INTRODUCTION

The DOD(HA) Health Service Regional Tricare Cost Summary Report uses data provided from the Tri-Service CHAMPUS Statistical Database Project's (TCSDP) Consolidated Budget Record (CBR) files. The report summarizes and compares Army, Air Force, and Navy payments and workload for all claim types (institutional, handicapped, dental, professional services, and drugs) by DOD(HA)-designated Health Service Regions for two 12-month fiscal periods spanning 1991, 1992, and 1993. The DOD(HA) 5-digit zip code cross map to region data file and TCSDP's supplemental 3-digit zip code and BMC cross reference files were used to assign region codes to the CBR data records. Figure 1 on page 4 shows the geographical boundaries for each region from the October 1993 Defense Medical Information System, Catchment Area Directory U.S. and Puerto Rico Inpatient. Each region's information was broken out by 26 clinical categories. The clinical categories were created by assignment through an ICD-9-CM primary diagnosis code to clinical category mapping file. The mapping-file logic was based on the CHAMPUS ICD-9-CM Diagnosis Code Assignment to Hospital Specialty methodology published in the 1989 User's Guide For The CHAMPUS Workload Reports.

METHODS

Because of the significant time lag between a claim's payment authorization date and the date it is processed and accepted into the CHAMPUS database, a 24-month processing period, from July 1991 - June 1993, was used to extract government payments for July 1991 - June 1992 (Previous Period). Only a 15-month processing period, from July 1992 - September 1993, was available to extract government payments for July 1992 - June 1993 (Current Period). Hence, the Current Period data are lacking nine months of processing time relative to the Previous Period. To provide an accurate assessment of the Current Period costs and workload, the Current Period data are adjusted to account for the nine month lag of data. The Net Marginal Growth Rate Adjustment Factor (NMGRAF) conversion program performs this function. It uses data from the three monthly processing periods subsequent to June 1992 and June 1993 to calculate the NMGRAF and to apply it to Current Period data. This application to Current Period data provides the basis for a very accurate comparison of Previous Period data to Current Period data. The tables showing the stages of computing the Net Marginal Growth Rate Adjustment Factor are located in Appendix A.

RESULTS

Table 1 on page 6 shows the results of applying the Net Marginal Growth Rate Adjustment Factor to the Current Period data. The estimated total government payment for all claim types and regions increased 3.5% (\$95,194,306) over the Previous Period. Institutional workload decreased while professional services workload increased. Admissions and bed days decreased 2.5% (-7,304) and 13.7% (-311,231), respectively, while non-prescription services and visits climbed 3.4% (1,264,965) and

8.0% (1,012,271), respectively. The magnitude of change in prescription services reported in regions four, nine, ten, and twelve are grossly disproportional to the other eight regions. The report shows a percent change decrease ranging from 50%-90% for regions nine, ten, and twelve and a 100.5% increase for Region four. The remaining eight regions show a percent change increase ranging from 3%-29.7%. Regions two and nine display the most cost and workload volatility. Region two's total government payments have increased 13.6% (\$36,299,085). Its workload figures of admissions, bed days, non-prescription services, and visits have all increased 9.4% (3,606), 0.6% (1,481), 11.5% (490,750), and 9.9% (139,046), respectively. Region nine's total government payments have increased 13.9% (\$42,320,934). Its admissions have increased 21.3% (4,965) while the bed days have decreased 12.5% (-24,894). Region nine's non-prescription services and visits have increased 6.4% (259,789) and 6.8% (98,174), respectively. Region six displays the most significant decreasing change in total government payments by reducing outlays by 5.9% (-\$21,437,177). Both admissions and bed days have declined 12.8% (-4,394) and 25.1% (-92,026), respectively. However, its non-prescription services and visits have softened that impact by rising 1.8% (85,232) and 11.3% (181,828), respectively. Detailed reports by region and clinical category are located in Appendices B-F.

APPENDIX A

Net Marginal Growth Rate Adjustment Factor Tables

The Net Marginal Growth Rate Adjustment Factor conversion program extracts data records on all claim types from the regional CBR data sets for the six processing periods of July 1992 - September 1992 and July 1993 - September 1993. Because there are adjustment records with negative values that can dominate a processing period, both an absolute and a positive data file for each period are created. A frequency analysis weighted by total government payments is performed on each absolute and positive data period. The marginal rate of positive government payments to absolute government payments for the 9 month period of October 1991 through June 1992 is calculated for each type of claim within each region (Marginal Rate Table page A-3). The difference between the absolute completion percentages for government payments between October 1991 - September 1992 and July 1993 - September 1993 is computed (Differential Completion Percentage Table page A-5). The Net Marginal Growth Factor for each claim type within each region is computed by multiplying the marginal rate (Mrate) by the differential completion percentage (Diff), dividing that product by 100, and adding 1 to the result $(((\text{MRATE} * \text{DIFF}) / 100) + 1 = \text{FACTOR})$. The Net Marginal Growth Rate Adjustment Factor Table is located on page A-7.

THIS PAGE IS INTENTIONALLY LEFT BLANK.
