13. ABSTRACT (Maximum 200 words)

THIS REPORT IS THE SECOND IN A SERIES OF REPORTS PREPARED TO DOCUMENT AND ASSESS THE STATUS AND OVERALL OPERATIONAL PERFORMANCE OF THE NORTH BOUNDARY CONTAINMENT/TREATMENT SYSTEM. THE REPORT CONSISTS OF THREE VOLUMES: VOLUME I IS THE MAIN TEXT; VOLUME II CONTAINS THE HYDROGEOLOGIC AND CONTAMINANT DISTRIBUTION PLATES; AND VOLUME III CONTAINS THE DATABASES DEVELOPED TO SUPPORT THE EVALUATIONS AND ASSESSMENTS MADE DURING THE STUDY.

THE OBJECTIVES OF THE REPORT INCLUDE:

1. ASSESS THE CONTINUING EFFECTIVENESS OF THE NORTH BOUNDARY SYSTEM IN PREVENTING OFF-POST MIGRATION OF CONTAMINATED GROUND WATER
2. DOCUMENT SYSTEM OPERATING PARAMETERS
3. IDENTIFY AND DOCUMENT SYSTEM IMPROVEMENTS
4. IDENTIFY AND DOCUMENT OPERATIONAL IMPROVEMENTS THAT WILL ENHANCE LONG-TERM EFFECTIVENESS.

DATA IN VOLUME II INCLUDE WEEKLY ADSORBER FLOWS, WATER QUALITY, AND WATER

14. SUBJECT TERMS
GROUNDWATER

PREFACE

The following organizations were involved in the production of this report:

- D.P. Associates, Inc.
- Rocky Mountain Arsenal
- Environmental Science and Engineering
- Harding Lawson Associates
- Potomac Research, Inc.

TABLE OF CONTENTS

PART I: Treatment System Flow Data (Weekly by FY85 & FY86)

PART II: Treatment System Water Quality Data

PART III: Monitoring Well Water Level Data

PART IV: Monitoring Well Water Quality Data

PART V: Dewatering Well Water Quality Data

TREATMENT SYSTEM FLOW DATA

FY85

PART I

Definitions

The abbreviations used in the listing of weekly adsorber flows are explained below.

DATE is in month, day then year format. The total gallon and gallon per minute estimates associated with the date were computed by determining the number of gallons processed (and number of minutes elapsing) during a seven day time period ending on this date.

-A-B-C-TOTAL- are the headings for columns containing flow data for adsorbers A, B, C and the total of these adsorbers respectively.

GAL (OO) corresponds to the total gallons processed during a seven day time period ending on the date specified. The value must be multiplied by 100 to determine the total gallons. For example, 9141 X 100 yields a total of 914,100 gallons processed during the seven day period ending on 10/07/84.

GPM corresponds to gallon per minute flow rate. It is determined by dividing the total gallons processed during a seven day time period (ending on the date specified) by the total number of minutes elapsing during the same period.

Definitions

Definitions for the column headings and abbreviations used in the statistical summaries of the chemical data are given below:

ANALYTE is a code up to six characters long used to identify the parameter being measured. Complete chemical descriptions of the compounds can be found in the front of Part 4.

TOT SAMP (TOTAL SAMPLE) corresponds to the total number of readings taken for a particular adsorber and analyte combination.

SAMP ≥ DL (Sample greater than or equal to the Detection Limit) corresponds to the number of readings taken for a particular adsorber and analyte combination that are equal to or above the detection limit.

% ≥ DL (Percent greater than or equal to the Detection Limit) corresponds to the percent of readings equal to or greater than the detection limit.

DETEC LIMIT (Detection Limit) is the lowest measurement which can be determined.

MEAN is the arithetic average. The mean was only computed for sets of data where 70 percent or more of the readings fell above the detection limit. When this criteria was met, values falling below the detection limit were made equivalent to the detection limit and included in the computations. An asterisk (*) appears when the mean has not been computed. The individual organo-sulfurs are the exception. The mean was computed for all organo-sulfurs regardless of what percentage of the readings fell above the detection limit. Values falling below the detection limit were not included in the computations.

UOM (Units of Measurement) are expressed in micrograms per liter (UGL), milligrams per liter (MGL), parts per hundred (PPH) or micromhos per centimeter of conductivity (UMHC). An "S" following UGL or MGL corresponds to internal standard.

STATISTICAL SUMMARY OF CHEMICAL DATA
FROM ADSORBER A INFLUENT FY 85

* The mean was only computed for sets of data where 70 percent or more of the readings fell above the detection limit. When this criteria was met, values falling below the detection limit were made equivalent to the detection limit and included in the computations. An asterisk (*) appears when the mean has not been computed. The individual organo-sulfurs are the exception. The mean was computed for all orgnao-sulfurs regardless of what percentage of the readings fell above the detection limit. Values falling below the detection limit were not included in the computations.

USER NUMBER FOR EFFLUFNT WAS P4EX## FOR PART OF 1984 AND PNEFIN FOR REMAINDER OF REPORT PERIOD

PART III

Definitions

Definitions for the column headings and abbreviations used in the listings of water level data are given below:

WELL NO (WELL NUMBER) is made up of the section number (01-36) and the well sequence number (001-999) within the section.

AQUIF TYPE (AQUIFER TYPE) is the aquifer where the well's screen is located. The codes associated with it include:

ALL - Alluvium
DEN - Denver

DATE is in month, day then year format.

DEPTH (TOC) corresponds to the depth to water as measured from the top of casing. Water depth is measured to the nearest one hundredth of a foot.

WATER ELEV (WATER ELEVATION) is measured to the nearest one hundredth of a foot.

SAT THICK is the saturated thickness and is computed by subtracting the bedrock elevation from the water elevation. Blanks will appear if the bedrock elevation is not known or if the saturated thickness is found to be negative.

REMARKS will include any special information concerning the well or the measurement. Water levels falling below the bottom of screen will have "DRY" in the REMARKS column. Wells which are clogged, destroyed or coded as being dry will also have an appropriate message in the REMARKS column. The remark "MEAS @ GRND" indicates the well casing had been broken off and the measurement was taken from the ground or surface level.

ANOMALOUS FEATURES OF THE WATER LEVEL MAPS

Some of the data used to construct the water level contour maps for this report is anomalous. That is, the data produces either unusually low areas of water levels or unusually high areas that do not occur consistently over time or that contort the contours in unusual ways. These anomalies are pointed out so that users of information in this report, or related information in past or subsequent documents, will be aware of them.

During the course of this study, an error of approximately two feet was suspected, and subsequently confirmed, in the RIC database for the casing elevation of well 24092. Correction of the error caused a significant change in the water table contours in the central portion of section 24 for FY 85 and FY 86 water level maps. This change is quite noticeable when these maps are compared to the ones produced for FY 84.

The water elevation for well 24184 during the 2nd quarter of FY 85 was 5136.3 feet, which is 1.9 feet lower than any previous reading for this well. Since this reading differs from previous readings for this and other surrounding wells, it was judged to be erroneous and was, therefore, not used for water level contouring.

An anomalously high water level was plotted on the map for wells 23101 and 23102 for the 4th quarter of FY 86. This level is about 2 feet higher than any level recorded during FY 84, FY 85 and the first three quarters of FY 86. The plot forms a conspicuous mound around these two wells where none had existed before.

Water levels for well 23070 consistently run anomalously low from quarter to quarter in FY 85 and FY 86. This pulls the 5142 foot contour line south into a narrow zone between wells 23009 and 23072. The well should be checked for correct casing elevation.

SO4	SULFATE
SUPONA	SUPONA / 2-CHLORO-1-(2,4-DICHLOROPHENYL)VINYLDIEHYL PHOSPHATE
TCLEE	TETRACHLOROETHYLENE / TETRACHLOROETHENE (PCE)
TOC	TOTAL ORGANIC CARBON
TRCLE	TRICHLOROETHYLENE / TRICHLOROETHENE (TCE)
XYLEN	XYLENES
ZN	ZINC

PART IV

Definitions

Definitions for the column headings and abbreviations used in the listings of chemical concentrations are given below:

WELL NO (WELL NUMBER) is made up of the section number (01-36) and the well sequence number (001-999) within the section.

AQUIF TYPE (AQUIFER TYPE) is the aquifer where the well's screen is located. The codes associated with it include:

ALL - Alluvium
DEN - Denver

SAMPLE DATE is in month, day then year format.

LAB is a two character code used to identify the laboratory conducting the analysis.

RM - Rocky Mountain Arsenal
ES - Environmental Science and Engineering (Gainesville)
ED - Environmental Science and Engineering (Denver)

ANALYTE is a code up to six characters long used to identify the parameter being measured. Complete chemical descriptions of the compounds can be found in the front of this section.

MEASUREMENT is divided into three components:

BOOL (BOOLEAN) corresponds to the two letter code used when the measurement falls below detectable limits.

LT - Less Than
ND - Not Detected

CONCEN corresponds to the chemical concentration.

UOM (UNITS OF MEASUREMENT) are expressed in micrograms per liter (UGL), milligrams per liter (MGL), parts per hundred (PPH) or micromhos per centimeter of conductivity (UMHC). An "S" following UGL or MGL corresponds to internal standard.
