The Army Family Research Program (AFRP) was designed to address the research objectives outlined in the 1983 White Paper by Chief of Staff of the Army (CSA) Meyer and to investigate issues raised by subsequent Army Family Action Plans (1984-1991). To meet these objectives, a worldwide survey of a representative sample of Army soldiers and their spouses and supervisors was distributed in calendar year 1989. This data book provides frequencies of all variables and scales included in the 1989 AFRP Soldier Data File. The data for each variable are broken down by career stage, unit type, location, marital/parental status, employment status of spouse, and age of children.

FOREWORD

The Army Family Research Program (AFRP) has served as the U.S. Army Research Institute for the Behavioral and Social Sciences (ARI) mechanism for supporting the U.S. Army Community and Family Support Center (CFSC) and the Army Chief of Staff's Army Family Action Plans since 1986. This data book provides the frequencies and cross tabulations of variables included in the Soldier Data File. The data were collected in calendar year 1989.

The Army Research Institute, with assistance from the Research Triangle Institute, Caliber Associates, HumRRO, and the University of North Carolina, is conducting the research as part of ARI 6.3, Advanced Development Program. This research is being performed under the sponsorship of CFSC pursuant to the LOA dated 18 December 1986, "Sponsorship of ARI Army Family Research."

The AFRP will provide additional information of interest to these Army professionals, including (1) service needs and access, (2) factors that influence adaptation to Army life, (3) how families influence career decisions, (4) how unit activities affect and are affected by families, and (5) how to better handle typical Army stressors, such as family separation and relocations.

Soldier Survey Data Book

1.0 INTRODUCTION

This volume presents preliminary tabulations of data from the 1989 Soldier Survey conducted under the Army Family Research Program (AFRP).

The Army Family Research Program is designed to help meet the Army's needs for information on the role of family factors in retention, readiness and sense of community among Army members. The AFRP survey and its analyses are designed to provide information needed for the development, implementation and assessment of family programs and policies and to increase the knowledge base needed for informed decisionmaking.

Data for the soldier survey were collected in on-site adminstrations at Army installations around the world. The soldier data were collected in the period February-December 1989. In addition to the soldier survey, the soldiers' supervisors were asked to rate the readiness of survey sample members. Data were collected from a total of 11,035 soldiers serving in 528 Army units.[1]

2.0 DATA BOOK ORGANIZATION

This volume presents data from the soldier questionnaire items, the supervisor ratings of soldiers, and the scales created from the soldier survey responses.

The tables are organized by the questionnaire sections, and these are followed by the supervisor ratings and the soldier scales. The sections and the survey items the cover are:

---

[1] The sample selection, survey development, and implementation are described in The AFRP Analysis Plan (May 1990) and the AFRP Survey Implementation Report (forthcoming).

Sections	Survey Items
• Your Background	1-15
• Your Unit Environment	16-22
• Unit Readiness Rating Scales	23-34
• Your Work	35-67
• You and the Army	68-78
• Your Army Plans	79-87
• Your Relationships	88-98
• Your Spouse	99-134
• Your Children	135-145
• Your Family	146-149
• Your Community	150-164
• Supervisor Ratings	Individual Readiness Ratings
• Soldier Scales	Scales created from soldier survey responses

For some soldier survey items, recoded versions were created. These are primarily of two kinds:

- Categorical versions of continuous variables (e.g., number of hours worked per week)
- Recodes for analytic use (e.g., spouse employment status, single parent and dual military indicators)

The tables for these recoded variables are shown in the same sections as the main survey items from which they were created.

3.0 TABLE FORMAT AND SUBGROUP DEFINITIONS

3.1 FORMAT

The tables are laid out in a fixed format. The first of the two pages of tables for an item presents data by major military categories. The second page is organized by family variables. The format is:

Page 1:

Column 1: Total (all eligible soldiers)

Columns 2-5: Rank (Junior Enlisted; NCO; Company Grade Officer; Field Grade Officer)

Columns 6-8: Location (CONUS; Europe; Other OCONUS)

Columns 9-12: Unit Type (Combat; Combat Support; Combat Service Support; and TDA)

Page 2:

Column 1-2: Single soldiers (no children, children)

Column 3-4: Soldiers in dual-military marriages (no children, children)

Columns 5-12: Soldiers married to civilian spouses

Columns 5-7: Enlisted (no children, youngest child age 5 or younger, youngest child 6 or older)

Columns 8-10: Officer (no children, youngest child age 5 or younger, youngest child 6 or older)

Columns 11-12: Spouse employment status (employed, not employed)

3.2 SUBGROUP DEFINITIONS

The subgroup definitions for the tables are:

Rank:

Junior Enlisted: Pay grades E2-E4
NCOs: Pay grades E5-E9
Company Grade Officer: Pay grades O1-O3
Field Grade Oficer: Pay grades O4-O6
Enlisted: Pay grades E2-E9
Officer: Pay grades W1-W4 and O1-O6

Marital Status:

Single: never-married, legally separated, widowed or divorced
Married: current married (not legally separated)

Children:

Children variables are defined by dependent children in the soldier's household (not total dependent children)

Age categories are defined by the age of the youngest child in the soldier's household:

0-5 Youngest child 5 or younger
6+ Youngest child 6 or older

4.0 TABLE ENTRIES

The tables were run using data weighted to compensate for sample selection probabilities and survey non-response.[2] The entries in the cells are the weighted percentages and the associated 95% confidence intervals, computed using the RTI survey data analysis (SUDAAN) software, which takes the sample design into account in computing the variances.

A 95 percent confidence interval will contain the population parameter being estimated in 95 out of 100 samples generated by the sample design. Differences between the estimates for two subgroups can be considered statisticcally significant at the 0.05 level of significance if their corresponding confidence intervals do not overlap. However, such tests of significance will be conservative in that some differences between estimates with overlapping confidence intervals may also be significant at the 0.05 level of significance.

---

2 The weighting of the survey data is described in The AFRP Analysis Plan (May 1990) and the AFRP Survey Implementation Report (forthcoming).

The totals shown at the bottom of each table are the sample size and weighted totals of soldiers eligible for the survey. The difference between sample size given in the first column of page 1 (all soldiers) and 11,035 (the total number of respondents) indicates how much missing data there is for the variable presented in the table.

The tables exclude cases with missing data, those that skipped the item because it was not applicable to them, ones that indicated an item was not applicable in response to the question, and ones with multiple responses. Cases that responded "Don't Know" are included in the tables.

5.0 USE OF THE DATA BOOK TABLES

The data book tables provide preliminary results for major Army subgroups as well as totals for all eligible soldiers. The tables are designed to be used by researchers planning the data analyses being carried out under the AFRP. Subsequent analyses will be prepared in the form of reports and other materials designed to meet the needs of Army program and policy staff and other information users in the Army, military, and family research community.
