13. ABSTRACT (Maximum 200 words) In response to the growing number of environmental laws and regulations worldwide, the Air Force adopted an environmental compliance program that identifies compliance problems before they are cited as violations by the U.S. Environmental Protection Agency (USEPA). Beginning in 1984, the U.S. Army Construction Engineering Research Laboratories, in cooperation with the Air Force Engineering and Services Center, began research on ECAMP. Federal, Department of Defense (DOD), and Air Force environmental regulations, along with documentation of good management practices and risk-management information, were combined into a series of checklists that show (1) legal requirements and (2) which specific items or operations to review. Each assessment protocol lists a point of contact to help assessors review the checklists as effectively as possible. The Worldwide ECAMP incorporates existing checklists from the USEPA and private industry. It also integrates the <i>Overseas Environmental Baseline Guidance Document (OEBGD)</i> , published by the DOD in October 1992. Additionally, Worldwide ECAMP includes pertinent information from Air Force Regulations, DOD Directives and Instructions, and cited good management practices for an overall environmental review. The program was tested at several Air Force installations. The manual is updated continually to address new environmental compliance laws and regulations.

FOREWORD

This work was performed for Headquarters United States Air Force (HQ USAF), Director of Engineering and Services, Environmental Division, under military inter-departmental purchase request number FS HQCE 3004-0001, dated 22 December 1992. The HQ USAF technical monitor was Captain William Kolakowski, HQ USAF/CEVV.

The research was performed by the Environmental Compliance Modeling and Systems Division (EC) of the Environmental Sustainment Laboratory (EL), U.S. Army Construction Engineering Research Laboratories (USACERL). The Principal Investigator was Donna J. Schell, CECER-ECP. Tina M. Beckler, CECER-ECP, was Associate Investigator. Dr. Diane K. Mann, CECER-ECP, is Acting Team Leader. Dr. William D. Goran is Acting Chief, CECER-EP, and Dr. Edward W. Novak is Acting Chief, CECER-EL.

LTC David J. Rehbein is Commander of USACERL and Dr. L. R. Shaffer is Director.

NOTICE

This manual is intended as general guidance for personnel at certain U.S Air Force installations. It is not, nor is it intended to be, a complete treatise on environmental laws and regulations. Neither the U.S Government nor any agency thereof, nor any of their employees, makes any warranty, expressed or implied, or assumes any legal liability or responsibility for the accuracy, completeness, or usefulness of any information contained herein. For any specific questions about, or interpretations of, the legal references herein, consult appropriate legal counsel.

INTRODUCTION

PROGRAM BACKGROUND

The United States Air Force (USAF) initiated the Environmental Compliance Assessment and Management Program (ECAMP) as a comprehensive self-evaluation and program management system for achieving, maintaining, and monitoring environmental management with environmental evaluations and management action plans at Air Force installations. The objectives of the ECAMP are to:

1. improve Air Force environmental management
2. build supporting financial programs and budgets for environmental requirements
3. assure Major Commands (MAJCOMs), installation commanders, environmental protection committees, environmental coordinators, and bioenvironmental engineers that their environmental programs are effectively addressing environmental problems that could:
 - a. impact mission effectiveness
 - b. jeopardize the health or safety of Air Force personnel or the general public
 - c. significantly degrade the environment
 - d. erode public confidence in the Air Force and the United States
4. anticipate future environmental problems

The ECAMP regulation, Air Force Regulation (AFR) 19-16, *Environmental Compliance Assessment and Management Program*, 24 August 1990, requires periodic internal and external environmental compliance evaluations. The evaluations are designed to assess environmental compliance and to provide necessary feedback to commanders for organizing, directing, and controlling environmental protection activities.

GOVERNING POLICY

Policy concerning environmental compliance at overseas installations is contained in the following:

1. Executive Order (EO) 12088, *Federal Compliance with Pollution Control Standards*
2. EO 12114, *Environmental Effect Abroad of Major Federal Actions*
3. *Overseas Environmental Baseline Guidance Document*, October 1992
4. Department of Defense (DOD) Directive 5100.50, *Protection and Enhancement of Environmental Quality*, 7 December 1973

5. AFR 19-1, *Pollution Abatement and Environmental Quality*, 9 January 1978
6. AFR 19-3, *Environmental Impact Analysis Process Overseas*, 23 September 1981
7. AFR 19-8, *Environmental Protection Committees and Environmental Reporting*, 19 August 1988.

The ECAMP will assist the Air Force in implementing these policies.

- EO 12088, *Federal Compliance with Pollution Control Standards*, requires the following:

- 1-801. The head of each executive agency that is responsible for the construction or operation of Federal facilities outside the United States shall ensure that such construction or operation complies with the environmental pollution control standards of general applicability in the host country or jurisdiction.
- 1-802. Nothing in this order shall create any right or benefit substantive or procedural, enforceable at law by a party against the United States, its agencies, its officers, or any person.

ECAMP does not commit the Air Force to comply with host country law beyond the current obligation under EO 12088 and the status of forces agreement (SOFA).

- EO 12114, *Environmental Effects Abroad of Major Federal Actions*, requires every Federal agency with major Federal actions significantly affecting the environment of a foreign nation to use the following documents in connection with actions:
 1. environmental impact statements (EISs)
 2. environmental studies related to the proposed action
 3. environmental assessments (EAs), summary environmental analyses, or other appropriate documents.
- *Overseas Environmental Baseline Guidance Document (OEBGD)*, October 1992 identifies implementation guidance, procedures, and criteria for compliance at DOD installations outside the United States, its territories, and possessions.
- DOD Directive 5100.50, *Protection and Enhancement of Environmental Quality*, 7 December 1973, requires DOD components at locations outside the United States to conform at all times to the environmental quality standards of the host country, international agreements, and SOFA, and to conform, to the extent practical, to the following:
 1. comply with the spirit, as well as the letter, of the National Environmental Policy Act and all other Federal environmental laws, executive orders, and regulations

2. Demonstrate leadership in environmental pollution abatement and enhancement of the environment.
- AFR 19-1, *Pollution Abatement and Environmental Quality*, 9 January 1978, sets up an environmental protection program. Air Force policy is to make sure facilities outside the United States territory are designed, constructed, and operated so as to comply with the substantive environmental pollution standards of general applicability in the host country.
 - AFR 19-3, *Environmental Impact Analysis Process (EIAP) Overseas*, 23 September 1981, establishes the policies, procedures, and responsibilities for considering the effects on the environment by major Air Force actions outside the United States. It describes how the overseas EIAP is used to identify environmental impact to host nation territory, global commons, and/or protected global resources by major Air Force actions outside the United States, its territories or possessions.
 - AFR 19-8, *Environmental Protection Committees and Environmental Reporting*, 19 August 1988, establishes the Environmental Protection Committees (EPCs) and assigns their responsibilities as a multidisciplinary approach to incorporate environmental concerns into the decision making process. It also details the environmental reporting procedures, applicable worldwide, that support the Air Force's pollution abatement program.

MANUAL OBJECTIVES

The ECAMP manual for installations outside the United States is intended to serve as the primary tool for conducting environmental compliance evaluations at Air Force installations. The objectives of the manual are to:

1. compile applicable DOD and Air Force environmental regulations associated with Air Force operations and activities
2. synthesize good management practices (GMPs) and risk management issues into consistent and easy to use checklists
3. serve as an aid during the evaluation process.

A second, country-specific manual (if available), should be used in conjunction with the worldwide manual. The country-specific manual contains the Air Force interpretation of the environmental pollution control standards of general applicability for that country.

ECAMP PROGRAM MANAGEMENT PROCESS

The ECAMP program management process begins with the environmental evaluation and written report that identifies compliance and management issues. The commander, through his EPC, then assigns appropriate staff agencies to work on each issue.

The path illustrated on the far left of Figure 1 represents the process the installation follows in resolving most issues. Immediate hazards should, of course, be addressed as quickly as possible. The procedural, easy-to-fix issues are corrected during the process and documented in the report.

The path in the center, for the tough and expensive issues, includes preparation of a management action plan by the installation, describing how these problems will be addressed.

Figure 1

ENVIRONMENTAL EVALUATION PROCESS

The ECAMP program management process described above can be divided into three distinct phases:

1. pre-evaluation activities
2. site evaluation activities
3. post-evaluation activities.

The ECAMP Environmental Assessment Manual deals with the first two phases of the program management process. For detailed information on the post-evaluation phase of the process, the user is referred to the ECAMP policy. Brief descriptions of the pre-evaluation and site evaluation activities are presented below.

Pre-evaluation Activities - There are five key activities that should be completed before an evaluation team begins the evaluation activities:

1. Complete Previsit Questionnaire (external evaluations only). The purpose of the previsit questionnaire is to collect information that will familiarize the evaluation team with the installation and its operations so the evaluation team can review the applicable regulations and prepare a detailed evaluation schedule. A sample previsit questionnaire has been included as Attachment 1.
2. Define Evaluation Scope and Team Responsibilities. The installation or MAJCOMs may wish to place special emphasis on certain protocols or to review additional areas not covered in the manual. These goals must be clearly stated so the evaluation can be properly planned. Additionally, the duration of the evaluation, appointment of team members by the EPC, and handling of tenants and off-base sites must be addressed. Finally, responsibilities for each protocol must be assigned to one of the team members.
3. Review Relevant Regulations. Once the evaluation scope and responsibilities are known, the evaluators should undertake a thorough review of the relevant host nation and local regulations affecting the installation. The applicable environmental regulations must be determined before the evaluation is begun. If not already available, checklist items for host nation and local requirements must be added to the checklists in the ECAMP manual.
4. Develop Evaluation Schedule. The team should develop a detailed evaluation schedule that includes the activities planned for each day.
5. Review Evaluation Protocols. Each evaluator should know the regulatory requirements and schedule and be familiar with the evaluation checklists that will be used.

Site Evaluation Activities - On site, the evaluators will conduct record searches, interviews, and site surveys to determine the compliance status of the installation. Operations are compared with environmental standards, and any deficiencies are written up as findings. The data collected should be sufficient, reliable, and relevant to provide a sound basis for evaluation findings and recommendations. AF Form 1955, ECAMP Finding Summary, is available to assist evaluators in compiling needed information during an ECAMP evaluation. An AF Form 1955 should be completed for each finding during the evaluation. These forms comprise the basis for the ECAMP report. The format and content for ECAMP evaluation reports are covered in AFR 19-16.

All items of the ECAMP Finding Summary must be filled in up to "Sampling Results" for negative findings and up to "Criteria" for positive findings. The *condition* is a factual statement describing the status of the process, permit, or situation under investigation. A condition may be positive if the installation is going above and beyond the requirements. The *criteria* are the environmental standards (DOD, Air Force, GMPs, host nation standards) the installation is violating. The *cause* is the reason the condition exists. Causes can include staffing problems, incorrect or lack of training, procedures that are not followed, and inadequate equipment or facilities. The *effect* can be actual or potential, and can include health and safety, environmental damage, cost, effectiveness of operation, legal consequences, and mission impact. Further instructions for completing AF Form 1955 are on the reverse side of the form.

For example, a team member assigned to evaluate the installation's hazardous waste management program visited the accumulation point at building 5000. The evaluator noticed some drums were damaged and took a count of the total number of drums and the number of damaged drums to obtain an accurate description of the finding. Five of the 25 drums were rusted and bulging. Item 3-21 states that containers should be tightly sealed and not be leaking, bulging, rusting, or badly dented. The damaged drums were behind the others, so the accumulation point manager may have overlooked them during his regular inspections. The accumulation point manager immediately put overpack drums on order. The evaluator is now ready to fill out an AF Form 1955 for this finding. A completed sample form for this finding is shown in Attachment 2.

MANUAL APPROACH

Air Force installations engage in many operations and activities that can cause environmental impacts on public health and the environment if not controlled or properly managed. Many of these activities and operations are regulated by local, national, DOD, and USAF directives, as well as SOFA provisions and host nation standards of general applicability.

After a review of these activities at Air Force installations, it was apparent that there were major categories of environmental compliance into which most environmental regulations and Air Force activities could be grouped.

This manual is divided into 10 major sections that correspond to these major environmental categories:

Section	Environmental Category
1	Air Emissions Management
2	Hazardous Materials Management
3	Hazardous Waste Management
4	Natural and Cultural Resources Management
5	Environmental Noise Management
6	Pesticide Management
7	POL Management
8	Solid Waste Management
9	Special Programs Management
10	Water Quality Management

Each section is organized in the following format:

A. Applicability of this Protocol

This part provides guidance on the major activities and operations included in the checklist and a brief description of the major application.

B. DOD Directives/Instructions

This part identifies any DOD directives/instructions that address requirements associated with the specific environmental category.

C. U.S. Air Force Regulations

This part identifies those USAF regulations that address requirements associated with the specific environmental category.

D. Responsibility for Compliance

This part identifies and summarizes the individual organizations at an Air Force installation responsible for maintenance, operation, or environmental monitoring of activities associated with the environmental category.

E. Key Compliance Definitions

This part presents definitions for those key terms associated with each environmental category.

F. Assessment Checklists

The final part of each section contains evaluation procedures (checklists) composed of statements of requirements or guidelines that serve as indicators to point out possible environmental problems, as well as practices, conditions, and situations that could indicate potential problems. They are intended to focus attention on the key questions and issues that should be investigated. Instructions are provided to direct the evaluator to the appropriate action, reference, or activity that corresponds to the specific requirement or guideline.

INTRODUCTION TO MANUAL

The checklist portion of each section in the ECAMP manual is divided into two columns. The narrow columns contain statements of a requirement. This may be an Air Force or DOD requirement, or it may be a requirement considered to be a GMP, which is not specifically mandated by regulation.

The wide column gives instructions to help conduct the evaluation. These instructions are intended to be specific action items that should be accomplished by the investigator. Some of the instructions may be a simple documentation check taking a few minutes, while others may require physical inspection of a facility. Contact/location information in parentheses is intended to give guidance on the department or location at the installation where action items are applicable. The contact/local code given is referenced to a legend at the bottom of the worksheet.

The worksheet provided at the end of each section is to be copied and used for detailed notations or comments. This worksheet is also divided into two columns. The first is for the status of the item: Not Applicable (N/A), Complies (C), and Requires Management Action (RMA). The second is for reviewer comments such as location, statistics, or other observations. These notations will provide a record for use in preparing the final report. Notations should include both situations of substandard operation needing attention and those operations that exceed requirements or provide examples of good programs. For future reference and clarity, it is essential to record the building number or other references be made of the location that is being reviewed.

The evaluation procedures are designed as an aid and should not be considered exhaustive. Use of the guide requires the evaluator's judgement to play a role in determining the focus and extent of further investigation. The MAJCOM is responsible for ensuring that host nation regulations are considered. The country-specific manual (if

available) and local regulations should be reviewed so additional questions can be included that reflect the substantive requirements pertinent to individual installations.

CREATING SHOP-SPECIFIC SELF-INSPECTION CHECKLISTS

The ECAMP checklist is a useful tool for creating self-inspection checklists for individual shops. These shop-specific checklists can be used by shop supervisors and workers to ensure correct practices and procedures are being followed on a routine basis. Thus, good self-inspection checklists are an excellent supplement to annual ECAMP evaluations.

A customized checklist can be created in five steps:

1. review the shops' activities to determine which protocols apply
2. select broad sections of the applicable protocols for closer review by using the checklist road maps found before the questions in each protocol
3. review the individual questions selected for application to the shop in question
4. edit the applicable questions to make them shop specific
5. compile the questions on AF Form 1955.

For example, using these five steps, a customized checklist for a paint shop is derived as follows:

1. The paint shop has many environmental concerns:
 - emissions from painting activities
 - proper storage of flammable and combustible liquids
 - hazardous waste accumulation point requirements
 - management of the solid waste receptacles at the shop
 - discharge of solvents, stripping compounds, and paint solids into the storm or sanitary systems.

Protocols that apply are:

- Air Emissions Management
- Hazardous Materials Management
- Hazardous Waste Management
- Solid Waste Management
- Water Quality Management.

2. Referring to the protocol "road maps" in this manual, the following items may apply to paint shop:

- in Air Emissions Management: spray painting or surface coating operations questions
- in Hazardous Materials Management: storage of flammable/combustible liquids questions
- in Hazardous Waste Management: generator requirements questions
- in Solid Waste Management: management of the solid waste receptacles questions
- in Water Quality Management: unpermitted stormwater discharge and discharge of wastewater to an off-base Publicly Owned Treatment Works (POTW) or other treatment facility questions.

3. Most of these applicable checklist questions can be easily rewritten to specifically address paint shop concerns. Using Water Quality as an example, questions are edited to delete interviews and inspections in other shops:

Example Question from the Checklist

10-41. Even where not covered by permit, stormwater discharge on the installation should be uncontaminated and periodically surveyed (GMP).

Determine stormwater surveillance locations. (1)(2)(4)

Check analytical records and discuss any instances of elevated readings for any parameters.

Check plan for storm sewer system and location of all outfalls and discharge points.

Check areas of stormwater discharge physically for evidence of contamination (oil sheen, discoloration, etc.).

Verify that any oil/water separators connected to the storm sewer on the installation are operating properly.

Check major industrial shops or industrial areas physically, and look for evidence of contaminated waste streams discharging to floor drains, storm system, or catch basins. Key shops to be visited include:

*battery shop
corrosion control
engine shop
motor pool
paint shop
plating shop
petroleum, oils, and lubricants (POL) area.*

Example Rewrite Question

10-41. Even where not covered by permit, stormwater discharge on the installation should be uncontaminated and periodically surveyed (GMP).

Check paint shop areas physically, and look for evidence of contaminated waste streams discharging to floor drains, storm system, or catch basins.

4. Finally, all of the edited questions are compiled on AF Form 1955 for use in the shop. The example for the paint shop is shown in Attachment 3.

(NOTE: The same numbering convention is kept, which allows ease of reference back to the original manual.)

OPERATIONS AND RELATED PROTOCOLS

Table 1 lists major operations and activities that affect the environment at typical Air Force installations, and the protocols within which they are addressed. As shown, many activities and operations cause environmental impacts in more than one area, and are, therefore, addressed in more than one protocol.

SUPPLEMENTAL INFORMATION

Any findings discovered through the use of this guidance manual by the internal assessment must be validated by the environmental coordinator and Judge Advocate. The findings and corrective actions must be recorded in the Environmental Protection Committee minutes.

Any change or suggestion for improving this guidance manual should be forwarded to: HQ USAF/LEEVO, Bolling AFB, Washington D.C. 20332-5000.

Attachment 1
Previsit Environmental Management Questionnaire

This questionnaire will provide background information necessary to plan and conduct an environmental compliance assessment.

MAJCOM: _____

Name of Installation: _____

Environmental Point of Contact (POC): _____

Telephone Number: _____

Has the MAJCOM implemented a policy of adopting any U.S. Federal environmental regulations? If yes, which ones:

YES NO N/A

Section 1 Air Emissions Management

1. Does installation operate a fuel burner?

— — —

a. central steam plant?

— — —

b. hot water?

— — —

c. approximate size of fuel burner _____

2. Are any hazardous or toxic air pollutants present in the installation's air emissions (e.g., beryllium, asbestos, mercury, and vinyl chloride)?

— — —

3. Is the installation subject to any of the following air emission standards:

a. particulates?

— — —

b. NO_x?

— — —

c. sulfur dioxide?

— — —

d. volatile organic compounds?

— — —

e. carbon monoxide?

— — —

f. toxic air pollutants?

— — —

If yes, please specify:

	YES	NO	N/A
4. Does the installation operate any incinerators? (i.e. for classified documents, medical waste, solid waste, etc.)	—	—	—

How many? _____

5. Does the installation engage in:

a. open burning?	—	—	—

b. firefighter training?	—	—	—

6. Does the installation use any solvent degreasers?	—	—	—

7. Does the installation have a dry cleaning facility?	—	—	—

8. Does the installation have a:

a. spray painting operation?	—	—	—

b. surface coating operation?	—	—	—

(Attach list of locations if answered yes to either.)

9. Have installation emissions resulted in complaints from the public due to:

a. odors?	—	—	—

b. fugitive dusts?	—	—	—

c. other? _____	—	—	—

10. Does the installation utilize air pollution control equipment?	—	—	—

If yes, please explain: _____

11. Does installation operate a motor vehicle station?	—	—	—

12. Does the installation dispense fuel to motor vehicles?	—	—	—

13. Please list number of fuel storage areas and the fuel type.

Quantity	Fuel type	Quantity	Fuel type
_____	_____	_____	_____
_____	_____	_____	_____

	YES	NO	N/A
14. Does the installation have active aircraft operations?	—	—	—
15. Does the installation have active aircraft maintenance operations?	—	—	—
16. Does the installation have aerospace ground equipment (AGE) operations?	—	—	—
17. Please list any additional shop activities that generate any form of air pollution:			

Section 2 Hazardous Materials Management

1. Does the installation store any flammable materials?	—	—	—
2. Does the installation transport any hazardous materials off-installation?	—	—	—
3. Does the installation have a procedure to ensure the proper labeling, packaging, and spill response for hazardous materials?	—	—	—
4. Does the installation store:			
a. acids?	—	—	—
b. caustics?	—	—	—
c. flammables?	—	—	—
d. combustibles?	—	—	—
e. compressed gases?	—	—	—
f. oxidizers?	—	—	—

Section 3 Hazardous Waste Management

1. Does the installation produce any wastes classified as:			
a. ignitable?	—	—	—
b. corrosive?	—	—	—
c. reactive?	—	—	—
d. toxic?	—	—	—
e. other? (please explain)	—	—	—

	YES	NO	N/A
2. Does the installation treat, store, or dispose of hazardous wastes on site?	—	—	—
If so, please specify waste type and treatment method:			
3. Does the installation accept wastes from other installations for treatment, storage, or disposal?	—	—	—
4. Does the installation engage in the transportation of hazardous wastes:			
a. on base?	—	—	—
b. off base?	—	—	—
c. by central transport (transportation squadron)?	—	—	—
d. by individual unit transport?	—	—	—
5. Does the installation monitor:			
a. groundwater?	—	—	—
b. leachate?	—	—	—
6. Does the installation have a hazardous waste management (contingency) plan?	—	—	—
7. Does the installation utilize other locations for the treatment, storage, or disposal of hazardous waste?	—	—	—
Please specify:			
8. Does the installation use any nonhazardous solid waste (including used oil) as a supplemental fuel source?	—	—	—
9. Does the installation have a contractor dispose of its hazardous waste?	—	—	—
Which office monitors this contract?			

YES NO N/A

Section 4 Natural and Cultural Resources Management

1. Does the installation have an area designated as a natural resource, including "highly protected" and "more generally protected?"
2. Does the installation have a plan for managing its natural resources?
3. Does the installation have an area designated as a:
 - a. cultural resource?
 - b. archeological resource?
 - c. historic structure?
4. Are there any areas on the installation that have:
 - a. wetlands?
 - b. flood Plains?

—	—	—
—	—	—
—	—	—
—	—	—
—	—	—
—	—	—
—	—	—
—	—	—

Section 5 Environmental Noise Management

1. Does the installation have an active runway?
2. Does the installation have any operations or maneuvers that produce environmental noise (e.g., target range, skeet range, helicopter pad)?

—	—	—
—	—	—

Section 6 Pesticide Management

1. Does the installation use pesticides in regulated quantities?
2. Are pesticide wastes disposed of at the installation?
3. Are pesticides stored on the installation?
Please list locations:

—	—	—
—	—	—
—	—	—

4. Are medical records kept for individuals involved in the management of pesticides?

—	—	—

5. Where are pesticides used at the installation?

YES NO N/A

Section 7 POL Management

Fuels and Lubricants

1. Does the installation have a motor pool?

— — —

How many? _____

2. Does the installation store oil in large volumes?

— — —

3. Does the installation have a spill prevention and response plan?

— — —

4. Does the installation's spill plan include provisions pertaining to hazardous substances or hazardous wastes?

— — —

5. Does the installation conduct spill response training?

— — —

6. Does the installation use "fuel bladders" during field exercises?

— — —

7. Does the installation have any oil/water separators?

— — —

How many? _____

(Please have a map, showing locations, available for the team.)

Underground storage tanks (USTs)

8. Does the installation have an aircraft fuel storage yard?

— — —

If yes, how many USTs are in the aircraft fuel storage yard, and what size are they?

9. Does the installation have a ground vehicle fuel storage yard?

— — —

If yes, how many USTs are in the ground vehicle fuel storage yard, and what size are they?

	YES	NO	N/A
10. Does the installation have an Army/Air Force Exchange Service (AAFES)-run or other type of gas station located on the base?	—	—	—
If yes, how many USTs are located at the gas station, and what size are they?			
11. Does the base have any other USTs used to store petroleum products?	—	—	—
If yes, where are they located, how many are there, and what size are they?			
12. Does the installation have any USTs used to store hazardous substances?	—	—	—
If yes, where are they located, how many are there, what size are they, and what hazardous product do they contain?			
13. Does the installation have any underground tanks out of service?	—	—	—

Section 8 Solid Waste Management

1. Does the installation have a solid waste management facility on site?	—	—	—
2. Does the installation have a:			
a. resource recovery facility Defense Reutilization and Marketing Office (DRMO) on the installation?	—	—	—
b. resource recovery facility (DRMO) off the installation?	—	—	—
c. landfill?	—	—	—
d. solid waste incinerator?	—	—	—
e. solid waste recycling program?	—	—	—
3. Does the installation have any "unofficial" landfill sites that are no longer in use?	—	—	—
4. Is waste transported off-installation for disposal:			
a. in landfills?	—	—	—
b. in incinerators?	—	—	—
c. other (specify): _____	—	—	—

	YES	NO	N/A
5. Does the installation dispose of ash residues or sludge:			
a. on base?	—	—	—
b. off base?	—	—	—
6. Is the installation monitored for:			
a. leachate?	—	—	—
b. groundwater?	—	—	—
7. Does the installation currently dispose of, or has it been used for the disposal of, asbestos?	—	—	—
8. Does the installation generate pathological wastes?	—	—	—
9. Does the installation dispose of pathological waste by on-base incineration?	—	—	—

Section 9 Special Programs Management

PCBs

1. Are PCB (polychlorinated biphenyl) or PCB contaminated oils in use or stored in the installation:

a. transformers?	—	—	—
b. capacitors?	—	—	—
c. electromagnets?	—	—	—
d. hydraulic systems?	—	—	—
e. other? _____	—	—	—

2. Are there any PCB Items in storage for disposal?

— — —

PCB concentration (if known): _____

3. Does installation dispose of PCBs or PCB Items at the base?

— — —

	YES	NO	N/A
Asbestos			
4. Does the installation have primary or secondary schools?	—	—	—
5. Has the installation conducted a complete base-wide asbestos facility survey?	—	—	—
6. Does the installation have a written asbestos management plan?	—	—	—
7. Does the installation have a written asbestos operating plan?	—	—	—
8. Has the installation undergone any asbestos removal projects in the past?	—	—	—
9. Is there any asbestos on the installation that has been removed and is awaiting disposal at this time?	—	—	—
10. Will the installation have any demolition, remodeling or renovation projects underway at the time of the ECAMP assessment?	—	—	—

Please identify those projects and buildings:

11. Does the installation maintain training records for asbestos workers?	—	—	—

Location of records:

Radon Gas

12. Is the installation located in a geographic area where radon gas is found?	—	—	—
13. Does the installation monitor for radon gas?	—	—	—

A-106

14. Does the installation include, in the A-106 report, all environmental projects listed in the CECORs?	—	—	—

EIAP

15. Does the installation have any major actions programmed which will require an Environmental Impact Analysis Program (EIAP) as described in AFR 19-3?	—	—	—

YES NO N/A

Section 10 Water Quality

Drinking Water

1. Does the installation operate a public water system? — — —
2. Does any portion of the installation's drinking water supply come from on-site wells or surface water sources? — — —
3. Does the installation monitor on-site drinking water sources? — — —

Wastewater Discharge

4. Does the installation have any discharges of the following:

- a. stormwater runoff from operational/storage area? — — —
- b. stormwater runoff from undeveloped area? — — —
- c. dredge and fill solids drainage water? — — —
- d. wastewater treatment installation effluent? — — —
- e. process wastewater? — — —
- f. heat/power production cooling water? — — —
- g. other? — — —

5. Does the installation discharge into a Publicly Owned Treatment Works (POTW) any of the following:

- a. process wastewater? — — —
- b. domestic (sanitary) wastewater? — — —
- c. wastewater treatment installation effluent? — — —
- d. other? — — —

6. Does the installation make use of an on-site wastewater treatment system prior to effluent discharge? — — —

7. Does the installation conduct any effluent monitoring? — — —

	YES	NO	N/A
8. Are monitoring samples analyzed by:			
a. installation personnel?	—	—	—
b. off-site contractor?	—	—	—
9. Does the installation have a separate stormwater runoff system?	—	—	—
10. Does the installation have vehicle washracks (or other designated vehicle wash areas)?	—	—	—

Section 11 General Information

1. Does the installation contain water protection areas?	—	—	—
2. Is the installation suspected of contributing to a groundwater contamination problem?	—	—	—

Signature of individual completing this form: _____

Date completed: _____

ENVIRONMENTAL COMPLIANCE ASSESSMENT AND MANAGEMENT PROGRAM (ECAMP) FINDING SUMMARY

PROTOCOL Hazardous Waste Management	ITEM NUMBER 3-21	TYPE (+/-) Neg.	BLDG NO./LOCATION 5000		
SECTION I - FINDING INFORMATION					
1. CONDITION Five of the twenty-five drums at the accumulation point at building 5000 were rusted and bulging.					
2. CRITERIA Containers at HWAPs are required to meet specific standards (OEBGD, Chapter 6, Section 2, Criteria 3, and Section 4, Criteria 1(a) through 1(d)).					
3. FINDING IDENTIFICATION CODE 3A		4. VIOLATION TYPE CODE P3		5. REPEAT FINDING	
6. FINDING TYPE Regulatory (OEBGD)		7. RATING Minor		YES	X
8. SAMPLING RESULTS: (NOTE: Normally random sampling is used--if not, identify method used)					
a. UNIVERSE 25	b. SAMPLE SIZE 25	c. DISCREPANCIES 5	d. PERCENT 20%		
SECTION II - COMMENTS					
1. CAUSE(s) Accumulation point managers are not adequately trained on container standards.					
2. EFFECT(s) Drums may become damaged enough to leak.					
3. SUGGESTED SOLUTION(s) Overpack the five damaged drums. Change hazardous waste training program to include container standards.					
4. COMMENTS The accumulation point manager put the overpack drums on order.

A10 PROGRAM PLANNING	D4 SPILLS/LEAKS
A11 SAMPLING	D5 OTHER
A12 TRAINING	
A13 OTHER	

VIOLATION TYPE CODES:

DISCHARGE--Spilling, leaking, pumping, pouring, emitting, emptying or dumping of a pollutant that is not covered by a permit or exceeds a permit limit

POTENTIAL DISCHARGE--Physical conditions and operating practices, if left uncorrected, could cause a discharge

ADMINISTRATIVE--Program management and oversight issues such as plans, permits, training, records, reports, etc.

FINDING TYPE:

REGULATORY--Involves federal, state or local environmental requirements

PROCEDURAL--Involves DoD or USAF environmental requirements

HOST COUNTRY--Involves host country environmental requirements

MANAGEMENT PRACTICE--Environmental procedures/policies which are good practices but are not REGULATORY or PROCEDURAL

RATING:

SIGNIFICANT--Requires IMMEDIATE attention, poses a direct threat to human health/safety, can "shut you down".

MAJOR--Requires less than immediate attention, could affect human health/safety, would probably result in an NOV.

MINOR--Procedural, temporary, or occasional deficiencies of no immediate consequence.

MANAGEMENT PRACTICE--Used for positive findings and when the finding is of the management practice type.

ENVIRONMENTAL COMPLIANCE REQUIREMENTS**ENVIRONMENTAL COMPLIANCE ASSESSMENT AND MANAGEMENT PROGRAM (ECAMP)****COMPLIANCE CATEGORY:** Water Quality**REGULATOR REQUIREMENTS AND INSTRUCTIONS TO EVALUATOR**

10-41 Even where not covered by permit, stormwater discharge on the installation should be uncontaminated and periodically surveyed (GMP).

Check paint shop areas physically, and look for evidence of contaminated waste streams discharging to floor drains, storm systems, or catch basins.

Section 1

Air Emissions Management

SECTION 1

AIR EMISSIONS MANAGEMENT

A. Applicability of this Protocol

This protocol includes regulations, responsibilities, and compliance requirements associated with air pollution emissions at Air Force installations. The major sources of air pollution emissions at Air Force installations are:

- particulates, sulfur dioxide (SO_2), and nitrogen oxides (NO_x) from fuel burning at steam and hot water generation plants and boilers
- particulate emissions from the operation of classified material and pathological incinerators
- the emission of volatile organic compound (VOC) vapors from the storage and transfer of certain petroleum fuels and chemicals (solvents), and the operation of degreasers and other processes (paint stripping and metal finishing) that use solvents
- the emission of NO_x and hydrocarbons from aerospace ground equipment (AGE) and vehicles operated on the base.

Most Air Force installations have air emissions sources in each of these four categories. Therefore, this protocol is applicable to some extent at all Air Force installations.

The regulatory requirements in this protocol are based on Department of Defense (DOD) and Air Force regulations that apply at overseas installations. Good Management Practices (GMPs) are derived from U.S. Environmental Protection Agency (USEPA) regulations and typical state or local regulations that are not mandatory overseas but are important to follow to preserve the health and safety of Air Force employees and protect the environment. Any procedural USEPA requirements, such as permits and notifications, are not applicable overseas, and, therefore, are not in the worldwide manual. GMPs in the air emissions protocol are derived from the following USEPA regulations: 40 Code of Federal Regulations (CFR) 51, 40 CFR 60, and 40 CFR 80.

B. DOD Directives/Instructions

- *Overseas Environmental Baseline Guidance Document (OEBGD)*, October 1992, Chapter 2 outlines performance standards for fossil fuel fired steam generators, hot water generating plants, electric utility steam generators, and incinerators. Motor vehicles ozone-depleting substances, and VOCs are also included.
- DOD Instruction 4120.14, *Environmental Pollution Prevention, Control, and Abatement*, 30 August 1977, establishes policies for developing and submitting plans for installing improvements needed to abate air emissions from DOD facilities.
- DOD Directive 6050.9, *Chlorofluorocarbons (CFCs) and Halons*, 13 February 1989, establishes policy and assigns responsibilities for the management of CFCs and halons and the long-term process of decreasing DOD dependence on CFCs and halons.

C. U. S. Air Force Regulations

- Air Force Regulation (AFR) 19-6, *Air Pollution Control Systems for Boilers and Incinerators*, 9 May 1988, provides guidance on how to select, design, operate, and maintain emission control devices on boilers and incinerators.
- Air Force Technical Manual TO 00-20B-5, *USAF Motor Vehicle and Vehicular Equipment Inspection*, establishes procedures for inspecting and reporting vehicle emissions.

D. Responsibility for Compliance

- The Combat Support Group Commander is usually the person responsible for compliance.
- Base Civil Engineering (BCE) is responsible for the maintenance of incinerators and fuel handling and storage equipment, as well as the operation and maintenance of all fuel burners (boilers). The heating and boiler plants are responsible for the operation of fuel burners and are part of the Operations Branch of Civil Engineering.
- The Environmental Coordinator in BCE is responsible for the preparation of all air pollution emission source permit applications.
- The regional hospital or base clinic is responsible for the operation of any pathological incinerators located in its facility.

- The Fuels Management Branch of Base Supply is responsible for the operation of all fuel handling, transportation (tanks and/or pipelines), and storage facilities on base. They are also responsible for insuring that all fuels satisfy specifications.

The Fuels Management Branch is also responsible for operating the Military Service Station, which dispenses leaded or unleaded fuel.

- The Automotive Maintenance Branch of Base Transportation is responsible for the emission testing and vehicle maintenance required by Host Nation and Air Force regulations.
- The various maintenance squadrons at the base are responsible for the operation of degreasers and other industrial processes that are regulated or may require operating permits.
- The Base Exchange operates a service station that dispenses leaded and unleaded fuels and is subject to the Host Nation requirements. The service station is normally operated by a contractor, but the labeling and nozzle size regulations still apply. The Government is responsible for compliance, but the contractor may also be responsible, depending on the contract wording.
- The Bioenvironmental Engineer (BEE) is responsible for monitoring ambient air quality and preparing the installation air emission inventory.

E. Key Compliance Definitions

These definitions were obtained from the directives/instructions and AFRs listed at the end of each definition. If there is no citation listed for the definition, it has been drawn from the U.S. CFR.

- *Annual Capacity Factor* - the ratio between the actual heat input to a steam generating unit from an individual fuel or combustion of fuels during a period of 12 consecutive calendar months and the potential heat input to the steam generating unit from all fuels, had the steam generating unit been operated for 8,700 hours (h) during that 12-month (mo) period at the maximum design heat input capacity.
- *Bulk Gasoline Terminal* - any gasoline facility that receives gasoline by pipeline, ship, or barge and has a throughput of greater than 284,250 liters (L) (75,000 gallons (gal)) per day.

- *Chlorofluorocarbons and Halons* - as of August 1988, these include CFC-11, CFC-12, CFC-113, CFC-114, CFC-115, Halon 1211, Halon 1301, and Halon 2402 (DOD Directive 6050.9, para C).
- *Closed-vent System* - a system that is not open to the atmosphere and is composed of piping, connections, and, if necessary, flow inducing devices that transport gas or vapor from a piece or pieces of equipment to a control device.
- *Coal Refuse* - waste products of coal mining, cleanings, and coal preparation operations, containing coal, matrix materials, clay, and other organic and inorganic material (OEBGD, Chapter 2, Definitions).
- *Continuous Emissions Monitoring Systems (CEMS)* - a monitoring system for continuously measuring the emissions of a pollutant from an affected facility.
- *Diesel Fuel* - any fuel sold and suitable for use in diesel motor vehicles and diesel motor vehicle engines, and commonly or commercially known or sold as diesel fuel.
- *Dryer* - a machine, used to remove petroleum solvent from articles of clothing or other textile or leather goods after washing and removing excess petroleum solvent, together with the piping and ductwork used in the installation of this device.
- *Electric Utility Steam Generating Unit* - any furnace, boiler, or other device used for combusting fuel for the purpose of producing steam to generate electricity (OEBGD, Chapter 2, Definitions).
- *Fossil Fuel* - natural gas, petroleum, coal, and any form of solid, liquid, or gaseous fuel derived from such materials for the purpose of creating useful heat (OEBGD, Chapter 2, Definitions).
- *Fuel Pretreatment* - a process that removes a portion of the sulfur in a fuel before combustion of the fuel in a steam generating unit.
- *Fugitive Emissions* - air pollutants entering into the atmosphere from other than a stack chimney, vent, or other functionally equivalent opening (e.g., vapors, dust, or fumes).
- *Gasoline Carrier* - any distributor who transports or stores, or causes the transportation or storage of, gasoline or diesel fuel, without taking title to or otherwise having any ownership of the gasoline and without altering either the quality or quantity of the gasoline or diesel fuel.

- *Good Management Practice (GMP)* - practices that, although not mandated by law, are encouraged to promote safe operating procedures.
- *Incinerator* - any furnace used in the process of burning solid or liquid waste for the purpose of reducing the volume of the waste by removing combustible matter, including equipment with heat recovery systems for either hot water or steam generation (OEBGD, Chapter 2, Definitions).
- *Maximum Heat Input Capacity of a Steam Generating Unit* - determined by operating the facility at maximum capacity for 24 h and using the heat loss method described in Sections 5 and 7.3 of the American Society of Mechanical Engineers (ASME) *Power Test Codes* 4.1 no later than 180 days after initial startup of the facility and within 60 days after reaching the maximum production rate at which the facility will be operated.
- *Non-tactical Vehicles* - commercially available vehicles that are adapted for military use (OEBGD, Chapter 2, Definitions).
- *Opacity* - the degree to which emissions reduce the transmission of light and obscure the view of an object in the background.
- *Particulate Matter Emissions* - any airborne, finely divided solid or liquid material, except uncombined water, emitted to the ambient air.
- *Petroleum Dry Cleaner* - a dry cleaning facility that uses petroleum solvent in a combination of washers, dryers, filters, stills, and settling tanks.
- *PM₁₀* - particulate matter with an aerodynamic diameter less than or equal to a nominal 10 micrometers (μm).
- *Publication Rotogravure Printing* - any number of rotogravure printing units capable of printing simultaneously on the same continuous web or substrate and including any associated device for continuous cutting and folding of the printed web, where the following sellable paper products are printed: catalogues; direct mail advertisements; display advertisements; magazines; miscellaneous advertisements, including brochures, pamphlets, catalogue sheets, circular folders, and announcements; newspapers; periodicals; and telephone and other directories.
- *Reid Vapor Pressure* - the absolute vapor pressure of volatile crude oil and volatile nonviscous petroleum liquids, except liquefied petroleum gases, as determined by the ASTM, Part 17, 1973, D-323-72 (reapproved 1977).

- *Steam Generating Unit* - any furnace, boiler, or other device used for combusting fuel for the purpose of producing steam, including fossil fuel fired generators associated with the combined cycle of gas turbines; nuclear generators are not included (OEBGD, Chapter 2, Definitions).
- *True Vapor Pressure* - the equilibrium partial pressure exerted by a petroleum liquid, as determined in accordance with methods described in American Petroleum Institute Bulletin 2517, *Evaporation Loss From Floating Roof Tanks*, 1962.
- *Very Low Sulfur Oil* - an oil that contains no more than 0.5 weight percent sulfur or that, when combusted without sulfur dioxide emission control, has a sulfur dioxide emission rate equal to or less than 0.225 kilogram/Million British thermal units (kg/MBtu) or 0.5 pound (lb)/MBtu heat input.
- *VHAP Service* - a piece of equipment that either contains or contacts a fluid (liquid or gas) that is, at least 10 percent by weight, a volatile hazardous air pollutant (VHAP).
- *VOC Service* - in relationship to fugitive emissions, this is when a piece of equipment contains or contacts a process fluid that is at least 10 percent VOC by weight.
- *Volatile Hazardous Air Pollutant (VHAP)* - a substance regulated under 40 CFR 61, Subpart V for which a standard for equipment leaks of the substance has been proposed and promulgated. Benzene and vinyl chloride are VHAPs.
- *Volatile Organic Compound (VOC)* - any compound of carbon, excluding carbon monoxide, carbon dioxide, carbonic acid, metallic carbides, or carbonates, and ammonium carbonate, which participates in atmospheric photochemical reactions.
- *Wood Residue* - bark, sawdust, slabs, chips, shavings, mill trim, and other wood products derived from wood processing and forest management operations (OEBGD, Chapter 2, Definitions).

AIR EMISSIONS MANAGEMENT

Records to Review

- Host Country air pollution control regulations
- Emissions inventory
- All air pollution source permits
- Plans and procedures applicable to air pollution control
- Emission monitoring records
- Opacity records
- Instrument calibration and maintenance records
- Reports/complaints concerning air quality
- Air Emergency Episode Plan
- Host Country regulatory inspection reports
- Documentation of preventive measures or actions
- Results of air sampling at the conclusion of response action

Physical Features to Inspect

- All air pollution sources (fuel burners, incinerators, VOC sources, etc.)
- Air pollution monitoring and control devices
- Air emission stacks
- Air intake vents

Sources to Interview

REGULATORY REQUIREMENTS:	REVIEWER CHECKS:
1-10. New or substantially modified steam generating units or electric utility steam generating units rated greater than 100 MBtu/h heat input are required to operate continuous emissions monitoring systems for opacity, nitrogen oxide, and the oxygen or carbon dioxide content of flue gases (OEBGD, Chapter 2, Criteria 5). ...	Verify that the opacity of emissions is continuously monitored, except where gaseous or distillate fuels are the only fuels combusted. (2)(3) Verify that nitrogen oxide emissions are continuously monitored. Verify that the oxygen or carbon dioxide content of flue gases is continuously monitored at each location where either sulfur dioxide or nitrogen oxide emissions are monitored.
1-11. New or substantially modified electric utility steam generating units with a rated capacity of greater than 100 MBtu/h heat input are required to meet specific emissions limitations (OEBGD, Chapter 2, Criteria 2, Criteria 3, and Criteria 4). ...	Verify that flue gases discharged into the environment do not contain particulate matter in excess of 13 ng/J heat input (0.03 lb/MBtu) derived from the combustion of solid, liquid, or gaseous fuel. (2)(3) Verify that no gases are discharged that: - exhibit greater than 20 percent opacity, except for one 6-minute period per hour of not more than 30 percent opacity - contain in excess of 520 ng sulfur dioxide per joule heat input (1.2 lb/MBtu) and 10 percent of the potential combustion concentration derived from solid fuel - contain in excess of 340 ng of sulfur dioxide per joule heat input (0.80 lb/MBtu) and 10 percent of the potential combustion concentration derived from liquid or gaseous fuels - contain nitrogen oxides in excess of the emissions limits listed in Table 1-1. (NOTE: When emissions of sulfur dioxide are less than 260 ng/J heat input (0.80 lb/MBtu) a limit of 30 percent of the potential combustion concentration derived from solid fuel is required.) (NOTE: These fuels require the following percent reduction of potential combustion concentrations: gaseous fuels, 25 percent; liquid fuels, 30 percent; solid fuels, 65 percent.) Verify that fuel consumption and electrical steam output is calculated monthly in order to calculate boiler efficiency. (NOTE: Emissions limitations and percent reduction requirements are determined on a 30-day rolling average.) (NOTE: Particulate matter and sulfur dioxide emissions criteria do not apply during periods of startup, shutdown, and malfunction.) ...

REGULATORY REQUIREMENTS:	REVIEWER CHECKS:
1-37. In order to minimize atmospheric emissions of ozone-depleting substances, specific procedures should be instituted at the installation (GMP).	Verify that ozone-depleting substances are procured only in the absence of suitable alternatives. (2)(6)(7)(8) Verify that there is no disposal of ozone-depleting substance by direct release to the atmosphere. Verify that ozone-depleting substances are recycled.

Table 1-1

**Nitrogen Oxides Emissions for New or Substantially Modified
Electric Utility Steam Generating Units**

	Nanograms per Joule	Emission Limits lb/MBtu
Gaseous Fuels		
Coal-derived	210	0.50
Other	86	0.20
Liquid Fuels		
Coal derived and shale oil	210	0.50
Other	130	0.30
Solid Fuels		
Coal-derived	210	0.50
Subbituminous	210	0.50
Bituminous	260	0.60
Anthracite	260	0.60
Other	260	0.60

Table 1-2

Standards of Performance, 40 CFR Part 60

Source Category	Fuel Type	Pollutant	Emission Level	Monitoring Requirement
<i>Subpart D</i>				
Steam generators* (> 250 MBtu/h) constructed or modified after 8/17/71	Solid Fossil Fuel	Particulate Opacity SO ₂ NO _x (except lignite and coal refuse)	0.10 lb/MBtu 20%; 27% 6 min/h 1.2 lb/MBtu 0.70 lb/MBtu	None Continuous Continuous Continuous
	Liquid Fossil Fuel	SO ₂ NO _x	0.80 lb/MBtu 0.30 lb/MBtu	Continuous Continuous
	Gaseous Fossil Fuel	NO _x	0.20 lb/MBtu	Continuous
	Lignite	NO _x	0.60 lb/MBtu	Continuous
	Lignite mined in ND, SD, or MT, burned in a cyclone fired unit	NO _x	0.80 lb/MBtu	Continuous
<i>Subpart E</i>				
Incinerators (> 50 tons/day) constructed or modified after 8/17/71	Inciner- ators	Particulate CO ₂	0.08 gr/dscf** corrected to 12% CO ₂	Record of daily charging rates and hours of operation

*Does not include electric utility steam generating unit that started construction or modification after 18 September 1978.

**gr/dscf - grains per dry standard cubic foot

Table 1-3**Municipal Waste Combustor Operating Standards for Carbon Monoxide**

Municipal Waste Combustor Technology	Emission Limit (ppm by volume)
Mass burn waterwall	100
Mass burn refractory	100
Mass burn rotary waterwall	100
Modular starved air	50
Modular excess air	50
Refuse-derived Fuel (RDF) stoker	150
Bubbling fluidized bed combustor	100
Circulating fluidized bed combustor	100
Coal/RDF mixed fuel fired combustor	150

Table 1-4

**Department of Defense Goals for Reduction
Releases, Procurement, and Use of Ozone-Depleting Substances**

Phase I	Phase II	Phase III	Phase IV	Phase V
Institute plans to reduce unnecessary releases during operation, maintenance, and training.	Institute plans to eliminate procurement and use.	Stop use in new procurements.	Phaseout of current applications to 50 percent of 1986 levels.	Reduce use in all applications to zero.

Goals for CFCs

	Phase I	Phase II	Phase III	Phase IV	Phase V
Category III	OCT 90	OCT 92	OCT 96	OCT 96	OCT 2000
Category II	OCT 90	OCT 93	OCT 97	OCT 97	OCT 2000*
Category I	OCT 90	OCT 93	OCT 98	OCT 98	Upon available substitutes

Goals for Halons

Category III	OCT 90	OCT 90	OCT 90	---	OCT 95
Category II	OCT 90	OCT 90	OCT 90	OCT 95	OCT 2000*
Category I	OCT 90	OCT 90	OCT 95	OCT 95	Upon available substitutes

*Meet requirement from recycle or inventory.

NOTE: All phaseout goals are dependent on development of suitable substitutes for ozone-depleting substances in a timely manner. To prevent interruption of supplies for mission-critical uses (Category I), these uses will be identified and plans initiated not later than October 1990 to recycle existing stocks and initiate stockpiling of sufficient quantities of ozone-depleting substances to allow operation for the useful life of the weapons system.

Category I: *Mission-Critical Uses* -- The highest-priority uses will be those that are mission critical. Mission-critical uses have a direct impact on combat mission capability and include uses that are integral to combat mission assets or affect operability of these assets. Mission-critical uses include cooling operational suppression systems in tactical vehicle crew compartments to protect the lives of mission-critical personnel.

Category II: *Essential Uses* -- Essential uses include those applications that have an indirect effect on combat mission assets and play an auxiliary role in ensuring the operability of those assets. Essential uses include process cooling applications and charging portable fire extinguishers for electronic area protection.

Category III: *Nonessential Uses* -- This category includes all nonessential uses. Nonessential uses include uses for comfort cooling in family housing and installation support activities.

Section 2

Hazardous Materials Management

SECTION 2

HAZARDOUS MATERIALS MANAGEMENT

A. Applicability of this Protocol

Most Air Force installations handle many chemicals and substances that may be considered hazardous if not handled, stored, or used properly. A complete list of chemicals used at Air Force installations is too lengthy to include in this protocol, but many of the materials are hazardous, i.e., toxic chemicals, flammable substances, reactive substances, and corrosive materials.

This protocol primarily addresses the proper storage and handling of chemicals and the spill contingency and response requirements related to hazardous materials. Oil, pesticides, and asbestos are hazardous materials that require special management practices at Air Force installations and are addressed in separate protocols. Radioactive substances and the general category of hazardous wastes are also not included in this protocol. This protocol does not focus on individual hazardous chemicals or substances used at Air Force installations. It deals with the generic requirements and good management practices (GMPs) associated with minimizing impacts on the environment from spills or releases of hazardous materials as a result of improper storage and handling. As a general rule, most sections of this protocol will be applicable to most Air Force installations.

The regulatory requirements in this protocol are based on Department of Defense (DOD) regulations, U.S. Air Force Occupational Safety and Health (USAFOSH) standards, and Air Force regulations (AFRs) that apply at overseas installations. GMPs are derived from U.S. Environmental Protection Agency (USEPA) regulations and National Fire Protection Association (NFPA) publications that are not mandatory overseas but are important to follow to preserve the health and safety of Air Force employees and to protect the environment.

B. DOD Directives/Instructions

- *Overseas Environmental Baseline Guidance Document (OEBGD)*, October 1992, Chapter 5 contains criteria for the storage, handling and disposition of hazardous materials used by DOD installations. Chapter 19 addresses hazardous substance underground storage tanks (USTs).
- DOD Directive 4145.19-R-1, Chapter 5, Section 4, *Hazardous Commodities*, September 1979, provides overall guidance for storage and handling of various types of hazardous commodities at Air Force installations.

C. U.S. Air Force Regulations

- AFR 19-1, *Pollution Abatement and Environmental Quality*, 9 January 1978 provides guidance for writing oil and hazardous substance contingency plans.
- USAFOSH 127-43, *Flammable and Combustible Liquids* 21 September 1980, applies to the storage, use, and handling of flammable and combustible liquids in containers or tanks of 60 gallons (gal) or less and in portable tanks of up to 660 gal capacity. The standard implements those portions of Occupational Safety and Health Administration (OSHA) Standard 1910.106 applicable to Air Force operations and, in addition, covers several items not addressed in the OSHA standard.
- Headquarters U.S. Air Force/Director of Logistics (HQ USAF/LE) policy letter, *Title III of Sara* (dated 9 November 1987 and 27 September 1988), states, "We must actively participate in local emergency planning committees and provide our technical expertise in community emergency response plan development." Though Federal facilities are not subject to the Emergency Planning and Community Right-to-Know Act (EPCRA), the Air Force has developed policy guidelines for installations. These requirements are stated in policy letters dated 9 November 1987 and 27 September 1988 and are included in this protocol.

D. Responsibility for Compliance

- Base Supply (Logistics) has primary responsibility to receive, store, and issue all hazardous commodities. Base Supply reviews all items that have a potential health hazard and determines if an issue exception code should be assigned to the item before being placed in storage. The receipt of hazardous materials with the proper documentation and shipping papers is also the responsibility of Base Supply. The proper maintenance and operation of flammable/combustible materials storage facilities, acid storage facilities, and compressed gas storage facilities is also the responsibility of Base Supply.
- The Director of Base Medical Services, through the Bioenvironmental Engineering Section (BEE), is responsible for reviewing the issue exception codes for hazardous materials assigned by Base Supply and for approving or disapproving the recommendations.
- The Base Civil Engineer (BCE) is responsible for the storage and handling of all hazardous materials used by the civil engineering shops.
- The Base Fire Department provides support in emergency response, spill events, exercises, and fire protection activities. In addition, the department is responsible for making periodic fire safety inspections of flammable/combustible storage and handling areas on the installation.

- The Base Safety Manager is responsible for conducting workplace safety evaluations and inspections of the handling and storage of hazardous materials. The Safety Manager provides the appropriate manager with a report of findings and recommended corrective actions. He or she is also responsible for ensuring the prompt and accurate investigation of any hazardous material mishaps that result in injury or property damage.

E. Key Compliance Definitions

These definitions were obtained from the directives/instructions and AFRs listed at the end of each definition. If there is no citation listed for the definition, it has been drawn from the U.S. Code of Federal Regulations (CFR).

- *Basement* - a story of a building or structure having one-half or more of its height below ground level and to which access for fire fighting purposes is unduly restricted.
- *Boiling Point* the temperature at which a liquid starts to boil when at atmospheric pressure (14.7 pounds per square inch absolute (psia), as determined by American Society for Testing and Materials (ASTM) test D-86-72).
- *Closed Container* - a container sealed with a lid or other closing device that neither liquid and/or vapor will escape from at ordinary temperatures.
- *Combustible Liquid* - a liquid with a flashpoint at or above 100 °F (37.8 °C). Combustible liquids are categorized as Class II or Class III liquids and are further subdivided as follows:
 1. Class II liquids are those having a flashpoint at or above 100 °F (37.8 °C), and below 140 °F (60 °C), except any mixture having components with a flashpoint of 200 °F (93.3 °C) or higher, the volume of which makes up 99 percent or more of the total volume of the mixture
 2. Class III A liquids are those with a flashpoint at or above 140 °F (60 °C), and below 200 °F (93.4 °C), except any mixture having components with a flashpoint of 200 °F or higher, the total volume of which makes up 99 percent or more of the total volume of the mixture
 3. Class III B liquids are those with a flashpoint at or above 200 °F (93.4 °C).
- *Fire Area* - that portion of a building separated from the remainder by construction with a rated fire resistance of at least 1 hour (h) and with all communicating openings properly protected by an assembly with a fire resistance rating of at least 2 h.

- *Flammable Aerosol* - an aerosol that is required to be labeled "Flammable" under the Federal Hazardous Substance Labeling Act (15 U.S. Code (USC) 1261). These aerosols are considered Class IA liquids.
- *Flammable Liquid* - a liquid with a flashpoint below 100 °F (37.8 °C) except any mixture with components with flashpoints of 100 °F or higher, the total of which makes up 99 percent or more of the total volume of the mixture. Flammable liquids are categorized as Class 1 liquids and are further subdivided as follows:
 1. Class 1A are those with a flashpoint below 73 °F (22.8 °C) and boiling point below 100 °F (37.8 °C)
 2. Class 1B are those with a flashpoint below 73 °F (22.8 °C) and boiling points at or above 100 °F (37.8 °C)
 3. Class 1C are those with a flashpoint at or above 73 °F (22.8 °C) and below 100 °F (37.8 °C).
- *Flashpoint* - the minimum temperature at which a liquid gives off vapor in sufficient concentration to form an ignitable mixture with air near the surface of the liquid. Flashpoints are established using several standard closed cup test methods.
- *Good Management Practice (GMP)* - practices that, although not mandated by law, are encouraged to promote safe operating procedures.
- *Hazardous Material* - any material that is capable of posing an unreasonable risk to health, safety, or the environment if improperly stored, handled, issued, transported, labeled, or disposed of because it displays a characteristic identified in Table 2-1 or the material is listed in Table 3-2 of the *Hazardous Waste Management* section. Munitions are excluded (OEBGD, Chapter 5, Definitions).
- *Hazardous Substance UST* - a UST that contains a hazardous substance (but not including hazardous waste) or any mixture of such hazardous substance and petroleum, and which is not a petroleum UST (OEBGD, Chapter 19, Definitions).
- *Liquid* - any material with a fluidity greater than that of 300 penetration asphalt when tested in accordance with ASTM Test D-5-73. When not otherwise identified, the term "liquid" will include both flammable and combustible liquid.
- *Material Safety Data Sheet (MSDS)* - a form used by manufacturers of chemical products to communicate to users the chemical, physical, and hazardous properties of their product (OEBGD, Chapter 5, Definitions).
- *New UST* - any UST installed after 1 October 1994 (OEBGD, Chapter 19, Definitions).

- *Portable Tank* - a closed container with a liquid capacity of over 227.4 liters (L) (60 gal) and not intended for fixed installation.
- *Pressure Vessel* - a storage tank or container designed to operate at pressures above 15 pounds per square inch gauge (psig).
- *Safety Can* - an approved flammable liquid container with a spring closing lid, spout cover, and other features designed to safely relieve internal pressure and to provide safe storage for the liquid.
- *Underground Storage Tank (UST)* - under the OEBGD, this is any tank, including underground piping connected thereto, larger than 420 L (110 gal), that is used to contain POL products or hazardous substances and the volume of which, including the volume of connected pipes, is 10 percent or more beneath the surface of the ground, but does not include:
 - a. tanks containing heating oil used for consumptive use on the premises where it is stored
 - b. septic tanks
 - c. stormwater or wastewater collection systems
 - d. flow through process tanks
 - e. surface impoundments, pits, ponds, or lagoons
 - f. field constructed tanks
 - g. hydrant fueling systems.

REGULATORY REQUIREMENTS:	REVIEWER CHECKS:
2-23. Flammable and combustible liquid storage cabinets must meet certain structural requirements (AFOSH Standard 127-43, para 4b). ...	Verify that flammable and combustible storage cabinets meet the following structural requirements: (1)(2)(4)(5) - all cabinets are constructed to limit internal temperature to no more than 163 °C (325 °F) when subject to the standard 10-minute (min) fire test specified in NFPA 251-1969 - the bottom, top, door, and sides of metal cabinets are at least 18 gauge sheet steel and double-walled with 1 1/2 inches (in.) air space, and joints are riveted or welded - the doors of metal cabinets have a three-point lock and the door sill is raised at least 2 in. above the bottom of the steel cabinet - existing wood cabinets are knot free and of at least 1 in. nominal thickness, and all joints are rabbeted and fastened in two directions with flathead wood screws. Verify that the following storage requirements are met: - no more than 455 L (120 gal) of Class I, Class II, and Class IIIA liquids are stored in any cabinet - no more than 227 L (60 gal) of the 455 L (120 gal) are Class I or II liquids. ...
2-24. Storage cabinets used for the storage of flammable/combustible liquids should meet specific requirements (GMP). ...	Verify that storage cabinets meet the following: (1)(2)(4)(5) - no more than 227 L (60 gal) of Class I or Class II liquids nor any more than 455 L (120 gal) of Class III liquids are stored in the cabinet - the cabinets are fire resistant - cabinets are constantly closed and conspicuously labeled "FLAMMABLE--Keep Fire Away." ...
2-25. Storage cabinets used for the storage of flammable/combustible liquids should be handled properly (GMP). ...	Verify that storage cabinets meet the following: (1)(2)(4)(5) - materials within the cabinet are segregated - there are no open containers within the cabinet - all containers in the cabinet are labeled. ...
2-26. No more than three cabinets may be located in a single fire area (except in industrial areas) (AFOSH 127-43, para 4b(1)).	Verify that, in general, no more than three cabinets are located in a single fire area. (1)(2)(4)(5) (NOTE: The limit of three cabinets in a single area may be increased where small cabinets are used; however, the maximum amount of flammable storage cannot exceed 1365 L (360 gal) total.) (NOTE: Additional cabinets may be located in the same fire area of an industrial area if the additional cabinet, or group of not more than three 455 L (120-gal) cabinets, is separated from other cabinets or group of cabinets by at least 30.5 meters (m) (100 feet (ft)).)

Table 2-1

Typical Hazardous Materials Characteristics

I.	The item is a health or physical hazard. Health hazards include carcinogens, corrosive materials, irritants, sensitizers, toxic materials, and materials that damage the skin, eyes, or internal organs. Physical hazards include combustible liquids, compressed gases, explosives, flammable materials, organic peroxides, oxidizers, pyrophoric materials, unstable (reactive) materials, and water-reactive materials.
II.	The item and/or its disposal is regulated by the host nation because of its hazardous nature.
III.	The item contains asbestos, mercury, or polychlorinated biphenyls.
IV.	The item has a flashpoint below 93 °C (200 °F) closed cup, or is subject to spontaneous heating or is subject to polymerization with release of large amounts of energy when handled, stored, or shipped without adequate control.
V.	The item is a flammable solid or is an oxidizer or is a strong oxidizing or reducing agent with a standard reduction potential of greater than 1.0 volt (v) or less than -1.0 v.
VI.	In the course of normal operations, accidents, leaks, or spills, the item may produce dusts, gases, fumes, vapors, mists, or smokes with one or more of the above characteristics.
VII.	The item has special characteristics that, in the opinion of the manufacturer or the DOD Components, could cause harm to personnel if used or stored improperly.

 - ² Responds to releases of hazardous substances in a defensive manner, without trying to stop the releases.**
 - ³ Responds aggressively to stop the release of hazardous substances.**
 - ⁴ Responds with and in support of HAZMAT Technicians, but has specific knowledge of various hazardous substances.**
 - ⁵ Assumes control of the incident scene beyond the first responder awareness level.**
-

Table 2-3

**Maximum Allowable Capacity of Containers
And Portable Tanks for Hazardous Materials**

Container Type	Flammable Liquids			Combustible Liquids	
	<i>IA</i>	<i>IB</i>	<i>IC</i>	<i>II</i>	<i>III</i>
Glass or approved plastic ¹	1 pt ²	1 qt ²	1 ³	1	1
Metal (other than DOT drums)	1	5	5	5	5
Safety cans	2	5	5	5	5
Metal drums (DOT specifications)	60	60	60	60	60
Approved portable tanks	660	660	660	660	660

¹ Nearest metric size is also acceptable for the glass and plastic containers listed.

² One gallon of nearest metric equivalent size may be used if metal containers must be avoided because of chemical reaction with their contents.

³ Quantities are in gallons for the rest of this table.

Table 2-4

Storage of Hazardous Materials in Inside Rooms

<i>Fire Protection¹ Provided</i>	<i>Fire Resistance</i>	<i>Maximum Size</i>	<i>Total Allowable Quantities² (gal/sq ft floor area)</i>
Yes	2 h	500 sq ft	10
No	2 h	500 sq ft	4
Yes	1 h	150 sq ft	5
No	1 h	150 sq ft	2

¹ Fire protection system will be sprinkler, water spray, or other approved method.

² If metric containers are being stored, use the nearest metric equivalent.

Table 2-5
Indoor/Outdoor Storage
For Flammable/Combustible Materials

Flammable/Combustible Materials
Indoor Container Storage

Class Liquid	Storage Level	*Protected Storage Maximum per Pile in Gallons	Unprotected Storage Maximum per Pile in Gallons
IA	Ground and upper floors	2,750 (50)	600 (12)
	Basement	Not permitted	Not permitted
IB	Ground and upper floors	5,500 (100)	1,375 (25)
	Basement	Not permitted	Not permitted
IC	Ground and upper floors	16,500 (300)	4,125 (25)
	Basement	Not permitted	Not permitted
II	Ground and upper floors	16,500 (300)	4,125 (75)
	Basement	5,500 (100)	Not permitted
III	Ground and upper floors	55,000 (1,000)	13,750 (250)
	Basement	8,250 (450)	Not permitted

* A sprinkler or equivalent fire protection system installed in accordance with NFPA Standard 30.

NOTE 1: When two or more classes of materials are stored in a single pile, the maximum gallonage permitted in that pile will be the smallest of the two or more separate maximum gallonages.

NOTE 2: Aisles will be provided so no container is more than 4 m (12 ft) from an aisle. Main aisles will be at least 2 m (8 ft) wide and side aisles at least 1 m (4 ft) wide. (Numbers in parentheses indicate the number of 55-gal drums.)

NOTE 3: Each pile shall be separated from each other by at least 1 m (4 ft).

**Table 2-5
(continued)**

**Flammable/Combustible Materials
Outdoor Container Storage**

Class Liquid	Maximum per pile (see NOTE 1) (gal)	Distance be- tween piles (see NOTE 2) (ft)	Distance to property line that can be built upon (see NOTES 3 and 1) (ft)	Distance to street, alley public way (see NOTE 4) (ft)
IA	1,100	5	20	10
IB	2,200	5	20	10
IC	4,400	5	20	10
II	8,800	5	10	5
III	22,000	5	10	5

NOTE 1: When two or more classes of materials are stored in a single pile, the maximum gallonage permitted in that pile will be the smallest of the two or more separate gallonages.

NOTE 2: Within 200 ft of each container, there will be a 12-ft-wide access way to permit access of fire control apparatus.

NOTE 3: The distances listed apply to properties that have protection for exposures as defined. If there are exposures, and such protection for exposures does not exist, the distances in column 4 will be doubled.

NOTE 4: When total quantity stored does not exceed 50 percent of maximum per pile, the distance in columns 4 and 5 may be reduced 50 percent, but not to less than 3 ft.

**Table 2-5
(continued)**

**Flammable/Combustible Materials
Indoor Portable Tank Storage**

Class Liquid	Storage Level	*Protected Storage Maximum per Pile Gallons	Unprotected Storage Maximum per Pile Gallons
IA	Ground and upper floors Basement	Not permitted Not permitted	Not permitted Not permitted
IB	Ground and upper floors Basement	20,000 Not permitted	2,000 Not permitted
IC	Ground and upper floors Basement	40,000 Not permitted	5,500 Not permitted
II	Ground and upper floors Basement	40,000 20,000	5,500 Not permitted
III	Ground and upper floors Basement	60,000 20,000	22,000 Not permitted

* A sprinkler or equivalent fire protection system installed in accordance with NFPA Standard 30.

NOTE 1: When two or more classes of materials are stored in a single pile, the maximum gallonage permitted in that pile will be the smallest of the two or more separate maximum gallonages.

NOTE 2: Aisles will be provided so no container is more than 12 ft from an aisle. Main aisles will be at least 8 ft wide and side aisles at least 4 ft wide.

NOTE 3: Each pile shall be separated from each other by at least 4 ft.

**Table 2-5
(continued)**

**Flammable/Combustible Materials
Outdoor Portable Tank Storage**

Class Liquid	Maximum per pile (see NOTE 1) (gal)	Distance be- tween piles (see NOTE 2) (ft)	Distance to property line that can be built upon (see NOTES 3 and 4) (ft)	Distance to street, alley public way (see NOTE 4) (ft)
IA	2,200	5	20	10
IB	4,400	5	20	10
IC	8,800	5	20	10
II	17,600	5	10	5
III	44,000	5	10	5

NOTE 1: When two or more classes of materials are stored in a single pile, the maximum gallonage permitted in that pile will be the smallest of the two or more separate gallonages.

NOTE 2: Within 200 ft of each container, there will be a 12-ft-wide access way to permit access of fire control apparatus.

NOTE 3: The distances listed apply to properties that have protection for exposures as defined. If there are exposures, and such protection for exposures does not exist, the distances in column 4 will be doubled.

NOTE 4: When total quantity stored does not exceed 50 percent of maximum per pile, the distance in columns 4 and 5 may be reduced 50 percent, but not to less than 3 ft.

Section 3

Hazardous Waste Management

SECTION 3

HAZARDOUS WASTE MANAGEMENT

A. Applicability of this Protocol

This protocol applies to U.S. Air Force (USAF) installations that generate, store, treat, or dispose of any type of hazardous waste.

This protocol and its associated evaluation worksheets are necessarily more complex than other protocols in this volume. All evaluation items will not be applicable to all installations. Guidance is provided to direct the evaluator to the questions related to the type of hazardous waste activities/facilities on the installation.

The regulatory requirements in this protocol are based on Department of Defense (DOD) and Air Force regulations (AFRs) that apply at overseas installations. Good Management Practices (GMPs) are derived from U.S. Environmental Protection Agency (USEPA) regulations that are not mandatory overseas but are important to follow to preserve the health and safety of Air Force employees and protect the environment.

B. DOD Directives/Instructions

- *Overseas Environmental Baseline Guidance Document (OEBGD)*, October 1992, Chapter 6, addresses the management of hazardous waste. It includes criteria for the identification, accumulation, storage, transportation, and disposal of hazardous waste.
- DOD 4160.21M, *Defense Demilitarization Manual*, 28 January 1985, gives guidance on waste turn-in for disposal at Defense Reutilization and Marketing Office (DRMO).

C. U.S. Air Force Regulations

- AFR 19-11, *Hazardous Waste Management*, 14 July 1989, covers responsibilities of the various installation activities.
- Air Force Manual (AFM) 67-1, *USAF Supply Manuals*, 1 December 1991, establishes turn-in procedures for hazardous waste through Base Supply.

- AFR 71-4, *Preparing Hazardous Material for Military Air Shipment*, 15 January 1988, sets standards for placarding of vehicles, and for labeling and container requirements.

D. Responsibility for Compliance

- **The Installation Commander (IC)**- The installation commander is responsible for establishing and maintaining an active surveillance program of: users, generators, transporters, and storers of hazardous wastes; the waste minimization program; and disposal activities. By DOD direction, the IC is responsible for compliance with Host Nation regulations involving host and tenant organizations on the installation. In either case, operational responsibility for the hazardous waste program rests with the activities that generate, treat, store, transport, or dispose of the waste and the activities responsible for implementing health, safety, and environmental protection programs.
- **The Installation Environmental Protection Committee (EPC)** - The EPC is responsible for reviewing and coordinating the ICs hazardous waste program. The EPC reviews summary data on waste generation, personnel training, and disposal practices.
- **The Base Civil Engineer (BCE) or designated Environmental Management Office (EMO)** - The BCE/EMO develops installation-specific policy for all aspects of hazardous waste management for all activities on the installation, including Air Force and non-Air Force tenants. The BCE/EMO: manages the hazardous waste program; reviews all hazardous waste storage, treatment, and disposal facilities and ensures their compatibility with hazardous waste regulations; serves as Office of Primary Responsibility (OPR) for developing and implementing the hazardous waste management plan; identifies to the contracting office those hazardous wastes that the installation elects to dispose of by local contract, along with the necessary conditions the contractor is required to meet; and approves siting and design of all hazardous waste management facilities.
- **Base Fire Department** - This department provides support in emergency response, spill events, exercises, and fire protection activities. In addition, the department will be responsible for making periodic fire safety inspections of hazardous waste storage areas and accumulation points on the installation.
- **Civil Engineering Environmental Planning Function or EMO Subgroup** - The environmental planner is responsible for monitoring day-to-day hazardous waste management activities, maintaining hazardous waste files, and establishing procedures for transfer of accountability and/or custody of hazardous waste from the generating activity to the DRMO.

- **The Bioenvironmental Engineer (BEE) - The BEE:** reviews workplace processes and practices to ensure all hazardous materials/wastes are identified; conducts or arranges for environmental monitoring as required; interprets monitoring results for health risks; reviews plans to build or modify facilities used to treat, store, or dispose of hazardous wastes; reviews all material requests for issues of stock classes listed in Federal Standard 313; and maintains a master file of Material Safety Data Sheets (MSDSs).
- **The Environmental Health Officer (EHO) - The EHO** conducts Hazardous Communication Training for all supervisors who have personnel who handle hazardous materials.
- **The Supply Officer - The supply officer:** receives, stores, and issues hazardous materials; ensures that turn-in hazardous waste documents contain information necessary to comply with all regulatory requirements; and ensures all hazardous materials are properly labeled.
- **The Ground Safety Officer - The ground safety officer** performs workplace safety inspections, monitors hazardous conditions, and performs occupational safety training.
- **The Transportation Officer - The transportation officer** coordinates as necessary with shipping activities to ensure hazardous wastes are properly labeled, packaged, manifested, and transported in appropriate vehicles (contract or Air Force-owned vehicles).
- **The Deputy Commander for Maintenance (DCM)/Chief of Maintenance - The DCM:** ensures that nonhazardous/nontoxic materials are used where possible; maintains a list of hazardous materials used in the work area by shop and maintenance-related task; ensures personnel are properly trained in ordering, using, handling, controlling, and storing hazardous materials and wastes; and ensures hazardous waste is properly labeled.
- **Hazardous Waste Generators - Generators** manage hazardous waste in their custody, including proper storage, inspection, recordkeeping, labeling of containers, and transfer for disposal.
- **Hazardous Waste Treatment, Storage, and Disposal Facility (TSDF) Operators - Each TSDF operator** is responsible for ensuring compliance with hazardous waste regulations applicable to the facility, including maintaining operational and training records.
- **Defense Reutilization and Marketing Office (DRMO) - This agency** may or may not be located on the installation, but it is the single agency designated by DOD to provide hazardous waste disposal service on a pay for services

rendered basis to the installation. The DRMO is responsible for compliance with all Host Nation, local, and Air Force (including base guidance) regulations at its storage/disposal facility. Unless the DRMO is located on the installation, it is not in the scope of this assessment.

E. Key Compliance Definitions

These definitions were obtained from the directives/instructions and AFRs listed at the end of each definition. If there is no citation listed for the definition, it has been drawn from the U.S. Code of Federal Regulations (CFR).

- *Aboveground Tank* - a tank that is situated in such a way that the entire surface area of the tank is completely above the plane of the adjacent surrounding surface and the entire surface area of the tank (including the tank bottom) is able to be visually inspected.
- *Accumulation Point* - an area at or near the point of generation where hazardous wastes are temporarily stored, up to 206 liters (L) (55 gallons (gal)) or 1 L (1 quart (qt)) of acute hazardous waste, from each waste stream, until removed to a hazardous waste storage area (HWSA) or shipped for treatment or disposal (OEBGD, Chapter 6, Definitions).
- *Active Portion* - that portion of a facility where treatment, storage, or disposal operations are being or have been conducted and which is not a "closed portion."
- *Acute Hazardous Waste* - those wastes listed in Table 3-1 with a USEPA waste number with the designator "p" or those wastes with (H) following the waste number (OEBGD, Chapter 6, Definitions).
- *Characteristics of Hazardous Waste* - the characteristics of ignitability, corrosivity, reactivity, and toxicity which identify hazardous waste.
- *Closed Portion* - the portion of a facility which has been closed in accordance with the approved closure plan and all applicable closure requirements.
- *Component* - refers to either the tank or the ancillary equipment of the tank system.
- *Container* - any portable device in which a material is stored, transported, treated, disposed of, or otherwise handled.

- *Contingency Plan* - a document setting out an organized, planned, and coordinated course of action to be followed in case of a fire, explosion, or release of hazardous waste or hazardous waste constituents which could threaten human health or the environment.
- *Dike* - an embankment or ridge of either natural or man-made materials used to prevent the movement of liquids, sludges, solids, or other materials.
- *Discharge or Hazardous Waste Discharge* - the accidental or intentional spilling, leaking, pumping, pouring, emitting, emptying, or dumping of hazardous waste into or on any land or water.
- *Disposal* - discharging, depositing, injecting, dumping, spilling, leaking, or placing any hazardous waste into or on any land or water so that such hazardous waste or any constituent thereof may enter the environment, or be emitted into the air, or discharged into any waters, including groundwaters (OEBGD, Chapter 6, Definitions).
- *DOD Hazardous Waste Generator* - a generator is considered to be the installation or activity on an installation which produces a regulated hazardous waste (OEBGD, Chapter 6, Definitions).
- *Facility* - all contiguous land and structures, other appurtenances, and improvements on the land used for treating, storing, or disposing of hazardous waste. A facility may consist of several treatment, storage, or disposal operational units (e.g., one or more landfills, surface impoundments, or combination of them).
- *Free Liquids* - liquids which readily separate from the solid portion of a waste under ambient temperature and pressure.
- *Good Management Practice (GMP)* - schedules of activities, prohibitions of practices, maintenance procedures, and other management procedures, to prevent or reduce hazards to the environment.
- *Hazardous Constituent* - a chemical compound that is listed by name in Table 3-1 or possesses a characteristic described in Table 3-1 (OEBGD, Chapter 6, Definitions).
- *Hazardous Waste* - a discarded material that may be solid, semisolid, liquid, or contained gas and either exhibits a characteristic of a hazardous waste in Table 3-1 or is listed as a hazardous waste in Table 3-1 (OEBGD, Chapter 6, Definitions).

- **Hazardous Waste Fuel** - hazardous waste burned for energy recovery is termed "hazardous waste fuel." Fuel produced from hazardous waste by processing, blending, or other treatment is also hazardous waste fuel (OEBGD, Chapter 6, Definitions).
- **Hazardous Waste Generation** - any act or process that produces hazardous waste as defined in this document (OEBGD, Chapter 6, Definitions).
- **Hazardous Waste Profile Sheet** - a document which identifies and characterizes the waste by providing user's knowledge of the waste and/or lab analysis and details the physical, chemical, and other descriptive properties or processes which created the hazardous waste (OEBGD, Chapter 6, Definitions).
- **Hazardous Waste Storage Area** - a location where more than 206 L (55 gal) of hazardous waste or 1 L (1 qt) of acute hazardous waste from one waste stream is stored prior to shipment for treatment or disposal (OEBGD, Chapter 6, Definitions).
- **Incinerator** - an enclosed device using controlled flame combustion that neither meets the criteria for classification as a boiler nor is listed as an industrial furnace.
- **Incompatible Waste** - a hazardous waste that is unsuitable for (1) placement in a particular device or facility because it may cause corrosion or decay of containment materials (e.g., containers, liners, or tank walls) or (2) co-mingling with another waste or material under uncontrolled conditions because the co-mingling conditions produce heat or pressure, fire or explosion, violent reaction, toxic dusts, mists, fumes, gases, or flammable fumes or gases.
- **In-ground Tank** - a tank whereby a portion of the tank is situated to any degree within the ground, thereby preventing visual inspection of that external surface area of the tank that is in the ground.
- **Inner Liner** - a continuous layer of material placed inside a tank or container which protects the construction materials of the tank or container from the contained waste or reagents used to treat the waste.
- **Land Disposal** - placement in or on the land, including, but not limited to, land treatment, surface impoundments, underground injection wells, salt dome formations, salt bed formations, underground mines, or caves (OEBGD, Chapter 6, Definitions).
- **Leachate** - any liquid, including any suspended components in the liquid, that has percolated through or drained from hazardous waste.

- *Leak Detection System* - a system capable of detecting the failure of either the primary or secondary containment structure or the presence of a release of hazardous waste or accumulated liquid in the secondary structure. Such a system must employ operational controls (e.g., daily visible containment for releases into the secondary containment system of aboveground tanks) or consist of an interstitial monitoring device designed to continuously and automatically detect the failure of the primary or secondary containment structure or the presence of hazardous waste released into the secondary containment structure.
- *Liner* - a continuous layer of natural or man-made materials, beneath or on the sides of a surface impoundment, landfill, or landfill cell, which restricts the downward or lateral escape of hazardous waste, hazardous waste constituents, or leachate.
- *On-Ground Tank* - a tank that is situated in such a way that the bottom of the tank is on the same level as the adjacent surrounding surface so that the external tank bottom cannot be visibly inspected.
- *Onsite* - the same, or geographically continuous property which may be divided by a public right-of-way, provided the entrance and exit between the properties is at a cross-roads intersection and access is by crossing as opposed to going along the right-of-way.
- *Representative Sample* - a sample of a universe or whole (e.g., waste pile, lagoon, groundwater) which can be expected to exhibit the average properties of the universe or whole.
- *Run-off* - any rainwater, leachate, or other liquid that drains over land from any part of a facility.
- *Run-on* - any rainwater, leachate, or other liquid that drains over land onto any part of a facility.
- *Sludge* - any solid, semisolid, or liquid waste generated from a municipal, commercial, or industrial wastewater treatment plant, water supply treatment plant, or air pollution control facility, exclusive of the treated effluent from a wastewater treatment plant.
- *Storage* - the holding of hazardous wastes for a temporary period, at the end of which the hazardous wastes are treated, disposed of, or stored elsewhere.
- *Sump* - any pit or reservoir that meets the definition of tank and those troughs/trenches connected to it that serve to collect hazardous waste for transport to hazardous waste storage, treatment, or disposal facilities. Except when

used in rules for landfills, surface impoundments, and waste piles, "sump" means any lined pit or reservoir that serves to collect liquids drained from a leachate collection and removal system or leak detection system for subsequent removal from the system.

- *Surface Impoundment* - a facility or part of a facility that is a natural topographic depression, man-made excavation, or diked area formed primarily of earthen materials designed to hold an accumulation of liquid wastes or wastes containing free liquids and which is not an injection well.
- *Tank* - a stationary device designed to contain an accumulation of hazardous waste and constructed primarily of nonearthen materials (e.g., wood, concrete, steel, plastic) which provide structural support.
- *Tank System* - a hazardous waste storage or treatment tank and its associated ancillary equipment and containment system.
- *Treatment* - any method, technique, or process, including neutralization, designed to change the physical, chemical, or biological character or composition of any hazardous waste so as to neutralize such waste, recover energy or material resources from the waste, or render such waste: nonhazardous, or less hazardous; safer to transport, store, or dispose of; or amenable for recovery, amenable for storage, or reduced in volume (OEBGD, Chapter 6, Definitions).
- *Treatment, Storage, and Disposal Facility (TSDF)* - refers to any facility not located on a DOD installation that is used for the collection, source separation, storage, transportation, transfer, processing, treatment, or disposal of hazardous waste (OEBGD, Chapter 6, Definitions).
- *Treatment Zone* - a soil area of the unsaturated zone of a land treatment unit within which hazardous constituents are degraded, transformed, or immobilized.
- *Underground Tank* - a tank whose entire surface area is totally below the surface and covered by the ground.
- *Unfit-for-Use Tank System* - a tank system that has been determined, through an integrity assessment or other inspection, to be no longer capable of storing or treating hazardous waste without posing a threat of release of hazardous waste to the environment.
- *Unsaturated Zone or Zone of Aeration* - the zone between the land surface and the water table.

- *Zone of Engineering Control* - an area under the control of the owner/operator that, upon detection of a hazardous waste release, can be readily cleaned up before the release of hazardous waste or hazardous constituents to groundwater or surface water.

HAZARDOUS WASTE MANAGEMENT

Records to Review

- Generator (including TSDFs if they are also considered generators):

- Hazardous waste manifests
 - Manifest exception reports
 - Employee training documentation
 - Contingency plan
 - Notifications of hazardous waste oil fuel marketing or blending activity
 - Hazardous waste disposal turn-in document (DD Form 1348-1)

- In addition to the above, TSDFs would be required to have:

- Unmanifested waste reports
 - Facility audit reports (inspection log)
 - Waste analysis plan(s)
 - Operating record
 - Groundwater monitoring records and annual reports
 - Closure/post closure plans
 - Closure/post closure notices (where applicable)
 - Other documents as required by the permit

Physical Features to Inspect

- Disposal sites
- Generating areas
- Accumulation points
- Incinerators
- Vehicles used for transport
- Storage facilities (including drums)

**COMPLIANCE CATEGORY:
HAZARDOUS WASTE MANAGEMENT
Worldwide ECAMP**

REGULATORY REQUIREMENTS:	REVIEWER CHECKS:
ALL INSTALLATIONS 3-1. Determine actions or changes since previous review (GMP). ... 3-2. Copies of all relevant DOD directives/instructions, USAF directives, host nation hazards waste laws, and guidance documents are required to be maintained at the installation (AFR 19-1, para 11f and Air Force Hazardous Waste Management Policy Letter, 6 June 1991, para II(a)). ... 3-3. Installations are required to comply with the substantive environmental pollution standards of general applicability in the host country and the Major Command (MAJCOM) regulations (AFR 19-1, para 2(a)(5)). ...	Determine if noncompliance issues have been resolved by reviewing a copy of the previous review report. (1)(2) ... Verify that copies of the following regulations are maintained and kept current at the installation: (1) - Overseas Environmental Baseline Guidance Document (OEBGD), October 1992. - AFR 19-1, <i>Pollution Abatement and Environmental Quality</i>, 9 January 1978. - <i>Air Force Hazardous Waste Management Policy</i>, 6 June 1991. - <i>Occupational Health and Safety Act</i>. - <i>Hazardous Materials Transportation Act</i>. - <i>Toxic Substances Control Act</i>. - <i>Resource Conservation and Recovery Act and Hazardous and Solid Waste Amendments (RCRA/HSWA)</i>. - <i>Comprehensive Environmental Response, Compensation, and Liabilities Act/Superfund Amendments and Reauthorization Acts (CERCLA/SARA)</i>. - <i>Hazardous Materials Transportation Uniform Safety Act</i>. Verify that the Base Staff Judge Advocate reviews the documents annually for currency and completeness and submits the findings of the review to the Base Environmental Protection Committee. ... Verify that the installation is complying with MAJCOM and host nation requirements. (1)(2) (NOTE: Issues typically regulated include: - manifesting requirements - reporting requirements - transportation - identification of special waste or waste categories - regulation of specific substances as hazardous waste such as: medical, pathological, and infectious wastes; used oil; explosives; and used batteries - small quantity generator requirements - disposal requirements - construction and operation of storage and disposal facilities - classification/characteristics of hazardous waste - storage and marking of hazardous waste.) ...

(1) BCE (Environmental Planning) (2) DRMO (Defense Reutilization and Marketing Office) (3) Accumulation Point Managers (4) Fire Department (5) TSD (Treatment, Storage, and Disposal) Facility Officer (6) Safety Manager (8) Transportation Officer (9) Base Supply (10) Generating Activities

**COMPLIANCE CATEGORY:
HAZARDOUS WASTE MANAGEMENT
Worldwide ECAMP**

REGULATORY REQUIREMENTS:	REVIEWER CHECKS:
3-4. Installations that generate hazardous waste are required to have a Hazardous Waste Management Plan (AF Hazardous Waste Management Policy 6 June 1991, para III(b)). ...	Verify that the plan contains the following: (1)(6)(7) - letter of instruction - information and emergency contacts - introductory materials - introduction - responsibilities - organizational chart - location maps - waste inventory - waste analysis plan - recordkeeping - reporting - training - contingency plan - preparedness and spill prevention - pollution prevention. ...
3-5. Hazardous waste must be recycled or reused to the maximum extent possible (OEBGD, Chapter 6, Section 11, Criteria 6). ...	Verify that safe and environmentally acceptable methods are used to identify, store, prevent leakage of, and dispose of hazardous wastes in order to minimize risks to health and the environment. (1)(9)(10) ...
3-6. Installations that generate hazardous waste must have a waste minimization program in place. Environmental Planning is responsible to maintain generating data for measuring waste minimization goals (AFR 19-11 and AF Hazardous Waste Management Policy 6 June 1991, para V).	(NOTE: The waste minimization program may be referred to as a pollution prevention program.) Determine if, at minimum, the following information is maintained in hazardous waste records: (1)(2)(3)(5)(10) - type and quantity of waste generated - generating activity - disposal activity - dates transferred - ultimate disposal. Verify that a log of generator's turn-ins is maintained using turn-in documents as a source of data. Determine if each facility that produces hazardous waste has a hazardous waste minimization program in place. Verify that Environmental Planning provides quarterly summaries of generation data, prior year data, and waste minimization baseline year data (normally calendar year 1986) to the EPC for evaluating progress in hazardous waste minimization. The same data is also used in the Annual Defense Status Report.

**COMPLIANCE CATEGORY:
HAZARDOUS WASTE MANAGEMENT
Worldwide ECAMP**

REGULATORY REQUIREMENTS:	REVIEWER CHECKS:
3-7. Hazardous waste may not be used for dust suppression or road treatment (OEBGD, Chapter 6, Section 9, Criteria 2). ...	Verify that hazardous waste is not used for dust suppression or road work. (1)(7)(8) ...
3-8. Installations that generate solid wastes are required to determine if the wastes are hazardous wastes with the aid of a hazardous waste inventory and a hazardous waste plan (OEBGD, Chapter 6, Section 1, Criteria 1 and Section 9, Criteria 3; AF Hazardous Waste Management Policy, 6 June 1991, para III(c)). ...	Determine, by interviewing the staff, how wastes generated on the installation were identified and classified. (1)(10) Verify that a Hazardous Waste Profile Sheet is used to identify each hazardous waste. Determine if the installation generates, transports, treats, stores, or disposes of any hazardous waste (see Table 3-1 for guidance). Verify that there is a hazardous waste inventory, identifying all the waste streams and a hazardous waste analysis plan, identifying and characterizing the hazardous waste streams. (NOTE: Lead-acid batteries that are not going to be recycled are required to be treated as hazardous waste.) ...
PROGRAM MANAGEMENT	
3-9. Installations that handle or manage wastes should identify those wastes defined as hazardous according to toxicity characteristics (GMP). ...	Determine if waste fits the hazardous waste toxicity characteristics if: (1)(5)(10) - the waste previously has been identified as toxic (See Table 3-2), or - the waste contains contaminants in greater concentrations than the Toxicity Characteristics listed in Table 3-3. Verify that all data, including quality assurance data, is maintained and kept available for reference or inspection. ...
3-10. The installation safety manager is responsible for conducting safety evaluations and inspections of the handling and storage of hazardous waste (AFR 127-12, para 10e and 16a(2)(c); AFR 127-2 para 4-8). ...	Determine command inspection requirements and reporting procedures by interviewing the safety officer. (6) Obtain list of buildings, shops, and material inspected by the safety officer yearly. Verify that any corrective actions recommended in the safety reports have been implemented. ...

REGULATORY REQUIREMENTS:	REVIEWER CHECKS:
TRAINING 3-11. All installation personnel who handle hazardous waste must meet certain training requirements (OEBGD, Chapter 6, Section 10, Criteria 1 through 4; Hazardous Waste Management Policy 6 June 1991, para III(d)(1) and Appendix B). ... 3-12. Training records are required to be maintained for all installation staff who manage hazardous waste (OEBGD, Chapter 6, Section 10, Criteria 5; Hazardous Waste Management Policy, 6 June 1991, para III(d)(2)).	Verify that the training program is directed by a person trained in hazardous waste management procedures. (1)(2)(3)(4)(5)(6)(10) Verify that the following individuals receive training: - those who determine which wastes are hazardous wastes - those who complete hazardous waste recordkeeping requirements - those who handle/store hazardous waste containers - those who transfer hazardous waste to or from accumulation tanks or containers - those who transport hazardous waste - those who perform hazardous waste cleanup (nonemergency) - those who collect hazardous waste samples - those who conduct other hazardous waste related activities as designated by Base Commanders and/or Environmental Coordinators. Verify that the training program includes the following: - key parameters for automatic waste feed cut-off system - procedures for using, inspecting, repairing, and replacing facility emergency and monitoring equipment - operation of communications and alarm systems - safe use of equipment - duties needed to fulfill job assignments - response to fires or explosions - response to leaks or spills - facility shutdown procedures. Verify that new employee training for personnel assigned to duties involving actual or potential exposure to hazardous wastes is completed prior to their assuming those duties and that they work under direct supervision until training is completed. Verify that an annual review of initial training is provided. Verify specifically that accumulation point managers and hazardous waste handlers have been trained. Verify that the training meets the standards outlined in Table 3-4. ... Verify that documentation and records include the following: (1)(2)(5)(6)(10) - job title and description for each employee by each employee - written description of how much training each position will receive - documentation of training received by each employee. Determine if training records are retained for 3 years (yr) after employment at the installation.

REGULATORY REQUIREMENTS:	REVIEWER CHECKS:
3-19. Installations that generate hazardous wastes and use the DRMO for disposal of hazardous waste must follow established procedures (Air Force Hazardous Waste Management Policy, 6 June 1991, para III(e)(2) and Appendix C, Section B). ...	Determine, by examining records and interviewing generators, if: (2)(10) - generators provide a Hazardous Waste Profile Sheet with the waste - generators hand-carry AF Form 2005 to Base Supply to initiate timely action - generators hand-carry DD Form 1348-1 when received from Base Supply, to Environmental Planning for certification - generators hand-carry certified DD Form 1348-1 from Environmental Planning to the DRMO. Examine records and interview the staff at Base Supply (Customer Service Unit) to determine if: - computer records of all hazardous waste transfer actions are maintained - a DD Form 1348-1 is processed for each transaction and includes the hazardous waste stock number, waste quantity, and applicable disposal cost and funding information. Examine records and interview Environmental Planning personnel to determine if: - a letter identifying personnel eligible to certify hazardous waste disposal turn-in documents (DD Form 1348-1) is current and on file at the servicing DRMO - all DD Forms 1348-1 are properly certified, indicating that hazardous waste is properly identified (USEPA identification (ID) number), u labeled, and packaged - DD Form 448, Military Interdepartmental Purchase Request (MIPR), has been executed with DRMO and the Accounting and Finance Office (AFO) maintains DD Form 448 after execution - billings from DRMO on a standard form (SF) 1080 and through the AFO are reviewed and certified for payment by Environmental Planning. Examine records and interview Bioenvironmental Engineering personnel to verify that: - Bioenvironmental Engineering conducts a semiannual review of the health hazard listing to review all IEX 8 and 9 items and determine if health hazard items produce a specific hazardous waste - nomenclatures are included in the health hazard listing - the BEE reviews all plans to build or modify facilities used to treat, store, or dispose of hazardous waste. ...

ACCUMULATION POINT SITES 3-20. Hazardous waste accumulation points (HWAP) are required to meet specific design and operating standards (OEBGD, Chapter 6, Section 2). ... 3-21. Containers at HWAPs are required to meet specific standards (OEBGD, Chapter 6, Section 2, Criteria 3 and Section 4, Criteria 1(a) through 1(d)). ... 3-22. The HWAP container storage area must have a containment system (OEBGD, Chapter 6, Section 2, Criteria 3). ...	Verify that the accumulation point is at or near the point of generation and no more than 206 L (55 gal) of hazardous waste or 1 L (1 qt) of acute hazardous waste (Table 3-1) from each waste stream is accumulated there. (3) Verify that each HWAP is designed and operated to provide appropriate segregation for different waste streams and those that are chemically incompatible. (NOTE: See Table 3-5 for a list of incompatible wastes.) Verify that each HWAP has warning signs appropriate to the waste being accumulated at the site. Verify that after leaving the HWAP, the waste either goes to an on-site hazardous waste storage area or to an off-site treatment and disposal facility. ... Verify that containers are in good condition and free from severe rusting, bulging, or structural defects. (3) Verify that containers, including overpack containers, are compatible with the materials stored. Verify that containers are always closed, except when they need to be opened to add or remove waste. Verify that containers are not opened, handled, or stored in a manner that could cause a rupture or a leak. Verify that containers are marked with a hazardous waste marking and a label indicating the hazard class of the wastes (flammable, corrosive, etc.). ... Verify that container storage areas have a containment system, such as a drip pan, that has sufficient capacity to contain 10 percent of the volume of the containers or the volume of the largest container, whichever is greater. (3) (NOTE: This only applies to containers that hold free liquids.) ...

REGULATORY REQUIREMENTS:	REVIEWER CHECKS:
3-28. All HWSAs are required to be designed, constructed, maintained, and operated to minimize the possibility of a fire, explosion, or any unplanned release of hazardous waste (OEBGD, Chapter 6, Section 3, Criteria 2, 5, 6, and 7). ...	Verify that the following equipment is easily accessible and in working condition: (5) - internal communications or alarm system capable of providing immediate emergency instructions to facility personnel - telephone or hand-held two-way radio - portable fire extinguishers and special extinguishing equipment (foam, inert gas, or dry chemicals) - spill control equipment - decontamination equipment (eyewash and shower) - fire hydrants or other source of water (reservoir, storage tank, etc.) with adequate volume and pressure, foam producing equipment, automatic sprinklers, or water spray systems - personal protective equipment. Verify that the equipment is tested and maintained as necessary to insure proper operation in an emergency. Verify that sufficient aisle space is maintained to allow unobstructed movement of personnel, fire protection equipment, spill control equipment, and decontamination equipment to any area of the facility operation. Verify that police, fire departments, and emergency response teams are familiar with the layout of the facility, properties of the waste being handled, and general operations. Verify that the hospital is familiar with the site and the types of injuries that could result in an emergency. ...
3-29. The storage of ignitable, reactive, or incompatible wastes at HWSAs is required to be done so that it does not threaten human health or the environment (OEBGD, Chapter 6, Section 3, Criteria 10). ...	Verify, from the operating record and/or observation, that when treating, storing, or disposing of ignitable or reactive wastes, or when mixing incompatible wastes and other materials, precautions are taken to prevent the following reactions: (2)(5) - generation of extreme heat or pressure, fires or explosions, or violent reactions - production of uncontrolled toxic mists, fumes, dusts, or gases sufficient to threaten human health or the environment - production of uncontrolled flammable fumes or gases sufficient to pose a risk of fires or explosions - damage to the structural integrity of the device or facility - threats to human health or the environment through other like means. Verify that while ignitable or reactive waste is being handled, smoking and open flames are confined to specially designated areas. Verify that "No Smoking" signs are conspicuous and in English and any other predominant language. Verify that water reactive waste is not stored in the same area as flammable and combustible liquids. ...

HAZARDOUS WASTE MANAGEMENT
Worldwide ECAMP**

REGULATORY REQUIREMENTS:	REVIEWER CHECKS:
3-30. A detailed chemical and physical analysis of a representative sample, as specified in the waste analysis plan, of the hazardous waste must be obtained prior to treatment, storage, or disposal (OEBGD, Chapter 6, Section 3, Criteria 3). ...	Verify that the waste analysis plan indicates how and when wastes are to be analyzed, including procedures for characterization and verification testing of both on-site and off-site hazardous waste. (2)(5) Verify that a detailed physical and chemical analysis is done of a representative sample of the wastes prior to treatment, storage, or disposal. (NOTE: Prior studies and published information may be included as a part of the analysis.) Verify that the analysis is repeated as necessary to ensure that it is accurate and up to date, specifically if the process or operation generating the waste has changed. ...
3-31. The installation must have and keep a hazardous waste profile sheet (HWPS) on file for each waste handled by each HWSA (OEBGD, Chapter 6, Section 3, Criteria 3). ...	Verify that there is a file of HWPSs. (2)(5) Verify that no waste is accepted for storage unless the HWPS has been provided. Verify that the generator updates the HWPS as needed to reflect any new waste streams or process modifications that change the character of the hazardous waste being handled at the storage area. ...
3-32. The HWSA manager is required to conduct periodic verification testing of the hazardous waste in storage (OEBGD, Chapter 6, Section 3, Criteria 3(b)). ...	Verify that periodic testing is done to ensure that stored hazardous wastes are accurately identified by the generator. (2)(5) ...
3-33. Prior to accepting waste from a generator, the HWSA manager is required to follow specific procedures (OEBGD, Chapter 6, Section 3, Criteria 3(c)). ...	Verify that prior to accepting waste from generators, the HWSA manager: (2)(5) - inspects the waste to ensure that it matches the description provided - requests a new HWPS from the generator if there is reason to believe that the process generating the waste has changed - analyzes waste shipments to see if they match the waste description on the accompanying manifest and documents - rejects shipments that do not match the accompanying waste descriptions, unless the generator provides an accurate description. ...

REGULATORY REQUIREMENTS:	REVIEWER CHECKS:
Tank Systems 3-41. Secondary containment must be in place for specific types of tank systems used to store or treat hazardous waste (OEBGD, Chapter 6, Section 8, Criteria 1 and 4). ... 3-42. Tank ancillary equipment should also be provided with secondary containment (GMP). ... 3-43. Existing tank systems without proper secondary containment are required to meet specific standards (OEBGD, Chapter 6, Section 8, Criteria 2). ...	Verify that the following types of tanks used to store or treat hazardous waste have secondary containment: (2)(5) - all new tank systems or components - existing tank systems when the tank system annual leak test detects leakage - tanks systems that store or treat hazardous wastes by 1 January 1999. Verify that secondary containment meets the following criteria: - it is designed, installed, and operated to prevent the migration of liquid out of the system - it is capable of detecting and collecting releases and accumulated liquids until removal is possible - it is constructed to include one or more of the following: a liner external to the tank; a vault; or a double-walled tank. (NOTE: Exempted from these requirements are the following: - tanks systems used to store or treat hazardous wastes that contain no free liquids and are situated inside a building with an impermeable floor - tank systems, including sumps, that serve as part of a secondary containment system to collect or contain releases of hazardous wastes.) ... Verify that ancillary equipment, except for the following, has secondary containment: (2)(5) - aboveground piping that is visually inspected for leaks on a daily basis - welded flanges, welded joints, and welded connections that are visually inspected for leaks on a daily basis - sealless or magnetic coupling pumps and sealless valves that are visually inspected for leaks on a daily basis - pressurized aboveground piping systems with automatic shutoff valves that are visually inspected for leaks on a daily basis. ... Verify that for tank systems without proper secondary containment, an annual determination is made as to whether the tank system is leaking or is fit for use. (2)(5) Verify that the installation maintains a record of the results of testing and assessments. ...

**COMPLIANCE CATEGORY:
HAZARDOUS WASTE MANAGEMENT
Worldwide ECAMP**

REGULATORY REQUIREMENTS:	REVIEWER CHECKS:
3-44. When new tank systems or components are installed, managers of HWSAs must obtain a written assessment, reviewed and certified by a competent authority, certifying that the tank is acceptable (OEBGD, Chapter 6, Section 8, Criteria 3). ...	Verify that the certification states that the tank system has sufficient structural integrity and is acceptable for the storing and treating of hazardous waste. (2)(5) ...
3-45. Tanks used for hazardous waste treatment or storage should be operated according to specific procedures (OEBGD, Chapter 6, Section 8, Criteria 5(a)). ...	Verify that hazardous wastes or treatment reagents are not placed in tanks if they could cause the tank system (including ancillary equipment or containment system) to fail. (2)(5) ...
3-46. Tank systems should comply with specific parameters for ignitable, reactive, or incompatible wastes (GMP). ...	Verify that ignitable or reactive wastes are not placed in a tank system unless one of the following is met: (2)(5) - the waste is treated, rendered, or mixed before or immediately after placement in the tank system so that it is no longer reactive or ignitable, and the minimum requirements for reactive and ignitable wastes are met - the waste is treated or stored in such a way that it is protected from any material or conditions that may cause the waste to ignite or react - the tank system is used solely for emergencies. Verify that the minimum protective distances between waste management areas and any public ways, streets, alleys, or an adjoining property line that can be built upon, as required in Table 3-1 through 3-6 of the National Fire Protection Association's <i>Flammable and Combustible Liquids Code</i>, are maintained. Verify that incompatible wastes, or incompatible wastes and materials, are not placed in the same tank system unless minimum safety requirements are met. Verify that hazardous waste is not placed in a tank system that has not been decontaminated and that previously held an incompatible waste or material unless minimum safety requirements are met. ...

**COMPLIANCE CATEGORY:
HAZARDOUS WASTE MANAGEMENT
Worldwide ECAMP**

REGULATORY REQUIREMENTS:	REVIEWER CHECKS:
3-47. Installations are required to conduct inspections of tank systems and associated equipment (OEBGD, Chapter 6, Section 8, Criteria 5(b) and 5(c)). ...	Verify that inspections of the following are conducted and logged at least once a day: (2)(5) - aboveground portions of the tank to detect corrosion or releases - tank monitoring equipment (e.g., pressure and temperature gauges) - data gathered from monitoring and leak detection equipment - area surrounding tank, including the secondary containment system, for signs of leakage (wet spots, dead vegetation). Verify that the proper operation of cathodic protection systems are inspected within 6 months (mo) after initial installation and annually thereafter. Verify that all sources of impressed current are inspected and/or tested every other month. Verify that inspections are documented. ...
3-48. Tank systems or secondary containment systems that have leaked or spilled or been declared unfit for use must be removed from service immediately and have specific requirements met (OEBGD, Chapter 6, Section 8, Criteria 6). ...	Verify that the following steps are taken: (1)(2)(5)(10) - stop the flow or addition of hazardous wastes to the tank - inspect systems to determine the cause of the release - contain the visible release and prevent further migration of the leak or spill to soils or surface water - remove and properly dispose of any contamination of the soil and surface water - complete required notifications and reports. Verify that the tank and/or secondary containment is repaired prior to its return to service and that extensive repairs are certified by an independent, qualified, registered, professional engineer. ...
3-49. Installations must follow specific procedures when closing a tank system (OEBGD, Chapter 6, Section 8, Criteria 7). ...	Determine if the installation has closed any tank systems. (1)(2)(5) Verify that all waste residues and contaminated containment system components, soils, structures, and equipment have been removed or decontaminated to the extent practicable. ...

REGULATORY REQUIREMENTS:	REVIEWER CHECKS:
3-57. Installations that use host nation facilities to store, treat, or dispose of DOD-generated waste must ensure that the facilities are approved by the host nation as being in compliance (OEBGD, Chapter 6, Section 11, Criteria 5). ...	Verify that the host nation facility has a permit or host nation equivalent for the hazardous wastes that will be generated. (1)(2)(5) ...
LAND DISPOSAL 3-58. Hazardous wastes may be land disposed when there is a reasonable degree of certainty that hazardous constituents will not migrate from the disposal site and if the facility meets specific criteria (OEBGD, Chapter 6, Section 10, Criteria 7). ...	Verify that the land disposal system has: (2)(5) - a liner of natural or man-made materials that restricts the downward or lateral escape of hazardous waste, hazardous constituents, or leachate and has a permeability of no more than 10⁻⁷ centimeters/ second (cm/s) - a leachate collection system - a groundwater monitoring program capable of determining the facility's impact on the quality of water in the aquifers underlying the facility. (NOTE: The Executive Agent may waive these requirements for a particular land disposal site.) ...
3-59. The Base Environmental Manager is responsible for completing the information required on the Hazardous Waste Profile Sheet concerning land disposal restrictions (Air Force Hazardous Waste Management Policy, 6 June 1991, Appendix C, Section B, para 2(c)(1)(c)). ...	Verify that the following information relating to land disposal restrictions is filled in on the Hazardous Waste Profile Sheet: (1)(2)(5) - treatability groups - USEPA hazardous waste codes - all subcategories if there is more than one code - the five letter treatment code or the section of the CFR where the treatment appears - whether or not a lab pack contains a waste identified as a restricted waste. ...

**COMPLIANCE CATEGORY:
HAZARDOUS WASTE MANAGEMENT
Worldwide ECAMP**

REGULATORY REQUIREMENTS:	REVIEWER CHECKS:
HAZARDOUS WASTE INCINERATORS 3-60. Hazardous waste incinerators, including boilers and industrial furnaces for any recycling purposes, are required to meet specific standards (OEBGD, Chapter 6, Section 11, Criteria 8). ... TREATMENT TECHNOLOGIES 3-61. Wastes categorized as hazardous on the basis of Section A.1 of Table 3-1 and that, after the use of approved treatment technologies, no longer exhibit any hazardous characteristic may be disposed of as solid waste (OEBGD, Chapter 6, Section 11, Criteria 9). ...	Verify that incinerators used to dispose of hazardous waste are licensed or permitted by a competent host nation authority or approved by the Executive Agent. (1)(2)(5) Verify that the license, permit, or Executive Agent requires the incinerator to be designed to include appropriate equipment as well as to be operated according to management practices and other relevant criteria so as to effectively destroy hazardous constituents and control harmful emissions. ... Verify that the following approved treatment technologies are used: (1)(2)(5) - for organics: - incineration - fuel substitution where the units are operated so that destruction of hazardous constituents is efficient, and hazardous emissions are no greater than those produced by incineration - biodegradation - recovery - chemical degradation - for heavy metals: - stabilization or fixation - recovery - reactives are treated so that the chemical or physical composition of a material no longer exhibits the characteristic of reactivity - corrosives are neutralized to a pH value between 6.0 and 9.0 or undergo: - recovery - incineration - chemical or electrolytic oxidation - chemical reduction - stabilization. ...

**COMPLIANCE CATEGORY:
HAZARDOUS WASTE MANAGEMENT
Worldwide ECAMP**

REGULATORY REQUIREMENTS:	REVIEWER CHECKS:
3-62. Treatment residues of wastes categorized as hazardous under all sections of Table 3-1, except Section A.1, must be managed as hazardous waste (OEBGD, Chapter 6, Criteria 9). ...	Verify that treatment residues, from the following treatment technologies that are classified as hazardous waste are managed as hazardous waste: (1)(2)(5) - for organics: - incineration - fuel substitution where the units are operated so that destruction of hazardous constituents is efficient, and hazardous emissions are no greater than those produced by incineration - biodegradation - recovery - chemical degradation - for heavy metals: - stabilization or fixation - recovery - reactives are treated so that the chemical or physical composition of a material no longer exhibits the characteristic of reactivity - corrosives are neutralized to a pH value between 6.0 and 9.0 or undergo: - recovery - incineration - chemical or electrolytic oxidation - chemical reduction - stabilization. ...
SPECIFIC WASTES 3-63. Mercury, nickel-cadmium, lithium, and lead acid batteries are required to be processed to stabilize, fix, or recover heavy metals and neutralize any corrosives prior to disposal (OEBGD, Chapter 6, Section 11, Criteria 9(e)). ...	Verify that the listed batteries are being treated prior to disposal. (2)(5) ...

**CHARACTERISTICS OF HAZARDOUS WASTES
AND
LISTS OF HAZARDOUS WASTES AND HAZARDOUS MATERIALS**

A-1 CHARACTERISTICS OF HAZARDOUS WASTE

(a) General

- (1) A solid waste is a hazardous waste if it exhibits any of the characteristics identified in this section.
- (2) A hazardous waste which is identified by a characteristic in this section is assigned every USEPA Hazardous Waste Number that is applicable. This number must be used in complying with the notification, recordkeeping, and reporting requirements of these alternate standards.

(b) Characteristic of Ignitability

- (1) A solid waste exhibits the characteristic of ignitability if a representative sample of the waste has any of the following properties:
 - (i) It is a liquid, other than an aqueous solution that contains less than 24 percent alcohol by volume and has a flash point less than 60 °C (140 °F), as determined by a Pensky-Martens Closed Cup Tester, using the test method specified in ASTM Standard D-93-80, or a Setaflash Closed Cup Tester, using the test method specified in ASTM Standard D-3278-78, or as determined by an equivalent test method.
 - (ii) It is not a liquid and is capable, under standard temperature and pressure, of causing fire through friction, absorption of moisture or spontaneous chemical changes and, when ignited, burns so vigorously and persistently that it creates a hazard.
 - (iii) It is an ignitable, compressed gas as determined by appropriate test methods or USEPA.
 - (iv) It is an oxidizer.
- (2) A solid waste that exhibits the characteristic of ignitability has the USEPA Hazardous Waste Number of D001.

(c) Characteristic of Corrosivity

- (1) A solid waste exhibits the characteristic of corrosivity if a representative sample of the waste has either of the following properties:
 - (i) It is aqueous and has a pH less than or equal to 2.0 or greater than or equal to 12.5, as determined by a pH meter.

Table 3-1 (continued)

- (ii) It is a liquid and corrodes steel (SAE 1020) at a rate greater than 6.35 millimeters (mm), or 0.250 inch (in.), per year at a test temperature of 55 °C (130 °F) as determined by the test method specified in NACE (National Association of Corrosion Engineers) Standard TM-01-69 as standardized in *Test Methods for the Evaluation of Solid Waste, Physical/Chemical Methods*.

- (2) A solid waste that exhibits the characteristic of corrosivity has the USEPA Hazardous Waste Number of D002.

(d) Characteristic of Reactivity

- (1) A solid waste exhibits the characteristic of reactivity if a representative sample of the waste has any of the following properties:
 - (i) It is normally unstable and readily undergoes violent change without detonating.
 - (ii) It reacts violently with water.
 - (iii) It forms potentially explosive mixtures with water.
 - (iv) When mixed with water, it generates toxic gases, vapors, or fumes in a quantity sufficient to present danger to human health or the environment.
 - (v) It is a cyanide or sulfide bearing waste that, when exposed to pH conditions between 2.0 and 12.5, can generate toxic gases, vapors, or fumes in a quantity sufficient to present a danger to human health or the environment.
 - (iv) It is capable of detonation or explosive reaction if subjected to a strong initiating source or if heated under confinement.
 - (vii) It is readily capable of detonation, explosive decomposition, or reaction at standard temperature and pressure.
 - (viii) It is a forbidden explosive.
- (2) A solid waste that exhibits the characteristic of reactivity has the USEPA Hazardous Waste Number of D003.

(e) Toxicity Characteristic

- (1) A solid waste exhibits the characteristic of toxicity if, the extract from a representative sample of the waste contains any of the contaminants listed in table A.1(a) or (b) at the concentration equal to or greater than the respective value given in that Table. Where the waste contains less than 0.5 percent filterable solids, the waste itself is considered to be the extract for the purpose of this section.
- (2) A solid waste that exhibits the characteristic of toxicity has the USEPA Hazardous Waste Number specified in Table A.1 (a) or (b) which corresponds to the toxic contaminant causing it to be hazardous.

Table 3-1 (continued)

A-2 LISTS OF HAZARDOUS WASTES

(a) General

- (1) A solid waste is a hazardous waste if it is listed in this section.
- (2) The basis for listing the classes or types of wastes listed employed one or more of the following Hazard Codes:

Ignitable Waste	(I)
Corrosive Waste	(C)
Reactive Waste	(R)
Toxicity Characteristic Waste	(E)
Acute Hazardous Waste	(H)
Toxic Waste	(T)

- (3) Each hazardous waste listed in section A-2 is assigned a USEPA Hazardous waste Number which precedes the name of the waste. This number must be used in complying with the notification, recordkeeping and reporting requirements of these alternative standards.

(b) Hazardous Wastes from Non-Specific Sources

The solid wastes in Table A.2 are listed hazardous wastes from non-specific sources.

- (c) The solid wastes listed in Table A.3, annotated "K" as the first character in the USEPA number are listed hazardous wastes from specific sources.
- (d) Discarded Commercial Chemical Products, Off-Specification Species, Container Residues, and Spill Residues Thereof

The following materials or items are hazardous wastes if and when they are discarded or intended to be discarded: when they are mixed with waste oil, or used oil, or other material and applied to the land for dust suppression or road treatment; when they are otherwise applied to the land in lieu of their original intended use; when they are contained in products that are applied to the land in lieu of their original intended use; or when, in lieu of their original intended use, they are produced for use as (or as a component of) a fuel, distributed for use as a fuel, or burned as a fuel.

- (1) Any commercial chemical product, or manufacturing chemical intermediate with the generic name listed in Table A.3, annotated "P" or "U" as the first character in the USEPA waste number.
- (2) Any off-specification commercial chemical product or manufacturing chemical intermediate that, if it met specifications, would have the generic name listed in Table A.3, annotated "P" or "U" as the first character in the USEPA waste number.

Table 3-1 (continued)

TABLE A.2

LISTED HAZARDOUS WASTES FROM NON-SPECIFIC SOURCES

USEPA Waste No.	Hazardous Waste	Hazard Code
F001	The following spent halogenated solvents used in degreasing: tetrachloroethylene, trichloroethylene, methylene chloride, 1,1,1-trichloroethane, carbon tetrachloride, and chlorinated fluorocarbons; all spent solvent mixtures/blends used in degreasing containing, before use, a total of 10 percent or more (by volume) of one or more of the above halogenated solvents or those solvents listed in F002, F004, and F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures.	(T)
F002	The following spent halogenated solvents: tetrachloroethylene, methylene chloride, trichloroethylene, 1,1,1-trichloroethane, chlorobenzene, 1,1,2-trichloro-1,2,2-trifluoroethane, orthodichlorobenzene, trichlorofluoromethane, and 1,1,2-trichloroethane; all spent solvent mixtures/blends containing, before use, a total of 10 percent or more (by volume) of one or more of the above halogenated solvents or those listed in F001, F004, or F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures.	(T)
F003	The following spent non-halogenated solvents: xylene, acetone, ethyl acetate, ethyl benzene, ethyl ether, methyl isobutyl ketone, n-butyl alcohol, cyclohexanone, and methanol; all spent solvent mixtures/blends containing, before use, only the above spent non-halogenated solvents; and all spent solvent mixtures/blends containing, before use, one or more of the above non-halogenated solvents and a total of 10 percent or more (by volume) of one or more of those solvents listed in F001, F002, F004, and F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures.	(I)
F004	The following spent non-halogenated solvents: cresols and cresylic acid, and nitrobenzene; all spent solvent mixtures/blends containing, before use, a total of 10 percent or more (by volume) of one or more of the above non-halogenated solvents or those solvents listed in F001, F002, and F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures.	(T)
F005	The following spent non-halogenated solvents: Toluene, methyl-ethyl ketone, carbon disulfide, isobutanol, pyridine, benzene, 2-ethoxyethanol, and 2-nitropropane; all spent solvent mixtures/blends containing, before use, a total of 10 percent or more (by volume) of one or more of the above non-halogenated solvents or those solvents listed in F001, F002, or F004; and still bottoms from the recovery of these spent solvents and spent solvent mixtures.	(I,T) ²

Table 3-1 (continued)

USEPA Waste No.	Hazardous Waste	Hazard Code
F006	Wastewater treatment sludges from electroplating operations except from the following processes: (1) sulfuric acid anodizing of aluminum; (2) tin plating on carbon steel; (3) zinc plating (segregated basis) on carbon steel; (4) aluminum or zinc-aluminum plating on carbon steel; (5) cleaning/stripping associated with tin, zinc and aluminum plating on carbon steel; and (6) chemical etching and milling of aluminum.	(T)
F007	Spent cyanide plating bath solutions from electroplating operations.	(R,T)
F008	Plating bath residues from the bottom of plating baths from electroplating operations where cyanides are used in the process.	(R,T)
F009	Spent stripping and cleaning bath solutions from electroplating operations where cyanides are used in the process.	(R,T)
F010	Quenching bath residues from oil baths from metal heat treating operations where cyanides are used in the process.	(R,T)
F011	Spent cyanide solutions from salt bath pot cleaning from metal heat treating operations.	(R,T)
F012	Quenching wastewater treatment sludges from metal heat treating operations where cyanides are used in the process.	(T)
F019	Wastewater treatment sludges from the chemical conversion coating of aluminum except from zirconium phosphating in aluminum can washing when such phosphating is an exclusion conversion coating process.	(T)

Notes

¹ USEPA Hazardous Waste Number

² (I,T) should be used to specify mixtures containing ignitable and toxic constituents.

- (3) Any residue remaining in a container or in an inner liner removed from a container that has held any commercial chemical product or manufacturing chemical intermediate having the generic name listed in Table A.3, annotated "P" or "U" as the first character in the USEPA waste number, unless the container is empty.

(Comment: Unless the residue is being beneficially used or reused, being legitimately recycled or reclaimed, or being accumulated, stored, transported, or treated prior to such use, reuse, recycling or reclamation, the residue should be discarded, and is thus, a hazardous waste. An example of a legitimate reuse of the residue would be where the residue remains in the container, and the container is used to hold the same commercial chemical product or manufacturing chemical intermediate it previously held. An example of the discard of the residue would be where the drum is sent to a drum reconditioner who reconditions the drum but discards the residue.)

Table 3-1 (continued)

- (4) Any residue or contaminated soil, water or other debris resulting from the cleanup of a spill into or on any land or water of any commercial chemical product or manufacturing chemical intermediate having the generic name listed in Table A.3, annotated "P" or "U" as the first character in the USEPA waste number, or any residue or contaminated soil, water or other debris resulting from the cleanup of a spill into or on any land or water of any off-specification chemical product and manufacturing chemical intermediate that, if it met specifications, would have the generic name listed in Table A.3, annotated "P" or "U" as the first character in the USEPA waste number of this section.

(Comment: The phrase "commercial chemical product or manufacturing chemical intermediate having the generic name listed in ..." refers to a chemical substance that is manufactured or formulated for commercial or manufacturing use that consists of the commercially pure grade of the chemical, any technical grades of the chemical that are produced or marketed, and all formulation in which the chemical is the sole active ingredient. It does not refer to a material, such as a manufacturing process waste, that contains any of the substances listed in Table A.3, annotated "P" or "U" as the first character in the USEPA waste number. Where a manufacturing process waste is deemed to be a hazardous waste because it contains a substance listed in Table A.3, annotated "P" or "U" as the first character in the USEPA waste number, such waste will be listed in section A.2 or will be identified as a hazardous waste by the characteristics set forth in section A-1.)

- (5) The commercial chemical products, manufacturing chemical intermediates, or off-specification commercial chemical products or manufacturing chemical intermediates referred to in Table A.3, annotated "P" as the first character in the USEPA waste number, are hereby identified as acute hazardous wastes (H).

(Comment: For the convenience of the regulated community, the primary hazardous properties of these materials have been indicated by the letters T (Toxicity) and R (Reactivity). Absence of a letter indicates that the compound only is listed for acute toxicity.)

These wastes and their corresponding USEPA Hazardous Waste Numbers are listed in Table A.3, annotated "P" as the first character in the USEPA waste number.

- (6) The commercial chemical products, manufacturing chemical intermediates, or off-specification commercial chemical products referred to in Table A.3 of this section are hereby identified as toxic wastes (T), unless otherwise designated.

[Comment: For the convenience of the regulated community, the primary hazardous properties of these materials have been indicated by the letter T (Toxicity), R (Reactivity), I (Ignitability), and C (Corrosivity). Absence of a letter indicates that the compound is only listed for toxicity.]

Wastewater treatment sludges from electroplating operations except from the following: (1) sulfuric acid anodizing aluminum, (2) tin plating on carbon steel, (3) zinc plating (segregated basis) on carbon steel, (4) aluminum or zinc-aluminum plating on carbon steel, (5) cleaning/stripping associated with tin, zinc and aluminum plating on carbon steel, and (6) chemical etching and milling of aluminum.				
F007			F007	10
Spent cyanide plating bath solutions from electroplating operations.				
F008			F008	10
Plating bath residues from the bottom of plating baths from electroplating operations where cyanides are used in the process.				

Table 3-1 (continued)

Hazardous Waste/Substances	CAS No. ¹	Threshold Planning ² Quantity (pounds)	USEPA Waste Number	RQ (pounds) ³
F009			F009	10
Spent stripping and cleaning bath solutions from electroplating operations where cyanides are used in the process.				
F010			F010	10
Quenching bath residues from oil baths from metal heat operations where cyanides are used in the process.				
F011			F011	10
Spent cyanide solution from salt bath pot cleaning from metal heat treating operations.				
F012			F012	10
Quenching wastewater treatment sludges from metal heat treating operations where cyanides are used in the process.				
F019			F019	10
Wastewater treatment sludges from the chemical conversion coating of aluminum except from zirconium phosphating in aluminum can washing when such phosphating is an exclusive coating process				
F020			F020	1
Waste (except wastewater and spent carbon from hydrogen chloride purification) from the production of manufacturing use (as a reactant, chemical intermediate, or component in a formulating process) of tri-or-tetrachlorophenol, or of intermediates used to produce their pesticide derivatives. (This listing does not include wastes from the production of hexachlorophene from highly purified 2,4,5-trichlorophenol.)				
F021			F021	1
Wastes (except wastewater and spent carbon from hydrogen chloride purification) from the production or manufacturing use (as a reactant, chemical intermediate, or component in a formulating process) of pentachlorophenol, or of intermediates used to produce its derivatives.				
F022			F022	1
Wastes (except wastewater and spent carbon from hydrogen chloride purification) from the manufacturing use (as a reactant, chemical intermediate, or component in a formulating process) or tetra-, penta-, or hexachlorobenzenes under alkaline conditions.				
F023			F023	1
Wastes (except wastewater and spent carbon from hydrogen chloride purification) from the production of materials on equipment previously used for the production or manufacturing use (as a reactant, chemical intermediate, or component in a formulating process) of tri- and tetrachlorophenols. (This listing does not include wastes from equipment used only for the production or use of hexa-chlorophene from highly purified, 2,4,5-tri-chlorophenol.)				

Table 3-1 (continued)

Hazardous Waste/Substances	CAS No. ¹	Threshold Planning ² Quantity (pounds)	USEPA Waste Number	RQ (pounds) ³
F024			F024	1
Wastes, including but not limited to distillation residues, heavy ends, tars, and reactor cleanout wastes, from the production of chlorinated aliphatic hydrocarbons, having carbon content from one to five, utilizing free radical catalyzed processes. (This listing does not include light ends, spent filters and filter aids, spent dessicants(sic), wastewater, wastewater treatment sludges, spent catalysts, and wastes listed in Section 261.32.)				
F025			F025	1
Condensed light ends, spent filters and filter aids, and spent dessicant wastes from the production of certain chlorinated aliphatic hydrocarbons, by free radical catalyzed processes. These chlorinated aliphatic hydrocarbons are those having carbon chain lengths ranging from one to and including five, with varying amounts and positions of chlorine substitution.				
F026			F026	1
Wastes (except wastewater and spent carbon from hydrogen chloride purification) from the production of materials on equipment previously used for the manufacturing use (as a reactant, chemical intermediate, or component in a formulating process) of tetrapenta-, or hexachlorobenzene under alkaline conditions.				
F027			F027	1
Discarded unused formulations containing tri-, tetra-, or pentachlorophenol or discarded unused formulations containing compounds derived from these chlorophenols. (This listing does not include formulations containing hexachlorophene synthesized from prepurified 2,4,5-tri-chlorophenol as the sole component.)				
K028			K028	1
Residues resulting from the incineration or thermal treatment of soil contaminated with USEPA Hazardous Waste Nos. F020, F021, F022, F023, F026, and F027				
K001			K001	1
Bottom sediment sludge from the treatment of wastewaters from wood preserving processes that use creosote and/or pentachlorophenol.				
K002			K002	#
Wastewater treatment sludge from the production of chrome yellow and orange pigments.				
K003			K003	#
Wastewater treatment sludge from the production of molybdate orange pigments.				
K004			K004	10
Wastewater treatment sludge from the production of zinc yellow pigments.				

Table 3-1 (continued)

Hazardous Waste/Substances	CAS No. ¹	Threshold Planning ² Quantity (pounds)	USEPA Waste Number	RQ (pounds) ³
K005			K005	#
Wastewater treatment sludge from the production of chrome green pigments.				
K006			K006	10
Wastewater treatment sludge from the production of chrome oxide green pigments (anhydrous and hydrated).				
K007			K007	10
Wastewater treatment sludge from the production of iron blue pigments.				
K008			K008	10
Oven residue from the production of chrome oxide green pigments.				
K009			K009	10
Distillation bottoms from the production of acetaldehyde from ethylene.				
K010			K010	10
Distillation side cuts from the production of acetaldehyde from ethylene.				
K011			K011	10
Bottom stream from the wastewater stripper in the production of acrylonitrile.				
K013			K013	10
Bottom stream from the acetonitrile column in the production of acrylonitrile.				
K014			K014	5000
Bottom from the acetonitrile purification column in the production of acrylonitrile.				
K015			K015	10
Still bottoms from the distillation of benzyl chloride.				
K016			K016	1
Heavy ends or distillation residues from the production of carbon tetrachloride.				
K017			K017	10
Heavy ends (still bottoms) from the purification column in the production of epi-chlorohydrin.				
K018			K018	1
Heavy ends from the fractionation column in ethyl chloride production.				
K019			K019	1
Heavy ends from the distillation of ethylene dichloride in ethylene dichloride production.				
K020			K020	1
Heavy ends from the distillation of vinyl chloride in vinyl chloride monomer production.				
K021			K021	10
Aqueous spent antimony catalyst waste from fluoromethanes production.				

Table 3-1 (continued)

Hazardous Waste/Substances	CAS No. ¹	Threshold Planning ² Quantity (pounds)	USEPA Waste Number	RQ (pounds) ³
K022			K022	1
Distillation bottom tars from the production of phenol/acetone from cumene.				
K023			K023	5000
Distillation light ends from the production of ophthalic anhydride from naphthalene.				
K024			K024	5000
Distillation bottoms from the production of phthalic anhydride from naphthalene.				
K025			K025	10
Distillation bottoms from the production of nitrobenzene by the nitration of benzene.				
K026			K026	1000
Stripping still tails from the production of methyl ethyl pyndines.				
K027			K027	10
Centrifuge and distillation residues from toluene diisocyanate production.				
K028			K028	1
Spent catalyst from the hydrochlorinator reactor in the production of 1,1,1-trichloroethane.				
K029			K029	1
Waste from the product steam stripper in the production of 1,1,1-trichloroethane.				
K030			K030	1
Column bottoms or heavy ends from the combined production of trichloroethylene and perchloroethylene.				
K031			K031	1
By-product salts generated in the production of MSMA and cacodylic acid.				
K032			K032	10
Wastewater treatment sludge from the production of chlordane.				
K033			K033	10
Wastewater and scrub water from the chlorination of cyclopentadiene in the production of chlordane.				
K034			K034	10
Filter solids from the filtration of hexachlorocyclopentadiene in the production of chlordane.				
K035			K035	1
Wastewater treatment sludges generated in the production of creosote.				
K036			K036	1
Still bottoms from toluene reclamation distillation in the production of disulfoton.				

Table 3-1 (continued)

Hazardous Waste/Substances	CAS No. ¹	Threshold Planning ² Quantity (pounds)	USEPA Waste Number	RQ (pounds) ³
K037			K037	1
Wastewater treatment sludges from the production of disulfoton.				
K038			K038	10
Wastewater from the washing and stripping of phorate production.				
K039			K039	10
Filter cake from the filtration of diethylphosphorodithioic acid in the production of phorate.				
K040			K040	10
Wastewater treatment sludge from the production of phorate.				
K041			K041	1
Wastewater treatment sludge from the production of toxaphene.				
K042			K042	10
Heavy ends or distillation residues from the distillation of tetrachlorobenzene in the production of 2,4,5-T.				
K043			K043	10
2,6-Dichlorophenol waste from the production 2,4-D.				
K044			K044	10
Wastewater treatment sludges from the manufacturing and processing of explosives.				
K045			K045	10
Spent carbon from the treatment of wastewater containing explosives.				
K046			K046	100
Wastewater treatment sludges from the manufacturing, formulation and loading of lead-based initiating compounds.				
K047			K047	10
Pink/red water from TNT operations.				
K048			K048	#
Dissolved air flotation (DAF) float from the petroleum refining industry.				
K049			K049	#
Slop oil emulsion solids from the petroleum refining industry.				
K050			K050	10
Heat exchanger bundle cleaning sludge from the petroleum refining industry.				
K051			K051	#
API separator sludge from the petroleum refining industry.				
K052			K052	10
Tank bottoms (lead) from the petroleum refining industry.				
K060			K060	1
Ammonia still lime sludge from coking operations.				

Table 3-1 (continued)

Hazardous Waste/Substances	CAS No. ¹	Threshold Planning ² Quantity (pounds)	USEPA Waste Number	RQ (pounds) ³
K061			K061	#
Emission control dust/sludge from the primary production of steel in electric furnaces.				
K062			K062	#
Spent pickle liquor generated by steel finishing operations of facilities within the iron and steel industry (SIC Codes 331 and 332).				
K064			K064	##
Acid plant blowdown slurry/sludge resulting from thickening of blowdown slurry from primary copper production.				
K065			K065	##
Surface impoundment solids contained in and dredged from surface impoundments at primary lead smelting facilities.				
K066			K066	##
Sludge from treatment of process wastewater and/or acid plant blowdown from primary zinc production.				
K069			K069	#
Emission control dust/sludge from secondary lead smelting.				
K071			K071	1
Brine purification muds from the mercury cell process in chlorine production, where separately prepurified brine is not used.				
K073			K073	10
Chlorinated hydrocarbon waste from the purification step of the diaphragm cell process using graphite anodes in chlorine production.				
K083			K083	100
Distillation bottoms from aniline extraction.				
K084			K084	1
Wastewater treatment sludges generated during the production of veterinary pharmaceuticals from arsenic or organo-arsenic compounds.				
K085			K085	10
Distillation or fractionation column bottoms from the production of chlorobenzenes.				
K086			K086	#
Solvent washes and sludges, caustic washes and sludges, or water washes and sludges from cleaning tubs and equipment used in the formulation of ink from pigments, driers, soaps, and stabilizers containing chromium and lead.				
K087			K087	100
Decanter tank tar sludge from coking operations.				
K088			K088	
Spent potliners from primary aluminum reduction.				

Table 3-1 (continued)

Hazardous Waste/Substances	CAS No. ¹	Threshold Planning ² Quantity (pounds)	USEPA Waste Number	RQ (pounds) ³
K090			K090	
Emission control dust or sludge from ferrochromiumsilicon production.				
K091			K091	
Emission control dust or sludge from ferrochromium production.				
K093			K093	5000
Distillation light ends from the production of phthalic anhydride from ortho-xylene.				
K094			K094	5000
Distillation bottoms from the production of phthalic anhydride from ortho-xylene.				
K095			K095	100
Distillation bottoms from the production of 1,1,1-trichloroethane.				
K096			K096	100
Heavy ends from the heavy ends column from the production of 1,1,1-trichloroethane.				
K097			K097	1
Vacuum stripper discharge from the chlordane chlorinator in the production of chlordane.				
K098			K098	1
Untreated process wastewater from the production of toxaphene.				
K099			K099	10
Untreated wastewater from the production of 2,4-D.				
K100			K100	#
Waste leaching solution from acid leaching of emission control dust/sludge from secondary lead smelting.				
K101			K101	1
Distillation tar residues from the distillation of aniline-based compounds in the production of veterinary pharmaceuticals from arsenic or organo-arsenic compounds.				
K102			K102	1
Residue from the use of activated carbon for decolorization in the production of veterinary pharmaceuticals from arsenic or organo-arsenic compounds.				
K103			K103	100
Process residues from aniline extraction from the production of aniline.				
K104			K104	10
Combined wastewater streams generated from nitrobenzene/aniline production.				
K105			K105	10
Separated aqueous stream from the reactor product washing step in the production of chlorobenzenes.				

Table 3-1 (continued)

Hazardous Waste/Substances	CAS No. ¹	Threshold Planning ² Quantity (pounds)	USEPA Waste Number	RQ (pounds) ³
K106			K106	1
Wastewater treatment sludge from the mercury cell process in chlorine production.				
K107			K107	10
Column bottoms from product separation from the production of 1,1-dimethylhydrazine (UDMH) from carboxylic acid hydrazines.				
K108			K108	10
Condensed column overhead from product separation and condensed reactor vent gases from the production of 1,1-dimethylhydrazine (UDMH) from carboxylic acid hydrazides.				
K109			K109	10
Spent filter cartridges from product purification from the production of 1,1-dimethylhydrazine (UDMH) from carboxylic acid hydrazides.				
K110			K110	10
Condensed column overheads from intermediate separation from the production of 1,1-dimethylhydrazine (UDMH) from carboxylic acid hydrazides.				
K111			K111	10
Product washwaters from the production of dinitrotoluene via nitration of toluene.				
K112			K112	10
Reaction by-product water from the drying column in the production of toluenediamine via hydrogenation of dinitrotoluene.				
K113			K113	10
Condensed liquid light ends from the purification of toluenediamine in the production of toluenediamine via hydrogenation of dinitrotoluene.				
K114			K114	10
Vicinals from the purification of toluenediamine in the production of toluenediamine via hydrogenation of dinitrotoluene.				
K115			K115	10
Heavy ends from the purification of toluenediamine in the production of toluenediamine via hydrogenation of dinitrotoluene.				
K116			K116	10
Organic condensate from the solvent recovery column in the production of toluene diisocyanate via phosgenation of toluenediamine.				
K117			K117	1
Wastewater from the reaction vent gas scrubber in the production of ethylene bromide via bromination of ethene.				
K118			K118	1
Spent absorbent solids from purification of ethylene dibromide in the production of ethylene dibromide.				

Table 3-1 (continued)

Hazardous Waste/Substances	CAS No. ¹	Threshold Planning ² Quantity (pounds)	USEPA Waste Number	RQ (pounds) ³
K123			K123	10
Process wastewater (including supermates, filtrates, and washwaters) from the production of ethylenebisdithiocarbamic acid and its salts.				
K124			K124	10
Reactor vent scrubber water from the production of ethylene-bisdithiocarbamic acid and its salts.				
K125			K125	10
Filtration, evaporation, and centrifugation solids from the production of ethylene-bisdithiocarbamic acid and its salts.				
K126			K126	10
Baghouse dust and floor sweepings in milling and packaging operations from the production or formulation of ethylene-bisdithiocarbamic acid and its salts.				
K131			K131	100
Wastewater from the reactor and spent sulfuric acid from the acid dryer in the production of methyl bromide.				
K132			K132	1000
Spent absorbent and wastewater solids from the production of methyl bromide.				
K136			K136	1
Still bottoms from the purification of ethylene dibromide in the production of ethylene dibromide via bromination of ethene.				

NOTES:

- 1 Chemical Abstract Service (CAS) Registry Number.
- 2 Quantity in storage above which Executive Agent must be notified (see *Hazardous Materials*).
- 3 Reportable quantity release which requires notification (see *POL Management*).
- ++ No reporting of releases of this hazardous substance is required if the diameter of the pieces of the solid metal released is equal to or exceeds 100 micrometers (0.004 inches).
- +++ The RQ for asbestos is limited to friable forms only.
- 1* Indicates that the 1-pound RQ is a statutory RQ.
- # Indicates that the RQ is subject to change when the assessment of potential carcinogenicity is completed.
- ## The statutory RQ for this hazardous substance may be adjusted in a future rulemaking; until then the statutory RQ applies.
- ** Indicates that no RQ is being assigned to the generic or broad class.

Table 3-2

**Commercial Chemical Products or Manufacturing Chemical Intermediates
Identified as Toxic Wastes
CFR 261.33 (effective 8 May 1990)**

(COMMENT: Primary hazardous properties of these materials have been indicated by the letter (t) (toxicity), (r) (reactivity), (i) (ignitability), and (c) (corrosivity); absence of a letter indicates that the compound is only listed for acute toxicity.)

USEPA Hazardous Waste No.	Substance
U001	acetaldehyde (i)
U034	acetaldehyde, trichloro-
U187	acetamide, N-(4-ethoxyphenyl)-
U005	acetamide, N-9H-fluoren-2-yl-
U240	acetic acid, (2,4-dichloropheoxy)-, salts and esters
U112	acetic acid, ethyl ester (i)
U144	acetic acid, lead(2+) salt
U214	acetic acid, thallium(1+) salt
see F027	acetic acid, (2,4,5-trichlorophenoxy)-
U002	acetone (i)
u003	acetonitrile (i,t)
U004	acetophenone
U005	2-acetylaminoflourene
U006	acetyl chloride (c, r, t)
U007	acrylamide
U008	acrylic acid (i)
U009	acrylonitrile
U011	amitrole
U012	aniline (i, t)
U136	arsenic acid, dimethyl-
U014	auramine
U015	azaserine
U010	azirino(2,3,3,4(pyrrolo(1,2-a)indole -4,7-dione, 6-amino-8-[(aminocarbonyl) oxy)methyl]-1,1a,2,8,8a,8b- hexahydro-8a-methoxy-5-methyl-,
U157	benz[j]aceanthrylene, 1,2-dihydro-3- methyl-
U016	benza[c]ridine
U017	benzal chloride
U192	benzamide, 3,5-dichloro-n- (1,1-diethyl-2-propynyl-
U018	benz[a]anthracene

Table 3-2 (continued)

USEPA Hazardous Waste No.	Substance
U094	1,2-benzanthracene, 7,12-dimethyl-
U012	benzenamine (i,t)
U014	benzenamine, 4,4-carbonimidoylbis(N,N- dimethyl-
U049	benzenamine, 4-chloro-2-methyl-, hydrochloride
U093	benzenamine, N,N-dimethyl-4- (phenylazo)-
U328	benzenamine, 2-methyl-
U353	benzenamine, 4-methyl-
U158	benzenamine, 4,4-methylenebis(2-chloro-
U222	benzenamine, 2-methyl-, hydrochloride
U181	benzenamine, 2-methyl-5-nitro
U019	benzene (i, t)
U038	benzeneacetic acid, 4-chloro-alpha- (4-chlorophenyl)-alpha-hydroxy, ethyl ester
U030	benzene, 1-bromo-4-phenoxy-
U035	benzenebutanoic acid, 4-[bis (2-chloroethyl)amino]-
U037	benzene, chloro-
U221	benzenediamine, ar-methyl-
U028	1,2-benzendicarboxylic acid, [bis(2-ethyl-hexyl)]ester
U069	1,2-benzenedicarboxylic acid, dibutyl ester
U088	1,2-benzenedicarboxylic acid, diethyl ester
U102	1,2-benzendicarboxylic acid, dimethyl ester
U107	1,2-benzenedicarboxylic acid, dioctyl ester
U070	benzene, 1,2-dichloro-
U071	benzene, 1,3-dichloro-
U072	benzene, 1,4-dichloro-
U060	benzene, 1,1'- (2,2-dichloroethylidene) bis[4-chloro-
U017	benzene, (dichloromethyl)-
U223	benzene, 1,3-diisocyanatomethyl- (r,t)
U239	benzene, dimethyl-(i,t)
U201	1,3-benzenediol
U127	benzene, hexachloro-
U056	benzene, hexahydro- (i)
U220	benzene, methyl-
U105	benzene, 1-methyl-2,4-dinitro-
U106	benzene, 2-methyl-1,3-dinitro-

Table 3-2 (continued)

USEPA Hazardous Waste No.	Substance
U055	benzene, (1-methylethyl)-(i)
U169	benzene, nitro- (i,t)
U183	Benzene, pentachloro-
U185	benzene, pentachloronitro-
U020	benzenesulfonic acid chloride (c,r)
U020	benzenesulfonyl chloride (c,r)
U207	benzene, 1,2,4,5-tetrachloro-
U061	benzene, 1,1'-(2,2,2- trichloroethylidene) bis[4-chloro
U247	benzene, 1,1'-(2,2,2- trichloroethylidene)[4-methoxy-
U023	benzene, (trichloromethyl)-
U234	benzene, 1,3,5-trinitro-
U021	benzidine
U202	1,2-benzisothiazolin-3-one, 1,1-dioxide and salts
U203	1,3-benzodioxole, 5-(2-propenyl)-
U141	1,3-benzodioxole, 5-(1-propenyl)-
U090	1,3-benzodioxole, 5-propyl-
U064	benzo[rs]pentaphene
U248	2-H-1-benzopyran-2-on2, 4-hydroxy-3-(3-oxo-1-phenylbutyl)-, and salts, when present at concentrations of 0.3% or less
U022	benzo[a]pyrene
U197	p-benzoquinone
U023	benzotrichloride (c,r,t)
U085	2,2-bioxirane (i,t)
U021	(1,1-biphenyl)-4,4-diamine
U073	(1,1-biphenyl)-4,4-diamine, 3,3-dichloro
U091	(1,1-biphenyl)-4,4-diamine, 3,3- dimethoxy-
U095	(1,1-biphenyl)-4,4-diamine, 3,3- dimethyl-
U225	bromoform
U030	4-bromophenyl phenyl ether
U128	1,3-butadiene, 1,1,2,3,4,4- hexachloro
U172	1-butanamine, N-butyl-N-nitroso-
U031	1-butanol (i)
U159	2-butanone (i,t)
U160	2-butanone peroxide (r,t)
U053	2-butenal
U074	2-butene, 1,4-dichloro- (i,t)

Table 3-2 (continued)

USEPA Hazardous Waste No.	Substance
U143	2-butenic acid, 2-methyl-, 7- [(2,3-dihydroxy-2-(1-methoxyethyl)- -3-methyl-1-oxobutoxy)methyl] -2,3,5,7s-erythro-1- pyrrolizin-1-yl ester, [1S-[alpha(Z),7(2S,3R), 7alpha]]-
U031	n-Butyl alcohol (i)
U136	cacodylic acid
U032	calcium chromate
U238	carbamic acid, ethyl ester
U178	carbamic acid, methylnitroso- ethyl ester
U097	carbamic chloride, dimethyl-
U114	carbamodithioic acid, 1,2- ethanediylbis-, salts and esters
U062	carbamothioic acid, bis(1-methylethyl)-S- (2,3-dichloro-2-propenyl) ester
U215	carbonic acid, dithallium(1+)salt
U033	carbonic difluoride
U156	carbonochlorodic acid, methyl ester (i,i)
U033	carbon oxyfluoride (r,t)
U211	carbon tetrachloride
U034	chloral
U035	chlorambucil
U036	chlordan, alpha and gamma isomers
U026	chlomaphazine
U037	chlorobenzene
U039	p-chloro-m-cresol
U041	1-chloro-2,3-epoxypropane
U042	2-chloroethyl vinyl ether
U044	chloroform
U046	chloromethyl methyl ether
U047	beta-chloronaphthalene
U048	o-chlorophenol
U049	4-chloro-o-toluidine, hydrochloride
U032	chromic acid H ₂ CrO ₄ , calcium salt
U050	chrysene
U051	creosote
U052	cresols (cresylic acid)
U053	crotonaldehyde
U055	cumene (i)
U246	cyanogen bromide

Table 3-2 (continued)

USEPA Hazardous Waste No.	Substance
U197	2,5-cyclohexadiene-1, 4-dione
U056	cyclohexane (i)
U129	cyclohexane 1,2,3,4,5,6- hexachloro-, (1alpha, 2alpha, 3beta, 4alpha, 6beta)-
U057	cyclohexanone (i)
U130	1,3-cyclopentadiene, 1,2,3,4,5,5- hexachloro-
U058	cyclophosphamide
U240	2,4-d, salts and esters
U059	daunomycin
U060	ddd
U061	ddt
U062	diallate
U063	dibenz[a,h]anthracene
U064	dibenzo[a,i]pyrene
U066	1,2-dibromo-3-chloropropane
U069	dibutyl phthalate
U070	o-Dichlorobenzene
U071	m-Dichlorobenzene
U072	p-Dichlorobenzene
U073	3,3'-dichlorobenzidine
U074	1,4-dichloro-2-butene (i,t)
U075	dichlorodifluoromethane
U078	1,1-dichloroethylene
U079	1,2-dichloroethylene
U025	dichloroethyl ether
U027	dichloroisopropyl ether
U024	dichloromethoxy ethane
U081	2,4-dichlorophenol
U082	2,6-dichlorophenol
U084	1,3-dichloropropene

D043	Vinyl chloride	75-01-4	0.002	0.2

¹ If o-, m-, and p-cresol concentrations cannot be differentiated, the total cresol (D026) concentration is used.

² Quantitation limit is greater than the calculated regulatory level. Therefore, the quantitation limit becomes the regulatory level.

Source: Federal register 55:61, page 11804.

Table 3-4

**Hazardous Waste Operations and Emergency Response
(HAZWOPER) Training Requirements**

1. Level 1 - First Responder (Awareness Level)

- a. This level of training shall be given to all individuals who are likely to witness or discover a hazardous substance release and who have been trained to initiate an emergency response sequence by notifying the proper authorities. They would take no further response action beyond notifying the authorities of the release.

Employees Covered (Air Force Systems Commands (AFSCs))

Security/Law Enforcement (811XX, 811X0, 811X2)

Command and Control (274XX, 19XX)

Air Traffic Control (16XX, 271XX, 272XX)

b. Training Requirements:

Initial and refresher training requirements for this level are detailed in 29 CFR 1910.120(q)(6)(i). Personnel at Level 1 must understand what hazardous materials are and how to initiate an emergency response.

c. Source of Training:

- (1) Level 1 first responders (awareness level) can obtain the required initial training through the installation disaster preparedness program. Training will be accomplished in accordance with (IAW) AFR 8-18, AFR 355-1 (Course 7) to include Standardized Air Force Disaster Preparedness Training Packages (DPTP) H-1 *Major Accident Threats and Hazardous Materials* and DPTP H-3 *Peacetime Emergency Warning and Notification*.
- (2) AFSCs 16XX, 271XX, and 272XX can receive refresher training IAW AFR 60-5. Other AFSCs may receive classroom refresher training through the base disaster preparedness office. Participation in base hazardous material response exercises can be credited against the refresher training requirement for all AFSCs.
- (3) The base disaster preparedness office can obtain support for Level 1 training from the installation fire department and safety office.

Table 3-4 (continued)

- (4) Hazard communications training may be used to support Level 1 training requirements.

2. Level 2 - First Responder (Operations Level)

- a. This level of training shall be given to individuals who respond to releases or potential releases of hazardous substances for the purpose of protecting nearby persons, property, or the environmental areas from the effects of the release.

Employees Covered

On-scene Disaster Control Group (DCG) (As Assigned)
Fire Protection (all 571X0)

- b. Training Requirements:

Initial and refresher training requirements for this level are detailed in 29 CFR 1910.120(Q)(6)(ii). Personnel receiving this training must be competent in health, safety, and operational aspects of basic control and containment of hazardous substance releases. They will be trained to respond in a defensive manner without actually trying to stop the release. Their function is to contain the release at a safe distance, keep it from spreading, and prevent exposures.

- c. Source of Training:

- (1) DCG members requiring this training will refer to AFR 355-1, Chapter 2, Section D. DCG members can obtain initial Level 2 training through the installation disaster preparedness program. Training will be accomplished IAW AFR 8-18, AFR 355-1 (Course 7) to include Standardized Air Force DPTP H-1 *Major Accident Threats and Hazardous Materials* (DPTP) H-3, *Peacetime Emergency Warning and Notification*, and DCG Course 5, which will include participation in a demonstration/performance exercise.
- (2) Refresher training can be obtained by receiving sufficient classroom training or by demonstrating competency during participation in at least one hazardous materials major exercise as specified in AFR 355-1, Chapter 5, Paragraph 5-3.
- (3) The base disaster preparedness office can obtain support for Level 2 training from the installation fire department.

3. Level 3 - Hazardous Materials Technician

- a. This level of training shall be given to individuals who respond to releases or potential releases of hazardous substances with the intent of aggressively stopping the release by plug, patch, dike, berm, or other means.

Employees Covered

Explosive Ordnance Personnel (464X0)
Hazardous Materials (HAZMAT) Team (Selected 571X0)
Bioenvironmental Engineering Technicians (907X0)

b. Training Requirements:

Initial and refresher training requirements for this level are detailed in 29 CFR 1910(q)(6)(iii). Personnel receiving this training must be competent in advanced health, safety, and operational aspects of aggressive spill control and containment.

c. Source of Training:

- (1) A bioenvironmental engineer's formal entry level training can be used to satisfy Level 3 training requirements.
- (2) Fire protection personnel and any other personnel formally assigned to the base HAZMAT teams will meet Level 3 training requirements through the installation fire department's hazardous materials emergency response training programs.
- (3) EOD personnel can use level 3 training that is currently required in EOD training programs.
- (4) Refresher training will be accomplished by receiving sufficient classroom training from the above sources or by demonstrating competency by participating in at least two hazardous materials major accident exercises as specified in AFR 355-1, Chapter 5, Paragraph 5-3.

Table 3-4 (continued)

4. Level 4 - Hazardous Materials Specialist

- a. This level of training shall be given to individuals who respond with and provide support to hazardous materials technicians.

Employees Covered

Bioenvironmental Engineer (91XX)
Environmental Manager (as assigned)
HAZMAT Team Leader (s)

b. Training Requirements:

Initial and refresher requirements for this level are detailed in 29 CFR 1910.120(q)(6)(iv). Personnel receiving this training have duties parallel to those of the hazardous materials technicians; however, Level 4 duties require a more directed or specific knowledge of the various substances they may be called upon to contain or may come in contact with.

c. Source of Training:

- (1) The formal entry level training for bioenvironmental engineers (BEE school) can be used to fulfill the requirements for Level 4 emergency response training. This training should be updated by participation in local training exercises and attendance at refresher courses, symposiums, and conferences.
- (2) The environmental manager can attend an Occupational Safety and Health Administration (OSHA) approved commercial course for the required training. It is recommended that all environmental managers be completely retrained for this level every 3 yr.
- (3) The HAZMAT team leader will receive Level 4 training from the installation fire department. The primary source of training should be the hazardous materials emergency response training program.
- (4) Refresher training will be accomplished by receiving sufficient classroom training from the above sources or by demonstrating competency by participating in at least two hazardous materials major accident exercises as specified in AFR 355-1, Chapter 5, Paragraph 5-3.

5. Level 5 - On-Scene Incident Commander

- a. This level of training shall be given to personnel who will assume control of the incident beyond the first responder awareness.

Employees Covered

Base Commander and Deputies (0066)
Disaster Preparedness (19XX, 242XX)
Senior Fire Officials (571XX)

b. Training Requirements:

Initial and refresher training requirements for this level are detailed in 29 CFR 1910.120(q)(6)(v). Personnel receiving this training shall be competent in implementation of the base incident command system and emergency response plan.

c. Source of Training:

- (1) Every designated On-scene Commander (OSC) can receive the training as part of the formal Air Training Command (ATC) OSC's Course G30ZR0516-001, IAW AFR 355-1, Chapter 7.
- (2) Disaster preparedness staffs can be trained through mobile training programs specifically developed for this career field.
- (3) Senior fire officials can meet Level 5 training requirements through the installation fire department's hazardous materials emergency response training program or through the OSC's Course.
- (4) Annual refresher training for the above career fields can be accomplished through base level, on-scene DCG training or by demonstrating competency while participating in a base hazardous materials major accident exercises in AFR 355-1.

Table 3-4 (continued)

6. Level 6 - Air Force Installation Restoration Site

- a. The training described in 29 CFR 1910.120(e) for supervisors/managers should be given to the following personnel based on their frequency of required visits.

Employees Covered

Bioenvironmental Engineer (91XX)

Installation Restoration Program (IRP) Remedial Project Managers (as assigned)

b. Source of Training:

This training can be provided by contract or commercially available courses using Defense Environmental Restoration Account funds.

Table 3-5

Potentially Incompatible Hazardous Wastes

Below are examples of potentially incompatible wastes, waste components, and materials, along with the harmful consequences that result from mixing materials in one group with materials in another group. The list is intended as a guide to indicate the need for special precautions when managing these potentially incompatible waste materials or components. This list is not intended to be exhaustive. Operators must, as the regulations require, adequately analyze their wastes so they can avoid creating uncontrolled substances or reactions of the type listed below, whether listed below or not.

In the lists below, the mixing of a *Group A* material with a *Group B* material may have the potential consequences as noted.

Group 1-A	Group 1-B
Acetylene sludge Alkaline caustic liquids Alkaline cleaner Alkaline corrosive liquids Alkaline corrosive battery acid Caustic wastewater Lime sludge and other corrosive alkalies Lime wastewater Lime and water Spent caustic	Acid sludge Acid and water Battery acid Chemical cleaners Electrolyte, acid Etching acid liquid or solvent Pickling liquor and other corrosive acids Spent acid Spent mixed acid Spent sulfuric acid

Potential Consequences: heat generation; violent reaction.

Group 2-A	Group 2-B
Aluminum Beryllium Calcium Lithium Magnesium Potassium Sodium Zinc powder Other reactive metals and metal hydrides	Any waste in Group 1-A or 1-B

Potential Consequences: fire or explosion; generation of flammable hydrogen gas.

Table 3-5 (continued)

Group 3-A	Group 3-B
Alcohols Water	Any concentrated waste in Groups 1-A or 1-B Calcium Lithium Metal hydrides Potassium SO ₂ Cl ₂ , SOCl ₂ , PCl ₃ , CH ₃ SiCl ₃ Other water-reactive waste

Potential Consequences: fire; explosion; heat generation; generation of flammable or toxic gases.

Group 4-A	Group-4-b
Alcohols Aldehydes Halogenated hydrocarbons Nitrated hydrocarbons Unsaturated hydrocarbons Other reactive organic compounds and solvents	Concentrated Group 1-A or Group 1-B wastes Group 2-A wastes

Potential Consequences: fire; explosion; violent reaction.

Group 5-A	Group 5-B
Spent cyanide and sulfide solutions	Group 1-B wastes

Potential Consequences: generation of toxic hydrogen cyanide or hydrogen sulfide gas.

Table 3-5 (continued)

Group 6-A	Group 6-B
Chlorates Chlorine Chlorites Chromic acid Hypochlorites Nitrates Nitric acid, fuming Perchlorates Permanganates Peroxides Other strong oxidizers	Acetic acid and other organic acids Concentrated mineral acids Group 2-A wastes Group 4-A wastes Other flammable and combustible wastes

Potential Consequences: fire; explosion; violent reaction.

Section 4

**Natural & Cultural
Resources Management**

SECTION 4

NATURAL AND CULTURAL RESOURCES MANAGEMENT

A. Applicability of this Protocol

This protocol applies to any Air Force installation with improved, semi-improved and unimproved grounds. Plans and programs for protection and management of natural resources such as soil, water, plants, wildlife, and cultural resources, which include historic and prehistoric properties, are included in this protocol.

The regulatory requirements in this protocol are based on Department of Defense (DOD) regulations and Air Force regulations (AFRs) that apply at overseas installations. Good Management Practices (GMPs) are derived from DOD regulations and AFRs that are not mandatory overseas but are important to follow to preserve the health and safety of Air Force employees and protect the environment.

B. DOD Directives/Instructions

- *Overseas Environmental Baseline Guidance Document (OEBGD)*, October 1992, Chapter 12 contains criteria for required plans and programs needed for the protection and management of cultural resources. Chapter 13 addresses required plans and programs for the protection, establishment, and management of natural resources and endangered or threatened species.
- DOD Instruction 7310.5, *Accounting for Production and Sale of Forest Products*, 25 January 1988, provides policy on DOD Forestry accounting procedures.

C. U.S. Air Force Regulations

- AFR 126-1, *Conservation and Management of Natural Resources*, 21 October 1988, addresses the issues of managing and conserving soil, water, forest, fish, wildlife, and outdoor recreation resources on Air Force lands. Only Chapter Two of this document applies worldwide; otherwise, it serves as a guideline.

D. Responsibility for Compliance

- Base Civil Engineering (BCE) is responsible for funding, supervising, controlling, and managing installation natural resources and historic preservation programs.
- The Natural Resources Manager is responsible for preparing management plans, cooperative agreements, budgets, and the annual natural resources report. The

natural resources manager also implements and controls all activities that promote natural resources management. On installations without a full-time Natural Resources Manager, these duties would normally be assigned to the environmental coordinator or community planner.

- The Base Historic Preservation Officer is responsible for implementing the historic preservation program, and for locating, inventorying, and evaluating installation cultural resources. This is usually an additional duty assignment within BCE.

E. Key Compliance Definitions

These definitions were obtained from the directives/instructions and AFRs listed at the end of each definition. If there is no citation listed for the definition, it has been drawn from the U.S. Code of Federal Regulations (CFR).

- *Action* - all activities or programs of any kind authorized, funded, or carried out, in whole or in part, by DOD installations (OEBGD, Chapter 12 and 13, Definitions).
- *Adverse Effect* - changes that diminish the quality or significant value of archeological resources, natural resources, or cultural resources or properties. For biological resources, adverse effects include overall population fitness (OEBGD, Chapter 12 and 13, Definitions).
- *Archaeological Resource* - any material remains of prehistoric or historic human life or activities. Such resources include, but are not limited to: pottery, basketry, bottles, weapons, weapon projectiles, tools, structures or portions of structures, pit houses, rock paintings, rock carvings, intaglios, graves, human skeletal materials, or any portion of any of the foregoing items (OEBGD, Chapter 12, Definitions).
- *Building* - a structure created to shelter any form of human activity, such as a house, barn, church, hotel, or similar structure. Building may refer to a historically related complex such as a courthouse and jail or a house and barn.
- *Burial Site* - any natural or prepared physical location, whether originally below, on, or above the surface of the earth, into which, as a part of the death rite or ceremony of a culture, individual human remains are deposited.
- *Conservation* - wise management and use of natural resources to provide the best public benefits for present and future generations (OEBGD, Chapter 13, Definitions).

- *Critical Habitat* - specific areas within the geographic area, commonly occupied by a species, which contain features essential to the conservation of the species and which may require special management consideration or protection.
- *Cultural Mitigation* - specific steps designed to lessen the adverse effects of a DOD action on a cultural or archeological resource, including (OEBGD, Chapter 12, Definitions):
 1. limiting the magnitude of the action
 2. relocating the action in whole or in part
 3. repairing, rehabilitating, or restoring the affected property
 4. recovering and recording data from cultural properties that may be destroyed or substantially altered.
- *Cultural Property or Resources* - physical remains of any prehistoric or historic district, site, building, structure, or object significant in world, national, or local history, architecture, archeology, engineering, or culture. The term includes artifacts, records, and remains that are related to such a district, site, building, structure, or object (OEBGD, Chapter 12, Definitions).
- *Cultural Resources Program* - identification, evaluation, documentation, curation, acquisition, protection, rehabilitation, restoration, management, stabilization, maintenance, recording, and reconstruction of cultural resources and any combination of the foregoing (OEBGD, Chapter 12, Definitions).
- *Curatorial Service* - managing and preserving a collection according to professional museum and archival practices.
- *Destruction or Adverse Modification* - means a direct or indirect alteration that appreciably diminishes the value of critical habitat for both the survival and recovery of a listed species. Such alterations include, but are not limited to, alterations adversely modifying any of those physical or biological features that were the basis for determining the habitat to be critical.
- *Endangered Species* - any species of flora or fauna, listed in Appendix 4-1 or designated by the host nation, whose continued existence is, or is likely to be, threatened and is therefore subject to special protection from destruction or adverse modification of associated habitat (OEBGD, Chapter 13, Definitions).
- *Good Management Practice (GMP)* - practices that, although not mandated by law, are encouraged to promote safe operating procedures.

- ***Historic Preservation*** - identification, evaluation, documentation, curation, acquisition, protection, rehabilitation, restoration, management, stabilization, maintenance, recording, and reconstruction of cultural resources, and any combination of the foregoing.
- ***Historic Property or Resource*** - physical remains of any prehistoric or historic district, site, building, structure, or object included in or eligible for inclusion in the National Register. The term includes artifacts, records, and remains that are related to such a district, site, building, structure, or object.
- ***Inventory*** - to determine the location of cultural resources that may have world, national, or local significance (OEBGD, Chapter 12, Definitions).
- ***Management Plan*** - a document describing natural resources, and their quantities, conditions, and actions to ensure conservation and good stewardship (OEBGD, Chapter 13, Definitions).
- ***Material Remains*** - physical evidence of human habitation, occupation, use, or activity, including the site, loci, or context in which such evidence is situated. including:
 1. surface or subsurface structures
 2. surface or subsurface artifact concentrations or scatters
 3. whole or fragmentary tools, implements, containers, weapons, clothing, and ornaments
 4. by-products, waste products, or debris resulting from manufacture or use
 5. organic waste
 6. human remains
 7. rock carvings, rock paintings, and intaglios
 8. rock shelters and caves
 9. all portions of shipwrecks
 10. any portion or pieces of any of the foregoing (OEBGD, Chapter 12, Definitions).
- ***Natural Resource*** - all living and inanimate materials supplied by nature that are of aesthetic, ecological, educational, historical, recreational, scientific, or other value (OEBGD, Chapter 13, Definitions).
- ***Natural Resources Management*** - action taken to protect, manipulate, alter, or manage environmental, human, and biological resources in harmony with each other to meet present and future human needs (OEBGD, Chapter 13, Definitions).

- *Preservation* - the act or process of applying measures to sustain the existing form, integrity, and material of a building or structure and the existing form and vegetative cover of a site. It may include initial stabilization work where necessary, as well as ongoing maintenance of the historic building materials (OEBGD, Chapter 12, Definitions).
- *Property* - a site, building, object, structure, or collection of such items (OEBGD, Chapter 12, Definitions).
- *Protection* - the act or process of applying measures designed to affect the physical condition of a property by safeguarding it from deterioration, loss, attack, or alteration, or to cover or shield the property from danger or injury. In the case of buildings and structures, such treatment is generally temporary and anticipates future historic preservation treatment; in the case of archaeological sites, the protective measure may be temporary or permanent (OEBGD, Chapter 12, Definitions).
- *Restoration* - the act or process of accurately recovering the form and details of property and its setting, as it appeared at a particular period of time, by means of the removal of later work or by the replacement of missing earlier work.
- *Threatened Species* - any species which is likely to become an endangered species within the foreseeable future throughout all or a significant portion of its range.
- *Undertaking* - any project, activity, or program that can result in changes in the character or use of cultural resources if any such resources are located in the area of potential effects.

- (2) Historic Preservation Officer (or Environmental Coordinator)

NATURAL AND CULTURAL RESOURCES MANAGEMENT

Records to Review

- For construction activities: documentation of finding of no adverse effect
- Environmental Impact Statement
- Installation Master Plan
- Land Use Plan
- Historic Preservation Plan
- Fish and Wildlife Plan
- Outdoor Recreation Plan
- Cropland and Grazing Plan
- Forest Management Plan

Physical Features to Inspect

- Construction sites
- Site or landmark of historic or archaeological interest
- Facilities constructed in the past 2 yr
- Wildlife containment areas
- Wildlife habitat, and land and water resources
- Equipment that could damage wildlife, its habitat, or land and water resources

Sources to Interview

- Natural Resources Manager (or Environmental Coordinator)
- Historic Preservation Officer (or Environmental Coordinator)

REGULATORY REQUIREMENTS:	REVIEWER CHECKS:
ALL INSTALLATIONS 4-1. Determine actions or changes since previous review (GMP). ... 4-2. Copies of all relevant DOD directives/instructions, USAF directives, and guidance documents are required to be maintained at the installation (AFR 19-1, para 11f). ... 4-3. Installations are required to comply with the substantive environmental pollution standards, of general applicability, in the host country and with the Major Command (MAJCOM) regulations (AFR 19-1, para 2(a)(5)). ... 4-4. The Installation Natural Resource Manager/ Historic Preservation Officer should be included in the coordination process for all actions that may impact the installation's natural or cultural resources (GMP).	Determine, by reviewing a copy of the previous review report, if non-compliance issues have been resolved. (1)(2) ... Verify that copies of the following regulations are maintained and kept current at the installation: (1)(2) - Overseas Environmental Baseline Guidance Document (OEBGD), October 1992. - AFR 19-1, <i>Pollution Abatement and Environmental Quality</i>, 9 January 1978. - AFR 127-15, <i>The Bird Strike Reduction Program</i>, 5 April 1991. - AFR 215-20, <i>Air Force Outdoor Recreation Programs</i>, 12 May 1981. - AFR 900-4, <i>The Air Force Suggestion Program</i>, 23 July 1987. - AFM 126-2, <i>Natural Resources Land Management</i>, July 1982. Verify that the Base Staff Judge Advocate reviews the documents annually for currency and completeness and submits the findings of the review to the Base Environmental Protection Committee. ... Verify that the installation is complying with MAJCOM and host nation requirements. (1)(2) (NOTE: Issues typically regulated include: - designation of historic sites - protection of historic sites - endangered and threatened species - hunting and trapping restrictions - erosion control requirements - wetlands management - floodplains designation and management - coastal zones management.) ... Determine if the Natural Resources Manager/Historic Preservation Officer is included in the coordination process for all actions that may affect the installation's natural or cultural resources. (1)(2)

REGULATORY REQUIREMENTS:	REVIEWER CHECKS:
4-9. When there is a new discovery of a cultural property or resource or archeological resource not previously inventoried, the newly-discovered item must be preserved and protected pending a decision on final disposition by the installation commander (OEBGD, Chapter 12, Criteria 9). ...	Determine if there have been any newly discovered cultural properties or resources or archaeological resources. (2) Verify that the resource is being protected and preserved. ...
4-10. Installations must develop a plan for the protection and preservation of cultural resources (OEBGD, Chapter 12, Criteria 3). ...	Verify that installations with cultural resources have a plan for the protection and preservation of cultural resources and mitigation of any adverse effects. (2) ...
4-11. Personnel performing cultural or archaeological resource functions are required to have the required expertise in world, national, and local history and culture (OEBGD, Chapter 12, Criteria 1). ...	Verify that staffing optimizes professionally trained personnel for technical guidance. Examples include: (2) - archaeologist - historical architect - architectural historian - historian - preservation expert. ...
4-12. Installations are required to establish measures sufficient to protect known cultural property or archaeological resources until appropriate mitigation or preservation can be completed (OEBGD, Chapter 12, Criteria 4, 6, and 7). ...	Verify that cultural and archaeological resources are protected at the installation. (2) Verify that the installation has established measures to prevent installation personnel from disturbing or removing archaeological resources without permission from the host nation. ...

Section 5

Environmental Noise Management

SECTION 5

ENVIRONMENTAL NOISE MANAGEMENT

A. Applicability of this Protocol

This protocol applies to all Air Force installations that have aircraft operations, including airfields, ranges, military operating areas (MOAs), military training routes (MTRs), and small-arms training, or other aircraft-noise-generating activities that could impact the environment. This protocol presents review action items that respond to mechanisms for planning operations with consideration for noise. Noise effects are addressed by Base Comprehensive Planning (BCP), Air Force Regulation (AFR) 55-34, the Environmental Impact Analysis Process (EIAP), Air Force Manual 19-10, and Host Country regulations.

B. DOD Directives/Instructions

- *Overseas Environmental Baseline Guidance Document (OEBGD)*, October 1992, Chapter 10, contains criteria to control environmental noise within installations.

C. U.S. Air Force Regulations

- Air Force Regulation (AFR) 50-46, *Weapons Ranges*, 8 June 1987, provides instructions for the planning, acquisition, construction, operation, and maintenance of training ranges.
- AFR 55-34, *Reducing Flight Disturbances*, 27 February 1984, establishes practices to decrease disturbances from flight operations. It provides guidelines for planning operations with consideration for noise.

D. Responsibility for Compliance

- The Airspace Manager, under the Deputy Commander for Operations, is responsible for managing special use airspace and MTRs.
- The Public Affairs Office (PAO) is responsible for making all public releases of information about Air Force activities.
- The Range Management Agency is responsible for activities at an air-to-ground range, including planning for the range.

E. Key Compliance Responsibilities

- *Airspace Management* - AFR 55-34 requires planning of flight operations to minimize adverse public relations. Air Force operations must be planned to avoid noise-sensitive areas.
- *Range Planning* - AFR 50-46 requires planning for air operations and land use on air-to-ground test and training ranges for safety, prevention of encroachment, optimal use, and avoidance of conflicts. Each plan must include all reasonable, economical, and practical measures to control aircraft noise. Plans must be updated at least every 2 years (yr), or sooner if required.

F. Key Compliance Definitions

These definitions were obtained from the directives/instructions and AFRs listed at the end of each definition. If there is no citation listed for the definition, it has been drawn from the U.S. Code of Federal Regulations (CFR).

- *A-Weighted Day-Night Sound Level (ADNL)* - closely resembles the frequency response of human hearing, and, therefore, provides an indication of the impact of noise produced by transportation activities (OEBGD, Chapter 10, Definitions).
- *C-Weighted Day-Night Average Sound Level (CDNL)* - measures more of the low frequency components of a noise than does A-weighting. These low frequency components can cause buildings and windows to rattle and shake. The C-weighting is based on the findings of the National Academy of Sciences Committee on Hearing, Bioacoustics, and Biomechanics and the American National Standards Institute (OEBGD, Chapter 10, Definitions).
- *Day-Night Average Sound Level (Ldn)* - the sound exposure for a 24-hour (h) calendar day calculated by adding sound exposure obtained during daytime (0700-2200 hours) to 10 times the sound exposure obtained during nighttime (0000-0700 and 2200-2400 hours). The frequency weighting should be stated; otherwise, the A-weighting is assumed (OEBGD, Chapter 10, Definitions).
- *Decibel (dB)* - the unit of sound pressure is the decibel and is symbolically represented as dB. Sound pressure is the amplitude or measure of the difference between atmospheric pressure (with no sound present) and total pressure (with sound present). The decibel is a logarithmic scale (OEBGD, Chapter 10, Definitions).
- *Equivalent Level (LEQ)* - is the equivalent steady-state sound which, in a stated period of time, would contain the same acoustic energy as the time-varying sound during the same period (OEBGD, Chapter 10, Definitions).

- *Good Management Practice (GMP)* practices that, although not mandated by law, are encouraged to promote safe operating procedures.
- *Sound Exposure Level (SEL)* - a measure of single noise events, such as ground runup. It is the level, in decibels, of the time integral of squared A-weighted sound pressure over a given time period or event, with reference to the square of the standard reference sound pressure of 20 micropascals (μPa) and a reference duration of 1 second (s) (OEBGD, Chapter 10, Definitions).

**COMPLIANCE CATEGORY:
ENVIRONMENTAL NOISE MANAGEMENT
Worldwide ECAMP**

REGULATORY REQUIREMENTS:	REVIEWER CHECKS:
ALL INSTALLATIONS 5-1. Determine actions or changes since previous review (GMP). ... 5-2. Copies of all relevant DOD directives/instructions, USAF directives, and guidance documents are required to be maintained at the installation (AFR 19-1, para 11f). ... 5-3. Installations are required to comply with the substantive environmental pollution standards of general applicability in the host country and with the Major Command (MAJCOM) regulations (AFR 19-1, para 2(a)(5)). ...	Determine, by reviewing a copy of the previous review report, if non-compliance issues have been resolved. (1)(2) ... Verify that copies of the following regulations are maintained and kept current at the installation: (1) - Overseas Environmental Baseline Guidance Document (OEBGD), October 1992. - AFR 19-1, <i>Pollution Abatement and Environmental Quality</i>, 9 January 1978. - AFR 55-34, <i>Reducing Flight Disturbances</i>, 27 February 1984. - Air Force Manual (AFM) 19-10, <i>Planning in the Noise Environment</i>, 15 June 1978. Verify that the Base Staff Judge Advocate reviews the documents annually for currency and completeness and submits the findings of the review to the Base Environmental Protection Committee. ... Verify that the installation is complying with MAJCOM and host nation requirements. (1)(2) (NOTE: Issues typically regulated include: - vehicle noise - noise from installation facilities that goes across the property line.) ...

(1) BCE (Base Civil Engineering (Environmental/Community Planning)) (2) Deputy for Operations (Airspace Manager) (3) Public Affairs Officer (4) Range Operating Agency

**COMPLIANCE CATEGORY:
ENVIRONMENTAL NOISE MANAGEMENT
Worldwide ECAMP**

REGULATORY REQUIREMENTS:	REVIEWER CHECKS:
5-4. Installations are required to conduct an Installation Compatible Use Zone Program (ICUZ) study to identify and control noise (OEBGD, Chapter 10, Criteria 1 through 5, 7, and AFR 55-34, para 3f). ...	Verify that an initial ICUZ program study was completed. (1)(2) Verify that the installation used a computerized program for developing operational data using the A-weighted Day-Night Average Sound Level noise descriptor system. Verify that the ICUZ study includes the following minimum components: - noise contour maps (up-to-date) of the installation's existing and future noise environment - ADNLs for airfield related noise - analysis of land/building use compatibility problems (see Table 5-1) - ICUZ public involvement plan - review of installation master plans to ensure that existing and future facility siting is consistent with the noise environment - identification of noise sources that create impact, investigation of possible mitigations, and programming of resources to reduce noise impacts. Verify that the ICUZ study is being updated whenever significant noise producing operations change. ...
5-5. The siting and conduct of ground run-up must be evaluated for low frequency vibration as well as general audible noise (OEBGD, Chapter 10, Criteria 6). ...	Verify that the conduct of ground run-up is evaluated for both low frequency vibration and general audible noise. (2) ...
5-6. Installations are required to maintain operational data on noise producing activities (OEBGD, Chapter 10, Criteria 8). ...	Verify that noise operational data required to develop noise contour maps are being maintained. (1)(2) ...
5-7. Installations must institute a noise complaint procedure (OEBGD, Chapter 10, Criteria 7 and AFR 55-34, para 3g(6)).	Verify that a noise complaint procedure has been instituted that ensures the following: (1)(2)(3)(4) - a log is maintained of all noise complaints - complaints are investigated without delay - copies of complaints are routed to the office responsible for the type of activity that resulted in the noise complaint - PAO responds to the complainant. Verify that the ICUZ committee is provided with a copy of the complaint and followup.

(1) BCE (Base Civil Engineering (Environmental/Community Planning)) (2) Deputy for Operations (Airspace Manager) (3) Public Affairs Officer (4) Range Operating Agency

**COMPLIANCE CATEGORY:
ENVIRONMENTAL NOISE MANAGEMENT
Worldwide ECAMP**

REGULATORY REQUIREMENTS:	REVIEWER CHECKS:
AIRCRAFT NOISE 5-8. Aircraft noise disturbances are required to be minimized through the application of the planning checklist in AFR 55-34 Attachment I (AFR 55-34, para 3h). ... 5-9. A program is required at each applicable base to distribute information on military training routes, special use airspace, and supersonic areas or routes (AFR 55-45, para 3g). ... 5-10. Pilots are required to be kept informed of measures to reduce noise disturbance (AFR 55-34, para 7). ... AIR-TO-GROUND RANGES 5-11. A comprehensive range plan is required to be developed and updated a minimum of every 2 years (yr) (AFR 50-46, para 2-17).	Determine how the installation addresses the following issues to minimize noise disturbances: (2) - traffic patterns - take-off techniques - landing techniques - run-up pads - engine test stands - base quiet hours - CHAFF dispensing - route or operations development. ... Verify that a explanatory letter has been developed, outlining the purpose, routes, areas, altitudes, intensity, day and time of use of the areas or routes, and locations of existing operating areas or routes in the vicinity. (2) Verify that the PAO distributes the information in an explanatory letter to community news media and local officials. Verify that copies of the explanatory letter have been sent to airport managers at airports within 33 kilometers (km) of military training routes, military operating areas, and restricted areas and within 65 km of supersonic operations. ... Obtain a copy of the pilot information file. (2) Review local noise abatement instructions for pilots regarding approaches and departures. ... Verify that the range plan includes information about noise related issues. (4)

Livestock Farming, Animal Breeding	No	No	No	Yes	Yes
*Agricultural (except livestock)	Yes(3)	Yes(3)	Yes	Yes	Yes

*For detailed design, the Leq for the appropriate period of usage is the preferred measure of the noise environment.

Table 5 - 1 (continued)

Yes - Land use compatible with noise environment. No special noise control restriction. Normal construction appropriate.

NLR - Appropriate noise level reduction where indoor activities predominate.

No - Land use not compatible with noise environment, even if special building noise insulation provided.

KEY:

- (1) Land use is acceptable, provided special sound reinforcement systems are installed.
- (2) Land use may be acceptable, provided special speech communication systems are used.
- (3) Land use may be acceptable provided hearing protection devices are worn by personnel. Check applicable hearing damage regulations.
- (4) Although it is recognized that local conditions may require residential uses in these areas, this use is strongly discouraged in Ldn 70-74 and Ldn 75-79 and discouraged in Ldn 65-69. The absence of viable development options should be determined. NLR criteria will not eliminate outdoor environment noise problems, and, as a result, site planning and design should include measures to minimize this impact, particularly where the noise is from ground level sources.
- (5) The LDR must only be incorporated into the design and construction of portions of these buildings where the public is received, where office areas and noise sensitive work areas exist, or where the normal noise level is low.

Section 6

Pesticide Management

SECTION 6

PESTICIDE MANAGEMENT

A. Applicability of this Protocol

This protocol applies to any U.S. Air Force (USAF) installation that uses, stores, or handles pesticides. This protocol integrates the requirements of Department of Defense (DOD) regulations and Air Force regulations (AFRs) into a single document that normally will apply to any installation that handles pesticides.

Much of the guidance for pest management involves operations and maintenance (O&M) procedures. This protocol combines O&M guidance and compliance matters. It is used to determine the compliance status of operations, facilities and equipment used to store and apply pest-control chemicals. The protocol addresses the adequacy of facilities, operating procedures, and personnel qualifications.

The regulatory requirements in this protocol are based on DOD regulations and AFRs that apply at overseas installations. Good management practices (GMPs) are derived from U.S. Environmental Protection Agency (USEPA) regulations that are not mandatory overseas but are important to follow to preserve the health and safety of Air Force employees and protect the environment.

B. DOD Directives/Instructions

- *Overseas Environmental Baseline Guidance Document (OEBGD)*, October 1992, Chapter 11, contains criteria regulating the use, storage, and handling of pesticides, herbicides, and defoliants at DOD installations but does not address the use of these items by individuals acting in an unofficial capacity in a residence or garden.
- DOD Directive 4150.7, *Department of Defense Pest Management Program*, 24 October 1983, sets forth the policy, responsibilities, and procedures for pest management programs. This directive establishes the DOD policy of maintaining safe, efficient, and environmentally sound integrated pest management programs to prevent or control pests that may adversely affect health or damage structures, material, or property. The DOD Plan for the Certification of Pesticide Applicators stipulates the certification of USAF military and civilian pest managers.
- DOD Directive 4150.7 is supplemented by Technical Information Memoranda (TIMs) that provide specific criteria and procedures for the operation of pesticide spill prevention and management, which addresses cleanup procedures for pesticide spills. The TIMs are guidance only and nonregulatory. The following are appropriate to have on hand: TIM 14 *Protective Equipment for Pest Control Personnel*; TIM 15 *Pesticide Spill Prevention and Management*; TIM 16 *Pesticide*

Fires: Prevention, Control, and Cleanup; TIM 17 Pest Control Facilities; TIM 18 Installation Pest Management Program Guide; TIM 21 Pesticide Disposal Guide for Pest Control Shops.

C. U.S. Air Force Regulations

- Air Force Regulation (AFR) 91-21, *Pest Management Programs*, 6 March 1981, provides the functional requisites for the operation of pest management programs at Air Force installations. The standards, procedures, and requirements identified in this regulation provide a large portion of the criteria for the assessment of compliance. AFR 91-21 and DOD 4150.7 require a Major Command (MAJCOM) professional pest management person (PPMP) to do an on-site consultant review of each installation annually or biannually. The ECAMP assessment does not preclude this PPMP consultant visit.
- AFR 91-22, *Aerial Dispersal of Pesticides*, 26 April 1976, details the policies and responsibilities for aerial spray of pesticides.

D. Responsibility For Compliance

- Base Civil Engineering (BCE): assures that pest management facilities comply with all applicable USAF, DOD, and host nation regulations and standards; submits annual reports; and assumes responsibility for the completion of daily records, inspections, requests for additional support, biennial physical examinations, notifications to the Director of Base Medical Services (DBMS), protection of the health and safety of pest management personnel, and required training and certification/recertification of pesticide applicators. The pest management shop within BCE is the principal department charged with proper pesticide management at Air Force installations.
- The DBMS: identifies and characterizes pests; recommends measures for personal protection and pest control; monitors pests of medical importance; provides industrial hygiene and environmental sanitation assistance; and assures that pest management personnel are physically qualified to work with pesticides.

E. Key Compliance Definitions

These definitions were obtained from the directives/instructions and AFRs listed at the end of each definition. If there is no citation listed for the definition, it has been drawn from the U.S. Code of Federal Regulations (CFR).

- *Acute LD₅₀* - a statistically derived estimate of the concentration of a substance that would cause 50 percent mortality to the test population under specified conditions.
- *Caution* - the human hazard signal word required on the front panel of a pesticide container determined by the toxicity category of the pesticide. All pesticide products meeting the criteria of Toxicity Category III or IV must bear on the front panel the signal word "Caution" (see definition of toxicity category).
- *Certified Pesticide Applicators* - personnel who apply pesticides or supervise the use of pesticides and who have been authorized to do so by successfully completing a training program approved by the USEPA, followed by formal certification (OEBGD, Chapter 11, Definitions).
- *Danger* - the human hazard signal word required on the front panel of a pesticide container determined by the toxicity category of the pesticide. All pesticide products meeting the criteria of toxicity category I must bear on the front panel the signal word "Danger" (see definition of toxicity category).
- *Good Management Practice (GMP)* - practices that, although not mandated by law, are encouraged to promote safe operating procedures.
- *Pesticide* - any substance or mixture of substances used to destroy pests, control their activity, or prevent them from causing damage (OEBGD, Chapter 11, Definitions).
- *Pesticide Product* - a pesticide in the particular form (including composition, packaging, and labeling) in which the pesticide is, or is intended to be, distributed or sold. This includes any physical apparatus used to deliver or apply the pesticide if distributed or sold with the pesticide.
- *Pesticide Waste* - materials that are subject to pesticide disposal restrictions and should be treated as excess pesticides for purposes of disposal:
 1. any pesticide that has been suspended, contaminated, improperly mixed, or is off specification or otherwise unusable, whether concentrated or diluted
 2. used spill cleanup material

3. any container, equipment, or material that is contaminated with pesticides; empty pesticide containers that have been triple rinsed are not considered hazardous waste but are normal solid waste (OEBGD, Chapter 11, Definitions).
- *Professional Pest Management Personnel* - military commissioned officers and equivalent civilian employees of the DOD or its components (a) with college degrees in an applied biological or agricultural science, such as agronomy, entomology, forestry, or wildlife biology, and (b) in a current assignment that includes pest management responsibilities exercised regularly. Civilian personnel shall also meet the minimum requirements governing Civil Service Commission Qualifications Standards (AFR 91-21, Attachment 1).
 - *Restricted Use Pesticides* - (also restricted pesticide) a pesticide that has been determined to merit additional restrictions by either the United States or the host nation because it would cause unreasonable adverse effects on health or the environment (OEBGD, Chapter 11, Definitions).
 - *Specially Designated Landfill* - a landfill where complete long-term protection is provided for the quality of surface and subsurface waters from pesticides, pesticide containers, and pesticide-related wastes, and against hazards to public health and the environment, including a chemical waste landfill (OEBGD, Chapter 11, Definitions).
 - *Toxicity Category* - required warnings and precautionary statements are based on the toxicity category of the pesticide. The category is assigned on the basis of the highest hazard shown in the table listed in 40 CFR 156.10.
 - *Warning* - the human hazard signal word required on the front panel of a pesticide container determined by the toxicity category of the pesticide. All pesticide products meeting the criteria of Toxicity Category II shall bear on the front panel the signal word "Warning."

REGULATORY REQUIREMENTS:	REVIEWER CHECKS:
6-9. Personal protective equipment and clothing must be provided at employer (Air Force or contractor) expense (OEBGD, Chapter 11, Criteria 7; DOD Directive 4165.19-R-1, para 3-415a; AFR 91-21, para 5f). ... 6-10. Copies of material safety data sheets (MSDSs) for all pesticides must be available at the storage and holding facility (OEBGD, Chapter 11, Criteria 15). ... 6-11. Records must be maintained and summary reports written for pest management activities (DOD 4150.7, para G; AFR 91-21, para 2d(1)(e), para 2d(1)(h) through para 2d(1)(j), and para 9). ...	Determine if personal protective clothing and equipment is provided and used by pest management personnel. The following equipment depends upon magnitude and type of operations: (4)(5) - respirators - masks - gloves - safety shoes - coveralls - specialized personal protective equipment for fumigation. Verify that health and safety procedures emphasizing good work habits, reduction or elimination of hazards, and use of personal protective equipment are followed. Verify that protective clothing and equipment are stored separately from chemical areas. Verify that appropriate/approved respirators are used when handling and applying pesticides. Verify that respirator cartridges/canisters are changed at appropriate intervals. Verify that periodic fit testing of respirators is conducted. ... Determine if MSDSs are available at the storage and holding facility for the pesticides used at the installation. (4)(5) ... Verify that daily pesticide application records are maintained by use of DD Form 1532 (or WIMS equivalent). (4)(5) Determine that the Pest Control Summary Report (RCS: DD-M (A&AR or DOD Form 1532 or WIMS equivalent) 1080) is prepared quarterly. Verify that the Pest Management Plan (RCS: HAF-LEE (A) 8303 which utilizes AF Form 646 or WIMS equivalent) is complete and current. Additions and deletions for the annual program are to be forwarded to MAJCOM by 1 December of each year. The shop should have verification of MAJCOM approval for the current year program. Verify that the Pest Management Maintenance Record (DD Form 1532-1) is filled out for all facilities and areas treated to control pests. ...

REGULATORY REQUIREMENTS:	REVIEWER CHECKS:
6-12. Notification must be made and/or approval received for certain application activities (AFR 91-21, para 2d(1) and para 5d). ...	Review procedures to ascertain if BMS is notified prior to any pesticide applications in food preparation, consumption, or storage areas and in areas where a high risk exists for human contact with applied pesticides. (3)(4) Verify that BMS is notified of all pesticides procured for pest management use. (NOTE: BMS does not approve or direct what pesticides are procured and used. MAJCOM PPMP is responsible.) Check that BMS and the fire department are notified prior to the performance of any fumigation activities or operation of internal combustion engines used for aerosol or spray mists inside buildings. ...
6-13. Equipment used for pesticide applications must be dedicated to the pest management operation and equipped with specific safety measures (DOD Directive 4145.19-R-1, para 3-413d and AFR 91-21 para 5c). ...	Verify that vehicles and dispersal equipment are used solely in support of pest management activities. (4)(5) Verify that vehicles (prime movers) used for fogging, misting, dusting, or ultra low volume (ULV) application are equipped with air conditioning. Verify that vehicles are equipped with locking compartments for storage of pesticides. ...
6-14. Insecticides and termiticides must not be injected into the soil to control subterranean termites in any military buildings with subslab or in-slab heating ducts or air conditioning unless such systems are made inoperable and unless duct registers are blocked to prevent air flow (AFR 91-21, para 2d(1)(o)). ...	Determine if pesticide applications are undertaken to control subterranean termites. (1)(4) Determine if any structures on base have in-slab or subslab heating or air conditioning systems. Determine if subterranean termite control is undertaken at any building with slab or subslab heating systems. ...
6-15. Installations are required to ensure the prevention of damage to wildlife from pesticide applications (DOD 4145.19-R-1, para 3-417). ...	Determine if personnel are aware of any endangered or threatened species at the installation and the impact of pesticides on these and other wildlife. (1)(2)(4)(5) Verify that runoff or washoff by rain from treated areas to fish-bearing waters is guarded against. ...

REGULATORY REQUIREMENTS:	REVIEWER CHECKS:
6-20. Facilities that are used for storing, mixing, and preparing pesticides must be constructed in a manner that promotes cleanliness, safety, and environmental protection (AFR 91-21, para 2d(1)(a)(1) through 2d(1)(a)(3), para 2d(1)(a)(5), and para 2d(1)(a)(7)). ...	Verify that the pesticide storage facility is not co-used with other non-related functions. (4)(5) Verify that separate rooms are provided for pesticide storage, pesticide mixing, and laundry facilities. (NOTE: Laundry facilities may be in office, shower, or locker area.) Determine if offices, lockers, changing rooms, laundry facilities, and toilet facilities are adequately sealed or separated from pesticide storage, mixing and preparation areas so that pesticide vapors and dusts are excluded. Determine if pesticide application and support equipment is stored as follows: - small equipment is stored in an enclosed indoor area - large equipment is stored in a covered or enclosed area located adjacent to the pesticide mixing and storage building. ...
6-21. Security measures must be provided to assure that only authorized people can access pesticide storage, mixing, and preparation areas (AFR 91-21, para 2d(1)(a)(9)). ...	Verify that a climb-resistant fence completely encloses the facility. (4)(5) ...
6-22. A spill containment system, constructed of impervious materials, shall exist adjacent to the pesticide management facility to effectively provide containment for the pesticide storage, mixing, preparation, and management areas (AFR 91-21, para 2d(1)(a)(4)). ...	Verify that barriers around the required areas will adequately contain drainage. (4)(5) Determine if there are drains and cracks in the floors. Determine, through interviews, if spill response procedures are understood by the staff. ...

Table 6-1

Requirements for Installation Pest Management Program			
Pest Control Recognized Requirements Work-Hours*	Minimum No. of Certified Full-time Pesticide Applicators Required	Installation Pest Management Plan	On-Site Program Review
Less than 0.25	None unless restricted use pesticides are used or unusually sensitive environmental conditions exist, including endangered species	Individual plan not required; included in supporting installation plan	Requirements established by MACOM Pest Management Consultant (PMC)
0.25 to 0.49	One	Same as above	Same as above
0.50 to 1.49	One	Individual pest management plans required	Annual or biennial
1.50 to 3.99	Two	Same as above	Same as above
4.00 or More	50 percent of the pest management workforce	Same as above	Same as above

* Multiply the total productive work-years required for the pest management program by a factor of 1.19 to determine the recognized requirement. This factor includes essential time allowance for annual and sick leave, on-the-job training, formal training, mandatory attendance at lectures on safety, security, and fire prevention, and required medical examination.

Table 6-2

Restricted Use Pesticides

The following uses of pesticide products containing the active ingredients specified below have been classified for restricted use and are limited to use by or under the direct supervision of a certified applicator.

Active Ingredient	Formulation	Use Pattern	Classification¹	Criteria Influencing Restriction
Acrolein	As sole active ingredient. No mixtures registered.	All uses.	Restricted	Inhalation hazard to humans. Residue effects on avian species and aquatic organisms.
Acrylonitrile	In combination with carbon tetrachloride. No registrations as the sole active ingredient.	*do	do	Other hazards-accident history of acrylonitrile and carbon tetrachloride products.
Aldicarb	As sole active ingredient. No mixtures registered.	Ornamental uses (indoor and outdoor). Agricultural crop uses.	do Under further evaluation.	Other hazards-accident history.
Allyl alcohol	All formulations.	All uses.	Restricted	Acute dermal toxicity.
Aluminum phosphide	As sole active ingredient. No mixtures registered.	do	do	Inhalation hazard to humans.
Azinphos methyl	All liquids with a concentration greater than 13.5 pct.	do	do	do

*do means same as above.

Table 6-2 (continued)

Active Ingredient	Formulation	Use Pattern	Classification ¹	Criteria Influencing Restriction
	All other formulations.	do	Under further evaluation.	
Calcium cyanide	As sole active ingredient. No mixture registered.	do	Restricted	do
Carbofuran	All concrete suspensions and wettable powders 40% and greater.	do	do	Acute inhalation toxicity.
	All granular formulations.	Rice	Under evaluation.	
	All granular and fertilizer formulations.	All uses except rice.	do	
Chlorfenvinphos	All concentrate solutions or emulsifiable concentrates 21% and greater.	All uses (domestic and non-domestic).	Restricted	Acute dermal toxicity.
Chloropicrin	All formulations greater than 2%.	All uses	Restricted	Acute inhalation toxicity
	All formulations.	Rodent control	Restricted	Hazard to non-target organisms.
	All formulations 2% and less.	Outdoor uses (other than rodent control).	Unclassified	
Clonitralid	All wettable powders 70% and greater.	All uses	do	Acute inhalation toxicity.
	All granulars and wettable powders.	Molluscide uses.	do	Effects on aquatic organisms.
	Pressurized sprays 0.55% and less.	Hospital antiseptics.	Unclassified	

*do means same as above.

Table 6-2 (continued)

Active Ingredient	Formulation	Use Pattern	Classification ¹	Criteria Influencing Restriction
Cycloheximide	All formulations greater than 4%.	All uses.	Restricted	Acute dermal toxicity.
	All formulations 0.027% to 4%	All uses.	Under evaluation.	
	All formulations 0.027% and less.	Domestic uses.	Unclassified	
Demeton	1 pct fertilizer formulation, 1,985 pct granular.	All uses, including domestic uses.	Restricted	Domestic uses: Acute oral toxicity Acute dermal toxicity. Nondomestic outdoor uses. Residue effects on avian and mammalian species.
	All granular formulations, emulsifiable concentrates and concentrated solutions.	All uses.	do	Acute dermal toxicity. Residue effects on mammalian and avian species.
Dicrotophos	All liquid formulations 8% and greater.	All uses.	Restricted	Acute dermal toxicity; residue effects on avian species (except for tree injections).
Dioxathion	All concentrate solutions or emulsifiable concentrates ² greater than 30%.	All uses	Restricted	Acute dermal toxicity.
	Concentrate solutions or emulsifiable concentrates ² 30% and less and wettable powders 25% and less.	Livestock and agricultural uses (nondomestic uses only).	Unclassified	
	All solutions ² 3% and greater	Domestic	Restricted	

Table 6-2 (continued)

Active Ingredient	Formulation	Use Pattern	Classification ¹	Criteria Influencing Restriction
Dioxathion (Continued)	2.5% solutions ² with toxaphene and malathion.	All uses.	Under evaluation.	
Disulfoton	All emulsifiable concentrates 65% and greater, all emulsifiable concentrates and concentrate solutions 21% and greater with fensulfothion 43% and greater, all emulsifiable concentrates 32% and greater in combination with 32% fensulfothion and greater.	do	Restricted	do Acute inhalation toxicity.
	Non-aqueous solution 95% and greater.	Commercial seed treatment.	Restricted	Acute dermal toxicity.
	Granular formulations 10% and greater.	Indoor uses (greenhouse).	do	Acute inhalation toxicity.
Endrin	All emulsions, dusts, wettable powders, pastes, and granular formulations 2 pct and above.	All uses.	Restricted.	Acute dermal toxicity. Hazard to nontarget organisms.
	All concentrations less than 2 pct.	do	do	Hazard to non-target organisms.

*do means same as above.

Table 6-2 (continued)

Active Ingredient	Formulation	Use Pattern	Classification ¹	Criteria Influencing Restriction
EPN	All liquid and dry formulations greater than 4%.	All uses.	Restricted	Acute dermal toxicity; acute inhalation toxicity; residue effects on avian species.
		Aquatic uses.	Restricted	Effects on aquatic organisms.
Ethoprop	Emulsifiable concentrates 40% and greater.	do	do	Acute dermal toxicity.
	All granular and fertilizer formulations.	do	Under evaluation.	
Ethyl parathion	All granular and dust formulations greater than 2 pct, fertilizer formulations, wettable powders, emulsifiable concentrates, concentrated suspensions, concentrated solutions.	do	Restricted	Inhalation hazard to humans. Acute dermal toxicity. Residue effects on mammalian, aquatic, avian species.
	Smoke fumigants.	do	do	Inhalation hazard to humans.
	Dust and granular formulations 2 pct and below.	do	do	Other hazards-accident history.
Fenamiphos	Emulsifiable concentrates 35% and greater.	do	do	Acute dermal toxicity.

*do means same as above.

Table 6-2 (continued)

Active Ingredient	Formulation	Use Pattern	Classification ¹	Criteria Influencing Restriction
Fensulfothion	Concentrate solutions 63% and greater, all emulsifiable concentrates and concentrate solutions 43% and greater with disulfoton 21% and greater, all emulsifiable concentrates 32% and greater in combination with disulfoton 32% and greater.	do	Restricted	do Acute inhalation toxicity.
	Granular formulations 10% and greater.	Indoor uses (greenhouse).	do	do
Fluoroacetamide/1081	As sole active ingredient in baits. No mixtures registered.	All uses.	Restricted	Acute oral toxicity.
Fonofos	Emulsifiable concentrates 44% and greater.	All uses.	do	Acute dermal toxicity.
	Emulsifiable concentrates 12.6% and less with pebulate 50.3% and less.	Tobacco	Unclassified	

*do means same as above.

Table 6-2 (continued)

Active Ingredient	Formulation	Use Pattern	Classification ¹	Criteria Influencing Restriction
Hydrocyanic acid	As sole active ingredient. No mixtures registered.	do	do	Inhalation hazard to humans.
Methamidophos	Liquid formulations 40% and greater.	All uses	Restricted	Acute dermal toxicity; residue effects on avian species.
	Dust formulations 2.5% and greater.	All uses	Restricted	Residue effects on avian species.
Methidathion	All formulations.	All uses except stock, safflower, and sunflower.	Restricted	Residue effects on avian species.
	All formulations.	Nursery stock, safflower, and sunflower	Unclassified	
Methomyl	As sole active ingredient in 1 pct to 2.5 baits (except 1 pct fly bait).	Nondomestic outdoor agricultural crops, ornamental and turf. All other registered uses.	Restricted.	Residue effects on mammalian species.
	All concentrated solution formulations.	do	do	Other hazards-accident history.
	90 pct wettable powder formulations (not in water soluble bags).	do	do	do
	90 pct wettable powder formulation in water soluble bags.	do	Unclassified	

Table 6-2 (continued)

Active Ingredient	Formulation	Use Pattern	Classification ¹	Criteria Influencing Restriction
Methomyl (continued)	All granular formulations.	do	do	
	25 pct wettable powder formulations.	do	do	
	In 1.24 pct to 2.5 pct dusts as sole active ingredient and in mixtures with fungicides and chlorinated hydrocarbon, inorganic phosphate and biological insecticides.	do	do	
Methyl bromide	All formulations in containers greater than 1.5 lb	All uses.	Restricted	Other hazards-accident history.
	Containers with not more than 1.5 lb of methyl bromide with 0.25 pct to chloropicrin as an indicator.	Single applications (nondomestic use) for soil treatment in closed systems.	Unclassified	
	Containers with not more than 1.5 lb having no indicator.	All uses.	Restricted	do
Methyl parathion	All dust and granular formulations less than 5 pct.	do	do	Other hazards-accident history. All foliar applications restricted based on residue

Table 6-2 (continued)

Active Ingredient	Formulation	Use Pattern	Classification ¹	Criteria Influencing Restriction
Methyl parathion (continued)				effects on mammalian and avian species.
	Microencapsulated. All dust and granular formulations 5 pct and greater and all wettable powders and liquids.	do	do	Residue effects on avian species. Hazard to bees. Acute dermal toxicity. Residue effects on mammalian and avian species.
Mevinphos	All emulsifiable concentrates and liquid concentrates.	do	do	do
	Psycodid filter fly liquid formulations.	do	do	Acute dermal toxicity.
	2 pct dusts.	do	do	Residue effects on mammalian and avian species.
Monocrotophos	Liquid formulations 19% and greater.	do	do	Residue effects on avian species.
	Liquid formulations 55% and greater.	do	do	Residue effects on mammalian species. Acute dermal toxicity. Residue effects on avian species. Residue effects on mammalian species.
Nicotine (alkaloid)	Liquid and dry formulations 14% and above.	Indoor (greenhouse)	Restricted	Acute inhalation toxicity.
	All formulations.	Applications to cranberries	Restricted	Effects on aquatic organisms.

Table 6-2 (continued)

Active Ingredient	Formulation	Use Pattern	Classification¹	Criteria Influencing Restriction
Nicotine (alkaloid) (Continued)	Liquid and dry formulations 1.5% and less.	All uses (domestic and non-domestic).	Unclassified	
Paraquat (dichloride) and paraquat bis(methyl sulfate)	All formulations and concentrations except those listed below.	All uses.	Restricted	Other hazards. Use and accident history, human toxicological data.
	Pressurized spray formulations containing 0.44 pct Paraquat bis(methyl sulfate) and 15 pct petroleum distillates as active ingredients.	Spot weed and grass control.	do	
	Liquid fertilizers containing concentrations of 0.025 pct paraquat dichloride and 0.03 percent atrazine; 0.03 pct paraquat dichloride and 0.37 pct atrazine, 0.04 pct paraquat dichloride and 0.49 pct atrazine.	All uses.	Unclassified	
Phorate	Liquid formulations 65% and greater.	do	Restricted	Acute dermal toxicity. Residue effects on avian species (applies to foliar

*do means same as above.

Table 6-2 (continued)

Active Ingredient	Formulation	Use Pattern	Classification ¹	Criteria Influencing Restriction
Phorate (continued)	All granular formulations.	Rice	Restricted	applications only). Residue effects on mammalian species (applies to foliar application only). Effects on aquatic organisms.
	Baits 0.1% and greater.	All uses.	Restricted	Hazard to non-target species. Residues effects on mammalian species. Residue effects on avian species.
Phosphamidon	Liquid formulations 75% and greater.	do	do	Acute dermal toxicity. Residue effects on mammalian species. Residue effects on avian species.
	Dust formulations 1.5% and greater.	do	do	Residue effects on mammalian species.

*do means same as above.

Table 6-2 (continued)

Active Ingredient	Formulation	Use Pattern	Classification ¹	Criteria Influencing Restriction
Picloram	All formulations and concentrations except tordon 101R. Tordon 101 R forestry herbicide containing 5.4 pct picloram and 20.9 pct 2,4-D.	do	do	Hazard to non-target organisms (specifically nontarget plants both crop and noncrop).
		Control of unwanted trees by cut surface treatment.	Unclassified	
Sodium cyanide ³	All capsules and ball formulations.	All uses.	Restricted	Inhalation hazard to humans.
Sodium fluoroacetate	All solutions and dry baits.	do	do	Acute oral toxicity. Hazard to nontarget organisms. Use and accident history.
Strychnine	All dry baits, pellets and powder formulations greater than 0.5 pct. All dry baits, pellets and powder formulations. All dry baits, and pellets and powder formulations 0.5 pct and below. do	do	do	Acute oral toxicity. Hazard to non-target avian species. Use and accident history. Hazard to non-target organisms.
		All uses calling for burrow builders. All uses except subsoil.	do	do
		All subsoil uses.	Unclassified	do

*do means same as above.

Table 6-2 (continued)

Active Ingredient	Formulation	Use Pattern	Classification ¹	Criteria Influencing Restriction
Sulfotepp	Sprays and smoke generators.	All uses.	Restricted	Inhalation hazard to humans.
Tepp	Emulsifiable concentrate formulations.	do	do	Inhalation hazard to humans. Dermal hazard to humans. Residue effects on mammalian and avian species.
Zinc Phosphide	All formulations 2% and less.	All domestic uses and non-domestic uses in and around buildings.	Unclassified	
	All dry formulations 60% and greater.	All uses.	Restricted	Acute inhalation toxicity.
	All bait formulations	Nondomestic outdoor uses (other than around buildings).	Restricted	Hazard to nontarget organisms.
	All dry formulations 10% and greater.	Domestic uses.	Restricted	Acute oral toxicity.

*do means same as above.

NOTES:

- ¹ "Under evaluation" means no classification decision has been made and the use/formulation in question is still under active review within the USEPA.
- ² Percentages given are the total of dioxathion plus related compounds.
- ³ Note: M-44 sodium cyanide capsules may only be used by certified applicators who have also taken the required additional training.

This table lists uses of pesticide products containing the active ingredients specified that have been classified for restricted use and are limited to use by or under the direct supervision of a certified applicator.

Section 7

Petroleum, Oil, and Lubricant (POL) Management

SECTION 7

POL MANAGEMENT

A. Applicability of this Protocol

This protocol applies to U.S. Air Force (USAF) installations that store, transport, dispose of, or use petroleum, oil, and lubricant (POL), including petroleum-based fuels. The protocol presents review action items that respond to regulations, procedures, and organizational mechanisms designed to prevent or limit the accidental release of POL materials to surface water, groundwater, or soils. Procedures to control volatile organic compounds (VOCs) from POL sources are addressed in Section 1, *Air Emissions Management*.

This protocol covers management of aboveground and belowground POL bulk storage tanks, organizational tanks, pipeline delivery systems, truck fill stands, immediate operating storage areas, and fueling/defueling flightline operations. POL materials addressed include jet fuel (JP-4, fuel oil, JP-8), aviation gasoline (AVGAS), motor gasoline (MOGAS), diesel fuel, and lubricating oils. Waste petroleum-based solvents (including PD-680) are addressed in Section 3, *Hazardous Waste Management*.

Some local requirements for POLs may vary in important ways, and the evaluator should obtain copies of the spill plans, where appropriate, and review them for those differences before conducting the evaluations. In particular, the evaluator should check for differences in the quantities and the specific procedures for reporting spills that may exist in local regulations.

Many local governments have active underground storage tank (UST) programs. These various governments have developed regulations specific to the physical environment and the regulated community's needs. It is important to review regulations at the national and local level to ensure that any differences, such as in reporting notice requirements and monitoring requirements, can be complied with.

The regulatory requirements in this protocol are based on Department of Defense (DOD) regulations and Air Force Regulations (AFRs) that apply at overseas installations. Good Management Practices (GMPs) are derived from U.S. Environmental Protection Agency (USEPA) regulations that are not mandatory overseas but are important to follow to preserve the health and safety of Air Force employees and protect the environment.

B. DOD Directives/Instructions

- *Overseas Environmental Baseline Guidance Document (OEBGD)*, October 1992, Chapter 9, outlines the criteria for the control and abatement of pollution from the storage, transfer, and distribution of petroleum products. Chapter 18 contains criteria for a spill plan and a contingency plan. Chapter 19 details requirements for POL USTs.
- DOD Manual 4140.25 M, *Procedures for Management of Petroleum Products*, describes procedures for the management of petroleum products on military installations.
- DOD Directive 5030.41, *Hazardous Substance Pollution Prevention and Contingency Plan*, addresses requirements for compliance with the National Oil and Hazardous Substances Pollution Contingency Plan.

C. U.S. Air Force Regulations

- AFR 19-1, *Pollution Abatement and Environmental Quality*, outlines the general requirements for the preparation of Oil and Hazardous Substance Pollution Contingency (OHSPC) plans and Spill Prevention Control and Countermeasure (SPCC) plans.
- AFR 19-8, *Environmental Protection Committee and Environmental Reporting*, outlines the requirements for an annual review of the OHSPC and SPCC plans and gives requirements for reporting spills.
- AFR 19-14, *Management of Recoverable and Waste Liquid Petroleum Products*, describes the management of recoverable and waste liquid petroleum products and governs the maintenance of permanently installed storage and dispensing systems for petroleum and unconventional fuels.
- Air Force Manual (AFM) 85-16, *Maintenance of Petroleum Systems*, governs the maintenance of permanently installed storage and dispensing systems for petroleum and unconventional fuels.
- AFM 85-5, *Maintenance and Operation of Cathodic Protection Systems*, provides guidance for maintenance and operation of cathodic protection systems.
- AFR 144-16, *Organization Fuel Tanks*, provides the policies and procedures for establishing and operating organizational fuel tanks.

- Air Force Technical Order (AFTO) 37-1-1, *General Operation and Inspection of Installed Fuel Storage and Dispensing System*, provides fuels management personnel guidance in the operation, inspection, and operator maintenance of permanently installed fuel facilities.
- AFTO 42B-1-23, *The Management of Recoverable and Waste Liquid Petroleum Products*, provides guidelines for collecting, segregating, and processing reclaimed, recoverable, and waste petroleum products.
- Headquarters U.S. Air Force (HQ USAF)/LEE Letter, *Air Force Underground Storage Tank (UST) Management Strategy*, 30 May 1990, provides guidance on the management of the Air Force's UST program worldwide.

D. Responsibility for Compliance

- The Base Environmental Protection Committee (EPC) is usually responsible for drafting and reviewing the Spill Prevention and Response (SPR) Plan prior to its promulgation by the Base Commander and for the annual review and update of the SPR Plan. Often, the EPC delegates the specific preparation of the plan to the Base Civil Engineer (BCE) for implementation by the Base Environmental Coordinator (BEC). The EPC also is responsible for review and implementation of the Base Plan for Recoverable and Waste Petroleum.
- The Spill Response Team (SRT) responds to spills, when requested by an On-Scene Commander (OSC), and performs spill containment, recovery, cleanup, disposal, and restoration activities as directed by the OSC. The SRT is a multidisciplinary team often including the following people: BCE, BEC, Bioenvironmental Engineer (BEE), Fire Chief, Security Police Chief, Public Affairs Officer, Base Fuels Officer, Safety Chief, and Staff Judge Advocate.
- The Base Fire Department provides support in emergency response, spill events, exercises, and fire protection activities. In addition, the department will be responsible for making periodic fire safety inspections of flammable/combustible storage and handling areas, hazardous waste storage areas, and accumulation points on the installation.
- The Safety Manager is responsible for conducting workplace safety evaluations and inspections of the handling and storage of hazardous materials and waste. The Safety Manager will provide the appropriate manager with a report of his or her findings and recommended corrective actions. The Safety Manager is also responsible for ensuring the prompt and accurate investigation of any hazardous material mishaps that result in injury or property damage.

- The Base Fuels Management Officer (BFMO) is responsible for the safe and efficient receipt, storage, handling, issuing, and accounting of all petroleum products and for all general operations and inspections.
- The Base Civil Engineer (BCE) is responsible for the maintenance of all installed petroleum storage and dispensing systems. This responsibility often is discharged by the Liquid Fuels Maintenance (LFM) shop. The BCE also is responsible for the calibration of permanently installed meters.
- The Base Environmental Coordinator (BEC) monitors all POL activities that may affect the environment and usually is responsible for the coordination of the EPC review and updates of the SPR Plan. The BEC often coordinates the reportable spills notification of appropriate Federal and state agencies on behalf of the base OSC.
- The Base Bioenvironmental Engineer (BEE) takes samples to determine the chemical nature, pollutant concentration, and extent of each reportable-quantity spill as required for response actions and documentation.

E. Key Compliance Definitions

These definitions were obtained from the directives/instructions and AFRs listed at the end of each definition. If there is no citation listed for the definition, it has been drawn from the U.S. Code of Federal Regulations (CFR).

- *Aboveground Release* - any release to the surface of the land or to surface water. This includes, but is not limited to, releases from the aboveground portion of an UST system and aboveground releases associated with overfills and transfer operations as the regulated substance moves to or from UST system.
- *Ancillary Equipment* - any devices including, but not limited to, pipings, fittings, flanges, valves, and pumps used to distribute, meter, or control the flow of regulated substances to or from the UST.
- *Associated Piping* - a length or system of piping connected to a UST and used to transport petroleum products or hazardous substances to or from the UST.
- *Belowground Release* - any release to the subsurface of the land or to groundwater. This includes, but is not limited to, releases from the belowground portion of a UST system and belowground releases associated with overfills and transfer operations as the regulated substance moves to or from a UST.

- **Bulk Storage Tanks** - refers to field-erected tanks, usually having a capacity greater than 190,000 liters (L), or 50,000 gallons (gal), and constructed aboveground or belowground (OEBGD, Chapter 9, Definitions).
- **Cathodic Protection** - a technique to prevent corrosion of a metal surface by making the surface the cathode of an electrochemical cell. For example, a tank system can be cathodically protected through the application of either galvanic anodes or impressed current.
- **Compatible** - the ability of two or more substances to maintain their respective physical and chemical properties upon contact with one another for the design life of the tank system under conditions likely to be encountered in the UST.
- **Connected Piping** - all underground piping, including valves, elbows, joints, flanges, and flexible connectors, attached to a tank system through which regulated substances flow. For the purpose of determining how much piping is connected to any individual UST system, the piping that joins two UST systems should be allocated equally between them.
- **Deferred USTs** - USTs that are exempt from meeting the outlined requirements, except those concerning release response and corrective action for UST systems containing hazardous substances. These tanks include:
 1. wastewater treatment tank systems
 2. any UST system containing radioactive materials that are significant under the Atomic Energy Act of 1954
 3. any UST system that is a part of an emergency generator system at a nuclear power generation facility regulated by the Nuclear Regulatory Commission under 10 CFR Part 50, Appendix A
 4. airport hydrant fuel distribution systems
 5. UST systems with field-constructed tanks.
- **Dielectric Material** - a material that does not conduct direct electrical current. Dielectric coatings are used to electrically isolate UST systems from the surrounding soils. Dielectric bushings are used to electrically isolate portions of the UST system (e.g., tank from piping).
- **Electrical Equipment** - underground equipment that contains dielectric fluid that is necessary for the operation of equipment such as transformers and buried electric cable.
- **Excavation Zone** - the volume containing the tank system and backfill material bounded by the ground surface, walls, and floor of the pit and trenches into which the UST system is placed at the time of installation.

- **Excluded USTs** - USTs that are not required to meet the following outlined requirements, including:
 1. any UST system holding hazardous wastes listed under Subtitle C of the Solid Waste Disposal Act or a mixture of such hazardous wastes and other regulated substances
 2. any wastewater treatment tank system that is a part of a wastewater treatment facility regulated under Section 402 or 307(b) of the Clean Water Act
 3. equipment or machinery that contains regulated substances for operational purposes such as hydraulic lift tanks and electrical equipment
 4. any UST system whose capacity is 100 gal or less
 5. any UST that contains a de minimis concentration of a regulated substance
 6. any emergency spill or overflow containment UST system that is expeditiously emptied after use.
- **Existing Tank System** - a tank system used to contain an accumulation of regulated substances or for which installation began on or before 22 December 1988. Installation is considered to have commenced if:
 1. the owner or operator has obtained all Federal, state, and local approvals or permits necessary to begin physical construction of the site or installation of the tank system
 2. either a continuous on-site physical construction or installation program has begun or the owner or operator has entered into any contractual obligations which cannot be canceled or modified without substantial loss in order for physical construction at the site or installation of the tank system to be completed within a reasonable time.
- **Flow-through Process Tank** - a tank that forms an integral part of a production process through which there is a steady, variable, recurring, or intermittent flow of materials during the operation of the process. Flow-through process tanks do not include tanks used to store material before introduction into the production process or to store finished products or by-products from the production.
- **Free-product** - a regulated substance that is present as a nonaqueous phase liquid (e.g., liquid not dissolved in water).
- **Hazardous Substance** - any substance having the potential to do serious harm to human health or the environment if spilled or released in reportable quantity. A listing of these substances and corresponding reportable quantity is contained in Table 3-1. The term does not include (OEBGD, Chapter 18, Definitions):
 1. petroleum, including crude POL or any fraction thereof, that is not otherwise specifically listed or designated as a hazardous substance above

2. natural gas, natural gas liquids, liquefied natural gas, or synthetic gas usable for fuel (or mixtures of natural gas and such synthetic gas).
- **Hazardous Substance UST System** - any UST system that contains a hazardous substance defined in section 101(14) of the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (but not including any substance regulated as a hazardous waste under subtitle C) or any mixture of such substances and petroleum, and that is not a petroleum UST system.
 - **Heating Oil** - petroleum that is No. 1, No. 2, No. 4-light, No. 4-heavy, No. 5-heavy, and No. 6 technical grades of fuel oil; other residual fuel oils (including Navy Special Fuel Oil and Bunker C); and other fuels when used as substitutes for one of these fuel oils.
 - **Hydraulic Lift Tank** - a tank holding hydraulic fluid for a closed-loop mechanical system that uses compressed air or hydraulic fluid to operate lifts, elevators, and other similar devices.
 - **Installation On-Scene Coordinator (IOSC)** - the official that coordinates and directs DOD control and cleanup efforts at the scene of a POL or hazardous substance spill due to DOD activities on or near the installation. This official is designated by the installation commander (IC) (OEBGD, Chapter 18, Definitions).
 - **Installation Response Team (IRT)** - a team performing emergency functions as defined and directed by the IOSC (OEBGD, Chapter 18, Definitions).
 - **Liquid Trap** - sumps, well cellars, and other traps used in association with oil and gas production, gathering, and extracting operations (including gas production plants) for the purpose of collecting oil, water, and other liquids. These liquid traps may temporarily collect liquids for subsequent disposition or reinjection into a production or pipeline stream, or may collect and separate liquids from a gas stream.
 - **Maintenance** - the normal operational upkeep to prevent a UST system from releasing a product.
 - **Motor Fuel** - petroleum or a petroleum-based substance that is motor gasoline, aviation gasoline, No. 1 or No. 2 diesel fuel, or any grade of gasohol, and is typically used in the operation of motor engines.
 - **New Underground Storage Tank** - any UST installed after 1 October 1994 (OEBGD, Chapter 19, Definitions).
 - **Noncommercial Purposes** - with respect to motor fuel, is not for resale.

- *Oil* - in addition to the above definition, POL of any kind or in any form, including, but not limited to, petroleum, fuel POL, sludge, POL refuse, and POL mixed with wastes other than dredged spoil (OEBGD, Chapter 18, Definitions).
- *On the Premises Where Stored (Heating Oil)* - UST systems located on the same property where the stored heating oil is used.
- *Operator* - any person in control of, or having responsibility for, the daily operation of the UST system.
- *Organizational Fuel Tank* - these are tanks which may be fixed or portable and must meet established engineering criteria. They do not include fuel tanks that are an integral part of a vehicle or equipment, any type of hand-carried safety cans, 55-gal drums, or missile propellant conditioning systems (AFR 144-16, para 2).
- *Organizational Issue Tank* - a tank not permanently connected to any facility or equipment and that may be used to issue fuel to vehicles, equipment, or portable containers (AFR 144-16, para 2).
- *Organizational Portable Tank* - a tank which may be used as either an issue or a support tank that is portable (AFR 144-16, para 2).
- *Organizational Support Tank* - a tank connected by fixed piping to a consuming facility or installed equipment item (AFR 144-16, para 2).
- *Overfill Release* - a release that occurs when a tank is filled beyond its capacity, resulting in a discharge of the regulated substance to the environment.
- *Petroleum UST System* - a UST system that contains petroleum or a mixture of petroleum with *de minimis* quantities of other regulated substances. Such systems include those containing motor fuels, jet fuels, distillate fuel oils, residual fuel oils, lubricants, petroleum solvents, and used oils.
- *Pipe or Piping* - a hollow cylinder or tubular conduit that is constructed of non-earthen materials.
- *Pipeline Facilities* - includes new and existing pipes, pipeline rights of way, auxiliary equipment (e.g., valves, manifolds, etc.), and buildings or other facilities used in the transportation of POL (OEBGD, Chapter 9, Definitions).
- *POL* - includes, but is not limited to, petroleum and petroleum-based substances comprised of complex blends of hydrocarbons derived from crude oil through processes of separation, conversion, upgrading, and finishing, such as motor fuels, residual fuel oils, lubricants, petroleum solvents, and used oils (OEBGD, Chapter 19, Definitions).

- **POL Facility** - an installation with any individual aboveground tank of 2500 L (660 gal) or greater, aggregate aboveground storage of 5000 L (1320 gal) or greater, UST storage of greater than 15,900 L (4200 gal) or a pipeline facility (OEBGD, Chapter 9, Definitions).
- **Regulated Substance** - 1) any substance defined in section 101(14) of Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) (but not including any substance regulated as a hazardous waste under subtitle C), and 2) petroleum, including crude oil or any fraction thereof, that is liquid at standard conditions of temperature and pressure (60 °F and 14.7 pounds per square inch absolute (psia)).

The term "regulated substance" includes, but is not limited to, petroleum and petroleum-based substances comprised of a complex blend of hydrocarbons derived from crude oil through processes of separation, conversion, upgrading, and finishing, such as motor fuels, jet fuels, distillate fuel oils, residual fuel oils, lubricants, petroleum solvents, and used oils.

- **Release Detection** - determining if a release of a regulated substance has occurred from the UST system into the environment or into the interstitial space between the UST system and its secondary barrier or secondary containment around it.
- **Repair** - to restore a tank or UST system component that has caused a release of product from the UST system.
- **Reportable Quantity (RQ)** - a released quantity of POL or quantities of hazardous substances which exceeds those identified in this chapter or in the RQ column, Table 3-1 (OEBGD, Chapter 18, Definitions).
- **Residential Tank** - a tank located on property used primarily for dwelling purposes.
- **Septic Tank** - a water-tight covered receptacle designed to receive or process, through liquid separation or biological digestion, the sewage discharged from a building sewer. The effluent from such receptacle is distributed through the soil and settled solids and scum from the tank are pumped out periodically and discharged to a treatment facility.
- **Stormwater or Wastewater Collection System** - piping, pumps, conduits, and any other equipment necessary to collect and transport the flow of surface water run-off resulting from precipitation or domestic, commercial, or industrial wastewater to and from retention areas or any areas where treatment is designated to occur. The collection of stormwater and wastewater does not include treatment except where incidental to conveyance.

- *Surface Impoundment* - a natural topographic depression, man-made excavation, or diked area formed primarily of earthen materials (although may be lined with man-made materials) that is not an injection well.
- *Tank* - a stationary device designed to contain an accumulation of regulated substances and constructed of nonearthen materials (e.g., concrete, steel, plastic) that provide structural support.
- *Underground Area* - an underground room such as a basement, cellar, shaft, or vault, providing enough space for physical inspection of the exterior of the tank situated on or above the surface of the floor.
- *Underground Release* - any belowground release.
- *Underground Storage Tank (UST)* - under the OEBGD, this is any tank, including underground piping connected thereto, larger than 420 L (110 gal) that is used to contain POL products or hazardous substances and the volume of which, including the volume of connected pipes, is 10 percent or more beneath the surface of the ground, but does not include:
 1. tanks containing heating oil used for consumptive use on the premises where it is stored
 2. septic tanks
 3. stormwater or wastewater collection systems
 4. flow through process tanks
 5. surface impoundments, pits, ponds, or lagoons
 6. field constructed tanks
 7. hydrant fueling systems.
- *Upgrade* - the addition or retrofit of some systems, such as cathodic protection, lining, or spill and overfill controls, to improve the ability of a UST system to prevent the release of product.
- *Used Oil* - any oil or other waste POL product that has been refined from crude oil, or is a synthetic oil, used and as a result of such use, is contaminated by physical or chemical impurities (OEBGD, Chapter 6, Definitions).
- *Used Oil Burned for Energy Recovery* - used oil that is burned for energy recovery is termed "used fuel oil" (OEBGD, Chapter 6, Definitions).
- *UST System or Tank System* - UST, connected underground piping, underground ancillary equipment, and containment system, if any.
- *Wastewater Treatment Tank* - a tank designed to receive and treat influent wastewater through physical, chemical, or biological methods.

- *Waste Petroleum Product* - a product that is no longer suitable for any use because of excessive degradation or contamination by hazardous or toxic wastes.

Worldwide ECAMP**

REGULATORY REQUIREMENTS:	REVIEWER CHECKS:
POL MANAGEMENT 7-5. Installations that store, transport, or dispense petroleum products are required to prepare, according to specific guidelines, a contingency plan and an SPCC plan (OEBGD, Chapter 9, Criteria 1, and Chapter 18; DOD Directive 5030.41, para D3; AFR 19-1, para 11e(3). AFR 19-8, para 3c(3)).	Verify that both plans have been prepared. (1)(2)(5)(6) Verify that the prevention portion of the spill plan includes, at a minimum: - name, title, responsibilities, duties, and telephone number of the designated coordinator - general information on the installation, including: - name - type and function - location and address - charts of drainage patterns - designated water protection areas - maps showing locations of facilities - critical water resources - land uses - possible significant migration pathways - inventory of all storage, handling, and transfer facilities that could produce a significant spill. For each listing include: - prediction of direction and rate of flow - total quantity of POL that could be spilled as a result of major failure - inventory of all oil at storage and handling and transfer facilities - detailed description of equipment and countermeasures, including structures and equipment for diversion and containment of spills for each facility listed in the inventory - description of deficiencies at each listed site and corrective measures - written procedures for: - operations to preclude spills of oil - inspections - recordkeeping requirements. Verify that the control section of the plan contains: - description of the responsibilities, duties, procedures, and resources to be used to contain and cleanup spills - description of immediate response actions - responsibilities, composition, and training requirements of the IRT - procedures for IRT alert and responses to include: - access to a reliable communications system for timely notification of a POL spill - public affairs involvement - current roster of persons and alternates who are required to be notified of a spill

DISCHARGES/SPILLS 7-28. Any spill of POL that exceeds the reportable quantities must be reported to the IOSC, host nation authorities, and local fire departments immediately, and action must be implemented to eliminate the source and contain the spill (OEBGD, Chapter 18, Criteria 5(b) and 5(e)). ... 7-29. Installations are not allowed to add dispersants or emulsifiers to oil that will be discharged (DOD Directive 5030.41, para D(5)). ... 7-30. Specific steps and actions are required to be taken in incidents of a spill or a release (OEBGD, Chapter 9, Criteria 6 and AFR 19-8, para 5a).	Verify that spills of reportable quantities of POL have been reported to the IOSC and other appropriate individuals (see Table 3-1 in the Section, <i>Hazardous Wastes Management</i>, for reportable quantities). (1)(2)(3)(4)(5)(6) ... Verify that facilities do not add dispersants or emulsifiers to discharges. (1) ... Verify that when there is a spill, the immediate response involves: (1) - stopping the leak - controlling the spill - calling for help. Verify that followup includes: - preventing the migration of released POL - continuing the monitoring and mitigation of and fire and safety standards by vapors or free product - determining soil and water cleanup action - beginning free product removal as soon as possible. Verify that a Pollution Incident Report is submitted when the discharge does one of the following: - threatens public health - could result in substantial harm to plants or animals - contaminates or threatens to contaminate surface water or groundwater - results in the release of a hazardous substance - violates applicable water quality standards - causes a film, sheen, or discoloration on the surface of the water or adjoining shoreline - could cause unfavorable publicity - may foreseeably result in litigation - results in an outside agency report.

SOLID WASTE MANAGEMENT

A. Applicability of this Protocol

This protocol addresses the collection, storage, and disposal of solid waste on Air Force installations.

Solid waste is considered to be nonhazardous trash, rubbish, garbage, bulky wastes, liquids or sludges generated by any Air Force installation operations and activities. It also includes any medical/pathological wastes generated by the base hospital (some countries classify medical/pathological wastes as hazardous waste; consult local requirements). The handling and disposal of asbestos waste materials are addressed in Section 9, *Special Programs Management*.

Recycling and resource recovery activities are also included in this protocol, because this form of solid waste management is required by Department of Defense (DOD) and United States Air Force (USAF) directives.

- The regulatory requirements in this protocol are based on DOD regulations and Air Force Regulations (AFRs) that apply at overseas installations. Good Management Practices (GMPs) are nonregulatory but are important to follow to preserve the health and safety of Air Force employees and protect the environment.

B. DOD Directives/Instructions

- *Overseas Environmental Compliance Guidance Document (OEBGD)*, October 1992, Chapter 7, includes criteria concerning the identification, classification, collection, transportation, storage, treatment, and safe disposal of solid waste. Chapter 8 addresses the management of medical waste.
- DOD Directive 4165.60, *Solid Waste Management*, 1 October 1976, provides guidance and direction to all DOD facilities relative to solid waste collection, disposal, material recovery, and recycling in agreement with the Solid Waste Disposal Act (SWDA).

C. U.S. Air Force Regulations

- AFR 19-1, *Pollution Abatement and Environmental Quality*, 9 January 1978, directs Air Force installations to use municipal or regional waste disposal systems for the

disposal of solid waste whenever feasible. When the use of such facilities is not feasible, Air Force installations must do whatever is necessary to comply with all applicable laws, rules, and regulations.

- Air Force Pamphlet (AFP) 19-5, *Environmental Quality Control Handbook*, 15 October 1975, discusses the general background of solid waste problems at Air Force installations, types of pollutants produced, and their environmental effects. Regulatory standards for solid waste management, design and operating guidelines for landfills and incinerators, and proper control of solid wastes are also addressed.
- Air Force Manual (AFM) 88-11, *Sanitary and Industrial Wastewater Collection*, 31 August 1988, contains chapters on incineration (Chapter 4), sanitary landfills (Chapter 5), and industrial waste (Chapter 6).
- AFP 91-8, *Solid Waste Management*, June 1978, contains comprehensive information concerning types of equipment, operating procedures, and implementation procedures for solid waste programs at Air Force installations.

D. Responsibility for Compliance

- Base Civil Engineering (BCE) is responsible for site location, licensing, construction, and operation of on-base landfills and for the storage and transportation of solid wastes to either on-base or off-base disposal activities.
- Bioenvironmental Engineering (BEE) is responsible for reviewing and coordinating asbestos disposal plans and operations.

E. Key Compliance Definitions

These definitions were obtained from directives/instructions and AFRs listed at the end of each definition. If there is no citation listed for the definition, it has been drawn from the U.S. Code of Federal Regulations (CFR).

- *Bottom Ash* - the solid material that remains on a hearth or falls off the grate after thermal processing is complete (DOD Directive 4165.60, para V(A)).
- *Bulky Wastes* - large items of solid waste such as household appliances, furniture, large auto parts, trees, branches, stumps, and other oversized wastes whose large size precludes or complicates their handling by normal solid wastes collection, processing, or disposal methods (40 CFR 243.101 as adopted by DOD Directive 4165.60, para V(A), and OEBGD, Chapter 7, Definitions).

- *Carry-out Collection* - collection of solid waste from a storage area proximate to the dwelling unit(s) or establishment where generated (OEBGD, Chapter 7, Definitions).
- *Cell* - compacted solid wastes that are enclosed by natural soil or cover material in a land disposal site (40 CFR 241.101 as adopted by DOD Directive 4165.60, para V(A)).
- *Collection* - the act of consolidating solid wastes (or materials which have been separated for the purpose of recycling) from various locations (OEBGD, Chapter 7, Definitions).
- *Collection Frequency* - the number of times collection is provided in a given period of time (OEBGD, Chapter 7, Definitions).
- *Commercial Solid Waste* - all types of solid wastes generated by stores, offices, restaurants, warehouses, and other nonmanufacturing activities, excluding residential and industrial wastes (OEBGD, Chapter 7, Definitions).
- *Compactor Collection Vehicle* - a vehicle with an enclosed body, containing mechanical devices, that conveys solid waste into the main compartment of the body and compresses it into a smaller volume of greater density (OEBGD, Chapter 7, Definitions).
- *Construction and Demolition Waste* - the waste building materials, packaging and rubble resulting from construction, remodeling, repair, and demolition operations on pavement, houses, commercial buildings, and other structures (OEBGD, Chapter 7, Definitions).
- *Cover Material* - soil or other suitable material used to cover compacted solid wastes in a land disposal site (40 CFR 241.101 as adopted by DOD Directive 4165.60, para V(A), and OEBGD, Chapter 7, Definitions).
- *Curb Collection* - collection of solid waste placed adjacent to a street (OEBGD, Chapter 7, Definitions).
- *Daily Cover* - cover material that is spread and compacted on the top and side slopes of compacted solid wastes at least at the end of each operating day in order to control vectors, fire, moisture, and erosion and to assure an aesthetic appearance (40 CFR 241.101 as adopted by DOD Directive 4165.60, para V(A)).
- *Daily Cover* - in addition to the above definition, solid material that is spread and compacted or synthetic material that is placed on the top and side slopes of com-

pacted solid waste at least at the end of each operating day in order to control vectors, fire, moisture, and erosion and to assure an aesthetic appearance (OEBGD, Chapter 7, Definitions).

- *Final Cover* - cover materials that serve the same function as daily cover but, in addition, may be permanently exposed on the surface (40 CFR 241.101 as adopted by DOD Directive 4165.60, para V(A), and OEBGD, Chapter 7, Definitions).
- *Fly Ash* - suspended particles, charred paper, dust, soot, and other partially oxidized matter carried in the products of combustion (40 CFR 240.101 as adopted by DOD Directive 4165.60, para V(A)).
- *Food Waste* - the organic residues generated by the handling, storage, sale, preparation, cooking, and serving of foods, commonly called garbage (40 CFR 243.101 as adopted by DOD Directive 4165.60, para V(A), and OEBGD Chapter 7, Definitions).
- *Generation* - the act or process of producing solid waste (OEBGD, Chapter 7, Definitions).
- *Good Management Practice (GMP)* - practices that, although not mandated by law, are encouraged to promote safe operating procedures.
- *Groundwater* - water present in the unsaturated zone of an aquifer (40 CFR 241.101 as adopted by DOD Directive 4165.60, para V(A)).
- *Human Blood and Blood Products Waste* - this includes serum, plasma, and other blood components. It is items contaminated with liquid or semiliquid blood or blood products, items saturated or dripping with blood or blood products, or items caked with blood or blood products that are capable of releasing these materials during handling (OEBGD, Chapter 8, Definitions).
- *Industrial Solid Waste* - solid waste generated by industrial processes and manufacturing (OEBGD, Chapter 7, Definitions).
- *Infectious Medical Waste* - solid waste, produced by medical and dental treatment facilities, which is specially managed because it has the potential for causing disease in man and may pose a risk to both individuals or community health if not managed properly. It includes microbiology waste, pathology waste, human blood and blood products, potentially infectious materials, sharps, and infection wastes from isolation rooms (OEBGD, Chapter 8, Definitions).

- *Institutional Solid Waste* - solid wastes generated by educational, health care, and correctional institutions and other institutional facilities (40 CFR 243.101 as adopted by DOD Directive 4165.60, para V(A), and OEBGD, Chapter 7, Definitions).
- *Intermediate Cover* - cover material that serves the same function as daily cover but must resist erosion for a longer period of time because it is applied in areas where additional cells are not to be constructed for extended periods of time (40 CFR 241.101 as adopted by DOD Directive 4165.60, para V(A)).
- *Land Application Unit* - an area where wastes are applied onto or incorporated into the soil surface (excluding manure spreading operations) for agricultural purposes or for treatment or disposal (OEBGD, Chapter 7, Definitions).
- *Microbiology Waste* - this includes cultures and stocks of etiologic agents which, due to their species, type, virulence, or concentration, are known to cause disease in humans (OEBGD, Chapter 8, Definitions).
- *Municipal Solid Waste* - normally, residential and commercial solid waste generated within a community, not including yard waste (OEBGD, Chapter 7, Definitions).
- *Municipal Solid Waste Landfill Unit (MSWLF)* - a discrete area of land or an excavation, on or off the installation, that receives household waste and that is not a land application unit, surface impoundment, injection well, or waste pile. An MSWLF unit also may receive other types of wastes, such as commercial solid waste and industrial waste (OEBGD, Chapter 7, Definitions).
- *Noninfectious Medical Waste* - solid waste created in medical and dental treatment facilities that does not require special management because it has been determined to be incapable of causing disease in humans or it has been treated to render it noninfectious (OEBGD, Chapter 8, Definitions).
- *Open Burning* - burning of solid wastes in the open, such as in an open dump (OEBGD, Chapter 7, Definitions).
- *Open Dump* - a land disposal site where solid wastes are disposed of in a manner that does not protect the environment, are susceptible to open burning, and are exposed to the elements, vectors, and scavengers (40 CFR 240.101 as adopted by DOD Directive 4165.60, para V(A) and OEBGD, Chapter 7, Definitions).
- *Regulated Wastes* - liquid or semiliquid blood or other potentially infectious materials, or contaminated items that would release blood or other potentially infectious materials in a liquid or semiliquid state if compressed. Also included are items that are caked with dried blood or other potentially infectious materials and are

capable of releasing these materials during handling or through contaminated sharps or pathological and microbiological wastes containing blood or other potentially infectious materials.

- *Residential Solid Waste* - the wastes generated by the normal activities of households, including, but not limited to, food wastes, rubbish, ashes, and bulky wastes (OEBGD, Chapter 7, Definitions).
- *Rubbish* - a general term for solid waste, excluding food wastes and ashes, taken from residences, commercial establishments, and institutions (OEBGD, Chapter 7, Definitions).
- *Sanitary Landfill* - a land disposal site employing an engineered method of disposing of solid wastes on land in a manner that minimizes environmental hazards by spreading the solid wastes in thin layers, compacting the solid wastes to the smallest practical volume, and applying and compacting cover material at the end of each operating day (40 CFR 240.101 as adopted by DOD Directive 4165.60, para V(A) and OEBGD, Chapter 7, Definitions).
- *Sludge* - the accumulated semiliquid suspension of settled solids deposited from wastewaters or other fluids in tanks or basins (OEBGD, Chapter 7, Definitions).
- *Solid Waste* - garbage, refuse, sludge, and other discarded materials, including solid, semisolid, liquid, and gaseous containing materials resulting from industrial and commercial operations and from community activities. It does not include solids or dissolved material in domestic sewage or other significant pollutants in water resources, such as silt, dissolved or suspended solids in industrial wastewater effluent, dissolved materials in irrigation return flows or other common water pollutants (OEBGD, Chapter 7, Definitions).
- *Solid Waste Storage Container* - a receptacle used for the temporary storage of solid waste while awaiting collection (OEBGD, Chapter 7, Definitions).
- *Storage* - the interim containment of solid waste after generation and prior to collection for ultimate recovery or disposal (OEBGD, Chapter 7, Definitions).
- *Street Wastes* - material picked up by manual or mechanical sweepings of alleys, streets, and sidewalks, wastes from public waste receptacles, and material removed from catch basins (OEBGD, Chapter 7, Definitions).
- *Thermal Processing* - processing of waste material by means of heat (40 CFR 240.101 as adopted by DOD Directive 4165.60, para V(A)).

- *Transfer Station* - a station at which solid wastes are concentrated for transport to a processing facility or land disposal site. A transfer station may be fixed or mobile (40 CFR 243.101 as adopted by DOD Directive 4165.60, para V(A) and OEBGD, Chapter 7, Definitions).
- *Universal Precautions* - an approach to infection control. According to the concept of Universal Precautions, all human blood and certain human body fluids are treated as if known to be infected with HIV, H-B virus, and other bloodborne pathogens.
- *Vector* - a carrier, usually an arthropod, that is capable of transmitting a pathogen from one organism to another (40 CFR 240.202 as adopted by DOD Directive 4165.60, para V(A) and OEBGD, Chapter 7, Definitions).
- *Working Face* - that portion of the land disposal site where solid wastes are discharged and are spread and compacted prior to the placement of cover material (40 CFR 241.101 as adopted by DOD Directive 4165.60, para V(A)).
- *Yard Waste* - grass and shrubbery clippings, tree limbs, leaves, and similar organic materials commonly generated in residential yard maintenance (also known as green waste) (OEBGD, Chapter 7, Definitions).

SOLID WASTE MANAGEMENT

Records to Review

- Record of current nonhazardous solid waste management practices
- Documentation of locations (map) and descriptions of all nonhazardous waste treatment, storage, and disposal facilities (TSDFs)
- Records of operational history of all active and inactive TSDFs
- Environmental monitoring procedures or plans
- Records of resource recovery practices, including the sale of materials for the purpose of recycling
- Solid waste removal contracts and inspection records

Physical Features to Inspect

- Resource recovery facilities
- Incineration and land disposal facilities (active and inactive)
- Areas where hazardous and nonhazardous wastes are disposed of
- Construction debris areas
- Waste receptacles
- Solid waste vehicle storage and washing areas

Land disposal sites are required to be designed and operated in an aesthetically acceptable manner and to have control over public access (OEBGD, Chapter 7, Criteria 12(j), 12(l), and DOD Directive 4165.60, para V(A)). ...	Verify that blowing litter is controlled through portable litter fences or other devices. (1)(2)(3) Verify that wastes that are easily moved by wind are covered as necessary to prevent their becoming airborne. Verify that on-site vegetation is cleared only as necessary. Verify that natural windbreaks are maintained. Verify that buffer strips and/or berms are used to screen the site from nearby residences and major roadways. Verify that salvage material is removed from the site frequently. Verify that public access to the landfill facilities is controlled. ...
8-34. Land disposal site cover material is required to meet certain criteria (DOD Directive 4165.60, para V(A)). ...	Verify that cover material is applied as necessary to: (1)(2)(3) - minimize fire hazards - minimize infiltration of precipitation - minimize odors - minimize blowing litter - control gas venting - control vectors - discourage scavenging - provide a pleasing appearance. Verify that cover material is applied daily, regardless of weather. Verify that intermediate cover is applied on areas where additional cells are not to be constructed for extended periods of time. Verify that final cover is applied on each area as it is completed or if the area is to remain idle for over 1 year (yr). ...
8-35. Municipal solid waste and cover material must be compacted to the smallest practicable volume (OEBGD, Chapter 7, Criteria 12(a); DOD Directive 4165.60, para V(A)). ...	Verify that on an operating day, municipal solid waste handling equipment is capable of performing the following functions: (1)(2)(3) - spread solid waste in layers no more than 0.6 meters (m) or 2 feet (ft) thick while confining it to the smallest practicable area - compact the spread solid wastes to the smallest practicable volume - place, spread, and compact the cover material daily. ...

Section 9

Special Programs Management

SECTION 9

SPECIAL PROGRAMS MANAGEMENT

A. Applicability of this Protocol

This protocol applies to all U.S. Air Force (USAF) installations. Currently this section contains protocols for polychlorinated biphenyls (PCBs), asbestos, radon gas, the A-106 Pollution Abatement Plan, and the Environmental Impact Analysis Process (EIAP). The Special Programs protocol is written in response to regulations and policy that are applicable to the conduct of activities that involve these programs.

Specific host nation and local regulations are not included in this protocol.

The Special Programs Management protocol is used to determine the compliance status of the management activities associated with: PCBs and in-service and out-of-service PCB items; asbestos in schools and on the installation; the Air Force Radon Assessment and Mitigation Program (RAMP); the EIAP Overseas; and the A-106 Pollution Abatement Plan.

The regulatory requirements in this protocol are based on U.S. Environmental Protection Agency (USEPA) regulations, Department of Defense (DOD) regulations, and Air Force Regulations (AFRs) that apply at overseas installations. 40 Code of Federal Regulations (CFR) 763, *The Asbestos Hazard Emergency Response Act (AHERA)*, is applicable at schools overseas. Good Management Practices (GMPs) are derived from USEPA regulations that are not mandatory overseas but are important to follow to preserve the health and safety of Air Force employees and protect the environment.

B. DOD Directives/Instructions

- *Overseas Environmental Baseline Guidance Document (OEBGD)*, October 1992, Chapter 14, discusses the actions and controls needed to abate threats to human health and the environment from the handling, use, storage, and disposal of PCBs. Chapter 15 addresses similar issues for asbestos while Chapter 16 outlines the criteria for assessing and mitigating radon. Chapter 17 contains procedures for informing decision makers of environmental consideration when authorizing or approving major DOD actions to be taken.

Asbestos

- *The Asbestos Hazard Emergency Response Act (AHERA)* requires local education agencies to inspect their local school buildings for asbestos-containing materials (ACM), develop asbestos management plans, and implement response actions in a timely fashion. By definition, "local education agency" includes the governing authority of any school operated under the Defense Department's education system provided for under the Defense Department's Education Act of 1978. Regulations under AHERA for schools are contained in 40 CFR 763, Subpart E.

A-106 Pollution Abatement Plan

- Office of Management and Budget (OMB) Circular A-106 implements the requirement in Executive Order (EO) 12088, *Federal Compliance with Pollution Standards*, to assure that Federal agencies, facilities, programs, and activities meet Federal, state, and local environmental requirements, or to correct situations that are not in compliance with such regulations.

EIAP Overseas

- EO 12114 directs establishments of EIAP-type procedures at all Federal installations overseas.

C. U.S. Air Force Regulations

PCBs

- There are no AFRs on PCBs, but several policy letters have been issued:
 1. HQUSAF/LEEV, letter, 29 Apr 1986, *Removal of Polychlorinate Biphenyl (PCB) Equipment from Air Force Installations*. The letter requires all Major Commands (MAJCOMs) to draft management plans for removing all PCB equipment from AF installations by fiscal year (FY) 92.
 2. HQUSAF/LEEV, letter, 5 Apr 1988, *Removal of Polychlorinated Biphenyls (PCB) Items from Air Force Installations*. The letter requires an update on MAJCOM plans to remove all PCB items by FY 92 including:
 - all PCB Items (500 parts per million (ppm) or greater)
 - all PCB-contaminated Items (50-499 ppm)
 - reclassifications (retrofilling, filtering, and treatment processes)

- funding requirements and program approach
- A-106 report inputs.

3. HQUSAF/LEE/SGP, letter, 24 July 1987, *Polychlorinated Biphenyls (PCB) Spill Clean-up Policy*. The letter requires all PCB releases to be cleaned up in accordance with USEPA standards.

Asbestos

- AFR 91-42, *Facility Asbestos Management*, outlines procedures for developing a base facility asbestos management program. It also contains optional guidance to help the Base Civil Engineer (BCE) administer plans to incorporate facility asbestos management procedures and practices into Air Force Military Construction Program (MCP) and Operations and Maintenance (O & M) projects.
- Air Force Occupational Safety and Health (AFOSH) Standard 161-4, also contains information for asbestos requirements and control.

Radon

- *The Radon Assessment and Mitigation Program (RAMP)* was initiated by the Assistant Vice Chief of Staff of the Air Force (USAF/CV) by policy letter on 23 Oct 1987. This letter transmitted the RAMP Implementation Plan to Air Force activities for implementation.

A-106 Pollution Abatement Plan

- AFR 19-8, *Environmental Protection Committees and Environmental Reporting*, briefly outlines the A-106 procedure. The report is required to be sent to HQUSAF/LEE in June and November. HQUSAF/LEE gives detailed instructions in a semiannual call that includes the *Instruction Kit for Completion of USEPA Form 3500-7 for New Pollution Abatement and Prevention Projects*.

EIAP Overseas

- AFR 19-3, *Environmental Impact Analysis Process (EIAP) Overseas*, contains the policies, procedures, and responsibilities required to ensure consideration of the effects on the environment by major Air Force actions outside the United States.

D. Responsibility for Compliance

PCBs

- *The Base Civil Engineer (BCE)*, through the Exterior Electrical Shop or the Base Environmental Coordinator, is responsible for identifying, inspecting, marking (labeling), and properly servicing PCB electrical equipment (transformers and capacitors).
- *The Base Environmental Coordinator (BEC)* is responsible for ensuring that out-of-service items are located in a licensed and technically adequate PCB storage facility. Normally, such facilities are located at a Defense Reutilization and Marketing Office (DRMO), and the DRMO is responsible for storage, disposal transportation, and contracting for disposal.
- *The Bioenvironmental Engineer (BEE)* is responsible for arranging chemical analytical support in screening electrical equipment for PCBs and for cleanup verification.

Asbestos

- *The BCE* appoints an Asbestos Program Officer to prepare the Asbestos Management Plan and an Asbestos Operations Officer to prepare the Asbestos Operating Plan. The BCE ensures a sufficient number of in-house technicians and supervisors are trained and equipped to remove, repair, and control ACM.
- *The Asbestos Program Officer* prepares the Asbestos Management Plan, which contains documentation on all asbestos management efforts and the mechanism for oversight of the program.
- *The Asbestos Operations Officer* prepares and implements the Asbestos Operating Plan.
- *The BEE* takes air samples, evaluates friable materials for the preservation of asbestos, and assigns Risk Assessment Codes (RACs).

Radon

- *The BCE* is responsible for reviewing Radon assessments planning and programming and for institutionalizing radon mitigation features for existing and future facility projects.
- *The BEE* is responsible for sampling radon gas levels at installation offices, housing, day care facilities, etc. The BEE provides these sample results to the BCE. The BEE is also responsible for mitigation.

A-106 Pollution Abatement Plan

- *The BEC* is responsible for managing the A-106 program, including updating the current plan, inputting new projects, and coordinating with the Civil Engineering Programmer to ensure projects are included in the Civil Engineering Contract Reporting System (CECORS) or the Programming Design and Construction (PDC) System.
- *The Civil Engineering Programmer (CEP)* is responsible for getting projects into the CECORS or the PDC system.
- *The Environmental Protection Committee (EPC)* is responsible for coordinating and approving the A-106 Plan.

E. Key Compliance Definitions

These definitions were obtained from the directives/instructions and AFRs listed at the end of each definition. If there is no citation listed for the definition, it has been drawn from the U.S. Code of Federal Regulations (CFR).

- *Active Waste Disposal Site* - any disposal site other than an inactive site.
- *Adequately Wetted* - sufficiently mixed or penetrated with liquid to prevent the release of particulates.
- *Asbestos* - including chrysotile, amosite, crocidolite, tremolite asbestos, anthrophyllite asbestos, actinolite asbestos, and any other of these materials that have been chemically treated and/or altered (OEBGD, Chapter 14, Definitions).
- *Asbestos-containing Material (ACM)* - any material containing more than 1 percent asbestos by weight (OEBGD, Chapter 14, Definitions).
- *Asbestos-containing Waste Materials* - This term includes filters from control devices, friable asbestos waste material, and bags or other similar packaging contaminated with commercial asbestos. As applied to demolition and renovation operations, this term also includes regulated asbestos-containing material waste and materials contaminated with asbestos including disposable equipment and clothing.
- *Capacitor* - a device for accumulating and holding a charge of electricity and consisting of conducting surfaces separated by a dielectric.

- *Categorical Exclusion* - a class of actions that normally do not individually or cumulatively do harm to the environment and which require no further environmental review beyond appropriate documentation of the decisions to apply the exclusion (OEBGD, Chapter 17, Definitions).
- *Category I Nonfriable ACM* - asbestos-containing packings, gaskets, resilient floor covering, and asphalt roofing products containing more than 1 percent asbestos.
- *Category II Nonfriable ACM* - any material, excluding Category I nonfriable ACM, containing more than 1 percent asbestos.
- *Chemical Waste Landfill* - a landfill at which a high level of protection against risk of injury to health or the environment from migration of deposited PCBs to land, water, or the atmosphere is provided by incorporating special methods for locating, engineering, and operating the landfill (OEBGD, Chapter 14, Definitions).
- *Demolition* - the wrecking or taking out of any load-supporting structural member of a facility, together with any related handling operations, or the intentional burning of any facility.
- *Detailed Radon Testing* - a comprehensive testing program of radon (OEBGD, Chapter 16, Definitions).
- *Disposal* - to intentionally or accidentally discard, throw away, or otherwise complete or terminate the useful life of PCBs and PCB Items.
- *Emergency Renovation Operation* - a renovation operation that was not planned but results from a sudden, unexpected event that, if not immediately attended to, presents a safety or public health hazard, is necessary to protect equipment from damage, or is necessary to avoid imposing an unreasonable financial burden. This term includes operations necessitated by nonroutine failures of equipment.
- *Emergency Situations* - for continuing use of a PCB Transformer exists when:
 1. neither a non-PCB Transformer nor a non-PCB-Contaminated Transformer is currently in storage for reuse or readily available within 24 hours (h) for installation, or
 2. immediate replacement is necessary to continue service for power users.

- *Environmental Assessment* - a concise analysis to assist DOD components in determining whether there is a potential for significant environmental impacts associated with the proposed action and whether an environmental impact statement is required (OEBGD, Chapter 17, Definitions).
- *Environmental Impact Statement (EIS)* - an analysis of the likely environmental consequences of a proposal for a major federal action that is to be considered by DOD components in deciding whether to approve the proposal (OEBGD, Chapter 17, Definitions).
- *Environmental Reviews* - an analysis of the likely environmental consequences of the action that is to be considered by DOD components in the decision making process. They are prepared either unilaterally by DOD or in conjunction with another U.S. Agency but do not include foreign government participation (OEBGD, Chapter 17, Definitions).
- *Environmental Study* - an analysis of the likely environmental consequences of the action that is to be considered by DOD components in the decision making process. It includes a review of the affected environment, actions taken to avoid environmental harm or otherwise to better the environment, and environmental considerations and actions by the other participating nations. These will be prepared by the United States in conjunction with one or more foreign nation or by an international body or organization in which the United States is a member or participant (OEBGD, Chapter 17, Definitions).
- *Federal Action* - an action that is implemented or funded directly by the United States government. It does not include actions in which the United States participates in an advisory information gathering, representational, or diplomatic capacity, nor does it include actions taken by a foreign government in a foreign country in which foreign governments use funds derived indirectly from the United States (OEBGD, Chapter 17, Definitions).
- *Friable Asbestos* - any material containing more than 1 percent asbestos that, when dry, can be crumbled, pulverized, or reduced to powder by hand pressure (OEBGD, Chapter 14, Definitions).
- *Glove Bag* - a sealed compartment with attached inner gloves used for handling of ACM.
- *Good Management Practice (GMP)* - practices that, although not mandated by law, are encouraged to promote safe operating procedures.
- *High Concentration PCBs* - PCBs that contain 500 ppm or greater PCBs, or those materials which the USEPA requires to be assumed to contain 500 ppm or greater PCBs in the absence of testing.

- ***In or Near Commercial Buildings*** - within the interior of, on the roof of, attached to the exterior wall of, in the parking area serving, or within 30 meters (m) of a nonindustrial, nonsubstation building (OEBGD, Chapter 14, Definitions).
- ***Incinerator*** - an engineered device using controlled flame combustion to thermally degrade PCBs and PCB Items. Examples include rotary kilns, liquid injection incinerators, cement kilns, and high temperature boilers (OEBGD, Chapter 14, Definitions).
- ***Industrial Building*** - a building directly used in manufacturing or technically productive enterprises.
- ***Initial Radon Screening*** - short-term radon testing in a statistically representative sample of selected high priority facilities (family housing, child development centers, schools, dormitories, etc.). The purpose of initial screening is to identify installations having high radon levels (OEBGD, Chapter 16, Definitions).
- ***Leak or Leaking*** - any instance in which a PCB Article, a PCB Container, or PCB Equipment has any PCBs on any portion of its external surface (OEBGD, Chapter 14, Definitions).
- ***Low Concentration PCBs*** - PCBs that are tested and found to contain less than 500 ppm PCBs or those PCB-containing materials which the USEPA requires to be assumed to be at concentrations below 500 ppm (i.e., untested mineral oil dielectric fluid).
- ***Major Action*** - an action involving substantial expenditures of time, money, and resources that affects the environment on a large geographic scale or has substantial environmental effects on a more limited geographic area and that is substantially different or a significant departure from other actions previously analyzed with respect to environmental considerations and approved, with which the action under consideration may be associated. A deployment of units, ships, aircraft, or mobile military equipment that does not involve significant changes to the physical environment and that does not require additional support facilities that would significantly change the physical environment is not a major action for the purposes of Chapter 17 (OEBGD, Chapter 17, Definitions).
- ***Mark*** - the descriptive name, instructions, cautions, or other information applied to PCBs, PCB Items, or other objects subject to this document (OEBGD, Chapter 14, Definition).

- **Marking** - the marking of PCB Items and PCB storage areas and transport vehicles by means of applying a legible mark by painting, fixation of an adhesive label, or by any other method that meets these criteria.
- **Mineral Oil PCB Transformers** - any transformer originally designed to contain mineral oil as the dielectric fluid and which has been tested and found to contain 500 ppm or greater PCBs.
- **Mitigation** - actions taken to reduce radon levels in facilities having radon levels higher than 4 picoCuries/liter (pCi/L) as identified during detailed radon testing (OEBGD, Chapter 16, Definitions).
- **Non-PCB Transformers** - any transformer that contains less than 50 ppm PCB (OEBGD, Chapter 14, Definition).
- **PCB or PCBs** - any chemical substance that is limited to the biphenyl molecule that has been chlorinated to varying degrees or any combination of substances which contains such a substance.
- **PCB Article** - any manufactured article, other than a PCB Container, that contains PCBs and whose surface(s) has been in direct contact with PCB. This includes capacitors, transformers, electric motors, pumps, and pipes (OEBGD, Chapter 14, Definition).
- **PCB Article Container** - any package, can, bottle, bag, barrel, drum, tank, or other device used to contain PCB Articles or PCB Equipment, and whose surface(s) has not been in direct contact with PCBs (OEBGD, Chapter 14, Definition).
- **PCB Container** - any package, can, bottle, bag, barrel, drum, tank, or other device that contains PCBs or PCB Articles and whose surface has been in direct contact with PCBs (OEBGD, Chapter 14, Definition).
- **PCB-Contaminated Electrical Equipment** - any electrical equipment including, but not limited to, transformers, capacitors, circuit breakers, reclosers, voltage regulators, switches, electromagnets, and cable, that contain 50 ppm or greater PCB, but less than 500 ppm PCB (OEBGD, Chapter 14, Definitions).

- **PCB Equipment** - any manufactured item, other than a PCB Container or a PCB Article Container, which contains a PCB Article or other PCB Equipment, and includes microwave ovens, electronic equipment, and fluorescent light ballasts and fixtures (OEBGD, Chapter 14, Definitions).
- **PCB Item** - any PCB Article, PCB Article Container, PCB Container, or PCB Equipment, that deliberately or unintentionally contains, or has as a part of it, any PCB, or PCBs at a concentration of 50 ppm or greater (OEBGD, Chapter 14, Definitions).
- **PCB Transformer** - any transformer that contains 500 ppm PCB or greater (OEBGD, Chapter 14, Definitions).

LEVELS OF PCB ppm

less than 50 ppm	Non-PCB Transformer
50 ppm - 499 ppm	PCB-contaminated Electrical Equipment
500 ppm or greater	PCB Transformer

- **Permissible Exposure Limit (PEL)** - an airborne concentration of 0.2 of an asbestos fiber per cubic centimeter (f/cm^3) as an 8-h time-weighted average (OEBGD, Chapter 14, Definitions).
- **Posing an Exposure Risk to Food or Feed** - being in any location where human food or animal feed products could be exposed to PCBs released from a PCB Item.
- **Post Mitigation Monitoring** - follow-up radon testing in facilities where mitigation has been completed. The purpose of post-mitigation monitoring is to ensure that mitigation actions were effective in reducing radon levels below 4 pCi/L (OEBGD, Chapter 16, Definitions).
- **Radon** - a naturally occurring, odorless, colorless radioactive gas (OEBGD, Chapter 16, Definitions).
- **Regulated Asbestos-containing Material (RACM)** - includes: friable asbestos material; Category I Nonfriable ACM that has become friable; Category I nonfriable ACM that will be or has been subjected to sanding, grinding, cutting, or abrading; and Category II nonfriable ACM that has a high probability of becoming crumbled, crushed, or pulverized.
- **Renovation** - altering a facility or one or more facility components in any way, including the stripping or removal of RACM from a facility component. Operations in which load-supporting structural members are wrecked or taken out are demolition.

- *Restricted Access Area* - areas where access by unauthorized personnel is controlled by fences, other man-made structures, or naturally occurring barriers such as mountains, cliffs, or rough terrain (OEBGD, Chapter 14, Definitions).
- *Retrofill* - to remove PCB or PCB-contaminated dielectric fluid and to replace it with either PCB, PCB-contaminated, or non-PCB dielectric fluid.
- *Rupture of a PCB Transformer* - a violent or nonviolent break in the integrity of a PCB Transformer caused by an over-temperature and/or over-pressure condition that results in the release of PCBs.
- *Strip* - to take off RACM from any part of a facility.
- *Structural Member* - any load-supporting member of a facility, such as beams and load-supporting walls, or any nonload-supporting member, such as ceilings and nonload-supporting walls.
- *Substantial Contact Area* - an area that is subject to public access on a routine basis or which could result in substantial dermal contact by employees (OEBGD, Chapter 14, Definitions).
- *Visible Emissions* - any emissions which are visually detectable without the aid of instruments that come from RACM or asbestos-containing waste materials or from any asbestos milling, manufacturing, or fabricating operations. This does not include condensed water vapor.

Records to Review

- Inspection, storage, maintenance, and disposal records for PCBs/PCB Items
- PCB Equipment inventory and sampling results
- Asbestos management plan
- Documentation of asbestos sampling and analytical results
- Documentation of preventive measure or action
- Results of air sampling at the conclusion of response action
- Records of asbestos training program
- List of buildings insulated with asbestos or housing ACMs
- Record of demolition or renovation projects completed in the past 5 years (yr) that involve friable asbestos

Physical Features to Inspect

- PCB storage areas
- Equipment, fluids, and other items, used or stored at the facility, that contain PCBs
- Pipe, spray-on, duct, and troweled cementitious insulation, and boiler lagging
- Ceiling and floor pipes

REGULATORY REQUIREMENT:	REVIEWER CHECKS:
PCBs General 9-4. PCB Items (any PCB Article, PCB Article Container, PCB Container, or PCB Equipment with PCB concentration of 50 ppm or greater), and rooms, vaults, or storage rooms containing PCB Items are required to be marked in English and the host nation language (OEBGD, Chapter 14, Section 1, Criteria 3). ... PCB Records 9-5. A written annual document log must be prepared by 1 July of each calendar year, covering the previous year for all installations that use or store at any time at least 45 kilograms (kg) or 99.4 pounds (lb) of PCBs contained in PCB Containers, PCB Transformers of 50 ppm, or one or more PCB Large Capacitors of High- or Low-voltage (GMP).	Verify that PCB Items and storage rooms or vaults are marked so that they are identified as containing PCBs, there is a warning against improper handling and disposal, and there is a phone number provided in case of spills. (1)(3) ... Verify that the annual document log and annual records (manifests, certificates of disposal) are kept for at least 5 yr after the facility stops using or storing PCBs and PCB Items in the listed quantities. (1)(2)(3) Verify that the written annual document log addresses the following: - identification of facility - calendar year covered - manifest number for every manifest generated - total number (by type) of PCB Articles, PCB Article Containers, and PCB Containers placed into storage for disposal or disposed of during the calendar year - total weight placed into storage for disposal or disposed of during the calendar year of: - PCBs in PCB Articles - contents of PCB Article Container - contents of PCB Containers - bulk PCB Waste - a list of PCBs and PCB Items remaining in service at the end of the calendar year. The total weight of any PCBs and PCB Items in containers including identification of container contents and the total number of PCB Transformers, PCB Large Capacitors of High- and Low-voltage, and the total weight of PCBs in PCB Transformers - a record of each telephone call or other form of verification to confirm the receipt of PCB Waste transported by independent transport.

REGULATORY REQUIREMENT:	REVIEWER CHECKS:
9-12. PCB Transformers with PCB concentrations of 500 ppm or greater are required to be properly serviced (OEBGD, Chapter 14, Section 2, Criteria 5). ...	Verify that servicing activities are properly conducted as follows: (1)(3) - transformers classified as PCB-contaminated electrical equipment are only serviced with dielectric fluid containing less than 500 ppm PCB - the transformer coil is not removed during servicing - PCBs removed during servicing are captured and either reused or disposed of properly - the PCBs from a PCB Transformer are not mixed with or added to dielectric fluid from PCB-contaminated Electrical Equipment. - dielectric fluids containing less than 500 ppm that are mixed with fluids containing 500 ppm or greater are not used as dielectric fluid in any Electrical Equipment - dielectric fluids containing 500 ppm or greater are not used as dielectric fluid in any transformers classified as PCB-contaminated Electrical Equipment. (NOTE: PCB Transformers may be serviced with dielectric fluid at any concentration.) ...
9-13. Inspections must be performed once every 3 months (mo) for all in-service PCB Transformers of greater than 500 ppm PCB (OEBGD, Chapter 14, Section 2, Criteria 6). ...	Verify that applicable transformers are inspected at least once every 3 mo. (1)(3) Determine if any PCB Transformers have been leaking. Verify that if any leaking transformers have been discovered, proper reporting procedures have been followed. Verify that the following information is recorded for each PCB Transformer inspection: - location of transformer - dates of each visual inspection - date when any leak was discovered - name of person conducting inspection - location and estimate of the dielectric fluid quantity of any leaks - data and description of any cleanup, containment, or repair performed - results of any daily inspections of transformers with uncorrected active leaks. (NOTE: Reduced visual inspection of at least once every 12 mo is allowed for PCB Transformers with impervious, undrained secondary containment capacities of 100 percent of dielectric fluid and for PCB Transformers tested and found to contain less than 60,000 ppm PCBs.) (NOTE: Increased visual inspection of once a week is required for any PCB Transformer in use or stored for reuse that poses an exposure risk to food or feed.) Verify that records of inspection and maintenance are kept for 3 yr after disposal. ...

REGULATORY REQUIREMENT:	REVIEWER CHECKS:
9-21. Spills of PCB liquids at concentrations of 50 ppm or greater must be responded to immediately and cleaned up according to specific standards (OEBGD, Chapter 14, Section 1, Criteria 2). ... 9-22. Cleanup of high-concentration spills and low concentration spills involving 0.45 kilogram (kg) or 1 pound (lb) or more of PCBs by weight (1023 liters (L) or 270 gallons (gal) or more of untested mineral oil should be done according to specific requirements (GMP).	Verify that surfaces located in substantial contact areas are cleaned to 10 micrograms (μg) per 100 square centimeters (cm^2). (1)(2)(3) Verify that surfaces in all other contact areas are cleaned to 100 μg per 100 cm^2. Verify that contaminated soil located in restricted access areas is removed until the soil tests no higher than 25 ppm PCB and the area is then backfilled with clean soil containing less than 1 ppm PCB. Verify that contaminated soil located in unrestricted access areas is removed to a minimum depth of 25 centimeters (cm) or 10 inches (in.) or until the soil tests no higher than 10 ppm PCB, whichever is deeper, and is then backfilled with clean soil containing less than 1 ppm PCB. ... Verify that the following actions are taken within 24 h (or within 48 h for a PCB Transformer with PCB concentrations of greater than 500 ppm) of discovering the spill: (1)(2)(3) - the area of the spill is cordoned off or otherwise identified to include the area with visible traces of the spill and a 2-foot (ft) buffer zone (If there are no visible traces, the area of the spill may be estimated.) - clearly visible signs are placed advising people to avoid the area - the area of visible contamination is recorded and documented, identifying the extent and center of the spill - cleanup of visible traces of the fluid from hard surfaces is initiated - removal of all visible traces of the spill on soil and other media, such as gravel, sand, etc., is started. Verify that if the spill occurs in an outdoor substation: - contaminated solid surfaces are cleaned to a PCB concentration of 100 $\mu\text{g}/\text{cm}^2$ (as measured by standard wipe tests) - soil contaminated by the spill is cleaned to either 25 ppm PCB by weight or 50 ppm PCB by choice of the installation if notice is placed in the area to indicate the level of cleanup - post-cleanup sampling is done. Verify that if the spill occurs in a restricted access area other than an outdoor substation: - high-contact solid surfaces are cleaned to 10 μg per 100 cm^2 (as measured by standard wipe tests) - low-contact, indoor, impervious solid surfaces are decontaminated to 10 μg per 100 cm^2 - low-contact, indoor, nonimpervious surfaces are cleaned to either 10 μg or 100 μg per 100 cm^2 and encapsulated at the option of the installation - low-contact, outdoor surfaces (both impervious and nonimpervious) are cleaned to 100 μg per 100 cm^2 - soil contaminated by the spill is cleaned to 25 ppm PCB by weight - post-cleanup sampling is done.

ENVIRONMENTAL IMPACT ANALYSIS PROCESS 9-72. Installations are required to analyze and document major Federal actions that have the potential to do significant harm to the environment of the global commons (OEBGD, Chapter 17, Criteria 1 and 4; AFR 19-3, para 2a and Attachment 1). ... 9-73. Specific analyzes and documentation procedures are required when an installation performs certain types of major Federal actions that do significant harm to the environment of a foreign nation or to a protected global resource (OEBGD, Chapter 17, Criteria 1 and 2; AFR 19-3 Attachment 2).	(NOTE: See Table 9-2 for a quick summary of documentation requirements.) Verify that no action was taken that did significant harm or limited the choice of a reasonable alternative until the completion of the documentation process. (1) (NOTE: In the case of an emergency where the actions are taken that do significant harm to the environment, the DOD component concerned must consult with the Assistant Secretary of Defense.) (NOTE: Environmental documents may be combined with other documents to reduce duplication. Both the use of collective statements and tiering is acceptable.) Determine if the DOD provided a categorical exclusion for the action, thereby negating the need for an EIS. Verify that an Environmental Assessment (EA) was done to determine if an EIS was needed. ... Verify that analyzes and documentation were performed for the following types of major Federal actions: (1) - those that significantly harm the environment of a foreign nation that is not involved in the action - those that are determined to cause significant harm to the environment because they provide to that nation: - a product or involve a physical project that produces a principal product, emission, or effluent that is prohibited or strictly regulated in the United States because its toxic effects on the environment create a serious public health risk - a physical project that is prohibited or strictly regulated in the United States by Federal law to protect the environment against radioactive substances. Examples include asbestos, vinyl chloride, acrylonitrile, isocyanates, polychlorinated biphenyls, mercury, beryllium, arsenic, cadmium, and benzene - those that significantly harm natural or ecological resources of global importance designated for protection by the President or, in case of such a resource protected by international agreement binding on the United States, designated for protection by the Secretary of State. Determine if any of the actions occurring at the installation have been granted a categorical exclusion by the DOD.

A-106 POLLUTION ABATEMENT 9-75. The A-106 process must be incorporated into the Air Force planning, programming, and budgeting system (AF Policy Letter on Programming and Budgeting for Environmental Compliance, 30 May 1990). ... 9-76. Installations are required to submit the A-106 to HQUSAF/CEV on 1 May and 1 November of each year (AFR 19-8, para 6).	Determine if the installation A-106 Pollution Abatement Plan reflects environmental requirements, and properly prioritizes each as Operation and Services, Level I, Level II, or Level III. (1)(5) Compare the A-106 Plan with requirements in the Civil Engineering Contract Reporting System (CECORS) and the Programming, Design, and Construction (PDC) System. Determine if the A-106 Plan includes all projects involving costs that are necessary to comply with environmental standards. Verify that projects resulting from previous ECAMP evaluations or regulatory inspections are included in the A-106 Plan. Management action plans from ECAMP will give projects required to get the installation back in compliance. Determine if the A-106 Plan includes funds required for studies, management, and monitoring associated with the definition and development of corrective measures and necessary equipment to assure compliance with standards. Determine if the installation budgets for the environmental requirements are recorded in the installation A-106 Plan. Compare listings in the A-106 with the CECORS and PDC listings in Civil Engineering. Compare official financial records with obligation/expenditure data reflected in the A-106 system. Determine if current Class I and Class II requirements are being executed. Check the progress code in the A-106 Plan to ensure projects are under construction or work is on-going. ... Verify that the A-106 Environmental Pollution, Prevention, Control, and Abatement Status Report (RCS: DD-A&L(SA)1383) is submitted to HQUSAF/CEV on 1 May and 1 November of each year. (1)

Table 9-1

Radon Mitigation Schedule

Radon Level (pCi/L)	Mitigation within:
Greater than 200	1 mo of sample results or move occupants
200 or less, but greater than 20	6 mo of sample results
20 or less, but greater than 8	4 yr
8 or less, but greater than 4	5 yr
4 or less	No action required

Table 9-2

ENVIRONMENTAL EFFECTS ABROAD

ANALYSES OF OVERSEAS ACTIONS	
ACTION	ANALYSES REQUIRED
a. Major DOD actions significantly affecting the environment of the geographic areas outside the jurisdiction of any nation (i.e., outside any economic zone, fishery zone, territorial sea, or other claim of national sovereignty). Antarctica is considered outside the jurisdiction of any nation.	Environmental Impact Statement
b. Major DOD actions significantly affecting the environment of a foreign nation, that is not participating with the United States and not otherwise involved in the action.	Environmental Review or Environmental Study
c. Major DOD actions significantly affecting the environment of a foreign nation in which the actions provide, to that nation, a product or physical project producing a principal product or an emission or effluent that is prohibited or strictly regulated by Federal law in the United States because its toxic effects on the environment create a serious public health risk.	Environmental Review or Environmental Study
d. Major DOD actions significantly affecting the environment of a foreign nation in which the actions provide, to that nation, a physical project that is prohibited or strictly regulated by Federal law in the United States to protect against radioactive substances.	Environmental Review or Environmental Study
e. Major DOD actions that significantly affect natural or ecological resources of global importance designated for protection by the President or, in the case of such a resource protected by international agreement binding on the United States, by the Secretary of State. Recommendations to the President in such cases will be accompanied by the views of the Council on Environmental Quality and the Secretary of State.	Environmental Impact Statement, Environmental Review, or Environmental Study
f. Major DOD actions affecting only the environment of a participating or otherwise involved foreign nation and that do not involve emissions, effluents that are prohibited or strictly regulated by Federal law in the United States, or resources of global importance that have been designated for protection.	No formal document required.

Section 10

Water Quality Management

Section 10

WATER QUALITY MANAGEMENT

A. Applicability of this Protocol

This protocol identifies regulations, responsibilities, and compliance requirements applicable to all water use, management, and discharge on U.S. Air Force (USAF) installations, including activities and procedures involved in the collection, treatment, storage, and distribution of drinking water and the collection, treatment, and discharge of wastewater.

The regulations, responsibilities, and compliance requirements associated with wastewater discharge at Air Force installations include, but are not limited to, the following examples:

- sanitary or industrial wastewater discharged directly to a receiving stream or through an on-base treatment facility
- sanitary or industrial wastewater discharge to an off-base publicly owned treatment works (POTW) or to a treatment plant of another Department of Defense (DOD) activity
- stormwater runoff from industrialized areas of the installation to a receiving stream or water body.

Most Air Force installations have wastewater discharge of one type or another; therefore, this protocol will be applicable to most installations.

The regulatory requirements in this protocol are based on DOD regulations and Air Force Regulations (AFRs) that apply at overseas installations. Good Management Practices (GMPs) are derived from U.S. Environmental Protection Agency (USEPA) regulations that are not mandatory overseas but are important to preserve the health and safety of Air Force employees and protect the environment.

B. DOD Directives/Instructions

- *Overseas Environmental Baseline Guidance Document (OEBGD)*, October 1992, Chapter 3, addresses standards for potable water and the management of a drinking water facility. Chapter 4 contains criteria to control and regulate discharges of wastewaters into surface waters, including domestic and industrial wastewater discharges and pollutants from indirect dischargers.

- DOD Directive 6230.1, *Safe Drinking Water*, 24 April 1978, sets forth DOD policy for provisions of adequately safe drinking water and compliance with the Safe Drinking Water Act and the standards established by 40 Code of Federal Regulations (CFR) 141. Outside of the United States, the provisions of this directive apply consistently with international agreements, the status of forces agreement (SOFA), or host country laws.
- DOD Instruction 4120.14, *Environmental Pollution Prevention, Control, and Abatement* (NOTAL), is implemented within DOD policies provided by Executive Order (EO) 12088, *Federal Compliance with Pollution Standards*, and Office of Management and Budget (OMB) Circular A-106. The instruction establishes policies for developing and submitting plans for installing improvements needed to abate water pollution from DOD facilities.

C. U.S. Air Force Regulations

- AFR 19-7, *Environmental Pollution Monitoring*, specifies requirements for establishing water quality surveillance and monitoring to ensure compliance with appropriate host nation and local requirements. All Air Force installations are required to issue supplements to AFR 19-7 that identify specific monitoring locations and frequencies of sampling at the installation.
- AFR 86-4, *Base Comprehensive Plan*, requires Base Comprehensive Plans to be reviewed and revised as appropriate every 5 years (yr). The Base Comprehensive Plan includes master plans for the drinking water, wastewater, and stormwater systems.
- AFR 91-5, *Utility Services*, AFR 91-10, *Operation and Maintenance of Air Force Water Works Facilities*, and AFR 91-26, *Maintenance and Operation of Water Supply, Treatment, and Distribution Systems*, contain pertinent standards related to operation and maintenance of drinking water systems.
- AFR 91-10 defines required procedures for conflict resolution and for dealing with regulatory authorities who request access to facilities and information or who conduct inspections.
- AFR 91-9, *Water Pollution Control Facilities*, specifies additional requirements relative to proper operation of waste treatment works at Air Force installations. Requirements for training and certification of treatment plant operators are also included along with requirements for a base wastewater regulation and plant-specific Operations and Maintenance (O & M) manuals.
- Air Force Manual (AFM) 91-32, *Operation and Maintenance of Domestic and Industrial Wastewater Systems*, specifies detailed operation and maintenance

guidelines and requirements for water pollution control plants on Air Force installations. In particular, requirements for maintenance of operating logs, maps, and records are specified in these AFMs.

- AFR 161-44, *Management of the Drinking Water Surveillance Program*, is the operative regulation for the management of drinking water programs at all Air Force installations. It implements the Safe Drinking Water Act (SDWA) (Public Law 93-523), the USEPA Primary Drinking Water Regulations, and DOD Directive 6230.1. It is the key regulation against which compliance with all appropriate standards, procedures, and requirements for drinking water systems will be measured at Air Force installations. As the USEPA finalizes rules for specific contaminants (i.e. synthetic volatile organics, lead, microbiologicals, etc.), HQ USAF/SG will publish policy letters to supplement AFR 161-44. Revision of AFR 161-44 is in progress, the USEPA is finalizing rules for all requirements as mandated by the SDWA. To date, HQUSAF/SG policy letters have been issued for volatile synthetic organic chemicals (28 December 1987) and public notice pertaining to lead has been given (28 December 1987).
- HQ USAF/LEE Policy Letter, *Nonpoint Source Pollution Policy*, 5 May 1987, outlines USAF policy and GMPs.

D. Responsibility for Compliance

- Air Force Systems Command (OEHL), Brooks Air Force Base, Texas, provides services to complete all required laboratory, chemical, physical, and radiological analyses for drinking water. It also establishes a water supply sampling schedule for each installation to conform to the frequency established in AFR 161-44. OEHL maintains a potable water quality data repository of the last 10 yr of data and disseminates analytical results as required to the using activities and commands.
- The Base Civil Engineer (BCE) designs, constructs, and operates the water supply system to provide sufficient drinking water to installation personnel. The BCE is responsible for providing adequate water treatment to assure that drinking water does not exceed the maximum contaminant levels established for human consumption. Training of operating personnel to meet proficiency levels consistent with the operator certification requirements that apply to their location is also the responsibility of the BCE. The BCE maintains an up-to-date map of the complete potable water system, makes repairs, and maintains the systems. The BCE is also responsible for negotiating and maintaining the base's water supply contract and for preparing applications for monitoring compliance with, and reporting deviations from, minimum standards outlined in wastewater discharge permits of

host nations (or host nation equivalents). The BCE's design departments are responsible for the design and construction of wastewater collection and treatment systems as needed on the installation.

- Bioenvironmental Engineering (BEE) is responsible for monitoring wastewater discharge and streamwater quality at selected locations around the installation, according to the installation's supplement to AFR 19-7.
- The Director of Base Medical Services, through BEE, is responsible for proper sample collection from drinking water systems at Air Force installations and for determining compliance with drinking water standards. Coordination with OEHL, interpretation of results of water analyses, and notifications to state regulatory authorities when maximum contaminant levels are exceeded are also the responsibilities of the Director of Base Medical Services.
- Individual shop supervisors and superintendents are responsible for ensuring that the prohibited, unpermitted discharge of wastewater, containing toxic or hazardous substances, is not discharged into the sanitary or stormwater systems on the installation.
- The Water and Waste Shop within BCE is responsible for operating and maintaining sewer lines, pretreatment facilities, pump stations, oil/water separators, and other associated facilities around the installation and for taking timely and appropriate corrective actions when deficiencies are discovered.

E. Key Compliance Definitions

These definitions were obtained from the directives/instructions and AFRs listed at the end of each definition. If there is no citation listed for the definition, it has been drawn from the U.S. CFR.

- *Action Level* - the concentration of a substance in the water which determines appropriate treatment for a water system (OEBGD, Chapter 3, Definitions).
- *Best Available Technology (BAT)* - the best technology treatment techniques, or other means which the administrator finds, examined for effectiveness under field conditions and not solely under lab conditions that are available (taking cost into consideration). For the purposes of setting Maximum Contaminant Levels (MCLs) for synthetic organic chemicals, any BAT must be at least as effective as granular activated carbon.
- *BOD₅* - the 5-day measure of the pollutant parameter, biochemical oxygen demand (OEBGD, Chapter 4, Definitions).

- *CBOD₅* - the 5-day measure of the pollutant parameter, carbonaceous biochemical oxygen demand (OEBGD, Chapter 4, Definitions).
- *Community Water System (CWS)* - a public water system having at least 15 service connections used by year-round residents or which regularly serves at least 25 of the same people for more than 6 months (mo) per year (OEBGD, Chapter 3, Definitions).
- *Contaminant* - any physical, chemical, biological, or radiological substance in water.
- *Continuous Discharge* - a discharge which occurs without interruption throughout the operating hours of the facility, except for infrequent shutdowns for maintenance, process changes, or other similar activities.
- *Conventional Filtration Treatment* - a series of processes including coagulation, flocculation, sedimentation, and filtration resulting in substantial particulate removal.
- *Daily Discharge* - the discharge of a pollutant measured during a calendar day or any 24-hour (h) period that reasonably represents the calendar day for purposes of sampling (OEBGD, Chapter 4, Definitions).
- *Diatomaceous Earth Filtration* - a process resulting in substantial particulate removal in which:
 - a pre-coat cake of diatomaceous earth filter media is deposited on a support membrane (septum), and
 - while the water is filtered by passing through the cake on the septum, additional filter media known as body feed is continuously added to the feed water to maintain the permeability of the filter cake.
- *Direct Discharge* - any discharge of pollutants other than an indirect discharge by the host nation (OEBGD, Chapter 4, Definitions).
- *Direct Filtration* - a series of processes, including coagulation and filtration but excluding sedimentation, resulting in substantial particulate removal.
- *Discharge of a Pollutant* - any addition of any pollutant or combination of pollutants to waters of the host nation from any point source (OEBGD, Chapter 4, Definitions).
- *Disinfectant* - any oxidant, including but not limited to, chlorine, chlorine dioxide, chloramines, and ozone, intended to kill or inactivate pathogenic micro-organisms in water (OEBGD, Chapter 3, Definitions).

- *Disinfection* - a process which inactivates pathogenic organisms in water by chemical oxidants or equivalent agents.
- *Domestic or Other Nondistribution System Plumbing Problem* - a coliform contamination problem in a public water system, with more than one service connection, that is limited to the specific service connection from which the coliform-positive sample was taken.
- *Domestic Wastewater Treatment Plant (DWTP)* - any DOD or host nation facility designed to treat wastewater, the majority of which is made up of domestic sewage, before its discharge to waters of the host nation (OEBGD, Chapter 4, Definitions).
- *Effluent Limitation* - any restriction imposed on quantities, discharge rates, and concentrations of pollutants that are ultimately discharged from point sources into waters of the host nation (OEBGD, Chapter 4, Definitions).
- *Electroplating* - operations in which metal is electroplated on any base material including: electroplating of common metals; electroplating of precious metals; anodizing; metal coatings like immersion plating; chemical etching and milling; electrolysis plating; and printed circuit board manufacturing (OEBGD, Chapter 4).
- *Existing Source* - a source that discharges pollutants and is in operation or under construction prior to 1 October 1994 (OEBGD, Chapter 4, Definitions).
- *Filtration* - a process for removing particulate matter from water by passage through porous media.
- *First Draw Sample* - a 1-liter (L) sample of tapwater that has been standing in plumbing at least 6 h and is collected without flushing the tap (OEBGD, Chapter 3, Definitions).
- *Flocculation* - a process to enhance agglomeration or collection of smaller floc particles into larger, more easily settleable particles through gentle stirring by hydraulic or mechanical means.
- *Gross Alpha Particle Activity* - the total radioactivity due to alpha particle emissions, as inferred from measurements on a dry sample.
- *Groundwater Under the Direct Influence of Surface Water* - any water below the surface of the ground with:
 1. significant occurrence of insects or other macro-organisms, algae, or large-diameter pathogens such as *Giardia lamblia*, or

2. significant and relatively rapid shifts in water characteristics such as turbidity, temperature, conductivity, or pH which closely correlate to climatological or surface water conditions (OEBGD, Chapter 3, Definitions).

(Direct influence must be determined for individual sources.)

- *Halogen* - one of the chemical elements chlorine, bromine, or iodine.
- *Indirect Discharge* - the introduction of pollutants in process wastewater to a DWTP (OEBGD, Chapter 4, Definitions).
- *Industrial Wastewater Treatment Plant* - any DOD facility designed to treat wastewater before its discharge to waters of the host nation other than a DWTP (OEBGD, Chapter 4, Definitions).
- *Interference* - a discharge that, alone or in conjunction with one or more discharges from other sources, inhibits or disrupts the publicly owned treatment works (POTW) and causes a violation of any requirement of a POTW's permit.
- *Large Water System* - in reference to lead and copper in systems, this refers to a water system that serves more than 50,000 people.
- *Lead-free* - a maximum lead content of 0.2 percent for solder and flux and 8.0 percent for pipes and fittings (OEBGD, Chapter 3, Definitions).
- *Lead Service Line* - a service line, made of lead, which connects the water main to the building inlet and any lead pigtail, gooseneck, or other fitting which is connected to such a line (OEBGD, Chapter 3, Definitions).
- *Legionella* - a genus of bacteria, some species of which have caused a type of pneumonia called Legionnaires Disease.
- *Maximum Contaminant Level (MCL)* - the maximum permissible level of a contaminant in water that is delivered to the free-flowing outlet of the ultimate user of a public water system, except for turbidity for which the maximum permissible level is measured after filtration (OEBGD, Chapter 3, Definitions).
- *Maximum Contaminant Level Goal (MCLG)* - the maximum level of a contaminant in drinking water at which no known or anticipated adverse effect on the health of people would occur and which allows an adequate margin of safety. Maximum contaminant level goals are nonenforceable health goals.
- *Maximum Daily Discharge Limitation* - the highest allowable daily discharge (OEBGD, Chapter 4, Definitions).

- *Maximum Total Trihalomethane Potential* - the maximum concentration of total trihalomethanes produced in a given water, containing a disinfectant residual, after 7 days at a temperature of 25 °C or above.
- *Medium Size Water System* - in reference to lead and copper in systems, this refers to a water system that serves more than 3300 and fewer than or equal to 50,000 people.
- *Near the First Service Connection* - located at one of the 20 percent of all service connections in the entire system that are nearest the water supply treatment facility, as measured by water transport time within the distribution system.
- *New Source* - a source built or significantly modified after 1 October 1994 that discharges pollutants (OEBGD, Chapter 4, Definitions).
- *Non-Public Water System (NPWS)* - a system that is not a public water system. For example, a well serving a building (OEBGD, Chapter 3, Definitions).
- *Non-Transient, Non-Community Water System (NTNCWS)* - a public water system that is not a community water system and that regularly serves at least 25 of the same people for more than 6 mo per year. Examples include a school or a factory with its own water supply (OEBGD, Chapter 3, Definitions).
- *Palatable Water* - water that is pleasing to the taste and free of objectionable color, turbidity, taste, or odor. Palatability does not imply potability (AFR 161-44).
- *Pass Through* - a discharge which exits the POTW into waters in quantities or concentrations which, alone or in conjunction with a discharge from other sources, are a cause of a violation of any requirement of the POTW's permit.
- *PicoCurie (pCi)* - quantity of radioactive material producing 2.22 nuclear transformations/minute (min).
- *Point of Disinfectant Application* - the point where the disinfectant is applied and water downstream of that point is not subject to recontamination by surface water runoff.
- *Point-of-Entry Treatment Device* - a treatment device applied to the drinking water entering a structure to reduce contaminants in the drinking water throughout the structure.
- *Point-of-Use Treatment Device* - a treatment device applied to a tap to reduce contaminants in drinking water at that tap (OEBGD, Chapter 3, Definitions).

- *Point Source* - any discernible, confined, and discrete conveyance including, but not limited to, a pipe, ditch, channel, tunnel, conduit, well, discrete fissure, container, or rolling stock, but not including vessels, aircraft, or any conveyance that merely collects natural surface flows of precipitation (OEBGD, Chapter 4, Definitions).
- *Pollutant* - includes, but is not limited to, the following: dredged spoil, solid waste, incinerator residue, filter backwash, sewage, garbage, sewage sludge, munitions, chemical wastes, biological materials, radioactive materials, heat, wrecked or discarded equipment, rock, sand, cellar dirt, and industrial, municipal, and agricultural waste discharged into water (OEBGD, Chapter 4, Definitions).
- *Population Served* - the number of base residents plus one-third of the nonresidents usually served by the system (AFR 161-44).
- *Potable Water* - water that has been examined and treated to meet the proper standards and declared by responsible authorities to be fit for drinking (AFR 161-44).
- *Pretreatment* - the reduction of the amount of pollutants, the elimination of pollutants, or the alteration of the nature of pollutant properties in wastewater prior to or in lieu of discharging or otherwise introducing such pollutants into a POTW.
- *Process Wastewater* - any water which, during manufacturing or processing, comes into direct contact with or results from the production or use of any raw material, intermediate product, finished product, by-product, or waste product (OEBGD, Chapter 4, Definitions).
- *Public Water System (PWS)* - a system that provides piped water to the public for human consumption if such system has at least 15 service connections or regularly serves an average of at least 25 individuals daily for at least 60 days out of the year. This term includes:
 1. any collection, treatment, storage, and distribution facilities under control of the operator of such system
 2. any collection or pretreatment storage facilities not under such control that are used primarily in connection with such system.

A public water system is either a "community water system" or a "noncommunity water system." (OEBGD, Chapter 3, Definitions).

- *Rem* - the unit of dose equivalent from ionizing radiation to the total body or any internal organ or organ system. A millirem (mrem) is 1/1000 of a rem.
- *Residual Disinfectant Concentration* - ("C" in CT calculations) the concentration of disinfectant measured in milligrams (mg)/L in a representative sample of water.

- *Sanitary Survey* - an on-site review of the water source, facilities, equipment, operation and maintenance of a public water system for the purpose of evaluating the adequacy of such elements for producing and distributing potable water (OEBGD, Chapter 3, Definitions).
- *Sedimentation* - a process for removing solids before filtration by gravity or separation.
- *Slow Sand Filtration* - a process involving passage of raw water through a bed of sand at low velocity (generally less than 0.4 meters (m)/h) resulting in substantial particulate removal by physical and biological mechanisms.
- *Standard Sample* - the aliquot of finished drinking water that is examined for the presence of coliform bacteria.
- *Substantial Modification* - any functional alteration to an existing facility, the cost of which exceeds \$1 million, regardless of funding source (OEBGD, Chapter 4, Definitions).
- *Surface Water* - all water that is open to the atmosphere and subject to surface runoff.
- *System with a Single Service Connection* - a system which supplies drinking water to consumers via a single service line.
- *Total Suspended Solids (TSS)* - the pollutant parameter that measures total non-filterable suspended solids (OEBGD, Chapter 4, Definitions).
- *Total Toxic Organic (TTO)* - the summation of all quantifiable values greater than 0.01 mg/L for toxic organics (OEBGD, Chapter 4, Definitions).
- *Total Trihalomethanes (TTHM)* - the sum of the concentration in milligrams per liter of chloroform, bromoform, dibromochloromethane, and bromodichloromethane (OEBGD, Chapter 3, Definitions).
- *Trihalomethane (THM)* - one of the family of organic compounds, named as derivatives of methane, wherein three of the four hydrogen atoms in methane are each substituted by a halogen atom in the molecular structure.
- *Underground Injection Control* - a subsurface emplacement through a bored, drilled, driven, or dug well, where the depth is greater than the largest surface dimension whenever a principle function of the well is the emplacement of any fluid (OEBGD, Chapter 3, Definitions).

- *Virus* - a virus of fecal origin which is infectious to humans by waterborne transmission.
- *Vulnerability Assessment* - an evaluation by the DOD which shows the contaminants of concern either have or have not been used in a watershed area or the source of water for the system is not susceptible to contamination (OEBGD, Chapter 3, Definitions).
- *Water System* - refers to PWSs and NPWSs, and purchasers who have a distribution system and water storage facilities (OEBGD, Chapter 3, Definitions).
- *Waters of the Host Nation* - surface waters including the territorial seas recognized under customary international law, including: all waters which are currently used, were used in the past, or may be susceptible to use in commerce; waters which are or could be used for recreation or other purposes; waters from which fish or shellfish are or could be taken and sold; waters which are used or could be used for industrial purposes by industries; waters including lakes, rivers, and streams (including intermittent streams, sloughs, prairie potholes, or natural ponds); and tributaries of waters (OEBGD, Chapter 4, Definitions).

WATER QUALITY MANAGEMENT

Records to Review

- Bacterial and chemical analyses of drinking water, including sampling dates and locations, dates of analyses, analytical methods used, and results of analyses
- Monthly operating reports (flow, chlorine residual, etc.)
- Records of planning and construction of injection wells
- Results of injection well monitoring
- Records of facility projects, including any petition for review, that may potentially cause contamination of a sole source aquifer through its recharge zone
- Discharge monitoring reports for the past year
- Laboratory records and procedures
- Monthly operating reports for wastewater treatment facilities
- Flow monitoring calibration certification and supporting records
- Ash pond volume certification and supporting records
- Red water inspection records
- Spill Prevention, Control, and Countermeasures (SPCC) Plan
- All records required by SPCC
- Sewage treatment plant operator certification
- Sewer and storm drain layout

Physical Features to Inspect

- Drinking water collection, treatment, and distribution facilities
- On-base laboratory analysis facilities
- Underground injection wells
- Discharge outfall pipes
- Wastewater treatment facilities
- Industrial treatment facilities
- Streams, rivers, open waterways
- Floor and sink drains (especially in industrial areas)
- Stormwater collection points (especially in industrial areas)
- Oil storage tanks
- Oil/water separators

REGULATORY REQUIREMENTS:	REVIEWER CHECKS:
10-3. Installations are required to comply with the substantive environmental pollution standards of general applicability in the host country and with the Major Command (MAJCOM) regulations (AFR 19-1, para 2(a)(5)). ... DRINKING WATER General 10-4. DOD water systems are required to meet specific operating requirements concerning positive pressure and maintenance practices (OEBGD, Chapter 3, Criteria 1(f) through 1(h)). ...	Verify that the installation is complying with MAJCOM and host nation requirements. (1)(2) (NOTE: Issues typically regulated include: - underground injection control - MCLs for drinking water contaminants - stormwater runoff - filtration requirements - nonpoint sources - wastewater - certification requirements for laboratories analyzing samples - wastewater treatment plant operator certification - sludge disposal - pretreatment standards - discharges at sewage treatment facilities - septic tanks - use and treatment of wells - water system surveys - drinking water monitoring frequency and methodologies - use of groundwater - reporting requirements.) ... Verify that the water system maintains continuous positive pressure in the water distribution system. (2) Verify that there is an effective cross connection control and backflow prevention program. Verify that the water distribution operation and maintenance practices include: - maintenance of a disinfectant residual throughout the water distribution system (except where an effective ultraviolet or ozone disinfectant process is used) - proper repair and replacement of mains procedures (including disinfection and bacteriological testing) - implementation of an effective annual water main flushing program - proper operation and maintenance of storage tanks and reservoirs, and maintenance of distribution system components (including hydrants and valves). ...

REGULATORY REQUIREMENTS:	REVIEWER CHECKS:
10-5. The Directorate of Engineering and Housing (DEH) must keep records of actions taken to correct or repair any part of the distribution system (OEBGD, Chapter 3, Criteria 1(b) and 1(m); AFR 161-44, para 7-3). ...	Determine if there have been any changes to the water system since the previous review, and review the map of the complete potable water system. (2) Verify that records of operational changes have been maintained for at least 3 yr. Verify that monthly operating reports on performance are reviewed and that the water supply system master plan is updated every 5 yr. ...
10-6. The BCE is required to prepare and update water supply distribution system, sectional, and valve location maps (OEBGD, Chapter 3, Criteria 1(a) and AFR 161-44, para 3-6h). ...	Verify that water supply distribution system, sectional, and valve location maps are kept current. (1) ...
10-7. Installations are required to have a standard operating procedure (i.e., an emergency contingency plan) for alerting personnel in national or local emergencies or at times of actual or anticipated noncompliance (OEBGD, Chapter 3, Criteria 1(j)). ...	Verify that a standard operating procedure (emergency contingency plan) is in place and includes: (1)(2) - identification of key personnel - procedures to restore service - procedures to isolate damaged lines - identification of alternative water supplies - installation public notification procedures - conducting a vulnerability assessment. ...
10-8. The Environmental Coordinator should review plans for water system modifications (GMP). ...	Determine if the Environmental Coordinator has reviewed the plans. (1) ...
10-9. Installations are required to conduct sanitary surveys of the water system (OEBGD, Chapter 3, Criteria 1(d)). ...	Verify that surveys of the water system, including a review of required water quality analysis, are conducted annually and as needed. (1)(2) (NOTE: Off-installation surveys will be coordinated with host nation authorities.) ...

**COMPLIANCE CATEGORY:
WATER QUALITY MANAGEMENT
Worldwide ECAMP**

REGULATORY REQUIREMENTS:	REVIEWER CHECKS:
10-10. Installations are required to conduct vulnerability assessments (OEBGD, Chapter 3, Criteria 1(n)). ... Monitoring 10-11. DOD PWSs are required to meet specific monitoring requirements and MCLs for inorganic chemicals, fluorides, and synthetic organics (OEBGD, Chapter 3, Criteria 2(b), 2(c), and 2(e); AFR 161-44, para 5-2, 5-5b, 5-5c, 6-5, 6-6e). ...	Verify that the installation has conducted a vulnerability assessment. (1)(2) ... Verify that the inorganic chemicals in the water distributed to end users does not exceed the limitations in Table 10-1. (2) Verify that PWSs are monitored for inorganic chemicals at the frequencies outlined in Table 10-2. (NOTE: When the MCLs for inorganic compounds are exceeded, quarterly monitoring is to be increased as detailed in Table 10-2 until authorities determine the system is reliable.) Verify that fluoride monitoring involves collecting one treated water sample at any entry point to the distribution system annually for surface water systems and once every 3 yr for groundwater systems. (NOTE: Daily monitoring is recommended for systems practicing fluoridation using the criteria in Table 10-3.) Verify that synthetic organic chemicals in water distributed to people does not exceed the limitation outlined in Table 10-1 and that systems are monitored according to the schedule outlined in Table 10-4. (NOTE: When the MCLs for synthetic organic chemicals are exceeded, the installation will begin immediate quarterly monitoring, increase monitoring if the level of any contaminant is at its detection limit but less than its MCL (see Table 10-4) and continue until the system is reliable.) Verify that if the system is out of compliance, notification is done as soon as possible, but no later than 14 days after the violation. Verify that if the system is out of compliance and is only monitoring annually under a waiver, it immediately increases monitoring to the levels outlined in Table 10-4 until the system is determined to be reliable. ...

REGULATORY REQUIREMENTS:	REVIEWER CHECKS:
10-13. DOD water systems, regardless of whether they produce or purchase water, are required to meet specific MCL and testing requirements for total coliform bacteria (OEBGD, Chapter 3, Criteria 2(a)). ...	(NOTE: Compliance may be assured by either independent testing or validated supplier testing.) Verify that PWSs have no more than 5 percent positive samples for the presence of total coliforms per month for a system examining 40 or more samples per month. (2) Verify that PWSs have no more than one positive sample for the presence of total coliforms per month when a system analyzes less than 40 samples per month. (NOTE: The MCL for total coliforms is exceeded whenever a routine sample is positive for fecal coliforms or E. Coli or when any repeat sample is positive for total coliforms.) Verify that each system has a written, site specific monitoring plan and collects routine samples according to the schedule in Table 10-7. Verify that systems with initial samples testing positive collect repeat samples as soon as possible, preferably on the same day. Verify that repeat samples are taken at the same tap as the original sample and that an upstream and a downstream sample are taken in the vicinity of the tap. Verify that monitoring continues until total coliforms are no longer detected. Verify that when routine or repeat samples are positive for total coliforms, they are tested for fecal coliforms or E. Coli. (NOTE: Fecal-type testing can be foregone on a total coliform positive sample if fecal coliforms or E. Coli are assumed to be present.) Verify that if the system has exceeded the MCL, the installation notifies the appropriate individuals no later than the end of the next business day that an acute risk to public health may exist. ...
10-14. PWS filtered waters are required to be tested daily for turbidity and meet a specific MCL for turbidity (OEBGD, Chapter 3, Criteria 2(i)). ...	Verify that the monthly average of daily samples does not exceed 1 Nephelometric Turbidity Unit (NTU) in more than 5 percent of the samples. (2) Verify that the average of 2 consecutive days does not exceed 5 NTU. Verify that if the MCL for turbidity is exceeded, notification is made as soon as possible, but no later than 14 days after the violation. ...

REGULATORY REQUIREMENTS:	REVIEWER CHECKS:
10-34. Activities or installations that have a significant potential for spills or batch discharges are required to develop a slug prevention plan (OEBGD, Chapter 4, Criteria 1(f)). ...	Verify that the plan contains the following, at a minimum: (2)(3) - a description of discharge practices, including nonroutine batch discharges - a description of stored chemicals - a plan for immediately notifying the DWTP of slug discharges and discharges that would violate standards, including standards for subsequent written notification within 5 days - necessary practices to prevent accidental spills, including: - inspection and maintenance of storage areas - handling and transfer of materials - loading and unloading operations - control of plant site runoff - worker training - proper procedures for building containment structures or equipment - necessary measures to control toxic organism pollutants and solvents - proper procedures and equipment for emergency response and any subsequent plans needed to limit damage to the treatment plant or the environment. ...
POINT SOURCE DISCHARGES 10-35. New point source dischargers of pollutants are required to meet specific effluent limitations (OEBGD, Chapter 4, Criteria 1 and 3). ...	Verify that all new sources of pollutants to host nation waters comply with the following: (2)(3) - BOD₅: - 30-day average does not exceed 30 mg/L - 7 day average does not exceed 45 mg/L - TSS - 30-day average does not exceed 30 mg/L - 7-day average does not exceed 45 mg/L - effluent pH values are maintained between 6.0 and 9.0. (NOTE: The Executive Agents may, at their discretion, substitute CBOD₅ for the parameter BOD₅ at new sources. In those cases, the following apply:- - 30-day average does not exceed 25 mg/L - 7-day average does not exceed 40 mg/L.) (NOTE: Discharge at a new source can be exempted from the pH limit if it is demonstrated that: - no inorganic chemicals are added to the waste stream as part of the treatment process - contributions from industrial sources do not cause the pH of the effluent to be outside the 6.0 to 9.0 range.) Verify that monitoring of these parameters is done according to Table 10-10. ...

WATER QUALITY MANAGEMENT
Worldwide ECAMP**

REGULATORY REQUIREMENTS:	REVIEWER CHECKS:
10-36. Existing point source dischargers of pollutants are required to meet specific effluent limitations and monitoring requirements (OEBGD, Chapter 4, Criteria 2 and 3). ...	Verify that all existing source of pollutants to waters of host nation comply with the following: (2)(3) - BOD₅: - 30-day average does not exceed 45 mg/L - 7-day average does not exceed 65 mg/L - TSS - 30-day average does not exceed 45 mg/L - 7-day average does not exceed 65 mg/L - effluent pH values are maintained between 6.0 and 9.0. Verify that monitoring of these parameters is done according to Table 10-10. ...
10-37. Samples of wastewater discharges should be processed using proper collection, testing, and shipping procedures (GMP). (2)(3) ...	Verify that for wastewater sampling: (2)(3) - proper sample containers are used - samples are refrigerated during compositing - proper preservation techniques are used. ...
DWTPs 10-38. Installations must not discharge, into a treatment works, any pollutant that would cause "pass through" or "interference" (OEBGD, Chapter 4, Criteria 1(e) and 1(g)). 3-3e(2)). ...	Determine the sources of discharge and the composition of discharges at the installation. (1)(2)(3) Verify that the installation is not discharging, to a DWTP, pollutants that would cause a "pass through" or "interference." Verify that none of the following oils are being discharged to the DWTP: - petroleum - nonbiodegradable cutting oil - products of mineral origin. Verify that trucked and hauled waste is not discharged into the DWTP, except at locations specified by the DWTP. ...

**COMPLIANCE CATEGORY:
WATER QUALITY MANAGEMENT
Worldwide ECAMP**

REGULATORY REQUIREMENTS:	REVIEWER CHECKS:
10-39. Installations must not introduce specific pollutants into a DWTP ((OEBGD, Chapter 4, Criteria 1(a) through 1(d)). ...	Verify that pollutants that create a fire or explosion hazard in the collection system or treatment facility are not discharged, specifically: (2)(3) - wastewater with a closed cup flashpoint of less than 60 °C - liquid waste solutions that contain more than 24 percent alcohol by volume with a flash point less than 60 °C (140 °F) - nonliquid wastes under standard temperature and pressure that can cause a fire through friction - ignitable compressed gases - oxidizers such as peroxide. Verify that corrosive pollutants, including those with a pH lower than 5.0, are not discharged unless the treatment facilities and collecting systems are designed to handle such discharges. Verify that solid or viscous pollutants in amounts that will cause obstruction to the flow are not being discharged to the DWTPs. Examples are: - waste from fish cleaning stations - pieces of metal, rubber, and wood from shops - sand and sediment. Verify that oil/water separators connected to the sanitary sewer are operating correctly. Verify that the following types of waste are not discharged because of their reactivity and fume toxicity: - wastes that are normally unstable and readily undergo violent changes without detonating - wastes that react violently with water - wastes that form explosive mixtures with water or form toxic gases or fumes when mixed with water - cyanide or sulfide wastes that can generate potentially harmful toxic fumes, gases, or vapors - wastes capable of detonation or explosive decomposition or reaction at standard temperature and pressure - wastes that contain regulated explosives - wastes that produce any toxic fumes, vapors, or gases with the potential to cause safety problems or harm to workers. Determine if the installation has been granted any exemptions or variances concerning its discharges. ...
10-40. Installations must notify the DWTP immediately of any discharge that could cause problems to the DWTP (OEBGD, Chapter 4, Criteria 1(f)(iii)).	Verify that personnel at the installation are aware of the need to notify the DWTP of any discharge that would cause problems. (2)(3)

Table 10-2

Inorganics Monitoring Requirements

Contaminant	Groundwater Baseline Requirement ¹	Surface Water Baseline Requirement	Trigger That Increases Monitoring ⁵	Waivers
Barium	1 sample/3 yr	Annual sample	> MCL	---
Cadmium	1 sample/3 yr	Annual sample	> MCL	---
Chromium	1 sample/3 yr	Annual sample	> MCL	---
Mercury	1 sample/3 yr	Annual sample	> MCL	---
Selenium	1 sample/3 yr	Annual sample	> MCL	---
Sodium	1 sample/3 yr	Annual sample	---	---
Asbestos	1 sample/9 yr	1 sample/9 yr	> MCL	Yes ²
Nitrate	Annual sample	Quarterly	> 50% MCL ⁶	Yes ³
Nitrite	Annual sample	Quarterly	> 50% MCL ⁶	Yes ⁴
Corrosivity ⁷	Once	Once	---	---

1 - Samples shall be taken as follows: groundwater systems shall take a minimum of one sample at every entry point to the distribution system that is representative of each well after treatment; surface water systems shall take at least one sample at every entry point to the distribution system after any application of treatment or in the distribution system at a point that is representative of each source after the treatment.

2 - Necessity for analysis is predicated upon a vulnerable assessment conducted by the PWS.

3 - The DOD Executive Agent may reduce repeat sampling frequency of surface water systems to an annual sample if, after 1 yr, the parameter is less than 50 percent of the annual sample MCL.

4 - The DOD Executive Agent may reduce repeat sampling frequency to one sample if the parameter is 50 percent of MCL.

5 - Increased quarterly monitoring requires a minimum of two samples per quarter for groundwater systems and at least four samples per quarter for surface water systems.

6 - Increased quarterly monitoring shall be undertaken for nitrate and nitrite if a sample is less than 50 percent of the MCL.

7 - PWSs shall be analyzed within 1 yr of the effective date of country specific, final governing standards to determine the corrosivity entering the distribution system.

Table 10-3

Recommended Fluoride Concentration at Different Temperatures

Annual Average of Max. Daily Air Temperatures (°F)	Control Limits (mg/L)		
	Lower	Optimum	Upper
50.0 - 53.7	0.9	1.2	1.7
53.8 - 58.3	0.8	1.1	1.5
58.4 - 63.8	0.8	1.0	1.3
63.9 - 70.6	0.7	0.9	1.2
70.7 - 79.2	0.7	0.8	1.0
79.3 - 90.5	0.6	0.7	0.8

Table 10-4

Synthetic Organic Chemical Monitoring Requirements

Contaminant	Base Requirement ¹		Trigger for more monitoring ⁶	Waivers
	Groundwater	Surface water		
VOCs	Quarterly	Quarterly	> 0.0005 mg/L	Yes ^{2,3}
Pesticides/ PCBs	4 quarterly samples/3 yr during most likely period for their presence		> Detection limit ⁵	Yes ^{3,4}

¹ Groundwater systems shall take a minimum of one sample at every entry point that is representative of each well after treatment; surface water systems will take a minimum of one sample at every entry point to the distribution system at a point that is representative of each source after treatment.

² Repeat sampling frequency may be reduced to annually after 1 yr of no detection and to every 3 yr after three rounds of no detection.

³ Monitoring frequency may be reduced, if warranted, based on a vulnerability assessment by the PWS.

⁴ Repeat sampling frequency may be reduced after one round of no detection; systems greater than 3300 may be reduced to two samples/yr every 3 yr or systems less than 3300 may be reduced to one sample every 3 yr.

⁵ Detection limits noted in Table 10-10.

⁶ Increased monitoring requires a minimum of two samples per quarter for groundwater systems and at least four samples per quarter for surface water systems.

(NOTE: Compliance is based on an annual running average for each sample point for systems monitoring quarterly or more frequently. For systems monitoring annually or less frequently, compliance is based on a single sample, unless the DOD Executive Agent requests a confirmation sample. A system is out of compliance if any contaminant exceeds the MCL.)

Table 10-5

Total Trihalomethane Monitoring Requirements

Population Served by System	Number of Samples per Distribution System	Frequency of Samples	Type of Sample
10,000 or more	4	Quarterly	Treated
Less than 10,000	1	Annually	Treated

NOTES

1. One of the samples must be taken at a location in the distribution system reflecting the maximum residence time of water in the system. The remaining samples shall be taken at representative points in the distribution system. Systems using groundwater sources that add a disinfectant should have one sample analyzed for maximum total trihalomethane potential. Systems that employ surface water sources, in whole or in part, and that add a disinfectant should have one sample analyzed for total trihalomethanes.

2. Compliance is based upon a running yearly average of quarterly samples for systems serving more than 10,000 people. Noncompliance exists if the average exceeds the MCL. For systems serving less than 10,000 people and having a maximum total trihalomethane potential sample exceeding the MCL, a sample for total trihalotethanes shall be analyzed. If the total trihalomethane sample exceeds the MCL, noncompliance results.

Table 10-6**Radionuclide MCLs and Monitoring Requirements**

MCL Contaminant	MCL, pCi/L
Gross Alpha ¹	15
Combined Radium-226 and -228	5
Gross Beta ²	50
Strontium-90	8
Tritium	20,000
Radon ³	300

Monitoring Requirements

For gross alpha activity and radium-226 and radium-228, systems will be tested once every 4 yr. Testing will be conducted using an annual composite of four consecutive quarterly samples or the average of four samples obtained at quarterly intervals at a representative point in the distribution system.

Gross alpha only may be analyzed if activity is less than or equal to 5 pCi/L. Where radium-228 may be present, radium-226 and/or radium-228 analyses should be performed when activity is greater than 2 pCi/L. If the average annual concentration is less than half the maximum contaminant level, analysis of a single sample may be substituted for the quarterly sampling procedure. A system with two or more sources having different concentrations of radioactivity shall monitor source water in addition to water from a free-flowing tap. If the installation introduces a new water source, these contaminants will be monitored within the first year after introduction.

¹ Gross alpha activity includes radium-226, but excludes radon and uranium.

² Gross beta activity refers to the sum of beta particle and photon activity from man-made radionuclides. If gross beta exceed the MCL, i.e., equals a dose of 4 millirem/yr, the individual components must be determined.

³ MCL for radon is proposed to be effective in 1995.

-

Table 10-7**Total Coliform Monitoring Frequency**

Population Served per Month	Minimum Number of Samples per Month

2,270,001 to 3,020,000	420
3,020,001 to 3,960,000	450
3,960,001 or more	480

Table 10-8

Surface Water Treatment Requirements

1. Unfiltered Systems

- a. Systems that use unfiltered surface water or groundwater sources under the direct influence of surface water will analyze the raw water for total coliforms or fecal coliforms at least weekly and for turbidity at least daily for a minimum of 1 yr. If the total coliforms and/or fecal coliforms exceed 100/100 milliliters (mL) and 20/100 mL, respectively, appropriate filtration must be applied. Appropriate filtration must also be applied if turbidity exceeds 1 NTU.
- b. Disinfection must achieve at least 99.9 percent inactivation of *Giardia lamblia* cysts and 99.99 percent inactivation of viruses by meeting applicable CT values.
- c. Disinfection systems must have redundant components to ensure uninterrupted disinfection during operational periods.
- d. Daily disinfectant residual monitoring immediately after disinfection is required. Disinfectant residual measurements in the distribution system will be made weekly.
- e. Water in a distribution system with a heterotrophic bacteria concentration less than or equal to 500/mL, measured as heterotrophic plate count, is considered to have a detectable disinfectant residual.
- f. If disinfectant residuals in the distribution system are undetected in more than 5 percent of monthly samples for 2 consecutive months, appropriate filtration must be implemented.

2. Filtered Systems

- a. The turbidity of filtered water will be monitored at least daily.
- b. The turbidity of filtered water will not exceed 1 NTU in 95 percent of the analyses in a month, with a maximum of 5 NTU.
- c. Disinfection requirements are identical to those for unfiltered systems.

Table 10-9

**Monitoring Requirements for Lead and Copper
Water Quality Parameters**

Population Served	No. of Sites for Standard Monitoring ^{1,2}	No. of Sites for Reduced Monitoring ³	No of Sites for Water Quality Parameters ⁴
> 100,000	100	50	25
10,001-100,000	60	30	10
3,301-10,000	40	20	3
501-3,300	20	10	2
101-500	10	5	1
< 100	5	5	1

¹ Monitor every 6 mo for lead and copper.

² Sampling sites shall be based on a hierarchal approach. For CWS, priority will be given to: single family residences that contain copper pipe with lead solder installed after 1982, contain lead pipes, or are served by lead service lines; then, structures, including multifamily residences, with the foregoing characteristics; and finally, residences and structures with copper pipe with lead solder installed before 1983. For NTNC systems, sampling sites will consist of structures that contain copper pipe with lead solder installed after 1982, contain lead pipes, and/or are served by lead service lines. First draw samples will be collected from a cold water kitchen or bathroom tap; nonresidential samples will be taken at an interior tap from which water is typically drawn for consumption.

³ Monitor annually for lead and copper if action levels are met during each of two consecutive 6-mo monitoring periods. Annual sampling will be conducted during the 4 warmest months of the year.

⁴ Samples will be representative of water quality throughout the distribution system. Samples will be taken in duplicate for pH, alkalinity, calcium, conductivity or total dissolved solids, and water temperatures to allow a corrosivity determination (via a Langelier saturation index or other appropriate saturation index); additional parameters are orthophosphate when a phosphate inhibitor is used and silica when a silicate inhibitor is used.

Pentachlorophenol
Pesticides/PCBs
Alpha-Endosulfan
Beta-Endosulfan
Endosulfan sulfate
Alpha-BHC
Beta-BHC
Delta-BHC
Gamma-BHC
4,4-DDT
4,4-DDE (p,p-DDX)
4,4-DDD (p,p-TDE)

Table 10-11 (continued)

COMPONENTS OF TOTAL TOXIC ORGANICS (continued)	
	Aldrin
	Chlordane (technical mixture and metabolites)
	Dieldrin
	Endrin
	Endrin aldehyde
	Heptachlor
	Heptachlor Epoxide (BHC-hexachlorocyclohexane)
	Toxaphene
	PCB-1242 (Arochlor 1242)
	PCB-1254 (Arochlor 1254)
	PCB-1221 (Arochlor 1221)
	PCB-1232 (Arochlor 1232)
