13. ABSTRACT (Maximum 200 words) This bibliography was prepared to provide a reference base for individuals who are new to the industrial ergonomics field. The focus is on prevention of cumulative trauma injuries through workplace evaluation and intervention. Articles in several subcategories are listed, in addition to basic ergonomics: carpal tunnel syndrome, the back, the office environment and video display terminals, seating, and workplace evaluation. While this bibliography is not all inclusive of the Industrial Ergonomics field, it will provide the user with references to further explore the profession.				
14. SUBJECT TERMS ergonomics; human factors; carpal tunnel; cumulative trauma; overuse syndrome; video display terminals; VDT; occupational injury			15. NUMBER OF PAGES	
			16. PRICE CODE

INTRODUCTION

This bibliography was prepared to provide a reference base for individuals who are required to address injury prevention through ergonomic intervention. As this is an unfamiliar approach to industrial safety for many industrial hygienists, occupational health practitioners, safety officers, and therapists, we have received numerous requests for a bibliography. This bibliography is an interim provision, and an annotated bibliography is anticipated.

Ergonomics is a broad field which includes a great deal more than cumulative trauma injury prevention. As such, the list of articles is not all inclusive, but should provide the user with enough information to further explore the profession and to begin an ergonomics injury prevention program. Some articles apply to more than one section and are repeated in each applicable section. It is hoped that users will notify the compilers of additional references they find exceptionally useful for incorporation in this bibliography.
