PREFACE

This report presents the results of a detailed Air Force Occupational Survey of the Logistics Plans and Programs Utilization Field (66XX) and the Logistics Plans Career Field (661X0). Authority for conducting occupational surveys is contained in AFR 35-2. Computer products that support this report are available for use by operations and training officials.

The survey instrument was developed by Captain Harold Huguley III, with computer programming support by Mr Wayne Fruge. Ms Linda McDonald provided administrative support. First Lieutenant Gary W. Foster, Occupational Analyst, analyzed the data and wrote the final report. This report was reviewed and approved by Mr Gerald R. Clow, Chief of Management Applications Section, Occupational Analysis Flight.

Approved additional copies are available upon request to the USAF Occupational Measurement Squadron, Attention: Chief, Occupational Analysis Flight (OMY), 1550 5th Street East, Randolph AFB TX 78150-4449.

Squadron

SUMMARY OF RESULTS

1. Survey Coverage: Logistics Plans and Programs (AFSC 66XX) utilization field and Logistics Plans (AFSC 661X0) career ladder personnel were surveyed to obtain current data on increased automation responsibilities, mainly in Contingency Operations/Mobility Planning and Execution System (COMPES) functions. These personnel were also surveyed to help assess the impact of the deletion of manpower, facilities, and budget duties from AFR 39-1 and the development of Air Force Manpower Standards for logistics plans and programs work centers. A single job inventory was administered to all active duty personnel during May through October 1992. The total sample population consists of 1,013 Air Force members, this represents 60 percent of the total eligible population.

2. Specialty Jobs: There are 16 logistics plans and programs jobs that were identified. Three of the jobs grouped together to form the Logistics Staff Personnel cluster, and three other jobs grouped together to form the Wholesale Logistics Personnel cluster.

3. Comparison with Previous Occupational Survey Report (OSR): All the independent jobs in the current OSR matched to the previous 661X0 OSR, except two mainly officer job clusters (Logistics Staff Personnel and Wholesale Logistics Personnel). One job cluster (Manpower and Authorizations Personnel) and four independent jobs (MAJCOM Functional Managers, Functional Systems Analysts, ATC Logistics Plans Instructors, and Facilities Managers) identified in the previous enlisted OSR did not have a match in the current OSR. Due to the lack of availability of independent job definitive task data, a comparison of the current OSR to the previous 66XX OSR could not be accomplished.

4. Duty AFSC Analysis: The specialty description analysis indicated personnel were basically performing duties and tasks specified in AFR 36-1 and AFR 39-1. There were some grade-spread discrepancies in AFR 36-1. Specifically, AFR 36-1 specified that captains and majors should occupy DAFSC 662X, however, 39 percent of these personnel were lieutenants. In addition, AFR 36-1 also states that majors and lieutenant colonels should occupy DAFSC 661X; however, 20 percent of these personnel were captains. The descriptions written in AFR 39-1 concerning DAFSCs 66130/66150, 66170, and 66190/66100 were accurate.

5. Military Rank Analysis: In performing an analysis of the military rank, lower ranking officers were generally spending more time performing Mobility and Acquisition Functions, while higher ranking officers tend to have more supervisory duties. Likewise, lower ranking enlisted personnel spend more time performing Mobility, Support Agreements, and Administrative and Supply Functions, while senior NCOs performed more supervisory types of duties.

6 First-Assignment Personnel: Based on time in utilization field (TIUF) and time in career field (TICF), the survey included 349 respondents who were first-assignment personnel. Out of these 349 respondents, 227 were officers and 122 were enlisted. First-assignment 662X officers mostly perform Command, Management, and Staffing Functions, Acquisition Management Functions, and Mobility Functions. First assignment 661X0 personnel mostly perform Command, Management, and Staffing Functions; Mobility Functions; and Support Agreement Functions.

7. Training Analysis: Overall, analysis of the OSR data with the STS 661X0 and CTS G3OLR6621 003 revealed that the data provide adequate support for these documents. However, there are some areas that might be improved upon. Likewise, POI G3ALR66130 003 and POI G3OLR6621 003 are being supported by the OSR data, but may need some minor adjustments.

8 Job Satisfaction: Overall, officers and enlisted personnel involved with logistics plans and programs were fairly satisfied. As for career plans and intentions, most of the personnel plan to stay in the Air Force and retire. As a whole, all personnel expressed interest in their job and are moderately satisfied with their work accomplishment. They also feel that their talents and training are being moderately utilized. However, out of the choices given in the job inventory, most members felt the most unfavorable aspect about being in logistics is they do not have enough authority to carry out their responsibilities. As for career progression, most members rate the opportunity for advancement to be very poor to fair.

9 Implications: The OSR validated the decision to delete manpower and facilities functions from the current AFR 39-1 as primary duties of the enlisted career field. However, budgeting functions are still being performed by a small number of Financial Management NCOs. Further analysis of AFR 36-1 and 39-1 indicates that slight changes may be in order, especially with AFR 36-1 and the grade spread associated with each DAFSC. The OSR analysis also revealed that, due to increased computer automation responsibilities, the number of COMPES operators has increased from 8 percent to 10 percent. The CTS, STS, and POIs for respective logistics personnel seem to be supported by the OSR data. However, slight changes may be warranted.

**OCCUPATIONAL SURVEY REPORT
LOGISTICS PLANS AND PROGRAMS PERSONNEL
AFSCs 66XX AND 661X0**

INTRODUCTION

This report summarizes the occupational survey results of the Logistics Plans and Programs Personnel, it includes related work performed by AFS 66XX and 661X0 officers and enlisted members. The Chief, Logistics Plans Division, DCS/Logistics & Engineering, requested the survey due to increased automation responsibilities; deletion of manpower, facilities, and budget duties; and the development of Air Force manpower standards for logistics plans and programs work centers. Increased automation has resulted from various contingency operations/mobility planning and execution system (COMPES) enhancements and upgrades and further developments in automated data processing. Manning and training improvements resulted from the previous OSR, and there is some necessity for more improvements based on the new OSR findings.

Historical Background

The present Logistics Plans and Programs utilization field has its origins dating back to May 1956 when the Production Procurement (AFS 6525) and Purchasing and Contracting (AFS 6444) specialties merged to form the 66XX utilization field. By September 1962, Procurement had separated into its own utilization field, leaving Logistics Plans and Programs (AFS 6624) by itself. In September 1964, the Logistics Staff Officer (AFS 6616) was created as a senior level AFSC for Logistics officers.

The Logistics Plans specialty (AFSC 661X0) was created in April 1976 to draw together the logistics planning functions of supply, transportation, and maintenance, thus improving overall efficiency of operations planning. This specialty was formed as a lateral career ladder open only to those with prior experience in one of the aforementioned component fields. In October 1978, a Chief Enlisted Manager (CEM) code (AFSC 66100) was created as Logistics Program Manager. In 1983, the career ladder became open to anyone with logistics-related career experience.

APPROVED FOR PUBLIC RELEASE; DISTRIBUTION UNLIMITED

Training Background

In the 66XX utilization field, Course G30LR6621 002, Logistics Plans and Programs Officer, is the only ATC officer technical training offered. This course lasts for approximately 5 weeks. The Logisticians are trained in the duties and responsibilities of retail-level logistics at Lowry AFB CO. Instruction in the area of wholesale logistics is obtained from several courses through the Air Force Institute of Technology at Wright-Patterson AFB OH. Ranging from 5 to 20 weeks in length, these courses are taken prior to assignment in a specific wholesale area or whenever feasible. In the AFSC 661X0 career ladder, Course G3ALR66130 004, Apprentice Logistics Plans Specialist, is a 19-day course also taught at Lowry AFB CO. This 3-level course trains future logistics planners in programming, planning, mobility, and COMPES functions.

CURRENT SPECIALTY DESCRIPTIONS

Logistics Plans and Programs Officer (6621 and 6624) manages and controls logistics plans and programs at the corporate, wholesale, and retail levels that encompass the logistics functional areas of supply, transportation, engineering and services, and contracting. Manages systems, subsystems, or equipment throughout the life cycle, to include integrated logistics support activities during the acquisition phase, mobility, war reserve material management (WRM), support agreements, and contingency planning during the operational life of the system. Grade spread is captain through major.

Logistics Plans and Programs Staff Officer (6611 and 6616) formulates and administers plans and programs at the corporate, wholesale, and retail levels that encompass the logistics functional areas of supply, transportation, engineering and services, and contracting. Plans for and manages systems, subsystems, or equipment throughout the life cycle, to include integrated logistics support activities during the acquisition phase, mobility, WRM management, support agreements, and contingency planning during the operational life of the system. Grade spread is major through colonel.

Logistics Plans Specialist (66110, 66130, and 66150) performs, evaluates, monitors, and inspects logistics plans and programs activities, including logistics plans, specialized logistics programs, WRM programs, support agreements, and mobility plans.

Logistics Plans Technician (66170) develops, evaluates, monitors, and supervises logistics plans and programs activities, including logistics plans, specialized logistics programs, WRM material programs, support agreements, and mobility plans.

Logistics Plans Superintendent (66190 and 66100) superintends development, evaluations, planning, and documentation of all logistics plans functions and activities. Plans, organizes, and manages logistics plans activities. Directs logistics plans activities. Inspects and evaluates logistics plans functions. Provides technical logistics plans support.

SURVEY METHODOLOGY

Inventory Development

The data collection instrument for this occupational survey was "Logistics Plans and Programs Officer and Enlisted Personnel USAF Job Inventory, AFPT 90-66X-954," dated April 1992. The inventory consisted of two main sections:

- 1) Respondents' biographical and current job information section
- 2) A detailed list of tasks performed at all organizational levels

The task list was prepared after reviewing the two previous job inventories, the logistics publications, and all pertinent directives. The list was further developed by selected subject-matter experts (SMEs) at the following locations:

<u>Location</u>	<u>Organization Visited</u>
Lowry AFB	3400 TCHTW 3440 TCHTG
Offutt AFB	HQ SAC 55 SRW
Andrews AFB	89th AW 89th LSS 113 TFW
Langley AFB	HQ TAC 1 LSS
Scott AFB	HQ MAC USTRANSCOM 375th AW

Wright-Patterson AFB	HQ AFLC ASD AFIT 2750 LS
Hurlburt Field	HQ AFSOC 1 SOW 823rd 834th
Robins AFB	HQ AFRES 5 CCGP 4400th
Shaw AFB	9 AF 363 FW 682 ASOC 507 ACW
Charleston AFB	437 AW 315 MAW

The resulting job inventory contained a comprehensive listing of 1,539 tasks grouped under 19 duties.

Table 1 provides a list of the duty titles used in the job inventory.

Survey Sample

During April through October 1992, 1,690 Logistics Plans and Programs Job Inventories (JI) were administered in an effort to capture all eligible Logistics Plans and Programs Personnel. In total, 1,013 JIs were returned and analyzed; this represents 60 percent of the 1992 eligible population. Table 2 shows sample representation by MAJCOMs. Sample is representative of the original population.

Survey Administration

USAF Job Inventory Booklets. All individuals who filled out an inventory completed an identification and biographical section. Next, they went through the booklet and checked each task performed in their current job. Finally, they went back and rated each task they checked on a 9-point scale reflecting relative time spent on each task compared to all other tasks. Ratings range from "1" which indicated very small amount of time spent to "9," which indicated a very

ATC	3	3	5	4
SOC	3	2	1	0
SPACECOM	2	3	3	3
Other	6	13	21	29

large amount of time spent. The relative percent time spent on tasks for each inventory was captured by first totaling all rating values on the inventory. The rating for each task was then divided by this total and the result multiplied by 100. The percent time spent ratings from all inventories were combined and used with percent members performing to describe the various groups in the career utilization field.

Training Emphasis (TE) Booklets TE booklets were completed by 67 experienced 66XX officers in the grade of major and 84 experienced 661X0 NCOs in the grades of technical sergeant and master sergeant. Individuals completing the TE booklets were also asked to rate tasks on a 9-point scale (from "1" no training is required to "9" extremely high amount of training needed). The TE rating is a relative comparison of which tasks require structured training of new logistics personnel (first 48 months in the career field). "Structured" training is defined as training provided at training schools, field training detachments, mobile training teams, formal OJT, or any other organized training method. For this survey, the officer responses indicate an average (mean) TE of .85; however, some tasks are as high as 4.09. Similarly, the NCO responses indicate an average (mean) TE of 1.18; however, some tasks are as high as 6.37.

Task Difficulty (TD) Booklets To complete the TD booklet, a total of 87 technical sergeants and master sergeants rated each task in the inventory with which they were familiar on a 9-point scale, extremely low relative difficulty (a rating of 1) to an extremely high relative difficulty (a rating of 9). TD refers to the length of time required for the average job incumbent to learn to perform that task satisfactorily. The data had an interrater reliability (as assessed through components of variance of standardized group means) of .96. This figure indicates high agreement among raters. The TD ratings were adjusted to give a rating of 5.00 to a task of average difficulty, with a standard deviation of 1.00. The data are then used to rank order the tasks in the job inventory in descending values of rated TD. When used in conjunction with other information, such as percent members performing and TE, TD ratings can provide insight into training requirements. Such insight may help validate lengthening or shortening portions of instruction to fill the actual required needs of the employers of tech school graduates

SPECIALTY JOBS

Job Clustering Process

Once the job inventories and the task factor booklets were received from the field, a very powerful computer program written to analyze occupational input data called the Comprehensive Occupational Data Analysis Program (CODA[™]) created a job description for each respondent as well as composite job descriptions for members of various demographic groups.

For the purpose of organizing individual jobs into similar units of work, CODAP used an automated job clustering process. The basic identified group in this hierarchical process is referred to as a "Job." If this job has distinguishing characteristics that are unrelated to other jobs, it is referred to as an "Independent Job." When there is a substantial degree of similarity between jobs, they are grouped together and identified as a "Job Cluster." The resulting data may be used to evaluate the accuracy of career documents (e.g., AFR 36-1 and AFR 39-1) and to gain a better understanding of current personnel utilization and training applications.

Overview of Specialty Jobs

There are 16 logistics plans and programs jobs that were identified; 3 of these jobs are found under the Logistics Staff Personnel job cluster, and another 3 of these jobs are found under the Wholesale Logistics Personnel job cluster. This represents 60 percent of the logistics plans and programs survey. The majority of the respondents spend their duty time performing tasks associated with Command, Management, and Staffing Functions (22 percent); Performing Mobility Functions (14 percent); Performing Administrative and Supply Functions (10 percent); Performing Contingency Planning Functions (7 percent); Performing War Reserve Material (WRM) Management Functions (6 percent); and Performing Mobility Control Center (MCC) or Logistics Readiness Control (LRC) Functions (6 percent).

Figure 1 shows the personnel percentage distribution among the identified clusters and independent jobs. The titles chosen may not directly equate to primary duty areas or reflect any presently offered logistics plans and program job titles. Each title does, however, describe what the incumbents actually do in their assigned positions.

Job Descriptions

The following paragraphs offer a brief description of the 16 specialty jobs: 10 independent jobs are listed plus 6 other jobs that are grouped within 2 job clusters. First, a list of the duties where the incumbents spend the majority of their duty time is presented. Then a list of typical tasks in these duty headings and pertinent background information is discussed to differentiate between all the other jobs. Appendix A presents a detailed list of independent jobs and jobs identified in each cluster, Appendix B presents background information for each cluster and independent job; Appendix C outlines the tasks performed by each cluster and independent job. Appendix D outlines the representative tasks performed by each officer and enlisted rank.

I. MOBILITY EXERCISE PLANNERS (N=13). This is a small independent job consisting of members whose efforts are highly concentrated in conducting exercise functions. Their duty time is spent performing tasks in the following duties: Performing Mobility Functions (31 percent); Performing Command, Management, and Staffing Functions (13 percent); Performing Contingency Planning Functions (12 percent); and Performing MCC or LRC Functions (10 percent). Between 90 to 100 percent of the members perform the following differentiating tasks:

AFSCs 66XX/661X0
CAREER LADDER STRUCTURE
(N= 1013)

* DENOTES INDIVIDUALS WHO DID NOT GROUP IN ANY MAJOR JOB

FIGURE 1

- Coordinate exercise or deployment contingency plans or requirements with local units
- Monitor mobility progress on MCC status boards
- Arrange exercise logistics support, such as facilities, transportation, and supply
- Coordinate support, such as billeting, for deployments or exercises with base agencies
- Coordinate marshalling of cargo for deployments or exercises

Mobility Exercise Planners consist of four officers and nine enlisted personnel; both perform similar tasks and duties. Incumbents predominately work in SAC (54 percent), USAFE (23 percent), and TAC (15 percent), with the majority of these members located at wing level (69 percent). Sixty-two percent of these incumbents are dissatisfied with the sense of accomplishment from their work and feel the communication flow between different logistics areas is poor. These members performed the fewest average numbers of tasks (110). Besides exercise planning, these incumbents also have extensive experience in contingency planning (85 percent) and mobility (92 percent). The grade spread ranged from second to first lieutenant and technical sergeant to senior master sergeant.

II. MOBILITY NCO (N=12). This small independent job represents members whose efforts are highly concentrated in performing mobility functions. Their duty time is spent performing tasks in the following duties: Performing Mobility Functions (37 percent); Performing Command, Management, and Staffing Functions (16 percent); and Performing Administrative and Supply Functions (12 percent). Between 65 to 100 percent of the NCOs perform the following differentiating tasks:

- Operate microcomputer terminals which are not CAMS or COMPES terminals
- Prepare mobility or deployment folders
- Coordinate assignments of personnel to fill mobility positions
- Prepare DD Forms 1387-2 (Request for Hazardous Cargo Handling)
- Coordinate hazardous cargo handling forms (DD Form 1387-2)

Thirty-three percent of the incumbents work in TAC, while 25 percent work in PACAF and 17 percent work in Special Ops command. Most mobility NCOs (83 percent) work at the squadron level. Ninety-two percent of these members do not have any supervisory duties and perform the second lowest average number of total tasks (115). Of all the jobs that were identified, mobility NCOs had the highest percentage (92 percent) of members who found their job interesting. In addition, 92 percent of these incumbents felt they would stay in the AFSC until

retirement. However, 92 percent of these members also felt their rank was too low compared to their responsibilities. In this same regard, 67 percent of the incumbents also felt that their rank occasionally caused problems that affected their performance of their duties. Thirty-three percent of the mobility NCOs have completed LOG199, Introduction to Logistics. Besides having experience with mobility, these incumbents also possess extensive experience in training management (67 percent) and inspection and evaluation (33 percent). The grade spread extended from sergeant through master sergeant.

III. CONTINGENCY PLANNERS (N=34). This independent job represents about 3 percent of the total survey. Members spend their duty time performing tasks in the following duties: Performing Command, Management, and Staffing Functions (27 percent), Performing Contingency Planning Functions (16 percent), Performing Mobility Functions (12 percent), and Performing Exercise Planning Functions (9 percent). Between 68 and 80 percent of these members perform the following differentiating tasks:

- Safeguard classified documents
- Write inputs to programming plans (P-Plans) and operational plans (O-Plans)
- Consolidate logistics inputs to war or contingency plans
- Maintain contingency plans
- Request logistics inputs from functional areas, such as supply or transportation

The majority of the personnel are enlisted (62 percent); all members perform similar tasks, duties, and jobs. Approximately a third of the members (32 percent) are located in USAFE, while 26 percent are in PACAF and 12 percent are in TAC. Most of these members work at the wing (38 percent) or squadron (26 percent) level. Sixty-eight percent of the contingency planners are located outside the continental U.S. Fifty percent of the incumbents feel the communication flow between different logistics areas is poor. Over a third of the members (38 percent) have completed LOG 299, Combat Logistics, and 32 percent have completed Contingency Wartime Planning (CWP). Besides experience with contingency planning, most incumbents have extensive experience with exercise planning (91 percent). The grade spread ranged from captain through major and technical sergeant to chief master sergeant.

IV. LOGISTICS COMMANDERS AND SUPERINTENDENTS (N=148). This job represents 15 percent of the entire survey. Deputy commanders, assistant superintendents, OICs, and NCOICs are also included in this job. Incumbents' duty time is spent performing tasks in the following duty areas: Performing Command, Management, and Staffing Functions (30 percent), Performing Mobility Functions (18 percent); Performing MCC or LRC Functions (7 percent); Performing Inspections and Evaluating Functions (7 percent); and Performing Contingency Planning Functions (7 percent). Members of this group perform the following differentiating tasks:

- Direct mobility control center (MCC) during exercises or deployments
- Coordinate manning of MCCs or LRCs
- Prepare mobility concept briefing
- Establish mobility control centers
- Supervise Logistics Plans Specialists (DAFSC 66150)
- Review mobility policies and directives

There are 91 officers and 57 enlisted personnel in this group. They are primarily spread among TAC (23 percent), USAFE (16 percent), SAC (15 percent), MAC (11 percent), and PACAF (11 percent). Most incumbents are located at the wing (49 percent), group (13 percent), and squadron level (28 percent). They also supervise the highest average number of people (five). These members perform the highest average number of tasks (254) of all the jobs that were identified in the survey. Twenty-five percent of these personnel have completed LOG 299, Combat Logistics. Most incumbents have experience in mobility (93 percent), exercise planning (83 percent), WRM management (79 percent), support agreements (78 percent), contingency planning (74 percent), and inspection and evaluation (34 percent). The grade spread ranged from second lieutenant through lieutenant colonel and technical sergeant through chief master sergeant

V. MOBILITY CONTROL CENTER OPERATORS (N=22). This small independent job represents members whose efforts are highly concentrated in performing mobility control center operations. Members spent their duty time performing the following duties: Performing Mobility Functions (34 percent); Performing Mobility Control Center or Logistics Readiness Center Functions (15 percent); and Performing Command, Management, and Staffing Functions (13 percent). The following list represents differentiating tasks performed by these members:

- Write base mobility schedule of events
- Write base mobility plans or base supplement to AF Regulation (28-4)
- Coordinate mobility plans with mobility staff personnel
- Distribute base mobility plans or base supplements to AF Regulation (28-4)
- Prepare mobility concept briefings

This job is primarily composed of enlisted members; all members perform similar tasks, duties, and jobs. Most members (32 percent) are in ATC, while 9 percent are in SAC, TAC, PACAF, USAFE, AFSPACECOM, and AF ELEM Other. Thirty-two percent of the incumbents work at the wing and squadron levels, and 23 percent are found at the group level. Most of these

personnel have extensive experience in mobility (100 percent) and exercise planning (82 percent). The grade spread of incumbents ranged from second lieutenant through captain and sergeant through master sergeant.

VI. MOBILITY COMPES OPERATORS (N=22). This independent job represents 2 percent of the survey. Members spend their time performing the following duties. Performing Mobility Functions (27 percent); Performing COMPES Functions (14 percent); Performing Command, Management, and Staffing Functions (11 percent); Performing MCC or LRC Functions (11 percent); and Performing Contingency Planning Functions (11 percent). Differentiating tasks performed by these members include:

- Prepare packing and load lists
- Update equipment lists for COMPES
- Develop nonstandard UTCs from standard UTCs for local use
- Develop equipment lists for COMPES
- Implement procedures for operating COMPES
- Develop vehicle or equipment requirements for exercises or deployments

All enlisted members compose this group. Twenty-seven percent of these members are in TAC, 23 percent are in SAC, and 9 percent are in Special Ops, PACAF, MAC, and USAFE. Half of the incumbents work at wing level, and 32 percent work at the squadron level. All of these personnel have experience in mobility, while 77 percent and 41 percent have experience in support agreements and training management, respectively. The grade spread is sergeant through master sergeant.

VII. COMPES OPERATORS (N=36). This independent job represents 3 percent of the survey, and all are NCOs. Incumbents spend their duty time performing the following duties: Performing COMPES Functions (30 percent); Performing Mobility Functions (14 percent), and Performing Command, Management, and Staffing Functions (14 percent). They perform the following differentiating tasks:

- Maintain copies of LOGFOR and LOGPLAN
- Prepare packing and load lists
- Update equipment lists for COMPES
- Upload UTCs in active files
- Develop equipment lists for COMPES
- Develop nonstandard UTCs from standard UTCs for local use

Distribute COMPES equipment and personnel management products
Coordinate LOGFOR and LOGPLAN with COMPES personnel
Conduct COMPES training (LOGMOD-B, LOGMOD-M, and LOG-FAC)

Forty-two percent of the incumbents are in TAC, 17 percent are in SAC, and 11 percent are in MAC. Sixty-four percent of the members work at the wing level, and 33 percent work at the squadron level. The COMPES operators perform the third lowest average number of total tasks (77). All of these personnel were trained at the tech school. The grade spread ranged from sergeant through master sergeant.

VIII. WRM PERSONNEL (N=46). This independent job consists of members whose efforts are highly concentrated in war reserve materiel (WRM) functions. These members perform the following duties: Performing WRM Functions (37 percent), and Performing Command, Management, and Staffing Functions (19 percent). They spend 90-100 percent of their duty time performing the following differentiating tasks:

Conduct surveillance visits of WRM locations
Conduct follow-up of WRM review board findings
Coordinate status of WRM assets with WRM personnel
Review WPARRs
Analyze WRM reports, such as war consumables report
Review WCDOs

This group consists mainly of NCOs; all perform the same types of tasks, duties, and jobs. Most members are assigned to USAFE (41 percent), TAC (17 percent), SAC (13 percent), PACAF (11 percent), and MAC (11 percent). Fifty-nine percent of the personnel work at the wing level, 13 percent at the group level, and 24 percent at the squadron level. Sixty-one percent of the incumbents are located outside the continental U.S. One-third of the WRM personnel have completed LOG 299, Combat Logistics, and 28 percent of the members have completed Contingency Wartime Planning. Lieutenants and technical sergeants through senior master sergeants comprise this group.

IX. SUPPORT AGREEMENT PERSONNEL (N=98). This job represents 10 percent of the survey. These incumbents perform the majority of their tasks in the following areas. Performing Support Agreement Functions (49 percent), and Performing Command, Management, and Staffing Functions (15 percent). On the average, 95 percent of the members spend their duty time performing the following differentiating tasks:

- Maintain support agreements
- Coordinate support agreements with supplier (host) and receiver (tenant) approving authorities
- Coordinate support agreements with supplier (host) and receiver (tenant) comptroller functions
- Initiate review of support agreements
- Review host-tenant support agreements
- Negotiate host-tenant support agreements

Members of this cluster were primarily NCOs. Twenty percent of this group work in TAC, 19 percent belonged to SAC, 18 percent belonged to USAFE, and 10 percent were in MAC. Fifty-two percent of the members work at wing level, while 13 percent are at group level and 23 percent are at squadron level. Besides experience in support agreements, 91 percent of these personnel have experience in mobility. The grade spread included first lieutenants and sergeants through senior master sergeants.

X. FINANCIAL MANAGEMENT PERSONNEL (N=23). This job represents 2 percent of the survey. Their duty time is spent performing tasks under the following duty titles: Performing Financial Management Functions (41 percent), and Performing Command, Management, and Staffing Functions (25 percent). Within these duty areas the differentiating tasks include.

- Allocate or distribute funds
- Analyze budget requirements
- Prepare unfunded requirements
- Verify availability of funds for budgets
- Identify unfunded requirements

This job included 11 officers and 12 NCOs; all perform similar tasks, duties, and jobs. The majority of these members are in USAFE (22 percent), with 13 percent in MAC. Twenty-six percent of the incumbents work at the wing and group level, with 15 percent working in joint service assignments. Sixty-one percent of this group felt their job did not utilize their training. However, 83 percent of these personnel would stay in the Air Force and retire with 20 years or more of TAFMS. Of all jobs that were identified, these members spend the most time performing additional duties. Specifically, 52 percent of this group spend more than 30 percent of their duty time performing additional duties. Seventy percent of the incumbents also have experience in support agreements. Most of these members' grades ranged from second lieutenant through major and technical sergeant through senior master sergeant. The identification of this job may cast some doubt on the decision to delete budgeting functions from AFR 39-1. This issue may want to be reexamined.

JOB CLUSTER LOGISTICS STAFF PERSONNEL (N=224). The members of this cluster represent the largest number of incumbents (22 percent) performing similar duties and tasks. They spend 70 percent of their duty time performing the following duties: Performing Command, Management, and Staffing Functions (54 percent), Performing Contingency Planning Functions (7 percent), and Performing Administrative and Supply Functions (6 percent). The three jobs identified in this cluster include:

Logistics Staff Officers
Contingency Staff Managers
Logistics Division and Branch Chiefs

XI. LOGISTICS STAFF OFFICERS (N=22) This small independent job consists of Logistics Staff Officers comprised mainly of captains and majors. They spend their duty time performing the following duties: Performing Command, Management, and Staffing Functions (80 percent); Performing Administrative and Supply Functions (5 percent); and Performing Contingency Planning Functions (3 percent). The Logistics Staff Officers perform the following differentiating tasks:

Participate in logistics-related meetings, conferences, or working groups
Write messages or letters
Write background papers, point papers, or talking papers
Compile information for staff studies, staff summary sheets, or position papers
Prepare briefings or presentations
Conduct briefings or presentations
Write trip reports

The majority of these incumbents are in AFLC (27 percent), while 9 percent are in USAFE, AFSC, MAC, TAC, and other. Thirty-two percent work at the MAJCOM level, 15 percent work in a numbered Air Force and joint service, and 11 percent work at the wing level. Logistics Staff Officers performed the second least average amount of tasks (32). Seventy-two percent of the members have had experience with mobility, and 29 percent have had experience with contingency wartime planning (CWP). Incumbents hold the grade of captain, major, and lieutenant colonel.

XII CONTINGENCY STAFF MANAGERS (N=33) This independent job comprises 3 percent of the survey. Members spend their duty time performing the following duties: Performing Command, Management, and Staffing Functions (36 percent); Performing Contingency Planning Functions (22 percent); and Performing Administrative and Supply Functions (7 percent). The following differentiating tasks are performed by these job incumbents.

- Review joint operations planning execution system (JOPES)
output products
- Write inputs to regulations, directives, manuals, or
supplements
- Coordinate logistics policies or procedures with HQ Staff, DOD
agencies, or other services
- Participate in logistics planning conferences
- Review inputs to TPFDL or TPFDD

The job composite includes 19 officers and 14 NCOs. All members perform similar tasks and duties. Their jobs are mainly located in AFLC (27 percent) at the MAJCOM level (32 percent). In addition, 18 percent of the incumbents work at separate operating agencies and at joint services, while 11 percent work at the wing level. Logistics Staff Officers performed the least average amount of tasks (32) of all the jobs identified. Thirty-six percent of this group have had contingency wartime planning experience. The grade spread ranged from captain through lieutenant colonel and master sergeant through chief master sergeant.

XIII. LOGISTICS DIVISION AND BRANCH CHIEFS (N=43) This independent job consists of 5 percent of the entire survey. Incumbents spend their duty time performing tasks under the following duty titles: Performing Command, Management, and Staffing Functions (71 percent), Performing Financial Management Functions (4 percent), and Performing Contingency Management Functions (4 percent). The differentiating tasks include:

- Approve or disapprove correspondence, such as letters or
messages
- Approve or disapprove point, position, or talking papers
- Direct work assignments or workloads
- Conduct cross-staff coordination
- Approve or disapprove inputs to directive, regulations, or manuals
- Approve or disapprove duty schedules

This job consists of 39 officers and 4 NCOs, both perform the same types of tasks and duties. Twenty-eight percent of this group work in AFLC, and 14 percent are in USAFE. Thirty-five percent of these members are at the MAJCOM level, 19 percent at the numbered Air Force level, and 12 percent at the wing level. Logistics Division and Branch Chiefs supervise an average of five people. They also have the highest average time in career field (102 months) and the highest TAFMS (205 months). Seventy-four percent of these members have experience in exercise planning, 30 percent have completed Contingency Wartime planning, and 26 percent of these incumbents have completed LOG 299, Combat Logistics, or Security Assistance Management. The grade spread consists of captains, majors, lieutenant colonels, senior master sergeants, and chief master sergeants.

JOB CLUSTER: WHOLESALE LOGISTICS PERSONNEL (N=75). The members of this cluster represent 7 percent of the survey. They perform similar duties and tasks. As a whole, 92 percent of wholesale logistics personnel find their job interesting. They spend 75 percent of their duty time performing the following duties: Performing Acquisition Management Functions (49 percent); Performing Command, Management, and Staffing Functions (28 percent); and Performing Weapon System Support Functions (8 percent). The three jobs identified in this cluster include:

Acquisition Directors
Program Managers
Acquisition Staff Officers

XIV. ACQUISITION DIRECTORS (N=10). This is the smallest job identified in the survey. The incumbents spend their duty time performing the following duties: Performing Command, Management, and Staffing Functions (39 percent), Performing Acquisition Management Functions (22 percent), Performing Financial Management Functions (12 percent), and Performing Weapon System Support Functions (9 percent). They perform the following differentiating tasks:

Supervise civilians
Participate in program management reviews
Develop methods of management feedback or control
Allocate or designate use of equipment or supplies

The incumbents in this job are all officers; all perform the same types of tasks, duties, and jobs. Forty percent of the Acquisition Directors are in AFLC; 30 percent are at AFMC. Twenty percent work at the wing level. These members performed the second highest average number of tasks (199). They also have the second highest average for TAFMS (204 months). All of the

incumbents in this group plan to stay in the Air Force and retire with benefits. All of these members feel their previous logistics experience has been useful from a moderate to a very large extent. The grade spread ranged from captain to lieutenant colonel.

XV. PROGRAM MANAGERS (N=35). This job represents 3 percent of the survey. Members spend their duty time performing the following duties: Performing Acquisition Management Functions (52 percent), Performing Command, Management, and Staffing Functions (25 percent); Performing Weapon System Support Functions (10 percent), and Performing Financial Management Functions (5 percent). Members perform the following differentiating tasks:

- Coordinate deliveries of logistics items, such as tech orders, spare parts, or support equipment, with other units
- Coordinate user requirements with contractors
- Advise organizations on status of integrated logistics support (ILS) programs
- Coordinate milestone slippages and corrections with contractors

This job consists of 30 officers and 5 NCOs; all members perform the same type of tasks, duties, and jobs. They are mainly concentrated at AFLC (46 percent) and AFSC (29 percent) at the MAJCOM (29 percent), Detachment (17 percent), and Numbered Air Force level (14 percent). These personnel perform the third highest average number of tasks (186). The grade spread mainly included captains and majors and technical sergeants through chief master sergeants.

XVI. ACQUISITION STAFF OFFICERS (N=23). This job represents approximately 2 percent of the survey. They spend their duty time Performing Acquisition Management Functions (58 percent); Performing Command, Management, and Staffing Functions (28 percent), Performing Weapon System Support Functions (6 percent); and Performing Financial Management Functions (4 percent). Differentiating tasks performed by these incumbents include.

- Evaluate engineering change proposals (ECPs), ECRs, or specification change notices (SCNs)
- Review ECPs
- Coordinate acquisition matters with contractors
- Coordinate modifications with users
- Evaluate contractor cost or schedule data

The incumbents in this job are all officers; all perform similar tasks, duties, and jobs. All of the Acquisition Staff Officers are in the CONUS and work in AFLC (43 percent), AFSC (43 percent), and AFMC (13 percent), with 17 percent working at either the MAJCOM, Numbered Air Force, or wing level. These members performed the second lowest average number of tasks (68). The grade spread ranged from first lieutenant through major.

COMPARISON OF CURRENT JOB SPECIALTIES TO PREVIOUS OCCUPATIONAL SURVEY REPORTS

The results of the specialty job analysis were compared to the previous Logistics Plans Specialty OSR, dated March 1987. These results are in Table 3. Due to the lack of job definitive task data from the previous Logistics Plans and Programs OSR, dated April 1985, a comparison was not made to the new OSR data. Some differences exist in the identified job specialties that can be attributed to some modifications in the task list and analysis approach.

The current analysis of Logistics Plans OSR clusters and independent jobs accounts for 75 percent of the total sample.

ANALYSIS OF DUTY AFSC

An examination of DAFSC groups, along with the analysis of identified jobs, is an important part of each occupational analysis. The DAFSC analysis reveals similarities and differences among various levels based on tasks they performed and the relative time spent on particular duties. The information is used to assess the accuracy and how well the utilization and career field documents (AFR 36-1 and AFR 39-1, respectively) reflect what career ladder personnel are actually doing in the field.

The distribution of 66XX officer and 661X0 enlisted DAFSC groups across the duty titles is presented in Appendix E (relative time spent in each duty). The detailed list of tasks performed by each DAFSC is provided in Appendix F. The distribution of DAFSC groups among the 16 identified logistics plans and programs jobs and 2 job clusters is also presented in Appendix G.

DAFSC 662X. As the officer entry-level DAFSC, the 241 personnel in this group devote the majority of their duty time to Performing Command, Management and Staffing Functions (33 percent), Performing Acquisition Management Functions (14 percent), and Performing Mobility Functions (10 percent). The average number of tasks performed by 662X officers is 127. The majority of the 662X officers were logistics commanders (22 percent). Some of the officers enter the utilization field after serving in a previous DAFSC; this is reflected by the 662X rank distribution which includes second lieutenants (19 percent), first lieutenants (20 percent), captains

	B. Program Managers
	C. Acquisition Staff Officers

(53 percent), and majors (8 percent) The duty description written in AFR 36-1 is accurate, however, the grade spread indicates captains and majors should occupy this DAFSC, but in reality, 39 percent of these personnel are lieutenants

DAFSC 661X. This upgraded DAFSC group performs an average of 118 tasks. The 228 officers in this group spend 76 percent of their duty time Performing Command, Management, and Staffing Functions (48 percent), Performing Acquisition Management Functions (8 percent), Performing Inspection and Evaluation Functions (5 percent), Performing Financial Management Functions (5 percent), Performing Contingency Planning Functions (5 percent), and Performing Mobility Functions (5 percent). The majority (13 percent) of the officers work in command jobs, while 10 percent are Logistics Division and Branch Chiefs The rank includes captains (20 percent), majors (52 percent), and lieutenant colonels (22 percent) This indicates the majority of the 662Xs are upgrading into the 661X DAFSC. The duty description written in AFR 36-1 is accurate, however, 20 percent of these personnel are captains.

In regard to AFR 39-1, manpower, facilities, and budget functions have been deleted as a primary duty of the enlisted career field. However, the OSR revealed that some budgeting functions are still being performed by Financial Management personnel (see SPECIALTY JOB DESCRIPTIONS section)

DAFSC 66130/66150. The analysis indicates there are 185 members in this group performing an average of 98 tasks. They spend 75 percent of their duty time Performing Mobility Functions (16 percent); Performing Command, Management, and Staffing Functions (14 percent), Performing Support Agreement Functions (13 percent); Performing Administrative and Supply Functions (10 percent); Performing COMPES Functions (8 percent); Performing Contingency Planning Functions (7 percent), and Performing MCC or LRC Functions (7 percent). Nearly one-quarter of the members (22 percent) work in Support Agreements, while 17 percent work as a form of COMPES Operator The grade spread of DAFSCs 66130/66150 includes sergeants (34 percent), staff sergeants (58 percent), and technical sergeants (6 percent). The description written in AFR 39-1 is accurate

DAFSC 66170. This upgraded DAFSC group is the largest 661X0 group. The 309 members perform an average of 120 tasks. They spend 63 percent of their time Performing Command, Management, and Staffing Functions (24 percent); Performing Administrative and Supply Functions (9 percent); Performing Support Agreements Functions (8 percent), Performing Contingency Planning Functions (7 percent); and Performing WRM Functions (7 percent) Fourteen percent of these incumbents hold Support Agreement positions, while 13 percent are Logistics Superintendents and 9 percent work in WRM. The grade spread included staff sergeants (21 percent), technical sergeants (47 percent), and master sergeants (30 percent) The description written in AFR 39-1 is accurate.

DAFSC 66190/66100 This was a relatively small group with 50 members. They perform an average of 135 tasks. These members spend their duty time Performing Command, Management, and Staffing Functions (37 percent), Performing Mobility Functions (9 percent), and Performing Contingency Planning Functions (7 percent). Fourteen percent of these personnel work as Logistics Superintendents, 12 percent work as Contingency Staff Managers, and 8 percent work in Support Agreements. The grade spread includes technical sergeants (6 percent), master sergeants (36 percent), senior master sergeants (38 percent), and chief master sergeants (20 percent). The description written in AFR 39-1 is accurate.

In addition, Appendix F shows representative tasks performed by DAFSC 66XX, 661X0, and all members.

MILITARY RANK ANALYSIS

Analyzing the various characteristics associated with the rank distribution can provide officer utilization managers and enlisted career field managers with a better understanding of when and where to place Logistics Plans and Programs Personnel based on their skill level. In analyzing the relative time spent in duties across the rank distribution, Appendix H indicates that typical duties of each rank correspond to duties that should be performed at the associated skill levels. Lower ranking officers generally spend more time performing Mobility and Acquisition Functions, while higher ranking officers tend to have more supervisory responsibilities. Likewise, lower ranking enlisted personnel spend more time performing Mobility, Support Agreement, and Administrative and Supply Functions, while senior NCOs perform more supervisory types of duties. Appendix I shows the distribution of officer and enlisted grades across logistics plans and programs jobs. A slight trend towards command, staff, and contingency staff management exists as officers progress in rank. This same idea holds true for the enlisted force. Appendix J displays a positive correlation between the officer and enlisted rank distributions and the AF skill levels, as the rank increases, the skill level increases.

Second Lieutenants. There were 51 members who held the rank of second lieutenant, 11 percent of the total number of officers in the survey. The majority (46) of these members are in the 662X AF specialty. They spend their duty time performing Command, Management, and Staffing Functions (27 percent); Performing Mobility Functions (15 percent); Performing MCC or LRC Functions (9 percent); and Performing WRM Functions (8 percent). The jobs most common to second lieutenants are Logistics Commanders and WRM Personnel.

First Lieutenants. There were 49 members who held the rank of first lieutenant, 10 percent of the total survey. They were predominately 662X personnel. They spend their duty time Performing Command, Management, and Staffing Functions (26 percent); Performing Mobility Functions (15 percent); and Performing Acquisition Management Functions (15 percent). First lieutenants are usually Logistics Commanders, Support Agreement Personnel, or Acquisition Staff Officers.

Captains This was the largest officer group by grade with 173 members, 37 percent of the total number of officers in the survey. These members comprise 53 percent of the 662X utilization field and 20 percent of the 661X personnel. They spend their duty time Performing Command, Management, and Staffing Functions (37 percent), and Performing Acquisition Management Functions (15 percent). Most of the captains are Logistics Commanders (24 percent), Program Managers (8 percent), and Acquisition Staff Officers (8 percent).

Majors This was the second largest officer group by grade with 139 members, 30 percent of the total number of officers in the survey. These members comprised 8 percent of the 662X utilization field and 53 percent of the 661X utilization field. They spend their duty time Performing Command, Management, and Staffing Functions (48 percent), and Performing Acquisition Management Functions (9 percent). The most common jobs for majors include Logistic Commanders (12 percent), Logistics Division and Branch Chiefs (12 percent), and Program Managers (8 percent).

Lieutenant Colonels There were 53 officers who held the rank of lieutenant colonel, 11 percent of the total number of officers in the survey. These members comprised 20 percent of the 661X utilization field. They spend their duty time Performing Command, Management, and Staffing Functions (52 percent); Performing Acquisition Management Functions (8 percent); Performing Financial Management Functions (7 percent); and Performing Contingency Planning Functions (6 percent). They generally hold leadership positions associated with Logistics Division and Branch Chiefs (28 percent), Logistics Commanders (17 percent), and Contingency Staff Managers (11 percent).

Colonels. There were six members who held the rank of colonel, 1 percent of the total number of officers in the survey. These members comprised 3 percent of the 661X utilization field. They spend their duty time Performing Command, Management, and Staffing Functions (60 percent), and Performing Financial Management Functions (17 percent). They generally hold leadership positions associated with Logistics Division and Branch Chiefs (17 percent).

Sergeants There were 66 members who held the rank of sergeant, 12 percent of the total number of enlisted personnel in the survey. The majority (34 percent) of these members are in AFSC 66130/66150. They spend their duty time Performing Mobility Functions (17 percent); Performing Support Agreement Functions (15 percent); Performing Command, Management, and Staffing Functions (13 percent); and Performing Administrative and Supply Functions (10 percent). The jobs most common to sergeants are Support Agreement Personnel (27 percent), COMPES Operators (12 percent), Mobility COMPES Operators (9 percent), and Mobility NCOs (5 percent).

Staff Sergeants This was the largest enlisted group with 175 members, 32 percent of the total number of enlisted personnel in the survey. They are predominately in AFSCs 66130/66150 (58 percent) and 66170 (21 percent). They spend their duty time Performing Command, Management, and Staffing Functions (16 percent), Performing Mobility Functions (15 percent), and Performing Support Agreement Functions (12 percent). Staff Sergeants are usually Support Agreement Personnel (21 percent), COMPES Operators (11 percent), and WRM Personnel (7 percent).

Technical Sergeants This was the second largest enlisted group by grade with 158 members, 29 percent of the total number of enlisted personnel in the survey. These members comprise 47 percent of AFSC 66170. They spend their duty time Performing Command, Management, and Staffing Functions (22 percent); Performing Support Agreement Functions (17 percent); Performing Mobility Functions (17 percent), and Performing Administrative and Supply Functions (10 percent). Most of the technical sergeants are Support Agreement Personnel (13 percent), Logistics Superintendents (10 percent), WRM Personnel (8 percent), and MCC Operators (6 percent).

Master Sergeants This was the third largest group by enlisted grade with 113 members, 21 percent of the total number of enlisted personnel in the survey. These members comprised 30 percent of AFSC 66170 and 36 percent of AFSC 66190/66100. They spend their duty time Performing Command, Management, and Staffing Functions (31 percent); Performing Mobility Functions (11 percent), Performing WRM Functions (9 percent); and Performing Administrative and Supply Functions (8 percent). The most common jobs for master sergeants include Logistic Superintendents (22 percent), Support Agreement Personnel (9 percent), and WRM Personnel (8 percent).

Senior Master Sergeants There were 22 members who held the rank of senior master sergeant, 4 percent of the total number of enlisted personnel in the survey. These members comprise 38 percent of AFSC 66190/00. They spend their duty time Performing Command, Management and Staffing Functions (38 percent); Performing Mobility Functions (9 percent); Performing WRM Functions (8 percent); Performing Support Agreement Functions (7 percent); and Performing Acquisition Management Functions (6 percent). They generally hold leadership positions associated with Logistics Superintendents (18 percent), Support Agreement Personnel (9 percent), and Contingency Staff Managers (9 percent).

Chief Master Sergeants There were 10 members who held the rank of chief master sergeant, 2 percent of the total number of enlisted personnel in the survey. These members comprise 20 percent of AFSC 66190/66100. They spend their duty time Performing Command, Management, and Staffing Functions (46 percent); Performing Manpower and Authorization Functions (16 percent); Performing Inspection and Evaluation Functions (7 percent); and Performing WRM Functions (7 percent). They generally hold leadership positions associated with Logistics Superintendents (10 percent), Contingency Staff Managers (10 percent), and Program Managers (10 percent).

TRAINING ANALYSIS

Occupational survey data are used to assist in planning, developing, reviewing, and evaluating various training programs and documents such as the CTS, STS, and POI. These training efforts are relevant to personnel working in their first assignment. Factors that may be used in the analysis include percent of first-enlistment or first-assignment (1-48 months TIUF or TICF) personnel performing tasks, along with TE and TD ratings (as explained in the Survey Administration section). These factors were used in reviewing the AFSC CTS 66XX, STS 661X0, and POIs for courses G3OLR6621 003 and G3ALR66130 005, based on the matching of inventory tasks to the appropriate sections of the CTS, STS, and POIs by experienced technical school personnel from Lowry Technical Training Center. A complete computer listing displaying percent members performing, TE and TD ratings for each task, along with CTS, STS, and POI matchings, has been forwarded to the technical school for use in further review of training documents. A summary of that information is presented below.

First-Assignment Personnel. Based on TIUF, there were 227 first-assignment officers, and based on TICF, there were 122 enlisted personnel in this survey. This represents 34 percent of all survey respondents. First assignment 66XX officers show a high concentration of duty time spent Performing Command, Management, and Staffing Functions (37 percent); Performing Acquisition Management Functions (11 percent); and Performing Mobility Functions (10 percent). First assignment 661X0 personnel mostly perform Command, Management, and Staffing Functions (19 percent); Mobility Functions (15 percent), and Support Agreement Functions (12 percent). A more detailed description of the duties performed by first-assignment 66XX and 661X0 personnel is presented in Appendix K.

Training Emphasis. As explained in the Survey Administration section of this report, TE ratings are factors that can assist technical school personnel in deciding which tasks should be emphasized for entry-level training. In addition, they may provide support for adding or deleting training requirements. The TE ratings provided by the 67 logistics plans and programs officer SMEs yielded an average (mean) rating of .85 with a standard deviation of .73. Similarly, the TE rating by the 84 logistics plans enlisted SMEs yielded an average (mean) rating of 1.18 with a standard deviation of 1.44. According to ATCR 52-22, when a given task has an assigned TE rating greater than or equal to the sum of the mean value plus one standard deviation, in this case 1.58 for the officers and 2.62 for enlisted personnel, it merits strong consideration for inclusion in some form of structured training. Two hundred twenty-nine of the 1,539 tasks met this criteria for the officers, and 297 of the 1,539 tasks met this criteria for the enlisted personnel. Furthermore, many of the same tasks received high TE values for both the officers and enlisted. Appendix L displays the TE ratings for first-assignment 661X officers that had high percent members performing and also displays the same information for first-assignment DAFSC 661X0 personnel.

Task Difficulty The relative difficulty of each task in the inventory was assessed through ratings of 87 experienced 661X0 NCOs. These ratings were processed to produce an ordered listing of all tasks in terms of their relative difficulty. Ratings were standardized to have an average of 5.0, with a standardized deviation equal to 1. As previously mentioned in the Survey Administration section of this report, TD data provide information on first-term training needs, as perceived by experienced technicians in the field. This information, along with the percent members performing data, can then aid training managers in determining if revisions to the STS or POI are required. Appendix L2 displays the TD ratings for first-assignment DAFSC 661X0 personnel with high percent members performing. These data indicate no tasks with over 30 percent of the members performing would satisfy the criteria for structured training based solely on TD ratings. However, before a decision can be made based solely on TD information, one should also evaluate the percent members performing each task and TE ratings. The TD ratings are the composite opinion of experienced career ladder personnel on how difficult the tasks are to learn, these data can guide training developers in where to place emphasis in entry-level training. Tasks receiving high TD ratings, as well as moderate to high percent members performing, may warrant formal, resident training. Those tasks assigned high TD ratings, but low percentages of personnel performing, may be more appropriately planned for OJT programs. Low TD ratings may indicate tasks best left out of formalized training for entry-level personnel; however, such a decision must also consider the percentages of personnel performing the specific tasks, task criticality, command concerns, or safety programs.

Specialty Training Standard (STS) and Course Training Standard (CTS). During the course of this analysis, technical school personnel from Lowry AFB matched inventory tasks to the current STS and CTS. Utilizing the results of the matched data, a review of STS 661X0 (dated January 1993, tentative) and CTS G3OLR6621 003 (dated January 1993, tentative) was conducted.

Overall, many areas of the STS and CTS are well supported by survey data. There are, however, a few areas on these documents that do not appear to be supported due to less than 20 percent members of the criterion groups (first-term, 3/5- and 7-skill levels), (first-term, 662X) performing matched tasks, and low TE and TD data. In some STS areas, performance codes may need some minor adjusting.

Only one main heading area of the STS (5. Logistics Combat Support Management) had very few tasks matched to it. In addition, some subelements under the major headings should be reviewed for appropriateness based on the limited amount and types of tasks matched. The STS paragraphs mentioned below reflect low percent members performing tasks with low TE and low to average TD values.

- 7 i (1). Describe WRM Funding Process
- 7 i (2). Develop WRM Budget
- 8 b (3). Survival, Recovery, and Reconstitution (SRR) Plan, and
- 8 b (5). Concept Plans (CONPLANS).

A few STS elements may require some minor proficiency code changes based on the OSR data. The following list depicts two areas where the proficiency code may want to be increased.

- 10. Installation/Site Surveys
- 12 d. Conduct COMPES Working Groups

Examination of the "tasks not referenced" to the STS revealed 13 logistics-specific tasks that may warrant formal training based on TE, TD, and percent members performing data. A complete listing of these tasks can be found in the Training Analysis Extract.

All main heading areas of the CTS had tasks matched. However, some subelements under the major headings should be reviewed for appropriateness, based on the limited amount and types of tasks match to them. The CTS paragraphs mentioned below reflect low percent members performing tasks with low TE values.

- 7 f. Interpret MANPER-B output products
- 7 g. Perform UTC data functions in LOGFOR
- 8 b. Explain redeployment
- 8 c. Explain reconstitution
- 8 d. Explain logistics command and control (LOG C2)

Examination of "tasks not referenced" to the CTS revealed a number of tasks that may warrant formal training based on TE and percent members performing. A complete listing of these tasks can be found in the Training Analysis Extract.

Plan of Instruction (POI) G3ALR66130 003 and POI G3OLR6621 003. The 19-day Apprentice Logistics Plans Specialist Course, G3ALR66130 003 (dated January 1993, tentative) covers four blocks of instruction. These include Programming Functions, Planning Functions, Mobility Functions, and COMPES Functions. This tentative POI was reviewed for appropriateness of instruction, based on the jobs and tasks performed by survey respondents. The complete results of the matching of tasks to POI objectives are presented in a separate computer printout (PRTMOD) within the Training Extract.

Overall, the basic course is well supported by survey data. Training is being performed on all major jobs being performed in the field. POI behavioral objectives were supported by the OSR data. Only six tasks were identified as possibilities for inclusion into the basic course. All of these tasks were from the mobility duty area.

The Logistics Plans and Programs Officer course lasts approximately 30 days. It is specifically designed for officers entering the 66XX AF specialty. This course provides five blocks of instruction: Introduction to Logistics Plans, Programming Functions of Logistics, Planning Functions of Logistics, Mobility Planning, and COMPES Functions.

Comparison of POI objectives to occupational survey data (TE and percent members performing) indicates retail logistics training is covering appropriate material. However, Block II may need to be reviewed based on the small number of matched tasks found in this block of instruction. Little information has been utilized for assessing wholesale logistics training. Assessment of wholesale logistics training may necessitate future matching of occupational survey data to wholesale course outlines.

Upon examining the "tasks not referenced" section, numerous tasks exist which are one standard deviation above the TE mean; however, hardly any of these tasks have more than 20 percent of first-assignment personnel performing these tasks. Thus, with this idea kept in mind, care should be taken when identifying these tasks for inclusion into course training. A complete listing of these tasks can be found in the Training Analysis Extract.

COMPES Training The previous enlisted OSR revealed 8 percent of NCOs were active in performing COMPES functions. Due to increased computer automation responsibilities, this number has increased to 10 percent. Furthermore, the OSR analysis also revealed two distinct variations of COMPES operators: Mobility COMPES Operators and COMPES Operators. Due to the rewrite of AFR 39-1, ATC has changed the technical school curriculum permitting more "hands-on" classroom training. As these NCOs progress in rank and in time in service, they assume more mobility responsibilities while still remaining active in COMPES functions. As a training implication, 100 percent of the COMPES operators and 86 percent of Mobility COMPES operators were trained at the technical school. The majority of both groups felt the training they received was fair to excellent. This indicates that almost all COMPES Operators are receiving formal training at the technical school. The data also indicates the technical school is effectively training these personnel. In addition, these personnel are also being appropriately utilized within the Air Force. However, a closer examination of the two different jobs associated with COMPES functions may be in order to see if this result will have any impact on training.

JOB SATISFACTION ANALYSIS

An examination of satisfaction indicators of various personnel groups can provide officer utilization managers a better understanding of some of the factors that may affect the job performance of logistics personnel. Attitude questions covering job interest, perceived use of talents and training, sense of work accomplishment, current assignment information, time spent on additional duties, and career intentions/plans were included in the survey booklets. Appendix M provides job satisfaction data for the identified clusters and independent jobs. In addition, it displays differences in job satisfaction according to DAFSC.

Job Satisfaction for Jobs. Overall, officers and enlisted personnel involved with logistics plans and programs were fairly satisfied. The lowest percentage for job interest was Financial Management Personnel (48 percent). Conversely, the highest percentage for job interest was Acquisition Directors (90 percent), Program Managers (91 percent), Acquisition Staff Officers (91 percent), and Mobility NCOs (92 percent). Financial Management Personnel perceive the use of their talents to be low. More than half of the Financial Management Personnel (61 percent) also feel the use of their training is low. Most of the personnel were satisfied with their work accomplishment, except Mobility Exercise Planners and Logistics Staff Officers. Seventy percent of the Mobility Exercise Planners and 62 percent of the Contingency Planners felt communication flow between different logistics areas was poor to very poor. Mobility NCOs (92 percent) felt their rank was too low compared to their responsibilities, and rank also caused a problem with the performance of their duties. As a whole, most members felt the most unfavorable aspect about being in the logistics field was that they did not have enough authority to carry out their responsibilities. As for career plans and intentions, most of the personnel involved with logistics plan to stay in the Air Force and retire. In addition, 92 percent of the Mobility NCOs plan to stay in this AFSC until retirement. Fifty-two percent of the Financial Management Personnel reported spending 31 percent or more of their time performing additional duties. Appendix M1 presents job satisfaction data for the identified clusters and independent jobs.

Job Satisfaction for DAFSC. As a whole, all personnel expressed interest in their job and are satisfied with their work accomplishment. DAFSC 66XX officers have a slightly higher job interest than 661X0 personnel. For enlisted personnel, job interest increases as rank increases. Both officers and NCOs also feel their talents and training are being moderately utilized. The majority of personnel across all DAFSCs felt they did not have enough authority to carry out their responsibilities. As the DAFSC 66130/66150 NCOs upgrade to DAFSCs 66170, 66190/66100, their job satisfaction increases nearly 20 percent--most likely due to increased authority in their respective duty positions. Most members' career intentions indicate a desire to stay and retire with benefits. DAFSC 661X and 66130/66150 personnel have the lowest percentage of members indicating they would stay until retirement, however, this result is not surprising because these personnel have the lowest TAFMS time. Appendix M2 presents job satisfaction data on the DAFSCs.

IMPLICATIONS

This survey was conducted to assess the effect of increased automation in the enlisted AFSC (COMPES functions), deletion of manpower, facilities, and budget duties from AFR 39-1, and to aid in the development of Air Force manpower standards for logistics plans and program work centers.

The new OSR validated the previous decision to delete manpower and facilities duties from AFR 39-1 as a primary duty of the enlisted career field. However, a few NCOs are still performing budgeting functions under the job identified as Financial Management Personnel. Analysis of AFR 36-1 revealed some grade-spread discrepancies. However, as a whole, both AFR 36-1 and AFR 39-1 seem to reflect what these personnel are doing within their respective utilization and career fields

Overall, analysis of the OSR data with the STS 661X0 and CTS G3OLR6621 003 revealed that the data support these documents very well. However, there are some areas that might be improved upon. Likewise, POI G3ALR66130 003 and POI G3OLR6621 003 are being well supported by the OSR data, but may need some minor adjustments.

The previous enlisted OSR revealed 8 percent of the 661X0 personnel were involved in COMPES functions. The new OSR found 10 percent of NCOs were active in performing COMPES functions. However, the new OSR analysis revealed two distinct variations of COMPES Operators: Mobility COMPES Operators and COMPES Operators. A closer examination of the two different jobs associated with COMPES functions may be in order to see if this finding will have any impact on training.

APPENDIX A

DETAILED LIST OF INDEPENDENT JOBS AND JOB CLUSTERS

LOGISTICS PLANS AND PROGRAMS OFFICER AND LOGISTICS PLANS ENLISTED
PERSONNEL

- (315) Mobility Exercise Planners (N=13)
- (268) Mobility NCOs (N=12)

**REPRESENTATIVE TASKS PERFORMED BY FIRST-ASSIGNMENT
OFFICER AND ENLISTED DAFSC GROUPS**

TABLE L1
REPRESENTATIVE TASKS BY
FIRST-ASSIGNMENT DAFSC 66XX PERSONNEL
(1-48 MONTHS TIUF, N=227)

<u>TASKS</u>	<u>PMP</u>	<u>TE</u>
A45 Conduct briefings or presentations	87	3.25
A130 Participate in logistics-related meetings, conferences, or working groups	79	1.58
A182 Write messages or letters	78	2.37
A139 Prepare briefings or presentations	75	2.57
A166 Write background papers, point papers, or talking papers	68	3.55
A44 Compile information for staff studies, staff summary sheets, or position papers	62	2.19
A181 Write memoranda for records (MFRs)	59	2.00
A50 Conduct logistics conferences, meetings, or working groups	55	2.60
A7 Advise commander or staff agencies on logistics program policies and procedures	54	2.45
A193 Write staff studies, staff summary sheets, or position papers	51	2.82
A62 Coordinate logistics-related meetings, conferences, or working groups with personnel	44	1.63
A25 Approve or disapprove point, position, or talking papers	43	1.60
A47 Conduct cross-staff coordination	42	2.52
B234 Operate microcomputer terminals which are not CAMS or COMPES terminals	41	2.05
A172 Write enlisted performance reports (EPRs)	40	2.36
A194 Write trip reports	39	2.37
A187 Write recommendations for awards or decorations	39	1.90
A59 Coordinate logistics policies or procedures with MAJCOM or air staff personnel	38	2.00
A6 Advise base staff activities on logistics planning and programming initiatives or support capabilities	37	2.16
N1321 Participate in Mobility Control Center (MCC) during exercises or deployments	36	3.49
N1299 Direct mobility control center (MCC) during exercises or deployments	36	3.34
A96 Establish unit goals or objectives	34	2.04
B208 Destroy classified materials	34	1.76
C284 Conduct unit self-inspections	33	2.13
S1509 Prepare mobility concept briefing	32	2.84
S1508 Brief commanders or staff on mobility progress	32	2.60
M1219 Arrange exercise logistics support, such as facilities, transportation, and supply	32	2.57
S1527 Monitor mobility progress on MCC status boards	32	2.15
S1536 Resolve problems occurring during exercises	32	2.10
A175 Write inputs to regulations, directives, manuals, or supplements	32	1.58
N1296 Develop mobility schedule of events	31	3.54
S1509 Conduct mobility concept briefing	31	3.13
S1514 Coordinate manning of MCCs or LRCs	31	2.13
N1343 Review base mobility plans or base supplements to AF Mobility Register (28-4)	31	2.00

TABLE L2

REPRESENTATIVE TASKS BY
FIRST-ASSIGNMENT DAFSC 661X0 PERSONNEL
(1-48 MONTHS TICF, N=122)
