16. Abstract

This report contains forecasts of aviation activity of 873 airports in the United States for fiscal years 1993-2005. These include 401 airports with FAA air traffic control towers and radar approach control services and 27 FAA contract towers. For each airport, detailed forecasts are made for the four major users of the air traffic system: air carriers, air taxi/commuters, general aviation, and military. Summary tables contain national, FAA regional, and State aviation data and other airport specific-highlights. The forecasts have been prepared to meet the budget and planning needs of the FAA and to provide airport-specific information that can be used by State and local aviation authorities, the aviation industry, and the general public.

PREFACE

The Federal Aviation Administration (FAA) forecasts of aviation activity are developed annually for use in the agency's planning and decisionmaking. This report, FAA Terminal Area Forecasts FY 1993-2005, presents historical and forecast data for 873 airports. It is a subset of the terminal area forecast data base which contains over 4,000 public use airports, including all airports in the National Plan of Integrated Airport Systems (NPIAS) for which aircraft operations data are available.

The data base is accessible through the Aviation Data and Analysis System (ADA) maintained by the Office of Aviation Policy, Plans, and Management Analysis (APO). In addition, the data can be made available to FAA regional personnel, and to State and local aviation authorities for use on personal computers.

The FAA uses these forecasts in developing its program plans and in assessing the level of resources needed to meet the anticipated demand for its services. In addition, we believe that these forecasts could be a helpful planning tool to State and local aviation authorities and to the industry in planning airport development and in accommodating future aviation needs.

This document will be available to the public through the Government Printing Office. We welcome public comments about the forecasts, as well as any suggestions for improving the usefulness of this publication.

John M. Rodgers

ACKNOWLEDGMENTS

This report was prepared by the Statistics and Forecast Branch of the FAA Office of Aviation Policy, Plans, and Management Analysis. Thomas Henry was the principal analyst responsible for the development of the forecasts. Robert L. Bowles, Branch Manager, Michael Hartmann, Virginia Price, and Prudence M. Dance also contributed their valuable support.

The computer programs are executed under the direction of Carlton Wine, Manager, Information Systems Branch. Mr. Wine and his staff organize and manage the data bases used to produce the forecasts, update the computer programs, and carry out the computer operations necessary to produce the individual airport forecasts. In particular, Steve O'Gara and Gary Mihalik modified the computer programs and facilitated the transfer of the data base and programs to a fully functional Personal Computer (PC) system.

Special acknowledgments are made to the Regional Planning Officers and Airport District Officers for their assistance in coordinating the regional reviews, State input, and final forecast recommendations. The extensive reviews and comments of the regional offices (executed in two stages: first, for FAA towered airports and, later, for nontowered airports) were extremely important in guiding the Statistics and Forecast Branch in making adjustments to the preliminary version of the report. Undoubtedly, the effort has enhanced the accuracy and credibility of the final product.

APPENDIX A

DESCRIPTION OF ACTIVITY MEASURES

APPENDIX B

FAA TOWERED AIRPORTS

APPENDIX C

MEDIUM HUBS

APPENDIX D

SMALL HUBS

PART 1: INTRODUCTION AND NATIONAL SUMMARY

SUMMARY HIGHLIGHTS

- Forecasts are presented for 873 airports. Of these, 401 are FAA towered airports and radar approach control facilities and 27 are FAA contract towers.

- A total of 225 towered airports accounted for 447 million air carrier enplanements and 12.5 million air carrier operations in fiscal year 1991. Over 96 percent of air carrier activity occurred at these airports.

- The Southern, Western-Pacific, and Eastern Regions are forecast to reach 437 million air carrier enplanements and 10.3 million air carrier operations, collectively, by the year 2005.

- These regions will maintain their ranks as the top three regions for air carrier passenger enplanements.

- By the year 2005, the Western Pacific Region will increase its proportion of enplanements slightly to 21.7 percent and the Eastern Region will be down slightly relative to the 1991 proportion of 16.7 percent.

- Currently, 95.3 percent of all air carrier passengers are enplaned at the top 100 air carrier airports.

- The top 100 air carrier airports account for 91.5 percent of air carrier operations.

- In FY 1991 the top five air carrier airports--Chicago O'Hare, Dallas/Ft. Worth, Los Angeles, Atlanta, and San Francisco--enplaned 23.3 percent of all air carrier passengers and accounted for 18.4 percent of all air carrier operations.

- Air carrier enplanements are forecast to reach over 757 million by 2005, about 64 percent more than the 462 million enplaned in 1991.

- When ranked by total enplanements (air carrier, commuter and air taxi), the top 11 airports maintained the same ranking. Because of the inclusion of commuters and air taxis, Honolulu and Las Vegas improved their rankings relative to Boston and Minneapolis (see page 10 and Table 2).

INTRODUCTION

This document presents forecasts of key aviation activity measures for 873 airports through fiscal year 2005. These forecasts are prepared to meet the planning needs of the Federal Aviation Administration (FAA) offices and services concerned with future traffic levels at these facilities. Except for specific regional or State requests, the airports selected for inclusion in the report meet at least one of the following criteria:

- Existing FAA tower;
- FAA contract tower;
- Candidate for an FAA tower;
- Currently receiving or expected to receive scheduled air carrier or commuter service;
- Currently exceeds 60,000 itinerant or 100,000 total aircraft operations; or
- Reported 10 or more based aircraft on the latest available Airport Master Record (FAA Form 5010-1).

The Terminal Area Forecasts (TAF) report is organized in two sections. The first part is a general summary. It includes summary highlights, the introduction, a brief overview of the forecasting process, a discussion of the large hub airports, and a series of summary tables. The summary tables provide a national overview as well as a comparison among regions.

The second part contains the forecasts for each airport. It is arranged alphabetically by FAA region and, within each region, by State. The airports in each State are listed alphabetically by city. The airport data include summary information for the facility followed by seven years of historical data, and projections for fiscal years 1993-1996, 2000, and 2005. In some cases, a comment about current or planned aviation activity at the airport is included. The summary indicates the airport's tower/nontower status and the number of aircraft based at the airport in 1991 or 1992.

State and regional summary statistics precede the individual airport forecasts. There are five tables that provide regional summaries and State comparisons from fiscal year 1987 through 2005 for air carrier enplaned passengers, air carrier aircraft operations, itinerant operations, total operations, and instrument operations.

FORECAST PROCESS

The general approach to the facility forecasts presented in this report is "bottom-up." Growth factors were applied to the base year (FY 1991) data at individual airports to project annual activity levels through FY 2005. Measures of aviation activity obtained from FAA Aviation Forecasts: Fiscal Years 1992-2003, FAA-APO-92-1 (February 1992), were used as control factors and to determine growth rates for some airports. Preliminary projections were modified using forecasts from major hub reports (discussed below) as well as facility-specific information provided by the nine FAA regions. The data for individual airports were eventually added to generate various summary tables for FAA towers, individual States, FAA regions and, finally, national totals.

As a general rule, no expansion of airport facilities has been assumed for these forecasts except those recommended by the regions and, in part, noted in the comments and those implicit in specific hub forecasts or in specific airport master plans or aviation system plans. For some airports, the preliminary forecasts were adjusted to account for known operating constraints. When the level of operations at an airport begins to approach the airport's design capacity, delays and congestion occur.

Forecasts at 32 of the major hubs have been developed and published in special reports. The results have been incorporated in the TAF. These hub forecasts used regression models and trend analyses in generating an original set of forecasts of aviation activity. The analysts also accomplished in-depth studies of demographic and economic conditions of the metropolitan areas. In each study, the hub's (or airport's) status with respect to originating or connecting passengers, type of aircraft and fleet composition, markets served, and frequency of service is analyzed also. General aviation activity is examined from the point of view of the metropolitan area, as a whole, and from the viewpoint of individual airports.

After the TAF forecasts are generated and adjustments made, they are compared to forecasts contained in various State and/or airport master plans. In addition, the FAA regional planning offices, State transportation agencies, and airport managers are asked to comment on the forecasts. Information is requested on based aircraft, plans for new runways, new commercial air carrier or commuter/

regional service, and airports which are expected to deviate from national trends. Responses are reviewed, and the forecasts are revised whenever significant deviations from historical patterns are established.

Forecasts of general aviation aircraft operations at some airports are based on State parameters such as population, disposable personal income, and area and on numbers of based aircraft at the local airports. These forecasts are obtained from either (1) specific airport master plans or state aviation system plans or (2) specific hub studies. Historical trends are modified in response to changes in availability of airport facilities and services, presence of reliever airports, and the policies relevant to general aviation activity at the subject airport. *Additional sources of data include* supplementary forecasts of general aviation activity and commercial operations at specific airports. In the absence of specific recommendations for changes, military operations have been held constant at the levels reported in 1991 or 1992.

The individual airport instrument operations forecasts reflect assumptions about the increased use of avionics by general aviation business aircraft and the expanded use of airport radar service areas (ARSA). The FAA regional offices provided updates of based general aviation aircraft and FY 1991 and 1992 activity at nontowered airports. In addition, other information was received which included the status of plans for new runways and the possibility of new air carrier or commuter/regional service. The assumptions and comments were incorporated in these series of forecasts subject to constraints consistent with activity levels in the national forecasts.

Activity Measures Forecast

The activities forecast for each airport include: commercial air carrier (sum of U.S. and Foreign Flag), commuter/regionals, and air taxi enplanements; air carrier, air taxi (including nonscheduled air taxi, and scheduled commuter/regional air carrier), and general aviation itinerant operations, general aviation local operations; and instrument operations. A short description of each activity measure is included in Appendix A.

The TAF data base contains over 4,000 public-use airports including all airports in the NPIAS (subject to the availability of aircraft operations data). Activity levels and forecasts are available for the majority of these airports upon request.

Data Sources

Enplanements are based on data submitted to the Research and Special Programs Administration (RSPA) by the U.S. scheduled

and nonscheduled commercial air carriers on Form 41 reports and by the U.S. air commuter/regional carriers on Form 298-C reports. These data are supplemented by an FAA survey of air taxi operators, by reports of foreign flag traffic from the U.S. Immigration and Naturalization Service (Form I-92), and by State aviation commission's and airport manager's reports. Other sources, such as the Official Airline Guide (OAG) and Airports Association Council International's (AACI) traffic reports, provide data and background information when forecasting the type of operations and the level of activity at specific airports. These sources may be used to compile enplanement figures for both towered and nontowered airports.

Historical operations at FAA towered airports are derived from FAA Air Traffic Activity reports. U.S. air carrier departures at nontowered airports were obtained from RSPA Form 41 reports. Other operations data at nontowered airports are based on special traffic surveys and on estimates provided in the FAA Airport Master Record, FAA Form 5010-1.

Instrument operations handled by FAA towered airports and instrument approaches for all airports are reported in the FAA air traffic activity reports. Region, State, city, airport name, and location identifier (LOCID), as well as an estimate of based aircraft, are taken from the FAA Airport Master Record.

The data obtained from these sources and the preliminary forecasts are reviewed by FAA staff at headquarters and at the regional level. In some regions, the Airport District Offices and State aviation departments are requested to review the preliminary data also. Erroneous and inconsistent data are corrected and reconciled prior to production of the final forecasts. Also, preliminary tower operations data for 1992 have been substituted for the 1992 forecast values during the review process. By design, when data are expressed in thousands, values between one and 499 are rounded down to zero. A blank implies a zero or no information.

A Note on National Totals

The sums of the regional activity data in Tables 3 through 7 may not add to the national totals contained in the FAA Aviation Forecasts publication referenced earlier. This is due to the different methods employed in producing the reports. The national forecasts used aggregate numbers (for example, total aircraft operations at FAA towers). In contrast, the terminal area forecasts used activity levels at individual airports with inputs from regional, State, and local planners and specific hub and airport master plan studies. When national totals are required, they should be obtained from the latest issue of the FAA Aviation Forecasts.

NATIONAL SUMMARY AND COMPARISONS BY REGION

The published TAF includes historical and forecast data for 873 airports through fiscal year 2005. Of this total, 401 airports had FAA air traffic control towers in FY 1992. In addition, there are 27 airports with FAA contract towers. Table 1 shows the distribution of the FAA air traffic control facilities throughout the United States. The largest number of FAA towers are located in the Southern Region (73 towers). California leads all states with 49 towers. Florida has 28 towers and Texas has 27 towers. An alphabetical list of cities with FAA towered airports is presented in Appendix B.

Of the 873 airports included in the TAF, 264 airports (30 percent) registered 1,500 or more air carrier enplanements for FY 1991. In total, there were 12.8 million air carrier operations and 451 million air carrier enplanements in FY 1991. Of the 401 towered airports, 225 had air carrier enplanements of 1,500 or more. These airports accounted for about 447 million air carrier enplanements and 12.5 million air carrier operations in 1991. Other towered and nontowered airports had approximately 4 million air carrier passengers and about 200,000 air carrier operations.

Table 2 shows a list of the top 100 airports in order of total air carrier passengers enplaned during FY 1991. Approximately 95.3 percent of all air carrier passengers are enplaned at the top 100 airports. The top five airports (Chicago, Dallas-Ft. Worth, Los Angeles, Atlanta, and San Francisco) accounted for 23.3 percent of all air carrier enplanements. Over 50 percent of all air carrier enplanements in the United States occurred at the top 17 busiest air carrier airports.

Tables 3 and 4 provide summaries and regional comparisons from 1987 through 2005 for all air carrier enplaned passengers and air carrier aircraft operations for all airports published in the TAF. Tables 5 through 7 show itinerant aircraft operations, total aircraft operations, and instrument operations at airports with FAA-operated air traffic control towers and radar approach control facilities. The percent distributions of these various activities among the regions are shown in Tables 8 through 11. The forecasts in this volume do not assume construction of additional runways, runway extensions, or other enhancement of the existing facility at specific airports except where mentioned as a footnote to the individual forecasts or where implicit in specific airport

master plan or other report or studies.

Tables 12, 13, and 14 indicate total, itinerant, and local general aviation aircraft operations for approximately 4,000 airports included in the TAF data base. It is estimated that the TAF data base represents approximately 80 percent of the total general aviation operations.

A summary of growth factors for general aviation itinerant and local operations by region and State for nontowered airports is provided in Table 15. These growth rates may be used as a guide for making or reviewing aviation activity projections at airports that are not included in the published TAF. The number of based aircraft at an airport is sometimes used as an index of actual or potential aviation activity at specific airports or regions. Table 16 presents a summary of based aircraft by States and FAA regions for FY 1991. A total of 206,222 based aircraft were reported in 1991. The based aircraft count at some airports may include some "inactive" and some military aircraft.

This section of the report discusses: (1) forecasts of total enplanements and total operations at 30 large hub airports and (2) summary data for large, medium, and small hub airports. (For analytical purposes, airport hub size is consistent with the enplanement percentages indicated in the definition for air traffic hubs in AIRPORT ACTIVITY STATISTICS OF CERTIFICATED ROUTE AIR CARRIERS, U. S. DOT-FAA, December 1991.) Air Traffic Hubs are geographical areas, and are based on the percentage of total passengers enplaned in the area. A hub may have more than one air carrier airport.

Summary

In fiscal year 1991, there were 30 large hub airports, 39 medium hub airports, and 63 small hub airports. The large hub airports accounted for 326.6 million enplanements, 67.2 percent of the approximately 486.3 million air carrier, commuter and air taxi passengers enplaned nationally. The medium hub airports enplaned 99.7 million passengers and the small hubs enplaned 36.6 million, 20.5 percent and 7.5 percent of the total, respectively. In 1991, enplanements at the large hub airports were 2.4 percent lower than the 1990 enplanement total. Enplanements at the medium and small hub airports decreased by 1.5 percent and 3.1 percent, respectively.

In 1991, aircraft operations at the large hub airports totaled 12.2 million, about 2.2 percent less than the 1990 level. At the medium and small hub airports, there were 8.5 and 8.4 million operations, respectively. The 1991 operations at the medium and small hub airports were slightly lower than the 1990 levels.

Large Hub Forecasts

The total enplanements and related operations forecasts for the 30 large hub airports for fiscal years 1995, 2000, and 2005 are presented on pages 10 and 13. By 2005, Chicago O'Hare is expected to reach 47.0 million enplanements and Dallas/Fort Worth is expected to reach 44.7 million. It is anticipated that Los Angeles International and Atlanta will reach 32.3 million and 28.3 million enplaned passengers, respectively, by the year 2005.

Total aircraft operations will reach 848,000 at Chicago O'Hare and 1,097,000 at Dallas/Fort Worth. (For purposes of these forecasts, we made no assumptions about new airports in Chicago or elsewhere.) Los Angeles and Atlanta will reach 826,000 operations and 818,000 operations, respectively.

TOTAL AIRCRAFT OPERATIONS GROWTH AT LARGE HUB AIRPORTS

These projections suggest that by the year 2005 Dallas/Fort Worth will become the busiest airport in the United States in terms of landings and takeoffs. On this basis, it would be the first airport to reach one million operations annually.

The average annual growth rates expected for the large hub airports for enplanements and operations for the 991 to 2005 period are shown in the graphs on pages 12 and 15. Because of differences in the growth rates among airports, the relative ranks of the 30 hub airports in 2005 will differ from the rankings in 1991. For example, Las Vegas and St. Louis will be ranked 12th and 13th, considerably higher than the 16th and 17th places observed in 1991. Conversely, some airports (like New York LaGuardia, Boston, and Washington National Airport) which are experiencing some form of environmental or capacity constraints are expected to be ranked lower than their 1991 positions. Large shifts could also occur if a major airline decides to use a small or medium size airport as a hub, or to cease hubbing at an airport. (For purposes of these forecasts, we have not assumed any new airport-specific hubs, nor have we assumed that any existing airport-specific hubs would cease to exist. We anticipate that when the new Denver Airport is opened activities at Denver Stapleton will cease.) Airline mergers, consolidations, and restructuring of routes may also affect the enplanements and operations forecasts, and, consequently, the relative ranks of the major hubs discussed in this section.

Medium/Small Hub Forecasts

The growth of enplanements and operations at the 39 medium and 63 small hub airports (relative to growth at the large hub airports) are compared in the tables on page 18. The first table shows that during the 1991-1995 period passenger enplanements at the medium hub airports are expected to increase somewhat slower than at the large hub airports. However, during the later period (1995-2005), growth at medium hubs will be higher than at large hubs. It is anticipated that some carriers will continue to develop or establish hubbing operations at medium or small hubs as alternatives to the larger more congested hubs. At the medium hubs, enplanements are forecast to grow at an annual average rate of 3.6 percent during the 1991 to 1995 period and at 4.2 percent between 1995 and 2005. Passenger enplanements at the small hubs are expected to increase at a slower rate than the medium hubs during the latter part of the forecast period. The expected increases are 5.1 percent between 1991 and 1995 and 3.9 percent between 1995 and 2005.

As indicated in the second table, aircraft operations at both the medium and small hub

airports are expected to grow faster than the large hubs during the latter part of the 14-year period. Between 1991 and 1995, aircraft operations are expected to grow at 2.3 percent at both the medium hubs and the small hubs. During the 1995-2005 period, the growth rates are expected to be about 2.7 percent and 2.4 percent, respectively. The medium and small hubs are listed alphabetically by cities in Appendices C and D.

SUMMARY OF PASSENGER ENPLANEMENTS AND AIRCRAFT OPERATIONS AT HUB AIRPORTS
(Millions)

	PASSENGER ENPLANEMENTS			AVERAGE ANNUAL PERCENT CHANGE	
	1991	1995	2005	1991-1995	1995-2005

COMMENTS:

APPENDIX A

DESCRIPTION OF ACTIVITY MEASURES

Air Carrier Enplanements--include originating, stopover, and transfer passengers of U.S. scheduled and nonscheduled commercial air carriers submitted to Research and Special Programs Administration (RSPA) on Form 41 reports. International passengers who disembark at airports to go through customs and then reenplane are included in an airport's count of passenger enplanements. Commercial air carriers are certificated in accordance with FAR Parts 121 or 127 to conduct scheduled services on specified routes. These air carriers may also provide nonscheduled or charter services.

Air Taxi Enplanements--include survey estimates of nonscheduled air taxi enplanements. Where data are unavailable, enplanement counts are estimated from the number of operations multiplied by an estimated "load-factor" (number of passengers per departure). The air taxi load-factor typically ranges from one to three people.

Commuter/Regional/Air Taxi Operations--aircraft arrivals and departures performed by commuter/regional carriers or air taxi operators certificated in accordance with FAR Part 135 or Part 121 who fly aircraft with 60 seats or less.

Commuter/Regional Enplanements--include enplanements on scheduled commercial air commuter/regional carriers reported to RSPA on Form 298-C. Typically, commuter/regional air carriers are certificated in accordance with FAR Part 135, operate aircraft with a maximum of 60 seats, provide at least five round trips per week between two or more points, or carry mail.

General Aviation Operations--all civil aviation aircraft operations except those performed by air carrier, air taxi or commuter/regional aircraft.

Instrument Approaches--a series of predetermined maneuvers for the orderly transfer of an aircraft under instrument flight rules (meteorological or weather related) conditions from the beginning of the initial approach to a landing, or to a point from which a landing may be made visually. The published TAF does not include forecast of annual instrument

approaches (AIA's). Historical data as reported in the FAA Air Traffic Activity reports are stored in the TAF data base and are available from the Office of Aviation Policy, Plans, and Management Analysis.

Instrument Operations--occur when an FAA operated terminal control facility handles the arrival, departure, or overflight of an aircraft on an Instrument Flight Rules (IFR) flight plan or provides separation to other aircraft. The data for some facilities include instrument operations for both primary and secondary airports. Primary facilities are FAA towered airports with radar approach control service. Secondary facilities are airports (towered and nontowered) which receive approach control service from a primary approach control facility. Instrument operations which occur at secondary airports are credited to both the primary facility and the airport where the physical landing or takeoff occurs. Non-IFR instrument counts at existing terminal control area facilities and airports with Stage III of area radar service are included under instrument operations. The instrument operations count include FAA operated military radar approach control facilities (Air Force RAPCON's and Navy RATCF's).

Itinerant Operations--all aircraft operations other than local aircraft operations.

Local Operations--those performed by aircraft that: (1) operate in the local traffic pattern or within sight of the airport; (2) are known to be departing for, or arriving from, flights in local practice areas located within a 20-mile radius of the airport; or (3) execute simulated instrument approaches or low passes at the airport.

Stage III/Radar Sequencing and Separation Service for VFR Aircraft--provision of traffic information, full-time vectoring and sequencing to arriving Visual Flight Rules (VFR) aircraft, and separation between all participating aircraft.

Total Operations--the sum of itinerant and local operations. Every takeoff and every landing is counted as an aircraft operation.
