weeks, W.F, et al, (1988, p.103-110) MP 2344

On the effect of the 4 C density maximum on melting heat transfer. Yen, Y.-C, (1988, p 362-367) MP 2382

International Symposium on Cold Regions Heat Transfer, 1989 (1989, 314p) MP 2636

Heat transfer from water flowing through a chilled-bed open channel. Richmond, P.W, et al, (1989, p 51-58) MP 2649

Shortwave radiation and open water in models of sea ice decay Perovich, D.K., et al, (1990, p 242-246) MP 2759

Ice (water storage)

Some elements of iceberg technology Weeks, W.F, et al, (1978, 31p) CR 78-02

ICE WEDGES

Patterned ground in Alaska Péwé, T.L., et al, (1969, 87p) MP 1180

Ice wedges

Electromagnetic survey in permafrost. Sellmann, P.V, et al, (1979, 7p) SR 79-14

Bending and buckling of a wedge on an elastic foundation Nevel, D.E, (1980, p 278-288) MP 1303

Ice floe distribution in the wake of a simple wedge Tatinclaux, J.C., (1986, p 622-629) MP 2038

Iceberg towing

Some elements of iceberg technology. Weeks, W.F, et al, (1978, p 45-98) MP 1616

Some elements of iceberg technology. Weeks, W.F, et al, (1978, 31p) CR 78-02

Prospects for towing icebergs from the Southern Ocean Weeks, W.F, et al, (1979, p 66-75) MP 1305

Power requirements and methods for long distance large iceberg towing Mellor, M., (1980, p 231-240) MP 1275

Iceberg water: an assessment Weeks, W.F., (1980, p.5-10) MP 1365

Icebergs

Towing icebergs Lonsdale, H.K., et al, (1974, p.2) MP 1020

Obtaining fresh water from icebergs Mellor, M., (1977, p.193) MP 1117

Iceberg thickness profiling using an impulse radar. Kovacs, A., (1977, p.140-142) MP 1012

Some elements of iceberg technology. Weeks, W.F., et al, (1978, p.45-98) MP 1616

Iceberg thickness and crack detection. Kovacs, A., (1978, p.131-145) MP 1128

Destruction of ice islands with explosives. Mellor, M., et al, (1978, p.753-765) MP 1018

Iceberg thickness profiling. Kovacs, A., (1978, p.766-774) MP 1019

Icebergs, an overview. Kovacs, A., (1979, 7p) SR 79-21

Overview of the seasonal sea ice zone Weeks, W.F., et al, (1979, p.320-337) MP 1320

Iceberg water: an assessment Weeks, W.F., (1980, p.5-10) MP 1365

Dynamics of snow and ice masses Colbeck, S.C., ed, (1980, 468p) MP 1297

Mechanical properties of ice in the Arctic seas. Weeks, W.F., et al, (1984, p 235-259) MP 1674

Conference on offshore mechanics and Arctic engineering, 8th, 1989. (1989, 476p) MP 2481

Dynamic simulations of iceberg-seabed interactions Bass, D.W., et al, (1989, p 137-151) MP 2684

Wave-induced bergy bit motion near a floating platform Mak, L.M., et al, (1990, p 205-215) MP 2580

Icebound lakes

Ice-covered North Slope lakes observed by radar. Weeks, W.F., et al, (1981, 17p) CR 81-19

Icebound rivers

St. Lawrence River freeze-up forecast Foltyn, E.P., et al, (1986, p 467-481) MP 2120

Morphology, hydraulics and sediment transport of an ice-covered river. Lawson, D.E., et al, (1986, 37p) CR 86-11

Calibrating HEC-2 in a shallow, ice-covered river Calkins, D.J., et al, (1986, 25 refs) SR 86-34

Ice cover distribution in Vermont and New Hampshire Atlantic salmon rearing streams Calkins, D.J., et al, (1988, p 85-96) MP 2473

ICEBREAKERS

Ice pressure on engineering structures. Michel, B., (1970, 71p.) M III-B1b

Icebreakers

Icebreaker simulation Nevel, D.E., (1977, 9p) CR 77-16

Icebreaking concepts Mellor, M., (1980, 18p.) SR 80-02

Evaluation of ice deflectors on the USCG icebreaker *Polar Star*. Vance, G.P., (1980, 37p) SR 80-04

Performance of the USCGC *Katmai Bay* icebreaker Vance, G.P., (1980, 28p) CR 80-08

Methods of ice control Frankenstein, G.E, et al, (1983, p 204-215) MP 1642

Model tests on two models of WTGB 140-foot icebreaker. Tatinclaux, J.C., (1984, 17p) CR 84-03

Ice resistance tests on two models of the WTGB icebreaker Tatinclaux, J.C, et al, (1984, p 627-638) MP 1716

Model tests in ice of a Canadian Coast Guard R-class icebreaker. Tatinclaux, J.C., (1984, 24p) SR 84-06

Propulsion tests in level ice on a model of a 140-ft WTGB icebreaker. Tatinclaux, J.C., (1985, 13p) CR 85-04

Level ice breaking by a simple wedge Tatinclaux, J.C, (1985, 46p) CR 85-22

Development of a river ice-prow Part 2 Tatinclaux, J.C, (1988, p 44-52) MP 2497

Comparative model tests in ice of a Canadian Coast Guard R-class icebreaker Tatinclaux, J.C, et al, (1989, p 1/1-1/18) MP 2751

Model tests in ice of a Canadian Coast Guard icebreaker. Tatinclaux, J.C., et al, (1989, 41p.) SR 89-25

Comparative model tests in ice of a Canadian Coast Guard R-class icebreaker. Tatinclaux, J.C., et al, (1990, p 31-52) MP 2762

Iceland

Utility distribution systems in Iceland Aamot, H.W.C, (1976, 63p) SR 76-05

Icing

Roof response to icing conditions Lane, J.W., et al, (1979, 40p) CR 79-17

Icing on structures Minsk, L.D., (1980, 18p) CR 80-31

Window performance in extreme cold. Flanders, S.N., et al, (1982, 21p) CR 82-38

Atmospheric icing of structures Minsk, L.D., ed, (1983, 366p) SR 83-17

How effective are icephobic coatings Minsk, L.D, (1983, p 93-95) MP 1634

Application of a block copolymer solution to ice-prone structures Hanamoto, B., (1983, p.155-158) MP 1636

Icing *(cont.)*
Aerostat icing problems. Hanamoto, B., (1983, 29p) SR 83-23
Mechanical ice release from high-speed rotors Itagaki, K., (1983, 8p) CR 83-26
Atmospheric icing on sea structures. Makkonen, L., (1984, 92p) M 84-02
Icing rate on stationary structures under marine conditions. Itagaki, K., (1984, 9p.) CR 84-12
Survey of ice problem areas in navigable waterways Zufelt, J., et al, (1985, 32p) SR 85-02
Measurement of icing on offshore structures. Minsk, L.D., (1985, p 287-292) MP 2010
Comparison of winter climatic data for three New Hampshire sites. Govoni, J.W., et al, (1986, 78p) SR 86-05
Transfer of meteorological data from mountain-top sites. Govoni, J.W., et al, (1986, 6p.) MP 2107
Communication tower icing in the New England region Mulhern, N., et al, (1986, 7p.) MP 2109
Atmospheric icing on communication masts in New England Mulhern, N., (1986, 46p) CR 86-17
Rime meteorology in the Green Mountains Ryerson, C.C., (1987, 46p) CR 87-01
Effect of oscillatory loads on the bearing capacity of floating ice covers. Kerr, A.D., et al, (1987, p 219-224) MP 2216
Meteorological instrumentation for characterizing atmospheric icing. Bates, R.E., et al, (1987, p 23-30) MP 2276
Ice detector measurements compared to meteorological data Tucker, W.B., et al, (1987, p 31-37) MP 2277
Self-shedding of accreted ice from high-speed rotors. Itagaki, K., (1987, p.95-100) MP 2278
Climatology of rime accretion in the Green and White Mountains. Ryerson, C.C., (1987, p.267-272) MP 2284
Meteorological system performance in icing conditions Bates, R.E., (1987, p 73-86) MP 2285
Cold regions roof design. Tobiasson, W., (1987, p 457-458) MP 2243
Mobility: working group report. Blaisdell, G.L., et al, (1987, p 273-274) MP 2423
New England mountain icing climatology Ryerson, C.C., (1988, 35p) CR 88-12
Atmospheric icing and broadcast antenna reflections Ryerson, C.C., (1988, 13p) CR 88-11
Ice removal from broadcast towers by low-frequency vibrations. Mulherin, N.D., et al, (1988, 6p) MP 2538
Atmospheric icing climatologies of two New England mountains. Ryerson, C.C., (1988, p.1261-1281) MP 2669
Roof design in cold regions Tobiasson, W., (1989, p 462-472) MP 2613

Icing rate
Atmospheric icing rates with elevation on northern New England mountains, U.S.A Ryerson, C.C., (1990, p 90-97) MP 2589

IMPACT STRENGTH
Impact of spheres on ice. Closure. Yen, Y.-C., et al, (1972, p 473) MP 988

Impact strength
Remote sensing of accumulated frazil and brash ice Dean, A.M., Jr., (1977, p 693-704) MP 934
Brazil tensile strength tests on sea ice a data report. Kovacs, A., et al, (1977, 39p) SR 77-24
Ice and ship effects on the St. Marys River ice booms Perham, R.E., (1978, p 222-230) MP 1617
Ice forces on the Yukon River bridge—1978 breakup Johnson, P.R., et al, (1979, 40p) MP 1304
Cost of ice damage to shoreline structures during navigation. Carey, K.L., (1980, 33p) SR 80-22
Impact fuse performance in snow (Initial evaluation of a new test technique). Aitken, G.W., et al, (1980, p 31-45) MP 1347
Small caliber projectile penetration in frozen soil Richmond, P.W., (1980, p 801-823) MP 1490
Ship resistance in thick brash ice. Mellor, M., (1980, p 305-321) MP 1329
Ice force measurement on the Yukon River bridge. McFadden, T., et al, (1981, p 749-777) MP 1396
Measurement of ice forces on structures. Sodhi, D.S., et al, (1983, p 139-155) MP 1641
Mechanics of ice cover breakthrough. Kerr, A.D., (1984, p 245-262) MP 1997
Ice penetration tests Garcia, N.B., et al, (1985, p 223-236) MP 2014
Impact ice force and pressure: An experimental study with urea ice Sodhi, D.S., et al, (1986, p 569-576) MP 2037
Wave-induced bergy bit motion near a floating platform Mak, L.M., et al, (1990, p 205-215) MP 2580

Impact tests
Report of the ITTC panel on testing in ice 1978 Frankenstein, G.E., et al, (1978, p 157-179) MP 1140
Fracture behavior of ice in Charpy impact testing Itagaki, K., et al, (1980, 13p) CR 80-13
Dynamic testing of free field stress gages in frozen soil. Aitken, G.W., et al, (1980, 26p) SR 80-30
Results from indentation tests on freshwater ice Sodhi, D.S., et al, (1988, p.341-350) MP 2495

Impurities
Apparent anomaly in freezing of ordinary water Swinzow, G.K., (1976, 23p) CR 76-20
Vanadium and other elements in Greenland ice cores. Herron, M.M., et al, (1976, 4p) CR 76-24
Photomacrography of artifacts in transparent materials Marshall, S.J., (1976, 31p) CR 76-40
Composition of vapors evolved from military TNT. Leggett, D.C., et al, (1977, 25p) SR 77-16
Tracer movement through snow. Colbeck, S.C., (1977, p.255-262) MP 1093
Verification tests for a stiff inclusion stress sensor. Cox, G.F.N., et al, (1987, p 81-88) MP 2223

Indexes (ratios)
Axial double point-load tests on snow and ice. Kovacs, A., (1978, 11p) CR 78-01
Environmental atlas of Alaska. Hartman, C.W., et al, (1978, 95p.) MP 1204
Plant recovery from Arctic oil spills Walker, D.A., et al, (1978, p.242-259) MP 1184

India
—Yamuna River
Snow hydrology in the upper Yamuna basin, India Malhotra, R.V., et al, (1988, p 84-93) MP 2633

Indicating instruments
Photoelastic instrumentation—principles and techniques. Roberts, A., et al, (1979, 153p) SR 79-13

Indoor climates
Reference guide for building diagnostics equipment and techniques. McKenna, C., et al, (1986, 148p) MP 2226
Vents and vapor retarders for roofs. Tobiasson, W., (1986, 11p) MP 2246
Reference guide for building diagnostics equipment and techniques McKenna, C.M., et al, (1989, 64p.) SR 89-27

Inflatable structures
Lock wall deicing. Hanamoto, B., (1977, p.7-14) MP 972
Laboratory experiments on lock wall deicing using pneumatic devices Itagaki, K., et al, (1977, p 53-68) MP 974

Infrared equipment
Detecting structural heat losses with mobile infrared thermography, Part IV. Munis, R.H., et al, (1976, 9p.) CR 76-33
CRREL roof moisture survey, Pease AFB. Korhonen, C., et al, (1977, 10p) SR 77-02
Infrared detective: thermograms and roof moisture Korhonen, C., et al, (1977, p 41-44) MP 961
Roof moisture survey—U.S Military Academy. Korhonen, C., et al, (1979, 8 refs.) SR 79-16
Transient heat flow and surface temperatures of a built-up roof Korhonen, C., (1983, 20p) SR 83-22

Infrared photography
Land use and water quality relationships, eastern Wisconsin. Haugen, R.K., et al, (1976, 47p) CR 76-30
Infrared thermography of buildings Munis, R.H., et al, (1977, 17p) SR 77-29
Infrared thermography of buildings Munis, R.H., et al, (1977, 21p.) SR 77-26
Roof moisture survey, ten State of New Hampshire buildings. Tobiasson, W., et al, (1977, 29p) CR 77-31
Inundation of vegetation in New England. McKim, H.L., et al, (1978, 13p) MP 1169
Detecting wet roof insulation with a hand-held infrared camera Korhonen, C., et al, (1978, p A9-A15) MP 1213
Infrared thermography of buildings 1977 Coast Guard survey. Marshall, S.J., (1979, 40p) SR 79-20
Roof moisture surveys Tobiasson, W., (1982, p 163-166) MP 1505
Infrared inspection of new roofs Korhonen, C., (1982, 14p) SR 82-33
Comparison of aerial to on-the-roof infrared moisture surveys Korhonen, C., et al, (1983, p.95-105) MP 1709
Thermal emittance of diathermanous materials Munis, R.H., et al, (1984, p 209-220) MP 1863
Time-lapse thermography, a unique electronic imaging application Marshall, S.J., et al, (1984, p 84-88) MP 2103
Aerial roof moisture surveys Tobiasson, W., (1985, p 424-425) MP 2022
Thermal emissivity of diathermanous materials Munis, R.H., et al, (1985, p 872-878) MP 1963
Method for conducting airborne infrared roof moisture surveys Tobiasson, W., (1988, p 50-61) MP 2436
Test of a prototype advanced thermal imaging system Munis, R.H., (1989, p 81-82) MP 2645
Impact of the winter environment on infrared target signatures Lacombe, J., (1989, n p) MP 2587
Thermal infrared survey of winter trails at Fort Wainwright, Collins, C.M., et al, (1990, 16p) SR 90-17

Infrared radiation
Infrared thermography of buildings an annotated bibliography. Marshall, S.J., (1977, 21p) SR 77-09
CRREL roof moisture survey, Building 208 Rock Island Arsenal Korhonen, C., et al, (1977, 6p) SR 77-43
Infrared thermography of buildings—a bibliography with abstracts Marshall, S.J., (1979, 67p) SR 79-01
Snow chemistry of obscurants released during SNOW-TWO/Smoke Week VI Cragin, J.H., (1984, p 409-416) MP 1873
Ice fog as an electro-optical obscurant Koh, G., (1985, 11p) CR 85-08
Wavelength-dependent extinction by falling snow. Koh, G., (1986, p.51-55) MP 2019
Scattering at mm wavelengths from *in situ* snow. Walsh, J., et al, (1986, p 1.6.1-1.6.2) MP 2141
Extinction coefficient measurement in falling snow. Koh, G., (1987, 9p) SR 87-04
Extinction coefficient for a distribution of ice fog particles. Jordan, R., (1987, p 527-539) MP 2286
Scavenging of infrared screener EA 5763 by falling snow. Cragin, J.H., et al, (1987, p 13-20) MP 2292
Slant path extinction and visibility measurements from an unmanned aerial vehicle. Cogan, J., et al, (1987, p.115-126) MP 2296

Infrared reconnaissance
Hand-held infrared systems for detecting roof moisture. Tobiasson, W., et al, (1977, p 261-271) MP 1390
Recommendations for implementing roof moisture surveys in the U.S. Army. (1978, 8p) SR 78-01
Thermal observations of Mt. St Helens before and during eruption. St. Lawrence, W.F., et al, (1980, p 1526-1527) MP 1482
Roof moisture surveys: current state of the technology. Tobiasson, W., (1983, p.24-31) MP 1628
Chemical obscurant tests during winter: Environmental fate. Cragin, J.H., (1983, p.267-272) MP 1760
Infrared testing for leaks in new roofs. Korhonen, C., (1987, p 49-54) MP 2282
Impact of the winter environment on infrared target signatures. Lacombe, J., (1989, n p) MP 2587

Infrared spectroscopy
Red and near-infrared spectral reflectance of snow O'Brien, H.W., et al, (1975, p 345-360) MP 872
Research on roof moisture detection Tobiasson, W., et al, (1978, 6p) SR 78-29
Roof moisture survey. Korhonen, C., et al, (1980, 31p.) SR 80-14
Problems in snow cover characterization. O'Brien, H.W., (1982, p 139-147) MP 1987

Instruments
Instruments in the Arctic. Atkins, R.T., (1972, p 183-188) MP 990

Insulation
Protected membrane roofs in cold regions Aamot, H.W.C., et al, (1976, 27p) CR 76-02
Water absorption of insulation in protected membrane roofing systems. Schaefer, D., (1976, 15p) CR 76-38
CRREL roof moisture survey, Pease AFB. Korhonen, C., et al, (1977, 10p) SR 77-02
Installation of loose-laid inverted roof system at Fort Wainwright, Alaska. Schaefer, D., (1977, 27p) SR 77-18
Infrared detective, thermograms and roof moisture Korhonen, C., et al, (1977, p 41-44) MP 961
Construction of temporary airfields in NPRA Crory, F.E., (1978, p.13-15) MP 1253
Roof construction under wintertime conditions a case study. Bennett, F.L., (1978, 34p.) SR 78-24
Roof moisture survey—U.S Military Academy Korhonen, C., et al, (1979, 8 refs.) SR 79-16
Roofs in cold regions Tobiasson, W., (1980, 21p) MP 1408
Locating wet cellular plastic insulation in recently constructed roofs Korhonen, C., et al, (1983, p 168-173) MP 1729
Protected membrane roofing systems Tobiasson, W., (1986, p.49-50) MP 2140
Wetting of polystyrene and urethane roof insulations. Tobiasson, W., et al, (1987, p 108-119) MP 2337
Radar profiling of Newton Airfield in Jackman, Maine. Martinson, C.R., (1989, 9p.) SR 89-04

Interfaces
CRREL instrumented vehicle for cold regions mobility measurements Blaisdell, G.L., (1982, 11p) MP 1515
On the rheology of a broken ice field due to floe collision Shen, H., et al, (1984, p 29-34) MP 1812

Internal friction
Effect of X-ray irradiation on internal friction and dielectric relaxation of ice Itagaki, K., et al, (1983, p 4314-4317) MP 1670
Friction loss through a uniform snow layer Yen, Y.C., (1990, p 83-90) MP 2703

International cooperation
High-latitude basins as settings for circumpolar environmental studies Slaughter, C.W., et al, (1975, p.IV/57-IV/68) MP 917
Scientists visit Kolyma Water Balance Station in the USSR. Slaughter, C.W., et al, (1977, 66p) SR 77-15
Subarctic watershed research in the Soviet Union Slaughter, C.W., et al, (1978, p.305-313) MP 1273
International and national developments in land treatment of wastewater McKim, H.L., et al, (1979, 28p) MP 1420
Arctic research in the United States, Vol 3. (1989, 72p) MP 2653

Interstitial water
Chemistry of interstitial water from subsea permafrost, Prudhoe Bay, Alaska Iskandar, I.K., et al, (1978, p 92-98) MP 1385

Ion density (concentration)
Chemical composition of haul road dust and vegetation Iskandar, I.K., et al, (1978, p 110-111) MP 1116

Ion diffusion
Ionic migration and weathering in frozen Antarctic soils. Ugolini, F C , et al, (1973, p.461-470) MP 941
Does snow have ion chromatographic properties. Hewitt, A D., et al, (1989, p.165-171) MP 2755
Ion exchange
Prototype wastewater land treatment system. Jenkins, T F., et al, (1979, 91p) SR 79-35
Ions
Ion and moisture migration and frost heave in freezing Morin clay. Qiu, G., et al, (1986, p.1014) MP 1970
Irrigation
Land treatment of wastewaters for rural communities. Reed, S.C., et al, (1975, p 23-39) MP 1399
Land treatment of wastewater. Murrmann, R.P., et al, (1976, 36p) MP 920
Land application of wastewater in permafrost areas Sletten, R S , (1978, p 911-917) MP 1110
Uptake of nutrients by plants irrigated with wastewater. Clapp, C.E , et al, (1978, p.395-404) MP 1151
Microbiological aerosols during wastewater irrigation. Bausum, H.T , et al, (1978, p 273-280) MP 1154
Mass water balance during spray irrigation with wastewater at Deer Creek Lake land treatment site. Abele, G., et al, (1978, 43p) SR 79-29
Experimental system for land renovation of effluent. Nylund, J.R , et al, (1978, 26p) SR 78-23
Freezing problems with wintertime wastewater spray irrigation. Bouzoun, J.R., (1979, 12p) SR 79-12
International and national developments in land treatment of wastewater. McKim, H.L., et al, (1979, 28p) MP 1420
Bacterial aerosols resulting from wastewater irrigation in Ohio. Bausum, H.T , et al, (1979, 64p.) SR 79-32
Nitrogen transformations in land treatment. Jenkins, T.F , et al, (1979, 32p) SR 79-31
Land treatment of waste water in cold climates. Jenkins, T.F., et al, (1979, p 207-214) MP 1279
Prototype wastewater land treatment system. Jenkins, T.F., et al, (1979, 91p) SR 79-35
Wastewater treatment in cold regions by overland flow. Martel, C.J., et al, (1980, 14p) CR 80-07
Dynamics of NH4 and NO3 in cropped soils irrigated with wastewater. Iskandar, I.K., et al, (1980, 20p) SR 80-27
Forage grass growth on overland flow systems. Palazzo, A.J., et al, (1980, p 347-354) MP 1402
Effectiveness of land application for P removal from waste water. Iskandar, I.K , et al, (1980, p 616-621) MP 1444
Seasonal growth and accumulation of N, P, and K by grass irrigated with wastes Palazzo, A.J., (1981, p 64-68) MP 1425
Hydraulic characteristics of the Deer Creek Lake land treatment site during wastewater application. Abele, G , et al, (1981, 37p) CR 81-07
Seasonal growth and uptake of nutrients by orchardgrass irrigated with wastewater. Palazzo, A J , et al, (1981, 19p) CR 81-08
Isostasy
Misgivings on isostatic imbalance as a mechanism for sea ice cracking Ackley, S F , et al, (1976, p 85-94) MP 1379
Isotope analysis
Greenland climate changes shown by ice core. Dansgaard, W , et al, (1971, p.17-22) MP 998
Oxygen isotope profiles through ice sheets Johnsen, S.J , et al, (1972, p 429-434) MP 997
C-14 and other isotope studies on natural ice. Oeschger, H , et al, (1972, p.D70-D92) MP 1052
Stable isotope profile through the Ross Ice Shelf at Little America V, Antarctica Dansgaard, W., et al, (1977, p.322-325) MP 1095
Methodology for nitrogen isotope analysis at CRREL Jenkins, T.F , et al, (1978, 57p) SR 78-08
20-yr cycle in Greenland ice core records. Hibler, W D., III, et al, (1979, p 481-483) MP 1245
Isotopes
Method for measuring enriched levels of deuterium in soil water Oliphant, J.L., et al, (1982, 12p) SR 82-25
Deuterium diffusion in a soil-water-ice mixture Oliphant, J L., et al, (1984, 11p) SR 84-27
Isotopic labeling
Guide to the use of 14N and 15N in environmental research Edwards, A P , (1978, 77p) SR 78-18
Korea
Deployment of floating bridges in ice-covered rivers Mellor, M., et al, (1988, 38p) SR 88-20
—Imjin River
Imjin River ice boom Perham, R.E , (1988, 10p) SR 88-22
Laboratories
Research activities of U S Army Cold Regions Research and Engineering Laboratory. Buzzell, T D , (1975, p 9-12) MP 1244
Cold Regions Research and Engineering Laboratory Freitag, D.R., (1978, p 4-6) MP 1251
Mercury contamination of water samples Cragin, J H , (1979, p.313-319) MP 1270
Ice engineering facility Zabilansky, L J , et al, (1983, 12p + figs) MP 2088
Data acquisition in USACRREL's flume facility. Daly, S.F., et al, (1985, p.1053-1058) MP 2089
Corps of engineers seek ice solutions Frankenstein, G.E., (1987, p.5-7) MP 2219
Information systems planning study. Atkins, R T , et al, (1987, 48p) SR 87-23
Unique new cold weather testing facility. Eaton, R.A., (1988, p.745-750) MP 2542
Unique new cold weather testing facility. Eaton, R.A , (1989, p 335-342) MP 2468
Data acquisition. first the FERF then the world Knuth, K.V , (1989, p 136-138) MP 2567
Laboratory techniques
Ice forces on model structures. Zabilansky, L.J., et al, (1975, p.400-407) MP 863
Apparent anomaly in freezing of ordinary water. Swinzow, G.K , (1976, 23p.) CR 76-20
Laboratory studies of compressed air seeding of supercooled fog. Hicks, J R., et al, (1977, 19p) SR 77-12
Laboratory experiments on lock wall deicing using pneumatic devices. Itagaki, K , et al, (1977, p.53-68) MP 974
Resiliency in cyclically frozen and thawed subgrade soils. Chamberlain, E J., et al, (1977, p 229-281) MP 1724
Laboratory experiments on icing of rotating blades Ackley, S F , et al, (1979, p 85-92) MP 1236
Kinetics of denitrification in land treatment of wastewater Jacobson, S , et al, (1979, 59p) SR 79-04
Preparation of polycrystalline ice specimens for laboratory experiments Cole, D M., (1979, p.153-159) MP 1327
Frazil ice in rivers and streams Daly, S F , (1987, p 19-26) MP 2381
Solvent extraction for solute preconcentration from water. Leggett, D.C , et al, (1990, p.1355-1336) MP 2743
Lacustrine deposits
Phosphorus chemistry of sediments of Lake Koocanusa, Montana Iskandar, I K., et al, (1981, 9p) SR 81-15
Lake ice
Ice-cratering experiments Blair Lake, Alaska Kurtz, M.K., et al, (1966, Various pagings) MP 1034
LAKE ICE
Surveys of river and lake ice Michel, B , (1971, 131p) M III-B1a
Lake ice
Growth and mechanical properties of river and lake ice. Ramseier, R.O , (1972, 243p) MP 1883
Winter thermal structure and ice conditions on Lake Champlain, Vermont Bates, R E , (1976, 22p) CR 76-13
Structural growth of lake ice. Gow, A J , et al, (1977, 24p.) CR 77-01
Radar imagery of ice covered North Slope lakes Weeks, W F , et al, (1977, p 129-136) MP 923
Flexural strength of ice on temperate lakes Gow, A J , (1977, p.247-256) MP 1063
Visual observations of floating ice from Skylab Campbell, W.J , et al, (1977, p 353-379) MP 1263
Flexural strength of ice on temperate lakes Gow, A J., et al, (1978, 14p) CR 78-09
Remote detection of water under ice-covered lakes on the North Slope of Alaska. Kovacs, A , (1978, p 448-458) MP 1214
Forecasting ice formation and breakup on Lake Champlain Bates, R.E , et al, (1979, 21p) CR 79-26
Winter thermal structure, ice conditions and climate of Lake Champlain Bates, R.E , (1980, 26p) CR 80-02
Maximum thickness and subsequent decay of lake, river and fast sea ice in Canada and Alaska. Bilello, M.A , (1980, 160p) CR 80-06
Freshwater ice growth, motion, and decay Ashton, G D , (1986, p 261-304) MP 1299
Ice formation and breakup on Lake Champlain Bates, R.E., (1980, p 125-143) MP 1429
Method for measuring brash ice thickness with impulse radar Martinson, C.R , et al, (1981, 10p) SR 81-11
Sea ice the potential of remote sensing Weeks, W F , (1981, p 19-48) MP 1468
Ice-covered North Slope lakes observed by radar. Weeks, W F , et al, (1981, 17p) CR 81-19
Port Huron ice control model studies Calkins, D J., et al, (1982, p 361-373) MP 1530
Model study of Port Huron ice control structure; wind stress simulation Sodhi, D S , et al, (1982, 27p) CR 82-09
Theory of thermal control and prevention of ice in rivers and lakes Ashton, G.D., (1982, p 131-165) MP 1554
Predicting lake ice decay. Ashton, G D , (1983, 4p) SR 83-19
Measurement of ice forces on structures Sodhi, D S , et al, (1983, p 139-155) MP 1641
Lake ice decay Ashton, G D , (1983, p 83-86) MP 1684
Flexural strengths of freshwater model ice Gow, A J , (1984, p.73-82) MP 1826
Quiet freezing of lakes and the concept of orientation textures in lake ice sheets Gow, A J , (1984, p 137-149) MP 1828
Techniques for measurement of snow and ice on freshwater Adams, W P , et al, (1986, p 174-222) MP 2000
Orientation textures in ice sheets of quietly frozen lakes Gow, A J., (1986, p 247-258) MP 2118
Ice problems associated with rivers and reservoirs. Benson, C., et al, (1986, p.70-98) MP 2155
River and lake ice engineering Ashton, G.D , ed, (1986, 485p) MP 2144
Short-pulse radar investigations of freshwater ice sheets and brash ice. Arcone, S A., et al, (1986, 10p) CR 86-06
Experiments on the cutting process in ice Ueda, H.T., et al, (1989, 36p.) CR 89-05
Flexural properties of freshwater ice sheets Gow, A.J., et al, (1989, p.249-270) MP 2652
Investigation of the LIZ-3 Dew Line Station water supply lake. Kovacs, A , (1990, 10p) SR 90-11
Lake water
Correlation and quantification of airborne spectrometer data to turbidity measurements at Lake Powell, Utah Merry, C.J., (1970, p 1309-1316) MP 1271
Remote detection of water under ice-covered lakes on the North Slope of Alaska. Kovacs, A , (1978, p 448-458) MP 1214
Case study fresh water supply for Point Hope, Alaska McFadden, T , et al, (1979, p.1029-1040) MP 1222
Dissolved nitrogen and oxygen in lake water Leggett, D.C., (1979, 5p.) SR 79-24
Tundra lakes as a source of fresh water: Kipnuk, Alaska. Bredthauer, S.R., et al, (1979, 16p) SR 79-30
Limnology of Lake Koocanusa, MT, the 1967-1972 study. Bonde, T J.H., et al, (1982, 184p) SR 82-21
Limnology of Lake Koocanusa, Montana. Storm, P.C , et al, (1982, 597p.) SR 82-23
Lake water intakes under icing conditions Dean, A.M , Jr., (1983, 7p) CR 83-15
Shoreline erosion processes Orwell Lake, Minnesota. Reid, J.R , (1984, 101p) CR 84-32
Use of SPOT HRV data in a Corps dredging operation in Lake Erie. Merry, C.J , et al, (1987, p 49-58) MP 2548
Winter water quality in lakes and streams. Calkins, D J., et al, (1988, 8p) MP 2507
Use of SPOT HRV data in the Corps of Engineers dredging program. Merry, C.J , et al, (1988, p.1295-1299) MP 2528
Investigation of the LIZ-3 Dew Line Station water supply lake. Kovacs, A , (1990, 10p) SR 90-11
Lakes
Remote sensing for earth dam site selection and construction materials Merry, C.J , et al, (1980, p.158-170) MP 1316
Land development
Urban waste as a source of heavy metals in land treatment. Iskandar, I K , (1976, p 417-432) MP 977
Land use and water quality relationships, eastern Wisconsin. Haugen, R K., et al, (1976, 47p) CR 76-30
Symposium: geography of polar countries, selected papers and summaries. Brown, J , ed, (1977, 61p) SR 77-06
Effects of wastewater on the growth and chemical composition of forages Palazzo, A J , (1977, p 171-180) MP 975
Wastewater treatment at Calumet, Michigan Baillod, C.R., et al, (1977, p 489-510) MP 976
Land treatment of wastewater at Manteca, Calif , and Quincy, Washington. Iskandar, I.K , et al, (1977, 34p) CR 77-24
Symposium on land treatment of wastewater, CRREL, Aug. 1978 (1978, 2 vols) MP 1145
LAND ICE
Antarctic ice sheet Mellor, M , (1961, 50p) M I-B1
Greenland ice sheet. Bader, H , (1961, 18p) M I-B2
Land ice
Planetary and extraplanetary event records in polar ice caps. Zeller, E J , et al, (1980, p.18-27) MP 1461
Land reclamation
Bibliography of soil conservation activities in USSR permafrost areas Andrews, M , (1977, 116p.) SR 77-07
Land treatment of wastewater in subarctic Alaska Sletten, R.S , et al, (1977, p 533-547) MP 1268
Municipal sludge management environmental factors. Reed, S C , ed, (1977, Var. p) MP 1406
Land treatment, present status, future prospects Pound, C E , et al, (1978, p 98-102) MP 1417
Experimental system for land renovation of effluent. Nylund, J R , et al, (1978, 26p) SR 78-23
Five-year performance of CRREL land treatment test cells. Jenkins, T.F , et al, (1978, 24p) SR 78-26
Nitrification inhibitor in land treatment of wastewater in cold regions Elgawhary, S M , et al, (1979, 25p) SR 79-18
Land treatment systems and the environment McKim, H L., et al, (1979, p 201-225) MP 1414
Design of liquid-waste land application Iskandar, I K , (1979, p 65-88) MP 1415
International and national developments in land treatment of wastewater McKim, H L., et al, (1979, 28p) MP 1420
Revegetation at two construction sites in New Hampshire and Alaska Palazzo, A J , et al, (1980, 21p.) CR 80-03
EPA policy on land treatment and the Clean Water Act of 1977 Thomas, R E , et al, (1980, p 452-460) MP 1418
Energy and costs for agricultural reuse of wastewater. Sletten, R S , et al, (1980, p.339-346) MP 1401

Land reclamation *(cont.)*
Forage grass growth on overland flow systems Palazzo, A.J., et al, (1980, p.347-354) MP 1402
Spray application of waste-water effluent in a cold climate. Cassell, E.A., et al, (1980, p 620-626) MP 1403
Overland flow: removal of toxic volatile organics. Jenkins, T.F., et al, (1981, 16p) SR 81-01
Seasonal growth and accumulation of N, P, and K by grass irrigated with wastes Palazzo, A J., (1981, p 64-68) MP 1425
Seasonal growth and uptake of nutrients by orchardgrass irrigated with wastewater. Palazzo, A J., et al, (1981, 19p.) CR 81-08
Seven-year performance of CRREL slow-rate land treatment prototypes. Jenkins, T.F., et al, (1981, 25p.) SR 81-12
Site selection methodology for the land treatment of wastewater. Ryan, J.R., et al, (1981, 74p) SR 81-28
Model for prediction of nitrate leaching losses in soils Mehran, M., et al, (1981, 24p) CR 81-23
Vegetation selection and management for overland flow systems. Palazzo, A J., et al, (1982, p 135-154) MP 1511
Overview of models used in land treatment of wastewater Iskandar, I.K., (1982, 27p) SR 82-01
Wastewater treatment and plant growth. Palazzo, A.J., (1982, 21p.) SR 82-05
Land treatment of wastewater. Reed, S C., (1982, p 91-123) MP 1947
User's index to CRREL land treatment computer programs and data files. Berggren, P.A., et al, (1982, 65p) SR 82-26
Case study of land treatment in a cold climate—West Dover, Vermont. Bouzoun, J.R., et al, (1982, 96p.) CR 82-44
Assessment of the treatability of toxic organics by overland flow. Jenkins, T F., et al, (1983, 47p) CR 83-03
Model for land treatment, Pt.1. Baron, J.A., et al, (1983, 35p.) SR 83-06
Model for land treatment planning, design and operation, Pt.2 Baron, J.A., et al, (1983, 30p) SR 83-07
Model for land treatment planning, design and operation, Pt.3. Baron, J.A., et al, (1983, 38p) SR 83-08
Corps of Engineers land treatment of wastewater research program an annotated bibliography Parker, L.V., et al, (1983, 82p) SR 83-09
Engineering systems for wastewater treatment. Loehr, R., et al, (1983, p 409-417) MP 1948
Land treatment research and development program Iskandar, I K., et al, (1983, 144p) CR 83-20
Land treatment processes. Merry, C.J., et al, (1983, 79p) SR 83-26
Nitrogen behavior in soils irrigated with liquid waste. Selim, H.M., et al, (1984, p.96-108) MP 1762
Impact of slow-rate land treatment on groundwater quality. toxic organics. Parker, L.V., et al, (1984, 36p) CR 84-30
Overland flow wastewater treatment at Easley, S.C. Abernathy, A R., et al, (1985, p 291-299) MP 2183
Toxic organics removal kinetics in overland flow land treatment. Jenkins, T.F., et al, (1985, p.707-718) MP 2111
Corps of Engineers Land Treatment Research and Development program. Iskandar, I K., (1986, p 17-18) MP 2149
Forest land treatment with municipal wastewater in New England. Reed, S C., et al, (1986, p 420-430) MP 2280
Removal of trace-level organics by slow-rate land treatment. Parker, L.V., et al, (1986, p.1417-1426) MP 2170
Of. Overland flow wastewater treatment at Easley, S C Martel, C.J., et al, (1986, p 1078-1079) MP 2300
Disturbance and recovery of arctic Alaskan tundra terrain Walker, D.A., et al, (1987, 63p) CR 87-11

Landforms
Geobotanical atlas of the Prudhoe Bay region, Alaska. Walker, D A., et al, (1980, 69p) CR 80-14
Spatial analysis in recreation resource management. Edwardo, H.A., et al, (1984, p 209-219) MP 2084
Periglacial landforms and processes, Kenai Mts., Alaska Bailey, P K., (1985, 60p) SR 85-03

LANDSAT
Near real time hydrologic data acquisition utilizing the LANDSAT system McKim, H L., et al, (1975, p 200-211) MP 1055
Remote measurement of sea ice drift Hibler, W D., III, et al, (1975, p 541-554) MP 849
Sea ice drift and deformation from LANDSAT imagery Hibler, W D., III, et al, (1976, p 115-135) MP 1059
Landsat data analysis for New England reservoir management. Merry, C.J., et al, (1978, 61p) SR 78-06
Landsat data collection platform, south central Alaska Haugen, R.K., et al, (1979, 17 refs) SR 79-02
Mapping of the LANDSAT imagery of the Upper Susitna River Gatto, L.W., et al, (1980, 41p) CR 80-04
Remote sensing of revegetation of burned tundra, Kokolik River, Alaska Hall, D K., et al, (1980, p 263-272) MP 1391
Sea ice piling at Fairway Rock, Bering Strait, Alaska. Kovacs, A., et al, (1981, p 985-1000) MP 1460
Hydrologic modeling from Landsat land cover data McKim H.L., et al, (1984, 19p) SR 84-01

Landscape types
Filtering and classification routines in land use imagery. Merry, C.J., et al, (1988, p.57-58) MP 2534

Lasers
De-icing using lasers Lane, J.W., et al, (1976, 25p) CR 76-10
Dynamics of near-shore ice. Kovacs, A., et al, (1977, p.151-163) MP 1073
Use and application of PRESTO in Snow-III West. Stallings, E S., et al, (1986, p.11-24) MP 2658
Effects of water and ice on the scattering of diffuse reflectors Jezek, K.C., et al, (1986, p 259-269) MP 2664

Latent heat
Deforming finite elements with and without phase change Lynch, D.R., et al, (1981, p 81-96) MP 1493
Heat fluxes, humidity profiles, and surface humidity. Andreas, E.L., (1982, 18p) CR 82-12
Year of Bowen ratios over the frozen Beaufort Sea. Andreas, E.L., (1989, p 12,721-12,724) MP 2508
Wind-generated polynyas off the coasts of the Bering Sea islands. Kozo, T.L., et al, (1990, p 126-132) MP 2734

Layers
Enclosing fine-grained soils in plastic moisture barriers Smith, N., (1978, p.560-570) MP 1089

Leaching
Model for prediction of nitrate leaching losses in soils Mehran, M., et al, (1981, 24p) CR 81-23
Leaching of metal pollutants from well casings Hewitt, A D., (1989, 11p) SR 89-32

Leakage
Roof moisture survey—U.S. Military Academy. Korhonen, C., et al, (1979, 8 refs) SR 79-16
Roof leaks in cold regions: school at Chevak, Alaska Tobiasson, W., et al, (1980, 12p) CR 80-11
Roof blister valve. Korhonen, C., (1986, p.29-31) MP 2138
Infrared testing for leaks in new roofs. Korhonen, C., (1987, p 49-54) MP 2282
Reduced winter leakage in gates with J-seals Rand, J.H., et al, (1989, 3p) MP 2724

Legislation
Land treatment: present status, future prospects Pound, C.E., et al, (1978, p 98-102) MP 1417
EPA policy on land treatment and the Clean Water Act of 1977. Thomas, R E., et al, (1980, p.452-460) MP 1418
Arctic research of the United States, Vol.3. (1989, 71p) MP 2530
United States arctic research plan biennial revision: 1990-1991. Brown, J., ed, (1989, 72p.) MP 2544

Lichens
Tundra environment at Barrow, Alaska. Bunnell, F L., et al, (1975, p.73-124) MP 1050

Lidar
Lidar detection of leads in arctic sea ice. Schnell, R.C., et al, (1990, p.119-123) MP 2733
Recent measurements of sea ice topography in the eastern Arctic. Krabill, W.B., et al, (1990, p.132-136) MP 2735
Lidar-derived particle concentrations in plumes from arctic leads Andreas, E.L., et al, (1990, p 9-12) MP 2758

Light scattering
Optical properties of salt ice Lane, J.W., (1975, p 363-372) MP 854
Snowpack optical properties in the infrared Berger, R.H., (1979, 16p) CR 79-11
Polarization of skylight Bohren, C., (1984, p 261-265) MP 1794
Forward-scattering corrected extinction by nonspherical particles Bohren, C.F., et al, (1984, p 261-271) MP 1870
Forward-scattering corrected extinction by nonspherical particles Bohren, C F., et al, (1985, p 1023-1029) MP 1958
Wavelength-dependent extinction by falling snow. Koh, G., (1986, p 51-55) MP 2019
Snow mass extinction coefficient Koh, G., (1986, p 35-38) MP 2659
Comments on the characteristics of *in situ* snow at millimeter wavelengths Walsh, J., et al, (1986, p 317-320) MP 2666
Extinction coefficient measurement in falling snow Koh, G., (1987, 9p) SR 87-04
Scavenging of infrared screener EA 5763 by falling snow Cragin, J.H., et al, (1987, p 13-20) MP 2292
Forward scatter meter for measuring extinction in adverse weather Koh, G., (1987, p 81-84) MP 2295

Light transmission
Correlation and quantification of airborne spectrometer data to turbidity measurements at Lake Powell, Utah. Merry, C J., (1970, p 1309-1316) MP 1271
Water quality measurements at Lake Powell, Utah Merry, C J., (1977, 38p) SR 77-28
Problems in snow cover characterization O'Brien, H W., (1982, p.139-147) MP 1987
Falling snow characteristics and extinction Berger, R H., (1983, p 61-69) MP 1756
Visible propagation in falling snow as a function of mass concentration and crystal type Lacombe, J., et al, (1983, p 103-111) MP 1757
Performance and optical signature of an AN/VVS-1 laser rangefinder in falling snow: Preliminary test results Lacombe, J., (1983, p.253-266) MP 1759
Wavelength-dependent extinction by falling snow. Koh, G., (1986, p 51-55) MP 2019
Snow mass extinction coefficient. Koh, G., (1986, p 35-38) MP 2659
Preview of the SNOW-III West data base. Lacombe, J., (1987, p 3-11) MP 2291
Slant path extinction and visibility measurements from an unmanned aerial vehicle Cogan, J., et al, (1987, p 115-126) MP 2296
Two-stream approximation to radiative transfer in falling snow. Koh, G., (1988, p 463-470) MP 2604
Increased transmission through brass obscurant clouds during snowfall. Hewitt, A D., et al, (1988, p 489-496) MP 2605
Snow-smoke interaction. Hogan, A.W., et al, (1988, p.497-506) MP 2607
Optical technique for characterizing precipitation. Koh, G., (1989, p 71-76) MP 2627
Radiative transfer in falling snow: a two-stream approximation. Koh, G., (1989, 10p.) CR 89-06
Two-stream multilayer, spectral radiative transfer model for sea ice. Perovich, D K., (1989, 17p) CR 89-15
Refractive index structure parameter for a year over the frozen Beaufort Sea. Andreas, E.L., (1989, p 667-679) MP 2575
Theoretical estimates of light reflection and transmission by spatially inhomogeneous and temporally varying ice covers Perovich, D K., (1990, p 45-49) MP 2729
Light reflection and transmission by sea ice covers. Perovich, D K., (1990, p.9557-9567) MP 2761

Light (visible radiation)
Polarization of skylight. Bohren, C., (1984, p 261-265) MP 1794
Ice fog as an electro-optical obscurant Koh, G., (1985, 11p) CR 85-08
Spectra and cospectra of atmospheric turbulence over snow. Andreas, E L., (1986, p 219-233) MP 2661

Lightning
What makes thunderbolts zig and zag. Itagaki, K., (1988, p 22-27) MP 2524

Liming
Wastewater treatment in Alaska Schneiter, R.W., et al, (1982, p 207-213) MP 1696
Restoration of acidic dredge soils with sewage sludge and lime. Palazzo, A.J., (1983, 11p) CR 83-28

Limnology
Arctic limnology: a review. Hobbie, J E., (1973, p 127-168) MP 1007
Environmental analyses in the Kootenai River region, Montana McKim, H.L., et al, (1976, 53p) SR 76-13
Phosphorus chemistry of sediments of Lake Koocanusa, Montana Iskandar, I K., et al, (1981, 9p) SR 81-15
Bottom heat transfer to water bodies in winter. O'Neill, K., et al, (1981, 8p) SR 81-18
Limnology and primary productivity, Lake Koocanusa, Montana. Woods, P F., et al, (1982, 106p) SR 82-15
Limnology of Lake Koocanusa, MT, the 1967-1972 study. Bonde, T J H., et al, (1982, 184p) SR 82-21
Limnology of Lake Koocanusa, Montana Storm, P C., et al, (1982, 597p) SR 82-23

Linings
Wastewater stabilization pond linings. Middlebrooks, E J., et al, (1978, 116p) SR 78-28
1979 Greenland Ice Sheet Program. Phase 1: casing operation Rand, J.H., (1980, 18p) SR 80-24

Lipids
Trends in carbohydrate and lipid levels in Arctic plants. McCown, B H., et al, (1972, p 40-45) MP 1376

Liquid solid interfaces
Liquid distribution and the dielectric constant of wet snow. Colbeck, S C., (1980, p 21-39) MP 1349
Deforming finite elements with and without phase change. Lynch, D R., et al, (1981, p 81-96) MP 1493
Simulation of planar instabilities during solidification. Sullivan, J M., Jr., et al, (1987, p 81-111) MP 2585

LOADS (FORCES)
Properties of snow. Mellor, M., (1964, 105p) M III-A1

Loads (forces)
Ice forces on simulated structures Zabilansky, L J., et al, (1975, p 387-396) MP 864
Forces on an ice boom in the Beauharnois Canal Perham, R E., et al, (1975, p 397-407) MP 858
Creep theory for a floating ice sheet Nevel, D E., (1976, 98p) SR 76-04
Shallow snow performance of wheeled vehicles Harrison, W L., (1976, p 589-614) MP 1130
Some economic benefits of ice booms Perham, R E., (1977, p 570-581) MP 959
Roof loads resulting from rain-on-snow Colbeck, S C., (1977, 19p) CR 77-12
Concentrated loads on a floating ice sheet Nevel, D E., (1977, p 237-245) MP 1062
Intermittent ice forces acting on inclined wedges Tryde, P., (1977, 26p) CR 77-26
Viscoelasticity of floating ice plates subjected to a circular load Takagi, S., (1978, 32p) CR 78-05

Load tests on membrane-enveloped road sections Smith, N., et al, (1978, 16p) CR 78-12

Ice cover forces on structures. Kerr, A.D., (1978, p 123-134) MP 879

Horizontal forces exerted by floating ice on structures Kerr, A.D., (1978, 9p) CR 78-15

Loading on the Hartford Civic Center roof before collapse Redfield, R., et al, (1979, 32p) SR 79-09

Safe ice loads computed with a pocket calculator. Nevel, D.E., (1979, p 205-223) MP 1249

Analysis of plastic shock waves in snow Brown, R.L., (1979, 14p) CR 79-29

Power requirements and methods for long distance large iceberg towing. Mellor, M., (1980, p.231-240) MP 1275

Pressure waves in snow. Brown, R.L., (1980, p 99-107) MP 1306

Extending the useful life of DYE-2 to 1986. Tobiasson, W., et al, (1980, 37p) SR 80-13

Some promising trends in ice mechanics. Assur, A., (1980, p.1-15) MP 1300

Bending and buckling of a wedge on an elastic foundation Nevel, D.E., (1980, p 278-288) MP 1303

Working group on ice forces on structures. Carstens, T., ed, (1980, 146p) SR 80-26

Mechanics of cutting and boring in permafrost. Mellor, M., (1980, 82p) CR 80-21

Investigation of the snow adjacent to Dye-2, Greenland. Ueda, H.T., et al, (1981, 23p) SR 81-03

Pavement deflection after freezing and thawing. Chamberlain, E.J., (1981, 10p) CR 81-15

Macroscopic view of snow deformation under a vehicle Richmond, P.W., et al, (1981, 20p) SR 81-17

Vehicle tests and performance in snow. Berger, R.H., et al, (1981, p 51-67) MP 1477

Acoustic emission and deformation of ice plates Xiroucha-kis, P.C., et al, (1982, p 129-139) MP 1589

Force distribution in a fragmented ice cover. Daly, S.F., et al, (1982, p.374-387) MP 1531

Piling in frozen ground. Crory, F.E., (1982, p.112-124) MP 1722

Determining the characteristic length of model ice sheets Sodhi, D.S., et al, (1982, p.99-104) MP 1570

CRREL instrumented vehicle hardware and software Blaisdell, G.L., (1983, 75p) SR 83-03

Stress/strain/time relations for ice under uniaxial compression. Mellor, M., et al, (1983, p 207-230) MP 1587

Frozen soil characteristics that affect land mine functioning. Richmond, P.W., (1983, 18p) SR 83-05

Effect of loading on the unfrozen water content of silt. Oliphant, J.L., et al, (1983, 17p) SR 83-18

Stress measurements in ice. Cox, G.F.N., et al, (1983, 31p) CR 83-23

Effect of stress application rate on the creep behavior of polycrystalline ice. Cole, D.M., (1983, p 454-459) MP 1671

Experimental determination of buckling loads of cracked ice sheets Sodhi, D.S., et al, (1984, p.183-186) MP 1687

Force distribution in a fragmented ice cover Stewart, D.M., et al, (1984, 16p) CR 84-07

Static determination of Young's modulus in sea ice. Richter-Menge, J.A., (1984, p 283-286) MP 1789

Mechanics of ice cover breakthrough Kerr, A.D., (1984, p 245-262) MP 1997

Creep of a strip footing on ice-rich permafrost. Sayles, F.H., (1985, p 29-51) MP 1731

Experience with a biaxial ice stress sensor Cox, G.F.N., (1985, p 252-258) MP 1937

Brittleness of reinforced concrete structures under arctic conditions. Kivekäs, L., et al, (1985, 28 + 14p) MP 1969

Simple design procedure for heat transmission system piping Phetteplace, G., (1985, p 1748-1752) MP 1942

Confined compressive strength of multi-year pressure ridge sea ice samples Cox, G.F.N., et al, (1986, p 365-373) MP 2035

On the determination of the average Young's modulus for a floating ice cover Kerr, A.D., et al, (1988, p 39-43) MP 2324

Uniaxial tension/compression tests on ice – preliminary results. Cole, D.M., et al, (1989, p 37-41) MP 2482

State of the art of pavement response monitoring systems for roads and airfields (1989, 401p) SR 89-23

Resilient modulus determination for frost conditions Chamberlain, E.J., et al, (1989, p 320-333) MP 2569

Dynamic analysis of a floating ice sheet undergoing vertical indentation McGilvary, W.R., et al, (1990, p 195-203) MP 2579

Cyclic loading of saline ice: initial experimental results Cole, D.M., (1990, p 265-271) MP 2581

Snow cover effects on antarctic sea ice thickness Ackley, S.F., et al, (1990, p 16-21) MP 2726

Looms

Relationship between freezing and water content in sandy loam Black, P.B., et al, (1988, 37p) CR 88-26

Soil freezing and soil water in sandy loam Black, P.B., et al, (1989, p 2205-2210) MP 2577

Locks (waterways)

Lock wall deicing studies Hanamoto, B., ed, (1977, 68p) SR 77-22

Lock wall deicing. Hanamoto, B., (1977, p [illegible]) MP 972

Lock wall deicing with high velocity water jet at Soo Locks, Mi. Calkins, D.J., et al, (1977, p.23-35) MP 973

Laboratory experiments on lock wall deicing using pneumatic devices. Itagaki, K., et al, (1977, p 53-68) MP 974

Effects of ice on coal movement via the inland waterways Lunardini, V.J., et al, (1981, 72p) CR 81-13

Ice control at navigation locks. Hanamoto, [illegible] (1981, p.1088-1095) MP 1448

Application of a block copolymer solution to ice-prone structures. Hanamoto, B., (1983, p 155-158) MP 1636

Methods of ice control. Frankenstein, G.E., et al, (1983, p 204-215) MP 1642

Survey of ice problem areas in navigable waterways. Zufelt, J., et al, (1985, 32p) SR 85-02

Data acquisition for refrigerated physical model Zufelt, J.E., (1987, p.338-341) MP 2351

High-flow air-screen bubbler systems to control ice in locks. Rand, J.H., (1988, p 34-43) MP 2496

Methods to reduce ice accumulation on miter gate recess walls Rand, J.H., et al, (1989, 5p) MP 2722

Unconventional power sources for ice control at locks and dams Nakato, T., et al, (1989, p.107-126) MP 2572

Loess

Effects of salt on unfrozen water content in silt, Lanzhou, China. Tice, A.R., et al, (1984, 18p) CR 84-16

Logistics

Towing icebergs Lonsdale, H.K., et al, (1974, p 2) MP 1020

Operational report 1976 USACRREL-USGS subsea permafrost program Beaufort Sea, Alaska. Sellmann, P.V., et al, (1976, 20p) SR 76-12

Megastructures for mobilization. Flanders, S.N., (1986, p 10-11) MP 2153

Field water supply on the winter battlefield. Bouzoun, J.R., (1988, 7p) SR 88-02

Logjams

Debris of the Chena River McFadden, T., et al, (1976, 14p) CR 76-26

Long range forecasting

Study of climatic elements occurring concurrently. Bilello, M.A., (1976, p.23-30) MP 1613

Low temperature research

Proceedings of the Second International Symposium on Cold Regions Engineering Burdick, J., ed, (1977, 597p) MP 952

Optical engineering for cold environments Aitken, G.W., ed, (1983, 225p) MP 1646

Unique new cold weather testing facility. Eaton, R.A., (1988, p.745-750) MP 2542

Unique new cold weather testing facility. Eaton, R.A., (1989, p 335-342) MP 2468

Low-temperature effects on systems for composting explosives-contaminated soils. Ayorinde, O.A., et al, (1989, 18p) SR 89-38

Low temperature tests

Load tests on membrane-enveloped road sections Smith, N., et al, (1978, 16p) CR 78-12

Water vapor adsorption by sodium montmorillonite at -5C. Anderson, D.M., et al, (1978, p 638-644) MP 981

Waterproofing strain gages for low ambient temperatures. Garfield, D.E., et al, (1978, 20p) SR 78-15

Thermal and load-associated distress in pavements Johnson, T.C., et al, (1978, p 403-437) MP 1209

Resilient response of two frozen and thawed soils Chamberlain, E.J., et al, (1979, p 257-271) MP 1176

Grouting silt and sand at low temperatures—a laboratory investigation. Johnson, R., (1979, 33p) CR 79-05

Heat and mass transfer from freely falling drops at low temperatures Zarling, J.P., (1980, 14p) CR 80-18

Field cooling rates of asphalt concrete overlays at low temperatures Eaton, R.A., et al, (1980, 11p) CR 80-30

Brittleness of reinforced concrete structures under arctic conditions Kivekäs, L., et al, (1985, p.111-121) MP 2272

Low temperature cracking susceptibility of asphalt concrete. Janoo, V.C., et al, (1987, p 397-415) MP 2233

Theory of particle coarsening with a log-normal distribution Colbeck, S.C., (1987, p 1583-1588) MP 2250

On the application of thermosyphons in cold regions Zarling, J.P., et al, (1988, p 281-286) MP 2321

Performance of laminated composites in cold Dutta, P.K., et al, (1988, p 269-281) MP 2433

Behavior of materials at low temperatures Dutta, P.K., (1988, 68p) SR 88-09

Structural fiber composite materials for cold regions Dutta, P.K., (1988, p 124-134) MP 2405

Fiber composite materials in an arctic environment Dutta, P.K., (1989, p 216-225) MP 2559

Graphite-epoxy composites subjected to low temperatures Dutta, P.K., et al, (1989, p 429-435) MP 2554

Macquarie Island

Soil properties of the International Tundra Biome sites Brown, J., et al, (1974, p 27-48) MP 1043

Tundra and analogous soils Everett, K.R., et al, (1981, p 139-179) MP 1405

Magnetic measurement

Bedrock geology survey in northern Maine Sellmann, P.V., et al, (1976, 19p) CR 76-37

Magnetic properties

Detection of Arctic water supplies with geophysical techniques Arcone, S.A., et al, (1979, 30p) CR 79-15

Magnetic surveys

Measurements of ground resistivity. Arcone, S.A., (1982, p 92-110) MP 1513

Comparative field testing of buried utility locators Bigl, S.R., et al, (1984, 25p) MP 1977

Locating buried utilities. Bigl, S.R., (1985, 48p) SR 85-14

Maintenance

Approach roads, Greenland 1955 program (1959, 100p) MP 1522

Haines-Fairbanks pipeline: design, construction and operation. Garfield, D.E., et al, (1977, 20p) SR 77-04

Maintaining buildings in the Arctic Tobiasson, W., et al, (1977, p 244-251) MP 1508

Excavation of frozen materials Moore, H.E., et al, (1980, p 323-345) MP 1360

Construction engineering community materials and diagnostics. (1986, 54p) SR 86-01

Rebuilding infrastructure for pleasure boating Wortley, C.A., et al, (1989, p.188-201) MP 2466

Roofer, a management tool for maintaining built-up roofs. Bailey, D.M., et al, (1989, p 6-10) MP 2488

Vapor retarders for membrane roofing systems Tobiasson, W., (1989, p 31-37) MP 2489

Manuals

Cold climate utilities delivery design manual. Smith, D.W., et al, (1979, c300 leaves) MP 1373

Guidebook to permafrost and its features, northern Alaska. Brown, J., ed, (1983, 230p) MP 1640

User's guide for the BIBSORT program for the IBM-PC personal computer. Kyriakakis, T., et al, (1985, 61p) SR 85-04

Mapping

Permafrost and vegetation maps from ERTS imagery. Anderson, D.M., et al, (1973, 75p) MP 1003

ERTS mapping of Arctic and subarctic environments Anderson, D.M., et al, (1974, 128p) MP 1047

Land use/vegetation mapping in reservoir management. Cooper, S., et al, (1974, 30p) MP 1039

Regionalized feasibility study of cold weather earthwork. Roberts, W.S., (1976, 190p) SR 76-02

Skylab imagery Application to reservoir management in New England McKim, H.L., et al, (1976, 51p) SR 76-07

Ecology on the Yukon-Prudhoe haul road. Brown, J., ed, (1978, 131p) MP 1115

Water resources by satellite. McKim, H.L., (1978, p.164-169) MP 1090

Geoecological mapping scheme for Alaskan coastal tundra. Everett, K.R., et al, (1978, p 359-365) MP 1098

Estuarine processes and intertidal habitats in Grays Harbor, Washington a demonstration of remote sensing techniques. Gatto, L.W., (1978, 79p) CR 78-18

Electrical ground impedance. Arcone, S.A., et al, (1978, 92p) MP 1221

Snow cover mapping in northern Maine using LANDSAT. Merry, C.J., et al, (1979, p 197-198) MP 1510

Mapping of the LANDSAT imagery of the Upper Susitna River Gatto, L.W., et al, (1980, 41p) CR 80-04

Characteristics of permafrost beneath the Beaufort Sea Sellmann, P.V., et al, (1981, p 125-157) MP 1428

Environmental mapping of the Arctic National Wildlife Refuge, Alaska Walker, D.A., et al, (1982, 59p. + 2 maps) CR 82-37

Perspective ground loads and mapping Tobiasson, W. (1989, p 512-513) MP 2614

Coastal subsea permafrost and bedrock observations using dc resistivity Sellmann, P.V., et al, (1989, 13p) CR 89-13

Maps

Plant recovery from Arctic oil spills Walker, D.A., et al, (1978, p 242-259) MP 1184

Geobotanical atlas of the Prudhoe Bay region, Alaska Walker, D.A., et al, (1980, 69p) CR 80-14

Ice atlas, 1984-1985, Ohio River, Allegheny River, Monongahela River Gatto, L.W., et al, (1986, 185p) SR 86-23

Ice atlas 1985-86 of five rivers of the USA Gatto, L.W., et al, (1987, 367p) SR 87-20

Marine biology

Choanoflagellata from the Weddell Sea, summer 1977 Buck, K.R., (1980, 26p) CR 80-16

Choanoflagellates from the Weddell Sea Buck, K.R., (1981, p 47-54) MP 1453

Physical mechanism for establishing algal populations in frazil ice Garrison, D.L., et al, (1983, p 363-365) MP 1717

Sea ice microbial communities in Antarctica Garrison, D.L., et al, (1986, p 243-250) MP 2026

Sea ice: a habitat for the foraminifer *Neogloboquadrina pachyderma*? Dieckmann, G., et al (1990, p 86-92) MP 2732

Marine deposits

Preliminary simulation of the formation and infilling of sea ice gouges Weeks, W.F., et al, (1986, p 259-268) MP 2218

Marine geology
Coastal marine geology of the Beaufort, Chukchi and Bering Seas Gatto, L.W., (1980, 357p.) SR 80-05
Distribution and features of bottom sediments in Alaskan coastal waters. Sellmann, P.V., (1980, 50p.) SR 80-15

Marine meteorology
Using a MicroCORA sounding system in the southern ocean Andreas, E.L., et al, (1982, 17p.) CR 82-28
US/USSR Weddell Polynya expedition, Upper air data, 1981 Andreas, E.L., (1983, 288p.) SR 83-13
Simple boom for use in measuring meteorological data from a ship. Andreas, E.L., et al, (1984, p 227-237) MP 1752
Lidar detection of leads in arctic sea ice Schnell, R.C., et al, (1990, p 119-123) MP 2733

Marine transportation
Effects of ice on coal movement via the inland waterways Lunardini, V.J., et al, (1981, 72p.) SR 81-13

Mars (planet)
Mars soil-water analyzer instrument description and status Anderson, D.M., et al, (1977, p 149-158) MP 912
UV radiational effects on Martian regolith water. Nadeau, P.H., (1977, 89p.) MP 1072
Water vapor adsorption by sodium montmorillonite at -5C. Anderson, D.M., et al, (1978, p 638-644) MP 981
Proceedings of the second planetary water and polar processes colloquium, 1978 (1978, 209p.) MP 1193
Viking GCMS analysis of water in the Martian regolith. Anderson, D.M., et al, (1978, p 55-61) MP 1195
Analysis of water in the Martian regolith. Anderson, D.M., et al, (1979, p.33-38) MP 1409

Mass balance
Mass-balance aspects of Weddell Sea pack-ice. Ackley, S.F., (1979, p 391-405) MP 1286
Mass balance of a portion of the Ross Ice Shelf Jezek, K.C., et al, (1984, p 381-384) MP 1919

Mass flow
Friction loss through a uniform snow layer Yen, Y.C., (1990, p 83-90) MP 2703

Mass movements (geology)
Glacigenic resedimentation related to mass-movement processes. Lawson, D.E., (1989, p 147-169) MP 2472

Mass transfer
Mass transfer along ice surfaces. Tobin, T.M., et al, (1977, p.34-37) MP 1091
Heat and mass transfer from freely falling drops at low temperatures. Zarling, J.P., (1980, 14p.) CR 80-18
Estimation of heat and mass fluxes over Arctic leads Andreas, E.L., (1980, p 2057-2063) MP 1410
Heat transfer in cold climates Lunardini, V.J., (1981, 731p.) MP 1435
One-dimensional transport from a highly concentrated, transfer type source. O'Neill, K., (1982, p 27-36) MP 1489
On the temperature distribution in an air-ventilated snow layer Yen, Y.-C., (1982, 10p.) CR 82-05
Calculation of advective mass transport in heterogeneous media. Daly, C.J., (1983, p.73-89) MP 1697
Aerosol growth in a cold environment Yen, Y.-C., (1984, 21p.) CR 84-06
Status of numerical models for heat and mass transfer in frost-susceptible soils. Berg, R.L., (1984, p 67-71) MP 1851
Modeling the transport of chromium (VI) in soil columns Selim, H.M., et al, (1989, p.996-1004) MP 2670

Materials
Thermal emittance of diathermanous materials Munis, R.H., et al, (1984, p 209-220) MP 1863
Emittance and interpretation of thermal images Munis, R.H., et al, (1985, p.72-78) MP 1962
Influence of thermal cycling on fiber composites Dutta, P.K., et al, (1988, p 141-147) MP 2435
Performance of laminated composites in cold Dutta, P.K., et al, (1988, p 269-281) MP 2433
Behavior of materials at low temperatures Dutta, P.K., (1988, 68p.) SR 88-09
Influence of well casing materials on chemical species in ground water Parker, L.V., et al, (1988, p 450-461) MP 2456
Use of geotextiles to mitigate frost heave in soils Henry, K., (1988, p 1096-1101) MP 2369
Response of advanced composite space materials to thermal cycling. Dutta, P.K., et al, (1988, p 506-517) MP 2478
Graphite-epoxy composites subjected to low temperatures Dutta, P.K., et al, (1989, p 429-435) MP 2554

Mathematical models
Prediction and validation of temperature in tundra soils Brown, J., et al, (1971, p 193-197) MP 907
Heat and moisture flow in freezing and thawing soils a field study Berg, R.L., (1975, p 148-160) MP 1612
Thermoinsulating media within embankments on perennially frozen soil. Berg, R.L., (1976, 161p.) SR 76-03
Creep theory for a floating ice sheet Nevel, D.E., (1976, 98p.) SR 76-04
Galerkin finite element analog of frost heave Guymon, G.L., et al, (1976, p 111-113) MP 898
Excavating rock, ice, and frozen ground by electromagnetic radiation Heeksta, P., (1976, 17p.) CR 76-36
Mathematical model to predict frost heave. Berg, R.L., et al, (1977, p.92-109) MP 1131
Viscous wind-driven circulation of Arctic sea ice. Hibler, W.D., III, et al, (1977, p.95-133) MP 983
Modeling pack ice as a viscous-plastic continuum. Hibler, W.D., III, (1977, p 46-55) MP 1164
Finite element formulation of a sea ice drift model. Sodhi, D.S., et al, (1977, p 67-76) MP 1165
Finite element model of transient heat conduction. Guymon, G.L., et al, (1977, 167p.) SR 77-38
Roof loads resulting from rain on snow Colbeck, S.C., (1977, p 482-490) MP 982
Model simulation of near shore ice drift, deformation and thickness Hibler, W.D., III, (1978, p 33-44) MP 1010
Symposium on land treatment of wastewater, CRREL, Aug. 1978. (1978, 2 vols.) MP 1145
NO3-N in percolate water in land treatment. Iskandar, I.K., et al, (1978, p 163-169) MP 1148
Nitrogen behavior in land treatment of wastewater: a simplified model Selim, H.M., et al, (1978, p 171-179) MP 1149
Simulation of the movement of conservative chemicals in soil solution. Nakano, Y., et al, (1978, p 371-380) MP 1156
Numerical simulation of atmospheric ice accretion. Ackley, S.F., et al, (1979, p 44-52) MP 1235
Effect of the oceanic boundary layer on the mean drift of pack ice application of a simple model McPhee, M.G., (1979, p 388-400) MP 1198
Dynamic thermodynamic sea ice model Hibler, W.D., III, (1979, p 815-846) MP 1247
Mathematical model to correlate frost heave of pavements Berg, R.L., et al, (1980, 49p.) CR 80-10
Shore ice pile-up and ride-up field observations, models, theoretical analyses Kovacs, A., et al, (1980, p 269-298) MP 1295
Numerical modeling of sea ice in the seasonal sea ice zone. Hibler, W.D., III, (1980, p 299-356) MP 1296
Nonsteady ice drift in the Strait of Belle Isle. Sodhi, D.S., et al, (1980, p 177-186) MP 1364
Continuum sea ice model for a global climate model Ling, C.H., et al, (1980, p 187-196, MP 1622
Linearized Boussinesq groundwater flow equation. Daly, C.J., et al, (1981, p 875-884) MP 1470
Frost heave model Hromadka, T.V., II, et al, (1982, p.1-10) MP 1567
Field tests of a frost-heave model. Guymon, G.L., et al, (1983, p 409-414) MP 1657
Equations for determining gas and brine volumes in sea ice Cox, G.F.N., et al, (1983, p 306-316) MP 2055
Increased heat flow due to snow compaction: the simplistic approach Colbeck, S.C., (1983, p 227-229) MP 1693
Numerical simulation of sea ice induced gouges on the shelves of the polar oceans Weeks, W.F., et al, (1985, p 259-265) MP 1938
Bulk transfer coefficients for heat and momentum over leads and polynyas. Andreas, E.L., et al, (1986, p 1875-1883) MP 2187
Comment on "Atmospheric boundary layer modification in the marginal ice zone" by T.J. Bennett, Jr. and K. Hunkins Andreas, E.L., (1987, p 3965-3969) MP 2394
Diagnostic ice-ocean model Hibler, W.D., III, et al, (1987, p.987-1015) MP 2238
Algorithm for extraction of ice-thickness data from short pulse radar signals Rieck, L., et al, (1990, p 137-145) MP 2698
Unfrozen water content and hydraulic conductivity of frozen soil. Black, P.B., (1990, 7p.) CR 90-05
Shortwave radiation and open water in models of sea ice decay. Perovich, D.K., et al, (1990, p 242-246) MP 2759

Measurement
Measuring unmetered steam use with a condensate pump cycle counter Johnson, P.R., (1977, p 434-442) MP 957
Physical measurement of ice jams 1976-77 field season Wuebben, J.L., et al, (1978, 19p.) SR 78-03
Physical measurements of river ice jams Calkins, D.J., (1978, p 693-695) MP 1159
Ice stress measurements around offshore structures Johnson, J.B., (1988, p 55-59) MP 2611
Measurement of the path-averaged turbulent surface heat flux Andreas, E.L., (1988, p 219-220) MP 2526
Measurement of frost heave forces on H-piles and pipe piles Johnson, J.B., et al, (1988, 49p.) CR 88-21
Perspective ground leads and mapping Tobiasson, W., (1989, p 512-513) MP 2614
Two-wavelength method of measuring path-averaged turbulent surface heat fluxes Andreas, E.L., (1989, p 280-292) MP 2648
SNOW IV field experiment data report Wright, E.A., ed, (1989, 250p.) SR 89-14
Airborne particle measurements Berger, R.H., (1989, p 31) MP 2644
Radar backscattering from artificially grown sea ice Bredow, J., et al, (1989, p 259-264) MP 2667
Algorithm for extraction of ice-thickness data from short pulse radar signals Rieck, L., et al, (1990, p 137-145) MP 2698
Sea ice thickness versus impulse radar time-of-flight data Kovacs, A., et al, (1990, p 91-98) MP 2704
Radar backscatter measurements over saline ice Gogineni, S., et al, (1990, p 603-615) MP 2741

MEASURING INSTRUMENTS
Heat exchange at the ground surface. Scott, R.F., (1964, 49p. plus append.) M II-A1
Investigation and exploitation of snowfield sites Mellor, M., (1969, 57p.) M III-A2b

Measuring instruments
Instrument for determining snow properties related to trafficability Parrott, W.H., et al, (1972, p 193-204) MP 886
Case for comparison and standardization of carbon dioxide reference gases Kelley, J.J., et al, (1973, p.163-181) MP 964
Remote sensing program required for the AIDJEX model. Weeks, W.F., et al, (1974, p 22-44) MP 1040
Heat and moisture flow in freezing and thawing soils—a field study Berg, R.L., (1975, p 148-160) MP 1612
Near real time hydrologic data acquisition utilizing the LANDSAT system. McKim, H.L., et al, (1975, p 200-211) MP 1055
On the use of tensiometers in snow hydrology. Colbeck, S.C., (1976, p.135-140) MP 843
Winter thermal structure and ice conditions on Lake Champlain, Vermont. Bates, R.E., (1976, 22p.) CR 76-13
Remote-reading tensiometer for use in subfreezing temperatures McKim, H.L., et al, (1976, p 31-45) MP 897
Mars soil-water analyzer: instrument description and status Anderson, D.M., et al, (1977, p.149-158) MP 912
Sea ice thickness profiling and under-ice oil entrapment. Kovacs, A., (1977, p 547-550) MP 940
Evaluation of electrical equipment for measuring permafrost distribution. Sellmann, P.V., et al, (1977, p 39-42) MP 925
Iceberg thickness profiling using an impulse radar. Kovacs, A., (1977, p 140-142) MP 1012
Difficulties of measuring the water saturation and porosity of snow Colbeck, S.C., (1978, p.189-201) MP 1124
Simplified method for monitoring soil moisture. Walsh, J.E., et al, (1978, p 40-44) MP 1194
Construction and performance of platinum probes for measurement of redox potential. Blake, B.J., et al, (1978, 8p.) SR 78-27
Photoelastic instrumentation—principles and techniques Roberts, A., et al, (1979, 153p.) SR 79-13
Determination of frost penetration by soil resistivity measurements Atkins, R.T., (1979, 24p.) SR 79-22
CRREL frost heave test, USA Chamberlain, E.J., et al, (1981, p 55-62) MP 1499
Airborne-Snow Concentration Measuring Equipment Lacombe, J., (1982, p 17-46) MP 1981
Collapsible restraint for measuring tapes Ueda, H.T., (1983, 12 col.) MP 2335
Technique for measuring the mass concentration of falling snow Lacombe, J., (1983, p 17-28) MP 1647
Progress in methods of measuring the free water content of snow Fisk, D.J., (1983, p 48-51) MP 1649
Boom for shipboard deployment of meteorological instruments Andreas, E.L., et al, (1983, 14p.) SR 83-28
Surface roughness of Ross Sea pack ice Govoni, J.W., et al, (1983, p 123-124) MP 1764
Atmosphere subgroup discussions Andreas, E.L., (1984, p 97-98) MP 2603
Simple boom for use in measuring meteorological data from a ship Andreas, E.L., et al, (1984, p 227-237) MP 1752
Evaluation of a biaxial ice stress sensor Cox, G.F.N., (1984, p 349-361) MP 1836
In-ice calibration tests for an elongated, uniaxial brass ice stress sensor. Johnson, J.B., (1985, p 244-249) MP 1859
Vertically stable benchmarks a synthesis of existing information Gatto, L.W., (1985, p 179-188) MP 2069
Rock stress measurements by wire stressmeter at high temperatures Dutta, P.K., et al, (1987, p 43-58) MP 2447
CRREL Hopkinson bar apparatus Dutta, P.K., et al, (1987, 29p.) SR 87-24
Uniaxial tension compression tests on ice preliminary results Cole, D.M., et al, (1989, p 37-41) MP 2482
Snow-surface temperature analysis Bates, R.E., et al, (1989, p 109-116) MP 2753
Site-specific meteorology Bates, R.E., et al, (1989, p 13-15) MP 2641
Snow concentration and precipitation rate measurements during SNOW IV Lacombe, J., (1989, p 25-29) MP 2643
Remote water-temperature measurement Daly, S., (1989, 6p.) MP 2722
Cold regions weather data systems Bates, R.E., et al, (1989, p 139-145) MP 2568
Sea ice thickness measurement Kovacs, A., et al, (1989, p 394-424) MP 2693
Development of an underwater fresh ice detector Daly, S.F., et al, (1990, p 77-82) MP 2702

Mechanical properties
Resurvey of the "Byrd" Station (Antarctica) drill hole Garfield, D.E., et al, (1976, p 29-34) MP 846
Kinematics of axial rotation machines Melnor, M., (1976, 45p.) CR 76-16

Movement study of the trans-Alaska pipeline at selected sites Ueda, H.T., et al, (1981, 32p) CR 81-04
Investigation into the post-stable behavior of a tube array in cross-flow. Lever, J.H., et al, (1989, p.457-465) MP 2561
Fate and transport of contaminants in frozen soils Ayorinde, O.A., et al, (1990, p.202-211) MP 2679

Mechanical tests

Report of the ITTC panel on testing in ice, 1978. Frankenstein, G.E., et al, (1978, p.157-179) MP 1140
Mechanical properties of multi-year pressure ridge samples. Richter-Menge, J.A., (1985, p.244-251) MP 1936
Evaluation of the Caterpillar Challenger tractor for use in Antarctica. Blaisdell, G.L., et al, (1989, 12p + figs) MP 2718
Comparative model tests in ice of a Canadian Coast Guard R-class icebreaker. Tatinclaux, J.C., et al, (1989, p.1-1-1/18) MP 2751

Meetings

Workshop on permafrost-related research and TAPS (1975, 37p.) MP 1122
Third International Symposium on Ice Problems, 1975. Frankenstein, G.E., ed, (1975, 627p) MP 845
Symposium: geography of polar countries, selected papers and summaries Brown, J., ed, (1977, 61p) SR 77-06
Proceedings of the Second International Symposium on Cold Regions Engineering Burdick, J., ed, (1977, 597p) MP 952
Symposium on land treatment of wastewater, CRREL, Aug 1978. (1978, 2 vols) MP 1145
Report of the ITTC panel on testing in ice, 1978 Frankenstein, G.E., et al, (1978, p.157-179) MP 1140
Workshop on Ecological Effects of Hydrocarbon Spills in Alaska Atlas, R.M., et al, (1978, p.155-157) MP 1183
Proceedings of the second planetary water and polar processes colloquium, 1978. (1978, 209p) MP 1193
Modeling snow cover runoff meeting, Sep 1978 Colbeck, S.C., ed, (1979, 432p) SR 79-36
International Workshop on the Seasonal Sea Ice Zone, Monterey, California, Feb 26-Mar 1, 1979. Andersen, B.G., ed, (1980, 357p) MP 1292
Problems of the seasonal sea ice zone Weeks, W.F., (1980, p.1-35) MP 1293
Workshop on Environmental Protection of Permafrost Terrain. Brown, J., et al, (1980, p.30-36) MP 1314
U.S.-Soviet seminar on building under cold climates and on permafrost. (1980, 365p) SR 80-40
Arctic research of the United States, Vol 2 (1988, 76p) MP 2379
Arctic research in the United States, Vol 3. (1989, 72p) MP 2653
Arctic research of the United States, Vol 3. (1989, 71p) MP 2530

Melting

Roof response to icing conditions Lane, J.W., et al, (1979, 40p) CR 79-17

Melting points

Unfrozen water contents of submarine permafrost determined by nuclear magnetic resonance. Tice, A.R., et al, (1980, p.400-412) MP 1412
Temperature and interface morphology in a melting ice-water system Yen, Y.-C., (1984, p.305-325) MP 1727

Meltwater

Snow accumulation for arctic freshwater supplies Slaughter, C.W., et al, (1975, p.218-224) MP 869
Short-term forecasting of water run-off from snow and ice Colbeck, S.C., (1977, p.571-588) MP 1067
Sintering and compaction of snow containing liquid water Colbeck, S.C., et al, (1979, p.13-32) MP 1190
Water flow through heterogeneous snow Colbeck, S.C., (1979, p.37-45) MP 1219
Roof leaks in cold regions school at Chevak, Alaska Tobiasson, W., et al, (1980, 12p) CR 80-11
Free convection heat transfer characteristics in a melt water layer. Yen, Y.-C., (1980, p.550-556) MP 1311
Atmospheric pollutants in snow cover runoff Colbeck, S.C., (1981, p.1383-1388) MP 1487
Permeability of a melting snow cover Colbeck, S.C., et al, (1982, p.904-908) MP 1565
Thermal instability and heat transfer characteristics in water-ice systems. Yen, Y.-C., (1987, 33p) CR 87-22
Ski friction and thermal response Warren, G.C., et al, (1989, p.223-225) MP 2745
Does snow have ion chromatographic properties Hewitt, A.D., et al, (1989, p.165-171) MP 2755

Metal ice friction

Ice characteristics in Whitefish Bay and St. Marys River in winter. Vance, G.P., (1980, 27p) SR 80-32
Ship resistance in thick brash ice Meller, M., (1980, p.305-321) MP 1329
Dynamic friction of bobsled runners on ice Huber, N.P., et al, (1985, 26p) MP 2082
Comparative model tests in ice of a Canadian Coast Guard R-class icebreaker Tatinclaux, J.C., et al, (1989, p.1-1-1/18) MP 2751
Model tests on an icebreaker at two friction factors Tatinclaux, J.C., (1989, p.774-784) MP 2622
Dynamic friction of a metal runner on ice I. Model sled test Itagaki, K., et al, (1989, 17p) CR 89-14
Comparative model tests in ice of a Canadian Coast Guard R-class icebreaker. Tatinclaux, J.C., et al, (1990, p.31-52) MP 2762

Metal snow friction

Ice characteristics in Whitefish Bay and St. Marys River in winter. Vance, G.P., (1980, 27p) SR 80-32
Kinetic friction of snow. Colbeck, S.C., (1988, p.78-86) MP 2339
Thermal response of downhill skis Warren, G.C., et al, (1989, 40p) CR 89-23

Metals

Atmospheric trace metals and sulfate in the Greenland Ice Sheet. Herron, M.M., et al, (1977, p.915-920) MP 949
Blank corrections for ultratrace atomic absorption analysis Cragin, J.H., et al, (1979, 5p) CR 79-03
Techniques for measuring Hg in soils and sediments Cragin, J.H., et al, (1985, 16p) SR 85-16
Retention and release of metals by soils—evaluation of several models. Amacher, M.C., et al, (1986, p.131-154) MP 2186
Theory of particle coarsening with a log-normal distribution Colbeck, S.C., (1987, p.1583-1588) MP 2250

METAMORPHISM (SNOW)

Snow as a material. Bader, H., et al, (1962, 79p) M II-B

Metamorphism (snow)

Thermodynamics of snow metamorphism due to variations in curvature. Colbeck, S.C., (1980, p.291-301) MP 1368
Overview of seasonal snow metamorphism Colbeck, S.C., (1982, p.45-61) MP 1500
Workshop on the Properties of Snow, 1981. Brown, R.L., ed, (1982, 135p) SR 82-18
Theory of metamorphism of dry snow Colbeck, S.C., (1983, p.5475-5482) MP 1603
Comments on the metamorphism of snow Colbeck, S.C., (1983, p.149-151) MP 1650
Comments on "Theory of metamorphism of dry snow" by S.C. Colbeck. Sommerfeld, R.A., (1984, p.4963-4965) MP 1800
New classification system for the seasonal snow cover Colbeck, S.C., (1984, p.179-181) MP 1921
Classification of seasonal snow cover crystals Colbeck, S.C., (1986, p.59S-70S) MP 2164
Snow metamorphism and classification. Colbeck, S.C., (1987, p.1-35) MP 2205
Metamorphism and classification of seasonal snow crystals. Colbeck, S.C., (1987, p.3-34) MP 2438
Snow properties and processes Colbeck, S.C., (1987, p.145-150) MP 2413

Meteorological charts

SNOW IV field experiment data report. Wright, E.A., ed, (1989, 250p) SR 89-14
Synoptic meteorology during the SNOW IV Field Experiment Bilello, M.A., et al, (1989, p.5-12) MP 2640

METEOROLOGICAL DATA

Heat exchange at the ground surface Scott, R.F., (1964, 49p, plus append) M II-A1
Climatology of Antarctic regions Wilson, C., (1968, 77p) M I-A3c

Meteorological data

Automatic data collection equipment for oceanographic application Dean, A.M., Jr., (1978, p.1111-1121) MP 1028
Midwinter temperature regime and snow occurrence in Germany Bilello, M.A., et al, (1978, 56p) CR 78-21
Land treatment climatic survey at CRREL Bilello, M.A., et al, (1978, 37p) SR 78-21
Soil characteristics and climatology during wastewater application at CRREL Iskandar, I.K., et al, (1979, 82p) SR 79-23
Prototype wastewater land treatment system Jenkins, T.F., et al, (1979, 71p) SR 79-35
Forecasting ice formation and breakup on Lake Champlain Bates, R.E., et al, (1979, 21p) CR 79-26
Winter thermal structure, ice conditions and climate of Lake Champlain Bates, R.E., (1980, 26p) CR 80-02
Winter surveys of the upper Susitna River, Alaska Bilello, M.A., (1980, 30p) SR 80-19
Ice jams and meteorological data for three winters, Ottauquechee River, Vt Bates, R.E., et al, (1981, 27p) CR 81-01
Point Barrow, Alaska, USA Brown, J., (1981, p.775-776) MP 1434
Synoptic meteorology during the CRREL-ONE field experiment Bilello, M.A., (1981, 55p) SR 81-27
SNOW-ONE-A, Data report Aitken, G.W., ed, (1982, 641p) SR 82-08
Meteorology Bates, R.E., (1982, p.43-180) MP 1560
Surface meteorology U.S.-USSR Weddell Polynya Expedition, 1981 Andreas, E.L., et al, (1983, 32p) SR 83-14
Site-specific and synoptic meteorology Bates, R.E., (1983, p.13-50) MP 1845
Climate at CRREL, Hanover, New Hampshire Bates, R.E., (1984, 58p) SR 84-24
Frozen precipitation and weather. Munchen Riem, West Germany Bilello, M.A., (1984, 47p) SR 84-32
Overview of meteorological and snow cover characterization at SNOW-TWO Bates, R.E., et al, (1984, p.171-191) MP 1868
Comparison of winter climatic data for three New Hampshire sites Govoni, J.W., et al, (1986, 78p) SR 86-05
Evaluating trafficability. McKim, H.L., (1986, p.237-239) MP 2662
Snow hydrology in the upper Yamuna basin, India Malhotra, R.V., et al, (1988, p.84-93) MP 2633
Regional climatic trends in northern New England Haugen, R.K., et al, (1988, p.64-71) MP 2748
SNOW IV field experiment data report Wright, E.A., ed, (1989, 250p) SR 89-14
Site-specific meteorology Bates, R.E., et al, (1989, p.13-15) MP 2641
Hourly meteorological data for SNOW IV Bates, R.E., et al, (1989, p.159-250) MP 2647
Cold regions weather data systems. Bates, R.E., et al, (1989, p.139-145) MP 2568

Meteorological factors

Report on ice fall from clear sky in Georgia October 26, 1959. Harrison, L.P., et al, (1960, 31p. plus photographs) MP 1017
Seasonal regime and hydrological significance of stream icings in central Alaska. Kane, D.L., et al, (1973, p.528-540) MP 1026
Mesoscale measurement of snow-cover properties Bilello, M.A., et al, (1973, p.624-643) MP 1029
Decay patterns of land-fast sea ice in Canada and Alaska. Bilello, M.A., (1977, p.1-10) MP 1161
Computer modeling of atmospheric ice accretion Ackley, S.F., et al, (1979, 36p) CR 79-04
Ablation seasons of arctic and antarctic sea ice. Andreas, E.L., et al, (1982, p.440-447) MP 1517
Ice jams and flooding on Ottauquechee River, VT. Bates, R., et al, (1982, 25p) SR 82-06
Meteorology and observed snow crystal types during the SNOW-ONE experiment Bilello, M.A., (1982, p.59-75) MP 1983
Snow-cover characterization SADARM support O'Brien, H., et al, (1984, p.409-411) MP 2095
Numerical simulation of freeze-up on the Ottauquechee River Calkins, D.J., (1984, p.247-277) MP 1815
Constraints and approaches in high latitude natural resource sampling and research. Slaughter, C.W., et al, (1984, p.41-46) MP 2013
New method of measuring the snow-surface temperature Andreas, E.L., (1986, p.139-156) MP 2166
Meteorological instrumentation for characterizing atmospheric icing. Bates, R.E., et al, (1987, p.23-30) MP 2276

Meteorological instruments

Meteorological measurements at Camp Ethan Allen Training Center, Vermont. Bates, R., (1982, p.77-112) MP 1984
Using a MicroCORA sounding system in the southern ocean. Andreas, E.L., et al, (1982, 17p) CR 82-28
US/USSR Weddell Polynya expedition, Upper air data, 1981 Andreas, E.L., (1983, 288p) SR 83-13
Boom for shipboard deployment of meteorological instruments. Andreas, E.L., et al, (1983, 14p) SR 83-28
Atmospheric dynamics in the antarctic marginal ice zone. Andreas, E.L., et al, (1984, p.649-661) MP 1667
Simple boom for use in measuring meteorological data from a ship Andreas, E.L., et al, (1984, p.227-237) MP 1752
Computer interfacing of meteorological sensors in severe weather. Rancourt, K., et al, (1985, p.205-211) MP 2175
Meteorological system performance in icing conditions Bates, R.E., (1987, p.73-86) MP 2285
Humidity and temperature measurements obtained from an unmanned aerial vehicle Ballard, H., et al, (1987, p.35-45) MP 2293
SNOW IV field experiment data report Wright, E.A., ed, (1989, 250p) SR 89-14
Site-specific meteorology Bates, R.E., et al, (1989, p.13-15) MP 2641
Optical measurement of precipitation Koh, G., (1989, 13p) SR 89-30

Meteorology

Problems of the seasonal sea ice zone Weeks, W.F., (1980, p.1-35) MP 1293
Cold Regions Science and Technology Bibliography Cummings, N.H., (1981, p.1-255) MP 1372

Microbiology

Fate of crude and refined oils in North Slope soils Seastone, A., et al, (1978, p.139-147) MP 1186
Bacterial aerosols resulting from wastewater irrigation in Ohio Bausum, H.T., et al, (1979, 64p) SR 79-32
Choanoflagellates from the Weddell Sea Buck, K.R., (1981, p.47-54) MP 1453
Sea ice microbial communities in Antarctica Garrison, D.L., et al, (1986, p.243-250) MP 2126
Sea-ice pressure ridge microbial communities Ackley, S.F., (1988, p.172-174) MP 2450
Sea ice--a habitat for the foraminifer Neogloboquadrina pachyderma Dieckmann, G., et al, (1990, p.86-92) MP 2732

Microclimatology

Abiotic overview of the Tundra Biome Program, 1971 Weller, G., et al, (1971, p.133-151) MP 906
Micrometeorological investigations near the tundra surface Kelley, J.J., (1971, p.109-126) MP 1006

Microclimatology *(cont.)*
Land treatment climatic survey at CRREL. Bilello, M.A., et al, (1978, 37p.) SR 78-21
Microelement content
Urban waste as a source of heavy metals in land treatment. Iskandar, I.K., (1976, p.417-432) MP 977
Elemental compositions and concentrations of microspherules in snow and pack ice from the Weddell Sea. Kumai, M., et al, (1983, p.128-131) MP 1777
Microscopy
Producing strain-free flat surfaces on single crystals of ice: comments. Tobin, T.M., (1973, p.519-520) MP 1000
Microstructure
Acoustic emission and deformation response of finite ice plates. Xirouchakis, P.C., et al, (1981, p.385-394) MP 1455
Ice crystal formation and supercooled fog dissipation. Kumai, M., (1982, p.579-587) MP 1539
Polycrystalline ice creep in relation to applied stresses. Cole, D.M., (1983, p 614-621) MP 1582
Crystalline structure of urea ice sheets used in modeling in the CRREL test basin. Gow, A.J., (1984, p 241-253) MP 1835
Effect of size on stresses in shear flow of granular materials, Pt.1. Shen, H.H., (1985, 18p.) CR 85-02
Effect of size on stresses in shear flow of granular materials, Pt.2. Shen, H.H., (1985, 20p.) CR 85-03
Microstructure and the resistance of rock to tensile fracture. Peck, L., et al, (1985, p.11,533-11,546) MP 2157
Evaluation of the rheological properties of columnar ridge sea ice. Brown, R.L., et al, (1986, p.55-66) MP 2177
Microstructure of frozen soils examined by SEM. Kumai, M., (1988, p.390-395) MP 2361
Microwaves
Antarctic sea ice dynamics and its possible climatic effects. Ackley, S.F., et al, (1976, p.53-76) MP 1378
Interaction of a surface wave with a dielectric slab discontinuity. Arcone, S.A., et al, (1978, 10p.) CR 78-08
Disinfection of wastewater by microwaves. Iskandar, I.K., et al, (1980, 15p.) SR 80-01
Inlet current measured with Seasat-1 synthetic aperture radar. Shemdin, O.H., et al, (1980, p.35-37) MP 1443
Antarctic sea ice microwave signatures. Comiso, J.C., et al, (1984, p.662-672) MP 1668
Dielectric properties at 4.75 GHz of saline ice slabs. Arcone, S.A., et al, (1985, p.83-86) MP 1911
Dielectric measurements of snow cover. Burns, B.A., et al, (1985, p.829-834) MP 1913
Remote sensing of the Arctic seas. Weeks, W.F., et al, (1986, p.59-64) MP 2117
Microwave dielectric, structural and salinity properties of sea ice. Arcone, S.A., et al, (1986, p.832-839) MP 2188
Scientific challenges at the poles. Welch, J.P., et al, (1987, p.23-26) MP 2228
Microwave and structural properties of saline ice. Gow, A.J., et al, (1987, 36p.) CR 87-20
Multifrequency passive microwave observation of saline ice grown in a tank. Grenfell, T.C., et al, (1988, p.1687-1690) MP 2459
Millimeter-wave performance during mixed precipitation. Bates, R.E., et al, (1989, p.113-120) MP 2630
Radar backscatter in snow at millimeter wave frequencies. Berger, R.H., et al, (1989, p.133-136) MP 2631
Passive microwave *in situ* observations of winter Weddell Sea ice. Comiso, J.C., et al, (1989, p.10,891-10,905) MP 2655
Antarctic ice sheet brightness temperature variations. Jezek, K.C., et al, (1990, p.217-223) MP 2736
Migration
Brine zone in the McMurdo Ice Shelf, Antarctica Kovacs, A., et al, (1982, p.166-171) MP 1550
Chemical migration in snowpack. Murphy, B.B., et al, (1989, p.282-286) MP 2757
Military engineering
Test of snow fortifications. Farrell, D.R., (1979, 15p.) SR 79-33
Seasonal soil conditions and the reliability of the M15 land mine. Richmond, P.W., et al, (1984, 35p.) SR 84-18
Conventional land mines in winter. Richmond, P.W., (1984, 23p.) SR 84-30
Cold factor. Abele, G., (1985, p.480-481) MP 2024
Corps of Engineers research in the Arctic. Smallidge, P.D., et al, (1987, p.81-87) MP 2411
Arctic construction working group report. Marvin, E.L., et al, (1987, p.311-314) MP 2426
Field water supply on the winter battlefield Bouteoun, J.R., (1988, 7p.) SR 88-02
Imjin River ice boom Perham, R.E., (1988, 10p.) SR 88-22
Smart weapons operability enhancement Link, L.E., Jr., (1989, p.165-173) MP 2539
Military equipment
Baseplate design and performance mortar stability report Aitken, G.W., (1977, 28p.) CR 77-22
Snow and snow cover in military science Swinzow, G.K., (1978, p.1-239-1-262) MP 926
Radial tire demonstration Liston, R.A., (1985, p.281-285) MP 2102
Performance based tire specification system for military wheeled vehicles. Blaisdell, G.L., (1985, p.277-280) MP 2101
Military facilities
Wastewater treatment in cold regions. Sletten, R.S., et al, (1976, 15p.) MP 965
Notes on conducting the behavior setting survey by interview method. Ledbetter, C.B., (1976, 33p.) SR 76-14
Window performance in extreme cold. Flanders, S.N., et al, (1982, 21p.) CR 82-38
Utility services for remote military facilities. Reed, S.C., et al, (1984, 66p.) SR 84-14
Secondary stress within the structural frame of DYE-3: 1978-1983. Ueda, H.T., et al, (1984, 44p.) SR 84-26
Megastructures for mobilization. Flanders, S.N., (1986, p.10-11) MP 2153
Assessment of a field water purification unit. Bouzoun, J.R., et al, (1986, 6p.) SR 86-20
Military wastewater treatment systems in cold regions Reed, S.C., (1986, 23p.) CR 86-07
Measured insulation improvement potential for ten U.S. Army buildings. Flanders, S.N., (1987, p.202-220) MP 2327
Shasta waterless system as a remote site sanitation facility. Martel, C.J., (1987, 24p.) SR 87-16
Buildings and utilities in very cold regions, overview and research needs. Tobiasson, W., (1987, p 299-303) MP 2424
Winter field testing of U.S Navy fleet hospital Sletten, R.S., et al, (1988, 10p.) MP 2512
Composite buildings for military bases. Flanders, S.N., (1988, 25p.) CR 88-04
Buildings and utilities in very cold regions: overview and research needs. Tobiasson, W., (1988, p.4-11) MP 2552
Development of a membrane for *in-situ* optical detection of TNT. Zhang, Y., et al, (1988, 6p.) SR 88-24
Roofer: a management tool for maintaining built-up roofs. Bailey, D.M., et al, (1989, p.6-10) MP 2488
Military operation
Arctic environmental factors affecting army operations. Sater, J.E., ed, (1962, 11p.) MP 984
Defensive works of subarctic snow. Johnson, P.R., (1977, 23p.) CR 77-06
Projectile and fragment penetration into ordinary snow. Swinzow, G.K., (1977, 30p.) MP 1750
Snow and snow cover in military science. Swinzow, G.K., (1978, p 1-239-1-262) MP 926
Effects of winter military operations on cold regions terrain. Abele, G., et al, (1978, 34p.) SR 78-17
Snow Symposium, 1st, Hanover, NH, Aug. 1981. (1982, 324p.) SR 82-17
Frozen soil characteristics that affect land mine functioning. Richmond, P.W., (1983, 18p.) SR 83-05
SNOW-ONE-B data report. Bates, R.E., ed, (1983, 284p.) SR 83-16
Operation of the U.S. Combat Support Boat (USCSBMK I) on an ice-covered waterway. Stubstad, J., et al, (1984, 28p.) SR 84-05
Observations during BRIMFROST '83. Bouzoun, J.R., et al, (1984, 36p.) SR 84-10
SNOW-TWO data report Volume 2 System performance Jordan, R., ed, (1984, 417p.) SR 84-20
Field sampling of snow for chemical obscurants at SNOW-TWO/Smoke Week VI Cragin, J.H., (1984, p 265-270) MP 2096
Helicopter snow obscuration sub-test. Eberside, J.F., (1984, p.359-376) MP 2094
Snow-cover characterization. SADARM support O'Brien, H., et al, (1984, p 409-411) MP 2095
Effects of snow on vehicle-generated seismic signatures Albert, D.G., (1984, p 83-109) MP 2074
Change in orientation of artillery-delivered anti-tank mines in snow. Bigl, S.R., (1984, 20p.) CR 84-20
Effect of snow on vehicle-generated seismic signatures. Albert, D.G., (1984, 24P.) CR 84-23
Review of antitank obstacles for winter use Richmond, P.W., (1984, 12p.) CR 84-25
Frozen precipitation and weather, Munchen Riem, West Germany. Bilello, M.A., (1984, 47p.) SR 84-32
Snow Symposium, 4th, Hanover, NH, Vol 1. (1984, 433p.) SR 84-35
Overview of meteorological and snow cover characterization at SNOW-TWO Bates, R.E., et al, (1984, p.171-191) MP 1868
Workshop on Ice Penetration Technology, Hanover, NH, June 12-13, 1984 (1984, 345p.) SR 84-33
Penetration of shaped charges into ice Mellor, M., (1984, p.137-148) MP 1995
Tank E-O sensor system performance in winter an overview Lacombe, J., et al, (1985, 26p.) MP 2073
Clear improvement in obscuration Palmer, R.A., (1985, p.476-477) MP 2067
Snow in the construction of ice bridges Coutermarsh, B.A., et al, (1985, 12p.) SR 85-18
Sorption of military explosive contaminants on bentonite drilling muds Leggett, D.C., (1985, 33p.) CR 85-18
Intensity of snowfall at the SNOW experiments Bates, R.E., et al, (1986, p 205-217) MP 2287
Ice interaction with the U.S Army ribbon bridge Coutermarsh, B.A., (1986, 18p.) CR 86-01
Ice heat sinks. Part 1: Vertical systems. Lunardini, V.J., (1986, 107p.) SR 86-14
Ice heat sinks Part 2 Horizontal systems. Lunardini, V.J., (1986, 104p.) SR 86-26
Proceedings, Vol.1. (1986, 369p.) SR 86-15
Use and application of PRESTO in Snow-III West. Stallings, E.S., et al, (1986, p 11-24) MP 2658
Utilization of Unmanned Aerial Vehicles in the ALBE Thrust. Greeley, H.P., et al, (1986, p 249-257) MP 2663
Effects of water and ice on the scattering of diffuse reflectors. Jezek, K.C., et al, (1986, p 259-269) MP 2664
Some developments in shaped charge technology. Mellor, M., (1986, 29p.) SR 86-18
After-action report—Reforger '85. Liston, R.A., (1986, 20p.) SR 86-22
Winter field fortifications. Farrell, D., (1986, 50p.) SR 86-25
Second Workshop on Ice Penetration Technology, 1986. (1986, 659p.) SR 86-30
Effect of snow on vehicle-generated seismic signatures. Albert, D.G., (1987, p 881-887) MP 2229
Comparison of extraction techniques for munitions residues in soil. Jenkins, T.F., et al, (1987, p.1326-1331) MP 2350
Development of an analytical method for explosive residues in soil Jenkins, T.F., et al, (1987, 51p.) CR 87-07
Tactical bridging during winter: 1986 Korean bridging exercise. Coutermarsh, B.A., (1987, 23p.) SR 87-13
Preview of the SNOW-III West data base. Lacombe, J., (1987, p 3-11) MP 2291
Saline ice penetration a joint CRREL-NSWC test program. Cole, D.M., et al, (1987, 34p.) SR 87-14
Military snow removal problems. Minsk, L.D., (1987, p.452-453) MP 2268
Persistence of chemical agents on the winter battlefield. Leggett, D.C., (1987, 20p.) CR 87-12
Sorption of chemical agents and simulants. Leggett, D.C., (1987, 15p.) SR 87-18
Field observations of mine detection in snow using UHF short-pulse radar. Arcone, S.A., et al, (1987, 24p.) SR 87-19
Environments and standards for military operation. Opitz, B.K., et al, (1987, 137p.) MP 2309
Corps of Engineers research in the Arctic. Smallidge, P.D., et al, (1987, p.81-87) MP 2411
DOD floating ice problems. Cox, G.F.N., (1987, p.151-154) MP 2414
Mechanical and physical properties of soils in cold regions. Chamberlain, E.J., (1987, p.155-161) MP 2415
Obscuration and background dynamics in and over snow. Hogan, A.W., (1987, p.181-185) MP 2417
Recent research on acoustic to seismic coupling. Albert, D.G., (1987, p.223-225) MP 2418
Analytical method for determining tetrazane in water. Walsh, M.E., et al, (1987, 34p.) SR 87-25
Evaporation of chemical agents from ice and snow. Leggett, D.C., (1988, 10p.) CR 88-03
Snowfall amounts and snow depths in Germany and NE USA. Bates, R.E., et al, (1988, p.107-117) MP 2401
Prediction of winter battlefield weather effects. Ryerson, C.C., et al, (1988, p.357-362) MP 2402
Decontamination of chemical agents on the winter battlefield. Parker, L.V., (1988, 48p.) CR 88-07
Experimental and theoretical studies of acoustic-to-seismic coupling Albert, D.G., (1988, p.19-31) MP 2432
Development of analytical methods for military-unique compounds. Walsh, M.E., et al, (1988, p.370-380) MP 2454
Deployment of floating bridges in ice-covered rivers. Mellor, M., et al, (1988, 38p.) SR 88-20
Antitank obstacles for winter use Richmond, P.W., (1988, 11p.) SR 88-19
Using the Ground Emplaced Mine Scattering System in winter Richmond, P.W., et al, (1988, 13p.) SR 88-27
SNOW III WEST field experiment report Volume 1 Lacombe, J., et al, (1988, 170p.) SR 88-28
Land mines in winter Richmond, P.W., (1989, 10p.) SR 89-11
Factors affecting rates of ice cutting with a chain saw Coutermarsh, B.A., (1989, 14p.) SR 89-24
Impact of the winter environment on infrared target signatures Lacombe, J., (1989, n.p.) MP 2587
CRR operations in cold weather a bibliography, Vol 1 Carlon, H.R., et al, (1989, 88p.) MP 2574
Proceedings (1989, 475p.) SR 89-39
Models of the mechanical properties of ice Richter-Menge, J.A., et al, (1989, p 87-94) MP 2687
Winter bridging exercise on thick ice Fort McCoy, Wisconsin, 1988 Coutermarsh, B.A., (1990, 24p.) SR 90-10
Thermal infrared survey of winter trails at Fort Wainwright Collins, C.M., et al, (1990, 16p.) SR 90-17
Military research
Mine detection using non-ammonidal radar laboratory tests Dean, A.M., Jr., et al, (1984, 29p.) SR 84-22
Ice penetration tests Garcia, N.B., et al, (1985, p.225-236) MP 2014
Use and application of PRESTO in Snow-III West Stallings, E.S., et al, (1986, p 11-24) MP 2658
Field water supply on the winter battlefield Bouteoun, J.R., (1988, 7p.) SR 88-02

Performance of laminated composites in cold. Dutta, P.K., et al, (1988, p.269-281) MP 2433
Behavior of materials at low temperatures. Dutta, P.K., (1988, 68p.) SR 88-09
Octanol-water partition coefficients for organophosphonates. Britton, K.B., et al, (1988, 24p.) SR 88-11
Analytical method for determining tetrazene in soil. Walsh, M.E., et al, (1988, 22p.) SR 88-15
Smart weapons operability enhancement. Link, L.E., Jr., (1989, p.165-173) MP 2539

Military transportation
Air-transportable Arctic wooden shelters. Flanders, S.N., et al, (1982, p.385-397) MP 1558

Mineralogy
Examining antarctic soils with a scanning electron microscope. Kumai, M., et al, (1976, p.249-252) MP 931

Mines (ordnance)
Frozen soil characteristics that affect land mine functioning. Richmond, P.W., (1983, 18p.) SR 83-05
Mine detection using non-sinusoidal radar: laboratory tests. Dean, A.M., Jr., et al, (1984, 99p.) SR 84-22
Conventional land mines in winter. Richmond, P.W., (1984, 23p.) SR 84-30
Mine detection in cold regions using short-pulse radar. Arcone, S.A., (1985, 16p.) SR 85-23
Land mines in winter. Richmond, P.W., (1989, 10p.) SR 89-11

Mining
Isua, Greenland: glacier freezing study. Ashton, G.D., (1978, p.256-264) MP 1174

Mobility
Vehicle mobility over snow. Blaisdell, G.L., (1987, p.265-266) MP 2420
Arctic mobility problems. Abele, G., (1987, p.267-269) MP 2421
Mobility: working group report. Blaisdell, G.L., et al, (1987, p.273-274) MP 2423

Models
Synthesis and modeling of the Barrow, Alaska, ecosystem. Coulombe, H.N., et al, (1970, p.44-49) MP 944
Abiotic overview of the Tundra Biome Program, 1971. Weller, G., et al, (1971, p.173-181) MP 906
Ice forces on model structures. Zabilansky, L.J., et al, (1975, p.400-407) MP 863
Ice forces on simulated structures. Zabilansky, L.J., et al, (1975, p.387-396) MP 864
Thickness and roughness variations of arctic multiyear sea ice. Ackley, S.F., et al, (1976, 25p.) CR 76-18
Generation of runoff from subarctic snowpacks. Dunne, T., et al, (1976, P.677-685) MP 883
Computer program for determining electrical resistance in nonhomogeneous ground. Arcone, S.A., (1977, 16p.) CR 77-02
Computer modeling of terrain modifications in the arctic and subarctic. Outcalt, S.I., et al, (1977, p.24-32) MP 971
Resiliency of silt under asphalt during freezing and thawing. Johnson, T.C., et al, (1978, p.662-668) MP 1106
Lysimeters validate wastewater renovation models. Iskandar, I.K., et al, (1978, 11p.) SR 78-12
Hydraulic model investigation of drifting snow Wuebben, J.L., (1978, 29p.) CR 78-16
Regelation and the deformation of wet snow Colbeck, S.C., et al, (1978, p.639-650) MP 1172
Modeling snow cover runoff meeting, Sep. 1978. Colbeck, S.C., ed, (1979, 432p.) SR 79-36
Acoustic emission response in polycrystalline materials St Lawrence, W.F., (1979, p.223-228) MP 1246
Modeling of ice in rivers. Ashton, G.D., (1979, p.14/1-14/26) MP 1335
Multi year pressure ridges in the Canadian Beaufort Sea Wright, B., et al, (1979, p.107-126) MP 1229
Volumetric constitutive law for snow Brown, R.L., (1980, p.161-165) MP 1803
Problems of the seasonal sea ice zone Weeks, W.F., (1980, p.1-35) MP 1293
Sea ice growth, drift, and decay. Hibler, W.D., III, (1980, p.141-209) MP 1298
Hydrologic modeling from Landsat land cover data McKim, H.L., et al, (1984, 19p.) SR 84-01
Ocean circulation: its effect on seasonal sea-ice simulations Hibler, W.D., III, et al, (1984, p.489-492) MP 1700
Heat and moisture transfer in frost-heaving soils Guymon, G.L., et al, (1984, p.336-343) MP 1765
Caribou Creek Model data acquisition system Bennett, B.M., et al, (1985, p.1424-1429) MP 2090
Instrumentation for an uplifting ice force model Zabilansky, L.J., (1985, p.1430-1435) MP 2091
Corps of engineers seek ice solutions Frankenstein, G.E., (1987, p.5-7) MP 2219
Numerical simulation of first-year sea ice Cox, G.F.N., et al, (1988, p.12,449-12,460) MP 2464
Comparative model tests in ice of a Canadian Coast Guard R-class icebreaker Tatinclaux, J.C., et al, (1989, p.1-1/18) MP 2751
Model tests on an icebreaker at two friction factors Tatinclaux, J.C., (1989, p.774-784) MP 2622

Moisture
CRREL roof moisture survey, Pease AFB Korhonen, C., et al, (1977, 10p.) SR 77-02
Infrared detective: thermograms and roof moisture. Korhonen, C., et al, (1977, p.41-44) MP 961
Detection of moisture in construction materials. Morey, R.M., et al, (1977, 9p.) CR 77-25
CRREL roof moisture survey, Building 208 Rock Island Arsenal. Korhonen, C., et al, (1977, 6p.) SR 77-43
Effects of moisture and freeze-thaw on rigid thermal insulations. Kaplar, C.W., (1978, p.403-417) MP 1085
Detecting wet roof insulation with a hand-held infrared camera. Korhonen, C., et al, (1978, p.A9-A15) MP 1213
Infrared thermography of buildings—a bibliography with abstracts. Marshall, S.J., (1979, 67p.) SR 79-01
Drainage and frost action criteria for a pavement design. Berg, R.L., (1979, 51p.) SR 79-15
Roof moisture survey—U.S. Military Academy. Korhonen, C., et al, (1979, 8 refs.) SR 79-16
Roofs in cold regions. Tobiasson, W., (1980, 21p.) MP 1408
Window performance in extreme cold. Flanders, S.N., et al, (1981, p.396-408) MP 1593
Roof moisture surveys. Tobiasson, W., et al, (1981, 18p.) SR 81-31
Can wet roof insulation be dried out. Tobiasson, W., et al, (1983, p.626-639) MP 1509
Condensation control in low-slope roofs. Tobiasson, W., (1985, p.47-59) MP 2039
Vapor drive maps of the U.S.A. Tobiasson, W., et al, (1986, 7p. + graphs) MP 2041
Vents and vapor retarders for roofs. Tobiasson, W., (1986, 11p.) MP 2245
Vents and vapor retarders for roofs. Tobiasson, W., (1987, p.80-90) MP 2352
Wood-frame roofs and moisture. Tobiasson, W., (1988, p.33-37) MP 2340

Moisture detection
Hand-held infrared systems for detecting roof moisture. Tobiasson, W., et al, (1977, p.261-271) MP 1390
Roof moisture surveys. Tobiasson, W., (1982, p.163-166) MP 1505
Moisture detection in roofs with cellular plastic insulation. Korhonen, C., et al, (1982, 22p.) SR 82-07
Infrared inspection of new roofs. Korhonen, C., (1982, 14p.) SR 82-33
Roof moisture surveys: current state of the technology. Tobiasson, W., (1983, p.24-31) MP 1628
Locating wet cellular plastic insulation in recently constructed roofs Korhonen, C., et al, (1983, p.168-173) MP 1729
Comparison of aerial to on-the-roof infrared moisture surveys. Korhonen, C., et al, (1983, p.95-105) MP 1709
U.S. Air Force roof condition index survey: Ft. Greely, Alaska. Coutermarsh, B.A., (1984, 67p.) SR 84-03
Roof moisture surveys: yesterday, today and tomorrow. Tobiasson, W., et al, (1985, p.438-443 + figs.) MP 2040
Aerial roof moisture surveys. Tobiasson, W., (1985, p.424-425) MP 2022
Lessons learned from examination of membrane roofs in Alaska. Tobiasson, W., et al, (1986, p.277-290) MP 2003
Airborne roof moisture surveys. Tobiasson, W., (1986, p.45-47) MP 2139
Infrared testing for leaks in new roofs. Korhonen, C., (1987, p.49-54) MP 2282
Method for conducting airborne infrared roof moisture surveys. Tobiasson, W., (1988, p.50-61) MP 2436
Nondestructive evaluation of moisture migration in insulation material Ayyounde, O.A., (1989, p.111-121) MP 2716

Moisture meters
Hand-held infrared systems for detecting roof moisture. Tobiasson, W., et al, (1977, p.261-271) MP 1390
Lysimeters validate wastewater renovation models. Iskandar, I.K., et al, (1978, 11p.) SR 78-12
Recommendations for implementing roof moisture surveys in the U.S. Army (1978, 8p.) SR 78-01

Moisture transfer
Energy balance and runoff from a subarctic snowpack Price, A.G., et al, (1976, 29p.) CR 76-27
Tracer movement through snow Colbeck, S.C., (1977, p.255-262) MP 1093
Maintaining buildings in the Arctic Tobiasson, W., et al, (1977, p.244-251) MP 1508
Research on roof moisture detection Tobiasson, W., et al, (1978, 6p.) SR 78-29
Roof moisture survey Korhonen, C., et al, (1980, 31p.) SR 80-14
Moisture gain and its thermal consequence for common roof insulations Tobiasson, W., et al, (1980, p.4-16) MP 1361
Two-dimensional model of coupled heat and moisture transport in frost heaving soils Guymon, G.L., et al, (1984, p.91-98) MP 1678
Simple model of ice segregation using an analytic function to model heat and soil-water flow Hromadka, T.V., II, et al, (1984, p.99-104) MP 2104
Heat and moisture transfer in frost-heaving soils Guymon, G.L., et al, (1984, p.336-343) MP 1765
Partial verification of a thaw settlement model Guymon, G.L., et al, (1985, p.18-25) MP 1924
Roughness and transfer coefficients over snow and sea ice. Andreas, E.L., (1986, 19p.) CR 86-09
Thermal and size evolution of sea spray droplets. Andreas, E.L., (1989, 37p.) CR 89-11
Environment of wintertime leads and polynyas. Andreas, E.L., (1989, p.273-288) MP 2609
Sludge dewatering by natural freeze-thaw Martel, C.J., (1990, p.116-122) MP 2714

Molecular structure
Octanol-water partition coefficients for organophosphonates. Britton, K.B., et al, (1988, 24p.) SR 88-11

Monitors
Automatic data collection equipment for oceanographic application. Dean, A.M., Jr., (1978, p.1111-1121) MP 1028
Dynamic ice breakup control for the Connecticut River near Wilmot, Vermont. Ferrick, M.G., et al, (1988, p.245-258) MP 2449
Monitoring pavement performance in seasonal frost areas. Berg, R.L., (1989, p.10-19) MP 2564

Moraines
Antarctic soil studies using a scanning electron microscope. Kurtzi, M., et al, (1978, p.106-112) MP 1306
Diamictons at the margin of the Matanuska Glacier, Alaska. Lawson, D.E., (1981, p.78-84) MP 1462

Mosses
Tundra environment at Barrow, Alaska. Bunnell, F.L., et al, (1975, p.73-124) MP 1050

Motor vehicles
Winter air pollution at Fairbanks, Alaska. Coutts, H.J., et al, (1981, p.512-528) MP 1395
Shallow snow model for predicting vehicle performance. Harrison, W.L., (1981, 21p.) CR 81-20
ISTVS workshop on tire performance under winter conditions, 1983. (1985, 177p.) SR 85-15
Vehicle for cold regions mobility measurements. Blaisdell, G.L., (1985, p.9-20) MP 2044
Winter tire tests: 1980-81. Blaisdell, G.L., et al, (1985, p.135-151) MP 2045
Field demonstration of traction testing procedures. Blaisdell, G.L., (1985, p.176) MP 2046
Instrumented vehicle for the measurement of mobility parameters. Blaisdell, G.L., (1988, p.377-388) MP 2486

MOUNTAINS
Geology and physiography of cold regions. Stearns, S.R., (1965, 40p.) M I-A1

Mountains
Atmospheric icing rates with elevation on northern New England mountains, U.S.A. Ryerson, C.C., (1990, p.90-97) MP 2509

Municipal engineering
Pothole primer; a public administrator's guide to understanding and managing the pothole problem. Eaton, R.A., coord, (1981, 24p.) MP 1416

Nuleds
Thermal infrared survey of winter trails at Fort Wainwright. Collins, C.M., et al, (1990, 16p.) SR 90-17

Natural resources
Cold climate utilities delivery design manual. Smith, D.W., et al, (1979, c300 leaves) MP 1373
Offshore oil in the Alaskan Arctic. Weeks, W.F., et al, (1984, p.371-378) MP 1743
Constraints and approaches in high latitude natural resource sampling and research. Slaughter, C.W., et al, (1984, p.41-46) MP 2013

Navigation
Helicopter snow obscuration sub-test. Ebersole, J.F., (1984, p.359-376) MP 2094
Data acquisition for refrigerated physical model Zufelt, J.E., (1987, p.335-341) MP 2351

Nitrate deposits
Nitrate fluctuations in antarctic snow and firn. Parker, B.C., et al, (1982, p.243-248) MP 1551

Nitrogen isotopes
Methodology for nitrogen isotope analyses at CRREL. Jenkins, T.F., et al, (1978, 57p.) SR 78-08

Noise (sound)
Audibility within and outside deposited snow Johnson, J.B., (1985, p.136-142) MP 1960
Model studies of surface noise interference in ground-probing radar Arcone, S.A., et al, (1985, 23p.) CR 85-19

Norway
Low pressure weather systems in and around Norwegian waters Bakelie, M.A., (1986, p.53-64) MP 2181

Nozzles
Heat transfer between water jets and ice blocks Yen, Y.-C., (1976, p.299-307) MP 882

Nuclear explosions
Analysis of explosively generated ground motions using Fourier techniques Blouin, S.E., et al, (1976, 56p.) CR 76-28
Prediction of explosively driven relative displacements in rocks Blouin, S.E., (1981, 33p.) CR 81-11

Nuclear magnetic resonance
NMR phase composition measurements on moist soils Tice, A.R., et al, (1978, p.11-14) MP 1210
Unfrozen water contents of submarine permafrost determined by nuclear magnetic resonance Tice, A.R., et al, (1980, p.400-415) MP 1412

Nuclear magnetic resonance *(cont.)*
Relationship between the ice and unfrozen water phases in frozen soil. Tice, A.R., et al. (1982, 8p.) CR 82-15
Effects of magnetic particles on the unfrozen water content in soils. Tice, A.R., et al. (1984, p.63-73) MP 1790
Soil-water potential and unfrozen water content and temperature. Xu, X., et al. (1985, p.1-14) MP 1932
Relationship between freezing and water content in sandy loam. Black, P.B., et al. (1988, 37p.) CR 88-26
Unfrozen water content of soils. Smith, M.W., et al. (1988, 11p.) CR 88-18
Unfrozen water content of undisturbed frozen silt. Tice, A.R., et al. (1988, 17p.) CR 88-19
Predicting unfrozen water content behavior of a soil. Black, P.B., et al. (1990, p.54-60) MP 2677
Nucleating agents
Ice nucleation activity of antarctic marine microorganisms. Parker, L.V., et al. (1985, p.126-128) MP 2217
Nucleation
Strain energy failure criterion for S2 freshwater ice in flexure. Cole, D.M., (1988, p.206-215) MP 2494
Nutrient cycle
Impact of urban wastewater reuse in cold regions on land treatment systems. Iskander, I.K., (1976, 32p.) MP 2452
Uptake of nutrients by plants irrigated with wastewater. Clapp, C.E., et al. (1978, p.395-404) MP 1151
Adaptability of forage grasses to wastewater irrigation. Palazzo, A.J., et al. (1978, p.157-163) MP 1153
Model for nitrogen behavior in land treatment of wastewater. Selim, H.M., et al. (1980, 49p.) CR 80-12
Nitrogen in an overland flow wastewater treatment system. Chen, R.L., et al. (1980, 33p.) SR 80-16
Dynamics of NH4 and NO3 in cropped soils irrigated with wastewater. Iskander, I.K., et al. (1980, 20p.) SR 80-27
Arctic ecosystem: the coastal tundra at Barrow, Alaska. Brown, J., ed. (1980, 571p.) MP 1355
Analysis of processes of primary production in tundra growth forms. Tieszen, L.L., et al. (1981, p.285-356) MP 1433
Plant growth on a gravel soil: greenhouse studies. Palazzo, A.J., et al. (1981, 8p.) SR 81-04
Modeling N transport and transformations in soils. Selim, H.M., et al. (1981, p.233-241) MP 1440
Modeling nitrogen transport and transformations in soils: 2. Validation. Iskander, I.K., et al. (1981, p.233-312) MP 1441
Seasonal growth and uptake of nutrients by orchardgrass irrigated with wastewater. Palazzo, A.J., et al. (1981, 19p.) CR 81-08
Seven-year performance of CRREL slow-rate land treatment prototypes. Jenkins, T.F., et al. (1981, 25p.) SR 81-12
Soil microbiology. Bonetta, E., et al. (1981, p.38-44) MP 1753
Wastewater treatment by a prototype slow rate land treatment system. Jenkins, T.F., et al. (1981, 44p.) CR 81-14
Effect of soil temperature on nitrification kinetics. Parker, L.V., et al. (1981, 27p.) SR 81-33
Overview of models used in land treatment of wastewater. Iskander, I.K., (1982, 27p.) SR 82-01
Mathematical simulation of nitrogen interactions in soils. Selim, H.M., et al. (1983, p.241-248) MP 2051
U.S. tundra biome publication list. Brown, J., et al. (1983, 29p.) SR 83-29
Ocean bottom
Hyperbolic reflections on Beaufort Sea seismic records. Neave, K.G., et al. (1981, 16p.) CR 81-02
Subsea trenching in the Arctic. McGee, M., (1981, p.843-882) MP 1466
Subsea trenching in the Arctic. McGee, M., (1981, 31p.) CR 81-17
Site investigations and submarine soil mechanics in polar regions. Chamberlain, E.J., (1981, 18p.) SR 81-24
Understanding the Arctic sea floor for engineering purposes. (1982, 141p.) SR 82-25
Ice scoring on the Alaskan shelf of the Beaufort Sea. Weeks, W.F., et al. (1983, 34p. + map) CR 83-21
Some probabilistic aspects of ice gouging on the Alaskan Shelf of the Beaufort Sea. Weeks, W.F., et al. (1984, p.213-236) MP 1838
Subsea permafrost distribution on the Alaskan shelf. Sellmann, P.V., et al. (1984, p.75-82) MP 1852
Study of sea ice induced gouges on the sea floor. Weeks, W.F., et al. (1985, p.126-135) MP 1917
Mapping seismic seabed features using INC methods. Sellmann, P.V., et al. (1985, p.136-147) MP 1918
Numerical simulation of sea ice induced gouges on the shelves of the polar oceans. Weeks, W.F., et al. (1985, p.254-265) MP 1930
Ice gouge hazard analysis. Lavan, G.A., et al. (1986, p.57-66) MP 2106
Preliminary simulations of the formation and infilling of sea ice gouges. Weeks, W.F., et al. (1986, p.259-268) MP 2218
Seafloor temperature and thermal conductivity. Sellmann, P.V., et al. (1989, 19p.) CR 89-01
Dynamic simulations of iceberg-seabed interactions. Rass, D.W., et al. (1989, p.137-151) MP 2604
Ocean currents
Baseline data on tidal flushing in Cook Inlet, Alaska. Gatto, L.W., (1973, 11p.) MP 1523
Circulation and sediment: distribution in Cook Inlet, Alaska. Gatto, L.W., (1976, p.205-227) MP 895
Baseline data on the oceanography of Cook Inlet, Alaska. Gatto, L.W., (1976, 84p.) CR 76-25
Radar anisotropy of sea ice. Kovacs, A., et al. (1978, p.171-201) MP 1111
Preferred crystal orientations in Arctic Ocean fast ice. Weeks, W.F., et al. (1978, 24p.) CR 78-13
Radar anisotropy of sea ice. Kovacs, A., et al. (1978, p.6037-6046) MP 1139
Some results from a linear-viscous model of the Arctic ice cover. Hibler, W.D., III, et al. (1979, p.293-304) MP 1241
Anisotropic properties of sea ice. Kovacs, A., et al. (1979, p.5749-5759) MP 1258
Crystal alignments in the fast ice of Arctic Alaska. Weeks, W.F., et al. (1979, 21p.) CR 79-22
Crystal alignments in the fast ice of Arctic Alaska. Weeks, W.F., et al. (1980, p.1137-1146) MP 1277
Physical properties of sea ice and under-ice current orientation. Kovacs, A., et al. (1980, p.169-153) MP 1323
Oceanic boundary-layer features and oscillation at drift stations. McPhee, M.G., (1980, p.870-884) MP 1369
Sea ice anisotropy, electromagnetic properties and strength. Kovacs, A., et al. (1980, 18p.) CR 80-20
Inlet current: measured with Seasat-1 synthetic aperture radar. Sheridan, O.H., et al. (1980, p.35-37) MP 1401
Review of sea-ice weather relationships in the Southern Hemisphere. Ackley, S.F., (1981, p.127-159) MP 1426
Ice distribution and winter surface circulation, Kachemak Bay, Alaska. Gatto, L.W., (1981, p.995-1001) MP 1442
Ice distribution and winter ocean circulation, Kachemak Bay, Alaska. Gatto, L.W., (1981, 43p.) CR 81-22
Ice growth and circulation in Kachemak Bay, Alaska. Daly, S.F., (1982, p.(C)1-(C)9) MP 1501
Ice distribution and water circulation, Kachemak Bay, Alaska. Gatto, L.W., (1982, p.421-435) MP 1569
Effects of conductivity on high-resolution impulse radar sounding. Morey, R.M., et al. (1982, 12p.) CR 82-42
Ocean circulation: its effect on seasonal sea-ice simulations. Hibler, W.D., III, et al. (1984, p.489-492) MP 1700
Diagnostic ice-ocean model. Hibler, W.D., III, et al. (1987, p.987-1015) MP 2238
Coupled air-ice-ocean models. Hibler, W.D., III, (1987, p.131-137) MP 2412
On modeling the baroclinic adjustment of the Arctic Ocean. Hibler, W.D., III, (1990, p.247-250) MP 2739
Ocean environments
Oceanographic data from the Weddell Sea, summer 1977. Buck, K.R., (1980, 26p.) CR 80-16
Oceanography
Automatic data collection equipment for oceanographic application. Dean, A.M., Jr., (1978, p.1111-1121) MP 1028
Coastal marine geology of the Beaufort, Chukchi and Bering Seas. Gatto, L.W., (1980, 357p.) SR 80-05
International Workshop on the Seasonal Sea Ice Zone, Monterey, California, Feb. 26-Mar.1, 1979. Anderson, B.G., ed. (1980, 357p.) MP 1292
Problems of the seasonal sea ice zone. Weeks, W.F., (1980, p.1-35) MP 1293
Physical oceanography of the seasonal sea ice zone. McPhee, M.G., (1980, p.93-132) MP 1294
Arctic Ocean temperature, salinity and density, March-May 1979. McPhee, M.G., (1981, 20p.) SR 81-05
Mesoscale air-ice-ocean interaction experiments. Johannessen, O.M., ed. (1984, 176p.) SR 84-29
Arctic research of the United States, Vol.4. (1990, 120p.) MP 2745
Oceans
Circulating fluid sea ice model. Place, G.M., et al. (1990, p.239-262) MP 2738
Arctic research of the United States, Vol.4. (1990, 120p.) MP 2745
Offshore drilling
Delineation and engineering characteristics of permafrost beneath the Beaufort Sea. Sellmann, P.V., et al. (1976, p.391-408) MP 1377
Operational report 1976 USACRREL-USGS subsea permafrost program Beaufort Sea, Alaska. Sellmann, P.V., et al. (1976, 20p.) SR 76-12
Delineation and engineering characteristics of permafrost beneath the Beaufort Sea. Sellmann, P.V., et al. (1976, p.53-60) MP 919
Delineation and engineering characteristics of permafrost beneath the Beaufort Sea. Sellmann, P.V., et al. (1977, p.432-440) MP 1077
1977 CRREL-USGS permafrost program Beaufort Sea, Alaska, operational report. Sellmann, P.V., et al. (1977, 19p.) SR 77-41
Problems of offshore oil drilling in the Beaufort Sea. Weeks, G., et al. (1978, p.4-11) MP 1250
Penetration tests in subsea permafrost, Prudhoe Bay, Alaska. Bowers, S.E., et al. (1979, 44p.) CR 79-07
Distribution and properties of subsea permafrost of the Beaufort Sea. Sellmann, P.V., et al. (1979, p.93-115) MP 1287
Permafrost beneath the Beaufort Sea: near Prudhoe Bay, Alaska. Sellmann, P.V., et al. (1980, p.35-48) MP 1346
Problems of the seasonal sea ice zone. Weeks, W.F., (1980, p.1-35) MP 1293
Foundations of structures in polar waters. Chamberlain, E.J., (1981, 16p.) SR 81-25
Site investigations and submarine soil mechanics in polar regions. Chamberlain, E.J., (1981, 18p.) SR 81-24
Offshore mechanics and Arctic engineering, symposium, 1983. (1983, 813p.) MP 1561
Ice scoring on the Alaskan shelf of the Beaufort Sea. Weeks, W.F., et al. (1983, 34p. + map) CR 83-21
Offshore oil in the Alaskan Arctic. Weeks, W.F., et al. (1984, p.371-378) MP 1743
Offshore Mechanics and Arctic Engineering Symposium, 4th, 1985. (1985, 2 vols.) MP 2105
Topical databases: Cold Regions Technology on-line. Linton, N., et al. (1985, p.12-15) MP 2027
Offshore Mechanics and Arctic Engineering Symposium, 5th, 1986. (1986, 4 vols.) MP 2031
Portable hot water ice drill. Tucker, W.B., et al. (1986, p.549-564) MP 2202
International Offshore Mechanics and Arctic Engineering Symposium, 1987. (1987, 4 vols.) MP 2189
Conference on offshore mechanics and Arctic engineering, 8th, 1989. (1989, 476p.) MP 2681
Conference on offshore mechanics and arctic engineering, 9th, 1990. (1990, 339p.) MP 2984
Offshore structures
Structures in ice infested water. Assur, A., (1972, p.93-97) MP 1046
Investigation of ice forces on vertical structures. Hirayama, K., et al. (1974, 153p.) MP 1041
Statistical variations in Arctic sea ice ridging and deformation rates. Hibler, W.D., III, (1975, p.31-316) MP 850
Ice forces on simulated structures. Zabilansky, L.J., et al. (1975, p.387-396) MP 864
Yukon River breakup 1976. Johnson, P., et al. (1977, p.592-596) MP 900
Horizontal forces exerted by floating ice on structures. Kerr, A.D., (1978, 9p.) CR 78-15
Ice laboratory facilities for solving ice problems. Frankenstein, G.E., (1980, p.93-102) MP 1301
Foundations of structures in polar waters. Chamberlain, E.J., (1981, 16p.) SR 81-25
Site investigations and submarine soil mechanics in polar regions. Chamberlain, E.J., (1981, 18p.) SR 81-24
Sea ice rubble formations in the Bering Sea and Norton Sound, Alaska. Kovacs, A., (1981, 23p.) SR 81-34
Offshore mechanics and Arctic engineering, symposium, 1983. (1983, 813p.) MP 1981
Dynamic ice-structure interaction during continuous crushing. Matlock, M., (1983, 45p.) CR 83-05
Method for determining ice loads on offshore structures. Johnson, J.B., (1983, p.124-128) MP 2056
Protection of offshore arctic structures by explosives. Mellor, M., (1983, p.310-322) MP 1605
Ice forces on model marine structures. Haynes, F.D., et al. (1983, p.778-787) MP 1606
Measurement of ice forces on structures. Sodhi, D.S., et al. (1983, p.139-155) MP 1641
Characteristics of multi-year pressure ridges. Kovacs, A., (1983, p.173-182) MP 1698
Offshore petroleum production in ice-covered waters. Tucker, W.B., (1983, p.207-215) MP 2086
Ice scoring on the Alaskan shelf of the Beaufort Sea. Weeks, W.F., et al. (1983, 34p. + map) CR 83-21
Ice action on piers of cylindrical and conical structures. Kato, K., et al. (1983, 33p.) CR 83-25
Offshore mechanics and Arctic engineering symposium, 1984. (1984, 3 vols.) MP 1675
Ice action on two cylindrical structures. Kato, K., et al. (1984, p.107-112) MP 1741
Dependence of crushing specific energy on the aspect ratio and the structure velocity. Sodhi, D.S., et al. (1984, p.363-374) MP 1788
Assessment of ice accretion on offshore structures. Masuda, L.D., (1985, 12p.) SR 84-04
Atmospheric icing on sea structures. Makkonen, L., (1984, 92p.) M 84-02
Icing rate on stationary structures under marine conditions. Ingalls, K., (1984, 9p.) CR 84-12
Computational mechanics in arctic engineering. Sodhi, D.S., (1984, p.351-376) MP 2072
Buckling analysis of cracked, floating ice sheets. Adley, M.D., et al. (1984, 29p.) SR 84-23
Ice forces on rigid, vertical, cylindrical structures. Sodhi, D.S., et al. (1984, 36p.) CR 84-33
Offshore Mechanics and Arctic Engineering Symposium, 5th, 1986. (1986, 2 vols.) MP 2105
Short ice forces on a conical structure: an experimental study. Sodhi, D.S., et al. (1985, p.49-54) MP 1915
Arctic ice and drilling structures. Sodhi, D.S., (1985, p.61-69) MP 2119
Kulluk ice stress measurement program. Johnson, J.B., et al. (1985, p.85-100) MP 1990

Sheet ice forces on a conical structure: an experimental study. Sodhi, D.S., et al. (1985, p.643-655); MP 1906

Experience with a buried ice stress sensor. Cox, G.F.N., (1985, p.252-258); MP 1937

Measurement of icing on offshore structures. Mauk, L.D., (1985, p.287-292); MP 2010

Topical databases: Cold Regions Technology on-line. Liston, N., et al. (1985, p.12-15); MP 2027

Real-time measurements of uplifting ice forces. Zabilansky, L.J., (1985, p.253-259); MP 2092

Instrumentation for an uplifting ice force model. Zabilansky, L.J., (1985, p.1430-1435); MP 2091

Sea ice and the Fairway Rock iceline. Kovacs, A., et al. (1985, p.25-32); MP 2145

Ice cover research—present state and future needs. Kerr, A.D., et al. (1986, p.384-399); MP 2004

Crushing of ice sheet against rigid cylindrical structures. Sodhi, D.S., et al. (1986, p.1-12); MP 2018

Offshore Mechanics and Arctic Engineering Symposium, 5th, 1986. (1986, 4 vols); MP 2031

Some effects of friction on ice forces against vertical structures. Kato, K., et al. (1986, p.528-533); MP 2036

Impact ice force and pressure: An experimental study with urea ice. Sodhi, D.S., et al. (1986, p.569-576); MP 2037

Flexural and buckling failure of floating ice sheets against structures. Sodhi, D.S., (1986, p.339-355); MP 2134

Model study of ice forces on a single pile. Zabilansky, L.J., (1986, p.77-87); MP 2308

International Offshore Mechanics and Arctic Engineering Symposium, 1987 (1987, 4 vols); MP 2189

Ice beam moving against a sloping structure. Sodhi, D.S., (1987, p.281-286); MP 2194

Advances in ice mechanics—1987. (1987, 49p.); MP 2207

Advances in sea ice mechanics in the USA. Sodhi, D.S., et al. (1987, p.37-49); MP 2208

Mechanical properties of multi-year sea ice. Richter-Menge, J.A., et al. (1987, p.121-153); MP 2438

Kulluk ice stress measurement program. Cox, G.F.N., (1987, p.190-187); MP 2298

Mechanical properties of multi-year pressure ridge ice. Richter-Menge, J.A., (1987, p.108-119); MP 2299

Working group on ice forces. 3rd state-of-the-art report. Sanderson, T.J.O., ed. (1987, 221p.); SR 87-17

Flexural and buckling failure of floating ice sheets against structures. Sodhi, D.S., (1987, p.33-73); MP 2315

Arctic construction: working group report. Marvin, E.L., et al. (1987, p.311-316); MP 2436

Conference on Offshore Mechanics and Arctic Engineering, 7th, 1988. Vol.4 (1988, 343p.); MP 2317

Verification tests of the surface integral method for calculating structural ice loads. Johnson, J.B., et al. (1988, p.449-456); MP 2353

Ice stress measurements around offshore structures. Johnson, J.B., (1988, p.55-56); MP 2611

Elements of floating-debris control systems. Perham, R.E., (1988, 58p. + appends.); MP 2653

Mukluk ice stress measurement program. Cox, G.F.N., (1988, p.11-15); MP 2618

Rebuilding infrastructure for pressure heaving. Woolley, C.A., et al. (1989, p.188-201); MP 2646

Conference on offshore mechanics and Arctic engineering, 8th, 1989 (1989, 474p.); MP 2681

Conference on offshore mechanics and arctic engineering, 9th, 1990. (1990, 339p.); MP 2984

Dynamic analysis of a floating ice sheet undergoing vertical indentation. McGilvary, W.R., et al. (1990, p.165-201); MP 2979

Wave-induced bergy bit motion near a floating platform. Mak, L.M., et al. (1990, p.205-215); MP 2980

Measurement of sea ice thickness using electromagnetic induction. Holladay, J.S., et al. (1990, p.309-315); MP 2990

Oil recovery

Offshore oil in the Alaskan Arctic. Weeks, W.F., et al. (1988, p.321-375); MP 1743

Oil spills

Ecological effects of oil spills and seepages in cold-dominated environments. McCown, B.H., et al. (1971, p.61-64); MP 905

Oil spills on permafrost. Collins, C.M., et al. (1976, 18p.); SR 76-15

Second progress report on oil spilled on permafrost. McFadden, T., et al. (1977, 24p.); SR 77-44

Workshop on Biological Effects of Hydrocarbon Spills in Alaska. Atlas, R.M., et al. (1978, p.195-197); MP 1183

Plant recovery from Arctic oil spills. Walker, D.A., et al. (1978, p.282-299); MP 1184

Crude oil spills on black spruce forest. Jenkins, T.F., et al. (1978, p.305-323); MP 1185

Fate of crude and refined oils in North Slope soils. Sexstone, A., et al. (1979, p.336-347); MP 1186

Tundra recovery since 1969 near Fish Creek, Alaska. Lawson, D.E., et al. (1978, 81p.); CR 78-28

Oil pooling under sea ice. Kovacs, A. (1979, p.136-137); MP 1209

Crude oil spills on subarctic permafrost in interior Alaska. Johnson, L.A., et al. (1980, 126p.); MP 1310

Crude oil spills on subarctic permafrost in interior Alaska. Johnson, L.A., et al. (1980, 67p.); CR 80-29

Pooling of oil under sea ice. Kovacs, A., et al. (1981, p.912-922); MP 1499

Surface disturbance and protection during economic development of the North. Brown, J., et al. (1981, 88p.); MP 1467

Long-term active layer effects of crude oil spilled in interior Alaska. Collins, C.M., (1981, p.175-179); MP 1656

Simulation of oil slicks in rivers and lakes. Shen, H.T., et al. (1990, 29p.); CR 90-01

Optical phenomena

Measurements of refractive index spectra over snow. Andreas, E.L., (1986, p.248-260); MP 2212

Atmospheric stability from scintillation measurements. Andreas, E.L., (1988, p.2241-2246); MP 2306

Optical properties

Photoelastic instrumentation—principles and techniques. Roberts, A., et al. (1979, 153p.); SR 79-13

Catalog of smoke/obscurant characterization instruments. O'Brien, H.W., et al. (1984, p.77-82); MP 1865

Thermal emissivity of diathermanous materials. Morris, R.H., et al. (1985, p.872-878); MP 1963

Preliminary development of a fiber optic sensor for TNT. Zhang, Y., et al. (1988, 16p.); SR 88-04

Organic soils

Arctic ecosystem: the coastal tundra at Barrow, Alaska. Brown, J., ed. (1980, 571p.); MP 1356

Coastal tundra at Barrow. Brown, J., et al. (1980, p.1-29); MP 1354

Organizations

Information systems planning study. Atkins, R.T., et al. (1987, 48p.); SR 87-23

Comparison of EPA and USATHAMA detection capability estimators. Grant, C.L., et al. (1988, p.865-819); MP 2455

Arctic research in the United States, Vol.3. (1989, 72p.); MP 2653

Arctic research of the United States, Vol.3. (1989, 71p.); MP 2530

United States arctic research plan biennial revision, 1990-1991. Brown, J., ed. (1989, 72p.); MP 2546

Orientation

Vector analysis of ice petrographic data. Ferrick, M.G., et al. (1989, p.129-141); MP 2754

Oscillations

Oceanic boundary-layer structures and oscillation at drift stations. McPhee, M.G., (1990, p.870-884); MP 1309

Oxygen isotopes

Oxygen isotope profiles through ice sheets. Johnsen, S.J., et al. (1972, p.629-634); MP 997

Oxygen isotopes in the basal zone of Matanuska Glacier. Lawson, D.E., et al. (1978, p.673-685); MP 1177

Pack ice

Mesoscale strain measurements on the Beaufort sea pack ice (AIDJEX 1971). Hibler, W.D., III, et al. (1974, p.119-138); MP 1035

Statistical variations in Arctic sea ice ridging and deformation rates. Hibler, W.D., III, (1979, p.31-326); MP 850

Movement of coastal sea ice near Prudhoe Bay. Weeks, W.F., et al. (1977, p.533-546); MP 1046

Ice melting and the drift of pack ice through restricted channels. Smith, D.S., (1977, 11p.); CR 77-18

Modeling pack ice as a viscous-plastic continuum. Hibler, W.D., III, (1977, p.66-55); MP 1164

Sea ice studies in the Weddell Sea region aboard USCGC *Burton Island*. Ackley, S.F., (1977, p.172-173); MP 1014

Dynamics of near-shore ice. Kovacs, A., et al. (1977, p.503-520); MP 1200

Sea ice and ice algae relationships in the Weddell Sea. Ackley, S.F., et al. (1978, p.70-71); MP 1203

Measurement of mesoscale deformation of Beaufort sea ice (AIDJEX-1971). Hibler, W.D., III, et al. (1978, p.168-172); MP 1179

Effect of the oceanic boundary layer on the mean drift of pack ice: application of a simple model. McPhee, M.G., (1979, p.388-400); MP 1198

Overview on the seasonal sea ice zone. Weeks, W.F., et al. (1979, p.320-337); MP 1320

International Workshop on the Seasonal Sea Ice Zone, Monterey, California, Feb 26-Mar 2, 1979. Anderson, R.G., ed. (1980, 357p.); MP 1292

Oceanic boundary-layer structures and oscillation at drift stations. McPhee, M.G., (1980, p.870-884); MP 1300

Sea-ice atmosphere interactions in the Weddell Sea using drifting buoys. Ackley, S.F., (1981, p.177-191); MP 1427

Condensate profiles over Arctic leads. Andreas, E.L., et al. (1981, p.437-446); MP 1479

Physical and structural characteristics of antarctic sea ice. Gow, A.J., et al. (1982, p.113-117); MP 1548

On modeling the Weddell Sea pack ice. Hibler, W.D., III, et al. (1982, p.125-130); MP 1549

Observations of pack ice properties in the Weddell Sea. Ackley, S.F., et al. (1982, p.169-180); MP 1608

Surface roughness of Ross Sea pack ice. Cavanaugh, J.R., et al. (1983, p.123-124); MP 1768

Elemental compositions and concentrations of ice microparticles in snow and pack ice from the Weddell sea. Kumai, M., et al. (1983, p.128-131); MP 1777

Relative abundance of diatoms in Weddell Sea pack ice. Clarke, D.B., et al. (1983, p.181-182); MP 1786

Morphology and ecology of diatoms in sea ice from the Weddell Sea. Clarke, D.B., et al. (1984, 41p.); CR 84-05

Sea ice data buoys in the Weddell Sea. Ackley, S.F., et al. (1984, 18p.); CR 84-11

Sea ice penetration in the Arctic Ocean. Weeks, W.F., (1984, p.37-65); MP 1993

Heat and moisture advection over antarctic sea ice. Andreas, E.L., (1985, p.736-746); MP 1888

Physical and structural characteristics of Weddell Sea pack ice. Gow, A.J., et al. (1987, 70p.); CR 87-14

Sea-ice pressure ridge microbial communities. Ackley, S.F., (1988, p.172-176); MP 2490

Snow cover effects on antarctic sea ice thickness. Ackley, S.F., et al. (1990, p.16-21); MP 2726

Pad foundations

Construction on permafrost at Longyearbyen on Spitsbergen. Tobiasson, W., (1978, p.884-890); MP 1108

Paleoclimatology

Oxygen isotope profiles through ice sheets. Johnsen, S.J., et al. (1972, p.629-634); MP 997

US global ice core research program West Antarctica and beyond. Grootes, P.M., et al. (1989, 32p.); MP 2709

Particle size distribution

Measurement and identification of aerosols collected near Barrow, Alaska. Kumai, M., (1978, 6p.); CR 78-20

Numerical simulation of atmospheric ice accretion. Ackley, S.F., et al. (1979, p.44-52); MP 1235

Snow and fog particle size measurements. P[illegible]er, R.H., (1982, p.47-58); MP 1982

Falling snow characteristics and extinction. Berger, R.H., (1983, p.61-64); MP 1756

Snow characterization at SNOW-ONE-R. Berger, R.H., et al. (1983, p.155-195); MP 1847

Characterization of snow for evaluation of its effect on electromagnetic wave propagation. Berger, R.H., (1983, p.53-62); MP 1688

Frazil ice formation. Ettema, R., et al. (1984, 44p.); CR 84-18

Effect of size on stresses in shear flow of granular materials, Pt.1. Shen, H.H., (1985, 18p.); CR 85-02

Effect of size on stresses in shear flow of granular materials, Pt.2. Shen, H.H., (1985, 26p.); CR 85-03

Statistics of coarsening in water-saturated snow. Colbeck, S.C., (1986, p.347-355); MP 2015

Frazil ice measurements in CRREL's flume facility. Daly, S.F., et al. (1986, p.427-436); MP 2127

Airborne particle measurements. Berger, R.H., (1989, p.31); MP 2644

Particles

Elemental compositions and concentrations of microparticles in snow and pack ice from the Weddell Sea. Kumai, M., et al. (1983, p.128-131); MP 1777

Forward-scattering corrected extinction by nonspherical particles. Bohren, C.F., et al. (1985, p.1923-1929); MP 1958

Airborne particle measurements. Berger, R.H., (1989, p.31); MP 2644

PATTERNED GROUND

Patterned ground in Alaska. Péwé, T.L., et al. (1969, 87p.); MP 1180

Patterned ground

Morphology of the North Slope. Walker, H.J., (1973, p.49-55); MP 1004

Pavement base

Pavement recycling using a heavy bulldozer mounted pulverizer. Eaton, R.A., et al. (1977, 12p. + appends.); SR 77-30

Effect of freeze-thaw cycles on resilient properties of fine-grained soils. Johnson, T.C., et al. (1978, 19p.); MP 1082

Freeze thaw effects on resilient properties of fine soils. Johnson, T.C., et al. (1979, p.267-276); MP 1226

Pavements

Flexible pavement resilient surface deflections. Smith, N., et al. (1975, 13 leaves); MP 1264

Influence of insulation upon frost penetration beneath pavements. Eaton, R.A., et al. (1976, 41p.); SR 76-06

Frost action in New Jersey highways. Berg, R.L., et al. (1978, 8p.); SR 78-09

Resilience of silt under asphalt during freezing and thawing. Johnson, T.C., et al. (1978, p.642-648); MP 1106

Nondestructive testing of moisture highway pavements in Maine. Smith, N., et al. (1979, 32p.); CR 79-06

Drainage and frost action criteria for a pavement design. Berg, R.L., (1979, 51p.); SR 79-15

Asphalt concrete for cold regions. Dempsey, B.J., et al. (1980, 59p.); CR 80-05

Mathematical models to estimate frost heave of pavements. Berg, R.L., et al. (1980, 69p.); CR 80-10

Field studies of pavement encapsulated subgrades with additives. Eaton, R.A., et al. (1980, 64p.); SR 80-33

Structural evaluation of porous pavements in cold climates. Eaton, R.A., et al. (1980, 45p.); SR 80-39

Pothole primer: a public administrator's guide to understanding and managing the pothole problem. Eaton, R., (1981, 24p.); MP 28.4

Pavement deflections after freezing and thawing. Chamberlain, E.J., (1981, 16p.); CR 81-25

Pavements *(cont.)*
Guide to managing the pothole problem on roads. Eaton, R.A., et al, (1981, 24p) SR 81-21
Potholes. the problem and solutions Eaton, R.A , (1982, p.160-162) MP 1504
Full-depth and granular base course design for frost areas. Eaton, R.A , et al, (1983, p 27-39) MP 1492
Effect of color and texture on the surface temperature of asphalt concrete pavements. Berg, R L., et al, (1983, p 57-61) MP 1652
Comparison of two-dimensional domain and boundary integral geothermal models with embankment freeze-thaw field data. Hromadka, T.V , II, et al, (1983, p.509-513) MP 1659
Revised procedure for pavement design under seasonal frost conditions. Berg, R., et al, (1983, 129p) SR 83-27
Hydraulic properties of selected soils Ingersoll, J., et al, (1985, p.26-35) MP 1925
Frost heave of full-depth asphalt concrete pavements. Zomerman, I., et al, (1985, p 66-76) MP 1927
Seasonal variations in pavement performance. Johnson, T.C., (1985, c21p) MP 2076
Chemical solutions to the chemical problem Minsk, L D., (1985, p 238-244) MP 2224
Survey of airport pavement distress in cold regions. Vinson, T.S., et al, (1986, p 41-50) MP 2002
Construction engineering community: materials and diagnostics (1986, 54p) SR 86-01
Effects of freeze thaw cycles on granular soils for pavements. Cole, D.M., et al, (1986, 70p) CR 86-04
Deformation of pavements during freeze thaw cycles. Johnson, T.C , et al, (1986, 138p) CR 86-13
Resilient moduli of soil specimens in the frozen and thawed states. Johnson, T.C., et al, (1986, 62p) CR 86-12
Freeze-thaw test to determine the frost susceptibility of soils. Chamberlain, E.J., (1987, 90p) SR 87-1
Pavement icing detector—final report. Goldstein, N., et al, (1987, 26p + append.) MP 2263
Freeze thaw tests of road and airfield subgrade soils Cole, D.M., et al, (1987, 36p) CR 87-02
Airport pavement distress in cold regions Vinson, T.S., et al, (1987, p.981-1012) MP 2234
Summary of proper cold weather pavement repair methods. Eaton, R A , (1987, p.1013-1027) MP 2235
Rating system for unsurfaced roads to be used in maintenance management. Eaton, R.A., et al, (1987, p (2)51-(2)62) MP 2313
New freezing test for determining frost susceptibility. Chamberlain, E.J., (1988, p.1045-1050) MP 2368
Hard-surface runways in Antarctica. Mellor, M , (1988, 97p) SR 88-13
Pavement design for seasonal frost conditions Berg, R.L., (1988, 12p.) MP 2547
Response of runway pavement to freeze thaw cycles Allen, W.L., et al, (1989, 31p) SR 89-02
Performance of pavement at Central Wisconsin Airport. Stark, J., et al, (1989, p 92-103) MP 2463
Deep frost effects on a longitudinal edge drain Allen, W L , (1989, p.343-352) MP 2469
Comparison of insulated and noninsulated pavements Kestler, M., et al, (1989, p 367-378) MP 2471
Radar profiling of Newton Airfield in Jackman, Maine Martinson, C.R , (1989, 9p) SR 89-04
Airport pavement distress in cold regions Vinson, T.S., et al, (1989, 142p) CR 89-10
State of the art of pavement response monitoring systems for roads and airfields (1989, 401p) SR 89-23
Monitoring pavement performance in seasonal frost areas. Berg, R L , (1989, p.10-19) MP 2564
Determination of frost penetration by soil resistivity measurements Atkins, R T., (1989, p 87-100) MP 2565
Data acquisition: first the FERF then the world Knuth, K.V., (1989, p 136-138) MP 2567
Resilient modulus determination for frost conditions. Chamberlain, E.J., et al, (1989, p 320-333) MP 2569
Case study of potential causes of frost heave. Henry, K.S , (1990, 35p) SR 90-09
Use of soft grade asphalts in airfields and highway pavements in cold regions. Janoo, V C , (1990, 47p) SR 90-12

Penetration
Depth of water-filled crevasses of glaciers Weertman, J , (1973, p 139-145) MP 1044
Icebreaking concepts Mellor, M., (1980, 18p) SR 80-02
Shopper's guide to ice penetration Mellor, M , (1984, p 1-35) MP 1992
Sea ice penetration in the Arctic Ocean Weeks, W F , (1984, p 37-65) MP 1993
Surfacing submarines through ice Assur, A., (1984, p 309-318) MP 1998
Variability of Arctic sea ice drafts Tucker, W.B , et al, (1986, p 237-256) MP 2178
Penetration of floating ice sheets with cylindrical indentors Sodhi, D S , et al, (1989, p 104) MP 2688

Penetration tests
Brazil tensile strength tests on sea ice a data report Kovacs, A., et al, (1977, 39p) SR 77-24
Terminal ballistics in cold regions materials Aitken, G W , (1978, 6p) MP 1162
Permafrost beneath the Beaufort Sea, near Prudhoe Bay, Alaska. Sellmann, P.V., et al, (1979, p 1481-1493) MP 1211
Penetration tests in subsea permafrost, Prudhoe Bay, Alaska Blouin, S.E , et al, (1979, 45p.) CR 79-07
Determining subsea permafrost characteristics with a cone penetrometer—Prudhoe Bay, Alaska. Blouin, S E , et al, (1979, p 3-16) MP 1217
Subsea permafrost study in the Beaufort Sea, Alaska Sellmann, P.V., et al, (1979, p 207-213) MP 1591
Bullet penetration in snow Cole, D.M , et al, (1979, 23p) SR 79-25
Test of snow fortifications Farrell, D.R., (1979, 15p) SR 79-33
Permafrost beneath the Beaufort Sea. near Prudhoe Bay, Alaska. Sellmann, P.V., et al, (1980, p 35-48) MP 1346
Dynamic ice-structure interaction analysis for narrow vertical structures. Eranti, E., et al, (1981, p 472-479) MP 1456
Deceleration of projectiles in snow. Albert, D.G., et al, (1982, 29p) CR 82-20
Workshop on Ice Penetration Technology, Hanover, NH, June 12-13, 1984. (1984, 345p) SR 84-33
Penetration of shaped charges into ice. Mellor, M , (1984, p.137-148) MP 1995
Ice penetration tests Garcia, N B., et al, (1984, p.209-240) MP 1996
Mechanics of ice cover breakthrough. Kerr, A D , (1984, p 245-262) MP 1997
Revised guidelines for blasting floating ice Mellor, M., (1986, 37p) SR 86-10
Second Workshop on Ice Penetration Technology, 1986. (1986, 659p) SR 86-30
Portable hot water ice drill Tucker, W B., et al, (1986, p 549-564) MP 2202
Portable hot-water ice drill. Tucker, W.B , et al, (1987, p.57-64) MP 2236
Saline ice penetration: a joint CRREL-NSWC test program Cole, D.M., et al, (1987, 34p) SR 87-14
Penetration of floating ice sheets with cylindrical indentors Sodhi, D.S., (1989, p.377-382) MP 2485

Penetrometers
Penetration tests in subsea permafrost, Prudhoe Bay, Alaska. Blouin, S E , et al, (1979, 45p) CR 79-07
Determining subsea permafrost characteristics with a cone penetrometer—Prudhoe Bay, Alaska. Blouin, S.E , et al, (1979, p.3-16) MP 1217
Compacted-snow runways design and construction guidelines for Antarctica. Russell-Head, D.S , et al, (1989, 68p) SR 89-10

Performance
Radial tire and traction aid performance on ice and in snow. Rogers, T., et al, (1986, 20p) SR 86-07
Thawing soil strength measurements for predicting vehicle performance Shoop, S A , (1989, 18p) MP 2749
Comparative model tests in ice of a Canadian Coast Guard R-class icebreaker. Tatinclaux, J C., et al, (1989, p 1/1-1/18) MP 2751

PERIGLACIAL PROCESSES
Patterned ground in Alaska. Péwé, T L , et al, (1969, 87p) MP 1180

Periglacial processes
Deposits in the glacial environment Lawson, D E., (1981, 16p) CR 81-27
Periglacial landforms and processes, Kenai Mts , Alaska Bailey, P.K , (1985, 60p) SR 85-03

Periodic variations
20-yr oscillation in eastern North American temperature records Mock, S J., et al, (1976, p 484-486) MP 889
20-yr cycle in Greenland ice core records. Hibler, W.D , III, et al, (1979, p 481-483) MP 1245
Forecasting ice formation and breakup on Lake Champlain Bates, R.E , et al, (1979, 21p) CR 79-26
Nitrate fluctuations in antarctic snow and firn Parker, B.C , et al, (1982, p 243-248) MP 1551
Modeling fluctuations of arctic sea ice Hibler, W D., III, et al, (1982, p 1514-1523) MP 1579

Permafrost
Workshop on permafrost-related research and TAPS. (1975, 37p) MP 1122
Numerical studies for an airborne VLF resistivity survey Arcone, S A., (1977, 10p) CR 77-05
Dynamics and energetics of parallel motion tools for cutting and boring Mellor, M , (1977, 85p) CR 77-07
Transverse rotation machines for cutting and boring in permafrost Mellor, M., (1977, 36p) CR 77-19
Geobotanical atlas of the Prudhoe Bay region, Alaska Walker, D.A , et al, (1980, 69p) CR 80-14
Environmental engineering, Yukon River-Prudhoe Bay Haul Road. Brown, J , ed, (1980, 187p) CR 80-19
Environment of the Alaskan Haul Road Brown, J , (1980, p 3-52) MP 1350
Mechanics of cutting and boring in permafrost Mellor, M , (1980, 82p) CR 80-21
Crude oil spills on subarctic permafrost in interior Alaska Johnson, L A , et al, (1980, 67p) CR 80-29
Embankment dams on permafrost in the USSR Johnson, F.C , et al, (1980, 59p) SR 80-41
Cold Regions Science and Technology Bibliography Cummings, N.H., (1981, p.73-75) MP 1372
Tundra and analogous soils. Everett, K.R., et al, (1981, p 139-179) MP 1405
Mechanics of cutting and boring in permafrost. Mellor, M., (1981, 38p.) CR 81-26
National Chinese Conference on Permafrost, 2nd, 1981. Brown, J., et al, (1982, 58p) SR 82-03
Bibliography on glaciers and permafrost, China, 1938-1979. Shen, J , ed, (1982, 44p) SR 82-20
Offshore mechanics and Arctic engineering, symposium, 1983. (1983, 813p) MP 1581
Proceedings of the Symposium on Applied Glaciology, 2nd, 1982. (1983, 314p.) MP 2054
Recovery and active layer changes following a tundra fire in northwestern Alaska. Johnson, L., et al, (1983, p 543-547) MP 1660
Constraints and approaches in high latitude natural resource sampling and research. Slaughter, C.W., et al, (1984, p 41-46) MP 2013
Vegetation recovery in the Cape Thompson region, Alaska. Everett, K.R., et al, (1985, 75p) CR 85-11
Vertically stable benchmarks: a synthesis of existing information Gatto, L.W., (1985, p.179-188) MP 2069
Ice-coring augers for shallow depth sampling. Rand, J.H., et al, (1985, 22p) CR 85-21
Remote sensing of ice and snow (review). Jezek, K.C., (1987, p.51) MP 2429
Corps of Engineers research in the Arctic. Smallidge, P.D., et al, (1987, p.81-87) MP 2411
Seismic and acoustic wave propagation. working group report. Albert, D G., et al, (1987, p.253-255) MP 2419
Fox permafrost tunnel: a late Quaternary geologic record in central Alaska. Hamilton, T.D., et al, (1988, p.948-969) MP 2355
Pressure buildup in permafrost pile supports induced by freezeback. Ayorinde, O A., (1989, p 236-251) MP 2467
Use of off-road vehicles and mitigation of effects in Alaska permafrost environments· a review. Slaughter, C.W., et al, (1990, p 63-72) MP 2682
Undersaturation in thawed permafrost at the beginning of freezeback. Ayorinde, O.A., (1990, p.317-321) MP 2582

Permafrost bases
Dielectric properties of thawed active layers. Arcone, S.A., et al, (1982, p 618-626) MP 1547

Permafrost beneath rivers
Piles in permafrost for bridge foundations Crory, F E , et al, (1967, 41p) MP 1411
Runoff from a small subarctic watershed, Alaska. Chacho, E.F , et al, (1983, p.115-120) MP 1654
Bank recession of the Tanana River, Alaska Gatto, L.W., (1984, 59p) MP 1746

Permafrost beneath roads
Approach roads, Greenland 1955 program. (1959, 100p) MP 1522
Permafrost and active layer on a northern Alaskan road. Berg, R.L., et al, (1978, p 615-621) MP 1102
Construction on permafrost at Longyearbyen on Spitsbergen. Tobiasson, W., (1978, p.884-890) MP 1108
Haul Road performance and associated investigations in Alaska. Berg, R.L., (1980, p.53-100) MP 1351
Effect of color and texture on the surface temperature of asphalt concrete pavements. Berg, R L , et al, (1983, p 57-61) MP 1652
Interaction of gravel, surface drainage and culverts with permafrost. Brown, J , et al, (1984, 35p) MP 2215

Permafrost beneath structures
Construction and performance of the Hess creek earth fill dam, Livengood, Alaska Simoni, O.W., (1973, p 23-34) MP 859
Kotzebue hospital—a case study Crory, F E., (1978, p.342-359) MP 1084
Details behind a typical Alaskan pile foundation Tobiasson, W , et al, (1978, p 891-897) MP 1109
Soviet construction under difficult climatic conditions Assur, A., (1980, p 47-53) MP 1345
U.S -Soviet seminar on building under cold climates and on permafrost (1980, 365p) SR 80-40
Design of foundations in areas of significant frost penetration. Linell, K A., et al, (1980, p.118-184) MP 1358
Comparative analysis of the USSR construction codes and the US Army technical manual for design of foundations on permafrost. Fish, A M., (1982, 20p) CR 82-14
Conduction phase change beneath insulated heated or cooled structures Lunardini, V J , (1982, 40p) CR 82-22
Thawing beneath insulated structures on permafrost. Lunardini, V J , (1983, p 750-755) MP 1662
Foundations on permafrost, US and USSR design and practice. Fish, A.M., (1983, p 3-24) MP 1682
Design implications of subsoil thawing Johnson, T C , et al, (1984, p 45-103) MP 1706
Design and performance of water-retaining embankments in permafrost Sayles, F.H , (1984, p 31-42) MP 1850
Foundations in permafrost and seasonal frost Proceedings. (1985, 62p) MP 1730
Creep of a strip footing on ice-rich permafrost. Sayles, F.H., (1985, p 29-51) MP 1731
U S permafrost delegation visit to China, July 1984. Brown, J.. (1985, 137p.) SP 85-09

Heat transfer characteristics of thermosyphons with inclined evaporator sections. Haynes, F D., et al, (1986, p 285-292) MP 2034
Engineering surveys along the Trans-Alaska Pipeline. Godfrey, R.N., et al, (1986, 85p.) SR 86-28
Embankment dams on permafrost Sayles, F H., (1987, 109p.) SR 87-11
Heat transfer performance of commercial thermosyphons with inclined evaporator sections Haynes, F.D., et al, (1988, p.275-280) MP 2320
Airfields in Arctic Alaska. Crory, F.E., (1988, p.49-55) MP 2451

Permafrost control

Light-colored surfaces reduce thaw penetration in permafrost Berg, R.L., et al, (1977, p 86-99) MP 954
Some experiences with tunnel entrances in permafrost Linell, K.A., et al, (1978, p.813-819) MP 1107

Permafrost degradation

Construction on permafrost at Longyearbyen on Spitsbergen Tobiasson, W., (1978, p 884-890) MP 1108

Permafrost depth

Electrical ground impedance measurements in Alaskan permafrost regions Hoekstra, P., (1975, 60p.) MP 1047
Permafroct beneath the Beaufort Sea, near Prudhoe Bay, Alaska Sellmann, P V., et al, (1979, p 1481-1493) MP 1211
Distribution and features of bottom sediments in Alaskan coastal waters. Sellmann, P.V., (1980, 50p.) SR 80-15
Use of piling in frozen ground Crory, F.E., (1980, 21 p.) MP 1407
CO2 effect on permafrost terrain Brown, J., et al, (1982, 30p.) MP 1546
Seismic velocities and subsea permafrost in the Beaufort Sea, Alaska. Neave, K.G., et al, (1983, p.894-898) MP 1665
Subsea permafrost distribution on the Alaskan shelf Sellmann, P V., et al, (1984, p 75-82) MP 1852

PERMAFROST DISTRIBUTION

Effects of permafrost on engineering. Stearns, S.R., (1966, 77p.) M I-A2

Permafrost distribution

Permafrost and vegetation maps from ERTS imagery Anderson, D M., et al, (1973, 75p.) MP 1003
ERTS mapping of Arctic and subarctic environments. Anderson, D M., et al, (1974, 128p.) MP 1047
Delineation and engineering characteristics of permafrost beneath the Beaufort Sea Sellmann, P V., et al, (1977, p 385-395) MP 1074
Evaluation of electrical equipment for measuring permafrost distribution. Sellmann, P.V., et al, (1977, p 39-42) MP 925
Climatic and dendroclimatic indices in the discontinuous permafrost zone of the Central Alaskan Uplands Haugen, R.K., et al, (1978, p 392-398) MP 1099
Shallow electromagnetic geophysical investigations of permafrost. Arcone, S.A., et al, (1978, p 501-507) MP 1101
Physical and thermal disturbance and protection of permafrost. Brown, J., et al, (1979, 42p.) SR 79-05
Determining subsea permafrost characteristics with a cone penetrometer—Prudhoe Bay, Alaska Blouin, S E., et al, (1979, p.3-16) MP 1217
Electromagnetic surveys of permafrost Arcone, S A., et al, (1979, 24p.) CR 79-23
Distribution and properties of subsea permafrost of the Beaufort Sea Sellmann, P V., et al, (1979, p.93-115) MP 1287
Permafrost distribution on the continental shelf of the Beaufort Sea. Hopkins, D M., et al, (1979, p.135-141) MP 1288
Features of permafrost beneath the Beaufort Sea Sellmann, P.V., et al, (1980, p.103-110) MP 1344
Distribution and features of bottom sediments in Alaskan coastal waters *Sellmann, P V., (1980, 50p.)* SR 80-15
Design of foundations in areas of significant frost penetration Linell, K A., et al, (1980, p.118-184) MP 1358
Characteristics of permafrost beneath the Beaufort Sea Sellmann, P V., et al, (1981, p 125-157) MP 1428
Delineation and engineering of subsea permafrost, Beaufort Sea. Sellmann, P.V., et al, (1981, p 137-156) MP 1600
Drainage facilities of airfields and heliports in cold regions Lobacz, E.F., et al, (1981, 56p.) SR 81-22
Surface disturbance and protection during economic development of the North Brown, J., et al, (1981, 88p.) MP 1467
Ice-cored mounds at Sukakpak Mountain, Brooks Range Brown, J., et al, (1983, p 91-96) MP 1653
Relationships between estimated mean annual air and permafrost temperatures in North-Central Alaska Haugen, R K., et al, (1983, p 462-467) MP 1658
Seismic velocities and subsea permafrost in the Beaufort Sea, Alaska Neave, K.G., et al, (1983, p 894-898) MP 1665
Potential responses of permafrost to climatic warming Goodwin, C W., et al, (1984, p 92-105) MP 1710
Frost jacking forces on H and pipe piles embedded in Fairbanks silt Johnson, J B., (1984, 42p + append.) MP 2271
Determining distribution patterns of ice-bonded permafrost in the U.S. Beaufort Sea from seismic data. Neave, K.G., et al, (1984, p.237-258) MP 1839
Subsea permafrost distribution on the Alaskan shelf Sellmann, P.V., et al, (1984, p 75-82) MP 1852
Bank erosion, vegetation and permafrost, Tanana River near Fairbanks Gatto, L.W., (1984, 53p.) SR 84-21
Permafrost, snow cover and vegetation in the USSR Bigl, S R., (1984, 128p.) SR 84-36
Periglacial landforms and processes, Kenai Mts., Alaska Bailey, P.K., (1985, 60p.) SR 85-03
Seismic surveys of shallow subsea permafrost. Neave, K G., et al, (1985, p 61-65) MP 1954
U.S permafrost delegation visit to China, July 1984 Brown, J., (1985, 137p.) SR 85-09
Frost jacking forces on H and pipe piles embedded in Fairbanks silt. Johnson, J.B., et al, (1985, p 125-133) MP 1930
Terrain analysis from space shuttle photographs of Tibet Kreig, R.A., et al, (1986, p 400-409) MP 2097
Arctic and subarctic construction: general provisions. Lobacz, E F., (1986, 75p.) SR 86-17
D.C resistivity along the coast at Prudhoe Bay, Alaska. Sellmann, P.V., et al, (1988, p.988-993) MP 2366

PERMAFROST HEAT BALANCE

Effects of permafrost on engineering. Stearns, S R., (1966, 77p.) M I-A2

Permafrost heat balance

Cylindrical phase change approximation with effective thermal diffusivity. Lunardini, V.J., (1981, p.147-154) MP 1438

Permafrost heat transfer

Evaluation of methods for calculating soil thermal conductivity. Farouki, O., (1972, 90p.) CR 82-08
Thermal properties of soils. Farouki, O.T., (1981, 136p.) M 81-01
Conduction phase change beneath insulated heated or cooled structures Lunardini, V.J., (1982, 40p.) CR 82-22
Computer models for two-dimensional steady-state heat conduction. Albert, M.R., et al, (1983, 90p.) CR 83-10

Permafrost hydrology

Morphology of the North Slope Walker, H.J., (1973, p 49-52) MP 1004
Geophysical methods for hydrological investigations in permafrost regions. Hoekstra, P., (1976, p 75-90) MP 932
Colloquium on Water in Planetary Regoliths, Hanover, N.H., Oct 5-7, 1976. (1977, 161p.) MP 911
Mars soil-water analyzer: instrument description and status Anderson, D M., et al, (1977, p.149-158) MP 912
Fresh water supply for an Alaskan village McFadden, T., et al, (1978, 18p.) SR 78-07
Proceedings of the second planetary water and polar processes colloquium, 1978. (1978, 209p.) MP 1193
Case study: fresh water supply for Point Hope, Alaska McFadden, T., et al, (1979, p 1029-1040) MP 1222
Design of foundations in areas of significant frost penetration Linell, K.A., et al, (1980, p 118-184) MP 1358
Hydrology and climatology of a drainage basin near Fairbanks, Alaska Haugen, R K., et al, (1982, 34p.) CR 82-26
Ice-cored mounds at Sukakpak Mountain, Brooks Range Brown, J., et al, (1983, p 91-96) MP 1653
Ground ice in perennially frozen sediments, northern Alaska Lawson, D.E., (1983, p 695-700) MP 1661
Water migration due to a temperature gradient in frozen soil Oliphant, J L., et al, (1983, p.951-956) MP 1666
Permafrost Benson, C., et al, (1986, p 99-106) MP 2156

Permafrost indicators

Airborne E-phase resistivity surveys of permafrost Sellmann, P.V., et al, (1974, p 67-71) MP 1046
Geophysical methods for hydrological investigations in permafrost regions Hoekstra, P., (1976, p 75-90) MP 932
Selected examples of radiohm resistivity surveys for geotechnical exploration Hoekstra, P., et al, (1977, 16p.) SR 77-01

Permafrost physics

Delineation and engineering characteristics of permafrost beneath the Beaufort Sea. Sellmann, P.V., et al, (1977, p 385-395) MP 1074
Dynamic in-situ properties test in fine-grained permafrost Blouin, S.E., (1977, p.282-313) MP 963
Shallow electromagnetic geophysical investigations of permafrost. Arcone, S.A., et al, (1978, p 501-507) MP 1101
Remote sensing of massive ice in permafrost along pipelines in Alaska Kovacs, A., et al, (1979, p 268-279) MP 1175
Geophysics in the study of permafrost Scott, W.J., et al, (1979, p 93-115) MP 1266
Electromagnetic survey in permafrost Sellmann, P V., et al, (1979, 7p.) SR 79-14
Heat transfer in cold climates. Lunardini, V J., (1981, 731p.) MP 1435
VHF electrical properties of frozen ground near Point Barrow, Alaska Arcone, S A., et al, (1981, 18p.) CR 81-13
Measurements of ground resistivity Arcone, S A., (1982, p 92-110) MP 1513
Laboratory measurements of soil electric properties between 0.1 and 5 GHz. Delaney, A J., et al, (1982, 12p.) CR 82-10
Tundra soils on the Arctic Slope of Alaska. Everett, K.R., et al, (1982, p 264-280) MP 1552
Improving electric grounding in frozen materials. Delaney, A.J., et al, (1982, 12p.) SR 82-13
Deformation and failure of frozen soils and ice due to stresses. Fish, A M., (1982, p 419-428) MP 1553
Freezing of soil with surface convection Lunardini, V.J., (1982, p.205-212) MP 1595
Understanding the Arctic sea floor for engineering purposes. (1982, 141p.) SR 83-25
Computer models for two-dimensional steady-state heat conduction. Albert, M.R., et al, (1983, 90p.) CR 83-10
Guidebook to permafrost and its features, northern Alaska Brown, J., ed, (1983, 230p.) MP 1640
Offshore mechanics and Arctic engineering symposium, 1984. (1984, 3 vols.) MP 1675
Field dielectric measurements of frozen silt using VHF pulses. Arcone, S.A., et al, (1984, p.29-37) MP 1774
Conductive backfill for improving electrical grounding in frozen soils. Sellmann, P V., et al, (1984, 19p.) SR 84-17
Workshop on Permafrost Geophysics, Golden, Colorado, 23-24 October 1984. Brown, J., ed, (1985, 113p.) SR 85-05
Dielectric studies of permafrost Arcone, S A., et al, (1985, p 3-5) MP 1951
Galvanic methods for mapping resistive seabed features Sellmann, P.V., et al, (1985, p.91-92) MP 1955
Strain rate effect on the tensile strength of frozen silt. Zhu, Y., et al, (1985, p.153-157) MP 1898
International Offshore Mechanics and Arctic Engineering Symposium, 1987. (1987, 4 vols.) MP 2189
Preparation of geophysical borehole site with ground ice, Fairbanks, AK Delaney, A J., (1987, 15p.) SR 87-07
Mechanical and physical properties of soils in cold regions Chamberlain, E.J., (1987, p 155-161) MP 2415

Permafrost preservation

Piles in permafrost for bridge foundations Crory, F.E., et al, (1967, 41p.) MP 1411

PERMAFROST PRESERVATION

Foundations of structures in cold regions Sanger, F.J., (1969, 91p.) M III-C4

Permafrost preservation

Construction and performance of the Hess creek earth fill dam, Livengood, Alaska Simoni, O W., (1973, p 23-34) MP 859
Thermoinsulating media within embankments on perennially frozen soil. Berg, R.L., (1976, 161p.) SR 76-03
Ecological and environmental consequences of off-road traffic in northern regions Brown, J., (1976, p.40-53) MP 1383
Road construction and maintenance problems in central Alaska Clark, E F., et al, (1976, 36p.) SR 76-08
Physical and thermal disturbance and protection of permafrost. Brown, J., et al, (1979, 42p.) SR 79-05
Workshop on Environmental Protection of Permafrost Terrain. Brown, J., et al, (1980, p.30-36) MP 1314
Snow pads for pipeline construction in Alaska Johnson, P R., et al, (1980, 28p.) CR 80-17
Construction of foundations in permafrost Linell, K.A., et al, (1980, 310p.) SR 80-34
Sublimation and its control in the CRREL permafrost tunnel. Johansen, N I., (1981, 12p.) SR 81-08
Surface disturbance and protection during economic development of the North. Brown, J., et al, (1981, 88p.) MP 1467
Response of permafrost to disturbance Lawson, D E., (1986, p 1-7) MP 2165

Permafrost samplers

Subsurface explorations in permafrost areas Cass, J.R., Jr., (1959, p 31-41) MP 885
Drilling and coring of frozen ground in northern Alaska, Spring 1979 Lawson, D.E., et al, (1980, 14p.) SR 80-12

PERMAFROST STRUCTURE

Effects of permafrost on engineering Stearns, S R., (1966, 77p.) M I-A2
Characteristics of the cold regions Gerdel, R W., (1969, 51p.) M I-A

Permafrost structure

Morphology of the North Slope. Walker, H J., (1973, p 49-52) MP 1004
Electrical resistivity profile of permafrost Hoekstra, P., (1974, p.28-34) MP 1045
Computer modeling of terrain modifications in the arctic and subarctic Outcalt, S.I., et al, (1977, p 24-32) MP 971
Remote sensing of massive ice in permafrost along pipelines in Alaska Kovacs, A., et al, (1979, p 268-279) MP 1175
Electromagnetic survey in permafrost Sellmann, P V., et al, (1979, 7p.) SR 79-14
Drilling and coring of frozen ground in northern Alaska, Spring 1979 Lawson, D.E., et al, (1980, 14p.) SR 80-12

Permafrost temperature
Unfrozen water contents of six antarctic soil materials Anderson, D M., et al, (1989, p 353-366) MP 2470
Permafrost thermal properties
Approach roads, Greenland 1955 program. (1959, 100p) MP 1522
Subsea permafrost study in the Beaufort Sea, Alaska. Sellmann, P.V., et al, (1979, p.207-213) MP 1591
Crude oil spills on subarctic permafrost in interior Alaska. Johnson, L A., et al, (1980, 128p) MP 1310
Phase change around a circular pipe. Lunardini, V.J., (1980, 18p.) CR 80-27
Piling in frozen ground Crory, F E., (1982, p 112-124) MP 1722
Modifications of permafrost, East Oumalik, Alaska. Lawson, D.E., (1982, 33p) CR 82-36
Freezing and thawing: heat balance integral approximations. Lunardini, V.J., (1983, p.30-37) MP 1597
Approximate solution to conduction freezing with density variation. Lunardini, V.J., (1983, p 43-45) MP 1598
Relationships between estimated mean annual air and permafrost temperatures in North-Central Alaska. Haugen, R.K., et al, (1983, p 462-467) MP 1658
Ground ice in perennially frozen sediments, northern Alaska Lawson, D.E., (1983, p 695-700) MP 1661
Erosion of perennially frozen streambanks Lawson, D.E., (1983, 22p.) CR 83-29
Potential responses of permafrost to climatic warming Goodwin, C.W., et al, (1984, p 92-105) MP 1710
Status of numerical models for heat and mass transfer in frost-susceptible soils. Berg, R L., (1984, p 67-71) MP 1851
Subsea permafrost distribution on the Alaskan shelf. Sellmann, P.V., et al, (1984, p.75-82) MP 1852
Prototype drill for core sampling fine-grained perennially frozen ground. Brockett, B.E., et al, (1985, 29p) CR 85-01
Arctic thermal design. Lunardini, V.J., (1985, p 70-75) MP 2167
U S. permafrost delegation visit to China, July 1984 Brown, J., (1985, 137p.) SR 85-09
Review of analytical methods for ground thermal regime calculations Lunardini, V.J., (1985, p.204-257) MP 1922
Heat transfer characteristics of thermosyphons with inclined evaporator sections Haynes, F D., et al, (1986, p 285-292) MP 2034
Monitoring seasonal changes in seafloor temperature and salinity Sellmann, P.V., et al, (1986, p 110-114) MP 2147
Natural ground temperatures in upland bedrock terrain, interior Alaska. Collins, C M., et al, (1988, p 56-60) MP 2360
Seasonal variations in resistivity and temperature in discontinuous permafrost Delaney, A J., et al, (1988, p 927-932) MP 2365
Thermal stabilization of permafrost with thermosyphons Zarling, J.P., et al, (1990, p.323-328) MP 2583
Permafrost thickness
Electrical ground impedance measurements in Alaskan permafrost regions Hoekstra, P., (1975, 60p) MP 1049
Permeability
Consolidating dredged material by freezing and thawing Chamberlain, E.J., (1977, 94p) MP 978
Freeze thaw effect on the permeability and structure of soils Chamberlain, E J., et al, (1978, p 31-44) MP 1080
Freeze thaw effect on the permeability and structure of soils Chamberlain, E.J., et al, (1979, p.73-92) MP 1225
Soil infiltration on land treatment sites. Abele, G., et al, (1980, 41p) SR 80-36
Liquid distribution and the dielectric constant of wet snow Colbeck, S C., (1980, p.21-39) MP 1349
Soil hydraulic conductivity and moisture retention features Ingersoll, J., (1981, 11p) SR 81-02
Evaluation of procedures for determining selected aquifer parameters Daly, C.J., (1982, 104p) CR 82-41
Effect of freeze-thaw cycles on soils Chamberlain, E., et al, (1990, p 145-155) MP 2678
Petroleum industry
Design considerations for airfields in NPRA Crory, F E., et al, (1978, p 441-458) MP 1086
Phase transformations
Compressibility characteristics of compacted snow. Abele, G., et al, (1976, 47p) CR 76-21
Low temperature phase changes in moist, briny clays. Anderson, D.M., et al, (1980, p 139-144) MP 1330
Phase change around a circular pipe Lunardini, V J., (1980, 18p) CR 80-27
Heat transfer in cold climates Lunardini, V J., (1981, 731p) MP 1435
Some approaches to modeling phase change in freezing soils Hromadka, T V., II, et al, (1981, p 137-145) MP 1437
Cylindrical phase change approximation with effective thermal diffusivity Lunardini, V J., (1981, p 147-154) MP 1438
Deforming finite elements with and without phase change Lynch, D R., et al, (1981, p 81-96) MP 1493
Phase change around a circular cylinder Lunardini, V J., (1981, p 598-600) MP 1507
Phase change around insulated buried pipes: quasi-steady method. Lunardini, V.J., (1981, p.201-207) MP 1496
Heat conduction with phase changes. Lunardini, V.J., (1981, 14p) CR 81-25
Freezing of soil with surface convection Lunardini, V.J., (1982, p 205-212) MP 1595
Solution of two-dimensional freezing and thawing problems O'Neill, K., (1983, p.653-658) MP 1584
Approximate phase change solutions for insulated buried cylinders Lunardini, V J., (1983, p.25-32) MP 1593
Boundary integral equation solution for phase change problems O'Neill, K., (1983, p.1825-1850) MP 2093
Two-dimensional heat conduction phase change. Albert, M.R., et al, (1983, p 85-110) MP 2161
Fixed mesh finite element solution for cartesian two-dimensional phase change. O'Neill, K., (1983, p 436-441) MP 1702
Modeling two-dimensional freezing Albert, M.R., (1984, 45p) CR 84-10
Computation of porous media natural convection flow and phase change. O'Neill, K., et al, (1984, p 213-229) MP 1895
Freezing of soil with phase change occurring over a finite temperature zone Lunardini, V.J., (1985, p 38-46) MP 1854
Transient two-dimensional phase change. Albert, M R., et al, (1985, p.229-243) MP 2162
Heat conduction phase change problems Albert, M.R., et al, (1986, p.591-607) MP 2159
Tracking freezing front movement using boundary element method Hromadka, T.V., II, (1987, 58p) SR 87-08
XYFREZ.4 user's manual. O'Neill, K., (1987, 55p.) SR 87-28
Heat conduction with freezing or thawing. Lunardini, V.J., (1988, 329p.) M 88-01
Phase change heat transfer program for microcomputers Buzzell, G.M., et al, (1988, p.645-650) MP 2383
Photoelasticity
Photoelastic instrumentation—principles and techniques. Roberts, A., et al, (1979, 153p) SR 79-13
Photogrammetry
Remote measurement of sea ice drift. Hibler, W.D., III, et al, (1975, p 541-554) MP 849
Photography
Ice thickness distribution across the Atlantic sector of the Antarctic Ocean in midwinter. Wadhams, P., et al, (1987, p.14,535-14,552) MP 2314
Photointerpretation
Antarctic sea ice dynamics and its possible climatic effects Ackley, S.F., et al, (1976, p 53-76) MP 1378
Air photo interpretation of a small ice jam DenHartog, S L., (1977, p 705-719) MP 935
Aerial photointerpretation of a small ice jam DenHartog, S L., (1977, 17p) SR 77-32
Aerial photography of Cape Cod shoreline changes Gatto, L.W., (1978, 49p) CR 78-17
River channel characteristics at selected ice jam sites in Vermont Gatto, L W., (1978, 52p) CR 78-25
Historical shoreline changes along the outer coast of Cape Cod. Gatto, L.W., (1979, p 69-90) MP 1502
Aerial photointerpretation for shoreline changes Gatto, L.W., (1980, p 167-170) MP 1503
Wildlife habitat mapping in Lac qui Parle, Minnesota. Merry, C.J., et al, (1984, p 205-208) MP 2085
Evaluation of SPOT HRV simulation data for Corps of Engineers applications McKim, H.L., et al, (1985, p 61-71) MP 2184
Photomacrographs
Photomacrography of artifacts in transparent materials Marshall, S J., (1976, 31p) CR 76-40
Photosynthesis
Case for comparison and standardization of carbon dioxide reference gases Kelley, J J., et al, (1973, p 163-181) MP 964
Physical properties
Physical and structural characteristics of sea ice in McMurdo Sound Gow, A J., et al, (1981, p 94-95) MP 1542
Simulation of planar instabilities during solidification. Sullivan, J M., Jr., et al, (1987, p 81-111) MP 2585
Physiological effects
Winter habitats of salmon and trout Calkins, D J., (1989, 9p) SR 89-34
Piers
Arching of model ice floes at bridge piers. Calkins, D.J., (1978, p 495-507) MP 1134
Ice forces on the Yukon River bridge 1978 breakup Johnson, P R., et al, (1979, 40p) MP 1304
Ice action on pairs of cylindrical and conical structures Kato, K., et al, (1983, 35p.) CR 83-25
Ice forces on a bridge pier, Ottauquechee River, Vermont Sodhi, D S., et al, (1983, 6p) CR 83-32
Ice forces on inclined model bridge piers Haynes, F.D., et al, (1984, p.1167-1173) MP 2407
Vibration analysis of the Yamachiche lightpier Haynes, F.D., (1986, p.238-241) MP 1989
Vibration analysis of the Yamachiche Lightpier Haynes, F.D., (1986, p 9 18) MP 2253
Ice forces on bridge piers Haynes, F D., (1986, p 83-101) MP 2160
Static and dynamic ice loads on the Yamachiche Bend lightpier, 1984-86. Frederking, R., et al, (1986, p 115-126) MP 2389
Ice force measurements on a bridge pier in a small river. Sodhi, D.S., et al, (1989, p 1419-1427) MP 2764
Pile driving
Piles in permafrost for bridge foundations Crory, F.E., et al, (1967, 41p) MP 1411
Study of piles installed in polar snow Kovacs, A., (1976, 132p) CR 76-23
Stake driving tools a preliminary survey. Kovacs, A., et al, (1977, 43p) SR 77-13
Use of piling in frozen ground. Crory, F.E., (1980, 21 p) MP 1407
Pile extraction
Ice engineering. O'Steen, D.A., (1980, p 41-47) MP 1602
Frost jacking forces on H and pipe piles embedded in Fairbanks silt Johnson, J B., (1984, 42p. + append.) MP 2271
Frost heave forces on piling Esch, D C., et al, (1985, 2p) MP 1732
Uplifting forces exerted by adfrozen ice on marine piles Christensen, F T., et al, (1985, p.529-542) MP 1905
Frost jacking forces on H and pipe piles embedded in Fairbanks silt. Johnson, J.B., et al, (1985, p.125-133) MP 1930
Real-time measurements of uplifting ice forces Zabilansky, L.J., (1985, p.253-259) MP 2092
Frost heave forces on H and pipe foundation piles Buska, J S., et al, (1988, p 1039-1044) MP 2367
Model study of uplifting ice forces· the instrumentation. Zabilansky, L.J., (1988, p 745-748) MP 2487
Pile load tests
Use of piling in frozen ground Crory, F.E., (1980, 21 p) MP 1407
Real-time measurements of uplifting ice forces Zabilansky, L.J., (1985, p 253-259) MP 2092
Model study of uplifting ice forces: the instrumentation. Zabilansky, L.J., (1988, p 745-748) MP 2487
Pile structures
Ice forces on vertical piles Nevel, D E., et al, (1972, p.104-114) MP 1024
Investigation of ice forces on vertical structures. Hirayama, K., et al, (1974, 153p) MP 1041
Ice forces on model structures Zabilansky, L.J., et al, (1975, p 400-407) MP 863
Ice forces on simulated structures Zabilansky, L J., et al, (1975, p.387-396) MP 864
Ice forces on vertical piles Nevel, D E., et al, (1977, 9p) CR 77-10
Ice engineering. O'Steen, D.A., (1980, p 41-47) MP 1602
Construction of foundations in permafrost Linell, K.A., et al, (1980, 310p) SR 80-34
Piling in frozen ground Crory, F E., (1982, p 112-124) MP 1722
Dynamic ice-structure interaction during continuous crushing Määttänen, M., (1983, 48p) CR 83-05
Foundations in permafrost and seasonal frost, Proceedings (1985, 62p) MP 1730
Frost heave forces on piling Esch, D.C., et al, (1985, 2p) MP 1732
Model study of ice forces on a single pile. Zabilansky, L.J., (1986, p.77-87) MP 2388
Pressure buildup in permafrost pile supports induced by freezeback Ayorinde, O A., (1989, p 236-251) MP 2467
Piles
Application of ice engineering and research to Great Lakes problems Freitag, D.R., (1972, p 131-138) MP 1615
Foundation technology in cold regions Quinn, W F., (1987, p 305-310) MP 2425
Measurement of frost heave forces on H-piles and pipe piles Johnson, J B., et al, (1988, 49p) CR 88-21
Pingos
On the origin of pingos—a comment Mackay, J R., (1976, p.295-298) MP 916
Pipe flow
Ice bands in turbul· · pipe flow Ashton, G.D., (1984, 7p) MP 2087
Pipe laying
Subsea trenching in the Arctic Mellor, M., (1981, 31p) CR 81-17
Pipeline freezing
Freeze damage prevention in utility distribution lines McFadden, T., (1977, p 221-231) MP 929
Freeze damage protection for utility lines McFadden, T., (1977, p 12-16) MP 953
Cold climate utilities delivery design manual Smith, D W., et al, (1979, c300 leaves) MP 1373
Freezing in a pipe with turbulent flow. Albert, M R., et al, (1983, p 102-112) MP 1893
Ice bands in turbulent pipe flow Ashton, G D., (1984, 7p.) MP 2087
Pipeline insulation
Freeze damage protection for utility lines. McFadden, T., (1977, p 12-16) MP 953
Specialized pipeline equipment Hanamoto, B., (1978, 30p) SR 78-05

Phase change around insulated buried pipes. quasi-steady method. Lunardini, V.J., (1981, p.201-207) MP 1496

Pipeline supports

Movement study of the trans-Alaska pipeline at selected sites. Ueda, H.T, et al, (1981, 32p) CR 81-04

Performance of a thermosyphon with an inclined evaporator and vertical condenser Zarling, J.P, et al, (1984, p 64-68) MP 1677

Frost jacking forces on H and pipe piles embedded in Fairbanks silt. Johnson, J.B., et al, (1985, p 125-133) MP 1930

Frost heave forces on H and pipe foundation piles Buska, J.S, et al, (1988, p 1039-1044) MP 2367

Pipelines

Workshop on permafrost-related research and TAPS. (1975, 37p) MP 1122

Utility distribution practices in northern Europe McFadden, T., et al, (1977, p 70-95) MP 928

Haines-Fairbanks pipeline. design, construction and operation. Garfield, D.E, et al, (1977, 20p) SR 77-04

Revegetation and erosion control of the Trans-Alaska Pipeline Johnson, L.A., et al, (1977, 36p) SR 77-08

Canol Pipeline Project. a historical review. Ueda, H.T., et al, (1977, 32p) SR 77-34

Large mobile drilling rigs used along the Alaska pipeline. Sellmann, P.V, et al, (1978, 23p) SR 78-04

Specialized pipeline equipment Hanamoto, B., (1978, 30p) SR 78-05

Construction equipment problems and procedures. Alaska pipeline project. Hanamoto, B, (1978, 14p) SR 78-11

Undersea pipelines and cables in polar waters Mellor, M., (1978, 34p) CR 78-22

Application of heat pipes on the Trans-Alaska Pipeline. Heuer, C.E., (1979, 27p) SR 79-26

Snow pads for pipeline construction in Alaska. Johnson, P.R., et al, (1980, 28p) CR 80-17

Environmental engineering, Yukon River-Prudhoe Bay Haul Road. Brown, J., ed, (1980, 187p) CR 80-19

Environment of the Alaskan Haul Road Brown, J, (1980, p 3-52) MP 1350

Revegetation along roads and pipelines in Alaska Johnson, L.A., (1980, p 129-150) MP 1353

Movement study of the trans-Alaska pipeline at selected sites Ueda, H.T., et al, (1981, 32p) CR 81-04

Losses from the Fort Wainwright heat distribution system Phetteplace, G, et al, (1981, 29p) SR 81-14

Revegetation along the trans-Alaska pipeline, 1975-1978 Johnson, A.J, (1981, 115p) CR 81-12

Subsea trenching in the Arctic Mellor, M, (1981, p 843-882) MP 1464

Revegetation along pipeline rights-of-way in Alaska. Johnson, L, (1984, p 254-264) MP 2113

Simple design procedure for heat transmission system piping. Phetteplace, G, (1985, p 1748-1752) MP 1942

Engineering surveys along the Trans-Alaska Pipeline Godfrey, R.N., et al, (1986, 85p) SR 86-28

Pipes (tubes)

Phase change around a circular pipe Lunardini, V.J, (1980, 18p) CR 80-27

Phase change around a circular cylinder Lunardini, V.J., (1981, p 598-600) MP 1507

Approximate phase change solutions for insulated buried cylinders Lunardini, V.J, (1983, p 25-32) MP 1593

Transient two-dimensional phase change Albert, M.R, et al, (1985, p 279-243) MP 2162

Polyvinyl chloride pipes and ground water chemistry. Parker, L.V, et al, (1985, 27p) SR 85-12

Heat transfer of a thermosyphon Zarling, J.P, et al, (1987, p.79-84) MP 2190

Thermosyphon for horizontal applications DenHartog, S.L., (1988, p 319-321) MP 2444

Freezing and thawing of soils in cylindrical coordinates Lunardini, V.J., (1989, p 185-208) MP 2594

Investigation into the post-stable behavior of a tube array in cross-flow Lever, J.H., et al, (1989, p 457-465) MP 2561

PLAINS

Geology and physiography of cold regions Stearns, S.R., (1965, 40p) M I-A1

Planetary environments

Proceedings of the second planetary water and polar processes colloquium, 1978 (1978, 209p) MP 1193

First impressions of the comet drilling problem Mellor, M, (1989, p 229-232) MP 2592

Plankton

Choanoflagellata from the Weddell Sea, summer 1977 Buck, K.R, (1980, 26p) CR 80-16

Morphology and ecology of diatoms in sea ice from the Weddell Sea Clarke, D.B, et al, (1984, 41p) CR 84-05

Sea-ice pressure ridge microbial communities. Ackley, S.F, (1988, p 172-174) MP 2450

Plant ecology

Climatic and dendroclimatic indices in the discontinuous permafrost zone of the Central Alaskan Uplands Haugen, R.K, et al, (1978, p 392-398) MP 1099

Vegetation recovery after tundra fires in northwestern Alaska Racine, C., et al, (1987, p 461-469) MP 2374

Plant physiology

Seasonal variations in plant nutrition in tundra soils. McCown, B.H., et al, (1971, p.55-57) MP 904

Effects of inundation on six varieties of turfgrass. Erbisch, F.H, et al, (1982, 25p) SR 82-12

U.S. tundra biome publication list Brown, J, et al, (1983, 29p.) SR 83-29

Growth and flowering of tussocks in northcentral Alaska Haugen, R.K., et al, (1984, p 10-11) MP 1950

Effect and disposition of TNT in a terrestrial plant Palazzo, A.J., et al, (1986, p 49-52) MP 2098

TNT in a terrestrial plant Palazzo, A.J., et al, (1986, 17p) CR 86-15

Effects of temperature and species on TNT injury to plants. Palazzo, A.J, et al, (1988, 7p) SR 88-16

Plant tissues

Aquatic plant growth in relation to temperature and unfrozen water content Palazzo, A.J, et al, (1984, 8p) CR 84-14

Plants (botany)

Revegetation in arctic and subarctic North America—a literature review Johnson, L.A., et al, (1976, 32p) CR 76-15

Urban waste as a source of heavy metals in land treatment Iskandar, I.K, (1976, p 417-432) MP 977

Effects of wastewater application on forage grasses Palazzo, A.J., (1976, 8p) CR 76-39

Reclamation of acidic dredge soils with sewage sludge and lime Palazzo, A.J, (1977, 24p) SR 77-19

Effects of wastewater on the growth and chemical composition of forages. Palazzo, A.J, (1977, p 171-180) MP 975

Ecology on the Yukon-Prudhoe haul road. Brown, J, ed, (1978, 131p) MP 1115

Effects of a tundra fire on soil and vegetation Racine, C, (1980, 21p) SR 80-37

Aquaculture for wastewater treatment in cold climates Reed, S.C, et al, (1981, p.482-492) MP 1394

Wastewater treatment and plant growth Palazzo, A.J, (1982, 21p) SR 82-05

Vegetation and environmental gradients of the Prudhoe Bay region, Alaska Walker, D.A., (1985, 239p) CR 85-14

TNT in a terrestrial plant Palazzo, A.J., et al, (1986, 17p) CR 86-15

Effects of temperature and species on TNT injury to plants Palazzo, A.J, et al, (1988, 7p) SR 88-16

Plastic deformation

Mechanics of ice. Glen, J.W., (1975, 43p) M II-C2b

In-plane deformation of non-coaxial plastic soil Takagi, S, (1978, 28p) CR 78-07

Plastic flow

Modeling pack ice as a viscous-plastic continuum Hibler, W.D., III, (1977, p 46-55) MP 1164

Role of plastic ice interaction in marginal ice zone dynamics Leppäranta, M, et al, (1985, p 11,899-11,909) MP 1544

Plastic properties

Steady in-plane deformation of noncoaxial plastic soil Takagi, S, (1979, p.1049-1072) MP 1248

Analysis of non-steady plastic shock waves in snow Brown, R.L, (1980, p 279-287) MP 1354

Plasticity tests

Report of the ITTC panel on testing in ice, 1978 Frankenstein, G.E, et al, (1978, p.157-179) MP 1140

Plastics

Utility distribution practices in northern Europe McFadden, T, et al, (1977, p 70-95) MP 928

Plates

Viscoelasticity of floating ice plates subjected to a circular load. Takagi, S, (1978, 32p) CR 78-05

Investigation of the acoustic emission and deformation response of finite ice plates Xirouchakis, P.C, et al, (1981, 19p) CR 81-06

Acoustic emission and deformation response of finite ice plates Xirouchakis, P.C., et al, (1981, p 123-133) MP 1436

On the buckling force of floating ice plates Kerr, A.D, (1981, 7p) CR 81-09

Acoustic emission and deformation of ice plates Xirouchakis, P.C, et al, (1982, p.129-139) MP 1589

Pneumatic equipment

De-icing of radomes and lock walls using pneumatic devices Ackley, S.F, et al, (1977, p 467-478) MP 1064

Polar regions

Arctic research of the United States, Vol 1 (1987, 121p) MP 2306

Arctic research of the United States, Vol.2 (1988, 76p) MP 2379

United States arctic research plan biennial revision 1990-1991 Brown, J, ed, (1989, 72p) MP 2544

Polarization (waves)

Polarization studies in sea ice Arcone, S.A, et al, (1980, p 225-245) MP 1324

Polarization of skylight Bohren, C, (1984, p 261-265) MP 1794

Model studies of surface noise interference in ground-probing radar Arcone, S.A, et al, (1985, 23p) CR 85-19

Optical properties of sea ice structure Gow, A.J., (1986, p 264-271) MP 2257

Pollution

Mercury contamination of water samples Cragin, J.H, (1979, p 313-319) MP 1270

Health aspects of land treatment Reed, S.C, (1979, 43p) MP 1389

Sensitivity of vegetation and soil flora to seawater spills, Alaska. Simmons, C.L, et al, (1983, 35p) CR 83-24

Freezing effect on waste contaminants Iskandar, I.K, (1986, 33p) SR 86-19

Low temperature effects on organophosphonates Britton, K.B., (1986, 47 refs) SR 86-38

Losses of explosives residues on disposable membrane filters. Jenkins, T.F., et al, (1987, 25p.) SR 87-02

Decontamination of chemical agents on the winter battlefield. Parker, L.V., (1988, 48p) CR 88-07

Comparison of EPA and USATHAMA detection capability estimators Grant, C.L., et al, (1988, p 405-418) MP 2455

Using bleach mixture for decontamination at low temperatures Walsh, M.E, et al, (1989, 13p.) SR 89-33

CBR operations in cold weather a bibliography, Vol 1 Carlon, H.R, et al, (1989, 88p.) MP 2574

Polymers

Ice releasing block-copolymer coatings Jellinek, H.H.G, et al, (1978, p 544-551) MP 1141

Seeking low ice adhesion Sayward, J.M, (1979, 83p) SR 79-11

Adhesion of ice to polymers and other surfaces Itagaki, K., (1983, p 241-252) MP 1580

Cold-temperature characterization of polymer concrete. Bigl, S.R, (1986, 46p) MP 2521

Wetting of polystyrene and urethane roof insulations. Tobiasson, W, et al, (1988, p.421-430) MP 2011

On the design of polymeric composite structures for cold regions applications Lord, H.W, et al, (1988, p.435-458) MP 2395

Polynyas

Turbulent heat flux from Arctic leads Andreas, E.L, et al, (1979, p 57-91) MP 1340

Physical oceanography of the seasonal sea ice zone. McPhee, M.G, (1980, p 93-132) MP 1294

Estimation of heat and mass fluxes over Arctic leads. Andreas, E.L, (1980, p 2057-2063) MP 1410

Condensate profiles over Arctic leads Andreas, E.L, et al, (1981, p 437-460) MP 1479

Sea ice state during the Weddell Sea Expedition Ackley, S.F, et al, (1983, 6p. + 59p) SR 83-2

Bulk transfer coefficients for heat and momentum over leads and polynyas Andreas, E.L, et al, (1986, p 1875-1883) MP 2187

Estimating turbulent surface heat fluxes over polar, marine surfaces Andreas, E.L, (1988, p 65-68) MP 2448

Environment of wintertime leads and polynyas Andreas, E.L., (1989, p 273-288) MP 2689

Wind-generated polynyas off the coasts of the Bering Sea islands. Kozo, T.L, et al, (1990, p.126-132) MP 2734

Ponds

Suppression of ice fog from cooling ponds McFadden, T, (1976, 78p) CR 76-43

Wastewater stabilization pond linings Middlebrooks, E.J., et al, (1978, 116p) SR 78-28

Energy requirements for small flow wastewater treatment systems Middlebrooks, E.J., et al, (1979, 82p) SR 79-07

Cost-effective use of municipal wastewater treatment ponds Reed, S.C, et al, (1979, p 177-200) MP 1413

International and national developments in land treatment of wastewater McKim, H.L., et al, (1979, 28p) MP 1420

Aquaculture systems for wastewater treatment an engineering assessment Reed, S.C., et al, (1980, 127p) MP 1422

Aquaculture systems for wastewater treatment Reed, S.C, et al, (1980, p 1-12) MP 1423

Ice growth on Post Pond, 1973-1982 Gow, A.J, et al, (1983, 25p) CR 83-04

Nitrogen removal in wastewater stabilization ponds Reed, S.C., (1983, 13p + figs) MP 1943

Nitrogen removal in wastewater ponds. Reed, S.C., (1984, 26p) CR 84-13

Pontoon bridges

Ice interaction with the U.S. Army ribbon bridge. Coutermarsh, B.A., (1986, 18p) CR 86-01

Porosity

Difficulties of measuring the water saturation and porosity of snow Colbeck, S.C, (1978, p 189-20[illegible]) MP 1124

Configuration of ice in frozen media Colbeck, S.C., (1982, p 116-123) MP 1512

Geometry and permittivity of snow at high frequencies. Colbeck, S.C, (1982, p 4495-4500) MP 1545

Variation of ice strength within and between multiyear pressure ridges in the Beaufort Sea Weeks, W.F., (1984, p 134-139) MP 1680

Influence of grain size on the ductility of ice Cole, D.M, (1984, p 150-157) MP 1686

Sea ice salinity and porosity changes dur[illegible] storage. Cox, G.F.N, et al, (1986, p 371-375) MP 2244

Undersaturation in thawed permafrost at the beginning of freezeback Ayorinde, O.A, (1990, p 317-321) MP 2582

Porous materials
Water flow through veins in ice Colbeck, S C., (1976, 5p) CR 76-06
Moving boundary problems in the hydrodynamics of porous media Nakano, Y., (1978, p 125-134) MP 1343
Evaluation of the moving boundary theory. Nakano, Y., (1978, p.142-151) MP 1147
Functional analysis of the problem of wetting fronts Nakano, Y., (1980, p 314-318) MP 1307
Water and air horizontal flow in porous media Nakano, Y., (1980, p.81-85) MP 1341
Water and air vertical flow through porous media. Nakano, Y., (1980, p.124-133) MP 1342
Structural evaluation of porous pavement in cold climate Eaton, R A., et al, (1980, 43p) SR 80-39
Traveling wave solution to the problem of simultaneous flow of water and air through homogeneous porous media Nakano, Y., (1981, p.57-64) MP 1419
Horizontal infiltration of water in porous materials Nakano, Y., (1982, p 156-166) MP 1840
Wetting fronts in porous media Nakano, Y., (1983, p 71-78) MP 1720
Calculation of advective mass transport in heterogeneous media Daly, C J., (1983, p 73-89) MP 1697
Boundary value problem of flow in porous media Nakano, Y., (1983, p 205-213) MP 1721
Role of heat and water transport in frost heaving of porous soils. Nakano, Y., et al, (1984, p 93-102) MP 1842
Computation of porous media natural convection flow and phase change O'Neill, K., et al, (1984, p 213-229) MP 1895
Diffusivity of horizontal water flow through porous media. Nakano, Y., (1985, p 26-31) MP 1881
Experimental measurement of channeling of flow in porous media. Oliphant, J.L., et al, (1985, p 394-399) MP 1967
Natural convection in sloping porous layers Powers, D J., et al, (1986, p 697-710) MP 2158
On the pressure drop through a uniform snow layer. Yen, Y.C., (1988, 10p) CR 88-14

Portable shelters
Operation of the CRREL prototype air transportable shelter. Flanders, S N., (1980, 73p) SR 80-10
Cold regions testing of an air-transportable shelter Flanders, S.N., (1981, 20p) CR 81-16
Air-transportable Arctic wooden shelters Flanders, S N., et al, (1982, p 385-397) MP 1558
Winter field testing of U S Navy fleet hospital Sletten, R S., et al, (1988, 10p) MP 2512

Ports
Bibliography on harbor and channel design in cold regions Haynes, F.D., (1976, 32p) CR 76-03
Methods of ice control for winter navigation in inland waters. Frankenstein, G E., et al, (1984, p 329-337) MP 1831
Harbor design for ice conditions Wortley, C A., (1987, p.14-15) MP 2588
Ice control in river harbors and fleeting areas Perham, R.E., (1988, 7p) SR 88-12
Rebuilding infrastructure for pleasure boating Wortley, C.A., et al, (1989, p 188-201) MP 2466

Position (location)
Sea ice drift and deformation from LANDSAT imagery Hibler, W D., III, et al, (1976, p 115-135) MP 1059

Power line icing
Utility distribution practices in northern Europe. McFadden, T., et al, (1977, p 70-95) MP 928
Mechanisms for ice bonding in wet snow accretions on power lines Colbeck, S.C., et al, (1983, p 25-30) MP 1633
Field measurements of combined icing and wind loads on wires Govoni, J.W., et al, (1983, p 205-215) MP 1637
Combined icing and wind loads on a simulated power line test span Govoni, J W., et al, (1984, p 173-182) MP 2114
Ice accretion measurement on a wire at Mt Washington McComber, P., et al, (1985, p 34-43) MP 2173
Computer interfacing of meteorological sensors in severe weather Rancourt, K., et al, (1985, p 205-211) MP 2175
Transfer of meteorological data from mountain-top sites Govoni, J.W., et al, (1986, 6p.) MP 2107
Conductor twisting resistance effects on ice build-up and ice shedding Govoni, J W., et al, (1986, 8p + figs.) MP 2108
Icing and wind loading on a simulated power line Govoni, J W., et al, (1986, p 23-27) MP 2206
Ice accretion and aerodynamic loading of transmission lines Egelhofer, K Z., et al, (1987, p 103-109) MP 2279

Power line supports
Icing and wind loading on a simulated power line Govoni, J W., et al, (1986, p 23-27) MP 2206

Precipitation gages
Meteorological measurements at Camp Ethan Allen Training Center, Vermont Bates R., (1982, p 77-112) MP 1984
Optical snow precipitation gauge Koh, G., et al, (1987, p 26-31) MP 2259
Solid precipitation measurement at Sleepers River, VT Bates, R.E., et al, (1987, p 1-7) MP 2396
Snow mass concentration and precipitation rate Koh, G., et al, (1988, p 89-92) MP 2326
Optical technique for characterizing precipitation. Koh, G., (1989, p.71-76) MP 2627
Snow concentration and precipitation rate measurements during SNOW IV Lacombe, J., (1989, p 25-29) MP 2643

PRECIPITATION (METEOROLOGY)
Climatology of the cold regions of the northern hemisphere, II Wilson, C., (1969, 158p) M I-A3b

Precipitation (meteorology)
Changes in the composition of atmospheric precipitation Cragin, J H., et al, (1977, p.617-631) MP 1079
Summer air temperature and precipitation in northern Alaska. Haugen, R.K., et al, (1980, p 403-412) MP 1439
Climate of remote areas in north-central Alaska 1975-1979 summary Haugen, R.K., (1982, 110p) CR 82-35
Building materials and acid precipitation Merry, C.J., et al, (1985, 40p) SR 85-01
Structure data bases for predicting building material distribution Merry, C J., et al, (1985, 35p) SR 85-07
Frozen precipitation and concurrently observed meteorological conditions Bilello, M A., (1985, 11p) MP 2075
Construction materials data base for Pittsburgh, PA. Merry, C.J., et al, (1986, 87p) SR 86-08
Description of the building materials data base for Portland, Maine Merry, C J., et al, (1986, 83p) SR 86-13
Description of the building materials data base for Cincinnati, Ohio Merry, C J., et al, (1986, 85p) SR 86-31
Inventorying building materials Merry, C.J., (1986, 25p) SR 86-33
Impact of wet snow on visible, infrared and millimeter wave attenuation Bates, R.E., et al, (1988, p 523-535) MP 2608
Optical measurement of precipitation Koh, G., (1989, 13p) SR 89-30

Pressure
Review of the propagation of inelastic pressure waves in snow. Albert, D.G., (1983, 26p) CR 83-13
On the pressure drop through a uniform snow layer. Yen, Y C., (1988, 10p) CR 88-14
Pressure buildup in permafrost pile supports induced by freezeback Ayorinde, O A., (1989, p 236-251) MP 2467

Pressure control
Freeze damage prevention in utility distribution lines McFadden, T., (1977, p 221-231) MP 929

Pressure ridges
Classification and variation of sea ice ridging in the Arctic basin. Hibler, W D., III, et al, (1974, p 127-146) MP 1022
Height variation along sea ice pressure ridges Hibler, W.D., III, et al, (1975, p 191-199) MP 848
Grounded ice along the Alaskan Beaufort Sea coast Kovacs, A., (1976, 21p.) CR 76-32
Some characteristics of grounded floebergs near Prudhoe Bay, Alaska Kovacs, A., et al, (1976, p 169-172) MP 1118
Grounded floebergs near Prudhoe Bay, Alaska Kovacs, A., et al, (1976, 10p.) CR 76-34
Sea ice properties and geometry Weeks, W.F., (1976, p.137-171) MP 918
Sea ice roughness and floe geometry over continental shelves. Weeks, W F., et al, (1977, p 32-41) MP 1163
Radar profile of a multi-year pressure ridge fragment. Kovacs, A., (1978, p 59-62) MP 1126
Profiles of pressure ridges and ice islands in the Beaufort Sea. Hnatiuk, J., et al, (1978, p 519-532) MP 1187
Sea ice pressure ridges in the Beaufort Sea Wright, B D., et al, (1978, p 249-271) MP 1132
Dynamics of near-shore ice. Kovacs, A., et al, (1978, p 11-22) MP 1205
Sea ice north of Alaska Kovacs, A., (1978, p.7-12) MP 1252
Sea ice ridging over the Alaskan continental shelf Tucker, W B., et al, (1979, 24p) CR 79-08
Multi year pressure ridges in the Canadian Beaufort Sea Wright, B., et al, (1979, p 107-126) MP 1229
Ice pile-up and ride-up on Arctic and subarctic beaches Kovacs, A., et al, (1979, p 127-146) MP 1230
Sea ice ridging over the Alaskan continental shelf. Tucker, W B., et al, (1979, p 4885-4897) MP 1240
Dynamics of near-shore ice Kovacs, A., et al, (1979, p.181-207) MP 1291
Shore ice pile-up and ride-up: field observations, models, theoretical analyses. Kovacs, A., et al, (1980, p 209-298) MP 1295
Sea ice piling at Fairway Rock, Bering Strait, Alaska Kovacs, A., et al, (1981, p 985-1000) MP 1460
Morphology of sea ice pressure ridge sails Tucker, W.B., et al, (1981, p 1-12) MP 1465
Sea ice rubble formations off the NL Bering Sea and Norton Sound Kovacs, A., (1981, p 1348-1363) MP 1527
Dynamics of near-shore ice Kovacs, A., et al, (1981, p 125-135) MP 1599
Multi-year pressure ridges in the Canadian Beaufort Sea Wright, B., et al, (1981, p 125-145) MP 1514
Ice pile-up and ride up on arctic and subarctic beaches Kovacs, A., et al, (1981, p 247-273) MP 1538
Sea ice rubble formations in the Bering Sea and Norton Sound, Alaska Kovacs, A., (1981, 23p) SR 81-34
Modeling pressure ridge buildup on the geophysical scale Hibler, W.D., III, (1982, p.141-155) MP 1590
Bering Strait sea ice and the Fairway Rock icefoot. Kovacs, A., et al, (1982, 40p) CR 82-31
Properties of sea ice in the coastal zones of the polar oceans. Weeks, W.F., et al, (1983, p.25-41) MP 1604
Characteristics of multi-year pressure ridges. Kovacs, A., (1983, p.173-182) MP 1698
Summary of the strength and modulus of ice samples from multi-year pressure ridges Cox, G.F.N., et al, (1984, p 126-133) MP 1679
Variation of ice strength within and between multiyear pressure ridges in the Beaufort Sea. Weeks, W.F., (1984, p.134-139) MP 1680
Preliminary examination of the effect of structure on the compressive strength of ice samples from multi-year pressure ridges Richter, J A., et al, (1984, p.140-144) MP 1685
Mechanical properties of multi-year sea ice. Phase 1: Test results Cox, G F.N., et al, (1984, 105p) CR 84-09
Method of detecting voids in rubbled ice Tucker, W.B., et al, (1984, p 183-188) MP 1772
Structure of first-year pressure ridge sails in the Prudhoe Bay region. Tucker, W B., et al, (1984, p 115-135) MP 1837
Some probabilistic aspects of ice gouging on the Alaskan Shelf of the Beaufort Sea Weeks, W.F., et al, (1984, p 213-236) MP 1838
Tensile strength of multi-year pressure ridge sea ice samples Cox, G.F.N., et al, (1985, p 186-193) MP 1856
Structure, salinity and density of multi-year sea ice pressure ridges. Richter-Menge, J A., et al, (1985, p.194-198) MP 1857
Strength and modulus of ice from pressure ridges Cox, G F N., et al, (1985, p 93-98) MP 1848
Structure and the compressive strength of ice from pressure ridges Richter, J.A., et al, (1985, p 99-102) MP 1849
Compressive strength of pressure ridge ice samples. Richter-Menge, J.A., et al, (1985, p 465-475) MP 1877
Pressure ridge strength in the Beaufort Sea Weeks, W.F., (1985, p 167-172) MP 2121
Pressure ridge and sea ice properties Greenland Sea. Tucker, W.B., et al, (1985, p 214-223) MP 1935
Mechanical properties of multi-year pressure ridge samples. Richter-Menge, J A., (1985, p 244-251) MP 1936
Tensile strength of multi-year pressure ridge sea ice samples Cox, G.F.N., et al, (1985, p.375-380) MP 1908
Structure, salinity and density of multi-year sea ice pressure ridges Richter-Menge, J A., et al, (1985, p.493-497) MP 1965
Confined compressive strength of multi-year pressure ridge sea ice samples Cox, G.F.N., et al, (1986, p 365-373) MP 2035
Mechanical properties of multi-year pressure ridge ice. Richter-Menge, J.A., (1987, p 108-119) MP 2299
Confined compressive strength of multi-year pressure ridge sea ice samples. Cox, G.F.N., et al, (1988, p 295-301) MP 2403
Mechanical properties of multi-year sea ice. Richter-Menge, J A., (1988, p 54-61) MP 2619
On modeling the energetics of the ridging process Hopkins, M.A., et al, (1989, p.175-178) MP 2483
Sea ice ridging in the Ross Sea, Antarctica, as compared with sites in the Arctic Weeks, W.F., et al, (1989, p 4984-4988) MP 2490

Probes
Construction and performance of platinum probes for measurement of redox potential Blake, B J., et al, (1978, 8p) SR 78-27
Permafrost beneath the Beaufort Sea near Prudhoe Bay, Alaska. Sellmann, P.V., et al, (1980, p 35-48) MP 1346

Professional personnel
Architects and scientists in research for design of buildings in Alaska Ledbetter, C B., (1977, 8p) CR 77-23

Profiles
Iceberg thickness profiling Kovacs, A., (1978, p.766-774) MP 1019
Profiles of pressure ridges and ice islands in the Beaufort Sea Hnatiuk, J., et al, (1978, p 519-532) MP 1187
Sea ice ridging over the Alaskan continental shelf. Tucker, W B., et al, (1979, 24p) CR 79-08
Sea ice ridging over the Alaskan continental shelf Tucker, W B., et al, (1979, p 4885-4897) MP 1240
Pooling of oil under sea ice. Kovacs, A., et al, (1981, p 912-922) MP 1459
Condensate profiles over Arctic leads Andreas, E L., et al, (1981, p 437-460) MP 1479
Electromagnetic subsurface measurements Dean, A M., Jr., (1981, 19p) SR 81-23
Snowpack profile analysis using extracted thin sections Harrison, W L., (1982, 15p) SR 82-11
Airborne measurement of sea ice thickness and subice bathymetry Kovacs, A., et al, (1988 p 111-120) MP 2345

Projectile penetration
Projectile and fragment penetration into ordinary snow. Swinzow, G K., (1977, 30p) MP 1750
Terminal ballistics in cold regions materials Aitken, G W., (1978, 6p) MP 1182
Bullet penetration in snow Cole, D M., et al, (1979, 23p) SR 79-25

Nose shape and L/D ration, and projectile penetration in frozen soil Richmond, P.W., (1980, 21p) SR 80-17
Impact fuse performance in snow (Initial evaluation of a new test technique). Aitken, G.W., et al, (1980, p 31-45) MP 1347
Small caliber projectile penetration in frozen soil. Richmond, P.W., (1980, p.801-823) MP 1490
Deceleration of projectiles in snow. Albert, D.G., et al, (1982, 29p) CR 82-20
Ice penetration tests Garcia, N.B., et al, (1985, p 223-236) MP 2014
Some developments in shaped charge technology Mellor, M., (1986, 29p) SR 86-18
Small-scale projectile penetration in saline ice. Cole, D.M., et al, (1986, p 415-438) MP 2201
Equipment for making access holes through arctic sea ice Mellor, M., (1986, 34p) SR 86-32
Deviation of guidelines for blasting floating ice. Mellor, M., (1987, p.193-206) MP 2247

Propellers

Evaluation of ice deflectors on the USCG icebreaker *Polar Star*. Vance, G.P., (1980, 37p) SR 80-04
Self-shedding of accreted ice from high-speed rotors Itagaki, K., (1983, p 1-6) MP 1719
Mechanical ice release from high-speed rotors Itagaki, K., (1983, 8p.) CR 83-26
Natural rotor icing on Mount Washington, New Hampshire. Itagaki, K., et al, (1986, 62p.) CR 86-10
Self-shedding of accreted ice from high-speed rotors. Itagaki, K., (1987, p 95-100) MP 2278
Effect of ice-floe size on propeller torque in ship-model tests. Tatinclaux, J.C., (1987, p 291-298) MP 2289
Model tests on an icebreaker at two friction factors. Tatinclaux, J.C., (1989, p.774-784) MP 2622

Protection

Ecological and environmental consequences of off-road traffic in northern regions Brown, J., (1976, p.40-53) MP 1383
Hydraulic model study of a water intake under frazil ice conditions. Tantillo, T.J., (1981, 11p.) CR 81-03

Protective coatings

Thermoinsulating media within embankments on perennially frozen soil. Berg, R.L., (1976, 161p) SR 76-03
Evaluation of MESL membrane—puncture, stiffness, temperature, solvents. Sayward, J.M., (1976, 60p) CR 76-22
Water absorption of insulation in protected membrane roofing systems Schaefer, D., (1976, 15p) CR 76-38
Suppression of ice fog from cooling ponds. McFadden, T., (1976, 78p) CR 76-43
Ice removal from the walls of navigation locks Frankenstein, G.E., et al, (1976, p 1487-1496) MP 888
Lock wall deicing. Hanamoto, B., (1977, p.7-14) MP 972
Repetitive loading tests on membrane enveloped road sections during freeze thaw. Smith, N., et al, (1977, p.171-197) MP 962
Ice releasing block-copolymer coatings. Jellinek, H.H.G., et al, (1978, p.544-551) MP 1141
Freeze thaw loading tests on membrane enveloped road sections. Smith, N., et al, (1978, p 1277-1288) MP 1158
Performance of the USCGC *Katmai Bay* icebreaker. Vance, G.P., (1980, 28p) CR 80-08
Deicing a satellite communication antenna Hanamoto, B., et al, (1980, 14p) SR 80-18
Ice adhesion tests on coatings subjected to rain erosion Minsk, L.D., (1980, 14p) SR 80-28
Potential icing of the space shuttle external tank. Ferrick, M.G., et al, (1982, 305p) CR 82-25
How effective are icephobic coatings Minsk, L.D., (1983, p.93-95) MP 1634
Application of a block copolymer solution to ice-prone structures Hanamoto, B., (1983, p 155-158) MP 1636
Aerostat icing problems. Hanamoto, B., (1983, 29p) SR 83-23
Ice observation program on the semisubmersible drilling vessel SEDCO 708. Minsk, L.D., (1984, 14p) SR 84-02
Polyethylene glycol as an ice control coating Itagaki, K., (1984, 11p) CR 84-28
Blistering of built-up roof membranes pressure measurements Korhonen, C., (1987, 22p) SR 86-29
Wall coatings for concrete and masonry buildings Korhonen, C.J., et al, (1989, 27 refs) SR 89-36

Protective vegetation

Revegetation and erosion control of the Trans-Alaska Pipeline Johnson, L.A., et al, (1977, 36p) SR 77-08

Pumps

Measuring unmetered steam use with a condensate pump cycle counter Johnson, P.R., (1977, p 434-442) MP 957
Waste heat recovery for heating purposes Phetteplace, G., (1978, p 30-33) MP 1256
Bubblers and pumps for melting ice Ashton, G.D., (1986, p 223-234) MP 2133
Water-source heat pumps Phetteplace, G., (1986, p 14-15) MP 2151

Quartz

Mechanisms of crack growth in quartz Martin, R.J., III, et al, (1975, p.4837-4844) MP 855

Quaternary deposits

Fox permafrost tunnel, a late Quaternary geologic record in central Alaska. Hamilton, T.D., et al, (1988, p 948-969) MP 2355

Radar

Extending the useful life of DYE-2 to 1986. Tobiasson, W., et al, (1980, 37p) SR 80-13

Radar echoes

Imaging radar observations of frozen Arctic lakes. Elachi, C., et al, (1976, p 169-175) MP 1284
Dynamics of near-shore ice Kovacs, A., et al, (1977, p 106-112) MP 924
Sea ice thickness profiling and under-ice oil entrapment. Kovacs, A., (1977, p.547-550) MP 940
Dielectric constant and reflection coefficient of snow surface layers in the McMurdo Ice Shelf. Kovacs, A., et al, (1977, p.137-138) MP 1011
Iceberg thickness profiling using an impulse radar. Kovacs, A., (1977, p 140-142) MP 1012
Dynamics of near-shore ice Kovacs, A., et al, (1977, p 503-510) MP 1200
Iceberg thickness and crack detection Kovacs, A., (1978, p.131-145) MP 1128
Iceberg thickness profiling Kovacs, A., (1978, p.766-774) MP 1019
Radar anisotropy of sea ice Kovacs, A., et al, (1978, p 171-201) MP 1111
Radar profile of a multi-year pressure ridge fragment. Kovacs, A., (1978, p 59-62) MP 1126
Dynamics of near-shore ice. Kovacs, A., et al, (1978, p.11-22) MP 1205
Sea ice north of Alaska. Kovacs, A., (1978, p 7-12) MP 1252
Radar anisotropy of sea ice. Kovacs, A., et al, (1978, p 6037-6046) MP 1139
Remote detection of water under ice-covered lakes on the North Slope of Alaska Kovacs, A., (1978, p.448-458) MP 1214
Remote sensing of massive ice in permafrost along pipelines in Alaska Kovacs, A., et al, (1979, p 268-279) MP 1175
Freshwater pool radar-detected near an Alaskan river delta Kovacs, A., et al, (1979, p 161-164) MP 1224
Surface-based scatterometer results of Arctic sea ice Onstott, R.G., et al, (1979, p.78-85) MP 1260
Anisotropic properties of sea ice. Kovacs, A., et al, (1979, p 5749-5759) MP 1258
Inlet current measured with Seasat-1 synthetic aperture radar Shemdin, O.H., et al, (1980, p 35-37) MP 1443
Method for measuring brash ice thickness with impulse radar. Martinson, C.R., et al, (1981, 10p) SR 81-11
Distortion of model subsurface radar pulses in complex dielectrics Arcone, S.A., (1981, p 855-864) MP 1472
Ice-covered North Slope lakes observed by radar Weeks, W.F., et al, (1981, 17p) CR 81-19
Radar detection of sea ice and current alinement under the Ross Ice Shelf. Morey, R.M., et al, (1981, p.96-97) MP 1543
Dielectric properties of thawed active layers. Arcone, S.A., et al, (1982, p 618-626) MP 1547
Effects of conductivity on high-resolution impulse radar sounding Morey, R.M., et al, (1982, 12p) CR 82-42
Radar profiling of buried reflectors and the groundwater table Sellmann, P.V., et al, (1983, 16p) CR 83-11
Detection of cavities under concrete pavement Kovacs, A., et al, (1983, 41p) CR 83-18
Radar wave speeds in polar glaciers Jezek, K.C., et al, (1983, p 199-208) MP 2057
Changes in the Ross Ice Shelf dynamic condition. Jezek, K.C., (1984, p 409-416) MP 2058
Radar investigations above the trans-Alaska pipeline near Fairbanks. Arcone, S.A., et al, (1984, 15p) CR 84-27
Discrete reflections from thin layers of snow and ice Jezek, K.C., et al, (1984, p 323-331) MP 1871
Borehole geometry on the Greenland and Antarctic ice sheets. Jezek, K.C., (1985, p.242-251) MP 1817
Impulse radar sounding of frozen ground. Kovacs, A., et al, (1985, p 28-40) MP 1952
Analysis of wide-angle reflection and refraction measurements Morey, R.M., et al, (1985, p 53-60) MP 1953
Mine detection in cold regions using short-pulse radar Arcone, S.A., (1985, 16p) SR 85-23
Model studies of surface noise interference in ground-probing radar Arcone, S.A., et al, (1985, 23p) CR 85-19
Impulse radar sounding of level first-year sea ice from an icebreaker Martinson, C.R., (1985, 9p) SR 85-21
Observations of the backscatter from snow at millimeter wavelengths Berger, R.H., et al, (1986, p 311-316) MP 2665
Comments on the characteristics of *in situ* snow at millimeter wavelengths Walsh, J., et al, (1986, p 317-320) MP 2666
Short-pulse radar investigations of freshwater ice sheets and brash ice Arcone, S.A., et al, (1986, 10p) CR 86-06
Detecting underground objects, utilities Hironaka, M.C., et al, (1987, p.36-43) MP 2281
Wet precipitation in subfreezing air below a cloud influences radar backscattering Colbeck, S.C., (1987, p.135-144) MP 2297
Field observations of mine detection in snow using UHF short-pulse radar. Arcone, S.A., et al, (1987, 24p.) SR 87-19
Radioglaciology by V.V. Bogorodskiĭ, et al. Jezek, K.C., (1988, p 55-56) MP 2338
Alaska SAR facility, an update. Weller, G., et al, (1988, p 27-31) MP 2380
Radar backscattering from artificially grown sea ice. Bredow, J., et al, (1989, p 259-264) MP 2667
Analysis of a short pulse radar survey of revetments along the Mississippi River. Arcone, S.A., (1989, 20p.) MP 2692
Estimating sea ice thickness using data from impulse radar soundings Kovacs, A., et al, (1989, 10p) CR 89-22
Algorithm for extraction of ice-thickness data from short pulse radar signals. Riek, L., et al, (1990, p.137-145) MP 2698
Physical properties of brackish ice, Bay of Bothnia. Weeks, W.F., et al, (1990, p 5-15) MP 2725
Airborne sea ice thickness sounding. Kovacs, A., et al, (1990, p 225-229) MP 2737
Sea ice thickness versus impulse radar time-of-flight data. Kovacs, A., et al, (1990, p.91-98) MP 2704
Radar backscatter measurements over saline ice. Gogineni, S., et al, (1990, p 603-615) MP 2741
Radar surveying of the bottom surface of ice covers. Arcone, S.A., et al, (1990, p 30-39) MP 2766

Radar photography

AIDJEX radar observations. Thompson, T.W., et al, (1972, p.1-16) MP 909
Radar imagery of ice covered North Slope lakes Weeks, W.F., et al, (1977, p.129-136) MP 923

Radiation

Radiation and evaporation heat loss during ice fog conditions. McFadden, T., (1975, p.18-27) MP 1051
Forward scatter meter for measuring extinction in adverse weather Koh, G., (1987, p 81-84) MP 2295
Two-stream multilayer, spectral radiative transfer model for sea ice Perovich, D.K., (1989, 17p) CR 89-15

Radiation absorption

Effects of radiation penetration on snowmelt runoff hydrographs. Colbeck, S.C., (1976, 9p) CR 76-11
Ice fog as an electro-optical obscurant. Koh, G., (1985, 11p) CR 85-08
Comments on the characteristics of *in situ* snow at millimeter wavelengths Walsh, J., et al, (1986, p.317-320) MP 2666

RADIATION BALANCE

Climatology of the cold regions of the northern hemisphere, I. Wilson, C., (1967, 141p.) M I-A3a

Radiation balance

Micrometeorological investigations near the tundra surface. Kelley, J.J., (1973, p 109-126) MP 1006
Energy exchange over antarctic sea ice in the spring. Andreas, E.L., et al, (1985, p 7199-7212) MP 1889
Lidar detection of leads in arctic sea ice. Schnell, R.C., et al, (1990, p 119-123) MP 2733

Radio communication

Low frequency surface impedance measurements Arcone, S.A., et al, (1980, p 1-9) MP 1280
Transfer of meteorological data from mountain-top sites. Govoni, J.W., et al, (1986, 6p) MP 2107

Radio echo soundings

Internal properties of the ice sheet at Cape Folger by radio echo sounding Kelliher, T.E., et al, (1978, 12p) CR 78-04
Ice sheet internal reflections Ackley, S.F., et al, (1979, p 5675-5680) MP 1319
Radio echo sounding in the Allan Hills, Antarctica. Kovacs, A., (1980, 9p) SR 80-23
Ice flow leading to the deep core hole at Dye 3, Greenland. Whillans, I.M., et al, (1984, p 185-190) MP 1824
Folding in the Greenland ice sheet Whillans, I.M., et al, (1987, p 485-493) MP 2185
Airborne electromagnetic sensing of sea ice thickness. Becker, A., et al, (1987, 77p) MP 2673
Radar backscatter in snow at millimeter wave frequencies Berger, R.H., et al, (1989, p 133-136) MP 2631
Estimating sea ice thickness using data from impulse radar soundings Kovacs, A., et al, (1989, 10p) CR 89-22

Radio waves

Electrical ground impedance measurements in Alaskan permafrost regions Hoekstra, P., (1975, 60p) MP 1049
Electrical ground impedance Arcone, S.A., et al, (1978, 92p) MP 1221
Electrical resistivity of frozen ground Arcone, S.A., (1979, p 32-37) MP 1623
Detection of Arctic water supplies with geophysical techniques Arcone, S.A., et al, (1979, 30p) CR 79-15
Low frequency surface impedance measurements Arcone, S.A., et al, (1980, p 1-9) MP 1280
VHF electrical properties of frozen ground near Point Barrow, Alaska Arcone, S.A., et al, (1981, 18p) CR 81-13
Electrical properties of frozen ground, Point Barrow, Alaska Arcone, S.A., et al, (1982, p 485-492) MP 1572
Field dielectric measurements of frozen silt using VHF pulses Arcone, S.A., et al, (1983, p.29-37) MP 1774

Radio waves *(cont.)*
Pulse transmission through frozen silt. Arcone, S A., (1984, 9p) CR 84-17
Investigations of dielectric properties of some frozen materials. Arcone, S A., et al, (1989, 18p) CR 89-04
RADIOACTIVE ISOTOPES
Radioactive fallout in northern regions Wilson, C., (1967, 35p) M I-A3d
Radiometry
Remote sensing of water quality using an airborne spectroradiometer. McKim, H.L., et al, (1980, p.1353-1362) MP 1491
Summer conditions in the Prudhoe Bay area, 1953-75 Cox, G.F.N., et al, (1981, p.799-808) MP 1457
Water quality monitoring using an airborne spectroradiometer. McKim, H.L., et al, (1984, p.353-360) MP 1718
Remote sensing data for water masses in Delaware Bay and adjacent wetlands. Ackleson, S G., et al, (1985, p 1123-1129) MP 1909
Thermal emissivity of diathermanous materials Munis, R.H., et al, (1985, p 872-878) MP 1963
Passive microwave *in situ* observations of winter Weddell Sea ice. Comiso, J.C., et al, (1989, p 10,891-10,905) MP 2655
Antarctic ice sheet brightness temperature variations. Jezek, K.C., et al, (1990, p 217-223) MP 2736
Railroads
Snow and ice control on railroads, highways and airports Minsk, L.D., et al, (1981, p 671-706) MP 1447
Rain
Roof loads resulting from rain on snow Colbeck, S.C., (1977, p 482-490) MP 982
Loading on the Hartford Civic Center roof before collapse Redfield, R., et al, (1979, 32p.) SR 79-09
Recrystallization
Compressibility characteristics of compacted snow. Abele, G., et al, (1976, 47p) CR 76-21
Growth of faceted crystals in a snow cover Colbeck, S C., (1982, 19p.) CR 82-29
Optical properties of sea ice structure Gow, A J., (1986, p 264-271) MP 2257
Annealing recrystallization in laboratory and naturally deformed ice. Gow, A.J., et al, (1987, p (C1)271-(C1)276) MP 2230
Reflection
Near-infrared reflectance of snow-covered substrates O'Brien, H.W., et al, (1981, 17p) CR 81-21
Discrete reflections from thin layers of snow and ice. Jezek, K.C., et al, (1984, p 323-331) MP 1871
Effects of water and ice on the scattering of diffuse reflectors. Jezek, K C., et al, (1936, p 259-269) MP 2664
Theoretical estimates of light reflection and transmission by spatially inhomogeneous and temporally varying ice covers. Perovich, D K., (1990, p 45-49) MP 2729
Acoustics and morphology of undeformed sea ice. Jezek, K C., et al, (1990, p 67-75) MP 2730
Reflectivity
Red and near-infrared spectral reflectance of snow. O'Brien, H.W., et al, (1975, p 345-360) MP 872
Radar imagery of ice covered North Slope lakes Weeks, W.F., et al, (1977, p.129-136) MP 923
Observations of the ultraviolet spectral reflectance of snow O'Brien, H.W., (1977, 19p) CR 77-27
Snowpack optical properties in the infrared Berger, R H., (1979, 16p) CR 79-11
Effects of water and ice layers on the scattering properties of diffuse reflectors. Jezek, K C., et al, (1987, p 5143-5147) MP 2301
Single-horn reflectometry for *in situ* dielectric measurements at microwave frequencies Arcone, S A., et al, (1988, p 89-92) MP 2333
Refraction
Atmospheric turbulence measurements at SNOW-ONE-B Andreas, E.L., (1983, p 81-87) MP 1846
Measurements of refractive index spectra over snow Andreas, E L., (1986, p 248-260) MP 2212
Estimating Cn square over snow and sea ice from meteorological quantities Andreas, E.L., (1988, p 258-267) MP 2440
Estimating Cn square over snow and sea ice from meteorological data. Andreas, E.L., (1988, p 481-495) MP 2393
Refractivity
Kolmogorov Constants for temperature, humidity, and refractive index spectra Andreas, E L., (1988, p 2399-2406) MP 2437
Refractive index structure parameter for a clear over the frozen Beaufort Sea Andreas, E L., (1982, p 667-679) MP 2575
Refrigeration
Ice engineering facility heated with a central heat pump system Aamot, H W C., et al, (1977, 4p) MP 939
Data acquisition in USACRREL's flume facility Daly, S F., et al, (1985, p 1053-1058) MP 2089
Regelation
Heat transfer in drill holes in Antarctic ice. Yen, Y C., et al, (1976, 15p) CR 76-12
Regelation and the deformation of wet snow Colbeck, S C., et al, (1978, p 639-650) MP 1172
Numerical solutions for a rigid-ice model of secondary frost heave. O'Neill, K., et al, (1982, 11p) CR 82-13
Theory of microfracture healing in ice. Colbeck, S C., (1986, p 89-95) MP 2146
Reinforced concretes
Deteriorated concrete panels on buildings at Sondrestrom, Greenland. Korhonen, C., (1984, 11p) SR 84-12
Deteriorated building panels at Sondrestrom, Greenland. Korhonen, C., (1985, p.7-10) MP 2017
Brittleness of reinforced concrete structures under arctic conditions. Kivekäs, L., et al, (1985, 28 + 14p) MP 1969
Brittleness of reinforced concrete structures under arctic conditions. Kivekäs, L., et al, (1985, p 111-121) MP 2272
Brittleness of reinforced concrete structures under arctic conditions. Kivekäs, L., et al, (1986, 20p) CR 86-02
Reinforcement (structures)
Cantilever beam tests on reinforced ice. Ohstrom, E G., et al, (1976, 12p) CR 76-07
Relaxation (mechanics)
Mass transfer along ice surfaces. Tobin, T.M., et al, (1977, p 34-37) MP 1091
Ultrasonic tests of Byrd Station ice cores. Gow, A J., et al, (1979, p 147-153) MP 1282
Remote sensing
Progress report on ERTS data on Arctic environment. Anderson, D.M., et al, (1972, 3p) MP 991
Arctic and subarctic environmental analysis through ERTS-1 imagery. Anderson, D.M., et al, (1972, p 28-30) MP 1119
Permafrost and vegetation maps from ERTS imagery. Anderson, D M., et al, (1973, 75p) MP 1003
Arctic and subarctic environmental analyses utilizing ERTS-1 imagery. Anderson, D.M., et al, (1973, 5p) MP 1611
Mesoscale deformation of sea ice from satellite imagery. Anderson, D.M., et al, (1973, 2p) MP 1120
Arctic and subarctic environmental analyses. Anderson, D M., et al, (1973, 3p) MP 1030
Arctic and subarctic environmental analyses from ERTS imagery. Anderson, D.M., et al, (1973, 6p) MP 1031
ERTS mapping of Arctic and subarctic environments Anderson, D.M., et al, (1974, 128p) MP 1047
Land use/vegetation mapping in reservoir management. Cooper, S., et al, (1974, 30p) MP 1039
Remote sensing program required for the AIDJEX model Weeks, W.F., et al, (1974, p 22-44) MP 1040
Near real time hydrologic data acquisition utilizing the LANDSAT system. McKim, H L., et al, (1975, p 200-211) MP 1055
Ice dynamics, Canadian Archipelago and adjacent Arctic basin Ramseier, R O., et al, (1975, p 853-877) MP 1585
Remote sensing plan for the AIDJEX main experiment. Weeks, W.F., et al, (1975, p.21-48) MP 862
Applications of remote sensing in New England. McKim, H.L., et al, (1975, 8p. + 14 figs and tables) MP 913
Site access for a subarctic research effort Slaughter, C.W., (1976, 13p) CR 76-09
Islands of grounded sea ice. Kovacs, A., et al, (1976, p 35-50) MP 987
Techniques for studying sea ice drift and deformation at sites far from land using LANDSAT imagery Hibler, W D., III, et al, (1976, p.595-609) MP 866
Land use and water quality relationships, eastern Wisconsin Haugen, R K., et al, (1976, 47p) CR 76-30
Remote-reading tensiometer for use in subfreezing temperatures. McKim, H.L., et al, (1976, p 31-45) MP 897
Imaging radar observations of frozen Arctic lakes Elachi, C., et al, (1976, p 169-175) MP 1284
Dynamics of near-shore ice. Weeks, W F., et al, (1976, p 267-275) MP 922
Analysis of snow water equivalent using LANDSAT data Merry, C J., et al, (1977, 16 leaves) MP 1113
Remote sensing of frazil and brash ice in the St Lawrence River Dean, A M., Jr., (1977, 19p) CR 77-08
Remote sensing of accumulated frazil and brash ice. Dean, A.M., Jr., (1977, p 693-704) MP 934
Applications of remote sensing in the Boston Urban Studies Program, Parts I and II Merry, C J., et al, (1977, 36p) CR 77-13
Integrated approach to the remote sensing of floating ice Campbell, W J., et al, (1977, p 445-487) MP 1069
Investigation of an airborne resistivity survey conducted at very low frequency Arcone, S A., (1977, 48p) CR 77-20
Detection of moisture in construction materials Morey, R M., et al, (1977, 9p) CR 77-25
Landsat data for watershed management Cooper, S., et al (1977, c150p) MP 1114
Automatic data collection equipment for oceanographic application Dean, A M., Jr., (1978, p 1111-1121) MP 1028
Inundation of vegetation in New England McKim, H L., et al, (1978, 13p) MP 1169
1977 tundra fire in the Kokolik River area of Alaska. Hall, D K., et al, (1978, p 54-58) MP 1125
Landsat data analysis for New England reservoir management. Merry, C J., et al, (1978, 61p) SR 78-06
Remote sensing for reconnaissance of proposed construction site. McKim, H.L., et al, (1978, 9 leaves) MP 1167
Water resources by satellite. McKim, H.L., (1978, p.164-169) MP 1090
Estuarine processes and intertidal habitats in Grays Harbor, Washington: a demonstration of remote sensing techniques. Gatto, L.W., (1978, 79p.) CR 78-18
Remote sensing for land treatment site selection Merry, C J., (1978, p.107-119) MP 1146
1977 tundra fire at Kokolik River, Alaska Hall, D K., et al, (1978, 11p) SR 78-10
River channel characteristics at selected ice jam sites in Vermont. Gatto, L.W., (1978, 52p) CR 78-25
Remote detection of water under ice-covered lakes on the North Slope of Alaska. Kovacs, A., (1978, p 448-458) MP 1214
Remote sensing of massive ice in permafrost along pipelines in Alaska Kovacs, A., et al, (1979, p 268-279) MP 1175
Landsat data collection platform, south central Alaska. Haugen, R K., et al, (1979, 17 refs.) SR 79-02
Overview on the seasonal sea ice zone. Weeks, W.F., et al, (1979, p 320-337) MP 1320
Dynamics of near-shore ice. Kovacs, A., et al, (1979, p 181-207) MP 1291
Survey of methods for soil moisture determination Schmugge, T.J., et al, (1979, 74p) MP 1639
Recovery of the Kokolik River tundra area, Alaska. Hall, D K., et al, (1979, 15p) MP 1638
Remote sensing of water circulation in Grays Harbor, Washington. Gatto, L.W., (1980, p 289-323) MP 1283
Mapping of the LANDSAT imagery of the Upper Susitna River. Gatto, L.W., et al, (1980, 41p) CR 80-04
Physical properties of sea ice and under-ice current orientation. Kovacs, A., et al, (1980, p.109-153) MP 1323
Remote sensing for earth dam site selection and construction materials. Merry, C.J., et al, (1980, p.158-170) MP 1316
Continuum sea ice model for a global climate model. Ling, C H., et al, (1980, p.187-196) MP 1622
Remote sensing of revegetation of burned tundra, Kokolik River, Alaska. Hall, D.K., et al, (1980, p 263-272) MP 1391
Remote sensing of water quality using an airborne spectroradiometer. McKim, H L., et al, (1980, p.1353-1362) MP 1491
Snowpack estimation in the St. John River basin. Power, J.M., et al, (1980, p 467-486) MP 1799
Inlet current measured with Seasat-1 synthetic aperture radar. Shemdin, O.H., et al, (1980, p 35-37) MP 1481
Ice distribution and winter surface circulation, Kachemak Bay, Alaska. Gatto, L.W., (1981, p 995-1001) MP 1442
Sea ice piling at Fairway Rock, Bering Strait, Alaska. Kovacs, A., et al, (1981, p 985-1000) MP 1460
Electromagnetic subsurface measurements. Dean, A M., Jr., (1981, 19p) SR 81-23
Sea ice: the potential of remote sensing Weeks, W.F., (1981, p 39-48) MP 1468
Environmental mapping of the Arctic National Wildlife Refuge, Alaska. Walker, D.A., et al, (1982, 59p + 2 maps) CR 82-37
Optical engineering for cold environments. Aitken, G.W., ed, (1983, 225p) MP 1646
Landsat-4 thematic mapper (TM) for cold environments Gervin, J C., et al, (1983, p 179-186) MP 1651
Use of Landsat data for predicting snowmelt runoff in the upper Saint John River basin. Merry, C J., et al, (1983, p 519-533) MP 1694
Extraction of topography from side-looking satellite systems a case study with SPOT simulation data Ungar, S.G., et al, (1983, p 535-550) MP 1695
Size and shape of ice floes in the Baltic Sea in spring Leppäranta, M., (1983, p 127-136) MP 2061
Offshore petroleum production in ice-covered waters Tucker, W B., (1983, p 207-215) MP 2086
Spaceborne SAR and sea ice: a status report Weeks, W F., (1983, p 113-115) MP 2225
Hydrologic forecasting using Landsat data Merry, C J., et al, (1983, p 159-168) MP 1691
Science program for an imaging radar receiving station in Alaska Weller, G., et al, (1983, 45p) MP 1884
Antarctic sea ice microwave signatures Comiso, J C., et al, (1984, p 662-672) MP 1668
Hydrologic modeling from Landsat land cover data McKim, H L., et al, (1984, 19p) SR 84-01
Using Landsat data for snow cover/vegetation mapping. Merry, C.J., et al, (1984, p II(140)-II(144)) MP 1975
Potential use of SPOT HRV imagery for analysis of coastal sediment plumes Band, L.E., et al, (1984, p 199-204) MP 1744
Wildlife habitat mapping in Lac qui Parle, Minnesota Merry, C J., et al, (1984, p 205-208) MP 2085
Spatial analysis in recreation resource management Edwardo, H A., et al, (1984, p 209-219) MP 2084
Geographic features and floods of the Ohio River Edwardo, H A., et al, (1984, p 265-281) MP 2083
Radar investigations above the trans-Alaska pipeline near Fairbanks Arcone, S A., et al, (1984, 15p) CR 84-27
Mesoscale air-ice-ocean interaction experiments Johannessen, O M., ed, (1984, 176p) SR 84-29

Discrete reflections from thin layers of snow and ice Jezek, K C., et al. (1984, p 323-331) MP 1871
Use of remote sensing for the U.S. Army Corps of Engineers dredging program. McKim, H L., et al. (1985, p.1141-1150) MP 1890
Measuring multi-year sea ice thickness using impulse radar. Kovacs, A., et al. (1985, p.55-67) MP 1916
Air-ice ocean interaction in Arctic marginal ice zones: MIZEX-West. Wadhams, P., ed. (1985, 119p.) SR 85-06
Electromagnetic properties of multi-year sea ice. Morey, R.M., et al. (1985, p.151-167) MP 1902
Ice electrical properties. Gow, A.J., (1985, p.76-82) MP 1910
Dielectric measurements of snow cover. Burns, B.A., et al. (1985, p 829-834) MP 1913
Ice conditions on the Ohio and Illinois rivers, 1972-1985. Gatto, L.W., (1985, p 856-861) MP 1914
Evaluation of SPOT HRV simulation data for Corps of Engineers applications McKim, H L., et al. (1985, p 61-71) MP 2184
Remote sensing data for water masses in Delaware Bay and adjacent wetlands. Ackleson, S G., et al. (1985, p 1123-1129) MP 1909
Potential of remote sensing in the Corps of Engineers dredging program. McKim, H.L., et al. (1985, 42p.) SR 85-20
Terrain analysis from space shuttle photographs of Tibet. Kreig, R.A., et al. (1986, p 400-409) MP 2097
Remote sensing of the Arctic seas. Weeks, W.F., et al. (1986, p.59-64) MP 2117
Weddell-Scotia Sea MIZ, October 1984. Crasey, F.D., et al. (1986, p.3920-3924) MP 1536
Meteorological variation of atmospheric optical properties in an antarctic storm Egan, W G., et al. (1986, p.1155-1165) MP 2099
Winter marginal ice zone experiment, Fram Strait/Greenland Sea, 1987/89. Davidson, K., ed. (1986, 53p.) SR 86-09
Electromagnetic properties of sea ice Kovacs, A., et al. (1986, p 57-133) MP 2197
Remote sensing of ice and snow (review) Jezek, K C., (1987, p.51) MP 2429
River ice mapping w th Landsat and video imagery. Gatto, L.W., et al. (1987, p 352-363) MP 2273
Electromagnetic property trends in sea ice, Part 1. Kovacs, A., et al. (1987, 45p.) CR 87-06
Scientific challenges at the poles. Welch, J P., et al. (1987, p 23-26) MP 2228
Glaciological investigations using the synthetic aperture radar imaging system Bindschadler, R.A., et al. (1987, p 11-19) MP 2342
Use of Landsat for snow cover mapping, Saint John River basin, Maine. Merry, C J., et al. (1987, 68p.) CR 87-08
Alaska synthetic aperture radar (SAR) facility project Carsey, F., et al. (1987, p 593-596) MP 2408
Camp Century survey 1986 Gundestrup, N.S., et al. (1987, p 281-288) MP 2331
Remote sensing and water resources. McKim, H.L., et al. (1987, p 186-190) MP 2535
Use of SPOT HRV data in a Corps dredging operation in Lake Erie. Merry, C.J., et al. (1987, p 49-58) MP 2548
Geographic information system for river basin Merry, C J., et al. (1987, p 265-269) MP 2549
CRREL's experiences of remote sensing technology transfer to the Corps user. Merry, C.J., (1987, p 271-273) MP 2550
Sea ice thickness and sub-ice bathymetry. Kovacs, A., et al. (1987, 40p.) CR 87-23
Single-horn reflectometry for *in situ* dielectric measurements at microwave frequencies. Arcone, S A., et al. (1988, p 89-92) MP 2333
Ice conditions along the Ohio River, 1972-1985. Gatto, L.W., (1988, 162p.) SR 88-01
Alaska SAR facility Weeks, W F., et al. (1988, p 103-110) MP 2344
Ice conditions along the Allegheny and Monongahela Rivers Gatto, L.W., (1988, 106p.) SR 88-06
Filtering and classification routines in land use imagery. Merry, C.J., et al. (1988, p 57-58) MP 2534
Airborne sea ice thickness sounding Kovacs, A., et al. (1989, p.1042-1052) MP 2623
Oceanic heat flux in the Fram Strait measured by a drifting buoy. Perovich, D K., et al. (1989, p 995-998) MP 2531
Data reduction of GOES information from DCP networks DeCoff, G.W., et al. (1989, 15p.) SR 89-29
Satellite remote sensing in Arctic for 1990's Weeks, W F., et al. (1989, p 510-530) MP 2699
Satellite data collection platforms for temperature measurements Daly, S F., et al. (1989, 14p.) SR 89-37
Estimating sea ice thickness using data from impulse radar soundings Kovacs, A., et al. (1989, 10p.) CR 89-22
Measurement of sea ice thickness using electromagnetic induction Holladay, J S., et al. (1990, p 309-315) MP 2590
Physical properties of brackish ice, Bay of Bothnia Weeks, W.F., et al. (1990, p 5-15) MP 2725
Lidar detection of leads in arctic sea ice Schnell, R C., et al. (1990, p.119-123) MP 2733
Recent measurements of sea ice topography in the eastern Arctic. Krabill, W.B., et al. (1990, p 132-136) MP 2735
Antarctic ice sheet brightness temperature variations Jezek, K C., et al. (1990, p.217-223) MP 2736
Airborne sea ice thickness sounding. Kovacs, A., et al. (1990, p 225-229) MP 2737
Multiband imaging systems. McKim, H.L., et al. (1990, 10p.) SR 90-15

Rescue operations

Detection of sound by persons buried under snow avalanche Johnson, J.B., (1984, p.42-47) MP 1920

Research projects

Abiotic overview of the Tundra Biome Program, 1971. Weller, G., et al. (1971, p 173-181) MP 906
U.S Tundra Biome central program 1971 progress report. Brown, J., (1971, p.244-270) MP 909
Summary of the 1971 US Tundra Biome Program Brown, J., (1972, p.306-313) MP 995
Pedologic investigations in northern Alaska Tedrow, J.C F., (1973, p 93-108) MP 1005
Micrometeorological investigations near the tundra surface. Kelley, J J., (1973, p.109-126) MP 1006
Arctic limnology a review Hobbie, J E., (1973, p 127-168) MP 1007
Vegetative research in arctic Alaska. Johnson, P.L., et al. (1973, p 169-198) MP 1008
Remote sensing program required for the AIDJEX model. Weeks, W.F., et al. (1974, p 22-44) MP 1040
Workshop on permafrost-related research and TAPS. (1975, 37p.) MP 1122
Research activities of U.S Army Cold Regions Research and Engineering Laboratory. Buzzell, T.D., (1975, p 9-12) MP 1244
Snow and ice Colbeck, S C., et al. (1975, p 435-441, 475-487) MP 844
High-latitude basins as settings for circumpolar environmental studies. Slaughter, C.W., et al. (1975, p IV/57-IV/68) MP 917
Catalog of Snow Research Projects. (1975, 103p.) MP 1129
Delineation and engineering characteristics of permafrost beneath the Beaufort Sea Sellmann, P V., et al. (1976, p 391-408) MP 1377
Site access for a subarctic research effort. Slaughter, C.W., (1976, 13p.) CR 76-09
Influence of grazing on Arctic tundra ecosystems. Batzli, G O., et al. (1976, p.153-160) MP 970
Dynamics of near-shore ice Weeks, W F., et al. (1976, p 267-275) MP 922
Update on snow load research at CRREL. Tobiasson, W., et al. (1977, p.9-13) MP 1142
Scientists visit Kolyma Water Balance Station in the USSR. Slaughter, C.W., et al. (1977, 66p.) SR 77-15
Ross Ice Shelf Project environmental impact statement July, 1974. Parker, B C., et al. (1978, p 7-36) MP 1075
Subarctic watershed research in the Soviet Union Slaughter, C.W., et al. (1978, p 305-313) MP 1273
Ecological baseline on the Alaskan haul road Brown, J., ed. (1978, 131p.) SR 78-13
Workshop on Ecological Effects of Hydrocarbon Spills in Alaska. Atlas, R M., et al. (1978, p 155-157) MP 1183
Overview on the seasonal sea ice zone Weeks, W F., et al. (1979, p 320-337) MP 1320
Focus on U S snow research Colbeck, S C., (1979, p.41-52) MP 1261
Snow and the organization of snow research in the United States Colbeck, S C., (1979, p 55-58) MP 1262
Air-ice-ocean interaction in Arctic marginal ice zones Wadhams, P., ed. (1981, 20p.) SR 81-19
National Chinese Conference on Permafrost, 2nd, 1981 Brown, J., et al. (1982, 58p.) SR 82-03
Science program for an imaging radar receiving station in Alaska Weller, G., et al. (1983, 45p.) MP 1884
Perspectives in ice technology Ashton, G D., (1986, 4p.) MP 2288
Scientific challenges at the poles Welch, J P., et al. (1987, p 23-26) MP 2228
Arctic research of the United States, Vol 1 (1987, 121p.) MP 2306
Arctic research of the United States, Vol 1. (1987, 121p.) MP 2306
Arctic research of the United States, Vol 2 (1988, 76p.) MP 2379
Engineering geology studies on the National Petroleum Reserve in Alaska Kachadoorian, R., et al. (1988, p 899-922) MP 2519
Arctic research in the United States, Vol 3 (1989, 72p.) MP 2653
SNOW IV field experiment data report overview Redfield, R K., (1989, p 1-3) MP 2639
Cold regions heat transfer Cheng, K C., et al. (1989, p 1-25) MP 2637
International arctic research programs Chung, J S., comp. (1989, 74p.) SR 89-21
U.S Federal arctic research Devine, J S., et al. (1989, p 65-74) MP 2671
Arctic research of the United States, Vol 3 (1989, 71p.) MP 2530
United States arctic research plan biennial revision 1990-1991. Brown, J., ed. (1989, 72p.) MP 2544
Cold regions engineering research—strategic plan. Carlson, R.F., et al. (1989, p 172-190) MP 2571
US global ice core research program West Antarctica and beyond Grootes, P.M., et al. (1989, 32p.) MP 2709
Arctic research of the United States, Vol.4. (1990, 120p.) MP 2765

Reservoirs

Skylab imagery Application to reservoir management in New England McKim, H L., et al. (1976, 51p.) SR 76-07
Environmental analyses in the Kootenai River region, Montana. McKim, H.L., et al. (1976, 53p.) SR 76-13
Slumping failure of an Alaskan earth dam. Collins, C.M., et al. (1977, 21p.) SR 77-21
Landsat data analysis for New England reservoir management. Merry, C.J., et al. (1978, 61p.) SR 78-06
Limnology and primary productivity, Lake Koocanusa, Montana. Woods, P.F., et al. (1982, 106p.) SR 82-15
Water quality measurements at six reservoirs Parker, L.V., et al. (1982, 55p.) SR 82-30
Reservoir bank erosion caused and influenced by ice cover Gatto, L.W., (1982, 26p.) SR 82-31
Bank recession of Corps of Engineers reservoirs. Gatto, L.W., et al. (1983, 103p.) SR 83-30
Spatial analysis in recreation resource management. Edwardo, H A., et al. (1984, p 209-219) MP 2084
Reservoir bank erosion caused by ice. Gatto, L.W., (1984, p 203-214) MP 1787
Erosion of northern reservoir shores Lawson, D.E., (1985, 198p.) M 85-01
Ice problems associated with rivers and reservoirs. Benson, C., et al. (1986, p.70-98) MP 2155
Techniques for measuring reservoir bank erosion. Gatto, L.W., (1988, 27p.) SR 88-03
Ice cover formation downstream of a reservoir Ashton, G.D., (1988, p 189-198) MP 2498

Residential buildings

Life-cycle cost effectiveness of modular megastructures in cold regions. Wang, L.R.-L., et al. (1976, p.760-776) MP 892
Tracer gas measurement of air exchange in buildings. Flanders, S N., et al. (1989, p 433-444) MP 2557

Resins

Resins and non-portland cements for construction in the cold. Johnson, R., (1980, 19p.) SR 80-35
Polyethylene glycol as an ice control coating Itagaki, K., (1984, 11p.) CR 84-28

Revegetation

Revegetation in arctic and subarctic North America—a literature review. Johnson, L.A., et al. (1976, 32p.) CR 76-15
Evaluation of an air cushion vehicle in Northern Alaska. Abele, G., et al. (1976, 7p.) MP 894
Ecological and environmental consequences of off-road traffic in northern regions. Brown, J., (1976, p 40-53) MP 1383
Bibliography of soil conservation activities in USSR permafrost areas Andrews, M., (1977, 116p.) SR 77-07
Biological restoration strategies in relation to nutrients at a subarctic site in Fairbanks, Alaska Johnson, L.A., (1978, p 460-466) MP 1100
Bibliography of permafrost soils and vegetation in the USSR Andrews, M., (1978, 175p.) SR 78-19
Tundra recovery since 1949 near Fish Creek, Alaska. Lawson, D E., et al. (1978, 81p.) CR 78-28
Recovery of the Kokolik River tundra area, Alaska Hall, D K., et al. (1979, 15p.) MP 1638
Revegetation at two construction sites in New Hampshire and Alaska Palazzo, A J., et al. (1980, 21p.) CR 80-03
Remote sensing of revegetation of burned tundra, Kokolik River, Alaska Hall, D K., et al. (1980, p 263-272) MP 1391
Environmental engineering, Yukon River-Prudhoe Bay Haul Road Brown, J., ed. (1980, 187p.) CR 80-19
Revegetation along roads and pipelines in Alaska Johnson, L.A., (1980, p 129-150) MP 1353
Stabilizing fire breaks in tundra vegetation Patterson, W.A., III, et al. (1981, p 188-189) MP 1804
Revegetation along the trans-Alaska pipeline, 1975-1978 Johnson, A J., (1981, 115p.) CR 81-12
Chena River Lakes Project revegetation study -three-year summary Johnson, L.A., et al. (1981, 59p.) CR 81-18
Sewage sludge aids revegetation Palazzo, A J., et al. (1982, p 198-301) MP 1735
Recovery and active layer changes following a tundra fire in northwestern Alaska Johnson, L., et al. (1983, p 543-547) MP 1660
Restoration of acidic dredge soils with sewage sludge and lime Palazzo, A J., (1983, 11p.) CR 83-28
Revegetation along pipeline rights-of-way in Alaska Johnson, L., (1984, p 254-264) MP 2113
Vegetation recovery in the Cape Thompson region, Alaska Everett, K R., et al. (1985, 75p.) CR 85-11
Disturbance and recovery of arctic Alaskan tundra terrain Walker, D A., et al. (1987, 63p.) CR 87-11
Vegetation recovery after tundra fires in northwestern Alaska Racine, C., et al. (1987, p 461-469) MP 2374

Revegetation *(cont.)*
Management of northern gravel sites for successful reclamation: a review. Johnson, L.A., (1987, p.530-536) MP 2375

Rheology
Crystal fabrics of West Antarctic ice sheet. Gow, A.J., et al, (1976, p.1665-1677) MP 1382
Thermal and creep properties for frozen ground construction. Sanger, F.J., et al, (1978, p.95-117) MP 1624
Rheology of ice. Fish, A.M., (1978, 196p.) MP 1988
Thermal and creep properties for frozen ground construction. Sanger, F.J., et al, (1979, p 311-337) MP 1227
Acoustic emission response of snow. St. Lawrence, W.F., (1980, p.209-216) MP 1366
Modeling mesoscale ice dynamics. Hibler, W.D., III, et al, (1981, p.1317-1329) MP 1526
Acoustic emissions during creep of frozen soils. Fish, A.M., et al, (1982, p.194-206) MP 1495
Creep behavior of frozen silt under constant uniaxial stress. Zhu, Y., et al, (1984, p 33-48) MP 1807
Analysis of linear sea ice models with an ice margin. Leppäranta, M., (1984, p 31-36) MP 1782
Modeling the resilient behavior of frozen soils using unfrozen water content. Cole, D M., (1984, p.823-834) MP 1715
Creep model for constant stress and constant strain rate. Fish, A.M., (1984, p.1009-1012) MP 1766
Ice flow leading to the deep core hole at Dye 3, Greenland. Whillans, I.M., et al, (1984, p.185-190) MP 1824
Thermodynamic model of creep at constant stress and constant strain rate. Fish, A.M., (1984, p.143-161) MP 1771
Ice dynamics. Hibler, W D., III, (1984, 52p.) M 84-03
Preliminary investigation of thermal ice pressures. Cox, G.F.N., (1984, p.221-229) MP 1788
On the rheology of a broken ice field due to floe collision. Shen, H., et al, (1984, p.29-34) MP 1812
Rheology of glacier ice. Jezek, K.C., et al, (1985, p.1335-1337) MP 1844
Foundations in permafrost and seasonal frost; Proceedings. (1985, 62p.) MP 1730
Evaluation of the rheological properties of columnar ridge sea ice. Brown, R.L., et al, (1986, p 55-66) MP 2177
Ice dynamics. Hibler, W D., III, (1986, p.577-640) MP 2211
Some peculiarities of creep behavior of frozen silt. Fish, A.M., (1989, p.721-724) MP 2601
On modeling the energetics of the ridging process. Hopkins, M.A., et al, (1989, p.175-178) MP 2483
Cavitating fluid sea ice model. Flato, G M., et al, (1990, p.239-242) MP 2738

River basins
Permafrost distribution on the continental shelf of the Beaufort Sea. Hopkins, D.M., et al, (1979, p.135-141) MP 1288
Snowpack estimation in the St. John River basin. Power, J M., et al, (1980, p.467-486) MP 1799
Hydrologic modeling from Landsat land cover data. McKim, H L., et al, (1984, 19p.) SR 84-01
Geographic information system for river basin. Merry, C.J., et al, (1987, p.265-269) MP 2549
Snow hydrology in the upper Yamuna basin, India. Malhotra, R.V., et al, (1988, p 84-93) MP 2633

River crossings
Operation of the U.S. Combat Support Boat (USCSBMK 1) on an ice-covered waterway. Stubstad, J., et al, (1984, 28p.) SR 84-05
Tactical bridging during winter: 1986 Korean bridging exercise. Coutermarsh, B A., (1987, 23p.) SR 87-13
Deployment of floating bridges in ice-covered rivers. Mellor, M., et al, (1988, 38p.) SR 88-20
Winter bridging exercise on thick ice, Fort McCoy, Wisconsin, 1988 Coutermarsh, B A., (1990, 24p.) SR 90-10

River flow
ERTS mapping of Arctic and subarctic environments. Anderson, D.M., et al, (1974, 128p.) MP 1047
Turbulent heat transfer from a river to its ice cover. Haynes, F.D., et al, (1979, 5p.) CR 79-13
Harnessing frazil ice. Perham, R E., (1981, p 227-237) MP 1398
River ice suppression by side channel discharge of warm water. Ashton, G D., (1982, p 65-80) MP 1528
On zero-inertia and kinematic waves. Katopodes, N.D., (1982, p.1381-1387) MP 2053
Using the DWOPER routing model to simulate river flows with ice. Daly, S.F., et al, (1983, 19p.) SR 83-01
Unsteady river flow beneath an ice cover. Ferrick, M G., et al, (1983, p 254-260) MP 2079
Modeling of ice discharge in river models. Calkins, D J., (1983, p 285-290) MP 2081
Ice jams in shallow rivers with floodplain flow. Calkins, D J., (1983, p.538-548) MP 1644
Tanana River monitoring and research studies near Fairbanks, Alaska. Neill, C R., et al, (1984, 98p. + 5 appends.) SR 84-37
Chena Flood Control Project and the Tanana River near Fairbanks, Alaska. Buska, J S., et al, (1984, 11p. + figs.) MP 1745
Modeling rapidly varied flow in tailwaters. Ferrick, M.G., et al, (1984, p.271-289) MP 1711
Computer simulation of ice cover formation in the Upper St. Lawrence River. Shen, H.T., et al, (1984, p.227-245) MP 1814
Numerical simulation of freeze-up on the Ottauquechee River. Calkins, D.J., (1984, p.247-277) MP 1815
Analysis of rapidly varying flow in ice-covered rivers. Ferrick, M G., (1984, p.359-368) MP 1833
Geographic features and floods of the Ohio River. Edwards, H A., et al, (1984, p 265-281) MP 2003
Effect of ice cover on hydropower production. Yapa, P.D., et al, (1984, p.231-234) MP 1876
Analysis of river wave types. Ferrick, M.G., (1985, p.209-220) MP 1875
Analysis of river wave types. Ferrick, M.G., (1985, 17p.) CR 85-12
Hydrologic aspects of ice jams. Calkins, D.J., (1986, p.603-609) MP 2116
Sub-ice channels and frazil bars, Tanana River, Alaska. Lawson, D.E., et al, (1986, p.465-474) MP 2129
Morphology, hydraulics and sediment transport of an ice-covered river. Lawson, D.E., et al, (1986, 37p.) CR 86-11
River wave response to the friction-inertia balance. Ferrick, M.G., et al, (1987, p.764-769) MP 2237
Study of dynamic ice breakup on the Connecticut River near Windsor, Vermont. Ferrick, M.G., et al, (1987, p.163-177) MP 2400
Preliminary results of an experiment using a 16 ft x 50 ft long frazil collector line array. Perham, R.E., (1988, p.139-156) MP 2474
Transverse velocities and ice jamming potential in a river bend. Zufelt, J.E., (1988, p.193-207) MP 2476
Laboratory study of transverse velocities and ice jamming in a river bend. Zufelt, J.E., et al, (1988, p.189-197) MP 2501
Perturbation solution of the flood problem. Discussion and author's reply. Ferrick, M.G., (1988, p.346-349) MP 2536
Detection of coarse sediment movement using radio transmitters. Chacho, E.F., Jr., et al, (1989, p.367-373(B)) MP 2752
Simulation of oil slicks in rivers and lakes. Shen, H.T., et al, (1990, 29p.) CR 90-01
Ice cover effect on river flow. Ashton, G.D., (1990, 24p.) SR 90-08

River ice
Temperature and flow conditions during the formation of river ice. Ashton, G D., et al, (1970, 12p.) MP 1723

RIVER ICE
Surveys of river and lake ice. Michel, B., (1971, 131p.) M III-B1a

River ice
Formation of ice ripples on the underside of river ice covers. Ashton, G.D., (1971, 157p.) MP 1243
Growth and mechanical properties of river and lake ice. Ramseier, R.O., (1972, 243p.) MP 1883
Seasonal regime and hydrological significance of stream icings in central Alaska. Kane, D.L., et al, (1973, p.528-540) MP 1026
River ice problems. Burgi, P H., et al, (1974, p.1-15) MP 1002
ERTS mapping of Arctic and subarctic environments. Anderson, D M., et al, (1974, 128p.) MP 1047
Third International Symposium on Ice Problems, 1975 Frankenstein, G E., ed, (1975, 627p.) MP 845
Mechanics and hydraulics of river ice jams. Tatinclaux, J C., et al, (1976, 97p.) MP 1060
Potential river ice jams at Windsor, Vermont. Calkins, D.J., et al, (1976, 31p.) CR 76-31
Force estimate and field measurements of the St. Marys River ice booms. Perham, R E., (1977, 26p.) CR 77-04
Remote sensing of frazil and brash ice in the St. Lawrence River. Dean, A.M., Jr., (1977, 19p.) CR 77-08
Some economic benefits of ice booms. Perham, R.E., (1977, p 570-591) MP 959
Yukon River breakup 1976. Johnson, P., et al, (1977, p.592-596) MP 960
Ice breakup on the Chena River 1975 and 1976. McFadden, T., et al, (1977, 44p.) CR 77-14
Visual observations of floating ice from Skylab. Campbell, W J., et al, (1977, p 353-379) MP 1263
Physical measurement of ice jams 1976-77 field season. Wuebben, J L., et al, (1978, 19p.) SR 78-03
Bearing capacity of river ice for vehicles. Nevel, D E., (1978, 22p.) CR 78-03
Arching of model ice floes at bridge piers. Calkins, D J., (1978, p 495-507) MP 1134
Physical measurements of river ice jams. Calkins, D J., (1978, p 693-695) MP 1159
River ice. Ashton, G D., (1978, p 369-392) MP 1216
Characteristics of ice on two Vermont rivers. Deck, D S., (1978, 30p.) SR 78-30
River ice. Ashton, G D., (1979, p 38-45) MP 1178
Accelerated ice growth in rivers. Calkins, D J., (1979, 5p.) CR 79-14
Break-up dates for the Yukon River, Pt 2: Alaskanuk to Tanana, 1883-1978. Stephens, C A., et al, (1979, c50 leaves) MP 1518
Modeling of ice in rivers. Ashton, G.D., (1979, p.14/1-14/26) MP 1335
Break-up of the Yukon River at the Haul Road Bridge: 1979. Stephens, C.A., et al, (1979, 22p. + Figs.) MP 1315
Suppression of river ice by thermal effluents. Ashton, G.D., (1979, 23p.) CR 79-30
Maximum thickness and subsequent decay of lake, river and fast sea ice in Canada and Alaska. Bilello, M.A., (1980, 160p.) CR 80-06
Sediment displacement in the Ottauquechee River—1975-1978. Martinson, C.R., (1980, 14p.) SR 80-20
Freshwater ice growth, motion, and decay. Ashton, G D., (1980, p.261-304) MP 1299
Single and double reaction beam load cells for measuring ice forces. Johnson, P.R., et al, (1980, 17p.) CR 80-25
Clearing ice-clogged shipping channels. Vance, G P., (1980, 13p.) CR 80-28
Harnessing frazil ice. Perham, R.E., (1981, p.227-237) MP 1398
Ice jams and meteorological data for three winters, Ottauquechee River, Vt. Bates, R.E., et al, (1981, 27p.) CR 81-01
Ice control arrangement for winter navigation. Perham, R.E., (1981, p.1096-1103) MP 1449
Breakup of solid ice covers due to rapid water level variations. Billfalk, L., (1982, 17p.) CR 82-03
River ice suppression by side channel discharge of warm water. Ashton, G.D., (1982, p.65-80) MP 1528
Port Huron ice control model studies. Calkins, D.J., et al, (1982, p.361-373) MP 1530
Field investigations of a hanging ice dam. Beltaos, S., et al, (1982, p.475-488) MP 1533
Theory of thermal control and prevention of ice in rivers and lakes. Ashton, G.D., (1982, p.131-185) MP 1554
Ottauquechee River—analysis of freeze-up processes. Calkins, D.J., et al, (1982, p.2-37) MP 1738
Force measurements and analysis of river ice break up. Deck, D.S., (1982, p.303-336) MP 1739
Using the DWOPER routing model to simulate river flows with ice. Daly, S.F., et al, (1983, 19p.) SR 83-01
Measurement of ice forces on structures. Sodhi, D.S., et al, (1983, p.139-155) MP 1641
Unsteady river flow beneath an ice cover. Ferrick, M.G., et al, (1983, p.254-260) MP 2079
Modeling of ice discharge in river models. Calkins, D.J., (1983, p.285-290) MP 2081
Ice jams in shallow rivers with floodplain flow. Calkins, D.J., (1983, p.538-548) MP 1644
Mechanics of ice jam formation in rivers. Ackermann, N.L., et al, (1983, 14p.) CR 83-31
Navigation ice booms on the St. Marys River. Perham, R.E., (1984, 12p.) CR 84-04
Ice-related flood frequency analysis: application of analytical estimates. Gerard, R., et al, (1984, p 85-101) MP 1712
St. Lawrence River freeze-up forecast. Shen, H.T., et al, (1984, p 177-190) MP 1713
Performance of the Allegheny River ice control structure, 1983. Deck, D.S., et al, (1984, 15p.) SR 84-13
Ice cover melting in a shallow river. Calkins, D.J., (1984, p.255-265) MP 1763
Ice jams in shallow rivers with floodplain flow: Discussion. Beltaos, S., (1984, p 370-371) MP 1798
Controlling river ice to alleviate ice jam flooding. Deck, D.S., (1984, p.524-528) MP 1795
Salmon River ice jams. Cunningham, L.L., et al, (1984, p.529-533) MP 1796
Forecasting water temperature decline and freeze-up in rivers. Shen, H T., et al, (1984, 17p.) CR 84-19
Ice jam research needs. Gerard, R., (1984, p 181-193) MP 1813
Computer simulation of ice cover formation in the Upper St Lawrence River. Shen, H T., et al, (1984, p.227-245) MP 1814
Numerical simulation of freeze-up on the Ottauquechee River. Calkins, D J., (1984, p 247-277) MP 1815
Rise pattern and velocity of frazil ice. Wuebben, J L., (1984, p 297-316) MP 1816
Field investigation of St Lawrence River hanging ice dams. Shen, H T., et al, (1984, p 241-249) MP 1830
Methods of ice control for winter navigation in inland waters. Frankenstein, G E., et al, (1984, p.329-337) MP 1831
Analysis of rapidly varying flow in ice-covered rivers. Ferrick, M G., (1984, p 359-368) MP 1833
Controlling river ice to alleviate ice jam flooding. Deck, D S., (1984, p 69-76) MP 1885
Ice regime reconnaissance, Yukon River, Yukon. Gerard, R., et al, (1984, p 1059-1073) MP 2406
St Lawrence River hanging ice dams, winter 1983-1984. Shen, H T., et al, (1984, 85p.) MP 2178
Effect of ice cover on hydropower production. Yapa, P D., et al, (1984, p 231-234) MP 1876
Ice block stability. Daly, S F., (1984, p 544-548) MP 1972
Mathematical modeling of river ice processes. Shen, H T., (1984, p 554-558) MP 1973
Unified degree-day method for river ice cover thickness simulation. Shen, H T., et al, (1985, p 54-62) MP 2065
Analysis of river wave types. Ferrick, M G., (1985, 17p.) CR 85-12

Ice conditions on the Ohio and Illinois rivers. 1972-1985. Gatto, L.W., (1985, p 856-861) MP 1914

Ice jam flood prevention measures, Lamoille River, Hardwick VT. Calkins, D.J., (1985, p.149-168) MP 1940

Hudson River ice management. Ferrick, M.G., et al, (1985, p.96-110) MP 2174

Construction and calibration of the Ottauquechee River model. Gooch, G., (1985, 10p) SR 85-13

Cazenovia Creek Model data acquisition system. Bennett, B.M., et al, (1985, p.1424-1429) MP 2090

Determining the effectiveness of a navigable ice boom. Perham, R.E., (1985, 28p) SR 85-17

Techniques for measurement of snow and ice on freshwater. Adams, W.P., et al, (1986, p.174-222) MP 2000

Upper Delaware River ice control—a case study. Zufelt, J.E., et al, (1986, p.760-770) MP 2005

Hydrologic aspects of ice jams. Calkins, D.J., (1986, p.603-609) MP 2116

Ice problems associated with rivers and reservoirs. Benson, C., et al, (1986, p.70-98) MP 2155

St. Lawrence River freeze-up forecast. Foltyn, E.P., et al, (1986, p.467-481) MP 2120

Design and model testing of a river ice prow. Tatinclaux, J.C., (1986, p.137-150) MP 2132

River and lake ice engineering. Ashton, G.D., ed, (1986, 485p) MP 2144

Controlled river ice cover breakup; part 1. Hudson River field experiments. Ferrick, M.G., et al, (1986, p.281-291) MP 2391

Controlled river ice cover breakup; part 2. Theory and numerical model studies. Ferrick, M.G., et al, (1986, p.293-305) MP 2392

Ice atlas, 1984-1985 Ohio River, Allegheny River, Monongahela River. Gatto, L.W., et al, (1986, 185p) SR 86-23

River ice and salmonids. Walsh, M., et al, (1986, p.D-4.1-D-4.26) MP 2477

River ice mapping with Landsat and video imagery. Gatto, L.W., et al, (1987, p 352-363) MP 2273

Corps of engineers seek ice solutions. Frankenstein, G.E., (1987, p.5-7) MP 2219

Analysis of 112 years of ice conditions observed on the Ohio River at Cincinnati. Daly, S.F., et al, (1987, p 70-79) MP 2260

Airborne river-ice thickness profiles. Arcone, S.A., et al, (1987, p.330-340) MP 2312

Ice jams and the winter climate near White River, SD. Bilello, M.A., (1987, p 154-162) MP 2399

Study of dynamic ice breakup on the Connecticut River near Windsor, Vermont. Ferrick, M.G., et al, (1987, p.163-177) MP 2400

Ice atlas 1985-86 of five rivers of the USA. Gatto, L.W., et al, (1987, 367p) SR 87-20

Ice conditions along the Ohio River, 1972-1985. Gatto, L.W., (1988, 162p) SR 88-01

Dynamic ice breakup on the Connecticut River, VT. Ferrick, M.G., et al, (1988, 16p) CR 88-01

Ice conditions along the Allegheny and Monongahela Rivers. Gatto, L.W., (1988, 106p) SR 88-06

Inventory of ice problem sites and remedial ice control structures. Perham, R.E., (1988, 9p) SR 88-07

Development of a river ice prow. Tatinclaux, J.C., et al, (1988, 26p) CR 88-09

Ice cover distribution in Vermont and New Hampshire Atlantic salmon rearing streams. Calkins, D.J., et al, (1988, p.85-96) MP 2473

Preliminary results of an experiment using a 16 ft x 50 ft long frazil collector line array. Perham, R.E., (1988, p 139-156) MP 2474

Preliminary study of scour under an ice jam. Wuebben, J.L., (1988, p 177-192) MP 2475

Transverse velocities and ice jamming potential in a river bend. Zufelt, J.E., (1988, p.193-207) MP 2476

Development of a river ice prow. Part 2. Tatinclaux, J.C., (1988, p.44-52) MP 2497

Laboratory study of transverse velocities and ice jamming in a river bend. Zufelt, J.E., et al, (1988, p 189-197) MP 2501

Computer-generated graphics of river ice conditions. Bilello, M.A., et al, (1988, p 211-219) MP 2509

Development of a dynamic ice breakup control method for the Connecticut River near Windsor, Vermont. Ferrick, M.G., et al, (1988, p 221-233) MP 2510

Ice control in river harbors and fleeting areas. Perham, R.E., (1988, 7p) SR 88-12

Deployment of floating bridges in ice-covered rivers. Mellor, M., et al, (1988, 38p) SR 88-20

Ice observations on the Allegheny and Monongahela rivers. Bilello, M.A., et al, (1988, 43p) SR 88-25

Airborne radar survey of a breakup ice jam in the St. Clair River. Daly, S.F., et al, (1989, 17p) CR 89-02

Water detection in coastal plains using helicopter-borne short pulse radar. Arcone, S.A., et al, (1989, 24p) CR 89-07

Effect of Treston dam on upstream ice conditions. Ashton, G.D., (1989, 9p) SR 89-16

Framework for control of dynamic ice breakup by river regulation. Ferrick, M.G., et al, (1989, 14p) CR 89-12

Framework for control of dynamic ice breakup by river regulation. Ferrick, M.G., et al, (1989, p 79-92) MP 2537

Time estimation for maximum supercooling in dynamic frazil ice formation. Daly, S.F., et al, (1989, 13p) SR 89-26

Cryogenic sampling of frazil ice deposits. Chacho, E.F., Jr., et al, (1989, 6p) SR 89-28

Winter habitats of salmon and trout. Calkins, D.J., (1989, 9p) SR 89-34

River-ice mounds on Alaska's North Slope. Arcone, S.A., et al, (1989, p 288-290) MP 2563

Ice conditions along Illinois Waterway, 1972-1985. Gatto, L.W., (1989, 112p) CR 89-20

Ice force measurements on a bridge pier in a small river. Sodhi, D.S., et al, (1989, p.1419-1427) MP 2764

Freeze-up dynamics of a frazil ice screen. Axelson, K.D., (1990, 8p) SR 90-04

In-situ sampling and characterization of frazil ice deposits. Lawson, D.E., et al, (1990, p.193-205) MP 2694

Ice cover effect on river flow. Ashton, G.D., (1990, 24p) SR 90-08

Salmon River ice jam control studies, interim report. Axelson, K.D., et al, (1990, 8p) SR 90-06

Radar surveying of the bottom surface of ice covers. Arcone, S.A., et al, (1990, p 30-39) MP 2766

Rivers

Debris of the Chena River. McFadden, T., et al, (1976, 14p) CR 76-26

Environmental atlas of Alaska. Hartman, C.W., et al, (1978, 95p) MP 1204

Freshwater ice growth, motion, and decay. Ashton, G.D., (1980, p 261-304) MP 1299

Bank erosion of U.S. northern rivers. Gatto, L.W., (1982, 75p) CR 82-11

Data acquisition for refrigerated physical model. Zufelt, J.E., (1987, p.338-341) MP 2351

Analysis of a short pulse radar survey of revetments along the Mississippi River. Arcone, S.A., (1989, 20p) MP 2692

Road icing

Road construction and maintenance problems in central Alaska. Clark, E.F., et al, (1976, 36p) SR 76-08

Drainage facilities of airfields and heliports in cold regions. Lobacz, E.F., et al, (1981, 56p) SR 81-22

Optimizing deicing chemical application rates. Minsk, L.D., (1982, 55p) CR 82-18

ISTVS workshop on tire performance under winter conditions, 1983 (1985, 177p) SR 85-15

Pavement icing detector—final report. Goldstein, N., et al, (1987, 26p. + append.) MP 2263

Thermal infrared survey of winter trails at Fort Wainwright. Collins, C.M., et al, (1990, 16p) SR 90-17

Road maintenance

Winter maintenance research needs. Minsk, L.D., (1975, p.36-38) MP 950

Haul Road performance and associated investigations in Alaska. Berg, R.L., (1980, p 53-100) MP 1251

Pothole primer; a public administrator's guide to understanding and managing the pothole problem. Eaton, R.A., coord, (1981, 24p) MP 1416

Snow removal equipment. Minsk, L.D., (1981, p 648-670) MP 1446

Snow and ice control on railroads, highways and airports. Minsk, L.D., et al, (1981, p 671-706) MP 1447

Guide to managing the pothole problem on roads. Eaton, R.A., et al, (1981, 24p) SR 81-21

Potholes the problem and solutions. Eaton, R.A., (1982, p 160-162) MP 1504

Strategies for winter maintenance of pavements and roadways. Minsk, L.D., et al, (1984, p 155-167) MP 1964

Comparison of three compactors used in pothole repair. Snelling, M.A., et al, (1984, 14p) SR 84-31

Seasonal variations in pavement performance. Johnson, T.C., (1985, c21p) MP 2076

Snow and ice prevention in the United States. Minsk, L.D., (1986, p 37-42) MP 1876

Effects of cold environment on rapid runway repairs. Abele, G., (1986, p 1-9) MP 2169

Rating system for unsurfaced roads to be used in maintenance management. Eaton, R.A., et al, (1987, p (2)51-(2)62) MP 2313

Rating unsurfaced roads. Eaton, R.A., et al, (1987, 14p) SR 87-15

Rating unsurfaced roads. Eaton, R.A., et al, (1988, p 66-69) MP 2541

Development of the unsurfaced roads rating methodology. Eaton, R.A., (1988, 13p) SR 88-05

Cost effectiveness of proper pothole patching. Eaton, R.A., (1988, p 170-173) MP 2553

Use of low viscosity asphalts in cold regions. Janoo, V.C., (1989, p 70-80) MP 2662

Method for rating unsurfaced roads. Eaton, R.A., et al, (1989, p 101-106) MP 2610

Method for rating unsurfaced roads. Eaton, R.A., et al, (1989, p 30-40) MP 2533

Technology transfer. Eaton, R., (1990, p 25) MP 2721

Roadbeds

Haul Road performance and associated investigations in Alaska. Berg, P.L., (1980, p 84-109) MP 1351

Roads

Approach roads, Greenland 1955 program. (1959, 100p) MP 1522

Heat and moisture flow in freezing and thawing soils—a field study. Berg, R.L., (1975, p.148-160) MP 1612

Road construction and maintenance problems in central Alaska. Clark, E.F., et al, (1976, 36p) SR 76-08

Pipeline haul road between Livengood and the Yukon River. Berg, R.L., et al, (1976, 73p) SR 76-11

Repetitive loading tests on membrane enveloped road sections during freeze thaw. Smith, N., et al, (1977, p.171-197) MP 962

Resiliency in cyclically frozen and thawed subgrade soils. Chamberlain, E.J., et al, (1977, p.229-281) MP 1724

Ecology on the Yukon-Prudhoe haul road. Brown, J., ed, (1978, 131p) MP 1115

Chemical composition of haul road dust and vegetation. Iskandar, I.K., et al, (1978, p.110-111) MP 1116

Load tests on membrane-enveloped road sections. Smith, N., et al, (1978, 16p) CR 78-12

Permafrost and active layer on a northern Alaskan road. Berg, R.L., et al, (1978, p.615-621) MP 1102

Resiliency of silt under asphalt during freezing and thawing. Johnson, T.C., et al, (1978, p.662-668) MP 1106

Construction on permafrost at Longyearbyen on Spitsbergen. Tobiasson, W., (1978, p 884-890) MP 1108

Ecological baseline on the Alaskan haul road. Brown, J., ed, (1978, 131p) SR 78-13

Freeze thaw loading tests on membrane enveloped road sections. Smith, N., et al, (1978, p.1277-1288) MP 1158

Nondestructive testing of in-service highway pavements in Maine. Smith, N., et al, (1979, 22p) CR 79-06

Sulfur foam as insulation for expedient roads. Smith, N., et al, (1979, 21p) CR 79-18

Noncorrosive methods of ice control. Minsk, L.D., (1979, p.133-162) MP 1265

Environmental engineering, Yukon River-Prudhoe Bay Haul Road. Brown, J., ed, (1980, 187p) CR 80-19

Environment of the Alaskan Haul Road. Brown, J., (1980, p.3-52) MP 1350

Road dust along the Haul Road, Alaska. Everett, K.R., (1980, p.101-128) MP 1352

Revegetation along roads and pipelines in Alaska. Johnson, L.A., (1980, p 129-150) MP 1353

Field cooling rates of asphalt concrete overlays at low temperatures. Eaton, R.A., et al, (1980, 11p) CR 80-30

Guidebook to permafrost and its features, northern Alaska. Brown, J., ed, (1983, 230p) MP 1640

Measurement and evaluation of tire performance under winter conditions. Blaisdell, G.L., (1985, p.198-228) MP 2387

Stabilization of fine-grained soil for road and airfield construction. Danyluk, L.S., (1986, 37p) SR 86-21

Effects of freeze thaw cycles on granular soils for pavements. Cole, D.M., et al, (1986, 70p) CR 86-04

Frost action on roads and airfields. Johnson, T.C., et al, (1986, 45p) CR 86-18

Foundation technology in cold regions. Quinn, W.F., (1987, p 305-310) MP 2425

Freezing a temporary roadway for transport of a 3000 ton dragline. Maishman, D., et al, (1988, p 357-365) MP 2378

Engineering geology studies on the National Petroleum Reserve in Alaska. Kachadoorian, R., et al, (1988, p 899-922) MP 2519

Method for rating unsurfaced roads. Eaton, R.A., et al, (1989, p.103-106) MP 2610

State of the art of pavement response monitoring systems for roads and airfields (1989, 401p) SR 89-23

Rock drilling

Kinematics of axial rotation machines. Mellor, M., (1976, 45p) CR 76-16

Kinematics of continuous belt machines. Mellor, M., (1976, 24p) CR 76-17

Transverse rotation machines for cutting and boring in permafrost. Mellor, M., (1977, 36p) CR 77-19

Design for cutting machines in permafrost. Mellor, M., (1978, 24p) CR 78-11

Mechanics of cutting and boring in permafrost. Mellor, M., (1980, 82p) CR 80-21

Mechanics of cutting and boring in permafrost. Mellor, M., (1981, 38p) CR 81-26

Rock excavation

Excavating rock, ice, and frozen ground by electromagnetic radiation. Hoekstra, P., (1976, 17p) CR 76-36

Dynamics and energetics of parallel motion tools for cutting and boring. Mellor, M., (1977, 85p) CR 77-07

Design for cutting machines in permafrost. Mellor, M., (1978, 24p) CR 78-11

Rock mechanics

Block motion from detonations of buried near-surface explosive arrays. Bloom, S.I., (1980, 62p) CR 80-26

Prediction of explosively driven relative displacements in rocks. Bloom, S.E., (1981, 23p) CR 81-11

Alaska Good Friday earthquake of 1964. Swanson, G.K., (1982, 26p) CR 82-01

Some recent developments in vibrating wire rock mechanics instrumentation. Dutta, P.K., (1985, 12p) MP 1968

Verification tests for a stiff inclusion stress sensor. Cox, G.E.N., et al, (1985, p 41-68) MP 2223

Rock mechanics *(cont.)*
Rock stress measurements by wire stressmeter at high temperatures. Dutta, P.K., et al. (1987, p.43-58) MP 2447
Rocks
Mechanisms of crack growth in quartz. Martin, R.J., III, et al. (1975, p.4837-4844) MP 855
Resistance of elastic rock to the propagation of tensile cracks. Peck, L., et al. (1985, p.7827-7836) MP 2052
Microstructure and the resistance of rock to tensile fracture. Peck, L., et al. (1985, p 11,533-11,546) MP 2157
Condensing steam tunnel heat sinks. Lunardini, V.J., (1986, 29p.) SR 86-24
Detection of coarse sediment movement using radio transmitters. Chacho, E.F., Jr., et al. (1989, p.367-373(B)) MP 2752
Roofs
Snow load design criteria for the United States. Tobiasson, W., et al. (1976, p.70-72) MP 947
Protected membrane roofs in cold regions. Aamot, H.W.C., et al. (1976, 27p.) CR 76-02
Water absorption of insulation in protected membrane roofing systems. Schaefer, D., (1976, 15p.) CR 76-38
CRREL roof moisture survey, Pease AFB. Korhonen, C., et al. (1977, 10p.) SR 77-02
Methodology used in generation of snow load case histories. McLaughlin, D., et al. (1977, p.163-174) MP 1143
Observation and analysis of protected membrane roofing systems. Schaefer, D., et al. (1977, 40p.) CR 77-11
Roof loads resulting from rain-on-snow. Colbeck, S.C., (1977, 19p.) CR 77-12
Installation of loose-laid inverted roof system at Fort Wainwright, Alaska. Schaefer, D., (1977, 27p.) SR 77-18
Snow load data analysis, winter 1976-77. O'Rourke, M., (1977, 9p. + appends.) MP 2427
Hand-held infrared systems for detecting roof moisture. Tobiasson, W., et al. (1977, p.261-271) MP 1390
Mid-winter installation of protected membrane roofs in Alaska. Aamot, H.W.C., (1977, 5p.) CR 77-21
Infrared detective: thermograms and roof moisture. Korhonen, C., et al. (1977, p.41-44) MP 961
Detection of moisture in construction materials. Mocey, R.M., et al. (1977, 9p.) CR 77-25
Roof loads resulting from rain on snow. Colbeck, S.C., (1977, p.482-490) MP 982
Roof moisture survey: ten State of New Hampshire buildings. Tobiasson, W., et al. (1977, 29p.) CR 77-31
CRREL roof moisture survey, Building 208 Rock Island Arsenal. Korhonen, C., et al. (1977, 6p.) SR 77-43
Snow loads on structures. O'Rourke, M.J., (1978, p.418-428) MP 1001
Recommendations for implementing roof moisture surveys in the U.S. Army. (1978, 8p.) SR 78-01
Detecting wet roof insulation with a hand-held infrared camera. Korhonen, C., et al. (1978, p.A9-A15) MP 1213
Roof construction under wintertime conditions, a case study. Bennett, F.L., (1978, 34p.) SR 78-24
Research on roof moisture detection. Tobiasson, W., et al. (1978, 6p.) SR 78-29
Loading on the Hartford Civic Center roof before collapse. Redfield, R., et al. (1979, 32p.) SR 79-09
Roof moisture survey--U.S. Military Academy. Korhonen, C., et al. (1979, 8 refs.) SR 79-16
Roof response to icing conditions. Lane, J.W., et al. (1979, 40p.) CR 79-17
Roof moisture survey. Korhonen, C., et al. (1980, 31p.) SR 80-14
Roof leaks in cold regions, school at Chevak, Alaska. Tobiasson, W., et al. (1980, 12p.) CR 80-11
Roofs in cold regions, Marson's Store, Claremont, New Hampshire. Tobiasson, W., et al. (1980, 13p.) SR 80-25
Moisture gain and its thermal consequence for common roof insulations. Tobiasson, W., et al. (1980, p.4-16) MP 1361
Roofs in cold regions. Tobiasson, W., (1980, 21p.) MP 1400
New 2 and 3 inch diameter CRREL snow samplers. Bates, R.E., et al. (1980, p.199-200) MP 1430
Venting of built-up roofing systems. Tobiasson, W., (1981, p.16-21) MP 1498
Roof moisture surveys. Tobiasson, W., et al. (1981, 18p.) SR 81-31
Roof moisture surveys. Tobiasson, W., (1982, p.163-166) MP 1505
Moisture detection in roofs with cellular plastic insulation. Korhonen, C., et al. (1982, 22p.) SR 82-07
Uniform snow loads on structures. O'Rourke, M.J., et al. (1982, p.2781-2798) MP 1574
Infrared inspection of new roofs. Korhonen, C., (1982, 14p.) SR 82-33
Analysis of roof snow load case studies, uniform loads. O'Rourke, M., et al. (1983, 29p.) CR 83-01
Roof moisture surveys, current state of the technology. Tobiasson, W., (1983, p.24-31) MP 1628
Ground snow loads for structural design. Ellingwood, B., et al. (1983, p.950-964) MP 1734
Blisters in built-up roofs due to cold weather. Korhonen, C., et al. (1983, 12p.) SR 83-21
Locating wet cellular plastic insulation in recently constructed roofs. Korhonen, C., et al. (1983, p.168-173) MP 1729
Transient heat flow and surface temperatures of a built-up roof. Korhonen, C., (1983, 20p.) SR 83-22
Can wet roof insulation be dried out. Tobiasson, W., et al. (1983, p.626-639) MP 1509
Comparison of aerial to on-the-roof infrared moisture surveys. Korhonen, C., et al. (1983, p.95-105) MP 1709
U.S. Air Force roof condition index survey: Ft. Greely, Alaska. Coutermarsh, B.A., (1984, 67p.) SR 84-03
Probability models for annual extreme water-equivalent ground snow. Ellingwood, B., et al. (1984, p.1153-1159) MP 1823
Roof moisture surveys: yesterday, today and tomorrow. Tobiasson, W., et al. (1985, p.438-443 + figs.) MP 2040
Condensation control in low-slope roofs. Tobiasson, W., (1985, p.47-59) MP 2039
Aerial roof moisture surveys. Tobiasson, W., (1985, p.424-425) MP 2022
Lessons learned from examination of membrane roofs in Alaska. Tobiasson, W., et al. (1986, p.277-290) MP 2003
Construction engineering community: materials and diagnostics. (1986, 54p.) SR 86-01
Roof blister valve. Korhonen, C., (1986, p.29-31) MP 2138
Airborne roof moisture surveys. Tobiasson, W., (1986, p.45-47) MP 2139
Protected membrane roofing systems. Tobiasson, W., (1986, p.49-50) MP 2140
Vents and vapor retarders for roofs. Tobiasson, W., (1986, 11p.) MP 2246
Proposed code provisions for drifted snow loads. O'Rourke, M., et al. (1986, p.2080-2092) MP 2149
Roof blisters. Physical fitness building, Fort Lee, Virginia. Korhonen, C., et al. (1986, 15p.) Se 86-35
Infrared testing for leaks in new roofs. Korhonen, C., (1987, p.49-54) MP 2282
Cold regions roof design. Tobiasson, W., (1987, p.457-458) MP 2243
Blistering of built-up roof membranes: pressure measurements. Korhonen, C., (1987, 22p.) SR 86-29
Wetting of polystyrene and urethane roof insulations. Tobiasson, W., et al. (1987, p.108-119) MP 2337
Vents and vapor retarders for roofs. Tobiasson, W., (1987, p.80-90) MP 2352
Wetting of polystyrene and urethane roof insulations. Tobiasson, W., et al. (1988, p.421-430) MP 2011
Wood-frame roofs and moisture. Tobiasson, W., (1988, p.33-37) MP 2340
Method for conducting airborne infrared roof moisture surveys. Tobiasson, W., (1988, p.50-61) MP 2436
International Conference on Snow Engineering, 1st, July 1988. (1989, 573p.) SR 89-06
Changes coming in snow load design criteria. Tobiasson, W., (1989, p.413-418) MP 2612
Roof design in cold regions. Tobiasson, W., (1989, p.462-472) MP 2613
Roof design in cold regions. Tobiasson, W., (1989, p.1029-1037) MP 2651
Roofer a management tool for maintaining built-up roofs. Bailey, D.M., et al. (1989, p.6-10) MP 2488
Vapor retarders for membrane roofing systems. Tobiasson, W., (1989, p.31-37) MP 2489
ROOFER a management tool for maintaining built-up roofs. Bailey, D.M., et al. (1989, 9p.) MP 2576
Rotary drilling
General considerations for drill system design. Mellor, M., et al. (1976, p.77-111) MP 856
Kinematics of axial rotation machines. Mellor, M., (1976, 45p.) CR 76-16
Roughness coefficient
Theory for scalar roughness and transfer coefficients over snow and ice. Andreas, E.L., (1987, p.159-184) MP 2195
Rubber ice friction
Driving traction on ice with all-season and mud-and-snow radial tires. Blaisdell, G.L., (1983, 22p.) CR 83-27
Ice traction of tires. Blaisdell, G.L., et al. (1986, 11p.) SR 86-39
Rubber snow friction
Shallow snow performance of wheeled vehicles. Harrison, W.L., (1976, p.589-615) MP 1130
Predicting wheeled vehicle motion resistance in shallow snow. Blaisdell, G.L., (1981, 18p.) SR 81-30
CRREL instrumented vehicle for cold regions mobility measurements. Blaisdell, G.L., (1982, 11p.) MP 1515
Measurement of snow surfaces and tire performance evaluation. Blaisdell, G.L., et al. (1982, 7p.) MP 1516
Driving traction on ice with all-season and mud-and-snow radial tires. Blaisdell, G.L., (1983, 22p.) CR 83-27
Runoff
Snow accumulation for arctic freshwater supplies. Slaughter, C.W., et al. (1975, p.218-224) MP 860
Effects of radiation penetration on snowmelt runoff hydrographs. Colbeck, S.C., (1976, p.73-82) MP 948
Effects of radiation penetration on snowmelt runoff hydrographs. Colbeck, S.C., (1976, 9p.) CR 76-11
Generation of runoff from subarctic snowpacks. Dunne, T., et al. (1976, P.677-685) MP 883
Energy balance and runoff from a subarctic snowpack. Price, A.G., et al. (1976, 29p.) CR 76-27
Modeling snow cover runoff meeting, Sep. 1978. Colbeck, S.C., ed. (1979, 432p.) SR 79-36
Snow accumulation, distribution, melt, and runoff. Colbeck, S.C., et al. (1979, p.465-468) MP 1233
Watershed modeling in cold regions. Stokely, J.L., (1980, 241p.) MP 1471
Atmospheric pollutants in snow cover runoff. Colbeck, S.C., (1981, p.1-10) MP 1586
Atmospheric pollutants in snow cover runoff. Colbeck, S.C., (1981, p.1383-1388) MP 1487
Overland flow: an alternative for wastewater treatment. Martel, C.J., et al. (1982, p.181-184) MP 1506
Hydrology and climatology of a drainage basin near Fairbanks, Alaska. Haugen, R.K., et al. (1982, 34p.) CR 82-26
Runoff from a small subarctic watershed, Alaska. Chacho, E.F., et al. (1983, p.115-120) MP 1654
Permafrost. Benson, C., et al. (1986, p.99-106) MP 2156
Snow hydrology in the upper Yamuna basin, India. Malhotra, R.V., et al. (1988, p.84-93) MP 2633
Runoff forecasting
Short-term forecasting of water run-off from snow and ice. Colbeck, S.C., (1977, p.571-588) MP 1067
Use of Landsat data for predicting snowmelt runoff in the upper Saint John River basin. Merry, C.J., et al. (1983, p.519-533) MP 1694
Forecasting of snowmelt runoff using water temperature data. Pangburn, T., (1987, p.108-113) MP 2398
Snow cover and glacier variations. Colbeck, S.C., ed. (1989, 111p.) MP 2672
Runways
Fabric installation to reduce cracking on runways. Eaton, R.A., et al. (1981, 26p.) SR 81-10
Effects of cold environment on rapid runway repairs. Abele, G., (1986, p.1-9) MP 2169
Engineering geology studies on the National Petroleum Reserve in Alaska. Kachadoorian, R., et al. (1988, p.899-922) MP 2519
Hard-surface runways in Antarctica. Mellor, M., (1988, 87p.) SR 88-13
Airfields in Arctic Alaska. Croey, F.E., (1988, p.49-55) MP 2451
Response of runway pavement to freeze thaw cycles. Allen, W.L., et al. (1989, 31p.) SR 89-02
Performance of pavement at Central Wisconsin Airport. Stark, J., et al. (1989, p.92-103) MP 2463
Deep frost effects on a longitudinal edge drain. Allen, W.L., (1989, p.343-352) MP 2469
Compacted-snow runway, design and construction guidelines for Antarctica. Russell-Head, D.S., et al. (1989, 68p.) SR 89-10
Porous portland cement concrete as an airport runway overlay. Korhonen, C., et al. (1989, 20p.) SR 89-12
Airport pavement distress in cold regions. Vinson, T.S., et al. (1989, 142p.) CR 89-10
Improving snow roads and airstrips in Antarctica. Lee, S.M., et al. (1989, 18p.) SR 89-22
Safety
Foundations on permafrost, US and USSR design and practice. Fish, A.M., (1983, p.3-24) MP 1682
Saint Clair River
Water quality during winter river navigation seasons. Sletten, R.S., (1988, 56p.) SR 88-10
Airborne radar survey of a brash ice jam in the St. Clair River. Daly, S.F., et al. (1989, 17p.) SR 89-02
Saint Lawrence River
St. Lawrence River freeze-up forecast. Foltyn, E.P., et al. (1986, p.467-481) MP 2120
Saline soils
NMR phase composition measurements on moist soils. Tice, A.R., et al. (1978, p.11-14) MP 1210
Improving electric grounding in frozen materials. Delaney, A.J., et al. (1982, 12p.) SR 82-13
Frost heave of saline soils. Chamberlain, E.J., (1983, p.121-126) MP 1655
Effects of salt on unfrozen water content in silt, Lanzhou, China. Tice, A.R., et al. (1984, 18p.) CR 84-16
Shear strength in the zone of freezing in saline soils. Chamberlain, E.J., (1985, p.566-572) MP 1879
Effects of soluble salts on the unfrozen water content in silt. Tice, A.R., et al. (1985, p.99-109) MP 1933
Unfrozen water contents of six antarctic soil materials. Anderson, D.M., et al. (1989, p.363-366) MP 2470
Salinity
Salinity variations in sea ice. Cox, G.F.N., et al. (1974, p.109-122) MP 1023
Geochemistry of subsea permafrost at Prudhoe Bay, Alaska. Page, F.W., et al. (1978, 70p.) SR 78-14
Sintering and compaction of snow containing liquid water. Colbeck, S.C., et al. (1979, p.11-15) MP 1190
Compaction of wet snow on highways. Colbeck, S.C., (1979, p.14-17) MP 1234
Mass-balance aspects of Weddell Sea pack-ice. Ackley, S.F., (1979, p.191-205) MP 1286
Physical oceanography of the seasonal sea ice zone. McPhee, M.G., (1980, p.91-112) MP 1294

Low temperature phase changes in moist, frozen clays. Anderson, D.M., et al. (1980, p.139-144) MP 1330
Arctic Ocean temperature, salinity and density, March-May 1979. McPhee, M.G., (1981, 20p.) SR 81-05
Mechanical properties of multi-year pressure ridge samples. Richter-Menge, J.A., (1985, p.244-251) MP 1936

Salt ice

Optical properties of salt ice. Lane, J.W., (1975, p.363-372) MP 854
Structure and dielectric properties at 4.8 and 9.5 GHz of saline ice. Arcone, S.A., et al. (1986, p.14,281-14,303) MP 2182
DC resistivity measurements of model saline ice sheets. Arcone, S.A., (1987, p.845-849) MP 2308
Field studies of brackish ice to compare with satellite data. Weeks, W.F., et al. (1989, p.1318-1333) MP 2763

Salting

Use of de-icing salt—possible environmental impact. Minsk, L.D., (1973, p.1-2) MP 1037
Noncorrosive methods of ice control. Minsk, L.D., (1979, p.133-162) MP 1265
Optimizing deicing chemical application rates. Minsk, L.D., (1982, 55p.) CR 82-18
Salt action on concrete. Sayward, J.M., (1984, 69p.) SR 84-25
Chemical solutions to the chemical problem Minsk, L.D., (1985, p.238-244) MP 2224

Samplers

CRREL 2-inch frazil ice sampler. Rand, J.H., (1982, 8p.) SR 82-09
Liquid sampler. Rand, J.H., (1982, 4 col.) MP 2336
Cryogenic sampling of frazil ice deposits. Chacho, E.F., Jr., et al. (1989, 6p.) SR 89-28

Sampling

Evaluation of disposable membrane filter units for sorptive losses and sample contamination. Walsh, M.E., et al. (1988, p.45-52) MP 2328

Sands

Grouting silt and sand at low temperatures. Johnson, R., (1979, p.937-950) MP 1078
Configuration of ice in frozen media. Colbeck, S.C., (1982, p.116-123) MP 1512
Tertiary creep model for frozen sands (discussion). Fish, A.M., et al. (1984, p.1373-1378) MP 1810
Acoustically induced ground motion in sand under winter conditions. Peck, L., (1989, p.37-54) MP 2626

Sanitary engineering

Waste management in the north. Rice, E., et al. (1974, p.14-21) MP 1048
Aquaculture systems for wastewater treatment, an engineering assessment. Reed, S.C., et al. (1980, 127p.) MP 1422
Aquaculture systems for wastewater treatment. Reed, S.C., et al. (1980, p.1-12) MP 1423
Nutrient film technique for wastewater treatment. Bourgeois, J.R., et al. (1982, 15p.) SR 82-04
Corps of Engineers land treatment of wastewater research program: an annotated bibliography Parker, L.V., et al. (1983, 82p.) SR 83-09
Land treatment research and development program. Iskandar, I.K., et al. (1983, 144p.) CR 83-20
Accumulation, characterization, and stabilization of sludges for cold regions lagoons. Schneiter, R.W., et al. (1984, 40p.) SR 84-08
Nitrogen removal in wastewater ponds. Reed, S.C., (1984, 26p.) CR 84-13
Shasta waterless system as a remote site sanitation facility Martel, C.J., (1987, 24p.) SR 87-16

Saturation

Difficulties of measuring the water saturation and porosity of snow Colbeck, S.C., (1978, p.189-201) MP 1124
Water movement in a land treatment system of wastewater by overland flow. Nakano, Y., et al. (1979, p.185-206) MP 1285
Undersaturation in thawed permafrost at the beginning of freezeback Ayorinde, O.A., (1990, p.317-321) MP 2582

Saws

Development of large ice saws Garfield, D.E., et al. (1976, 14p.) CR 76-47
Factors affecting rates of ice cutting with a chain saw Cox-termarsh, B.A., (1989, 14p.) SR 89-24

Scandinavia

Utility distribution systems in Sweden, Finland, Norway and England Aamot, H.W.C., et al. (1976, 121p.) SR 76-16

Scanning electron microscopy

Microstructure of frozen soils examined by SEM Kumai, M., (1988, p.390-395) MP 2361

Scattering

Snow-Tun/Smoke Week VI field experiment plan Redfield, R.K., et al. (1984, 85p.) SR 84-19
Analysis of acoustical features of labwaters grown sea ice Stanton, T.K., et al. (1986, p.1486-1494) MP 2222
Effects of water and ice layers on the scattering properties of diffuse reflectors Jezek, K.C., et al. (1987, p.5141-5147) MP 2301

Scintillation

Two-wavelength method of measuring path-averaged turbulent surface heat fluxes Andreas, E.L., (1989, p.280-292) MP 2648
Three-wavelength scintillation measurement of turbulent heat fluxes. Andreas, E.L., (1990, p.74-77) MP 2696

Scotia Sea

Weddell-Scotia Sea MIZ, October 1984. Crasey, F.D., et al. (1986, p.3920-3924) MP 1536

SEA ICE

Snow and ice on the earth's surface Mellor, M., (1964, 163p.) M II-C1
Mechanical properties of sea ice. Weeks, W.F., et al. (1967, 80p.) M II-C3

Sea ice

Investigation of ice islands in Babbage Bight. Kovacs, A., et al. (1971, 46 leaves) MP 1381
Conductivity and surface impedance of sea ice. McNeill, D., et al. (1971, 19p. plus diagrams) MP 1071
Ice forces on vertical piles. Nevel, D.E., et al. (1972, p.104-114) MP 1026
Mesoscale deformation of sea ice from satellite imagery Anderson, D.M., et al. (1973, 2p.) MP 1120
Classification and variation of sea ice ridging in the Arctic basin Hibler, W.D., III, et al. (1974, p.127-146) MP 1022
Salinity variations in sea ice. Cox, G.F.N., et al. (1974, p.109-122) MP 1023
ERTS mapping of Arctic and subarctic environments. Anderson, D.M., et al. (1974, 128p.) MP 1047
Results of the US contribution to the Joint US/USSR Bering Sea Experiment. Campbell, W.J., et al. (1974, 197p.) MP 1032
Remote sensing program required for the AIDJEX model. Weeks, W.F., et al. (1974, p.22-44) MP 1040
Statistical variations in Arctic sea ice ridging and deformation rates. Hibler, W.D., III, (1975, p.J1-J16) MP 850
Snow and ice. Colbeck, S.C., et al. (1975, p.435-441, 475-487) MP 844
Remote sensing plan for the AIDJEX main experiment. Weeks, W.F., et al. (1975, p.21-48) MP 862
Islands of grounded ice. Kovacs, A., et al. (1975, p.213-216) MP 852
Third International Symposium on Ice Problems, 1975, Frankenstein, G.E., ed. (1975, 627p.) MP 845
Remote measurement of sea ice drift. Hibler, W.D., III, et al. (1975, p.541-554) MP 849
Height variation along sea ice pressure ridges. Hibler, W.D., III, et al. (1975, p.191-199) MP 848
Arctic environment and the Arctic surface effect vehicle. Sterrett, K.F., (1976, 28p.) CR 76-01
Sea ice engineering. Asser, A., (1976, p.231-234) MP 986
Sea ice drift and deformation from LANDSAT imagery Hibler, W.D., III, et al. (1976, p.115-135) MP 1059
Islands of grounded sea ice. Kovacs, A., et al. (1976, 26p.) CR 76-04
Thickness and roughness variations of arctic multi-year sea ice. Ackley, S.F., et al. (1976, 25p.) CR 76-18
Techniques for studying sea ice drift and deformation at sites far from land using LANDSAT imagery Hibler, W.D., III, et al. (1976, p.595-609) MP 866
Antarctic sea ice dynamics and its possible climatic effects. Ackley, S.F., et al. (1976, p.53-76) MP 1378
Misgivings on isostatic imbalance as a mechanism for sea ice cracking. Ackley, S.F., et al. (1976, p.85-94) MP 1379
Grounded ice along the Alaskan Beaufort Sea coast Kovacs, A., (1976, 21p.) CR 76-32
Some characteristics of grounded floebergs near Prudhoe Bay, Alaska Kovacs, A., et al. (1976, p.169-172) MP 1118
Grounded floebergs near Prudhoe Bay, Alaska Kovacs, A., et al. (1976, 10p.) CR 76-34
Operational report 1976 USACRREL-USGS subsea permafrost program Beaufort Sea, Alaska Sellmann, P.V., et al. (1976, 20p.) SR 76-12
Dynamics of near-shore ice Weeks, W.F., et al. (1976, p.267-275) MP 922
Sea ice properties and geometry Weeks, W.F., (1976, p.137-171) MP 918
Dynamics of near-shore ice Kovacs, A., et al. (1977, p.106-112) MP 924
Delineation and engineering characteristics of permafrost beneath the Beaufort Sea Sellmann, P.V., et al. (1977, p.234-237) MP 927
Seasonal variations in apparent sea ice viscosity on the geophysical scale Hibler, W.D., III, et al. (1977, p.87-90) MP 900
Dynamics of near-shore ice Kovacs, A., et al. (1977, p.151-163) MP 1073
Sea ice thickness profiling and under-ice oil entrapment Kovacs, A., (1977, p.547-550) MP 940
Visual observations of floating ice from Skylab Campbell, W.J., et al. (1977, p.343-379) MP 1263
Ice arching and the drift of pack ice through restricted channels Sodhi, D.S., (1977, 11p.) CR 77-18
Brazil tensile strength tests on sea ice: a data report Kovacs, A., et al. (1977, 39p.) SR 77-24
Viscous wind-driven circulation of Arctic sea ice Hibler, W.D., III, et al. (1977, p.95-113) MP 983
Decay patterns of land-fast sea ice in Canada and Alaska Bilello, M.A., (1977, p.1-10) MP 1161
Nearshore ice motion near Prudhoe Bay, Alaska Tucker, W.B., et al. (1977, p.23-31) MP 1162
Finite element formulation of a sea ice drift model Sodhi, D.S., et al. (1977, p.67-76) MP 1165
Dynamics of near-shore ice Kovacs, A., et al. (1977, p.411-424) MP 1076
Model simulation of near shore ice drift, deformation and thickness. Hibler, W.D., III, (1978, p.33-44) MP 1010
Radar anisotropy of sea ice. Kovacs, A., et al. (1978, p.171-201) MP 1111
Radar profile of a multi-year pressure ridge fragment. Kovacs, A., (1978, p.59-62) MP 1126
Preferred crystal orientations in Arctic Ocean fast ice. Weeks, W.F., et al. (1978, 24p.) CR 78-13
Primary productivity in sea ice of the Weddell region. Ackley, S.F., et al. (1978, 17p.) CR 78-19
Sea ice pressure ridges in the Beaufort Sea Wright, B.D., et al. (1978, p.249-271) MP 1132
Ice arching and the drift of pack ice through channels Sodhi, D.S., et al. (1978, p.415-432) MP 1138
Sea ice and ice algae relationships in the Weddell Sea. Ackley, S.F., et al. (1978, p.70-71) MP 1203
Dynamics of near-shore ice Kovacs, A., et al. (1978, p.11-22) MP 1205
Sea ice north of Alaska. Kovacs, A., (1978, p.7-12) MP 1252
Radar anisotropy of sea ice. Kovacs, A., et al. (1978, p.6037-6046) MP 1139
Dynamics of near-shore ice. Kovacs, A., et al. (1978, p.230-233) MP 1619
Standing crop of algae in the sea ice of the Weddell Sea region. Ackley, S.F., et al. (1979, p.269-281) MP 1262
Some results from a linear-viscous model of the Arctic ice cover. Hibler, W.D., III, et al. (1979, p.293-304) MP 1241
Dynamic thermodynamic sea ice model. Hibler, W.D., III, (1979, p.815-846) MP 1247
Surface-based scatterometer results of Arctic sea ice. Onstott, R.G., et al. (1979, p.78-85) MP 1260
Multi year pressure ridges in the Canadian Beaufort Sea. Wright, B., et al. (1979, p.107-126) MP 1229
Ice pile-up and ride-up on Arctic and subarctic beaches. Kovacs, A., et al. (1979, p.127-146) SIP 1230
Buckling analysis of wedge-shaped floating ice sheets. Sodhi, D.S., (1979, p.797-810) MP 1232
Turbulent heat flux from Arctic leads. Andreas, E.L., et al. (1979, p.57-91) MP 1340
Anisotropic properties of sea ice. Kovacs, A., et al. (1979, p.5749-5756) MP 1258
Crystal alignments in the fast ice of Arctic Alaska Weeks, W.F., et al. (1979, 21p.) CR 79-22
Dynamics of near-shore ice Kovacs, A., et al. (1979, p.181-207) MP 1291
Oil pooling under sea ice. Kovacs, A., (1979, p.310-323) MP 1289
Anisotropic properties of sea ice in the 50-150 MHz range. Kovacs, A., et al. (1979, p.324-353) MP 1620
Ross Ice Shelf bottom ice structure Zotikov, I.A., et al. (1979, p.65-66) MP 1336
Drifting buoy measurements on Weddell Sea pack ice. Ackley, S.F., (1979, p.106-108) MP 1339
Crystal alignments in the fast ice of Arctic Alaska Weeks, W.F., et al. (1980, p.1137-1146) MP 1277
Documentation for a two-level dynamic thermodynamic sea ice model. Hibler, W.D., III, (1980, 35p.) SR 80-08
Maximum thickness and subsequent decay of lake, river and fast sea ice in Canada and Alaska Bilello, M.A., (1980, 160p.) CR 80-06
International Workshop on the Seasonal Sea Ice Zone, Monterey, California, Feb 26-Mar 1, 1979 Andersen, R.G., ed. (1980, 357p.) MP 1292
Physical oceanography of the seasonal sea ice zone. McPhee, M.G., (1980, p.93-132) MP 1294
Shore ice pile-up and ride-up: field observations, models, theoretical analyses Kovacs, A., et al. (1980, p.209-295) MP 1295
Numerical modeling of sea ice in the seasonal sea ice zone. Hibler, W.D., III, (1980, p.299-356) MP 1296
Physical properties of sea ice and under-ice current orientation Kovacs, A., et al. (1980, p.109-145) MP 1323
Polarization studies in sea ice Arcone, S.A., et al. (1980, p.225-245) MP 1324
Modeling of anisotropic electromagnetic reflection from sea ice Golden, K.M., et al. (1980, p.267-294) MP 1325
Dynamics of snow and ice masses Colbeck, S.C., ed. (1980, 468p.) MP 1297
Sea ice growth, drift, and decay Hibler, W.D., III, (1980, p.141-209) MP 1298
Nonsteady ice drift in the Strait of Belle Isle Sodhi, D.S., et al. (1980, p.177-186) MP 1364
Continuum sea ice model for a global climate model Ling, C.H., et al. (1980, p.187-196) MP 1622
Sea ice anisotropy, electromagnetic properties and strength Kovacs, A., et al. (1980, 18p.) CR 80-20
Modeling of anisotropic electromagnetic reflection from sea ice Golden, K.M., et al. (1980, 19p.) CR 80-23
Estimation of heat and mass fluxes over Arctic leads Andreas, E.L., (1980, p.2047-2066) MP 1410
Sea ice studies on the Weddell Sea aboard I St Gil' Polar Sea Ackley, S.F., et al. (1980, p.82-96) MP 1431

Sea ice *(cont.)*

Modeling a variable thickness sea ice cover. Hibler, W.D., III, c1979, p.1943-1973; MP 1424

Choanoflagellates from the Weddell Sea. Buck, K.R., c1981, p.47-54; MP 1453

Sea-ice atmosphere interactions in the Weddell Sea using drifting buoys. Ackley, S.F., c1981, p.177-191; MP 1627

Hyperbolic reflections on Beaufort Sea seismic records. Neave, K.G., et al, c1981, 16p.; CR 81-02

Review of thermal properties of snow, ice and sea ice. Yen, Y.-C., c1981, 27p.; CR 81-10

Preliminary results of ice modeling in the East Greenland area. Tucker, W.B., et al, c1981, p.867-878; MP 1456

Pooling of oil under sea ice. Kovacs, A., et al, c1981, p.912-922; MP 1459

Sea ice piling at Fairway Rock, Bering Strait, Alaska. Kovacs, A., et al, c1981, p.985-1000; MP 1460

Morphology of sea ice pressure ridge sails. Tucker, W.B., et al, c1981, p.1-12; MP 1465

Sea ice rubble formations off the NE Bering Sea and Norton Sound. Kovacs, A., c1981, p.1348-1363; MP 1527

Modeling of anisotropic electromagnetic reflections from sea ice. Golden, K.M., et al, c1981, p.8107-8116; MP 1469

Sea ice: the potential of remote sensing. Weeks, W.F., c1981, p.39-48; MP 1468

Distortion of model subsurface radar pulses in complex dielectrics. Arcone, S.A., c1981, p.855-864; MP 1472

Multi-year pressure ridges in the Canadian Beaufort Sea. Wright, B., et al, c1981, p.125-145; MP 1514

Ice pile-up and ride-up on arctic and subarctic beaches. Kovacs, A., et al, c1981, p.247-273; MP 1530

Sea ice rubble formations in the Bering Sea and Norton Sound, Alaska. Kovacs, A., c1981, 23p.; SR 81-34

Physical and structural characteristics of sea ice in McMurdo Sound. Gow, A.J., et al, c1981, p.94-95; MP 1542

Radar detection of sea ice and current alinement under the Ross Ice Shelf. Morey, R.M., et al, c1981, p.96-97; MP 1543

Growth, structure, and properties of sea ice. Weeks, W.F., et al, c1982, 130p.; M 82-01

Ablation seasons of arctic and antarctic sea ice. Andreas, E.L., et al, c1982, p.440-447; MP 1517

Sea ice drag laws and boundary layer during rapid melting. McPhee, M.G., c1982, 17p.; CR 82-06

Using sea ice to measure vertical heat flux in the ocean. McPhee, M.G., et al, c1982, p.2071-2074; MP 1521

On modeling the Weddell Sea pack ice. Hibler, W.D., III, et al, c1982, p.125-130; MP 1509

Application of a numerical sea ice model to the East Greenland area. Tucker, W.B., c1982, 40p.; CR 82-16

Equations for determining the gas and brine volumes in sea ice samples. Cox, G.F.N., et al, c1982, 11p.; CR 82-30

Bering Strait sea ice and the Fairway Rock icefoot. Kovacs, A., et al, c1982, 40p.; CR 82-31

On the differences in ablation seasons of Arctic and Antarctic sea ice. Andreas, E.L., et al, c1982, 9p.; CR 82-33

Physical properties of the ice cover of the Greenland Sea. Weeks, W.F., c1982, 27p.; SR 82-28

Physical, chemical and biological properties of winter sea ice in the Weddell Sea. Clarke, D.B., et al, c1982, p.107-109; MP 1609

Atmospheric boundary layer measurements in the Weddell Sea. Andreas, E.L., c1982, p.113-115; MP 1610

Comment on "Water drag coefficient of first-year sea ice" by M.P. Langleben. Andreas, E.L., et al, c1983, p.779-782; MP 1577

Numerical simulation of the Weddell Sea pack ice. Hibler, W.D., III, et al, c1983, p.2873-2887; MP 1592

Alaska's Beaufort Sea coast ice ride-up and pile-up features. Kovacs, A., c1983, 51p.; CR 83-09

Properties of sea ice in the coastal zones of the polar oceans. Weeks, W.F., et al, c1983, p.25-41; MP 1604

Surface meteorology US/USSR Weddell Polynya Expedition, 1981. Andreas, E.L., et al, c1983, 32p.; SR 83-14

Mechanical behavior of sea ice. Mellor, M., c1983, 105p.; M 83-1

Sea ice model in wind forcing fields. Tucker, W.B., c1983, 11p.; CR 83-17

Comparison of different sea level pressure analyses fields in the East Greenland Sea. Tucker, W.B., c1983, p.1054-1068; MP 1737

Equations for determining gas and brine volumes in sea ice. Cox, G.F.N., et al, c1983, p.306-316; MP 2055

Thermal expansion of saline ice. Cox, G.F.N., c1983, p.425-432; MP 1768

Surface roughness of Ross Sea pack ice. Govoni, J.W., et al, c1983, p.123-124; MP 1764

Mechanical properties of ice in the Arctic seas. Weeks, W.F., et al, c1984, p.235-259; MP 1674

Electromagnetic properties of sea ice. Morey, R.M., et al, c1984, 32p.; CR 84-02

West antarctic sea ice. Ackley, S.F., c1984, p.88-95; MP 1818

Offshore mechanics and Arctic engineering symposium, 1984 (3 vols.); MP 1675

Variation of ice strength within and between multiyear pressure ridges in the Beaufort Sea. Weeks, W.F., c1984, p.134-139; MP 1680

Morphology and ecology of diatoms in sea ice from the Weddell Sea. Clarke, D.B., et al, c1984, 41p.; CR 84-05

Sea ice and biological activity in the Antarctic. Clarke, D.B., et al, c1984, p.2087-2095; MP 1701

Army research could reduce dangers posed by sea ice. Tucker, W.B., c1984, p.20-24; MP 2168

Mechanical properties of multi-year sea ice. Phase 1: Test results. Cox, G.F.N., et al, c1984, 105p.; CR 84-09

East Greenland Sea ice variability in large-scale model simulations. Walsh, J.E., et al, c1984, p.9-14; MP 1779

Analysis of linear sea ice models with an ice margin. Leppäranta, M., c1984, p.31-36; MP 1782

Mechanical properties of multi-year sea ice: Testing techniques. Mellor, M., et al, c1984, 39p.; CR 84-08

Ocean circulation: its effect on seasonal sea-ice simulations. Hibler, W.D., III, et al, c1984, p.489-492; MP 1780

Electromagnetic properties of sea ice. Morey, R.M., et al, c1984, p.53-75; MP 1776

Offshore oil in the Alaskan Arctic. Weeks, W.F., et al, c1984, p.371-378; MP 1743

Horizontal salinity variations in sea ice. Tucker, W.B., et al, c1984, p.6505-6514; MP 1761

Mechanical properties of sea ice: a status report. Weeks, W.F., et al, c1984, p.135-198; MP 1808

Structure of first-year pressure ridge sails in the Prudhoe Bay region. Tucker, W.B., et al, c1984, p.115-135; MP 1837

Static determination of Young's modulus in sea ice. Richter-Menge, J.A., c1984, p.283-286; MP 1789

MIZEX 83 mesoscale sea ice dynamics: initial analysis. Hibler, W.D., III, et al, c1984, p.19-28; MP 1811

Crystalline structure of urea ice sheets. Gow, A.J., c1984, 48p.; CR 84-24

Mesoscale air-ice-ocean interaction experiments. Johannessen, O.M., ed, c1984, 176p.; SR 84-29

MIZEX 84 mesoscale sea ice dynamics: post operations report. Hibler, W.D., III, et al, c1984, p.64-69; MP 1257

Sea ice properties. Tucker, W.B., et al, c1984, p.82-83; MP 2136

Discussion: Electromagnetic properties of sea ice by R.M. Morey, A. Kovacs and G.F.N. Cox. Arcone, S.A., c1984, p.93-94; MP 1821

Authors' response to discussion on: Electromagnetic properties of sea ice. Morey, R.M., et al, c1984, p.95-97; MP 1822

Tensile strength of multi-year pressure ridge sea ice samples. Cox, G.F.N., et al, c1985, p.186-193; MP 1856

Structure, salinity and density of multi-year sea ice pressure ridges. Richter-Menge, J.A., et al, c1985, p.194-198; MP 1857

Numerical modeling of sea ice dynamics and ice thickness. Hibler, W.D., III, c1985, 50p.; CR 85-05

Numerical simulation of Northern Hemisphere sea ice variability, 1951-1980. Walsh, J.E., et al, c1985, p.4547-4565; MP 1882

Energy exchange over antarctic sea ice in the spring. Andreas, E.L., et al, c1985, p.7199-7212; MP 1889

Compressive strength of multi-year sea ice. Kovacs, A., c1985, p.116-127; MP 1901

Electromagnetic properties of multi-year sea ice. Morey, R.M., et al, c1985, p.151-167; MP 1902

Physical properties of sea ice in the Greenland Sea. Tucker, W.B., et al, c1985, p.177-188; MP 1903

Ice electrical properties. Gow, A.J., c1985, p.76-82; MP 1910

Dielectric properties at 4.75 GHz of saline ice slabs. Arcone, S.A., et al, c1985, p.83-86; MP 1911

Laboratory studies of acoustic scattering from the underside of sea ice. Jezek, K.C., et al, c1985, p.87-91; MP 1912

Pressure ridge and sea ice properties Greenland Sea. Tucker, W.B., et al, c1985, p.214-223; MP 1935

Numerical simulation of sea ice induced gouges on the shelves of the polar oceans. Weeks, W.F., et al, c1985, p.259-265; MP 1938

Ice nucleation activity of antarctic marine macroorganisms. Parker, L.V., et al, c1985, p.126-128; MP 2217

Electromagnetic measurements of multi-year sea ice using impulse radar. Kovacs, A., et al, c1985, 26p.; CR 85-13

Mechanical properties of multi-year sea ice. Phase 2: Test results. Cox, G.F.N., et al, c1985, 81p.; CR 85-16

Field tests of the kinetic friction coefficient of sea ice. Tatinclaux, J.C., et al, c1985, 20p.; CR 85-17

Role of plastic ice interaction in marginal ice zone dynamics. Leppäranta, M., et al, c1985, p.11,899-11,909; MP 1544

Impulse radar sounding of level first-year sea ice from an icebreaker. Martinson, C.R., c1985, 9p.; SR 85-21

Electromagnetic measurements of sea ice. Kovacs, A., et al, c1986, p.67-93; MP 2020

Physical properties of the sea ice cover. Weeks, W.F., c1986, p.87-102; MP 2047

Weddell-Scotia Sea MIZ, October 1984. Crane, F.D., et al, c1986, p.3920-3924; MP 1536

Crystal structure of Fram Strait sea ice. Gow, A.J., et al, c1986, p.20-29; MP 2221

Sea ice microbial communities in Antarctica. Garrison, D.L., et al, c1986, p.241-250; MP 2026

Coupled ice-mixed layer model for the Greenland Sea. Hermann, M.N., c1986, p.2551-2560; MP 2141

Evaluation of the rheological properties of columnar ridge sea ice. Brown, R.L., et al, c1986, p.55-66; MP 2177

Growth, structure, and properties of sea ice. Weeks, W.F., et al, c1986, p.9-164; MP 2209

Mechanical behavior of sea ice. Mellor, M., c1986, p.165-281; MP 2210

Sea ice salinity and porosity changes during storage. Cox, G.F.N., et al, c1986, p.371-375; MP 2246

Ice and snow optics in the polar oceans, Pt.1. Perovich, D.K., et al, c1986, p.232-241; MP 2255

Ice and snow optics in the polar oceans, Pt.2. Grenfell, T.C., et al, c1986, p.242-251; MP 2256

Optical properties of sea ice structure. Gow, A.J., c1986, p.264-271; MP 2257

Roughness and transfer coefficients over snow and sea ice. Andreas, E.L., c1986, 19p.; CR 86-09

Electromagnetic properties of sea ice. Kovacs, A., et al, c1986, p.57-133; MP 2197

Bulk transfer coefficients for heat and momentum over leads and polynyas. Andreas, E.L., et al, c1986, p.1875-1883; MP 2187

Microwave dielectric, structural and salinity properties of sea ice. Arcone, S.A., et al, c1986, p.832-839; MP 2188

Analysis of acoustical features of laboratory grown sea ice. Stanton, T.K., et al, c1986, p.1486-1494; MP 2222

Structure and dielectric properties at 4.8 and 9.5 GHz of saline ice. Arcone, S.A., et al, c1986, p.14,281-14,303; MP 2182

Triaxial testing of first-year sea ice. Richter-Menge, J.A., et al, c1986, 41p.; CR 86-16

Preliminary simulation of the formation and infilling of sea ice gouges. Weeks, W.F., et al, c1986, p.259-268; MP 2218

Confined compressive strength of horizontal first-year sea ice samples. Richter-Menge, J.A., c1987, p.197-207; MP 2193

Advances in sea ice mechanics in the USA. Sodhi, D.S., et al, c1987, p.37-49; MP 2208

Sea ice structure and mechanical properties. Richter-Menge, J.A., et al, c1987, 30p.; CR 87-03

Sea-ice crystal structure and salinity, Hebron Fiord, Labrador. Gow, A.J., c1987, 18p.; CR 87-04

Sea-ice investigations during the Winter Weddell Sea Project. Ackley, S.F., et al, c1987, p.83-89; MP 2091

Physical properties of sea ice discharged from Fram Strait. Gow, A.J., et al, c1987, p.436-439; MP 2204

Comment on "Atmospheric boundary layer modification in the marginal ice zone" by T.J. Bennett, Jr. and K. Hunkins. Andreas, E.L., c1987, p.5965-5969; MP 2196

Electromagnetic property trends in sea ice, Part I. Kovacs, A., et al, c1987, 45p.; CR 87-06

Physical properties of summer sea ice in the Fram Strait. Tucker, W.B., et al, c1987, p.6787-6800; MP 2240

Physical properties of estuarine ice in Great Bay, New Hampshire. Meese, D.A., et al, c1987, p.833-840; MP 2251

Mechanical properties of multi-year sea ice. Richter-Menge, J.A., et al, c1987, p.121-151; MP 2428

Measurement of characteristic length of floating ice sheets. Sodhi, D.S., c1987, n.p. (Ch.7); MP 2080

Diagnostic sea-ocean model. Hibler, W.D., III, et al, c1987, p.987-1015; MP 2238

Modeling the electromagnetic property trends in sea ice, Part I. Kovacs, A., et al, c1987, p.207-235; MP 2330

Ice thickness distribution across the Atlantic sector of the Antarctic Ocean in midwinter. Wadhams, P., et al, c1987, p.14,535-14,552; MP 2316

Sea ice thickness and sub-ice bathymetry. Kovacs, A., et al, c1987, 60p.; CR 87-23

Mechanical properties of multi-year sea ice. Richter-Menge, J.A., et al, c1988, 27p.; CR 88-05

Alaska SAR facility: an update. Weller, G., et al, c1988, p.27-31; MP 2300

Airborne measurement of sea ice thickness and subice bathymetry. Kovacs, A., et al, c1988, p.111-120; MP 2345

Electromagnetic measurements of a second-year sea ice floe. Kovacs, A., et al, c1988, p.121-136; MP 2346

Microcomputer-based image-processing system. Perovich, D.K., et al, c1988, p.249-252; MP 2305

Ice stress measurements around offshore structures. Johnson, J.B., c1989, p.55-69; MP 2611

Overview of the physical properties of sea ice. Tucker, W.B., c1988, p.1-34; MP 2635

Multifrequency passive microwave observation of saline ice grown in a tank. Grenfell, T.C., et al, c1988, p.1687-1699; MP 2459

Confined compressive strength of multi-year pressure ridge sea ice samples. Cox, G.F.N., et al, c1988, p.295-301; MP 2003

Profile properties of undeformed first-year sea ice. Cox, G.F.N., et al, c1988, 57p.; CR 88-13

Numerical simulation of first-year sea ice. Cox, G.F.N., et al, c1988, p.12,649-12,660; MP 2004

Correlation function study for sea ice. Lau, F.C., et al, c1988, p.14,955-14,968; MP 2511

Mechanical properties of multi-year sea ice. Richter-Menge, J.A., c1988, p.53-61; MP 2619

Update on portable hot water sea ice drilling. Govoni, J.W., et al, c1989, p.175-178; MP 2479

Development of sea ice in the Weddell Sea. Lange, M.A., et al, c1989, p.92-96; MP 2615

Sea ice ridging in the Ross Sea, Antarctica, as compared with sites in the Arctic. Weeks, W.F., et al. (1989, p.4984-4988) MP 2690

Chemical and structural properties of sea ice in the southern Beaufort Sea. Meese, D.A., (1989, 294p.) MP 2656

Lidar detection of leads in Arctic sea ice. Schnell, R.C., et al. (1989, p.530-532) MP 2602

Elastic properties of frazil ice from the Weddell Sea, Antarctica. Lange, M.A., et al. (1989, p.208-217) MP 2630

Compressive strength of antarctic frazil ice. Richter-Menge, J.A., et al. (1989, p.269-278) MP 2621

Airborne sea ice thickness sounding. Kovacs, A., et al. (1989, p.1042-1052) MP 2623

Radar backscattering from artificially grown sea ice. Eicken, J., et al. (1989, p.259-264) MP 2667

Two-stream multilayer, spectral radiative transfer model for sea ice. Perovich, D.K., (1989, 17p.) CR 89-15

Passive microwave *in situ* observations of winter Weddell Sea ice. Comiso, J.C., et al. (1989, p.10,891-10,905) MP 2615

Year of Bowers ridge over the frozen Beaufort Sea. Anderson, E.L., (1989, p.12,721-12,724) MP 2598

Effect of ice pressure on marginal ice zone dynamics. Fiske, G.M., et al. (1989, p.514-521) MP 2522

Oceanic heat flux in the Fram Strait measured by a drifting buoy. Perovich, D.K., et al. (1989, p.995-998) MP 2531

Concurrent remote sensing of arctic sea ice from submarine and aircraft. Wadhams, P., et al. (1989, 29p.) MP 2697

Chemical and structural properties of sea ice in the southern Beaufort Sea. Meese, D.A., (1989, 134p.) CR 89-22

Estimating sea ice thickness using data from impulse radar soundings. Kovacs, A., et al. (1989, 16p.) CR 89-22

High frequency acoustical properties of saline ice. Jezek, K.C., et al. (1989, p.9-23) MP 2686

Sea ice thickness measurement. Kovacs, A., et al. (1989, p.394-424) MP 2693

Development of an airborne sea ice thickness measurement system and field test results. Kovacs, A., et al. (1989, 47p.) CR 89-19

Field studies of brackish ice to compare with satellite data. Weeks, W.F., et al. (1989, p.1318-1333) MP 2763

Measurement of sea ice thickness using electromagnetic induction. Holladay, J.S., et al. (1990, p.309-315) MP 2590

Physical properties of brackish ice, Bay of Barbara. Weeks, W.F., et al. (1990, p.5-15) MP 2725

Physical properties of sea ice from the Weddell Sea. Eicken, H., et al. (1990, p.28-32) MP 2727

Chemical and structural properties of sea ice in the southern Beaufort Sea. Meese, D.A., (1990, p.32-35) MP 2728

Acoustics and morphology of undeformed sea ice. Jezek, K.C., et al. (1990, p.67-75) MP 2730

Comparison of the compressive strength of antarctic frazil ice and laboratory-grown columnar ice. Richter-Menge, J.A., et al. (1990, p.79-84) MP 2731

Sea ice: a habitat for the foraminifer *Neogloboquadrina pachyderma*?. Dieckmann, G., et al. (1990, p.86-92) MP 2732

Lidar detection of leads in arctic sea ice. Schnell, R.C., et al. (1990, p.119-123) MP 2733

Wind-generated polynyas off the coasts of the Bering Sea islands. Kozo, T.L., et al. (1990, p.126-133) MP 2734

Recent measurements of sea ice topography in the eastern Arctic. Krabill, W.B., et al. (1990, p.133-134) MP 2735

Airborne sea ice thickness sounding. Kovacs, A., et al. (1990, p.225-229) MP 2737

Coalescing fixed sea ice model. Fiske, G.M., et al. (1990, p.230-242) MP 2738

Sea ice thickness versus response radar *[illegible]* data. Kovacs, A., et al. (1990, p.91-99) MP 2704

Radar backscatter measurements over saline ice. Gogineni, S., et al. (1990, p.603-617) MP 2741

Light reflection and transmission by sea ice covers. Perovich, D.K., (1990, p.9557-9567) MP 2771

Sea ice distribution

Ice dynamics, Canadian Archipelago as Indigenous Arctic basin. Kinnard, R.O., et al. (1975, p.455-477) MP [illegible]-85

Circulation and sediment distribution in Cook Inlet, Alaska. Gatto, L.W., (1976, p.205-222) MP 895

Sea ice roughness and floe geometry over continental shelves. Weeks, W.F., et al. (1977, p.32-41) MP 1163

Sea ice studies in the Weddell Sea region aboard *USCGC Burton Island*. Ackley, S.F., (1977, p.172 - [illegible]) MP 1414

Problems of offshore oil drilling in the Beaufort Sea. Weeks, G., et al. (1978, p.4-11) MP 1250

Sea ice ridging over the Alaskan continental shelf. Tucker, W.B., et al. (1979, 26p.) CR 79-04

Overview on the seasonal sea ice zone. Weeks, W.F., et al. (1979, p.320-337) MP 1329

Sea ice ridging over the Alaskan continental shelf. Tucker, W.B., et al. (1979, p.1695-1708) MP 1266

Mass-balance aspects of the Weddell Sea pack ice. Ackley, S.F. (1979, p.391-405) MP 1286

Problems of the seasonal sea ice zone. Weeks, W.F., (1980, p.1-35) MP 1393

Chemoclinoptilus from the Weddell Sea, summer 1977. Buck, K.R., (1980, 26p.) CR 80-16

Review of sea-ice weather relationships in the Southern Hemisphere. Ackley, S.F., (1981, p.127-154) MP 1436

Ice distribution and water surface circulation, Kachemak Bay, Alaska. Gatto, L.W., (1981, p.993-1001) MP 1442

Air-ice-ocean interaction in Arctic marginal ice zones. Wadhams, P., et al. (1981, 20p.) SR 81-03

Summer conditions in the Fram Strait area, 1952-75. Coachman, G.F.N., et al. (1981, p.799-808) MP 1457

Application of a numerical sea ice model to the East Greenland area. Tucker, W.B., (1981, 109p.) MP 1535

Dynamics of near-shore ice. Kovacs, A., et al. (1981, p.125-135) MP 1599

Ice distribution and winter circulation, Kachemak Bay, Alaska. Gatto, L.W., (1981, 45p.) CR 82-22

Modeling pressure ridge loading on the geophysical scale. Hibler, W.D., III, (1982, p.141-153) WP 1590

Ice growth and circulation in Kachemak Bay, Alaska. Daly, S.F., (1982, 91(C)1-(C)9) MP 1501

Ice distribution and water circulation, Kachemak Bay, Alaska. Gatto, L.W., (1982, p.421-435) MP 1549

Modeling fluctuations of arctic sea ice. Hibler, W.D., III, et al. (1982, p.1514-1522) MP 1579

Observations of pack ice properties in the Weddell Sea. Ackley, S.F., et al. (1982, p.165-106) MP 1407

Sea ice scour during the Weddell Sea Expedition. Ackley, S.F., et al. (1983, 6p. + 59p.) SR 83-2

Ice properties in the Greenland and Barents Seas during early summer. Overgaard, S., et al. (1983, p.142-156) MP 2061

Sea ice on the Norton Sound and adjacent Bering Sea coast. Kovacs, A., (1983, p.654-664) MP 1699

Size and shape of ice floes in the Baltic Sea in spring. [illegible]a, M., (1983, p.12[illegible]136) MP 2061

Offshore petroleum production in ice-covered waters. Wadhams, W.B., (1983, p.207-215) MP 2046

Spaceborne SAR and sea ice: a status report. Weeks, W.F., (1983, p.113-115) MP 2225

Antarctic sea ice microwave signatures. Comiso, J.C., et al. (1984, p.642-672) MP 1668

Modeling the marginal ice zone. Hibler, W.D., III, et al. (1984, 99p.) SR 84-07

Large-scale ice-ocean models for the marginal ice zone. Hibler, W.D., III, et al. (1984, p.1-7) MP 1775

On the decay and retreat of the ice cover in the eastern Weddell Sea. Martinec, G.A., (1984, p.15-22) MP 1786

Drag coefficient across the Antarctic marginal ice zone. Andreas, E.L., et al. (1984, p.63-71) MP 1781

Mechanisms for floe clustering in the marginal ice zone. Lavergnat, M., et al. (1984, p.[illegible]) MP 1785

Sea ice data buoys in the Weddell Sea. Ackley, S.F., et al. (1984, 12p.) CR 84-11

Role of sea ice dynamics in modeling CO2 increases. Hibler, W.D., III, (1984, p.238-253) MP 1749

Model simulation of 30 years of northern hemisphere sea-ice fluctuations. Walsh, J.E., et al. (1985, p.1[illegible]) MP 1787

Air-ice-ocean interaction: experiments in Arctic marginal ice zones. (1985, 56p.) SR 85-08

Short ice records and piling features, Beaufort Sea. Kovacs, A., (1984, 24p. + map) CR 84-24

Sea ice penetrators in the Arctic Ocean. Weeks, W.F., et al. (1984, p.37-45) MP 1963

Arctic sea ice and naval operations. Hibler, W.D., III, et al. (1984, p.91-91) MP 1994

Wind and convective advection over antarctic sea ice. Andreas, E.L., (1985, p.334-346) MP 1862

Airborne ocean measurements in Arctic marginal ice zones: MIZEX West. Wadhams, P., et al. (1985, 110p.) SR 85-06

Modeling sea ice dynamics. Hibler, W.D., III, (1985, p.569-579) MP 2061

Ice floe distributions in the wake of a simple wedge. Tuovinen, J.C., (1985, p.822-829) MP 2038

Ice cover seaward of the Arctic seas. Weeks, W.F., et al. (1986, p.59-64) MP 2117

MIZEX - a program for remote ice sensor-ocean interaction experiments in Arctic marginal ice zones. MIZEX bulletin 5, (1986, 84p.) SR 86-03

Large-scale sea ice modeling. Hibler, W.D. III, (1986, p.[illegible]-[illegible]) MP 2181

Variations of Arctic sea ice drafts. Tucker, W.B., et al. (1986, p.[illegible]-[illegible]) MP 2199

Alaska weather reporting radio (WAR) facility project. Carsey, F., et al. (1987, p.[illegible]-[illegible]) MP 2468

On modeling the convergence of the ridging process. Hibler, W.D., et al. (1988, p.[illegible]-[illegible]) MP 2403

Satellite remote sensing in Alaska. Weeks, W.F., et al. (1988, p.[illegible]-[illegible]) MP 2699

A.F. Weeks: Sea Ice Symposium, San Francisco, CA, Dec. 1988. Ackley, S.F., et al. (1988, 24p.) W 89-01

Snow cover effects on arctic sea ice thickness. Ackley, S.F., et al. (1989, p.16-21) MP 2726

Oceanic heat flux in the Fram Strait measured by a drifting buoy. Perovich, D.K., et al. (1989, p.[illegible]-[illegible]) MP 2749

Shear and tensile and open water in models of sea ice decay. Perovich, D.K., et al. (1989, p.242-256) MP 2789

Sea ice in the polar regions. Gow, A.J., et al. (1990, p.47-122) MP 2750

Sea level

Glaciology's grand unsolved problem. Weertman, J., (1974, p.224-226) MP 1056

Comparison of different sea level pressure analyses fields in the East Greenland Sea. Tucker, W.B., (1981, p.1064-1081) MP 1737

Sea spray

Ice accretion on ships. Itagaki, K., (1977, 22p.) SR 77-27

Assessment of ice accretion on offshore structures. Mank, L.D., (1984, 12p.) SR 84-06

Measurement of icing on offshore structures. Mank, L.D., (1985, p.267-292) MP 2016

Sea spray icing: a review of current models. Ackley, S.F., (1986, p.2[illegible]-[illegible]) MP 2163

Thermal and ice evolution of sea spray droplets. Andreas, E.L., (1989, 31p.) CR 89-11

Time constants for the evolution of sea spray droplets. Andreas, E.L., (1989, p.[illegible]-[illegible]) MP 2595

Sea water

Economic coal atlas of Alaska. Kirkham, C.W., et al. (1978, 95p.) MP 1206

Geochemistry of subsea permafrost at Prudhoe Bay, Alaska. Page, F.W., et al. (1978, 20p.) SR 78-14

Using sea ice to measure vertical heat flux in the ocean. McPhee, M.G., et al. (1982, p.2271-2074) MP 1521

Seasonality of vegetation, and soil loss to seawater spills, Alaska. Freeman, C.L., et al. (1981, 35p.) CR 83-24

Monitoring seasonal changes in surface temperature and salinity. Schlosser, P.W., et al. (1984, p.110-114) MP 2167

Oceanic heat flux in the Fram Strait measured by a drifting buoy. Perovich, D.K., et al. (1989, p.675-998) MP 2531

Oceanic heat flux in the Fram Strait measured by a drifting buoy. Perovich, D.K., et al. (1990, p.991-999) MP 2700

Sea water freezing

Sea ice in the polar regions. Gow, A.J., et al. (1980, p.47-122) MP 2707

Sealing

Wastewater rehabilitation pond linings. Middlebrooks, E.J., et al. (1978, 114p.) SR 78-20

SEASONAL FREEZE THAW

Foundations of structures in cold regions. Linell, K.A., (1969, 77p.) M 113-C6

Seasonal freeze thaw

Roads ice problems. Berg, R.L., et al. (1984, p.1-15) MP 1602

Preliminary investigation of cyclically frozen and thawed subgrade soils. Chamberlain, E.J., et al. (1977, p.225-251) MP 1174

Design of unbound pavement for seasonal frost and permanent frost areas. Berg, R.L., et al. (1979, 135p.) MP 1129

Resilient response of two frozen and thawed soils. Chamberlain, E.J., et al. (1979, p.257-271) MP 1176

Full-depth pavement considerations in seasonal frost areas. Eaton, R.A., et al. (1979, 24p.) MP 1108

Relationships between January temperatures and the winter regime in Germany. Rohlfs, M.A., et al. (1979, p.17-27) MP 1218

Hydrocarbon ice entrapment in frozen and subfreezing soils in Alaska. Secor, N., (1980, 31p.) CR 23-05

Instrumentation engineering, Yukon River-Prudhoe Bay Haul Road. Perron, J., et al. (1980, 127p.) CR 80-19

Haul road performance and associated investigations in Alaska. Berg, R.L., (1984, p.53-106) MP 1351

Tundra and workpad soils. Berg, R.L., et al. (1981, p.139-179) MP 1435

Pavement deflections and freezing and thawing. Chamberlain, E.J., (1981, 16p.) CR 81-15

Frost heaving of heated pavements and the permafrost table. Williams, P.J., et al. (1981, 16p.) CR 83-11

Revised procedure for pavement design under seasonal frost conditions. Berg, R.L., et al. (1986, 136p.) SR 86-17

Development and design of stable freezing beds. Martel, C.J., (1986, p.[illegible]-[illegible]) MP 1556

Seasonal variations

Seasonal variations in plant nutrients in Beaufort Sea. McCoy, R.D., et al. (1974, p.[illegible]-[illegible]) MP 904

Sea ice conditions in the Arctic. Weeks, W.F., (1974, p.[illegible]-[illegible]) MP 910

Drifting seasonal ice of Greenland sea. Langway, C.C., Jr., et al. (1977, p.[illegible]-[illegible]) MP 1004

Electromagnetic surveys of permafrost. Arcone, S.A., et al. (1984, 26p.) CR 84-23

Dynamics of the Weddell sea ice zone. Weeks, W.F., (1983, p.[illegible]-[illegible]) MP 1203

Passive microwaves of the seasonal sea ice zone. Parkinson, C.L., (1984, p.[illegible]-[illegible]) MP 1294

Numerical modeling of sea ice in the seasonal ice zone. Hibler, W.D., III, (1984, p.[illegible]-[illegible]) MP 1296

Road dust along the Haul Road, Alaska. Everett, K.R., (1984, p.[illegible]-[illegible]) MP 1352

Modeling a variable thickness sea ice cover. Hibler, W.D., III, (1984, p.[illegible]-[illegible]) MP 1436

Seasonal variations *(cont.)*
Seasonal growth and accumulation of N, P, and K by grass irrigated with wastes. Palazzo, A.J., (1981, p.64-68) MP 1425
Ocean circulation: its effect on seasonal sea-ice simulations. Hibler, W.D., III, et al, (1984, p 489-492) MP 1700
Numerical simulation of Northern Hemisphere sea ice variability, 1951-1980. Walsh, J.E., et al, (1985, p.4847-4865) MP 1882
Ground motion induced by an acoustic pulse, and its wintertime variations. Peck, L., (1988, p.361-385) MP 2597
Year of Bowen ratios over the frozen Beaufort Sea Andreas, E.L., (1989, p.12,721-12,724) MP 2508
Seasonal distribution of low flow events in New Hampshire streams with emphasis on the winter period. Melloh, R.A., (1990, p.47-53) MP 2681

Sediment transport
Influence of irregularities of the bed of an ice sheet on deposition rate of till. Nobles, L.H., et al, (1971, p 117-126) MP 1009
Permafrost and vegetation maps from ERTS imagery Anderson, D.M., et al, (1973, 75p) MP 1003
Baseline data on tidal flushing in Cook Inlet, Alaska. Gatto, L.W., (1973, 11p) MP 1523
Circulation and sediment distribution in Cook Inlet, Alaska Gatto, L.W., (1976, p 205-227) MP 895
Effect of open water disposal of dredged sediments. Blom, B.E., et al, (1976, 183p) MP 967
Baseline data on the oceanography of Cook Inlet, Alaska. Gatto, L.W., (1976, 84p) CR 76-25
Ice and navigation related sedimentation. Wuebben, J.L., et al, (1978, p 393-403) MP 1133
Sediments of the western Matanuska Glacier. Lawson, D.E., (1979, 112p.) CR 79-09
Pebble orientation ice and glacial deposits. Lawson, D.E., (1979, p.629-645) MP 1276
Distribution and features of bottom sediments in Alaskan coastal waters. Sellmann, P.V., (1980, 50p) SR 80-15
Sediment displacement in the Ottauquechee River—1975-1978. Martinson, C.R., (1980, 14p) SR 80-20
Diamictons at the margin of the Matanuska Glacier, Alaska. Lawson, D.E., (1981, p.78-84) MP 1462
Sediment load and channel characteristics in subarctic upland catchments Slaughter, C.W., et al, (1981, p 39-48) MP 1518
Subaerial sediment flow of the Matanuska Glacier, Alaska. Lawson, D.E., (1982, p 279-300) MP 1806
Shoreline erosion and shore structure damage on the St. Marys River. Wuebben, J.L., (1983, 36p.) SR 83-15
Tanana River monitoring and research studies near Fairbanks, Alaska. Neill, C.R., et al, (1984, 98p. + 5 appends) SR 84-37
Potential use of SPOT HRV imagery for analysis of coastal sediment plumes. Band, L.E., et al, (1984, p 199-204) MP 1744
Shoreline erosion processes: Orwell Lake, Minnesota Reid, J.R., (1984, 101p) CR 84-32
Use of remote sensing for the U.S Army Corps of Engineers dredging program. McKim, H.L., et al, (1985, p 1141-1150) MP 1890
Study of sea ice induced gouges in the sea floor Weeks, W.F., et al, (1985, p 126-135) MP 1917
Numerical simulation of sea ice induced gouges on the shelves of the polar oceans Weeks, W.F., et al, (1985, p.259-265) MP 1938
Data acquisition in USACRREL's flume facility. Daly, S.F., et al, (1985, p.1053-1058) MP 2089
Glaciers and sediment Bezinge, A., et al, (1986, p 53-69) MP 2154
Morphology, hydraulics and sediment transport of an ice-covered river. Lawson, D.E., et al, (1986, 37p) CR 86-11
Preliminary simulation of the formation and infilling of sea ice leads Weeks, W.F., et al, (1986, p.259-268) MP 2218
Effects of an ice cover on flow in a movable bed channel Wuebben, J.L., (1988, p.137-146) MP 2499
Detection of coarse sediment movement using radio transmitters. Chacho, E.F., Jr., et al, (1989, p 367-373(B)) MP 2752

Sedimentation
Baseline data on tidal flushing in Cook Inlet, Alaska Gatto, L.W., (1973, 11p) MP 1523
Estuarine processes and intertidal habitats in Grays Harbor, Washington, a demonstration of remote sensing techniques. Gatto, L.W., (1978, 79p) CR 78-18
Stratified debris in Antarctic ice cores Gow, A.J., et al, (1979, p 185-192) MP 1272
Removal of organics by overland flow Martel, C.J., et al, (1980, 9p) MP 1362
Deposits in the glacial environment Lawson, D.E., (1981, 16p.) CR 81-27
Pebble fabric in an ice-rafted diamicton Domack, E.W., et al, (1985, p 577-591) MP 1959
Glacigenic resedimentation related to mass-movement processes Lawson, D.E., (1989, p.147-169) MP 2472

SEDIMENTS
Patterned ground in Alaska Péwé, T.L., et al, (1969, 87p) MP 1180

Sediments
ERTS mapping of Arctic and subarctic environments Anderson, D.M., et al, (1974, 128p.) MP 1047
Environmental consequences of 1964 Alaska earthquake in Portage, Alaska. Ovenshine, A.T., et al, (1974, p.3-9) MP 2409
Placer River Silt—an intertidal deposit caused by the 1964 Alaska earthquake. Ovenshine, A.T., et al, (1976, p.151-162) MP 2410
Effect of temperature on the strength of frozen silt. Haynes, F.D., et al, (1977, 27p.) CR 77-03
Geochemistry of subsea permafrost at Prudhoe Bay, Alaska. Page, F.W., et al, (1978, 70p) SR 78-14
Direct filtration of streamborne glacial silt. Ross, M.D., et al, (1982, 17p) CR 82-23
Modifications of permafrost, East Oumalik, Alaska. Lawson, D.E., (1982, 33p.) CR 82-36
Ground ice in perennially frozen sediments, northern Alaska. Lawson, D.E., (1983, p 695-700) MP 1661
Bank recession of the Tanana River, Alaska. Gatto, L.W., (1984, 59p) MP 1746
Impact of dredging on water quality at Kewaunee Harbor, Wisconsin Iskandar, I.K., et al, (1984, 16p) CR 84-21
Techniques for measuring Hg in soils and sediments. Cragin, J.H., et al, (1985, 16p) SR 85-16
Explosives in soils and sediments Cragin, J.H., et al, (1985, 11p) CR 85-15
Tensile strength of frozen silt. Zhu, Y., et al, (1986, p.15-28) MP 1971

Seepage
Land treatment of wastewaters. Reed, S.C., et al, (1974, p 12-13) MP 1036
Land treatment of wastewaters for rural communities. Reed, S.C., et al, (1975, p.23-39) MP 1399
Reclamation of wastewater by application on land. Iskandar, I.K., et al, (1976, 15p.) MP 896
Wastewater renovation by a prototype slow infiltration land treatment system Iskandar, I.K., et al, (1976, 44p) CR 76-19
Treatment of primary sewage effluent by rapid infiltration. Satterwhite, M.B., et al, (1976, 15p) CR 76-49
Wastewater treatment at Calumet, Michigan Baillod, C.R., et al, (1977, p.489-510) MP 976
Wastewater treatment alternative needed. Iskandar, I.K., et al, (1977, p.82-87) MP 968
NO3-N in percolate water in land treatment Iskandar, I.K., et al, (1978, p 163-169) MP 1148
Nitrogen behavior in land treatment of wastewater: a simplified model Selim, H.M., et al, (1978, p 171-179) MP 1149
Wastewater stabilization pond linings. Middlebrooks, E.J., et al, (1978, 116p) SR 78-28
Energy requirements for small flow wastewater treatment systems. Middlebrooks, E.J., et al, (1979, 82p) SR 79-07
Energy requirements for small flow wastewater treatment systems. Middlebrooks, E.J., et al, (1979, 82p) SR 79-07
Water movement in a land treatment system of wastewater by overland flow Nakano, Y., et al, (1979, p.185-206) MP 1285
Land treatment systems and the environment McKim, H.L., et al, (1979, p.201-225) MP 1414
Cost of land treatment systems Reed, S.C., et al, (1979, 135p) MP 1387
Functional analysis of the problem of wetting fronts. Nakano, Y., (1980, p 314-318) MP 1307
Removal of organics by overland flow. Martel, C.J., et al, (1980, 9p) MP 1362
Energy and costs for agricultural reuse of wastewater Sletten, R.S., et al, (1980, p 339-346) MP 1401
Soil infiltration on land treatment sites Abele, G., et al, (1980, 41p) SR 80-36
Hydraulic characteristics of the Deer Creek Lake land treatment site during wastewater application Abele, G., et al, (1981, 37p) CR 81-07
Land treatment of wastewater Reed, S.C., (1982, p 91-123) MP 1947
Horizontal infiltration of water in porous materials Nakano, Y., (1982, p 156-166) MP 1840
Land application systems for wastewater treatment. Reed, S.C., (1983, 26p + figs) MP 1946
Analysis of infiltration results at a proposed North Carolina wastewater treatment site Abele, G., et al, (1984, 24p) SR 84-11
Problems with rapid infiltration—a post mortem analysis Reed, S.C., et al, (1984, 17p + figs) MP 1944
Nitrogen removal in cold regions trickling filter systems Reed, S.C., et al, (1986, 39p) SR 86-02
New approach for sizing rapid infiltration systems. Martel, C.J., (1988, p 211-215) MP 2323
New approach for sizing rapid infiltration systems (discussion and closure) Reed, S.C., et al, (1989, p 879-882) MP 2712

Seismic prospecting
Recent research on acoustic to seismic coupling Albert, D.G., (1987, p 223-225) MP 2416
Seismic and acoustic wave propagation working group report Albert, D.G., et al, (1987, p 253-255) MP 2419
Seismic/acoustic experiments at SNOW IV Peck, L., (1989, p.155-157) MP 2646

Seismic reflection
Hyperbolic reflections on Beaufort Sea seismic records. Neave, K.G., et al, (1981, 16p) CR 81-02

Seismic refraction
Seismic site characterization techniques, Münster Nord, FRG. Albert, D.G., (1982, 33p) CR 82-17
Subsea permafrost in Harrison Bay, Alaska. Neave, K.G., et al, (1982, 62p) CR 82-24
Seismic velocities and subsea permafrost in the Beaufort Sea, Alaska Neave, K.G., et al, (1983, p.894-898) MP 1665

Seismic surveys
Analysis of explosively generated ground motions using Fourier techniques. Blouin, S.E., et al, (1976, 86p.) CR 76-28
Creep rupture at depth in a cold ice sheet. Colbeck, S.C., et al, (1978, p.733) MP 1168
Sea ice north of Alaska. Kovacs, A., (1978, p.7-12) MP 1252
Geophysics in the study of permafrost. Scott, W.J., et al, (1979, p 93-115) MP 1266
Distribution and properties of subsea permafrost of the Beaufort Sea. Sellmann, P.V., et al, (1979, p.93-115) MP 1287
Features of permafrost beneath the Beaufort Sea. Sellmann, P.V., et al, (1980, p.103-110) MP 1344
Subsea permafrost in Harrison Bay, Alaska. Neave, K.G., et al, (1982, 62p) CR 82-24
Effects of snow on vehicle-generated seismic signatures Albert, D.G., (1984, p.83-109) MP 2074
Seismic surveys of shallow subsea permafrost Neave, K.G., et al, (1985, p 61-65) MP 1954

Seismic velocity
Surface-wave dispersion in Byrd Land Acharya, H.K., (1972, p 955-959) MP 992
Seismic exploration in cold regions. Roethlisberger, H., (1972, 138p.) M II-A2a
Delineation and engineering of subsea permafrost, Beaufort Sea. Sellmann, P.V., et al, (1981, p 137-156) MP 1600
Determining distribution patterns of ice-bonded permafrost in the U.S Beaufort Sea from seismic data. Neave, K.G., et al, (1984, p 237-258) MP 1839
Experimental and theoretical studies of acoustic-to-seismic coupling Albert, D.G., (1988, p 19-31) MP 2432
Observations of low-frequency acoustic-to-seismic coupling in the summer and winter Albert, D.G., et al, (1989, p 352-359) MP 2654

Seismology
Fluid dynamic analysis of volcanic tremor. Ferrick, M.G., et al, (1982, 12p) CR 82-32
Observations of volcanic tremor at Mount St. Helens volcano. Fehler, M., (1984, p.3476-3484) MP 1770
Effect of snow on vehicle-generated seismic signatures Albert, D.G., (1984, 24P.) CR 84-23
Review of methods for generating synthetic seismograms Peck, L., (1985, 39p.) CR 85-10
Effect of snow on vehicle-generated seismic signatures Albert, D.G., (1987, p 881-887) MP 2229
Acoustic-to-seismic coupling through a snow layer. Peck, L., (1987, p.47-55) MP 2294
Acoustically induced ground motion in sand under winter conditions. Peck, L., (1989, p 37-54) MP 2626

Sensor mapping
Use of SPOT HRV data in the Corps of Engineers dredging program. Merry, C.J., et al, (1988, p 1295-1299) MP 2528

Settlement (structural)
Piles in permafrost for bridge foundations. Crory, F.E., et al, (1967, 41p) MP 1411
Slumping failure of an Alaskan earth dam Collins, C.M., et al, (1977, 21p) SR 77-21
Kotzebue hospital—a case study Crory, F.E., (1978, p 342-359) MP 1084
Construction of an embankment with frozen soil Botz, J.J., et al, (1980, 105p) SR 80-21
Foundations on permafrost, US and USSR design and practice Fish, A.M., (1983, p.3-24) MP 1682
Creep of a strip footing on ice-rich permafrost Sayles, F.H., (1985, p 29-51) MP 1731
Partial verification of a thaw settlement model. Guymon, G.L., et al, (1985, p 18-25) MP 1924
Hydraulic properties of selected soils Ingersoll, J., et al, (1985, p.26-35) MP 1925
Physical changes in clays due to frost action Chamberlain, E.J., (1989, p 863-893) MP 2595

Sewage
Utilization of sewage sludge for terrain stabilization in cold regions Gaskin, D.A., et al, (1977, 45p) SR 77-37
Heat recovery from primary effluent using heat pumps Phetteplace, G., et al, (1985, p 199-203) MP 1978

SEWAGE DISPOSAL
Sewerage and sewage disposal in cold regions Alter, A.J., (1969, 106p) M III-C5b

Sewage disposal
Utility distribution systems in Iceland Aamot, H.W.C., (1976, 63p) SR 76-05
Utility distribution systems in Sweden, Finland, Norway and England Aamot, H.W.C., et al, (1976, 121p) SR 76-16

Wastewater treatment at Calumet, Michigan Baillod, C.R., et al, (1977, p 489-510) MP 976
Effects of wastewater and sludge on turfgrasses Palazzo, A J., (1978, 11p) SR 78-20
Sewage sludge for terrain stabilization, Part 2 Gaskin, D A., et al, (1979, 36p) SR 79-28
Utilization of sewage sludge for terrain stabilization in cold regions. Pt. 3. Rindge, S.D., et al, (1979, 33p.) SR 79-34
Revegetation at two construction sites in New Hampshire and Alaska. Palazzo, A.J., et al, (1980, 21p) CR 80-03
Sewage sludge aids revegetation. Palazzo, A J., et al, (1982, p.198-301) MP 1735

SEWAGE TREATMENT
Sewerage and sewage disposal in cold regions Alter, A J., (1969, 106p.) M III-C5b

Sewage treatment
Waste management in the north Rice, E., et al, (1974, p.14-21) MP 1048
Land treatment in relation to waste water disposal Howells, D.H., et al, (1976, p 60-62) MP 869
Rapid infiltration of primary sewage effluent at Fort Devens, Massachusetts Satterwhite, M B., et al, (1976, 34p) CR 76-48
Treatment of primary sewage effluent by rapid infiltration. Satterwhite, M.B., et al, (1976, 15p) CR 76-49
Land treatment of wastewater at West Dover, Vermont Bouzoun, J.R., (1977, 24p) SR 77-33
Wastewater treatment alternative needed Iskandar, I K., et al, (1977, p.82-87) MP 968
Land treatment present status, future prospects Pound, C.E., et al, (1978, p 98-102) MP 1417
Mass water balance during spray irrigation with wastewater at Deer Creek Lake land treatment site Abele, G., et al, (1978, 43p) SR 79-29
Cost of land treatment systems Reed, S C., et al, (1979, 135p) MP 1387
Development of a rational design procedure for overland flow systems Martel, C J., et al, (1982, 29p) CR 82-02
Energy conservation and water pollution control facilities Martel, C J., et al, (1982, 18p) SR 82-24
Restoration of acidic dredge soils with sewage sludge and lime. Palazzo, A.J., (1983, 11p) CR 83-28
Accumulation, characterization, and stabilization of sludges for cold regions lagoons. Schneiter, R.W., et al, (1984, 40p) SR 84-08
Primary effluent as a heat source for heat pumps. Phetteplace, G E., et al, (1988, p.141-146) MP 2445
Development and design of sludge freezing beds Martel, C.J., (1988, 49p) CR 88-20
Dewaterability of freeze-thaw conditional sludges Martel, C.J., (1989, p 237-241) MP 2616
Primary effluent as a heat source for heat pumps Phetteplace, G.E., et al, (1989, p 12-17) MP 2760

Shafts (excavations)
Heat transfer in a freezing shaft wall Liandi, F., (1986, 24p) CR 86-08

Shear flow
Effect of size on stresses in shear flow of granular materials, Pt.1. Shen, H.H., (1985, 18p) CR 85-02
Effect of size on stresses in shear flow of granular materials, Pt.2. Shen, H.H., (1985, 20p) CR 85-03
Constitutive relations for a planar, simple shear flow of rough disks. Shen, H.H., et al, (1985, 17p) CR 85-20

Shear properties
Mitigative and remedial measures for chilled pipelines in discontinuous permafrost Sayles, F H., (1984, p 61-62) MP 1974
Uplifting forces exerted by adfrozen ice on marine piles. Christensen, F T., et al, (1985, p 529-542) MP 1905

Shear strain
Dynamics of snow avalanches Mellor, M., (1978, p 753-792) MP 1070

SHEAR STRENGTH
Properties of snow Mellor, M., (1964, 105p) M III-A1
Mechanical properties of sea ice Weeks, W F., et al, (1967, 80p) M II-C3

Shear strength
Compressive and shear strengths of fragmented ice covers Cheng, S T., et al, (1977, 82p) MP 951
Field investigations of a hanging ice dam Beltaos, S., et al, (1982, p 475-488) MP 1533
How effective are icephobic coatings Minsk, L.D., (1983, p.93-95) MP 1634
Shear strength in the zone of freezing in saline soils Chamberlain, E J., (1985, p 566-574) MP 1879
Shear strength anisotropy in frozen saline and freshwater soils Chamberlain, E J., (1985, p 189-194) MP 1931
Vibration analysis of the Yamachiche lightpier Haynes, F.D., (1986, p 238-241) MP 1989
Ice properties in a grounded man-made ice island Cox, G F N., et al, (1986, p 135-142) MP 2032
Vibration analysis of the Yamachiche Lightpier Haynes, F.D., (1986, p 9-18) MP 2253
Ship model testing in level ice an overview Tatinclaux, J C., (1988, 30p.) Cr 88-15
Evaluation of shear strength of freshwater ice adhered to icephobic coatings Mulhern, N.D., (1990, p 149-154) MP 2578

Shear stress
Forces on an ice boom in the Beauharnois Canal Perham, R.E., et al, (1975, p.397-407) MP 858
Measuring the uniaxial compressive strength of ice. Haynes, F.D., et al, (1977, p 213-223) MP 1027
Effect of freeze-thaw cycles on resilient properties of fine-grained soils. Johnson, T.C., et al, (1978, 19p) MP 1082
Freeze thaw effect on resilient properties of fine soils Johnson, T.C., et al, (1979, p 247-276) MP 1226
Pressure waves in snow Brown, R.L., (1980, p 99-107) MP 1306
Measurement of the shear stress on the underside of simulated ice covers. Calkins, D J., et al, (1980, 11p) CR 80-24
Analysis of velocity profiles under ice in shallow streams. Calkins, D J., et al, (1981, p 94-111) MP 1397
Vehicle tests and performance in snow Berger, R H., et al, (1981, p.51-67) MP 1477
Shallow snow test results. Harrison, W L., (1981, p 69-71) MP 1478
Asymmetric flows application to flow below ice jams Göğüs, M., et al, (1981, p.342-350) MP 1733
Force distribution in a fragmented ice cover. Daly, S F., et al, (1982, p 374-387) MP 1531
Model study of Port Huron ice control structure, wind stress simulation Sodhi, D S., et al, (1982, 27p) CR 82-09
Flow velocity profiles in ice-covered shallow streams Calkins, D J., et al, (1982, p.236-247) MP 1540
Asymmetric plane flow with application to ice jams Tatinclaux, J C., et al, (1983, p 1540-1556) MP 1645
Force distribution in a fragmented ice cover. Stewart, D M., et al, (1984, 16p.) CR 84-07
Frost jacking forces on H and pipe piles embedded in Fairbanks silt Johnson, J.B., et al, (1985, p 125-133) MP 1930
Measurement of frost heave forces on H-piles and pipe piles Johnson, J B., et al, (1988, 49p.) CR 88-21

Shelters
Observations during BRIMFROST '83. Bouzoun, J R., et al, (1984, 36p.) SR 84-10

Ship icing
Ice accumulation on ocean structures Minsk, L.D., (1977, 42p.) CR 77-17
Ice accretion on ships Itagaki, K., (1977, 22p.) SR 77-27
Ice observation program on the semisubmersible drilling vessel SEDCO 708. Minsk, L D., (1984, 14p.) SR 84-02
Assessment of ice accretion on offshore structures Minsk, L.D., (1984, 12p.) SR 84-04
Sea spray icing: a review of current models Ackley, S.F., (1986, p 239-262) MP 2163
Evaluation of shear strength of freshwater ice adhered to icephobic coatings Mulhern, N.D., (1990, p.149-154) MP 2578

Ships
Arctic marine navigation and ice dynamics—summary findings Weeks, W.F., (1973, p 86-99) MP 2274
Towing ships through ice-clogged channels by warping and kedging Mellor, M., (1979, 21p.) CR 79-21
Ship resistance in thick brash ice Mellor, M., (1980, p.305-321) MP 1329
Vibrations caused by ship traffic on an ice-covered waterway Haynes, F D., et al, (1981, 27p.) CR 81-05
State of the art of ship model testing in ice Vance, G P., (1981, p 693-706) MP 1573
Effect of vessel size on shorelines along the Great Lakes channels Wuebben, J L., (1983, 62p.) SR 83-11
Boom for shipboard deployment of meteorological instruments Andreas, E.L., et al, (1983, 14p.) SR 83-28
Development of a river ice-prow Part 2 Tatinclaux, J C., (1988, p 44-52) MP 2497
Ship model testing in level ice an overview Tatinclaux, J C., (1988, 30p.) Cr 88-15

SHOCK WAVES
Explosions and snow Mellor, M., (1965, 34p.) M III-A3a

Shock waves
Ground pressures exerted by underground explosions Johnson, P R., (1978, p 284-290) MP 1520
Analysis of plastic shock waves in snow Brown, R.L., (1979, 14p.) CR 79-29
Pressure waves in snow Brown, R L., (1980, p 99-107) MP 1306
Analysis of non-steady plastic shock waves in snow Brown, R.L., (1980, p 279-287) MP 1354
Propagation of stress waves in alpine snow Brown, R L., (1980, p 235-243) MP 1367
Dynamic testing of free field stress gages in frozen soil Aitken, G W., et al, (1980, 26p.) SR 80-30
Blasting and blast effects in cold regions Part 1. Air blast Mellor, M., (1985, 62p.) SR 85-25
Blasting and blast effects in cold regions Part 2: underwater explosions Mellor, M., (1986, 56p.) SR 86-16
Techniques for gas gun studies of shock wave attenuation in snow Brown, J A., et al, (1988, p 657-660) MP 2543

Shore erosion
Historical shoreline changes along the outer coast of Cape Cod. Gatto, L.W., (1979, p 69-90) MP 1502
Aerial photointerpretation for shoreline changes. Gatto, L W., (1980, p.167-170) MP 1503
Shoreline erosion and shore structure damage on the St. Marys River. Wuebben, J.L., (1983, 36p.) SR 83-15
Erosion of perennially frozen streambanks. Lawson, D E., (1983, 22p.) CR 83-29
Shoreline erosion processes On... Lake, Minnesota. Reid, J.R., (1984, 101p.) CR 84-32
Erosion of northern reservoir shores. Lawson, D.E., (1985, 198p.) M 85-01
Bank conditions and erosion along selected reservoirs Gatto, L.W., et al, (1987, p.143-154) MP 2196
Techniques for measuring reservoir bank erosion. Gatto, L.W., (1988, 27p.) SR 88-03

Shoreline modification
Aerial photography of Cape Cod shoreline changes. Gatto, L.W., (1978, 49p.) CR 78-17
Estuarine processes and intertidal habitats in Grays Harbor, Washington a demonstration of remote sensing techniques Gatto, L W., (1978, 79p.) CR 78-18
Historical shoreline changes along the outer coast of Cape Cod Gatto, L.W., (1979, p 69-90) MP 1502
Coastal marine geology of the Beaufort, Chukchi and Bering Seas. Gatto, L W., (1980, 357p.) SR 80-05
Aerial photointerpretation for shoreline changes. Gatto, L.W., (1980, p 167-170) MP 1503
Bank erosion of U.S. northern rivers Gatto, L.W., (1982, 75p.) CR 82-11
Shoreline erosion and shore structure damage on the St Marys River. Wuebben, J.L., (1983, 36p.) SR 83-15

Shores
Ice pile-up and ride-up on Arctic and subarctic beaches. Kovacs, A., et al, (1979, p.127-146) MP 1230
Shore ice pile-up and ride-up field observations, models, theoretical analyses Kovacs, A., et al, (1980, p 209-298) MP 1295
Summer air temperature and precipitation in northern Alaska. Haugen, R.K., et al, (1980, p 403-412) MP 1439
Effect of vessel size on shorelines along the Great Lakes channels Wuebben, J.L., (1983, 62p.) SR 83-11
Sea ice on the Norton Sound and adjacent Bering Sea coast. Kovacs, A., (1983, p 654-666) MP 1699

Side looking radar
Sea ice roughness and floe geometry over continental shelves. Weeks, W.F., et al, (1977, p 32-41) MP 1163
Extraction of topography from side-looking satellite systems —a case study with SPOT simulation data Ungar, S G., et al, (1983, p.535-550) MP 1695

Signy Island
Soil properties of the International Tundra Biome sites Brown, J., et al, (1974, p 27-48) MP 1043

Simulation
Sea ice growth, drift, and decay Hibler, W D., III, (1980, p.141-209) MP 1298
Structure and dielectric properties at 4.8 and 9.5 GHz of saline ice Arcone, S.A., et al, (1986, p 14,281-14,303) MP 2182
Simulation of planar instabilities during solidification Sullivan, J M., Jr., et al, (1987, p 81-111) MP 2585
Simulation of district heating systems for piping design. Phetteplace, G., (1989, 27p.) MP 2746

Site accessibility
Site access for a subarctic research effort Slaughter, C.W., (1976, 13p.) CR 76-09
Site selection methodology for the land treatment of wastewater. Ryan, J R., et al, (1981, 74p.) SR 81-28

Site surveys
Numerical studies for an airborne VLF resistivity survey. Arcone, S A., (1977, 10p.) CR 77-05
Runway site survey, Pensacola Mountains, Antarctica Kovacs, A., et al, (1977, 45p.) SR 77-14
Remote sensing for land treatment site selection Merry, C J., (1978, p.107-119) MP 1146
Recommendations for implementing roof moisture surveys in the U S Army. (1978, 8p.) SR 78-01
Post occupancy evaluation of a planned community in Arctic Canada Bechtel, R B., et al, (1980, 27p.) SR 80-06
Remote sensing for earth dam site selection and construction materials Merry, C.J., et al, (1980, p 158-170) MP 1316
Post occupancy evaluation for communities in hot or cold regions Bechtel, R.B., et al, (1980, 57p.) SR 80-29
Introduction to abiotic components in tundra. Brown, J., (1981, p 79) MP 1432
Harbor design for ice conditions Wortley, C A., (1987, p 14-15) MP 2588
Investigations of dielectric properties of some frozen materials Arcone, S A., et al, (1989, 18p.) CR 89-04
Site-specific meteorology Bates, R E., et al, (1989, p 13-15) MP 2641

Skis
Ski friction and thermal response Warren, G C., et al, (1989, p 223-225) MP 2745
Thermal response of downhill skis Warren, G.C., et al, (1989, 40p.) CR 89-23

Sleds
Dynamic friction of bobsled runners on ice Huber, N P., et al, (1985, 26p.) MP 2082

Sleds *(cont.)*
Preliminary study of friction between ice and sled runners Itagaki, K., et al, (1987, p 297-301) MP 2358
Dynamic friction of a metal runner on ice I Model sled test Itagaki, K., et al, (1989, 17p) CR 89-14

Slope orientation
Snow load data analysis, winter 1976-77. O'Rourke, M., (1977, 9p + appends) MP 2427
Roof response to icing conditions Lane, J.W., et al, (1979, 40p) CR 79-17
Tundra soils on the Arctic Slope of Alaska. Everett, K.R., et al, (1982, p.264-280) MP 1552
Uniform snow loads on structures. O'Rourke, M J., et al, (1982, p 2781-2798) MP 1574
Analysis of roof snow load case studies, uniform loads O'Rourke, M., et al, (1983, 29p) CR 83-01

Slope processes
Drainage network of a subarctic watershed Bredthauer, S.R., et al, (1979, 9p.) SR 79-19
Shoreline erosion processes Orwell Lake, Minnesota Reid, J.R., (1984, 101p) CR 84-32
Erosion of northern reservoir shores Lawson, D.E., (1985, 198p) M 85-01

SLOPE STABILITY
Avalanches Mellor, M., (1968, 215p) M III-A3d

Slope stability
Pipeline haul road between Livengood and the Yukon River. Berg, R L., et al, (1976, 73p) SR 76-11

Slopes
Crude oil spills on subarctic permafrost in interior Alaska. Johnson, L.A., et al, (1980, 67p) CR 80-29
Antitank obstacles for winter use. Richmond, P W., (1988, 11p) SR 88-19
Hydraulic model of overland flow on grass covered slopes Adrian, D.D., et al, (1989, p 569-578) MP 2710

Sludges
Reclamation of acidic dredge soils with sewage sludge and lime. Palazzo, A J., (1977, 24p) SR 77-19
Municipal sludge management environmental factors Reed, S C., ed, (1977, Var p) MP 1406
Utilization of sewage sludge for terrain stabilization in cold regions. Gaskin, D.A., et al, (1977, 45p) SR 77-37
Sewage sludge for terrain stabilization, Part 2 Gaskin, D.A., et al, (1979, 36p) SR 79-28
Sewage sludge aids revegetation. Palazzo, A.J., et al, (1982, p.198-301) MP 1735
Engineering systems for wastewater treatment Lochr, R., et al, (1983, p 409-417) MP 1948
Wastewater treatment and reuse process for cold regions. Bouzoun, J.R., (1983, p 547-557) MP 2112
Restoration of acidic dredge soils with sewage sludge and lime Palazzo, A.J., (1983, 11p) CR 83-28
Accumulation, characterization, and stabilization of sludges for cold regions lagoons Schneiter, R W., et al, (1984, 40p) SR 84-08
Problems and opportunities with winter wastewater treatment. Reed, S.C., (1986, p 16-20) MP 2205
Treatment and disposal of alum and other metallic hydroxide sludges Reed, S C., et al, (1987, 40p + plates) SR 87-05
Rational design of sludge freezing beds Martel, C J., (1988, p.575-581) MP 2343
Developing a thawing model for sludge freezing beds Martel, C.J., (1988, p 1426-1430) MP 2372
Predicting freezing design depth of sludge-freezing beds Martel, C J., (1988, p 145-156) MP 2461
Development and design of sludge freezing beds Martel, C.J., (1988, 49p) CR 88-20
Dewaterability of freeze-thaw conditional sludges Martel, C.J., (1989, p 237-241) MP 2616
Thermal conductivity of sludges Vesilind, P A., et al, (1989, p 241-245) MP 2632
Development and design of sludge freezing beds Martel, C.J., (1989, p 799-808) MP 2556
Simple and economical thermal conductivity measurement system. Atkins, R.T., (1989, p 108-116) MP 2566
Sludge dewatering by natural freeze-thaw. Martel, C.J., (1990, p 116-122) MP 2714

Slush
Statistics of coarsening in water-saturated snow. Colbeck, S C., (1986, p.347-352) MP 2015

Small arms ammunition
Test of snow fortifications Farrell, D R., (1979, 15p) SR 79-33

Smoke generators
Propane dispenser for cold fog dissipation system. Hicks, J.R., et al, (1973, 38p) MP 1033
Field sampling of snow for chemical obscurants at SNOW-TWO/Smoke Week VI Cragin, J H., (1984, p 265-270) MP 2096
Snow chemistry of obscurants released during SNOW-TWO/Smoke Week VI Cragin, J.H., (1984, p 409-416) MP 1873

Snow
Study of water drainage from columns of snow. Denoth, A., et al, (1979, 19p.) CR 79-01
Dynamics of snow and ice masses Colbeck, S.C., ed, (1980, 468p) MP 1297
Instrumented vehicle for the measurement of mobility parameters. Blaisdell, G L., (1988, p 377-388) MP 2486

Snow accumulation
Snow accumulation for arctic freshwater supplies Slaughter, C W., et al, (1975, p.218-224) MP 860
Snow load data analysis, winter 1976-77 O'Rourke, M., (1977, 9p. + appends.) MP 2427
Role of research in developing surface protection measures for the Arctic Slope of Alaska. Johnson, P R., (1978, p 202-205) MP 1068
Surface protection measures for the Arctic Slope, Alaska. Johnson, P.R., (1978, p.202-205) MP 1519
Snow accumulation, distribution, melt, and runoff Colbeck, S.C., et al, (1979, p 465-468) MP 1233
Relationships between January temperatures and the winter regime in Germany Bilello, M A., et al, (1979, p.17-27) MP 1218
Extending the useful life of DYE-2 to 1986. Tobiasson, W., et al, (1980, 37p) SR 80-13
Shallow snow model for predicting vehicle performance. Harrison, W.L., (1981, 21p) CR 81-20
Climate of remote areas in north-central Alaska 1975-1979 summary. Haugen, R.K., (1982, 110p.) CR 82-35
Case study of land treatment in a cold climate—West Dover, Vermont. Bouzoun, J.R., et al, (1982, 96p) CR 82-44
Snow concentration and effective air density during snowfalls Mellor, M., (1983, p.505-507) MP 1769
Intensity of snowfall at the SNOW experiments Bates, R.E., et al, (1986, p 205-217) MP 2287
Snow mass concentration and precipitation rate Koh, G., et al, (1988, p 89-92) MP 2326
Snowfall amounts and snow depths in Germany and NE USA. Bates, R.E., et al, (1988, p.107-117) MP 2401
Snow concentration and precipitation rate measurements during SNOW IV Lacombe, J., (1989, p 25-29) MP 2643

Snow acoustics
Surface-wave dispersion in Byrd Land. Acharya, H.K., (1972, p 955-959) MP 992
Acoustic emissions in the investigation of avalanches St. Lawrence, W.F., (1977, p.VII/24-VII/33) MP 1630
Acoustic emission response in polycrystalline materials. St. Lawrence, W F., (1979, p 223-228) MP 1246
Acoustic emission response of snow. St. Lawrence, W.F., (1980, p.209-216) MP 1366
Snow Symposium, 1st, Hanover, NH, Aug. 1981. (1982, 324p) SR 82-17
Comparative near-millimeter wave propagation properties of snow or rain. Nemarich, J., et al, (1983, p 115-129) MP 1690
Detection of sound by persons buried under snow avalanche. Johnson, J.B., (1984, p.42-47) MP 1920
Audibility within and outside deposited snow. Johnson, J.B., (1985, p.136-142) MP 1960
Ground motion induced by an acoustic pulse, and its wintertime variations Peck, L., (1988, p 361-385) MP 2597
Proceedings (1989, 136p) SR 89-07
Observations of low-frequency acoustic-to-seismic coupling in the summer and winter. Albert, D G., et al, (1989, p 352-359) MP 2654
Acoustic pulse propagation above grassland and snow Albert, D G., et al, (1990, p 93-100) MP 2573

Snow air interface
Measurements of refractive index spectra over snow. Andreas, E.L., (1986, p 248-260) MP 2212
Theory for scalar roughness and transfer coefficients over snow and ice Andreas, E L., (1987, p.159-184) MP 2195
Spectral measurements in a disturbed boundary layer over snow. Andreas, E.L., (1987, p 1912-1939) MP 2254
On the micrometeorology of surface hoar growth on snow in mountainous area. Colbeck, S C., (1988, p.1-12) MP 2359
Thermal model for snow-covered terrain Petzko, D R., et al, (1989, p 25-36) MP 2625
Snow-surface temperature analysis Bates, R E., et al, (1989, p.109-116) MP 2753
Air movement in snow due to windpumping Colbeck, S C., (1989, p.209-213) MP 2562

Snow bearing strength
Mechanical properties of snow used as construction material Wuori, A.F., (1975, p 157-164) MP 1057
The strength of natural and processed snow. Abele, G., (1975, p 176-186) MP 1058
Study of piles installed in polar snow Kovacs, A., (1976, 132p) CR 76-23

Snow compaction
Mechanical properties of snow used as construction material Wuori, A.F., (1975, p 157-164) MP 1057
The strength of natural and processed snow Abele, G., (1975, p 176-186) MP 1058
Sintering and compaction of snow containing liquid water Colbeck, S C., et al, (1979, p.13-32) MP 1190
Compaction of wet snow on highways Colbeck, S C., (1979, p 14-17) MP 1234
Vehicle tests and performance in snow. Berger, R.H., et al, (1981, p 51-67) MP 1477
Predicting wheeled vehicle motion resistance in shallow snow Blaisdell G L., (1981, 18p) SR 81-30
Increased heat flow due to snow compaction: the simplistic approach Colbeck, S.C., (1983, p 227-229) MP 1693
Thermal measurements in snow. Jordan, R., et al, (1986, p.183-193) MP 2660
Improved techniques for construction of snow roads and airstrips. Lee, S.M., et al, (1988, 99p) SR 88-18
Compacted-snow runways: design and construction guidelines for Antarctica. Russell-Head, D.S., et al, (1989, 68p) SR 89-10

Snow composition
Composition and structure of South Pole snow crystals. Kumai, M., (1976, p 833-841) MP 853
Vanadium and other elements in Greenland ice cores. Herron, M.M., et al, (1976, 4p.) CR 76-24
Tracer movement through snow Colbeck, S.C., (1977, p 255-262) MP 1093
Atmospheric pollutants in snow cover runoff. Colbeck, S.C., (1981, p 1-10) MP 1586
Nitrogenous chemical composition of antarctic ice and snow Parker, B C., et al, (1981, p 79-81) MP 1541
Nitrate fluctuations in antarctic snow and firn Parker, B.C., et al, (1982, p 243-248) MP 1551
Chemical obscurant tests during winter, environmental fate. Cragin, J.H., (1982, 9p) SR 82-19
Field sampling of snow for chemical obscurants at SNOW-TWO/Smoke Week VI Cragin, J H., (1984, p 265-270) MP 2096
Snow chemistry of obscurants released during SNOW-TWO/Smoke Week VI. Cragin, J.H., (1984, p 409-416) MP 1873
Acidity of snow and its reduction by alkaline aerosols. Kumai, M., (1985, p.92-94) MP 2008
Low temperature effects on organophosphonates. Britton, K.B., (1986, 47 refs.) SR 86-38
Chemical properties of snow in the northeastern United States. Kumai, M., (1987, p (C1)625-(C1)630) MP 2232
Octanol-water partition coefficients for organophosphonates. Britton, K B., et al, (1988, 24p) SR 88-11
Does snow have ion chromatographic properties. Hewitt, A D., et al, (1989, p.165-171) MP 2755
Chemical migration in snowpack. Murphey, B.B., et al, (1989, p 282-286) MP 2757
Effect of aerosols on pH of snow. Kumai, M., (1990, p 17-30) MP 2675

Snow compression
Shallow snow performance of wheeled vehicles Harrison, W.L., (1976, p 589-614) MP 1130
Unconfined compression tests on snow: a comparative study. Kovacs, A., et al, (1977, 27p) SR 77-20
Compression of wet snow Colbeck, S C., et al, (1978, 17p.) CR 78-10
Effect of water content on the compressibility of snow-water mixtures Abele, G., et al, (1979, 26p) CR 79-02
Volumetric constitutive law for snow under strain. Brown, R.L., (1979, 13p) CR 79-20
Constitutive relation for the deformation of snow. St. Lawrence, W F., et al, (1981, p 3-14) MP 1370
Macroscopic view of snow deformation under a vehicle. Richmond, P.W., et al, (1981, 20p.) SR 81-17
Workshop on snow traction mechanics, 1979. Harrison, W.L., ed, (1981, 71p.) SR 81-16
Snow measurements in relation to vehicle performance. Harrison, W L., (1981, p 13-24) MP 1473
Techniques for gas gun studies of shock wave attenuation in snow Brown, J A., et al, (1988, p 657-660) MP 2543

SNOW (CONSTRUCTION MATERIAL)
Methods of building on permanent snowfields Mellor, M., (1968, 43p) M III-A2a
Investigation and exploitation of snowfield sites Mellor, M., (1969, 57p) M III-A2b
Foundations and subsurface structures in snow. Mellor, M., (1969, 54p) M III-A2c

Snow (construction material)
Mechanical properties of snow used as construction material. Wuori, A.F., (1975, p.157-164) MP 1057
The strength of natural and processed snow. Abele, G., (1975, p.176-186) MP 1058
Defensive works of subarctic snow. Johnson, P.R., (1977, 23p) CR 77-06
Role of research in developing surface protection measures for the Arctic Slope of Alaska. Johnson, P.R., (1978, p 202-205) MP 1068
Bullet penetration in snow Cole, D.M., et al, (1979, 23p) SR 79-25
Test of snow fortifications Farrell, D.R., (1979, 15p) SR 79-33
Snow fortifications as protection against shaped charge antitank projectiles Farrell, D R., (1980, 19p.) SR 80-11
Snow in the construction of ice bridges Coutermarsh, B A., et al, (1985, 12p) SR 85-18
Winter field fortification. Farrell, D., (1986, 50p) SR 86-25
Contribution of snow to ice bridges Coutermarsh, B.A., et al, (1987, p 133-137) MP 2192
Compacted-snow runways design and construction guidelines for Antarctica Russell-Head, D S., et al, (1989, 68p.) SR 89-10

SNOW COVER
Antarctic ice sheet. Mellor, M., (1961, 50p) M I-B1
Snow cover
ERTS mapping of Arctic and subarctic environments Anderson, D M., et al, (1974, 128p) MP 1047
Ecological investigations of the tundra biome in the Prudhoe Bay Region, Alaska Brown, J., ed, (1975, 215p.) MP 1053
Generation of runoff from subarctic snowpacks Dunne, T., et al, (1976, P.677-685) MP 883
Computer routing of unsaturated flow through snow. Tucker, W.B., et al, (1977, 44p) SR 77-10
Aerosols in Greenland snow and ice Kumai, M., (1977, p.341-350) MP 1725
Water resources by satellite. McKim, H L., (1978, p 164-169) MP 1090
Terminal ballistics in cold regions materials. Aitken, G W., (1978, 6p) MP 1182
Modeling snow cover runoff meeting, Sep 1978. Colbeck, S C., ed, (1979, 432p) SR 79-36
Winter surveys of the upper Susitna River, Alaska Bilello, M.A., (1980, 30p) SR 80-19
Impact fuse performance in snow (Initial evaluation of a new test technique). Aitken, G.W., et al, (1980, p 31-45) MP 1347
Snow cover characterization O'Brien, H W., et al, (1982, p 559-577) MP 1564
Landsat-4 thematic mapper (TM) for cold environments Gervin, J C., et al, (1983, p 179-186) MP 1651
Water supply and waste disposal on permanent snow fields Reed, S C., et al, (1984, p.401-413) MP 1714
Conventional land mines in winter Richmond, P W., (1984, 23p) SR 84-30
Explosive obscuration sub-test results at the SNOW-TWO field experiment. Ebersole, J F., et al, (1984, p 347-354) MP 1872
Permafrost, snow cover and vegetation in the USSR Bigl, S R., (1984, 128p.) SR 84-36
New method of measuring the snow-surface temperature Andreas, E.L., (1986, p.139-156) MP 2166
Intercomparison of snow cover liquid water measurement techniques Boyne, H.S., et al, (1987, p 167-172) MP 2262
History of snow-cover research. Colbeck, S C., (1987, p 60-65) MP 2316
Kinetic friction of snow Colbeck, S C., (1988, p 78-86) MP 2339
On the pressure drop through a uniform snow layer Yen, Y.C., (1988, 10p) CR 88-14
Chemical migration in snowpack. Murphey, B.B., et al, (1989, p 282-286) MP 2757
Snow cover and glacier variations Colbeck, S C., ed, (1989, 111p) MP 2672
Sea ice thickness versus impulse radar time-of-flight data Kovacs, A., et al, (1990, p 91-98) MP 2704
SNOW COVER DISTRIBUTION
Characteristics of the cold regions Gerdel, R W., (1969, 51p.) M I-A
Snow cover distribution
Red and near-infrared spectral reflectance of snow O'Brien, H.W., et al, (1975, p 345-360) MP 872
Snow accumulation, distribution, melt, and runoff Colbeck, S C., et al, (1979, p 465-468) MP 1233
Snow cover mapping in northern Maine using LANDSAT Merry, C.J., et al, (1979, p 197-198) MP 1510
Snowpack estimation in the St John River basin Power, J.M., et al, (1980, p 467-486) MP 1799
Snow cover and meteorology at Allagash, Maine, 1977-1980 Bates, R., (1983, 49p) SR 83-20
Snow characterization at SNOW-ONE-B Berger, R H., et al, (1983, p 155-195) MP 1847
Using Landsat data for snow cover vegetation mapping Merry, C J., et al, (1984, p II(140)-II(144)) MP 1975
Regional and seasonal variations in snow-cover density in the U.S.S.R. Bilello, M.A., (1984, 70p) CR 84-22
Overview of meteorological and snow cover characterization at SNOW-TWO Bates, R.E., et al, (1984, p 171-191) MP 1868
Dielectric measurements of snow cover Burns, B A., et al, (1985, p 829-834) MP 1913
Use of Landsat for snow cover mapping, Saint John River basin, Maine Merry, C J et al, (1987 68p) CR 87-08
Snow properties and processes Colbeck, S C., (1987, p 145-150) MP 2413
Snow cover effect
Carbon dioxide dynamics on the Arctic tundra Coyne, P.I., et al, (1971, p 48-52) MP 903
Abiotic overview of the Tundra Biome Program, 1971 Weller, G., et al, (1971, p 173-181) MP 906
Effect of snow cover on obstacle performance of vehicles Hanamoto, B., (1976, p 121-140) MP 933
Projectile and fragment penetration into ordinary snow Swinzow, G.K., (1977, 30p) MP 1750
Snow and snow cover in military science Swinzow, G K., (1978, p I-239-I-262) MP 926
Application of energetics to vehicle trafficability problems Brown, R L., (1981, p 25-38) MP 1474
Prediction methods for vehicle traction on snow Harrison, W.L., (1981, p 39-46) MP 1475
Field investigations of vehicle traction in snow. Harrison, W L., (1981, p 47-48) MP 1476
Shallow snow test results Harrison, W.L., (1981, p 69-71) MP 1478
Near-infrared reflectance of snow-covered substrates O'Brien, H.W., et al, (1981, 17p) CR 81-21
Vechicle mobility and snowpack parameters Berger, R.H., (1983, 26p) CR 83-16
Progress in methods of measuring the free water content of snow Fisk, D J., (1983, p 48-51) MP 1649
Helicopter snow obscuration sub-test. Ebersole, J F., (1984, p.359-376) MP 2094
Detection of sound by persons buried under snow avalanche. Johnson, J.B., (1984, p 42-47) MP 1920
Constraints and approaches in high latitude natural resource sampling and research. Slaughter, C.W., et al, (1984, p 41-46) MP 2013
Effects of snow on vehicle-generated seismic signatures Albert, D G., (1984, p 83-109) MP 2074
Change in orientation of artillery-delivered anti-tank mines in snow Bigl, S R., (1984, 20p) CR 84-20
Effect of snow on vehicle-generated seismic signatures Albert, D.G., (1984, 24P) CR 84-23
Review of antitank obstacles for winter use Richmond, P W., (1984, 12p) CR 84-25
Water supply and waste disposal in Greenland and Antarctica Reed, S.C., et al, (1985, p 344-350) MP 1792
Audibility within and outside deposited snow. Johnson, J B., (1985, p 136-142) MP 1960
Meteorological and snow cover measurements at Grayling, Michigan. Bates, R.E., et al, (1985, p.212-229) MP 2176
Measurement and evaluation of tire performance under winter conditions Blaisdell, G L., (1985, p 198-228) MP 2387
Winter tire tests 1980-81 Blaisdell, G.L., et al, (1985, p 135-151) MP 2045
Field demonstration of traction testing procedures. Blaisdell, G L., (1985, p.176) MP 2046
Mine detection in cold regions using short-pulse radar. Arcone, S A., (1985, 16p) SR 85-23
Spectra and cospectra of atmospheric turbulence over snow Andreas, E L., (1986, p.219-233) MP 2661
Utilization of Unmanned Aerial Vehicles in the ALBE Thrust Greeley, H P., et al, (1986, p 249-257) MP 2663
Effect of snow on vehicle-generated seismic signatures. Albert, D.G., (1987, p 881-887) MP 2229
Proceedings of the 6th Snow Symposium, Hanover, NH, 1986. (1987, 207p) SR 87-12
Acoustic-to-seismic coupling through a snow layer Peck, L., (1987, p 47-55) MP 2294
Spectral measurements in a disturbed boundary layer over snow. Andreas, E L., (1987, 41p) CR 87-21
Obscuration and background dynamics in and over snow Hogan, A W., (1987, p 181-185) MP 2417
Recent research on acoustic to seismic coupling. Albert, D G., (1987, p 223-225) MP 2418
Seismic and acoustic wave propagation working group report. Albert, D G., et al, (1987, p.253-255) MP 2419
Vehicle mobility over snow. Blaisdell, G L., (1987, p 265-266) MP 2420
Arctic mobility problems Abele, G., (1987, p 267-269) MP 2421
Estimating Cn square over snow and sea ice from meteorological quantities. Andreas, E L., (1988, p 258-267) MP 2440
Estimating Cn square over snow and sea ice from meteorological data Andreas, E L., (1988, p 481-495) MP 2393
Experimental and theoretical studies of acoustic-to-seismic coupling Albert, D G., (1988, p 19-31) MP 2432
Overview of obscuration in the cold environment Berger, R.H., et al, (1988, p 537-555) MP 2609
Antitank obstacles for winter use Richmond, P W., (1988, 11p) SR 88-19
Using the Ground Emplaced Mine Scattering System in winter Richmond, P.W., et al, (1988, 13p) SR 88-27
SNOW III WEST field experiment report Volume I. Lacombe, J., et al, (1988, 170p) SR 88-28
Radar backscatter in snow at millimeter wave frequencies Berger, R.H., et al, (1989, p 133-136) MP 2631
Wheeled versus tracked vehicle snow mobility test program Green, C E., et al, (1989, 19p) MP 2715
Snow cover effects on antarctic sea ice thickness Ackley, S F., et al, (1990, p 16-21) MP 2726
Snow cover stability
Instrument for determining snow properties related to trafficability Parrott, W H., et al, (1972, p.193-204) MP 886
Acoustic emissions in the investigation of avalanches St Lawrence, W.F., (1977, p VII'24-VII'33) MP 1630
Dynamics of snow avalanches Mellor, M., (1978, p 753-792) MP 1070
Snow studies associated with the sideways move of DYE-3. Tobiasson, W., (1979, p 117-124) MP 1312
Snow cover structure
Water percolation through homogeneous snow Colbeck, S C., et al, (1973, p 242-257) MP 1025
Physical aspects of water flow through snow Colbeck S C., (1978, p 165-206) MP 1566
Water flow through heterogeneous snow. Colbeck, S C., (1979, p.37-45) MP 1219
Acoustic emission response in polycrystalline materials. St. Lawrence, W F., (1979, p 223-228) MP 1246
Constitutive relation for the deformation of snow St Lawrence, W.F., et al, (1981, p.3-14) MP 1370
Overview of seasonal snow metamorphism. Colbeck, S C., (1982, p 45-61) MP 1500
Increased heat flow due to snow compaction: the simplistic approach. Colbeck, S C., (1983, p 227-229) MP 1693
Observations of the backscatter from snow at millimeter wavelengths. Berger, R H., et al, (1986, p 311-316) MP 2665
SNOW CREEP
Properties of snow. Mellor, M., (1964, 105p) M III-A1
Snow crust
Growth of faceted crystals in a snow cover. Colbeck, S.C., (1982, 19p) CR 82-29
Snow crystal growth
Growth of faceted crystals in a snow cover Colbeck, S C., (1982, 19p) CR 82-29
Theory of metamorphism of dry snow Colbeck, S C., (1983, p.5475-5482) MP 1603
Snow characterization at SNOW-ONE-B. Berger, R.H., et al, (1983, p.155-195) MP 1847
Comments on the metamorphism of snow. Colbeck, S.C., (1983, p.149-151) MP 1650
Comments on "Theory of metamorphism of dry snow" by S C. Colbeck. Sommerfeld, R A., (1984, p.4963-4965) MP 1800
What becomes of a winter snowflake Colbeck, S C., (1985, p 312-215) MP 2060
Some observations on the character of snow. Townsend, R A., et al, (1987, p 48-53) MP 2397
Metamorphism and classification of seasonal snow crystals Colbeck, S C., (1987, p 3-34) MP 2438
Snow crystal growth at varying surface temperatures. Colbeck, S C., (1989, p 23-29) MP 2634
Snow crystal nuclei
Composition and structure of South Pole snow crystals Kumai, M., (1976, p 833-841) MP 853
Snow crystal structure
Grain clusters in wet snow. Colbeck, S C., (1979, p.371-384) MP 1267
Volumetric constitutive law for snow. Brown, R L., (1980, p.161-165) MP 1803
Snow crystal habit. Koh, G., et al, (1982, p 181-216) MP 1561
Airborne snow and fog distributions Berger, R.H., (1982, p 217-223) MP 1562
Geometry and permittivity of snow at high frequencies Colbeck, S.C., (1982, p 4495-4500) MP 1545
Meteorology and observed snow crystal types during the SNOW-ONE experiment. Bilello, M.A., (1982, p.59-75) MP 1983
Snow Symposium, 2nd, 1982. (1983, 295p) SR 83-04
Atmospheric conditions and snow crystal observations during SNOW-ONE-A. Bilello, M A., et al, (1983, p 3-18) MP 1754
Visible propagation in falling snow as a function of mass concentration and crystal type Lacombe, J., et al, (1983, p 103-111) MP 1757
Snow particle morphology in the seasonal snow cover Colbeck, S C., (1983, p 602-609) MP 1688
Snow characterization at SNOW-ONE-B. Berger, R H., et al, (1983, p 155-195) MP 1847
Snow Symposium, 3rd, Hanover, NH, Aug 1983, Vol 1 (1983, 241p) SR 83-31
New classification system for the seasonal snow cover Colbeck, S.C., (1984, p 179-181) MP 1921
Performance of microprocessor-controlled snow crystal replicator. Koh, G., (1984, p 107-111) MP 1866
Approach to snow propagation modeling Koh, G., (1984, p 247-259) MP 1869
Forward-scattering corrected extinction by nonspherical particles Bohren, C F., et al, (1984, p 261-271) MP 1870
Forward-scattering corrected extinction by nonspherical particles. Bohren, C F., et al, (1985, p 1023-1029) MP 1958
Temperature dependence of the equilibrium form of ice Colbeck, S C., (1985, p 726-732) MP 1939
What becomes of a winter snowflake Colbeck, S C (1985, p 312-215) MP 2060
Classification of seasonal snow cover crystals Colbeck, S C., (1986, p 59S-70S) MP 2164
Impact of wet snow on visible, infrared and millimeter wave attenuation Bates, R E., et al, (1988, p 523-535) MP 2608
Application of aerosol physics to snow research Hogan, A W., (1989, p 201-207) MP 2756
Snow crystal characterization. Koh, G., (1989, p 17-23) MP 2642
Snow crystals
Elemental compositions and concentrations of microspherules in snow and pack ice from the Weddell Sea Kumai, M., et al, (1983, p 128-131) MP 1777
Scavenging of infrared screener EA 5763 by falling snow Cragin J H., et al, (1987, p 13-20) MP 2292

Snow crystals *(cont.)*
Does snow have ion chromatographic properties Hewitt, A D , et al, (1989, p 165-171) MP 2755
Snow crystal characterization. Koh, G , (1989, p.17-23) MP 2642

Snow deformation
Compressibility characteristics of compacted snow. Abele, G , et al, (1976, 47p) CR 76-21
Thermodynamic deformation of wet snow Colbeck, S C , (1976, 9p.) CR 76-44
Acoustic emissions in the investigation of avalanches. St Lawrence, W.F., (1977, p VII/24-VII/33) MP 1630
Regelation and the deformation of wet snow. Colbeck, S C , et al, (1978, p 639-650) MP 1172
Effect of water content on the compressibility of snow-water mixtures Abele, G , et al, (1979, 26p) CR 79-02
Acoustic emission response in polycrystalline materials. St Lawrence, W.F., (1979, p 223-228) MP 1246
Volumetric constitutive law for snow under strain Brown, R L., (1979, 13p) CR 79-20
Analysis of plastic shock waves in snow Brown, R L , (1979, 14p.) CR 79-29
Volumetric constitutive law for snow Brown, R.L , (1980, p 161-165) MP 1803
Constitutive relation for the deformation of snow St Lawrence, W F., et al, (1981, p.3-14) MP 1370
Macroscopic view of snow deformation under a vehicle. Richmond, P.W , et al, (1981, 20p) SR 81-17
Firn quake (a rare and poorly explained phenomenon) Den-Hartog, S.L., (1982, p 173-174) MP 1571

SNOW DENSITY
Greenland ice sheet Bader, H., (1961, 18p) M I-B2

Snow density
Mesoscale measurement of snow-cover properties Bilello, M.A., et al, (1973, p 624-643) MP 1029
Compressibility characteristics of compacted snow. Abele, G , et al, (1976, 47p) CR 76-21
Update on snow load research at CRREL. Tobiasson, W., et al, (1977, p.9-13) MP 1142
Defensive works of subarctic snow Johnson, P.R., (1977, 23p) CR 77-06
Projectile and fragment penetration into ordinary snow Swinzow, G.K , (1977, 30p) MP 1750
Effect of water content on the compressibility of snow-water mixtures Abele, G , et al, (1979, 26p) CR 79-02
Snowpack optical properties in the infrared Berger, R H , (1979, 16p) CR 79-11
Pressure waves in snow Brown, R.L , (1980, p 99-107) MP 1306
Analysis of non-steady plastic shock waves in snow. Brown, R L , (1980, p 279-287) MP 1354
Propagation of stress waves in alpine snow. Brown, R L , (1980, p 235-243) MP 1367
Ice characteristics in Whitefish Bay and St Marys River in winter. Vance, G P., (1980, 27p) SR 80-32
Investigation of the snow adjacent to Dye-2, Greenland Ueda, H.T., et al, (1981, 23p) SR 81-03
Review of thermal properties of snow, ice and sea ice Yen, Y.-C., (1981, 27p) CR 81-10
Macroscopic view of snow deformation under a vehicle Richmond, P.W., et al, (1981, 20p) SR 81-17
Snow cover characterization O'Brien, H W , et al, (1982, p 559-577) MP 1564
Geometry and permittivity of snow at high frequencies. Colbeck, S C , (1982, p 4495-4500) MP 1545
Permeability of a melting snow cover Colbeck, S C , et al, (1982, p 904-908) MP 1565
Deceleration of projectiles in snow Albert, D G , et al, (1982, 29p) CR 82-20
Utilization of the snow field test series results for development of a snow obscuration primer. Ebersole, J F , et al, (1983, p 209-217) MP 1692
Regional and seasonal variations in snow-cover density in the U.S S R Bilello, M A , (1984, 70p) CR 84-22
International Conference on Snow Engineering, 1st, July 1988 (1989, 573p) SR 89-06
Comparative studies of the winter climate at selected locations in Europe and the United States Bates, R.E , et al, (1989, p 283-293) MP 2598
Friction loss through a uniform snow layer. Yen, Y C , (1990, p 83-90) MP 2703

Snow depth
Some effects of air cushion vehicle operations on deep snow. Abele, G., et al, (1972, p 214-241) MP 887
Mesoscale measurement of snow-cover properties Bilello, M A , et al, (1973, p 624-643) MP 1029
Analysis of snow water equivalent using LANDSAT data Merry, C J , et al, (1977, 16 leaves) MP 1113
Snow cover mapping in northern Maine using LANDSAT Merry, C.J , et al, (1979, p 197-198) MP 1510
Ice characteristics in Whitefish Bay and St Marys River in winter. Vance, G P , (1980, 27p) SR 80-32
Shallow snow test results Harrison, W L., (1981, p 69-71) MP 1478
Predicting wheeled vehicle motion resistance in shallow snow Blaisdell, G L , (1981, 18p) SR 81-30
Snow cover characterization O'Brien, H W , et al, (1982, p 559-577) MP 1564
Northwest snowstorm of 15 16 December 1981 Bates, R E , (1983, p 19 34) MP 1755
Growth of black ice, snow ice and snow thickness, subarctic basins Leppäranta, M , (1983, p 59-70) MP 2063
Regional and seasonal variations in snow-cover density in the U S.S R Bilello, M A , (1984, 70p) CR 84-22
Use of Landsat for snow cover mapping, Saint John River basin, Maine. Merry, C.J., et al, (1987, 68p) CR 87-08
Field observations of mine detection in snow using UHF short-pulse radar Arcone, S A , et al, (1987, 24p) SR 87-19
Vehicle mobility over snow Blaisdell, G.L., (1987, p 265-266) MP 2420
Snowfall amounts and snow depths in Germany and NE USA. Bates, R E , et al, (1988, p 107-117) MP 2401
Roof design in cold regions Tobiasson, W , (1989, p 462-472) MP 2613
Perspective ground loads and mapping Tobiasson, W , (1989, p.512-513) MP 2614
Comparative studies of the winter climate at selected locations in Europe and the United States. Bates, R.E , et al, (1989, p 283-293) MP 2598
Sea ice thickness versus impulse radar time-of-flight data Kovacs, A , et al, (1990, p.91-98) MP 2704

Snow elasticity
Review of the propagation of inelastic pressure waves in snow Albert, D.G , (1983, 26p.) CR 83-13

Snow electrical properties
Engineering properties of snow. Mellor, M., (1977, p 15-66) MP 1015
Dielectric constant and reflection coefficient of snow surface layers in the McMurdo Ice Shelf Kovacs, A., et al, (1977, p.137-138) MP 1011
Liquid distribution and the dielectric constant of wet snow. Colbeck, S C , (1980, p 21-39) MP 1349
Geometry and permittivity of snow at high frequencies Colbeck, S C , (1982, p 4495-4500) MP 1545
Geometry and permittivity of snow. Colbeck, S C , (1982, p.113-131) MP 1985
Progress in methods of measuring the free water content of snow Fisk, D J , (1983, p.48-51) MP 1649
Use of radio frequency sensor for snow/soil moisture water content measurement McKim, H L., et al, (1983, p 33-42) MP 1689
Snow-cover characterization: SADARM support O'Brien, H , et al, (1984, p 409-411) MP 2095
Dielectric measurements of snow cover Burns, B A , et al, (1985, p 829-834) MP 1913

SNOW FENCES
Blowing snow Mellor, M., (1965, 79p) M III-A3c

Snow fences
Computer simulation of the snowmelt and soil thermal regime at Barrow, Alaska Outcalt, S I , et al, (1975, p 709-715) MP 857
Snowdrift control at ILS facilities in Alaska. Calkins, D.J , (1976, 41p) MP 914
Hydraulic model investigation of drifting snow Wuebben, J L., (1978, 29p) CR 78-16

Snow hardness
Snow cover characterization O'Brien, H W , et al, (1982, p 559-577) MP 1564

Snow heat flux
Increased heat flow due to snow compaction, the simplistic approach. Colbeck, S C., (1983, p 227-229) MP 1693
Thermal convection in snow. Powers, D J , et al, (1985, 61p) CR 85-09
Field observations of thermal convection in a subarctic snow cover. Johnson, J.B , et al, (1987, p 105-118) MP 2439
Snow as a thermal background Jordan, R , et al, (1989 p 5-24) MP 2624
Thermal model for snow-covered terrain Petzko, D R , et al, (1989, p 25-36) MP 2625

Snow hydrology
Effects of radiation penetration on snowmelt runoff hydrographs Colbeck, S C , (1976, 9p) CR 76-11
On the use of tensiometers in snow hydrology. Colbeck, S.C , (1976, p 135-140) MP 843
Energy balance and runoff from a subarctic snowpack. Price, A G , et al, (1976, 29p) CR 76-27
Short-term forecasting of water run-off from snow and ice Colbeck, S C , (1977, p 571-588) MP 1067
Physical aspects of water flow through snow Colbeck, S C., (1978, p 165-206) MP 1566
Snow, ice and frozen ground research at the Sleepers River, VT Pangburn, T., et al, (1984, p 229-240) MP 2071
History of snow-cover research Colbeck, S C , (1987, p 60-65) MP 2316
Snow properties and processes Colbeck, S C , (1987, p 145-150) MP 2413
Snow hydrology in the upper Yamuna basin, India Malhotra, R V , et al, (1988, p 84-93) MP 2633

Snow ice
Growth of black ice, snow ice and snow thickness subarctic basins Leppäranta, M , (1983, p 59-70) MP 2063

Snow ice interface
Alcohol calorimetry for measuring the liquid water fraction of snow Fisk, D J , (1987, p 164-166) MP 2261

Snow impurities
Engineering properties of snow. Mellor, M., (1977, p.15-66) MP 1015
Atmospheric pollutants in snow cover runoff. Colbeck, S C , (1981, p.1-10) MP 1586
Atmospheric pollutants in snow cover runoff. Colbeck, S.C , (1981, p.1383-1388) MP 1487
Nitrate fluctuations in antarctic snow and firn Parker, B C., et al, (1982, p 243-248) MP 1551
Evaporation of chemical agents from ice and snow. Leggett, D C , (1988, 10p) CR 88-03
Chemical migration in snowpack. Murphey, B B., et al, (1989, p 282-286) MP 2757

Snow loads
Snow load design criteria for the United States Tobiasson, W., et al, (1976, p 70-72) MP 947
Update on snow load research at CRREL. Tobiasson, W., et al, (1977, p 9-13) MP 1142
Methodology used in generation of snow load case histories. McLaughlin, D., et al, (1977, p.163-174) MP 1143
Roof loads resulting from rain-on-snow. Colbeck, S C., (1977, 19p.) CR 77-12
Snow load data analysis, winter 1976-77. O'Rourke, M., (1977, 9p. + appends) MP 2427
Roof loads resulting from rain on snow. Colbeck, S C., (1977, p 482-490) MP 982
Snow loads on structures O'Rourke, M.J., (1978, p 418-428) MP 1801
Loading on the Hartford Civic Center roof before collapse. Redfield, R , et al, (1979, 32p) SR 79-09
Impact fuse performance in snow (Initial evaluation of a new test technique). Aitken, G W , et al, (1980, p 31-45) MP 1347
New 2 and 3 inch diameter CRREL snow samplers Bates, R.E , et al, (1980, p 199-200) MP 1430
Uniform snow loads on structures. O'Rourke, M.J., et al, (1982, p 2781-2798) MP 1574
Ground snow loads for structural design Ellingwood, B., et al, (1983, p.950-964) MP 1734
Atmospheric icing of structures Minsk, L.D., ed, (1983, 366p) SR 83-17
Probability models for annual extreme water-equivalent ground snow. Ellingwood, B., et al, (1984, p.1153-1159) MP 1823
Secondary stress within the structural frame of DYE-3 1978-1983 Ueda, H T , et al, (1984, 44p) SR 84-26
Proposed code provisions for drifted snow loads O'Rourke, M., et al, (1986, p 2080-2092) MP 2148
Environments and standards for military operation. Opitz, B K , et al, (1987, 137p) MP 2309
International Conference on Snow Engineering, 1st, July 1988 (1989, 573p) SR 89-06
Changes coming in snow load design criteria Tobiasson, W , (1989, p 413-418) MP 2612
Perspective ground loads and mapping Tobiasson, W., (1989, p 512-513) MP 2614
Changes coming in snow load design criteria Tobiasson, W., (1989, p 918-920) MP 2650

SNOW MECHANICS
Explosions and snow. Mellor, M , (1965, 34p) M III-A3a

Snow mechanics
Mechanical properties of snow used as construction material. Wuori, A.F , (1975, p.157-164) MP 1057
Study of piles installed in polar snow. Kovacs, A , (1976, 132p) CR 76-23
Shallow snow performance of wheeled vehicles Harrison, W.L , (1976, p 589-614) MP 1130
Ice and snow at high altitudes. Mellor, M , (1977, 10p) MP 1121
Engineering properties of snow. Mellor, M , (1977, p 15-66) MP 1015
Axial double point-load tests on snow and ice Kovacs, A., (1978, 11p) CR 78-01
Sintering and compaction of snow containing liquid water Colbeck, S C., et al, (1979, p.13-32) MP 1190
Volumetric constitutive law for snow Brown, R L , (1980, p 161-165) MP 1803
Analysis of non-steady plastic shock waves in snow Brown, R L , (1980, p 279-287) MP 1354
Workshop on snow traction mechanics, 1979 Harrison, W.L., ed, (1981, 71p) SR 81-16
Modelling a snowdrift by means of activated clay particles Anno, Y., (1985, p 48-52) MP 2007
Comparison of snow cover liquid water measurement techniques Boyne, H S , et al, (1987, p 1833-1836) MP 2283
Vibration analysis of a DEW Line station. Haynes, F.D., et al, (1988, p 1513-1518) MP 2341
Overview of obscuration in the cold environment Berger, R H et al, (1988, p 537-555) MP 2609
International Conference on Snow Engineering, 1st, July 1988 (1989, 573p) SR 89-06

Snow melting
Spread of cetyl-1-C14 alcohol on a melting snow surface. Meiman, J R , et al, (1966 p 5-8) MP 876
Short-term forecasting of water run-off from snow and ice. Colbeck, S C , (1977, p 571-588) MP 1067
Permeability of a melting snow cover Colbeck, S C., et al, (1982, p.904-908) MP 1565

Free water measurements of a snowpack Fisk, D J., (1983, p.173-176) MP 1758

Snow morphology

Snow particle morphology in the seasonal snow cover Colbeck, S.C., (1983, p 602-609) MP 1688

Snow optics

Red and near-infrared spectral reflectance of snow O'Brien, H.W., et al, (1975, p.345-360) MP 872

Engineering properties of snow. Mellor, M., (1977, p 15-66) MP 1015

Observations of the ultraviolet spectral reflectance of snow. O'Brien, H.W., (1977, 19p) CR 77-27

Snowpack optical properties in the infrared. Berger, R.H., (1979, 16p) CR 79-11

Snow crystal habit Koh, G., et al, (1982, p.181-216) MP 1561

Snow Symposium, 1st, Hanover, NH, Aug. 1981. (1982, 324p) SR 82-17

Problems in snow cover characterization O'Brien, H.W., (1982, p.139-147) MP 1987

Snow Symposium, 2nd, 1982 (1983, 295p) SR 83-04

Atmospheric conditions and snow crystal observations during SNOW-ONE-A. Bilello, M.A., et al, (1983, p 3-18) MP 1754

Visible propagation in falling snow as a function of mass concentration and crystal type Lacombe, J., et al, (1983, p.103-111) MP 1757

Performance and optical signature of an AN/VVS-1 laser rangefinder in falling snow. Preliminary test results Lacombe, J., (1983, p.253-266) MP 1759

Chemical obscurant tests during winter: Environmental fate. Cragin, J.H., (1983, p 267-272) MP 1760

Utilization of the snow field test series results for development of a snow obscuration primer Ebersole, J.F., et al, (1983, p 209-217) MP 1692

Snow-cover characterization SADARM support. O'Brien, H., et al, (1984, p 409-411) MP 2095

Measurements of refractive index spectra over snow Andreas, E.L., (1986, p 248-260) MP 2212

Scattering at mm wavelengths from *in situ* snow. Walsh, J., et al, (1986, p 1.6.1-1 6 2) MP 2141

Ice and snow optics in the polar oceans, Pt 1. Perovich, D.K., et al, (1986, p.232-241) MP 2255

Ice and snow optics in the polar oceans, Pt 2 Grenfell, T.C., et al, (1986, p 242-251) MP 2256

Optical snow precipitation gauge Koh, G., et al, (1987, p 26-31) MP 2259

Two-stream approximation to radiative transfer in falling snow. Koh, G., (1988, p 463-470) MP 2604

Increased transmission through brass obscurant clouds during snowfall. Hewitt, A.D., et al, (1988, p 489-496) MP 2605

Snow-smoke interaction. Hogan, A.W., et al, (1988, p 497-506) MP 2607

Proceedings (1989, 136p) SR 89-07

Optical technique for characterizing precipitation Koh, G., (1989, p 71-76) MP 2627

Model of smoke concentration reduction due to scavenging by snow. Hutt, D.L., et al, (1989, p 87-98) MP 2628

Light transmission through smoke screens in falling snow Farmer, W.M., et al, (1989, p 99-111) MP 2629

Radiative transfer in falling snow a two-stream approximation Koh, G., (1989, 10p) CR 89-06

Application of aerosol physics to snow research. Hogan, A.W., (1989, p 201-207) MP 2756

Physical and optical properties of falling snow Koh, G., (1989, 22p) CR 89-16

Motion detection systems under winter conditions Peck, L., (1989, 8p) CR 89-17

Snow permeability

Spread of cetyl-1-C14 alcohol on a melting snow surface. Meiman, J.R., et al, (1966, p 5-8) MP 876

Water percolation through homogeneous snow Colbeck, S.C., et al, (1973, p 242-257) MP 1025

Analysis of water flow in dry snow. Colbeck, S.C., (1976, p 523-527) MP 871

Physical aspects of water flow through snow Colbeck, S.C., (1978, p 165-206) MP 1566

Permeability of a melting snow cover Colbeck, S.C., et al, (1982, p 904-908) MP 1565

Friction loss through a uniform snow layer Yen, Y.C., (1990, p 83-90) MP 2703

SNOW PHYSICS

Snow as a material Bader, H., et al, (1962, 79p) M II-B

Snow and ice on the earth's surface. Mellor, M., (1964, 163p) M II-C1

Properties of snow Mellor, M., (1964, 105p) M III-A1

Foundations and subsurface structures in snow Mellor, M., (1969, 54p) M III-A2c

Snow physics

Ice and snow at high altitudes Mellor, M., (1977, 10p) MP 1121

Grain clusters in wet snow Colbeck, S.C., (1979, p 371-384) MP 1267

Propagation of stress waves in alpine snow. Brown, R.L., (1980, p 235-243) MP 1367

Overview of seasonal snow metamorphism Colbeck, S.C., (1982, p 45-61) MP 1500

Geometry and permittivity of snow. Colbeck, S.C., (1982, p.113-131) MP 1985

Problems in snow cover characterization O'Brien, H.W., (1982, p 139-147) MP 1987

Workshop on the Properties of Snow, 1981 Brown, R.L., ed, (1982, 135p) SR 82-18

Snow Symposium, 2nd, 1982 (1983, 295p) SR 83-04

Snow Symposium, 3rd, Hanover, NH, Aug 1983, Vol.1. (1983, 241p) SR 83-31

Comparative near-millimeter wave propagation properties of snow or rain Nemarich, J., et al, (1983, p 115-129) MP 1690

SNOW-TWO data report Volume 2. System performance. Jordan, R., ed, (1984, 417p.) SR 84-20

Snow Symposium, 4th, Hanover, NH, Vol.1 (1984, 433p) SR 84-35

Overview of meteorological and snow cover characterization at SNOW-TWO Bates, R.E., et al, (1984, p 171-191) MP 1868

Discrete reflections from thin layers of snow and ice Jezek, K.C., et al, (1984, p.323-331) MP 1871

Climatic factors in cold regions surface conditions Bilello, M.A., (1985, p 508-517) MP 1961

Experiments on thermal convection in snow. Powers, D., et al, (1985, p.43-47) MP 2006

Meteorological and snow cover measurements at Grayling, Michigan. Bates, R.E., et al, (1985, p 212-229) MP 2176

Theory of natural convection in snow. Powers, D., et al, (1985, p 10,641-10,649) MP 1957

Proceedings, Vol.1 (1986, 369p) SR 86-15

Observations of the backscatter from snow at millimeter wavelengths Berger, R.H., et al, (1986, p 311-316) MP 2665

Comments on the characteristics of *in situ* snow at millimeter wavelengths Walsh, J., et al, (1986, p 317-320) MP 2666

Proceedings of the 6th Snow Symposium, Hanover, NH, 1986 (1987, 207p) SR 87-12

Preview of the SNOW-III West data base Lacombe, J., (1987, p 3-11) MP 2291

Heat conduction in a medium with variable properties Yen, Y.-C., (1987, 18p) CR 87-19

Snow properties and processes. Colbeck, S.C., (1987, p 145-150) MP 2413

Compacted-snow runways design and construction guidelines for Antarctica. Russell-Head, D.S., et al, (1989, 68p.) SR 89-10

Physical and optical properties of falling snow Koh, G., (1989, 22p) CR 89-16

Snow plasticity

Seismic exploration in cold regions Roethlisberger, H., (1972, 138p) M II-A2a

SNOW REMOVAL

Snow removal and ice control Mellor, M., (1965, 37p) M III-A3b

Snow removal

Computer model of municipal snow removal Tucker, W.B., (1977, 7p) CR 77-30

Current research on snow and ice removal in the United States Minsk, L.D., (1978, p 21-22) MP 1199

Compaction of wet snow on highways Colbeck, S.C., (1979, p 14-17) MP 1234

Systems study of snow removal Minsk, L.D., (1979, p 220-225) MP 1237

Computer simulation of urban snow removal Tucker, W.B., et al, (1979, p 293-302) MP 1238

Snow removal equipment Minsk, L.D., (1981, p 648-670) MP 1446

Snow and ice control on railroads, highways and airports Minsk, L.D., et al, (1981, p 671-706) MP 1447

Strategies for winter maintenance of pavements and roadways Minsk, L.D., et al, (1984, p.155-167) MP 1964

Snow and ice prevention in the United States Minsk, L.D., (1986, p 37-42) MP 1874

Concentration and flux of wind-blown snow. Mellor, M., et al, (1986, 16p) SR 86-11

Military snow removal problems Minsk, L.D., (1987, p 452-453) MP 2268

Snow roads

Mechanical properties of snow used as construction material Wuori, A.F., (1975, p 157-164) MP 1057

The strength of natural and processed snow Abele, G., (1975, p 176-186) MP 1058

Surface protection measures for the Arctic Slope, Alaska Johnson, P.R., (1978, p 202-205) MP 1519

Snow and ice roads in the Arctic Johnson, P.R., (1979, p 1063-1071) MP 1223

Snow pads for pipeline construction in Alaska Johnson, P.R., et al, (1980, 28p) CR 80-17

Hard surface runways in Antarctica Mellor, M., (1988, 87p) SR 88-13

Improved techniques for construction of snow roads and airstrips Lee, S.M., et al, (1988, 99p) SR 88-18

Improving snow roads and airstrips in Antarctica Lee, S.M., et al, (1989, 18p.) SR 89-22

Snow samplers

New 2 and 3 inch diameter CRREL snow samplers Bates, R.E., et al, (1980, p.199-200) MP 1430

Snow slides

Cold regions roof design. Tobiasson, W., (1987, p 457-458) MP 2243

Roof design in cold regions Tobiasson, W., (1989, p.462-472) MP 2613

Changes coming in snow load design criteria Tobiasson, W., (1989, p 918-920) MP 2650

Roof design in cold regions Tobiasson, W., (1989, p 1029-1037) MP 2651

Snow stratigraphy

Water flow through heterogeneous snow Colbeck, S.C., (1979, p.37-45) MP 1219

SNOW STRENGTH

Properties of snow. Mellor, M., (1964, 105p) M III-A1

Investigation and exploitation of snowfield sites Mellor, M., (1969, 57p) M III-A2b

Snow strength

Instrument for determining snow properties related to trafficability. Parrott, W.H., et al, (1972, p 193-204) MP 886

Effect of temperature on the strength of snow-ice Haynes, F.D., (1978, 25p) CR 78-27

Snow studies associated with the sideways move of DYE-3. Tobiasson, W., (1979, p 117-124) MP 1312

Snow fortifications as protection against shaped charge antitank projectiles Farrell, D.R., (1980, 19p.) SR 80-11

Pressure waves in snow Brown, R.L., (1980, p 99-107) MP 1306

Extending the useful life of DYE-2 to 1986 Tobiasson, W., et al, (1980, 37p) SR 80-13

Snow pads for pipeline construction in Alaska Johnson, P.R., et al, (1980, 28p) CR 80-17

Investigation of the snow adjacent to Dye-2, Greenland. Ueda, H.T., et al, (1981, 23p) SR 81-03

Prediction methods for vehicle traction on snow. Harrison, W.L., (1981, p.39-46) MP 1475

Vehicle tests and performance in snow Berger, R.H., et al, (1981, p 51-67) MP 1477

Trailing-tire motion resistance in shallow snow. Blaisdell, G.L., (1987, p 296-304) MP 2248

Snow surface

Spread of cetyl-1-C14 alcohol on a melting snow surface Meiman, J.R., et al, (1966, p.5-8) MP 876

Dielectric constant and reflection coefficient of snow surface layers in the McMurdo Ice Shelf Kovacs, A., et al, (1977, p 137-138) MP 1011

Measurement of snow surfaces and tire performance evaluation. Blaisdell, G.L., et al, (1982, 7p) MP 1516

Chemical obscurant tests during winter, environmental fate. Cragin, J.H., (1982, 9p) SR 82-19

Firn quake (a rare and poorly explained phenomenon) Den-Hartog, S.L., (1982, p 173-174) MP 1571

Roughness and transfer coefficients over snow and sea ice. Andreas, E.L., (1986, 19p) CR 86-09

Theory for scalar roughness and transfer coefficients over snow and ice Andreas, E.L., (1987, p.159-184) MP 2195

Scientific challenges at the poles Welch, J.P., et al, (1987, p 23-26) MP 2228

Spectral measurements in a disturbed boundary layer over snow Andreas, E.L., (1987, p 1912-1939) MP 2254

On the micrometeorology of surface hoar growth on snow in mountainous area Colbeck, S.C., (1988, p.1-12) MP 2359

Snow surface temperature

New method for measuring the snow-surface temperature. Andreas, E.L., (1984, p 161-169) MP 1867

Snow as a thermal background Jordan, R., et al, (1989, p.5-24) MP 2624

Thermal model for snow-covered terrain. Petzko, D.R., et al, (1989, p 25-36) MP 2625

Snow crystal growth at varying surface temperatures Colbeck, S.C., (1989, p 23-29) MP 2634

Snow-surface temperature analysis Bates, R.E., et al, (1989, p 109-116) MP 2753

Snow survey tools

Snowpack profile analysis using extracted thin sections. Harrison, W.L., (1982, 15p) SR 82-11

Snow surveys

Snow and ice Colbeck, S.C., et al, (1975, p 435-441, 475-487) MP 844

Catalog of Snow Research Projects (1975, 103p) MP 1129

Notes and quotes from snow and ice observers in Alaska. Bilello, M.A., (1979, p 116-118) MP 1631

Focus on U.S. snow research Colbeck, S.C., (1979, p 41-52) MP 1261

Snow and the organization of snow research in the United States Colbeck, S.C., (1979, p 55-58) MP 1262

Snow Symposium, 1st, Hanover, NH, Aug 1981. (1982, 324p) SR 82-17

Workshop on the Properties of Snow, 1981 Brown, R.L., ed, (1982, 135p) SR 82-18

Bibliography on glaciers and permafrost, China, 1938-1979. Shen, J., ed, (1982, 44p) SR 82-20

Proceedings of the Symposium on Applied Glaciology, 2nd, 1982 (1983, 314p) MP 2054

Snow cover and meteorology at Allagash, Maine, 1977-1980. Bates, R., (1983, 49p.) SR 83-20

Snow surveys *(cont.)*
Regional and seasonal variations in snow-cover density in the U.S.S.R. Bilello, M A., (1984, 70p) CR 84-22
Topical databases Cold Regions Technology on-line Liston, N., et al, (1985, p.12-15) MP 2027
Techniques for measurement of snow and ice on freshwater. Adams, W P, et al, (1986, p 174-222) MP 2000
Remote sensing of ice and snow (review) Jezek, K C., (1987, p 51) MP 2429
Corps of Engineers research in the Arctic. Smallidge, P.D., et al, (1987, p.81-87) MP 2411
Snow properties and processes Colbeck, S C, (1987, p 145-150) MP 2413
Snow/ice/frozen ground properties, working group report. Sterrett, K.F, et al, (1987, p 163-166) MP 2416
Snow cover and glacier variations Colbeck, S C., ed, (1989, 111p) MP 2672
Cold regions weather data systems Bates, R E, et al, (1989, p.139-145) MP 2568

Snow temperature
Mesoscale measurement of snow-cover properties Bilello, M A, et al, (1973, p 624-643) MP 1029
Computer simulation of the snowmelt and soil thermal regime at Barrow, Alaska Outcalt, S I, et al, (1975, p.709-715) MP 857
Compressibility characteristics of compacted snow. Abele, G., et al, (1976, 47p) CR 76-21
On the temperature distribution in an air-ventilated snow layer. Yen, Y.-C, (1982, 10p) CR 82-05
New method of measuring the snow-surface temperature Andreas, E.L., (1986, p 139-156) MP 2166
Thermal measurements in snow. Jordan, R, et al, (1986, p 183-193) MP 2660

Snow thermal properties
Analysis of water flow in dry snow Colbeck, S C., (1976, p 523-527) MP 871
Engineering properties of snow Mellor, M, (1977, p 15-66) MP 1015
Thermodynamics of snow metamorphism due to variations in curvature Colbeck, S C, (1980, p 291-301) MP 1368
Review of thermal properties of snow, ice and sea ice Yen, Y.-C., (1981, 27p) CR 81-10
Snow calorimetric measurement at SNOW-ONE Fisk, D, (1982, p 133-138) MP 1986
Thermal convection in snow. Powers, D J, et al, (1985, 61p) CR 85-09
Field observations of thermal convection in a subarctic snow cover. Johnson, J B, et al, (1987, p 105-118) MP 2439
Proceedings, (1989, 136p) SR 89-07
Snow as a thermal background. Jordan, R, et al, (1989, p 5-24) MP 2624
Thermal model for snow-covered terrain. Petzko, D.R, et al, (1989, p 25-36) MP 2625
Heat conduction in snow. Yen, Y C, (1989, p 21-32) MP 2546
Air movement in snow due to windpumping Colbeck, S.C., (1989, p 209-213) MP 2562

SNOW VEHICLES
Oversnow transport Mellor, M, (1963, 58p, plus appends) M III-A4

Snow vehicles
Effect of snow cover on obstacle performance of vehicles Hanamoto, B., (1976, p 121-140) MP 933

Snow water content
Water percolation through homogeneous snow Colbeck, S C, et al, (1973, p 242-257) MP 1025
Analysis of water flow in dry snow. Colbeck, S C, (1976, p 523-527) MP 871
Compression of wet snow Colbeck, S C, et al, (1978, 17p) CR 78-10
Difficulties of measuring the water saturation and porosity of snow Colbeck, S C, (1978, p 189-201) MP 1124
Effect of water content on the compressibility of snow-water mixtures Abele, G, et al, (1979, 26p) CR 79-02
Liquid distribution and the dielectric constant of wet snow Colbeck, S C, (1980, p 21-39) MP 1349
Overview of seasonal snow metamorphism Colbeck, S C, (1982, p 45-61) MP 1500
Snow calorimetric measurement at SNOW-ONE Fisk, D, (1982, p 133-138) MP 1986
Free water measurements of a snowpack Fisk D J, (1983, p 173-176) MP 1758
Snow particle morphology in the seasonal snow cover. Colbeck, S C, (1983, p 602-609) MP 1688
Progress in methods of measuring the free water content of snow Fisk, D J, (1983, p 48-51) MP 1649
Landsat-4 thematic mapper (TM) for cold environments. Gervin, J.C., et al, (1983, p 179-186) MP 1651
Use of radio frequency sensor for snow soil moisture water content measurement McKim, H L, et al, (1983, p 33-42) MP 1689
New classification system for the seasonal snow cover Colbeck, S C, (1984, p 179-181) MP 1921
Statistics of coarsening in water-saturated snow Colbeck, S C., (1986, p.347-352) MP 2015
Liquid water mass fraction of snow measured by alcohol solution Fisk, D J, (1986, p 538-541) MP 2245
Alcohol calorimetry for measuring the liquid water fraction of snow Fisk, D.J., (1987, p 163-166) MP 2261
Intercomparison of snow cover liquid water measurement techniques Boyne, H S, et al, (1987, p 167-172) MP 2262
Metamorphism and classification of seasonal snow crystals Colbeck, S C, (1987, p 3-34) MP 2438
Field observations of thermal convection in a subarctic snow cover Johnson, J B, et al, (1987, p.105-118) MP 2439
Comparison of snow cover liquid water measurement techniques Boyne, H.S, et al, (1987, p 1833-1836) MP 2283

Snow water equivalent
Analysis of snow water equivalent using LANDSAT data. Merry, C J., et al, (1977, 16 leaves) MP 1113
Landsat data for watershed management. Cooper, S, et al, (1977, c150p) MP 1114
Landsat data analysis for New England reservoir management. Merry, C.J, et al, (1978, 61p) SR 78-06
Snow cover mapping in northern Maine using LANDSAT. Merry, C.J, et al, (1979, p.197-198) MP 1510
New 2 and 3 inch diameter CRREL snow samplers Bates, R E., et al, (1980, p.199-200) MP 1430
Snowpack estimation in the St John River basin Power, J M., et al, (1980, p 467-486) MP 1799
Ground snow loads for structural design Ellingwood, B, et al, (1983, p 950-964) MP 1734
Snow cover and meteorology at Allagash, Maine, 1977-1980 Bates, R., (1983, 49p) SR 83-20
Use of Landsat data for predicting snowmelt runoff in the upper Saint John River basin. Merry, C J, et al, (1983, p 519-533) MP 1694
Snow Symposium, 3rd, Hanover, NH, Aug 1983. Vol 1 (1983, 241p) SR 83-31
Hydrologic forecasting using Landsat data Merry, C.J, et al, (1983, p 159-168) MP 1691
Probability models for annual extreme water-equivalent ground snow. Ellingwood, B, et al, (1984, p 1153-1159) MP 1823
Snow, ice and frozen ground research at the Sleepers River, VT. Pangburn, T, et al, (1984, p.229-240) MP 2071
Intensity of snowfall at the SNOW experiments Bates, R E, et al, (1986, p 205-217) MP 2287
Use of Landsat for snow cover mapping, Saint John River basin, Maine Merry, C J, et al, (1987, 68p) CR 87-08

SNOWDRIFTS
Blowing snow Mellor, M, (1965, 79p) M III-A3c

Snowdrifts
Snowdrift control at ILS facilities in Alaska Calkins, D J., (1976, 41p) MP 914
Snow load data analysis, winter 1976-77 O'Rourke, M., (1977, 9p + appends) MP 2427
Surface protection measures for the Arctic Slope, Alaska Johnson, P.R., (1978, p 202-205) MP 1519
Hydraulic model investigation of drifting snow. Wuebben, J L, (1978, 29p) CR 78-16
Modelling a snowdrift by means of activated clay particles. Anno, Y., (1985, p 48-52) MP 2007
Concentration and flux of wind-blown snow Mellor, M, et al, (1986, 16p) SR 86-11
Proposed code provisions for drifted snow loads O'Rourke, M, et al, (1986, p.2080-2092) MP 2148
Changes coming in snow load design criteria Tobiasson, W., (1989, p 413-418) MP 2612

Snowfall
Midwinter temperature regime and snow occurrence in Germany Bilello, M A, et al, (1978, 56p) CR 78-21
Synoptic meteorology during the SNOW-ONE field experiment Bilello, M.A, (1981, 55p) SR 81-27
SNOW-ONE-A, Data report Aitken, G W, ed, (1982, 641p) SR 82-08
Synoptic weather conditions during snowfall, Dec 1981-Feb 1982. Bilello, M A, (1982, p 9-42) MP 1559
Meteorology Bates, R E., (1982, p.43-180) MP 1560
Snow crystal habit Koh, G, et al, (1982, p 181-216) MP 1561
Measurements of airborne-snow concentration Lacombe, J, (1982, p 225-281) MP 1563
Snow cover characterization O'Brien, H W, et al, (1982, p 559-577) MP 1564
Snow Symposium, 1st, Hanover, NH, Aug 1981, (1982, 324p) SR 82-17
Airborne-Snow Concentration Measuring Equipment. Lacombe, J, (1982, p 17-46) MP 1981
Meteorology and observed snow crystal types during the SNOW-ONE experiment Bilello, M A, (1982, p 59-75) MP 1983
Meteorological measurements at Camp Ethan Allen Training Center, Vermont Bates, R, (1982, p 77-112) MP 1984
Snow Symposium, 2nd, 1982 (1983, 295p) SR 83-04
Atmospheric conditions and snow crystal observations during SNOW ONE-A Bilello, M A, et al, (1983, p 3-18) MP 1754
Northwest snowstorm of 15-16 December 1981 Bates, R E, (1983, p 19-34) MP 1755
Falling snow characteristics and extinction Berger, R H, (1983, p.61-69) MP 1756
Visible propagation in falling snow as a function of mass concentration and crystal type Lacombe, J, et al, (1983, p.103-111) MP 1757
Performance and optical signature of an AN/VVS-1 laser rangefinder in falling snow. Preliminary test results Lacombe, J, (1983, p 253-266) MP 1759
Synoptic meteorology during the SNOW-ONE-A Field Experiment. Bilello, M.A, (1983, 80p) SR 83-10
SNOW-ONE-B data report. Bates, R.E., ed, (1983, 284p) SR 83-16
Site-specific and synoptic meteorology Bates, R.E, (1983, p 13-80) MP 1845
Atmospheric turbulence measurements at SNOW-ONE-B. Andreas, E L, (1983, p 81-87) MP 1846
Snow characterization at SNOW-ONE-B Berger, R H, et al, (1983, p.155-195) MP 1847
Technique for measuring the mass concentration of falling snow Lacombe, J, (1983, p 17-28) MP 1647
Characterization of snow for evaluation of its effect on electromagnetic wave propagation Berger, R.H, (1983, p 35-42) MP 1648
Comments on the metamorphism of snow Colbeck, S C., (1983, p.149-151) MP 1650
Snow concentration and effective air density during snowfalls. Mellor, M, (1983, p.505-507) MP 1769
Snow Symposium, 3rd, Hanover, NH, Aug 1983, Vol.1. (1983, 241p) SR 83-31
Comparative near-millimeter wave propagation properties of snow or rain Nemarich, J, et al, (1983, p 115-129) MP 1690
Utilization of the snow field test series results for development of a snow obscuration primer Ebersole, J F, et al, (1983, p 209-217) MP 1692
Snow-Two/Smoke Week VI field experiment plan Redfield, R.K., et al, (1984, 85p) SR 84-19
Field sampling of snow for chemical obscurants at SNOW-TWO/Smoke Week VI Cragin, J.H, (1984, p 265-270) MP 2096
Climate at CRREL, Hanover, New Hampshire Bates, R E, (1984, 78p) SR 84-24
Frozen precipitation and weather, Munchen/Riem, West Germany Bilello, M.A, (1984, 47p) SR 84-32
Snow Symposium, 4th, Hanover, NH, Vol I. (1984, 433p) SR 84-35
Performance of microprocessor-controlled snow crystal replicator. Koh, G., (1984, p 107-111) MP 1866
Approach to snow propagation modeling Koh, G., (1984, p 247-259) MP 1869
Snow chemistry of obscurants released during SNOW-TWO/Smoke Week VI Cragin, J.H., (1984, p 409-416) MP 1873
Frozen precipitation and concurrently observed meteorological conditions Bilello, M A., (1985, 11p) MP 2075
Meteorological and snow cover measurements at Grayling, Michigan. Bates, R E, et al, (1985, p 212-229) MP 2176
Wavelength-dependent extinction by falling snow. Koh, G, (1986, p 51-55) MP 2019
Intensity of snowfall at the SNOW experiments. Bates, R E, et al, (1986, p 205-217) MP 2287
Proceedings, Vol 1 (1986, 369p) SR 86-15
Use and application of PRESTO in Snow-III West. Stallings, E S, et al, (1986, p 11-24) MP 2658
Snow mass extinction coefficient Koh, G, (1986, p 35-38) MP 2659
Extinction coefficient measurement in falling snow. Koh, G, (1987, 9p) SR 87-04
Optical snow precipitation gauge Koh, G., et al, (1987, p.26-31) MP 2259
Proceedings of the 6th Snow Symposium, Hanover, NH, 1986 (1987, 207p) SR 87-12
Scavenging of infrared screener EA 5763 by falling snow. Cragin, J H, et al (1987, p 13-20) MP 2292
Forward scatter meter for measuring extinction in adverse weather. Koh, G, (1987, p 81-84) MP 2295
Solid precipitation measurement at Sleepers River, VT. Bates, R E, et al, (1987 p 1-7) MP 2396
Some observations on the character of snow. Townsend, R.A., et al, (1987, p 48-53) MP 2397
Snowfall amounts and snow depths in Germany and NE USA Bates, R E, et al, (1988, p 107-117) MP 2401
Two-stream approximation to radiative transfer in falling snow Koh, G, (1988, p 463-470) MP 2604
Increased transmission through brass obscurant clouds during snowfall Hewitt, A D, et al, (1988, p 489-496) MP 2605
Snow-smoke interaction Hogan, A W, et al, (1988, p 497-506) MP 2607
Impact of wet snow on visible, infrared and millimeter wave attenuation Bates, R.E, et al, (1988, p 523-535) MP 2608
Overview of obscuration in the cold environment Berger, R H, et al, (1988 p 537-555) MP 2609
Dynamic aerosol flow chamber Hewitt, A D, (1988, 13p) SR 88-21
Comparative studies of the winter climate at selected locations in Europe and the United States Bates, R E, et al, (1989, p 283-293) MP 2598
Synoptic meteorology, crystal habit, and snowfall rates in Northeastern snowstorms Ryerson, C C, et al, (1989, p 315-345) MP 2599
Proceedings (1989, 136p) SR 89-07

Model of smoke concentration reduction due to scavenging by snow. Hutt, D L., et al, (1989, p 87-98) MP 2628

Light transmission through smoke screens in falling snow. Farmer, W.M., et al. (1989, p 99-111) MP 2629

Millimeter-wave performance during mixed precipitation. Bates, R.E., et al, (1989, p 113-120) MP 2630

Application of aerosol physics to snow research. Hogan, A.W., (1989, p 201-207) MP 2756

SNOW IV field experiment data report. Wright, E A., ed, (1989, 250p.) SR 89-14

Snow concentration and precipitation rate measurements during SNOW IV Lacombe, J., (1989, p 25-29) MP 2643

Physical and optical properties of falling snow. Koh, G., (1989, 22p) CR 89-16

Snowflakes

SNOW-ONE-A, Data report Aitken, G W., ed, (1982, 641p) SR 82-08

Snow crystal habit Koh, G., et al, (1982, p 181-216) MP 1561

Airborne snow and fog distributions Berger, R H., (1982, p 217-223) MP 1562

Measurements of airborne-snow concentration Lacombe, J., (1982, p 225-281) MP 1563

Airborne-Snow Concentration Measuring Equipment. Lacombe, J., (1982, p 17-46) MP 1981

Snow and fog particle size measurements Berger, R H., (1982, p 47-58) MP 1982

Snow particle morphology in the seasonal snow cover. Colbeck, S.C., (1983, p.602-609) MP 1688

SNOW-ONE-B data report. Bates, R E., ed, (1983, 284p) SR 83-16

Characterization of snow for evaluation of its effect on electromagnetic wave propagation. Berger, R.H., (1983, p 35-42) MP 1648

Attenuation and backscatter for snow and sleet at 96, 140, and 225 GHz. Nemarich, J., et al, (1984, p 41-52) MP 1864

Catalog of smoke/obscurant characterization instruments. O'Brien, H.W., et al, (1984, p 77-82) MP 1865

Performance of microprocessor-controlled snow crystal replicator. Koh, G., (1984, p 107-111) MP 1866

Forward-scattering corrected extinction by nonspherical particles. Bohren, C.F., et al, (1984, p 261-271) MP 1870

Forward-scattering corrected extinction by nonspherical particles Bohren, C.F., et al, (1985, p.1023-1029) MP 1958

What becomes of a winter snowflake. Colbeck, S C., (1985, p 312-215) MP 2060

Proceedings, Vol I. (1986, 369p) SR 86-15

Snow-smoke interaction Hogan, A.W., et al, (1988, p 497-506) MP 2607

Application of aerosol physics to snow research Hogan, A.W., (1989, p 201-207) MP 2756

Snowmelt

Water percolation through homogeneous snow. Colbeck, S C., et al, (1973, p 242-257) MP 1025

Tundra environment at Barrow, Alaska. Bunnell, F.L., et al, (1975, p.73-124) MP 1050

Effects of radiation penetration on snowmelt runoff hydrographs Colbeck, S C., (1976, p.73-82) MP 948

Energy balance and runoff from a subarctic snowpack. Price, A.G., et al, (1976, 29p) CR 76-27

Computer routing of unsaturated flow through snow Tucker, W.B., et al, (1977, 44p) SR 77-10

Snow accumulation, distribution, melt, and runoff. Colbeck, S C., et al, (1979, p 465-468) MP 1233

Case study: fresh water supply for Point Hope, Alaska. McFadden, T., et al, (1979, p 1029-1040) MP 1222

Tundra lakes as a source of fresh water Kipnuk, Alaska. Bredthauer, S R., et al, (1979, 16p) SR 79-30

Watershed modeling in cold regions. Stokely, J.L., (1980, 241p) MP 1471

Use of Landsat data for predicting snowmelt runoff in the upper Saint John River basin Merry, C J., et al, (1983, p 519-533) MP 1694

Hydrologic aspects of ice jams Calkins, D J., (1986, p 603-609) MP 2116

Forecasting of snowmelt runoff using water temperature data Pangburn, T., (1987, p 108-113) MP 2398

Snow hydrology in the upper Yamuna basin, India Malhotra, R.V., et al, (1988, p 84-93) MP 2633

Snowmelt increase through albedo reduction Colbeck, S C., (1988, 11p) SR 88-26

Thermal response of downhill skis Warren, G C., et al, (1989, 40p) CR 89-23

Water and suspended solids discharge during snowmelt Chacho, E.F., Jr., (1990, p 167-173) MP 2706

Snowstorms

SNOW-ONE-A, Data report Aitken, G W., ed, (1982, 641p) SR 82-08

Synoptic weather conditions during snowfall, Dec. 1981-Feb. 1982. Bilello, M.A., (1982, p 9-42) MP 1559

Meteorology Bates, R.E., (1982, p 43-180) MP 1560

Airborne snow and fog distributions Berger, R H., (1982, p 217-223) MP 1562

Northwest snowstorm of 15-16 December 1981. Bates, R.E., (1983, p 19-34) MP 1755

Proceedings, Vol I. (1986, 369p) SR 86-15

Prediction of winter battlefield weather effects. Ryerson, C.C., et al, (1988, p.357-362) MP 2402

Soil aggregates

Repetitive loading tests on membrane enveloped road sections during freeze thaw. Smith, N., et al, (1977, p 171-197) MP 962

Effect of freeze-thaw cycles on soils. Chamberlain, E., et al, (1990, p 145-155) MP 2678

Soil analysis

Reclamation of acidic dredge soils with sewage sludge and lime. Palazzo, A.J., (1977, 24p) SR 77-19

Determining explosive residues in soil Jenkins, T.F., et al, (1988, 46p) CR 88-08

Soil chemistry

Proceedings 1972 Tundra Biome symposium. (1972, 211p) MP 1374

Ionic migration and weathering in frozen Antarctic soils Ugolini, F.C., et al, (1973, p 461-470) MP 941

Micrometeorological investigations near the tundra surface. Kelley, J J., (1973, p.109-126) MP 1006

Soil properties of the International Tundra Biome sites. Brown, J., et al, (1974, p.27-48) MP 1043

Upland forest and its soils and litters in interior Alaska. Troth, J.L., et al, (1976, p 33-44) MP 867

Wastewater reuse at Livermore, California. Uiga, A., et al, (1976, p 511-531) MP 870

Land treatment of wastewater. Murrmann, R.P., et al, (1976, 36p.) MP 920

Reclamation of wastewater by application on land Iskandar, I K., et al, (1976, 15p) MP 896

Wastewater renovation by a prototype slow infiltration land treatment system Iskandar, I.K., et al, (1976, 44p.) CR 76-19

Urban waste as a source of heavy metals in land treatment Iskandar, I.K., (1976, p 417-432) MP 977

Effects of wastewater application on forage grasses Palazzo, A J., (1976, 8p) CR 76-39

Examining antarctic soils with a scanning electron microscope. Kumai, M., et al, (1976, p 249-252) MP 931

Reclamation of acidic dredge soils with sewage sludge and lime Palazzo, A.J., (1977, 24p) SR 77-19

Effects of wastewater on the growth and chemical composition of forages Palazzo, A J., (1977, p 171-180) MP 975

UV radiational effects on: Martian regolith water. Nadeau, P.H., (1977, 89p) MP 1072

Land treatment of wastewater at Manteca, Calif., and Quincy, Washington. Iskandar, I K., et al, (1977, 34p.) CR 77-24

Methodology for nitrogen isotope analysis at CRREL. Jenkins, T.F., et al, (1978, 57p) SR 78-08

NMR phase composition measurements on moist soils. Tice, A R., et al, (1978, p 11-14) MP 1210

NO3-N in percolate water in land treatment Iskandar, I K et al, (1978, p.163-169) MP 1148

Nitrogen behavior in land treatment of wastewater, a simplified model. Selim, H.M., et al, (1978, p 171-179) MP 1149

Overview of existing land treatment systems Iskandar, I.K., (1978, p.193-200) MP 1150

Uptake of nutrients by plants irrigated with wastewater Clapp, C.E., et al, (1978, p 395-404) MP 1151

Performance of overland flow land treatment in cold climates Jenkins, T.F., et al, (1978, p 61-70) MP 1152

Adaptability of forage grasses to wastewater irrigation Palazzo, A J., et al, (1978, p 157-163) MP 1153

Simulation of the movement of conservative chemicals in soil solution. Nakano, Y., et al, (1978, p 371-380) MP 1156

Waste water reuse in cold regions. Iskandar, I.K., (1978, p 361-368) MP 1144

Kinetics of denitrification in land treatment of wastewater. Jacobson, S., et al, (1979, 59p) SR 79-04

Spray application of wastewater effluent in Vermont Cassell, E.A., et al, (1979, 38p) SR 79-06

Soil characteristics and climatology during wastewater application at CRREL. Iskandar, I K., et al, (1979, 82p) SR 79-23

Land application of wastewater effect on soil and plant potassium Palazzo, A J., et al, (1979, p 309-312) MP 1228

Nitrogen transformations in land treatment Jenkins, T F., et al, (1979, 32p) SR 79-31

Prototype wastewater land treatment system Jenkins, T F., et al, (1979, 91p) SR 79-35

Enzyme kinetic model for nitrification in soil amended with ammonium. Leggett, D C., et al, (1980, 20p) CR 80-01

Model for nitrogen behavior in land treatment of wastewater. Selim, H M., et al, (1980, 49p) CR 80-12

Dynamics of NH4 and NO3 in cropped soils irrigated with wastewater. Iskandar, I K., et al, (1980, 20p) SR 80-27

Removal of organics by overland flow. Martel, C J., et al, (1980, 9p) MP 1362

Effectiveness of land application for P removal from waste water Iskandar, I K., et al, (1980, p 616-621) MP 1444

Modeling N transport and transformations in soils Selim, H M., et al, (1981, p.233-241) MP 1440

Modeling nitrogen transport and transformations in soils 2. Validation. Iskandar, I.K., et al, (1981, p 303-312) MP 1441

Model for prediction of nitrate leaching losses in soils. Mehran, M., et al, (1981, 24p.) CR 81-23

Effect of soil temperature on nitrification kinetics. Parker, L.V., et al, (1981, 27p) SR 81-33

P removal during land treatment of wastewater. Ryden, J.C., et al, (1982, 12p.) SR 82-14

Mathematical simulation of nitrogen interactions in soils. Selim, H.M., et al, (1983, p 241-248) MP 2051

Frost heave of saline soils Chamberlain, E J., (1983, p 121-126) MP 1655

Restoration of acidic dredge soils with sewage sludge and lime Palazzo, A J., (1983, 11p) CR 83-28

Techniques for measuring Hg in soils and sediments Cragin, J.H., et al, (1985, 16p) SR 85-16

Explosive residues in soil Jenkins, T F., et al, (1985, 33p) SR 85-22

Retention and release of metals by soils—evaluation of several models. Amacher, M.C., et al, (1986, p.131-154) MP 2186

Extraction solvents for determination of volatile organics in soil Jenkins, T F., et al, (1987, 26p) SR 87-22

Determining explosive residues in soil. Jenkins, T.F., et al, (1988, 46p) CR 88-06

Modeling the transport of chromium (VI) in soil columns. Selim, H.M., et al, (1989, p 996-1004) MP 2670

Ion-pairing RP-HPLC method for determining tetrazene in water and soil Walsh, M E., et al, (1989, p 159-179) MP 2593

Retention of elements by soils Buchter, B., et al, (1989, p.370-379) MP 2570

Analytical methods for determining nitroguanidine in soil and water. Walsh, M E., (1989, 27p) SR 89-35

Soil classification

Foundations on permafrost, US and USSR design and practice. Fish, A.M., (1983, p 3-24) MP 1682

Soil compaction

Consolidating dredged material by freezing and thawing. Chamberlain, E J., (1977, 94p) MP 978

Enclosing fine-grained soils in plastic moisture barriers. Smith, N., (1978, p 560-570) MP 1089

Densification by freezing and thawing of fine material dredged from waterways. Chamberlain, E.J., et al, (1978, p 622-628) MP 1103

Increasing the effectiveness of soil compaction at below-freezing temperatures Haas, W M., et al, (1978, 58p) SR 78-25

Construction of an embankment with frozen soil. Botz, J.J., et al, (1980, 105p) SR 80-21

Soil freezing response influence of test conditions. McCabe, E.Y., et al, (1985, p 49-58) MP 1990

Freeze thaw consolidation of sediments, Beaufort Sea, Alaska Lee, H.J., et al, (1985, 83p) MP 2025

Soil composition

Soil properties of the International Tundra Biome sites. Brown, J., et al, (1974, p 27-48) MP 1043

Tundra environment at Barrow, Alaska. Bunnell, F.L., et al, (1975, p.73-124) MP 1050

Antarctic soil studies using a scanning electron microscope Kumai, M., et al, (1978, p 106-112) MP 1386

Tundra and analogous soils Everett, K R., et al, (1981, p 139-179) MP 1405

VHF electrical properties of frozen ground near Point Barrow, Alaska Arcone, S A., et al, (1981, 18p) CR 81-13

Model for dielectric constants of frozen soils Oliphant, J L., (1985, p 46-57) MP 1926

Retention and release of metals by soils—evaluation of several models Amacher, M.C., et al, (1986, p 131-154) MP 2186

Comparison of extraction techniques for munitions residues in soil Jenkins, T F., et al, (1987, p 1326-1331) MP 2350

Determining nitroaromatics and nitramines in water. Jenkins, T F., et al, (1988, 36p) SR 88-23

Chromatographic determination of nitroaromatic residues in soil Jenkins, T F., et al, (1989, p 890-899) MP 2586

Unfrozen water contents of undisturbed and remolded Alaskan silt. Tice, A R., et al (1989, p 103-111) MP 2683

Soil creep

In-plane deformation of non-coaxial plastic soil Takagi, S., (1978, 28p) CR 78-07

Steady in-plane deformation of noncoaxial plastic soil Takagi, S., (1979, p 1049-1072) MP 1248

Kinetic nature of the long term strength of frozen soils. Fish, A M., (1980, p 95-108) MP 1450

Acoustic emissions during creep of frozen soils Fish, A M., et al (1982, p 194-206) MP 1495

Deformation and failure of frozen soils and ice due to stresses. Fish, A M., (1982, p 419-428) MP 1553

Field tests of a frost-heave model Guymon, G.L., et al, (1983, p 409-414) MP 1657

Creep behavior of frozen silt under constant uniaxial stress. Zhu, Y., et al, (1983, p 1507-1512) MP 1805

Foundations on permafrost, US and USSR design and practice Fish, A M., (1983, p 3-24) MP 1682

Thermodynamic model of soil creep at constant stresses and strains. Fish, A.M., (1983, 18p.) CR 83-33

Soil creep *(cont.)*

Creep behavior of frozen silt under constant uniaxial stress Zhu, Y., et al, (1984, p.33-48) MP 1807

Thermodynamic model of creep at constant stress and constant strain rate. Fish, A.M., (1984, p 143-161) MP 1771

Tertiary creep model for frozen sands (discussion). Fish, A.M., et al, (1984, p.1373-1378) MP 1810

Frozen ground physics Fish, A M., (1985, p.29-36) MP 1928

Creep and strength behavior of frozen silt in uniaxial compression. Zhu, Y., et al, (1987, 67p) CR 87-10

Shape of creep curves in frozen soils and polycrystalline ice. Fish, A.M., (1987, p 623-629) MP 2329

State of the art, mechanical properties of frozen soil Sayles, F.H., (1988, p.143-165) MP 2377

Some peculiarities of creep behavior of frozen silt Fish, A.M., (1989, p 721-724) MP 2601

Soil erosion

Placer River Silt—an intertidal deposit caused by the 1964 Alaska earthquake Ovenshine, A T., et al, (1976, p 151-162) MP 2410

Revegetation and erosion control of the Trans-Alaska Pipeline. Johnson, L A., et al, (1977, 36p) SR 77-08

Human-induced thermokarst at old drill sites in northern Alaska Lawson, D E, et al, (1978, p 16-23) MP 1254

Revegetation along roads and pipelines in Alaska Johnson, L A., (1980, p 129-150) MP 1353

Revegetation along the trans-Alaska pipeline, 1975-1978. Johnson, A.J., (1981, 115p) CR 81-12

Modifications of permafrost, East Oumalik, Alaska. Lawson, D.E., (1982, 33p) CR 82-36

Reservoir bank erosion caused and influenced by ice cover Gatto, L.W., (1982, 26p) SR 82-31

Bank recession of Corps of Engineers reservoirs. Gatto, L.W., et al, (1983, 103p) SR 83-30

Erosion of perennially frozen streambanks. Lawson, D E, (1983, 22p) CR 83-29

Tanana River monitoring and research studies near Fairbanks, Alaska Neill, C R, et al, (1984, 98p + 5 appends.) SR 84-37

Chena Flood Control Project and the Tanana River near Fairbanks, Alaska Buska, J S, et al, (1984, 11p + figs.) MP 1745

Bank recession of the Tanana River, Alaska. Gatto, L W., (1984, 59p) MP 1746

Bank recession and channel changes of the Tanana River, Alaska Gatto, L.W., et al, (1984, 98p) MP 1747

Erosion analysis of the Tanana River, Alaska Collins, C M., (1984, 8p. + figs.) MP 1748

Bank erosion, vegetation and permafrost, Tanana River near Fairbanks Gatto, L.W., (1984, 53p) SR 84-21

Vegetation recovery in the Cape Thompson region, Alaska Everett, K R., et al, (1985, 75p) CR 85-11

Soil formation

Tundra and analogous soils Everett, K R et al, (1981, p 139-179) MP 1405

SOIL FREEZING

Cold room studies on frost susceptible soils (1950 25p) ACFEL MP BL 1

Soil freezing

Remote-reading tensiometer for use in subfreezing temperatures McKim, H L., et al, (1976, p 31-45) MP 897

Calculating unfrozen water content of frozen soils McGaw, R., et al, (1976, p 114-122) MP 899

Periodic structure of New Hampshire silt in open-system freezing McGaw, R., (1977, p 129-136) MP 902

Consolidating dredged material by freezing and thawing Chamberlain, E J., (1977, 94p) MP 978

Segregation freezing as the cause of suction force for ice lens formation Takagi, S., (1978, p 45-51) MP 1081

Segregation freezing as the cause of suction force for ice lens formation. Takagi, S., (1978, 13p) CR 78-06

Fundamentals of ice lens formation Takagi, S., (1978, p 235-242) MP 1173

Thermal and creep properties for frozen ground construction Sanger, F J., et al, (1978, p 95-117) MP 1624

Resiliency of subgrade soils during freezing and thawing Johnson, T C., et al, (1978, 59p.) CR 78-23

Thermal and creep properties for frozen ground construction Sanger, F J., et al, (1979, p 311-337) MP 1227

Construction and performance of membrane encapsulated soil layers in Alaska Smith, N., (1979, 27p) CR 79-16

Low temperature phase changes in moist, briny clays Anderson, D.M., et al, (1980, p 139-144) MP 1330

Frost heave in an instrumented soil column Berg R L., et al, (1980, p 211-221) MP 1331

Frost heave model based upon heat and water flux Guymon, G L., et al, (1980, p 253 262) MP 1333

Adsorption force theory of frost heaving Takagi, S., (1980, p 57-81) MP 1334

Overconsolidation effects of ground freezing Chamberlain, E.J., (1980, p 325-337) MP 1452

Numerical solutions for rigid ice model of secondary frost heave O'Neill, K., et al, (1980, p 656-669) MP 1454

Field studies of membrane encapsulated soil layers with additives Eaton, R A., et al, (1980, 46p) SR 80-33

Neumann solution applied to soil systems Lunardini, V.J., (1980, 7p) CR 80-22

Some approaches to modeling phase change in freezing soils Hromadka, T V., II, et al, (1981, p.137-145) MP 1437

Effect of freezing and thawing on resilient modulus of granular soils Cole, D M., et al, (1981, p 19-26) MP 1484

Comparative evaluation of frost-susceptibility tests Chamberlain, E.J., (1981, p 42-52) MP 1486

CRREL frost heave test, USA Chamberlain, E J., et al, (1981, p.55-62) MP 1499

Ice segregation in a frozen soil column Guymon, G L., et al, (1981, p.127-140) MP 1534

Frost susceptibility of soil, review of index tests. Chamberlain, E J., (1981, 110p) M 81-02

Numerical solutions for a rigid-ice model of secondary frost heave O'Neill, K., et al, (1982, 11p) CR 82-13

Comparison of unfrozen water contents measured by DSC and NMR. Oliphant, J L., et al, (1982, p.115-121) MP 1594

Freezing of soil with surface convection. Lunardini, V.J., (1982, p 205-212) MP 1595

Initial stage of the formation of soil-laden ice lenses Takagi, S., (1982, p 223-232) MP 1596

Frost susceptibility of soil, review of index tests Chamberlain, E J., (1982, 110p) MP 1557

Frost heave model Hromadka, T V., II, et al, (1982, p 1-10) MP 1567

Transport of water in frozen soil, Part 1 Nakano, Y., et al, (1982, p 221-226) MP 1629

Freezing of semi-infinite medium with initial temperature gradient. Lunardini, V.J., (1983, p 649-652) MP 1583

Freezing and thawing: heat balance integral approximations. Lunardini, V J., (1983, p 30-37) MP 1597

Effects of ice on the water transport in frozen soil. Nakano, Y., et al, (1983, p 15-26) MP 1601

Frost heave of saline soils. Chamberlain, E J., (1983, p 121-126) MP 1655

Investigation of transient processes in an advancing zone of freezing McGaw, R., et al, (1983, p 821-825) MP 1663

Boundary integral equation solution for phase change problems O'Neill, K., (1983, p.1825-1850) MP 2093

Simple model of ice segregation using an analytic function to model heat and soil-water flow. Hromadka, T V., II, et al, (1984, p 99-104) MP 2104

Frost action and its control Berg, R.L., ed, (1984, 145p) MP 1704

Designing for frost heave conditions Crory, F E., et al, (1984, p 22-44) MP 1705

Survey of methods for classifying frost susceptibility Chamberlain, E J., et al, (1984, p 104-141) MP 1707

Freezing of a semi-infinite medium with initial temperature gradient. Lunardini, V.J., (1984, p 103-106) MP 1740

Heat and moisture transfer in frost-heaving soils Guymon, G.L., et al, (1984, p 336-343) MP 1765

Freezing of soil with phase change occurring over a finite temperature zone Lunardini, V J., (1985, p 38-46) MP 1854

Automated soils freezing test Chamberlain, E J., (1985, 5p) MP 1892

Soil freezing response influence of test conditions McCabe, E Y., et al, (1985, p 49-58) MP 1990

Ground freezing for management of hazardous waste sites Sullivan, J M., Jr., et al, (1985, 15p) MP 2030

Potential use of artificial ground freezing for contaminant immobilization Iskandar, I.K., et al, (1985, 10p) MP 2029

Literature review effect of freezing on hazardous waste sites Iskandar, I K., et al, (1985, p.122-129) MP 2028

Model of freezing front movement Hromadka, T.V., II, et al, (1985, 9p) MP 2077

Natural electrical potentials that arise when soils freeze. Yarkin, I.G., (1986, 24p) SR 86-12

Corps of Engineers Land Treatment Research and Development program Iskandar, I.K., (1986, p 17-18) MP 2149

Freezing effect on waste contaminants Iskandar, I K., (1986, 33p) SR 86-19

Heat transfer in a freezing shaft wall Liandi, F., (1986, 24p) CR 86-08

Resilient moduli of soil specimens in the frozen and thawed states Johnson, T C., et al, (1986, 62p) CR 86-12

Evaluation of selected frost-susceptibility test methods Chamberlain, E J., (1986, 51p) CR-86-14

Classification and laboratory testing of artificially frozen ground Sayles, F H., et al, (1987, p 22-48) MP 2227

Tracking freezing front movement using boundary element method Hromadka, T V., II, (198?, 58p) SR 87-08

Ground freezing controls hazardous waste Iskandar, I K., (1987, p 455-456) MP 2270

Recent research on acoustic to seismic coupling Albert, D G., (198?, p 223-225) MP 2418

Experimental methods for decontaminating soils by freezing Ayorinde, O A., et al, (1988, 12p) MP 2513

Soil freezing and unfrozen water content Lunardini, V J., (1988, 21p) CR 88-02

Evaluation of the X-ray radiography efficiency for heaving and consolidation observation. Akagawa, S., (1988, p.23-28) MP 2376

Freezing a temporary roadway for transport of a 3000 ton dragline. Maishman, D., et al, (1988, p.357-365) MP 2378

Contaminant transport in freezing soils. Ayorinde, O A., et al, (1988, 29p) MP 2514

New freezing test for determining frost susceptibility. Chamberlain, E J., (1988, p.1045-1050) MP 2368

Electrical freezing potential of soils Kelsh, D.J., et al, (1988, 9p) CR 88-10

Relationship between freezing and water content in sandy loam. Black, P.B., et al, (1988, 37p) CR 88-26

Chemical aspects of soil freezing Henry, K., (1988, 8p) CR 88-17

State of water in freezing soil Black, P.B., (1989, 7p) CR 89-03

Freezing and thawing of soils in cylindrical coordinates. Lunardini, V.J., (1989, p 185-208) MP 2594

Physical changes in clays due to frost action Chamberlain, E J., (1989, p 863-893) MP 2595

Ice-water partition coefficients for RDX and TNT Taylor, S., (1989, 10p) CR 89-06

Freezing technique for *in-situ* treatment of contaminated soils Ayorinde, O A., et al, (1989, p 489-498) MP 2515

Soil freezing and soil water in sandy loam. Black, P.B., et al, (1989, p 2205-2210) MP 2577

Steady growth of ice layer in freezing soils. Nakano, Y., (1990, p 207-226) MP 2695

X-ray photography of the frozen fringe of freezing soil. Akagawa, S., (1990, 69p) SR 90-05

Proceedings (1990, 318p) SR 90-01

Predicting unfrozen water content behavior of a soil Black, P B., et al, (1990, p 54-60) MP 2677

Transport of water due to a temperature gradient in unsaturated frozen clay Nakano, Y., et al, (1990, p.57-75) MP 2701

Comparison of four volatile organic compounds in frozen and unfrozen silt. Taylor, S., et al, (1990, 9p) SR 90-13

Case study of potential causes of frost heave. Henry, K S., (1990, 35p) SR 90-09

Unfrozen water content and hydraulic conductivity of frozen soil Black, P.B., (1990, 7p) CR 90-05

Soil mechanics

Segregation freezing as the cause of suction force for ice lens formation. Takagi, S., (1978, 13p) CR 78-06

Resilient response of two frozen and thawed soils Chamberlain, E J., et al, (1979, p 257-271) MP 1176

Dynamic testing of free field stress gages in frozen soil Aitken, G W., et al, (1980, 26p) SR 80-30

Soil infiltration on land treatment sites Abele, G., et al, (1980, 41p) SR 80-36

Laboratory and field use of soil tensiometers above and below 0 deg C Ingersoll, J., (1981, 17p) SR 81-07

Prediction of explosively driven relative displacements in rocks Blouin, S E., (1981, 23p) CR 81-11

Site investigations and submarine soil mechanics in polar regions Chamberlain, E J., (1981, 18p) SR 81-24

Frost susceptibility of soil, review of index tests. Chamberlain, E.J., (1981, 110p) M 81-02

Frost susceptibility of soil, review of index tests. Chamberlain, E J., (1982, 110p) MP 1557

Review of methods for generating synthetic seismograms Peck, L., (1985, 39p) CR 85-10

Evaluation of selected frost-susceptibility test methods Chamberlain, E J., (1986, 51p) CR-86-14

Acoustic-to-seismic coupling through a snow layer. Peck, L., (1987, p 47-55) MP 2294

Recent research on acoustic to seismic coupling Albert, D G., (1987, p 223-225) MP 2418

Soil microbiology

Nitrification inhibitor in land treatment of wastewater in cold regions Elgawhary, S M., et al, (1979, 25p) SR 79-18

Analysis of water in the Martian regolith Anderson, D M., et al, (1979, p 33-38) MP 1409

Arctic ecosystem the coastal tundra at Barrow, Alaska. Brown, J., ed, (1980, 571p) MP 1355

Crude oil spills on subarctic permafrost in interior Alaska Johnson, L A., et al, (1980, 67p) CR 80-29

Soil microbiology Bosatta, E., et al, (1981, p 38-44) MP 1753

Effect of soil temperature on nitrification kinetics Parker, L V., et al, (1981, 27p) SR 81-33

Soil physics

Freeze thaw effect on the permeability and structure of soils Chamberlain, E J., et al, (1978, p 31-44) MP 1080

Freeze thaw effect on the permeability and structure of soils Chamberlain, E J., et al, (1979, p 73-92) MP 1225

Functional analysis of the problem of wetting fronts Nakano, Y., (1980, p 314-318) MP 1307

Measurements of ground resistivity Arcone, S A., (1982, p 92-110) MP 1513

Ground dielectric properties Arcone, S A., et al, (1982, 11p) CR 82-06

Laboratory measurements of soil electric properties between 0.1 and 5 GHz Delaney, A J., et al, (1982, 12p) CR 82-10

Horizontal infiltration of water in porous materials. Nakano, Y., (1982, p.156-166) MP 1840

In-situ thermal conductivity measurements. Atkins, R.T., (1983, 38p) MP 2214

Use of radio frequency sensor for snow/soil moisture water content measurement. McKim, H.L., et al, (1983, p.33-42) MP 1689

In-situ thermoconductivity measurements. Faucher, M., (1986, p.13-14) MP 2137

Tensile strength of frozen silt Zhu, Y., et al, (1987, 23p) CR 87-15

Modeling the transport of chromium (VI) in soil columns Selim, H.M., et al, (1989, p 996-1004) MP 2670

Simple and economical thermal conductivity measurement system. Atkins, R.T., (1989, p 108-116) MP 2566

Low-temperature effects on systems for composting explosives-contaminated soils. Ayorinde, O.A., et al, (1989, 18p) SR 89-38

Soil pollution

Urban waste as a source of heavy metals in land treatment. Iskandar, I.K., (1976, p 417-432) MP 977

Explosives in soils and sediments Cragin, J.H., et al, (1985, 11p) CR 85-15

Explosive residues in soil. Jenkins, T.F., et al, (1985, 33p) SR 85-22

Effect and disposition of TNT in a terrestrial plant. Palazzo, A.J., et al, (1986, p.49-52) MP 2098

TNT in a terrestrial plant. Palazzo, A.J., et al, (1986, 17p) CR 86-15

Comparison of extraction techniques for munitions residues in soil Jenkins, T.F., et al, (1987, p.1326-1331) MP 2350

Development of an analytical method for explosive residues in soil. Jenkins, T.F., et al, (1987, 51p) CR 87-07

Sorption of chemical agents and simulants. Leggett, D.C., (1987, 15p) SR 87-18

Preliminary development of a fiber optic sensor for TNT. Zhang, Y., et al, (1988, 16p) SR 88-04

Development of analytical methods for military-unique compounds. Walsh, M.E., et al, (1988, p.370-380) MP 2454

Determining explosive residues in soil. Jenkins, T.F., et al, (1988, 46p) CR 88-08

Effects of temperature and species on TNT injury to plants. Palazzo, A.J., et al, (1988, 7p) SR 88-16

Analytical method for determining tetrazene in soil. Walsh, M.E., et al, (1988, 22p) SR 88-15

Determining nitroaromatics and nitramines in water Jenkins, T.F., et al, (1988, 36p) SR 88-23

Ice-water partition coefficients for RDX and TNT. Taylor, S., (1989, 10p) CR 89-08

Determination of explosive residues in soil. Part 3 Bauer, C.F., et al, (1989, 89p) CR 89-09

Low concentration measurement capability in trace analysis Grant, C.L., et al, (1989, 21p) SR 89-20

Comments on "Modeling adsorption/desorption kinetics of pesticides in a soil suspension" Leggett, D.C., (1989, p 231) MP 2532

Analytical methods for detecting military-unique compounds Jenkins, T.F., et al, (1989, p 13-14) MP 2713

Well casings for monitoring trace organics in ground water. Parker, L.V., et al, (1989, 29p) SR 89-18

Retention of elements by soils Buchter, B., et al, (1989, p 370-379) MP 2570

Analytical methods for determining nitroguanidine in soil and water. Walsh, M.E., (1989, 27p) SR 89-35

Chromatographic determination of nitroaromatic residues in soil Jenkins, T.F., et al, (1989, p 890-899) MP 2586

Environmental transformation of nitroaromatics and nitramines Walsh, M.E., (1990, 21p) SR 90-02

Fate and transport of contaminants in frozen soils Ayorinde, O.A., et al, (1990, p 202-211) MP 2679

Surface changes in well casings exposed to organic pollutants Taylor, S., et al, (1990, 14p) SR 90-07

Comparison of four volatile organic compounds in frozen and unfrozen silt. Taylor, S., et al, (1990, 9p) SR 90-13

Soil pressure

Segregation-freezing temperature as the cause of suction force Takagi, S., (1977, p.59-66) MP 901

Ground pressures exerted by underground explosions Johnson, P.R., (1978, p 284-290) MP 1520

Summary of the adsorption force theory of frost heaving Takagi, S., (1980, p 233-236) MP 1332

Soil stabilization

Thermoinsulating media within embankments on perennially frozen soil Berg, R.L., (1976, 161p) SR 76-03

Utilization of sewage sludge for terrain stabilization in cold regions Gaskin, D.A., et al, (1977, 45p) SR 77-37

Grouting silt and sand at low temperatures Johnson, R., (1979, p 937-950) MP 1078

Sewage sludge for terrain stabilization. Part 2 Gaskin, D.A., et al, (1979, 36p) SR 79-28

Utilization of sewage sludge for terrain stabilization in cold regions Pt 3 Rindge, S.D., et al, (1979, 33p) SR 79-34

Field studies of membrane encapsulated soil layers with additives Eaton, R.A., et al, (1980, 46p) SR 80-33

Plant growth on a gravel soil, greenhouse studies Palazzo, A.J., et al, (1981, 8p) SR 81-04

Chena River Lakes Project revegetation study—three-year summary. Johnson, L.A., et al, (1981, 59p) CR 81-18

Revised procedure for pavement design under seasonal frost conditions Berg, R., et al, (1983, 129p) SR 83-27

Performance of a thermosyphon with an inclined evaporator and vertical condenser. Zarling, J.P., et al, (1984, p 64-68) MP 1677

Stabilization of fine-grained soil for road and airfield construction. Danyluk, L.S., (1986, 37p) SR 86-21

SOIL STRENGTH

Freezing process and mechanics of frozen ground Scott, R.F., (1969, 65p) M II-D1

Soil strength

Evaluation of MESL membrane—puncture, stiffness, temperature, solvents Sayward, J.M., (1976, 60p) CR 76-22

Baseplate design and performance mortar stability report. Aitken, G.W., (1977, 28p) CR 77-22

Repetitive loading tests on membrane enveloped road sections during freeze thaw. Smith, N., et al, (1977, p.171-197) MP 962

Resiliency in cyclically frozen and thawed subgrade soils. Chamberlain, E.J., et al, (1977, p 229-281) MP 1724

Grouting of soils in cold environments: a literature search Johnson, R., (1977, 49p) SR 77-42

Electromagnetic survey in permafrost Sellmann, P.V., et al, (1979, 7p) SR 79-14

Effect of freezing and thawing on resilient modulus of granular soils. Cole, D.M., et al, (1981, p 19-26) MP 1484

Testing shaped charges in unfrozen and frozen silt in Alaska. Smith, N., (1982, 10p) SR 82-02

Seasonal soil conditions and the reliability of the M15 land mine Richmond, P.W., et al, (1984, 35p) SR 84-18

Mapping resistive seabed features using DC methods. Sellmann, P.V., et al, (1985, p 136-147) MP 1918

Arctic mobility problems Abele, G., (1987, p 267-269) MP 2421

Thawing soil strength measurements for predicting vehicle performance Shoop, S.A., (1989, 18p) MP 2749

Soil structure

Proposed size classification for the texture of frozen earth materials McGaw, R., (1975, 10p) MP 921

Evaluation of MESL membrane—puncture, stiffness, temperature, solvents. Sayward, J.M., (1976, 60p) CR 76-22

Regionalized feasibility study of cold weather earthwork Roberts, W.S., (1976, 190p) SR 76-02

Periodic structure of New Hampshire silt in open-system freezing McGaw, R., (1977, p 129-136) MP 902

Freeze thaw effect on the permeability and structure of soils. Chamberlain, E.J., et al, (1978, p 31-44) MP 1080

Freeze thaw effect on the permeability and structure of soils Chamberlain, E.J., et al, (1979, p 73-92) MP 1225

Electron microscope investigations of frozen and unfrozen bentonite. Kumai, M., (1979, 14p) CR 79-28

Soil-water potential and unfrozen water content and temperature Xu, X., et al, (1985, p 1-14) MP 1932

Ground motion induced by an acoustic pulse, and its wintertime variations Peck, L., (1988, p 361-385) MP 2597

Microstructure of frozen soils examined by SEM. Kumai, M., (1988, p 390-395) MP 2361

Effect of freeze-thaw cycles on soils Chamberlain, E., et al, (1990, p 145-155) MP 2678

Soil surveys

Tundra soils on the Arctic Slope of Alaska Everett, K.R., et al, (1982, p 264-280) MP 1552

Frozen strength characterization of NH&S test sites in Montana Chamberlain, E.J., et al, (1988, var p) MP 2617

SOIL TEMPERATURE

Heat exchange at the ground surface Scott, R.F., (1964, 49p plus append) M II-A1

Soil temperature

Piles in permafrost for bridge foundations Crory, F.E., et al, (1967, 41p) MP 1411

Abiotic overview of the Tundra Biome Program, 1971 Weller, G., et al, (1971, p 173-181) MP 906

Prediction and validation of temperature in tundra soils Brown, J., et al, (1971, p 193-197) MP 907

Computer simulation of the snowmelt and soil thermal regime at Barrow, Alaska Outcalt, S.I., et al, (1975, p 709-715) MP 857

Selected climatic and soil thermal characteristics of the Prudhoe Bay region Brown, J., et al, (1975, p 3-12) MP 1054

Surface temperature data for Atkasook, Alaska summer 1975 Haugen, R.K., et al, (1976, 25p) SR 76-01

Oil spills on permafrost Collins, C.M., et al, (1976, 18p) SR 76-15

Kotzebue hospital a case study Crory, F.E., (1978, p 342-359) MP 1084

Thermal properties and regime of wet tundra soils at Barrow, Alaska McGaw, R., et al, (1978, p 47-53) MP 1096

Geophysics in the study of permafrost Scott, W.J., et al, (1979, p 93-115) MP 1266

Removal of organics by overland flow Martel, C.J., et al, (1980, 9p) MP 1362

Waste heat utilization through soil heating McFadden, T., et al, (1980, p 105-120) MP 1363

Approximate solution to Neumann problem for soil systems. Lunardini, V.J., et al, (1981, p 76-81) MP 1494

Effect of soil temperature on nitrification kinetics Parker, L.V., et al, (1981, 27p) SR 81-33

CO2 effect on permafrost terrain. Brown, J., et al, (1982, 30p) MP 1546

Field tests of a frost-heave model Guymon, G.L., et al, (1983, p 409-414) MP 1657

Relationships between estimated mean annual air and permafrost temperatures in North-Central Alaska Haugen, R.K., et al, (1983, p 462-467) MP 1658

Natural ground temperatures in upland bedrock terrain, interior Alaska. Collins, C.M., et al, (1988, p 56-60) MP 2360

Soil tests

Viking GCMS analysis of water in the Martian regolith. Anderson, D.M., et al, (1978, p 55-61) MP 1195

Small-scale testing of soils for frost action. Sayward, J.M., (1979, p 223-231) MP 1309

Soil tests for frost action and water migration. Sayward, J.M., (1979, 17 p) CR 79-17

Determining explosive residues in soil Jenkins, T.F., et al, (1988, 46p) CR 88-08

Thawing soil strength measurements for predicting vehicle performance. Shoop, S.A., (1989, 18p) MP 2749

Soil texture

Enclosing fine-grained soils in plastic moisture barriers. Smith, N., (1978, p.560-570) MP 1089

Kinetic nature of the long term strength of frozen soils Fish, A.M., (1980, p.95-108) MP 1450

Soil trafficability

Effects of low ground pressure vehicle traffic on tundra. Abele, G., et al, (1978, 63p) SR 78-16

Snow pads for pipeline construction in Alaska Johnson, P.R., et al, (1980, 28p) CR 80-17

Evaluating trafficability. McKim, H.L., (1986, p 237-239) MP 2662

Vehicle mobility on thawing soils Shoop, S.A., (1989, 16p) SR 89-31

Soil water

Ionic migration and weathering in frozen Antarctic soils. Ugolini, F.C., et al, (1973, p 461-470) MP 941

Prediction of unfrozen water contents in frozen soils from liquid determinations. Tice, A.R., et al, (1976, 9p) CR 76-06

Impact of urban wastewater reuse in cold regions on land treatment systems Iskandar, I.K., (1976, 32p) MP 2452

On the origin of pingos—a comment Mackay, J.R., (1976, p 295-298) MP 916

Remote-reading tensiometer for use in subfreezing temperatures McKim, H.L., et al, (1976, p 31-45) MP 897

Colloquium on Water in Planetary Regoliths, Hanover, N.H., Oct 5-7, 1976. (1977, 161p) MP 911

Mars soil-water analyzer instrument description and status. Anderson, D.M., et al, (1977, p 149-158) MP 912

Enclosing fine-grained soils in plastic moisture barriers. Smith, N., (1978, p 560-570) MP 1089

Fundamentals of ice lens formation. Takagi, S., (1978, p 235-242) MP 1173

Simplified method for monitoring soil moisture Walsh, J.E., et al, (1978, p 40-44) MP 1194

Construction and performance of platinum probes for measurement of redox potential Blake, B.J., et al, (1978, 8p) SR 78-27

Increasing the effectiveness of soil compaction at below-freezing temperatures Haas, W.M., et al, (1978, 58p) SR 78-25

Construction and performance of membrane encapsulated soil layers in Alaska Smith, N., (1979, 27p) CR 79-16

Water movement in a land treatment system of wastewater by overland flow Nakano, Y., et al, (1979, p 185-206) MP 1285

Analysis of water in the Martian regolith Anderson, D.M., et al, (1979, p 33-38) MP 1409

Survey of methods for soil moisture determination Schmugge, T.J., et al, (1979, 74p) MP 1639

Frost heave in an instrumented soil column Berg, R.L., et al, (1980, p 211-221) MP 1331

Watershed modeling in cold regions Stokely, J.L., (1980, 241p) MP 1471

Review of techniques for measuring soil moisture *in situ* McKim, H.L., et al, (1980, 17p) SR 80-31

Field studies of membrane encapsulated soil layers with additives Eaton, R.A., et al, (1980, 46p) SR 80-33

Soil hydraulic conductivity and moisture retention features Ingersoll, J., (1981, 11p) SR 81-02

Some approaches to modeling phase change in freezing soils Hromadka, T.V., II et al, (1981, p 137-145) MP 1437

Laboratory and field use of soil tensiometers above and below 0 deg C Ingersoll, J., (1981, 17p) SR 81-07

Modeling N transport and transformations in soils Selim, H.M., et al, (1981, p 233-241) MP 1440

Hydraulic characteristics of the Deer Creek Lake land treatment site during wastewater application Abele, G. et al, (1981, 82p) CR 81-07

Soil water *(cont.)*
Simulating frost action by using an instrumented soil column. Ingersoll, J., et al. (1981, p 34-42) MP 1485
Comparative evaluation of frost-susceptibility tests. Chamberlain, E.J., (1981, p 42-52) MP 1486
Method for measuring enriched levels of deuterium in soil water. Oliphant, J.L., et al. (1982, 12p) SR 82-25
Relationship between ice and unfrozen water in frozen soils. Tice, A.R., et al. (1983, p 37-46) MP 1632
Wetting fronts in porous media. Nakano, Y., (1983, p.71-78) MP 1720
Effect of loading on the unfrozen water content of silt Oliphant, J.L., et al. (1983, 17p) SR 83-18
Soil-water diffusivity of unsaturated frozen soils at subzero temperatures. Nakano, Y., et al. (1983, p 889-893) MP 1664
Use of radio frequency sensor for snow/soil moisture water content measurement. McKim, H.L., et al. (1983, p 33-42) MP 1689
Boundary value problem of flow in porous media. Nakano, Y., (1983, p 205-213) MP 1721
Experimental measurement of channeling of flow in porous media Oliphant, J.L., et al. (1985, p 394-399) MP 1967
Phase equilibrium in frost heave of fine-grained soil. Nakano, Y., et al. (1985, p 50-68) MP 1896
Hydraulic properties of selected soils. Ingersoll, J., et al. (1985, p 26-35) MP 1925
Frost heave of full-depth asphalt concrete pavements. Zomerman, I., et al. (1985, p 66-76) MP 1927
Soil-water potential and unfrozen water content and temperature. Xu, X., et al. (1985, p 1-14) MP 1932
Evaluating trafficability. McKim, H.L., (1985, p.474-475) MP 2023
Evaluating trafficability. McKim, H.L., (1986, p.237-239) MP 2662
Measurement of the unfrozen water content of soils: a comparison of NMR and TDR methods Smith, M.W., et al. (1988, p 473-477) MP 2363
Relationship between freezing and water content in sandy loam. Black, P.B., et al. (1988, 37p) CR 88-26
Unfrozen water content of soils. Smith, M.W., et al. (1988, 11p) CR 88-18
Chemical aspects of soil freezing. Henry, K., (1988, 8p) CR 88-17
Determining nitroaromatics and nitramines in water. Jenkins, T.F., et al. (1988, 36p) SR 88-23
Unfrozen water contents of six antarctic soil materials Anderson, D.M., et al. (1989, p 353-366) MP 2470
Monitoring pavement performance in seasonal frost areas Berg, R.L., (1989, p.10-19) MP 2564
Data acquisition, first the FERF then the world. Knuth, K.V., (1989, p.136-138) MP 2567
New approach for sizing rapid infiltration systems (discussion and closure) Reed, S.C., et al. (1989, p 879-882) MP 2712
Soil freezing and soil water in sandy loam Black, P.B., et al. (1989, p 2205-2210) MP 2577
Hydraulic conductivity and unfrozen water content of frozen silt. Black, P.B., et al. (1990, p 323-329) MP 2551
Proceedings (1990, 318p) SR 90-01
Predicting unfrozen water content behavior of a soil Black, P.B., et al. (1990, p 54-60) MP 2677

Soil water migration
Segregation-freezing temperature as the cause of suction force. Takagi, S., (1977, p 59-66) MP 901
Mathematical model to predict frost heave Berg, R.L., et al. (1977, p 92-109) MP 1131
Moving boundary problems in the hydrodynamics of porous media Nakano, Y., (1978, p 125-134) MP 1343
Freeze thaw effect on the permeability and structure of soils Chamberlain, E.J., et al. (1978, p 31-44) MP 1080
Segregation freezing as the cause of suction force for ice lens formation. Takagi, S., (1978, p 45-51) MP 1081
Load tests on membrane-enveloped road sections Smith, N., et al. (1978, 16p) CR 78-12
Evaluation of the moving boundary theory Nakano, Y., (1978, p.142-151) MP 1147
Simulation of the movement of conservative chemicals in soil solution Nakano, Y., et al. (1978, p 371-380) MP 1156
Heat and moisture flow in unsaturated soils O'Neill, K., (1979, p 304-309) MP 1259
Small-scale testing of soils for frost action Sayward, J.M., (1979, p 223-231) MP 1309
Soil tests for frost action and water migration Sayward, J.M., (1979, 17 p) SR 79-17
Freeze thaw effect on the permeability and structure of soils Chamberlain, E.J., et al. (1979, p.73-92) MP 1225
Mathematical model to correlate frost heave of pavements Berg, R.L., et al. (1980, 49p) CR 80-10
Functional analysis of the problem of wetting fronts Nakano, Y., (1980, p 314-318) MP 1307
Summary of the adsorption force theory of frost heaving Takagi, S., (1980, p 233-236) MP 1332
Frost heave model based upon heat and water flux Guymon, G.L., et al. (1980, p 253-262) MP 1333
Adsorption force theory of frost heaving Takagi, S., (1980, p 57-81) MP 1334
Overconsolidation effects of ground freezing Chamberlain, E.J., (1980, p 325-337) MP 1452
Soil infiltration on land treatment sites. Abele, G., et al. (1980, 41p) SR 80-36
Results from a mathematical model of frost heave. Guymon, G.L., et al. (1981, p.2-6) MP 1483
Ice segregation in a frozen soil column. Guymon, G.L., et al. (1981, p 127-140) MP 1534
Mobility of water in frozen soils. Lunardini, V.J., et al. (1982, c15p.) MP 2012
Horizontal infiltration of water in porous materials. Nakano, Y., (1982, p.156-166) MP 1840
Transport of water in frozen soil, Part 1. Nakano, Y., et al. (1982, p 221-226) MP 1629
Effects of ice on the water transport in frozen soil. Nakano, Y., et al. (1983, p.15-26) MP 1601
Water migration due to a temperature gradient in frozen soil Oliphant, J.L., et al. (1983, p.951-956) MP 1666
Frozen soil-water diffusivity under isothermal conditions. Nakano, Y., et al. (1983, 8p) CR 83-22
Two-dimensional model of coupled heat and moisture transport in frost heaving soils Guymon, G.L., et al. (1984, p.91-98) MP 1678
Simple model of ice segregation using an analytic function to model heat and soil-water flow. Hromadka, T.V., II, et al. (1984, p.99-104) MP 2104
Effects of ice content on the transport of water in frozen soils. Nakano, Y., et al. (1984, p 28-34) MP 1841
Role of heat and water transport in frost heaving of porous soils Nakano, Y., et al. (1984, p 93-102) MP 1842
Deuterium diffusion in a soil-water-ice mixture. Oliphant, J.L., et al. (1984, 11p) SR 84-27
Transport of water in frozen soil. Nakano, Y., et al. (1984, p.172-179) MP 1819
Water migration in frozen clay under linear temperature gradients. Xu, X., et al. (1985, p 111-122) MP 1934
Experimental study on factors affecting water migration in frozen morin clay. Xu, X., et al. (1985, p 123-128) MP 1897
Thawing of frozen clays Anderson, D.M., et al. (1985, p.1-9) MP 1923
Ion and moisture migration and frost heave in freezing Morin clay. Qiu, G., et al. (1986, p.1014) MP 1970
Transport of water in frozen soil 6. Effects of temperature. Nakano, Y., et al. (1987, p.44-50) MP 2213
Model of heat and soil-water flow coupled by soil-water phase change. Hromadka, T.V., II, (1987, 124p) SR 87-09
Tracking freezing front movement using boundary element method. Hromadka, T.V., II, (1987, 58p) SR 87-08
Factors affecting water migration in frozen soils Xu, X., et al. (1987, 16p) CR 87-09
Geotextiles and a new way to use them. Henry, K., (1988, p 214-222) MP 2525
Observations of moisture migration in frozen soils during thawing Cheng, G., et al. (1988, p 308-312) MP 2373
Rate of water transport due to temperature gradients in frozen soils. Nakano, Y., et al. (1988, p 412-417) MP 2362
State of water in freezing soil. Black, P.B., (1989, 7p) CR 89-03
Fate and transport of contaminants in frozen soils Ayorinde, O.A., et al. (1990, p 202-211) MP 2679
Unfrozen water content and hydraulic conductivity of frozen soil Black, P.B., (1990, 7p) CR 90-05

Soils
Geobotanical atlas of the Prudhoe Bay region, Alaska Walker, D.A., et al. (1980, 69p) CR 80-14
Effects of a tundra fire on soil and vegetation Racine, C., (1980, 21p) SR 80-37
Introduction to abiotic components in tundra Brown, J., (1981, p 79) MP 1432

Solar radiation
Tundra environment at Barrow, Alaska Bunnell, F.L., et al. (1975, p.73-124) MP 1050
Effects of radiation penetration on snowmelt runoff hydrographs Colbeck, S.C., (1976, p 73-82) MP 948
Light-colored surfaces reduce thaw penetration in permafrost Berg, R.L., et al. (1977, p 86-99) MP 954
Near-infrared reflectance of snow-covered substrates O'Brien, H.W., et al. (1981, 17p) CR 81-21
Surface meteorology US/USSR Weddell Polynya Expedition, 1981. Andreas, E.L., et al. (1983, 32p) SR 83-14
On the decay and retreat of the ice cover in the summer MIZ. Maykut, G.A., (1984, p 15-22) MP 1780
Approach to snow propagation modeling Koh, G., (1984, p 247-259) MP 1869
Shortwave radiation and open water in models of sea ice decay Perovich, D.K., et al. (1990, p 242-246) MP 2759

Solid phases
Simulation of planar instabilities during solidification Sullivan, J.M., Jr., et al. (1987, p 81-111) MP 2585

Solutions
Nose shape and L/D ration, and projectile penetration in frozen soil Richmond, P.W., (1980, 21p) SR 80-17
Transport equation over long times and large spaces O'Neill, K., (1981, p 1665-1675) MP 1497
Ice crystal growth in subcooled NaCl solutions Sullivan, J.M., Jr., et al. (1985, p 527-532) MP 2100
Polyvinyl chloride well casings for ground water monitoring Parker, L.V., et al. (1986, p.92-98) MP 2171
Geochemistry of freezing brines Thurmond, V.L., et al. (1987, 11p) CR 87-13
Ice surface hydrolysis of diisopropylfluorophosphate (DFP) Leggett, D.C., (1987, p 809-815) MP 2457

Sound transmission
Audibility within and outside deposited snow. Johnson, J.E., (1985, p 136-142) MP 1960
Analysis of acoustical features of laboratory grown sea ice. Stanton, T.K., et al. (1986, p.1486-1494) MP 2222
Observations of low-frequency acoustic-to-seismic coupling in the summer and winter. Albert, D.G., et al. (1989, p 352-359) MP 2654
Acoustic pulse propagation above grassland and snow Albert, D.G., et al. (1990, p 93-100) MP 2573

Sound waves
Acoustic-to-seismic coupling through a snow layer. Peck, L., (1987, p.47-55) MP 2294

Sounding
Some characteristics of grounded floebergs near Prudhoe Bay, Alaska. Kovacs, A., et al. (1976, p 169-172) MP 1118
Grounded floebergs near Prudhoe Bay, Alaska Kovacs, A., et al. (1976, 10p) CR 76-34
US/USSR Weddell Polynya expedition, Upper air data, 1981. Andreas, E.L., (1983, 288p) SR 83-13
Impulse radar sounding of level first-year sea ice from an icebreaker Martinson, C.R., (1985, 9p) SR 85-21
Airborne measurement of sea ice thickness and subice bathymetry. Kovacs, A., et al. (1988, p 111-120) MP 2345
Coastal subsea permafrost and bedrock observations using dc resistivity. Sellmann, P.V., et al. (1989, 13p) CR 89-13
Sea ice thickness measurement. Kovacs, A., et al. (1989, p.394-424) MP 2693
Ice strength estimates from submarine topsounder data. DiMarco, R., et al. (1989, p 425-426) MP 2691
Airborne sea ice thickness sounding Kovacs, A., et al. (1990, p 225-229) MP 2737

South Georgia
Soil properties of the International Tundra Biome sites. Brown, J., et al. (1974, p 27-48) MP 1043
Tundra and analogous soils Everett, K.R., et al. (1981, p 139-179) MP 1405

South Shetland Islands
Tundra and analogous soils Everett, K.R., et al. (1981, p 139-179) MP 1405

Spaceborne photography
Applications of remote sensing in New England McKim, H.L., et al. (1975, 8p. + 14 figs and tables) MP 913
Circulation and sediment distribution in Cook Inlet, Alaska. Gatto, L.W., (1976, p 205-227) MP 895
Islands of grounded sea ice Kovacs, A., et al. (1976, 24p) CR 76-04
Land use and water quality relationships, eastern Wisconsin. Haugen, R.K., et al. (1976, 47p) CR 76-30
Antarctic sea ice dynamics and its possible climatic effects. Ackley, S.F., et al. (1976, p 53-76) MP 1378
Skylab imagery: Application to reservoir management in New England McKim, H.L., et al. (1976, 51p) SR 76-07
Environmental analyses in the Kootenai River region, Montana McKim, H.L., et al. (1976, 53p) SR 76-13
Visual observations of floating ice from Skylab Campbell, W.J., et al. (1977, p 353-379) MP 1263
Landsat data for watershed management Cooper, S., et al. (1977, c150p) MP 1114
1977 tundra fire in the Kokolik River area of Alaska Hall, D.K., et al. (1978, p 54-58) MP 1125
Water resources by satellite McKim, H.L., (1978, p 164-169) MP 1090
Estuarine processes and intertidal habitats in Grays Harbor, Washington: a demonstration of remote sensing techniques. Gatto, L.W., (1978, 79p) CR 78-18
Remote sensing for land treatment site selection Merry, C.J., (1978, p 107-119) MP 1146
1977 tundra fire at Kokolik River, Alaska Hall, D.K., et al. (1978, 11p) SR 78-10
Mapping of the LANDSAT imagery of the Upper Susitna River Gatto, L.W., et al. (1980, 41p) CR 80-04
Sea ice: the potential of remote sensing Weeks, W.F., (1981, p 39-48) MP 1468
Antarctic sea ice microwave signatures Comiso, J.C., et al. (1984, p 662-672) MP 1668
Use of SPOT HRV data in the Corps of Engineers dredging program Merry, C.J., et al. (1988, p 1295-1299) MP 2528
Satellite remote sensing in Arctic for 1990's Weeks, W.F., et al. (1989, p 510-530) MP 2699

Spacecraft
Progress report on ERTS data on Arctic environment Anderson, D.M., et al. (1972, 3p) MP 991
Near real time hydrologic data acquisition utilizing the LANDSAT system Mckim, H.L., et al. (1975, p 200-211) MP 1055
Remote sensing plan for the AIDJEX main experiment. Weeks, W.F., et al. (1975, p 21-48) MP 862
Deicing a satellite communication antenna Hanamoto, B., et al. (1980, 14p) SR 80-18
Potential icing of the space shuttle external tank Ferrick, M.G., et al. (1982, 305p.) CR 82-25

Arctic and Antarctic communications. Rosenberg, T.J., ed, (1987, 29p) MP 2322
Multiband imaging systems. McKim, H.L., et al, (1990, 10p) SR 90-15

Specific heat
Thermal diffusivity of frozen soil. Haynes, F.D., et al, (1980, 30p) SR 80-38
Comparison of unfrozen water contents measured by DSC and NMR. Oliphant, J.L., et al, (1982, p 115-121) MP 1594

Spectra
Atmospheric turbulence measurements at SNOW-ONE-B Andreas, E.L., (1983, p 81-87) MP 1846
Water quality monitoring using an airborne spectroradiometer. McKim, H.L., et al, (1984, p 353-360) MP 1718
Observations of volcanic tremor at Mount St. Helens volcano Fehler, M., (1984, p 3476-3484) MP 1770
Spectra and cospectra of atmospheric turbulence over snow Andreas, E.L., (1986, p 219-233) MP 2661
Spectral measurements in a disturbed boundary layer over snow. Andreas, E.L., (1987, 41p) CR 87-21
Kolmogorov Constants for temperature, humidity, and refractive index spectra. Andreas, E L., (1988, p 2399-2406) MP 2437

Spectrophotometers
Observations of the ultraviolet spectral reflectance of snow O'Brien, H.W., (1977, 19p) CR 77-27

Spectroradiometers
Water quality measurements at Lake Powell, Utah. Merry, C.J., (1977, 38p) SR 77-28

Spectroscopy
Correlation and quantification of airborne spectrometer data to turbidity measurements at Lake Powell, Utah. Merry, C.J., (1970, p 1309-1316) MP 1271
Remote sensing of water quality using an airborne spectroradiometer. McKim, H L., et al, (1980, p.1353-1362) MP 1491
Effects of volume averaging on spectra measured with a hygrometer. Andreas, E.L., (1981, p 467-475) MP 1728
Optical engineering for cold environments Aitken, G.W., ed, (1983, 225p) MP 1646
Characterization of snow for evaluation of its effect on electromagnetic wave propagation Berger, R H., (1983, p 35-42) MP 1648
Landsat-4 thematic mapper (TM) for cold environments. Gervin, J C., et al, (1983, p.179-186) MP 1651
Wildlife habitat mapping in Lac qui Parle, Minnesota. Merry, C.J., et al, (1984, p 205-208) MP 2085
Evaluation of SPOT HRV simulation data for Corps of Engineers applications McKim, H L., et al, (1985, p 61-71) MP 2184
Single fiber measurements for remote optical detection of TNT. Zhang, Y., et al, (1989, 7p) SR 89-18

Spillways
Reduced winter leakage in gates with J-seals Rand, J.H., et al, (1989, 3p) MP 2724

Stability
Movement study of the trans-Alaska pipeline at selected sites Ueda, H.T., et al, (1981, 32p) CR 81-04
Assessment of hydraulic structures in a stream after seasonal ice run. Calkins, D J., et al, (1989, 12p) MP 2744
Investigation into the post-stable behavior of a tube array in cross-flow Lever, J H., et al, (1989, p 457-465) MP 2561

Stabilization
Wastewater stabilization pond linings Middlebrooks, E J., et al, (1978, 116p) SR 78-28
Ice sheet retention structures Perham, R E., (1983, 33p) CR 83-30

Standards
Measuring mechanical properties of ice Schwarz, J., et al, (1981, p 245-254) MP 1556
Ground snow loads for structural design Ellingwood, B., et al, (1983, p.950-964) MP 1734
Changes coming in snow load design criteria Tobiasson, W., (1989, p 413-418) MP 2612

STATIC LOADS
Ice pressure on engineering structures Michel, B., (1970, 71p) M III-B1b

Static loads
Bearing capacity of floating ice plates Kerr, A.D., (1976, p 229-268) MP 884
Acoustic emissions from polycrystalline ice St Lawrence, W F., et al, (1982, 15p) CR 82-21
Mechanical properties of multi-year sea ice Testing techniques Mellor, M., et al, (1984, 39p) CR 84-08
Effect of oscillatory loads on the bearing capacity of floating ice covers Kerr, A D., et al, (1987, p 219-224) MP 2216

Static stability
Baseplate design and performance mortar stability report Aitken, G W., (1977, 28p) CR 77-22

Stations
Scientists visit Kolyma Water Balance Station in the USSR Slaughter, C.W., et al, (1977, 66p) SR 77-15
Subarctic watershed research in the Soviet Union Slaughter, C W., et al, (1978, p 305-313) MP 1273
Extending the useful life of DYE-2 to 1986 Tobiasson, W., et al, (1980, 37p) SR 80-13
Science program for an imaging radar receiving station in Alaska. Weller, G., et al, (1983, 45p) MP 1884

Statistical analysis
Midwinter temperature regime and snow occurrence in Germany. Bilello, M.A., et al, (1978, 56p) CR 78-21
Break-up dates for the Yukon River; Pt.1 Rampart to Whitehorse, 1896-1978. Stephens, C.A., et al, (1979, c50 leaves) MP 1317
Break-up dates for the Yukon River, Pt.2 Alakanuk to Tanana, 1883-1978 Stephens, C A., et al, (1979, c50 leaves) MP 1318
Cost-effective use of municipal wastewater treatment ponds Reed, S.C., et al, (1979, p 177-200) MP 1413
Regional climatic trends in northern New England Haugen, R.K., et al, (1988, p 64-71) MP 2748
Application of aerosol physics to snow research. Hogan, A.W., (1989, p 201-207) MP 2756

Steam
Long distance heat transmission with steam and hot water Aamot, H.W C., et al, (1976, 39p) MP 938
Measuring unmetered steam use with a condensate pump cycle counter. Johnson, P.R., (1977, p.434-442) MP 957
Losses from the Fort Wainwright heat distribution system Phetteplace, G., et al, (1981, 29p) SR 81-14

Steel structures
Extending the useful life of DYE-2 to 1986, Part 1 Tobiasson, W., et al, (1979, 15p) SR 79-27
Extending the useful life of DYE-2 to 1986 Tobiasson, W., et al, (1980, 37p) SR 80-13
Field tests of the kinetic friction coefficient of sea ice. Tatinclaux, J.C., et al, (1985, 20p) CR 85-17
Laboratory and field studies of ice friction coefficient Tatinclaux, J.C., et al, (1986, p 389-400) MP 2126

Stefan problem
Phase change around a circular pipe Lunardini, V J., (1980, 18p) CR 80-27
Deforming finite elements with and without phase change Lynch, D R., et al, (1981, p 81-96) MP 1493
Phase change around insulated buried pipes: quasi-steady method. Lunardini, V.J., (1981, p 201-207) MP 1496
Heat conduction with phase changes Lunardini, V.J., (1981, 14p) CR 81-25
Freezing of semi-infinite medium with initial temperature gradient. Lunardini, V.J., (1983, p 649-652) MP 1583
Freezing and thawing heat balance integral approximations. Lunardini, V.J., (1983, p.30-37) MP 1597
Two-dimensional heat conduction phase change Albert, M.R., et al, (1983, p 85-110) MP 2161
Freezing of a semi-infinite medium with initial temperature gradient. Lunardini, V.J., (1984, p 103-106) MP 1740
Stefan problem in a finite domain Takagi, S., (1985, 28p) SR 85-08
Approximate analytical solution of a Stefan's problem in a finite domain Takagi, S., (1988, p 245-266) MP 2384
Thin ice growth. Ashton, G D., (1989, p 564-566) MP 2657

Storms
Synoptic meteorology during the SNOW-ONE-A Field Experiment Bilello, M.A., (1983, 80p.) SR 83-10
Synoptic meteorology, crystal habit, and snowfall rates in Northeastern snowstorms Ryerson, C.C., et al, (1989, p 335-345) MP 2599

Strain measurement
Small-scale strain measurements on a glacier surface. Colbeck, S C., et al, (1971, p 237-243) MP 993

Strain measuring instruments
Waterproofing strain gages for low ambient temperatures Garfield, D E., et al, (1978, 20p) SR 78-15
Verification tests for a stiff inclusion stress sensor Cox, G F N., et al, (1987, p 81-88) MP 2223
Hopkinson pressure bar to measure strain rates of materials Dutta, P K., et al, (1988, p 885-903) MP 2517

Strain tests
Investigation of ice forces on vertical structures. Hirayama, K., et al, (1974, 153p) MP 1041
Effect of temperature and strain rate on the strength of polycrystalline ice Haynes, F D., (1977, p 107-111) MP 1127
Axial double point-load tests on snow and ice Kovacs, A., (1978, 11p) CR 78-01
Polycrystalline ice mechanics Hooke, R L., et al, (1979, 16p) MP 1207
Volumetric constitutive law for snow under strain Brown, R.L., (1979, 13p) CR 79-20
Asphalt concrete for cold regions Dempsey, B J., et al, (1980, 55p) CR 80-05
Mechanical properties of polycrystalline ice Hooke, R L., et al, (1980, p 263-275) MP 1328
Strain measurements on dumbbell specimens Mellor, M., (1983, p 75-77) MP 1683
Preliminary examination of the effect of structure on the compressive strength of ice samples from multi-year pressure ridges Richter, J A., et al, (1984, p 140-144) MP 1685
Tensile strength of frozen silt Zhu, Y., et al, (1986, p 15-28) MP 1971
Classification and laboratory testing of artificially frozen ground. Sayles, F.H., et al, (1987, p 22-48) MP 2227
Hopkinson pressure bar to measure strain rates of materials. Dutta, P.K., et al, (1988, p 885-903) MP 2517
Effects of temperature and structure of ice on its flexural strength. Gow, A J., et al, (1988, 43p) CR 88-06
Triaxial compressive strength of frozen soils under constant strain rates Zhu, Y., et al, (1988, p 1200-1205) MP 2371
Comparison of the compressive strength of antarctic frazil ice and laboratory-grown columnar ice Richter-Menge, J.A., et al, (1990, p 79-84) MP 2731

Strains
Remote sensing program required for the AIDJEX model Weeks, W.F., et al, (1974, p 22-44) MP 1040
Effect of temperature on the strength of frozen silt Haynes, F.D., et al, (1977, 27p) CR 77-03
Application of the Andrade equation to creep data for ice and frozen soil Ting, J M., et al, (1979, p 29-36) MP 1802
Volumetric constitutive law for snow under strain Brown, R L., (1979, 13p) CR 79-20
Acoustic emissions from polycrystalline ice St Lawrence, W F., et al, (1982, p 183-199) MP 1524
Relationship between creep and strength behavior of ice at failure. Cole, D.M., (1983, p 189-197) MP 1681
Effect of stress application rate on the creep behavior of polycrystalline ice. Cole, D.M., (1983, p 454-459) MP 1671
Variation of ice strength within and between multiyear pressure ridges in the Beaufort Sea. Weeks, W.F., (1984, p.134-139) MP 1680
Static determination of Young's modulus in sea ice Richter-Menge, J.A., (1984, p 283-286) MP 1789
MIZEX 83 mesoscale sea ice dynamics: initial analysis. Hibler, W.D., III, et al, (1984, p 19-28) MP 1811
Rheology of glacier ice Jezek, K C., et al, (1985, p.1335-1337) MP 1844
Deteriorated building panels at Sondrestrom, Greenland Korhonen, C., (1985, p.7-10) MP 2017
Strain rate effect on the tensile strength of frozen silt. Zhu, Y., et al, (1985, p 153-157) MP 1898
Frozen ground physics Fish, A M., (1985, p 29-36) MP 1928
Exact solution for melting of frozen soil with thaw consolidation. Lunardini, V.J., (1987, p.97-102) MP 2191
Strain-rate and grain-size effects in ice Cole, D.M., (1987, p 274-280) MP 2311

Stratification
Stratified debris in Antarctic ice cores. Gow, A J., et al, (1979, p 185-192) MP 1272

Stratigraphy
Drilling and coring of frozen ground in northern Alaska, Spring 1979. Lawson, D E., et al, (1980, 14p) SR 80-12

Stream flow
Drainage network analysis of a subarctic watershed Bredthauer, S R., et al, (1979, p 349-359) MP 1274
Watershed modeling in cold regions Stokely, J L., (1980, 241p) MP 1471
Clearing ice-clogged shipping channels Vance, G.P., (1980, 13p) CR 80-28
Analysis of velocity profiles under ice in shallow streams Calkins, D J., et al, (1981, p 93-111) MP 1397
Flow velocity profiles in ice-covered shallow streams Calkins, D J., et al, (1982, p 236-247) MP 1540
Runoff from a small subarctic watershed, Alaska Chacho, E F., et al, (1983, p 115-120) MP 1654
Snow hydrology in the upper Yamuna basin, India Malhotra, R V., et al, (1988, p 84-93) MP 2633
Assessment of hydraulic structures in a stream after seasonal ice run Calkins, D J., et al, (1989, 12p) MP 2744
Seasonal distribution of low flow events in New Hampshire streams with emphasis on the winter period Melloh, R.A., (1990, p 47-53) MP 2681

Streams
Lidar detection of leads in arctic sea ice Schnell, R C., et al, (1990, p 119-123) MP 2733

Strength
State of the art of ship model testing in ice Vance, G P., (1981, p 693-706) MP 1573
Model tests in ice of a Canadian Coast Guard R-class icebreaker Tatinclaux, J C., (1984, 24p) SR 84-06

Stress concentration
Flexural strength of ice on temperate lakes Gow, A J., et al, (1978, 14p) CR 78-09

Stress strain diagrams
Resiliency of silt under asphalt during freezing and thawing Johnson, T C., et al, (1978, p 662-668) MP 1106
Polycrystalline ice mechanics Hooke, R L. et al, (1979, 16p) MP 1207
Grouting silt and sand at low temperatures Johnson, R., (1979, p 937-950) MP 1078
Acoustic emission response of snow St Lawrence, W F., (1980, p 209-216) MP 1366
Strength of frozen silt as a function of ice content and dry unit weight Sayles, F H., et al, (1980, p 109-119) MP 1451
Mechanical properties of polycrystalline ice Hooke, R L., et al, (1980, p 263-275) MP 1328

Stress strain diagrams *(cont.)*
Constitutive relation for the deformation of snow. St. Lawrence, W.F., et al. (1981, p 3-14) MP 1370
Cyclic loading and fatigue in ice. Mellor, M., et al. (1981, p.41-53) MP 1371
Ice behavior under constant stress and strain. Mellor, M., et al. (1982, p.201-219) MP 1525
Glacier mechanics. Mellor, M., (1982, p 455-474) MP 1532
Polycrystalline ice creep in relation to applied stresses. Cole, D.M., (1983, p 614-621) MP 1582
Stress/strain/time relations for ice under uniaxial compression. Mellor, M., et al, (1983, p.207-230) MP 1587
Creep behavior of frozen silt under constant uniaxial stress. Zhu, Y., et al, (1983, p 1507-1512) MP 1805
Compressive strength of frozen silt Zhu, Y., et al, (1984, p 3-15) MP 1773
Creep model for constant stress and constant strain rate. Fish, A.M., (1984, p.1009-1012) MP 1766
Thermodynamic model of creep at constant stress and constant strain rate. Fish, A.M., (1984, p 143-161) MP 1771
Grain size and the compressive strength of ice. Cole, D.M., (1985, p 220-226) MP 1858
Creep and strength behavior of frozen silt in uniaxial compression. Zhu, Y., et al, (1987, 67p) CR 87-10
State of the art: mechanical properties of frozen soil. Sayles, F.H., (1988, p 143-165) MP 2377
Performance of laminated composites in cold Dutta, P.K., et al, (1988, p 269-281) MP 2433
Frozen strength characterization of NH&S test sites in Montana. Chamberlain, E.J., et al, (1988, var. p) MP 2617
Uniaxial tension/compression tests on ice—preliminary results. Cole, D.M., et al, (1989, p.37-41) MP 2482
Cyclic loading of saline ice: initial experimental results. Cole, D.M., (1990, p 265-271) MP 2581

Stresses
Statistical variations in Arctic sea ice ridging and deformation rates. Hibler, W.D., III, (1975, p.J1-J16) MP 850
Interpretation of the tensile strength of ice under triaxial stress. Nevel, D.E., et al, (1976, p.375-387) MP 996
Interpretation of the tensile strength of ice under triaxial stresses. Nevel, D.E., et al, (1976, 9p) CR 76-05
Compressibility characteristics of compacted snow Abele, G., et al, (1976, 47p) CR 76-21
Creep theory for a floating ice sheet Nevel, D.E., (1976, 98p) SR 76-04
Resilient response of two frozen and thawed soils. Chamberlain, E.J., et al, (1979, p 257-271) MP 1176
Photoelastic instrumentation—principles and techniques. Roberts, A., et al, (1979, 153p) SR 79-13
Some results from a linear viscous model of the Arctic ice cover. Hibler, W.D., III, et al, (1979, p 293-304) MP 1241
Extending the useful life of DYE-2 to 1986. Part I. Tobiasson, W., et al, (1979, 15p) SR 79-27
Snow studies associated with the sideways move of DYE-3 Tobiasson, W., (1979, p.117-124) MP 1312
Ice thickness-tensile stress relationship for load-bearing ice. Johnson, P.R., (1980, 11p) SR 80-09
Extending the useful life of DYE-2 to 1986 Tobiasson, W., et al, (1980, 37p) SR 80-13
Adsorption force theory of frost heaving. Takagi, S., (1980, p.57-81) MP 1334
Some promising trends in ice mechanics Assur, A., (1980, p 1-15) MP 1300
Propagation of stress waves in alpine snow Brown, R.L., (1980, p.235-243) MP 1367
Dynamic testing of free field stress gages in frozen soil Aitken, G.W., et al, (1980, 26p) SR 80-30
Kinetic nature of the long term strength of frozen soils Fish, A.M., (1980, p.95-108) MP 1450
Preliminary results of ice modeling in the East Greenland area Tucker, W.B., et al, (1981, p 867-878) MP 1458
Macroscopic view of snow deformation under a vehicle Richmond, P.W., et al, (1981, 20p) SR 81-17
Sea ice drag laws and boundary layer during rapid melting McPhee, M.G., (1982, 17p) CR 82-04
Acoustic emissions from polycrystalline ice St Lawrence, W.F., et al, (1982, p.183-199) MP 1524
Deformation and failure of frozen soils and ice due to stresses Fish, A.M., (1982, p 419-428) MP 1553
Stress measurements in ice Cox, G.F.N., et al, (1983, 31p) CR 83-23
Relationship between creep and strength behavior of ice at failure Cole, D.M., (1983, p 189-197) MP 1681
Effect of stress application rate on the creep behavior of polycrystalline ice Cole, D.M., (1983, p 454-459) MP 1671
Evaluation of a biaxial ice stress sensor Cox, G.F.N., (1984, p 349-361) MP 1836
Preliminary investigation of thermal ice pressures Cox, G.F.N., (1984, p 221-229) MP 1788
On the rheology of a broken ice field due to floe collision Shen, H., et al, (1984, p 29-34) MP 1812
Secondary stress within the structural frame of DYE-3 1978-1983. Ueda, H.T., et al, (1984, 44p) SR 84-26
in-ice calibration tests for an elongated, uniaxial brass ice stress sensor. Johnson, J.B., (1985, p 244-249) MP 1859
Effect of size on stresses in shear flow of granular materials, Pt 2. Shen, H.H., (1985, 20p) CR 85-03
Creep of a strip footing on ice-rich permafrost. Sayles, F.H., (1985, p 29-51) MP 1731
Kadluk ice stress measurement program Johnson, J.B., et al, (1985, p 88-100) MP 1899
Experience with a biaxial ice stress sensor Cox, G.F.N., (1985, p 252-258) MP 1937
Constitutive relations for a planar, simple shear flow of rough disks. Shen, H.H., et al, (1985, 17p) CR 85-20
Repeated load triaxial testing of frozen and thawed soils. Cole, D.M., et al, (1985, p.166-170) MP 2068
Static and dynamic ice loads on the Yamachiche Bend lightpier, 1984-86 Frederking, R., et al, (1986, p.115-126) MP 2389
Verification tests for a stiff inclusion stress sensor Cox, G.F.N., et al, (1987, p 81-88) MP 2223
Rock stress measurements by wire stressmeter at high temperatures. Dutta, P.K., et al, (1987, p.43-58) MP 2447
Verification tests of the surface integral method for calculating structural ice loads. Johnson, J.B., et al, (1988, p.449-456) MP 2353
Mukluk ice stress measurement program Cox, G.F.N., et al, (1988, p 457-463) MP 2354
Ice stress measurements around offshore structures. Johnson, J.B., (1988, p 55-59) MP 2611

Structural analysis
Structural evaluation of porous pavement in cold climate. Eaton, R.A., et al, (1980, 43p) SR 80-39

STRUCTURES
Ice pressure on engineering structures. Michel, B., (1970, 71p) M III-B1b

Structures
De-icing using lasers. Lane, J.W., et al, (1976, 25p) CR 76-10
Ice cover forces on structures. Kerr, A.D., (1978, p.123-134) MP 879
Cost of ice damage to shoreline structures during navigation. Carey, K.L., (1980, 33p) SR 80-22
Icing on structures. Minsk, L.D., (1980, 18p) CR 80-31
Force measurements and analysis of river ice break up Deck, D.S., (1982, p 303-336) MP 1739
Uniform snow loads on structures. O'Rourke, M.J., et al, (1982, p 2781-2798) MP 1574
Buckling loads of floating ice on structures. Sodhi, D.S., et al, (1983, p 260-265) MP 1626
Experiments on ice ride-up and pile-up Sodhi, D.S., et al, (1983, p 266-270) MP 1627
Atmospheric icing of structures. Minsk, L.D., ed, (1983, 366p) SR 83-17
Ice action on two cylindrical structures Kato, K., et al, (1983, p.159-166) MP 1643
Ice sheet retention structures. Perham, R.E., (1984, p.339-348) MP 1832
Crushing ice forces on cylindrical structures. Morris, C.E., et al, (1984, p.1-9) MP 1834
Secondary stress within the structural frame of DYE-3 1978-1983 Ueda, H.T., et al, (1984, 44p) SR 84-26
Transfer of meteorological data from mountain-top sites. Govoni, J.W., et al, (1986, 6p) MP 2107
Meteorological instrumentation for characterizing atmospheric icing Bates, R.E., et al, (1987, p.23-36) MP 2276
Ice detector measurements compared to meteorological data Tucker, W.B., et al, (1987, p.31-37) MP 2277
Working group on ice forces. 4th state-of-the-art report Timco, G.W., ed, (1989, 385p) SR 89-05
Ice-induced vibrations of structures Sodhi, D.S., (1989, p 189-221) MP 2492
Development and design of sludge freezing beds Martel, C.J., (1989, p 799-808) MP 2556

Subarctic landscapes
Utility distribution systems in Iceland Aamot, H.W.C., (1976, 63p) SR 76-05
Revegetation in arctic and subarctic North America a literature review Johnson, L.A., et al, (1976, 32p) CR 76-15
Land treatment of wastewater at a subarctic Alaskan location Sletten, R.S., et al, (1976, 21p) MP 868
Biological restoration strategies in relation to nutrients at a subarctic site in Fairbanks, Alaska Johnson, L.A., (1978, p.460-466) MP 1100

Subglacial drainage
Depth of water-filled crevasses of glaciers Weertman, J., (1973, p 139-145) MP 1044
Dimensions at the margin of the Matanuska Glacier, Alaska Lawson, D.E., (1981, p 78-84) MP 1462
Subice channels and frazil bars, Tanana River, Alaska Lawson, D.E., et al, (1986, p 465-472) MP 2129
Jokulhlaups from Strandline Lake, Alaska (especially the 1982 event) Sturm, M., et al, (1989, 19p) MP 2520
Jokulhlaup involving a pothole glacier in Alaska Sturm, M., et al, (1990, p 125-126) MP 2708

Subglacial observations
Investigation of ice islands in Babbage Bight Kovacs, A., et al, (1971, 46 leaves) MP 1381
Oil pooling under sea ice. Kovacs, A., (1979, p.310-323) MP 1289
Physical properties of sea ice and under-ice current orientation. Kovacs, A., et al, (1980, p.109-153) MP 1323
Measurement of the shear stress on the underside of simulated ice covers. Calkins, D.J., et al, (1980, 11p) CR 80-24
Electromagnetic subsurface measurements. Dean, A.M., Jr., (1981, 19p) SR 81-23
Geophysics of subglacial geology at Dye 3, Greenland. Jezek, K.C., et al, (1985, p.105-110) MP 1941
Airborne electromagnetic sounding of sea ice thickness and sub-ice bathymetry. Kovacs, A., et al, (1987, p.289-311) MP 2332

Subgrade preparation
Influence of insulation upon frost penetration beneath pavements. Eaton, R.A., et al, (1976, 41p) SR 76-06
Repetitive loading tests on membrane enveloped road sections during freeze thaw Smith, N., et al, (1977, p 171-197) MP 962
Winter earthwork construction in Upper Michigan. Haas, W.M., et al, (1977, 59p) SR 77-40
Effects of subgrade preparation upon full depth pavement performance in cold regions. Eaton, R.A., (1978, p 459-473) MP 1087
Load tests on membrane-enveloped road sections. Smith, N., et al, (1978, 16p) CR 78-12
Freeze thaw loading tests on membrane enveloped road sections. Smith, N., et al, (1978, p 1277-1288) MP 1150
Design of airfield pavements for seasonal frost and permafrost conditions. Berg, R.L., et al, (1978, 18p) MP 1189
Construction of temporary airfields in NPRA. Crory, F.E., (1978, p.13-15) MP 1253
Full-depth pavement considerations in seasonal frost areas. Eaton, R.A., et al, (1979, 24p) MP 1188

Subgrade soils
Resiliency in cyclically frozen and thawed subgrade soils. Chamberlain, E.J., et al, (1977, p.229-281) MP 1724
Effect of freeze-thaw cycles on resilient properties of fine-grained soils. Johnson, T.C., et al, (1978, 19p) MP 1082
Resiliency of subgrade soils during freezing and thawing. Johnson, T.C., et al, (1978, 59p) CR 78-23
Resilient response of two frozen and thawed soils. Chamberlain, E.J., et al, (1979, p.257-271) MP 1176
Freeze thaw effect on resilient properties of fine soils. Johnson, T.C., et al, (1979, p 247-276) MP 1226
Pavement deflection after freezing and thawing. Chamberlain, E.J., (1981, 10p) CR 81-15
Effect of freezing and thawing on resilient modulus of granular soils. Cole, D.M., et al, (1981, p 19-26) MP 1404
Full-depth and granular base course design for frost areas. Eaton, R.A., et al, (1983, p 27-39) MP 1692
Laboratory tests and analysis of thermosyphons with inclined evaporator sections. Zarling, J.P., et al, (1985, p.31-37) MP 1853
Freeze thaw tests of road and airfield subgrade soils Cole, D.M., et al, (1987, 36p) CR 87-02
Determination of frost penetration by soil resistivity measurements. Atkins, R.T., (1989, p 87-100) MP 2565

Subgrades
Pavement recycling using a heavy bulldozer mounted pulverizer Eaton, R.A., et al, (1977, 12p + appends) SR 77-30
Heat transfer of a thermosyphon Zarling, J.P., et al, (1987, p 79-84) MP 2190
Heat transfer performance of commercial thermosyphons with inclined evaporator sections Haynes, F.D., et al, (1988, p.275-280) MP 2320
Thermal stabilization of permafrost with thermosyphons Zarling, J.P., et al, (1990, p 323-329) MP 2583

Sublimation
Sublimation and its control in the CRREL permafrost tunnel Johansen, N.I., (1981, 12p) SR 81-08

Submarines
Surfacing submarines through ice Assur, A., (1966, p 309-318) MP 1098
DOD floating ice problems Cox, G.F.N., (1987, p 151-154) MP 2414
Proceedings (1989, 45p) SR 89-39
Ice strength estimates from submarine topsounder data DiMarco, R., et al, (1989, p 425-436) MP 2691

Subsea permafrost
Delineation and engineering characteristics of permafrost beneath the Beaufort Sea Sellmann, P.V., et al, (1976, p 391-408) MP 1377
Operational report 1976 ICSAC RREL ice stress subsea permafrost program Beaufort Sea, Alaska Sellmann, P.V., et al, (1976, 20p) SR 76-12
Delineation and engineering characteristics of permafrost beneath the Beaufort Sea Sellmann, P.V., et al, (1976, p 53-80) MP 919
Delineation and engineering characteristics of permafrost beneath the Beaufort Sea Sellmann, P.V., et al, (1977, p 214-219) MP 927
Delineation and engineering characteristics of permafrost beneath the Beaufort Sea Sellmann, P.V., et al, (1977, p.383-395) MP 1074

Delineation and engineering characteristics of permafrost beneath the Beaufort Sea. Sellmann, P.V., et al, [1977, p.432-440] MP 1077

1977 CRREL-USGS permafrost program Beaufort Sea, Alaska, operational report. Sellmann, P.V., et al, [1977, 19p.] SR 77-41

Delineation and engineering characteristics of permafrost beneath the Beaufort Sea. Sellmann, P.V., et al, [1977, p.518-521] MP 1201

Chemistry of interstitial water from subsea permafrost, Prudhoe Bay, Alaska. Iskandar, I.K., et al, [1978, p.92-98] MP 1385

Engineering properties of submarine permafrost near Prudhoe Bay. Chamberlain, E.J., et al, [1978, p.629-635] MP 1104

Geochemistry of subsea permafrost at Prudhoe Bay, Alaska. Page, F.W., et al, [1978, 70p.] SR 78-14

Permafrost beneath the Beaufort Sea. Sellmann, P.V., et al, [1978, p.50-74] MP 1206

Permafrost beneath the Beaufort Sea, near Prudhoe Bay, Alaska. Sellmann, P.V., et al, [1979, p.1481-1493] MP 1211

Penetration tests in subsea permafrost, Prudhoe Bay, Alaska. Blouin, S.E., et al, [1979, 45p.] CR 79-07

Determining subsea permafrost characteristics with a cone penetrometer—Prudhoe Bay, Alaska. Blouin, S.E., et al, [1979, p.3-16] MP 1217

Subsea permafrost study in the Beaufort Sea, Alaska. Sellmann, P.V., et al, [1979, p.207-213] MP 1591

Distribution and properties of subsea permafrost of the Beaufort Sea. Sellmann, P.V., et al, [1979, p.93-115] MP 1287

Permafrost distribution on the continental shelf of the Beaufort Sea. Hopkins, D.M., et al, [1979, p.135-141] MP 1288

Permafrost beneath the Beaufort Sea: near Prudhoe Bay, Alaska. Sellmann, P.V., et al, [1980, p.35-48] MP 1346

Features of permafrost beneath the Beaufort Sea. Sellmann, P.V., et al, [1980, p.103-110] MP 1344

Distribution and features of bottom sediments in Alaskan coastal waters. Sellmann, P.V., [1980, 50p.] SR 80-15

Unfrozen water contents of submarine permafrost determined by nuclear magnetic resonance. Tice, A.R., et al, [1980, p.400-412] MP 1412

Characteristics of permafrost beneath the Beaufort Sea. Sellmann, P.V., et al, [1981, p.125-157] MP 1428

Delineation and engineering of subsea permafrost, Beaufort Sea. Sellmann, P.V., et al, [1981, p.137-156] MP 1600

Foundations of structures in polar waters. Chamberlain, E.J., [1981, 16p.] SR 81-25

Site investigations and submarine soil mechanics in polar regions. Chamberlain, E.J., [1981, 18p.] SR 81-24

Understanding the Arctic sea floor for engineering purposes. [1982, 141p.] SR 83-25

Subsea permafrost in Harrison Bay, Alaska. Neave, K.G., et al, [1982, 62p.] CR 82-24

Seismic velocities and subsea permafrost in the Beaufort Sea, Alaska. Neave, K.G., et al, [1983, p.894-898] MP 1665

Determining distribution patterns of ice-bonded permafrost in the U.S. Beaufort Sea from seismic data. Neave, K.G., et al, [1984, p.237-258] MP 1839

Subsea permafrost distribution on the Alaskan shelf. Sellmann, P.V., et al, [1984, p.75-82] MP 1852

Mapping resistive seabed features using DC methods. Sellmann, P.V., et al, [1985, p.136-147] MP 1918

Seismic surveys of shallow subsea permafrost. Neave, K.G., et al, [1985, p.61-65] MP 1954

Galvanic methods for mapping resistive seabed features. Sellmann, P.V., et al, [1985, p.91-92] MP 1955

Freeze thaw consolidation of sediments, Beaufort Sea, Alaska. Lee, H.J., et al, [1985, 83p.] MP 2025

Monitoring seasonal changes in seafloor temperature and salinity. Sellmann, P.V., et al, [1986, p.110-114] MP 2147

D.C. resistivity along the coast at Prudhoe Bay, Alaska. Sellmann, P.V., et al, [1988, p.988-993] MP 2366

Coastal subsea permafrost and bedrock observations using dc resistivity. Sellmann, P.V., et al, [1989, 13p.] CR 89-13

Subsidence

Environmental consequences of 1964 Alaska earthquake in Portage, Alaska. Ovenshine, A.T., et al, [1974, p.3-9] MP 2409

Slumping failure of an Alaskan earth dam. Collins, C.M., et al, [1977, 21p.] SR 77-21

Human-induced thermokarst at old drill sites in northern Alaska. Lawson, D.E., et al, [1978, p.16-23] MP 1254

Substrates

Near-infrared reflectance of snow-covered substrates. O'Brien, H.W., et al, [1981, 17p.] CR 81-21

Subsurface drainage

Solving problems of ice-blocked drainage facilities. Carey, K.L., [1977, 17p.] SR 77-25

Drainage and frost action criteria for a pavement design. Berg, R.L., [1979, 51p.] SR 79-15

Subsurface investigations

Subsurface exploration in cold regions. Cass, J.R., Jr [1959, p.31-41] MP 885

Seismic exploration in cold regions. Rothblaberger, H., [1972, 138p.] M II-A2a

Remote sensing of ice gouge depths along pipelines in Alaska. Kovacs, A., et al [1982, p.268-279] MP 1175

Asymmetric flows: application to flow below ice jams. Gögüs, M., et al, [1981, p.342-350] MP 1733

Distortion of model subsurface radar pulses in complex dielectrics. Arcone, S.A., [1981, p.855-864] MP 1472

Radar profiling of buried reflectors and the groundwater table. Sellmann, P.V., et al, [1983, 10p.] CR 83-11

Analysis of wide-angle reflection and refraction measurements. Morey, R.W., et al, [1985, p.53-60] MP 1983

SUBSURFACE STRUCTURES

Foundations and subsurface structures in snow. Mellor, M., [1969, 54p.] M III-A2c

Subsurface structures

On the origin of pingos in a continent. Mackay, J.R., [1976, p.295-298] MP 916

Block motion from determinations of buried near-surface explosive arrays. Blouin, S.E., [1980, 62p.] CR 80-26

Supercooled clouds

Wet precipitation in subfreezing air below a cloud influences radar backscattering. Colbeck, S.C., [1987, p.135-144] MP 2297

Supercooled fog

Compressed air seeding of supercooled fog. Hicks, J.R., [1976, 9p.] SR 76-09

Use of compressed air for supercooled fog dispersal. Weinstein, A.I., et al, [1976, p.1226-1231] MP 1614

Laboratory studies of compressed air seeding of supercooled fog. Hicks, J.R., et al, [1977, 19p.] SR 77-12

Ice crystal formation and supercooled fog dissipation. Kumai, M., [1982, p.579-587] MP 1539

Mechanical ice release from high-speed rotors. Itagaki, K., [1983, 8p.] CR 83-26

Self-shedding of accreted ice from high-speed rotors. Itagaki, K., [1987, p.95-100] MP 2278

Supercooled water

Apparent anomaly in freezing of ordinary water. Swinzow, G.K., [1976, 23p.] CR 76-20

Frazil ice formation in turbulent flow. Müller, A., et al, [1978, p.219-234] MP 1135

Supercooling

Heat and mass transfer from freely falling drops at low temperatures. Zurling, J.P., [1980, 14p.] CR 80-18

Phase equilibrium in frost heave of fine-grained soil. Nakano, Y., et al, [1985, p.50-68] MP 1896

Frazil ice in rivers and streams. Daly, S.F., [1987, p.19-26] MP 2381

International Symposium on Cold Regions Heat Transfer, 1989. [1989, 314p.] MP 2636

Time estimation for maximum supercooling in dynamic frazil ice formation. Daly, S.F., et al, [1989, 13p.] SR 89-26

Supersaturation

Ice crystal morphology and growth rates at low supersaturations and high temperatures. Colbeck, S.C., [1983, p.2677-2682] MP 1537

Supports

Flexural strength of ice on temperate lakes. Gow, A.J., et al, [1978, 14p.] CR 78-09

Pressure buildup on permafrost pile supports induced by freezeback. Ayorinde, O.A., [1989, p.236-251] MP 2467

Surface drainage

Land treatment of wastewaters. Reed, S.C., et al, [1974, p.12-13] MP 1036

Land treatment of wastewaters for rural communities. Reed, S.C., et al, [1975, p.23-39] MP 1399

Solving problems of ice-blocked drainage facilities. Carey, K.L., [1977, 17p.] SR 77-25

Drainage facilities of airfields and heliports in cold regions. Lobacz, E.F., et al, [1981, 56p.] SR 81-22

Development of the unsurfaced roads rating methodology. Eaton, R.A., [1988, 13p.] SR 88-05

Hydraulic model of overland flow on grass covered slopes. Adrian, D.D., et al, [1989, p.569-578] MP 2710

Jökulhlaup involving a potholed glacier in AK. Sturm, M., et al, [1990, p.125-126] MP 2708

SURFACE FEATURES

Effects of permafrost on engineering. Stearns, S.R., [1966, 77p.] M I-A2

Surface migration

Camp Century survey 1986. Gundestrup, N.S., et al, [1987, p.281-288] MP 2331

Surface properties

CRREL instrumented vehicle for cold regions mobility measurements. Blaisdell, G.L., [1982, 11p.] MP 1515

Heat fluxes, humidity profiles, and surface humidity. Andreas, E.L., [1982, 18p.] CR 82-12

Freezing of soil with surface convection. Lunardini, V.J., [1982, p.205-212] MP 1598

CRREL instrumented vehicle hardware and software. Blaisdell, G.L., [1984, 75p.] CR 83-03

Implications of surface energy in ice adhesion. Itagaki, K., [1983, p.41-48] MP 1672

Climatic factors in cold regions surface conditions. Bilello, M.A., [1985, p.508-517] MP 1961

Field tests of the kinetic friction coefficient of sea ice. Tatinclaux, J.C., et al, [1985, 20p.] CR 85-17

Development of the unsurfaced roads rating methodology. Eaton, R.A., [1988, 13p.] SR 88-05

Surface roughness

Remote sensing program required for the AIDJEX model. Weeks, W.F., et al, [1974, p.22-44] MP 1040

Thickness and roughness variations of arctic multiyear sea ice. Ackley, S.F., et al, [1976, 25p.] CR 76-10

Sea ice roughness and flow geometry over continental shelves. Weeks, W.F., et al, [1977, p.32-41] MP 1163

Sea ice ridging over the Alaskan continental shelf. Tucker, W.B., et al, [1979, 24p.] CR 79-08

Sea ice ridging over the Alaskan continental shelf. Tucker, W.B., et al, [1979, p.4885-4897] MP 1240

Measurement of the shear stress on the underside of simulated ice covers. Calkins, D.J., et al, [1980, 11p.] CR 80-24

Analysis of velocity profiles under ice in shallow streams. Calkins, D.J., et al, [1981, p.94-111] MP 1397

Asymmetric flows: application to flow below ice jams. Gögüs, M., et al, [1981, p.342-350] MP 1733

Modeling pressure ridge buildup on the geophysical scale. Hibler, W.D., III, [1982, p.141-155] MP 1590

Comment on 'Water drag coefficient of first-year sea ice' by M.P. Langleben. Andreas, E.L., et al, [1983, p.779-782] MP 1577

Constitutive relations for a planar, simple shear flow of rough disks. Shen, H.H., et al, [1985, 17p.] CR 85-20

Laboratory and field studies of ice friction coefficient. Tatinclaux, J.C., et al, [1986, p.389-400] MP 2126

Roughness and transfer coefficients over snow and sea ice. Andreas, E.L., [1986, 19p.] CR 86-09

Rating unsurfaced roads. Eaton, R.A., et al, [1987, 34p.] SR 87-15

Measurement of the path-averaged turbulent surface heat flux. Andreas, E.L., [1988, p.219-220] MP 2526

Two-wavelength method of measuring path-averaged turbulent surface heat fluxes. Andreas, E.L., [1989, p.280-292] MP 2648

Radar backscattering from artificially grown sea ice. Bredow, J., et al, [1989, p.259-264] MP 2667

Surface structure

Airborne E-phase resistivity surveys of permafrost. Sellmann, P.V., et al, [1974, p.67-71] MP 1046

Light-colored surfaces reduce thaw penetration in permafrost. Berg, R.L., et al, [1977, p.86-99] MP 954

Surface temperature

Measuring building R-values for large areas. Flanders, S.N., et al, [1981, p.137-138] MP 1388

Transient heat flow and surface temperatures of a built-up roof. Korhonen, C., [1983, 20p.] SR 83-22

Effect of color and texture on the surface temperature of asphalt concrete pavements. Berg, R.L., et al, [1983, p.57-61] MP 1652

Increased heat flow due to snow compaction: the simplistic approach. Colbeck, S.C., [1983, p.227-229] MP 1693

Time-lapse thermography: a unique electronic imaging application. Marshall, S.J., et al, [1984, p.84-88] MP 2103

New method of measuring the snow-surface temperature. Andreas, E.L., [1986, p.139-156] MP 2166

Thermal measurements in snow. Jordan, R., et al, [1986, p.183-193] MP 2660

Low pressure weather systems in and around Norwegian waters. Bilello, M.A., [1986, p.53-66] MP 2181

Blistering of built-up roof membranes: pressure measurements. Korhonen, C., [1987, 22p.] SR 86-29

Surfactants

Using bleach mixture for decontamination at low temperatures. Walsh, M.E., et al, [1989, 13p.] SR 89-33

Surveys

Water detection in coastal plains using helicopter-borne short pulse radar. Arcone, S.A., et al, [1989, 25p.] CR 89-07

Suspended sediments

Correlation and quantification of airborne spectrometer data to turbidity measurements at Lake Powell, Utah. Merry, C.J., [1970, p.1309-1316] MP 1271

Baseline data on tidal flushing in Cook Inlet, Alaska. Gatto, L.W., [1973, 11p.] MP 1523

Remote sensing of water quality using an airborne spectroradiometer. McKim, H.L., et al, [1980, p.1353-1362] MP 1491

Ice distribution and water circulation, Kachemak Bay, Alaska. Gatto, L.W., [1982, p.421-435] MP 1569

Water quality monitoring using an airborne spectroradiometer. McKim, H.L., et al, [1984, p.353-360] MP 1718

Use of SPOT HRV data in the Corps of Engineers dredging program. Merry, C.J., et al, [1988, p.1295-1299] MP 2528

Water and suspended solids discharge during snowmelt. Chacho, E.F., Jr., [1990, p.167-173] MP 2706

Synoptic meteorology
Synoptic meteorology during the SNOW-ONE field experiment. Bilello, M.A., (1981, 55p) SR 81-27
Synoptic weather conditions during snowfall Dec. 1981-Feb 1982. Bilello, M.A., (1982, p.9-42) MP 1559
Synoptic meteorology during the SNOW-ONE-A Field Experiment. Bilello, M.A., (1983, 80p.) SR 83-10
Site-specific and synoptic meteorology. Bates, R.E., (1983, p.13-80) MP 1845
New England mountain icing climatology. Ryerson, C.C., (1988, 35p) CR 88-12
Synoptic meteorology, crystal habit, ... snowfall ... Northeastern snowstorms Ryerson, C.C., et al, (1989, p.335-345) MP 2599
Synoptic meteorology during the SNOW IV Field Experiment. Bilello, M.A., et al, (1989, p.5-12) MP 2640
Systems analysis
Systems study of snow removal ... sk, L.D., (1979, p 220-225) MP 1237
Taiga
Natural ground temperatures in upland bedrock terrain, interior Alaska Collins, C.M., et al, (1988, p 56-60) MP 2360
Tanks (combat vehicles)
Change in orientation of artillery-delivered anti-tank mines in snow. Bigl, S.R., (1984, 20p) CR 84-20
Review of antitank obstacles for winter use Richmond, P.W., (1984, 12p.) CR 84-25
Tank E/O sensor ... tem performance in winter an overview Lacombe, J., et ... (1985, 26p) MP 2073
Use and application of PRESTO in Snow-III West. Stallings, E.S., et al, (1986, p.11-24) MP 2658
After-action report—Reforger '85 Liston, R.A., (1986, 20p.) SR 86-22
Antitank obstacles for winter use. Richmond, P.W., (1988, 11p.) SR 88-19
Tanks (containers)
Potential icing of the space shuttle external tank Ferrick, M.G., et al, (1982, 305p) CR 82-25
Multifrequency passive microwave observation of saline ice grown in a tank. Grenfell, T.C., et al, (1988, p 1687-1690) MP 2459
Telecommunication
Transfer of meteorological data from mountain-top sites. Govoni, J.W., et al, (1986, 6p) MP 2107
Arctic and Antarctic communications. Rosenberg, T.J., ed, (1987, 29p) MP 2322
Telemetering equipment
Vibration analysis of a DEW Line station. Haynes, F.D., et al, (1988, p.1513-1518) MP 2341
Detection of coarse sediment movement using radio transmitters. Chacho, E.F., Jr., et al, (1989, p 367-373(B)) MP 2752
Temperature
Kolmogorov Constants for temperature, humidity and refractive index spectra. Andreas, E.L., (1988, p 2399-2406) MP 2437
International Symposium on Cold Regions Heat Transfer, (1989, 314p.) MP 2536
TEMPERATURE DISTRIBUTION
Geology and physiography of cold regions Stearns, S.R., (1965, 40p) M I-A1
Characteristics of the cold regions Gerdel, R.W., (1959, 51p) M I-A
Temperature distribution
Freezing of soil with phase change occurring over a finite temperature zone. Lunardini, V.J., (1985, p 38-46) MP 1854
Temperature effects
Heat exchange at the ground surface. Scott, R.F., (1964, 49p, illus append.) M II-A1
Climatology of the cold regions of the northern hemisphere. II. Wilson, C., (1969, 158p.) M I-A3b
Effect of temperature on the strength of frozen silt. Haynes, F.D., et al, (1977, 27p) CR 77-03
Abnormal internal friction peaks in single-crystal ice. Stallman, P.E., et al, (1977, 15p) SR 77-23
Ice accretion on ships Itagaki, K., (1977, 22p) SR 77-27
Effect of temperature and strain rate on the strength of polycrystalline ice Haynes, F.D., (1977, p 107-111) MP 1127
Temperature effects in compacting an asphalt concrete overlay. Eaton, R.A., et al, (1978, p 146-158) MP 1083
Thermal and load associated distress in pavements Johnson, T.C., et al, (1978, p.403-437) MP 1209
Effect of temperature on the strength of snow-ice Haynes, F.D., (1978, 25p) CR 78-27
Laboratory experiments on icing of rotating blades Ackley, S.F., et al, (1979, p 85-92) MP 1216
River ice. Ashton G.D., (1979, p 38-45) MP 1178
Low temperature phase changes in montmorillonite clay clays Anderson, D.M., et al, (1980, p.139-144) MP 1330
Fracture behavior of ice in Charpy impact testing Itagaki, K., et al, (1980, 13p) CR 80-13
Unfrozen water contents of submarine permafrost determined by nuclear magnetic resonance Tice, A.R., et al, (1980, p 400-412) MP 1412
Field cooling rates of asphalt concrete overlays at low temperatures Eaton, R.A., et al, (1980, 11p.) CR 80-30
Heat transfer in cold climates Lunardini, V.J., (1981, 731p) MP 1435
Variation of ice strength within and between multiyear pressure ridges in the Beaufort Sea Weeks, W.F., (1984, p 134-139) MP 1680
Aquatic plant growth in relation to temperature and unfrozen water content Palazzo, A.J., et al, (1984, 8p) CR 84-14
Cold-temperature characterization of polymer concrete. Bigl, S.R., (1986, 46p) MP 2521
Parameters affecting the kinetic friction of ice Akkok, M., ... (1987, p 552-561) MP 2258
Influence of thermal cycling on fiber composites Dutta, P.K., et al, (1988, p.141-147) MP 2435
Resilient modulus determination for frost conditions Chamberlain, E.J., et al, (1989, p 320-333) MP 2569
Low-temperature effects on systems for composting explosives-contaminated soils Ayorinde, O.A., et al, (1989, 18p) SR 89-38
Strength of soils and rocks at low temperatures. Sellmann, P.V., (1989, p 189-190) MP 2685
Temperature gradients
Subsea permafrost study in the Beaufort Sea, Alaska. Sellmann, P.V., et al, (1979, p 207-213) MP 1591
Arctic Ocean temperature, salinity and density, March-May 1979 McPhee, M.G., (1981, 20p) SR 81-05
Using sea ice to measure vertical heat flux in the ocean McPhee, M.G., et al, (1982, p 2071-2074) MP 1521
Freezing of semi-infinite medium with initial temperature gradient. Lunardini, V.J., (1983, p 649-652) MP 1583
Theory of metamorphism of dry snow. Colbeck, S.C., (1983, p 5475-5482) MP 1603
Freezing of a semi-infinite medium with initial temperature gradient. Lunardini, V.J., (1984, p 103-106) MP 1740
Vegetation and environmental gradients of the Prudhoe Bay region, Alaska Walker, D.A., (1985, 239p) CR 85-14
Rate of water transport due to temperature gradients in frozen soils Nakano, Y., et al, (1988, p 412-417) MP 2362
Temperature measurement
Improved millivolt-temperature conversion tables for copper constantan thermocouples 32F reference temperature Stallman, P.E., et al, (1976, 66p) SR 76-18
1977 CRREL-USGS permafrost program Beaufort Sea, Alaska, operational report. Sellmann, P.V., et al, (1977, 19p) SR 77-41
Thermal properties and regime of wet tundra soils at Barrow, Alaska. McGaw, R., et al, (1978, p 47-53) MP 1096
Thermal scanning systems for detecting building heat loss Grot, R.A., et al, (1978, p.B71-B90) MP 1212
Permafrost beneath the Beaufort Sea Sellmann, P.V., et al, (1978, p 50-71) MP 1206
Distribution and properties of subsea permafrost of the Beaufort Sea Sellmann, P.V., et al, (1979, p.93-115) MP 1287
Drifting buoy measurements on Weddell Sea pack ice Ackley, S.F., (1979, p.106-108) MP 1339
Thermal observations of Mt St Helens before and during eruption St Lawrence, W.F., et al, (1980, p 1526-1527) MP 1482
Free water measurements of a snowpack. Fisk, D.J., (1983, p 173-176) MP 1758
Thermal emittance of diathermanous materials Munis, R.H., et al, (1984, p 209-220) MP 1863
Liquid water mass fraction of snow measured by alcohol solution Fisk, D.J., (1965, p 538-541) MP 2245
Alcohol calorimetry for measuring the liquid water fraction of snow Fisk, D.J., (1987, p 163-166) MP 2261
Seafloor temperature and thermal conductivity Sellmann, P.V., et al, (1989, 19p) CR 89-01
Ski friction and thermal response Warren, G.C., et al, (1989, p 223-232) MP 2745
Snow-surface temperature analysis Bates, R.E., et al, (1989, p 103-116) MP 2753
Remote water-temperature measurement Daly, S., (1989, 6p) MP 2722
Data acquisition first the FERF then the world Knuth, K.V., (1989, p 136-138) MP 2567
Satellite data collection platforms for temperature measurements Daly, S.F., et al, (1989, 14p) SR 89-37
Temperature variations
Apparent anomaly in freezing of ordinary water Samzow, G.K., (1976, 23p) CR 76-20
Tensile properties
Effect of temperature on the strength of snow-ice. Haynes, F.D., (1978, 25p) CR 78-27
Temperature effect on the uniaxial strength of ice Haynes, F.D., (1979, p 667-681) MP 1231
Asphalt concrete for cold regions Dempsey, B.J., et al, (1980, 55p) CR 80-05
Ice thickness-tensile strength relationship for load-bearing ice Johnson, P.R., (1980, 11p) SR 80-09
Review of techniques for measuring soil moisture *in situ* McKim, H.L., et al, (1980, 17p) SR 80-31
Laboratory and field use of soil tensiometers above and below 0 deg C Ingersoll, J., (1981, 17p) SR 81-07
Measuring mechanical properties of ice Schwarz, J., et al, (1981, p.245-254) MP 1556
Study on the tensile strength of ice as a function Currier, J.H., et al, (1983, 38p) ...
Strain measurements on dumbbell specimens (1983, p 75-77) ...
Mechanical properties of multi-year sea ice ... niques Mellor, M., et al, (1984, 39p) ...

Haul Road performance and associated investigations in Alaska. Berg, R.L., [1980, p.53-100] MP 1351
Crude oil spills on subarctic permafrost in interior Alaska. Johnson, L.A., et al, [1980, 67p] CR 80-29
Long-term active layer effects of crude oil spilled in interior Alaska. Collins, C.M., [1983, p 175-179] MP 1656
Comparison of two-dimensional domain and boundary integral geothermal models with embankment freeze-thaw field data. Hromadka, T V., II, et al, [1983, p 509-513] MP 1659
Recovery and active layer changes following a tundra fire in northwestern Alaska. Johnson, L., et al, [1983, p 543-547] MP 1660
Developing a thawing model for sludge freezing beds. Martel, C.J., [1988, p 1426-1430] MP 2372

Thaw weakening

Mobility of water in frozen soils. Lunardini, V.J, et al, [1982, c15p] MP 2012
Frost heave of full-depth asphalt concrete pavements. Zomerman, I., et al, [1985, p 66-76] MP 1927
Frost action predictive techniques: an overview of research results. Johnson, T C., et al, [1986, p 147-161] MP 2267
Deformation of pavements during freeze thaw cycles Johnson, T.C, et al, [1986, 138p] CR 86-13

Thawing

Conduction heat transfer with freezing/thawing Lunardini, V.J., [1987, p.55-64] MP 2304

Thawing rate

Exact solution for melting of frozen soil with thaw consolidation. Lunardini, V.J., [1987, p 97-102] MP 2191

Theories

Interpretation of the tensile strength of ice under triaxial stresses Nevel, D.E., et al, [1976, 9p] CR 76-05
Small communities result in greater satisfaction. Ledbetter, C.B., [1977, 15p.] SR 77-36
In-plane deformation of non-coaxial plastic soil. Takagi, S., [1978, 28p.] CR 78-07
Evaluation of the moving boundary theory Nakano, Y., [1978, p 142-151] MP 1147
Steady in-plane deformation of noncoaxial plastic soil Takagi, S, [1979, p.1049-1072] MP 1248
Snow-smoke interaction. Hogan, A W., et al, [1988, p 497-506] MP 2607
Review of pure conduction with freezing Lunardini, V J, [1989, p 27-32] MP 2638

Thermal analysis

Applications of thermal analysis to cold regions Sterrett, K.F., [1976, p.167-181] MP 890
Infrared thermography of buildings an annotated bibliography. Marshall, S J, [1977, 21p] SR 77-09
Infrared thermography of buildings Munis, R.H, et al, [1977, 21p.] SR 77-26
Hydrologic aspects of ice jams Calkins, D J, [1986, p 603-609] MP 2116

Thermal conductivity

Formation of ice ripples on the underside of river ice covers Ashton, G.D., [1971, 157p] MP 1243
Evaluation of methods for calculating soil thermal conductivity. Farouki, O., [1972, 90p] CR 82-08
Finite element model of transient heat conduction. Guymon, G L., et al, [1977, 167p] SR 77-38
Frost action in New Jersey highways Berg, R.L, et al, [1978, 80p.] SR 78-09
Thermal properties and regime of wet tundra soils at Barrow, Alaska McGaw, R., et al, [1978, p 47-53] MP 1096
Roof response to icing conditions Lane, J.W., et al, [1979, 40p] CR 79-17
Time constraints on measuring building R-values Flanders, S.N., [1980, 30p] CR 80-15
Moisture gain and its thermal consequence for common roof insulations Tobiasson, W, et al, [1980, p 4-16] MP 1361
Neumann solution applied to soil systems. Lunardini, V.J., [1980, 7p] CR 80-22
Thermal diffusivity of frozen soil. Haynes, F D, et al, [1980, 30p] SR 80-38
Heat conduction with phase changes Lunardini, V J, [1981, 14p] CR 81-25
Initial stage of the formation of soil-laden ice lenses. Takagi, S, [1982, p 223-232] MP 1596
Computer models for two-dimensional steady-state heat conduction Albert, M.R., et al, [1983, 90p] CR 83-10
In-situ thermal conductivity measurements Atkins, R T., [1983, 38p] MP 2214
Solution of phase change problems. O'Neill, K, [1983, p 134-146] MP 1894
Toward in-situ building R-value measurement. Flanders, S.N., et al, [1984, 13p] CR 84-01
Status of numerical models for heat and mass transfer in frost-susceptible soils Berg, R.L, [1984, p 67-71] MP 1851
Heating and cooling method for measuring thermal conductivity McGaw, R, [1984, 8p] MP 1891
Theory of natural convection in snow Powers, D, et al, [1985, p.10,641-10,649] MP 1957
In-situ thermoconductivity measurements Faucher, M., [1986, p.13-14] MP 2137
Heat transfer characteristics of thermosyphons with inclined evaporator sections Haynes, F.D., et al, [1986, p 285-292] MP 2034
Soil freezing and unfrozen water content Lunardini, V.J., [1988, 27p] CR 88-02
Effect of variable thermal properties on freezing with an unfrozen water content. Lunardini, V.J, [1988, p 1127-1132] MP 2370
Seafloor temperature and thermal conductivity. Sellmann, P.V, et al, [1989, 19p] CR 89-01
Review of pure conduction with freezing Lunardini, V J, [1989, p 27-32] MP 2638
Heat conduction in snow. Yen, Y.C., [1989, p 21-32] MP 2546
Simple and economical thermal conductivity measurement system. Atkins, R T., [1989, p.108-116] MP 2566
Thermal response of downhill skis Warren, G.C, et al, [1989, 40p] CR 89-23

Thermal diffusion

Computer simulation of the snowmelt and soil thermal regime at Barrow, Alaska Outcalt, S I, et al, [1975, p 709-715] MP 857
Infrared thermography of buildings Munis, R.H, et al, [1977, 17p] SR 77-29
Suppression of river ice by thermal effluents. Ashton, G D, [1979, 23p] CR 79-30
Neumann solution applied to soil systems Lunardini, V.J., [1980, 7p] CR 80-22
Thermal diffusivity of frozen soil. Haynes, F D, et al, [1980, 30p] SR 80-38
Cylindrical phase change approximation with effective thermal diffusivity Lunardini, V J, [1981, p.147-154] MP 1438

Thermal drills

General considerations for drill system design Mellor, M, et al, [1976, p 77-111] MP 856
1979 Greenland Ice Sheet Program. Phase 1: casing operation Rand, J H, [1980, 18p] SR 80-24
Portable hot water ice drill. Tucker, W.B, et al, [1986, p 549-564] MP 2202
Portable hot-water ice drill Tucker, W.B, et al, [1987, p 57-64] MP 2236

Thermal effects

Thermal energy and the environment Crosby, R L, et al, [1975, 3p + 2p figs] MP 1480
Mechanics of cutting and boring in permafrost Mellor, M, [1981, 38p] CR 81-26

Thermal expansion

Movement of coastal sea ice near Prudhoe Bay Weeks, W.F, et al, [1977, p 533-546] MP 1066
Nearshore ice motion near Prudhoe Bay, Alaska Tucker, W.B, et al, [1977, p 23-31] MP 1162
Thermal expansion of saline ice. Cox, G.F N, [1983, p 425-432] MP 1768

Thermal insulation

Thermoinsulating media within embankments on perennially frozen soil. Berg, R.L., [1976, 161p] SR 76-03
Influence of insulation upon frost penetration beneath pavements Eaton, R A., et al, [1976, 41p] SR 76-06
Road construction and maintenance problems in central Alaska Clark, E.F, et al, [1976, 36p] SR 76-08
Observation and analysis of protected membrane roofing systems Schaefer, D., et al, [1977, 40p] CR 77-11
Reinsulating old wood frame buildings with urea-formaldehyde foam Tobiasson, W, et al, [1977, p.478-487] MP 958
Mid-winter installation of protected membrane roofs in Alaska Aamot, H W.C, [1977, 5p] CR 77-21
Maintaining buildings in the Arctic Tobiasson, W., et al, [1977, p 244-251] MP 1508
Effects of moisture and freeze-thaw on rigid thermal insulations Kaplar, C.W, [1978, p 403-417] MP 1085
Cold climate utilities delivery design manual Smith, D.W, et al, [1979, c300 leaves] MP 1373
Sulfur foam as insulation for expedient roads Smith, N., et al, [1979, 21p] CR 79-18
Moisture gain and its thermal consequence for common roof insulations Tobiasson, W, et al, [1980, p 4-16] MP 1361
Losses from the Fort Wainwright heat distribution system Phetteplace, G, et al, [1981, 29p] SR 81-14
Venting of built-up roofing systems Tobiasson, W, [1981, p 16-21] MP 1498
Roof moisture surveys Tobiasson, W et al, [1981, 18p] SR 81-31
Moisture detection in roofs with cellular plastic insulation Korhonen, C, et al, [1982, 22p] SR 82-07
Potential icing of the space shuttle external tank Ferrick, M G, et al, [1982, 305p] CR 82-25
Least life-cycle costs for insulation in Alaska Flanders, S N, et al, [1982, 47p] CR 82-27
Infrared inspection of new roofs Korhonen, C, [1982, 14p] SR 82-33
Window performance in extreme cold Flanders, S N, et al, [1982, 21p] CR 82-38
Thawing beneath insulated structures on permafrost Lunardini, V J, [1983, p 750-755] MP 1662
Can wet roof insulation be dried out Tobiasson, W., et al, [1983, p 626-639] MP 1509
Toward in-situ building R-value measurement Flanders, S N, et al, [1984, 13p] CR 84-01
Measuring thermal performance of building envelopes: nine case studies Flanders, S.N, [1985, 36p] CR 85-07
Deteriorated building panels at Sondrestrom, Greenland. Korhonen, C., [1985, p 7-10] MP 2017
Roof moisture surveys, yesterday, today and tomorrow. Tobiasson, W., et al, [1985, p 438-443 + figs] MP 2040
Heat flow sensors on walls—what can we learn Flanders, S N, [1985, p.140-149] MP 2042
Measured and expected R-values of 19 building envelopes. Flanders, S N, [1985, p 49-57] MP 2115
Vapor drive maps of the U.S.A. Tobiasson, W., et al, [1986, 7p + graphs] MP 2041
In-situ assessment of two retrofit insulations Flanders, S.N., [1986, p.32-44] MP 2172
Measuring building R-values with thermography and heat flux sensors Flanders, S N, [1987, 29p.] SR 87-06
Measured insulation improvement potential for ten U.S. Army buildings Flanders, S N, [1987, p 202-220] MP 2327
Wetting of polystyrene and urethane roof insulations Tobiasson, W., et al, [1988, p 421-430] MP 2011
Comparison of insulated and noninsulated pavements Kestler, M, et al, [1989, p 367-378] MP 2471
Nondestructive evaluation of moisture migration in insulation material Ayorinde, O.A, [1989, p 111-121] MP 2716

Thermal pollution

Thermal energy and the environment Crosby, R L, et al, [1975, 3p. + 2p figs] MP 1480
Thermal pollution studies of French Creek, Eielson AFB, Alaska McFadden, T, [1976, 5p] CR 76-14
River ice Ashton, G D, [1979, p.38-45] MP 1178
Suppression of river ice by thermal effluents. Ashton, G.D., [1979, 23p] CR 79-30

THERMAL PROPERTIES

Snow as a material. Bader, H, et al, [1962, 79p] M II-B

Thermal properties

Observation and analysis of protected membrane roofing systems. Schaefer, D, et al, [1977, 40p] CR 77-11
Thermal and creep properties for frozen ground construction. Sanger, F.J., et al, [1978, p 95-117] MP 1624
Thermal and creep properties for frozen ground construction Sanger, F.J., et al, [1979, p 311-337] MP 1227
Time constraints on measuring building R-values Flanders, S.N., [1980, 30p] CR 80-15
Comparison of two-dimensional domain and boundary integral geothermal models with embankment freeze-thaw field data Hromadka, T.V., II, et al, [1983, p 509-513] MP 1659
Emittance and interpretation of thermal images Munis, R H, et al, [1985, p.72-78] MP 1962
Thermal analysis of a shallow utilidor Phetteplace, G., et al, [1986, 10p] MP 2021
Roof blisters Physical fitness building, Fort Lee, Virginia. Korhonen, C., et al, [1986, 15p] Sr 86-35

Thermal radiation

Thermal emittance of diathermanous materials Munis, R H, et al, [1984, p 209-220] MP 1863
Emittance and interpretation of thermal images Munis, R.H., et al, [1985 p 72-78] MP 1962

Thermal regime

Environmental setting, Barrow, Alaska Brown, J, [1970, p 50-64] MP 945
Temperature and flow conditions during the formation of river ice Ashton, G D, et al, [1970, 12p] MP 1723
Winter thermal structure and ice conditions on Lake Champlain Vermont Bates, R E, [1976, 22p.] CR 76-13
Winter thermal structure, ice conditions and climate of Lake Champlain Bates, R E, [1980, 26p] CR 80-02
Crude oil spills on subarctic permafrost in interior Alaska Johnson, L A, et al, [1980, 128p] MP 1310
Thermal observations of Mt St Helens before and during eruption St. Lawrence, W F, et al, [1980, p.1526-1527] MP 1482
Embankment dams on permafrost in the USSR Johnson, T C, et al, [1980, 59p] SR 80-41
Measuring building R-values for large areas Flanders, S N, et al, [1981, p 137-138] MP 1388
Some approaches to modeling phase change in freezing soils Hromadka, T V, II, et al, [1981, p 137-145] MP 1437
Theory of thermal control and prevention of ice in rivers and lakes Ashton, G D, [1982, p 131-185] MP 1554
Arctic thermal design Lunardini, V J, [1985, p 70-75] MP 2167
Review of analytical methods for ground thermal regime calculations Lunardini, V J, [1985, p 204-257] MP 1922

Thermal stresses

Thermal and load-associated distress in pavements Johnson, T C, et al, [1978, p 403-437] MP 1209
Physical and thermal disturbance and protection of permafrost Brown, J, et al, [1979, 42p] SR 79-05
Low temperature cracking susceptibility of asphalt concrete Janoo, V C, et al, [1987, p 397-415] MP 2233
Acoustic emissions from composites at decreasing temperatures Dutta, P K, et al, [1988, p 1090-1095] MP 2430

Thermistors
USACRREL precise thermistor meter. Trachier, G.M., et al, (1985, 34p.) SR 85-26
In-situ thermoconductivity measurements Faucher, M., (1986, p 13-14) MP 2137
Determination of frost penetration by soil resistivity measurements Atkins, R T, (1989, p.87-100) MP 2565
Simple and economical thermal conductivity measurement system. Atkins, R.T, (1989, p.108-116) MP 2566

Thermocouples
Determination of frost penetration by soil resistivity measurements. Atkins, R.T, (1989, p 87-100) MP 2565
Data acquisition: first the FERF then the world. Knuth, K.V, (1989, p.136-138) MP 2567

Thermodynamic properties
Thermodynamic deformation of wet snow Colbeck, S.C., (1976, 9p.) CR 76-44
Oxygen isotopes in the basal zone of Matanuska Glacier Lawson, D E, et al, (1979, p 673-685) MP 1177
Documentation for a two-level dynamic thermodynamic sea ice model. Hibler, W D., III, (1980, 35p.) SR 80-08
On modeling the Weddell Sea pack ice Hibler, W D., III, et al, (1982, p 125-130) MP 1549

Thermodynamics
Dynamic thermodynamic sea ice model. Hibler, W.D, III, (1979, p 815-846) MP 1247
Analysis of water in the Martian regolith Anderson, D.M, et al, (1979, p 33-[illegible] MP 1409
Thermodynamics of snow metamorphism due to variations in curvature Colbeck, S C., (1980, p 291-301) MP 1368
Modeling a variable thickness sea ice cover. Hibler, W D, III, (1980, p.1943-1973) MP 1424
Introduction to the basic thermodynamics of cold capillary systems Colbeck, S.C., (1981, 9p.) SR 81-06
Preliminary results of ice modeling in the East Greenland area. Tucker, W B, et al, (1981, p.867-878) MP 1458
Application of a numerical sea ice model to the East Greenland area Tucker, W.B, (1981, 109p.) MP 1535
Application of a numerical sea ice model to the East Greenland area Tucker, W.B, (1982, 40p.) CR 82-16
Physics of mathematical frost heave models a review. O'Neill, K, (1983, p 275-291) MP 1588
East Greenland Sea ice variability in large-scale model simulations. Walsh, J E, et al, (1984, p 9-14) MP 1779
On the decay and retreat of the ice cover in the summer MIZ Maykut, G.A., (1984, p 15-22) MP 1780
Thermodynamic model of creep at constant stress and constant strain rate. Fish, A M., (1984, p 143-161) MP 1771
Ice dynamics. Hibler, W.D., III, (1984, 52p.) M 84-03
Ice dynamics. Hibler, W D., III, (1986, p 577-640) MP 2211
Thermal and size evolution of sea spray droplets Andreas, E L., (1989, 37p.) CR 89-11
Low-temperature effects on systems for composting explosives-contaminated soils Ayorinde, O A, et al, (1989, 18p.) SR 89-38

Thermokarst
Human-induced thermokarst at old drill sites in northern Alaska. Lawson, D E, et al, (1978, p 16-23) MP 1254

Thickness
Sea ice growth, drift, and decay Hibler, W.D, III, (1980, p 141-209) MP 1298

Thickness gages
Update on portable hot-water sea ice drilling Govoni, J W, et al, (1989, p.175-178) MP 2479

Tibet
Terrain analysis from space shuttle photographs of Tibet Kreig, R.A., et al, (1986, p 400-409) MP 2097

Tidal currents
Baseline data on tidal flushing in Cook Inlet, Alaska Gatto, L.W., (1973, 11p.) MP 1523
Baseline data on the oceanography of Cook Inlet, Alaska Gatto, L W, (1976, 84p.) CR 76-25
Estuarine processes and intertidal habitats in Grays Harbor, Washington. a demonstration of remote sensing techniques Gatto, L.W, (1978, 79p.) CR 78-18
Remote sensing of water circulation in Grays Harbor, Washington Gatto, L W, (1980, p 289-323) MP 1283

Time factor
Numerical simulation of atmospheric ice accretion Ackley, S F, et al, (1979, p 44-52) MP 1235

Tires
Vehicle damage to tundra soil and vegetation Walker, D A., et al, (1977, 49p.) SR 77-17
Effects of low ground pressure vehicle traffic on tundra Abele, G, et al, (1978, 63p.) SR 78-16
CRREL instrumented vehicle for cold regions mobility measurements Blaisdell, G.L., (1982, 11p.) MP 1515
CRREL instrumented vehicle hardware and software. Blaisdell, G.L., (1983, 75p.) SR 83-03
Driving traction on ice with all-season and mud-and-snow radial tires Blaisdell, G.L, (1983, 22p.) CR 83-27
Radial tire demonstration Liston, R A, (1985, p 281-285) MP 2102
Performance based tire specification system for military wheeled vehicles Blaisdell, G L, (1985, p 277-280) MP 2101
Measurement and evaluation of tire performance under winter conditions Blaisdell, G L, (1985, p.198-228) MP 2387
ISTVS workshop on tire performance under winter conditions, 1983. (1985, 177p.) SR 85-15
Need for snow tire characterization and evaluation. Yong, R.N., et al, (1985, p 1-2) MP 2043
Winter tire tests 1980-81 Blaisdell, G L, et al, (1985, p 135-151) MP 2045
Field demonstration of traction testing procedures. Blaisdell, G.L., (1985, p 176) MP 2046
Radial tire and traction aid performance on ice and in snow. Rogers, T, et al, (1986, 20p.) SR 86-07
After-action report—Reforger '85 Liston, R A., (1986, 20p.) SR 86-22
Ice traction of tires Blaisdell, G L, et al, (1986, 11p.) SR 86-39
Instrumented vehicle for the measurement of mobility parameters Blaisdell, G L, (1988, p 377-388) MP 2486

Topographic effects
VLF airborne resistivity survey in Maine Arcone, S A., (1978, p 1399-1417) MP 1166
Transverse velocities and ice jamming potential in a river bend Zufelt, J.E, (1988, p 193-207) MP 2476

TOPOGRAPHIC FEATURES
Geology and physiography of cold regions Stearns, S R., (1965, 40p.) M I-A1
Climatology of the cold regions of the northern hemisphere, I Wilson, C., (1967, 141p.) M I-A3a

Topographic features
Arctic environment and the Arctic surface effect vehicle. Sterrett, K F, (1976, 28p.) CR 76-01
Effect of snow cover on obstacle performance of vehicles Hanamoto, B, (1976, p 121-140) MP 933
Topological properties of some trellis pattern channel networks Mock, S J, (1976, 54p.) CR 76-46
River channel characteristics at selected ice jam sites in Vermont Gatto, L W., (1978, 52p.) CR 78-25
Ice-cored mounds at Sukakpak Mountain, Brooks Range Brown, J, et al, (1983, p.91-96) MP 1653
Extraction of topography from side-looking satellite systems—a case study with SPOT simulation data. Ungar, S.G, et al, (1983, p 535-550) MP 1695
Spatial analysis in recreation resource management Edwardo, H A, et al, (1984, p.209-219) MP 2084
Geographic features and floods of the Ohio River Edwardo, H.A., et al, (1984, p 265-281) MP 2083
Terrain analysis from space shuttle photographs of Tibet Kreig, R A, et al, (1986, p.400-409) MP 2097

Topography
Recent measurements of sea ice topography in the eastern Arctic Krabill, W.B., et al, (1990, p 132-136) MP 2735

Towers
Communication tower icing in the New England region. Mulherin, N., et al, (1986, 7p.) MP 2109
Atmospheric icing on communication masts in New England Mulherin, N, (1986, 46p.) CR 86-17
Ice removal from broadcast towers by low-frequency vibrations Mulherin, N D, et al, (1988, 6p.) MP 2538

Tracked vehicles
Effects of hovercraft, wheeled and tracked vehicle traffic on tundra Abele, G., (1976, p 186-215) MP 1123
Effect of snow cover on obstacle performance of vehicles Hanamoto, B., (1976, p 121-140) MP 933
Effects of low ground pressure vehicle traffic on tundra at Lonely, Alaska Abele, G, et al, (1977, 32p.) SR 77-31
Volumetric constitutive law for snow under strain Brown, R.L., (1979, 13p.) CR 79-20
Ecological impact of vehicle traffic on tundra. Abele, G, (1981, p 11-37) MP 1463
Long-term effects of off-road vehicle traffic on tundra terrain Abele, G, et al, (1984, p 283-294) MP 1820
Mobility working group report Blaisdell, G L, et al, (1987, p 273-274) MP 2423
Vehicles for freight-hauling and for science traverses in Antarctica Mellor, M, (1988, Var p.) MP 2504

Traction
Shallow snow performance of wheeled vehicles Harrison, W.L, (1976, p 589 614) MP 1130
Workshop on snow traction mechanics, 1979 Harrison, W L, ed, (1981, 71p.) SR 81-16
Snow measurements in relation to vehicle performance. Harrison, W.L, (1981, p 13-24) MP 1473
Application of energetics to vehicle trafficability problems Brown, R.L, (1981, p 25-38) MP 1474
Prediction methods for vehicle traction on snow Harrison, W L, (1981, p.39-46) MP 1475
Field investigations of vehicle traction in snow Harrison, W L., (1981, p 47-48) MP 1476
Vehicle tests and performance in snow Berger, R H, et al, (1981, p 51-67) MP 1477
Shallow snow test results Harrison, W L, (1981, p 69-71) MP 1478
Shallow snow model for predicting vehicle performance Harrison, W L, (1981, 21p.) CR 81-20
CRREL instrumented vehicle for cold regions mobility measurements Blaisdell, G.L., (1982, 11p.) MP 1515
Measurement of snow surfaces and tire performance evaluation. Blaisdell, G L, et al, (1982, 7p.) MP 1516
Driving traction on ice with all-season and mud-and-snow radial tires Blaisdell, G.L, (1983, 22p.) CR 83-27
Vehicle for cold regions mobility measurements Blaisdell, G.L., (1985, p 9-20) MP 2044
Field demonstration of traction testing procedures. Blaisdell, G L, (1985, p 176) MP 2046
Radial tire and traction aid performance on ice and in snow. Rogers, T., et al, (1986, 20p.) SR 86-07
Ice traction of tires Blaisdell, G.L, et al, (1986, 11p.) SR 86-39
Vehicle mobility over snow Blaisdell, G.L, (1987, p 265-266) MP 2420
Instrumented vehicle for the measurement of mobility parameters Blaisdell, G L, (1988, p 377-388) MP 2486
Performance of an omni-directional wheel on snow and ice. Blaisdell, G S, (1989, 21p + append.) MP 2711
Thawing soil strength measurements for predicting vehicle performance. Shoop, S.A., (1989, 18p.) MP 2749

Tractors
Vehicles for freight-hauling and for science traverses in Antarctica Mellor, M, (1988, Var. p.) MP 2504
Evaluation of the Caterpillar Challenger tractor for use in Antarctica Blaisdell, G.L., et al, (1989, 12p + figs.) MP 2718

Trafficability
Instrument for determining snow properties related to trafficability. Parrott, W H., et al, (1972, p 193-204) MP 886
Evaluation of an air cushion vehicle in Northern Alaska. Abele, G, et al, (1976, 7p.) MP 894
Effect of snow cover on obstacle performance of vehicles Hanamoto, B, (1976, p 121-140) MP 933
Arctic transportation: operational and environmental evaluation of an air cushion vehicle in northern Alaska Abele, G., et al, (1977, p 176-182) MP 985
Workshop on snow traction mechanics, 1979. Harrison, W.L., ed, (1981, 71p.) SR 81-16
Application of energetics to vehicle trafficability problems. Brown, R.L, (1981, p 25-38) MP 1474
Prediction methods for vehicle traction on snow Harrison, W.L., (1981, p 39-46) MP 1475
Field investigations of vehicle traction in snow. Harrison, W L, (1981, p.47-48) MP 1476
Shallow snow test results Harrison, W.L, (1981, p 69-71) MP 1478
Mobility bibliography Liston, N., comp, (1981, 313p.) SR 81-29
Vechicle mobility and snowpack parameters Berger, R.H, (1983, 26p.) CR 83-16
Evaluating trafficability McKim, H L, (1985, p 474-475) MP 2023
Trailing-tire motion resistance in shallow snow Blaisdell, G L, (1987, p.296-304) MP 2248

Transformations
Modeling N transport and transformations in soils. Selim, H M, et al, (1981, p 233-241) MP 1440
Modeling nitrogen transport and transformations in soils: 2. Validation Iskandar, I K, et al, (1981, p 303-312) MP 1441

Transmission
Catalog of smoke/obscurant characterization instruments O'Brien, H W., et al, (1984, p 77-82) MP 1865
Performance of microprocessor-controlled snow crystal replicator. Koh, G, (1984, p 107-111) MP 1866
Impact of wet snow on visible, infrared and millimeter wave attenuation Bates, R.E, et al, (1988, p 523-535) MP 2608

Transmission lines
Undersea pipelines and cables in polar waters Mellor, M, (1978, 34p.) CR 78-22
Ice accretion and aerodynamic loading of transmission lines Egelhofer, K.Z, et al, (1987, p 103-109) MP 2279

Transmissivity
Snow-Two/Smoke Week VI field experiment plan Redfield, R K, et al, (1984, 85p.) SR 84-19
Snow Symposium, 4th, Hanover, NH, Vol 1 (1984, 433p.) SR 84-35
Approach to snow propagation modeling Koh, G., (1984, p 247-259) MP 1869
Explosive obscuration sub-test results at the SNOW-TWO field experiment Ebersole, J F, et al, (1984, p 347-354) MP 1872
SNOW III WEST field experiment report Volume I Lacombe, J, et al, (1988, 170p.) SR 88-28

Transportation
Arctic transportation: operational and environmental evaluation of an air cushion vehicle in northern Alaska Abele, G, et al (1977, p 176-182) MP 985
Operation of the CRREL prototype air transportable shelter. Flanders, S N., (1980, 73p.) SR 80-10
Cold regions testing of an air-transportable shelter Flanders, S N, (1981, 20p.) CR 81-16
Mobility bibliography Liston, N, comp, (1981, 313p.) SR 81-29
Brittleness of reinforced concrete structures under arctic conditions Kivekäs, L, et al, (1986, 20p.) CR 86-02

Vehicle mobility over snow. Blaisdell, G.L., (1987, p.265-266) MP 2420
Arctic mobility problems. Abele, G, (1987, p.267-269) MP 2421

Trees (plants)
Upland forest and its soils and litters in interior Alaska Troth, J.L., et al, (1976, p.33-44) MP 867
Wastewater applications in forest ecosystems McKim, H.L, et al, (1982, 22p.) CR 82-19

Trenching
Some aspects of Soviet trenching machines. Mellor, M, (1980, 13p.) SR 80-07
Subsea trenching in the Arctic Mellor, M, (1981, p 843-882) MP 1464
Ice gouge hazard analysis Lanan, G.A., et al, (1986, p.57-66) MP 2106

Triaxial tests
Kinetic nature of the long term strength of frozen soils Fish, A.M., (1980, p.95-108) MP 1450

Trialtrotoluene
Vapor pressure of TNT by gas chromatography Leggett, D.C., (1977, p 83-90) MP 915

Tundra
Abiotic overview of the Tundra Biome Program, 1971. Weller, G., et al, (1971, p 173-181) MP 906
Ecological and environmental consequences of off-road traffic in northern regions Brown, J, (1976, p 40-53) MP 1383
Geoecological mapping scheme for Alaskan coastal tundra. Everett, K.R., et al, (1978, p 359-365) MP 1098
1977 tundra fire at Kokolik River, Alaska Hall, D.K., et al, (1978, 11p) SR 78-10
Human-induced thermokarst at old drill sites in northern Alaska Lawson, D.E, et al, (1978, p 16-23) MP 1254
Tundra lakes as a source of fresh water. Kipnuk, Alaska Bredthauer, S.R, et al, (1979, 16p) SR 79-30
Recovery of the Kokolik River tundra area, Alaska. Hall, D.K, et al, (1979, 15p.) MP 1638
Geobotanical atlas of the Prudhoe Bay region, Alaska. Walker, D.A, et al, (1980, 69p) CR 80-14
Arctic ecosystem the coastal tundra at Barrow, Alaska Brown, J., ed, (1980, 571p) MP 1355
Coastal tundra at Barrow. Brown, J., et al, (1980, p.1-29) MP 1356
Remote sensing of revegetation of burned tundra, Kokolik River, Alaska Hall, D.K, et al, (1980, p 263-272) MP 1391
Road dust along the Haul Road, Alaska. Everett, K R, (1980, p 101-128) MP 1352
Effects of a tundra fire on soil and vegetation. Racine, C, (1980, 21p.) SR 80-37
Summer air temperature and precipitation in northern Alaska Haugen, R.K, et al, (1980, p.403-412) MP 1439
Tundra and analogous soils Everett, K R, et al, (1981, p 139-179) MP 1405
Analysis of processes of primary production in tundra growth forms Tieszen, L L, et al, (1981, p 285-356) MP 1433
Point Barrow, Alaska, USA Brown, J, (1981, p 775-776) MP 1434
Stabilizing fire breaks in tundra vegetation. Patterson, W A, III, et al, (1981, p 188-189) MP 1804
Ecological impact of vehicle traffic on tundra Abele, G, (1981, p 11-37) MP 1463
Tundra soils on the Arctic Slope of Alaska Everett, K R, et al, (1982, p 264-280) MP 1552
Modifications of permafrost, East Oumalik, Alaska Lawson, D E, (1982, 33p) CR 82-36
Environmental mapping of the Arctic National Wildlife Refuge, Alaska Walker, D A, et al, (1982, 59p + 2 maps) CR 82-37
Recovery and active layer changes following a tundra fire in northwestern Alaska Johnson, L, et al, (1983, p 543-547) MP 1660
Vegetation in two adjacent tundra habitats, northern Alaska. Roach, D.A., (1983, p 359-364) MP 2064
U.S. tundra biome publication list. Brown, J, et al, (1983, 29p) SR 83-29
Sensitivity of vegetation and soil flora to seawater spills, Alaska Simmons, C.L, et al, (1983, 35p) CR 83-24
Potential responses of permafrost to climatic warming Goodwin, C.W, et al, (1984, p 92-105) MP 1710
Long-term effects of off-road vehicle traffic on tundra terrain Abele, G, et al, (1984, p 283-294) MP 1820
Vegetation recovery in the Cape Thompson region, Alaska Everett, K.R, et al, (1985, 75p) CR 85-11
Vegetation and environmental gradients of the Prudhoe Bay region, Alaska Walker, D A, (1985, 239p) CR 85-14
Vegetation of Beechey Point, Alaska Walker, D A., et al, (1987, 63p) CR 87-05
Disturbance and recovery of arctic Alaskan tundra terrain Walker, D.A., et al, (1987, 63p) CR 87-11
Vegetation recovery after tundra fires in northwestern Alaska Racine, C., et al, (1987, p.461-469) MP 2374
D.C. resistivity along the coast at Prudhoe Bay, Alaska Sellmann, P V., et al, (1988, p 988-993) MP 2366
Effects of all terrain vehicles on tundra Racine, C, et al, (1988, 12p) SR 88-17

Tundra biome
Tundra biome program. Brown, J, (1970, p.1278) MP 881
Tundra biome applies new look to ecological problems in Alaska. Brown, J., (1970, p 9) MP 880
Summary of the 1971 US Tundra Biome Program. Brown, J., (1972, p 306-313) MP 995
Case for comparison and standardization of carbon dioxide reference gases. Kelley, J.J., et al, (1973, p 163-181) MP 964
Soil properties of the International Tundra Biome sites. Brown, J., et al, (1974, p 27-48) MP 1043
Ecological investigations of the tundra biome in the Prudhoe Bay Region, Alaska. Brown, J, ed, (1975, 215p) MP 1053

Tundra climate
Tundra environment at Barrow, Alaska. Bunnell, F.L., et al, (1975, p 73-124) MP 1050

Tundra soils
Word model of the Barrow ecosystem. Brown, J., et al, (1970, p 41-43) MP 943
Synthesis and modeling of the Barrow, Alaska, ecosystem. Coulombe, H.N., et al, (1970, p 44-49) MP 944
Environmental setting, Barrow, Alaska. Brown, J, (1970, p.50-64) MP 945
Ecological effects of oil spills and seepages in cold-dominated environments. McCown, B H, et al, (1971, p.61-65) MP 905
Prediction and validation of temperature in tundra soils Brown, J, et al, (1971, p.193-197) MP 907
Proceedings 1972 Tundra Biome symposium (1972, 211p) MP 1374
Pedologic investigations in northern Alaska. Tedrow, J.C.F., (1973, p.93-108) MP 1005
Micrometeorological investigations near the tundra surface. Kelley, J J., (1973, p.109-126) MP 1006
Soil properties of the International Tundra Biome sites. Brown, J., et al, (1974, p 27-48) MP 1043
Ecological investigations of the tundra biome in the Prudhoe Bay Region, Alaska. Brown, J, ed, (1975, 215p) MP 1053
Selected climatic and soil thermal characteristics of the Prudhoe Bay region. Brown, J, et al, (1975, p.3-12) MP 1054
Thermal properties and regime of wet tundra soils at Barrow, Alaska. McGaw, R., et al, (1978, p.47-53) MP 1096
Geoecological mapping scheme for Alaskan coastal tundra. Everett, K R., et al, (1978, p 359-365) MP 1098
Fate of crude and refined oils in North Slope soils Sexstone, A, et al, (1978, p 339-347) MP 1186

Tundra terrain
Morphology of the North Slope Walker, H J, (1973, p 49-52) MP 1004
Vehicle damage to tundra soil and vegetation Walker, D A, et al, (1977, 49p.) SR 77-17

Tundra vegetation
Word model of the Barrow ecosystem. Brown, J., et al, (1970, p 41-43) MP 943
Synthesis and modeling of the Barrow, Alaska, ecosystem Coulombe, H.N., et al, (1970, p 44-49) MP 944
Environmental setting, Barrow, Alaska Brown, J, (1970, p 50-64) MP 945
Carbon dioxide dynamics on the Arctic tundra Coyne, P I, et al, (1971, p.48-52) MP 903
Seasonal variations in plant nutrition in tundra soils McCown, B H, et al, (1971, p 55-57) MP 904
Ecological effects of oil spills and seepages in cold-dominated environments McCown, B H, et al, (1971, p.61-65) MP 905
Proceedings 1972 Tundra Biome symposium (1972, 211p) MP 1374
Carbon dioxide exchange in tundra vegetation Coyne, P I, et al, (1972, p.36-39) MP 1375
Vegetative research in arctic Alaska. Johnson, P L, et al, (1973, p.169-198) MP 1008
Tundra environment at Barrow, Alaska. Bunnell, F L, et al, (1975, p 73-124) MP 1050
Ecological investigations of the tundra biome in the Prudhoe Bay Region, Alaska Brown, J, ed, (1975, 215p) MP 1053
Effects of hovercraft, wheeled and tracked vehicle traffic on tundra Abele, G, (1976, p 186-215) MP 1123
Influence of grazing on Arctic tundra ecosystems Batzli, G O., et al, (1976, p 153-160) MP 970
Energy balance and runoff fr[om] subarctic snowpack Price, A G, et al, (1976, 29p) CR 76-27
Vehicle damage to tundra soil an[d] vegetation Walker, D.A., et al, (1977, 49p) SR 77-17
Effects of low ground - vehicle traffic on tundra at Lonely, Alaska [Arctic] et al, (1977, 32p) SR 77-31
1977 tundra fire in the Kokolik River area of Alaska Hall, D K., et al, (1978, p 54-58) MP 1125
Chemical composition of haul road dust and vegetation Iskandar, I K., et al, (1978, p.110-111) MP 1116
Thermal properties and regime of wet tundra soils at Barrow, Alaska McGaw, R, et al, (1978, p 47-53) MP 1096
Climatic and dendroclimatic indices in the discontinuous permafrost zone of the Central Alaskan Uplands Haugen, R.K., et al, (1978, p.392-398) MP 1099
Ecological baseline on the Alaskan haul road. Brown, J., ed, (1978, 131p.) SR 78-13
Effects of low ground pressure vehicle traffic on tundra. Abele, G., et al, (1978, 63p) SR 78-16
Plant recovery from Arctic oil spills. Walker, D.A., et al, (1978, p 242-259) MP 1184
Tundra recovery since 1949 near Fish Creek, Alaska. Lawson, D.E., et al, (1978, 81p) CR 78-28

Tunneling (excavation)
Kinematics of axial rotation machines. Mellor, M, (1976, 45p) CR 76-16

Tunnels
Some experiences with tunnel entrances in permafrost. Linell, K A., et al, (1978, p.813-819) MP 1107
Field dielectric measurements of frozen silt using VHF pulses. Arcone, S.A., et al, (1984, p 29-37) MP 1774
Condensing steam tunnel heat sinks. Lunardini, V.J, (1986, 29p) SR 86-24
Fox permafrost tunnel, a late Quaternary geologic record in central Alaska. Hamilton, T D, et al, (1988, p.948-969) MP 2355

Turbidity
Correlation and quantification of airborne spectrometer data to turbidity measurements at Lake Powell, Utah Merry, C J., (1970, p 1309-1316) MP 1271
Water quality measurements at Lake Powell, Utah. Merry, C J., (1977, 38p) SR 77-28
Use of SPOT HRV data in the Corps of Engineers dredging program. Merry, C J, et al, (1988, p 1295-1299) MP 2528

Turbulence
Measurements of refractive index spectra over snow Andreas, E L., (1986, p.248-260) MP 2212
Atmospheric stability from scintillation measurements. Andreas, E L., (1988, p.2241-2246) MP 2386
On the micrometeorology of surface hoar growth on snow in mountainous area Colbeck, S C., (1988, p.1-12) MP 2359
Three-wavelength scintillation measurement of turbulent heat fluxes Andreas, E.L, (1990, p.74-77) MP 2696

Turbulent boundary layer
Bulk transfer coefficients for heat and momentum over leads and polynyas. Andreas, E.L, et al, (1986, p.1875-1883) MP 2187
Spectral measurements in a disturbed boundary layer over snow Andreas, E.L., (1987, p 1912-1939) MP 2254
Estimating averaging times for measurements of turbulence spectra Andreas, E.L, (1988, p 295-304) MP 2434

Turbulent exchange
Carbon dioxide exchange in tundra vegetation Coyne, P.I., et al, (1972, p.36-39) MP 1375
Turbulent heat flux from Arctic leads Andreas, E.L., et al, (1979, p 57-91) MP 1340
Estimation of heat and mass fluxes over Arctic leads. Andreas, E.L., (1980, p 2057-2063) MP 1410
Condensate profiles over Arctic leads Andreas, E.L., et al, (1981, p 437-460) MP 1479

Turbulent flow
Formation of ice ripples on the underside of river ice covers Ashton, G D., (1971, 157p) MP 1243
Baseline data on the oceanography of Cook Inlet, Alaska Gatto, L W., (1976, 84p.) CR 76-25
Frazil ice formation in turbulent flow Müller, A, et al, (1978, p 219-234) MP 1135
Turbulent heat transfer from a river to its ice cover Haynes, F.D, et al, (1979, 5p) CR 79-13
Freezing in a pipe with turbulent flow Albert, M R, et al, (1983, p 102-112) MP 1893
Spectra and cospectra of atmospheric turbulence over snow Andreas, E L, (1986, p 219-233) MP 2661
Evolution of frazil ice in rivers and streams, research and control Daly, S F, (1987, p.11-16) MP 2303
Estimating turbulent surface heat fluxes over polar, marine surfaces Andreas, E L, (1988, p 65-68) MP 2448

U S. Army CRREL
Role of research in developing surface protection measures for the Arctic Slope of Alaska Johnson, P.R., (1978, p 202-205) MP 1068
Cold Regions Research and Engineering Laboratory Freitag, D R, (1978, p 4-6) MP 1251
Corps of engineers seek ice solutions Frankenstein, G E, (1987, p 5-7) MP 2219

Ultrasonic tests
Acoustic emissions in the investigation of avalanches St Lawrence, W.F, (1977, p VII/24-VII/33) MP 1630
Ultrasonic measurements on deep ice cores from Antarctica Gow, A J, et al, (1978, p 48-50) MP 1202
Ultrasonic investigation on ice cores from Antarctica Kohnen, H., et al, (1979, 16p) CR 79-10
Ultrasonic investigation on ice cores from Antarctica. Kohnen, H., et al, (1979, p 4865-4874) MP 1239
Ultrasonic tests of Byrd Station ice cores Gow, A J, et al, (1979, p 147-153) MP 1282
Acoustic emission response of snow St Lawrence, W F, (1980, p 209-216) MP 1366

Ultraviolet radiation
Observations of the ultraviolet spectral reflectance of snow O'Brien, H.W, (1977, 19p) CR 77-27

Underground facilities
Experimental scaling study of an annular flow ice-water heat sink. Stubstad, J.M., et al, (1977, 54p.) CR 77-15
Design procedures for underground heat sink systems Stubstad, J.M., et al, (1979, 186p in var. pagns) SR 79-08
Comparative field testing of buried utility locators Bigl, S.R., et al, (1984, 25p.) MP 1977
Detection of buried utilities Bigl, S.R., et al, (1984, 36p) CR 84-31
Prevention of freezing of wastewater treatment facilities. Reed, S.C, et al, (1985, 49p) SR 85-11
Locating buried utilities Bigl, S.R., (1985, 48p.) SR 85-14
Detecting underground objects/utilities Hironaka, M.C., et al, (1987, p 36-43) MP 2281
Underground pipelines
Phase change around insulated buried pipes quasi-steady method. Lunardini, V.J., (1981, p 201-207) MP 1496
Transient analysis of heat transmission systems. Phetteplace, G., (1981, 53p) CR 81-24
Heat losses from the central heat distribution system at Fort Wainwright. Phetteplace, G., (1982, p.308-328) MP 2310
Approximate phase change solutions for insulated buried cylinders. Lunardini, V.J., (1983, p.25-32) MP 1593
Computer models for two-dimensional steady-state heat conduction. Albert, M.R., et al, (1983, 90p) CR 83-10
Mitigative and remedial measures for chilled pipelines in discontinuous permafrost. Sayles, F.H., (1984, p 61-62) MP 1974
Radar investigations above the trans-Alaska pipeline near Fairbanks Arcone, S.A., et al, (1984, 15p) CR 84-27
Simplified design procedures for heat transmission system piping Phetteplace, G., (1985, p.451-456) MP 1979
UNDERSNOW FACILITIES
Methods of build g on permanent snowfields Mellor, M., (1968, 43p) M III-A2a
Investigation and exploitation of snowfield sites Mellor, M., (1969, 57p) M III-A2b
Underwater acoustics
Acoustic waves incident on a seawater/sea ice interface. Jezek, K.C., (1985, 10p) SR 85-10
Ice strength estimates from submarine topsounder data DiMarco R., et al, (1989, p 425-426) MP 2691
Underwater ice
Field investigations of a hanging ice dam. Beltaos, S., et al, (1982, p.475-488) MP 1533
Eruptions from under-ice explosions Mellor, M., et al, (1988, 26p) SR 88-14
Development of an underwater frazil-ice detector Daly, S.F., et al, (1990, p 77-82) MP 2702
Unfrozen water content
Ionic migration and weathering in frozen Antarctic soils Ugolini, F.C., et al, (1973, p 461-470) MP 941
Depth of water-filled crevasses that are closely spaced. Robin, G. de Q., et al, (1974, p 543-544) MP 1038
Electrical resistivity profile of permafrost Hoekstra, P., (1974, p 28-34) MP 1045
Prediction of unfrozen water contents in frozen soils from liquid determinations Tice, A.R., et al, (1976, 9p) CR 76-08
Applications of thermal analysis to cold regions Sterrett, K.F., (1976, p 167-181) MP 890
Calculating unfrozen water content of frozen soils McGaw, R., et al, (1976, p 114-122) MP 899
Determination of unfrozen water in frozen soil by pulsed nuclear magnetic resonance Tice, A.R., et al, (1978, p.149-155) MP 1097
NMR phase composition measurements on moist soils Tice, A.R., et al, (1978, p.11-14) MP 1210
Low temperature phase changes in moist, briny clays. Anderson, D.M., et al, (1980, p 139-144) MP 1330
Frost heave in an instrumented soil column. Berg, R.L., et al, (1980, p 211-221) MP 1331
Unfrozen water contents of submarine permafrost determined by nuclear magnetic resonance Tice, A.R., et al, (1980, p 400-412) MP 1412
Some approaches to modeling phase change in freezing soils Hromadka, T.V., II, et al, (1981, p 137-145) MP 1437
Relationship between the ice and unfrozen water phases in frozen soil. Tice, A.R., et al, (1982, 8p) CR 82-15
Snow calorimetric measurement at SNOW-ONE Fisk, D., (1982, p 133-138) MP 1986
Comparison of unfrozen water contents measured by DSC and NMR Oliphant, J.L., et al, (1982, p 115-121) MP 1594
Liquid sampler Rand, J.H., (1982, 4 col) MP 2334
Relationship between ice and unfrozen water in frozen soils Tice, A.R., et al, (1983, p.37-46) MP 1632
Free water measurements of a snowpack. Fisk, D.J., (1983, p 173-176) MP 1758
Effect of loading on the unfrozen water content of silt. Oliphant, J.L., et al, (1983, 17p) SR 83-18
Ice-cored mounds at Sukakpak Mountain, Brooks Range Brown, J., et al, (1983, p 91-96) MP 1653
Investigation of transient processes in an advancing zone of freezing. McGaw, R., et al, (1983, p.821-825) MP 1663
Soil-water diffusivity of unsaturated frozen soils at subzero temperatures Nakano, Y., et al, (1983, p 889-893) MP 1664
Water migration due to a temperature gradient in frozen soil Oliphant, J.L., et al, (1983, p 951-956) MP 1666
Frozen soil-water diffusivity under isothermal conditions. Nakano, Y., et al, (1983, 8p) CR 83-22
Modeling the resilient behavior of frozen soils using unfrozen water content. Cole, D.M., (1984, p.823-834) MP 1715
Aquatic plant growth in relation to temperature and unfrozen water content. Palazzo, A.J., et al, (1984, 8p.) CR 84-14
Effects of salt on unfrozen water content in silt, Lanzhou, China Tice, A.R., et al, (1984, 18p.) CR 84-16
Effects of magnetic particles on the unfrozen water content in soils Tice, A.R., et al, (1984, p 63-73) MP 1790
Phase equilibrium in frost heave of fine-grained soil Nakano, Y., et al, (1985, p.50-68) MP 1896
Effects of soluble salts on the unfrozen water content in silt Tice, A.R., et al, (1985, p 99-109) MP 1933
Model for dielectric constants of frozen soils Oliphant, J.L., (1985, p.46-57) MP 1926
Frozen ground physics Fish, A.M., (1985, p 29-36) MP 1928
Unfrozen water content in frozen ground Xu, X., et al, (1985, p 83-87) MP 1929
Soil-water potential and unfrozen water content and temperature Xu, X., et al, (1985, p 1-14) MP 1932
Liquid water mass fraction of snow measured by alcohol solution Fisk, D.J., (1986, p 538-541) MP 2245
Transport of water in frozen soil 6 Effects of temperature Nakano, Y., et al, (1987, p 44-50) MP 2213
Alcohol calorimetry for measuring the liquid water fraction of snow Fisk, D.J., (1987, p.163-166) MP 2261
Intercomparison of snow cover liquid water measurement techniques Boyne, H.S., et al, (1987, p 167-172) MP 2262
Factors affecting water migration in frozen soils Xu, X., et al, (1987, 16p) CR 87-09
Comparison of snow cover liquid water measurement techniques. Boyne, H.S., et al, (1987, p.1833-1836) MP 2283
Soil freezing and unfrozen water content Lunardini, V.J., (1988, 23p) CR 88-02
Measurement of the unfrozen water content of soils: a comparison of NMR and TDR methods Smith, M.W., et al, (1988, p 473-477) MP 2363
Effect of variable thermal properties on freezing with an unfrozen water content. Lunardini, V.J., (1988, p.1127-1132) MP 2370
Unfrozen water content of soils Smith, M.W., et al, (1988, 11p) CR 88-18
Unfrozen water content of undisturbed frozen silt Tice, A.R., et al, (1988, 17p) CR 88-19
Unfrozen water contents of six antarctic soil materials Anderson, D.M., et al, (1989, p 353-366) MP 2470
Soil freezing and soil water in sandy loam Black, P.B., et al, (1989, p 2205-2210) MP 2577
Unfrozen water contents of undisturbed and remolded Alaskan silt. Tice, A.R., et al, (1989, p 103-111) MP 2683
Hydraulic conductivity and unfrozen water content of frozen silt. Black, P.B., et al, (1990, p.323-329) MP 2551
Predicting unfrozen water content behavior of a soil Black, P.B., et al, (1990, p 54-60) MP 2677
Transport of water due to a temperature gradient in unsaturated frozen clay Nakano, Y., et al, (1990, p 57-75) MP 2701
Unfrozen water content and hydraulic conductivity of frozen soil Black, P.B., (1990, 7p) CR 90-05
United Kingdom
Utility distribution systems in Sweden, Finland, Norway and England. Aamot, H.W.C., et al, (1976, 121p) SR 76-16
United States
Snow and ice prevention in the United States Minsk, L.D., (1986, p 37-42) MP 1874
Snowfall amounts and snow depths in Germany and NE USA. Bates, R.E., et al, (1988, p 107-117) MP 2401
U.S. Federal arctic research. Devine, J.S., et al, (1989, p 65-74) MP 2671

Biological restoration strategies in relation to nutrients at a subarctic site in Fairbanks, Alaska Johnson, L.A., (1978, p.460-466) MP 1100

Chena River Lakes Project revegetation study—three-year summary. Johnson, L.A., et al, (1981, 59p.) CR 81-18

Heat loss from the central heat distribution system, Fort Wainwright. Phetteplace, G., (1982, 20p.) MP 1980

Radar investigations above the trans-Alaska pipeline near Fairbanks. Arcone, S.A., et al. (1984, 15p.) CR 84-27

Preparation of geophysical borehole site with ground ice, Fairbanks, AK. Delaney, A.J., (1987, 15p.) SR 87-07

Frost heave forces on H and pipe foundation piles Buska, J.S., et al, (1988, p.1039-1044) MP 2367

Water and suspended solids discharge during snowmelt Chacho, E.F., Jr., (1990, p.167-173) MP 2706

—Alaska—Fort Wainwright

Thermal infrared survey of winter trails at Fort Wainwright Collins, C.M., et al, (1990, 16p.) SR 90-17

—Alaska—Harrison Bay

Subsea permafrost in Harrison Bay, Alaska Neave, K.G., et al, (1982, 62p.) CR 82-24

—Alaska—Kachemak Bay

Ice distribution and winter surface circulation, Kachemak Bay, Alaska. Gatto, L.W., (1981, p.995-1001) MP 1442

Ice distribution and winter ocean circulation, Kachemak Bay, Alaska. Gatto, L.W., (1981, 43p.) CR 81-22

Ice growth and circulation in Kachemak Bay, Alaska Daly, S.F., (1982, p.(C)1-(C)9) MP 1501

Ice distribution and water circulation, Kachemak Bay, Alaska Gatto, L.W., (1982, p.421-435) MP 1569

—Alaska—Kenai Mountains

Periglacial landforms and processes, Kenai Mts., Alaska Bailey, P.K., (1985, 60p.) SR 85-03

—Alaska—Kokolik River

Recovery of the Kokolik River tundra area, Alaska Hall, D.K., et al, (1979, 15p.) MP 1638

—Alaska—Livengood

Construction and performance of the Hess creek earth fill dam, Livengood, Alaska Simoni, O.W., (1973, p.23-34) MP 859

—Alaska—Matanuska Glacier

Subaerial sediment flow of the Matanuska Glacier, Alaska Lawson, D.E., (1982, p.279-300) MP 1806

—Alaska—Mukluk Island

Mukluk ice stress measurement program Cox, G.F.N., (1988, p.11-15) MP 2618

—Alaska—North Slope

Radar imagery of ice covered North Slope lakes Weeks, W.F., et al, (1977, p.129-136) MP 923

Role of research in developing surface protection measures for the Arctic Slope of Alaska Johnson, P.R., (1978, p.202-205) MP 1068

Surface protection measures for the Arctic Slope, Alaska Johnson, P.R., (1978, p.202-205) MP 1519

Ground pressures exerted by underground explosions Johnson, P.R., (1978, p.284-290) MP 1520

Summer air temperature and precipitation in northern Alaska Haugen, R.K., et al, (1980, p.403-412) MP 1439

Ice-covered North Slope lakes observed by radar Weeks, W.F., et al, (1981, 17p.) CR 81-19

Tundra soils on the Arctic Slope of Alaska Everett, K.R., et al, (1982, p.264-280) MP 1552

River-ice mounds on Alaska's North Slope Arcone, S.A., et al, (1989, p.288-290) MP 2563

Investigation of the LIZ-3 Dew Line Station water supply lake Kovacs, A., (1990, 10p.) SR 90-11

—Alaska—Norton Sound

Sea ice rubble formations off the NE Bering Sea and Norton Sound. Kovacs, A., (1981, p.1348-1363) MP 1527

—Alaska—Oumalik

Modifications of permafrost, East Oumalik, Alaska Lawson, D.E., (1982, 33p.) CR 82-36

—Alaska—Point Hope

Case study fresh water supply for Point Hope Alaska McFadden, T., et al, (1979, p.1029-1040) MP 1222

—Alaska—Prudhoe Bay

Ecological investigations of the tundra biome in the Prudhoe Bay Region, Alaska. Brown, J., ed. (1975, 215p.) MP 1053

Selected climatic and soil thermal characteristics of the Prudhoe Bay region Brown, J., et al, (1975, p.3-12) MP 1054

Dynamics of near-shore ice. Weeks, W.F., et al, (1976, p.9-34) MP 1380

Vehicle damage to tundra soil and vegetation. Walker, D.A., et al, (1977, 49p.) SR 77-17

Movement of coastal sea ice near Prudhoe Bay. Weeks, W.F., et al, (1977, p.533-546) MP 1066

Study of a grounded floeberg near Reindeer Island, Alaska. Kovacs, A., (1977, 9p.) MP 1751

Permafrost and active layer on a northern Alaskan road. Berg, R.L., et al, (1978, p.615-621) MP 1102

Determining subsea permafrost characteristics with a cone penetrometer—Prudhoe Bay, Alaska. Blouin, S.E., et al, (1979, p.3-16) MP 1217

Geobotanical atlas of the Prudhoe Bay region, Alaska. Walker, D.A., et al, (1980, 69p.) CR 80-14

Structure of first-year pressure ridge sails in the Prudhoe Bay region. Tucker, W.B., et al, (1984, p.115-135) MP 1837

Airborne electromagnetic sounding of sea ice thickness and sub-ice bathymetry Kovacs, A., et al, (1987, p.289-311) MP 2332

D.C. resistivity along the coast at Prudhoe Bay, Alaska Sellmann, P.V., et al, (1988, p.988-993) MP 2366

—Alaska—Redoubt Mountain

Recent glacier-volcano interactions on Mt. Redoubt, Alaska Sturm, M., et al, (1988, 18p.) MP 2431

—Alaska—Strandline Lake

Jökulhlaups from ice-dammed Strandline Lake, Alaska. Sturm, M., et al, (1987, p.79-94) MP 2307

Jökulhlaups from Strandline Lake, Alaska (especially the 1982 event) Sturm, M., et al, (1989, 19p.) MP 2520

—Alaska—Sukakpak Mountain

Ice-cored mounds at Sukakpak Mountain, Brooks Range Brown, J., et al, (1983, p.91-96) MP 1653

—Alaska—Susitna River

Mapping of the LANDSAT imagery of the Upper Susitna River Gatto, L.W., et al, (1980, 41p.) CR 80-04

Winter surveys of the upper Susitna River, Alaska Bilello, M.A., (1980, 30p.) SR 80-19

—Alaska—Taku Glacier

Geobotanical studies on the Taku Glacier anomaly. Heusser, C.J., et al, (1954, p.224-239) MP 1215

—Alaska—Tanana River

Tanana River monitoring and research studies near Fairbanks, Alaska. Neill, C.R., et al, (1984, 98p. + 5 appends.) SR 84-37

Chena Flood Control Project and the Tanana River near Fairbanks, Alaska. Buska, J.S., et al, (1984, 11p. + figs.) MP 1745

Bank recession of the Tanana River, Alaska. Gatto, L.W., (1984, 59p.) MP 1746

Bank recession and channel changes of the Tanana River, Alaska Gatto, L.W., et al, (1984, 98p.) MP 1747

Erosion analysis of the Tanana River, Alaska. Collins, C.M., (1984, 8p + figs.) MP 1748

Bank erosion, vegetation and permafrost, Tanana River near Fairbanks Gatto, L.W., (1984, 53p.) SR 84-21

Sub-ice channels and frazil bars, Tanana River, Alaska. Lawson, D.E., et al, (1986, p.465-474) MP 2129

Frazil ice pebbles, Tanana River, Alaska Chacho, E.F., et al, (1986, p.475-483) MP 2130

Morphology, hydraulics and sediment transport of an ice-covered river. Lawson, D.E., et al, (1986, 37p.) CR 86-11

—Alaska—Yukon River

Break-up dates for the Yukon River, Pt.1. Rampart to Whitehorse, 1896-1978 Stephens, C.A., et al, (1979, c50 leaves) MP 1317

Break-up dates for the Yukon River, Pt.2. Alakanuk to Tanana, 1883-1978 Stephens, C.A., et al, (1979, c50 leaves) MP 1318

Break-up of the Yukon River at the Haul Road Bridge 1979. Stephens, C.A., et al, (1979, 22p + Figs.) MP 1315

—Allegheny River

Ice conditions along the Allegheny and Monongahela Rivers Gatto, L.W., (1988, 106p.) SR 88-06

Ice observations on the Allegheny and Monongahela rivers Bilello, M.A., et al, (1988, 43p.) SR 88-25

—California—Manteca

Land treatment of wastewater Murrmann, R.P., et al, (1976, 36p.) MP 920

—Great Lakes

Application of ice engineering and research to Great Lakes problems Freitag, D.R., (1972, p.131-138) MP 1615

—Idaho—Salmon River

Salmon River ice jams Cunningham, L.L., et al, (1984, p.529-533) MP 1796

Potential solution to ice jam flooding: Salmon River, Idaho Earickson, J., et al, (1986, p.15-25) MP 2131

Salmon River ice jam control studies interim report Axelson, K.D., et al, (1990, 8p.) SR 90-06

—Illinois River

Ice conditions on the Ohio and Illinois rivers, 1972-1985 Gatto, L.W., (1985, p.856-861) MP 1914

—Illinois Waterway

Ice conditions along Illinois Waterway, 1972-1985 Gatto, L.W., (1989, 112p.) CR 89-20

—Iowa—Saylorville River

Geographic information system for river basin. Merry, C.J., et al, (1987, p.265-269) MP 2549

—Maine

Bedrock geology survey in northern Maine. Sellmann, P.V., et al, (1976, 19p.) CR 76-37

—Maine—Allagash

Investigation of an airborne resistivity survey conducted at very low frequency. Arcone, S.A., (1977, 48p.) CR 77-20

Snow cover and meteorology at Allagash, Maine, 1977-1980. Bates, R., (1983, 49p.) SR 83-20

—Maine—Portland

Description of the building materials data base for Portland, Maine. Merry, C.J., et al, (1986, 83p.) SR 86-13

—Maine—St. John River

Use of Landsat data for predicting snowmelt runoff in the upper Saint John River basin. Merry, C.J., et al, (1983, p.519-533) MP 1694

—Massachusetts—Boston

Applications of remote sensing in the Boston Urban Studies Program, Parts I and II Merry, C.J., et al, (1977, 36p.) CR 77-13

—Michigan—Saginaw River

Hydrologic modeling from Landsat land cover data. McKim, H.L., et al, (1984, 19p.) SR 84-01

—Minnesota—Lac qui Parle

Wildlife habitat mapping in Lac qui Parle, Minnesota. Merry, C.J., et al, (1984, p.205-208) MP 2085

—Monongahela River

Ice atlas, 1984-1985: Ohio River, Allegheny River, Monongahela River. Gatto, L.W., et al, (1986, 185p.) SR 86-23

Ice conditions along the Allegheny and Monongahela Rivers. Gatto, L.W., (1988, 106p.) SR 88-06

Ice observations on the Allegheny and Monongahela rivers. Bilello, M.A., et al, (1988, 43p.) SR 88-25

—Montana—Koocanusa, Lake

Limnology of Lake Koocanusa, MT, the 1967-1972 study. Bonde, T.J.H., et al, (1982, 184p.) SR 82-21

Limnology of Lake Koocanusa, Montana. Storm, P.C., et al, (1982, 597p.) SR 82-23

—Montana—Kootenai River

Environmental analyses in the Kootenai River region, Montana McKim, H.L., et al, (1976, 53p.) SR 76-13

—Montana—Missouri River

Effect of Toston dam on upstream ice conditions. Ashton, G.D., (1989, 9p.) SR 89-16

—Nebraska—Platte River

Ice cover effect on river flow. Ashton, G.D., (1990, 24p.) SR 90-08

—New England

Applications of remote sensing in New England McKim, H.L., et al, (1975, 8p + 14 figs. and tables) MP 913

—New Hampshire

Comparison of winter climatic data for three New Hampshire sites. Govoni, J.W., et al, (1986, 78p.) SR 86-05

Seasonal distribution of low flow events in New Hampshire streams with emphasis on the winter period Melloh, R.A., (1990, p.47-53) MP 2681

—New Hampshire—Hanover

Climate at CRREL, Hanover, New Hampshire. Bates, R.E., (1984, 78p.) SR 84-24

Chemical properties of snow in the northeastern United States Kumai, M., (1987, p.(C1)625-(C1)630) MP 2232

—New Hampshire—Lebanon

Response of runway pavement to freeze thaw cycles Allen, W.L., et al, (1989, 31p.) SR 89-02

—New Hampshire—Mount Washington

Atmospheric icing rates with elevation on northern New England mountains, U.S.A. Ryerson, C.C., (1990, p.90-97) MP 2589

—New Hampshire—Post Pond

Ice growth on Post Pond, 1973-1982 Gow, A.J., et al, (1983, 25p.) CR 83-04

—New York—Hudson River

Controlled river ice cover breakup; part 1 Hudson River field experiments Ferrick, M.G., et al, (1986, p.281-291) MP 2391

—Ohio—Erie, Lake

Use of SPOT HRV data in a Corps dredging operation in Lake Erie. Merry, C.J., et al, (1987, p.49-58) MP 2548

—Ohio River

Geographic features and floods of the Ohio River Edwardo, H.A., et al, (1984, p.265-281) MP 2083

Ice conditions on the Ohio and Illinois rivers, 1972-1985. Gatto, L.W., (1985, p.856-861) MP 1914

Ice atlas, 1984-1985 Ohio River, Allegheny River, Monongahela River. Gatto, L.W., et al, (1986, 185p.) SR 86-23

Analysis of 112 years of ice conditions observed on the Ohio River at Cincinnati Daly, S.F., et al, (1987, p.70-79) MP 2260

Ice conditions along the Ohio River, 1972-1985 Gatto, L.W., (1988, 162p.) SR 88-01

—Oregon—Hood, Mount

Source mechanism of volcanic tremor Ferrick, M.G., et al, (1982, p.8675-8683) MP 1576

United States *(cont.)*

—Pennsylvania—Allegheny River

Performance of the Allegheny River ice control structure, 1983. Deck, D.S., et al, (1984, 15p) SR 84-13

Ice atlas, 1984-1985. Ohio River, Allegheny River, Monongahela River. Gatto, L.W., et al, (1986, 185p) SR 86-23

—Pennsylvania—Pittsburgh

Construction materials data base for Pittsburgh, PA Merry, C.J., et al, (1986, 87p) SR 86-08

—Saint Clair River

Port Huron ice control model studies Calkins, D.J., et al, (1982, p.361-373) MP 1530

—South Dakota—Oahe Dam

Ice formation downstream of Oahe Dam—1987-1988 winter Ashton, G.D., (1988, 37p) MP 2506

—South Dakota—White River

Ice jams and the winter climate near White River, SD Bilello, M.A., (1987, p 154-162) MP 2399

—St. Marys River

Force estimate and field measurements of the St. Marys River ice booms Perham, R.E., (1977, 26p) CR 77-04

—Utah—Lake Powell

Water quality measurements at Lake Powell, Utah Merry, C.J., (1977, 38p) SR 77-28

—Vermont—Connecticut River

Study of dynamic ice breakup on the Connecticut River near Windsor, Vermont Ferrick, M.G., et al, (1987, p 163-177) MP 2400

—Vermont—Lake Champlain

Winter thermal structure and ice conditions on Lake Champlain, Vermont Bates, R.E., (1976, 22p) CR 76-13

—Vermont—Ottauquechee River

Ice jams and flooding on Ottauquechee River, VT Bates, R., et al, (1982, 25p) SR 82-06

Ottauquechee River—analysis of freeze-up processes Calkins, D.J., et al, (1982, p.2-37) MP 1738

Numerical simulation of freeze-up on the Ottauquechee River. Calkins, D.J., (1984, p 247-277) MP 1815

—Washington—Mount Saint Helens

Thermal observations of Mt St. Helens before and during eruption St. Lawrence, W.F., et al, (1980, p 1526-1527) MP 1482

—Washington—Quincy

Land treatment of wastewater Murrmann, R.P., et al, (1976, 36p) MP 920

—Washington—Saint Helens, Mount

Observations of volcanic tremor at Mount St. Helens volcano Fehler, M., (1984, p 3476-3484) MP 1770

—Wisconsin

Land use and water quality relationships, eastern Wisconsin Haugen, R.K., et al, (1976, 47p) CR 76-30

—Wisconsin—Kewaunee

Impact of dredging on water quality at Kewaunee Harbor, Wisconsin. Iskandar, I.K., et al, (1984, 16p) CR 84-21

Unsteady flow

Framework for control of dynamic ice breakup by river regulation. Ferrick, M.G., et al, (1989, 14p) CR 89-12

Urban planning

Applications of remote sensing in the Boston Urban Studies Program, Parts I and II. Merry, C.J., et al, (1977, 36p) CR 77-13

Computer model of municipal snow removal Tucker, W.B., (1977, 7p) CR 77-30

Post occupancy evaluation of a planned community in Arctic Canada. Bechtel, R.B., et al, (1980, 27p) SR 80-06

Post occupancy evaluation for communities in hot or cold regions Bechtel, R.B., et al, (1980, 57p) SR 80-29

Urea

Soil microbiology. Bosatta, E., et al, (1981, p 38-44) MP 1753

Properties of urea-doped ice in the CRREL test basin Hirayama, K., (1983, 44p) CR 83-08

Crystalline structure of urea ice sheets used in modeling in the CRREL test basin Gow, A.J., (1984, p 241-253) MP 1835

Crystalline structure of urea ice sheets Gow, A.J., (1984, 48p) CR 84-24

Fracture toughness of urea model ice Bentley, D.L., et al, (1988, p 289-297) MP 2348

Fracture experiments on freshwater and urea model ice Bentley, D.L., et al, (1988, 152p) MP 2502

USSR

Comparative analysis of the USSR construction codes and the US Army technical manual for design of foundations on permafrost. Fish, A.M., (1982, 20p) CR 82-14

Regional and seasonal variations in snow-cover density in the USSR Bilello, M.A., (1984, 70p) CR 84-22

Permafrost, snow cover and vegetation in the USSR Bigl, S.R., (1984, 128p) SR 84-36

—Magadan

Scientists visit Kolyma Water Balance Station in the USSR Slaughter, C.W., et al, (1977, 66p) SR 77-15

Subarctic watershed research in the Soviet Union Slaughter, C.W., et al, (1978, p 305-313) MP 1273

—Siberia

Embankment dams on permafrost in the USSR Johnson, T.C., et al, (1980, 59p) SR 80-41

UTILITIES

Sewerage and sewage disposal in cold regions Alter, A.J., (1969, 106p) M III-C5b

Utilities on permanent snowfields Mellor, M., (1969, 42p) M III-A2d

Utilities

Utility distribution systems in Iceland Aamot, H.W.C., (1976, 63p) SR 76-05

Utility distribution systems in Sweden, Finland, Norway and England Aamot, H.W.C., et al, (1976, 121p) SR 76-16

Utility distribution practices in northern Europe. McFadden, T., et al, (1977, p.70-95) MP 928

Field performance of a subarctic utilidor. Reed, S.C., (1977, p 448-468) MP 930

Cold climate utilities delivery design manual Smith, D.W., et al, (1979, c300 leaves) MP 1373

Heat losses from the central heat distribution system at Fort Wainwright Phetteplace, G., (1982, p 308-328) MP 2310

Water supply and waste disposal on permanent snow fields Reed, S.C., et al, (1984, p 401-413) MP 1714

Utility services for remote military facilities Reed, S.C., et al, (1984, 66p) SR 84-14

Comparative field testing of buried utility locators Bigl, S.R., et al, (1984, 25p) MP 1977

Detection of buried utilities Bigl, S.R., et al, (1984, 36p) CR 84-31

Locating buried utilities Bigl, S.R., (1985, 48p) SR 85-14

Thermal analysis of a shallow utilidor Phetteplace, G., et al, (1986, 10p) MP 2021

Cold climate utilities manual Smith, D.W., ed, (1986, var p) MP 2135

Buildings and utilities in very cold regions overview and research needs Tobiasson, W., (1987, p 299-303) MP 2424

Arctic construction working group report Marvin, E.L., et al, (1987, p 311-314) MP 2426

Valleys

Permafrost distribution on the continental shelf of the Beaufort Sea Hopkins, D.M., et al, (1979, p 135-141) MP 1288

Vapor barriers

Vapor retarders for membrane roofing systems Tobiasson, W., (1989, p 31-37) MP 2489

Vapor retarders to control summer condensation Tobiasson, W., (1989, p 566-572) MP 2558

Vapor diffusion

Thermodynamics of snow metamorphism due to variations in curvature Colbeck, S.C., (1980, p 291-301) MP 1368

Theory of metamorphism of dry snow Colbeck, S.C., (1983, p 5475-5482) MP 1603

Aerosol growth in a cold environment. Yen, Y.-C., (1984, 21p) CR 84-06

Transport of water in frozen soil 6 Effects of temperature Nakano, Y., et al, (1987, p 44-50) MP 2213

Field observations of thermal convection in a subarctic snow cover Johnson, J.B., et al, (1987, p 105-118) MP 2439

Vapor pressure

Remote reading tensiometer for use in subfreezing tempera tures McKim, H.L., et al, (1976, p 31-45) MP 897

Vapor pressure of TNT by gas chromatography Leggett D.C., (1977, p 83-90) MP 915

Composition of vapors evolved from military TNT Leggett D.C., et al, (1977, 25p) SR 77-16

Vapor transfer

Mercury contamination of water samples Cragin, J.H., (1979, p 313-319) MP 1270

Growth of faceted crystals in a snow cover Colbeck, S.C., (1982, 19p) CR 82-29

Condensation control in low-slope roofs Tobiasson, W., (1985, p 47-59) MP 2039

Vegetation

Pipeline haul road between Livengood and the Yukon River Berg, R.T., et al, (1976, 73p) SR 76-11

Oil spills on permafrost Collins, C.M., et al, (1976, 18p) SR 76-15

Computer modeling of terrain modifications in the arctic and subarctic Outcalt, S.I., et al, (1977, p 24-32) MP 971

Reclamation of acidic dredge soils with sewage sludge and lime Palazzo, A.J., (1977, 24p) SR 77-19

Utilization of sewage sludge for terrain stabilization in cold regions Gaskin, D.A., et al, (1977, 45p) SR 77-27

Second progress report on oil spilled on permafrost McFadden, T., et al, (1977, 46p) SR 77-44

Ecology on the Yukon-Prudhoe haul road Brown, J., ed, (1978, 141p) MP 1115

1977 tundra fire at Kokolik River Alaska Hall, D.K., et al, (1978, 11p) SR 78-10

Effects of winter military operations on cold regions terrain Abele, G., et al, (1978, 32p) SR 78-17

Crude oil spills on black spruce forest Jenkins, T.F., et al, (1978, p 305-323) MP 1185

Snow cover mapping in northern Maine using LANDSAT Merry, C.J., et al, (1979, p 197-198) MP 1516

Sewage sludge for terrain stabilization, Part 2 Gaskin, D.A., et al, (1979, 36p) SR 79-28

Geobotanical atlas of the Prudhoe Bay region, Alaska Walker, D.A., et al, (1980, 69p) CR 80-14

Coastal tundra at Barrow Brown, J., et al, (1980, p 1-29) MP 1356

Environment of the Alaskan Haul Road. Brown, J., (1980, p 3-52) MP 1350

Road dust along the Haul Road, Alaska. Everett, K.R., (1980, p 101-128) MP 1352

Crude oil spills on subarctic permafrost in interior Alaska. Johnson, L.A., et al, (1980, 67p) CR 80-29

Tundra and analogous soils Everett, K.R., et al, (1981, p 139-179) MP 1405

Point Barrow, Alaska, USA. Brown, J., (1981, p 775-776) MP 1434

Seasonal growth and accumulation of N, P, and K by grass irrigated with wastes Palazzo, A.J., (1981, p 64-68) MP 1425

Vegetation selection and management for overland flow systems. Palazzo, A.J., et al, (1982, p 135-154) MP 1511

CO2 effect on permafrost terrain Brown, J., et al, (1982, 30p) MP 1546

Vegetation in two adjacent tundra habitats, northern Alaska. Roach, D.A., (1983, p.359-364) MP 2064

U.S. tundra biome publication list Brown, J., et al, (1983, 29p) SR 83-29

Sensitivity of vegetation and soil flora to seawater spills, Alaska. Simmons, C.L., et al, (1983, 35p) CR 83-24

Bank recession of the Tanana River, Alaska. Gatto, L.W., (1984, 59p) MP 1746

Bank erosion, vegetation and permafrost, Tanana River near Fairbanks. Gatto, L.W., (1984, 53p) SR 84-21

Using Landsat data for snow cover/vegetation mapping Merry, C.J., et al, (1984, p.II(140)-II(144)) MP 1975

Wildlife habitat mapping in Lac qui Parle, Minnesota. Merry, C.J., et al, (1984, p 205-208) MP 2085

Revegetation along pipeline rights-of-way in Alaska. Johnson, L., (1984, p 254-264) MP 2113

Permafrost, snow cover and vegetation in the USSR. Bigl, S.R., (1984, 128p) SR 84-36

Vegetation and environmental gradients of the Prudhoe Bay region, Alaska Walker, D.A., (1985, 239p) CR 85-14

Response of permafrost to disturbance. Lawson, D.E., (1986, p.1-7) MP 2165

Effect and disposition of TNT in a terrestrial plant Palazzo, A.J., et al, (1986, p 49-52) MP 2098

Vegetation of Beechey Point, Alaska Walker, D.A., et al, (1987, 63p) CR 87-05

Effects of all terrain vehicles on tundra Racine, C., et al, (1988, 12p) SR 88-17

Vegetation patterns

Geobotanical studies on the Taku Glacier anomaly. Heusser, C.J., et al, (1954, p.224-239) MP 1215

VEGETATION PATTERNS

Effects of permafrost on engineering Stearns, S.R., (1966, 77p) M I-A2

Vegetation patterns

Abiotic overview of the Tundra Biome Program, 1971. Weller, G., et al, (1971, p 173-181) MP 906

Permafrost and vegetation maps from ERTS imagery. Anderson, D.M., et al, (1973, 75p) MP 1003

Vegetative research in arctic Alaska Johnson, P.L., et al, (1973, p 169-198) MP 1008

Land use/vegetation mapping in reservoir management. Cooper, S., et al, (1974, 30p) MP 1039

Inundation of vegetation in New England McKim, H.L., et al, (1978, 13p) MP 1169

Geocological mapping scheme for Alaskan coastal tundra. Everett, K.R., et al, (1978, p 359-365) MP 1098

Vehicle wheels

Effects of hovercraft, wheeled and tracked vehicle traffic on tundra Abele, G., (1976, p 186-215) MP 1123

Hovercraft ground contact directional control devices. Abele, G., (1976, p 51-59) MP 875

Effects of low ground pressure vehicle traffic on tundra at Teshekpuk, Alaska Abele, G., et al, (1977, 52p) SR 77-31

Workshop on snow traction mechanics, 1979 Harrison, W.L., ed, (1981, 71p) SR 81-16

Predicting wheeled vehicle motion resistance in shallow snow Blaisdell, G.L., (1981, 18p) SR 81-30

Vehicle for cold regions mobility measurements Blaisdell, G.L., (1985, p 9-20) MP 2044

Instrumented vehicle for the measurement of mobility parameters Blaisdell, G.L., (1988, p 377-388) MP 2486

Performance of an omni-directional wheel on snow and ice. Blaisdell, G.S., (1989, 21p + appends) MP 2711

Wheeled versus tracked vehicle snow mobility test program Green, C.E., et al, (1989, 19p) MP 2715

Vehicles

Bearing capacity of river ice for vehicles Nevel, D.E., (1978, 22p) CR 78-03

Macroscopic view of snow deformation under a vehicle Richmond, P.W., et al, (1981, 20p) SR 81-17

Snow measurements in relation to vehicle performance. Harrison, W.L., (1981, p 13-24) MP 1473

Application of energetics to vehicle trafficability problems Brown, R.L., (1981, p 25-38) MP 1474

Prediction methods for vehicle traction on snow Harrison, W.L., (1981, p 39-45) MP 1475

Field investigations of vehicle traction in snow. Harrison, W.L., (1981, p 47-48) MP 1476
Vehicle tests and performance in snow. Berger, R.H., et al, (1981, p 51-67) MP 1477
Shallow snow test results. Harrison, W.L., (1981, p.69-71) MP 1478
Mobility bibliography. Liston, N., comp, (1981, 313p) SR 81-29
Engine starters in winter. Coutts, H.J., (1981, 37p) SR 81-32
CRREL instrumented vehicle for cold regions mobility measurements Blaisdell, G.L., (1982, 11p.) MP 1515
Measurement of snow surfaces and tire performance evaluation Blaisdell, G.L., et al, (1982, 7p) MP 1516
CRREL instrumented vehicle: hardware and software. Blaisdell, G.L., (1983, 75p.) SR 83-03
Vechicle mobility and snowpack parameters. Berger, R.H., (1983, 26p.) CR 83-16
Utilization of Unmanned Aerial Vehicles in the ALBE Thrust. Greeley, H.P., et al, (1986, p 249-257) MP 2663
Effect of oscillatory loads on the bearing capacity of floating ice covers. Kerr, A.D., et al, (1987, p.219-224) MP 2216
Effect of snow on vehicle-generated seismic signatures. Albert, D G., (1987, p 881-887) MP 2229
Trailing-tire motion resistance in shallow snow. Blaisdell, G.L., (1987, p 296-304) MP 2248
Vehicle mobility over snow. Blaisdell, G L., (1987, p.265-266) MP 2420
Arctic mobility problems. Abele, G., (1987, p 267-269) MP 2421
Wheeled versus tracked vehicle snow mobility test program. Green, C.E., et al, (1989, 19p.) MP 2715
Thawing soil strength measurements for predicting vehicle performance. Shoop, S A., (1989, 18p.) MP 2749

Velocity

Critical velocities of a floating ice plate subjected to in-plane forces and a moving load. Kerr, A.D., (1979, 12p.) CR 79-19
Measurement of the shear stress on the underside of simulated ice covers. Calkins, D.J., et al, (1980, 11p) CR 80-24
Flow velocity profiles in ice-covered shallow streams. Calkins, D.J., et al, (1982, p.236-247) MP 1540
Laboratory study of transverse velocities and ice jamming in a river bend Zufelt, J.E., et al, (1988, p.189-197) MP 2501

Velocity measurement

Eruptions from under-ice explosions. Mellor, M., et al, (1988, 26p) SR 88-14

VENTILATION

Utilities on permanent snowfields Mellor, M., (1969, 42p) M III-A2d

Ventilation

Venting of built-up roofing systems Tobiasson, W., (1981, p 16-21) MP 1498
Can wet roof insulation be dried out Tobiasson, W., et al, (1983, p 626-639) MP 1509
Vents and vapor retarders for roofs Tobiasson, W., (1986, 11p) MP 2246
Vents and vapor retarders for roofs Tobiasson, W., (1987, p 80-90) MP 2352
Roof design in cold regions Tobiasson, W., (1989, p 462-472) MP 2613
Reference guide for building diagnostics equipment and techniques McKenna, C.M., et al, (1989, 64p) SR 89-27
Air change measurements of five Army buildings in Alaska Flanders, S.N., (1990, p 53-63) MP 2676

Very low frequencies

Numerical studies for an airborne VLF resistivity survey Arcone, S A., (1977, 10p) CR 77-05
VLF airborne resistivity survey in Maine. Arcone, S A., (1978, p 1399-1417) MP 1166

Vibration

Analysis of explosively generated ground motions using Fourier techniques Blouin, S E., et al, (1976, 86p) CR 76-28
Vibrations caused by ship traffic on an ice-covered waterway. Haynes, F.D., et al, (1981, 27p) CR 81-05
Vibration analysis of the Yamachiche lightpier Haynes, F.D., (1986, p 238-241) MP 1989
Vibration analysis of the Yamachiche Lightpier. Haynes, F.D., (1986, p 9-18) MP 2253
Vibration analysis of a DEW Line station Haynes, F.D., et al, (1988, p.1513-1518) MP 2341
Ice-induced vibrations of structures. Sodhi, D S., (1989, p 189-221) MP 2492
Investigation into the post-stable behavior of a tube array in cross-flow. Lever, J H., et al, (1989, p 457-465) MP 2561

VISCOELASTICITY

Freezing process and mechanics of frozen ground. Scott, R.F., (1969, 65p) M II-D1

Viscoelasticity

Viscoelasticity of floating ice plates subjected to a circular load Takagi, S., (1978, 32p) CR 78-05
Acoustic emission and deformation response of finite ice plates Xirouchakis, P.C., et al, (1981, p 123-133) MP 1436

Viscosity

Seasonal variations in apparent sea ice viscosity on the geophysical scale. Hibler, W.D., III, et al, (1977, p 87-90) MP 900
Compression of wet snow. Colbeck, S C., et al, (1978, 17p) CR 78-10
Grouting silt and sand at low temperatures Johnson, R., (1979, p 937-950) MP 1078
Some results from a linear-viscous model of the Arctic ice cover. Hibler, W.D., III, et al, (1979, p 293-304) MP 1241
Modeling mesoscale ice dynamics. Hibler, W.D., III, et al, (1981, p.1317-1329) MP 1526
Analysis of linear sea ice models with an ice margin. Leppäranta, M., (1984, p 31-36) MP 1782
Use of low viscosity asphalts in cold regions. Janoo, V C., (1989, p.70-80) MP 2462

Viscous flow

Viscous wind-driven circulation of Arctic sea ice. Hibler, W.D., III, et al, (1977, p.95-133) MP 983
Modeling pack ice as a viscous-plastic continuum. Hibler, W.D., III, (1977, p.46-55) MP 1164
Thermodynamic model of creep at constant stress and constant strain rate. Fish, A.M., (1984, p 143-161) MP 1771

Visibility

Ice fog suppression in Arctic communities. McFadden, T., (1980, p 54-65) MP 1357
Suppression of ice fog from the Fort Wainwright, Alaska, cooling pond. Walker, K.E., et al, (1982, 34p) SR 82-22
Explosive obscuration sub-test results at the SNOW-TWO field experiment. Ebersole, J.F., et al, (1984, p 347-354) MP 1872
Clear improvement in obscuration Palmer, R.A., (1985, p 476-477) MP 2067
Meteorological variation of atmospheric optical properties in an antarctic storm Egan, W.G., et al, (1986, p.1155-1165) MP 2099
Utilization of Unmanned Aerial Vehicles in the ALBE Thrust. Greeley, H.P., et al, (1986, p 249-257) MP 2663
Slant path extinction and visibility measurements from an unmanned aerial vehicle. Cogan, J., et al, (1987, p 115-126) MP 2296
Comparative studies of the winter climate at selected locations in Europe and the United States Bates, R.E., et al, (1989, p 283-293) MP 2598
Synoptic meteorology, crystal habit, and snowfall rates in Northeastern snowstorms Ryerson, C.C., et al, (1989, p 335-345) MP 2599
Model of smoke concentration reduction due to scavenging by snow. Hutt, D L., et al, (1989, p 87-98) MP 2628
Light transmission through smoke screens in falling snow Farmer, W.M., et al, (1989, p.99-111) MP 2629
Motion detection systems under winter conditions Peck, L., (1989, 8p) CR 89-17

Volcanic ash

Byrd Land quaternary volcanism LeMasurier, W E., (1972, p.139-141) MP 994

Volcanoes

Hydraulic transients: a seismic source in volcanoes and glaciers St. Lawrence, W F., et al, (1979, p 654-656) MP 1181
Thermal observations of Mt St Helens before and during eruption St. Lawrence, W.F., et al, (1980, p 1526-1527) MP 1482
Fluid dynamic analysis of volcanic tremor Ferrick, M G., et al, (1982, 12p) CR 82-32
Source mechanism of volcanic tremor. Ferrick, M G., et al, (1982, p 8675-8683) MP 1576
Observations of volcanic tremor at Mount St. Helens volcano Fehler, M., (1984, p 3476-3484) MP 1770
Recent glacier-volcano interactions on Mt Redoubt, Alaska Sturm, M., et al, (1988, 18p) MP 2431

Volume

Volumetric constitutive law for snow under strain Brown, R.L., (1979, 13p) CR 79-20

Walls

Investigation of water jets for lock wall deicing Calkins, D J., et al, (1976, p G2/13-22) MP 865
Ice removal from the walls of navigation locks Frankenstein, G E., et al, (1976, p 1487-1496) MP 888
Reinsulating old wood frame buildings with urea-formaldehyde foam Tobiasson, W., et al, (1977, p 478-487) MP 958
Roof moisture survey—U S. Military Academy Korhonen, C., et al, (1979, 8 refs) SR 79-16
Measuring building R-values for large areas Flanders, S N., et al, (1981, p 137-138) MP 1388
Toward in-situ building R-value measurement Flanders, S N., et al, (1984, 13p) CR 84-01
Heat flow sensors on walls what can we learn Flanders, S N., (1985, p 140-149) MP 2042
Measured and expected R-values of 19 building envelopes Flanders, S N., (1985, p 49-57) MP 2115
In-situ assessment of two retrofit insulations Flanders, S N., (1986, p 32-44) MP 2172
Methods to reduce ice accumulation on miter gate recess walls. Rand, J H., et al, (1989, 5p) MP 2723
Wall coatings for concrete and masonry buildings. Korhonen, C.J., et al, (1989, 27 refs.) SR 89-36

Warning systems

Motion detection systems under winter conditions. Peck, L., (1989, 8p) CR 89-17

WASTE DISPOSAL

Sewerage and sewage disposal in cold regions Alter, A.J., (1969, 106p) M III-C5b
Utilities on permanent snowfields. Mellor, M., (1969, 42p.) M III-A2d

Waste disposal

Land disposal: state of the art. Reed, S C., (1973, p.229-261) MP 1392
Land treatment in relation to waste water disposal. Howells, D.H., et al, (1976, p 60-62) MP 869
Wastewater reuse at Livermore, California. Uiga, A., et al, (1976, p 511-531) MP 870
Effect of open water disposal of dredged sediments Blom, B E., et al, (1976, 183p) MP 967
Utility distribution systems in Iceland. Aamot, H.W.C., (1976, 63p) SR 76-05
Reclamation of wastewater by application on land. Iskandar, I.K., et al, (1976, 15p) MP 896
Impact of urban wastewater reuse in cold regions on land treatment systems. Iskandar, I.K., (1976, 32p) MP 2452
Urban waste as a source of heavy metals in land treatment. Iskandar, I K., (1976, p 417-432) MP 977
Field performance of a subarctic utilidor. Reed, S.C., (1977, p 448-468) MP 930
Effects of wastewater on the growth and chemical composition of forages. Palazzo, A J., (1977, p.171-180) MP 975
Wastewater treatment at Calumet, Michigan. Baillod, C.R., et al, (1977, p 489-510) MP 976
Land treatment of wastewater at Manteca, Calif., and Quincy, Washington. Iskandar, I K., et al, (1977, 34p) CR 77-24
Land treatment of wastewater at West Dover, Vermont. Bouzoun, J.R., (1977, 24p.) SR 77-33
Consolidating dredged material by freezing and thawing. Chamberlain, E.J., (1977, 94p) MP 978
Municipal sludge management: environmental factors. Reed, S.C., ed, (1977, Var. p.) MP 1406
Methodology for nitrogen isotope analysis at CRREL. Jenkins, T.F., et al, (1978, 57p) SR 78-08
Lysimeters validate wastewater renovation models. Iskandar, I.K., et al, (1978, 11p) SR 78-12
Waste water reuse in cold regions. Iskandar, I.K., (1978, p 361-368) MP 1144
Effects of wastewater and sludge on turfgrasses. Palazzo, A J., (1978, 11p) SR 78-20
Land treatment climatic survey at CRREL. Bilello, M A., et al, (1978, 37p) SR 78-21
Computer file for existing land application of wastewater systems Iskandar, I.K., et al, (1978, 24p) SR 78-22
Experimental system for land renovation of effluent. Nylund, J.R., et al, (1978, 26p.) SR 78-23
Wastewater stabilization pond linings. Middlebrooks, E.J., et al, (1978, 115p) SR 78-28
Cold climate utilities delivery design manual Smith, D W., et al, (1979, c300 leaves) MP 1373
Kinetics of denitrification in land treatment of wastewater. Jacobson, S., et al, (1979, 59p) SR 79-04
Design procedures for underground heat sink systems Stubstad, J.M., et al, (1979, 186p. in var pagns) SR 79-06
Spray application of wastewater effluent in Vermont. Cassell, E A., et al, (1979, 38p) SR 79-06
Energy requirements for small flow wastewater treatment systems Middlebrooks, E J., et al, (1979, 82p) SR 79-07
Freezing problems with wintertime wastewater spray irrigation. Bouzoun, J.R., (1979, 12p) SR 79-12
Soil characteristics and climatology during wastewater application at CRREL. Iskandar, I K., et al, (1979, 82p) SR 79-23
Land treatment systems and the environment. McKim, H.L., et al, (1979, p 201-225) MP 1414
Land application of wastewater: effect on soil and plant potassium Palazzo, A.J., et al, (1979, p 309-312) MP 1228
Bacterial aerosols resulting from wastewater irrigation in Ohio Bausum, H T., et al, (1979, 64p) SR 79-32
Nitrogen transformations in land treatment. Jenkins, T F., et al, (1979, 32p) SR 79-31
Utilization of sewage sludge for terrain stabilization in cold regions Pt 3 Rindge, S D., et al, (1979, 33p) SR 79-34
Dynamics of NH_4 and NO_3 in cropped soils irrigated with wastewater. Iskandar I.K., et al, (1980, 20p) SR 80-27
Waste heat utilization through soil heating McFadden, T., et al, (1980, p.105-120) MP 1363
Effectiveness of land application for P removal from waste water Iskandar, I K., et al, (1980, p 616-621) MP 1444
Hydraulic characteristics of the Deer Creek Lake land treatment site during wastewater application. Abele, G., et al, (1981, 37p) CR 81-07

Waste disposal *(cont.)*
Seasonal growth and uptake of nutrients by orchardgrass irrigated with wastewater. Palazzo, A.J., et al, (1981, 19p.) CR 81-08
Site selection methodology for the land treatment of wastewater Ryan, J.R., et al, (1981, 74p) SR 81-28
Wastewater applications in forest ecosystems. McKim, H.L., et al, (1982, 22p) CR 82-19
Mathematical simulation of nitrogen interactions in soils. Selim, H.M., et al, (1983, p 241-248) MP 2051
Water supply and waste disposal on permanent snow fields Reed, S.C., et al, (1984, p 401-413) MP 1714
Observations during BRIMFROST '83. Bouzoun, J.R., et al, (1984, 36p.) SR 84-10
Utility services for remote military facilities Reed, S.C., et al, (1984, 66p.) SR 84-14
Impact of dredging on water quality at Kewaunee Harbor, Wisconsin. Iskandar, I.K., et al, (1984, 16p) CR 84-21
Chemical analysis of munitions wastewater Jenkins, T.F., et al, (1984, 95p.) CR 84-29
Water supply and waste disposal in Greenland and Antarctica Reed, S.C., et al, (1985, p 344-350) MP 1792
Literature review: effect of freezing on hazardous waste sites Iskandar, I.K., et al, (1985, p 122-129) MP 2028
Thermal analysis of a shallow utilidor. Phetteplace, G., et al, (1986, 10p.) MP 2021
Treatment and disposal of alum and other metallic hydroxide sludges Reed, S.C., et al, (1987, 40p + plates) SR 87-05
Ground freezing controls hazardous waste. Iskandar, I.K., (1987, p 455-456) MP 2270
Shasta waterless system as a remote site sanitation facility. Martel, C.J., (1987, 24p) SR 87-16
Chemical analysis of hazardous wastes McGee, I.E., et al, (1987, 57p) SR 87-21
Extraction solvents for determination of volatile organics in soil Jenkins, T.F., et al, (1987, 26p) SR 87-22
Waste management practices in Antarctica. Sletten, R.S., et al, (1989, p.122-130) MP 2464
Waste management practices of the United States Antarctic Program. Reed, S.C., et al, (1989, 28p) SR 89-3
Ice-water partition coefficients for RDX and TNT. Taylor, S., (1989, 10p) CR 89-08
Fate and transport of contaminants in frozen soils Ayorinde, O.A., et al, (1990, p 202-211) MP 2679

Waste treatment
Waste management in the north. Rice, E., et al, (1974, p.14-21) MP 1048
Land treatment of wastewaters Reed, S.C., et al, (1974, p.12-13) MP 1036
Land treatment of wastewaters for rural communities Reed, S.C., et al, (1975, p 23-39) MP 1399
Land treatment in relation to waste water disposal. Howells, D.H., et al, (1976, p 60-62) MP 869
Land treatment of wastewater. Murrmann, R.P., et al, (1976, 36p) MP 920
Reclamation of wastewater by application on land Iskandar, I.K., et al, (1976, 15p) MP 896
Wastewater renovation by a prototype slow infiltration land treatment system. Iskandar, I.K., et al, (1976, 44p) CR 76-19
Overview of land treatment from case studies of existing systems. Uiga, A., et al, (1976, 26p) MP 891
Land treatment of wastewater at a subarctic Alaskan location. Sletten, R.S., et al, (1976, 21p) MP 868
Wastewater treatment in cold regions Sletten, R.S., et al, (1976, 15p) MP 965
Wastewater reuse at Livermore, California Uiga, A., et al, (1977, p 511-531) MP 979
Land treatment of wastewater in subarctic Alaska Sletten, R.S., et al, (1977, p 533-547) MP 1268
Municipal sludge management: environmental factors Reed, S.C., ed, (1977, Var. p) MP 1406
Wastewater treatment alternative needed Iskandar, I.K., et al, (1977, p 82-87) MP 968
Land treatment module of the CAPDET program Merry, C.J., et al, (1977, 4p) MP 1112
Land application of wastewater in permafrost areas Sletten, R.S., (1978, p.911-917) MP 1110
Land treatment, present status, future prospects Pound, C.E., et al, (1978, p 98-102) MP 1417
Symposium on land treatment of wastewater, CRREL, Aug 1978 (1978, 2 vols) MP 1145
Remote sensing for land treatment site selection Merry, C.J., (1978, p 107-119) MP 1146
Nitrogen behavior in land treatment of wastewater a simplified model. Selim, H.M., et al, (1978, p 171-179) MP 1149
Overview of existing land treatment systems Iskandar, I.K., (1978, p 193-200) MP 1150
Performance of overland flow land treatment in cold climates Jenkins, T.F., et al, (1978, p 61-70) MP 1152
Adaptability of forage grasses to wastewater irrigation. Palazzo, A.J., et al, (1978, p 157-163) MP 1153
Microbiological aerosols during wastewater irrigation Bausum, H.T., et al, (1978, p 273-280) MP 1154
Computer procedure for comparing wastewater treatment systems. Spaine, P.A., et al, (1978, p 335-340) MP 1155
Mass water balance during spray irrigation with wastewater at Deer Creek Lake land treatment site Abele, G., et al, (1978, 43p) SR 79-29
Land treatment climatic survey at CRREL. Bilello, M.A., et al, (1978, 37p.) SR 78-21
Experimental system for land renovation of effluent. Nylund, J.R., et al, (1978, 26p) SR 78-23
Five-year performance of CRREL land treatment test cells Jenkins, T.F., et al, (1978, 24p.) SR 78-26
Energy requirements for small flow wastewater treatment systems. Middlebrooks, E.J., et al, (1979, 82p) SR 79-07
Health aspects of water reuse in California. Reed, S.C., (1979, p.434-435) MP 1404
Nitrification inhibitor in land treatment of wastewater in cold regions Elgawhary, S.M., et al, (1979, 25p) SR 79-18
Freezing problems with wintertime wastewater spray irrigation. Bouzoun, J.R., (1979, 12p) SR 79-12
Water movement in a land treatment system of wastewater by overland flow. Nakano, Y., et al, (1979, p 185-206) MP 1285
Health aspects of land treatment. Reed, S.C., (1979, 43p) MP 1389
Cost-effective use of municipal wastewater treatment ponds Reed, S.C., et al, (1979, p 177-200) MP 1413
Design of liquid-waste land application Iskandar, I.K., (1979, p 65-88) MP 1415
International and national developments in land treatment of wastewater. McKim, H.L., et al, (1979, 28p) MP 1420
Land application of wastewater: effect on soil and plant potassium Palazzo, A.J., et al, (1979, p.309-312) MP 1228
Cost of land treatment systems. Reed, S.C., et al, (1979, 135p) MP 1387
Land treatment of waste water in cold climates Jenkins, T.F., et al, (1979, p 207-214) MP 1279
Prototype wastewater land treatment system. Jenkins, T.F., et al, (1979, 91p.) SR 79-35
Enzyme kinetic model for nitrification in soil amended with ammonium. Leggett, D.C., et al, (1980, 20p) CR 80-01
Disinfection of wastewater by microwaves Iskandar, I.K., et al, (1980, 15p) SR 80-01
Wastewater treatment in cold regions by overland flow. Martel, C.J., et al, (1980, 14p) CR 80-07
Removal of volatile trace organics from wastewater by overland flow land treatment. Jenkins, T.F., et al, (1980, p.211-224) MP 1313
EPA policy on land treatment and the Clean Water Act of 1977 Thomas, R.E., et al, (1980, p 452-460) MP 1418
Model for nitrogen behavior in land treatment of wastewater Selim, H.M., et al, (1980, 49p) CR 80-12
Nitrogen in an overland flow wastewater treatment system Chen, R.L., et al, (1980, 33p) SR 80-16
Aquaculture systems for wastewater treatment: an engineering assessment. Reed, S.C., et al, (1980, 127p) MP 1422
Aquaculture systems for wastewater treatment Reed, S.C., et al, (1980, p 1-12) MP 1423
Removal of organics by overland flow Martel, C.J., et al, (1980, 9p.) MP 1362
Rational design of overland flow systems Martel, C.J., et al, (1980, p.114-121) MP 1400
Energy and costs for agricultural reuse of wastewater Sletten, R.S., et al, (1980, p 339-346) MP 1401
Forage grass growth on overland flow systems Palazzo, A.J., et al, (1980, p 347-354) MP 1402
Spray application of waste-water effluent in a cold climate. Cassell, E.A., et al, (1980, p 620-626) MP 1403
Soil infiltration on land treatment sites. Abele, G., et al, (1980, 41p) SR 80-36
Overland flow: removal of toxic volatile organics Jenkins, T.F., et al, (1981, 16p) SR 81-01
Toxic volatile organics removal by overland flow land treatment Jenkins, T.F., et al, (1981, 14p) MP 1421
Aquaculture for wastewater treatment in cold climates Reed, S.C., et al, (1981, p 482-492) MP 1394
Seasonal growth and accumulation of N, P, and K by grass irrigated with wastes Palazzo, A.J., (1981, p 64-68) MP 1425
Seven-year performance of CRREL slow-rate land treatment prototypes Jenkins, T.F., et al, (1981, 25p) SR 81-12
Wastewater treatment by a prototype slow rate land treatment system Jenkins, T.F., et al, (1981, 44p) CR 81-14
Model for prediction of nitrate leaching losses in soils Mehran, M., et al, (1981, 24p) CR 81-23
Effect of soil temperature on nitrification kinetics Parker, L.V., et al, (1981, 27p) SR 81-33
Vegetation selection and management for overland flow systems Palazzo, A.J., et al, (1982, p 135-154) MP 1511
Overview of models used in land treatment of wastewater Iskandar, I.K., (1982, 27p) SR 82-01
Nutrient film technique for wastewater treatment Bouzoun, J.R., et al, (1982, 15p) SR 82-04
Wastewater treatment and plant growth Palazzo, A.J., (1982, 21p) SR 82-05
Overland flow: an alternative for wastewater treatment. Martel, C.J., et al, (1982, p 181-184) MP 1506
Heat pumps to recover heat from waste treatment plants. Martel, C.J., et al, (1982, 23p) SR 82-10
P removal during land treatment of wastewater. Ryden, J.C., et al, (1982, 12p) SR 82-14
Wastewater treatment in Alaska Schneiter, R.W., et al, (1982, p.207-213) MP 1696
Land treatment of wastewater Reed, S.C., (1982, p 91-123) MP 1947
Removal of trace organics by overland flow. Leggett, D.C., et al, (1982, p 176-184) MP 2442
Wastewater applications in forest ecosystems McKim, H.L., et al, (1982, 22p) CR 82-19
Energy conservation and water pollution control facilities Martel, C.J., et al, (1982, 18p) SR 82-24
User's index to CRREL land treatment computer programs and data files Berggren, P.A., et al, (1982, 65p.) SR 82-26
Wastewater treatment by nutrient film technique. Bouzoun, J.R., et al, (1982, 34p) SR 82-27
Case study of land treatment in a cold climate—West Dover, Vermont. Bouzoun, J.R., et al, (1982, 96p) CR 82-44
Heating enclosed wastewater treatment facilities with heat pumps. Martel, C.J., et al, (1982, p 262-280) MP 1976
Microbiological aerosols from waste water Bausum, H.T., et al, (1983, p 65-75) MP 1578
Assessment of the treatability of toxic organics by overland flow Jenkins, T.F., et al, (1983, 47p) CR 83-03
Model for land treatment, Pt 1 Baron, J.A., et al, (1983, 35p) SR 83-06
Model for land treatment planning, design and operation, Pt 2. Baron, J.A., et al, (1983, 30p.) SR 83-07
Model for land treatment planning, design and operation, Pt 3. Baron, J.A., et al, (1983, 38p) SR 83-08
Corps of Engineers land treatment of wastewater research program: an annotated bibliography. Parker, L.V., et al, (1983, 82p) SR 83-09
Land application systems for wastewater treatment. Reed, S.C., (1983, 26p. + figs) MP 1946
Nitrogen removal in wastewater stabilization ponds Reed, S.C., (1983, 13p + figs) MP 1943
Engineering systems for wastewater treatment Loehr, R., et al, (1983, p 409-417) MP 1948
Wastewater treatment and reuse process for cold regions Bouzoun, J.R., (1983, p 547-557) MP 2112
Land treatment research and development program Iskandar, I.K., et al, (1983, 144p) CR 83-20
Land treatment processes. Merry, C.J., et al, (1983, 79p) SR 83-26
Analysis of infiltration results at a proposed North Carolina wastewater treatment site Abele, G., et al, (1984, 24p) SR 84-11
Utility services for remote military facilities Reed, S.C., et al, (1984, 66p) SR 84-14
Nitrogen removal in wastewater ponds Reed, S.C., (1984, 26p) CR 84-13
Nitrogen behavior in soils irrigated with liquid waste. Selim, H.M., et al, (1984, p 96-108) MP 1762
Problems with rapid infiltration—a post mortem analysis. Reed, S.C., et al, (1984, 17p. + figs) MP 1944
Wetlands for wastewater treatment in cold climates Reed, S.C., et al, (1984, 9p + figs) MP 1945
Impact of slow-rate land treatment on groundwater quality: toxic organics Parker, L.V., et al, (1984, 36p) CR 84-30
Maintaining frosty facilities Reed, S.C., et al, (1985, p 9-15) MP 1949
Overland flow wastewater treatment at Easley, S.C. Abernathy, A.R., et al, (1985, p 291-299) MP 2183
Prevention of freezing of wastewater treatment facilities Reed, S.C., et al, (1985, 49p) SR 85-11
Heat recovery from primary effluent using heat pumps Phetteplace, G., et al, (1985, p 199-203) MP 1978
Ground freezing for management of hazardous waste sites Sullivan, J.M., Jr., et al, (1985, 15p) MP 2030
Potential use of artificial ground freezing for contaminant immobilization Iskandar, I.K., et al, (1985, 10p) MP 2029
Literature review effect of freezing on hazardous waste sites Iskandar, I.K., et al, (1985, p 122-129) MP 2028
Cold weather O&M Reed, S.C., et al, (1985, p 10-15) MP 2070
Toxic organics removal kinetics in overland flow land treatment. Jenkins, T.F., et al, (1985, p 707-718) MP 2111
Reversed-phase high-performance liquid chromatographic determination of nitroorganics in munitions wastewater. Jenkins, T.F., et al, (1986, p 170-175) MP 2049
Chromatographic determination of nitroorganics in plant wastewater Hauer, C.F., et al, (1986, p 176-182) MP 2050
Nitrogen removal in cold regions trickling filter systems Reed, S.C., et al, (1986, 39p) SR 86-02
Freezing effect on waste contaminants Iskandar, I.K., (1986, 33p) SR 86-19
Problems and opportunities with winter wastewater treatment Reed, S.C., (1986, p 16-20) MP 2202

Technology and costs of wastewater application to forest systems Crites, R.W., et al, (1986, p 349-355) MP 2266

Forest land treatment with municipal wastewater in New England Reed, S.C, et al, (1986, p.420-430) MP 2280

Military wastewater treatment systems in cold regions. Reed, S.C., (1986, 23p.) CR 86-07

Removal of trace-level organics by slow-rate land treatment. Parker, L.V, et al, (1986, p.1417-1426) MP 2170

Of: Overland flow wastewater treatment at Easley, S C. Martel, C.J., et al, (1986, p 1078-1079) MP 2300

Treatment and disposal of alum and other metallic hydroxide sludges. Reed, S.C., et al, (1987, 40p. + plates) SR 87-05

Experimental methods for decontaminating soils by freezing Ayorinde, O A, et al, (1988, 12p) MP 2513

New approach for sizing rapid infiltration systems Martel, C.J., (1988, p.211-215) MP 2323

Rational design of sludge freezing beds Martel, C J, (1988, p.575-581) MP 2343

Contaminant transport in freezing soils. Ayorinde, O.A., et al, (1988, 29p.) MP 2514

Primary effluent as a heat source for heat pumps Phetteplace, G.E, et al, (1988, p 141-146) MP 2445

Waste management practices in Antarctica Sletten, R S., et al, (1989, p.122-130) MP 2464

Thermal conductivity of sludges. Vesilind, P.A., et al, (1989, p 241-245) MP 2632

Waste management practices of the United States Antarctic Program. Reed, S C, et al, (1989, 28p) SR 89-3

Development and design of sludge freezing beds. Martel, C.J., (1989, p 799-808) MP 2556

Freezing technique for *in-situ* treatment of contaminated soils Ayorinde, O.A, et al, (1989, p 489-498) MP 2515

Low-temperature effects on systems for composting explosives-contaminated soils Ayorinde, O A, et al, (1989, 18p) SR 89-38

Sludge dewatering by natural freeze-thaw Martel, C.J., (1990, p 116-122) MP 2714

Effect of freeze-thaw cycles on soils Chamberlain, E., et al, (1990, p.145-155) MP 2678

Wastes

Effects of wastewater application on forage grasses. Palazzo, A.J., (1976, 8p) CR 76-39

Land application of wastewater in permafrost areas Sletten, R.S, (1978, p 911-917) MP 1110

Uptake of nutrients by plants irrigated with wastewater. Clapp, C E., et al, (1978, p 395-404) MP 1151

Guide to the use of 14N and 15N in environmental research. Edwards, A.P., (1978, 77p) SR 78-18

Halocarbons in water using headspace gas chromatography Leggett, D C, (1981, 13p) SR 81-26

Water

Continuous monitoring of total dissolved gases, a feasibility study. Jenkins, T.F., (1975, p 101-105) MP 851

Effects of wastewater application on forage grasses Palazzo, A J., (1976, 8p) CR 76-39

Proceedings of the second planetary water and polar processes colloquium, 1978. (1978, 209p) MP 1193

Measurement of the shear stress on the underside of simulated ice covers. Calkins, D J., et al, (1980, 11p) CR 80-24

Horizontal infiltration of water in porous materials Nakano, Y., (1982, p 156-166) MP 1840

Effects of water and ice on the scattering of diffuse reflectors Jezek, K C, et al, (1986, p 259-269) MP 2664

Water balance

Scientists visit Kolyma Water Balance Station in the USSR. Slaughter, C.W., et al, (1977, 66p) SR 77-15

Subarctic watershed research in the Soviet Union Slaughter, C W, et al, (1978, p 305-313) MP 1273

Mass water balance during spray irrigation with wastewater at Deer Creek Lake land treatment site Abele, G, et al, (1978, 43p) SR 79-29

Water chemistry

Land treatment of wastewater Murrmann, R P., et al, (1976, 36p) MP 920

Effect of open water disposal of dredged sediments. Blom, B.E., et al, (1976, 183p) MP 967

Reclamation of wastewater by application on land Iskandar, I.K., et al, (1976, 15p.) MP 896

Baseline data on the oceanography of Cook Inlet, Alaska Gatto, L.W., (1976, 84p) CR 76-25

Effects of wastewater application on forage grasses Palazzo, A J., (1976, 8p) CR 76-39

Rapid infiltration of primary sewage effluent at Fort Devens, Massachusetts Satterwhite, M.B., et al (1976, 34p) CR 76-48

Effects of wastewater on the growth and chemical composition of forages Palazzo, A J., (1977, p 171-180) MP 975

Wastewater treatment at Calumet, Michigan Baillod, C.R., et al, (1977, p 489-510) MP 976

Determination of TNT in water by conversion to nitrate Leggett, D C, (1977, p 880) MP 980

Water quality measurements at Lake Powell, Utah Merry, C.J., (1977, 38p) SR 77-28

Chemistry of interstitial water from subsea permafrost, Prudhoe Bay, Alaska Iskandar, I.K., et al, (1978, p 92-98) MP 1385

Guide to the use of 14N and 15N in environmental research. Edwards, A.P., (1978, 77p) SR 78-18

Blank corrections for ultratrace atomic absorption analysis Cragin, J.H, et al, (1979, 5p) CR 79-03

Spray application of wastewater effluent in Vermont. Cassell, E.A, et al, (1979, 38p) SR 79-06

Dissolved nitrogen and oxygen in lake water Leggett, D.C., (1979, 5p.) SR 79-24

Mercury contamination of water samples Cragin, J H., (1979, p.313-319) MP 1270

Land treatment of waste water in cold climates Jenkins, T.F., et al, (1979, p 207-214) MP 1279

Remote sensing of water quality using an airborne spectroradiometer. McKim, H L., et al, (1980, p.1353-1362) MP 1491

Overland flow removal of toxic volatile organics Jenkins, T.F, et al, (1981, 16p.) SR 81-01

Seven-year performance of CRREL slow-rate land treatment prototypes Jenkins, T.F., et al, (1981, 25p.) SR 81-12

Halocarbons in water using headspace gas chromatography. Leggett, D C, (1981, 13p) SR 81-26

Limnology of Lake Koocanusa, Montana. Storm, P.C., et al, (1982, 597p) SR 82-23

Water quality measurements at six reservoirs. Parker, L.V., et al, (1982, 55p) SR 82-30

Isothermal compressibility of water mixed with montmorillonite. Oliphant, J.L., et al, (1983, p 45-50) MP 2066

Polyvinyl chloride pipes and ground water chemistry. Parker, L.V., et al, (1985, 27p.) SR 85-12

Reversed-phase high-performance liquid chromatographic determination of nitroorganics in munitions wastewater. Jenkins, T F, et al, (1986, p 170-175) MP 2049

Monitoring seasonal changes in seafloor temperature and salinity Sellmann, P V, et al, (1986, p 110-114) MP 2147

Winter water quality in lakes and streams. Calkins, D J, et al, (1988, 8p) MP 2507

Ion-pairing RP-HPLC method for determining tetrazene in water and soil Walsh, M E, et al, (1989, p 159-179) MP 2593

Solvent extraction for solute preconcentration from water. Leggett, D C., et al, (1990, p 1355-1356) MP 2743

Water content

Roof moisture survey ten State of New Hampshire buildings Tobiasson, W, et al, (1977, 29p) CR 77-31

Strength of frozen silt as a function of ice content and dry unit weight. Sayles, F H., et al, (1980, p.109-119) MP 1451

Observations of moisture migration in frozen soils during thawing. Cheng, G., et al, (1988, p 308-312) MP 2373

Nonlinear problems in the study of water movement in frozen soils Nakano, Y., (1989, p 383-393) MP 2719

Data acquisition, first the FERF then the world Knuth, K.V., (1989, p.136-138) MP 2567

Resilient modulus determination for frost conditions. Chamberlain, E J., et al, (1989, p 320-333) MP 2569

Water erosion

Lock wall deicing with high velocity water jet at Soo Locks, Mi. Calkins, D J, et al, (1977, p 23-35) MP 973

Water films

Adsorption force theory of frost heaving. Takagi, S, (1980, p.57-81) MP 1334

Preliminary study of friction between ice and sled runners Itagaki, K, et al, (1987, p.297-301) MP 2358

Kinetic friction of snow. Colbeck, S C, (1988, p 78-86) MP 2339

Water flow

Circulation and sediment distribution in Cook Inlet, Alaska Gatto, L.W., (1976, p 205-227) MP 895

Effects of radiation penetration on snowmelt runoff hydrographs Colbeck, S C, (1976, p 73-82) MP 948

Water flow through veins in ice Colbeck, S C, (1976, 5p) CR 76-06

Analysis of water flow in dry snow Colbeck, S C, (1976, p 523-527) MP 871

Potential river ice jams at Windsor, Vermont Calkins, D J., et al, (1976, 31p) CR 76-31

Computer routing of unsaturated flow through snow Tucker, W.B, et al, (1977, 44p) SR 77-10

Heat transfer over a vertical melting plate Yen, Y -C, et al, (1977, 12p) CR 77-32

Physical aspects of water flow through snow. Colbeck, S C., (1978, p 165-206) MP 1566

Entrainment of ice floes into a submerged outlet Stewart, D M, et al, (1978, p 291-299) MP 1137

Study of water drainage from columns of snow Denoth, A, et al, (1979, 19p) CR 79-01

Point source bubbler systems to suppress ice Ashton, G D, (1979, 12p) CR 79-12

Water flow through heterogeneous snow Colbeck, S C., (1979, p 37-45) MP 1219

Water movement in a land treatment system of wastewater by overland flow Nakano, Y, et al, (1979, p 185-206) MP 1285

Remote sensing of water circulation in Grays Harbor, Washington. Gatto, L.W., (1980, p.289-322) MP 1283

Traveling wave solutions of saturated-unsaturated flow through porous media Nakano, Y., (1980, p.117-122) MP 1278

Water and air horizontal flow in porous media. Nakano, Y, (1980, p.81-85) MP 1341

Water and air vertical flow through porous media. Nakano, Y, (1980, p 124-133) MP 1342

Inlet current measured with Seasat-1 synthetic aperture radar Shemdin, O H., et al, (1980, p 35-37) MP 1443

Traveling wave solution to the problem of simultaneous flow of water and air through homogeneous porous media. Nakano, Y., (1981, p 57-64) MP 1419

Linearized Boussinesq groundwater flow equation Daly, C J., et al, (1981, p 875-884) MP 1470

Asymmetric flows application to flow below ice jams. Gögüs, M., et al, (1981, p 342-350) MP 1733

Tests of frazil collector lines to assist ice cover formation. Perham, R.E, (1981, p 442-448) MP 1488

Model for prediction of nitrate leaching losses in soils Mehran, M., et al, (1981, 24p) CR 81-23

Model study of Port Huron ice control structure, wind stress simulation. Sodhi, D S., et al, (1982, 27p) CR 82-09

Theory of thermal control and prevention of ice in rivers and lakes Ashton, G D, (1982, p.131-185) MP 1554

Application of HEC-2 for ice-covered waterways. Calkins, D J., et al, (1982, p 241-248) MP 1575

Evaluation of procedures for determining selected aquifer parameters Daly, C J, (1982, 104p) CR 82-41

Tailwater flow conditions. Ferrick, M G., et al, (1983, 31p) CR 83-07

Asymmetric plane flow with application to ice jams Tatinclaux, J.C., et al, (1983, p 1540-1556) MP 1645

Boundary value problem of flow in porous media Nakano, Y, (1983, p.205-213) MP 1721

Procedure for calculating groundwater flow lines Daly, C.J, (1984, 42p) SR 84-09

Diffusivity of horizontal water flow through porous media. Nakano, Y., (1985, p 26-31) MP 1881

Experimental measurement of channeling of flow in porous media Oliphant, J.L, et al, (1985, p 394-399) MP 1967

Heat transfer in water over a melting ice sheet Lunardini, V J, (1986, p 227-236) MP 2033

Heat transfer in water flowing over a horizontal ice sheet. Lunardini, V.J., et al, (1986, 81p) CR 86-03

Laboratory study of flow in an ice-covered sand bed channel. Wuebben, J.L, (1986, p.3-14) MP 2123

Sorption of chemical agents and simulants Leggett, D C., (1987, 15p) SR 87-18

Effects of an ice cover on flow in a movable bed channel. Wuebben, J L., (1988, p 137-146) MP 2499

Flow developers for melting ice—experimental results Ashton, G D., (1989, p 151-160) MP 2465

Hydraulic model of overland flow on grass covered slopes. Adrian, D.D, et al, (1989, p 569-578) MP 2710

Heat transfer from water flowing through a chilled-bed open channel. Richmond, P.W, et al, (1989, p 51-58) MP 2649

Jökulhlaup involving a potholed glacier in AK. Sturm, M, et al, (1990, p 125-126) MP 2708

Water intakes

Entrainment of ice floes into a submerged outlet. Stewart, D.M, et al, (1978, p 291-299) MP 1137

Ice blockage of water intakes Carey, K.L., (1979, 27p) MP 1197

Inlet current measured with Seasat-1 synthetic aperture radar Shemdin, O H., et al, (1980, p 35-37) MP 1443

Inlet current measured with Seasat-1 synthetic aperture radar. Shemdin, O.H, et al, (1980, p 35-37) MP 1481

Hydraulic model study of a water intake under frazil ice conditions Tantillo, T J, (1981, 11p) CR 81-03

Lake water intakes under icing conditions Dean, A M, Jr, (1983, 7p) CR 83-15

Modeling intake peformance under frazil ice conditions. Dean, A M, Jr, (1984, p 559-563) MP 1797

Intake design for ice conditions. Ashton, G D., (1988, p 107-138) MP 2518

Development of an underwater frazil-ice detector. Daly, S F, et al, (1990, p 77-82) MP 2702

Water level

Clearing ice-clogged shipping channels Vance, G.P., (1980, 13p) CR 80-28

Breakup of solid ice covers due to rapid water level variations. Billfalk, L., (1982, 17p) CR 82-03

Field tests of a frost-heave model Guymon, G L., et al, (1983, p 409-414) MP 1657

Wetlands for wastewater treatment in cold climates Reed, S C, et al, (1984, 9p + figs) MP 1945

Effect of ice cover on hydropower production Yapa, P D, et al, (1984, p 231-234) MP 1876

Uplifting forces exerted by adfrozen ice on marine piles. Christensen, F T, et al, (1985, p 529-542) MP 1905

Potential solution to ice jam flooding Salmon River, Idaho Earickson, J, et al, (1986, p 15-25) MP 2131

Preliminary study of scour under an ice jam Wuebben, J L., (1988, p 177-192) MP 2475

Seasonal distribution of low flow events in New Hampshire streams with emphasis on the winter period Melloh, R A, (1990, p 47-53) MP 2681

Water pipelines
Long distance heat transmission with steam and hot water. Aamot, H.W C., et al, (1976, 39p) MP 938
Cold climate utilities delivery design manual. Smith, D.W., et al, (1979, c300 leaves) MP 1373
Simplified design procedures for heat transmission system piping Phetteplace, G., (1985, p 451-456) MP 1979

Water pipes
Freeze damage prevention in utility distribution lines McFadden, T., (1977, p 221-231) MP 929
Freeze damage protection for utility lines. McFadden, T., (1977, p.12-16) MP 953
Heat transmission with steam and hot water. Aamot, H W.C., et al, (1978, p.17-23) MP 1956
Modeling intake peformance under frazil ice conditions Dean, A.M., Jr., (1984, p 559-563) MP 1797
Heat distribution research. Phetteplace, G , (1986, p.2-3) MP 2150
Water-source heat pumps Phetteplace, G., (1986, p.14-15) MP 2151

Water pollution
Baseline data on tidal flushing in Cook Inlet, Alaska Gatto, L.W., (1973, 11p.) MP 1523
Land treatment of wastewaters for rural communities Reed, S.C., et al, (1975, p 23-39) MP 1399
Land treatment in relation to waste water disposal. Howells, D.H., et al, (1976, p 60-62) MP 869
Effect of open water disposal of dredged sediments Blom, B E , et al, (1976, 183p) MP 967
Thermal pollution studies of French Creek, Eielson AFB, Alaska. McFadden, T., (1976, 5p) CR 76-14
Land treatment of wastewater at a subarctic Alaskan location. Sletten, R S , et al, (1976, 21p) MP 868
Land treatment of wastewater in subarctic Alaska Sletten, R.S., et al, (1977, p 533-547) MP 1268
Health aspects of water reuse in California. Reed, S C., (1979, p.434-435) MP 1404
Atmospheric pollutants in snow cover runoff. Colbeck, S C., (1981, p.1383-1388) MP 1487
Limnology of Lake Koocanusa, MT, the 1967-1972 study. Bonde, T.J.H , et al, (1982, 184p) SR 82-21
Energy conservation and water pollution control facilities Martel, C.J., et al, (1982, 18p) SR 82-24
Limnology of Lake Koocanusa, Montana. Storm, P.C., et al, (1982, 597p) SR 82-23
Water quality measurements at six reservoirs Parker, L V., et al, (1982, 55p) SR 82-30
Nitrogen removal in wastewater stabilization ponds Reed, S C , (1983, 13p + figs) MP 1943
Impact of dredging on water quality at Kewaunee Harbor, Wisconsin Iskandar, I.K., et al, (1984, 16p) CR 84-21
Chemical analysis of munitions wastewater. Jenkins, T.F , et al, (1984, 95p) CR 84-29
Toxic organics removal kinetics in overland flow land treatment. Jenkins, T F., et al, (1985, p 707-718) MP 2111
Polyvinyl chloride pipes and ground water chemistry. Parker, L.V , et al, (1985, 27p) SR 85-12
Chromatographic determination of nitroorganics in plant wastewater Bauer, C F , et al, (1986, p 176-182) MP 2050
Floating debris control, a literature review Perham, R E , (1987, 22p + 41p of append) MP 2252
Extraction solvents for determination of volatile organics in soil. Jenkins, T.F., et al, (1987, 26p) SR 87-22
Water quality during winter river navigation seasons Sletten, R.S , (1988, 56p.) SR 88-10
Development of analytical methods for military-unique compounds Walsh, M.E., et al, (1988, p 370-380) MP 2454
Influence of well casing materials on chemical species in ground water Parker, L.V., et al, (1988, p 450-461) MP 2456
Development of a membrane for *in-situ* optical detection of TNT. Zhang, Y., et al, (1988, 6p) SR 88-24
Influence of well casing composition on trace metals in ground water. Hewitt, A.D , (1989, 18p) SR 89-09
Single fiber measurements for remote optical detection of TNT. Zhang, Y , et al, (1989, 7p) SR 89-18
Leaching of metal pollutants from well casings Hewitt, A D , (1989, 11p) SR 89-32
Influence of well casings on well water. Hewitt, A D , et al, (1989, 9p) MP 2717
Well casings for monitoring trace organics in ground water Parker, L.V., et al, (1989, 29p) CR 89-18
Analytical methods for determining nitroguanidine in soil and water. Walsh, M E , (1989, 27p) SR 89-35
Environmental transformation of nitroaromatics and nitramines Walsh, M E., (1990, 21p) SR 90-02
Surface changes in well casings exposed to organic pollutants Taylor, S , et al, (1990, 14p) SR 90-07
Influence of casing materials on trace-level chemicals in well water Parker, L.V , et al, (1990, 11p) MP 2720

Water pressure
Water flow through veins in ice Colbeck, S C , (1976, 5p) CR 76-06
On the use of tensiometers in snow hydrology Colbeck, S C., (1976, p 135-140) MP 843
Model study of Port Huron ice control structure, wind stress simulation Sodhi, D S , et al, (1982, 27p) CR 82-09
Field tests of a frost-heave model Guymon, G L , et al, (1983, p 409-414) MP 1657
Investigation of transient processes in an advancing zone of freezing McGaw, R , et al, (1983, p.821-825) MP 1663

Water reserves
Remote sensing data for water masses in Delaware Bay and adjacent wetlands Ackleson, S G , et al, (1985, p 1123-1129) MP 1909

Water retention
Analysis of water flow in dry snow. Colbeck, S.C., (1976, p 523-527) MP 871
Soil hydraulic conductivity and moisture retention features Ingersoll, J., (1981, 11p) SR 81-02
Laboratory and field use of soil tensiometers above and below 0 deg C. Ingersoll, J., (1981, 17p) SR 81-07
Design and performance of water-retaining embankments in permafrost. Sayles, F.H , (1984, p 31-42) MP 1850

WATER SUPPLY
Water supply in cold regions. Alter, A.J , (1969, 85p) M III-C5a
Utilities on permanent snowfields Mellor, M , (1969, 42p) M III-A2d

Water supply
Towing icebergs Lonsdale, H K , et al, (1974, p 2) MP 1020
Snow accumulation for arctic freshwater supplies Slaughter, C.W., et al, (1975, p 218-224) MP 860
Computer simulation of the snowmelt and soil thermal regime at Barrow, Alaska. Outcalt, S I., et al, (1975, p.709-715) MP 857
Utility distribution systems in Sweden, Finland, Norway and England Aamot, H.W.C., et al, (1976, 121p) SR 76-16
Field performance of a subarctic utilidor. Reed, S C , (1977, p 448-468) MP 930
Obtaining fresh water from icebergs Mellor, M , (1977, p.193) MP 1117
Some elements of iceberg technology Weeks, W.F , et al, (1978, p 45-98) MP 1616
Fresh water supply for an Alaskan village. McFadden, T , et al, (1978, 18p) SR 78-07
Water resources by satellite. McKim, H.L., (1978, p 164-169) MP 1090
Cold climate utilities delivery design manual Smith, D.W., et al, (1979, c300 leaves) MP 1373
Bibliography on techniques of water detection in cold regions. Smith, D.W., comp, (1979, 75p) SR 79-10
Detection of Arctic water supplies with geophysical techniques. Arcone, S.A., et al, (1979, 30p.) CR 79-15
Case study fresh water supply for Point Hope, Alaska McFadden, T , et al, (1979, p.1029-1040) MP 1222
Tundra lakes as a source of fresh water Kipnuk, Alaska Bredthauer, S R., et al, (1979, 16p) SR 79-30
Iceberg water: an assessment. Weeks, W F , (1980, p 5-10) MP 1365
Developing a water well for the ice backfilling of DYE-2 Rand, J H., (1982, 19p) SR 82-32
Water supply and waste disposal on permanent snow fields Reed, S C., et al, (1984, p 401-413) MP 1714
Utility services for remote military facilities Reed, S C., et al, (1984, 66p) SR 84-14
Water supply and waste disposal in Greenland and Antarctica Reed, S C , et al, (1985, p 344-350) MP 1792
Assessment of a field water purification unit. Bouzoun, J R , et al, (1986, 6p) SR 86-20
Remote sensing and water resources McKim, H L , et al, (1987, p 186-190) MP 2535
Field water supply on the winter battlefield Bouzoun, J R , (1988, 7p) SR 88-02
Waste management practices of the United States Antarctic Program Reed, S C., et al, (1989, 28p) SR 89-3
Investigation of the LIZ-3 Dew Line Station water supply lake Kovacs, A , (1990, 10p) SR 90-11

Water table
Periodic structure of New Hampshire silt in open system freezing McGaw, R., (1977, p 129-136) MP 902
Application of recent results in functional analysis to the problem of water tables Nakano Y , (1979, p.185-190) MP 1269
Water and air vertical flow through porous media Nakano, Y , (1980, p 124-133) MP 1342
Radar profiling of buried reflectors and the groundwater table Sellmann, P.V., et al, (1983, 16p) CR 83-11

Water temperature
Temperature and flow conditions during the formation of river ice Ashton, G D , et al, (1970, 12p) MP 1723
Radiation and evaporation heat loss during ice fog conditions McFadden, T , (1975, p 18-27) MP 1051
Compressive and shear strengths of fragmented ice covers Cheng, S T , et al (1977, 82p) MP 951
Heat transmission with steam and hot water Aamot, H W C , et al, (1978, p 17-23) MP 1956
Break-up of the Yukon River at the Haul Road Bridge 1979 Stephens, C A , et al, (1979, 22p + Figs) MP 1315
Winter thermal structure, ice conditions and climate of Lake Champlain. Bates, R.E., (1980, 26p.) CR 80-02
Free convection heat transfer characteristics in a melt water layer. Yen, Y.-C , (1980, p.550-556) MP 1311
Bottom heat transfer to water bodies in winter. O'Neill, K , et al, (1981, 8p) SR 81-18
River ice suppression by side channel discharge of warm water. Ashton, G.D , (1982, p 65-80) MP 1528
Forecasting water temperature decline and freeze-up in rivers. Shen, H.T., et al, (1984, 17p) CR 84-19
USACRREL precise thermistor meter Trachier, G M , et al, (1985, 34p) SR 85-26
Heat transfer in water flowing over a horizontal ice sheet Lunardini, V.J., et al, (1986, 81p) CR 86-03
Bubblers and pumps for melting ice. Ashton, G.D., (1986, p 223-234) MP 2133
Monitoring seasonal changes in seafloor temperature and salinity. Sellmann, P.V , et al, (1986, p.110-114) MP 2147
Forecasting of snowmelt runoff using water temperature data. Pangburn, T., (1987, p.108-113) MP 2398
Forecasting river water temperatures Daly, S F., (1988, p 180-188) MP 2500
Seafloor temperature and thermal conductivity Sellmann, P V , et al, (1989, 19p) SR 89-01
Seafloor temperature and thermal conductivity. Sellmann, P.V., et al, (1989, 19p) CR 89-01
Remote water-temperature measurement. Daly, S , (1989, 6p) MP 2722

Water transport
Mechanisms of crack growth in quartz. Martin, R.J., III, et al, (1975, p 4837-4844) MP 855
Effects of ice on the water transport in frozen soil. Nakano, Y , et al, (1983, p.15-26) MP 1601
Soil-water diffusivity of unsaturated frozen soils at subzero temperatures Nakano, Y , et al, (1983, p 889-893) MP 1664
Effects of ice content on the transport of water in frozen soils. Nakano, Y., et al, (1984, p 28-34) MP 1841
Role of heat and water transport in frost heaving of porous soils. Nakano, Y., et al, (1984, p 93-102) MP 1842
Effects of ice content on the transport of water in frozen soil. Nakano, Y , et al, (1984, p.58-66) MP 1843
Transport of water in frozen soil Nakano, Y., et al, (1984, p.172-179) MP 1819
Nonlinear problems in the study of water movement in frozen soils. Nakano, Y , (1989, p 383-393) MP 2719
Transport of water due to a temperature gradient in unsaturated frozen clay. Nakano, Y , et al, (1990, p.57-75) MP 2701

WATER TREATMENT
Water supply in cold regions Alter, A J , (1969, 85p) M III-C5a

Water treatment
Land disposal, state of the art Reed, S C., (1973, p.229-261) MP 1392
Wastewater reuse at Livermore, California Uiga, A , et al, (1976, p 511-531) MP 870
Land treatment of wastewater. Murrmann, R P., et al, (1976, 36p) MP 920
Reclamation of wastewater by application on land Iskandar, I.K , et al, (1976, 15p) MP 896
Wastewater renovation by a prototype slow infiltration land treatment system Iskandar, I.K , et al, (1976, 44p) CR 76-19
Impact of urban wastewater reuse in cold regions on land treatment systems Iskandar, I K , (1976, 32p) MP 2452
Overview of land treatment from case studies of existing systems Uiga, A , et al, (1976, 26p.) MP 891
Wastewater treatment in cold regions. Sletten, R S , et al, (1976, 15p) MP 965
Rapid infiltration of primary sewage effluent at Fort Devens, Massachusetts Satterwhite, M.B., et al, (1976, 34p) CR 76-48
Treatment of primary sewage effluent by rapid infiltration Satterwhite, M B , et al, (1976, 15p) CR 76-49
Wastewater treatment at Calumet, Michigan. Baillod, C R , et al, (1977, p 489-510) MP 976
Wastewater reuse at Livermore, California Uiga, A , et al, (1977, p 511-531) MP 979
Determination of TNT in water by conversion to nitrate. Leggett, D C , (1977, p 880) MP 980
Land treatment of wastewater at Manteca, Calif., and Quincy, Washington Iskandar, I K , et al, (1977, 34p) CR 77-24
Land treatment of wastewater at West Dover, Vermont. Bouzoun, J.R , (1977, 24p) SR 77-33
Municipal sludge management environmental factors. Reed, S C , ed, (1977, Var p) MP 1406
Wastewater treatment alternative needed Iskandar, I K , et al (1977, p 82-87) MP 968
Land treatment module of the CAPDET program Merry, C J , et al, (1977, 4p) MP 1112
Land application of wastewater in permafrost areas Sletten, R S , (1978, p 911-917) MP 1110
Lysimeters validate wastewater renovation models Iskandar, I K , et al, (1978, 11p) SR 78-12
Land treatment present status, future prospects Pound, C E , et al, (1978, p 98-102) MP 1417
Symposium on land treatment of wastewater, CRREL, Aug 1978, (1978, 2 vols.) MP 1145

Remote sensing for land treatment site selection. Merry, C.J., (1978, p.107-119) MP 1146

NO3-N in percolate water in land treatment Iskandar, I K., et al, (1978, p 163-169) MP 1148

Nitrogen behavior in land treatment of wastewater, a simplified model. Selim, H.M., et al, (1978, p.171-179) MP 1149

Overview of existing land treatment systems Iskandar, I.K., (1978, p.193-200) MP 1150

Uptake of nutrients by plants irrigated with wastewater. Clapp, C.E., et al, (1978, p.395-404) MP 1151

Performance of overland flow land treatment in cold climates Jenkins, T.F., et al, (1978, p 61-70) MP 1152

Microbiological aerosols during wastewater irrigation Bausum, H.T., et al, (1978, p 273-280) MP 1154

Computer procedure for comparing wastewater treatment systems. Spaine, P.A., et al, (1978, p 335-340) MP 1155

Waste water reuse in cold regions. Iskandar, I.K., (1978, p 361-368) MP 1144

Mass water balance during spray irrigation with wastewater at Deer Creek Lake land treatment site. Abele, G., et al, (1978, 43p) SR 79-29

Land treatment climatic survey at CRREL. Bilello, M A., et al, (1978, 37p) SR 78-21

Computer file for existing land application of wastewater systems. Iskandar, I.K., et al, (1978, 24p) SR 78-22

Experimental system for land renovation of effluent Nylund, J.R., et al, (1978, 26p) SR 78-23

Wastewater stabilization pond linings Middlebrooks, E J., et al, (1978, 116p) SR 78-28

Five-year performance of CRREL land treatment test cells Jenkins, T.F., et al, (1978, 24p) SR 78-26

Cold climate utilities delivery design manual Smith, D.W., et al, (1979, c300 leaves) MP 1373

Kinetics of denitrification in land treatment of wastewater. Jacobson, S., et al, (1979, 59p) SR 79-04

Spray application of wastewater effluent in Vermont Cassell, E.A., et al, (1979, 38p) SR 79-06

Health aspects of water reuse in California. Reed, S C., (1979, p 434-435) MP 1404

Nitrification inhibitor in land treatment of wastewater in cold regions. Elgawhary, S M., et al, (1979, 25p) SR 79-18

Freezing problems with wintertime wastewater spray irrigation Bouzoun, J.R., (1979, 12p) SR 79-12

Soil characteristics and climatology during wastewater application at CRREL Iskandar, I.K., et al, (1979, 82p) SR 79-23

Water movement in a land treatment system of wastewater by overland flow Nakano, Y., et al, (1979, p.185-206) MP 1285

Health aspects of land treatment Reed, S C., (1979, 43p) MP 1389

Cost-effective use of municipal wastewater treatment ponds. Reed, S C., et al, (1979, p.177-200) MP 1413

Land treatment systems and the environment. McKim, H L., et al, (1979, p 201-225) MP 1414

Design of liquid-waste land application Iskandar, I K., (1979, p 65-88) MP 1415

International and national developments in land treatment of wastewater. McKim, H L., et al, (1979, 28p) MP 1420

Bacterial aerosols resulting from wastewater irrigation in Ohio Bausum, H.T., et al, (1979, 64p) SR 79-32

Nitrogen transformations in land treatment Jenkins, T F., et al, (1979, 32p) SR 79-31

Cost of land treatment systems Reed, S C., et al, (1979, 135p) MP 1387

Prototype wastewater land treatment system. Jenkins, T.F., et al, (1979, 91p) SR 79-35

Enzyme kinetic model for nitrification in soil amended with ammonium. Leggett, D C., et al, (1980, 20p) CR 80-01

Disinfection of wastewater by microwaves Iskandar, I K., et al, (1980, 15p) SR 80-01

Wastewater treatment in cold regions by overland flow Martel, C.J., et al, (1980, 14p) CR 80-07

Removal of volatile trace organics from wastewater by overland flow land treatment. Jenkins, T F., et al, (1980, p 211-224) MP 1313

EPA policy on land treatment and the Clean Water Act of 1977 Thomas, R.E., et al, (1980, p 452-460) MP 1418

Model for nitrogen behavior in land treatment of wastewater Selim, H M., et al, (1980, 49p) CR 80-12

Nitrogen in an overland flow wastewater treatment system Chen, R.L., et al, (1980, 33p) SR 80-16

Dynamics of NH4 and NO3 in cropped soils irrigated with wastewater Iskandar, I K., et al, (1980, 20p) SR 80-27

Aquaculture systems for wastewater treatment an engineering assessment Reed, S C., et al, (1980, 127p) MP 1422

Aquaculture systems for wastewater treatment Reed, S C., et al, (1980, p.1-12) MP 1423

Removal of organics by overland flow Martel, C J., et al, (1980, 9p) MP 1362

Rational design of overland flow systems Martel, C J., et al, (1980, p 114-121) MP 1400

Energy and costs for agricultural reuse of wastewater Sletten, R.S., et al, (1980, p.339-346) MP 1401

Forage grass growth on overland flow systems Palazzo, A.J., et al, (1980, p.347-354) MP 1402

Spray application of waste-water effluent in a cold climate Cassell, E A., et al, (1980, p 620-626) MP 1403

Effectiveness of land application for P removal from waste water. Iskandar, I.K., et al, (1980, p 616-621) MP 1444

Overland flow, removal of toxic volatile organics. Jenkins, T.F., et al, (1981, 16p) SR 81-01

Toxic volatile organics removal by overland flow land treatment. Jenkins, T.F., et al, (1981, 14p) MP 1421

Aquaculture for wastewater treatment in cold climates Reed, S C., et al, (1981, p 482-492) MP 1394

Seasonal growth and accumulation of N, P, and K by grass irrigated with wastes. Palazzo, A.J., (1981, p 64-68) MP 1425

Hydraulic characteristics of the Deer Creek Lake land treatment site during wastewater application Abele, G., et al, (1981, 37p) CR 81-07

Seasonal growth and uptake of nutrients by orchardgrass irrigated with wastewater Palazzo, A J., et al, (1981, 19p) CR 81-08

Seven-year performance of CRREL slow-rate land treatment prototypes Jenkins, T F., et al, (1981, 25p) SR 81-12

Wastewater treatment by a prototype slow rate land treatment system. Jenkins, T F., et al, (1981, 44p) CR 81-14

Site selection methodology for the land treatment of wastewater. Ryan, J.R., et al, (1981, 74p) SR 81-28

Vegetation selection and management for overland flow systems Palazzo, A.J., et al, (1982, p 135-154) MP 1511

Overview of models used in land treatment of wastewater Iskandar, I.K., (1982, 27p) SR 82-01

Nutrient film technique for wastewater treatment Bouzoun, J.R., et al, (1982, 15p) SR 82-04

Wastewater treatment and plant growth. Palazzo, A.J., (1982, 21p) SR 82-05

Overland flow, an alternative for wastewater treatment. Martel, C J., et al, (1982, p 181-184) MP 1506

Heat pumps to recover heat from waste treatment plants Martel, C.J., et al, (1982, 23p) SR 82-10

P removal during land treatment of wastewater Ryden, J C., et al, (1982, 12p) SR 82-14

Wastewater treatment in Alaska Schneiter, R W., et al, (1982, p 207-213) MP 1696

Land treatment of wastewater Reed, S C., (1982, p 91-123) MP 1947

Removal of trace organics by overland flow Leggett, D.C., et al, (1982, p 176-184) MP 2442

Wastewater applications in forest ecosystems McKim, H.L., et al, (1982, 22p) CR 82-19

Direct filtration of streamborne glacial silt Ross, M D., et al, (1982, 17p) CR 82-23

Energy conservation and water pollution control facilities. Martel, C.J., et al, (1982, 18p) SR 82-24

User's index to CRREL land treatment computer programs and data files. Berggren, P A., et al, (1982, 65p) SR 82-26

Wastewater treatment by nutrient film technique. Bouzoun, J R., et al, (1982, 34p) SR 82-27

Case study of land treatment in a cold climate—West Dover, Vermont. Bouzoun, J R., et al, (1982, 96p) CR 82-44

Heating enclosed wastewater treatment facilities with heat pumps Martel, C J., et al, (1982, p 262-280) MP 1976

Microbiological aerosols from waste water Bausum, H T., et al, (1983, p 65-75) MP 1578

Assessment of the treatability of toxic organics by overland flow. Jenkins, T.F., et al, (1983, 47p) CR 83-03

Model for land treatment. Pt 1 Baron, J A., et al, (1983, 35p) SR 83-06

Model for land treatment planning, design and operation, Pt 2 Baron, J A., et al, (1983, 30p) SR 83-07

Model for land treatment planning, design and operation, Pt 3 Baron, J.A., et al, (1983, 38p) SR 83-08

Corps of Engineers land treatment of wastewater research program: an annotated bibliography Parker, L.V., et al, (1983, 82p) SR 83-09

Land application systems for wastewater treatment Reed, S C., (1983, 26p + figs) MP 1946

Nitrogen removal in wastewater stabilization ponds Reed, S C., (1983, 13p + figs) MP 1943

Engineering systems for wastewater treatment Loehr, R., et al, (1983, p 409-417) MP 1948

Wastewater treatment and reuse process for cold regions Bouzoun, J R., (1983, p 547-557) MP 2112

Land treatment research and development program Iskandar, I K., et al, (1983, 144p) CR 83-20

Land treatment processes Merry, C J., et al, (1983, 79p) SR 83-26

Water supply and waste disposal on permanent snow fields Reed, S C., et al, (1984, p 401-413) MP 1714

Analysis of infiltration results at a proposed North Carolina wastewater treatment site Abele, G., et al, (1984, 24p) SR 84-11

Utility services for remote military facilities Reed, S C., et al, (1984, 66p) SR 84-14

Nitrogen removal in wastewater ponds Reed, S C., (1984, 26p) CR 84-13

Nitrogen behavior in soils irrigated with liquid waste Selim, H.M., et al, (1984, p.96-108) MP 1762

Problems with rapid infiltration—a post mortem analysis. Reed, S.C., et al, (1984, 17p + figs) MP 1944

Wetlands for wastewater treatment in cold climates. Reed, S C., et al, (1984, 9p. + figs) MP 1945

Impact of slow-rate land treatment on groundwater quality: toxic organics. Parker, L.V., et al, (1984, 36p) CR 84-30

Maintaining frosty facilities Reed, S C., et al, (1935, p 9-15) MP 1949

Overland flow wastewater treatment at Easley, S C Abernathy, A.R., et al, (1985, p 291-299) MP 2183

Prevention of freezing of wastewater treatment facilities. Reed, S.C., et al, (1985, 49p) SR 85-11

Heat recovery from primary effluent using heat pumps. Phetteplace, G., et al, (1985, p.199-203) MP 1978

Cold weather O&M. Reed, S C., et al, (1985, p 10-15) MP 2070

Toxic organics removal kinetics in overland flow land treatment. Jenkins, T F., et al, (1985, p 707-718) MP 2111

Reversed-phase high-performance liquid chromatographic determination of nitroorganics in munitions wastewater. Jenkins, T F., et al, (1986, p.170-175) MP 2049

Chromatographic determination of nitroorganics in plant wastewater. Bauer, C.F., et al, (1986, p.176-182) MP 2050

Nitrogen removal in cold regions trickling filter systems. Reed, S C., et al, (1986, 39p) SR 86-02

Corps of Engineers Land Treatment Research and Development program Iskandar, I K., (1986, p.17-18) MP 2149

Assessment of a field water purification unit. Bouzoun, J R., et al, (1986, 6p) SR 86-20

Problems and opportunities with winter wastewater treatment. Reed, S C., (1986, p.16-20) MP 2205

Technology and costs of wastewater application to forest systems. Crites, R.W., et al, (1986, p 349-355) MP 2266

Forest land treatment with municipal wastewater in New England Reed, S.C., et al, (1986, p 420-430) MP 2280

Military wastewater treatment systems in cold regions. Reed, S C., (1986, 23p) CR 86-07

Removal of trace-level organics by slow-rate land treatment. Parker, L.V., et al, (1986, p.1417-1426) MP 2170

Of: Overland flow wastewater treatment at Easley, S.C. Martel, C.J., et al, (1986, p 1078-1079) MP 2300

Treatment and disposal of alum and other metallic hydroxide sludges Reed, S C., et al, (1987, 40p + plates) SR 87-05

New approach for sizing rapid infiltration systems Martel, C.J., (1988, p 211-215) MP 2323

Field water supply on the winter battlefield Bouzoun, J.R., (1988, 7p) SR 88-02

Rational design of sludge freezing beds. Martel, C.J., (1988, p 575-581) MP 2343

Development of analytical methods for military-unique compounds. Walsh, M E., et al, (1988, p 370-380) MP 2454

Predicting freezing design depth of sludge-freezing beds. Martel, C J., (1988, p.145-156) MP 2461

Waste management practices in Antarctica. Sletten, R.S., et al, (1989, p 122-130) MP 2464

Hydraulic model of overland flow on grass covered slopes. Adrian, D D., et al, (1989, p 569-578) MP 2710

New approach for sizing rapid infiltration systems (discussion and closure) Reed, S C., et al, (1989, p 879-882) MP 2712

Water vapor

Water vapor adsorption by sodium montmorillonite at -5C Anderson, D M., et al, (1978, p 638-644) MP 981

Analysis of water in the Martian regolith Anderson, D.M., et al, (1979, p 33-38) MP 1409

Thermal convection in snow. Powers, D J., et al, (1985, 61p) CR 85-09

Vapor drive maps of the U S A Tebiasson, W., et al, (1986, 7p + graphs) MP 2041

Water waves

Breakup of solid ice covers due to rapid water level variations. Billfalk, L., (1982, 17p) CR 82-03

On zero-inertia and kinematic waves Katopodes, N D., (1982, p 1381-1387) MP 2053

Tailwater flow conditions Ferrick, M G., et al, (1983, 31p) CR 83-07

Analysis of rapidly varying flow in ice-covered rivers Ferrick, M G., (1984, p 359-368) MP 1833

Shoreline erosion processes Orwell Lake, Minnesota Reid, J R., (1984, 101p) CR 84-32

Analysis of river wave types Ferrick, M G., (1985, 17p) CR 85-12

River wave response to the friction-inertia balance Ferrick, M G., et al, (1987, p 764-769) MP 2237

Wave-induced bergy bit motion near a floating platform. Mak, L M., et al, (1990, p 205-215) MP 2580

Waterproofing

Protected membrane roofs in cold regions Aamot, H W C., et al, (1976, 27p) CR 76-02

Water absorption of insulation in protected membrane roofing systems Schaefer, D., (1976, 15p) CR 76-38

Waterproofing *(cont.)*

Enclosing fine-grained soils in plastic moisture barriers. Smith, N., (1978, p 560-570) MP 1089

Load tests on membrane-enveloped road sections. Smith, N., et al, (1978, 16p) CR 78-12

Waterproofing strain gages for low ambient temperatures Garfield, D.E., et al, (1978, 20p) SR 78-15

Construction and performance of membrane encapsulated soil layers in Alaska Smith, N., (1979, 27p) CR 79-16

Roofs in cold regions Tobiasson, W., (1980, 21p) MP 1408

Roof moisture surveys. Tobiasson, W., et al, (1981, 18p) SR 81-31

Roof moisture surveys Tobiasson, W., (1982, p 163-166) MP 1505

Roof blisters Physical fitness building, Fort Lee, Virginia Korhonen, C., et al, (1986, 15p) Sr 86-35

Cold regions roof design. Tobiasson, W., (1987, p 457-458) MP 2243

Vapor retarders for membrane roofing systems Tobiasson, W., (1989, p 31-37) MP 2489

Watersheds

High-latitude basins as settings for circumpolar environmental studies. Slaughter, C.W., et al, (1975, p IV/57-IV/68) MP 917

Landsat data for watershed management Cooper, S., et al, (1977, c150p) MP 1114

Drainage network of a subarctic watershed. Bredthauer, S.R., et al, (1979, 9p) SR 79-19

Drainage network analysis of a subarctic watershed. Bredthauer, S.R., et al, (1979, p 349-359) MP 1274

Watershed modeling in cold regions Stokely, J.L., (1980, 241p) MP 1471

Hydrology and climatology of a drainage basin near Fairbanks, Alaska Haugen, R.K., et al, (1982, 34p) CR 82-26

Runoff from a small subarctic watershed, Alaska Chacho, E.F., et al, (1983, p.115-120) MP 1654

Forecasting river water temperatures Daly, S.F., (1988, p.180-188) MP 2500

Wave propagation

Surface-wave dispersion in Byrd Land Acharya, H.K., (1972, p 955-959) MP 992

Electrical ground impedance measurements in Alaskan permafrost regions Hockstra, P., (1975, 60p) MP 10[illegible]

Analysis of explosively generated ground motions using Fourier techniques Blouin, S.E., et al, (1976, 86p) CR 76-28

Ground pressures exerted by underground explosions. Johnson, P.R., (1978, p 284-290) MP 1520

Interaction of a surface wave with a dielectric slab discontinuity. Arcone, S.A., et al, (1978, 10p) CR 78-08

Hydraulic transients a seismic source in volcanoes and glaciers St. Lawrence, W.F., et al, (1979, p 654-656) MP 1181

Ultrasonic investigation on ice cores from Antarctica Kohnen, H., et al, (1979, 16p) CR 79-10

Ultrasonic investigation on ice cores from Antarctica. Kohnen, H., et al, (1979, p 4863-4874) MP 1239

Analysis of plastic shock waves in snow Brown, R.L., (1979, 14p) CR 79-29

Traveling wave solutions of saturated-unsaturated flow through porous media Nakano, Y., (1980, p 117-122) MP 1278

Low frequency surface impedance measurements. Arcone, S.A., et al, (1980, p.1-9) MP 1280

Analysis of non-steady plastic shock waves in snow Brown, R.L., (1980, p 279-287) MP 1354

Propagation of stress waves in alpine snow. Brown, R.L., (1980, p 235-243) MP 1367

Dynamic testing of free field stress gages in frozen soil. Aitken, G.W., et al, (1980, 26p) SR 80-30

Traveling wave solution to the problem of simultaneous flow of water and air through homogeneous porous media Nakano, Y., (1981, p 57-64) MP 1419

Distortion of model subsurface radar pulses in complex dielectrics. Arcone, S.A., (1981, p 855-864) MP 1472

On zero-inertia and kinematic waves Katopodes, N.D., (1982, p 1381-1387) MP 2053

Review of the propagation of inelastic pressure waves in snow Albert, D.G., (1983, 26p) CR 83-13

SNOW-ONE-B data report Bates, R.E., ed, (1983, 284p) SR 83-16

Optical engineering for cold environments Aitken, G.W., ed, (1983, 225p) MP 1646

Radar wave speeds in polar glaciers Jezek, K.C., et al, (1983, p.199-208) MP 2057

Comparative near-millimeter wave propagation properties of snow or rain Nemarich, J., et al, (1983, p 115-129) MP 1690

Modeling rapidly varied flow in tailwaters Ferrick, M.G., et al, (1984, p 271-289) MP 1711

Snow-Two/Smoke Week VI field experiment plan Redfield, R.K., et al, (1984, 85p) SR 84-19

SNOW-TWO data report Volume 2 System performance Jordan, R., ed, (1984, 417p) SR 84-20

Pulse transmission through frozen silt Arcone, S.A., (1984, 9p) CR 84-17

Electromagnetic pulse propagation in dielectric slabs. Arcone, S.A., (1984, p 1763-1773) MP 1991

Attenuation and backscatter for snow and sleet at 96, 140, and 225 GHz. Nemarich, J., et al, (1984, p.41-52) MP 1864

Catalog of smoke/obscurant characterization instruments. O'Brien, H.W., et al, (1984, p 77-82) MP 1865

Forward-scattering corrected extinction by nonspherical particles. Bohren, C.F., et al, (1984, p 261-271) MP 1870

Discrete reflections from thin layers of snow and ice. Jezek, K.C., et al, (1984, p.323-331) MP 1871

Analysis of river wave types. Ferrick, M.G., (1985, p.209-220) MP 1875

Observations of the backscatter from snow at millimeter wavelengths. Berger, R.H., et al, (1986, p 311-316) MP 2665

Comments on the characteristics of *in situ* snow at millimeter wavelengths. Walsh, J., et al, (1986, p 317-320) MP 2666

River wave response to the friction-inertia balance Ferrick, M.G., et al, (1987, p.764-769) MP 2237

Obscuration and background dynamics in and over snow. Hogan, A.W., (1987, p.181-185) MP 2417

Seismic and acoustic wave propagation: working group report. Albert, D.G., et al, (1987, p 253-255) MP 2419

Impact of wet snow on visible, infrared and millimeter wave attenuation. Bates, R.E., et al, (1988, p 523-535) MP 2608

Overview of obscuration in the cold environment Berger, R.H., et al, (1988, p.537-555) MP 2609

SNOW IV field experiment data report. Wright, E.A., ed, (1989, 250p) SR 89-14

Seismic/acoustic experiments at SNOW IV. Peck, L., (1989, p 155-157) MP 2646

Theoretical estimates of light reflection and transmission by spatially inhomogeneous and temporally varying ice covers. Perovich, D.K., (1990, p.45-49) MP 2729

Weather

Review of sea-ice weather relationships in the Southern Hemisphere. Ackley, S.F., (1981, p.127-159) MP 1426

Weather forecasting

Midwinter temperature regime and snow occurrence in Germany. Bilello, M.A., et al, (1978, 56p) CR 78-21

Relationships between January temperatures and the winter regime in Germany. Bilello, M.A., et al, (1979, p 17-27) MP 1218

Ice formation and breakup on Lake Champlain. Bates, R.E., (1980, p 125-143) MP 1429

Current procedures for forecasting aviation icing. Tucker, W.B., (1983, 31p) SR 83-24

Frozen precipitation and weather, Munchen/Riem, West Germany. Bilello, M.A., (1984, 47p) SR 84-32

Prediction of winter battlefield weather effects. Ryerson, C.C., et al, (1988, p 357-362) MP 2402

Weather modification

Use of compressed air for supercooled fog dispersal. Weinstein, A.I., et al, (1976, p 1226-1231) MP 1614

Weather observations

Low pressure weather systems in and around Norwegian waters. Bilello, M.A., (1986, p.53-66) MP 2181

Weathering

Examining antarctic soils with a scanning electron microscope. Kumai, M., et al, (1976, p 249-252) MP 931

Antarctic soil studies using a scanning electron microscope Kumai, M., et al, (1978, p.106-112) MP 1386

Weatherproofing

Window performance in extreme cold Flanders, S.N., et al, (1981, p 396-408) MP 1395

Window performance in extreme cold Flanders, S.N., et al, (1982, 21p) CR 82-38

Roofer: a management tool for maintaining built-up roofs. Bailey, D.M., et al, (1989, p 6-10) MP 2488

Weddell Sea

Sea ice studies in the Weddell Sea region aboard USCGC *Burton Island* Ackley, S.F., (1977, p.172-173) MP 1014

Primary productivity in sea ice of the Weddell region. Ackley, S.F., et al, (1978, 17p) CR 78-19

Sea ice and ice algae relationships in the Weddell Sea. Ackley, S.F., et al, (1978, p.70-71) MP 1203

Standing crop of algae in the sea ice of the Weddell Sea region Ackley, S.F., et al, (1979, p.269-281) MP 1242

Mass-balance aspects of Weddell Sea pack-ice Ackley, S.F., (1979, p 391-405) MP 1286

Continuum sea ice model for a global climate model Ling, C.H., et al, (1980, p 187-196) MP 1622

Sea ice studies in the Weddell Sea aboard USCGC Polar Sea Ackley, S.F., et al, (1980, p.84-96) MP 1431

Sea-ice atmosphere interactions in the Weddell Sea using drifting buoys Ackley, S.F., (1981, p 177-191) MP 1427

Observations of pack ice properties in the Weddell Sea Ackley, S.F., et al, (1982, p 105-106) MP 1608

Physical, chemical and biological properties of winter sea ice in the Weddell Sea Clarke, D.B., et al, (1982, p 107-109) MP 1609

Atmospheric boundary layer measurements in the Weddell Sea Andreas, E.L., (1982, p 113-115) MP 1610

Properties of sea ice in the coastal zones of the polar oceans Weeks, W.F., et al, (1983, p 25-41) MP 1604

Wedges

Intermittent ice forces acting on inclined wedges. Tryde, P., (1977, 26p) CR 77-26

Well casings

Polyvinyl chloride well casings for ground water monitoring. Parker, L.V., et al, (1986, p.92-98) MP 2171

Influence of well casing materials on chemical species in ground water Parker, L.V., et al, (1988, p 450-461) MP 2456

Pressure buildup in permafrost pile supports induced by freezeback. Ayorinde, O.A., (1989, p.236-251) MP 2467

Influence of well casing composition on trace metals in ground water Hewitt, A.D., (1989, 18p) SR 89-09

Leaching of metal pollutants from well casings. Hewitt, A.D., (1989, 11p) SR 89-32

Influence of well casings on well water. Hewitt, A.D., et al, (1989, 9p) MP 2717

Well casings for monitoring trace organics in ground water. Parker, L.V., et al, (1989, 29p) CR 89-18

Surface changes in well casings exposed to organic pollutants. Taylor, S., et al, (1990, 14p) SR 90-07

Influence of casing materials on trace-level chemicals in well water. Parker, L.V., et al, (1990, 11p) MP 2720

Wells

Developing a water well for the ice backfilling of DYE-2. Rand, J.H., (1982, 19p) SR 82-32

Engineering geology studies on the National Petroleum Reserve in Alaska. Kachadoorian, R., et al, (1988, p.899-922) MP 2519

Wet snow

Thermodynamic deformation of wet snow. Colbeck, S.C., (1976, 9p) CR 76-44

Compression of wet snow. Colbeck, S.C., et al, (1978, 17p.) CR 78-10

Difficulties of measuring the water saturation and porosity of snow. Colbeck, S.C., (1978, p.189-201) MP 1124

Regelation and the deformation of wet snow. Colbeck, S.C., et al, (1978, p 639-650) MP 1172

Physical aspects of water flow through snow. Colbeck, S.C., (1978, p.165-206) MP 1566

Sintering and compaction of snow containing liquid water. Colbeck, S.C., et al, (1979, p.13-32) MP 1190

Compaction of wet snow on highways. Colbeck, S.C., (1979, p.14-17) MP 1234

Grain clusters in wet snow. Colbeck, S.C., (1979, p.371-384) MP 1267

Liquid distribution and the dielectric constant of wet snow. Colbeck, S.C., (1980, p.21-39) MP 1349

Introduction to the basic thermodynamics of cold capillary systems. Colbeck, S.C., (1981, 9p) SR 81-06

Mechanisms for ice bonding in wet snow accretions on power lines. Colbeck, S.C., et al, (1983, p.25-30) MP 1633

Impact of wet snow on visible, infrared and millimeter wave attenuation. Bates, R.E., et al, (1988, p.523-535) MP 2608

Wettability

Seeking low ice adhesion. Sayward, J.M., (1979, 83p) SR 79-11

Water and air horizontal flow in porous media. Nakano, Y., (1980, p.81-85) MP 1341

Moisture gain and its thermal consequence for common roof insulations. Tobiasson, W., et al, (1980, p 6-16) MP 1361

Roof moisture surveys Tobiasson, W., et al, (1981, 18p) SR 81-31

Wetting fronts in porous media Nakano, Y., (1983, p.71-78) MP 1720

Wind direction

Role of plastic ice interaction in marginal ice zone dynamics. Leppäranta, M., et al, (1985, p.11,899-11,909) MP 1544

WIND FACTORS

Heat exchange at the ground surface. Scott, R.F., (1964, 49p, plus append) M III-A1

Blowing snow Mellor, M., (1965, 79p) M III-A3c

Climatology of the cold regions of the northern hemisphere. II Wilson, C., (1969, 155p) M I-A3b

Wind factors

Viscous wind-driven circulation of Arctic sea ice Hibler, W.D., III, et al, (1977, p 95-133) MP 983

Icing and wind loading on a simulated power line Govoni, J.W., et al, (1986, p 23-27) MP 2206

Predicting freezing design depth of sludge-freezing beds. Martel, C.J., (1988, p.145-156) MP 2661

Effect of ice pressure on marginal ice zone dynamics Flato, G.M., et al, (1989, p 514-521) MP 2522

Wind-generated polynyas off the coasts of the Bering Sea islands Kozo, T.L., et al, (1990, p 126-132) MP 2734

Wind (meteorology)

Review of sea-ice weather relationships in the Southern Hemisphere Ackley, S.F., (1981, p 127-159) MP 1426

Wind pressure

Model study of Port Huron ice control structure, wind stress simulation Sodhi, D.S., et al, (1982, 27p) CR 82-09

Sea ice model in wind forcing fields Tucker, W.B., (1983, 11p) CR 83-17

Some simple concepts on wind forcing over the marginal ice zone Tucker, W.B., (1984, p 43-48) MP 1783

Ice accretion and aerodynamic loading of transmission lines. Egelhofer, K.Z., et al. (1987, p.103-109) MP 2279
Wind tunnels
Ice accretion under natural and laboratory conditions. Itagaki, K., et al. (1985, p.225-228) MP 2009
Concentration and flux of wind-blown snow. Mellor, M., et al. (1986, 164p.) SR 86-11
Natural rotor icing on Mount Washington, New Hampshire. Itagaki, K., et al. (1986, 62p.) CR 86-10
Heat transfer performance of commercial thermosyphons with inclined evaporator sections. Haynes, F.D., et al. (1988, p.275-280) MP 2320
Wind velocity
Snow loads on structures. O'Rourke, M.J., (1978, p.412-428) MP 1091
Ice arching and the drift of pack ice through channels. Sodhi, D.S., et al. (1978, p.415-432) MP 1130
Surface meteorology US/USSR Weddell Polynya Expedition, 1981. Andreas, E.L., et al. (1983, 32p.) SR 83-14
Role of plastic ice interaction in marginal ice zone dynamics. Leppäranta, M., et al. (1985, p.11,899-11,909) MP 1544
Spectra and cospectra of atmospheric turbulence over snow. Andreas, E.L., (1986, p.219-233) MP 2041
Theory for scalar roughness and transfer coefficients over snow and ice. Andreas, E.L., (1987, p.159-184) MP 2155
Spectral measurements in a disturbed boundary layer over snow. Andreas, E.L., (1987, p.1912-1936) MP 2254
Windows
Infrared thermography of buildings. Munis, R.H., et al. (1977, 17p.) SR 77-29
Infrared thermography of buildings: 1977 Coast Guard survey. Marshall, S.J., (1979, 40p.) SR 79-20
Window performance in extreme cold. Flanders, S.N., et al. (1981, p.396-406) MP 1393
Window performance in extreme cold. Flanders, S.N., et al. (1982, 21p.) CR 82-38
Winter
Comparative studies of the winter climate at selected locations in Europe and the United States. Sater, R.E., et al. (1989, p.283-293) MP 2596
Seasonal distribution of low flow events in New Hampshire streams with emphasis on the winter period. Melcher, R.A., (1990, p.47-53) MP 2681
Winter concreting
Cements for structural concrete in cold regions. Jebsen, R., (1977, 13p.) SR 77-35
Regulated set concrete for cold weather construction. Sayles, F.H., et al. (1980, p.291-314) MP 1359
Cold weather construction materials; Part 2—Regulated-set cement for cold weather concreting, field validation of laboratory tests. Henson, B.L., et al. (1981, 33p.) MP 1466
Brittlement of reinforced concrete structures under arctic conditions. Krivelis, L., et al. (1982, 28 + 16p.) MP 1969
Antifreeze admixtures for cold weather concreting. Preliminary test results. Korhonen, C.J., et al. (1990, 8p.) MP 2702
Winter maintenance
Winter maintenance research needs. Minsk, L.D., (1975, p.36-58) MP 950
Road construction and maintenance problems in central Alaska. Clark, E.F., et al. (1976, 36p.) SR 76-08
Snow removal equipment. Minsk, L.D., (1981, p.643-670) MP 1446
Snow and ice control on railroads, highways and airports. Minsk, L.D., et al. (1981, p.671-706) MP 1447
Strategies for winter maintenance of pavements and roadways. Minsk, L.D., et al. (1984, p.155-162) MP 1964
Winter operation
Data acquisition for refrigerated physical models. Zufelt, J.E., (1987, p.338-341) MP 2351
Wood ice friction
Ski friction and thermal response. Warren, G.C., et al. (1989, p.223-225) MP 2745
Wooden structures
Air-transportable Arctic wooden shelters. Flanders, S.N., et al. (1982, p.385-397) MP 1558
Wood-frame roofs and moisture. Tobiasson, W., (1985, p.33-37) MP 2340
X ray analysis
Elemental analysis of ice crystal nuclei and aerosols. Kumai, M., (1987, 5p.) MP 1179
X-ray measurement of charge density in ice. Itagaki, K., (1978, 12p.) CR 79-25
X-ray photography of the fracture image of freezing soil. Akagawa, S., (1990, 6p.) SR 90-05
X ray diffraction
Effect of X-ray irradiation on internal friction and dielectric relaxation of ice. Itagaki, K., et al. (1983, p.4314-4317) MP 1679
Yew
Air cushion vehicle ground contact operational control devices. Abele, G., et al. (1976, 15p.) CR 76-45

* U.S. GOVERNMENT PRINTING OFFICE 1991-300-083/42013
