RE: Contract No: F49620-89-C-0053

Dear Col. Cavender:

In order to fulfill the obligations of the referenced contract, we are forwarding to you an original and three copies of a report for the Resident Research Associateship Program operated for the U.S. Air Force by the National Research Council.

This report covers the period January 1, 1991-December 31, 1991. Thus we have completed the requirements for an Annual Technical Report.

If further information is needed, please feel free to contact me.

Sincerely yours,

R. H. Manka
Program Administrator

NATIONAL RESEARCH COUNCIL

Resident Research Associateship Program

with the AIR FORCE SYSTEMS COMMAND

Annual Report

(Required under Contract No. F49620-89-C-0053)

January 1, 1991, through December 31, 1991

We report here on all Associateship Programs for the U.S. Air Force.

In addition to reporting on activities specifically sponsored under this contract, we also summarize any other current activities of the Air Force Associateship Program such as the termination of Associates who were sponsored under the previous year's contract.

PUBLICITY

The National Research Council, in cooperation with the U.S. Air Force, prepared a booklet describing opportunities for research in the NRC-USAF Research Associateship Program. The laboratories participating in the program were sent booklets to be distributed by the research staff to persons interested in the program.

In October 1991, publicity materials concerning the 1992 NRC-USAF Research Associateship Program were distributed to presidents, graduate deans, thesis advisers, and chairmen of appropriate departments of science and engineering of all academic, degree-granting institutions in the United States. Announcements were also sent to selected public and professional news media for publication.

REQUESTS

Through December 1991, the Associateship Programs Office sent application packets to individuals for the 1991 NRC-AFSC Associateship Program in response to requests by persons whose fields of specialization appeared to be appropriate for the research opportunities available in the AFSC laboratories.

COMPETITION

At the request of the U.S. Air Force, the Associateship Programs Office reviews applications in February, June, and October of each year.

February 1991 Review

Forty applications were received by the Associateship Programs Office before the closing date of January 17, 1991. Nine applications were incomplete, one application was withdrawn before review, one was ineligible, and two could not be considered for awards due to a lack of interest in the proposals by the laboratory. Twenty-seven applications were reviewed by the Panel Review Board that met in Washington, D.C., February 28-March 1, 1991. Twenty applicants were recommended for awards and seven were not recommended. Of the 20 recommended candidates, eleven were offered awards and have accepted them, three declined the award offers, and six award offers are still pending.

June 1991 Review

Forty-seven applications were received for the June review. Eight of these applications were incomplete, two were deferred to another review, one was ineligible, and seven could not be considered for awards due to lack of interest in the proposals by the laboratory. Twenty-nine applications were presented for review. All 29 candidates were recommended for awards. Of the 29 recommended candidates, 18 were offered awards and have accepted them, one declined the award offer, and ten award offers are still pending.

October 1991 Review

Thirty-four applications were received for the October review. Six applications were incomplete, one was received too late to be entered into the review, three were ineligible, and one could not be offered an award due to a lack of interest in the proposal by the laboratory. Twenty-three applications were presented for review. Of those presented, 21 were recommended for awards and one was not recommended. Of the 21 recommended candidates, seven were offered awards and have accepted, two have declined award offers, one could not be offered an award due to a lack of funding, and 11 award offers are still pending.

ASSOCIATES' ACTIVITIES

Part I includes information on the NRC-USAF February 1991 Review.

Part II includes information on the June 1991 Review.

Part III includes information on the October 1991 Review.

Part IV includes information on Associates whose tenure terminated during the reporting period, information on renewed Associates, and information on Associates on tenure as of January 1, 1992.

PART I

CANDIDATES WHO HAVE ACCEPTED AWARDS IN THE FEBRUARY 1991 NRC-AFSC
RESEARCH ASSOCIATESHIP PROGRAMS REVIEW

<u>Associates</u>	<u>Advisers</u>	<u>Laboratory</u>	<u>Expected/Actual Starting Date</u>
AMBADI, Satheesh	A. Garscadden	WL	February 10, 1992
BRUNO, John G.	J. L. Kiel	AL	July 1, 1991
HANSEN, Thorkild	A. Yaghjian	RADC	August 23, 1991
KIRKWOOD, Robert	W. J. Burke	GL	September 3, 1991
KOST, Daniel	J. P. Stewart	FJSRL	September 3, 1991
LIRON, ZVI	J. McDougal	AL	August 6, 1991
OLIPHANT, Nevin	D. Konowalow	PL	October 21, 1991
PACHTER, Ruth	R. L. Crane	WRDC	May 6, 1991
SIMMONS, Jeff	T. Nicholas	WRDC	October 15, 1991

**Termination Report
Dr. P. K. Bajpai
Senior Research Associate**

**RECEIVED
SEP 9 1991
ASSOCIATESHIP PROGRAMS**

(1) **DATE:**

August 31, 1991

(2) **NAME:**

Praphulla Kumar Bajpai

(3) **NAME AND LOCATION OF LABORATORY OR CENTER:**

Biodynamics & Biocommunications Division,
Armstrong Laboratory,
Wright-Patterson Air Force Base,
Dayton, Ohio 45433

(4) **DATES OF TENURE:**

6/16/89-8/31/91.

Returned to University of Dayton for Academic Terms 7/16/90-5/15/91.
Work on NRC-Research project was continued during this period.

(5) **TITLE OF RESEARCH PROJECT:**

Calcium Phosphate Ceramics for Rebuilding Bone Defects.

(6) **RESEARCH ADVISER'S NAME:**

Leon E. Kazarian (6/16/89-6/15/91).
Ints Kaleps (6/16/91-8/31/91)

(7) **LEAVE FROM A PROFESSIONAL POST:**

Professor, Department of Biology,
University of Dayton,
300 College Park, Dayton, OH 45432-2320.

&

Adjunct Professor, Department of Biomedical Engineering,
College of Engineering & Computer Science,
and School of Medicine,
Wright State University,
Dayton, OH 45435

**Termination Report
Dr. P. K. Bajpai
Senior Research Associate**

(8) INTERNATIONAL POST HELD DURING TENURE:

1. **Visiting Scientist.** University of Leiden, Leiden, & Free University, Amsterdam, The Netherlands. March 23-29, 1990. Sponsor: Free University, Amsterdam.
2. **Elected Vice President (1990-1992).** Society for Biomaterials and Artificial Organs, India. April 13-14, 1990.
3. **Visiting Professor.** University of Paris, France. November 25 to December 31, 1990. Sponsor The French Government.

(9) PROGRAMMATIC TRAVEL DURING LEAVE:

16th Annual Meeting of the Society for Biomaterials, Charleston, SC. May 19-23, 1990.

(10) SCIENTIFIC SEMINARS, MEETINGS, AND/OR CONSULTATIONS:

Scientific Seminars:

1. **Ceramics: A Novel Device for Sustained Long Term Delivery of Chemicals and Biologicals.** Third International Symposium on Ceramics in Medicine, Rose-Hulman, Institute of Technology, Terra Haute, IN., November 18-20, 1990.
2. **Drug Delivery via Ceramic Devices.** Gordon Conferences on Biomaterials, Plymouth, NH. July 10-14, 1989.
3. **Ceramic Drug Delivery Systems.** Keynote paper presented at the 4th National Conference on Biomaterials and Artificial Organs April 13-14, 1990, Hyderabad, India.

Meetings:

1. 17th Annual Meeting of the Society for Biomaterials, May 1-5, 1991, Scottsdale, AZ.
2. Third International Symposium on Ceramics in Medicine, Rose-Hulman, Institute of Technology, Terra Haute, IN., November 18-20, 1990.
3. Ninth Annual Southern Bioengineering Conference. November 17-19, 1990. Miami, FL.

Supervision of Students:

1. **H. A. BENGHUZZI, Ph.D. 1990.**

Dissertation:

Characterization of Ceramic Drug Delivery Systems and Their Application in Regulating Fertility.

Post-Doctoral Fellow, Dept. of Pathology, University of Michigan, Ann Arbor, Michigan.

2. **H. H. ARAR, M.Sc. 1990.**

Thesis:

Development of Zinc Calcium Phosphorous (ZCAP) Ceramics for Drug Delivery.

MD. Program, The University of Cincinnati, Cincinnati, Ohio.

3. **D. Parker, B.Sc. (Current).**

Thesis:

Effect of Testosterone Delivered Locally by Means of Ceramic Composites on Bone Healing.

HONORS PROGRAM

1. **N. Stricker.**

Thesis: Biocompatibility of Ferric Calcium Phosphorous Oxide (FECAP) Ceramic/Glass

2. **R. Larrabee.**

Thesis: A New Ceramic Composite: Ferric Calcium Phosphate.

**Termination Report
Dr. P. K. Bajpai
Senior Research Associate**

(14) WORK IN PROGRESS:

The final objective of this award was to develop an injectable ceramic bone substitute composite for repairing anterior wedge vertebral fractures. Data obtained from phase one studies indicated that on an overall, basis calcium phosphate ceramic-cysteine bone substitute composites were superior to ceramic-malic acid composites. In phase two anterior wedge fractures were induced in lumbar vertebrae of six male swine and filled with an injectable ZCAP ceramic-cysteine bone paste. Six male swine were sham operated and six male swine served as non-operated controls. The data obtained through six weeks post surgery shows that ZCAP-cysteine implants had no effect on blood chemistry, hematology values, and mean body weight. Data from the second phase of the swine study is expected by the end of this year. Animals assigned to the 12 week group will be euthanized in October.

(15) SUMMARY OF RESEARCH DURING TENURE:

A two phase study was designed to develop an injectable ceramic composite to bridge an anterior wedge vertebral fracture gap. In phase one, six calcium phosphate ceramic-organic acid composites were prepared from hydroxyapatite, tricalcium phosphate, or zinc calcium phosphate, with malic acid and CaOH_2 or cysteine and used to repair defects in rabbit tibiae. Autografts from right tibiae of three rabbits from each treatment group were implanted in left tibiae. Through 12 weeks post surgery, implants had no effect on blood chemistry and hematology values, mean body weight, and tibial strength (maximum torque). Complete bridging was observed 12 weeks post surgery.

ASSOCIATESHIP PROGRAM

14. Work in progress:

The associateship period gave me an opportunity to develop materials for the experiments, to run subjects, and to do preliminary data analysis. Currently, we are engaged in statistical analysis of subject responses in preparation for anticipated publication.

We intend to prepare three reports 1) describing the results of intelligibility testing 2) comparing the response modes used in evaluating sentence comprehension, and 3) describing acoustic-phonetic structures of words produced by highly intelligible vs. less intelligible speakers.

15. Research during tenure:

The research began during tenure dealt with speech perception and understanding abilities of native English listeners in comparison with listeners for whom English is a second language, when faced with difficult listening conditions and a variety of speakers.

The materials consisted of a standard intelligibility test (Modified Rhyme Test) and sentences designed for intelligibility testing. Five speakers recorded all the materials. Listeners were tested in six listening conditions investigating signal to noise ratios and band-pass filtering. The MRT was administered in a closed-set response format. The sentence test was administered in an open-set written format and spoken format. Ten native and ten non-native listeners participated in each listening condition.

Non-native listeners experiences substantial decrements in performance when listening to words or sentences in noise. Written responses were more difficult than spoken responses. The results suggest that non-native listener limited capacity is overtaxed by the requirement of separating speech from noise.

16. Publications are expected in the future.

(13) Teaching: None

(14) Work in Progress:

Recent ^{13}C and ^{27}Al NMR and viscosity studies in this laboratory indicate that AlCl_4^- in the MEI-chloroaluminate melts forms a complex by interacting with the C-2, C-4 and C-5 hydrogens on the MEI $^+$ ring. Multiple spin probe studies (MSP) of ^{27}Al and ^{23}Na vs. ^{13}C relaxation rates give similar relationships, thus establishing the existence of multi-ion complexes in the melts. A new series of $\text{MEICl}-\text{AlCl}_3-\text{EtAlCl}_2$ melts provides verification of the MSP method as the ^{13}C NMR from two separate parts of the resulting complex correlate with the ^{27}Al quadrupolar relaxation results in each melt. Initial NMR studies have identified the existence of the complex species, $\text{EtAl}_2\text{Cl}_6^-$. In this and similar cases, it is possible to determine the ^{27}Al quadrupolar coupling constant for the Al complexes in the liquid state.

(15) Summary of Research During Tenure:

This research has focused on the use of high and low field Nuclear Magnetic Resonance to study the composition of room temperature molten salts. We have used carbon, aluminum and sodium NMR results to establish changes in ionic complexes as function of temperature and melt composition. NMR NOE and relaxation data have been combined with diffusion and viscosity measurements to establish the relative size and composition of ionic liquid complexes. We have determined nuclear quadrupolar coupling constants for the various complexes in the liquid state.

(14) WORK IN PROGRESS

I am currently working on a "Multidisciplinary Communication Concept" which facilitates the integration of human factors information into the system design process. Design team members with different perspectives and backgrounds must be provided with tools (e.g., computer aids) to more easily understand and communicate the relevance and applicability of ergonomics information to their system design problems. Methods are needed for extracting specific experiential demonstrations of human perception and performance capabilities and limitations from existing data sources so that they may be shared with design team members. Common experiences can help bridge the multidisciplinary communication gap and assure that human factors information is given full consideration in the design process.

(15) SUMMARY OF RESEARCH DURING TENURE

My research as an Associate focused on several overlapping areas. These areas included the system design process, human factors information in system design, human-computer interaction, computer-supported cooperative work, and multidisciplinary communication. I applied a social psychological perspective to human-computer interaction and examined ways computers could aid the system design team in incorporating human factors information into the design process. Computers can not only provide designers with information about human capabilities and limitations, they can also help designers actually experience human factors phenomena and communicate the relevance of such phenomena to fellow design team members.

- (14) WORK IN PROGRESS:

The mathematical model developed is behaving satisfactorily for a particular type (constant heat-flux) of heated tube experiments. Recently, an experimental rig "PHOENIX" has become operational at Aero Propulsion Laboratory to study the fuel thermal stability in a more controlled way. Preliminary calculations for this rig indicate that the current model needs to be improved based on the vast additional data coming out of these experiments. Work is in progress towards a second generation mathematical model for the deposition of aircraft fuels.

(15) SUMMARY OF RESEARCH DURING TENURE:

A time-dependent Computational Fluid Dynamics and Chemistry (CFDC) model has been developed to study the deposition process in the heated tubes over long duration of times. An iterative boundary technique has been developed to account for the heat transfer losses in the tube wall and the deposit itself as the deposit builds up on the tube walls. A chemistry model consists of three global bulk fuel reactions and three wall reactions has been proposed. A mathematical model for the inhibition phenomenon is also proposed. The full Navier-Stokes equations along with k-e turbulent and chemical species equations have been numerically solved using an implicit scheme.

Presented Interim Research Status Briefing to AAAT, Wright Laboratories, 31 Jan 91.
Presented Neural Network Seminar at Dayton Engineers Club, "Introduction to Neural Networks and their Application," Dayton Ohio, 26 Mar 91.
Will present Final Status Briefing to AAAT, Wright Laboratories, Jun 91.
- (11) SEMINARS OR LECTURES DELIVERED AT UNIVERSITIES AND/OR INSTITUTES
Presented Paper to Fourth Conference on Neural Networks and Parallel Distributed Processing at Indiana-Purdue University, "Neural Network Optimization Methods," Fort Wayne, Indiana, 12 Apr 91.
- (12) MEETINGS ATTENDED BY SPECIFIC INVITATION
Presentation by Robert Hecht-Nielsen on a new Information Retrieval System using Neural Network technology, Dayton Ohio, 8 Apr 91.
- (13) TEACHING, IF ANY, AS AN ASSOCIATE Only providing my Backpropagation code to the AAAT-1 Group Leader and showing one of the group something about the code and the theory.

- (14) **WORK IN PROGRESS** The 30-page draft report to AAAT is complete and under review by Dr. Tamburino. The OPTNET computer program code (over 1600 lines) is complete and in-code documentation is being added. This will be turned over to Dr. Tamburino. A final briefing to AAAT is currently in preparation.
- (15) **SUMMARY OF RESEARCH DURING TENURE** It was shown that multi-layer feed-forward neural networks could be modeled as unconstrained minimization problems (limits on the weights or biases yield constrained problems). Because of this, standard optimization methods and software can be used to solve these neural network problems using far fewer iterations than any Backpropagation methods. In particular, superlinearly convergent gradient methods can be used. While Conjugate Gradient techniques showed promise, a new low-storage Quasi-Newton method was discovered which provided superior results for all of the problems tested. An OPTNET prototype program implemented in Pascal was interfaced with standard optimization codes, including the Nocedal L-BFGS FORTRAN code, to accomplish this.
- (16) **PUBLICATIONS AND PAPERS RESULTING FROM RESEARCH AS AN ASSOCIATE**

- (12) None.
- (13) None.
- (14) During my tenure, besides learning to work with room temperature melts, I also made some measurements on the EDAX SEM instrument. This data will be worked up, and hopefully will contribute to data already obtained in Leeds so that the work can be written up for publication. Colleagues at the Seiler Lab have agreed to furnish me with additional details, if necessary, from the SEM studies, and to record some more spectra for me in room temperature melts on the recently arrived spectrophotometer (see 19 B.(a)). I have two incomplete manuscripts, which I had hoped to have completed before the end of my tenure, but did not do so, partly for the reasons outlined in 19 B.(a) and (c). I now plan to make the necessary measurements in Leeds, and complete them, with due acknowledgements. I

am currently making a research grant application with an NRC Associate, with whom I overlapped in tenure, Prof. A.M. Elias (University of Lisbon), to the British Council for spectroelectrochemistry studies of a variety of room temperature melts, to determine their suitability as electrolytes for high power batteries.

I am also making a NATO Research Grant application with Prof. W.R. Carper (Wichita State University), another NRC Senior Associate with whom I also overlapped, to extend my spectroscopic studies in high and low temperature melts with his work on nmr, including examining the same solutions of suitable nuclei in room temperature melts by the two difference techniques. The objective is to be able to extrapolate the information unique to nmr studies to high temperature molten salt systems, which cannot be studied in situ by nmr spectroscopy, but can be using optical fibers linked to a uv-visible near ir spectrophotometer (see next section).

(15) **Summary of research during tenure:**

Visible absorption spectra of f-f transitions of hexachloro lanthanide complexes of neodymium, samarium and praseodymium were studied in the room temperature melt MEIC (1-methyl-3-ethylimidazolium chloride)-AlCl₃ up to 100°C. When extrapolated and compared with earlier spectra in LiCl-KCl (450-650°C) trends matched. Room temperature spectra are narrower and thus more informative. The temperature dependence found for certain discrete bands will help resolve particular theoretical problems in lanthanide spectra. Further spectroscopic and temperature-dependent nmr studies in ambient melts can thus be applied to the interpretation of high temperature (including industrial) molten salt phenomena.

a) Small near objects can appear farther than large far objects during object-motion and self-motion: Judgments of object-self and object-object collisions. Status: Ready to write up.

b) Optical expansion versus vertical displacement: Judgments of relative arrival time. Status: Ready to write up.

c) Thresholds for optic flow. Status: Data analysis in progress.

d) Pictorial and motion-based information in an active control task. Status: Data collection in progress.

e) Depth perception during action with night vision goggles. Status: data collection in progress.

f) Quantitative tests of the confusion theories: Status: Ready to submit.

(15) Summary of research during tenure:

With simulations of self motion and object motion during self motion, large far objects can appear nearer, and to hit the viewpoint before small near objects-- consistent with pictorial relative size rather than motion-based information. Results are weakened with viewpoints above/below the objects, and generalize to (a) displays with texture, and longer durations, (b) judgments of object-object collisions, (c) active control of altitude during self motion. Thresholds can be measured with staircase procedures, and projected vertical components may contribute to arrival time judgments. Pictorial information must be considered in models of depth perception, and designs of aviation displays.

Summary of Research During Tenure:

During my tenure at Sac Peak I have mainly worked on the project of Bidimensional Spectroscopy; a good fraction of the time has been devoted to the implementation of the *Narrow Passband Filter*, realized through the coupling of a Fabry-Perot Interferometer and the Universal Birefringent Filter, and to the determination of its characteristics.

The filter is now in operation at the Vacuum Tower Telescope of National Solar Observatory-SP and will be one of the most powerfull tool ever used to investigate the interaction between the gas dynamics and magnetic fields of the solar atmosphere, providing high spatial and spectral resolution observations.

Taking advantage of the period of solar maximum activity, many observations have been performed in young active regions: this will be useful to model (and maybe predict) the development of stressed situations that can lead to explosive phenomena like flares.

In the framework of solar flares, *vector* magnetic fields play a very important role: part of my time has been spent working with the Solar Vector Magnetograph installed at NSO-SP. In particular, I focused my attention on the problem of converting polarization measurements into magnetic fields.

Work in Progress:

A paper is in preparation with Dr. Dave Rust of Johns Hopkins University-APL, about observations of changing magnetic fields before an eruptive flare. The observations were performed with the JHU-APL Vector Magnetograph installed at NSO-SP.

The narrow Passband Filter installed at the Vacuum Tower Telescope has been very successful in terms of amount and quality of data obtained; the reduction of these data just began, and it will be my major research project for the next year.

6. Are you able to participate in local seminars, colloquia, etc.? X
7. Are you encouraged to plan for attendance at appropriate national and/or regional meetings? X
8. Have you encountered laboratory influences detrimental to your proposed research? Explain. X

Comments: I have been very satisfied overall with my interaction with the host laboratory, and particularly with my Research Adviser and other members of the Computational Aerodynamics Group. Research interests within the group closely parallel my own, and I have found discussions with group members beneficial to my current investigation.

Brief resume of progress:

Computer codes have been developed for the implementation of an improved low-aspect-ratio wing theory. Results have been obtained for both the steady case, and for unsteady cases involving pitching and plunging maneuvers and flight through gusts. While most of the results obtained so far have been for cases where no leading-edge separation is involved, a preliminary extension to the separated flow case has been made using a semi-empirical separation model. Current efforts are focused on the development of a self-consistent nonlinear description of leading-edge vortex separation to be implemented in the extended slender-wing treatment, and numerical verification of theoretical results using Navier-Stokes CFD codes which are available within the Computational Aerodynamics Group.

Overall general impression is very positive.

Suggestions:

P.S. If you plan on extending your tenure beyond the termination date of your award, please refer to the PPP Booklet on instruction for renewing.

Comments:

Brief resume of progress: During the first months I performed laboratory tests and tried new set-ups for the Fabry-Perot Interferometer (the basic instrument for my research program). Then, I started the observations of magnetic and velocity fields in solar active regions.

General impression of program to date:

The deep involvement of my adviser and the good observations performed in the last weeks (it's the reason of the delay in this progress report) make me trusting in the achieving the goals of this research.

Suggestions:

Comments: A large research community such as Air Force Materials Lab provides a newly started associate with an excellent work environment. Communications with people having various research background are very helpful to understanding and solving technical problems associated with research.

Brief resume of progress:

Research effort has been focused on the development of new processing method for fabric reinforced ceramic composites via colloidal filtration. Microstructures of composites, which had prepared by slurry infiltration of 3-D woven preforms, were investigated to understand the effects of powder and slurry characteristics on particle packing. Work is underway to evaluate processing defects.

General impression of program to date:

The program is well organized and managed to assist associate's research activities. The research opportunity and freedom given by NRC will contribute not only to my research career but also to the ongoing programs of this laboratory.

Suggestions:

Frequent publication and distribution of news letter to universities and laboratories can bring more qualified scientists interests in participating in NRC associateship program.

P.S. If you plan on extending your tenure beyond the termination date of your award, please refer to the PPP Booklet on instruction for renewing.

JUL 18 1991

ASSOCIATESHIP PROGRAM

Date: 12 JULY 1991

Associate Name: KENNETH D. SHAW

Laboratory: PHILLIPS LABORATORY (FORMERLY AFWL)

Location: ALVA KIRTLAND AFB, NEW MEXICO 87117-6008

Starting Date of Tenure 14 JAN 1991

Adviser Name: A. GAVRIELIDES

I. Associateship Office Functions

Yes No

- | | | |
|---|---|---|
| 1. Were the pre-start materials and instructions satisfactory? | X | — |
| 2. If requested, was the relocation and travel advance handled in a satisfactory manner? | X | — |
| 3. If requested, was the stipend advance available when you began tenure? | X | — |
| 4. Is the stipend being received regularly in a timely way? | X | — |
| 5. Are Travel Requests and travel reimbursements being handled promptly and satisfactorily? | — | X |
| 6. Are your questions to this Office being handled courteously and efficiently? | X | — |

Comments: I INITIALLY EXPERIENCED QUITE A DEGREE OF DIFFICULTY IN GETTING REIMBURSED FOR RELOCATION EXPENSES. ~~BY~~ THE FIRST TRAVEL VOUCHER I SUBMITTED WAS SOMEHOW LOST, AND I WAITED FOR SEVERAL WEEKS BEFORE DISCOVERING, THROUGH A PHONE CALL TO YOUR OFFICE, THAT SUCH WAS THE CASE. I THEN HAD TO RESUBMIT THE TRAVEL VOUCHER, WITH THE RESULT THAT I DID NOT RECEIVE THE REIMBURSEMENT CHECK UNTIL ^{OVER...} SIX WEEKS AFTER I HAD STARTED AT THE LAB. THIS WAS A CONSIDERABLE INCONVENIENCE, SINCE ONE IS CUSTOMARILY SOMEWHAT STRAPPED FINANCIALLY AFTER SUCH A MOVE.

2/5/85

II. Laboratory functions

- | | <u>Yes</u> | <u>No</u> |
|---|------------|-----------|
| 1. Was the laboratory ready to receive you and help you get started? | X | — |
| 2. Is your interaction with your research adviser and the NRC Laboratory Program Representative satisfactory? | X | — |
| 3. Is the space assigned reasonably adequate? | X | — |
| 4. Are you experiencing any problems with access to equipment, computer time, supplies, technical support?
If so, explain below. | — | X |
| 5. Are you being encouraged to plan for publication of your research results in referred journals? | X | — |
| 6. Are you able to participate in local seminars, colloquia, etc.? | X | — |
| 7. Are you encouraged to plan for attendance at appropriate national and/or regional meetings? | X | — |
| 8. Have you encountered laboratory influences detrimental to your proposed research? Explain. | — | X |

Comments: THE STAFF AT THE LAB HAVE BEEN EXTREMELY HELPFUL. I INTERACT FREQUENTLY WITH THE OTHER SCIENTISTS TO DISCUSS NEW DEVELOPMENTS IN MY WORK AS IT PROCEEDS, AND SEVERAL TANGENTIAL INVESTIGATIONS HAVE RESULTED FROM THESE DISCUSSIONS.

Brief resume of progress: PUBLISHED ONE PAPER ON COUPLED WAVE THEORY AS GENERALIZED FROM THAT USED IN STUDYING PHOTOREFRACTIVE WAVE MIXING. TWO PAPERS ARE IN PREPARATION ONE ON ~~THEORY~~ DEVELOPMENTS IN UNDERSTANDING THE DYNAMICS OF P.R. THESE CONJUGATION IN THE RING + DOUBLE PHASE CONJUGATE MIRRORS AND THE OTHER ON FUNDAMENTAL PROPERTIES OF THE DPCM AS RELATING TO THE VECTORIAL NATURE OF THE RADIATION FIELD. ONE EXPERIMENT EXPLORING THE DYNAMICS OF THE DPCM IS ALSO IN PROGRESS. THIS WORK ~~DEVIATES~~ SLIGHTLY FROM THE SPECIFIC LINE DETAILED IN THE PROPOSAL, BUT DISCUSSIONS WITH THE RESEARCH ADVISOR + OTHER LAB PERSONNEL IT WAS FELT BY ALL CONCERNED TO BE MORE APPROPRIATE IN LIGHT OF VERY RECENT DEVELOPMENTS WHICH HAVE OCCURRED IN THE FIELD SINCE I BEGAN TENURE AT THE LAB.

General impression of program to date: I AM VERY PLEASED WITH THE PROGRAM SO FAR. IN PARTICULAR, I FIND, AS I MENTIONED ABOVE, THE DISCUSSIONS WITH OTHER LAB PERSONNEL TO BE MOST IMPORTANT. THESE PERMIT A MUTUALLY ADVANTAGEOUS EXCHANGE OF IDEAS, WHICH HAS RESULTED IN SOME QUITE NEW AND INTERESTING ASPECTS OF PHOTOREFRACTIVE WAVE MIXING COMING TO LIGHT.

" Suggestions:

P.S. If you plan on extending your tenure beyond the termination date of your award, please refer to the PPP Booklet on instruction for renewing.

Comments:

The problems have been with instruments that have failed (both the Bruker and JEOL FTNMRs). The laboratory has had the Bruker serviced and has arranged for service for the JEOL. My NMR studies have been slowed by these inconveniences.

Brief resume of progress:

I am conducting variable temperature lithium-7 NMR T_1 studies on the LiCl-buffered chloroaluminate melts. These are giving information on the environment of Li^+ in the melt and the effect of temperature on the environment. The lithium NMR will be followed by aluminum-27 and carbon-13 T_1 studies.

General impression of program to date:

The program presents an opportunity for scientific exchange between those of us who are "visitors" and the regular employees and Air Force officers in the lab. The program allows us to offer a different perspective based on our background to solving the research problems pursued in the laboratory. The interactions and resulting research results are evidence of the success of the NRC program.

Suggestions:

P.S. If you plan on extending your tenure beyond the termination date of your award, please refer to the PPP Booklet on instruction for renewing.

Comments: The collaboration of the Lab's personnel (technical and administrative) has been outstanding. I received every possible help in getting started with my proposed research.

Brief resume of progress: I have been working in collaboration with the experimental researchers in the Lab on the theoretical study and modeling of molecular systems which may exhibit NLO response, particularly polypeptide-bound chromophores of defined secondary structure, cyclic siloxane-based liquid crystals, and various conjugated polymers. I have obtained interesting results, which were summarized as publications in refereed journals.

General impression of program to date: The program has been extremely successful so far. The working environment here is superb. The very high expertise of my advisor and colleagues enabled my rapid progress. The contribution that I have been able to bring to the project may enable the design of new materials in the future.

Suggestions:

P.S. If you plan on extending your tenure beyond the termination date of your award, please refer to the PPP Booklet on instruction for renewing.

Comments:

I have encountered no difficulties in acquiring the necessary and needed resources or support.

Brief resume of progress: The first 3-4 mos. of my tenure were spent setting up the necessary hardware/software facilities for the initial phase of my proposed program of research. Over the course of the following 2 mos., we collected data in the first of several planned studies. I will submit a preliminary report (now in progress) on this experiment to the 31st Annual Meetings of the Society for Psychophysiological Research (SPR). I have also participated in the analysis of a related dataset (previously collected) from this lab, and have initiated an additional methodological study of that dataset. I hope this will inform our future decisions

General impression of program to date: regarding data reduction and analysis.

The program is administered well, and provides mutual benefit to the interests of the Air Force laboratory as well as the Associate.

Suggestions: It may be helpful to Associates if host laboratories were to provide a brief tutorial or report concerning the organizational and procedural operations of the hosting institution. I am anxious to learn as much as possible about many of these issues, but am often not even aware what questions I should ask in order to learn. It is particularly valuable to the Associate to have an opportunity to learn more about funding structures and organizational priorities within the AF.

P.S. If you plan on extending your tenure beyond the termination date of your award, please refer to the PPP Booklet on instruction for renewing.

16 MONTH REPORT 11 JUL 91
DEPARTMENT OF THE AIR FORCE
ROME LABORATORY (AFSC)
HANSCOM AIR FORCE BASE, MASSACHUSETTS 01731-5000

REPLY TO
ATTN OF ERCE

12 July 1991

SUBJECT

RECEIVED

TO Dr. R. H. Manka
Program Administrator
Associateship Programs
National Research Council
2101 Constitution Avenue
Washington, DC 20418

Dear Dr. Manka,

Thanks for your letter dated 21 June 1991. I understand that you are interested in receiving some kind of an interim report.

Before I go into briefing on my research work I have a comment on the problems I faced during the earlier part of my tenure here. Although I am fairly well settled in my research work I should mention that the transition period was long and difficult. I feel it necessary to mention it here lest it is assumed that everything was perfect. However, I think that it serves no purpose further elaborating on this because I have now gotten used to the system here. The point I want to make here is that considerable amount of precious time and energy have gotten dissipated in the process.

Regarding my research work let me recapitulate and update on my current status. Essentially I had proposed to develop a theoretical model for terrain medium and to use it to interpret the bistatic scattering data available here in this laboratory. After discussions with my advisor Dr. R. J. Papa I have realized that there are some special considerations required in the analysis when the scattering angles are large. It is well known that the notion of 'visibility function' is useful in these situations. However it is clear that the idea of visibility function is itself a crude approximation which can in some cases lead to very erroneous results. Hence one important part of my task is to develop an improved formulation appropriate to our special needs.

As a part of my preliminary investigation I have developed a theoretical model for composite rough surface using the concepts of visibility function. At present I have written this work as a technical report. For your reference I have enclosed a copy of the abstract of this report. From time to time I will keep you informed of further progress in my research work.

Yours truly,

Saba Mudaliar

SABA MUDALIAR

abstract

cy to: Dr. R. J. Papa
RL/ERCP

Abstract

BISTATIC SCATTERING CROSS SECTIONS OF A RANDOMLY ROUGH SURFACE

Saba Mudaliar
12 April 1991

The notion of shadowing is an important consideration in the analysis of scattering from rough surfaces using the Kirchhoff method. A key role is played here by the visibility function which acts as a correction to the 'usual' scattering cross section. The surface under consideration is a normally distributed composite rough surface. Analytical results are provided for the bistatic scattering cross sections. Included herein is a detailed derivation of the visibility function. Some properties of the visibility function are highlighted in a discussion. An important feature of this work is that our expressions for scattering cross sections, in contrast to those of Sangers' (1969), are free from any discontinuities and hence physically more appropriate.

Comments:

Brief resume of progress:

Two abstracts and a full paper have been submitted
 Abstracts: 1. Theoretical derivation of a skin-air partition coefficient - SOT, Seattle, Feb. 92
 2. Diffusion of water in porcine stratum corneum measured by thermal gravimetric analysis (TGA) techniques. - SID, Baltimore, April 1992
 Full paper: Water diffusivity in porcine stratum corneum measured by a thermal gravimetric analysis (TGA) technique. J. Invest. Dermatol.
 General impression of program to date:

This program presents a great opportunity to me to concentrate on science. Although the slow supply system forced me to change some of my original plans, I was lucky to find alternative equipment and to gather interesting data in a relatively short time.

Suggestions:

Before starting tenure, the associate wld provide a detailed list of supplies including chemicals and disposable items like FTIR windows etc. This will enable a faster and smoother start.

P.S. If you plan on extending your tenure beyond the termination date of your award, please refer to the PPP Booklet on instruction for renewing.

Comments:

Brief resume of progress:

Trying out instructions on how to design instruction has begun with an example of a lesson on this topic, which now exists in storyboard form. The example is a procedure -- the functional check of the gun in the F-16 aircraft. Work is underway to devise a computer-based form of the advisory. This development will make possible the collection of data on the facility of use of this type of instruction with Air Force personnel.

General impression of program to date:

The Laboratory Directorate (AL/HR) provides a great deal of help with technical matters, and a cordial group of scientists with research interests in learning, instructional design, and AI applications to training. A stimulating environment, with much going on.

Suggestions:

Ask the Associate applicant to describe briefly what preparatory work and resources of the Laboratory will be needed to make ready for the proposed study. (Purpose: efficiency).

P.S. If you plan on extending your tenure beyond the termination date of your award, please refer to the PPP Booklet on instruction for renewing.

Comments:

The facilities at the Phillips Laboratory (AFOL) are very good and my research has progressed well.

Brief resume of progress:

Engaged in a program to investigate ion cyclotron waves observed by the recently launched CRRES spacecraft using magnetic, electric fields, and particle data.

General impression of program to date:

The program undertaken has been successful in that a very good experimental data set from CRRES is being compiled. This is providing many new results.

Suggestions:

P.S. If you plan on extending your tenure beyond the termination date of your award, please refer to the PPP Booklet on instruction for renewing.

JUN 24 1991

ASSOCIATESHIP PROGRAM

Date: June 17, 1991

Associate Name: Paul A. Fleitz

Laboratory: AFSC/Materials Laboratory

Location: Wright-Patterson Air Force Base, OH

Starting Date of Tenure December 17, 1991

Adviser Name: Dr. Wade Adams

I. Associateship Office Functions

Yes No

- | | | |
|---|-------------|-------------|
| 1. Were the pre-start materials and instructions satisfactory? | <u>X</u> | <u> </u> |
| 2. If requested, was the relocation and travel advance handled in a satisfactory manner? | <u>X</u> | <u> </u> |
| 3. If requested, was the stipend advance available when you began tenure? | <u> </u> | <u>N/A</u> |
| 4. Is the stipend being received regularly in a timely way? | <u>X</u> | <u> </u> |
| 5. Are Travel Requests and travel reimbursements being handled promptly and satisfactorily? | <u> </u> | <u>N/A</u> |
| 6. Are your questions to this Office being handled courteously and efficiently? | <u>X</u> | <u> </u> |

Comments: The Associateship Programs Office went out of their significantly to insure that I could start my tenure very soon after I recieved notification of the award. Robin Taylor was especially helpful.

II. Laboratory functions

- | | <u>Yes</u> | <u>No</u> |
|---|------------|-----------|
| 1. Was the laboratory ready to receive you and help you get started? | <u>X</u> | — |
| 2. Is your interaction with your research adviser and the NRC Laboratory Program Representative satisfactory? | <u>X</u> | — |
| 3. Is the space assigned reasonably adequate? | <u>X</u> | — |
| 4. Are you experiencing any problems with access to equipment, computer time, supplies, technical support?
If so, explain below. | — | <u>X</u> |
| 5. Are you being encouraged to plan for publication of your research results in referred journals? | <u>X</u> | — |
| 6. Are you able to participate in local seminars, colloquia, etc.? | <u>X</u> | — |
| 7. Are you encouraged to plan for attendance at appropriate national and/or regional meetings? | <u>X</u> | — |
| 8. Have you encountered laboratory influences detrimental to your proposed research? Explain. | <u>X</u> | — |

Comments: Government procurement has proven to be the single largest impediment to carrying out this research. We have had problems with the laser system that we are using in the experiments that required service from the laser manufacturer. It took nearly six weeks to get the purchase order authorizing the service visit and another four weeks to get the required parts. This lag time has significantly slowed our progress.

Brief resume of progress: I have been working in collaboration with both government and contractors to establish the experimental arrangement of perform Degenerate Four-Wave Mixing experiments. We have been trying to eliminate possible sources of error from the experimental set-up and obtain quantitative results. I have also obtained significant qualitative results using this technique on solutions of diphenyl polyenes. The preliminary results indicate that the nonlinear properties of these materials contain both a fast and a slow nonlinear response. The fast component is due to intrinsic nonlinearities while the slow component has been attributed to thermal effects. I am currently trying to prove these hypotheses.

General impression of program to date:

So far this program has been very successful. I have learned more during the last six months in the Materials Laboratory than during any other time. The working environment here is superb. The expertise of the people working with me on this project makes for rapid progress. The contribution that I have been able to bring to the project has helped to take the experiment into new directions and to support related projects that are under development in the Laboratory.

Suggestions:

P.S. If you plan on extending your tenure beyond the termination date of your award, please refer to the PPP Booklet on instruction for renewing.

7. Are you encouraged to plan for attendance at appropriate national and/or regional meetings?	<u>X</u>	<u>—</u>
8. Have you encountered laboratory influences detrimental to your proposed research? Explain.	<u>X</u>	<u>—</u>

Comments:

The lab was a bit short of space but still managed to find a suitable office for me. I also have ample computing resources available to me.

Brief resume of progress:

The first phase of the project has been completed. I am writing a paper for publication and proceeding with additional calculations.

General impression of program to date:

Overall, things are going very well. I have been making good progress on my projects and I am learning a lot from everyone at the lab.

Suggestions:

P.S. If you plan on extending your tenure beyond the termination date of your award, please refer to the PPP Booklet on instruction for renewing.

Comments:

#4 no gas chromatograph available we will have to lease one, it is expensive.

#8 I am having difficulty getting my protocol approved by Human Subjects Committee due to its invasive nature.

Brief resume of progress:

I have been involved in animal studies examining improving survival after high-altitude exposure. These studies began in Feb 1991 and are on-going. Meanwhile, I am waiting for approval on my original protocol and have also written another one for a non-invasive study.

General impression of program to date:

I think the opportunities are terrific, but I am disappointed that, although the laboratory approved my application and agreed to support me I still was not guaranteed to have my protocol approved by their Human Subjects Committee.

Suggestions:

Have applicants submit protocols directly to the lab BEFORE tenure begins so that the applicant can begin work right away (assuming approval has been given) instead of waiting for months like I have.

P.S. If you plan on extending your tenure beyond the termination date of your award, please refer to the PPP Booklet on instruction for renewing.

| 3. If requested, was the stipend advance available when you began tenure? | <u>X</u> | <u>—</u> |
| 4. Is the stipend being received regularly in a timely way? | <u>X</u> | <u>—</u> |
| 5. Are Travel Requests and travel reimbursements being handled promptly and satisfactorily? | | Don't know Yet. |
| 6. Are your questions to this Office being handled courteously and efficiently? | <u>X</u> | <u>—</u> |

Comments:

In general the administration of the program has been very good to excellent.

My only real complaint is that the health insurance is next to useless for a young family such as mine. In essence it is a catastrophic coverage with no provisions for health maintenance.

over...

II. Laboratory functions

	<u>Yes</u>	<u>No</u>
1. Was the laboratory ready to receive you and help you get started?	<u>X</u>	<u> </u>
2. Is your interaction with your research adviser and the NRC Laboratory Program Representative satisfactory?	<u>X</u>	<u> </u>
3. Is the space assigned reasonably adequate?	<u>X</u>	<u> </u>
4. Are you experiencing any problems with access to equipment, computer time, supplies, technical support?	<u>X</u>	<u> </u>
If so, explain below. Difficulties with reagent/supply acquisition are frequent, but surmountable and Air Force personnel do try to expedite acquisition for me.		
5. Are you being encouraged to plan for publication of your research results in referred journals?	<u>X</u>	<u> </u>
6. Are you able to participate in local seminars, colloquia, etc.?	<u>X</u>	<u> </u>
7. Are you encouraged to plan for attendance at appropriate national and/or regional meetings?	<u>X</u>	<u> </u>
8. Have you encountered laboratory influences detrimental to your proposed research? Explain.	<u> </u>	<u>XX</u>

Comments:

In general my laboratory experience at Brooks has been quite positive. I have access to very sophisticated equipment and stimulating intellectual interactions with both Dr. Kiel and Dr. Parker (my research advisor and the resident molecular biologist respectively).

Brief resume of progress: Great strides have been made toward in situ production of the potential chemiluminescent microwave dosimeter diazolumelanin (DALM) in mammalian cells. Adjunct research in the area of nitrite production in leukocytes has also been highly productive. In all, 2 abstracts and 1 paper have thus far been submitted. See attached abstracts.

General impression of program to date:

The program is an excellent opportunity for young, dedicated post-docs to enter and perhaps remain in federal laboratories where they are sheltered from many of the university or industrial burdens and able to focus on well-defined research projects in a stimulating environment.

Suggestions:

If associates were actual temporary federal employees, they might be eligible for HMO coverage?

P.S. If you plan on extending your tenure beyond the termination date of your award, please refer to the PPP Booklet on instruction for renewing.

Comments:

Considerable progress has been made in determining the absolute yield of $\text{NH}(\text{A}^3\Pi)$ production in HN_3 decompositions. Brief resume of progress: as well as the luminescent yield of other species produced when HN_3 is decomposed in the presence of other gases. These and other productive interactions with laboratory staff have resulted in several papers currently being prepared for publication. In addition a small program on $\text{O}_2(\text{g}^1\text{Ag})$ generation via energy transfer from triplet $\text{C}_{60}(+\text{C}_{70})$ in benzene solvent has enjoyed rapid progress. It is hoped to attempt heterogeneous generation of $\text{O}_2(^1\Delta)$. General impression of program to date: on films of $\text{C}_{60}(+\text{C}_{70})$ in the near future. An excellent program - perhaps it should be more widely advertised.

Suggestions:

P.S. If you plan on extending your tenure beyond the termination date of your award, please refer to the PPP Booklet on instruction for renewing.

Comments: Item 4. To procure any item for research the Air Force Laboratory has to go through several procedures which are time consuming. The adviser has to spend a lot of time chasing the papers.

BRIEF RESUME OF PROGRESS; The main aim of the research is to examine the convective heat transfer process in the wall region, the outer flow having high freestream turbulence. It is an experimental investigation. The large water channel with thick sublayer necessary for this work has been designed and it is under fabrication in the machine shop. Instrumentation for heat transfer measurements using multichannel on line data processing system has been set up.

General impression of program to date: The program is on heat transfer mechanism in high turbulent flows encountered in aircraft gas turbines. It is interesting & the work is progressing in the proper direction.

Suggestions: The investigation is experimental in nature & it calls for facilities to be designed and fabricated specially for this work. It will require an additional year to bring the project to a satisfactory stage.

P.S. If you plan on extending your tenure beyond the termination date of your award, please refer to the PPP Booklet on instructions for renewing.

Luigi A. Smaldone

Sunspot, October 22, 1991

Patents Applied for as a Result of Research as an Associate: N/A.

Future Position and Address: Associate Professor at the

Dipartimento di Scienze Fisiche
Università degli Studi di Napoli
Mostra d' Oltremare, Pad. 19
I-80125 NAPOLI, Italy

Summary of Research During Tenure:

The goal of the project is to supply observational bases to the magnetohydrodynamic modeling of solar active regions. The basic physical problem, in this field, is to understand the role of the gases motions in the control of magnetic flux elements, leading to the building-up of magnetic energy, its stress and sudden release (solar flares). A new conception instrument, the *20 milliångstroms filter*, has been used in order to acquire information about the three-dimensional pattern of the photospheric gas flow and the high spatial resolution structure of the magnetic field.

Extensive laboratory tests have been performed on the new filter (based on a capacity controlled Fabry-Perot Interferometer) and different optical interfaces with the National Solar Observatory Vacuum Tower Telescope have been tried out.

Observations of the active regions magnetic field and velocity field (using 4 different spectral lines in order to have the gas flow at 4 heights, from 40 to 1000 Km, in the solar atmosphere) have been performed in the last March and May. An observing run is still in progress.

Publications and Papers Resulting from Research as an Associate:

- (1) *Analysis of solar flares optical spectra. VI.- Velocity fields in the 13 June 1980 flare area.* Falchi, A., Falciani, R. and Smaldone, L.A. *Astronomy and Astrophysics*, 1991 in press.
- (2) *Narrow Bandpass Filter Solar Observations.* Smaldone, L.A., Cauzzi, G. and Keil, S.L., (1991) Presented at : 21st Meeting of Solar Physics Division of AAS, Huntsville, Alabama, April 9-11,1991. Bull. Amer. Astron Soc. Vol 23, No. 2, Pag. 54, 1991.
- (3) *High Resolutions Observations of Solar Flares.* Smaldone, L.A., Cauzzi, G., Falchi, A. and Falciani, R. (1991). To be presented at : Fall Meeting of American Geophysical Union, San Francisco, California, Dicember 9-13, 1991. October 29 issue of *Eos*, 1991 in press.
- (4) *On the calibration of line-of-sight magnetograms.* Cauzzi, G., Smaldone, L.A., Balasubramaniam.K.S., Keil, S.L., (1991). Submitted to Solar Physics.
- (5) *The NSO FPI : tests and set-up notes.* Cauzzi, G., Hegwer, S. and Smaldone, L.A.. NSO Technical Report 1991-02 (1991).
