INTRODUCTION

"Isotopes—An Eight-Year Summary of United States Distribution and Utilization" is a résumé of isotope utilization during the first 8½ years of the United States Atomic Energy Commission's distribution program. It is also a supplement to the Three-Year and Five-Year reports of similar title issued by the Commission in 1949 and 1951. This report has been prepared to provide a source for quick reference to the many uses of isotopes and a bibliography on published work with them, categorized by fields of use.

At the cut-off date for the Five-Year Summary (June 30, 1951) the AEC had issued 13,103 authorizations (licenses) to procure isotopes; at the end of 1954, a total of 37,155 authorizations had been issued. During this period the number of United States firms and institutions using radioisotopes has increased from 622 to 2,416. Much of the increased growth has been in industrial utilization; the total number of industrial firms using isotopes increased from 134 to 1,020.

The number of published papers involving the use of isotopes increased from around 3,000 to more than 10,000. More than 7,000 recent open-literature references on work with radioactive and stable isotopes appear in Appendix V. Some special publications of interest to isotope users are listed in Appendix I.

Before the advent of the nuclear reactor, various radioisotopes were made through the use of cyclotrons and other sources of high-speed subatomic particles. They could, however, be produced only in minute quantities, at considerable cost. Although their importance as research tools was immediately recognized, they were available to only a few investigators. The discovery of nuclear fission changed the situation dramatically. The nuclear reactor, in which Uranium 235 is fissioned through a chain reaction process, is a source of radioisotopes in quantities millions of times greater than available previously, with a much greater variety of radiations, and at greatly reduced cost.

Radioisotopes of all the ordinarily stable elements can now be produced. So diversified and extensive have been the methods of artificially transforming atoms that is it now possible to make many more radioactive forms of atoms than the number of stable ones existing in nature. Only 270-odd stable forms, the stable isotopes of 81 of the elements, are known, whereas more than 900 radioactive forms of 100 elements have already been identified, most of which are made artificially.

Radiosiotopes are produced in a nuclear reactor by either of two processes. (1) The two parts into which a uranium atom splits, during the fission process, are radioisotopes of elements from atomic numbers 30 to 64, and can be chemically separated from the remaining uranium. (2) The neutrons, which are emitted when uranium fissions, are present in tremendous numbers and produce radioisotopes from materials inserted into the reactor.

After withdrawal from the reactor, the radioactive objects or materials can often be used directly as sources of radiation. In other cases, radioisotopes can be separated chemically from the irradiated material in concentrated form.

Early in 1946, the Manhattan Engineering District established an Isotopes Branch at Oak Ridge, Tennessee, to institute a distribution program.

The first announcement of radioisotopes available under the distribution program was published in the June 14, 1946 issue of *Science*. The first shipment, a small unit of Carbon 14, was made to the Barnard Free Skin and Cancer Hospital in St. Louis, Mo., on August 2, 1946.

A chronological outline of the development of the isotopes distribution program is given in Appendix II.

Less than 6 months following the start of the distribution program, the Atomic Energy Commission took over the administration of the atomic energy project from the Manhattan Engineering District. In a comparatively short time isotopes distribution became a well-established and growing program.

During the first year of the isotope distribution program, approximately 280 radioisotope shipments were made from Oak Ridge National Laboratory to 83 institutions which used them primarily in fundamental research problems.

At the end of 5 years, approximately 19,300 shipments had gone to over 600 institutions throughout the country, many of whom had begun using the material in applied research and routine applications. More than 2,700 shipments of concentrated stable isotopes had been made. In addition to the domestic distribution, some 1,100 radioisotope shipments had gone to approximately 250 institutions in 31 countries abroad.

During the first 5 years, Oak Ridge National Laboratory made all but a very few of the radioisotope shipments. Today, ORNL remains the primary source of supply but several other AEC Laboratories now distribute radioisotopes. In addition to ORNL, radioisotopes are produced at Argonne National Laboratory, Brookhaven National Laboratory, Mound Laboratory, the National Reactor Testing Station and Hanford Atomic Products Operation.

During 8½ years of distribution, more than 63,990 shipments have gone from ORNL to over 2,400 institutions throughout the country. United States users have received, in addition, more than 3,280 shipments of concentrated stable isotopes. At the close of 1954, 46 countries outside the United States had received 3,173 shipments of radioisotopes and 21 of concentrated stable isotopes at 659 institutions. Distribution of stable isotopes abroad was not begun until July 1954.

In the early days of the radioisotopes program individual shipments averaged about 30 millicuries. At the end of 5 years the average shipment was approximately 130 mc. Today the average shipment is more than 2,360 mc.

The sharp increase in quantity per shipment in part reflects commercial participation in the processing and redistribution of radioisotopes.

The total number of isotope shipments received by ultimate users is several times greater than the quoted number of shipments from ORNL. Many commercial firms purchase radioisotopes in bulk quantities and reprocess them into such forms as labeled compounds, certified pharmaceuticals, and custom-manufactured radiation devices; thus, a single large unit of radioactivity from ORNL may represent hundreds of shipments to individual licensed customers. In addition, thousands of shipments have comprised small license-exempt quantities of radioisotopes. Such license-exempt quantities are readily exchanged between institutions and are not included in the total shipments mentioned above.

More detailed data on growth of the distribution program are contained in Appendix III. Information is furnished on increased isotope shipments and curies shipped per isotope as well as per field of study in which the materials have been used.

Several nuclear reactors are now operating and many more will eventually be built. In reactors tremendous amounts of useful radioisotopes are produced as byproducts. These are truly a great peacetime byproduct—perhaps most important of the atomic age.

Principles of Isotope Utilization

RADIOISOTOPES

Radioisotopes are useful as sources of ionizing radiations and as tracer atoms. As sources of radiation, they are utilized in much the same way as radium and X-rays; as tracers, most of their uses are unique. The fundamental principles involved may be reduced to three major types or modes of use, as shown in Figure 1.

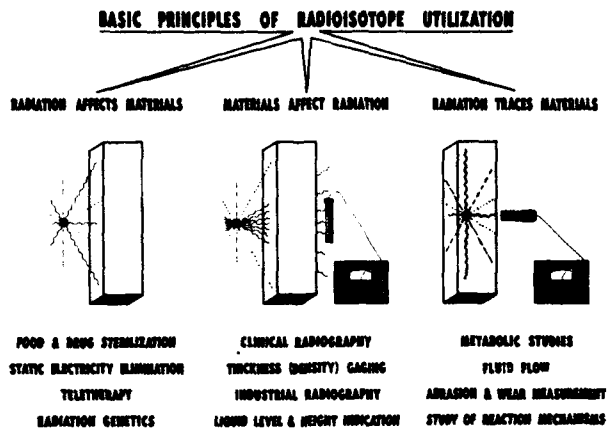

FIGURE 1.

Effect of Radiation on Materials.—In the first mode, the radioisotope is used simply as a fixed source of radiation much as radium and X-ray machines are used. There is a target material which is to be affected in some manner by the radiation. This material may be a cancer patient receiving radiation therapy, a plastic being irradiated to change its properties, or a bag of potatoes being irradiated to prevent decay; it may be the air surrounding a static eliminator or a phosphor incorporating a radioisotope which excites it to luminescence. The ability of radiation to alter a material is important in many ways.

Effect of Materials on Radiation.—In the second mode of use (fig. 1), the effect of the target material on the radiation furnishes information about the material. Here the application is based on measuring the radiation which penetrates or is reflected from the material. The radiation-detection device may be a counter or a photographic emulsion, depending on the application and type of information desired. This is the mode of use in medical radiography when a radioactive source replaces X-ray equipment. In industry it provides an ideal setup for testing purposes and is the basis for most radioisotope applications in product control. Examples of such applications include measuring the thickness of a moving sheet of metal, radiographing the internal structure of a piece of equipment or a casting, and measuring the liquid level in a closed container.

Tracing Atoms Through Their Radioactivity.—In the third mode of use (fig. 1), the radioisotope serves as a tracer to follow the complicated course of individual batches of atoms in physical transfer or chemical or biological reactions. To date this is the most important use of radioisotopes. Radioisotopes are incorporated into the materials of interest, rather than used as fixed sources of radiation physically removed from them. The radiosiotope used in a tracer serves as a tag or label which reveals the presence and identity of the material whether it is involved in a physical or mechanical transfer or in a chemical or biochemical reaction. The material labeled and traced may be water running through a pipe to an underground leak, sugar being utilized in a human being, a raw product for milk production in a cow's body, or an atom transferring from one kind of molecule to another in a chemical reaction.

Radiocompounds*

In many tracer studies isotopes must be incorporated directly into special complex compounds. For example, carbon, one of the major elements in plant and animal systems, is primarily of interest as part of a complex molecule

*The prefix "radio-", denoting radiation, was used by Marie Curie, in 1898, when coining "radioactivity". It has been extended to "radioisotope" and to radioactive elements (radiogold) and substances containing them (radiocompounds, radiocolloid).

such as an amino acid or carbohydrate. Radiocarbon, therefore, is often useful as a tracer only if it is first incorporated into the specific compound to be studied. In many instances it is also necessary to know the exact location of the radioisotope within the molecule, that is, to know which of the atoms within the molecule is labeled. The radioisotope will serve as a true tracer for a compound only as long as it remains part of the molecule. On the other hand, the same tracer atom can often be used to identify a second molecule formed from the first in a chemical sequence.

Isotope-labeled compounds may be prepared either by chemical or biological synthesis. To date nearly 1,000 labeled compounds are known to have been synthesized. Of these more than 500 have been synthesized by chemical means, that is, by procedures similar to those used in preparing the nonradioactive form of the same compound. Some complex labeled compounds which cannot be prepared by ordinary chemical procedures may be synthesized by the biochemical processes of animals and plants. Radioisotopes which have been injected into or fed to an animal may subsequently be extracted from the blood, urine, or tissues as part of complex organic compounds. Isotope-labeled compounds may similarly be extracted from plants.

Several hundred such compounds have been prepared by biological synthesis. The growth of isotope use, especially in the biological fields, will depend to an increasing extent on the availability of a wide variety of labeled compounds.

Detection of Radiation

The useful radiations from radioisotopes are mainly of four types: (1) Alpha particles, identical with the nucleus of a helium atom, are emitted chiefly by isotopes of the heavier elements. They produce intense ionization but have very little penetrating power. (2) Beta particles, identical with negative electrons, have less ionizing power than alpha particles but are much more penetrating. (3) Gamma rays are highly penetrating electromagnetic radiation and do most of their ionizing by means of high-speed electrons they eject from atoms. X-rays are emitted from atoms by a different process but are otherwise identical with gamma rays of the same energy. (4) Positrons are similar to beta particles and have similar ionizing power but are positively charged. They are encountered less frequently than the other types of radiation.

These radiations are detected through their effects on material. Radiation which passes through a material disrupts many of the molecules, producing positively and negatively charged fragments called ions. This ionization is revealed by either the electrical effects or recombination effects of the ions.

The radiations are most commonly detected and counted with sensitive electronic instruments such as geiger counters or scintillation counters. When a particle of radiation enters a geiger counter, it ionizes a gas and thus triggers an electrical discharge. The resulting tiny current is amplified to produce a signal seen, heard, or mechanically counted.

In a scintillation counter, the particle produces a minute flash of light in a liquid or crystal as the disrupted molecules give off energy in recombining. A light-sensitive device converts the flash to a tiny current which is then amplified.

Sensitivity and Specificity of Radioisotopes

Radioisotopes permit materials to be traced in minute quantities—a millionth to a hundred-millionth of the amount detectable by other means. It is easy to detect radiation from isotopes diluted with a billion or 10 billion times as much nonradioactive material. Some isotopes are still detectable after dilutions of more than a trillion.

This means that it would be possible to detect one hundred-millionth of an ounce of radioactive material dispersed, for example, in a 1,000 pound cow.

Even more important than sensitivity is the specificity of radioactive tracer atoms. They can label a specific batch of atoms and enable it to be traced through a series of chemical or physical processes. The labeled atoms can be traced in spite of multiple reactions with numerous other atoms or molecules. This permits the sorting out and untangling of complicated processes which can be followed in no other way. Tracer atoms are, therefore, unequaled

for studying complex chemical or biological processes.

The sensitivity of radioisotope detection, the specificity of the tracer method, and the unique radiation characteristics of individual radioactive species, permit radioisotopes to be used as powerful analytical tools in at least three major ways. These may be referred to as "tracer analysis," "isotope dilution analysis," and "activation analysis."

Radioisotopes as Analytical Tools

Tracer analysis constitutes perhaps the simplest type of tracer application. It is designed to follow the fate of a radioelement or radiomaterial from one stage to another of a reaction or a process. It is primarily useful in determining the distribution of a specified material in a variety of end products. The techniques may be either qualitative or quantitative. They can give information as to "what, when, and how" or can tell "how much." In either case, the advantage is that the determinations can be made at a concentration far below those permitted by other methods. The analysis frequently involves chemical separation of the material at a chosen stage of the process. Measurement is then made of the radioactivity in the different separated fractions.

Isotope dilution analysis is a modification of tracer analysis. It is particularly suited for determining the amount of a substance which is present in a process or system at a concentration too low to be measured by chemical or other methods or which cannot be separated from the other materials for separate measurement. The technique is based on putting into the system a small, known amount of radioactive (labeled) substance similar to the unlabeled substance to be measured.

After a period of mixing, the ratio between labeled and unlabeled substance is the same throughout the system and can be measured with a counter in a sample withdrawn for test purposes. The amount originally in the system can then be computed from its ratio to the known amount added.

An isotope dilution analysis can be likened to a method used by some investigators for estimating the number of fish of a certain kind in a pond. One hundred catfish, for example, can be released into the pond with clipped tails as labels. After sufficient time for thorough mixing of the fish, a sample can be taken with a net. If 100 catfish are removed, 10 of which are marked, it can be assumed that the catfish have been diluted to a ratio of 10 to 90, or 100 labeled to 900 unlabeled. Thus there were 900 catfish already in the pond.

Activation analysis can be used to identify and measure an unknown element in a sample or to determine the concentration of an element known to be in the sample. This is accomplished by exposing the sample to neutrons, as in a nuclear reactor. Some of the atoms of each element present are made radioactive, and those with suitable radiation characteristics can be identified. The technique can either be qualitative or quantitative. It is particularly useful when the concentration of an unknown element is too low to be identified by chemical or spectroscopic methods or where standard methods of analysis are not satisfactory because of interfering contaminants. Examples of applications suited to activation analysis include the determination of minor elements in animal tissue, garden products, and minerals.

STABLE ISOTOPES

Stable isotopes are also valuable as tracers, and their use has led to many important scientific discoveries. Most elements have one or more stable isotopes, which exist in fixed proportions in the element as found in nature. The natural proportions may be changed by increasing the relative abundance of one of the isotopes in a sample of the element. Such a concentrated stable isotope can be followed in a system by taking samples and observing the changes produced in the relative abundance of the isotope as normally found in the system. The isotope's abundance is determined with a mass spectrometer, which sorts out the isotopes of various weights. This method of tracing

342334—55 — 2

atoms is valuable and has found considerable use, but it is not as versatile or as sensitive as the use of radioactive tracers.

Radioactive and stable isotopes have proved especially beneficial in medical and biological research, medical diagnosis, medical therapy, agricultural studies, chemical and physical research, and industrial applications. Their usefulness in each of these broad fields is discussed in the following sections.

Medical and Biological Research

No other field has benefited as profoundly from the ready availability of radioisotopes as the life sciences. As tracer atoms these new tools are so uniquely suitable to solution of problems in this field that they seem almost to have been created for the purpose. Body processes, in sickness and in health, are fundamentally chemical but are carried out on such a dynamic, complex, and microscopic scale that they frequently defy ordinary chemical procedures in their study. Even the sensitive techniques of microchemistry are often too crude and slow to analyze biological processes.

Tracers of various kinds were used in biological studies before the advent of radioisotopes. Dyes can be used in some cases to follow a material and reveal its presence. Peculiar groups of atoms can be joined to molecules of a compound to identify it in later chemical tests Such tracers can follow dynamic processes but have two important defects: (1) they are different from the material they trace so that there is no assurance they follow the same chemical pathways and (2) where the traced material is greatly diluted during a process, so much of "foreign" tracer must be used that it affects the process itself.

The reason for supremacy of radioactive tracers is thus apparent. They correspond in size and kind to the things they trace. They are not foreign or chemically different. Indeed, they are not *added* to a material—they *are* the material or a true part of it. A molecule of vitamin B–12 is exactly that compound whether it has its cobalt atom in a stable or in a radioactive form, and the body treats it exactly the same. Radioisotopes, therefore, are "natural" tracers and, as far as biological processes are concerned, are no different from other atoms except in their ability to send out signals to identify their presence. These signals are the radiations which can be detected by instruments as previously mentioned.

Except for the important elements oxygen and nitrogen, useful radioactive forms are now available for most elements which enter into biological processes. Sodium, for example, is important in body fluids and tissues and is easily traced by means of its radioisotope, Sodium 24. In one type of application, illustrated in Figure 2, a solution of common salt, or sodium chloride, is labeled with this isotope and injected intravenously. Transfer of sodium to various body sites is then traced and measured by means of the Sodium 24 gamma rays.

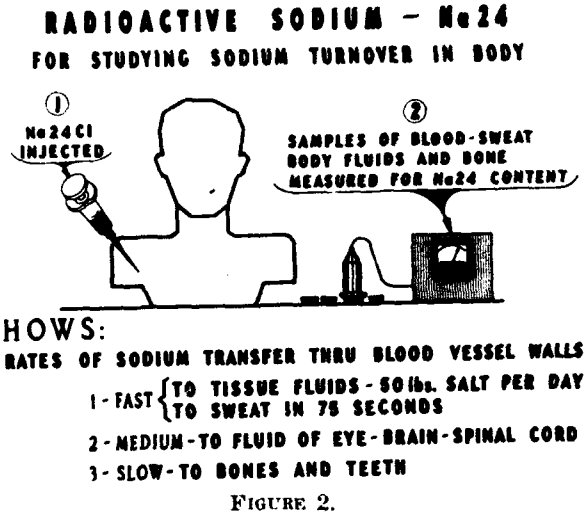

FIGURE 2.

The speed of this transfer and incorporation into body compounds well illustrates the extremely dynamic quality of life processes. Only a few seconds are required for the blood stream to carry the sodium from one arm, through the heart and lungs, and into the other arm. In another type of study, the conversion of injected radiocarbon-labeled acetate into labeled carbon dioxide is found to start almost immediately. The radioactivity in the exhaled breath reaches a peak in about 15 minutes.

Often it is necessary to trace a certain kind of molecule or part of a molecule rather than particular atoms. To meet this need, a growing assortment of hundreds of organic molecules have been provided with radioactive replacements for one or more of their atoms. These tracer compounds, purchased from commercial processers or synthesized by the researcher himself, include such materials as proteins, sugars, amino acids, vitamins, and hormones. With so varied an array of research tools at his

command it is not surprising that the biologist has been able to find answers to many perplexing problems of his science. For many of these problems, radioisotopes provide the first key to a solution.

If the human body were always perfectly healthy, interest in its intricacies would be academic. But, because things go wrong with its structure and processes, it becomes of prime importance to know all that can be learned about it. The body is an exceedingly busy chemical laboratory. It is continuously processing raw material into products suitable for use in building or repairing its parts, or for storage until they will be needed. Food molecules are broken down and their energy is applied to muscle action and other functions. To keep the processes running efficiently, an intricate control system of checks and balances must stay in good working order. This regulatory function is performed primarily by hormones secreted into the blood stream by various glands. Some hormones increase the rate of certain processes and others counteract them if they overcontrol. Still other substances destroy certain hormones if too much is secreted, or stimulate certain glands to overproduce when necessary. Not only rates of reactions but also such things as body temperatures, fluid pressures, and chemical concentrations must be kept within very narrow limits.

In view of this complexity and the many possible changes produced by disease or accident, the need for intense study is immediately apparent. To recognize, understand, and treat abnormal conditions, medical men need to know what is normal, to understand details of processes in the healthy body. Some are so complex that only through radioisotope tracers has any success in unraveling them been achieved.

The cells of the body themselves are the "test tubes" in which most of the chemical processes are carried out. The work of recent years has made this fact clear and much of the research is now being done at the cellular level. Three main subjects are being pursued in this work: (1) the fate of normal metabolites, (2) the action of drugs, and (3) the action of injurious agents.

FATE OF NORMAL METABOLITES

Isotope tracer techniques are being widely employed in studies of the normal chemical activities, or metabolism, of the body. Metabolites, those substances which are essential to these processes or are produced by them, are being labeled and then traced by various techniques.

Calcium Metabolism

Of the 92 natural elements, 15 or 20 are known to be essential to life processes. Most of these have been used in tracer studies designed to show their normal metabolism in the body. For example, radiotracer studies showed that nearly 90 percent of injected calcium concentrated in the bones of young animals; in the old the bone uptake was about 40 percent. Dietary factors have been found which reduce the amount of calcium available to the body. This action may possibly be of value in treating certain diseases. Even more effective is the compound ethylenediaminetetraacetic acid, which has a great affinity for the calcium and tends to remove it from the body.

Protein Metabolism

A large part of the work with metabolites is motivated by the hope of cancer control. If differences can be found between the needs of cancer cells and those of normal tissue it may be possible to retard or prevent the growth of one without seriously affecting the other.

Protein metabolism, because of its fundamental role in life processes, is receiving the greatest share of attention. In a typical study, the essential compound glycine was labeled with Carbon 14 and injected into normal rats and rats with liver tumors. The rats were then sacrificed after various intervals of time so that metabolism was stopped at various stages of completion. The tumors and normal liver tissue in each case were then broken down chemically and the many intermediate compounds, the amino acids which lead to the eventual building of body protein, were separated. The radioactivity of each fraction was measured; any activity demonstrated that the particular

fraction contained parts of the original glycine molecules. From the way in which the C–14 activities varied from one stage of completion to another the experimenters could draw up a "flow scheme" of glycine metabolism. As in almost all such metabolism studies, the same general scheme was found in both normal and cancer tissue although significant differences occurred in the relative importance of some of the steps.

Nucleic Acid Metabolism

Nucleic acid-protein combinations, the nucleoprotein molecules, are the essential material of cell nuclei, including the chromosomes. Nucleic acids, therefore, are fundamental to the life of the cell and to heredity, and the step-by-step processes in their production have received as much attention as those in the case of protein. In general, the same types of tracer techniques are applied to the two; these will be discussed further in relation to anti-metabolite drug action.

Citric Acid Cycle

Tracer techniques have also been used in studies of the citric acid cycle. This cycle, a normal part of cell chemistry, was formerly thought to be missing in malignant cells. However, since C–14-labeled carbon dioxide was found to be given off and citric acid to be produced by such cells when fed C–14-labeled carbohydrates and fatty acids, it was proved to occur in them also.

Hormone Metabolism

Radioactive tagging of various hormones which are known to play an important role in the body has contributed greatly to their understanding. Since a small injected quantity mixes with the same substance produced by the glands, it is possible to find how the body treats its own regulators. In the system of checks and balances, mentioned earlier, the hormones stimulate various chemical processes but, at least in some cases, are continually being destroyed by enzymes which control their amount. Enzymes may, in turn, be controlled in their action by other interfering substances.

The mechanism by which the body controls the insulin hormone is being studied with Iodine 131-labeled insulin. An enzyme-like system in the body, called insulinase, breaks down the insulin molecule. By injecting labeled insulin into mice and then measuring the radioactivity of the breakdown products in their livers, it was found that 1 percent of the insulin is destroyed every 2 minutes during at least the first 2 hours. This destruction must evidently be taken into account in any consideration of diabetes control.

Further study has shown that the liver contains an insulinase inhibitor, an enzyme antagonist, which reduces the destruction by about 78 percent when injected a half-hour before the insulin. Thus, it seems that a balance is normally maintained between the production of insulin and its controlled destruction. If production is low or destruction too rapid, the supply of insulin drops and a diabetic condition develops. The insulinase inhibitor tends to maintain the supply, but whether this substance will be effective as a treatment in diabetes must be determined by clinical trials.

Insulin is necessary in the metabolism of glucose, the form in which most food is absorbed into the blood stream after digestion. Without it the final step of converting sugar to energy or stored fat does not take place. The exact site of the insulin action has not been determined but recent studies with radiocarbon suggest that the hormone helps to transfer glucose through the cell walls and into the cell where it is actually used.

Information is gained in this particular line of research both by labeling insulin and by labeling substances it acts upon. Radioisotopes provide a two-way tool in this respect and permit very effective dual attacks on many similar problems in cause and effect.

A rapid method for measuring pepsin activity in the digestive system would be of benefit to clinical studies of this enzyme in pernicious anemia and cases of gastric ulcer. The breakdown of serum albumin by pepsin, during digestion, produces certain products which can be chemically separated after excretion. After an oral tracer dose of C–14-labeled serum, the

amount of these breakdown products, and thus the pepsin activity, can be determined by counting their C–14 radiation. This method in being developed and may prove of diagnostic value.

Iron Metabolism and Red Cell Life

A large and important number of man's diseases are those which affect that most important tissue, the blood. Among these may be mentioned anemia and the cancer-like conditions leukemia and polycythemia vera. The advent of radioactive iron has provided an entirely new and powerful means of studying the production and makeup of blood, both in health and disease, because of the essential role of iron in the blood constituent, hemoglobin. About 65 percent of the body's iron is in the hemoglobin of the red blood cells, 25 percent is stored in special cells of the liver, spleen, and bone marrow, and 10 percent is an essential part of other tissues. Thus, nearly all of an administered dose of radioiron will appear in the blood and blood-forming organs and can be traced over extended periods by means of gamma rays it emits.

Two types of measurements are used. Blood or marrow samples can be taken for detailed analysis, or the activity at a particular site can simply be found with an external counter. The first method is usually used for measuring plasma clearance rate, the rate at which iron carried by the blood plasma from the digestive tract is used up in red cell formation or is stored for future use. The second method gives information on the rate of uptake in a particular organ or tissue.

The iron isotope Fe–59 was used in this way, for example, in a study of red-cell production in persons suffering from polycythemia vera, a disease characterized by over-production of red blood cells. About a tenfold increase in the use of iron was found in such cases, considerably larger than could be accounted for by the increased cell count. In further study, with C–14-labeled glycine, the change of activity in the hemoglobin over a period of time indicated that short-lived cells were being formed in addition to the normal ones of 120-day life. The rapid turnover of these cells seemed to require the large amount of iron which had been a puzzling factor in this disease.

Shortened red-cell life was also found to be the cause of the anemia which so often occurs in cancer cases. Such anemia had usually been attributed to reduced production caused by suppression or replacement of red-cell-forming bone narrow by the malignant growth. However, radioiron tracing showed that red cell production was actually increased in the majority of cases, and that the net loss was due to more rapid death of the cells.

Bone marrow is the primary site of red blood cell production. Tracer studies with radioiron show, however, that in some polycythemia patients the spleen produces an excess of the red cells. By means of a counter directly over the spleen, as indicated in Figure 3, the accumulation of iron by the normal spleen is found to rise to a modest volume soon after administration and then to decrease slowly as the iron is metabolized. The uptake in polycythemia, on the other hand, is seen to be abnormally high and rapid because of the greater use of iron in red cell production.

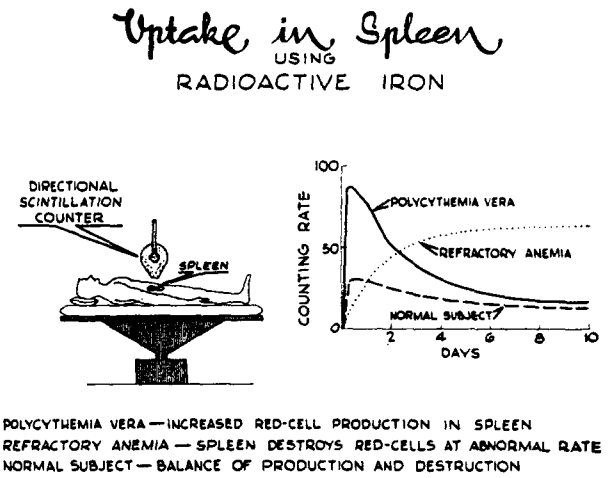

FIGURE 3.

The case of severe refractory anemia is seen in Figure 3 to be quite different in its prolonged uptake and high retention of iron. This reflects the destruction of red blood cells by the spleen, with retention of the breakdown products. Information of this kind can be quite useful inasmuch as removal might be indicated for a spleen which destroys red cells excessively but not for one operating as chief supply of the cells.

Red blood cells are continually being produced and destroyed and knowledge of their

survival time is frequently of great importance. Both radioiron and radiochromium tagging of cells persist throughout the cell lifetime, so that the rate at which redioactivity in the cells decreases with time measures the rate of cell destruction. For example, the technique of blood transfusion has been tremendously improved by development of better storage methods and ways to prepare, ship, and administer whole blood and blood fractions. At the same time, synthetic blood expanders have been developed for emergency replacement of blood plasma. Throughout this work, effectiveness as to preserving the usefulness of the blood for the receiving patient has been evaluated by the survival time of isotope-labeled blood cells.

While a donor's red blood cells survive and perform normally in the recipient's system, the white cells still present a grave problem. Even when transferred directly from the veins of the one to the other, the white cells, as is determined by Phosphorus 32 labeling, are rapidly trapped in the lungs. Indeed, if a large number are transfused, they begin to interfere with lung function. Thereafter they are transferred to the liver but in a fragmented condition. The transfused white cells are thus unable to perform their normal work of resisting disease. This is particularly unfortunate where the recipient's own white cell production has been curtailed, and it is hoped that techniques may soon be developed to permit survival of the cells.

The ability of radioisotopes to trace fluid flow within the body has been valuable in studies of brain circulation. The rate of uptake of a tracer by the brain is a function of the blood flow rate and, with the use of a gamma-emitter, can be determined with an external counter. Various radioisotopes and labeled compounds have been used in this way in determining brain circulation in senile psychoses, cerebral palsy, and epilepsy. Similar studies are leading to better understanding of coma, sleep, anesthesia and, most recently, of pilot blackout during supersonic flight.

Cholesterol Metabolism

A very important part of the contribution by radioisotopes to medical research is being made in studies of cholesterol and its role in arteriosclerosis. This disease has been said to cause more deaths than any other and to be the most important problem in preventive medicine. The loss of elasticity and the thickening of arteries and capillaries which characterize this condition are caused in part, at least, by the deposition of cholesterol in fatty accumulations on their inner surfaces. This substance, sometimes waxy and at other times strikingly crystalline, occurs in every cell of the body and seems to serve as raw material for some of the hormones, bile acids and other essential compounds.

The many tracer studies of cholesterol metabolism are adding bit by bit to our knowledge of this puzzling substance. C–14-labeled acetate fed to rats soon results in the appearance of C–14-cholesterol in many tissues of the body, mostly in the blood and liver. Rates of rise and fall in C–14 activity at the various sites give clues to its production and travels. The rise in activity in blood is found to be later than in liver; this and other considerations show that liver is the site of blood cholesterol production. Rats given a heavy dose of X-rays, before an injection of C–14-acetate, are shown by the tracer to produce cholesterol in the liver at three times the normal rate, a result in accord with other cases of liver damage.

Tracer techniques in such studies are an adjunct to the chemical procedures, of course, rather than a replacement. But as such they give valuable information as to origin of substances whereas chemical tests merely demonstrate their presence. The very high level of cholesterol in the blood of a certain patient with almost complete loss of thyroid function, for example, was naturally thought to be due to an abnormally high production rate. No activity could be found in the blood, however, after a tracer dose of C–14-acetate, showing that cholesterol was in fact not even being produced to a measurable extent. The high level was thus shown to be caused by a defect in cholesterol breakdown and disposal.

Another study with C–14-acetate demonstrated that in the case of cholesterol, as with many other metabolites, the body does not bother to produce a substance if it is supplied

in the diet or otherwise introduced. Dogs fed a high-cholesterol diet showed practically no liver-produced cholesterol in the blood.

If cholesterol in the diet is labeled it can be traced unchanged into the blood. There a portion remains free in the plasma while others are incorporated into red blood cells or are chemically changed in the plasma. When tritium-labeled cholesterol was fed to normal persons and to patients with arteriosclerosis, the tritium activity in the blood fractions was found to be quite different in the two cases. As shown in Figure 4, the concentration of activity in the free cholesterol was normally higher than in other fractions making up the total. In arteriosclerosis it was lower. The hope is that this type of test may lead to the early diagnosis of the disease.

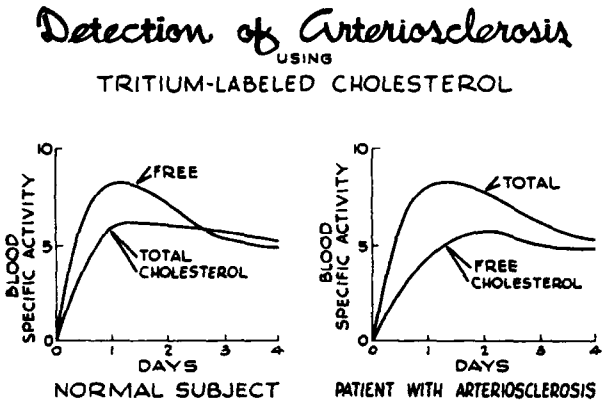

FIGURE 4.

ACTION OF DRUGS

Tracer techniques are also being used in determining the fate and action of materials not considered to be normal metabolites. These include the vast array of medications in common or occasional use, the long list of compounds being tested for possible effectiveness in various diseases, particularly in cancer studies, and substances accidentally introduced into the body.

Anticancer Agents

The intense interest in protein and nucleic acid metabolism, as mentioned before, stems in part from the possibility of exploiting differences between cancer and normal cells. If withholding a substance were found to be more harmful to the "well-being" of malignant tissue than of normal tissue, the former could possibly be starved. Or if the blocking of a step in the metabolic process were especially harmful to the cancer cells, a similar result should be obtained. A third possibility is seen in case a particular material is used to a greater extent by cancer cells; supplying the material in radioactive form would cause the cells to be irradiated from within and might lead to their destruction.

Of these three possibilities, the first has not yet been realized and the third, despite many trials with different radioisotopes and radiocompounds, has proved to be effective only in the case of Iodine 131 in some thyroid cancer. The remaining possibility, drug therapy or the chemotherapeutic approach, has received a great amount of attention in recent years. While most of the work has been done with experimental animals, it has been possible to extend the experiments to clinical trials with certain drugs.

The building process is considerably faster in malignant than in normal cells and so an impairment of nucleic acid synthesis can result in greater harm to cancer and to leukemic blood cells than to healthy tissue. Many of the chemical reactions in metabolism are made to proceed by enzymes. Hope, therefore, lies in the fact that a step from one intermediate product to another can be blocked by interfering with the particular enzyme. The drug amethopterin has received most attention in this respect because of its anti-enzymatic action and its resulting therapeutic effect in certain leukemias. This type of action is indicated in Figure 5. The drug seems to block the conversion of folic acid to an enzyme which is essential in the step from certain intermediate building blocks to forerunners (precursors) of nucleic acid.

A basis is thus established for chemotherapy of cancer. Radioisotope-labeled metabolites have been widely used in determining metabolic effects in extended trials of other possible anticancer drugs. It has been found that simultaneous use of two drugs can be particularly effective if they block enzymes at different

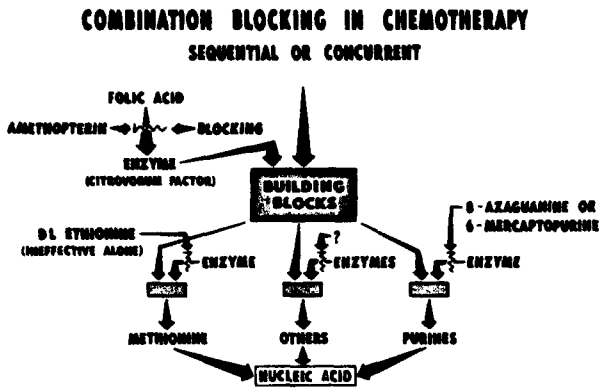

FIGURE 5.

points in the same metabolic pathway, as indicated in the figure. Concurrent use of two or more drugs can also overcome a drug resistance, acquired against any one of them, by blocking other necessary pathways.

It has been found that separated white blood cells, the leukocytes, can be used outside the body as an experimental medium in tracer studies of protein and nucleic acid metabolism. Differences in metabolism occur, depending on the origin of the cells, and amethopterin is found to have its usual inhibitory effect. A study is being made in which this and other drugs used clinically, especially in leukemia, will be tested on the leukocytes. If it should develop that a leukemic person's white cells in a test tube react metabolically to drugs in the same way and to the same extent as the person himself, a clinical method may evolve for selecting the best drug for treating a given patient.

The search for effective anti-cancer agents is made more difficult by the diversity among cancers themselves. Differences between types are frequently more pronounced than between some of them and normal tissues. Tracer methods are helping to bring order to this complex problem. In a typical study, mice bearing different types of malignancies were injected with various drugs known or suspected to have an effect on tumor metabolism. Labeled metabolites, known from other tracer work to be involved in the metabolic chains of reactions leading to protein, were then administered. The distribution of radioactivity later found in separated metabolites from the tumors then showed the relative blocking effect of the drugs on the different reactions and best drugs for the different tumors.

Among the host of drugs, other than anti-cancer agents, which have been isotopically labeled and traced in action, may be mentioned antibiotics such as penicillin, the sulfa drugs, alkaloids such as digitalis and morphine, sugar substitutes, and hypnotics such as pentothal and the barbiturates.

ACTION OF INJURIOUS AGENTS

Tracer techniques with radiosotopes permit detailed study of the effects of many agents causing actual bodily harm. Harmful substances or organisms can be labeled and then traced in experimental animals or in man himself. In addition, tracer methods can be applied to studies of the processes which are interfered with in the body.

Carcinogens

Many investigations have been made on substances known or suspected to cause cancer. Certain organic and inorganic compounds have long been known to induce cancer formation. In fact, some have been used experimentally to produce tumors in animal studies and to study cancer genesis and metabolism in general.

An outstanding class of these compounds is composed of various hydrocarbons, certain coal-tar products in particular. In a typical tracer study of these compounds, C–14-labeled dibenzanthracene was applied to the skin of mice. After a short time, the compound or one of its products, as identified by its radioactivity, was found chemically bound to protein in the skin cells. Other hydrocarbons known to produce cancer have similarly been found to unite with cell protein in various tissues of the body and this action is thus thought to be important to their effect.

One carcinogen in particular, 2-acetylaminofluorene, gives rise to cancers of different cellular types and in a variety of tissues remote from its point of entrance into the body. The ability of chemists to label selected parts of a molecule is being applied to this compound so

that each part in turn can be traced. As it is broken down in the body, the parts are traced to determine their individual distribution. It is hoped that a correspondence between the pattern of cancer distribution and that of the compound or one of its products may show which substance is the actual cause of the growths.

Radiation Damage

Radiation damage is a comparatively new hazard to man's well-being, starting with his first use of X-rays and radioactivity at about the turn of the century. A gamma or X-ray or a high-speed nuclear particle disrupts the molecules in its path. Chemical substances are produced which destroy the normal metabolic processes within the cells and may lead to their death. Studies of this action are important not only in devising ways to combat or forestall radiation damage but also in using and controlling it in medical therapy. Practically all the tracer studies conducted in other lines of medical research have been repeated in investigating the metabolic changes induced by radiation.

Some of the molecular fragments produced by radiation prevent normal cell processes by oxidizing and thus altering the components. Damage is greatly reduced by the addition of substances, such as cysteamine, which strongly compete for oxygen. Administered to a patient about to be given a therapeutic dose of X-rays, for example, such medication may greatly reduce the general damage to the system which might otherwise result.

Other Injurious Agents

The tracer technique has been applied in studies of a great many other damaging agents. The most important members of this category are, of course, the germs and viruses. These have been labeled and traced within the body to determine their distribution in relation to the onset of disease processes. Tracer studies of the processes they alter, the other side of the dual approach mentioned before, have increased our understanding of some diseases and aided in planning for their control.

Allergies have been investigated through the use of radioisotopes. In the case of ordinary ragweed pollen, for example, the injurious agent was tagged by growing the ragweed plant in an atmosphere of C–14-labeled carbon dioxide so that the entire plant, including the pollen, became radioactive. Differences could then be traced in the pollen's action in sensitive and nonsensitive patients.

The profound changes induced by toxicants and poisons have been traced in metabolic studies and, where the agent itself is labeled and traced, the extreme sensitivity of the technique allows positive results with minute, unharmful amounts of the material.

MISCELLANEOUS STUDIES

The lines of research which have been individually mentioned are, of course, only a representative few of the vast number under way. Practically every phase of human physiology and pathology has derived benefits from the radioisotope techniques in research. Brief mention may be made of a few other areas of study.

Since most of the body consists of fluids of various sorts, much of the research on normal and disturbed body functions relates to fluid volumes, flow, and transfer through cell and tissue walls. The availability of radioactive tracers is particularly fortunate for this type of study. The volume of a fluid can be found by the isotope dilution technique as previously described. Flow is easily measured by timing the arrival of a bit of tracer material at different points of a system, and drainage from tissues by noting a decreasing radioactivity at the area of interest.

Most of the body chemistry is dependent on membrane permeability to certain substances. For example, substances unwanted in particular reactions, as in a cell, are refused entrance while others can enter only at rates best suiting the reaction process. The ability of a substance to pass through a membrane, and the rate of passage, can be found by adding a radioactive tracer at one side and noting the arrival of activity in the otherwise exactly similar substance on the other side. Frequently radio-

active tracers furnish the only method for making such determinations.

Figure 6 is indicative of this type of study, and illustrates the nicety to which potassium and sodium ions, in and around a nerve cell, are normally kept at their respective relative concentrations. Recent studies show that these ions, as they enter and leave, produce the minute electrical impulses associated with the functioning of the nervous system. The quantities involved are so small, a few billionths of a gram of ions per impulse, that only the radioactive tracer technique could have determined them.

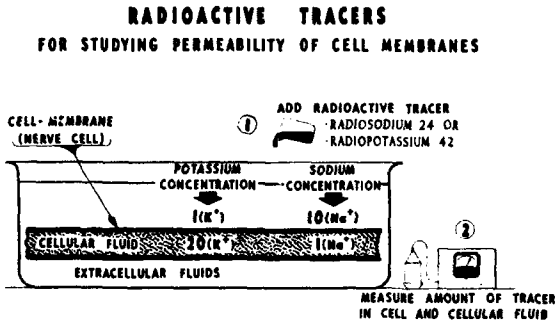

FIGURE 6.

Radioactive potassium has also been used to demonstrate that the potassium ion is related to muscle function. Muscle cells affected by muscular dystrophy, for example, have been found unable to retain the normal amount of the ions.

In tracer studies of permeability to pure water, only the oxygen atom or one or both of the hydrogen atoms can be used as a label for the H_2O molecule. No convenient oxygen isotope is available but the isotopes of hydrogen—stable deuterium and radioactive tritium—have been used for this purpose. A study has been made of the rate at which water normally enters the blood stream from different parts of the digestive system, using deuterium as a tracer. Measurements of the changing deuterium concentration in the blood showed that 95 percent of water in the stomach enters the blood in 54 minutes, while absorption from the small bowel amounts to 95 percent in only 10 minutes.

Radioactive tracing has frequently been ranked with the microscope in importance to biology and medicine. It is therefore to be expected that the two, in combination, would provide a particularly powerful research tool. In tissue autoradiography, illustrated by Figure 7, the distribution of a radioactive substance

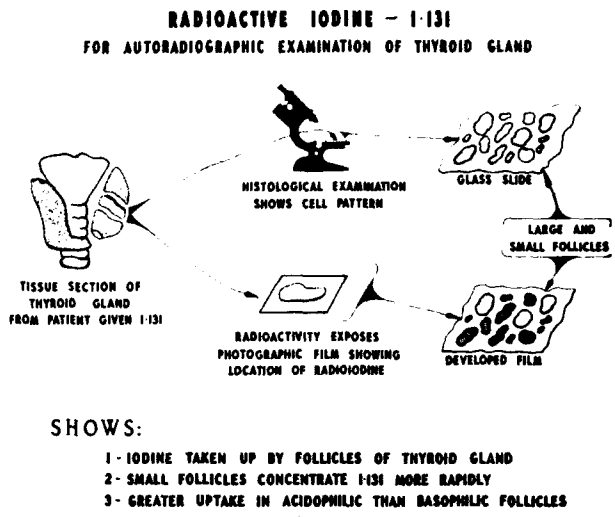

FIGURE 7.

among the cells, and even among the parts of a single cell, can be seen. In a typical application of this technique, a photographic emulsion is placed against a section of tissue which has been surgically removed from the body, after a labeled material has had time to attain its characteristic distribution. The emulsion becomes exposed by the radiation wherever the radioisotope occurs. By examining with a microscope the developed emulsion and the cells themselves, or by comparison of enlarged photographs of the two, the investigator can relate the traced material to particular cell structures.

Color may perhaps be added to autoradiography through an extension of this technique under development. The new concept involves the differential absorption of the radiations from different isotopes by color film. It is hoped that this will allow simultaneous tracing of two or more tagged substances. Radiations of different types and energies have been found to penetrate and expose the layers of three-layer color film to different extents, and thus to produce differently colored images. Carbon 14, Calcium 45, Sulfur 35, Phosphorus 32, and

Iodine 131 were found to give characteristic colors ranging from red-blue through yellow to white.

ANIMAL AND PLANT STUDIES IN MEDICINE

Medical research gains much benefit from animal and plant studies and in many ways is directly dependent upon them. Life processes are quite similar wherever found, chiefly because of the universal occurrence of the cell as a fundamental building block which can grow by division into others of its kind. Radioactive tracers have found widespread use in these parallel sciences, and many of the results obtained have been of profound importance to medicine.

As our understanding of metabolic processes continues to grow, through modern research methods, the closeness of this parallel becomes even more apparent. As an example, the present need to synthesize a better artificial rubber molecule has renewed the interest in Nature's successes along this line. From tracer studies of the plant chemistry involved in the building of the molecule from labeled acetate, a close correspondence has been found between rubber synthesis in plants and cholesterol synthesis in man.

The studies of concern to agriculture and animal husbandry are discussed in the section on agricultural studies below. Of chief interest here are those investigations involving life, at its various lower levels, which have medical

The ultimate experimental animal is, of course, man himself and, after judicious trials on human subjects, a great portion of the research has left the laboratory to become a part of clinical diagnosis and therapy.
strains of rats and mice provide the statistics where mammalian tissues and systems are required, and cats, dogs, and monkeys where organs and general physiology even closer to the human are of interest. Finally, where a system comparable in sheer size to man himself is needed, burros are given radiation doses or other treatment under study.
small animals or microorganisms; (3) genetically pure strains, unobtainable in man, are usually needed to avoid unknown heredity factors; and (4) much smaller amounts of a possibly very expensive tracer preparation need be used in smaller biological systems.

The fundamental processes in cell metabolism occur in microorganisms as well as in man, and much of the tracer work in determining the precursor-product schemes is done, for example, with bacterial and yeast cultures. Laboratory implications. Man is not expendable and, for a number of reasons, lower animals are usually used to take his place, at least in the early stages of an experiment. Four of the reasons may be mentioned: (1) effects may be harmful; (2) need for statistical accuracy calls for repeated trials, and sometimes generations, in tens and even thousands of cases, thus dictating the use of

Medical Diagnosis

In medical diagnosis, as in research, radioisotopes furnish a powerful means for gaining knowledge of body processes. Hundreds of hospitals consider them as part of their regular equipment. Some techniques are now routine diagnostic procedures. On the other hand, much of the diagnostic work still borders on the experimental. The widespread application of radioisotopes to medicine is only a few years old and is still a rich field for development.

The many diagnostic uses of radioisotopes can be grouped in four categories: (1) dilution techniques, (2) flow or diffusion measurements, (3) biochemical concentration, and (4) radiography.

DILUTION TECHNIQUES

Blood Volume

Many diagnostic applications are based on measurement of volume or amount of a substance in the body by means of the isotope dilution technique. It frequently becomes necessary to determine a patient's blood volume, for example, before surgery or administration of a blood additive. Many radioisotopes and variations of techniques have been used for this purpose. In a typical application, I–131-labeled human serum albumin is injected into the blood stream. After sufficient time for mixing (10 to 15 minutes), a sample of blood is withdrawn and measured for radioactivity. The degree to which the label has become diluted then gives a measure of the blood volume.

The mass or amount of the red blood cells themselves is determined by either of two methods. In the first, where radioiron is employed to label the cells, labeling must be done within and by the body. Since the dilution technique requires that the patient's blood be kept free of any radioactivity except that in the tracer material, this method involves the use of a second person, in whom the labeling can be done. The radioisotope is introduced into his blood stream, and after a sufficient time for the iron to become incorporated into the hemoglobin of the cells, a volume of blood is withdrawn. Labeled red blood cells are separated from plasma and injected into the patient for the dilution study.

The second method involves labeling cells with radiochromium, Cr–51. Since this can be done outside the body, a donor is not needed. The radioisotope, as sodium chromate, is mixed with a sample of the patient's blood. After about an hour, the red cells are separated in a centrifuge and, after washing, are reinjected into the patient for the dilution study. This method is comparatively simple and is coming into routine use.

Simultaneous measurements of blood plasma volume and red cell mass have been made using Cr–51 in the form of chromate and chromium chloride. Since the first penetrates cells while the second becomes fixed in plasma, the two measurements can be kept separate.

It is interesting to note that United Nations troops were tested with radioactive tracers for loss of blood, before transfusions on the battle field in Korea, and that many of them doubtlessly owe their lives to the increased accuracy of these newer techniques.

Water Volume

In many abnormal conditions, such as edema, it becomes important to know the volume of total body water and of water in intracellular and extracellular spaces. Here, again, dilution techniques provide the answer, the choice of labeling material determining the type of results obtained. Total water is measured from the dilution of deuterium- or tritium-labeled water. The mixing of a tracer amount

throughout the body and in the cells is essentially complete in about an hour, and a dilution sample can be taken at that time. No convenient method exists for measuring volume within the cells, but this can be found as the difference between total body water and extracellular water. The latter is measured by means of a tracer which penetrates blood vessel walls but cannot enter cells, or can enter only slowly. Certain substances with large molecules, such as inulin and sucrose, have been used for the purpose but faster mixing in the extracellular fluid is obtained with radioactive tracers such as Sodium 24 and Bromine 82. These slowly enter the cells and so only a short period of mixing is allowed before the measurement is made.

FLOW OR DIFFUSION MEASUREMENTS

Because of the dynamic qualities of body processes, many diagnoses are concerned with flow or diffusion of substances. Changes in counting rate at a certain place, due to movements and changing concentrations of a radioactive tracer, provide the necessary data.

Cardiac Output

Knowledge of the heart's output is invaluable in diagnosis of many heart disorders. As with other pumps, the efficiency of the heart can be judged by the flow it induces, measured in liters per minute or similar units. To measure this output, a small amount of I–131-labeled human serum albumin is injected into an arm vein. The resulting peak of activity in the blood is measured after it is pumped through the heart and then passes a certain point in an artery. The peak, recorded automatically as a curve on a strip chart, is somewhat spread out by this time and the flow rate is calculated from its area and duration.

Peripheral Vascular Disorders

Radioactive tracers have long been used to measure the blood supply to extremities and to measure the rate at which needed substances are passed to the tissues. If a saline solution labeled with radiosodium, for example, is injected into an arm vein and the foot is placed against a counter, the recorded activity begins to rise as sodium reaches the foot and pervades the tissues. In a normal subject the activity rises evenly and begins to level off within 30 to 40 minutes. The increase is the result of interchange of labeled sodium between blood and extracellular fluids. Equilibrium is established when the number of sodium atoms leaving the blood vessels is equal to the number returning to the circulation from fluids of the foot. In most patients with a peripheral vascular disorder the equilibrium value is lower and is reached more gradually, demonstrating an impairment in this supply system.

A similar technique is used in cases where the head of the femur has broken off. This ball of the ball-and-socket joint at the hip is attached to the thigh bone by a thin neck which is easily broken, especially in older people. If a break occurs, the surgeon must decide whether to graft the ball back on or to replace it with a pinned metal ball. The decision frequently rests on the question of an adequate blood supply to the ball, through the network of blood vessels still attached. After a tracer dose of Phosphorus 32 is put in the blood stream, a comparison is made with a directional counter of the activity above and below the break.

A somewhat different technique is shown in Figure 8, where a suspected constriction of blood vessels is found, after a tracer injection, by comparing the patterns of blood flow simul-

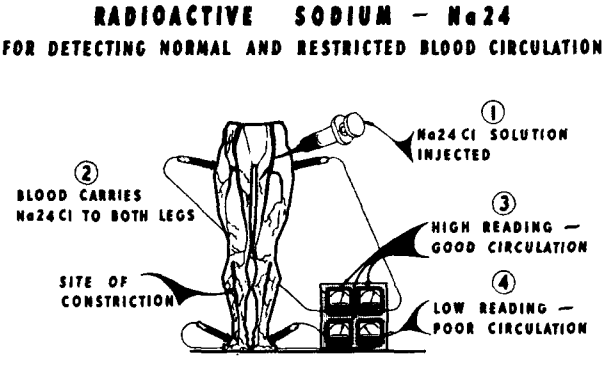

FIGURE 8.

taneously in the two legs. The method is also valuable for measuring the improvement in vascular function as a result of therapeutic procedures. It can also help in deciding upon the site of amputation if surgery becomes necessary.

The ability to trace blood circulation and accumulation at particular sites has been valuable also in cases of hemorrhage, burns, and fistulae between organs as in stab wounds. A reverse procedure is frequently used in determining blood circulation at a particular site by the rate at which it can remove an injected substance. Here a tracer material such as Sodium 24 chloride is injected into the tissues and the manner in which the activity decreases, as measured with a counter over the site, gives a measure of the clearance rate. This technique has been valuable to the plastic surgeon in the case of pedicle grafts. By watching the rate at which the tracer leaves the grafted tissue, he can tell whether circulation has been achieved, rather than waiting to find whether the graft "takes" or sloughs off.

BIOCHEMICAL PLACEMENT

Many diagnostic uses of radioisotopes involve selective accumulation of a tracer dose in certain tissues, where it can be found with a counter. The material is introduced into the body either orally or by injection and then, by physiological processes, is concentrated more at some sites than at others.

Two types of determinations can be made by this method. First, particular tissues, such as tumors, can be located if they are known to accumulate a certain element or compound. Second, the condition of a tissue can be determined from the rate at which the accumulation occurs.

More of the material may appear at one place than at others merely because a certain tissue absorbs it faster than others. This type of accumulation can only be used, therefore, until the other tissues "catch up" and the distribution becomes general. On the other hand, a certain tissue may have a special affinity for a material. In other instances, it may first be distributed fairly uniformly throughout the body but then be released at a slower rate by a certain tissue than by others.

The time at which the selective or differential concentration of a tracer is most useful may be a few minutes or even hours or days after the tracer is introduced. The degree of concentration also varies in different cases, being highly selective in some and low in others.

Thyroid Disorders

The best known and most widely used example of selective absorption is the accumulation of iodine by the thryoid gland. Other tissues and organs of the body have very little use for this element while the thyroid employs large amounts of it in manufacturing the thyroid hormone, thyroxin. The thyroid gland picks up and utilizes nearly all of the iodine retained in the human system, normally about 1,000 times as much as surrounding tissue. This selective action provides practically ideal conditions for radioiodine tracer studies of the gland and its functions.

The rate of iodine pickup is above normal in *hyperthyroidism* (overactivity of the thyroid) and below normal in hypothyroidism (underactivity). Diagnosticians, with radiation counting instruments, can easily determine this rate in any individual after administration of a small tracer dose. The diagnostic method now in use by hundreds of hospitals and private practitioners involves simply the placement of a counter over the patient's throat to measure the accumulation of radioactivity in the thyroid after a drink of weak radioiodine solution. In many places the technique is used routinely on all thyroid cases and has been made even easier by the availability of gelatin capsules which contain a correct tracer amount of the material for the patient to swallow. The rate and degree of radioiodine accumulation in the urine and in various blood fractions are also important in determining the thyroid health picture.

Delineation of Organs

The actual size and shape of an organ frequently need to be known, as in diagnosing a pathological condition, planning for surgery, or

determining organ bulk in order to plan a proper size of therapeutic dose. In the case of the thyroid gland this is done with a highly directional counter which "sees" only a very small area and thus can pinpoint the source which is producing the counts. After a tracer dose of radioiodine, such a counter can be moved about over the patient's neck to find the pattern of activity and thus to outline the thyroid tissue itself.

A refinement of this scanning method which has come into favor uses a motor-driven carriage to move the counter back and forth, and stepwise, over the throat. Amplified pulses from the counter actuate a marking pen which is moved back and forth continuously over a chart at the same rate as the counter. The resulting pen marks indicate the locations of the radioactivity and, as the counter and pen move down line by line, an actual picture of the thyroid gland is built up. Quite detailed pictures are obtained in this way, with nonfunctioning and over-functioning areas of the gland clearly distinguished. Successful use of this scanning method in the case of the thyroid gland has led to its use with other organs.

Location and Extent of Malignancy

Cancers are known to inherit some of the characteristics of their parent tissues. Those of the thyroid gland, for example, are sometimes able to accumulate iodine and even to manufacture the hormone. This uncertain concentration, however, is of very little or no use in locating cancer in the gland itself because of the high concentration in the surrounding gland tissue.

Where the thyroid cancer has metastasized, or spread, to other parts of the body, as it

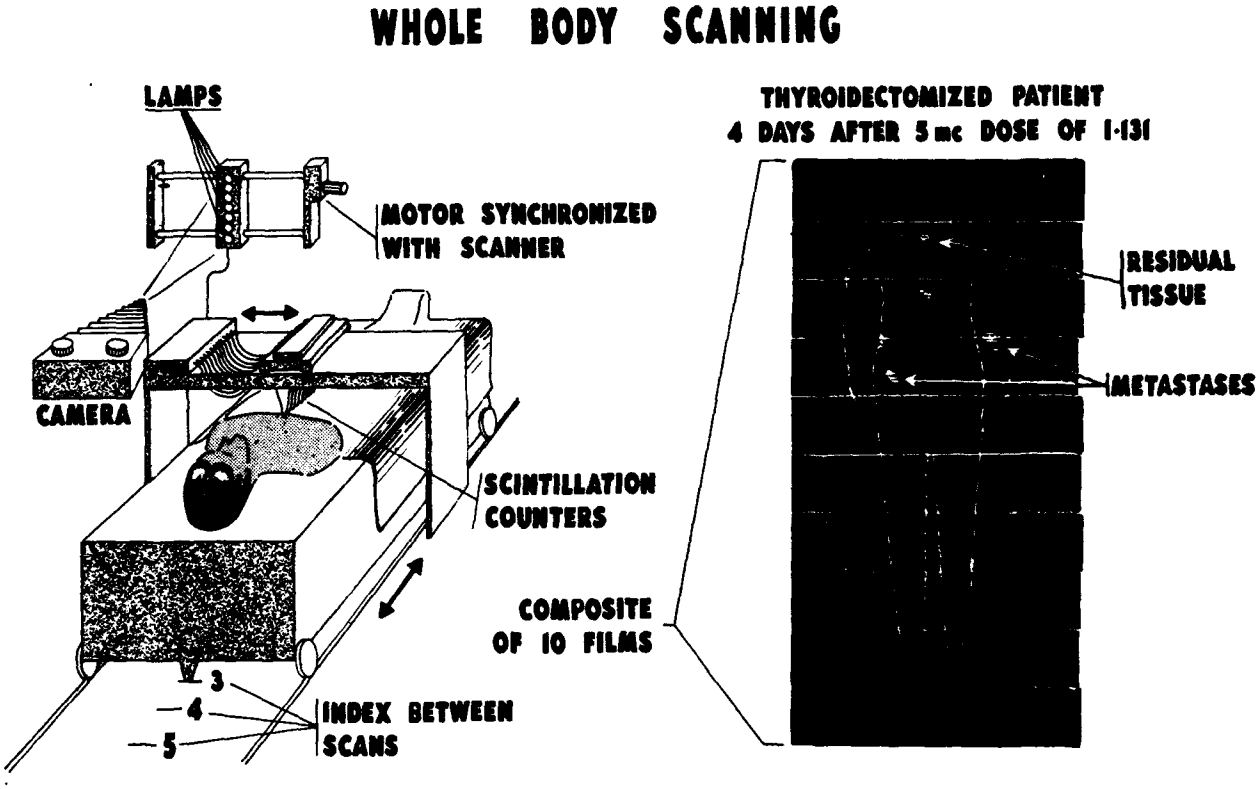

FIGURE 9.

usually does, the offshoots may continue to grow with thyroid characteristics. These thyroid metastases vary greatly in their ability to accumulate iodine. This uncertainty in iodine pickup is unfortunate in so far as finding the offshoots is concerned. Nevertheless, a large enough proportion of them show activity to make radioactive tracing a valuable diagnostic procedure. Many such cancerous lesions have been found which would not have been located by other available means.

The overpowering affinity of the normal thyroid tissue for iodine prevents any appreciable accumulation by the cancer cells. When the thyroid gland is removed by surgery or otherwise inactivated, the cancer offshoots receive more thyroid-stimulating hormone from the pituitary gland. Those which are able to take up iodine then increase their uptake and can more easily be found and treated.

Figure 9 illustrates a refinement of the automatic scanner which permits a survey of the entire body. This type of instrument has frequently demonstrated the presence of metastatic cancers which were otherwise unsuspected.

Tracer methods are assisting in the location of brain tumors in a number of hospitals.

The comparatively weak beta radiation from P–32 will not penetrate the brain and skull well enough to allow detection of tumors except by internal probe ,whereas the gamma radiation of I–131 has been found useful for locating tumors through the intact skull. This use is illustrated in Figure 10. Brain tissue is normally protected by the so-called blood-brain barrier which

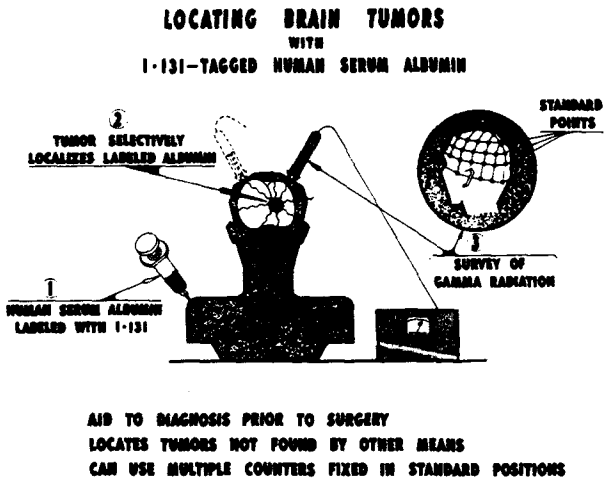

FIGURE 10.

prevents the transfer of many substances from the blood stream which otherwise would be absorbed. This barrier is impaired in lesions, and substances may temporarily accumulate in the extracellular spaces and cells of a tumor while being excluded from surrounding tissue. Various substances have been tagged with I–131 for concentration in brain tumors by this action. A survey over the skull with a directional counter may then help to indicate the position of the growth. Diiodofluorescein has been much used as a carrier of I–131 for this purpose but has been largely supplanted by iodinated human serum albumin.

Accurate outlining of radioactive areas is considerably more difficult in the brain than in the thyroid. Because of the increased amount of surrounding structure a considerable degree of gamma-ray scattering occurs which blurs the outlines. Also, concentrations of radioactivity ranging only from 1.6 to 29 relative to surrounding brain tissue have been reported, whereas a relative concentration of several thousand is characteristic of the thyroid. When so little variation exists between tumor and surrounding tissue, scattered radiation and background radiation from natural sources interfere seriously with the diagnosis.

These difficulties have been avoided by the use of a highly directional scintillation counter, with a recording system which accepts only those pulses from the counter which correspond in energy to the primary gamma ray of I–131. Only I–131 concentrations are depicted on the resulting gammagraph because scattered radiation is too degraded in energy from the primary value. Background radiation is either too high or too low in energy to be accepted.

Another scanning device for brain tumors takes advantage of a peculiar property of positrons. The decay of a positron, immediately after its emission by a radioisotope, is attended by the production of two gamma rays which travel in opposite directions. The device employs two opposed scintillation counters, one on each side of the patient's head. It is designed to count only gamma ray coincidences, counts which occur simultaneously in both counters. Therefore, it can detect positron disintegrations without also counting scattered and background radiation. The device is used

to detect positron-emitting substances, such as Copper 64 and Arsenic 74, concentrated by the tumors.

Benign vs. Malignant Lesions

Because of the rapid turnover of phosphorus in areas of accelerated metabolism, there is a temporary 8- to 100-fold concentration of P–32 in such areas after a diagnostic dose. Where this concentration occurs near a surface accessible to a counter, as in the breast, testes, or the eye, the fraction of the dose taken up by the cancer can be determined by a sensitive radiation counter. The growth or shrinking of the lesion under therapy may thus be determined by periodic checks. Since some benign tumors and other rapidly growing tissue also concentrate the isotope, malignancy cannot definitely be distinguished. Some clinicians, however, find the method useful even in original diagnosis for cancer.

The beta particles from P–32 cannot penetrate to a counter through more than 7 or 8 millimeters of tissue. Radiopotassium (K–42) has been used to extend the method to cancer at greater depths. Potassium, too, has a rapid turnover in growing tissue, while its radioisotope emits a 1.5-Mev gamma ray which is easily detected by a scintillation counter.

RADIOGRAPHY

The taking of "X-ray pictures," with beams from X-ray tubes, has been an important part of diagnosis since the turn of the century. Devices which utilize X-ray emitting radioisotopes as sources have now been developed for certain diagnostic purposes. These portable units have particular value in isolated locations where conventional, bulky X-ray equipment is not practical.

Such a portable X-ray unit using radiothulium (Tm–170), has been developed in a very simple form. A cylindrical piece of lead which can be grasped in the hand has a curved passageway through the center along which a small thulium source can be slid by means of a photographic shutter-release cable. When not in use the source is located at the center in shielded position; in use, it is moved to an open port at the end by means of the cable. Such a source, 15 to 30 inches away from an object, can produce an acceptable radiograph in a few seconds. The resulting picture is not as sharply detailed as those obtained with conventional X-ray equipment but is satisfactory for many purposes of diagnosis.

A somewhat similar device has been developed using the radioisotope Strontium 90. In the thulium unit described above, the X-rays are emitted by an ytterbium isotope formed in the decay of Tm–170. Strontium 90, on the other hand, decays to an isotope which emits beta rays. The beta particles, or electrons, in leaving the atoms and traversing the material in the source and holder, generate X-rays just as the electron beam does when it hits the target in an X-ray tube.

An especially useful combination is provided by one of these Tm–170 or Sr–90 X-ray sources and a film holder incorporating a self-contained development system. In this, a capsule contains film-developing chemicals which can be released and spread over the film without removing it from the holder. A finished picture is produced in about 1 minute. Such a combination can be extremely valuable in an army field hospital, for example, where neither X-ray equipment nor dark room is available.

Recent expansion and improvement in the diagnostic use of radioisotopes are due, in large measure, to advances in instrumentation. Development of the scintillation counter and of counting circuits which discriminate between radioisotope radiations, and between these and background radiation, have greatly increased the sensitivity of detection. More definitive results and greater accuracy can now be obtained. Moreover, increased sensitivity permits the use of less radioactivity. Tracer amounts of radioisotopes need result in radiation doses no larger than those received during X-ray diagnosis.

Hundreds of thousands of patients have been diagnosed with radioisotopes in the United States. Iodine 131 tests, alone, have been used over a quarter-million times. These numbers are increasing rapidly as more physicians receive training in clinical use of radioisotopes, and as techniques and instrumentation continue to improve.

Medical Therapy

The possibility of using radioactivity in medical therapy was recognized shortly after the discovery of radium in 1898. Since early in the present century, radium has been used in teletherapy, or treatment at a distance, in which it provides an external beam of radiation to destroy or retard tissue growth. It has also found widespread use in the form of surface applicators and insertions in tissues for local irradiation.

With the discovery of artificial radioactivity the possibility of a third mode of treatment was recognized. This was the possibility that radioactive forms of those elements which take part in body processes could be introduced into the body, and that the body would concentrate them in certain tissues for localized irradiation. Early hopes regarding this technique have not all been realized, since the radioisotope frequently is not concentrated to a sufficient degree to allow its destruction of the diseased tissue without damage to healthy tissues. Biochemical placement of therapeutic amounts of lethal radiation, therefore, can be relied upon only in certain types of cases. In these, however, valuable results are obtained. More positive action can be obtained in other instances by various techniques developed for inserting or injecting the radioisotopes directly into tissues.

The therapeutic uses of radioisotopes are grouped here under the three modes of application mentioned above: (1) biochemical placement of radioisotopes, (2) physical placement, and (3) teletherapy.

BIOCHEMICAL PLACEMENT

Two chief types of mechanism account for biochemical concentration of materials in certain tissues. The first is the *selective absorption* of a material needed by a particular tissue for its special function, while the second is *differential turnover* due to the increased use of a material in the more rapid metabolism of a particular tissue.

Selective Absorption

The best known and almost classic example of a special affinity between a tissue and a particular substance is that of the thyroid gland and iodine. The use of this selective action to introduce a sufficiently destructive amount of radioiodine to the gland, as illustrated in Figure 11, is now considered a highly practical form of therapy for hyperthyroidism (including thyrotoxicosis, Graves's disease, etc.) It is especially useful where surgery would be too dangerous or thyroid drugs cannot be given or are unsuitable. This treatment has largely supplanted surgical removal in a great many hospitals. Over 400 institutions are using I–131 for this purpose and tens of thousands of patients have been treated. It has been estimated that 90 percent of the hyperthyroid cases treated with I–131 are brought under control in 2 to 4 months.

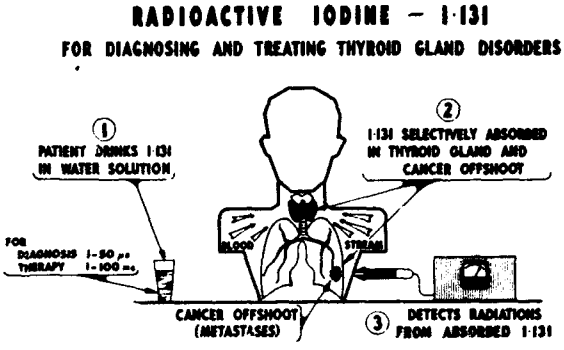

FIGURE 11.

Overactivity of the thyroid gland frequently results in the appearance of goiter as an outward manifestation. Internal consequences are much more fundamental, however, since the thyroid has a profound effect on body metabolism. The rate at which we burn up our food for energy is regulated to a great extent by the thyroid hormone. Overproduction of this hormone results in so fast a burnup that the heart is overtaxed

in pumping blood to supply the necessary oxygen. The intimate connection between thyroid and heart functions makes thyroid treatment a valuable adjunct in the treatment of angina pectoris and congestive heart failure.

Although I–131 has amply demonstrated its ability to destroy thyroid tissue, it can only rarely be used effectively against thyroid cancer. Destruction or removal of the primary cancer still leaves the metastases practically unaffected. Difficulty in inducing these to pick up I–131 is met with in therapy as it is in diagnosis, as previously discussed. Only about 10 percent of the offshoots can be stimulated to concentrate I–131 in effective amounts.

Radioiodine uptake by the metastases can be increased in three ways: (1) The physician may let "nature take its course." In this case, absence of thyroid hormone, after loss of the thyroid, stimulates the pituitary gland to produce more thyroid-stimulating hormone (TSH). The hormone rouses the cancers to take in more iodine. (2) TSH may be administered as a drug for the same purpose. (3) An extended course of treatment may be given with thiouracil, a drug which blocks iodine collection. This "starves" the cancer, so that a later dose of I–131 will be more actively collected.

Differential Turnover

The element phosphorus is necessary in all living cells so that, in time, a dose of P–32 becomes quite generally distributed throughout the body. Bone, blood-forming tissues, and rapidly growing tissue tend to concentrate it. Importance of this effect in P–32 treatment of diseases of the blood-forming system is not definitely established, but certain of these diseases respond to total body radiation, however administered. This method of treatment is illustrated in Figure 12.

Polycythemia vera, in which an excess of red blood cells is produced, has been the most successfully treated of blood-system diseases. The beta rays from P–32 do not cure the disease but repress cell formation nearly to normal, and usually can keep it there after a single large dose or repeated small ones. While X-ray and other treatments perhaps produce equally good result in polycythemia. radioisotope

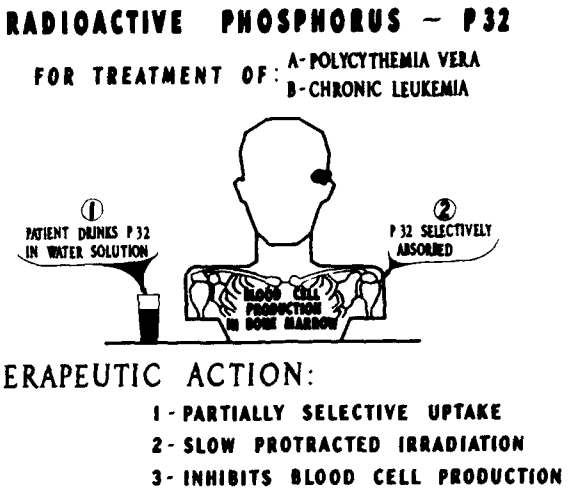

FIGURE 12.

therapy has come into wide use. It can be administered on an out-patient basis in a physician's office and radiation sickness and other side effects can be avoided.

Leukemia, in which an excess of white blood cells is produced, has not responded to P–32 therapy to as great an extent. In general, the results are quite similar to those obtained with X-rays, although the isotope treatment is usually favored because of its comparative convenience and freedom from side effects. The acute form of the disease does not seem to be affected, but satisfactory control is gained in about half of the cases of chronic leukemia.

PHYSICAL PLACEMENT

Many approaches to concentrating a radioisotope where its radiation will do the most good are based on the more direct concept of putting it there "by hand". No attempt need be made in this case to match biochemical activity of a material with that of the tissue to be treated; in fact, the concept is based on *lack* of affinity between the two. In general, such materials as gold, platinum, stainless steel, and plastics are used as sources and coverings so there will be little or no chemical reaction with the tissues or dissolving in body fluids.

Radioisotopes are used for physical placement both in solid form and as a liquid in an appropriate carrier or solution. As solids they are placed on a body surface, inserted into cavities, or implanted into the tissues. As liquids they are injected into cavities, mingled

with body fluids for transport to inaccessible parts, or injected into tissues as a dispersed source in the extracellular spaces. These various modes of application and their uses will be discussed in separate subsections.

Colloids and Suspensions

The liquid form referred to is generally not a true liquid but simply a fluid carrying tiny solid particles such as a colloid. Radioactive material which would dissolve to a true liquid would also enter the body chemistry and be lost from its desired position.

By putting the radioisotope into a form not affected by body chemicals, and suspending it in a finely divided state in a liquid which is well tolerated by the body, a number of advantages are gained. The particles remain where injected in a tissue, while the carrier is absorbed. When introduced into the blood stream, the particles are carried to diseased organs and are trapped there in the tissues. Also, when placed in a cavity, the particles deposit uniformly over the lining and remain at the surface.

Radioactive gold colloid meets many of the requirements in these applications. The beta rays emitted are short-ranged and so affect only the tissue immediately adjoining the particles. The half-life of 2.7 days allows the activity to disappear within a few days, after accomplishing its purpose, and the body tolerates the inert gold during the remainder of the person's life.

The chief disadvantage of gold colloid is that it emits penetrating gamma radiation in addition to the beta radiation. This makes it more hazardous to administer. Surrounding healthy organs are also partly irradiated as well as the local tissue. Colloidal chromic radiophosphate has come into favor in some applications, chiefly because the radiophosphorus emits only beta particles.

Other colloids are also being used to advantage, and more are being investigated. Gold colloid can be plated with silver, for example, to "fool" the body into transporting the gold radiation sources to a greater extent into the lymph channels. Yttrium chloride forms a colloid after injection into the body fluids and is generally believed to have potential importance because of the favorable half-life (2.6 days) and pure beta radiation of radioyttrium (Y–90). Other radioisotopes seem to offer special advantages in this type of therapy but remain radioactive too long for safety. These individual advantages may yet be realized as a result of research on complexing agents which may remove radioisotopes from the body when the desired therapy is accomplished.

Interstitial Injection

Direct injection of radiocolloid has provided a useful mode of treatment of many types of accessible but inoperable malignant masses. Those which are not suitable for surgery because of proximity to delicate organs, lack of definite boundary, or precarious condition of the patient are often reduced by this treatment. The tumors frequently can be given large doses of radiation which could not be administered with external X-rays without serious damage to other tissues.

This type of therapy has become routine in many hospitals in treating cases of inoperable cancer of the prostate gland. Only 5 to 10 percent of prostate cancer cases are found while still in the stage where surgical removal of the prostate and capsule can produce a cure. In about half the cases the tumor has invaded its surroundings, and it is in this class that interstitial injection of radiocolloid has been used with good effect. In the remaining cases, spread has occurred to distant areas, usually bone or lungs, and the radioactivity carried to these sites by the blood stream is not sufficient to produce a significant effect.

Encouraging results have been obtained where the colloid was used before metastasis occurred. Users of this technique have stated that the most striking effect is the rapid regression in prostate size, experienced in very nearly all cases. In 7 to 10 days a large nodular prostate can shrink until it is barely detectable.

Involvement of the lymphatic system frequently occurs in cases of cancer because cells and tissue fragments separated from the malignant mass are drained off along the lymph channels. Removal of infectious agents

and broken-down cells is a natural function of the lymph system. This function, unfortunately, aids in the spread of cancer because the cancer cells start new growths where they come to rest. This most frequently happens at the lymph nodes, the collecting points of the system, which are usually distant from the cancer and at inaccessible locations. An advantage of radiocolloid therapy in such cases is that the radioactive particles are often drained off in the same way and become lodged at the same points.

Both surgery and X-irradiation, when they fail in cases of cancer of the cervix, do so primarily because of residual cancerous growth in the lymph nodes and the adjoining tissues. Radiogold colloid has demonstrated its ability to reach the lymph nodes for localized destruction after injection near the tumor mass. It may be used as an adjunct to other therapy in cervical cancer cases.

Intravenous Injection and Clearance

When a colloidal substance is introduced into the blood stream a somewhat similar result is accomplished. The reticulo-endothelial system, a group of specialized cells widespread through the liver, spleen, lymph glands, and bone marrow, clears particles and debris from the blood. Radiogold colloid, when injected into a vein, is caught in this system and thus furnishes a means for treating its diseases. Chronic lymphatic leukemia, for example, responds to this treatment about as often as to drugs and X-rays. Hodgkin's disease and lymphosarcoma are also treated in this manner.

Distribution within the body depends partly on particle size. A degree of control can thus be realized through choice of an appropriate size. Extremely small particles of gold, measured in millionths of an inch, are produced from a solution of a radioactive gold compound. Slight alterations in the chemical technique can give a range of sizes. Larger particles may be obtained by depositing the radiogold on suspensions of finely divided charcoal.

An entirely different distribution is obtained with the larger particles. These, when injected into the blood, are caught in the fine capillaries of the lungs, whereas the smaller particles of a gold colloid pass through and concentrate in liver and spleen. Cancer growths distributed throughout the lung, as a result of blood transport from a distant primary cancer, can thus be given local radiation treatment by the particles blocked at the scattered sites. This type of therapy is relatively new and may result in useful treatment when the possibilities of controlling placement and distribution have been further explored.

Intracavitary Injection and Instillation

Radiocolloids, being in fluid form, are well suited for placement in body cavities to irradiate cavity linings. Beta radiation from only the outer particles can reach the tissues without being absorbed in the liquid, so that the effect is that of a thin radioactive coating. Moreover, the particles are rapidly deposited upon the surface itself and are engulfed in the cells. Only about 1% of the particles escape through lymph channels to the blood and thence to liver, spleen, and marrow, so that undesirable systemic effects of the treatment are usually negligible.

This technique, illustrated in Figure 13, is being used in about 250 hospitals in the control of fluid accumulation in the abdominal and chest cavities of cancer patients. Often pain or disturbance due to fluid pressure on adjacent organs is the only awareness the patient has of

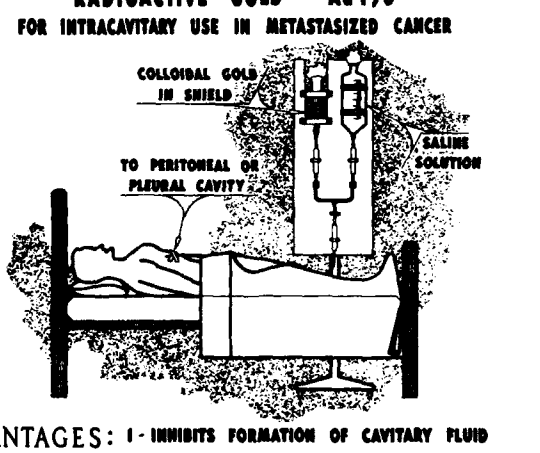

FIGURE 13.

his disease. Irradiation of the cavity lining reduces or prevents the fluid formation, and can make his existence tolerable while treatment of his disease is attempted. Reports by those using this technique indicate that relief from symptoms can be obtained in approximately 50 percent of the cases. The general opinion is that it is best suited to cases in which the cancer is growing slowly and the accumulation of fluid is the most important symptom.

Radiocolloids have also been injected into cavities as a preventive measure rather than as a treatment. Radiogold is sometimes used in this manner when a cystic cancer of the ovary is removed. In this operation, there is a possibility that some of the contents of the cyst will be released into the abdominal cavity. Introduction of the radiogold seems to decrease the probability that the cancer "seeds" will grow.

Cancer of the lung almost always involves the adjacent lymph nodes. Radiogold colloid has frequently been put into the lungs, by injection or tube, for drainage to these sites. The slowness of the drainage, however, is a disadvantage of this technique since the gold radioactivity is practically spent in the 10 or more days before optimum concentration occurs. This period has been reduced to about 5 days by coating the radiogold with silver.

A still greater improvement has been achieved, in experimental work with dogs, by injecting the gold colloid into the wall of the bronchus, or windpipe. From there it has only a short distance to travel and accumulates effectively in the lymph nodes within 3 days.

Too intense irradiation of a localized area of tissue is avoided wherever radioisotopes are applied. If tissue is killed faster than its fragments and breakdown products can be disposed of through the lymph and blood, toxic substances are formed and released into the system as in gangrene. Too intense a dose of radiocolloid put into the quite radiosensitive lung, in an attempt to achieve adequate transfer to lymph nodes, needs to be avoided. However, it has been suggested that a lobe of the lung can be used simply as a transfer point for part of a heavy dose, when the lobe is about to be surgically removed in any event.

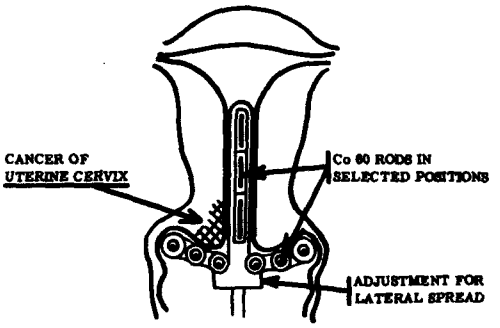

The lining of the bladder has also been treated by radiocolloid instillation, or introduction by tube. Filling the cavity with the fluid allows particle sources of beta radiation to surround each tiny papilloma or protuberance from the wall. After sufficient time for effective action, the cavity can be drained.

Intracavitary Insertion

Radium has long been used in devices specially designed for insertion into body cavities. This mode of radiation therapy has been greatly extended by the greater availability, economy and, in many cases, effectiveness of the newer radioisotopes.

Cobalt 60 is roughly equivalent to radium in this type of application and devices designed to hold the one are frequently used for the other. Figure 14 shows a simplified illustration of such a device. Various radiation patterns can be produced by using selected intensities and positions of the radioactive inserts.

RADIOACTIVE COBALT – Co 60
FOR INTRACAVITARY OR EXTERNAL APPLICATORS

PERMITS WIDE VARIETY OF APPLICATORS
READILY AVAILABLE AND INEXPENSIVE
ALLOWS LARGE INVENTORY OF SPECIAL SOURCES

FIGURE 14.

Balloon catheters, also, are used for internal irradiation of body cavities. After insertion into the bladder or uterus, for example, they can be inflated to expand the organ and smooth out the folds and irregularities of its lining for uniform irradiation. Fluids attempting to enter the cavity while the device is in place are drained off through a central catheter. One form of balloon catheter may be filled with a liquid. Since the liquid does not contact the tissues directly, it can be a solution containing

any radioisotope with the desired radiation characteristics. In a second form, the catheter carries a small radioactive source at the center so that, when the balloon is inflated, the cavity walls will be properly spaced from the source for uniform irradiation.

Interstitial Implants

The insertion of radium needles and radon seeds into cancer tissue is a well-established mode of treatment. Here, again, the technique has been extended and improved with radioisotopes. Cobalt 60 wire is the material most used for this purpose. It can be made much more radioactive than radium, so that only very thin wire need be used. This is encased in an inert, nonradioactive sheathing, such as stainless steel, which absorbs the beta radiation but does not hinder the gamma rays and is unaffected by body chemicals. The encased wires are cut to the desired lengths and can be bent to shapes appropriate for the tissues or growth to be treated, although they usually resemble straight, rather thick sewing needles. In use they are inserted in a predetermined pattern to give the desired radiation field and are removed when a specified radiation dose has been delivered.

Both Iridium 192 and Tantalum 182 are used in the same manner, with certain advantages and disadvantages when compared to Cobalt 60. Both have a greater neutron absorption and so can be given a higher activity in a reactor. On the other hand, they have much shorter half-lives (Ir–192, 74 days; Ta–182, 111 days; Co–60, 5.3 years) and require reactivation from time to time.

Implants also take the form of short lengths of radioactive gold wire encased in inactive gold tubing. These are comparable to the widely used radon seeds and, because of the short half-life of radiogold, can be left in the tissues permanently. The encased wire can be conveniently cut in the operating room to lengths providing the required amount of radioactivity. The simple act of cutting seals the ends sufficiently against beta-ray leakage. The gold seeds have entirely supplanted radon at some hospitals.

A unique form of implant has been developed in which short lengths of either the radiocobalt or radiogold wire are alternated with inactive aluminum lengths within very thin nylon tubing. This radioactive "suture" is sewed into the tissues in a configuration designed to give the best radiation pattern.

An even more recent development makes use of copper-covered iridium wire for this purpose. Before irradiation, the wire is slipped into a sheath of thin copper tubing, to absorb the beta particles, and cut into 3- or 4-mm lengths. Radioactivity induced in the copper is short-lived and disappears before use. The lengths are irradiated and then the desired number, say 10 or 12, are spaced at 1-centimeter intervals in nylon tubing, with 3 or 4 inactive aluminum pieces as a continuation at both ends. The tubing is compressed between the wires to maintain their spacing. Enough tubing is left at one end to allow the radioactive portion to remain in a shielded container while the surgeon places his needles in the desired pattern in the tissues and threads the free end of the tubing into the first needle. A minimum of time is then needed to draw the active portion into position. The aluminum markers indicate how many centimeters the end sources are below the surface.

Another implantation technique is reported to be ready for clinical trial. This involves the use of beads, less than a millimeter in diameter and of carefully predetermined radioactivity, for implantation in brain tissue. Radioactive gold, palladium, and yttrium have been used as these sources. Since beta particles travel only a very few millimeters in tissue, a very small spherical volume can be given a predetermined irradiation.

Topical Application

The very short range of beta particles from certain radioisotopes has been advantageous in surface applications. Many skin conditions, including warts and benign and malignant tumors, are treated with X-rays but only the very softest, or least penetrating, of these rays can be relied on to affect the outer layers without damage to deeper structures. In contrast, the beta radiation from radiophos-

phorus, for example, has an average penetration of only about one millimeter and cannot reach the underlying tissues.

Plaques of many types have been devised for holding concentrated or dispersed beta-ray sources next to the skin. The simplest form is obtained by soaking a piece of absorbent paper in a radioactive solution and holding it to the skin with adhesive tape. Another simple type is obtained by incorporating a finely divided radioactive material into a plastic substance which can then be molded to the contour of the surface. Actual contact of the radioisotope and skin, in these cases, is prevented by a thin wrapping of Cellophane or the like.

Ophthalmic Applicators

A variety of devices have been designed for beta irradiation of eye lesions. These employ the same radioisotopes as in the surface plaques just described and have the same effect—in fact, they are often used in treating skin conditions. They usually are designed as hand-held instruments with a radioactive tip, and are frequently provided with a shield to protect the physician's fingers. More than 230 of these applicators are in service in treating benign and malignant lesions of the eye. The beta-emitting isotope Strontium 90 is most frequently used as the source.

Nasopharynx applicators are quite similar but adapted, as the name implies, to use in treating pathological conditions of the upper air passage. Strontium 90 has been in favor for this use also, with Cobalt 60 occasionally providing a gamma-ray instrument for special conditions.

TELETHERAPY

Distance therapy by means of a gamma-ray beam from a concentrated pellet of radioisotope is a direct outgrowth of teleradium and X-ray treatment. Since the beam is directed through the body to the cancer or other growth to be eradicated, an important consideration is the amount of damage to healthy tissue. Certain radioisotopes have shown a superiority to X-ray equipment in this respect, because the whole of their radiation has the same energy or penetrating power. In an X-ray beam a large range of energies are present and much of the beam must be filtered out in eliminating the portion most harmful to overlying tissues. To obtain a useful beam with radiation as penetrating as that from Cobalt 60, very special and expensive X-ray equipment in the 2-million-volt range is required.

A Cobalt 60 unit is basically a small piece of the radioactive metal at the center of a large ball of lead or other heavy shielding. A passageway for a beam of gamma rays from the cobalt is blocked by a shutter of movable shielding when not in use. This basic unit, to be useful, must be supported in such a way that the beam can be directed as desired. Further details of control are added according to the proposed use and budget allowance. Thirty or more machines are now in use in the United States. They differ in the degree of complexity introduced by positioning controls, timing mechanisms and, in some instances, even electronic computers to direct the movements throughout a treatment.

The machines fall into two classes depending upon the source strength and, therefore, the amount of shielding. The "hectocurie" units, with source strengths of a few hundred curies, can be light enough to roll from place to place. The "kilocurie" units have sources of a few thousand curies and are permanent installations.

The ruggedness and comparative simplicity of the source holder and shielding gives the basic unit a high degree of maneuverability. The advantages of "rotational" therapy, for example, can be obtained by swinging the beam source entirely about the patient, as in the kilocurie unit illustrated in Figure 15, with the beam continually directed at a tumor. A heavy dose of radiation can be delivered to a small volume in this way without overdosing any one part of the skin or healthy tissue.

The basic principle in placing the source at a distance from the patient, when internal structures are to be irradiated through overlying tissue, is a geometrical one. The rays spread out in straight lines from the source so

342334—55——3

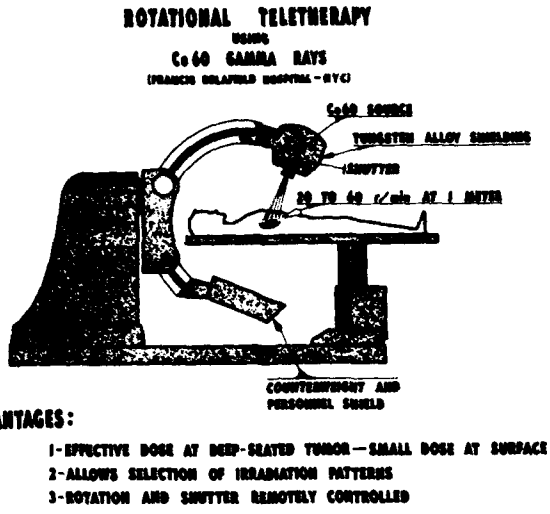

FIGURE 15.

that an area of a given size receives less radiation as it moves away. In mathematical terms, the intensity varies inversely with the square of the distance. Therefore, with a very near source the intensity at the skin is much greater than at the more distant tumor. However, with the source a few feet away the tumor-to-skin distance makes little difference and a radiation dose can be given to a tumor without a much larger dose going to overlying tissues.

With the exception of radium units and one Cesium 137 unit all of the 30 or more teletherapy machines in operation are using Cobalt 60. About 15 other hospitals have machines in various stages of completion but are awaiting their turn for cobalt being activated at the National Reactor Testing Station in Idaho.

Cesium 137 offers some advantages over Cobalt 60 as a teletherapy source, chiefly because of its much longer half life (33 years vs. 5.3 years) and the reduced amount of heavy material needed to shield its less penetrating gamma rays. This isotope, however, has not been available in large quantities, except for the 1540-curie source prepared at great effort for the one unit mentioned above. The new fission product separation plant, mentioned later under Available Materials and Services, is expected to produce kilocurie sources suitable for teletherapy.

NEUTRON-CAPTURE THERAPY

A quite different technique is being developed, especially for the treatment of brain tumors, in which a stable isotope is made radioactive *after* biochemical concentration in a tumor. The stable boron isotope B–10 in the form of a borax solution, for example, is administered to a patient. Impairment of the blood-brain barrier by the brain lesion allows temporary concentration of the boron. The head is then exposed to a beam of reactor neutrons. Boron 10 absorbs neutrons much more readily than the other elements present, and each absorbing atom emits an alpha particle which ionizes heavily during its very short travel. Localized destruction of tumor tissue is thus accomplished.

Agricultural Studies

The frontiers of farm science and land development must be pushed forward at an ever increasing rate to provide for world population growth and to improve living standards. Food production is not increasing as fast as population demands. World population is increasing at the rate of about 1 percent or over 20,000,000 persons per year. Reliable estimates indicate that over half of the more than two billion people in the world today do not get enough to eat.

To keep food production in pace there must be ever increasing production from the land and this advance must be based upon the work of plant and animal scientists.

All over the country agricultural research is being stimulated through the use of radioactive and stable isotopes. These new tools are unlocking the secrets of the growth of plants and animals and the scourges that injure or destroy them. Most of these isotope uses are related to the fate of metabolites and non-metabolites in plant and animal systems. The major applications of radioisotopes to agricultural problems have been concerned with soils and fertilizers, photosynthesis, entomology, and animal and plant nutrition.

The hundreds of agricultural uses of radioisotopes are here separated into several types of uses and only a few representative examples of each are discussed.

PLANT STUDIES

Metabolism and Translocation

The movement of mineral nutrients in plants is being studied at several institutions. Radioisotopes of phosphorus, sulfur, calcium, copper, molybdenum, and zinc are being used to investigate important plant nutrition problems. Radiotracers are being used to determine the path, rate of entry, and movement of materials in plants, the mechanism of such movement, and to trace steps in the mechanism of transfer of ions from the environment to the plant cell interior. Tracing elements through living plants was impossible before radioisotopes became available.

As illustrated in Figure 16, radioactive calcium has been used successfully to study the uptake of calcium (the element supplied by liming) by the root and fruit in the peanut plant. This investigation showed that although calcium is absorbed in the plant by both the fruit and root, absorption by the roots alone is not sufficient for fruit development.

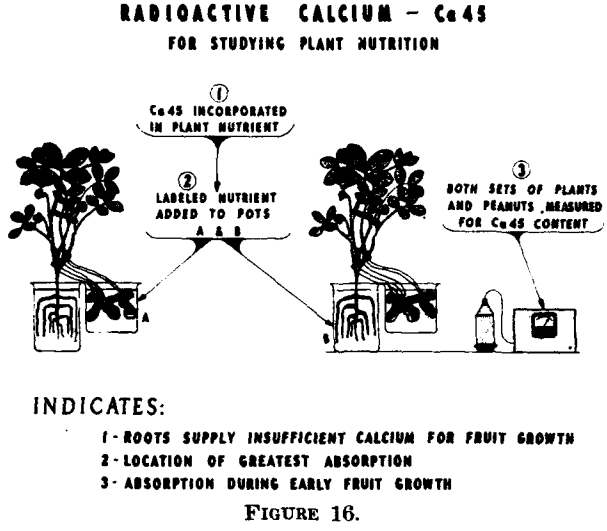

FIGURE 16.

Iron 55 has been used to study effects of acidity and action of charged particles on soils, and to trace soil nutrients in the uptake and translocation of iron by sorghum plants. Iron 55 and Zinc 65 have been used to determine factors influencing uptake and distribution of inorganic elements within plant tissues and their use in organic compounds synthesized within the plant. Carbon 14 has been used to study translocation of labeled organic materials in most of our economically important plants.

Uptake of Fertilizers

The most extensive use yet made of isotopes in agriculture has been concerned with studies on the uptake of fertilizers. This was one of the first and most important uses in agriculture. Now, even after 8 years, fertilizer uptake studies are still yielding valuable infor-

mation. With radioactive tracers it is possible to study not only commercial fertilizers, but green manures as well. These applications are illustrated in Figures 17 and 18.

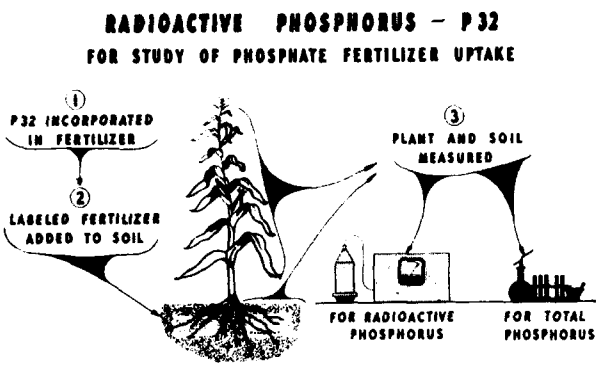

FIGURE 17.

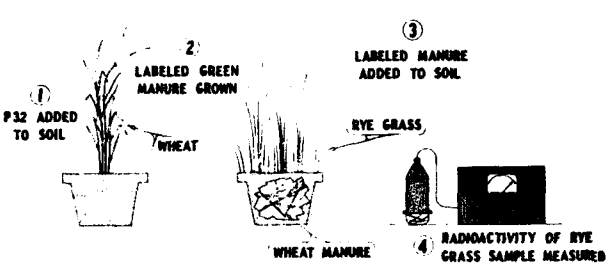

FIGURE 18.

Although most of the investigations are designed to determine the proper type, placement, and efficiency of various fertilizers, the data obtained provide many other answers since the studies can be carried out under a wide variety of soil and climate conditions. American farmers are spending more than a billion dollars a year for commercial fertilizers, and isotopes research has found many ways to get greater returns in crop yields with this money.

With radioisotopes, it is possible to tag a certain material such as phosphorus in the fertilizer, and tell how much moves into the plant. The effectiveness of different methods of placement of the fertilizer such as below the seed, broadcast, or foliage application can be easily compared. In the past, requirements of a crop on a particular soil for a specific fertilizer usually have been measured by crop yield, but variations in rainfall, temperature, disease, and other factors also affect yield and confound the evaluation of the fertilizer. Through the use of radioisotopes many years are being saved in evaluating fertilizer materials and methods of application, and sound conclusions about fertilizer practices are being drawn.

The capacity of the soil to supply a plant nutrient can be measured by adding a labeled fertilizer as a partial source of the nutrient to the growing plant. The plant will draw upon both the natural supply and the added fertilizer in proportion to the availability of each. In some soils, most of the plant nutrient will come from the added fertilizer, in other soils most of it will come from the nutrients already present in the soil. The isotope dilution analysis is used to obtain this information. Thus the plant itself, which is the best judge of availability, is used to give the answer.

Although measurement of crop yield is satisfactory and in some cases preferable, the new techniques permit an evaluation under varying field conditions and at any stage of the plant's growth through the season.

Through the use of isotopes, it has been proved conclusively that plants absorb nutrients not only through the roots but also through the foliage, the fruit, the twigs, the trunk, and even the flowers. Comparative uptakes of Phosphorus 32 are illustrated in Figure 19.

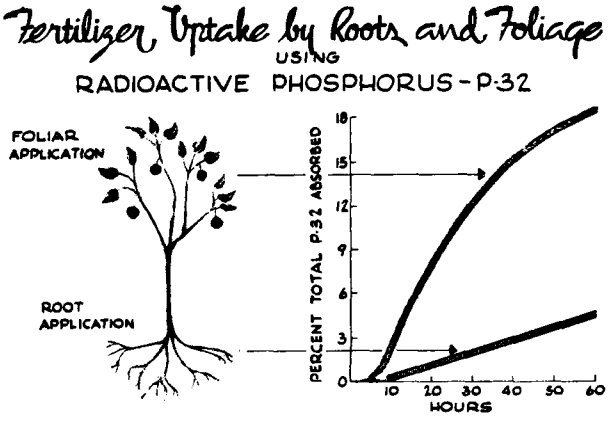

FIGURE 19.

Tracer studies show that certain plant nutrients applied to the leaves in soluble form result in as much as 95 percent uptake by the plant. Plant nutrients applied to the soil often show no more than 10 percent uptake.

Work in California and in Oregon showed that spraying dormant trees with fertilizers improved the growth of the fruit the next year. It has been shown that within 24–48 hours, even in mid-winter and at below freezing temperatures, radiozinc movement in the branches can be traced 18 inches to 2 feet above the point of application. Furthermore, the nutrient tends to accumulate near the buds. Thus the entry of nutrients into dormant branches is proved and the value of spraying fruit trees with zinc in the dormant season is established.

Similarly, the radioisotope technique shows that a leaf is a very efficient organ of absorption. Experiments prove that the nutrient material moves in from any leaf surface both night and day.

If leaf feeding is compared with soil feeding radioisotopes demonstrate that nutrients supplied to roots move upward in the plant. If applied to the leaf the nutrient moves downward in some plants at the rate of about one foot an hour. When applied to a middle leaf the nutrient moves both ways very effectively. Also learned during these studies is the fact that certain parts of a plant need specific nutrients at different times.

When seeds form in fruit, radioisotopes show that phosphorus concentrates immediately in the seed. In the case of the apple both phosphorus and magnesium concentrate in the seed when it is developing. This explains why a magnesium deficiency appears in the foliage in summer when seeds are drawing magnesium from the leaves.

Studies with radiocalcium have shown that foliage application does not result in movement of this nutrient to root sections. This is of considerable importance, for example, in growing strawberries. Calcium applied to the foliage of strawberry plants would not move to the roots. Daughter plants nourished only by roots might therefore starve to death for lack of calcium if the material is available only through the leaves. Calcium must be applied to the soil to reach the entire plant including the roots.

Urea applied to the foliage is being used very freely by orchardists and vegetable crop specialists. The urea molecule has two groups of nitrogen atoms in addition to one oxygen and one carbon atom. Since no suitable radioisotope of nitrogen exists the molecule is made radioactive by using radioactive carbon. (It can, however, be traced by a heavy isotope of nitrogen, stable N-15.) When urea is applied to a plant the enzyme "urease" acts on the molecule and splits it. The groups containing nitrogen combine with hydrogen in the plant moisture to give ammonia which moves into the plant. The radioactive carbon and the oxygen from the plant moisture combine to give radioactive carbon dioxide. By counting the radioactive carbon dioxide that is given off, one can obtain an absolute measurement of the use of nitrogen from the urea applied. This test has given valuable information on the ability of different plants to use this compound.

Soil Fertility

Of major concern in agriculture are the amounts of naturally occurring nutrients in soil, their exchange between the soil, the soil solution, and plant roots, and their availability to plants.

Maintenance of soil fertility is the main objective of soil management. Soils of the United States Corn Belt are fertile, but their continued ability to supply adequate potash (potassium) to corn has been questioned. The capacity to supply potash can be measured with radioisotopes. Unfortunately, one cannot use a radioisotope of potassium in field studies for it has none with long enough half-life. However, radioactive rubidium, which behaves chemically very similarly to potassium, can be used and follows along with potassium as a tracer. These studies are yielding valuable information on soil maintenance questions.

A tracer study directly related to soil fertility is the use of radioactive calcium in measuring the kinetic exchange of this element in various types of clays. The radioisotope tracer tech-

nique, illustrated in Figure 20, is particularly suited to measurement of exchange between ions of the same element. This study shows that calcium exchanges readily.

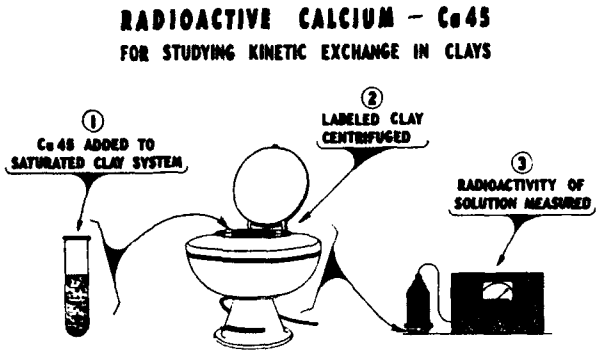

FIGURE 20.

Calcium 45 has also been used to study the absorption of calcium by alfalfa and other legumes as influenced by soil reaction, amount of exchangeable calcium, degree of calcium saturation, presence of manganese, iron and aluminum, and method of application.

Likewise, Phosphorus 32 is used to study exchange reactions of inorganic phosphorus between solutions and mineral surfaces in soils and synthetic calcium phosphates, and to determine the contribution of phosphorus in manures to the fertility of the soil.

Carbon 14 has been used to study decomposition rates of organic materials in soils and their availability as nutrients to plants. Radioisotopes of potassium, calcium, and rubidium have been used in the laboratory to study exchange equilibria reactions of these elements in soils. In other laboratory studies, Sulfur 35 and Calcium 45 have been used to determine the rate of leaching of these elements through columns of soil.

The radioisotope technique opens new vistas in basic research on soil fertility. It adds to the precision and reliability of measurements of importance to agriculture. It does not make obsolete other current research methods but rather supplements them as a very useful new tool.

Action of Growth Regulators and Herbicides

Radiosotopes are used to study the behavior and action of plant-growth regulators and herbicides. These investigations are concerned primarily with how these materials act on metabolic processes. The method, illustrated in Figure 21, is so specific it can show how a regulator is translocated to developing parts of the plant. Further, it is so sensitive that it indicates accumulation of as little as a millionth of a gram.

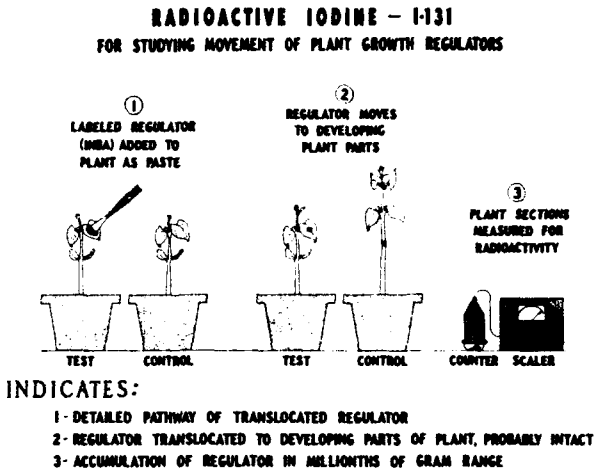

FIGURE 21.

Growth regulators can speed up or slow down the growth of plants. Advancing the date for maturing of crops, in some cases, can mean thousands of dollars of added profit in the market place. Radioisotopes are helping to find better growth regulators.

In the war on weeds radioisotopes have been called upon to help explain the complicated actions of herbicides. It has been estimated that crop losses due to weeds alone amount to at least 5 billion dollars annually. Weed plants take water and nutrients meant for crops and are carriers of both animal and human diseases. Their presence increases the cost of tillage by almost 50 percent.

Certain chemicals can kill some plants and spare others. The best known herbicides now in use are the phenoxyacetic acid derivities known popularly as 2,4-D and 2,4,5-T, produced in 1954 at a rate exceeding 60 million pounds.

The action of herbicides on the alligator weed has been investigated with C–14-labeled 2,4-D. Through this study valuable information was gained on possible new materials for combatting the weed.

It has been shown that bean plants readily absorb the radioactive 2,4-D, and radioactivity has been found in the various parts of the plant. This absorption into edible plants is important, of course, because of possible effects on the plant and on persons who eat the beans. In a continuation of the study, two radioactive compounds in addition to unchanged 2,4-D were found in an extract of the stems of bean plants treated with labeled 2,4-D. This led to further work on metabolism of 2,4-D in 2,4-D resistant plants and to studies of the absorption and metabolism of radioactive 2,4-D by crops such as corn and wheat.

Plant Diseases and Fungicides

Plant diseases cause an estimated annual agricultural loss of approximately $3 billion. Old as well as new diseases sweep the country from time to time.

Some plant diseases are annihilating. Cereal rust may destroy up to two-thirds of the crop of wheat and oats in extensive areas. Potato blight can almost completely destroy potatoes in the field or in storage. Many other diseases are debilitating or disfiguring. They may cause pealing, root rot, wilt, scab, and various other disorders. Most plant diseases are insidious because of the relative invisibility of the disease organisms.

Radioisotopes are of great value in studying plant diseases and devising means for their control. Carbon 14 has been used to study metabolic changes in tobacco plants induced by virus infections, mealy bug wilt of pineapple, and effects of the virus of "little cherry" disease. Sulfur 35 has been used to measure the difference in absorption of sulfur by parasites and the host in plant diseases caused by fungi. Phosphorus 32 and Calcium 45 have been used to compare absorption and movement of phosphorus and calcium in pole-blighted and healthy western pines.

Wheat stem rust and most other rusts can be controlled if plants can be dusted often enough with sulfur. But to dust 70 million acres of wheat in the United States with the minimum amount of sulfur that would be effective in years when weather favors rust would require nearly 2 million tons of sulfur. Cheaper fungicides, therefore are badly needed and radioisotopes are helping to find them.

Work has been done on methods for tagging fungal spores with radiocarbon. The effect of radiocarbon upon the growth and genetics of the tagged organisms also has been investigated.

In testing the toxicity of chemicals to fungus spores, chemical methods of determining the quantity of uptake by the spores are impractical because of the minute amounts involved. With the availability of radioactive isotopes, quantitative uptake of the toxic chemical on a spore weight basis can be carried out quite easily.

Isotopes also make possible study of the relationship of several toxicants and the replacement of one material by another in fungus spores. Spores of various species were found to act quite differently in their affinity for various toxicants.

Other types of plant disease studies with radioisotopes are illustrated in Figure 22. They are concerned with the proper balance of normal metabolic processes. In the study of molybdenum, an essential mineral for plant nutrition, it can be determined by the tracer technique what concentration of the element blocks iron uptake and causes chlorosis (an iron deficiency) as well as the mechanism of the block. Since the amounts of molybdenum and iron involved

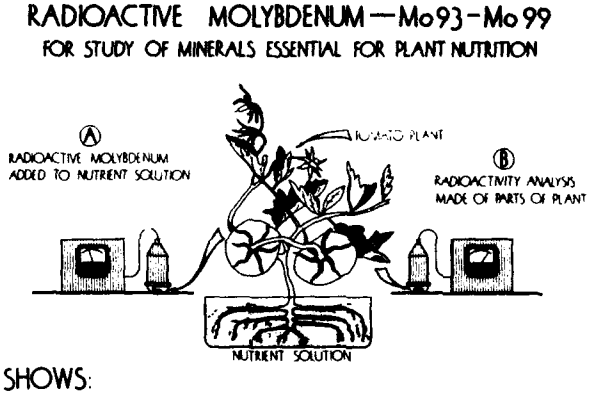

FIGURE 22.

in this plant disorder are very small, the sensitivity of the tracer technique is of particular advantage. Iron 55 and 59 also have been used to follow iron metabolism under conditions conducive to chlorosis.

Radiation Effects and Genetics

The science of radiation genetics may have a fundamental effect upon agriculture since it offers promise of developing new strains of hardy, disease-resistant plants. Natural mutations, or changes in the germ cells which transmit inherited characteristics, occur spontaneously although at a very slow rate. Ionizing radiation causes them to occur much faster.

Early genetical studies used X-rays and radium, but the work was on a limited scale. Reactor-produced radioisotopes provide the geneticist with new tools that greatly facilitate plant breeding.

With better radiation sources, radiation genetics is being studied from two different points of view. The first approach is designed to give a better understanding of the science of radiation genetics and consequently of genetics itself. The second is a much more practical approach to the use of radiation for the solution of specific agricultural problems.

By means of fundamental studies, plant scientists have been able to define accurately the way in which radiation should be given to a plant, the biological conditions which must be fulfilled, the type of radiation to use, the results that may be expected, as well as a great many other factors necessary for an intelligent approach to the problem.

Such fundamental studies have produced evidence that some radiation-induced mutations are desirable changes. As a direct result of these studies, scientists recently have applied their findings to the solution of specific agricultural problems. One of the most spectacular of these results is the development of rust resistant oats by means of neutron irradiation. After only one and one-half years, a small amount of rust resistant oat seeds was obtained. Conventional plant breeding methods might have taken 10 years to produce this result, at considerably greater expense.

Disease resistance is by no means the only desirable characteristic which can be induced by radiation. The most striking example so far of the induction of other characteristics is illustrated by work in North Carolina. Irradiation has produced peanut plants which have about 30 percent higher yield per acre, a size and shape better adapted to mechanical harvesting, and better resistance to common leaf spot diseases.

Attempts are also being made to develop shorter corn plants which provide a greater yield of grain per stalk. In Nebraska there is a program to develop a winter hardy barley.

Many important crops, such as apples, are not normally propagated by seeds but are reproduced by means of branch grafts. Several types of plants and vines are being grown in gamma-ray exposure fields. Branches are removed from time to time and grafted to normal host plants in radiation-free areas. It is expected that these will produce many abnormal branches bearing new types of fruit.

Nature continues to produce new and virulent strains of plant-disease organisms. Radioisotopes have proved to be very useful in determining the potential virulence of some types of fungi. This is done by exposing a disease fungus to radiation in order to speed up the natural mutation rate. In this way it is possible to gain some insight into what types of new diseases may occur naturally in the future.

The degree to which plant disease can be overcome will depend on how well possible future diseases are understood. Thus, much basic research is required and in many cases radioisotopes provide the only key.

Moisture Distribution and Cloud Seeding

Droughts have a vital economic effect upon agriculture. Any new information about weather in general and rainfall in particular is of great importance to the farmer. The versatility of the radioisotope technique has made it a useful new tool in this field.

For most efficient use of natural precipitation, particularly in western states, it is helpful to know the amount of precipitation both as it falls and as it is stored in snow packs in the mountainous areas. Without this informa-

tion, proper preparations cannot be made to store a portion of the water in lakes and reservoirs for later use when it is most urgently needed. Commitments for irrigation water supplies as well as hydroelectric current are made on the basis of snow measurements.

Snow-survey and precipitation-gage data give only limited information because of the inaccessibility of many important watersheds during the winter months. However, the use of radioisotopes allows reliable and economical methods for measuring and telemetering information on the amount of water stored in mountain snow packs. A snow gage utilizing Cobalt 60 has been developed and integrated with a telemetering system. The application is illustrated in Figure 23.

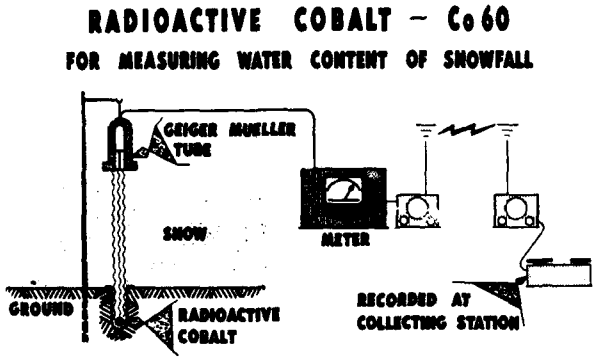

FIGURE 23.

Radiosilver has been used to study cloud seeding, which had undergone extensive testing as a means of artificially producing rainfall. The experiments, conducted in Oklahoma, employed Ag 111 in proper combination with stable silver iodide for introduction into the atmosphere. The tagged AgI crystals were used to trace the concentration and distribution of such crystals in the atmosphere both vertically and horizontally and under specific atmospheric flow conditions. The precipitation believed to have been induced was analyzed. This more accurate method of measuring gave knowledge of AgI concentration and distribution in the atmosphere and in possible precipitation from seeded clouds.

Radioactive rubidium has been used on Hawaiian sugar plantations to study water flow and distribution during irrigation. In several field tests water inflow measured by the rubidium technique agreed very closely with water measured by Parshall flumes. These tests are pointing out weaknesses in the present system of timing water flow and volume of water used. With fuller data, changes in irrigation methods can be scheduled to obtain a better distribution of water.

Cobalt 60 and Cesium 137 are being used also as sources of gamma rays for measuring soil moisture on Hawaiian sugar plantations. There are obvious advantages in having absolute moisture values continuously available without disturbing the soil. Readings can be taken at several steps across the main root system.

Cesium 137 is being used in a detailed study of the relation of soil water to photosynthesis. Experiments are being carried out with potted plants and the soil moisture is measured by the gamma-ray method. The tops of the plants are sealed in glass chambers so that the rate of uptake of carbon-dioxide from the air can be followed continuously. Exact time relations between plant wilting and photosynthesis are being sought.

Studies of efficient use of fertilizer also have provided information on moisture availability to plants. Tagged fertilizer placement studies indicate the time and depth at which supplemental irrigation is most required. Such irrigation is important in production of high-acre-value crops such as tobacco, even in areas of high annual rainfall.

Root Growth

To achieve higher yields from plants, a better understanding of root systems and their rate of growth is important. An insight into this important aspect of plant growth is gained during fertilizer uptake and soil fertility studies with radioisotopes.

For example, tracer studies show that corn plants which have extensive root systems during maximum growth cannot get a major share of the phosphorus from a surface application made at planting time. The roots are predominantly below the plow depth when the corn is maturing.

342334—55——4

Therefore, radioisotopes show that the crop feeds largely on phosphorus already in the soil.

Other interesting points observed in tracing fertilizer include the comparatively shallow feeding of cotton plants and the heavy uptake of nutrients from immediately beneath the peanut plant during the first 7 weeks of growth. Research of this kind is leading to a better understanding of the volume of soil utilized by various crop plants. In the soils of the Southeast, which are naturally low in fertility, plants are usually expected to subsist on nutrients supplied in the top 6 inches, or plow depth. It may be possible to raise the ceiling on yields by providing a deeper zone of nutrients more in keeping with the needs of the plant. If heavy rooting could be induced in a number of crop plants to the depth of one additional foot, the bad effects of relatively brief droughts would be materially reduced.

In studies of root system growth radioactive phosphorus was placed in the ground at various depths and positions around the base of the plants. The appearance of radioactivity in a plant indicated that roots had reached the fertilizer and permitted making a detailed pattern of root growth as the plant grew. Information was obtained on how much each zone of the root system contributed to the phosphorus nutrition of the plant.

Radioisotopes will certainly play a prominent role in further fundamental research on rooting characteristics in relation to soil properties.

Photosynthesis

Photosynthesis is the process through which green plants make food out of air, water, and the radiant energy from the sun. It was not until 1940 that anything definite was shown about the role of water in the process. Oxygen was known to be evolved but its source was in considerable doubt. At that time, scientists in California, using water labeled with stable Oxygen 18, definitely established water as its source

Scientists in England were successful in determining the next major stage in photosynthesis. It was found that if the leaves of a plant were ground up, and thereby the process of photosynthesis as a whole destroyed in the plant, the individual bits of green coloring matter from the plant would still carry out the reaction of evolution of oxygen and transfer of hydrogen when placed in water and subjected to sunlight.

In 1946, when Carbon 14 became available in large quantities from Oak Ridge, researchers at a score or more universities began investigating the chemical reactions of carbon dioxide after hydrogen is transferred into the system. This work led eventually to the discovery of later steps in the process.

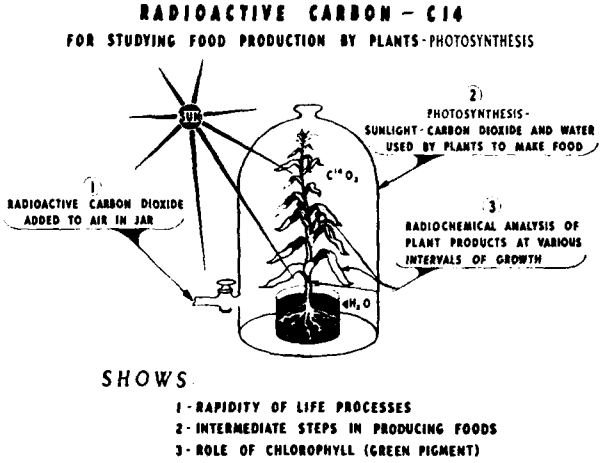

FIGURE 24.

As in many life processes, the steps in photosynthesis are very rapid; many compounds may be formed in a few seconds. Through the use of radioactive isotopes, as illustrated in Figure 24, these dynamic life processes were unraveled. The successful discovery of the intermediate steps in photosynthesis was reported to the American Association for the Advancement of Science at the close of 1954.

ANIMAL STUDIES

Tracer studies in animal nutrition and animal physiology are similar in many ways to those in plant physiology. They cover a wide variety of interest. The problems and approaches are, also, very similar to those involved in the extensive use of isotopes in the studies of human physiology and metabolism. As a matter of fact, animal studies must often serve as a basis for application to human beings. A major portion of the radioisotope applications in the

animal husbandry field have been concerned with metabolism studies in poultry, cattle, and sheep.

Micronutrients

Radioisotopes are uniquely valuable for studying mineral metabolism, especially the extremely minute quantities of certain essential elements called micronutrients. Perhaps the best known and most striking of such studies is concerned with cobalt metabolism in the ruminant. Cattle and sheep require between 0.04 and 0.07 parts per million of cobalt in their diet, whereas simple-stomached animals such as horses, hogs, and rabbits have much lower requirements. Chemical studies of such low concentrations are extremely difficult. However, the problem easily lends itself to the tracer technique, which also permits the investigator to follow the metabolic path of the element.

Vitamin B–12 is known to be essential in minute quantities. Since the vitamin B–12 molecule contains cobalt, it was suspected rather early that cobalt deficiency in cattle and sheep was actually a B–12 deficiency. By oral administration of radiocobalt it has been confirmed that vitamin B–12 is synthesized in the rumen of cows and sheep and that oral administration is the most effective way to provide cobalt to animals deficient in this mineral.

Prior to work with radiomolybdenum, it had been assumed that molybdenum was essential for plants but not for animals. In recent work in Tennessee, radiomolybdenum was given to dairy cows. One of the important body enzymes, with radioactive molybdenum incorporated into the molecule, was then isolated from milk, showing that molybdenum is a part of this important enzyme.

Recent research with Sulfur 35 has shown that the amino acids, cystine and methionine, are synthesized by sheep and cattle from radioactive inorganic sulfate administered orally. In a rather surprising development, it was shown that the chicken also could synthesize the amino acid, cystine, from inorganic sulfate. Since cystine can partially replace methionine in the diet, inorganic sulfate may be considered an important and cheap nutritional mineral even for nonruminants.

Radioactive sulfur is being used in Wyoming to study selenium poisoning, an extremely important problem since many areas in western states are unused because of high selenium content in the soil. Selenium is taken up by plants and, when consumed by animals, has many toxic effects. Sulfur metabolism was shown to be affected by the ingestion of selenium. The latter is believed to interchange with sulfur in important amino acids, thus making them unavailable to the body. Through such studies a better insight is being gained on the mode of action of selenium.

Other studies include the use of radiophosphorus to investigate the metabolic relation of phosphorus with iron, cobalt, copper, and molybdenum in larger animals. Mineral metabolism in animals such as rabbits, chickens, swine, and cattle has been studied with the following radioisotopes: Cesium 134, Phosphorus 32, Sulfur 35, Calcium 45, Iron 55, Cobalt 60, Copper 64, Zinc 65, Strontium 89, Molybdenum 99, Iodine 131, and Tantalum 182.

Use of Organic Metabolites

Radioisotopes have found such extensive use in investigating organic and biochemical processes in animals, as shown by the large number of papers listed in Appendix V, that only a few of the noteworthy applications will be briefly discussed.

In several Southern states many better breeds of cattle do not thrive well because they are unable to adapt to high temperature and humidity. Several groups have conducted experiments in which animals with high heat tolerance, such as the Sindhi and Brahman, are crossed with other breeds in an attempt to develop animals with both heat resistance and high productivity. Prior to the use of radioisotopes, it was difficult to evaluate the ability of an animal to withstand high environmental temperatures. The more heat-resistant animals are believed to adapt themselves to high temperatures, at least in part, by a depression in activity of the thyroid gland.

Scientists in Missouri have injected radioactive iodine into animals exposed to various

temperatures and then measured the uptake of iodine by the thyroid with a counter. These studies are leading to a better understanding of thyroid depression and heat resistance, and are helping to identify animals with more than average heat resistance. The selected animals are used in breeding more heat-resistant cattle. Efforts are also being made to use similar techniques for prediction of performance potential in the young animal.

In the above section on micronutrients, the synthesis of amino acids from tagged inorganic sulfate was discussed. These same observations suggested that only the growing feathers of chickens take up methionine and cystine and that there is no exchange of these amino acids in the feathers with those in the body. The work also demonstrated that growth takes place only from the base of the feather. The growth of wool and the growth of feathers have much in common, so that radioactive sulfur also offers excellent opportunities for the study of wool growth and the effect of nutrition upon the growth of wool fiber.

By injecting cows with substances containing radioactive carbon and then measuring the radioactivity of expired carbon dioxide and various milk substances, investigators can establish the rate at which organic metabolites are broken down within the body and the extent to which the carbon in them contributes to formation of milk substances. The sensitivity of Carbon 14 as a tracer is illustrated in Figure 25.

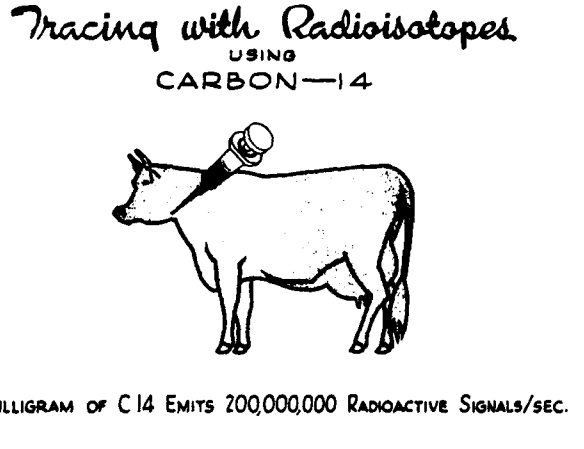

FIGURE 25.

Physiological Availability of Diet Additives

Radioactive tracers are used in a wide variety of ways to study the physiological availability of diet additives. Prior to the advent of radioisotopes for following complicated body processes, very little information on this important aspect of animal nutrition was known.

Conventional food balance studies give information only on intake and loss of nutrients from the body. Although excreta from animals contain materials that have not been absorbed, they also contain material which have been absorbed from the alimentary tract and subsequently excreted. This fact long interfered with estimation of the true digestion coefficient for feed materials, until the introduction of radioisotopes permitted identification of the source of excreted elements. Such uncertainty about mineral absorption is in contrast to organic nutrients, since the digestibility of these can usually be measured with accuracy by analysis of feed and feces. When organic nutrients are absorbed into the body from the digestive tract, they are broken down and not reexcreted intact into the gut. Tennessee and California scientists have succeeded in making definite separations of endogenous (body) and exogenous (feed) calcium and phosphorus in the feces. Similar studies have been extended to the egg, the fetus, and milk, making possible a clearer understanding of the relative contribution of the feed and body to each of these. This type of study is leading to a clearer understanding of the important processes of nutrition.

It has been long thought that the digestibility of the phosphorus of alfalfa hay for lambs was low, about 20 percent. This supposition is contradicted by recent studies made in California. The radioisotope tracer technique showed the true figure to be about 90 percent. Thus, alfalfa was proved an excellent source of phosphorus for the feeding of ruminants.

These procedures have emphasized the dynamic equilibrium of all elements within the animal body, and have made possible a new approach to determining body requirements of farm animals based on true digestibility of feed nutrients.

Biochemistry of Body Processes

For investigating the biochemistry of body processes, radioisotopes provide tools with practically unlimited possibilities. The work accomplished in this field on both laboratory and experimental animals is quite extensive, as indicated by Appendix V. (See secs. J and K.)

A great deal of research has been carried out with the dairy cow because of its importance as a provider of food. Much of this research has been done with the object of evaluating feed in relation to milk formation.

In the rumen of the cow, carbohydrates in the form of both starch and cellulose as well as proteins are acted upon by microorganisms and are broken down into small molecules. Radioisotopes show the principal end products to be acetic acid, propionic acid, and butyric acid. These are absorbed in the body for metabolic processes. Acetic acid is built into the body fats and other substances, used for energy, and converted into milk fats. Propionic acid is converted into liver glycogen, and butyric acid appears to be converted primarily into beta-hydroxybutyric acid. Knowledge of such processes is extremely important in improving milk production.

When acetic, propionic, and butyric acids containing radioactive carbon were injected into cows, it was noted that 17 percent of the radioactivity from the acetic acid, 11 percent from propionic acid, and 6 percent from butyric acid appeared in the milk, thus giving their efficiency of transformation into milk. When glucose containing radioactive carbon was injected into the cow, 56 percent of the radioactive carbon appeared in the milk. By analyzing the milk and studying the amount of activity found in each milk component it was shown which milk substances arise from acetic acid, propionic acid, glucose, and butyric acid. Such studies also suggest pathways by which biochemical transformations take place.

In a similar study, illustrated in Figure 26, radioactive glucose pumped through an udder by an artificial heart-lung apparatus has shown that all of the activity goes into milk sugar and practically none to other milk components. These studies show that glucose, when injected into the cow, is converted into substances such as fat and protein, which then are carried to the udder by blood and converted into milk

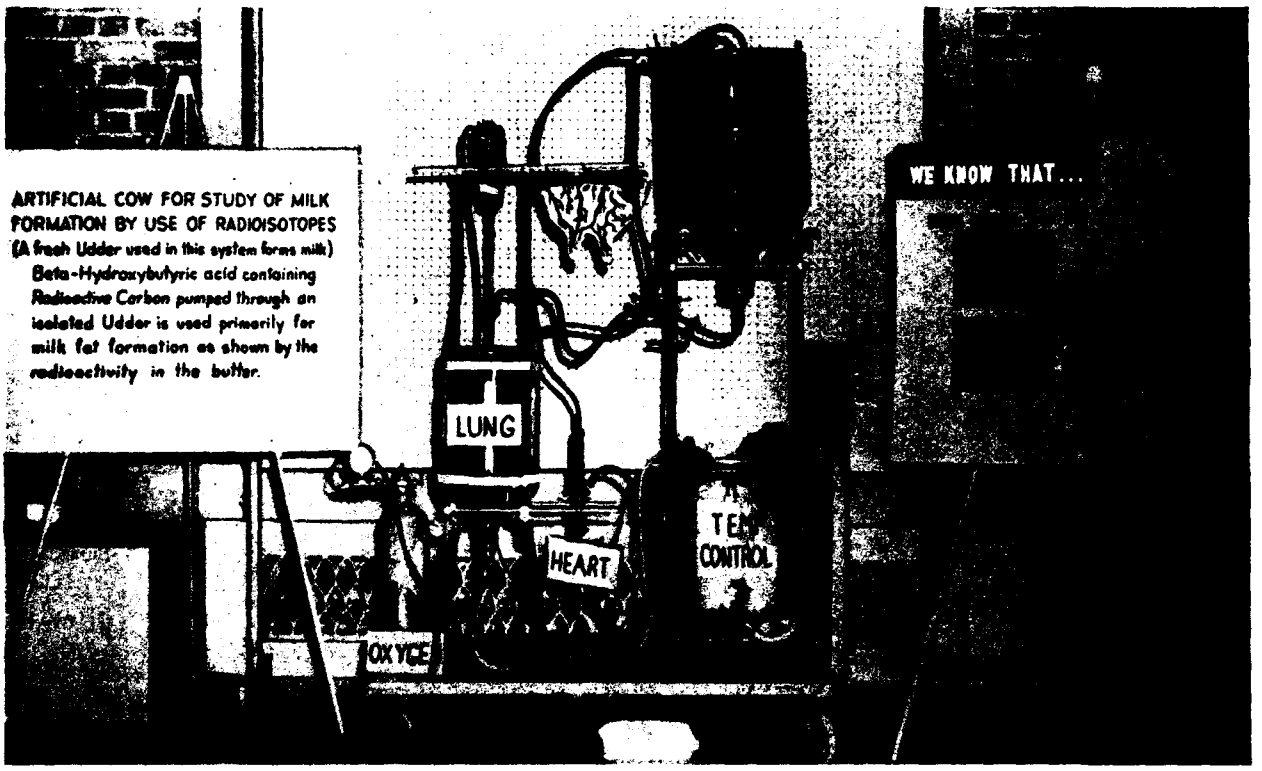

FIGURE 26.

components. A considerable amount of the glucose also passes directly to the udder and is converted into milk sugar. By the use of an artificial cow and radioactive glucose it has been possible to show that the udder itself utilizes glucose for milk sugar production only.

Information on milk forming reactions is showing the way to improved milk production in individual animals, the choice of economic feeds, better management practices, and choice of better stock for breeding.

Animal Diseases

Economic considerations often operate against using domestic animals to study diseases which affect them. Large domestic animals must be given si eable quantities of radioisotipes for investigational purposes, and their use creates special radiological safety problems. Results of work with small animals, such as rats, often can be extrapolated to larger animals.

However, certain specific problems must be investigated in the particular animal of interest. In many such studies, radioisotopes provide the best or perhaps the only approach to the problem. The following examples illustrate some of the applications.

In Maryland, radioisotopes have been used in work on ketosis in dairy cattle. Ketosis is caused by a hormonal deficiency that brings on a breakdown in the body's system of normal checks and balances. It has been shown that the hormone ACTH can be effective in its treatment. In other studies on bloat in sheep and cattle, a condition that results in losses amounting to millions of dollars, the use of radioisotopes is being planned as the most direct and profitable approach to a solution.

Strontium 90 beta-ray applicators have been used for treating infections of the eyes and skin in farm animals. Valuable breeding bulls with eye cancer have had their usefulness prolonged.

Chromium 51 and Phosphorus 32 have been used in labeling the virus which causes erythrogranuloblastic leucosis of fowls, and also a low-virulent strain of Newcastle disease virus of fowls. Cases of neural lymphomatosis and visceral lymphomatosis in fowls have been treated with Phosphorus 32.

Radiation Effects, Reproduction, and Genetics

Radioisotopes have been used extensively in specialized studies of experimentally produced radiation sickness in animals. Perhaps the most noteworthy are the studies of response of farm animals to radiation in which normal animals were subjected to lethal and sublethal amounts of radiation from Cobalt 60. Such studies have provided vital information on survival rates, physiology and pathology of irradiation, ability to perform work, and food potential of various farm animals in case of atomic disaster.

In other studies, uptake and retention of fission products in farm animals has provided useful information on the extent of radiation damage caused by these materials.

Radioisotopes are used in investigating important problems of placental transfer and deposition of elements in the developing fetus. These studies were peformed on cattle because their body size allows more detailed study of skeletal deposition and placental permeability.

The principles of genetics are believed to be universal from bacteria to man. Extensive studies of the genetic effect of radiation are being made with laboratory animals such as mice. Information gained in these studies will provide data necessary for an attempt to produce beneficial mutations in animals. Animal scientists hope that such mutations will result in increased economy in nutrition and in resistance to disease. Poultry raisers are using radiation in an attempt to produce genetic changes leading to increased egg production.

INSECT STUDIES

The number of species of insects and related arthropods are known to approach one million. The destructive and beneficial activities of these small creatures often determine the economic and social level of man's existence. Destruction of crops by the corn borer and several species of grasshoppers is an annual problem. Mosquitoes, house flies, and other insects spread both human and animal disease.

In the United States alone, it has been estimated that insects cause damage of over 3 billion dollars annually. Methods of controlling destructive insects generally depend on knowledge of the life history of the pest, to find a susceptible stage in the life cycle of the insect which can be attacked with an appropriate control method. Radioisotopes are helping in the search for better methods of controlling these destructive insects.

Despite the destruction and annoyance caused by most insects, many are useful. The perpetuation of many plants results through fertilization by insects. In addition to the honey bee, the silkworm, and lac insects, useful insects include predators and parasites which affect the balance of nature in a usually unnoticed fashion. Insects are useful also as experimental animals because of their small size, low cost of rearing and maintenance, and high rate of reproduction.

Sterilization

Scientists have utilized gamma rays from radioisotopes to interfere with the reproduction cycles of certain insects. The method is based on sterilizing large populations of male insects and releasing them with the knowledge that the female mates only once a year and with a single male. The resulting eggs will not hatch, thereby reducing the population in the next generation. U. S. Department of Agriculture scientists, working with Dutch authorities on the Caribbean island of Curacao, have been able by such methods to nearly eliminate screw worm flies, whose maggots attack livestock. Similar action in the United States has proved very effective. Losses to United States cattlemen from this pest are reported to total 25 to 35 million dollars per year.

The sterilization technique is useful only for the control of insects with suitable mating habits, and cannot be applied to a number of insect species.

In another type of study, scientists are devising ways for combatting the pink bollworm, which in 1953 accounted for a $261,000,000 loss to the United States cotton crop. Equipment utilizing radioisotopes as sources of radiation is being developed to kill the pink bollworm in cotton seed when it is removed from the fiber at the cotton gin. Ordinarily part of such seed is used by growers for planting the following year's crop. Thus, if the pink bollworm, which thrives in both the seed and the plant, is carted back to the field for planting it can continue its damage to a new crop. Sources for such radiation units may be obtained from waste fission product materials.

Insecticides

The use of radioactive insecticides has been a rewarding approach to the study of absorption and distribution of the toxicants in insecticides, particularly the ones that are systemically taken into plants. Information is obtained on extent of coverage during application, duration, systemic action within the plant, uptake by the insect, physiology within the insect, and other factors. Carbon 14 in various organic compounds has been most widely used in such studies. Iodine 131, Sulfur 35, and other radioactive isotopes have been used to a lesser extent.

Comparing the amount of insecticide absorbed by resistant and nonresistant strains of insects has helped to explain causes of resistance. Tracer studies in Oregon showed that a particular type of mosquito larva with acquired resistance absorbed over six times as much DDT as the same variety with no acquired resistance. Mortality of resistant larvae was 74 percent and of nonresistant larvae was 94 percent.

Some of the most important insecticides are also toxic to mammals. Sulfur 35-labeled parathion has been used to study the toxicity of this insecticide in rabbits. Phosphorus 32 has been used in the study of parathion in cows and milking goats.

In Iowa, work has been done on measurement of wireworm reactions to soil insecticides by tagging the insects with radioactive cobalt. The technique has several unique and important applications to the study of soil-infesting insect pests, and perhaps to other destructive insects such as stored grain pests which cannot otherwise be traced in their movements without disturbing them.

Migration and Hibernation

The use of radioactive isotopes to tag insects for flight-range measurements has been most helpful in the study of their habits of migration and hibernation. Phosphorus 32 and Strontium 89 are the radioisotopes most frequently used. Study of the ratio of tagged to untagged recaptured mosquitoes gives valuable clues to the productivity of breeding areas, and thereby aids in control activities.

Flies play an important part in the dissemination of dysentery and typhoid, and possibly poliomyelitis. Information of fly movements is essential, therefore, in planning field control operations. Fluorescent dyes, colored dusts, and chemical agents producing color reactions have been used in marking adult flies for dispersion studies. Certain mutant strains have been employed in special cases. These methods require the inspection of individual insects. The radioactive tracer technique has proved to be a far more versatile, quick, and accurate method for conducting these studies.

Such studies established that the major portion of house fly dispersion in a community falls within 1 mile of the release point, although movement can and does occur up to distances of 2 to 7 miles.

Radioisotope tracer studies also showed that blow flies disperse more rapidly and to greater distances than the house fly. Since blow flies frequent both disease sources and human foods and are a proven carrier of disease, their extended dispersal range increases their potential health hazard.

Cockroaches sprayed with radiophosphorus have demonstrated how the species can invade homes, even passing through water traps in the plumbing. Sewer cockroaches were used in one such experiment. The results showed that the insects, which are potential disease carriers, migrate as much as 200 feet when they become overcrowded or when forced out of their colonies by backed-up sewage.

Bee Culture

In bee culture studies in Wyoming, radioisotopes are being used to follow the spread of honey bee diseases by carriers between colonies. Phosphorus 32 was fed in sugar syrup to a colony of honey bees located in the middle of a row of colonies in an apiary. The drifting of bees from the marked colony to another colony was observed in relation to the spread of one of the brood diseases of bees, known as foulbrood. The drifting of tagged bees from the colony that had consumed some of the radioactive sugar syrup was easily followed by using a geiger survey instrument in examining the other colonies. Radioactive phosphorus is also being used in Louisiana to follow the feeding habits of bees.

Physical and Chemical Research

It was through the efforts of physicists and chemists that isotopes were discovered and ultimately produced in useful quantities. These scientists soon found isotopes to be very important tools in many of their fundamental research problems. As tracers for physical and chemical processes involving individual atoms and molecules, isotopes have no equal.

Isotopes represent one of the great extensions in man's ability to "see" and to "sort." At first, things could be seen only with unaided eyes and sorted out only with hands. Next, magnifying glasses and small tweezers were [illegible] Later, the microscope was invented to [illegible]iner details and chemical and physical processes were developed to sort out various elements, compounds, and forms of life. As an "atomic" microscope, isotopes now take man another great stride forward in perception.

Both radioactive and stable isotopes are widely used in physics and chemistry. The statistical data on shipments of the two kinds, given in tables 1 and 4 of Appendix III, do not adequately reflect the importance of stable isotopes. Unlike the radioactive ones, which must be used while still "hot" and, in most instances, be replaced each time they are used, the stable variety do not change with time. Once obtained, they can be used over and over, as long as they are not too diluted with other isotopes of their chemical element during the experimental procedures.

PHYSICS

Nuclear physicists, in particular, have benefited by ready availability of a large variety of stable and radioactive isotopes. Even though particle accelerators and neutron sources allow the physicist to produce his own radioisotopes, a handy catalog of ready-made ones is extremely valuable. As byproducts of nuclear reactor operation they are available in quantities far larger than could be produced in a cyclotron.

Concentrated stable isotopes have been even more useful in nuclear research than the radioactive species. They are particularly useful as "purified" nuclear species with which to perform nuclear reactions, and to determine spin, magnetic moment, and other nuclear properties of interest to the physicist.

Stable isotopes have been of great help in the discovery and identification of new radioisotopes. Radioisotopes are discovered by finding a new half-life and energy of radiation and then obtaining conclusive evidence that the radiation comes from a particular isotope of a particular element. In most cases, a stable atomic nucleus hit by a nuclear particle is converted to a radioisotope of either the same element or one of its very near neighbors on the Periodic Chart. Chemical analysis of the target material then reveals which element is radioactive, but not which isotope of that element. However, if the physicist uses a single or concentrated isotope to start with, he can usually determine which isotope was formed from it.

The bombarding particle most often used in cyclotron reactions is the stable deuteron, the nucleus of double-weight hydrogen, or deuterium. It is obtainable, through the isotopes distribution program, as a gas or as heavy water, deuterium oxide. The radioactive nucleus of triple-weight hydrogen, or tritium, is also obtainable and used as a bombarding particle. Alpha particles are obtained as the nuclei of helium atoms, while Helium 3 particles are obtained from the decay of tritium.

Concentrated stable isotopes are frequently used as target material for the production of relatively pure radioisotopes in a nuclear reactor. Neutron irradiation of natural iron, for example, produces about equal activities of Iron 55 and Iron 59. Either of these can be obtained almost free of the other by irradiating iron enriched in Iron 54 or Iron 58, respectively.

Peculiar characteristics are found among the hundreds of stable isotopes and some of these have proved particularly valuable in pure form. Boron 10, for example, has an especially high probability of capturing a slow neutron. When capture occurs, B–10 converts into an alpha

particle and a lithium nucleus, both with high velocity. This special property makes B–10 useful for measuring or counting neutrons. Slow neutrons usually pass through a geiger counter without being counted, but a coating of Boron 10 in the counter absorbs a large proportion of them. The resulting particles from the B–10 trip the counter.

Concentrated stable isotopes have also proved useful in fundamental studies of the energy states, or levels, of atoms and molecules. These particles, when excited, emit visible light, infrared and ultraviolet light, microwaves, or X-rays. All are the same kind of radiation, but differ in energy range. These radiations are the energy released when the energy content of an atom or molecule shifts to a lower, more stable level. The spectroscopist can determine the energy states from the emitted spectrum.

Formerly, much of this work was indefinite because the weight of an atom affects its internal energy to a small extent and quite decidedly affects its vibrational energy in a molecule. In ordinary mercury, for example, seven different weights of atoms are always present and give slightly different spectra which blur together. By using mercury in which the isotope Hg–202 has been electromagnetically enriched from its natural relative abundance of 30 percent to 98 percent or better, the results become overwhelmingly those from one kind of atom and are quite definite.

The wavelength of the red line in the spectrum of cadmium was long ago set as the international standard of length. Although quite precise for most purposes, this standard suffers in being a combination of slightly different lines from the cadmium isotopes. Therefore, for still greater precision in laboratory wavelength comparisons, separated isotopes such as Cadmium 114, Copper 63, and Mercury 198 and 202 are used as spectrographic sources. Because mercury is so easily used in a light source, its enriched form as a practically pure isotope has been under consideration for possible replacement of cadmium as a primary standard.

Electromagnetically separated isotopes have been frequently used in search for natural radioactivity among the supposedly stable isotopes. When natural beta radiation from indium was confirmed, for example, a sample enriched at Oak Ridge to 99.92 percent Indium 115 was found to have more activity than normal indium, thus definitely pointing to Indium 115 as the radioactive isotope.

The physicist, also, sometimes employs radioisotopes as tracer atoms. Thicknesses down to a trillionth of an inch are measured in a method for calibrating the shadow-casting technique. Specimens to be viewed in an electron microscope are frequently sprayed at an angle with chromium or other heavy metal atoms so that "shadows" are formed which reveal varying depths of the surface. Atoms are evaporated in vacuum from a heated metal, as indicated in Figure 27. The resulting film must be thick

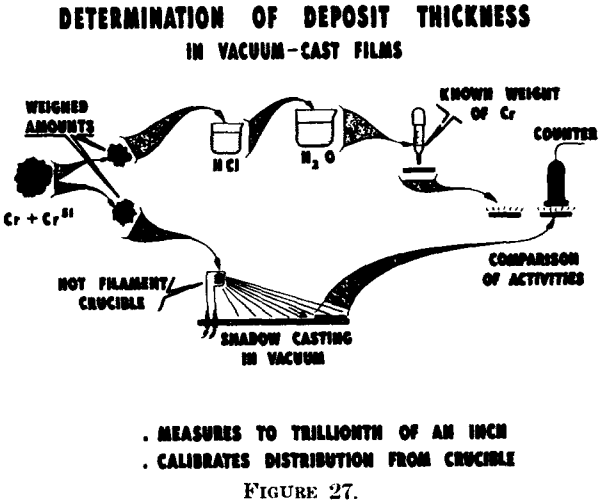

FIGURE 27.

enough to produce good shadows but not so thick as to blur details of the specimen. Thickness of film laid down in a given time at a particular place is determined by a test run with radioactive metal. A standard area of this film is measured for radioactivity with a counter. Solutions containing known weights of the same labeled starting material are dried on identical areas and are counted. Comparison of activities then gives the weight of film, for conversion to film thickness.

GENERAL CHEMISTRY

The chemist plays a universal role in technical endeavor. His investigations into fundamental chemical phenomena such as those discussed here form the basis for further progress in such diverse fields as medicine, biology, agri-

culture, and industry. The cause and cure of disease, the action of drugs, the mode of action of fertilizer and insecticides, the study of cell biochemistry, and a host of industrial processes, all require fundamental knowledge provided by the chemist.

Chemistry not only serves as the basis for a number of the unique techniques associated with the tracer method but also as the means by which tracer products are separated and identified. Indeed, the isotope tracer method depends very largely on chemistry.

The isotope tracer technique derives its power from its great sensitivity and specificity. Sensitivity is primarily concerned with the detection and measurement of radioactivity and hence is not the primary responsibility of the chemist. Specificity, on the other hand, depends on careful separation and identification procedures, which are chemical techniques. Further, the final radioactivity measurements in a tracer experiment are only as significant as the preciseness of the techniques used to separate and identify the samples.

The chemist has had to devise new methods and adapt others to meet these strict separation and identification prerequisites. Those most frequently used include ion exchange, chromatographic, and isotope derivative techniques. A brief discussion of these techniques will illustrate their versatility.

Separation of ionized substances by ion exchange is probably the most adaptable method at very low concentrations. Ion exchangers are substances which are insoluble in solvents and aqueous solutions usually employed in the laboratory, but which ionize in certain solvents. Under proper chemical conditions, the "charged" exchanger is extremely selective in reacting with ionized substances in solution. After being selectively absorbed, the separated substance (isotope) may be removed from the ion exchanger. This is one of the few methods of separation which operates more efficiently when substances are present at very low concentrations than when they are present in appreciable amounts.

Paper chromatography has proved a particularly useful technique since it permits separation and identification to be made in the same operation. Movement of a solvent along a strip of paper causes certain molecules to move with it, usually at a slower rate. Different compounds (molecules) move at different rates, thus permitting separation of mixtures of compounds in the chromatogram. Identification of the separated compounds may then be made by comparison with known chromatograms or by a combination of radiochemical and microchemical techniques. Two-dimensional paper chromatography has been introduced into isotope work and offers the advantage of a second order of separation. After one solvent has caused the products of an unknown mixture to move along one dimension of the paper, the chromatogram is rotated 90 degrees and a second solvent is added so that the partially separated products move in a second path at a right angle to the path of the original separation. Autoradiography has been found to be a helpful adjunct to paper chromatography.

The isotope derivative method, like paper chromatography, finds widest application in biological tracer studies. Briefly, it is a method for determining organic compounds from their isotopically labeled derivatives. To a mixture containing the compounds to be analyzed is added an isotopically labeled reagent under such conditions that the compound in question is converted into a derivative of the reagent. The isotope derivative method becomes quantitative (1) when quantitative yields are obtained of the isotopic derivatives during the reaction with the isotopic reagent as well as in subsequent isolations or (2) when a known amount of the compound being determined is labeled with a second isotope and introduced into the mixture. The recovery of the second isotope in any pure isolated sample of the isotopic derivative may be used to correct both the lack of quantitative yield and recovery obtained with the derivative of the original isotopic mixture.

For example, to determine glutamic acid in an amino acid mixture, one reacts the mixture with a certain radioiodine-labeled reagent, adds a known amount of very pure radiosulfur-labeled glutamic acid, and then separates the amino acids by chromatography. If the ratio of counts of radioiodine to radiosulfur is determined in successive small strips over the glutamic acid band, one can identify with

certainty and measure the amount of glutamic acid in the original mixture.

Throughout the course of all tracer experiments the isotope user must be continually aware of pitfalls. Potential pitfalls lie in each of the seven criteria of tracer methodology, namely: radiochemical purity, single chemical state, exchange error, degree to which the tagged molecule remains intact, isotope effect, chemical effects, and radiation effects. It is primarily the responsibility of the chemist to see that such pitfalls do not invalidate the results of tracer experiments.

PHYSICAL CHEMISTRY

Atom Exchange

Exchange of like atoms, between two different chemical species in solution, occurs spontaneously and can be detected and measured only with isotopic tracers. It occurs, for example, in a solution containing two types of complex cyanide molecules, each having an iron atom. The iron atoms exchange position between the dissimilar molecules, while the number of molecules in each species remains unchanged.

After labeling one species with radioiron and allowing exchange to occur with the other species over a definite period of time, the two are chemically separated and the radioactivity is measured in the second species. Such observations on the rate of exchange can shed much light upon the strengths of various chemical bonds. Strong bonds would prevent substantial exchange.

Aging of Precipitates

Alteration of chemical precipitates with time has also been studied with radioactive tracers. When a solid is precipitated from solution there are always a definite number of molecules which remain dissolved, depending on the solubility of the precipitate. A newly formed precipitate differs in character from an "aged" precipitate and the solubility often varies with aging. Tracer studies have clearly demonstrated what was long suspected, namely, that the precipitate spontaneously redissolves and reprecipitates (recrystallizes) to form a new and more stable surface during aging. The use of radioisotopes to measure quantitatively the very small solubilities of many solids has proved valuable to analytical chemistry.

Surface Reactions

Surface phenomena involve special and complex mechanisms for which radioisotopes frequently provide the chemist his only method of study. Even as seemingly simple an action as corrosion is quite complex and much effort is being made to gain a better understanding of it. The "passivity" or inertness to corrosion which is induced in iron by treatment with chromate was studied, using Chromium 51-labeled chromate. An autoradiograph of the surface showed concentrations of the chromium at areas where early corrosion had been arrested. Various theories have been proposed to explain passivity and results of this test were useful in supporting one of the theories.

Radioisotopes are useful in studies of surface reactions frequently encountered in industrial processes. In studying reactions involving surfaces of solids, powders, or colloids, determination of the surface area is frequently important. No ordinary measuring technique reveals the surface of a powder but many methods have been devised for estimating these areas. The method using radioisotopes is generally in agreement with others and is usually faster and more convenient. It involves selective transfer (adsorption) of radioactive atoms from a solution onto the surface and determination of the area from the number of atoms on the surface.

Water flotation of mineral ores for separations in the mining industry is based on the adsorption of certain organic chemicals on the mineral particle surfaces. Since the chemicals coat one type of particle better than another, it is possible to make one kind float in a froth so that it can be skimmed off while the other sinks. By using a radioactively tagged chemical and a counter, it is possible to determine the conditions for and extent of adsorption on any particular mineral. The use of dodecyl amine for the flotation of quartz was studied in this way by using C–14-labeled amine. Economically important results were obtained on the fraction of surface which had to be covered to achieve

flotation and the grams per ton which gave optimum results.

Surface reactions are of great importance to the manufacturer and user of detergents and of laundry equipment. Adsorption on cloth fibers of both the soiling substances and minerals in hard water must be combatted by chemical action of the detergent. Many tracer techniques with radioisotopes have been devised for evaluating the efficiency of cleaning agents. In a typical test, swatches of cotton cloth were cleaned with various detergents in wash and rinse waters containing calcium bicarbonate labeled with radiocalcium. Little or no radioactivity remaining on the washed cloth indicated high efficiency in removing calcium ions absorbed on the surface.

The soiling substance also is frequently made radioactive for testing the efficiency of detergents or washing equipment and techniques. Fats, proteins, carbon, and clays have been labeled for this purpose. Automatic washing machines are routinely tested in this way by some firms.

Many important chemical reactions can only be made to proceed on a commercial scale by means of catalysts. Adsorption, reactions, and exchange on the catalyst surface are imporant factors in surface reactions. Information regarding these factors can be obtained with tracer isotopes and may be of vital importance to an industry. A tracer study of the Fischer-Tropsch synthesis of gasoline and other important hydrocarbons from hydrogen and carbon monoxide is an example of such work.

Diffusion

Isotopic tracers are particularly useful for identifying and following particular atoms or molecules in a chemical or physical system. In studies of gaseous, liquid, or solid self-diffusion there is virtually no other way to distinguish the diffusing atoms or molecules from chemically identical neighbors in the surrounding material. Such studies are not only of fundamental value in the understanding of molecular dynamics but are of potential use in many metallurgical and chemical processes.

A tracer study of solid metal self-diffusion, as affected by temperature, is illustrated in Figure 28. In the procedure, a thin layer of radioactive copper atoms is deposited on a copper block. The surface radioactivity is then found to decrease as surface atoms migrate into the block and the radioactive atoms among them are replaced by inactive ones. Self-diffusion in gases and liquids is usually studied by introducing the tracer at the end of a long, thin tube containing the material and measuring the radioactivity along the tube.

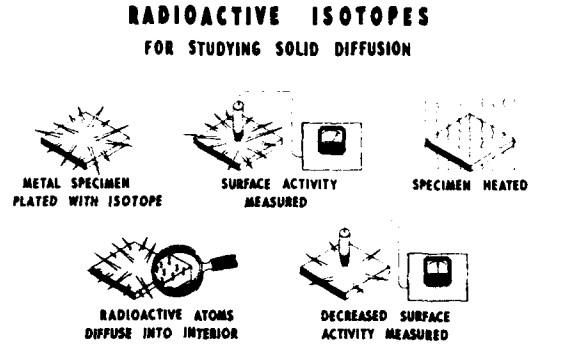

FIGURE 28.

Diffusion between dissimilar materials can be investigated in the same way. Such studies are particularly valuable in the case of metal alloys, where the strength and other characteristics depend on the distribution of the unlike atoms.

Vapor Pressure

The superior sensitivity of radioisotope measurement as an analytical method is shown in a method for measuring vapor pressure over solid or liquid metals. With metals of high melting point, it takes hours or days to collect enough condensed vapor to allow accurate weighing. By adding a radioactive tracer to the metal, as indicated in Figure 29, the determination may be made in a few minutes.

In a typical study, Silver 110 is added to melted silver. The vapor from the hot metal is allowed to stream through a pinhole in the crucible lid and condense on a cold metal disk. The activity collected in a certain time is measured with a geiger counter, and from it the amount of evaporated metal and the vapor pressure are calculated.

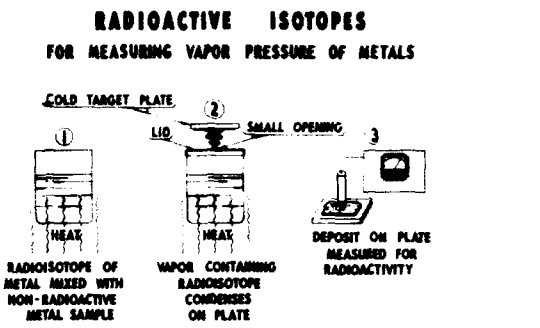

FIGURE 29.

Thermodynamic Properties

The great sensitivity obtainable in radioisotope tracing allows the chemist to use extremely small quantities of material when he finds this desirable. The thermodynamic properties of solutions, for example, are usually extrapolated to their values at "infinite dilution" since they change significantly with concentration. The researcher can verify or study thermodynamic behavior in a quantitative manner at extreme dilutions by using radioactive solutes.

Activation of Chemical Reactions

Radioisotopes are not only valuable in studying chemical reactions but also in causing them. Radiation is able to cause chemical changes by producing ionized molecules or free radicals (detached parts of molecules) which react in turn to form new molecules and, hence, new chemicals. Production of new or better products with radiation has great economic significance, and industrial potentialities are discussed in the section on Industrial Uses.

Chemical reactions best suited to activation by nuclear radiation are those which are "triggered" by penetrating particles, rather than those depending upon radiation energy to carry on the reaction. Chemical processes based on this type of action can be classed as polymerization, cross linking, halogenation, and oxidation.

Polymerization refers to chemical reactions in which many molecules are joined in a long chain as one large molecule called a polymer. Many important materials such as plastics and synthetic rubbers are produced in this way, entirely by chemical means. Rupturing of bonds to form new points of attachment for additions to the chains can also be effected by nuclear radiations. New materials may be produced in this way that are not possible or practical with present means. Reactions which have been studied include the formation of polymers of acrylates, styrene, and acrylonitrile.

The initiation of cross-linking of long-chain polymers is an effect of radiation receiving much attention in research. Molecules of a thermoplastic material such as polyethylene have many carbon-hydrogen bonds which can be broken by radiation. A single high-energy particle can produce this effect in thousands of molecules. The open bonds then join permanently to those of adjoining chains. Cross-linking prevents easy sliding of the molecules and thus changes the melting point, solubility, strength, and other characteristics of the material. Polyethylene, for example, melts to a thick liquid at about 70° C but retains its shape to 190° C after cross-linking.

Halogenation reactions, in which chlorine, iodine, and other halogens are joined to other chemicals to produce new compounds, are often extremely slow but can be greatly speeded up under ultraviolet light. The triggering energy can also be supplied by nuclear radiation. Oxidation reactions, also, make up a large group of chemical processes. Modern chemical theory assumes that in many oxidation reactions there is a chain reaction of free radicals in the presence of oxygen. Radiation is effective in producing free radicals as well as ions and may lead to easy oxidation of materials ordinarily difficult to oxidize by other means.

ORGANIC CHEMISTRY

The chemistry of carbon compounds, as this branch of science is usually described, has benefited greatly from the isotope-labeled organic compounds now available. The older literature in this field proposed many different mechanisms and theories for a single chemical reaction. With no way to trace individual carbon atoms, investigators were at a loss to resolve

the differences between various proposed mechanisms and theories. Carbon 14 has provided the key to understanding. Hundreds of compounds have been labeled with this isotope alone.

The Crossed Cannizaro reaction, for example, has been known for nearly 100 years. It involves a reaction between an aromatic aldehyde and formaldehyde. The formaldehyde is oxidized to formic acid and the aromatic aldehyde is reduced to a carbinol. To prepare a carbinol isotopically labeled in the carbinol carbon atom, one might consider starting with the corresponding aromatic aldehyde labeled with C–14 and performing a Crossed Cannizaro reaction with formaldehyde. An effort to do this came to nought, however, because all the radioactivity appeared in the formic acid, leaving a nonradioactive carbinol. Apparently, *the formaldehyde carbon traded places with the* C–1⁴ beled aldehyde group. Without the use the radioisotope label, this mechanism would not have been discovered.

In studying chemical reactions, once the mechanism is known, the next stage is to determine the kinetics of the reaction. Prior to the use of isotopically labeled compounds it was not possible to study the kinetics of a reaction under equilibrium conditions. Data on the progress of a reaction had to be obtained by chemical analysis, requiring that a reaction proceed a substantial degree in one direction so that changes in concentration of reactants and products were great enough to be measured. Reaction rates so far from equilibrium, however, may not be the same at equilibrium. Isotopically labeled reactants allow kinetic studies under equilibrium conditions and provide the kineticist with an extremely sensitive means of measuring rates and determining the reversibility of a reaction step.

The Menschutkin reaction provides an illustration of the latter point. It involves the formation of a quaternary salt from an alkyl halide and a tertiary amine. A steric orientation in the collision of the reactant molecules was thought by many to be necessary to permit the formation of an activated intermediate complex which could then dissociate to form the products. Other workers postulated the *reversible* formation of an activated intermediate complex, that is, one which could disassociate to form either the original reactants or, under favorable circumstances, the products. To investigate this problem, a Menschutkin reaction was performed with an isotopically labeled alkyl halide. When the reaction was only partially complete, the other reactant, the tertiary amine, was assayed for radioactivity. None of the isotopically labeled alkyl groups appeared in it. If a reversible intermediate had been formed, however, in which the alkyl groups were spatially equivalent, labeled alkyl groups would have been found in the unreacted tertiary amine. This indicated either that the intermediate complex does not reform the reactants to an appreciable extent or that the alkyl groups are not spatially equivalent. Thus, through the use of radioisotopes, evidence was obtained which indicated that a reaction which was thought to be reversible actually proceeded only in one direction.

Although radioisotopes are extremely valuable in kinetics, their use interposes an additional factor, the isotope effect, in rate studies. This additional complication can be turned to advantage, however. Two factors are involved in changes in reaction rate resulting from isotopic substitution. One is the lower frequency of rupture of the critical bonds in the activated intermediate complex containing the heavier isotope. The other is the higher activation energy for dissociation of the heavier molecule. In hydrolysis of an ester, for example, substituting C–14 for C–12 in the carbonyl carbon caused the molecule to react somewhat more slowly. This indicated that the rate-determining step involved breaking a bond to the isotopic label.

The rate-determining step in the decarboxylation of an aliphatic acid could not be identified from available kinetic data. A study employing isotopic carbon, however, revealed a reaction rate difference due to the isotope effect, thus leading to the conclusion that the step in question was the breaking of a carbon-carbon bond.

Perhaps the most striking example of the chemist's important role can be found in his contributions to unraveling the complicated process of photosynthesis. Here we have one of the most complex of natural phenomena, where starting with carbon dioxide, water, and the

energy of the sun, plants synthesize the complicated compounds upon which human life depends. The chemist, with his knowledge and techniques, spearheaded research in this field. With his tracer methods he determined the different compounds which are produced, by isotope dilution analysis he measured the amounts of each, through mechanism studies he followed the synthetic pathways in the plant, and via kinetic studies he determined the reaction rates and the nature of the bonds involved in the various reactions. There was no phase of this problem which did not call upon the chemist's talent.

Industrial Uses

As the atomic energy program entered the year 1950 there were approximately 100 industrial firms exploring the uses of radioisotopes as new industrial tools. Today, nearly 1,200 industrial firms comprise almost 50 percent of all institutions using radioactive materials. This recent striking growth has seen the use of atomic energy, in the form of radioisotopes, pushed into most major industrial fields. These uses have created widespread interest among other firms which are hopeful that these same principles may be adapted to solve some of their own particular problems.

Employee training is still the biggest bottleneck in wider industrial use of atomic energy. However, a recent increase in number of training courses, as noted in the section on training, is rapidly improving this picture.

The recent years of radioisotope distribution have indeed witnessed a phenomenal growth in industrial uses. Industry is no longer reluctant to bring these valuable tools into its plants and laboratories.

The bibliography on applied industrial uses, in Appendix V, CC, lists more than 200 papers published within the past 3 years. Since industrial development usually involves "trade secrets" with patent potentialities and production advantages, this number of papers is noteworthy.

The nuclear principles involved in most industrial applications are not profound. As a matter of fact some of these uses were conceived toward the end of the last century when radium and X-rays were first discovered. These potential industrial uses spurred the early development of atomic energy and early uses of radiation.

Since there are hundreds of industrial uses of radioisotopes, the various applications are broken down here into several types of use and a few representative examples of each type are discussed.

PENETRATION OF RADIATION

The ability of radiation to penetrate matter has led to the most extensive industrial use of radiosotopes. A part of the radiation is always stopped by the material being irradiated; the amount depends upon the type and energy of the radiation being used and upon the density and thickness of the material and any flaws which may be present.

Radiography

Industrial radiography is one of the large uses of radiosotopes. Its principle is illustrated in Figure 30. Radiography with radium, of course, is a comparatively old method for inspecting metal castings and welds for possible flaws not otherwise detectable. Reactor-produced Cobalt 60, Cesium 137, and Iridium 192 are now used in much the same way as radium but are much cheaper and more effective. Cobalt 60 equivalent in radiation intensity to $20,000 worth of radium can be purchased for about $100. The radiation from Co–60 will penetrate thicker sections of steel than will the rays from radium.

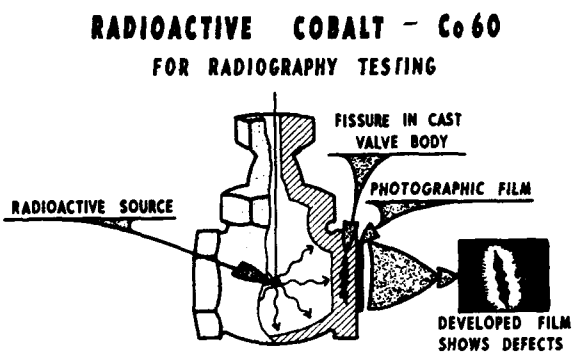

FIGURE 30.

Thickness Gaging

In another application of the radiation penetration principle, the transmission-type thickness gage is being used routinely on production lines to help produce more uniform paper, aluminum, copper, tin plate, plastics, rubber, glass, and numerous other items. This continuous, noncontacting method of gaging is especially useful where products are moving rapidly, where temperatures are high, and where products are soft and may be easily marred. As illustrated in Figure 31, the material whose thickness is to be gaged is passed between a source of radiation and a radiation detector which is connected to an amplifier and recording device. In many cases, the signal caused by the radiation transmitted through the material is used to make automatic corrections in the production process.

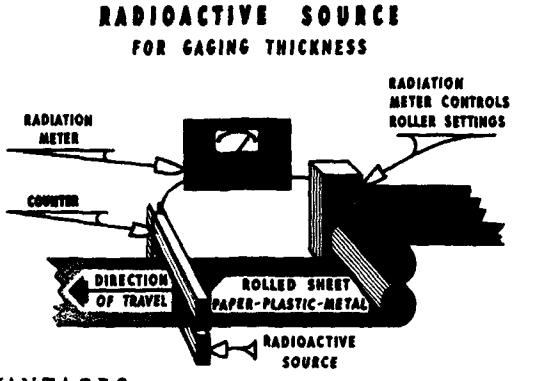

FIGURE 31.

Nuclear gages have taken many interesting and ingenious forms. To control ink distribution during lithographic printing, for example, a special built-in thickness gage was developed in which the inking rollers, themselves, serve as radiation sources. A small amount of the low-energy beta emitter Nickel 63 was electroplated on the rollers and "flashed" with a thin protective layer of copper. Detectors near the rollers recorded the beta particles penetrating the 4- to 6-micron thicknesses of ink. By this means, ink film thicknesses were determined on all rollers under dynamic conditions.

Density Gage

In the transmission type of thickness gage the amount of radiation picked up by the detector is, of course, dependent upon the amount of material between it and the radioactive source. In such thickness measurements it is assumed that the density of the material remains constant. Conversely, if the thickness or size of a material remains constant, the same gage may be used to measure density. Examples of such an application are the monitoring of the density of a process fluid flowing through a pipe or the moisture content of sand or other material.

A recent and interesting variation of the radioactive density gage is being used to determine the hydrogen-to-carbon ratio in an analysis of hydrocarbon compounds, including fuels. The principle, illustrated in Figure 32, involves the difference in beta-ray absorption caused by variations in electron density, this density in turn depending upon the hydrogen-to-carbon ratio. The commercially available device is expected to be particularly useful in conducting various fuel tests, but should have other applications as a quick check on the constitution of certain organic products.

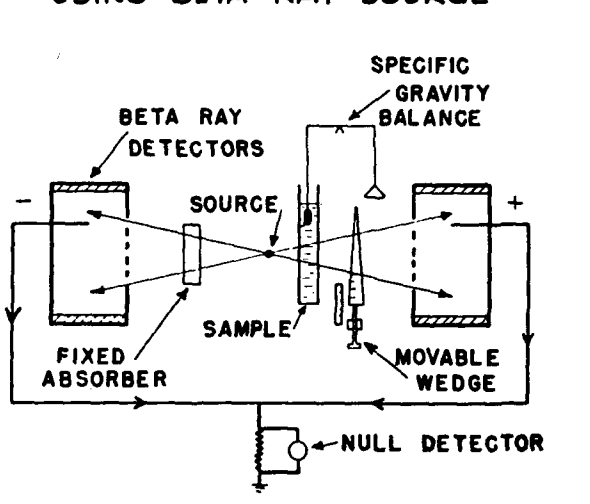

FIGURE 32.

An excellent example of how a radioisotope can be adapted to a high-speed packaging problem is illustrated by a recent development in the cigarette industry. Over the past years this industry has expended considerable effort

to improve production quality control with respect to cigarette weight. The average weight of a cigarette is an important factor in cigarette quality. A light-weight cigarette burns both fast and hot, whereas cigarettes that contain more tobacco than necessary are hard to draw through and are costly since tobacco represents about 90 percent of the production cost. A density gage, in Figure 33, using Strontium 90 as the source, permitted automatic adjustment of tobacco feed and contributed to uniformity of product.

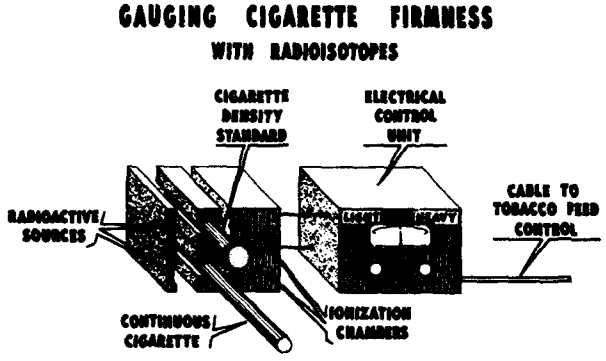

FIGURE 33.

Radioisotopes have been used to solve the problem of measuring silt at the bottom of large bodies of impounded water. As illustrated in Figure 34 a density gage was developed which utilizes low-energy bremsstrahlung radiation, the X-rays caused by beta ray emitters.

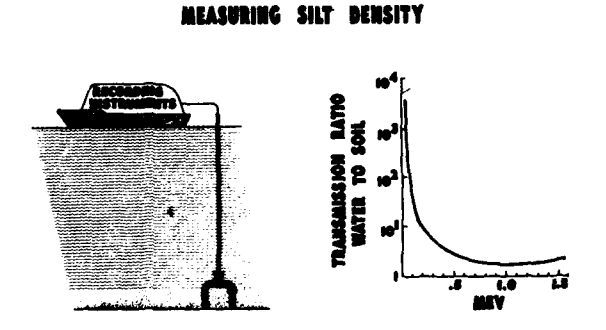

FIGURE 34.

With Strontium 90 in one side of a two-pronged device and a radiation detector in the other, changes in silt density between them affected the transmission of X-rays sufficiently for accurate measurement.

Liquid-Level Gage

The radioactive liquid-level gage is similarly based on measuring the change in intensity of a beam of radiation from a fixed source. As shown in Figure 35, the source is sometimes mounted on one side of the tank or vessel containing the liquid and the radiation detector on the other side. When the liquid rises

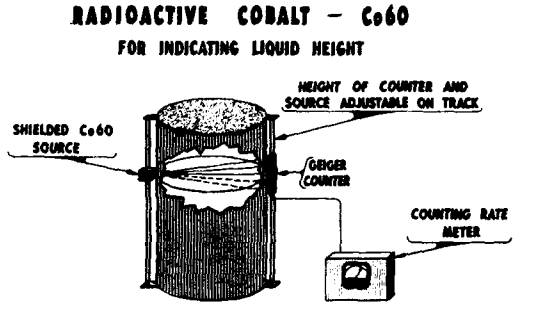

FIGURE 35.

to a certain level, it cuts off or reduces the beam. This particular adaptation has, for example, been found advantageous in measuring the height of molten metal in a cupola since problems of corrosion and heat damage can be eliminated.

REFLECTION OF RADIATION

When a beam of radiation is directed toward a material, some of the radiation is reflected. The amount depends upon the type and energy of radiation and upon the composition, density, and thickness of the material.

Reflection Thickness Gage

Radiation reflection is serving a useful industrial purpose in the accurate measurement of thickness of coatings laid over a base metal. For example, it is possible to measure the thick-

ness of gold plated over copper or rubber over steel. The reflection-type thickness gage is illustrated in Figure 36.

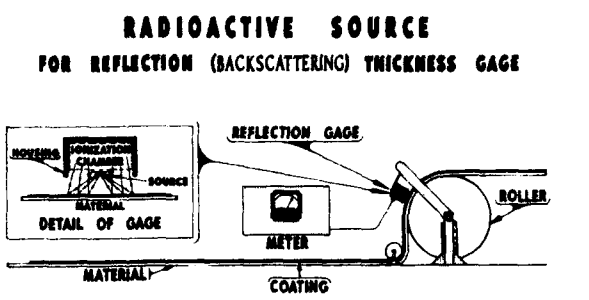

FIGURE 36.

In this technique the beta particles, or electrons, from a radioisotope strike the base metal and the intensity of the reflected beam is measured. The metal is then coated with a different material (either metal or nonmetal), and the reflected radiation is again measured. The change in reflection is proportional to the thickness of the coating, up to a certain limiting value, and can be measured directly in microinches. Variations in coating thickness can be measured with good accuracy in most cases, and automatic adjustments can be made without stopping or cutting the sheet of moving stock.

The cost for the radioisotope included in such a gage is quite small, usually below $50. The associated electronic equipment is more expensive and may amount to several hundred dollars.

The applicability of the radioactive thickness gage is attested to by the number and variety of industries using them. A number of companies that started out initially with one gage in one plant now have many similar installations in other plants.

Soil Moisture and Density Gage

Soil-density and soil-moisture gages for use in the field are other industrial applications of the radiation reflection principle. These gages eliminate the delays incident to laboratory determinations. They have been used in the selection of suitable sites for aircraft runways, highway roadbeds, and hydroelectric dams.

Each apparatus uses a radioactive source, a radiation detector, and an electronic recorder. The source and detector are housed in a probe which can be lowered through a one-inch diameter steel tube driven into the ground. The soil density probe utilizes a Cobalt-60 source inserted in the tip of the probe. Gamma rays from the cobalt bombard the soil surrounding the tube and are scattered by it. Some return to the geiger counter which is mounted in the top of the probe and shielded against direct radiation from the Cobalt 60. The amount of reflected radiation can be translated directly into soil density in pounds per cubic foot.

The soil-moisture probe utilizes a neutron source activated either by alpha or gamma rays. Neutrons are strongly affected by the hydrogen atoms in soil moisture. When fast neutrons strike hydrogen atoms they are slowed down and after several such collisions some are reflected back to the vicinity of the probe. The top of the probe contains a geiger counter surrounded by a silver foil and shielded against direct radiation from the neutron source. When a reflected slow neutron strikes the foil, a short-lived radioisotope of silver is formed. The radiation from this rapidly decaying radioisotope is measured by the counter, which is insensitive to the neutrons themselves, and can be translated directly into moisture content of the soil.

The principle of the soil-density and moisture gage is illustrated in Figure 37.

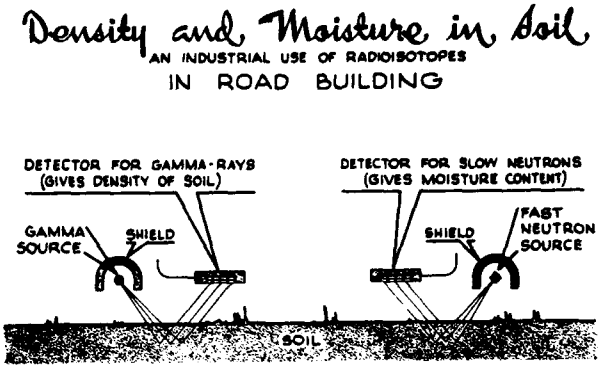

FIGURE 37.

LUMINESCENCE

The ability of radiation to cause certain materials to emit light, or to luminesce, is a long-known and long-used principle. As a matter of fact, the science of radioactivity is a direct outgrowth of early interest in luminescence. Before the turn of the century, Jean Poincaré postulated an intimate connection between luminescence and the new X-rays found by Roentgen and the mysterious emanations from uranium found by Becquerel.

Luminescence is now a well-developed science with many promises for the future. Many special compounds emit a variety of light rays when struck by atomic particles. These self-luminous markers can be invaluable in emergency situations and have vitally important military applications. Routine applications include such uses as illuminating dials and clocks and providing photometric light standards.

A number of companies have investigated the possibility of using reactor-produced materials in place of naturally occurring radium and polonium in the manufacture of luminescent materials. Reactor-produced radioisotopes offers several advantages: first, pure beta-ray emitters reduce the health hazards involved; second, reactor-produced isotopes are usually easier to work with; and third, beta radiation has been found to cause less deterioration than the alpha particles of natural radioisotopes, leading to a more constant level of light output and longer life. Luminescence as an industrial use of radioisotopes is illustrated in Figure 38.

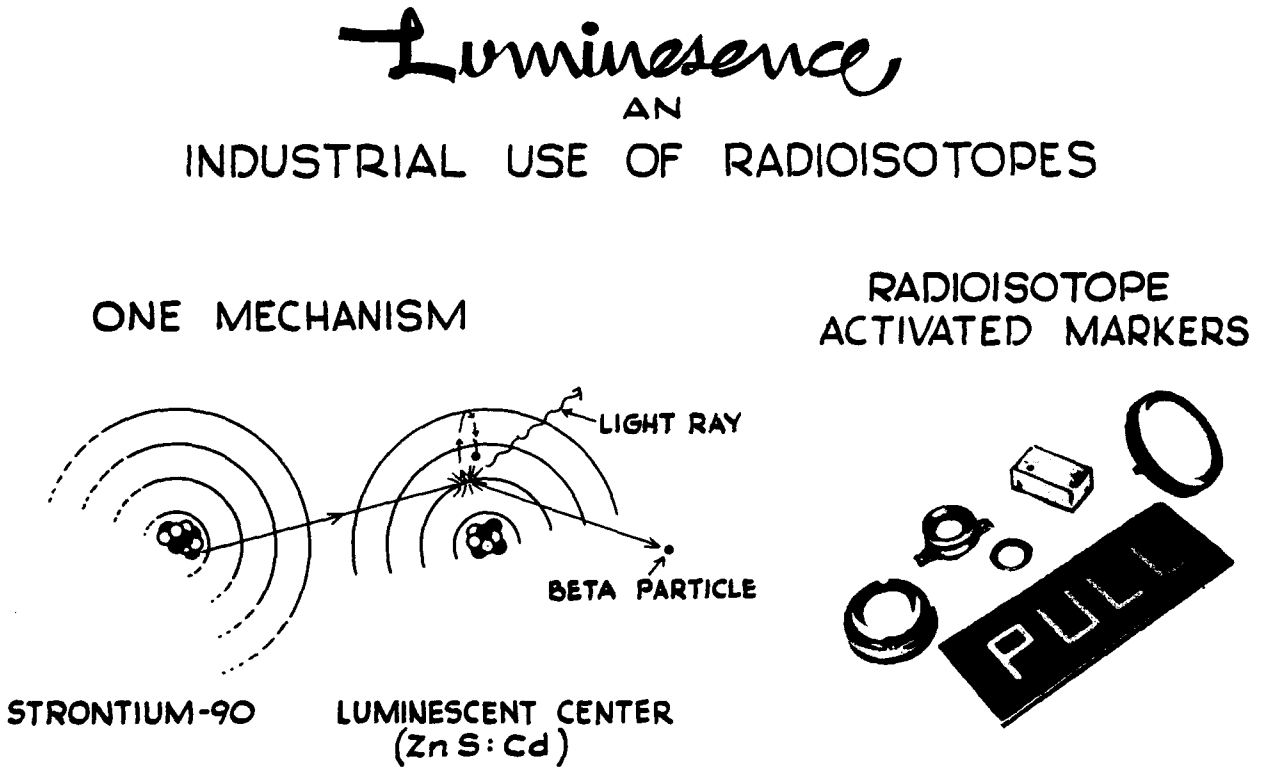

FIGURE 38.

IONIZATION

The ability of atomic radiation to ionize most of the materials it strikes can be put to many beneficial industrial uses. For example, static electricity in industry is a menacing problem to production and personnel and occurs quite generally whenever products manufactured possess insulating properties. Through their ability to ionize the air at selected points along the moving stock and thus "ground" the static electricity, radioisotopes help to meet this problem.

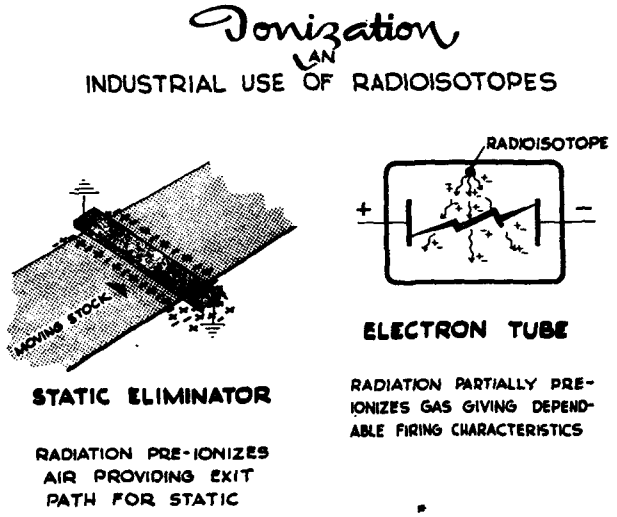

FIGURE 39.

The electron tube industry also is profiting from the ionizing ability of radioisotopes. A small amount of radioactivity inside certain specialized tubes keeps the gases in a partial state of ionization, allowing more dependable operation of the tubes. The use of radioisotopes as stabilizing agents for spark gaps in ignition systems is also being developed.

Ionization as an industrial use of radioisotopes is illustrated in Figure 39.

ACTIVATION OF CHEMICAL REACTIONS

Activation of chemical reactions is another industrial use of atomic energy that holds many possibilities. It has already been demonstrated that beneficial chemical and physical reactions may occur when certain materials are subjected to the proper amount of radiation. Many new compounds and, especially, some superior plastics have already been made in research operations.

The possibility of producing crosslinked, degraded, and formed materials under accurately controlled conditions by a purely physical process has valuable commercial possibilities. These will depend on the cost of irradiation, the enhanced value of the material, and the comparative cost of competitive chemical processes if they are available.

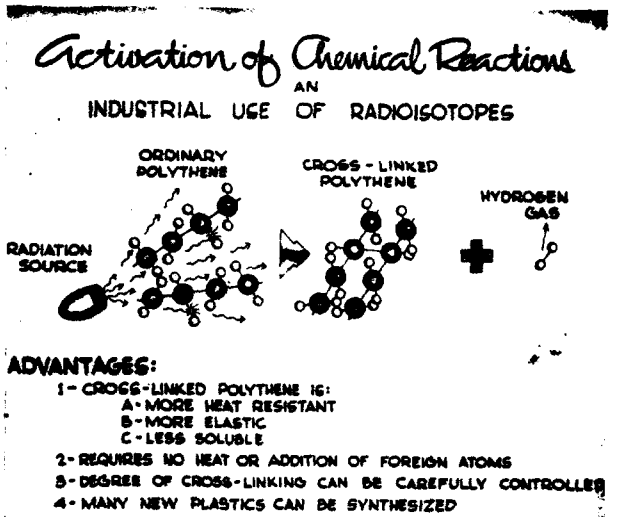

FIGURE 40.

As previously noted, irradiation increases the melting point of polyethylene from 70° to 190° centigrade. Irradiated polyethylene drug bottles and other containers can be sterilized without harm.

Activation of chemical reactions as an industrial use of radioisotopes is illustrated in Figure 40.

STERILIZATION

Gamma radiation in large enough doses can destroy bacteria and enzymes in a material without raising its temperature significantly. Many papers have been written since 1920 concerning the effects of ionizing radiation on all types of organisms. The recent availability of large sources of radiation from reactors has caused extensive interest in radiation sterilization.

The absence of high temperatures is quite necessary in the processing of many items such as antibiotics and certain other drugs. Large-scale sterilization or pasteurization of perishable food stuffs such as meats, bananas, potatoes,

and beverages holds interesting possibilities. Indeed, cold radiation sterilization has great potential importance.

The success of radiation sterilization and pasteurization will be determined by the enhanced value of products treated. If the irradiation process results in improved or longer lasting products, radiation treatment of many present day items should become profitable.

In the drug industry, radiation sterilization presents fewer problems. Side effects such as occur in many foods, are usually not important. It may be possible to utilize this type of sterilization in many pharmaceutical processes.

Radiation sterilization offers the first promising new principle of food sterilization since Nicholas Appert discovered the art of canning in 1809. Today, more than 40 institutions, including food industries, universities, research institutions, government laboratories, and the military, are actively engaged in radiation processing research. The activities of these many groups are being coordinated in the Quartermaster Food and Container Institute Radiation Sterilization Program. Many believe that this research will lead to the changing of food containers, preparation and processing methods, and distribution and marketing practices of food products.

Sterilization or pasteurization of foods by irradiation presents several problems as well as many promising aspects. Irradiation of some foods may cause changes in texture, color, taste, odor, or nutritional value. Intensive research is now being done to learn why unwanted changes occur and to devise ways to reduce or prevent them.

Irradiation of potatoes to delay sprouting and rotting is now being studied. Routine pasteurization of meats and beverages may be

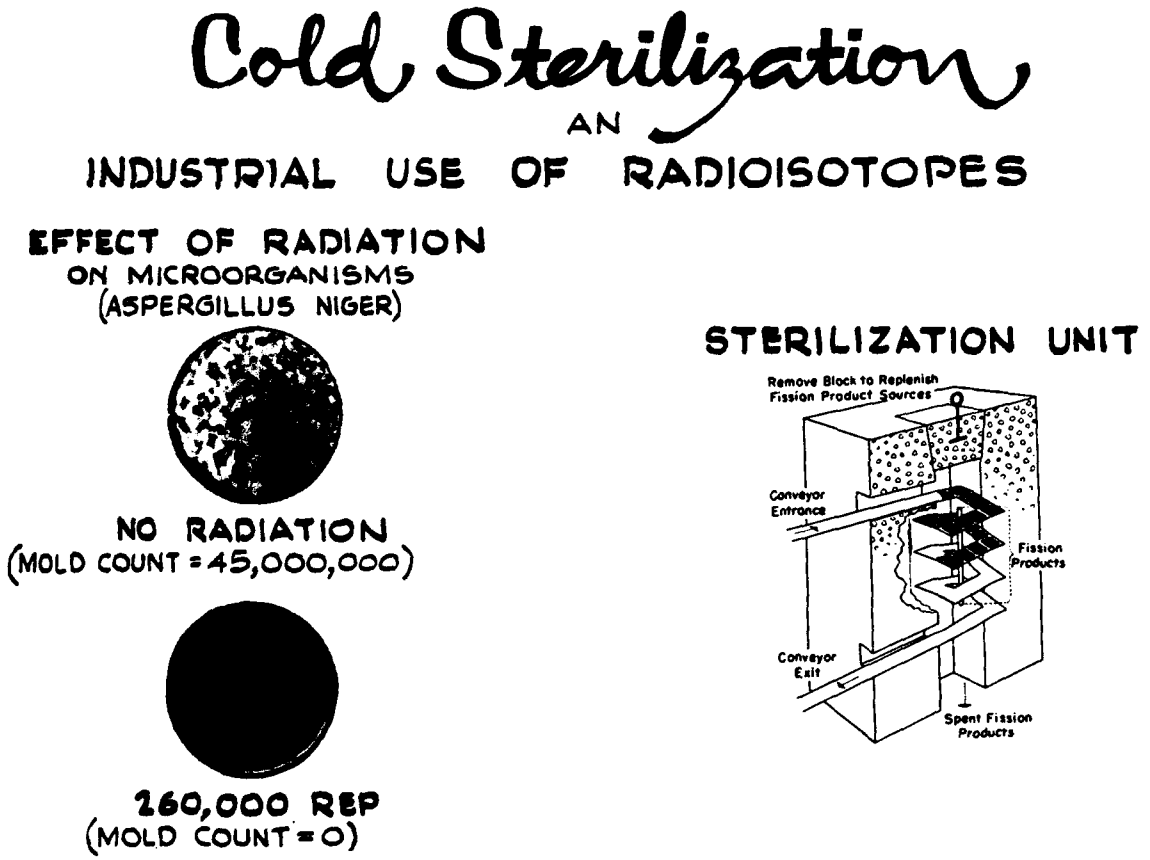

FIGURE 41.

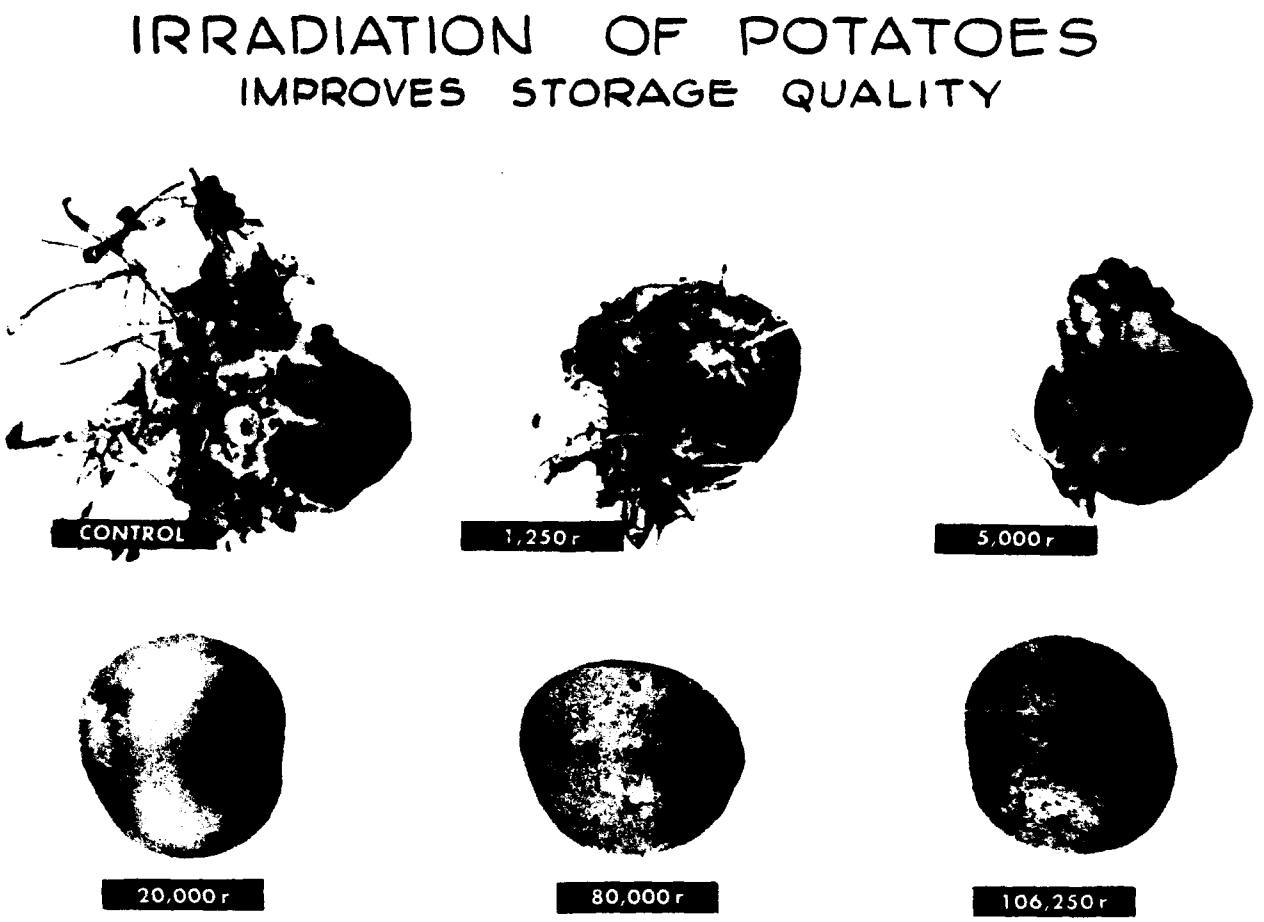

FIGURE 42.

feasible within a few years. In these applications, a comparatively small amount of radiation extends the shelf life without causing the undesirable effects mentioned above.

The principle of cold sterilization is illustrated in Figure 41. Irradiated potatoes with improved storage quality are shown in Figure 42.

VOLTAGE PRODUCTION

There are several methods for direct production of electricity from the energy released in the decay of radioactive atoms. This energy is extremely minute compared with that from power reactors, but can be used for certain special applications requiring tiny amounts of power. The first of these methods utilizes a basic principle of physics. When a piece of dry plastic or hard rubber is stroked with a wool cloth, for example, the cloth sweeps off electrons from the surface of the dielectric material and leaves it with a positive charge. The wool cloth, of course, holds the negative charge.

Similarly, beta rays ejected from an insulated radioactive source leave it with a positive charge; this is the principle of the Moseley generator developed in 1913. The useful industrial application of this principle has been realized in the development of one type of atomic battery. This high-potential, low-current battery is illustrated in Figure 43.

Another battery takes advantage of the ion multiplication principle to produce electricity from radioisotopes. The electricity is generated by the high-energy beta particles emitted from Strontium 90. These high-energy electrons are used to bombard a pea-sized silicon P-N junction, the merging of two specialized types of silicon. The P-N junction, in turn, releases about 200,000 slow-moving electrons for each high-speed electron striking it. About one-millionth of a volt is produced, strong enough to cause an audible signal in a telephone receiver. The battery is about the size of a thimble and has a life expectancy of more than 20 years.

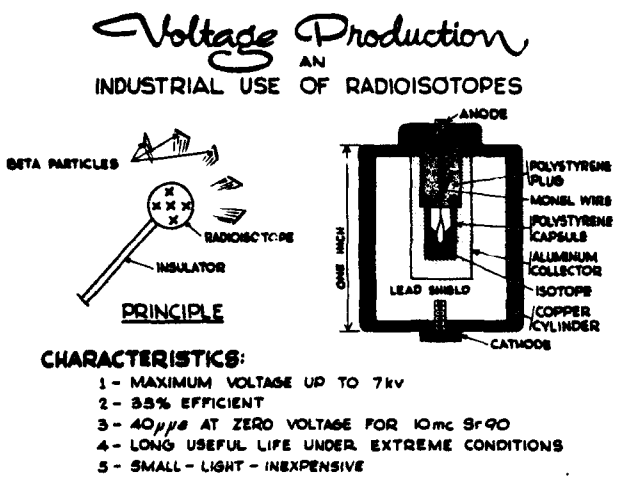

FIGURE 43.

Another very recent development has resulted in an atomic battery which uses a series of thermocouples to convert the heat from the decay of a radioisotope into electricity. The battery in its present form contains several curies of Polonium 210 sealed in a small capsule. The polonium is in contact with the hot junction of 40 thermocouples while the cold junction is located outside the container. The temperature difference of about 450° F. thus produced between the hot and cold junctions causes a current to flow through the device. This first model was found to be 0.2 percent efficient in transforming the energy from atomic decay into electricity.

A fourth type of atomic battery utilizes a radioactive source to ionize the filling gas between two electrodes of dissimilar metallic properties. Still another utilizes a radioisotope-activated luminescent source to energize a photoelectric cell, thus producing a small electric current.

TRACING ATOMS

Tracing atoms is perhaps the most important industrial use of radioisotopes. A few examples of the many ways in which the tracer principle is being used should illustrate its importance.

Wear Studies

Prior to World War II cyclotron-produced Phosphorus 32, added to the metal mix, was used to study the wear of piston rings. Today, conventional piston rings are made radioactive by subjecting them to neutron bombardment in reactors.

In such a bombardment, only one atom of iron in approximately one billion is converted from stable Iron 58 to radioactive Iron 59. The radioactive ring is fitted to the piston, using proper shielding and monitoring techniques. The engine is assembled, the lubricating oil is added, and the motor is started. Radioactive iron atoms are worn off the ring along with others and are easily detected in the oil. The sensitivity of the radioisotope method is so high that the wear of the ring can be detected in the first few minutes of running time.

The first such experiments were made primarily to determine engine wear as a function of the type of lubricating oil used, and have led to the production of oils that stand up better under severe operating conditions. It should be noted that it is not necessary to dismantle the engine to make the measurements. Both the rate and total wear can be measured readily. One company conducting such a study has indicated it was able to find out in 4 years for $35,000 what would have required 60 years and cost $1 million by older methods. Figure 44 illustrates this application of tracing atoms as an industrial use of radioisotopes.

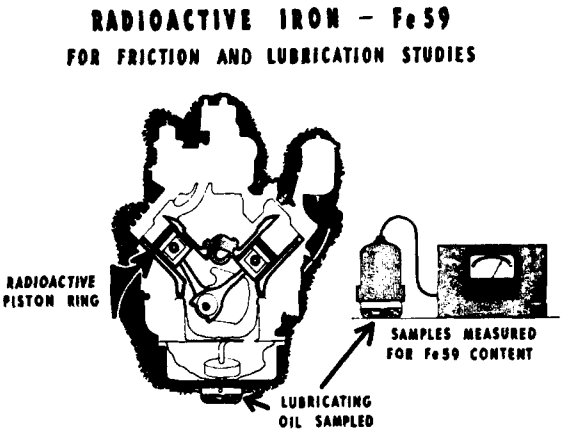

FIGURE 44.

Tracing Catalyst Circulation

One of the simplest and most practical examples of the use of radiation to trace material is the determination of catalyst circulation in a catalytic cracking refinery. The catalyst, in the form of small porous beads, passes slowly down through the cracker, then to a furnace where the accumulated carbon is burned off, and finally back to the top of the cracker. The efficiency of this continuous operation is very dependent upon the rate of catalyst circulation, but it is extremely difficult to measure and thus to control this rate. Until recently it was determined by measuring temperature surges at various points in the cracker, even though this method required 2 man-days and did not give dependable results.

The isotopes technique now used for measuring the rate of catalyst circulation depends on impregnating a half-dozen or so of the few billion beads with radioactive zirconium, and noting the time required for a radiactive bead to pass between two rings of counters fastened at each end of a pipe between the gas lift and cracker. By knowing the weight of the catalyst in the pipe between the two points and the time interval between the two peak radiation readings, the operator can quickly calculate the catalyst circulation rate in tons per hour.

In its first application, this one simple test procedure eliminated the necessity for a $100,000 shutdown of a refinery. Today, this radioisotope procedure is used in a number of refineries for routine plant control. A chart in the control room keeps a continuous record of the flow and circulation of the catalyst. This application of tracing atoms is illustrated in Figure 45.

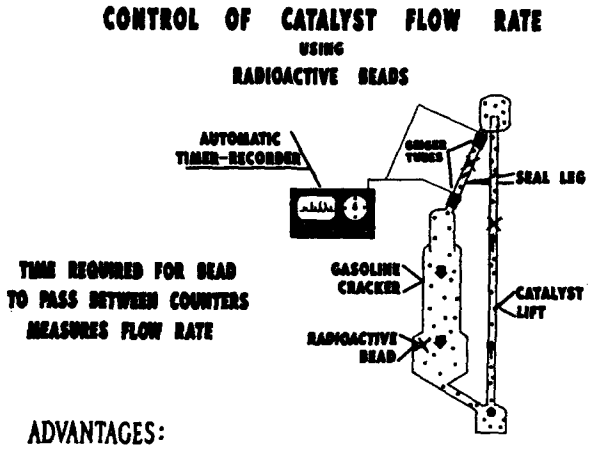

FIGURE 45.

Petroleum Product Flow

In another application in the petroleum industry, radioisotopes are used to mark the interface or boundary between two different petroleum products flowing through an overland pipeline. As illustrated in Figure 46 the location of the interface must be known in order to route different products to different take-off points and terminals along the line. The exactness with which the interface can be located determines the volume of product which must be considered as waste to assure that two unlike grades will not be mixed in the consumer product.

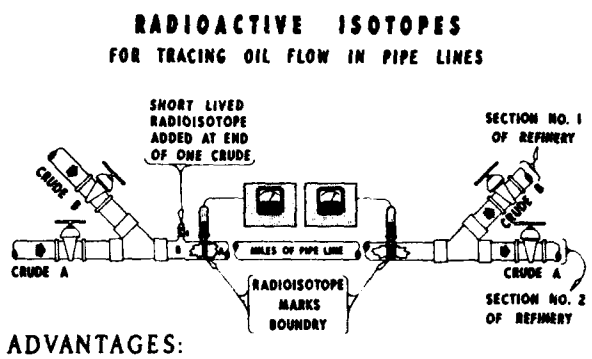

FIGURE 46.

The radioisotope method is based on injecting into the line a small amount of radioactive material just at the interface as a different product is added. Geiger counters detect and record the passage of radioactivity in the interface at various points along the line. The isotope technique, which is now being used by a number of petroleum companies, has made it possible to reduce the volume of waste product at the final take-off point by one-third as compared to other methods for determining the location of the interface. The isotope technique has also proved helpful in determining the degree of mixing of various products as they pass through the pipeline.

Further, the technique has been used as a safety feature to start pumps operating automatically as the interface approaches, and thereby avoid the possibility of different products, say gasoline and stove oil, becoming mixed because of holdup in an idle pump.

Oil Well Acidizing

Still another tracer application of particular interest and economic significance to the petroleum industry is the use of radioisotopes in oil well acidizing. To increase the output of certain oil-bearing strata it is often necessary to increase the porosity of the strata with an acid treatment. In the past an undesirable feature of the process was the necessity for removing the tubing through which the acid was introduced before the control instruments could be used. This involved the hoisting and complete disjointing of as much as 10,000 feet of 2-inch pipe sections, a costly and hazardous operation.

The radioisotope technique which is less hazardous, less costly and much quicker, is illustrated in Figure 47. The technique is based on suspending in the pipe at the desired depth of acid treatment a radiation detector such as a geiger counter and adding a small quantity of radioactive material to the acid being used. As the acid containing the radioisotope passes down through the pipe, there is, of course, a response as it goes by the counter, but this response is not as great as when the labeled acid has filled the well to the height of the suspended detector.

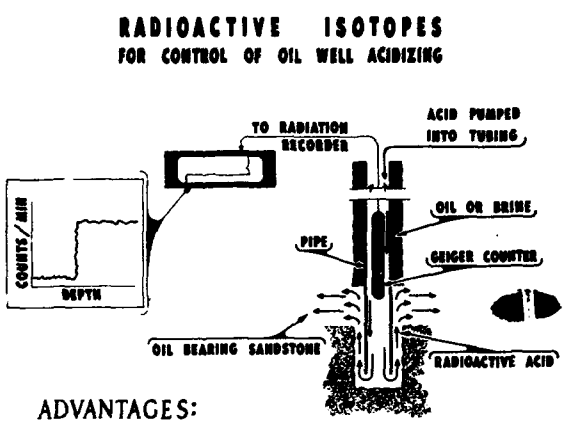

FIGURE 47.

A high radiation reading, therefore, means that the acid has reached the level at which the treatment should be made. At this time, pressure is applied to the system to force acid into the strata, while more acid is added to maintain the proper depth.

Leak Location

Somewhat related to flow indication and also to a test procedure is the use of radioisotope markers or tracers in leak detection. Perhaps the simplest application is the use of radiosodium or radioiodine in detecting leaks in water lines.

In this case a small quantity of the radioisotope is introduced into the line and the path of its radiation followed until it reaches the spot where the radiation reading drops off. In a number of instances these tests have made it possible to find and repair leaks in buildings with a minimum disruption of the structure. Furthermore, the test gives quick and reliable results where other techniques fail. This industrial use of radioisotopes is illustrated in Figure 48.

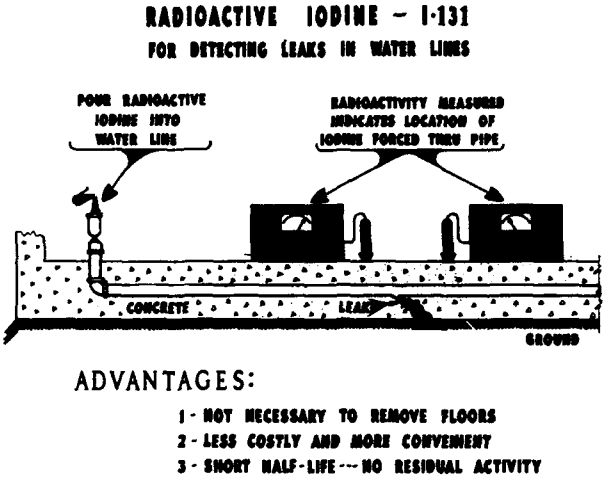

FIGURE 48.

Tracing Pirate Colors

Radioisotopes have been used as a "moving marker" to trace pirate colors. They provide a means of preventing what is called color soiling in multicolor textile printing operations. This occurs whenever one color is carried forward by the fabric from one printing roller to the

next, and may jeopardize the sale of many hundreds of yards of valuable fabric.

Any color is in danger of being contaminated by the preceding colors—especially by the immediately preceding one. It is not always possible to arrange the color sequence for printing such that the most sensitive colors are applied first. Frequent replacing of dye solutions is costly; hence, constant efforts must be made to prevent or reduce color contamination.

Many solutions to the problem were tried in the past but without practical success. However, radioisotopes now offer the ideal solution since the offending or so-called pirate color can be labeled with radioactivity and its gradual invasion of a sensitive color dye box carefully and continuously monitored

It is not necessary to synthesize a costly radioactive dye for this use. A few millicures of P–32 as soluble phosphate are added to the dye bath in question. Dip counters, as shown in Figure 49, are used to establish the initial specific activity of the pirate color and other dip counters continuously record the level of contamination in dye boxes further down the production line.

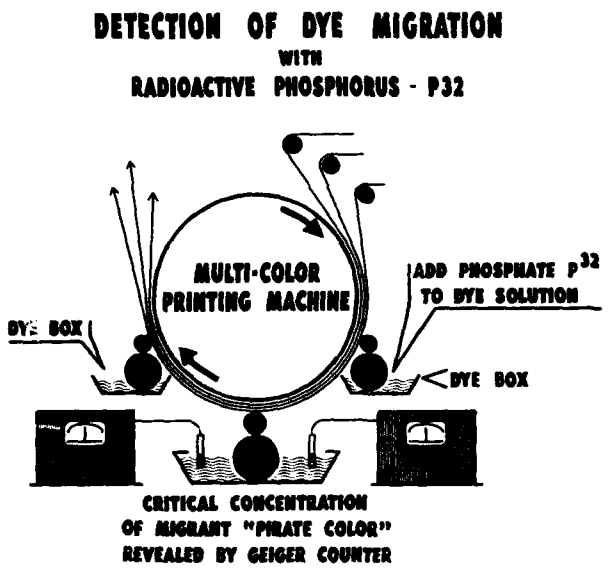

FIGURE 49.

Electron Printing

A recently developed application of radioisotopes in the field of fine arts may have industrial significance. As shown in Figure 50 a picture painted or printed with sufficiently long-lived radioactive ink can be reproduced as many times as desired simply by placing it in contact with photographic paper and then developing the image. An isotope emitting low-energy beta particles, such as Nickel 63, produces clear, sharp reproductions. On the other hand, a softened, diffused effect is obtained with the high-energy beta particles of Phosphorus 32, which can reach the photographic emulsion at an appreciable distance. Tones from light gray to black are obtained by repeated applications of the ink or with inks of different radioactive concentration.

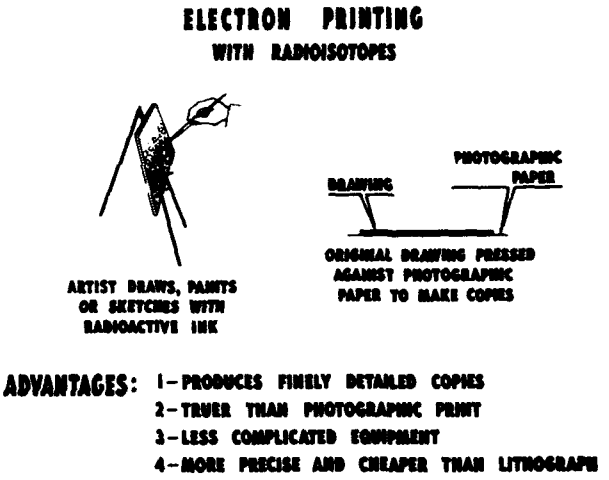

FIGURE 50.

Other Tracer Applications

The radioisotope technique has also been used for measuring the wear of gears, the contact wear of distributor points, and the wear of tire tread as a function of vehicle velocity. Similar techniques have been used for measuring the wear and life of machine cutting tools, for studying carbon brush wear during commutation of a direct-current motor, and for determining the wear of floor waxes.

The radioisotope technique is also adaptable to the study of wear caused by corrosion rather than by friction. For example, radiosulfur has been used to study the corrosion of gas-fired thermoelectric generators, radiosodium has been used to test the corrosion of refractories by molten glass, and radiocobalt has been used in determining the wear of fire brick in the lining of blast furnaces.

Space does not permit listing additional applications. However, the use of radioisotopes

in most tracing problems is a "natural" and awaits only the application of the technique to the problem at hand.

FUTURE INDUSTRIAL ASPECTS

There can be no doubt that radioisotopes hold many keys to present-day industrial problems. Many believe that radioactivity and the capabilities of the industrial atom will soon be as familiar to industrialists as electricity is today.

Recent developments in low-level radiation counting (counting just above the normal radiation level in nature) hold considerable promise for industrial use of radioisotopes. Using these very sensitive methods, tracer tests could be done during actual processing in an industrial plant and the products reaching the general public would contain such small amounts of radioactivity above the natural level that their handling and use would be completely safe.

Special electronic circuits that cancel out the natural radiation background permit easy measurement of harmless levels of radioactivity. Samples for measurement are usually placed directly into the counter gas or scintillation fluid.

Nature has herself shown how useful radioisotopes can be. For example, it is possible to distinguish recently living wood from wood long dead by means of the radiocarbon produced through the action of cosmic rays on nitrogen in the air. Organic chemicals derived from living materials can be distinguished from those derived from coal and oil. In a similar way, rainwater can be distinguished from groundwater by the radioactivity of naturally occurring radiohydrogen, or tritium.

Many tons of naturally occurring radiocarbon are distributed throughout the world in soil, atmosphere, water, etc. Growing things absorb and use the radioisotope along with stable carbon. At death, absorption stops. Using the decay of naturally occurring radioisotopes as timing devices, ages of things long dead can be accurately determined.

Low-level counting has not been explored to a great extent by industry. Techniques for measurements at these levels are well known, however, and need only industrial development.

Available Materials and Services

RADIOISOTOPES

Basic radioactive products available from Commission facilities:

1. Unprocessed irradiated materials
   (a) Service irradiations of targets furnished by the applicant.
   (b) Routinely irradiated batches or "units."
2. Chemically processed radioisotopes
   (a) From target materials.
   (b) From uranium (fission products).

Processed radioisotopes are available from Commission distributors primarily in simple chemical forms.

Radioisotopes of elements of atomic number 1 to 84 inclusive are routinely available for all uses. Service irradiations of elements above atomic number 83 are not normally available but will be considered provided the target material will not affect the safety of the reactor or is not dangerous to handle.

The principal production unit in the United States is the air-cooled graphite reactor at Oak Ridge National Laboratory (ORNL). The Low Intensity Test Reactor at ORNL is used when its higher flux of 4×10^{13} neutrons per square centimeter per second is desirable.

A new facility which can separate and purify large quantities of fission products from used reactor fuels has been scheduled for construction at ORNL in 1956. The new plant will provide equipment for separation and purification of kilocurie quantities of important long-lived fission products and for fabricating them into large radiation sources. It will have the capacity for separation of approximately 200,000 curies per year of Cesium 137 as well as thousands of curies of Strontium 90 and other long lived fission products. At present only a few curies per month of such radioisotopes can be separated.

Irradiation services and certain special materials are available from Argonne National Laboratory, Brookhaven National Laboratory, Mound Laboratory, and National Reactor Testing Station. Brookhaven's program for development of production methods resulted in such additions to the list of available radioisotopes and services as Iodine 132, Fluorine 18 and special irradiations. Argonne has added the CP–5 reactor to the program, increasing the variety of special irradiations. Objects up to $15\frac{1}{2}\times15\frac{1}{2}\times60$ inches, for example, can be accommodated, and pneumatic "rabbits" can carry small samples through a flux of 2×10^{13} n/cm.^{2}/sec.

The materials Testing Reactor in Idaho, with a thermal neutron flux of 4×10^{14} n/cm.^{2}/sec., is now activating intense Cobalt 60 sources on a routine basis. The fast neutron flux of 2×10^{14} n/cm.^{2}/sec. in the Experimental Breeder Reactor can be made available for special irradiations.

Mound Laboratory in Ohio processes and sells Polonium 210 as a metal deposited on platinum foil or gauze, specially prepared alpha sources, and neutron sources.

In addition to the materials produced at these sites, certain materials with long life and high specific activity, such as Carbon 14, Iron 55 and Cobalt 60, are produced at Hanford Atomic Products Operation, Hanford, Wash., and distributed through the Radioisotope Sales Department at ORNL.

STABLE ISOTOPES

The stable isotopes distribution program has continued at a steadily increasing rate since its inception in 1947. For detailed data on distribution of stable isotopes refer to Appendix III.

Most of these isotopes are concentrated at Oak Ridge in the same type of electromagnetic separators which were used during World War II to separate fissionable Uranium 235 from Uranium 238. More than 200 concentrated stable isotopes of 50 elements are now routinely available.

SPECIAL SERVICES

Special Services from Commission Facilities:

Neutron activation analysis involves irradiation of a sample in a nuclear reactor and subsequent identification of the radioisotopes produced. The analysis may be both qualitative and quantitative. Trace elements have been determined in biological materials, drugs, fertilizers, fine chemicals, foods, fuels, glass, insecticides, lubricants, metals, minerals, paints, petroleum products, plastics, soils, dusts, waters, toxicants and other materials.

Gamma service irradiations are available at most AEC reactor sites and also from a number of private laboratories. Gamma radiation in large enough doses can destroy bacteria in a material without raising its temperature significantly. Also, certain important chemical reactions or physical changes occur when the material is exposed to enough gamma radiation. These two uses of radiation are believed to hold many commercial potentialities. Large sources of Cobalt 60 and Tantalum 182 are used for most gamma irradiations, but highly active fuel elements from reactors are now coming into use.

Encapsulation of special radioisotope sources is provided at ORNL. All metalic Cobalt 60 to be used as radiation sources must be encapsulated prior to use. This safety precaution was found necessary since the surface of cobalt metal oxidizes. When handled, the oxide tends to flake off, and may present a hazardous contamination problem. ORNL encapsulates only large or special sources not available commercially.

Radioisotope waste disposal service is available at three AEC laboratories. ORNL will accept radiomaterials from users in all sections of the country. The Radiation Laboratory at Berkeley, Calif., will receive radiomaterials from users in the San Francisco Bay Area. ANL will assist in disposal of active waste resulting from materials irradiated at that Laboratory.

Materials and Services from Commercial Firms:

Much of the progress of the atomic energy program can be attributed to the close cooperation between private industry and government. In the field of isotope distribution and utilization, private industry has contributed extensively to the growth and development of the program. With the passage of the Atomic Energy Act of 1954, industry has new opportunities for greater industrial participation. There are numerous direct and indirect business opportunities found in the many uses of radioisotopes.

Labeled Compounds.—Many universities and research centers as well as industrial firms have contributed to developing new isotope-labeled compounds and improving existing production techniques. Nearly 1,000 labeled compounds are currently available from approximately 25 commercial suppliers.

Pharmaceuticals.—Bulk shipments of unrefined radioisotopes are purchased from ORNL, processed as pharmaceuticals, calibrated, and reshipped in small quantities to hundreds of individual users.

Teletherapy Units.—At the close of 1954, seven United States firms were collaborating with radiophysicists and therapists in developing radiation devices for specific medical purposes. The numerous variables, such as energy of radiation, specific activity of the radioisotope, source-skin distance, stationary versus rotation therapy, and protection of patient and personnel, have led to many possibilities and plans of use. The active development of teletherapy units incorporating large sources of radioisotopes shows much commercial promise.

Radiography exposure devices, or gamma-ray cameras, are now being manufactured and sold by several companies in the United States. More than 350 industrial firms in the United States are using radioisotopes for radiography. Many of these have purchased special exposure devices or fabricated their own in plant shops.

Radioactive thickness gages are currently available from six commercial firms and are being used by more than 300 companies to meet more exacting product specifications.

Medical applicators are now being manufactured by several commercial firms. Such devices include eye applicators for treating

ophthalmic lesions, beta-ray plaques for treating a variety of skin disorders, custom designed radiation needles for interstitial uses, colpostats for special medical use, a variety of radioisotopes sealed in plastic tubing for use as sutures, shielded syringes and a variety of other special devices.

Other materials and services account for a growing commercial business related to isotopes. These include the production of radiation measuring instruments, luminescent markers, static eliminators, and atomic batteries. Services include consultation, film meter service and radioisotope waste disposal.

LICENSING

The Atomic Energy Act of 1954 authorizes the Commission to issue general or specific licenses to applicants seeking to use byproduct material for research or development purposes, for medical therapy, industrial uses, agricultural uses, or such other useful applications as may be developed.

The act further provides that the Commission shall not permit the distribution of any byproduct material to any licensee, and shall recall or order the recall of any distributed material from any licensee, who is not equipped to observe or who fails to observe such safety standards to protect health as may be established by the Commission or who uses such material in violation of law or regulation of the Commission or in a manner other than as disclosed in the application therefor or approved by the Commission.

Regulations governing the manufacture, production, transfer, acquisition, ownership, possession, importation, or export of byproduct material have been published by the Commission under Title 10, Part 30, of the Code of Federal Regulations.

Exempt Quantities

Small quantities of certain beta- and gamma-emitting radioisotopes may be obtained and used without filing an application or receiving a license from the AEC. A detailed list of exempt items and quantities is published in the regulations.

Export and Imports

A program for the international distribution of radioisotopes was begun in 1947; stable isotopes were added to the program in July 1954. Isotopes and reactor-irradiated materials subject to USAEC regulations may be imported from other countries. Detailed data on the international distribution of isotopes appears in Appendix III.

RADIOLOGICAL SAFETY

To date, distribution of AEC-supplied isotopes has been accomplished by means of an authorization (or licensing) procedure. In the case of radioactive isotopes this procedure is designed to make the materials available under conditions which will assure their safe use. The Commission, through the Isotopes Division, provides the services of experts trained in radiological safety. Field visits are made to assist radioisotope users who have radiation protection problems. Consultation on specific isotope applications is not provided by the Commission. The latter type of service is available from a number of commercial firms and private consultants.

Recommendations of the National Committee on Radiation Protection are used as basic guides in development of safe practices in the use of radioisotopes and in the formulation of AEC standards for the protection of health. A list of National Bureau of Standards handbooks containing these recommendations appears in Appendix I.

Technical Services and Training Opportunities

The Commission has an extensive program for developing wider use of isotopes. Some of the important services are to:

1. Provide information on isotopic materials, procurement policies, and procedures.
2. Provide information on radiological safety in the storage, use, and disposal of radioisotopes.
3. Assist in developing and presenting radioisotope techniques training courses and in the production of training films and other visual aids.
4. Provide references on isotope uses.
5. Encourage industrial and commercial participation.

Training Films

The AEC gave extensive technical assistance to the Army Signal Corps in the preparation and production of a series of training films entitled "The Radioisotope." The series consists of individual films designed to offer instruction in the characteristics and measurement of radioisotopes, the techniques involved in their use, their safe handling, the biological effects of radiation, and finally, the ways in which radioisotopes have been used in medicine, industry, agriculture, and general sciences. They are intended for an audience of high professional, technical and educational level.

The films that have been completed are: (1) Fundamentals of Radioactivity, (2) Properties of Radiation, (3) Practical Procedures of Measurement, (4) Methodology, (5) Principles of Radiological Safety, (6) Practice of Radiological Safety, (12) Agricultural Research, and (13) General Sciences. Films in the series that have not yet been produced are: (7) Biological Effects of Radiation, (8) Medical Research, (9) Medical Diagnosis, (10) Medical Therapy, and (11) Industry and Engineering.

The films are available on loan to United States users from the AEC and from the various Army Headquarters' Central Film Libraries.

Slide Illustrations

An extensive series of line-drawing illustrations is available for use by educators, lecturers, and students. The subject matter includes isotope production, isotope characteristics, isotope distribution, and isotope applications in biology, medical research, diagnosis and therapy, agriculture, chemistry, physics, and industry. Copies of the illustrations in the form of 8 x 10-inch prints are available on loan from the Isotopes Division for reproduction purposes.

AEC-Sponsored Training

The Commission early realized the necessity for basic training in radioisotope uses and safe handling techniques. The application of these new tools can be expanded only as fast as people learn to use them. To assure health and safety, radiomaterials are distributed in quantity only to those who are trained to use them safely. The AEC has therefore actively encouraged the establishment of training opportunities in techniques and safety, both by its own laboratories and by private enterprise.

ORINS Training Courses.—The Oak Ridge Institute of Nuclear Studies was organized in 1946 by a group of universities, under contract with the AEC, to utilize the unique facilities of Oak Ridge in programs of research and training. In the summer of 1948, the Institute initiated a program of courses, of 4 weeks duration, in the basic techniques of radioisotope handling. These basic courses are still given. Scientific experts from nearby AEC groups frequently serve as lecturers. More than 1,400 graduates have returned to their own laboratories, hospitals, and firms with sufficient training to initiate a radioisotope program. The courses have served as a prototype for others established since by universities and private institutions.

ORINS also gives advanced courses in various specialized fields of radioisotope utilization. Leading authorities in the respective fields, both

342334—55——6

from within and outside the AEC, serve as lecturers and course leaders. About 600 participants have taken advantage of these special courses.

At the popular and semitechnical levels, the Institute maintains an Atomic Energy Museum which acquaints visitors with various aspects of atomic energy and radioisotope usage.

Radiological Physics Fellowships.—With the increasing usage of radioisotopes and the advent of nuclear reactors in universities and industry, there is an increasing need for institutional radiological safety officers. The AEC is helping to meet the need by providing fellowships in radiological physics to promising graduates of colleges and universities.

The fellowships provide for nine months in a university followed by three months of applied health physics training at one of the National Laboratories. The programs are carried out in three separate pairs of locations: at Vanderbilt University and Oak Ridge, at the University of Rochester and Brookhaven, and at the University of Washington and the Hanford Atomic Products Operation. More than 200 of these fellowships have been accepted and the graduates' specialized knowledge and training are being applied in AEC installations, universities, medical centers, industrial plants, and other institutions throughout the Nation.

On-the-Job Training.—Thousands of persons throughout the Atomic Energy Project are receiving training in the handling of radioactivity as an integral part of their work. Radiological Safety and Health Physics groups, in particular, are given extensive training in safety principles.

Many university and industrial people also are receiving valuable training in Commission laboratories. Their participation in development work, while on leave of absence, is mutually beneficial to the Commission and their home institutions. These researchers and engineers, as well as students in training centers such as the Oak Ridge School of Reactor Technology, receive broad knowledge in applications of atomic energy.

AEC Assistance.—In addition to its training opportunities, the Commission has encouraged this activity by others. The encouragement has taken many forms, such as suggestions and recommendations on programs and courses, review of proposed course content and training manuals, active participation by AEC personnel in programs and symposia, furnishing informational material, and loan of exhibits, lantern slide illustrations, and technical and nontechnical films. At the high school level, the American Museum of Atomic Energy at Oak Ridge instructs visiting student groups, aids in setting up "science fairs," maintains traveling exhibits, and sends teaching aids on request.

Medical Training

Training in medical techniques and safety with radioisotopes is proceeding at two general levels. First, orientation programs are offered by medical schools for undergraduate students, and by various medical groups for physicians who were already in practice when radioisotopes came into clinical use. At the second level, actual clinical training with patients enables the physician to employ radioisotopes in his own practice.

Programs of the first type have ranged from short lecture series to extended courses including lectures, detailed laboratory work, and clinical demonstrations. This type of orientation provides a background knowledge suitable for the medical man who wishes to understand the role of radioisotopes in his field.

At the second level referred to above, training is aimed directly at the use of radioisotopes in medical practice. The AEC's Advisory Committee on Isotope Distribution considers a definite period of clinical apprenticeship, with a physician or group actively using radioisotopes, essential for developing clinical judgment in the use of these materials.

Specialized opportunities for clinical training are made available in certain AEC research hospitals. One-year residencies, including stipend and maintenance, have been established at the cancer research hospital operated by the Medical Division of the Oak Ridge Institute of Nuclear Studies. These residencies offer an unusual opportunity to learn tracer and therapeutic techniques and are approved for basic credit in Internal Medicine. Similar residen-

cies have been established at the Argonne Cancer Research Hospital in Chicago.

The training of hospital technicians and pharmacists in the techniques of radioisotope handling and laboratory procedures relies, at present, on occasional on-the-job experience. The need for additional training opportunities in these specialties is becoming more acute and several technical training schools are starting to offer formal courses to fit these persons for new responsibilities with radioisotopes.

Industrial Training

Several industrial concerns have added radioisotope technique and radiological safety courses to their training schedule. These are usually geared to the company's needs. The amount of instruction necessary is governed by the complexity and extent of radioisotope usage, and ranges from a simple manufacturer's manual for use with a well-shielded, direct-reading thickness gage to a full-scale course in nuclear physics, instrumentation, and health physics for a large program involving industrial research and manufacturing.

Initiation of customer training courses by suppliers and manufacturers of radioactive devices has been another worthwhile step toward better radiological safety.

University Training

Most important from the long term standpoint has been the initiation of radioisotope courses in university extension programs and in graduate and undergraduate work. If the principles of radioisotope utilization are learned as part of the usual academic education there will be less need for intense, special training later.

Isotopes are used in over 200 universities and colleges. Many of these have initiated radioisotope laboratory courses or are presenting the fundamentals of the techniques where they apply in other course. Most of these universities are conducting research projects, often sponsored by the AEC, in which radioisotopes are involved and in which postgraduate students can obtain a familiarity with the principles of their use.

Secondary School Education

The introduction into the high school of laboratory experiments with radioactivity is, in some respects, the most noteworthy of recent developments in education. Concepts involved in counting and measuring radiations, in tracer studies, and in operating simple radiation equipment are readily adaptable to the high school level.

The use of radioisotopes in high school science demonstrations and in laboratory experiments by the students has been accelerated by the spreading awareness that small license-free quantities of radiomaterial can be purchased. When handled with reasonable care, the small amounts present little or no hazard. License-free quantities of radioisotopes are quite adequate for classroom experiments.

Other Training Opportunities

In recognition of increasing use of radiation and the associated health problems, the Public Health Service sponsors a radiological health training program in Cincinnati. The program includes 2-week courses designed for personnel of State and local health departments and a limited number of participants from other governmental agencies and industry.

An impressive amount of training in radioisotope handling and radiological safety is being sponsored by the Armed Forces, both because of the increased significance of such training in national defense and because of the widespread use of radioisotopes in the Service's medical research and clinical programs.

APPENDIX I

Special Sources of Information on Isotopes

Available From—

I. ISOTOPES DIVISION
U. S. Atomic Energy Commission
Oak Ridge, Tenn.

Forms and Instructions

AEC–313, "Application for Radioisotope Procurement" and Instructions.
AEC–375, "Radioisotope Order Blank" (for Federal Agencies).
AEC–465, "Certificate of Compliance with Federal Food, Drug, and Cosmetic Act."
AEC–100, "Stable Isotope Request."

Films and Illustrations

"Guide to the Training Film Series, 'The Radioisotope'."—Outlines purpose, scope and organization of series and contains a brief synopsis of each film. The individual films are on loan, without charge, at the Central Film Library of the Army Area in which the borrower resides and at the Isotopes Division, Oak Ridge, for isotope users.
"List of Slide Illustrations".—Listing variety of line drawing illustrations on various aspects and uses of isotopes. Available on loan as 8" x 10" prints for reproduction purposes.

II. SUPERINTENDENT OF DOCUMENTS
Government Printing Office
Washington 25, D. C.

"ISOTOPICS—Announcements of the Isotopes Division".—Quarterly bulletin of the Isotopes Division furnishing information on isotope procurement allocation procedures, distribution policies, and methods for safe handling and disposal of radiomaterials. 35 cents per copy or $1 per volume (calendar year) by subscription.
"Isotopes . . . A Three-Year Summary of U. S. Distribution," August 1949.—Summarizes isotope production and distribution and contains bibliography of over 1,850 references. 45 cents per copy.
"Isotopes . . . A Five-Year Summary of U. S. Distribution," August 1951.—Gives detailed account of all isotope investigations initiated from the beginning of the distribution program in August 1946 through June 30, 1951, indicating institution and department, principal investigator, isotope, purpose for which material was obtained, and status of investigation at date of publication or reference to published report, if any. Report also contains bibliography of 1,400 references (supplementing bibliography in 3-year summary). $1 per copy.
"Nuclear Science Abstracts".—Covers unclassified and declassified AEC research reports on Nuclear Science, and other material in this field which appears in technical and scientific journals and unpublished research reports of government agencies, universities, and industrial research establishments. 25 cents per copy or subscription at $6 a year domestic and $9 foreign.
TID–5098, "Use of Isotopes in Plant and Animal Research".—19 papers from Conference at Kansas State College, June 12, 1952. $1.25.
"The Contribution of Atomic Energy to Agriculture".—Hearings before the Subcommittee on Research and Development of the Joint Committee on Atomic Energy, Congress of the United States, March 31 and April 1, 1954. 25 cents.
"The Contribution of Atomic Energy to Medicine".—Hearings before the Subcommittee on Research and Development of the Joint Committee on Atomic Energy, Congress of the United States, June 2, 3, and 4, 1954. 55 cents.

National Bureau of Standards Handbooks

Handbook 42, "Safe Handling of Radioactive Isotopes." 15 cents.
Handbook 48, "Control and Removal of Radioactive Contamination in Laboratories." 15 cents.
Handbook 49, "Recommendations for Waste Disposal of Phosphorus 32 and Iodine 131 for Medical Users." 10 cents.
Handbook 51, "Radiological Monitoring Methods and Instruments." 15 cents.
dbook 52, "Maximum Permissible Amounts of adioisotopes in the Human Body and Maximum rmissible Concentrations in Air and Water." 20 cents.
Handbook 53, "Recommendations for the Disposal of Carbon 14 Wastes." 15 cents.
Handbook 54, "Protection Against Radiations From Radium, Cobalt 60, and Cesium 137." 25 cents.
Handbook 56, "Safe Handling of Cadavers Containing Radioactive Isotopes." 15 cents.
Handbook 57, "Photographic Dosimetry of X- and Gamma Rays." 15 cents.
Handbook 58, "Radioactive-Waste Disposal in the Ocean." 20 cents.
Handbook 59, "Permissible Dose From External Sources of Ionizing Radiation." 30 cents.

Semiannual Reports of the AEC to Congress

Fourth Semiannual Report, "Recent Scientific and Technical Developments in the Atomic Energy Pro-

gram of the United States," July 1948. 35 cents (largely on isotopes program).

Sixth Semiannual Report, "Atomic Energy in the Life Sciences," July 1949. 45 cents.

Eighth Semiannual Report, "Control of Radiation Hazards in the Atomic Energy Program," July 1950. 50 cents.

Eleventh Semiannual Report, "Some Applications of Atomic Energy in Plant Science," January 1952. 50 cents.

Thirteenth Semiannual Report, "Assuring Public Safety in Continental Weapons Test," January 1953. 50 cents.

Fourteenth Semiannual Report, "Major Activities in the Atomic Energy Programs," January–June 1953. 45 cents.

Fifteenth Semiannual Report, "Major Activities in the Atomic Energy Programs," July–December 1953. 45 cents.

Seventeenth Semiannual Report of the Atomic Energy Commission, July–December 1954. 45 cents.

III. OFFICE OF TECHNICAL SERVICES
Department of Commerce,
Washington 25, D. C.

"Price List of Research Reports for Sale."—Titles and prices of available unclassified and declassified AEC research reports. Free of charge upon request.

AECU–2226, "Design of Laboratories for Safe Use of Radioisotopes."—By Donald R. Ward. 35 cents.

AECU–2821, "Air Contamination and Respiratory Protection in Radioisotope Work."—By G. W. Morgan and C. R. Buchanan. 25 cents.

AECU–2875, "Equipment for Radioisotope Laboratories."—By Oscar M. Bizzell. 25 cents.

AECU–2967, "Radiation Safety in Industrial Radiography with Radioisotopes."—By P. M. Frazier, C. R. Buchanan, and G. W. Morgan. 25 cents.

ANL–5111, "Annotated Bibliography in Radiobiology."—Abstracts of 2,153 reports and journal articles on radiation effects, radioelement metabolism, and effects on growth, genetics, and cytology. $2.10.

TID–3046, "Utilization of Gross Fission Products."—Bibliography of unclassified report literature. 25 cents.

TID–3050, "A Bibliography of Selected AEC Reports of Interest to Industry."—Brief abstracts.

Part 1, Metallurgy and Ceramics. 35 cents.

Part 2, Chemistry and Chemical Engineering. 45 cents.

Part 3, Nuclear Technology. 35 cents.

Part 4, Electronics and Electrical Engineering. 35 cents.

Part 5, Mechanics and Mechanical Engineering. 25 cents.

Parts 6 & 7, Construction and Civil Engineering; Mining and Geology. 25 cents.

Parts 8 & 9, Industrial Management: Health and Safety. 25 cents.

TID–4550, "Availability of U. S. Atomic Energy Commission Research and Development Reports."—Description of ways reports and other publications are made available to the public. Free of charge upon request.

TID–5078, "Radioisotope Applications of Industrial Significance."—Extracts the industrial uses from the listing in "Isotopes . . . A Five-Year Summary of U. S. Distribution" above. 30 cents.

TID–5115, "The Role of Atomic Energy in Agricultural Research."—25 papers from symposium at Oak Ridge, August 25, 1952. $3.10.

IV. OAK RIDGE NATIONAL LABORATORY
Radioisotope Sales Department
Post Office Box P
Oak Ridge, Tennessee

"Catalog and Price List of Radioactive and Stable Isotopes."—Gives price, chemical form, purity, specific activity, etc., of radioisotopes; chemical form and degree of enrichment of stable isotopes on loan; special materials and services; ordering and shipping procedures.

V. BROOKHAVEN NATIONAL LABORATORY
Isotopes and Special Materials Group
Upton, Long Island, New York

"Catalog and Price List of Reactor Irradiation Services and Radioisotopes."—Gives prices, specifications applying to target conveyor, shipping information, and instructions for ordering.

VI. ARGONNE NATIONAL LABORATORY
Special Materials Department
Post Office Box 299
Lemont, Illinois

"Catalog and Price List of Irradiation Services."—Gives information on availability of the irradiation facilities of ANL's Research Reactor—CP–5, Experimental Breeder Reactor and 60-Inch Cyclotron, and ordering and shipping procedures.

VII. McGRAW-HILL BOOK COMPANY, INC.
330 W. 42nd Street
New York 36, New York

National Nuclear Energy Series.—Complete technical record of scientific work carried out in the nation's atomic energy program under the Manhattan Project and continuing with that of the AEC (see TID–4550 above for titles and prices).

VIII. D. VAN NOSTRAND COMPANY, INC.
250 4th Avenue
New York 3, New York

"Sourcebook on Atomic Energy."—By Samuel Glasstone.—Description of theory, history, development, and uses of atomic energy and radioisotopes. $2.90.

IX. STANFORD RESEARCH INSTITUTE
Project 361
Stanford, California

"Industrial Uses of Radioactive Fission Products."—A report to the USAEC. $1.50.

APPENDIX II

Chronological Outline of Development of Isotopes Distribution Program

1. First public announcement of reactor-produced radioisotopes available under the distribution program appeared in the June 14, 1946 issue of *Science* (served as 1st Radioisotopes Catalog).
2. First reactor-produced radioisotope shipment from Oak Ridge, August 2, 1946.
3. Jurisdiction of program turned over to civilian Atomic Energy Commission, January 1, 1947.
4. Initiation of service irradiations, that is, a service whereby the radioisotope user may submit his own sample for irradiation or neutron bombardment in the nuclear reactor, March 1, 1947.
5. Initiation of program making available the concentrated stable isotopes of Boron 10 (complex), deuterium and deuterium oxide (heavy water), June 1947.
6. First compound labeled with radiocarbon (methyl alcohol) available from the Commission, July 1947.
7. Initiation of a program for international distribution of radioisotopes, September 3, 1947.
8. Formation of an Advisory Committee on Isotope Distribution (to replace interim policy committee set up under the Manhattan Project), January 1, 1948.
9. Initiation of a program for distribution on a loan basis of more than 100 varieties of electromagnetically concentrated isotopes of about 30 elements, January 21, 1948.
10. Publication of regulations by the Interstate Commerce Commission for shipment of radioisotopes by common carrier (rail and truck), January 25, 1948.
11. Opening of first Commission-sponsored training course in radiosotope techniques by Oak Ridge Institute of Nuclear Studies, June 1948.
12. Distribution of tritium (radioactive hydrogen) and stable Helium 3, September 1948.
13. Completion of a nation-wide intercomparison of Iodine 131 radiation analyses conducted by the National Bureau of Standards and Atomic Energy Commission.
14. Availability of stable elemental Boron 10 announced March 28, 1949.
15. Initiation of a program for cyclotron production and distribution of certain long-lived radioisotopes not producible in the nuclear reactor, June 1949.
16. Enactment of regulations by the Civil Aeronautics Board for shipment of radioisotopes by commercial aircraft, July 20, 1949.
17. Completion of new large-scale radioisotope processing facilities at Oak Ridge National Laboratory, March 15, 1950.
18. Announcement of program for returning radioactive wastes to Commission facilities for disposal, October 1950.
19. Initiation of cooperative visitation with state health departments to radioisotope users, December 1950.
20. Announcement that Brookhaven National Laboratory will provide reactor irradiation services and radioisotopes, January 1951.
21. Publication of first issue of the quarterly bulletin, "*Isotopics*—Announcements of the Isotopes Division," April 1951.
22. Expansion of international distribution of radioisotopes to include all reactor-produced radioisotopes (except tritium and Polonium 210) and to authorize the export of these materials for use in scientific research, medical research, industrial research, medical therapy and industrial applications, July 16, 1951.
23. First radioisotope (Iodine 131) accepted by Federal Food and Drug Administration as effective new drug, November 23, 1951; Phosphorus 32 accepted June 30, 1952; and Colloidal Gold 198 accepted October 1, 1954.
24. First film of thirteen-part radioisotope training film series, "The Radioisotope," made available for distribution, January 1952.
25. Announcement of availability of neutron activation analysis service at Oak Ridge National Laboratory, April 1952.
26. Publication of AEC-financed supplement to the Journal of the American Chemical Society on labeled-compound synthesis, May 1952.
27. Announcement of availability of facilities for irradiation of large items at Brookhaven National Laboratory, January 1953.
28. Publication in the Federal Register of criteria governing the authorization of AEC supplied radioisotopes for research and development, for human use, and for use under a general authorization. Use of license-exempt quantities of radioisotopes in humans expressly prohibited, December 15, 1953.
29. Publication by USAEC of list of 492 isotope-labeled compounds available from 13 commercial suppliers, the National Bureau of Standards, and Oak Ridge National Laboratory, January 1954.
30. Announcement of standard reactor units of radioisotopes, July 27, 1954.

31. Revision of Federal Radioisotopes Distribution Regulations to cover radioisotopes produced in any publicly or privately owned nuclear reactors located within the United States, its territories, or possessions, July 24, 1954.
32. Stable isotopes made available for export, July 1954.
33. Issuance of Argonne National Laboratory booklet, entitled "Irradiation Services" containing detailed information on services available at ANL's Research Reactor CP-5, Experimental Breeder Reactor, and its 60-inch cyclotron, September 1954.
34. Approval of Kilocurie Fission Product Separation Plant to be located at Oak Ridge National Laboratory, October 1954.
35. Announcement of Gamma Irradiation Facilities at National Reactor Testing Station to provide gamma-ray fields of the order of 10 million roentgens per hour, October 1954.

APPENDIX IV

Extent of Chief Medical Uses of Radioisotopes

Isotope	Use		No. of Institutions Receiving AEC Licenses	
			1953	1954
I-131	Diagnosis	Thyroid function (diagnosis only)	80	80
		Blood volume and circulation	111	151
		Brain tumor	95	104
		Liver tumor	15	33
		Cardiac output	6	13
	Treatment	Hyperthyroidism	291	431
		Cancer	242	295
		Heart disorders	124	230
P-32	Diagnosis	Blood volume and circulation	37	50
		Tumor detection	39	49
	Treatment	Polycythemia and leukemia	269	389
		Skin cancer	4	10
		Other cancer	87	104
		Intracavitary	38	51
Au-198	Treatment	Intracavitary (including bladder)	131	209
		Prostate	32	45
		Other interstitial injection	43	39
		Intravenous	24	33
		Implants	3	7
Cr-51	Diagnosis	Blood volume	43	90
		Blood cell life	17	64
		Cardiac output	1	3
			1946-53	1946-54
Co-60	Treatment	Applicators (intracavitary and topical)	37	60
		Implants	18	36
		Teletherapy	28	46
Cs-137	Treatment	Teletherapy	[1] 8	[1] 8
Sr-90	Treatment	Applicators (ophthalmic and topical)	179	232
			1953	1954
Other isotopes	Diagnosis (other than above) Treatment (other than above) Studies in humans		131	156
	Diagnosis (including any above) Treatment (including any above) Studies in humans		[2] 15	[2] 17

[1] Three are for same machines as Co-60.

[2] Special general authorizations, with use unspecified.

NOTE.—Figures for the 2 years should not be added since licensees in 1953 usually appear also in 1954. Figures within a column should not be added since an institution usually is licensed for more than one use.

APPENDIX V

Bibliography

More than 7,000 references appear in the following bibliography. These are categorized into 30 fields of work with radioactive and stable isotopes supplied through the United States Atomic Energy Commission. Reference is made only to material which has been published during the 3½ years ending February 1955 or, more specifically, since publication of "Isotopes—A Five-Year Summary of U. S. Distribution."

The bibliography is restricted to open-literature references. Unclassified and declassified reports written by investigators working in Commission laboratories, but not published in the open literature, have not been included. These items are available as project reports at AEC depository libraries. Selected ones are on sale at the Office of Technical Services, Department of Commerce, Washington 25, D. C.

The bibliography is intended as a guide to persons interested in the technical aspects of isotope utilization. Being primarily concerned with isotopes as tools of research, it complements *Nuclear Science Abstracts* which can provide only limited coverage in this area. NSA is a semimonthly journal, published by the AEC, which covers reports and open literature on nuclear science.

The Isotopes Division staff has for the past few years scanned several hundred journals per month and maintained a card file on isotope uses. Each article is reviewed in sufficient detail to place it in an appropriate category. Although the card file is by no means complete, it served as a beginning for this bibliography.

In order to make the bibliography more complete, isotope users were requested to send lists of their publications. Because of the large number of references submitted, it was impossible to find and examine all the articles themselves. Instead, the title of each article was considered and an effort made to place it in an appropriate category. For this reason, a reference not appearing in the best category for the work actually reported may perhaps be found in a closely allied category.

Some references sent in had to be omitted. In certain cases the reference was not applicable to this coverage; in others the reference did not provide sufficient information to permit finding the article. Unfortunately several lists of references, particularly those from other countries, were received too late to be included.

The bibliography has been appended with an author index and a key to abbreviations used. The abbreviations are those used in the "List of Periodicals Abstracted by Chemical Abstracts."

Reference titles are listed alphabetically, except for additions at the end, within the following categories of isotope use:

Categories of Isotope Uses

References in this bibliography are broken down into the following categories

A Diagnostic Medicine.
B Therapeutic Medicine.
C Clinical Research.
D Human Physiology.
E General Medical Research.
F Immunology.
G Metabolite Physiology in Animals.
H Non-Metabolite Physiology in Animals.
I Injurious Agent Physiology in Animals.
J General Animal Physiology.
K Animal Husbandry.
L Bacteriology.
M Fertilizer Uptake by Plants.
N Plant Physiology.
O Photosynthesis.
P Radiation Effects on Living Organisms.
Q Biochemistry.
R Biosynthesis of Labeled Compounds.
S Chemical Synthesis of Labeled Compounds.
T General Chemistry.
U Reaction Mechanisms and Kinetics.
V Radiochemistry.
W Radiation Detection.
X Radiation Physics.
Y Nuclear Properties of Isotopes.
Z General Physics.
AA General Topics.
BB Isotope Techniques.
CC Applied Industrial Use.
DD Entomology.

Diagnostic Medicine

A 1 Absorption and Urinary Excretion of Orally Administered Radioactive Iodinated Human Serum Albumin in Human Beings. W. C. Levin and C. C. Snyder. *J. Lab. Clin. Med. 40*, 823(1952).

A 2 Action of Lipotropic Substances in Liver Disease as Measured by Radioactive Phosphorus. D. Cayer and W. E. Cornatzer. *J. Am. Med. Assoc. 144*, 1566–7(1950).

A 3 Alterations in the Body Potassium Content in Cirrhosis of the Liver. J. K. Aikawa, J. H. Felts, Jr., and G. T. Harrell, Jr. *Gastroenterology 24*, 437–43(1953).

A 4 Blood Levels of I–131 after Tracer Doses in the Diagnosis of Hpyerthyroidism. S. Silver and M. H. Fieber. *Proc. Soc. Exptl. Biol. Med. 75*, 570–3(1959).

A 5 Blood Levels after Tracer Doses of Radioactive Iodine in the Diagnosis of Thyroid Disorders. S. Silver, M. H. Fieber, and S. B. Yohalem. *Am. J. Med. 13*, 725–9(1952).

A 6 Blood Volume in Congenital Cyanotic Heart Disease: Simultaneous Measurements with Evans Blue and Radioactive Phosphorous. H. W. Scott, Jr., S. R. Elliott, II, and R. C. Clay. *Bull. Johns Hopkins Hosp. 89*, 121–32(1951).

A 7 Blood Volume Studies with Radio Active Isotopes. B. Koster. *Am. J. Med. Technol. 19*, 291–7(1953).

A 8 Bone Marrow in the Diagnosis and Treatment of Polycythemia Vera. M. Block, L. O. Jacobson, and W. Bethard. *Proc. Inst. Med. of Chicago 19*, 84–6(1952).

A 9 Breast-Cancer Prognosis and Ovarian Cortical Stromal Hyperplasia. R. G. McManus and S. C. Sommers. *New Engl. J. Med. 246*, 890–2(1952).

A 10 Clinical Evaluation of the Hepatic Radioactivity Survey. E. T. Yuhl and L. A. Stirrett. *Ann. Surg. 138*, 857–62(1953).

A 11 The Clinical Use of Sodium Fluorescein and Radioactive Di-iodo-fluorescein in the Localization of Tumors of the Central Nervous System. G. E. Moore, W. T. Peyton, S. W. Hunter, and L. A. French. *Minnesota Med. 31*, 1073–6(1948).

A 12 Clinical Value of the Butanol Extractable (Thyroxine) I—131 in the Diagnosis of Hyperthyroidism. L. A. Schultz and L. Zieve. *J. Lab. Clin. Med. 42*, 949–50(1953).

A 13 Clinical Value of the Plasma Butanol-Extractable (Thyroxine) I–131 in the Diagnosis of Hyperthroidism and Myxedema. A. L. Schultz, S. Sandhaus, H. L. Demorest, and L. Zieve. *J. Clin. Endocrinol. Metabolism 14*, 1062–8(1954).

A 14 A Comparative Study of the Use of Di-iodo-fluorescein and Iodinated Human Serum Albumin for the Diagnosis and Localization of Intracranial Neoplasms. E. T. Yuhl, L. A. Stirrett, and R. L. Libby. *Ann. Surg. 137*, 184–8(1953).

A 15 Comparison of a Single G-M Tube Method and a Multitube Method of Assaying I–131 Uptake by the Human Thyroid. M. Perlmutter, S. Weisenfeld, and M. Mufson. *J. Clin. Endocrinol. 11*, 1012–20(1951).

A 16 A Computational Procedure for the Isotope Method of Brain Tumor Localization. A. Langer and R. Loevinger. *Science 117*, 247–8(1953).

A 17 Detection of Concealed Thyroid Disease by Tracer Technique. L. Reynolds, K. E. Corrigan, and H. S. Hayden. *J. Am. Med. Assoc. 151*, 368–71(1953).

A 18 The Detection of Intracranial Lesions, Especially Recurrent Tumors, by the Use of Radioactive Isotopes and the Scintillation Counter. M. Ashkenazy. *J. Am. Pharm. Assoc. Sci. Ed. 42*, 125–6(1953).

A 19 Detection of Intraocular Tumors with the Use of Radioactive Phosphorus. J. S. Krohmer, C. I. Thomas, J. P. Storassli, and H. L. Friedell. *Radiology 61*, 916–21(1953).

A 20 Detection of Intraocular Tumors by the Use of Radioactive Phosphorus. C. I. Thomas, J. S. Krohmer, J. P. Storaasli, and H. L. Friedell. *Am. J. Ophthalmol. 38*, Part II, 93–100(1954).

A 21 The Determination of Thyroidal and Renal Plasma I–131 Clearance Rates as a Routine Diagnostic Test of Thyroid Dysfunction. S. A. Berson, R. S. Yalow, J. Sorrentino, and B. Roswit. *J. Clin. Invest. 31*, 141–58(1952).

A 22 Diagnosis of Equivocal Hypothyroidism, Using Thyrotropic Hormone (TSH). N. G. Schneeberg, W. H. Perloff, and L. M. Levy. *J. Clin. Endocrinol. and Metabolism 14*, 223–31(1954).

A 23 Diagnosis of Hypothyroidism. P. Starr. *J. Clin. Endocrinol. and Metabolism 13*, 1422–7(1953).

A 24 Diagnosis and Localization of Organic Lesions of the Central Nervous System Using Radioactive Diiodofluorescein. L. Davis and S. L. Goldstein. *Radiology 59*, 514–20(1952).

A 25 The Diagnosis of Morphologic Abnormalities of the Human Thyroid Gland by Means of I–131. F. K. Bauer, W. E. Goodwin, R. L. Libby, and B. Cassen. *Radiology 61*, 935–7(1953).

A 26 The Diagnosis of Thyroid Disease. D. W. Petit and F. Scharles. *Postgrad. Med. 12*, 545–51(1952).

A 27 Diagnostic Studies with Radioactive Isotope Tracers. K. E. Corrigan and H. S. Hayden. *Radiology 59*, 1–18(1952).

A 28 Diagnostic Technics with Radioiodine. S. C. Werner. *Med. Ann. Dist. Columbia 22*, 12–6(1953).

A 29 Diagnostic Use of Radioactive Iodine: Report of 1,000 Cases. E. C. Albright. *J. Lab. Clin. Med. 40*, 776(1952).

A 30 Diagnostic Use of Radioactive Isotopes. L. Reynolds, K. E. Corrigan, and H. S. Hayden. *Am. J. Roentgenol. Radium Therapy Nuclear Med. 68*, 421–34(1952).

A 31 Diagnostic Use of Radioisotopes in a General Hospital. R. W. Emerick, L. E. Holly, A. H. Joistad, Jr., and K. E. Corrigan. *J. Am. Med. Assoc. 154*, 493–5(1954).

A 32 The Distribution of Administered Radioactive Rubidium (Rb86) in Normal and Neoplastic Tissues of Mice and Humans. A. Zipser and A. S. Freedberg. *Cancer Research 12*, 867–70(1952).

A 33 Distribution of Radioactive Phosphorus in Ocular Tissue. E. B. Dunphy and B. Selverstone. *Am. J. Ophthalmol. 34*, 1603(1951).

A 34 Evaluation of the Conversion of Radioactive Inorganic Iodine to Protein-Bound Iodine as a Diagnostic Aid in Thyroid Dysfunction. W. N. Harsha. *J. Clin. Endocrinol. 11*, 1524–34(1951).

A 35 Evaluation of Diagnostic Methods in Diseases of Thyroid Function, with Particular Reference to Radioiodine Tracer Tests. B. Roswit, J. A. Rosenkrantz, J. Sorrentino, R. Yalow, and I. Berlin. *Am. J. Med. Sci. 223*, 229–38(1952).

A 36 Evaluation of Radioactive Isotopes as an Adjunct to Surgical Diagnosis and Therapy. M. M. Copeland. *J. Bone Joint Surg. 33-A*, 1021–30(1951).

A 37 Evaluation of the Radioactive Mapping Technic in the Surgery of Brain Tumors. B. Selverstone and J. C. White. *Ann. Surg. 134*, 387–95(1951).

A 38 Evaluation of the Radiocardiogram in Heart Failure. R. A. Shipley and R. E. Clark. *J. Lab. Clin. Med. 40*, 943–4(1952).

A 39 An Evaluation of the Radioiodine Concentration Test in the Study of Thyroid Disease. N. G. Schneeberg, W. H. Perloff, and W. Serber. *Radiology 56*, 869–75(1951).

A 40 An Evaluation of the Technic and Results of the Radioactive Di-iodofluorescein Test for the Localization of Intracranial Lesions. M. Ashkenazy, L. Davis, and J. Martin. *J. Neurosurg. 8*, 300–14(1951).

A 41 Evaluation of a Thyroid Panel Practical Application of Scintillation Counter in Diagnosis of Diseases of the Thyroid. T. F. Barrett, H. Peck, F. K. Bauer, R. L. Libby, and S. R. Jarrett. *J. Am. Med. Assoc. 152*, 1414–7(1953).

A 42 Experience with the Conversion Ratio as a Measure of Thyroid Activity. K. F. Balls, J. M. Phillips, and J. D. Hardy. *Am. J. Med. Sci. 221*, 231–2(1951).

A 43 Experiences with the Moore Technique of Localization of Cerebral Tumors with Radioactive Substances. E. B. Schlesinger. *Surg. Forum, Proc. Forum Sessions, 36th Clin. Congr., Am. Coll. Surgeons, Philadelphia, W. B. Saunders Co.*, 368–71(1951).

A 44 Experimental Location of Myocardial Infarction Using Radioisotopes. W. K. Yates. *U. S. Armed Forces Med. J. 3*, 1597–602(1952).

A 45 Failures, Flops and False Localizations in Tracer Technic. K. E. Corrigan and H. S. Hayden. *Radiology 60*, 870–84(1953).

A 46 The Hepatic Radioactivity Survey. L. A. Stirrett, E. T. Yuhl, and R. L. Libby. *Radiology 61*, 930–4(1953).

A 47 Hypothyroidism Due to Thyrotropin Deficiency without Other Manifestations of Hypopituitarism. C. R. Shuman. *J. Clin. Endocrinol. Metabolism 13*, 795–800(1953).

A 48 Inhibition of a cervical Thyroid Gland by a Functioning Struma Ovarii. M. Perlmutter and M. Mufson. *J. Clin. Endocrinol. 11*, 621–9 (1951).

A 49 Instrumentation for Thyroid Measurement. G. L. Brownell and J. B. Stanbury. *J. Clin. Endocrinol. Metabolism 13*, 210–20(1953).

A 50 The Iodine-Deficient Human Thyroid Gland, A Preliminary Report. J. B. Stanbury, G. L. Brownell, D. S. Riggs, H. Perinetti, E. Del Castillo and J. Itoiz. *J. Clin. Endocrinol. Metabolism 12*, 191–207(1952).

A 51 Isotope Encephalometry: External Localization Techniques for the Diagnosis of Brain Tumors.

G. E. Moore. *J. Am. Pharm. Assoc., Sci. Ed. 62*, 126–9(1953).

A 52 Interference with Radioactive Iodine Uptake Test. G. L. Jackson. *J. Am. Med. Assoc. 156*, 787(1954).

A 53 Laboratory Aids In The Diagnosis of Thyroid Disorders. M. L. Mitchell. *Bull. New Engl. Med. Center 16*, 86–9(1954).

A 54 The Laboratory Diagnosis of Extra-Thyroidal Hypermetabolism. C. V. Meckstroth, R. L. Rapport, G. M. Curtis and S. J. Simcox. *J. Clin. Endocrinol. Metabolism 12*, 1373–9(1952).

A 55 The Laboratory Diagnosis of Hyperthyroidism: A Practical Analysis of Current Methods, with Presentation of Illustrative Cases. J. D. Hardy and C. Riegel. *Am. J. Med. Sci. 221*, 359–63 (1951).

A 56 Laboratory Procedures in the Diagnosis of Hyperthyroidism. S. C. Werner. *Postgraduate Med. 8*, 511–3(1950).

A 57 Lingual Thyroid; the Use of Radioactive Iodine in Diagnosis. J. R. Timmons and J. M. Timmons. *Ann. Surg. 133*, 90–4(1951).

A 58 Lingual Thyroid: With Report of a Case. H. J. Dietrich and L. A. Schall. *Ann. Otol. Rhinol. Laryngol. 61*, 395–9(1952).

A 59 Localization of Brain Tumors by Means of Radioactive Phosphorus. B. Selverstone, A. K. Solomon, and W. H. Sweet. *J. Am. Med. Assoc. 140*, 227(1949).

A 60 Localization of Brain Lesions by Means of RISA. J. G. Rushton, H. J. Svien, and E. J. Baldes. *Proc. Staff Meetings Mayo Clinic 29*, 478–85(1954).

A 61 Localization of Brain Tumors and Other Intracranial Lesions with Radioactive Iodinated Human Serum Albumin. H. S. Dunbar and B. S. Ray. *Surg. Gynecol. Obstet. 98*, 433–6 (1954).

A 62 Localization of Brain Tumors with Positron Emitters. G. L. Brownell and W. H. Sweet. *Nucleonics 11, No. 11*, 40–5(1953).

A 63 Localization of Brain Tumors with Radioiodide 131. S. N. Chou, G. E. Moore, and J. F. Marvin. *Science 115*, 119–20(1952).

A 64 Localization of Intracranial Lesions by Radioactive Isotopes. W. T. Peyton, G. E. Moore, L. A. French, and S. N. Chou. *J. Neurosurg. 9*, 432–42(1952).

A 65 Localization of Intracranial Neoplasms with Radioactive Diiodofluorescein. R. D. Woolsey and G. E. Thoma. *J. Missouri State Med. Assoc.*, 885–9 December (1950).

A 66 Localization of Intracranial Neoplasms with Radioactive Diiodofluorescein. R. D. Woolsey, G. E. Thoma, and R. E. Mack. *Southern Med. J. 45*, 789–92(1952).

A 67 Localization of Intracranial Neoplasms with Radioactive Isotopes. W. B. Seaman, M. M. Ter-Pogossian, and H. G. Schwartz. *Radiology 62*, 30–6(1954).

A 68 Localization of Radioactivity in Regional Lymph Nodes. H. F. Berg, W. M. Christophersen, A. M. Isaacs, and J. R. Bryant. *Arch. Surg. 67*, 228–43(1953).

A 69 Mapping Cerebral Tumors. B. Selverstone and C. Robinson. *J. Am. Med. Assoc. 153*, 21–3 (1953).

A 70 Measurement of Thyroxin Synthesis with I–131. A Test for Evaluation of Thyroid Function in Equivocal States. M. E. Morton. *Calif. Med. 78*, 277–9(1953).

A 71 Measurements of Absolute Radioiodine Uptake in the Assessment of Human Thyroid Activity. C. P. Haigh, M. Reiss, and J. M. Reiss. *J. Endocrinol. 10*, 273–83(1954).

A 72 Measurements of the Disappearance of Radioactive Tagged Albumin from Serum and the Excretion of I–131 in the Urine of Patients with Cirrhosis. M. P. Tyor, J. K. Aikawa, and D. Cayer. *Gastroenterology 21*, 79–89(1952).

A 73 A method for the Determination of Small Doses of I–131 in the Urine. W. E. Goodwin and W. D. Harris. *J. Lab. Clin. Med. 38*, 470–3 (1951).

A 74 A Method Using I–131 for the Determination of Abnormal Thyroid Morphology. W. E. Goodwin, F. K. Bauer, T. F. Barrett, and B. Cassen. *Am. J. Roentgenol. Radium Therapy Nuclear Med. 68*, 963–70(1952).

A 75 A Modified Radioiodine Test for Thyroid Function. H. M. Nitowsky and T. T. Puck. *J. Lab. Clin. Med. 39*, 824–36(1952).

A 76 Myelography by Means of I–131 The Myeloscintigram. F. K. Bauer and E. T. Yuhl. *Neurology 3*, 341–6(1953).

A 77 A New Technic for the Determination of Gallbladder Function. E. T. Yuhl and L. A. Stirrett. *Western J. Surg. Obstet. Gynecol. 62*, 490–2(1954).

A 78 A New Technique for the Diagnosis of Carcinoma Metastatic to the Liver; a Preliminary Report. L. A. Stirrett, E. T. Yuhl, and R. L. Libby. *Surg. Gynecol. Obstet. 96*, 210–4(1953).

A 79 Nonutilization of Radioactive Iodinated Uracil, Uridine, and Orotic Acid by Animal Tissues *in Vivo*. W. H. Prusoff, W. L. Holmes, and A. D. Welch. *Cancer Research 13*, 221–5(1953).

A 80 Plasma Radioactive Iron Turnover in Acute Viral Hepatitis. R. E. Peterson. *Proc. Soc. Exptl. Biol. Med. 84*, 47–50(1953).

A 81 The Present Status of the Diagnosis and Treatment of Thyrocardiac Disease. C. K. Friedberg. *Connecticut State Med. J. 16*, 164–70(1952).

A 82 Present Status of Radioactive Isotopes in Diagnosis and Treatment of Brain Tumors. R. D. Woolsey. *Mississippi Valley Med. J. 74*, 159–61(1952).

A 83 Q Factor in Cancer. A. F. Reid, R. C. Gilmore, Jr., and M. C. Robbins. *J. Am. Med. Assoc. 153*, 26(1953).

A 84 Quantitative Evaluation of Radiocardiogram. R. A. Shipley, R. E. Clark, D. Liebowitz, and J. Krohmer. *Federation Proc. 12*, 131(1953).

A 85 Radioactive Diiodofluorescein in Diagnosis and Localization of Central Nervous System Tumors. L. Davis, J. Martin, M. Ashkenazy, G. V. LeRoy, and T. Fields. *J. Am. Med. Assoc. 144*, 1424–32(1950).

A 86 Radioactive Iodinated Human Serum Albumin as Tracer Agent for Diagnosing and Localizing Intracranial Lesions. S. N. Chou, J. B. Aust, G. E. Moore, and W. T. Peyton. *Proc. Soc. Exptl. Biol. Med. 77*, 193–5(1951).

A 87 Radioactive Iodine. The Diagnosis of Thyroid Diseases with Some Remarks on the Health Hazard. O. E. Skang. *Scand. J. Clin. Lab. Invest. 4*, 321–6(1952).

A 88 Radioactive Iodine 131 in the Differential Diagnosis of Thyroid Disorders. S. B. Nadler, T. Bloch, J. Hidalgo, and R. Nieset. *New Orleans Med. Surg. J. 104*, 177–81(1951).

A 89 Radioactive Iodine Studies Following Hemithyroidectomy for Carcinoma of the Thyroid. A Possible Aid in the Diagnosis of Early Metastases. A Case Report. K. R. Crispell. *Virginia Med. Monthly 77*, 652–4(1950).

A 90 Radioactive Isotopes in Localization of Intracranial Lesions; A Survey of Various Types of Isotopes and "Tagged Compounds" Useful in the Diagnosis and Localization in Intracranial Lesions with Special Reference to the Use of Radioactive Iodine-Tagged Human Serum Albumin. S. N. Chou, J. B. Aust, W. T. Peyton, and G. E. Moore. *Arch. Surg. 63*, 554–60(1951).

A 91 Radioactive Measurement of Proteolytic Activity. G. L. Nardi. *Science 118*, 299–300 (1953).

A 92 Radioactive Phosphorus as a Diagnostic Aid in Opthalmology. J. W. Bettman and V. Fellows. *Arch. Opthalmol. 51*, 171–9(1954).

A 93 Radioactive Phosphorus Studies in the Diagnosis of Ocular Tumors (A Preliminary Report). A. E. Town. *West Va. Med. J. 48*, 356–9(1952).

A 94 Radioactive Sodium Chromate for the Study of Survival of Red Blood Cells II. The Rate of Hemolysis in Certain Hematologic Disorders. I. M. Weinstein and G. V. LeRoy. *J. Lab. Clin. Med. 42*, 368–76(1953).

A 95 Radioactive Sodium Clearance as A Measurement of Efficacy of Sympathectomy in Peripheral Arterial Insufficiency. J. J. Reinhard, Jr., and E. Dituri. *Ann. Surg. 140*, 67–74(1954).

A 96 Radiochromium-Labeled Erythrocytes for the Detection of Gastrointestinal Hemorrhage. C. A. Owen, Jr., J. L. Bollman, and J. H. Grindlay. *J. Lab. Clin. Med. 44*, 238–45(1954).

A 97 Radioiodine in the Diagnosis of Thyroid Disorders. F. K. Bauer, W. E. Goodwin, and R. L. Libby. *Med. Clin. N. Amer.* (July), 981–9(1952).

A 98 Radioiodine Tracer and Biopsy in the Diagnosis and Treatment of Hyperthyroidism. C. F. Baumeister. *Arch. Surg. 67*, 80–91(1953).

A 99 The Radioiosine-Accumulating Function of the Human Thyroid Gland as a Diagnostic Test in Clinical Medicine. F. R. Keating, S. F. Haines, M. H. Power, and M. M. D. Williams. *J. Clin. Endocrinol. 10*, 1425–64(1950).

A 100 A Rapid Simple Clinical Radioactive Method for Evaluating Thyroid Function. W. A. Reilly. *J. Clin. Endocrinol. Metabolism 14*, 770–1(1954).

A 101 The Rate of Formation of Nondiffusible (Organic) Fraction of I–131 in Plasma Correlated with Apparent Thyroid State. W. E. White. *J. Lab. Clin. Med. 41*, 516–20(1953).

A 102 Results of Radioactive Isotope Encephalography in Patients with Verified Intracranial Tumors, L. Davis and T. Craigmile. *J. Neurosurg. 11*, 262–7(1954).

A 103 Scintigrams of the Thyroid Gland. The Diagnosis of Morphologic Abnormalities with I–131. F. K. Bauer, W. E. Goodwin, T. F. Barrett, R. L. Libby, and B. Cassen. *Calif. Med. 77*, 380–2(1952).

A 104 The Scintillation Counter as an Instrument for *in Vivo* Determination of Thyroid Weight. H. C. Allen, Jr., and W. E. Goodwin. *Radiology 58*, 68–79(1952).

A 105 Scintillation Equipment for Use in the Detection of Radioactivity in the Localization of Intracranial Lesions. J. F. Nechaj and C. Moses. *J. Lab. Clin. Med. 39*, 815–7(1952).

A 106 Scintiscanning the Entire Body for Radioiodine. K. W. Taber. *Mississippi Valley Med. J. 75*, 188–91(1953).

A 107 Serial Observations of I–131 Levels in the Plasma as an Aid to the Diagnosis of Hypothyroidism. H. Rollman, D. W. Petit, and P. Starr. *J. Lab. Clin. Med. 39*, 697–703(1952).

A 108 Serum Concentrations of Radioiodine in Diagnostic Tracer Studies. M. C. Barry and A. E. Pugh. *J. Clin. Endocrinol. Metabolism 13*, 980–8(1953).

A 109 A Simplified Technique for the Diagnosis of Hyperthyroidism, Utilizing the One-Hour Uptake of Orally Administered I–131. K. R. Crispell, W. Parson, and P. Sprinkle. *J. Clin. Endocrinol. Metabolism 13*, 221–4(1953).

A 110 Status of the Conversion Ratio as a Measure of Thyroid Activity. K. F. Balls, J. M. Phillips, and J. D. Hardy. *Federation Proc. 10* (1951).

A 111 Studies of Radiogallium as a Diagnostic Agent in Bone Tumors. W. C. Mulry and H. C. Dudley. *J. Lab. Clin. Med. 37*, 239–52(1951).

A 112 Study of Revascularization of Blood Vessel Grafts by Means of Radioactive Phosphorus. C. L. Kiehn, J. Benson, D. M. Glover, and M. Berg. *Arch. Surg. 65*, 477–86(1952).

A 113 Successful Treatment of A Case of Cushing's Syndrome by Electro-Coagulation of the Hypophysis. B. Arner, R. Luft, H. Olivecrona, and B. Sjogren. *J. Clin. Endocrinol. Metabolism 13*, 1101–8(1953).

A 114 The Tracer Dose of Radioactive Iodine in the Diagnosis of Thyroid Disease. L. Seed, B. Jaffe, and C. Baumeister. *J. Clin. Endocrinol. 11*, 1143–56(1951).

A 115 Tracer Studies with Radioactive Phosphorus (P–32) on the Absorption of Cerebrospinal Fluid and the Problem of Hydrocephalus. J. E. Adams. *J. Neurosurg. 8*, 279–88(1951).

A 116 The Uptake of Radioactive Phosphorus by Intraocular Neoplasms. E. B. Dunphy, K. K. Dreisler, J. B. Cadigan, and W. Sweet. *Am. J. Ophthalmol. 37*, 45–54(1954).

A 117 Use of I–131-Labeled Protein in the Diagnosis of Pancreatic Insufficiency. A. B. Chinn, P. S. Lavik, R. M. Stitt, and G. W. Buckaloo. *New Engl. J. Med. 247*, 877–80(1952).

A 118 The Use of Radioactive Iodine in the Assessment of Thyroid Function. J. F. Goodwin, A. G. Macgregor, H. Miller, and E. J. Wayne. *Quart. J. Med. 20*, 353(1951).

A 119 The Use of Radioactive Iodine in the Detection of Thyroid Dysfunction. W. W. Drummy, Jr. *New Engl. J. Med. 249*, 970–3(1953).

A 120 Use of Radioactive Phosphorus in Detection of Intraocular Neoplasms. I. J. Eisenberg, I. H. Leopold, and D. Sklaroff. *Arch. Ophthalmol. 51*, 633–41(1954).

A 121 The Use of Radioactive Phosphorus in the Detection of Intraocular Tumors. R. J. Kennedy, O. Glasser, and P. Kazdan. *Cleveland Clinic Quart. 21*, 133–40(1954).

A 122 The Use of Radioactive Phosphorus in the Diagnosis of Avascular Necrosis of the Femoral Head. F. R. Tucker. *J. Bone and Joint Surg. 32–B*, 100–7(1950).

A 123 The Use of Radioisotopes for the Localization of Brain Tumors. F. R. Wrenn, Jr., and M. L. Good. *N. Carolina Med. J. 13*, 231–6(1952).

A 124 Use of Radioactive Tracer Material in the Differential Diagnosis of Experimental Jaundice. W. W. Carroll, A. S. Biddle, and J. A. D. Cooper. *Quart. Bull. Northwestern Univ. Med. School, Chicago 25*, 13(1951).

A 125 The Uses of Nuclear Disintegration in the Diagnosis and Treatment of Brain Tumor. W. H. Sweet. *New Engl. J. Med. 245*, 875–8(1951).

A 126 The Value of the Measurements of Thyroid Uptake and Urinary Excretion of I–131 in Assessing Thyroid Function of Normal and Congenitally Hypothyroid Children. W. A. Reilly and D. I. Bayer. *J. Pediat. 40*, 714–21 (1952).

A 127 The Value of Serial Studies of Cerebrovascular Permeability with Radioactive Iodinated Serum Albumin and the Scintillation Counter, Particularly in the Detection of Neurosurgical Lesions. M. Ashkenazy and J. W. Crawley. *Am. Surgeon 19*, 155–64(1953).

A 128 The Value of Thyrotropin in the Diagnosis of Obscure Hypothyroidism. R. P. Levy, W. G. Palmer, and W. McK. Jefferies. *J. Lab. Clin. Med. 40*, 823(1952).

A 129 Visual Delineation of Thyroid Glands *in Vivo*. F. K. Bauer, W. E. Goodwin, R. L. Libby, and B. Cassen. *J. Lab. Clin. Med. 39*, 153–8(1952).

A 130 Analysis of Radiocardiogram in Heart Failure. R. A. Shipley, R. E. Clark, D. Liebowitz, and J. S. Krohmer. *Circulation Research 1, No. 5* (1953).

A 131 Application of I–131 to the Diagnosis and Treatment of Carcinoma of the Thyroid Gland. L. V. dos Remedios. *Kaiser Foundation Med. Bull. 2, No. 1 and 2, 25*(1954).

A 132 The Blood Volume in Congestive Heart Failure. J. F. Ross, R. B. Chodos, W. H. Baker, and E. D. Fries. *Trans. Assoc. Am. Physicians 65*, 75(1952).

A 133 Blood Volume Determinations in Man—Advantages of Radioactive Iodinated Human Serum Albumin Method. H. D. Strauss, S. V. Geyer, and D. Berkowitz. *Proc. Penna. Acad. Sci. 28*, 197–204(1954).

A 134 The Clinical Use of Radioactive Di-Iodo-Fluorescein in the Diagnosis and Localization of Organic Lesions of the Central Nervous System. L. Davis, J. Martin, M. Ashkenazy, G. V. LeRoy, and T. Fields. *Surg. Forum, Am. Coll. Surgeons* 357–62(1950).

A 135 Detection of Metastatic Tumor Cells by Intraperitoneal Inoculation of Organ Brei from Tumor-Bearing Mice. H. Goldie, B. R. Jeffries, A. M. Jones, and M. Walker. *Cancer Research 13*, 566–72(1953).

A 136 Determination of Thyroidal Plasma Iodide Clearance as a Routine Diagnostic Test of Thyroid Function. S. A. Berson, R. S. Yalow, J. Sorrentino, and B. Roswit. *Bull. N. Y. Acad. Med. 27*, 395(1951).

A 137 The Diagnostic Use of I–131. E. M. Hanbury, Jr., J. Heslin, L. G. Stang, Jr., W. D. Tucker, and J. E. Rall. *J. Clin. Endocrinol. Metabolism 14*, 1530–8(1954).

A 138 Diagnostisk bruk av Radioktivt Jod. R. B. Engelstad. *Tidsskr. Norske Laegeforen. No. 7*, 224–5(1950).

A 139 Dosimetric Consideration in Determining Hematopoietic Damage from Radioactive Iodine. J. E. Rall, C. G. Foster, J. Robbins, R. Lazerson, L. E. Farr, and R. W. Rawson. *Trans. Am. Goiter Assoc.*, 290–304(1952).

A 140 Eksogent og endogent cholesterol. Undersokelser over absorbsjon, deponering og syntese av cholesterol hos rotter. A. Pihl. *Akademisk Trykningssentral, Blindern Oslo*, 107(1954).

A 141 Histopathologic Basis for the Diagnosis of Polycythemia Vera in Anemia Patients and for Combined Treatment with Transfusions, Radio-

phosphorus, and Intravenous Iron (Except in the Burnt-Out Leukemoid Stage). M. Block, W. Bethard, and L. O. Jacobson. *Abstracts Proc. Central Soc. Clin. Research, 27th Ann. Meeting, J. Lab. Clin. Med. 44*, 771(1954).

A 142 Indicaciones del Radiofosforo. B. J. Duffy, Jr. *Sinopsis Medica Intern. 3, No. 4*, 11–3(1954).

A 143 Les Isotopes Radioactifs dans la Localisation des Tumeurs Cerebrales. B. Selverstone. *La Presse Medicale 59*, 1093–4(1951).

A 144 Measurement of Total Body Exchangeable Potassium and Erythrocyte Potassium in Nephrotic Children. D. Gribetz, L. Corsa, C. D. Cook, H. G. Keitel, and N. B. Talbot. *J. Clin. Invest. 33*, 680(1954).

A 145 A method for Increasing the Accuracy of the Thyroidal Radioiodine Uptake as a Test for Thyroid Function by the Use of Thyroid Medication. M. A. Greer and G. E. Smith. *J. Clin. Endocrinol. Metabolism 13*, 855(1953).

A 146 The Physiologic Evaluation and Management of Chronic Bone Marrow Failures. V. Loeb, Jr., C. V. Moore and R. Dubach. *Am. J. Med. 15*, 499(1953).

A 147 The Radioactive Di-Iodo-Fluorescein Test for the Localization of Intracranial Lesions. L. Davis. *Ann. Roy. Coll. Surg. of Eng. 9*, 349–65(1951).

A 148 Radioactive Isotopes as Aids in Medical Diagnosis. E. H. Quimby. *New Engl. J. Med. 252*, 1(1955).

A 149 Radioactive Isotopes in Clinical Diagnosis. E. H. Quimby. *Advances in Biol. and Med. Phys. 2* (1951).

A 150 Radioactive Phosphorus in the Management of Brain Tumors. R. W. Garrity and L. W. Matthews. *Neurology 5*, 929(1954).

A 151 A Simplified I–131 Diagnostic Test for Thyroid Function, E. M. Lasche, N. G. Schneeberg, W. H. Perloff, W. Serber, T. E. Sopp, and L. Stanton. *Phila. Gen. Hosp. 1*, 13–6(1950).

A 152 Simplified Sensitive Test for Thyroid Function, Using Protein-bound I–131. L. van Middlesworth, C. E. Nurnberger, and A. Lipscomb. *J. Clin. Endocrinol. Metabolism 14*, 1056–61(1954).

A 153 The Turnover of Liver and Plasma Phospholipides of Phlorizinized Dogs. N. R. DiLuzio and D. B. Zilversmit. *Am. J. Physiol. 170*, 472(1952).

A 154 Use of Radioactive Phosphorus to Determine Volume of Blood Replaced in Replacement Transfusion. R. J. Soberman, J. R. Kregans, and R. P. Keating. *Proc. Soc. Exptl. Biol. Med. 73*, 87–9(1950).

A 155 The Use of Radioactive Phosphorus (P–32) in Determining the Blood Supply to the Head of the Femur. H. B. Boyd, D. B. Zilversmit, and R. A. Calandruccio. *Proc. 5th Intern. Congr. Orthopedic Surgery, 1951*, 536(1953).

A 156 The Use of Thyrotropic Hormone in the Diagnosis of Myxedema. W. H. Perloff, L. M. Levy, and A. Despopoulos. *J. Clin. Endocrinol. Metabolism 11*, 1495–502(1951).

A 157 The Value of Blood Volume Determinations in the Study of Patients Undergoing Surgery for Rheumatic Heart Disease. W. Likoff, D. Berkowitz, S. V. Geyer, H. Strauss, and A. Reale. *Am. Heart J. 49*, 1–8(1955).

A 158 A Case of Struma Cibaria. G. Fisher, D. Epstein, and K. E. Paschkis. *J. Clin. Endocrinol. 12*, 1100–2(1952).

A 159 Clinical Applications of Hepatic Radioactivity Surveys. L. A. Stirrett, E. T. Yuhl, and B. Cassen. *Am. J. Gastroentol. 21*, 310–7(1954).

A 160 New Method for Determination of Gall-Bladder Function. L. A. Stirrett and E. T. Yuhl. *Arch. Surg. 68*, 417–21(1954).

A 161 The Diagnosis of Hepatic Neoplasms. L. A. Stirrett and R. L. Libby. *Clin. Research Proc. 1*, 37(1953).

A 162 An Improved Method for the Bioassay of Thyrotropic Hormones. F. S. Greenspan, J. P. Kriss, and L. A. Mosen. *Am. J. Med. 10*, 106(1954).

A 163 Iodine Metabolism in Thyroid Diagnosis. B. A. Burrows. *Boston Med. Quart. 4, No. 3*(1953).

A 164 Radiology and Radioactivity. R. R. Newell. *Ann. Rev. Med.*, 317–38(1950).

A 156 Use of Radioactive Isotopes in Diagnostic Studies of Malignancy. G. E. Moore. *Proc. Second Natl. Cancer Conf.*, 1607–13(1952).

A 166 The Use of Scintography for the Diagnosis of Liver and Gall Bladder Diseases. E. T. Yuhl and L. A. Stirrett. *Clin. Research Proc. 2*, 23(1954).

A 167 Value of Blood Volume Determinations in Gastrointestinal Disease. R. M. Zollinger, E. H. Ellison, C. I. Britt, and N. Cedars. *Arch. Surg.*, June(1953).

A 168 Diagnosis of Breast Cancer with P–32. K. L. Bhattacharjya, R. Dutt Chowdhury, A. Bose, and N. N. Das Gupta. *J. Indian Med. Assoc. 22*, 393(1953).

A 169 Study of Thyroid Function with Radioactive Iodine I–131. K. P. Chakraborty, A. Bose, K. L. Bhattacharjya, and N. N. Das Gupta. *J. Endocrinol. 10, No. 4*(1954).

Therapeutic Medicine

B 268 The Treatment of Thyroid Cancer with Radioiodine; Present Status. R. W. Rawson and J. E. Rall. *Proc. Second Natl. Cancer Conf. 1952, N. Y. 1*, 475–9(1954).

B 269 Treatment of Toxic Goiter with Radioactive Iodine. L. Seed and T. Fields. *Monograph Am. Lectures Endocrinol. No. 197*(1953).

B 270 Use of I—131 in Thyrotoxicosis, Experience at Hartford Hospital: 1949–1953. G. B. McAdams and J. Stiano. *Connecticut State Med. J. 18*, 805–11(1954).

B 271 Use of I–131 in Treatment of Pulmonary Emphysema. C. P. Wilson, H. Kammer, and W. L. Lehman. *Proc. Soc. Nuclear Med.*, Seattle (July 1954).

B 272 The Use of P–32 Beta Sources for Superficial Therapy. W. K. Sinclair and H. Blondal. *Brit. J. Radiol. 25*, 360(1952).

B 273 The Use of Radioactive Colloidal Gold (Au–198) in Pleural Effusions and Ascites Associated with Malignancy. E. R. King, D. W. Spicer, F. W. Dowda, M. A. Bender, and W. E. Noel. *Am. J. Roentgenol. Radium Therapy Nuclear Med. 68* (1953).

B 274 The Use of Radioactive Colloidal Gold 198 in the Treatment of Peritoneal and Pleural Effusions. W. K. Sinclair and R. J. Walton. *Brit. Med. Bull. 8*, 165(1952).

B 275 Use of Thyroid Stimulating Hormone in the Treatment of Metastatic Carcinoma of the Thyroid. C. P. Wilson, H. Kammer, and W. L. Lehman. *Abstr. Second Intern. Cong. Biochem.* Paris(1952).

B 276 Radioactive Iodine in the Management of Solitary Thyroid Nodules. M. T. Friedell. *Trans. Am. Goiter Assoc. 165*(1952).

B 277 Results of Therapy with Radioiodine in Hyperthyroidism. R. E. Goldsmith and E. L. Saneger. *Ohio State Med. J. 50*, 26–7(1954).

B 278 Use of Radioactive Gold in Treatment of Prostatic Cancer. C. M. Crigler, G. Fletcher, J. E. Stapleton, P. C. Campbell, and W. J. Wingo. *Trans. S. Central Section Am. Urol. Assoc.*(1953).

B 279 The Control of Malignant Effusions with Radioactive Gold. A. Schick and R. J. Bloor. *N. Y. State J. Med. 54*, 2979–82(1954).

B 280 The Hematopoetic and Goitrogenic Effects of a Preparation of Cobaltous Chloride in Patients with Sickle Cell Anemia. R. T. Gross, J. P. Kriss and T. H. Spaet. *Soc. Trans., Am. J. Diseases Children 88*, 503(1954).

B 281 Hypothyroidism and Hyperplasia of the Thyroid in Patients Treated with Cobalt. J. P. Kriss, W. H. Carnes and R. T. Gross. *J. Am. Med. Assoc. 157*, 117(1955).

B 282 The Management of Hyperthyroidism. B. A. Burrows and J. F. Ross. *Med. Clin. N. Amer. 35*, 1305(1951).

B 283 Prophylaxis and Pallitation of Malignant Effusions with Radioactive Colloidal Gold. I. I. Cowan and F. G. Karioris. *Am. J. Obstet. Gynecol. 69*, 312–19(1955).

B 284 Radioactive Colloidal Gold in the Treatment of Malignant Pleural and Peritoneal Effusions. T. Carlile, H. E. Mackey, and E. R. Morgan. *Bull. Mason Clin. 7*, 43–51(1953).

B 285 Radioactive Iodine in the Treatment of Thyrotoxicosis. J. H. Crampton, W. J. Steenrod, Jr., and T. Carlile. *Mason Clin. Bull. 4*, Sept.(1950).

B 286 Radioiodine (I-131): Principles of Diagnosis and Treatment of Thyroid Disease. B. J. Duffy, Jr. and J. W. Howland. *N. Y. State J. Med 51*, 1399(1951).

B 287 The Radioiodine Uptake and the Protein Bound Iodine in Treated Hyperthyroidism. B. A. Burrows, E. Dell, D. Graham and J. F. Ross. *Clin. Research Proc. 1*, 20(1953).

B 288 Treatment of Multiple Myeloma with Radioactive Iodine. J. P. Kriss. *Proc. Am. Assoc. Cancer Research 1*, 27(1954).

B 289 Use of Strontium 90 Applicator in Beta Ray Therapy of the Eye. T. Stevenson. *Trans. Pacific Coast Oto-Ophthalmol. Soc.*, 115–22(1953).

Clinical Research

C 1 Abnormalities of Carbohydrate Metabolism of Red Cells in Hereditary Spherocytosis. T. A. J. Prankerd, K. I. Altman, and L. E. Young. *J. Clin. Invest. 33*, 957(1954).

C 2 The Absorption of Iron. Radioiron Studies in Idiopathic Hemochromatosis, Malnutritional Cytosiderosis, and Transfusional Hemosiderosis. T. H. Bothwell, H. v., W. v. Doorn-Wittkampf, M. L. Du Preez, and T. Alper. *J. Lab. Clin. Med. 41*, 836–48(1953).

C 3 Absorption of Radioactive Iron in Normal, Anemic and Hemochromatotic Subjects. R. B. Chodos and J. F. Ross. *Am. J. Med. 14*, 499 (1953).

C 4 Acetate Metabolism of Blood Cholesterol Synthesis. R. G. Gould, G. Okita, P. Keegan, and G. V. LeRoy. *J. Lab. Clin. Med. 42*, 809–10 (1953).

C 5 Action of Insulin on the Permeability of Cells to Sorbitol. A. N. Wick and D. R. Drury. *Am. J. Physiol. 166*, 421–3(1951).

C 6 Albumin, Potassium, Sodium and Chloride Redistribution and Erythrocyte Loss After Surgical Trauma and Extensive Burns. C. L. Fox, Jr., S. E. Lasker, J. M. Winfield, and W. L. Mersheimer. *Ann. Surg. 140*, 524–34 (1954).

C 7 Alteration of Thyroid Function by ACTH and Cortisone. W. J. Kuhl, Jr., and M. Ziff. *J. Clin. Endocrinol. Metabolism 12*, 554–59(1952).

C 8 Analysis of Techniques for the Determination of Thyroid Function with Radioiodine. G. L. Brownell. *J. Clin. Endocrinol. 11*, 1095–105 (1951).

C 9 Ascitic Fluid and Plasma Protein Exchange in Cirrhosis of the Liver. Studies with Radioiodinated Human Serum Albumin and Gamma Globulin. F. K. Bauer, W. H. Blahd, M. Fields, and G. Getchell. *Metabolism Clin. Exptl. 3*, 289–96(1954).

C 10 Autopsy Studies of Distribution of Gallium 72. M. Brucer, G. A. Andrews, D. J. Rehbock, S. W. Root, and J. Gray. *Radiology 61*, 590–5 (1953).

C 11 Balance Studies in Two Remarkable Instances of "Pure" Chronic Potassium Depletion Resulting from the Overuse of Laxatives. W. B. Schwartz and A. S. Relman. *J. Clin. Invest. 31*, 660(1952).

C 12 Biologic Studies with Arsenic 76. IV. The Histopathologic Effects of Arsenic 76, in Patients with Leukemia and Related Diseases. M. Block, L. O. Jacobson, and W. Neal. *J. Lab. Clin. Med. 38*, 792(1951).

C 13 Biological Studies with Arsenic 76. IV. The Histopathologic Effect of Arsenic 76 Upon the Hematopoietic Tissues of Patients with Leukemia. M. Block, L. O. Jacobson, and W. Neal. *J. Lab. Clin. Med. 41*, 499–515(1953).

C 14 Blood Iodine Levels in Pregnancy and Abortion. K. P. Russell. *Surg. Gynecol. Obstet. 96*, 577–80(1953).

C 15 Blood Isotope Levels Following a Test Meal of I–131-Labeled Protein. A. B. Chinn, P. S. Lavik, L. I. Babb, G. W. Buckaloo, R. M. Stitt, and W. E. Abbott. *J. Lab. Clin. Med. 42*, 377–9(1953).

C 16 Blood (Red Cell) Volume Measured by Carbon Monoxide and Radiochromium Methods. J. Hopper, Jr., N. Nomof, E. Brown, R. Wennesland, and K. G. Scott. *J. Clin. Invest. 33*, 944(1954).

C 17 Blood Volume Alterations in Congestive Heart Failure. S. S. Schreiber, A. Bauman, R. S. Yalow, and S. A. Berson. *J. Clin. Invest. 33*, 578–86(1954).

C 18 The Blood Volume and Blood Turnover in Thoracic Surgery as Determined by P–32 Labelled Red Blood Cells. N. I. Berlin, D. F. Rowles, G. M. Hyde, R. J. Parsons, P. C. Sampson, and S. Port. *Surg. Gynecol. Obstet. 92*, 712–16(1951).

C 19 Blood Volume in Congenital Heart Disease: Simultaneous Measurements with Evans Blue and Radioactive Phosphorus. H. W. Scott, Jr.,

S. R. Elliott, II, and R. C. Clay. *Bull. Johns Hopkins Hosp. 89*, 121(1951).

C 20 Blood Volume in Congestive Heart Failure as Determined with Iodinated Human Serum Albumin. E. Kaplan, R. C. Puestow, L. A. Baker, and S. Kruger. *Am. Heart J. 47*, 824–38(1954).

C 21 Blood Volume Determination: Comparison of T–1824 and P–32 Labeled Red Cell Methods. L. R. Wasserman, Tse-Fei Yoh, and I. A. Rashkoff. *J. Lab. Clin. Med. 37*, 342–52(1951).

C 22 The Blood Volume in Portal Cirrhosis as Determined by P–32 Labeled Red Blood Cells. G. M. Hyde, N. I. Berlin, R. J. Parsons, J. H. Lawrence, and S. Port. *J. Lab. Clin. Med. 39*, 347–53(1952).

C 23 Blood Volume Studies in Pernicious Anemia and Non-Tropical Sprue. L. M. Meyer and R. Bertcher. *Proc. Soc. Exptl. Biol. Med. 81*, 511–13(1952).

C 24 Blood Volume Variation During Labor and Early Puerperium. H. J. Tatum. *Am. J. Obstet. Gynecol. 66*, 27–35(1953).

C 25 The Blood Volume in Various Medical and Surgical Conditions. N. I. Berlin, G. M. Hyde, R. J. Parsons, and J. H. Lawrence. *New Engl. J. Med. 247*, 675–83(1952).

C 26 Body Potassium Deficiency in Diabetes Mellitus. J. K. Aikawa, J. H. Felts, and G. T. Harrell, Jr. *J. Clin. Invest. 31*, 614(1952).

C 27 Bone Marrow Studies in Polycythemia. M. Block and W. F. Bethard. *J. Clin. Invest. 31*, 618(1952).

C 28 The Cardiac Complications of Hemochromatosis. T. H. Bothwell, B. Van Lingen, T. Alper and M. L. Du Preez. *Am Heart J. 43*, 333–40(1952).

C 29 Carrier-Free Radioactive Iodine 131 Thyroid Uptake and Urinary Excretion in Normal and Hypothyroid Children. W. A. Reilly and D. I. Bayer. *J. Clin. Endocrinol. 10*, 811(1950).

C 30 Changes in Human Plasma Mucoproteins in Hyperthyroidism and Myxedema. P. Mustacchi, M. L. Petermann and J. E. Rall. *J. Clin. Endocrinol. Metabolism 14*, 729–34(1954).

C 31 Chloride "Space" and Total Exchanging Chloride in Man Measured with Long-Life Radiochloride, C–36. S. A. Threefoot, G. E. Burch, and C. T. Ray. *J. Lab. Clin. Med. 42*, 16–33 (1953).

C 32 Chromatographic Changes in Plasma I–131 During the Treatment of Graves' and Cardiac Diseases Correlated with Clinical Course. W. E. White and W. A. Reilly. *J. Lab. Clin. Med. 43*, 553–65(1954).

C 33 The Circulating Red Cell Mass in Polycythemia Vera as Determined by Red Blood Cells Tagged with the Radioactive Isotope of Iron. P. F. Hahn, E. B. Wells and G. R. Meneely. *Southern Med. J. 43*, 947–50(1950).

C 34 Circulating Red Cell Volume and Body Hematocrit in Normal Pregnancy and the Puerperium by Direct Measurement, Using Radioactive Red Cells. W. L. Caton, C. C. Roby, D. E. Reid, R. Caswell, C. J. Maletskos, R. G. Fluharty, and J. G. Gibson, II. *Am. J. Obstet. Gynecol. 61*, 1207–17(1951).

C 35 The Circulation of Radiation Damaged Skin Radiosodium Clearance Studies. B. Roswit, L. H. Wisham and J. Sorrentino. *Am. J. Roentgenol. Radium Therapy Nuclear Med. 69*, 980–90(1953).

C 36 Clinical Discussion, The Use and Abuse of Thyroid Hormone Therapy. M. Perlmutter. *Metabolism, Clin. Exptl. 2*, 81–92(1953).

C 37 Clinical Evaluation of Dicumarinyl Derivatives with a Metabolic Study of the Radioactively Labeled Anticoagulants in Animals. E. P. Hausner, C. L. Shafer, M. Corson, O. Johnson, T. Trujillo, and W. Langham. *Circulation 3*, 171–81(1951).

C 38 Clinical and Experimental Studies with Tritium. T. C. Prentice, W. Siri, N. I. Berlin, and R. J. Parsons. *J. Clin. Invest. 31*, 654(1952).

C 39 Clinical, Metabolic and Genetic Studies in Myotonia Dystrophica. A. A. Sandberg, F. E. Stephens, and F. H. Tyler. *J. Clin. Invest. 33*, 961–62(1954).

C 40 Clinical Observations on the Use of Radioactive Iodine in Diseases of the Thyroid Gland. M. T. Friedell, F. Schaffner, and I. F. Hummon. *Am. Practitioner Dig. Treatment 2*, 415–21(1951).

C 41 Clinical Studies with Gallium 72. G. A. Andrews, S. W. Root, and H. D. Kerman. *Radiology. 61*, 570–88(1953).

C 42 The Clinical Use of Radioactive Isotopes. J. H. Lawrence. *Bull. N. Y. Acad. Med. 26*, 640–69 (1950).

C 43 Clinical Uses of Radioactive Isotopes. J. R. Maxfield, Jr. and J. G. S. Maxfield. *Texas State J. Med. 48*, 449–53(1952).

C 44 Comparative Incorporation of S–35 l-Cystine and S–35 Sodium Sulfate by Normal and Leukemic Leukocytes. A. S. Weisberger, L. G. Suhrland, and B. Levine. *J. Clin. Invest. 33*, 971(1954).

C 45 Concentration Gradients for Inorganic I–131 and Chloride in Mixed Human Saliva. N. Freinkel and S. H. Ingbar. *J. Clin. Invest. 32*, 1077–84(1953).

C 46 The Concentration and Significance of the Butanol-extractable I–131 of Serum in Patients with Diverse States of Thyroidal Function. S. H. Ingbar, N. Freinkel, P. D. Hoeprich, and J. W. Athens. *J. Clin. Invest. 33*, 388–99(1954).

C 47 A Continuous Recording Determination of Early Disappearance of Iodinated (I–131) Human Serum Albumin from Circulating Blood. W. H. Pritchard and W. J. MacIntyre. *J. Lab. Clin. Med. 40*, 928–29(1952).

C 48 Cretinism, with or without Goiter, in 5 of 10 Siblings. D. L. Sexton and R. Mack. *J. Clin. Endocrinol. Metabolism 14*, 747–55(1954).

C 49 Cytological Studies on Patients with Carcinoma of the Cervix Treated with Co–60. E. Von Haam, C. H. Hendricks, and T. L. Morton. *Cancer Research 12*, 303–04(1952).

C 50 Deposition of Radioactive Iodine in Teeth of Persons Treated for Disease of the Thyroid Gland. W. W. Wainwright, B. D. Butt, J. D. Hauptfuehrer, and H. L. Dute. *J. Am. Dental Assoc. 47*, 649–55(1953).

C 51 The Determination of Cardiac Output by a Continuous Recording System Utilizing Iodinated (I–131) Human Serum Albumin. II. Clinical Studies. W. H. Pritchard, W. J. MacIntyre, W. C. Schmidt, B. L. Brofman, and D. J. Moore. *Circulation 6*, 572–77(1952).

C 52 Determination of Deuterium Exchange Rates between Maternal Circulation and Amniotic Fluid. A. A Plentl, and D. L. Hutchinson. *Proc. Soc. Exptl. Biol. Med. 82*, 681(1953).

C 53 The Determination of Plasma Volume in Man with Radioactive Chromic Chloride. H. Frank, and S. J. Gray. *J. Clin. Invest. 32*, 991–9(1953).

C 54 Determination of Trapped Plasma in the Centrifuged Erythrocyte Volume of Normal Human Blood with Radioiodinated (I–131) Human Serum Albumin and Radiosodium (Na24). O. N. Vazquez, K. Newerly, R. S. Yalow, and S. A. Berson. *J. Lab. Clin. Med. 39*, 595–604(1952).

C 55 Diabetic Retinopathy and Urinary Excretion of Vitamin B_{12}. C. A. Lang, B. Becker, D. Gleysteen, and B. F Chow. *Federation Proc. 12*, 420–1(1953).

C 56 The Diphasic Character of Thyroidal I–131 Clearance. J. H. Nodine, W. H. Perloff, D. De Albuquerque, L. Perczek, and B. Channick. *J. Clin. Endocrinol. Metabolism 14*, 773(1954).

C 57 Direct Irradiation of Carcinoma of the Liver and Biliary Tract by the Use of Radioactive Iodine (I–131) in tetraiodophenolphthalein. G. H. Copher, V. H. Wallingford, W. G. Scott, G. G. Zedler, B. Hayward, and S. Moore. *Am. J. Roentgenol. Radium Therapy Nuclear Med. 67*, 964–73(1952).

C 58 Direct Measurement of I–131 Thyroid Gland Uptake and Turnover to Relation to Thyroid Function in Normal and Pathologic States. A. S. Freedberg, D. L. Chamovitz, and A. M. Ureles. *Federation Proc. 9*, 43(1950).

C 59 A Directional Scintillation Counter for the Laboratory Study of Thyroid Tumors. B. M. Dobyns and G. Brownell. *Lab. Invest. 3*, 39–47(1954).

C 60 Disappearance from Serum of I–131-Labeled L-Thyroxine and L-Triiodothyronine in Euthyroid Subjects. K. Sterling, J. Lashof, and E. B. Man. *J. Clin. Invest. 33*, 967(1954).

C 61 Disappearance from Serum of I–131-Labeled L-Thyroxine and L-Triiodothyronine in Euthyroid Subjects. K. Sterling, J. C. Lashof, and E. B. Man. *J. Clin. Invest. 33*, 1031–5(1954).

C 62 Distribution and Degradation Studies with Insulin-I–131. N. J. Elgee, R. H. Williams, and N. D. Lee. *J. Clin. Invest. 33*, 1252–60(1954).

C 63 Distribution and Excretion of Radioactive Isoniazid in Tuberculous Patients. W. R. Barclay, R. H. Ebert, G. V. LeRoy, R. W. Manthei, and L. J. Roth. *J. Am. Med. Assoc. 151*. 1384–8(1953).

C 64 Distribution of I–131 in Tissue Obtained at Necropsy or at Surgical Operation in Man. G. S. Kurland and A. S. Freedberg. *J. Clin. Endocrinol. 11*, 843–56(1951).

C 65 Distribution of Radioactive Phosphorus in Normal and Diseased Brain Tissue. Experimental and Clinical Observations. W. E. Stern and C. Marshall. *Proc. Soc. Exptl. Biol. Med. 78*, 16–20(1951).

C 66 Distribution of Radioiodide in Man. N. B. Myant, B. D. Corbett, A. J. Honour, and E. E. Pochin. *Clin. Sci. 9*, 405–19(1950).

C 67 The Distribution of Sodium and Potassium in Man. N. Deane and H. W. Smith. *J. Clin. Invest. 31*, 197–9(1952).

C 68 Dosimetric Considerations in Determining Hematopoietic Damage from Radioactive Iodine. J. E. Rall, C. G. Foster, J. Robbins, R. Lazerson, L. E. Farr, and R. W. Rawson. *Am. J. Roentgenol. Radium Therapy Nuclear Med. 70*, 274–82(1953).

C 69 Dosimetric Considerations with Radioiodine. J. E. Rall, C. E. Foster and W. Peacock. *J. Clin. Invest. 31*, 655(1952).

C 70 The Effect of Congestive Heart Failure on the Blood Volume as Determined by Radioactive Chromium-Tagged Red Cells. S. Eisenberg. *Clin. Research Proc. 1*, 77(1953).

C 71 Effect of Irradiation upon the Uptake of Labeled Phosphorus in Human Carcinoma of the Cervix. M. L. Taymor, N. Gold, S. H. Sturgis, J. V. Meigs, and J. MacMillan. *Cancer 5*, 469–77(1952).

C 72 The Effect of Massive Cortisone Therapy on Measurements of Thyroid Function. D. S. Frederickson, P. H. Forsham, and G. W. Thorn. *J. Clin. Endocrinol. Metabolism 12*, 541–53(1952).

C 73 Effect of a Mercurial Diuretic on Thyroid Uptake and Renal Clearance of Radioiodine. S. N. Spies. *Proc. Soc. Exptl. Biol. Med. 86*, 469–71(1954).

C 74 The Effect of a Thyrotrophic Hormone Preparation on the Metabolism of Radioiodine in Euthyroid, Hyperthyroid and Acromegalic Individuals. D. V. Becker, J. E. Rall, W. Peacock, and R. W. Rawson. *J. Clin. Invest. 32*, 149–60(1953).

C 75 Effect of Variation in Thyroid Function on the Pressor Response to Norepinephrine in Man. R. E. Schneckloth, G. S. Kurland, and A. S. Freedberg. *Metabolism, Clin. Exptl. 2*, 546–55(1953).

C 76 Effective Half-Life of Radioactive Iodine (I-131) in the Hyperthyroid Gland, Its Significance in the Treatment of Thyrotoxicosis. C. E. Schmidt and J. Nadelhaft. *Lab Invest. 2*, 133–39(1953).

C 77 Endogenous Fat Metabolism Studied by Heavy Water Dilution and Nitrogen Balance. I. S. Edelman, L. Brooks, and F. D. Moore. *J. Clin. Invest. 31*, 626(1952).

C 78 Estimation of Ascitic Fluid Volumes. L. Baker, R. C. Puestow, S. Kruger, and J. H. Last. *J. Lab. Clin. Med. 39*, 30–5(1952).

C 79 Estimation of Radioiodine in the Thyroid Gland of Living Subjects. N. B. Myant, A. J. Honour, and E. C. Pochin. *Clin. Sci. 8*, 135–44(1949).

C 80 An Estimation of the Renal and Extrarenal Clearance of Radioiodide in Man. W. M. McConahey, F. R. Keating, Jr., and M. H. Power. *J. Clin. Invest. 30*, 778(1951).

C 81 Estimation of the Time of Equilibrium of Distribution of Long-Life Radiochlorine and Radiosodium in Man with and Without Chronic Congestive Heart Failure. C. T. Ray, G. E. Burch, and S. A. Threefoot. *J. Lab. Clin. Med. 38*, 940–1(1951).

C 82 Etude de la Distribution dans L'organisme du Phosphate de Chrome Radioactif Injecte par Voie Intra-Vieneuse. (Study of the distribution in the organism of radioactive chromium phosphate injected by the intravenous route.) A. Herve and J. Govaerts. *Acta Radiol. 35*, 257–64 (1951).

C 83 The Exchangeable Potassium Content in Disease States. J. K. Aikawa, J. H. Felts, Jr., M. P. Tyor, and G. T. Harrell. *J. Clin. Invest. 31*, 743–9(1952).

C 84 The Exchangeable Potassium Content of Normal Women. J. K. Aikawa, G. T. Harrell, and B. Eisenberg. *J. Clin. Invest. 31*, 367–9(1952).

C 85 The Exchangeable Thyroid Hormonal Pool: I. Its Magnitude and Rate of Turnover in Various Thyroid States in Man. M. W. Hamolsky, A. S. Freedberg, G. S. Kurland, and L. Wolsky. *J. Clin. Invest. 32*, 453–7(1953).

C 86 Excretion of Cobalt 60-Labeled Vitamin B-12 after Total Gastrectomy. M. E. Swendseid, J. A. Halsted and R. L. Libby. *Proc. Soc. Exptl. Biol. Med. 83*, 226–8(1953).

C 87 Experience with the Radioiodine Tracer Test in Radioiodine-Treated Thyrotoxic Patients. R. Goldsmith. *Am. J. Med. Sci. 227*, 403–7(1954).

C 88 Extreme Hyperferremia in Two Instances of Hemochromatosis with Notes on the Treatment of One Patient by Means of Repeated Venesection. R. B. Howard, W. M. Balfour, and R. Cullen. *J. Lab. Clin. Med. 43*, 848–59(1954).

C 89 Factors Influencing the *in Vitro* Uptake of Radiophosphorus by Human Erythrocytes. A. R. Feinstein, E. L. Gordon, and W. F. Bethard. *J. Lab. Clin. Med. 42*, 165–77(1953).

C 90 The Fate of Hydrocortisone-4-C 14 in Man. L. Hellman, H. L. Bradlow, J. Adesman, D. K. Fukushima, J. L. Kulp, and T. F. Gallagher. *J. Clin. Invest. 33*, 940–1(1954).

C 91 Fate of Intravenously Injected Labelled Gamma Globulin in the Normal Subject and in Patients with Rheumatoid Arthritis. J. H. Vaughan, A. Armato, J. Goldthwaite, P. Brachman, C. B. Favour, and T. B. Bayles. *J. Clin. Invest. 31*, 668(1952).

C 92 A Fermentable Non-Reducing Substance in Plasma Following Insulin Administration. A. N. Wick, D. R. Drury, and E. M. MacKay. *Proc. Soc. Exptl. Biol. Med. 75*, 577–9(1950).

C 93 Ferrokinetics in Normal Persons and in Patients Having Various Erythropoietic Disorders. R. L. Huff, P. L. Almlinger, J. F. Garcia, J. M. Oda, M. C. Cockrell, and J. H. Lawrence. *J. Clin. Invest. 30*, 1512–26(1951).

C 94 A Forty-Eight Hour Procedure for the Determination of Post-Transfusion Survival of Erythrocytes from Preserved Blood, Employing Radioactive Chromium 51 (Cr51). T. R. Talbot, Jr., M. Sax, and A. Cary. *J. Clin. Invest. 33*, 968 (1954).

C 95 Further Evidence that Graves' Disease Is Hyperthyroidism and Not Hyperpituitarism: Effects of Triiodothyronine and Sodium Iodide. S. C. Werner, M. Spooner, and H. Hamilton. *J. Clin. Endocrinol. Metabolism 14*, 768–9(1954).

C 96 Goitre Plongeant (Plunging Goiter) Associated with Pharyngo-Esophageal Diverticulum. M. Slobodkin. *Radiology 58*, 378–82(1952).

C 97 Graves' Disease: Hyperthyroidism or Hyperpituitarism. S. C. Werner, H. Hamilton, and M. Nemeth. *J. Clin. Endocrinol. Metabolism 12*, 1561–71(1952).

C 98 The Heart in I-131-Induced Myxedema Comparison of the Roentgenographic and Electrocardiographic Findings before and after the Induction of Myxedema. G. S. Kurland, R. E. Schnekloth, and A. S. Freeberg. *New Engl. J. Med. 249*, 215–22(1953).

C 99 The Hemolytic Effect of Primaquine. I. The Localization of the Drug-Induced Hemolytic Defect in Primaquine-Sensitive Individuals. R. J. Dern, I. M. Weinstein, G. V. LeRoy, D. W. Talmage, and A. S. Alving. *J. Lab. Clin. Med. 43*, 303–9(1954).

C 100 The Hemolytic Effect of Primaquine. IV. The Relationship of Cell Age to Hemolysis. E. Beutler, R. J. Dern, and A. S. Alving. *J. Lab. Clin. Med. 44*, 439–42(1954).

C 101 High PBI-131 Concentration in Blood of Patients with Myxedema: Preliminary Report. P. S. Blom and J. Terpstra. *J. Clin. Endocrinol. Metabolism 13*, 989–93(1953).

C 102 Human Serum Albumin Tagged with I-131 in Patients with Ascites Caused by Abdominal Carcinomatosis and Portal Cirrhosis: The Rates of Interchange Between the Vascular Compart-

ment and Peritoneal Cavity. M. P. Tyor. *J. Lab. Clin. Med. 44*, 110–7(1954).

C 103 Hyperthyroidism Without Apparent Hypermetabolism. S. C. Werner and H. Hamilton. *J. Am. Med. Asso. 146*, 450–3(1951).

C 104 The Incorporation of C–14 Glycine into Protein by Human Liver Slices. C. M. Grossman and J. D. Hauschildt. *J. Clin. Invest. 31*, 192–6 (1952).

C 105 Increased Uptake of Iodine 131 by the Thyroid Gland after Administration of Hesperidine Methyl Chalcone. W. A. Reilly, K. G. Scott, and W. E. White. *Proc. Soc. Exptl. Biol. Med. 81*, 682–3(1952).

C 106 Influence of Adrenal and Gonadal Steroids on the Uptake of Iodine by the Thyroid Gland. W. Zingg and W. F. Perry. *J. Clin. Endocrinol. Metabolism 13*, 712–23(1953).

C 107 Influence of Certain Diseases on the Absorption of Vitamin B–12 from the Gastrointestinal Tract. J. R. Krevans, C. L. Conley, and M. Sachs. *J. Clin. Invest. 33*, 949–50(1954).

C 108 The Influence of Dynamic Sequestration of An Electrolyte on the Calculation of "Space" and "Mass" by the Tracer Method. G. E. Burch, S. A. Threefoot, and C. T. Ray. *J. Lab. Clin. Med. 40*, 786(1952).

C 109 Influence of Ionizing Radiation and Dietary Restriction on Body Fluid Compartments and Water Kinetics in Patients with Malignant Lymphoma. J. Greenberg and D. Laszlo. *Federation Proc. 13, No. 1*, 60–1(1954).

C 110 Intrapleurally Injected Colloidal Au–198 and Growth and Implantation of Free Tumor Cells in Pleural Exudate. H. Goldie, H. D. West, B. R. Jeffries and C. H. Butler. *Proc. Soc. Exptl. Biol. Med. 80*, 327–31(1952).

C 111 The Intravascular Life Span of Transfused Leukocytes Tagged with Atabrine. L. P. White. *Blood 9*, 73–82(1954).

C 112 Intrinsic Factor Studies. II. The Effect of Gastric Juice on the Urinary Excretion of Radioactivity after the Oral Administration of Radioactive Vitamin B–12. R. F. Schilling. *J. Lab. Clin. Med. 42*, 860–6(1953).

C 113 Investigation of the Permeability Factor in Ascites and Edema Using Albumin Tagged with I–131. J. A. Schoenberger, G. Kroll, A. Sakamoto, and R. M. Kark. *Gastroenterology 22*, 607–19(1952).

C 114 The Iodine Uptake of the Human Thyroid Throughout the Menstrual Cycle and in Pregnancy. E. E. Pochin. *Clin. Sci. 2*, 441–5(1952).

C 115 I–131 Uptake in Treated Hyperthyroidism. F. K. Bauer. *Am. J. Med. Sci. 223*, 495–501 (1952).

C 116 Iron Metabolism in Human Pregnancy as Studied with the Radioactive Isotope, Fe–59. P. F. Hahn, E. L. Carothers, W. J. Darby, M. Martin, C. W. Sheppard, R. O. Cannon, A. S. Beam, P. M. Densen, J. C. Peterson, and G. S. McClellan. *Am. J. Obstet. Gynecol. 61*, 477–86(1951).

C 117 Iron Metabolism in Steatorrhea. The Use of Radioactive Iron in Studies of Absorption and Utilization. J. Badenoch and S. T. Callender. *Blood 9*, 123–33(1954).

C 118 Iron Turnover Abnormalities in Patients Having Anemia: Seral Blood and *in Vivo* Tissue Studies with Fe–59. P. J. Elmlinger, A. L. Huff, C. A. Tobias, and J. H. Lawrence. *Acta Hemat. Scandinav. 9*, 73–96(1953).

C 119 Iron Turnover, Rates and Pathways. P. J. Elmlinger. *Federation Proc. 12*, 39(1953).

C 120 Isotopic Studies of the Body Potassium Content in Thyrotoxicosis. J. K. Aikawa. *Proc. Soc. Exptl. Biol. Med. 84*, 594–6(1953).

C 121 Isotopic Studies of Potassium Metabolism in Diabetes. J. K. Aikawa, J. H. Felts, Jr., and G. T. Harrell, Jr. *J. Clin. Invest. 32*, 15–21 (1953).

C 122 Jet Injection of Radioisotopes: A Clinical Study Comparing Needle and Jet Injection of I–131, K–42, and Na–24. F. K. Bauer, B. Cassen, E. Youtcheff, and L. Shoop. *Am. J. Med. Sci. 225*, 374–8(1953).

C 123 Labeled Methionine as an Indicator of Protein Formation in Children with Lipoid Nephrosis. V. C. Kelley, M. R. Ziegler, D. Doeden and I. McQuarrie. *Proc. Soc. Exptl. Biol. Med. 75*, 153–5(1950).

C 124 The Life Span of the Elliptocyte Hereditary Elliptocytosis and Its Relationship to Other Familial Hemolytic Diseases. A. G. Motulsky, K. Singer, W. H. Crosby, and V. Smith. *Blood 9*, 57–72(1954).

C 125 The Life Span of the Red Blood Cell in Chronic Leukemia and Polycythemia. N. I. Berlin, J. H. Lawrence, and H. C. Lee. *Science 114*, 385–7(1951).

C 126 The Local Blood Flow in Human Bone Marrow in Leukemia and Neoplastic Diseases as Determined by the Clearance Rate of Radioiodide (I–131). N. L. Petrakis, S. P. Masouredis, and P. Miller. *J. Clin. Invest. 32*, 952–63(1953).

C 127 Lymph-Node Concentration of Radioactive Colloidal Gold Following Interstitial Injection. A. I. Sherman and M. Ter-Pogossian. *Cancer 6*, 1238–40(1953).

C 128 The Measurement of Total Body Water in the Human Subject by Deuterium Oxide Dilution. P. R. Schloerb, B. J. Friis-Hansen, I. S. Edelman, A. K. Solomon, and F. D. Moore. *J. Clin. Invest. 29*, 1296–1310(1950).

C 129 Metabolic Studies with I–131 Labeled Thyroid Compounds: Distribution and Excretion of Radiodiiodotyrosine in Human Beings. A. Albert and F. R. Keating, Jr. *J. Clin. Endocrinol. 11*, 996–1011(1951).

C 130 The Metabolism of Radioactive Iodine (I–131) in Patients with Cardiac Disease. F. R. Birkhill,

K. E. Corrigan, and H. S. Hayden. *Am. J. Roentgenol 67*, 42–50(1952).

C 131 The Metabolism of Radiothyroxine in Exophthalmic Goiter. R. S. Benua, A. Albert, and F. R. Keating, Jr. *J. Clin. Endocrinol. Metabolism 12*, 1461–73(1952).

C 132 The Metabolism of Radiothyroxine in Man. N. B. Myant and E. E. Pochin. *Clin. Sci. 9*, 421–40(1950).

C 133 Metastatic Adenocarcinoma of the Thyroid With Elevated Basal Metabolism: Radioiodine Studies. S. J. Weinberg, R. M. Fink, K. Fink, and G. L. Packer. *Ann. Internal Med. 32*, 1207–24(1950).

C 134 Metastatic Carcinoma of Rectum to the Thyroid Gland. Correlation with Radioactive Iodine Studies. D. M. Sklaroff. *Arch. Surg. 68*, 117–9(1954).

C 135 A Model of Plasma Iron Kinetics in Human Subjects. R. L. Huff, P. Elmilinger, R. Mortimer, H. Anger and C. A. Tobias. *J. Clin. Invest. 31*, 640(1952).

C 136 A New Method for Measuring Transcapillary Exchanges: The Transfer of Salt and Water in the Lesser Circulation of Man. M. Freinkel, G. E. Schreiner, and J. W. Athens. *J. Clin. Invest. 31*, 629(1952).

C 137 A New Test for Intrinsic Factor Activity. R. R. Schilling. *J. Lab. Clin. Med. 42*, 946–7 (1953).

C 138 Nucleic Acid Metabolism in Chronic Lymphatic Leukemia. L. Hamilton. *J. Clin. Invest. 33*, 939–40(1954).

C 139 Observations on Body Composition and Body Water Metabolism in Normal Pregnancy. H. B. Haley, and J. W. Woodbury. *J. Clin. Invest. 31*, 635(1952).

C 140 Oral Administration of Co–60 Vitamin B_{12} in Pernicious Anemia. L. M. Meyer. *Proc. Soc. Exptl. Biol. Med. 82*, 490–1(1953).

C 141 The Persistence in the Blood of the Radioactive Label of Albumin, Gamma Globulins, Globulins of Intermediate Mobility Studied with S_{35} and Paper Electrophoresis: Methods and Preliminary Results. S. H. Armstrong, Jr., K. McLeod, J. Wolter, and J. Kukral. *J. Lab. Clin. Med. 43*, 918–37(1954).

C 142 Pituitary Thyroid Relationship in Normal and Disordered Thyroid States. S. C. Werner. *Bull. N. Y. Acad. Med. 29*, 523–36(1953).

C 143 Plasma Iodide Clearance Rate of Human Thyroid. N. B. Myant, E. E. Pochin and E. A. G. Goldie. *Clin. Sci. 8*, 109–33(1949).

C 144 A Preliminary Report on The Use of Gallium 72 in Clinical Tracer Studies. E. R. King, M. W. Mason, H. B. Messinger, H. C. Dudley. *Radiology 59*, 844–8(1952).

C 145 A Preliminary Study on the Renal Excretion of Radioactive Colchicine in Patients with and Without Neoplastic Disease. E. J. Walaszek, E. M. K. Geiling and G. V. LeRoy. *J. Lab. Med. 42*, 960–1(1953).

C 146 Progesterone Metabolism. II. Pregnanediol Excretion Following Oral, Sublingual and Parenteral Administration of Progesterone. R. H. Fischer and S. P. McColgan. *J. Clin. Endocrinol. Metabolism 13*, 1043–53(1953).

C 147 Propylthiouracil: 4-6 Year Follow-Up of Selected Patients with Graves Disease. E. P. McCullagh and C. E. Cassidy. *J. Clin. Endocrinol. Metabolism 13*, 1057–12(1953).

C 148 Protein-Binding of Thyroxine in Normal and Nephrotic Serum. J. Robbins, J. E. Rall, and M. L. Petermann. *J. Clin. Invest. 33*, 959–60 (1954).

C 149 Protein-Bound Blood Iodine in Cardiovascular Disease. H. W. Allison and T. L. Bliss. *Ann. Internal Med. 39*, 326–32 (1953).

C 150 Radioactive Iodine as an Adjunct to the Surgical Management of Diseases of the Thyroid. B. M. Dobyns. *Surg. Gynecol. Obstet. 93*, 415–27 (1951).

C 151 Radioactive Iodine Uptake in the Hypermetabolism of Acromegaly. E. P. McCullagh, A. Gold, and J. B. R. McKendry. *J. Clin. Endocrinol. 10*, 687–91(1950).

C 152 Radioactive Iodine: Its Use in Studying Certain Functions of Thyroid Tumors. R. W. Rawson. *Brookhaven Conf. Rept.* (Symposium on Radioiodine) 4–12(1948).

C 153 Radioactive Iron Absorption in Siderosis (Hemochromatosis) of the Liver. R. E. Peterson and R. H. Ettinger. *Am. J. Med. 15*, 518–24 (1953).

C 154 Radioactive Potassium Distribution in Metabolic Disorders. B. A. Burrows, M. M. Ashley, and J. H. Sisson. *J. Clin. Invest. 31*, 620(1952).

C 155 Radioactive Potassium (K–42) in the Study of Benign and Malignant Breast Tumors. I. T. Nathanson, W. H. Baker, and B. Selverstone. *Proc Am. Soc. Cancer Research 1*, 40 (1953).

C 156 A Radiochemical Method for the Determination of Micro Quantities of Thyroxine. F. C. Larson, D. M. Coulson, and E. C. Albright. *J. Lab. Clin. Med. 38*, 827 (1951).

C 157 Radiochromatographic Identification of Thyroxin in an Alpha Globulin Fraction of Serum Separated by Starch Zone Electrophoresis. E. C. Albright, W. P. Deiss, and F. C. Larson. *J. Lab. Clin. Med. 42*, 777(1953).

C 158 Radiochromatographic Identification of Thyroxin in an Alpha Globulin Fraction of Serum Separated by Starch Zone Electrophoresis. F. C. Larson, W. P. Deiss, and E. C. Albright. *J. Clin. Invest. 33*, 230–4(1954).

C 159 Radioiodine (I–131) and Gonadal Function: An Experimental and Clinical Study. B. J. Duffy, Jr., J. T. Godwin, J. B. Trunnell, and R. W. Rawson. *J. Clin. Endocrinol. 10*, 810–1(1950).

C 160 Radioiodine (I–131) Tracer Studies after Total Thyroidectomy. D. E. Szilagyi, R. D. McClure,

T. H. Connell, Jr., J. H. L. Watson, and L. E. Preuss. *Ann. Surg. 134*, 546–65(1951).

C 161 Radioiodine Studies in Thyroiditis. W. M. McConahey and F. R. Keating, Jr. *J. Clin. Endocrinol. 11*, 1116–22(1951).

C 162 Radioiodine in the Study and Treatment of Thyroid Disease: A Review. M. P. Kelsey, S. F. Haines, and F. R. Keating, Jr. *J. Clin. Endocrinol. 9*, 171–210(1949).

C 163 A Radioiodine Tracer Study of the Fate of Human Thyroid Autotransplants. E. E. Szilagyi, J. L. Barrett, E. R. Longabaugh, and L. E. Preuss. *J. Clin. Endocrinol. Metabolism 13*, 1347–57(1953).

C 164 Radioiodine Uptake in the Study of Different Types of Hypothyroidism in Childhood. S. H. Silverman and L. Wilkins. *Pediatrics 12*, 288–99(1953).

C 165 Radioiron Studies in a Case of Hemochromatosis. T. Alper, D. V. Savage, and T. H. Bothwell. *J. Lab. Clin. Med. 37*. 665–75(1951).

C 166 Radioisotopes in Pathology. P. J. Fitzgerald. *Am. J. Clin. Pathol. 24*, 70(1954).

C 167 Radiophosphorus Studies in Breast Tumors: Six Years' Investigation of the Validity of the Surface Measurement Method. B. V. A. Low-Beer and R. B. Green. *Cardiologia 21*, 497–505(1952).

C 168 A Rapid Method for Clinical Total Blood Volume Determination Using Radioactive Iodinated Human Serum Albumin. J. B. Aust, S. N. Chou, J. F. Marvin, E. L. Brackney, and G. E. Moore. *Proc. Soc. Exptl. Biol. Med. 77*, 514(1951).

C 169 The Rate of Disappearance of Iodinated Human Albumin from the Serum in Relation to Albumin Concentration, Total Circulating Albumin Content, and the Presence of Ascites in Patients with Cirrhosis. M. P. Tyor and D. Cayer. *J. Lab. Clin. Med. 39*, 874–81(1952).

C 170 Red Cell Survival Studies in Abnormal Hemoglobulin Syndromes. I. M. Weinstein, C. L. Spurling, and H. Klein. *J. Lab. Clin. Med. 42*, 963(1953).

C 171 Refractory Macrocytic Anemia with Defect in Vitamin B–12 Binding and with Response to Normal Plasma. D. L. Horrigan. *J. Lab. Clin. Med. 40*, 811–12(1952).

C 172 The Relative Rates of Formation of New Leukocytes in Patients with Acute and Chronic Leukemias. E. E. Osgood, H. Tivey, K. B. Davison, A. J. Seaman, and J. G. Li. *Cancer 5*, 331–5(1952).

C 173 The Renal Excretion of I–131. Simultaneous Determinations of I–131 and Inulin Clearances in Varying States of Thyroid and Renal Function. N. S. Bricker and C. J. Hlad, Jr., *J. Lab. Clin. Med. 42*, 788–9(1953).

C 174 Renal Excretion of Radioactive Colchicine in Patients with and Without Neoplastic Disease. E. J. Walaszek, G. V. LeRoy, and E. M. K. Geiling. *Federation Proc. 13, No. 1*, 413–4(1954).

C 175 Routine Clinical Experiences Using Urokon Sodium 70% in Intravenous Urography. A. A. Porporis, O. C. Zink, H. M. Wilson, C. N. Barry, R. Royce, and D. K. Rose. *Radiology 60*, 675–86(1953).

C 176 Saphenous Circulation Time Test with A Radioactive Tracer. H. T. Zankel and R. Clark. *Proc. Soc. Exptl. Biol. Med. 79*, 135–8(1952).

C 177 The Scintillation Counter in Clinical Studies of Human Thyroid Physiology Using I–131. H. C. Allen, R. L. Libby, and B. Cassen. *J. Clin. Endocrinol. 11*, 492–511(1951).

C 178 Secretion of Radioiodine in Digestive Juices and Milk in Man. A. J. Honour, N. B. Myant, and E. N. Rowlands. *Clin. Sci. 11*, 449–62(1952).

C 179 The Selective Tagging of Red Blood Cells and Plasma Proteins with Radioactive Sodium Chromate and Chromic Chloride: Its Use in the Simultaneous Determination of Red Cell Mass and Plasma Volume in Man. S. J. Gray and H. Frank. *J. Clin. Invest. 32*, 571(1953).

C 180 Serum Albumin Turnover in Laennec's Cirrhosis as Measured by I–131-Tagged Albumin. K. Sterling. *J. Clin. Invest. 30*, 1238–42(1951).

C 181 Significance of the Radiosodium Space in Human Disease. A Comparison with the Thiocyanate Space. J. K. Aikawa. *Southern Med. J. 44*, 654–60(1951).

C 182 The Simultaneous Determination of Red Cell Mass and Plasma Volume in Man with Radioactive Sodium Chromate and Chromic Chloride. S. J. Gray and H. Frank. *J. Clin. Invest. 32*, 1000–04(1953).

C 183 Simultaneous Distribution of T–1824 and I–131 Labelled Human Serum Albumin in Man. N. Freinkel, G. E. Schreiner and J. W. Athens. *J. Clin. Invest. 32*, 138(1953).

C 184 Six-Year Clinical Evaluation of Radiophosphorous P–32 (In Disease). C. A. Doan, B. K. Wiseman, C. S. Wright, J. H. Geger, W. Myers and J. W. Myers. *J. Lab. Clin. Med. 32*, 943–69(1947).

C 185 Studies on Blood-Brain Barrier with Radioactive Phosphorus. II. Hypophysis and Hypothalamus in Man. L. Bakay. *Arch. Neurol. Psychiat. 68*, 629–40(1952).

C 186 Studies with Colloids Containing Radioisotopes of Yttrium, Zirconium, Columbium, and Lanthanum. I. Chemical Principles and Methods Involved in Preparation of Colloids of Yttrium, Zirconium, Columbium and Lanthanum. J. W. Gofman. *J. Lab. Clin. Med. 34*, 297–304(1949).

C 187 Studies on Fatty Acid Oxidation in Transplanted Neoplasia. S. Weinhouse, A. Allen and R. H. Millington. *Cancer Research 12*, 304–5(1952).

C 188 Studies of the Fractional Rate of Release of Hormonal Iodine from the Thyroid Gland.

E. C. Albright and D. H. Solomon. *J. Clin. Endocrinol. Metabolism 14*, 772(1954).

C 189 Studies of The Human Thyroid Function, Measured by Radio-Iodine and Its Relation to The Basal Metabolic Rate, M. Reiss, C. P. Haigh, R. E. Hemphill, R. Maggs, J. M. Reiss, and S. Smith. *J. Endocrinol. 8*, 1-10(1952).

C 190 Studies in Man on Endothelial Permeability to Radioactive Iodine-Tagged Albumin Injected Intravenously or Intraperitoneally. J. A. Schoenberger. *J. Lab. Clin. Med. 40*, 941(1952).

C 191 Studies on Primary Amines. II. Their Natural Occurrence in Urine of Normotensive and Hypertensive Subjects. D. F. Davies, K. M. Wolfe, and H. M. Perry, Jr. *J. Lab. Clin. Med. 43*, 620–32(1954).

C 192 Studies of Radioactive Insulin. N. J. Elgee, R. H. Williams, N. D. Lee, T. Wong, and J. R. Hogness. *Diabetes 2*, 370(1953).

C 193 Studies on the Renal Excretion of Radioactive Digitoxin in Human Subjects with Cardiac Failure. G. T. Okita, F. E. Kelsey, P. J. Talso, L. B. Smith and E. M. K. Geiling. *Circulation 7*, 161–8(1953).

C 194 Studies on Renal Hyperchloremic Acidosis. L. H. Smith, Jr. and G. E. Schreiner. *J. Lab. Clin. Med. 43*, 347–58(1954).

C 195 Studies of the Urinary Excretion of Gallium 72 in Man. H. D. Bruner, J. Gray, S. W. Root and M. Brucer. *Radiology 61*, 588–90(1953).

C 196 A Study of the Blood Volume in Congestive Heart Failure. R. K. Funkhouser and W. H. Pritchard. *J. Clin. Invest. 33*, 934(1954).

C 197 The Study of the Early Disappearance of Iodinated (I–131) Serum Albumin from the Circulation of Edematous Subjects by a Continuously Recording Method. T. W. Moir, A. B. Ford, and W. H. Pritchard. *J. Lab. Clin. Med. 42*, 925(1953).

C 198 A Study of the Nature of the Circulating Thyroid Hormone in Euthyrcid and Hyperthyroid Subjects by Use of Paper Electrophoresis. W. P. Deiss, E. C. Albright, and F. C. Larson. *J. Clin. Invest. 31*, 1000–05(1952).

C 199 The Study of Peripheral Vascular Disease with Radioactive Isotopes. D. C. Elkin, F. W. Cooper, R. H. Rohrer, W. B. Miller, P. C. Shea, and E. W. Dennis. *Surg. Gynecol. Obstet. 87*, 1–8(1948).

C 200 A Study of the Use of Rb–86 as a Tracer for Measurement of Rb–86 and K–39 Space and Mass in Intact Man with and Without Congestive Heart Failure. C. T. Ray, S. Threefoot, and G. E. Burch. *J. Clin. Invest. 33*, 957–8-(1954).

C 201 A Study of the Vascularization of Experimental Bone Grafts by Means of Radioactive Phosphorus and the Transparent Chamber. C. L. Kienn, F. Cebul, M. Berg, J. Gutentag, and D. M. Glover. *Ann. Surg. 136*, 404–11(1952).

C 202 A Symposium on a Study of Gallium 72. M. Brucer, G. A. Andrews, and H. D. Bruner. *Radiology 61*, 534–612(1953).

C 203 Tagging of Red Cells and Plasma Proteins with Radioactive Chromium. S. J. Gray, and K. Sterling. *J. Clin. Invest. 29*, 1604–43(1950).

C 204 A Technique of Autoradiography. E. Odeblad. *Scand. J. Clin. Lab. Invest. 3*, 151–6(1951).

C 205 Techniques Employed in the Utilization of Radioiodine (I–131) in the Diagnosis and Treatment of Thyroid Diseases. E. Siegel, D. Tabowitz, and L. M. Levinson. *J. Newark Beth Israel Hosp. 3*, 229(1952).

C 206 Therapeutic Studies in Hyperthyroidism: Methimazole. H. H. Stone, D. W. Petit, and P. Starr. *J. Clin. Endocrinol. Metabolism 12*, 841–5(1952).

C 207 Thoracic Lymphatic Drainage of Silver-Coated Radioactive Gold Colloids. P. F. Hahn and E. L. Carothers. *Federation Proc. 12*, 389-(1953).

C 208 Thyroid Activity in Coronary Heart Disease. R. R. Howard and M. M. Gertler. *J. Kansas Med. Soc. 54*, 377–80(1953).

C 209 Thyroid Function in Nephrosis. L. Recant and D. S. Riggs. *J. Clin. Invest. 31*, 789–97(1952).

C 210 Thyroid Uptake Measured One Hour after Small Oral Doses of Radioiodine. M. E. Morton, R. E. Ottoman, and R. E. Peterson. *J. Clin. Endocrinol. 11*, 1572–74(1951).

C 211 The Thyroidal Uptake of Stable Iodine Compared with the Serum Concentration of Protein-Bound Iodine in Normal Subjects and in Patients with Thyroid Disease. B. A. Burrows and J. F. Ross. *J. Clin. Endocrinol. Metabolism 13*, 1358–68(1953).

C 212 Total Accountable Radioiodine Combined Thyroid Uptake and Urinary Excretion of I–131 in the Study of Thyroid Function. W. E. Goodwin. *Metabolism, Clin. Exptl. 2*, 238–47 (1953).

C 213 Transport of Radioactive Colloidal Gold between Serous Cavities. I. I. Cowan, R. S. Cron, G. F. Burgess, and F. G. Karioris. *Surg. Gynecol. Obstet. 98*, 721–4(1954).

C 214 Turnover Rate of Sodium in Edema Fluid and Ascites. J. S. Robertson. *Federation Proc. 13*, *No. 1*–442(1954).

C 215 Turn-Over Rates of Serum Proteins in Cirrhotic Man. W. Volwiler, K. Fremont-Smith, and M. P. MacMartin. *J. Clin. Invest. 31*, 668 (1952).

C 216 Turn-Over Rates of Various Plasma Proteins in Normal and Cirrhotic Humans Using Biosynthetic Methods. W. Volwiler, P. D. Goldsworthy, M. P. MacMartin, P. A. Wood, I. R. MacKay, K. Fremont-Smith, and D. F. Shook. *J. Clin. Invest. 33*, 970(1954).

C 217 The Uptake of Labelled Phosphorus by Cancer of the Cervix; Preliminary Report. S. H. Sturgis, E. DeMuylder, and J. V. Meigs. *Ann. Surg. 133*, 305–12(1951).

C 218 Uptake of Radioactive Sulfur by Chondrosarcomas in Man. R. G. Gottschalk and H. C. Allen, Jr. *Proc. Soc. Exptl. Biol. Med. 80*, 334–9(1952).

C 219 The Urinary and Fecal Excretion of I-131 from Labeled Sodium-L-Thyroxine in Various Thyroid States and in Euthyroids with "Bile Fistules." P. C. Johnson and W. H. Beierwaltes. *J. Lab. Clin. Med. 41*, 676–83(1953).

C 220 The Use of Chromium 51 as an Erythrocyte Tagging Agent for Determining the Survival of Transfused and Autotransfused Erythrocytes. F. G. Ebaugh, Jr., J. F. Ross, and C. P. Emerson. *Am. Soc. Clin. Invest.* 18(1953 session).

C 221 The Use of Lipotropic Factors in the Treatment of Liver Disease. D. Cayer and W. E. Cornatzer. *Gastroenterology 20*, 385–402(1952).

C 222 Use of Protein Bound Iodine as a Clinical Tool. W. N. Harsha. *J. Kansas Med. Soc. 51*, 332–6 (1950).

C 223 The Use of Radioactive Iodinated Human Serum Albumin in Evaluating the Peripheral Circulation. H. Kreiger, J. P. Storaasli, W. J. MacIntyre, W. D. Holden, and H. L. Friedell. *Ann. Surg. 136*, 357–65(1952).

C 224 Use of Radioactive Iodinated Human Serum Albumin as Tracer Agent in Study of Cerebral Disorders. T. W. Farmer, H. Lanz, M. S. McCall, C. Morgan, W. Nicholl, and R. Clayton. *Proc. Soc. Exptl. Biol. Med. 81*, 33–6(1952).

C 225 The Use of Radioactive Iodinated Plasma Protein in the Study of Blood Volume. J. P. Storaasli, H. Krieger, H. L. Friedell, and W. D. Holden. *Surg. Gynecol. Obstet. 91*, 458–64(1950).

C 226 The Use of Radioactive Sulphur Labeled Methionine in the Study of Protein Catabolism in Burn Patients. T. G. Blocker, Jr., W. C. Levin, S. R. Lewis, and C. C. Snyder. *Ann. Surg. 140*, 519–23(1954).

C 227 The Use of Tritium- and Radiocarbon-Labeled Precursors to Study the Metabolism of Steroid Hormones in Man. G. V. LeRoy, D. Bergenstal, R. G. Gould, H. Werbin, and G. T. Okita. *J. Clin. Invest. 33*, 952–3(1954).

C 228 Utilization of Optical Isomers of Cysteine by Leukocytes. A. S. Weisberger and L. G. Suhrland. *J. Lab. Clin. Med. 42*, 964(1953).

C 229 *In Vivo* Conversion of C-14 Acetate to Labeled Steroids. F. Ungar and R. I. Dorfman. *Cancer Research 12*, 303(1952).

C 230 Water Distribution in Normal Subjects and in Patients with Laennec's Cirrhosis. H. Gilder, S. F. Redo, D. Barr, and C. G. Child III. *J. Clin. Invest. 33*, 555–64(1954).

C 231 Whole Blood Volume Determined by Radiochromium-Tagged Red Cells Comparative Studies on Normal and Congestive Heart Failure Patients. W. A. Reilly, R. M. French, F. Y. K. Lau, K. G. Scott, and W. E. White. *Circulation 9*, 571–80(1954).

C 232 Zone Electrophoresis in Filter Paper of Serum I-131 after Radioiodide Administration. J. Robbins and J. E. Rall. *Proc. Soc. Exptl. Biol. Med. 81*, 530–6(1952).

C 233 The Absorption of "Egg" and Inorganic Iron by Normal, Iron-Deficient, and Hemochromatotic Subjects. R. B. Chodos, J. F. Ross, M. Pratt, J. Donovan, and J. Halkett. *Clin. Res. Proc. 2*, 30(1954).

C 234 The Absorption of Food and Inorganic Iron by Normal, Iron-Deficient, and Hemochromatotic Subjects. R. B. Chodos, J. F. Ross, L. Apt, J. Halkett, and M. Pollycove. *Clin. Res. Proc. 2*, 53(1954).

C 235 Acute Sodium Deficiency in a Postpartum Preeclamptic Patient. D. L. Hutchinson and A. A Plentl. *Am. J. Obstet. Gynecol. 66*, 891–4(1953).

C 236 Administration of Dextran by Hypodermoclysis. W. E. Abbott, H. Krieger, L. I. Babb, E. Savoie, and S. Levey. *Surg. Gynecol. Obstet. 99*, 147(1954).

C 237 Antithyrotrope and Antigonadotrope Activity of Para-hydroxypropiophenone in Human Beings. W. H. Beierwaltes and R. M. Rees. *Proc. Centr. Soc. Clin. Res. 24*, 73(1951). *J. Lab. Clin. Med. 38*, 949(1951).

C 238 Biosynthetic Determination of Turn-over Rates of Various Plasma Proteins in Normal and Cirrhotic Man. W. Volwiler, P. D. Goldsworthy, M. P. MacMartin, P. A. Wood, G. Douglas, and I. R. Mackay. *Am. J. Med. 27*, 104(1954).

C 239 Blood Distribution in Experimental Traumatic Shock. J. J. Friedman. *Federation Proc. 13*, *No. 1*, 40(1954).

C 240 Blood Volume in Cardiac Decompensation Using Radiochromium. W. A. Reilly, K. G. Scott, R. French, F. Y. K. Lau, and W. E. White. *Calif. Med. 31*, 256–8(1954).

C 241 Blood Volume Changes with Parenteral Administration of Modified Human Globin Solution. C. A. Hubay, W. E. Abbott, A. Abelson, F. Cebul, and R. Izant. *Surg. Forum*, 642–51(1952).

C 242 Blood Volume Determined by Radiochromium Tagged Red Cells; Comparative Studies on Normal and Congestive Heart Failure Patients. W. A. Reilly, R. French, F. Y. K. Lau, K. G Scott, and W. E. White. *Circulation 2*, 571–80(1954).

C 243 Blood Volume Measurement Using Radiochromium in Normal Patients and Cardiacs in Congestive Failure. W. A. Reilly, R. French, K. G. Scott, F. Y. K. Lau, and W. E. White. *Clin. Res. Proc. 2*, 66(1954).

C 244 Blood Volume in Pulmonary Tuberculosis. N. I. Berlin, D. F. Rowles, G. M. Hyde, R. J. Parsons, J. H. Lawrence, and S. Port. *Am. Med. Assoc. Arch. Internal Med. 88*, 17–9(1951).

C 245 Body Potassium Loss During Therapy with ACTH and Cortisone. J. K. Aikawa and J. H.

Felts. *Am. J. Med. 13*, 640(1952). *N. Carolina Med. J. 13*, 22–4(1952).

C 246 Carcinogenic Activity of Radioactive Phosphorus. S. Koletsky and J. H. Christie. *Proc. Soc. Exptl. Biol. Med. 86*, 266(1954).

C 247 Cardiac Output by Body Surface Counting of I–131 Human Serum Albumin. R. L. Huff, D. D. Feller and G. Bogardus. *J. Clin. Invest. 33*, 944(1954).

C 248 The Cell Membrane Defect in Acute Rheumatic Fever. J. K. Aikawa. *Am. J. Med. 13*, 640(1952).

C 249 The Cell Membrane Defect in Acute Rheumatic Fever. J. K. Aikawa. *N. Carolina Med. J. 13*, 330–1(1952).

C 250 Changes in the Bone Marrow Differential in Chronic Leukemia Treated with P–32 and Y–90. N. I. Berlin and J. H. Lawrence. *Acta Med. Scand. 140*, 99–118(1951).

C 251 The Clinical Significance of the Blood Volume in the Anemia of Portal Cirrhosis. R. B. Chodos, J. Denton, B. Ferguson, and J. F. Ross. *Clin. Research Proc. 1*, 111(1953).

C 252 Clinical Studies of Cancer with Radioactive Isotopes. N. I. Berlin. *Proc. 2nd. Natl. Cancer Conf., Am. Cancer Soc.*, 1591–606(1954).

C 253 The Clinical Use of Bone Marrow Study. G. A. Andrews. *J. Tenn. State Med. Assoc. 47*, 361–6(1954).

C 254 Comparative Effects of Total Body Radiation, Nitrogen Mustard, Triethylene Melamine on the Hematopoietic System of Terminal Cancer Patients. R. K. Loeffler, V. P. Collins, and G. A. Hyman. *Science 118*, 161–3(1953).

C 255 Comparative Tests of Thyroid Function. G. B. McAdams and W. T. Salter. *Ann. Internal Med. 36*, 1198–205(1952).

C 256 Comparison of Thyroid Function Tests. B. J. Duffy, Jr., T. E. Wheeler, P. J. Novak, and J. W. Edwards. *Armed Forces Med. J. 5*, 995–9(1954).

C 257 Corticogenic Hypothyroidism. Its Regular Occurrence and Clinical Significance During Prolonged Therapeutic Administration of ACTH or Cortisone. W. H. Beierwaltes, W. Q. Wolfson, W. O. Robinson, I. F. Duff, J. R. Jones, C. T. Knorpp, and M. Eya. *Proc. Centr. Soc. Clin. Res. 23*, 114(1950). *J. Lab. Clin. Med. 36*, 1005(1950).

C 258 Current Treatment of Toxic Goiter. M. G. Wohl, C. R. Shuman, and R. Robbins. *Med. Clin. N. Amer.*, 1059–76, July(1953).

C 259 The Danger of Administering Fluids by Hypodermoclysis. W. E. Abbott, S. Levey, R. C. Foreman, H. Krieger, and W. D. Holden. *Surgery 32*, 305(1952).

C 260 The Determination of Transfused Red Cell Survival by Means of Radioactive Cr–51 Labelled Erythrocytes. F. G. Ebaugh, Jr., C. P. Emerson, and J. F. Ross. *J. Clin. Invest. 32*, 1260(1953).

C 261 Development of Goiters in Cretins without Iodine Deficiency: Hypothyroidism Due to Apparent Inability of the Thyroid Gland to Synthesize Hormone. L. Wilkins, G. W. Clayton, and M. Bethrong. *Pediatrics*, 235–46(1954).

C 262 The Disposal of I–131-Labelled Thyroxine in Myxedema, Euthyroidism, and Artificial Hyperthyroidism. W. H. Beierwaltes and P. C. Johnson. *Proc. Centr. Soc. Clin. Res. 25*, 46(1952).

C 263 The Disposal of I–131-Labelled Thyroxine in Myxedema, Euthyroidism, and Artificial Hyperthyroidism. W. H. Beierwaltes and P. C. Johnson. *Clin. Res. Proc. 1*, 10(1953).

C 264 Distribution of Anesthetic Gas Xenon in Dog Tissues as Determined with Radioactive Xenon. R. M. Featherstone, W. Steinfield, E. G. Gross, and C. B. Pittinger. *J. Pharmacol. Exptl. Therap. 106*(1952).

C 265 Distribution of C–14-Labeled Digitonin in Tissues of Cardiac Patients. G. T. Okita and P. J. Talso. *Federation Proc. 12*, 534(1953).

C 266 Distribution and Decay of I–131-Tagged Albumin and Globulin in Patients with Cirrhosis. W. J. Eisenmenger and R. J. Slater. *J. Clin. Invest. 32*(1953).

C 267 The Distribution and Fate of Intravenously Administered I 131 Labeled Human Serum Albumin. S. A. Berson, R. S. Yalow, S. S. Schreiber, and J. Post. *J. Clin. Invest. 32*, 554–5(1953).

C 268 Distribution of Radioactive Colloidal Gold Following Intrapulmonary Administration. G. R. Meneely, R. C. Kory, S. H. Auerbach and P. F. Hahn. *Federation Proc. 10*, 365(1951).

C 269 Drug Induced Hypoplastic Anemia and Related Syndromes. E. E. Osgood. *Ann. Internal Med. 39*, 1173(1953).

C 270 Effect of ACTH on the Eosinophil Count in Peripheral Blood and Bone Marrow. S. W. Root, G. A. Andrews and E. Hodgens. *Am. J. Med. Sci. 226*, 304–9(1953).

C 271 Effect of Chewing on the Phosphorus Exchange in Teeth. H. H. Neumann and N. A. DiSalvo. *J. Dental Research 33*, 801(1954).

C 272 The Effect of Congestive Heart Failure on Blood Volume as Determined by Radiochromium-Tagged Red Cells. S. Eisenberg. *Circulation 10*, 902(1954).

C 273 The Effect of Cortisone in Hodgkin's Disease. B. Straus, A. S. Jacobson, S. A. Berson, T. C. Bernstein, R. S. Fadon, and R. S. Yalow. *Am. J. Med. 12*, 170–89(1952).

C 274 The Effect of Iodide, Perchlorate, Thiocyanate and Nitrate Administration upon the Iodide Concentrating Mechanism of the Rat Thyroid. J. B. Wyngaarden, J. B. Stanbury, and B. Rapp. *Endocrinology 52*, 568–74(1953).

C 275 The Effect of Low Sodium Intake on Body Fluid Distribution in Hypertension. A. P. Shapiro, H. C. Teng, and A. Grollman. *Clin. Research Proc. 2*, 69(1954).

C 276 Effect of Perchlorate on the Human Thyroid Gland. J. B. Stanbury and J. B. Wyngaarden. *Metabolism 1*, 533–9(1952).

C 277 Effect of Physical Modalities upon Saphenous Circulation Time Using a Radioactive Tracer. H. T. Zankel, R. E. Clark, and R. A. Shipley. *Arch. Phys. Med. Rehabilitation*(June 1953).

C 278 The Effect of Salicylates and Adrenocorticotropic Hormone upon the Miscible Pool of Uric Acid in Gout. J. D. Benedict, P. H. Forsham, M. Roche, S. Soloway, and S. DeWitt, Jr. *J. Clin. Invest. 29*, 1104(1950).

C 279 The Effect of ACTH on the Electrolyte Content of Various Body Tissues. L. P. Eliel, L. Hellman, O. H. Pearson, and B. Katz. *Proc. Second Clin. ACTH Conference, Blakiston and Co., Philadelphia*, 196(1951).

C 280 Effects of an Anterior Pituitary Extract and Thyrotropin on Renal Excretion of Administered Radiophosphorus. E. M. Zorn, W. R. Tweedy, and G. V. LeRoy. *Federation Proc. 10*, 273–4(1951).

C 281 The Effects of Certain Anions upon the Accumulation and Retention of Iodide by the Thyroid Gland. J. B. Wyngaarden, B. M. Wright, and P. Ways. *Endocrinology 50*, 537–49(1952).

C 282 The Effects of Hemorrhage and Intravenous and Intra-Arterial Infusion upon Respiration and the Volume of Blood in the Lungs. B. J. Wilson, and A. F. Reid. *Surg. Forum, Clin. Congr. Am. Coll. Surgeons*(1951).

C 283 Effects of Oral Iodide on Serum Butanol insoluble Protein-Bound Iodine in Various Species. H. B. Brown and I. H. Page. *Circulation 10*, 714–20(1954).

C 284 An Evaluation of the Clinical Use of Sr–90 Beta Ray Applicator with a Review of the Underlying Principles. H. L. Friedell, C. I. Thomas, and J. Krohmer. *Am. J. Roentgenol. Radium Therapy Nuclear Med. 61*, 25–39(1954).

C 285 An Evaluation of the Pathologic Physiology of the Anemia of Cancer. R. B. Chodos, and J. Moses. *J. Clin. Invest. 32*, 560(1953).

C 286 Evaluation of Protein and Fat Metabolism in Post-Gastrectomized Patients. L. I. Babb, A. B. Chinn, R. M. Stitt, P. S. Lavik, S. Levey, H. Krieger, and W. E. Abbott. *Arch. Surg. 67*, 462–8(1953).

C 287 Evidence of Hypothalmic Control of the Pituitary Releases of Thyrotrophin. M. A. Greer. *Proc. Soc. Exptl. Biol. Med. 77*, 603–8(1951).

C 288 Evidence for a Relationship between Sodium (Chloride) Intake and Human Essential Hypertension. L. K. Dahl and R. A. Love. *Arch. Internal Med. 94*, 525–31(1954).

C 289 Excessive Losses of Sodium, Chloride and Water After Administration of Cortisone or ACTH, Suggesting Transient Adrenocortical Insufficiency. L. P. Eliel, O. H. Pearson, and C. D. West. *J. Clin. Invest. 30*, 637(1951).

C 290 Experimental Effects of Radioactive Collodial Gold in the Subarachnoid Space and Its Clinical Application in Treating Brain Tumors. F. Kerr, H. G. Schwartz, and W. B. Seaman. *Arch. Surg. 69*, 694–706(1954).

C 291 Experiences with the Schilling Test Using Co–60 Labeled Vitamin B 12 in Pernicious Anemia, Sprue, and Other Conditions. W. R. Best, W. F. White, J. Louis, and L. R. Limarzi. *J. Lab. Clin. Med. 44*, 767–8(1954).

C 292 Factors Contributing to the Variability of Na–24 Clearance Constant. L. Sokoloff, R. L. Wechsler, and S. S. Kety. *Am. Heart Assoc. Abstracts*(1953).

C 293 The Fate of Hydrocortisone-4-C–14 in Man. L. Hellman, H. L. Bradlow, J. Adesman, D. K. Fukushima, J. L. Kulp, and T. F. Gallagher. *J. Clin. Invest. 33*, 1106–15(1954).

C 294 The Fate of 6-Mercaptopurine in Man. L. Hamilton, G. B. Elion, and R. Bases. *Proc. Am. Assoc. Cancer Research 1*, 18(1954).

C 295 The Half-Life of I–131 Labeled Normal Human Gamma Globulin in Patients with Hepatic Cirrhosis. W. P. Havens, Jr., J. Dickensheets, J. N. Bierly, and T. P. Eberhard. *J. Immunol. 73*, 256–8(1954).

C 296 Hypertrophy of Salivary Glands During Treatment of Myxedema with Triiodothyronine. E. C. Albright, F. C. Larson, and W. P. Deiss. *J. Lab. Clin. Med. 44*, 762(1954).

C 297 Identification of Thyroglobulin in Human Serum After Large Doses of I–131. J. Robbins. *Trans. Am. Goiter Assoc.*, 402–19(1953).

C 298 Increase in Basal Oxygen Consumption Produced by Cortisone in Patients with Untreated Myxedema. W. H. Beierwaltes, W. Q. Wolfson, J. R. Jones, C. T. Knorpp, and J. S. Siemienski. *Proc. Cent. Soc. Clin. Res. 23*, 11(1950). *J. Lab. Clin. Med. 36*, 799(1950).

C 299 Induced Hypercholesterolemia and Atherogenesis. I. H. Page and H. B. Brown. *Circulation 6*, 681(1952).

C 300 Influence of Cortisone and Desoxycorticosterone upon the Renal and Thyroidal Metabolism of Iodine. S. H. Ingbar, and B. Chandler. *J. Clin. Endocrinol. 13*, 853–4(1953).

C 301 The Influence of Cortisone on the Toxicity of Nitrogen Mustard in Rats. L. A. Hutchinson, G. A. Andrews, and R. M. Kniseley. *Proc. Soc. Exptl. Biol. Med. 83*, 376–7(1953).

C 302 The Inhibition of Hydrogenase by Nitric Oxide. A. I. Krasna and D. Rittenberg. *Proc. Natl. Acad. Sci. 40*, 225(1954).

C 303 Investigations on the Use of Sodium-Removing Resins in the Treatment of Pre-Eclampsia. D. L. Hutchinson and A. A. Plentl. *Am. J. Obstet. Gynecol. 67*, 32–46(1954).

C 304 *In vivo* Inhibition of Succinoxidase Activity in Normal and Tumor Tissues by Antimycin A. A. E. Reif and V. R. Potter. *Cancer Research 13*, 168–73(1953).

C 305 Iodinated Compounds in the Serum, the Disappearance of Radioactive Iodine from the Thyroid, and Clinical Response in Patients with Radioactive Iodine. R. S. Benua and B. M. Dobyns. *J. Clin. Endocrinol. Metabolism 15*, 118(1955).

C 306 Iron Turnover Abnormalties in Patients Having Anemia. Serial Blood and *in Vivo* Tissue Studies with Fe–59. P. J. Elmlinger, R. L. Huff, C. A. Tobias, and J. H. Lawrence. *Acta Haematol. 9*, 2(1953).

C 307 Lack of Selective Uptake of Radioactive Iodine, Phosphorus and Copper by Melanomas in Mouse and Man. W. H. Beierwaltes and C. T. Knorpp. *Proc. Centr. Soc. Clin. Res. 24*, 10(1951).

C 308 Lymph Node Concentration of Radioactive Colloidal Gold Following Interstitial Injection. A. I. Sherman and M. Ter-Progossian. *Cancer 6*, 11(1953).

C 309 Macrophage Migration in Experimental Atherosclerosis. J. H. Simonton and J. W. Gofman. *Circulation 4*, 557–62(1951).

C 310 Measure of Change in Uptake Following TSH. W. Mck. Jeffries, et al. *New Engl. J. Med. 249*, 876(1953). *Proc. Soc. Nuclear Med.*, 3(1954).

C 311 Measure of Discharge from I–131 Trap with KSCN after 24 hours. J. B. Stanbury and A. N. Hedge. *J. Clin. Endocrinol. 10*, 1471(1950). *Proc. Soc. Nuclear Med.*, Seattle, 3(1954).

C 312 On the Mechanism of Iodide Accumulation by the Thyroid Gland. J. B. Wyngaarden, J. B. Stanbury and C. H. DuToit. *J. Clin. Endocrinol. 11*, 1259–72(1952).

C 313 Mechanisms of Anemia in Human Cancer. G. A. Hyman. *Proc. Am. Assoc. Cancer Research 1*, April(1954).

C 314 The Metabolic Behavior of the Cholesterol of Human Erythrocytes. I. M. London and H. Schwarz. *J. Clin. Invest. 32*, 1248(1953).

C 315 The Metabolic Defect in Gout. S. DeWitt, Jr. *Bull. Rheum. Diseases 3*, 25 (1952): *Bull. N. Y. Acad. Med. 28*, 664(1952).

C 316 Metabolic Effects of Marked Sodium Restriction in Hypertensive Patients: Changes in Total Exchangeable Sodium and Potassium. L. K. Dahl, B. G. Stall, III and G. C. Cotzias. *J. Clin. Invest. 33*, 1397–406(1954).

C 317 Metabolism of Cholesterol–4–C–14 in Hypercholesterolemia. L. Hellman, R. Rosenfeld, T. F. Gallagher, D. Adlersberg, and C. I. Wang. *Circulation 8*, 434–5(1953).

C 318 The Metabolism of Labeled l–Triiodothyronine, l–Thyroxine and d–Thyroxine. J. E. Rall, J. Robbins, D. Becker, and R. W. Rawson. *J. Clin. Invest. 32*, 596(1953).

C 319 Metastatic Adenocarcinoma of the Thyroid with Elevated Basal Metabolism; Radiologic Studies. S. J. Weinberg, R. M. Fink, G. L. Packer, and K. Fink. *Ann Internal Med. 32*, 1207(1950).

C 320 Morphological Changes in the Lymph; Estimation of Permeability and Lymphopoiesis. J. Furth, R. R. Bigelow, J. B. Kahn, M. M. Knoohuizen and M. H. Ross. *Am. J. Pathol.* 27, 677–9(1951).

C 321 The Nature of the Anemia of the Rheumatoid Arthritis. F. G. Ebaugh, Jr., R. E. Peterson, and J. J. Bunim. *Clin. Res. Proc. 2*, 55(1954).

C 322 Observations on the Capacity of Serum Alpha-Globulin to Bind Thyroxine *in Vitro*. E. C. Albright, F. C. Larson, and W. P. Deiss. *J. Clin. Invest. 33*, 914(1954).

C 323 Observations on the Course of Hodgkin's Disease Treated with Cortisone. A. S. Jacobson, B. Straus, S. A. Berson, T. Bernstein, RS. Fadem, and R. S. Yalow. *Bull. N. Y. Acad. Med. 27*, 401–2(1951).

C 324 Origin of Urinary Creatine in Progressive Muscular Dystrophy. M. Roche, J. D. Benedict, T. F. Yu, E. J. Bien, and S. DeWitt, Jr. *Metabolism 1*, 13(1952).

C 325 The Pathogenesis of the Anemia of Chronic Leukemia: Measurement of the Life Span of the Red Blood Cell with Glycine–2C–14. N. I. Berlin, J. H. Lawrence, and H. C. Lee. *J. Lab. Clin. Med. 44*, 860–74(1954).

C 326 Plasma Clearance of Cortisone and Hydrocortisone in Human. R. E Peterson, S. L. Guerra, and J. B. Wyngaarden. *Clin. Research Proc. 2*, 84(1954).

C 327 Plasma Volume Determination in the Hypovolemic State Produced by Intraperitoneal Injection of a Non-Electrolyte Solution. H. Krieger, C. A. Hubay, W. E. Abbott, and S. Levey. *Proc. Soc. Exptl. Biol. Med. 81*, 503 (1952).

C 328 Pneumoperitoneum in the Study of Pelvic Structures. J. R. Maxfield, Jr. *J. Am. Med. Assoc. 146*, 920–3(1951).

C 329 Polycythemie Vraie Cliniques et Experimentaux Diagnostic Differentiel. H. C. Moffit, J. H. Lawrence, and N. I. Berlin. *Rev. d'Hematol. 6*, 463–9(1951).

C 330 Possible Use of the Level of Radioiodine in the Blood as a Guide to Therapy in Patients with Graves' Disease J. E. Rall, M. Sonenberg, J. Robbins, and R. W. Rawson. *J. Clin. Endocrinol. Metabolism 13*, 1369–77(1953).

C 331 Postoperative Potassium Deficit and Metabolic Alkalosis. The Pathogenic Significance of Adrenal Cortical Hyperfunction and of Potassium and Phosphorus Deprivaiton. L. P. Eliel, O H. Pearson, and F. C. White. *J. Clin. Invest. 31*, 419(1952).

C 332 Quantitative Aspects of Iodine Metabolism. The Exchangeable Organic Iodine Pool, and the Rates of Thyroidal Secretion, Peripheral De-

gradation and Fecal Excretion of Endogenously Synthesized Organically Bound Iodine. S. A. Berson, and R. S. Yalow. *J. Clin. Invest. 33*, 1533–52(1954).

C 333 Quantitative Evaluation of Tissue Growth. G. Michaels, E. Osawa, R. French, C. Baker, and L. Kinsell. *Am. J. Med. 17*, 109(1954)

C 334 Quantitative Studies of Ascitic Fluid Circulation with Tritium-Labeled Water. T. C. Prentice, W. Siri, and E. E. Joiner. *Am. J. Med. 13*, 668–73(1952).

C 335 Radiobiologic Studies on Human Cells. E E. Osgood, A. J. Seaman, and H. Tivey. *Rev. D'hemat. 8*, 403(1953).

C 336 Relationship of Body Hematocrit to Venous Hematocrit in Polycythemia and Leukemia. S. P. Masouredis and J. Soni. *Clin. Research Proc. 2*, 58(1954).

C 337 Removal and Distribution of P–32 Following Its Injection as Buffered Phosphate, Colloidal Calcium on Chromium Phosphate. J. A. D. Cooper, J. Suker, and S. Freeman. *Federation Proc. 10*, 175(1951).

C 338 Renal Excretion of Administered Radiophosphorus Following Thyroparathyroidectomy and the Injection of Parathyroid Extract. W. R. Tweedy and E M Zorn *Federation Proc 10*, 261–2(1951)

C 339 Renal Function, Electrolyte Excretion and Body Fluids in Patients with Chronic Renal Insufficiency before and after Sodium Deprivation J F. Nickel, P. B Lowrance, E. Feifer, and S. E. Bradley. *J. Clin. Invest. 32*, 68–79(1953).

C 340 Renal Function and I–131 Clearance in Hyperthyroidism and Myxedema. C. J. Hlad, Jr., and N. S. Bricker. *J. Clin. Endocrinol. Metabolism 14*, 1539(1954).

C 341 Repeated Blood Volume Determinations in Bleeding Peptic Ulcer. S. Kruger, L. Baker and W. D. Mosiman. *Gastroenterology 21*, 516–24(1952).

C 342 Response of Leukemic Spleen Breis to -Methop terin. M. E. Balis, D. H. Levin and J. Dancis. *Proc. Am. Assoc. Cancer Research 1*, 3(1954)

C 343 The Results of Feeding Desiccated Thyroid to Thyrotoxic Subjects. M. A. Greer. *J. Clin. Invest. 30*, 644(1951).

C 344 Simultaneous Determinations of the Total Volume of Red Blood Cells by Use of Carbon Monoxide and Chromium in Healthy and Diseased Human Subjects. N. Nomof, J. Hopper, Jr., E. Brown, K. Scott, and R. Wennesland. *J. Clin. Invest. 33*, 1382–7(1954).

C 345 The Simultaneous Measurement of the Iodine-Concentrating and Protein-Binding Capacities of the Human Thyroid Gland. S. H. Ingbar. *Trans. Am. Goiter Assoc.*, 387–401(1953).

C 346 Sodium Space and Body Sodium Content, Exchangeable with Sodium 24, in Normal Individuals and Patients with Ascites. G. F. Warner, N. J. Sweet, and E. L. Dobson. *Circulation Research 1*, 486–90(1953).

C 347 The Spaces of Distribution of Tagged Erythrocytes and Serum Proteins of Na 24 and Br–82. S. A. Berson and R. S. Yalow. *Clin. Chem. 5*, 41(1953).

C 348 Sternal Marrow Puncture: The Dilution with Peripheral Blood as Determined by P–32 Labeled Red Blood Cells. N. I. Berlin, T. G. Hennessy, and J. Gartland. *J. Lab. Clin. Med. 36*, 23–8(1950).

C 349 Studies on Anemia of Disseminated Malignant Neoplastic Disease. I. The Hemolytic Factor. G. A. Hyman. *Blood 9*, 911(1954).

C 350 Studies of Formation, Flow and Absorption of Cerebrospinal Fluid. II. Studies with Heavy Water in the Normal Man. W. H. Sweet, B. Selverstone, S. Soloway, and D. Stetten. *Forum on Fundamental Surgical Problems, Am. Coll. Surgeons*, W. B. Saunders, Philadelphia, 376–81(1951).

C 351 Studies on the Mechanisms of Action of Adrenal Cortical Hormones. The Inhibition of Protein Synthesis in Lymphatic Cells by Some Corticoid Hormones. E. S. Guzman-Barron and S. Kit. *Trans. Assoc. Am. Physicians 65*, 293–302(1952).

C 352 Studies on the Metabolism of Cholesterol in Normal Man and in the Nephrotic Syndrome. I. M. London, G. Sabella, and M. Yamasaki. *J. Clin. Invest. 30*, 657(1951).

C 353 Studies on Metabolism of Tetra-iodo-phenolphthalein Labeled with Radioactive Iodine. W. W. Carroll, A. Biddle, and J. A. D. Cooper. *Quart. Bull. Northwestern Univ. Med School 25*, 13(1951).

C 354 Studies in Neuromuscular Diseases with Radioactive Potassium. W. H. Bland, F. K. Bauer, R. L. Libby, and A. S. Rose. *Neurology 3*, 604–8(1953).

C 355 Studies on Nucleic Acid Metabolism in Bone Marrow and Spleen: I. Normal Values and Effect of Sodium Pentobarbital. W. A. Rambach, D. Moomaw, J. A. D. Cooper, and H. L. Alt. *Proc. Soc. Exptl. Biol. Med. 79*, 59(1952)

C 356 Studies on Nucleic Metabolism Using Radiophosphorus. J. A. D. Cooper. *Federation Proc. 11*(1952).

C 357 Studies with Radioactive Phosphorus on Bone Marrow Function. J. A. D. Cooper, S. Martin, and H. L. Alt. *J. Clin. Invest. 36*, 961(1951).

C 358 Studies in Sulfur Metabolism. VII. The Protein Metabolic Abnormality of the Nephrotic Syndrome as Studied with S–35 Labeled Methionine. S. Margen, J. Lange, H. Tarver, R. DeLaney, and L. Kinsell. *Am. J. Med. 13*, 97–8(1952).

C 359 A Study of Radioactive Phosphorus Activities in Pleural Effusions. R. E. Bauer, I. H. Moss, and A. D. Richardson. *Cancer 7*, 8[illegible]7(1954).

C 360 A Study of the Revascularization of Stored Homogonous Bone Grafts by Means of Radioactive Phosphorus. C. L. Kiehn and D. M.

Glover. *Plastics and Reconstructive Surgery 12*, 233–40(1953).

C 361 Subacute Thyroditis. G. Crile, Jr., and E. W. Rumsey. *J. Am. Med. Assoc. 142*, 458-62(1950).

C 362 Substrate Utilization by Ehrlich's Mouse Ascites Carcinoma Cells. R. W. McKee, K. Lonberg-Holm, and J. A. Jehl. *Cancer Research 13*, 537(1953).

C 363 The Survival of Human Eruthrocytes Estimated by Means of Cells Tagged with Radioactive Chromium: A Study of the Normal State. D. A. Sutherland, M. S. McCall, M. T. Groves, and E. E. Muirhead. *J. Lab. Clin. Med. 43*, 717-26(1954).

C 364 Thyroid Cancer in Childhood and Adolescence.. A Report on 28 Cases. B. J. Duffy and P. J. Fitzgerald. *Cancer 3*, 1017–32(1950).

C 365 Thyroidectomizing Dose of Radioactive Iodine in Humans with Malignant Melanoma. W. H. Beierwaltes and L. W. Olmsted. *Clin. Res. Proc. 1*, 115(1953).

C 366 Total Red Cell Volume, Plasma Volume, and Sodium Space in Congestive Heart Failure. T. C. Prentice, N. I. Berlin, G. M. Hyde, R. J. Parsons, J. H. Lawrence, and S. Port. *J. Clin. Invest. 30*, 1471–82(1951).

C 367 L-triiodothyronine versus L-tetraiodothyronine (L-Thyroxine). A Comparison of Their Metabolic Effects in Human Myxedema. R. W. Rawson, J. E. Rall, O. H. Pearson, J. Robbins, H. F. Poppell, and C. D. West. *Am. J. Med Sci. 226*, 405–11(1953).

C 368 A Unique Serum Iodine Component in Certain Patients with Thyroid Carcinoma. J. Robbins, J. E. Rall, and R. W. Rawson. *J. Clin. Endocrinol. Metabolism 13*, 852–3(1953).

C 369 Uptake of Radioactive Iodine in the Thyroid of Patients with Impaired Liver Function. R. Mueller, C. C. Brausch, E. A. Hirsch, R. S. Benua, and B. M. Dobyns. *J. Clin. Endocrinol. Metabolism 14*, 1287(1954).

C 370 The Use of Radioactive Iron in the Evaluation of Erythropoiesis and Ferrokinetics. M. Pollycove, R. B. Chodos, L. Apt, and J. F. Ross. *Clin. Res. Proc. 2*, 31(1954).

C 371 Use of Tapazole to Increase I–131 Concentration in Euthyroid Patients. B. J. Duffy, Jr., and J. W. Howland. *Jl Clin. Endocrinol. and Metabolism 12*, 761(1952).

C 372 The Utilization of Exogeneous Cholesterol for the Formation of Adrenal Cortical Hormones in Man. G. V. LeRoy, H. Werbin, M. E. Davis, J. E. Plotz, and D. M. Bergenstal. *Central Soc. Clin. Research 27*(1954).

C 373 The Utilization of Ingested Iron in Disease. H. D. West, A. H. Jackson, R. R. Elliott, P. F. Hahn, W. A. Patterson, and R. S. Anderson. *Southern Med. J. 45*, 629–33(1952).

C 374 The Variations of the Sodium Space and the Total Exchangeable Sodium During Pregnancy. M. J. Gray and A. A. Plentl. *J. Clin. Invest. 33*, 347–53(1954).

C 375 The Volume of the Fluid Compartments in Human and Experimental Hypertension. H. C. Teng, A. P. Shapiro, and A. Grollman. *Metabolism 3*, 405–11(1954).

C 376 Xenon Concentration Changes in Brain and Other Body Tissues of the Dog During Inhalation of the Gas. C. B. Pittinger, R. M. Featherstone, E. G. Gross, E. E. Stickley, and L. Levy. *J. Pharmacol. Exptl. Therap 110*(1954).

C 377 C14-Acetate Utilization in Dietary Necrosis of the Liver. *Proc. Soc. Clin. Research 27*, 15(1954).

C 378 Isotope Studies in Neuromuscular Disease. I. Radioactive Potassium. W. H. Blahd, F. K. Bauer, R. L. Libby and A. S. Rose. *Proc. Am. Neurol. Assoc.*(1954).

C 379 Metabolisme du fer au cours des cirrhoses bronzees. M. Polonovski, G. Schapira et J. C. Dreyfus. *Semaine Hôpitaux de Paris (Arch. de la Societe de Biologie Medicale) 30*, 150(1954).

C 380 Radioactive Isotopes in the Study of Peripheral Vascular Disease. III. Further Studies on the Circulation Index with an Evaluation of the Diagnostic and Therapeutic Value of Priscoline. M. T. Friedell. *Arch. Internal Med. 85*, 667(1950).

C 381 Recherches sur l'anemie des leucoses aigues I.—Metabolisme du fer dans la leucose aigue etudie a l'aide du Fer–59. G. Schapira, M. Tubiana, J. C. Dreyfus. J. Kruh, M. Boison et J. Bernard. *Rev. d'Hematol.* 9, 3(1954)

C 382 Studies of Butazolidin and Butapyrin in Patients with Rheumatic Diseases. E. C. Kidd, K C. Boyce and R. H. Freyberg. *Ann. Rheumatic Diseases 11*, 297–300(1952).

C 383 The Use of Tritium and Radiocarbon Labeled Precursors to Study the Metabolism of Steroid Hormones in Man. *46th. Ann. Meeting, Am. Soc. Clin. Invest.*, 43(1954).

C 384 The Use of Radioactive Iodinated Human Serum Albumin (RIHSA) for Clinical Total Blood Volume Studies. J. B. Aust, S. N. Chou, J. F. Marvin, E. L. Brackney and G E. Moore. *Surg. Forum Proc. 37th Congr. Am. Coll. Surgeons* (1952).

C 385 Biological Studies on Stable and Radioactive Rare Earth Compounds. III. Distribution of Radioactive Yttrium in Normal and Ascites-Tumor-Bearing Mice, and in Cancer Patients with Serous Effusions. R. Lewin, H. E. Hart, J. Greenberg, H. Spencer, K. G. Stern, and D. Laszlo. *J Natl. Cancer Inst. 15*, 131–43(1954).

C 386 C–14 Isoniazid Concentration in Normal and Tuberculous Tissues. R. W. Manthei, L. J. Roth, W. R. Barclay, and R. H. Ebert. *J. Pharmacol. Exptl. Therap. 12*, 537(1953).

C 387 Changes in Body Potassium in Hepatic Decompensation. B. A. Burrows and J. Denton. *Clin. Research Proc. 1*, 111(1953).

C 388 Clinical Applications of Hepatic Radioactivity Surveys. L. A. Stirrett and E. T. Yuhl. *Am. J. Gastroenterol. 21*, 310(1954).

C 389 Distribution and Mode of Action of Lanthanum in Cancer Patients and in Tumor-Bearing Mice. R. Lewin, H. Spencer, K. G. Stern, and D. Laszlo. *Proc. Am. Assoc. Cancer Research 1*, No. 1, April(1953).

C 390 Distribution of Yttrium 90 upon Systemic and Intracavitary Administration and Its Modification by Chelating Agents. R. Lewin, H. E. Hart, J. Greenberg, H. Spencer, K. G. Stern, and D. Laszlo. *Proc. 2nd. Conf., Oxford, Radioisotope Conf. 1*, 125–33(1954).

C 391 The Evaluation of Post Transfusion Survival of Erythrocytes by Isotope Tracer Methods. J. F. Ross. *Monograph: Subcommittee on Blood and Related Problems. Natl. Research Council* (1953).

C 392 Exchangeable Potassium Content in Metabolic Disorders. B. A. Burrows, M. M. Ashley and J. H. Sisson. *Clin. Research Proc. 1*, 31(1953).

C 393 Iron Absorption in Normal, Anemic and Hemachromatotic Subjects. R. B. Chodos, J. F. Ross, M. A. Adams, and M. C. O'Brien. *Federation Proc. 11*, 411(1952).

C 394 Modification of the Distribution and Excretion of Radiosotopes by Chelating Agents. H. E. Hart and D. Laszlo. *Science 118, No. 3053*, July(1953).

C 395 Modification of Distribution and Excretion of Radioisotopes by Complexing Agents. H. E. Hart and J. Greenberg. *Proc. Am. Assoc. Cancer Research 1, No. 1*, April(1953).

C 396 New Method for Determination of Gall Bladder Function. L. A. Stirrett and E. T. Yuhl. *Arch. Surg. 68*, 417(1954).

C 397 The Pathologic Physiology of Hematopoiesis and Iron Metabolism in Chronic Myelogenous Leukemia before and after Radiophosphorus Therapy. M. Pollycove, L. Apt, and J. F. Ross. *Clin. Research Proc. 2*, 58(1954).

C 398 La pérmeabilities du placenta aux globules sanguins. J. Dankmeyer et C. B. Heyn. *J. Suisse Med. 80, annee, No. 45*, 1217(1950).

C 399 Physiopathologie de l'anémie des leucoses aigues. M. Tubiana, Leprat, J. Kruh, Mathe, et J. Bernard. *Bull. et Mém. Soc. Med. Hôpitaux de Paris 68*, 973(1952).

C 400 A Radioiodine Tracer Study of the Survival of Thyroid Autotransplants in Man. D. E. Szilagyi, J. L. Barrett, E. E. Lonabaugh, and L. E. Preuss. *Am. Assoc. Study Goiter 12*, 10(1954).

C 401 The Range of Usefulness of Photographic Film in Roentgen Dosimetry. G. J. Hine. *Am. J. Roentgenol. Radium Therapy Nuclear Med. 72*, 293(1954).

C 402 The Relationship of Thyroid Hormone Utilization to Its Serum Level. B. A. Burrows. *J. Clin. Invest. 32*, 558–9(1953).

C 403 The Simultaneous Determination of Radiosodium, Radiopotassium and Radiosulphate Spaces. B. A. Burrows, G. J. Hine and J. F. Ross. *Clin. Research Proc. 2*, 81(1954).

C 404 Studies on the Localization of Radioactively Labeled Specific Gamma Globulin in Skin Homotransplantation. W. Gaudino. *N. Y. Acad. Sci. 59, Art. 3*. 361–5(1955).

C 405 Studies on EDTA Treatment of Internal Radioactive Contamination. S. H. Cohn, J. K. Gong, et al. *Nucleonics 11, No. 1*, 56–61(1953).

C 406 Studies in Steroid Metabolism. XXVI. Steroid Isolation Studies in Human Leukemia. K. Dobriner, A. Kappas and T. F. Gallagher. *J. Clin. Invest. 33*, 1481–6(1954).

C 407 Correlation of B. M. R., P. B. I. and Radioiodine Uptake in the Assessment of Thyroid Function. K. L. Bhattacharya, K. P. Chakraborty, A. Bose and N. N. Das Gupta. *J. Indian Med. Assoc. 24*, 1(1954).

Human Physiology

D 1 Absorption of Radioiron from Foods. C. V. Moore and R. Dubach. *Science 116*, 527(1952).

D 2 Absorption of Radioiron from Iron Enriched Bread. R. Steinkamp, R. Dubach, and C. V. Moore. *Federation Proc. 13, No. 1*, 479(1954).

D 3 Appearance of Protein Tagged with Radioactive Iodine in Thoracic Duct Lymph. H. Krieger, W. D. Holden, C. A. Hubay, M. W. Scott, J. P. Storaasli, and H. L. Friedell. *Proc. Soc. Exptl. Biol. Med. 73*, 124(1950).

D 4 Artifactual Differences in the Distribution of T-1824 and I131-Labeled Albumin Resulting from Mixing Prior to Administration. N. Freinkel, G. E. Schreiner, J. W. Athens, C. W. Hiatt, and S. Breese. *J. Lab. Clin. Med. 43*, 215–26(1954).

D 5 Ascitic Fluid and Plasma Protein Exchange. Studies with Radioiodinated Human Serum Albumin. F. K. Bauer, W. H. Blahd, and M. Fields. *J. Clin. Invest. 32*, 553(1953).

D 6 Biogenesis of Androgens in the Human Testis. K. Savard, R. L. Dorfman, and E. Poutasse. *J. Clin. Endrocrinol. Metabolism 12*, 935(1952).

D 7 The Blood Volume in Pregnancy as Determined by P32 Labeled Red Blood Cells. N. I. Berlin, C. Goetsch, G. M. Hyde, and R. J. Parsons. *Surg. Gynecol. Obstet. 97*, 173–6(1953).

D 8 Body Sodium and Potassium. I. Simultaneous Measurement of Exchangeable Sodium and Potassium in Man by Isotope Dilution. A. H. James, L. Brooks, I. S. Edelman, J. M. Olney,

and F. D. Moore. *Metabolism, Clin. Exptl. 3*, 313–23(1954).

D 9 Body Sodium and Potassium. II. A Comparison of Metabolic Balance and Isotope Dilution Methods of Study. G. M. Wilson, J. M. Olney, L. Brooks, J. A. Myrden, M. R. Ball, and F. D. Moore. *Metabolism, Clin. Exptl. 3*, 324–33 (1954).

D 10 Body Sodium and Potassium. III. Interrelated Trends in Alimentary, Renal and Cardiovascular Disease; Lack of Correlation between Body Stores and Plasma Concentration. F. D. Moore, I. S. Edelman, J. M. Olney, A. H. James, L. Brooks, and G. M. Wilson. *Metabolism, Clin. Exptl. 3*, 334–48 (1954).

D 11 Cerebral Blood Flow and Oxygen Consumption in Hyperthyroidism before and after Treatment. L. Sokoloff, R. L. Wechsler, R. Mangold, K. Balls, and S. S. Kety. *J. Clin. Invest. 32*, 202–8(1953).

D 12 Circulating Red Cell Volume and Corporeal Specific Gravity. R. L. Huff and D. D. Feller. *Federation Proc. 13, No. 1*, 73(1954).

D 13 A Comparison of the Metabolism of Rb–86 and K–42 Following Simultaneous Injection into Man. M. P. Tyor, and J. S. Eldridge. *J. Clin. Invest. 33*, 969(1954).

D 14 Consistency of Clearance of Radioactive Sodium from Human Muscle. L. R. Wisham, R. S. Yalow, and A. J. Freund. *Am. Heart J. 41*, 810(1951).

D 15 Content of, and Incorporation of P–32 into, the Nucleic Acids of the Liver, Spleen, and Lymphosarcomatous Tissue of Man. K. M. Stevens. *Cancer 5*, 122–5(1952).

D 16 Determination Sodium 24 "Space" in Infants, Children and Adults. A. Perley, G. B. Forbes, and M. M. Pennoyer. *J. Pediat. 38*, 299–305 (1951).

D 17 The Determination of Total Body Water in the Human Subject by Deuterium Oxide Dilution. P. R. Schloerb, B. J. Friis-Hansen, I. S. Edelman, A. K. Solomon, and F. D. Moore. *J. Clin. Invest. 29*, 1296(1950).

D 18 The D_2O Dilution Space as a Measure of Total Body Water and the Relation of Body Water to Body Size. J. D. Hardy and D. L. Drabkin. *Am. J. Med. Sci. 219*, 108–19(1950).

D 19 The Disposal of I–131-Labeled Thyroxine in Myxedema, Euthyroidism, and Artificial Hyperthyroidism. P. C. Johnson. *J. Lab. Clin. Med. 40*, 815–6(1952).

D 20 Distribution and Fate of Intravenously Administered Modified Human Globin and Its Effect on Blood Volume. Studies Utilizing I–131 Tagged Globin. S. A. Berson, R. S. Yalow, J. Post, L. H. Wisham, K. N. Newerly, M. J. Villazon and O. N. Vazquez. *J. Clin. Invest. 32*, 22–32(1953).

D 21 The Distribution of I–131 Labeled Human Serum Albumin Introduced into Ascitic Fluid: Analysis of the Kinetics of a Three Compartment Catenary Transfer System in Man and Speculations on Possible Sites of Degradation. S. A. Berson and R. S. Yalow. *J. Clin. Invest. 33*, 377–87(1954).

D 22 Distribution of Radioiodine in Erythrocytes and Plasma of Man. J. E. Rall, M. H. Power and A. Albert. *Proc. Soc. Exptl. Biol. Med. 74*, 460–1 (1950).

D 23 Distribution of Radioiodide in Man. N. B. Myant, B. D. Corbett, A. J. Honour and E. E. Pochin. *Clin. Sci. 9*, 405(1949).

D 24 Dynamic Aspects of Carbon Dioxide and Urea Metabolism in the Human Studied with Radioactive Carbon. L. Hellman and M. L. Eidinoff. *J. Clin. Invest. 31*, 638(1952).

D 25 The Effect of ACTH and Adrenal Steroids on K Transport in Human Erythrocytes. D. H. P. Streeten and A. K. Solomon. *J. Gen. Physiol. 37*, 643–61(1954).

D 26 The Effect of Chelating Agents Upon the Metabolism of Stable and Radio-Metals. J. Greenberg, H. E. Hart, R. Lewin, H. Spencer, K. G. Stern, and D. Laszlo. *J. Clin. Invest. 33*, 938(1954).

D 27 The Effect of Cortisone and Corticotropin on the Biologic Decay of Thyroidal Radioiodine. A. Albert, A. Tenney, and E. Ford. *Endocrinology 50*, 324(1952).

D 28 The Effect of Hypophysectomy on the Renal Clearance of I–131. A. Albert, A. Tenney and N. Lorenz. *Endocrinology 50*, 327–30(1952).

D 29 Effect of Massage on Muscle Temperature and Radiosodium Clearance. A. Ebel and L. H. Wisham. *Arch. Phys. Med. 33*, 399–405(1952).

D 30 Effect of Phytates on Ca–45 Absorption in Children on Breakfasts of Moderate Calcium content. C. J. Maletskos, F. Bronner, and R. S. Harris. *Federation Proc. 12*, 472(1953).

D 31 Effect of Phytates on Ca–45 Absorption in Children on Low Calcium Breakfasts. F. Bronner and R. S. Harris. *Federation Proc. 12*, 472(1953).

D 32 The Effect of Priscoline, Papaverine and Nicotinic Acid on Blood Flow in the Lower Extrimity of Man. R. A. Murphy, J. N. McClure, F. W. Cooper, and L. G. Crowley. *Surgery 27*, 655–63(1950).

D 33 The Effect of Propylthiouracil on the Thyroid Uptake of I–131 and the Plasma Conversion Ratio in Hyperthyroidism. A. L. Schultz and W. E. Jacobson. *J. Clin. Endocrinol. Metabolism 12*, 1205–14(1952).

D 34 Effect of Sickling on Sodium and Cesium Transport. D. C. Tosteson and E. T. Dunham. *Federation Proc. 13. No. 1*, 523(1954).

D 35 Effect of Stress, TSH and ACTH on the Level of Hormonal I–131 of Serum. R. A. Shipley and F. H. MacIntyre. *J. Clin. Endocrinol. Metabolism 14*, 309–17(1954).

D 36 The Effect of Temperature Upon the Uptake of Radioactive Phosphate by Human Erythrocytes *in Vitro*. D. R. H. Gourley and C. L. Gemmill. *J. Cellular Comp. Physiol. 35*, 341–52(1950).

D 37 Effects on Human Subjects of Intravenous Fat Emulsions of High Caloric Potency. B. G. P. Shafiroff and J. H. MulHolland. *Ann. Surg. 133*, 145–52(1951).

D 38 Elimination of Intravenous Carbon 14 Bicarbonate by Man. D. L. Buchanan. *J. Clin. Invest. 30*, 630–1(1951).

D 39 Endothelial Permeability in Man Studies with Albumin I–131 Injected Intravenously or Intraperitoneally. J. A. Schoenberger, R. M. Kark, G. Kroll and E. Eckert. *J. Clin. Invest. 32*, 601(1953).

D 40 Erythrocyte Carbohydrate Metabolism. I. The Flow of C–14 Glucose Carbon into Lactic Acid, Carbon Dioxide, Cell Polymers, and Carbohydrate Intermediate Pool. G. R. Bartlett and A. A. Marlow. *J. Lab. Clin. Med. 42*, 178–87(1953).

D 41 Erythrocyte Carbohydrate Metabolism. II. Chromatographic Isolation of Monophosphoglycerate, Diphosphoglycerate, and Adenosine Triphosphate and Their Metabolic Turnover with Glucose Carbon. G. R. Bartlett and A. A. Marlow. *J. Lab. Clin. Med. 42*, 188–92(1953).

D 42 Estimation of Total Body Chloride in Young Infants by Radiobromide Dilution. G. B. Forbes, A. Reid, J. Bondurant and J. Etheridge. *Proc. Soc. Exptl. Biol. Med. 83*, 871–2(1953).

D 43 Estimation of Total Body Sodium by Isotopic Dilution. I. Studies on Young Adults. G. B. Forbes and A. Perley. *J. Clin. Invest. 30*, 558(1951).

D 44 Estimation of Trapped Plasma with I–131 Albumin; Critique of Methods. O. N. Vazquez, K. Newerly, R. S. Yalow, and S. A. Berson. *J. Appl. Physiol. 6*, 437–40(1954).

D 45 Estrogen Metabolism in Human Pregnancy; A Study with the Aid of Deuterium. W. H. Pearlman, M. R. J. Pearlman, and A. E. Rakoff. *J. Biol. Chem. 209*, 803–12(1954).

D 46 Exposure of Human Cardiac Muscle to Radioactive Digitoxin *in Vitro*. W. J. Burdette. *Am. Heart J. 46*, 602–6(1953).

D 47 Factors Affecting Hematocrit Determinations: Trapped Plasma, Its Amount and Distribution. C. J. Hlad, Jr., and J. H. Holmes. *J. Appl. Physiol. 5*, 457–70(1953).

D 48 The Fate of P32 Labeled Diisopropylfluorophosphonate in the Human Body and its Use as a Labelling Agent in the Study of the Turnover of Blood Plasma and Red Cells. J. A. Cohen and M. G. P. J. Warringa. *J. Clin. Invest. 33*, 459–67(1954).

D 49 The Fate of Testosterone Infused Intravenously in Man. D. K. Fukushima, H. L. Bradlow, K. Dobriner and T. F. Gallagher. *J. Biol. Chem. 206*, 863–74(1954).

D 50 Formation, Flow, and Reabsorption of Cerebrospinal Fluid in Man. W. H. Sweet and H. B. Locksley. *Proc. Soc. Exptl. Biol. Med. 84*, 397–402(1953).

D 51 Glycolysis and Phosphate Turnover in the Human Erythrocyte. D. R. H. Gourley. *Arch. Biochem. and Biophys. 40*, 13–9(1952).

D 52 An Improved Method for the Determination of Blood Volume Using Radioactive Iodinated Human Serum Albumen. J. R. Erickson, J. B. McCormick and L. Seed. *Science 118*, 595–6(1953).

D 53 Intracavitary Visceral Radiation: Effect on Gastric Acid Secretion. J. B. R. McKendry. *Proc. Soc. Exptl. Biol. Med. 75*, 25–7(1950).

D 54 Intravascular Distribution of Na24 Injected Intravenously in Man. L. Bakay, B. Selverstone and W. H. Sweet. *J. Lab. Clin. Med. 38*, 893–903(1951).

D 55 Inverse Relationship Between Intake and Utilization of Vitamin B12 in the Intestine. G. B. J. Glass, L. J. Boyd, and L. Stephanson. *Federation Proc. 13, No. 1*, 54(1954).

D 56 K Transport in Human Erythrocytes: Evidence for a Rapidly Exchanging K Component. A. K. Solomon and G. L. Gold. *Federation Proc. 13, No. 1*, 142(1954).

D 57 The Measurement of Exchangeable Sodium in Man Using the Isotope Na–24. H. Miller and G. M. Wilson. *Clin. Sci. 12*, 97(1953).

D 58 Measurement of Hepatic Circulation by Clearance of Radioactive Sodium in Man. R. L. Wechsler, L. Sokoloff, and S. S. Kety. *Federation Proc. 9*, 133(1950).

D 59 Measurement of Rate of Gastric Emptying in Man as Determined by Clearance of a Radioactive Colloid (AgI–131): Normal Values, Effect of Urecholine Chloride and Morphine Sulfate. R. L. Wechsler and J. L. A. Roth. *Federation Proc. 13, No. 1*, 161–2(1954).

D 60 The Metabolic Effects of Compound F Acetate in Man. A. S. Relman and W. B. Schwartz. *J. Clin. Invest. 31*, 656–7(1952).

D 61 The Metabolic Fate of Radioactive Carbon Labeled Acetate and Glycine in Humans. L. Hellman, W. Peacock, M. Eidinoff, R. Rosenfeld, and T. Gallagher. *J. Clin. Invest. 30*, 648(1951).

D 62 Metabolic Fate of Radioactive Carbon Labeled Glycine and Acetate in Humans. L. Hellman, W. Peacock, M. Eidinoff, R. Rosenfeld, T. Gallagher, and K. Dobriner. *Proc. Isotopes Techniques Conference, Oxford, July 1951, 1, Medical & Physiological Application, London, H. M. Stationery Office*, 299(1953).

D 63 Metabolic and Renal Studies in Chronic Potassium Depletion Resulting from Overuse of Laxatives. W. B. Schwartz and A. S. Relman. *J. Clin. Invest. 32*, 258–71(1953).

D 64 The Metabolism of C–14 Labeled Ethylenediaminetetra-Acetic Acid in Human Beings. H.

Foreman and T. T. Trujillo. *J. Lab. Clin. Med. 43*, 566–71(1954).

D 65 Metabolism of C-14 Labeled Glucose in Normal and Diabetic Humans. W. W. Shreeve, N. Baker, G. Incefy, R. A. Shipley, M. Miller, and J. Craig. *Federation Proc. 13, No. 1*, 137(1954).

D 66 Metabolism and Excretion of Intravenously Administered 4-C^{14}-17-Hydroxycorticosterone. J. E. Plager, F. H. Tyler, H. H. Hecht, and L. T. Samuels. *J. Clin. Endocrinol. Metabolism 14*, 780(1945).

D 67 The Metabolism of Intravenously Infused C-14 Labeled Cholesterol in Man. G. S. Kurland, J. L. Lucas, and A. S. Freedberg. *J. Clin. Invest. 33*, 950(1954).

D 68 Metabolism and Removal of Ca-45 in Man. J. Bellin and D. Laszlo. *Science 117*, 331–4 (1953).

D 69 Observations on the Absorption of Iron from Foods Tagged with Radioiron. C. V. Moore and R. Dubach. *Trans. Assoc. Am. Physicians 64*, 245–56(1951).

D 70 Oxidative Esterification of Phosphate by Neural Tissue. L. G. Abood and R. W. Gerard. *Am. J. Physiol. 168*, 739–41(1952).

D 71 Pathological Effects and Radioautographic Localization of I131 in Humans; Postmortem Studies in Nine Patients. J. T. Godwin, B. J. Duffy, Jr., P. J. Fitzgerald, J. B. Trunnell, and R. W. Rawson. *Cancer 4*, 936–51(1951).

D 72 The Permeability of the Human Erythrocyte to Sodium and Potassium. A. K. Solomon. *J. Gen. Physiol. 36*, 57–110(1952).

D 73 Phosphate Ion Uptake by Human Red Cells. D. R. H. Gourley. *Virginia J. Sci. 5*, (New Series), 20–5(1954).

D 74 Phospholipid Turnover in Man. H. W. Moser. *J. Clin. Invest. 31*, 651(1952).

D 75 Phospholipide Metabolism in Human Liver Disease. W. E. Cornatzer *Phosphorous Metabolism 2*, 24–5(1952).

D 76 P-32 Entry Into the Nervous System from a Constant Plasma Level. R. D. Tschirgi, J. L. Taylor, and E. R. John. *Am. J. Physiol. 167*, 832–3(1951).

D 77 Potassium Deficiency in Man. W. H. Blahd and S. H. Bassett. *Metabolism, Clin. Exptl. 2*, 218–24(1953).

D 78 Potassium Imbalance. G. H. Mudge. *Bull. N. Y. Acad. Med. 29*, 846–64(1953).

D 79 Progesterone from Human Pregnancy Plasma. H. Salhanick, J. Jones, N. Merrill, and L. Neal. *Federation Proc. 13, No. 1*, 401(1954).

D 80 Proof of the Early Utilization of Fat Administered Intravenously into Human Subjects. B. G. P. Shafiroff, J. H. MulHolland, and J. Baker. *Exptl. Med. Surg. 9*, 184–8(1951).

D 81 Quantitative Measurement of Regional Circulation by the Clearance of Radioactive Sodium. S. S. Kety. *Am. J. Med. Sci. 215*, 352(1948).

D 82 Radioactive Estrogens in Humans. C. T. Beer, K. Dobriner, M. L. Eidinoff, and T. F. Gallagher. *Federation Proc. 12*, 176(1953).

D 83 Radioactive Iodide Uptake of Normal Newborn Infants. L. Van Middlesworth. *Am. J. Diseases Children 88*, 439–42(1954).

D 84 Radioactive Sodium (Na24) in the Measurement of Local Blood Flow. R. Semple, L. McDonald, and R. P. Ekins. *Am. Heart J. 41*, 803–9(1951).

D 85 Radioactive Zinc Metabolism in Patients with Neoplastic Diseases. F. G. Ebaugh and J. F. Ross. *Federation Proc. 11*, 413(1952).

D 86 Radio-Iodine Excretion in the Aged. P. G. Ackerman and K. Iversen. *J. Gerontol. 8*, 458–64(1953).

D 87 Rapid Diffuse Penetration of Intact Enamel and Dentin by Carbon 14 Labeled Urea. W. W. Wainwright and F. A. Lemoine. *J. Am. Dental Assoc. 41*, 135–45(1950).

D 88 The Rate of Transfer of Phosphorus Across the Red Blood Cell Membrane. C. B. Mueller and A. B. Hastings. *J. Biol. Chem. 189*, 869–79(1951).

D 89 The Rates of Synthesis of Fatty Acids and Cholesterol in the Adult Rat Studied with Aid of Labeled Acetic Acid. A. Pihl, K. Bloch, and H. S. Anker. *J. Biol. Chem. 183*, 441(1950).

D 90 The Relationship Between Changes in Thyroidal I131 Uptake and Serum Protein-Bound Iodine Following Thyrotropin. R. P. Levy, L. W. Kelly, Jr., and W. McK. Jefferies. *J. Clin. Invest. 33*, 953–4(1954).

D 91 Recent Advances in Nutrition and Metabolism. 1. Review of the Literature on General Nutrition and Protein and Mineral Metabolism, 1952. C. S. Davidson. *Arch. Internal Med. 94*, 460–76,(1954).

D 92 The Role of Adenosine Triphosphate in the Transport of Phosphate in the Human Erythrocyte. D. R. H. Gourley. *Arch. Biochem. and Biophys. 40*, 1–12(1952).

D 93 Role of Calcium in the Reaction between Thromboplastin and Stable Factor. R. W. Coon, W. B. Stewart, and J. E. Flynn. *Federation Proc. 13, No. 1*, 426(1954).

D 94 Salivary and Pulpal Contributions to the Radiophosphorus Uptake in Enamel and Dentin. R. F. Sognnaes and J. H. Shaw. *J. Am. Dental Assoc. 44*, 489–505(1952).

D 95 Some Factors Affecting the Clearance of Na-24 from Human Muscle. L. H. Wisham and R. S. Yalow. *Am. Heart J. 43*, 67–76(1952).

D 96 Studies in Glycine-2-C-14 Metabolism in Man. I. The Pulmonary Excretion of $C14O_2$. N. I. Berlin, B. M. Tolbert and J. H. Lawrence. *J. Clin. Invest. 30*, 73–6(1951).

D 97 Studies in Glycine-2-C-14 Metabolism in Man. II. Tissue Distribution. N. I. Berlin, B. M. Tolbert, and C. Lotz. *J. Clin. Invest. 31*, 335–7(1952).

D 98 Studies of Human Peripheral Blood Flow: The Effect of Injection Volume on the Intramuscular Radiosodium Clearance Rate. G. F. Warner, E. L. Dobson, N. Pace, M. E. Johnston, and C. R. Finney. *Circulation 8*, 732–4(1953).

D 99 Studies with Testosterone-d in Normal Men. D. K. Fukushima, K. Dobriner and T. F. Gallagher. *J. Biol. Chem. 206*, 845–61(1954).

D 100 A Study of the Minimum Calcium Requirements of Adult Man. D. M. Hegsted, I. Moscoso, and C. Collozos. *J. Nutrition 46*, 181(1952).

D 101 A Study of the Rate of Protein Synthesis in Humans. II. Measurement of the Metabolic Pool and the Rate of Protein Synthesis. A. S. Pietro and D. Rittenberg. *J. Biol. Chem. 201*, 457–73(1953).

D 102 Test for Intrinsic Factor Activity: Measurement of Hepatic Uptake of Ingested Radioactive Vitamin B–12. G. B. J. Glass, L. J. Boyd, G. A. Gellin, and F. Stephanson. *Federation Proc. 13, No. 1*, 54–5(1954).

D 103 Thyroid Function in Normal and Pathological States as Revealed by Radioactive Iodine Studies. I. Thyroid I–131 Uptake and Turnover in Euthyroid, Hyperthyroid and Hypothyroid Subjects. A. S. Freedberg, D. L. Chamovitz, and G. S. Kurland. *Metabolism 1*, 26(1952).

D 104 Tissue Localization and Excretion Routes of Radioactive Diethylstilbestrol. G. H. Twombly. *Unio Intern. Contra Cancrum 7*, 882–88 (1952).

D 105 The Total Body Water and the Water Turnover in Pregnancy Studied with Deuterium Oxide as Isotopic Tracer. D. L. Hutchinson, A. A. Plentl, and H. C. Taylor, Jr. *J. Clin. Invest. 33*, 235–41(1954).

D 106 Tracer Experiments with I–131 Labeled Human Serum Albumin: Distribution and Degradation Studies. S. A. Berson, R. S. Yalow, S. S. Schreiber, and J. Post. *J. Clim. Invest. 32*, 746–68(1953).

D 107 Transmission of Radioiodine (I–131) to Infants through Human Maternal Milk. C. E. Nurnberger and A. Lipscomb. *J. Am. Med. Assoc. 150*, 1398–400(1952).

D 108 Transport of Radioactive Sodium Across the Synovial Membrane of Normal Human Subjects. R. F. Jacox, M. K. Johnson, and R. Koontz. *Proc. Soc. Exptl. Biol. Med. 80*, 655–7(1952).

D 109 Utilization of C14-Acetate for Cholesterol and Steroid Hormone Synthesis in the Human. L. Hellman, R. R. Rosenfeld, D. K. Fukushima, T. F. Gallagher, and K. Dobriner. *J. Clin. Endocrinol. Metabolism 12*, 934–5(1952).

D 110 The Volume of Distribution of Insulin, Antipyrine and Radiosodium During Normal and Toxemic Pregnancy and During the Puerperium. C. Lambiotte-Escoffier, D. B. Moore, and H. C. Taylor, Jr., *Am. J. Obstet. Gynecol. 66*, 18(1953).

D 111 Volume of Distribution of Radiosulfate as a Measure of the Extracellular Fluid. M. Walser. *Proc. Soc. Exptl. Biol. Med. 79*, 372(1952).

D 112 Water Exchanges and Barriers as Studied by the Use of Hydrogen Isotopes. E. A. Pinson. *Physiol. Revs. 32*, 123–4(1952).

D 113 Absorption of Phospholipides Manner of Transport from Intestinal Lumen to Lacteals. B. Bloom, J. Y. Kiyasu, W. O. Reinhardt, and I. Chaikoff. *Am. J. Physiol. 177*, 84(1954).

D 114 Blood Volume in Health and Disease. S. A. Berson. *Bull. N. Y. Acad. Med. 30*, 750–76-(1954).

D 115 C14 Studies in Carbohydrate Metabolism. I. The Oxidation of Glucose in Normal Human Subjects. N. Baker, W. W. Shreeve, R. A. Shipley, G. E. Incefy, and M. Miller. *J. Biol. Chem.* 211(1954).

D 116 Changes in Blood Volume in the Neonatal Period. G. Fashena, H. H. Bates, and A. F. Reid. *Am. J. Diseases Children 80*, 510–1(1950).

D 117 Disturbances in the Reticulo-Endothelial System Following Thermal Injury. G. F. Warner and E. L. Dobson. *Am. J. Physiol. 179*, 93–8(1954).

D 118 Effect of Temperature on Uptake of Radioactive Phosphate by Human Erythrocytes. D. R. H. Gourley and C. L. Gemmill. *Federation Proc. 9*, 277(1950).

D 119 Evidence for Heterogeneity in Desoxyribonucleic Acid Metabolism. A. Bendich and P. J. Russell, Jr. *Federation Proc. 12*, 176–7 (1953).

D 120 Exchange of Albumin Between Plasma and Cerebrospinal Fluid. R. A. Fisherman. *Am. J. Physiol. 175*, 96(1953).

D 121 Exchangeable Potassium Content of Normal Women. J. K. Aikawa, G. T. Harrell, and B. Eisenberg. *Am. J. Med. 13*, 640(1952).

D 122 Fat, Water and Lean Tissue Studies. W. E. Siri. *Federation Proc. 12*, 133(1953).

D 123 Hydrolysis of the Metabolites of Cortisone in Humans. H. L. Bradlow, T. H. Kritchevsky, E. R. Katzenellenbogen, K. Dobriner, and T. F. Gallagher. *Federation Proc. 12*, 181(1953).

D 124 Iron Absorption in Premature and Full-Term Infants. L. Oettinger, Jr., W. B. Mills, and P. F. Hahn. *J. Pediat. 45*, 302–6(1954).

D 125 Iron Metabolism. Pathophysiology of Iron Storage. C. A. Finch, M. Hegsted, T. D. Kinney, E. D. Thomas, C. E. Rath, D. Haskins, S. Finch, and R. G. Fluharty. *Blood 5*, 983–1008 (1950).

D 126 Kinetics of Phosphate Transport in Erythrocyte. D. R. H. Gourley and J. T. Matschiner. *Federation Proc. 11*, 57(1952).

D 127 The Major Pathways of Steroid Metabolism in Man. L. Hellman, R. Rosenfeld, D. Fukushima, M. Eidinoff, A. Brunschwig, and T. Gallagher. *J. Clin. Invest. 32*, 557–8(1953).

D 128 Metabolism of the Androgens. W. H. Elliott, J. Ashmore, and P. M. Hyde. *Science 116*, 520(1952).

D 129 The Number and Distribution of Human Hemic Cells. E. E. Osgood. *Blood 9*, 1141(1954).

D 130 Observations on the Venous Circulation Time in the Lower Extremities. O. Creech, Jr., P. F. Paulsen, F. J. Kelly, and M. E. DeBakey. *Surg. Forum, W. B. Saunders Co., Phila.*(1953).

D 131 Phosphate Turnover in the Human Erythrocyte. D. R. H. Gourley. *Federation Proc. 10*, 300 (1951).

D 132 The Presence of Aspirin in Human Plasma after Oral Administration. H G. Mandel, N. M. Cambosos, and P. K. Smith. *J. Pharmacol. Exptl. Therap. 112*, 495–500(1954)

D 133 Properties of a Red Cell Metabolism Regulator. A. F. Reid and E. B. Ryan. *Federation Proc. 9*, 218(1950).

D 134 Rate of Absorption of Water from Stomach and Small Bowel of Human Beings. J. F. Scholer and C. F. Code. *Gastroenterology 27*, 565–77 (1954).

D 135 Rate of Exchange of Sodium and Potassium Between Amniotic Fluid and Maternal System. E. D. Neslon, C. E. Hunter, and A. A. Plentl. *Proc. Exptl. Biol. Med. 86*, 432–5(1954).

D 136 The Rates of Formation of Serum Proteins in Man. I. M. London. *Symposium on Plasma Proteins, Chicago 3*(1950).

D 137 Red Cell Life Span in Acclimitization to Altitude. C. Reynafarje, N. I. Berlin, and J. H. Lawrence. *Proc. Soc. Exptl. Biol. Med. 87*, 101–2(1954).

D 138 Regeneration of Human Thyroid After So-called Total Thyroidectomy. J. V. Goode, A. Grollman, and A. F. Reid. *Ann. Surg. 34*, 541–5 (1951).

D 139 Removal Rate of Radiosodium (Na^{24}) from Human Orbit in Graves' Disease and in Health. S. C. Werner. *Arch. Ophthalmol. 52*, 85–90 (1954).

D 140 Source of the Bicarbonate of Saliva. H. F. Sand. *J. Appl. Physiol. 4*, 66–76(1951).

D 141 Studies on the Process of Phosphate Uptake by Human Erythrocytes. D. R. H. Gourley. *Virginia J. Sci. 1*, 388–9(1950).

D 142 A Study of the Phosphate Turnover in the Human Erythrocyte. D. R. H. Gourley. *Virginia J. Sci. 2*, 355(1951).

D 143 Transcapillary Exchange Rates of Deuterium Oxide and Thiocyanate in the Forearm of Man. E. D. Freis, T. F. Higgins, and H. J. Morowitz. *J. Appl. Physiol. 5*, 526–32(1953).

D 144 Transcapillary Migration of Heavy Water and Thiocyanate Ion in the Pulmonary Circulation of Normal Subjects and Patients with Congestive Heart Failure. L. S. Lilienfield, E. D. Freis, E. A. Partenope, and H. J. Morowitz. *J. Clin. Invest. 34*, 1–8(1955).

D 145 The Turnover of Body Fat in Obesity Resulting from Hypothalamic Injury Studied with the Aid of Deuterium. H. Mankin, A. F. Stevenson, J. R. Brobeck, C. N. H. Long, and S. DeWitt, Jr. *Endocrinology 47*, 443(1950).

D 146 Urinary Steroids After Testosterone and Progesterone in Humans. D. K. Fukushima, M. E. Stokem, H. L. Bradlow, T. H. Kritchevsky, L. Hellman, K. Dobriner, and T. F. Gallagher. *Federation Proc. 12*, 206–7(1953.

D 147 Utilization of Purines for Nucleic Acid Synthesis in Man. L. Hamilton. *Nature 172*, 457(1953).

D 148 The Effect of Thyrotropin on the Release of Hormone From the Human Thyroid. R. E. Goldsmith, J. B. Stanbury, and G. L. Brownell. *J. Clin. Endocrinol. 11*, 1079–94(1951).

D 149 Estrone Conversion Capacity of Blood of Postmenopausal Women with Carcinoma of the Breast. N. T. Werthessen, E. Schwenk, C. F. Baker, and N. S. Field. *Cancer Research 10*, 679–80(1950).

D 150 Excretion of Carbon-14 by Man after Administration of Morphine-N-Methyl-C14. H. W. Elliott, B. M. Tolbert, T. K. Adler, and H. H. Anderson. *Proc. Soc. Exptl. Biol. Med. 85*, 77–81(1954).

D 151 The Metabolism of $N\text{-}C^{14}H_3$ Labeled Meperidine. N. P. Plotnikoff, H. W. Elliott, and E. L. Way. *J. Pharmacol. Exptl. Therap. 104*, 377–86 (1952).

D 152 Phases initiales de l'hemoglobino-pollésé étudiées à l'aide du fer radioactif. J. C. Dreyfus, G. Schapira, et J. Kruh. *Compt. rend. soc. biol. 147*, 782(1953).

D 153 Synthèse des hemoglobines humaines marquees *in vivo* (hommes normaux et atteints de leucèmie aigüe) et *in Vitro*. G. Schapira, C. J. Dreyfus, et J. Kruh. *Compt. rend, soc. biol. 147*, 780 (1953).

D 154 Accumulation of Astatine 211 by Thyroid Gland of Man. J. G. Hamilton, P. W. Durbin, and M. W. Parrott. *Proc. Soc. Exptl. Biol. Med. 86*, 366–9(1954).

D 155 Effect of Parathyroid Extract on Renal Functions. P. Handler and D. V. Cohn. *Am. J. Physiol. 169*, 188(1952).

D 156 The Effect of Phytate and other Food Factors on Iron Absorption. L. M. Sharpe, W. C. Peacock, R. Cooke, and R. S. Harris. *J. Nutrition 41*, 433–46(1950).

D 157 Incorporation of Acetate-2-14-C into Human Erythrocyte Stroma as a Function of Storage. K. I. Altman and S. N. Swisher. *Nature 174*, 459–60(1954).

D 158 Intestinal Absorption of Vitamin B–12 in Man. G. B. J. Glass, L. J. Boyd and L. Stephanson. *Science 120*, July(1954).

D 159 Investigative Tools in the Study of Calcium Metabolism in Man: Balance Studies, the Calcium Tolerance Test, Radioactive Calcium and Complexing Agents. A. Schilling and D. Laszlo. *Oral Surg., Oral Med., Oral Pathol. 6*, 139–46 (1953).

D 160 Metabolism and Removal of Radio-Calcium in Man. J. Bellin, A. Hausinger, H. Spencer and

D. Laszlo. *Proc. Am. Assoc. Cancer Research 1, No. 1*, April(1953).

D 161 Nicotinamide Mononucleotide Synthesis in Hemolysates. J. Preiss and M. Tabachnick. *Federation Proc. 14*, 265(1955).

D 162 Phosphate Partition and Turnover in Human Red Cells. T. A. J. Prankerd and K. I. Altman. *Nature 173*, 870(1954).

D 163 Physiology of Hyperchloremic Acidosis Following Ureterosigmoidostomy: A Study of Urinary Reabsorption with Radioactive Isotopes. M. Rosenberg. *J. Urol. 70*, 569–80(1953).

D 164 Scintillation Measurements of the Uptake of Radioactive Vitamin B-12 by the Liver in Normal Humans and Patients with Pernicious and Other Macrocytic Anemias. G. B. J. Glass. *Bull. N. Y. Acad. Med. 30*, Sept.(1954).

D 165 Studies in Calcium Metabolism. I. Effect of Food Phytates on Calcium 45 Uptake of Children on Low-Calcium Breakfasts. F. Bronner, R. S. Harris, C. J. Maletskos and C. E. Benda. *Federation Proc. 12*, 472(1953). *J. Nutrition 54*, 523–42(1954).

D 166 Studies in Calcium Metabolism. II. Effect of Food Phytates on Calcium 45 Uptake of Children on Breakfasts of Moderate Calcium Content. C. J. Maletskos, F. Bronner, and R. S. Harris. *Federation Proc. 12*, 472(1953).

D 167 Synthesis of Nicotinamide Mononucleotide by Human Erythrocyte Hemolysates. I. G. Leder and P. Handler. *Phosphorus Metabolism 1*, 421–7(1951).

D 168 The Tissue Utilization of Endogenous Thyroid Hormone in Human Subjects. B. A. Burrows, T. Peters, and J. F. Ross. *J. Clin. Invest. 33*, 921(1954).

D 169 Utilization and Intestinal Excretion of Calcium Man. M. Blau, H. Spencer, J. Swernov, and D. Laszlo. *Science 120*, 1029–31(1954).

General Medical Research

E 1 Absorption of Water from the Upper Part of the Human Gastrointestinal Tract. C. F. Code, J. F. Scholer, N. C. Hightower, Jr., F. K. Dietzler, and E. J. Baldes. *Proc. Staff Meetings Mayo Clinic 29*, 235–40(1954).

E 2 Alterations in the Permeability of Membranes During Infections. G. T. Harrell, Jr., and J. K. Aikawa. *J. Am. Med. Assoc. 147*, 232–8(1951).

E 3 Autonomous Transplantable Pituitary Tumors Arising in Growths Dependent on Absence of the Thyroid Gland. J. Furth, E. L. Gadsden, and W. T. Burnett, Jr. *Proc. Soc. Exptl. Biol. Med. 80*, 4–7(1952).

E 4 Binding of Histamine by Animal Proteins. E. H. Kaplan and J. Davis. *Proc. Soc. Exptl. Biol. Med. 84*, 218–20(1953).

E 5 Biochemical Consideration of Distribution. G. C. Kyker. *Am. J. Med. Sci. 227*, 572–89(1954).

E 6 Biologic Decay Rates of Chloride in Normal and Diseased Man, Determined with Long-Life Radiochlorine, Cl-36. C. T. Ray, G. E. Burch, and S. A. Threefoot. *J. Lab. Clin. Med. 39*, 673–96(1952).

E 7 The Biological Decay Curve of P 32 Tagged Erythrocytes Application to the Study of Acute Changes in Blood Volume. S. A. Berson, R. S. Yalow, A. Azulay, S. Schreiber, and B. Roswit. *J. Clin. Invest. 31*, 581–91(1952).

E 8 Blood Volume in Polycythemia as Determined by P 32 Labeled Red Blood Cells. N. I. Berlin, J. H. Lawrence, and J. Gartland. *Am. J. Med. 9*, 747–51(1950).

E 9 Blood Volume Studies in Normal Humans. L. W. Brady, D. Y. Cooper, M. Colodzin, J. E. McClenathan, E. R. King, and R. Williams. *Surg. Gynecol. Obstet. 97*, 25–32(1953).

E 10 Capsules for Oral Administration of Radioisotopes. R. L. Libby and M. Tubis. *Nucleonics 10, No. 3*, 63–64(1952).

E 11 Changes in Blood Volume following Administration of Dextran-determined by P-32 Labeled Red Cells. L. M. Meyer, N. I. Berlin, G. M. Hyde, R. J. Parsons, and D. Whittington. *Surg. Gynecol. Obstet. 94*, 712–4(1952).

E 12 Chloride Exchange between Human Erythrocytes and Plasma Studied with Cl 36. W. D. Love and G. E. Burch. *Proc. Soc. Exptl. Biol. Med. 82*, 131–3(1953).

E 13 Chloride "Space" and "Mass" Measured with Long-Life Radiochloride, Cl-36, in Intact Man. S. A. Threefoot, G. E. Burch, and C. T. Ray. *J. Clin. Invest. 31*, 666–7 (1952).

E 14 Clearance Rates following Intra-arterial Injection of Radioactive Sodium as a Measure of Regional Blood Flow. E. L. Dobson, G. F. Warner, N. Pace, C. R. Finney, and M. E. Johnston. *Federation Proc. 12*, 33–4 (1953).

E 15 The Clinical Significance of Measurements of Protein-Bound Iodine. F. W. Sunderman and F. W. Sunderman, Jr. *Am. J. Clin. Pathol. 24*, 885–902(1954).

E 16 Comparative Effects of Cobalt 60 and Radium when Implanted Interstitially in the Skin of Rabbits. I. Meschan, A. Nettleship, and E. Kerekes. *Am. J. Roentgenol. Radium Therapy Nuclear Med. 68*, 89–103(1952).

E 17 A Comparison of Potassium 42, Rubidium 86, and Cesium 134 as Tracers of Potassium in the Study of Cation Metabolism of Human Erythrocytes *in Vitro*. W. D. Love and G. E. Burch. *J. Lab. Clin. Med. 41*, 351–6 (1953).

E 18 Comparison of the Thiocyanate and Radiosodium Spaces in Disease States. J. K. Aikawa. *Am. J. Med. Sci. 224*, 632–7(1952).

E 19 Comparisons between Bone Marrow Differentials Prepared from Particles and from Random Samples of Aspirate and Determinations of the Dilution of Aspirate with Peripheral Blood Utilizing Radioactive Phosphorus (P-32). R. S. Fadem and I. Berlin. *Blood 6*, 160–74(1951).

E 20 Concurrent Use of Radioisotopes of Calcium and Phosphorus in the study of the Metabolism of Calcified Tissues. W. D. Armstrong and C. P. Barnum. *J. Biol. Chem. 172*, 199(1948).

E 21 A Continuous Recording Determination of Early Disappearance of Iodinated (I–131) Human Serum Albumin from Circulating Blood. W. H. Pritchard, W. J. MacIntyre, T. W. Moir, and S. R. Inkley. *J. Lab. Clin. Med. 40*, 928(1952).

E 22 Correlation of Changes in Blood and Bone Marrow Resulting from Injection of 0.25μc of Radioactive Phosphorus Per Gram of Body Weight. J. S. Latta, J. L. Vose and R. C. Rosenlof. *Anat. Record 112, Suppl. 119* (1952).

E 23 A Critical Comparison of the T–1824 Dye and Iodinated Albumin Methods for Plasma Volume Measurement. A. L. Schultz, J. F. Hammarsten, B. I. Heller, and R. V. Ebert. *J. Clin. Invest. 32*, 107–12(1953).

E 24 Determination of Cardiac Output by a Continuous Recording System Utilizing Iodinated (I–131) Human Serum Albumin. I. Animal Studies. W. J. MacIntyre, W. H. Pritchard, R. W. Eckstein, and H. L. Friedell. *Circulation 4*, 552–6(1951).

E 25 The Development of a Radioactive Isotope Program in a General Hospital. Part I. Requirements for the Development of a Radioactive Isotope Laboratory. Part 2. Clinical Application of Radioactive Isotopes with Special Reference to Radioactive Iodine (I–131) and Radioactive Phosphorus (P32). L. J. Levinson, E. Siegel, N. J. Furst, and D. Tabowitz. *J. Newark Beth Israel Hosp. Newark, N. J. 11*, 28(1951).

E 26 Distribution of C–14-labeled Digitoxin in Tissues of Cardiac Patients. G. T. Okita and P. J. Talso. *Federation Proc. 12*, 355(1953).

E 27 Distribution of Colloidal Radioactive Chromic Phosphate After Intracavitary Administration. S. W. Root, M. P. Tyor, G. A. Andrews, and R. M. Kniseley. *Radiology 63*, 251–9(1954).

E 28 Distribution of Iodide Between Cells and Plasma as Measured by Means of Radioactive Iodide. C. A. Owen, Jr., and M. H. Power. *J. Biol. Chem. 200*, 111–6(1953).

E 29 The Distribution of Radioactive Iodine in Human Tissues: Necropsy Study in Nine Patients. J. B. Trunnell, B. J. Duffy, Jr., J. T. Godwin, W. Peacock, L. Kirschner, and R. Hill. *J. Clin. Endocrinol. 10*, 1007–21(1950).

E 30 Effect of Butazolidin on I–131 Uptake by the Thyroid Gland II. T. W. Green, W. E. White, E. P. Engelman, and M. A. Krupp. *Proc. Soc. Exptl. Biol. Med. 82*, 155–7(1953).

E 31 Effect of Butazolidin upon the Fate of I–131 in the Rat. K. G. Scott, J. B. Frerichs, and W. A. Reilly. *Proc. Soc. Exptl. Biol. Med. 82*, 150–2(1953).

E 32 Effect of Fluoride on Potassium Transfer in Human Erythrocytes *in Vitro*. R. E. Eckel. *Federation Proc. 12*, 317–8(1953).

E 33 Effect of Insulin *in Vitro* on Phosphate Uptake by Erythrocytes from Diabetic Humans. D. R. H. Courley. *Scand. J. Clin. Lab. Invest. 4*, 79–80(1952).

E 34 Effect of Muscular Exercise on Circulating Thyroid Hormone. J. C. Lashof, P. K. Bondy, K. Sterling, and E. B. Man. *Proc. Soc. Exptl. Biol. Med. 86*, 233–5(1954).

E 35 Effect of Oral Thyroxine and Triiodothyronine on Radioactive Iodine Uptake and Serum PBI in Normal Human Subjects. P. Starr and R. Liebhold-Schueck. *Proc. Soc. Exptl. Biol. Med. 83*, 52–4(1953).

E 36 The Effect of Priscoline on the Clearance of Radiosodium from Muscle and Skin of Man in Normal and Diseased Limbs. J. Freund, L. H. Wisham, and R. S. Yalow. *Circulation 8*, 89–97(1953).

E 37 Effects of Changes in Altitude on Hematopoietic Activity. R. L. Huff, J. H. Lawrence, W. E. Siri, L. R. Wasserman, and T. G. Hennessy. *Medicine 30*, 197–217(1951).

E 38 The Effects of Dextran in Normovolemic and Oligemic Subjects. J. F. Hammarsten, B. I. Heller, and R. V. Ebert. *J. Clin. Invest. 32*, 340–4(1953).

E 39 Encouraging and Discouraging Research with Therapeutic Radioisotopes. M. Brucer. *J. Kentucky State Med. Assoc.*(June 1953).

E 40 Estimation of Dosage for Intravenously Administered P–32 Calculation Based on Two Compartment Distribution of the Isotope. B. V. A. Low-Beer, R. S. Blais, and N. E. Scofield. *Am. J. Roentgenol. Radium Therapy 67*, 28–41(1952).

E 41 Estimation of Plasmin Activity by Radioactive Measurement. N. R. Shulman and H. J. Tagnon. *J. Clin. Invest. 29*, 846(1950).

E 42 Evaluation of Acute Changes in Blood Volume from the Intravascular Biological Decay Curve of P–32 Tagged Erythrocytes. S. A. Berson, R. S. Yalow, A. Azulay, S. Schrieber, and B. Roswit. *Bull. N. Y. Acad. Med. 28*, 606 (1952).

E 43 An Evaluation of Radiosulfate for the Determination of the Volume of Extracellular Fluid in Man and Dogs. M. Walser, D. W. Seldin, and A. Grollman. *J. Clin. Invest. 32*, 299–311(1953).

E 44 Exchange of Water Between Blood and Tissues Characteristics of Deuterium Oxide Equilibration in Body Water. I. S. Edelman. *Am. J. Physiol. 171*, 279–96(1952).

E 45 Excretion and Distribution of Polyvinyl Pyrrolidone in Man. As Determined by Use of Radiocarbon as a Tracer. R. K. Loeffler and J. Scudder. *Am. J. Clin. Pathol. 23*, 311–21(1953).

E 46 Excretion of Gallium by the Rat and by Man. E. R. King, J. D. Perkinson Jr., H. D. Bruner and J. Gray. *Science 113*, 555–7(1951).

E 47 Half-life of Homologous Serum Albumin in Several Species. M. P. Deichmiller, F. J. Dixon, and P. H. Maurer. *Federation Proc. 12*, 386–7(1953).

E 48 Hematocrit Determination and Distribution of Trapped Plasma in a Centrifuged Red Cell Mass. C. J. Hlad, Jr. *Am. J. Physiol. 167*, 795(1951).

E 49 Hypertonic Salt Solution in Surgical Therapeusis. J. D. Hardy and J. R. Lovelace. *Federation Proc. 13*, No. 1, 67(1954).

E 50 Implication of Atomic Energy in Medicine and Dentistry. II. Application in Clinical Medicine. D. H. Copp. *Oral Surg., Oral Med., Oral Pathol. 3*, 606(1950).

E 51 Implication of Atomic Energy in Medicine and Dentistry. III. Applications in the Study of Bones and Teeth. D. H. Copp. *Oral Surg., Oral Med., Oral Pathol. 3*, 613(1950).

E 52 Inhibition of Uptake of Radioactive Phosphate by Human Erythrocytes *in Vitro*. D. R. H. Gourley. *Am. J. Physiol. 164*, 213–20(1951).

E 53 Intercellular Plasma of Centrifuged Human Erythrocytes as Measued by Means of Iodo–131–Albumin. C. A. Owen, Jr., and M. H. Power. *J. Appl. Physiol. 5*, 323–9(1953).

E 54 Intracellular Distribution of Radioactivity in Nucleic Acid Nucleotides and Proteins Following Simultaneous Administration of P–32 and Glycine–2–C–14. E. P. Tyner, C. Heidelberger, and G. A. LePage. *Cancer Research 13*, 186–203(1953).

E 55 Investigations of Human Thyroid Function with the use of Small Doses of Radioactive Iodine, and the Effect of Thyrotrophic Hormone on I–131 Uptake and Excretion. M. Reiss, R. E. Hemphill, B. M. Murphy, J. M. Halkerston, and F. E. Badrick. *J. Endocrinol. 6*, 235(1949).

E 56 Iodine in the Atomic Age. G. M. Curtis. *J. Am. Pharm. Assoc., Sci. Ed. 40*, 479–87(1951).

E 57 Intestinal Absorption of Vitamin B–12 in Humans as Studied by Isotope Technic. G. B. J. Glass, L. J. Boyd, and L. Stephanson. *Proc. Soc. Exptl. Biol. Med 86*, 522–6(1954).

E 58 I–131-Labeled Serum Albumin: Its Use in the Study of Cardiac Output and Peripheral Vascular Flow. W. J. MacIntyre, J. P. Storaasli, H. Krieger, W. Pritchard, and H. L. Friedell. *Radiology 59*, 849–57(1952).

E 59 The Kinetics of I–131 Metabolism in the Dog and Human. W. R. Ruegamer. *Arch. Biochem. & Biophys. 47*, 119–36(1953).

E 60 Lack of Selective Uptake of Radioactive Iodine Phosphorus, and Copper by Melanomas in Mouse and Man. W. H. Beierwaltes and C. T. Knorpp. *J. Lab. Clin. Med. 38*, 786–7 (1951)

E 61 Localization of Cu–64 in Serum Fractions Following Oral Administration: An Alteration in Wilson's Disease. A. G. Bearn and H. G. Kunkel. *Proc. Soc. for Exptl. Biol. Med. 85*, 44–8(1954).

E 62 Localization of Radioactivity of Colloidal Gold 198. H. F. Berg. *Arch. Surg. 63*, 545–53(1951).

E 63 The Measurement of Total Sodium Space and Total Body Sodium in Normal Individuals and in Patients with Cardiac Edema. G. F. Warner, E. L. Dobson, C. E. Rodgers, M. E. Johnston, and N. Pace. *Circulation 5*, 915–9(1952).

E 64 The Metabolism of Glycine–2–C^{14} in Man. III. The Urinary Excretion of C^{14} and Cumulative Radiation Dosimetry. N. I. Berlin, B. M. Tolbert, and H. C. Lee. *J. Clin. Invest. 32*, 1–4(1953).

E 65 The Metabolism of Glycine–2–C^{14} in Man. N. I. Berlin. *J. Clin. Invest. 32*, 554(1953).

E 66 The Metabolism of Radioactive Dibromoestrone in Man. G. H. Twombly and E. F. Schoenewaldt. *Cancer 3*, 601–7(1950).

E 67 Oral Administration of Co–60 Vit. B–12 in Tropical Sprue and Hepatic Cirrhosis and Diarrhea. L. M. Meyer, R. M. Suarez, Jr., R. Buso, J. Sabater, and R. M. Saurez. *Proc. Soc. Exptl. Biol. & Med. 83*, 681–3(1953).

E 68 The Pathologic Effects of I–131 on the Normal Thyroid Gland of Man. A. S. Freedberg, G. S. Kurland, and H. L. Blumgart. *J. Clin. Endocrinol and Metabolism 12*, 1315–48(1952).

E 69 Penetration of Radiocalcium at the Margins of Filling Materials: A Preliminary Report. W. D. Armstrong and W. S. Simon. *J. Am. Dental Assoc. 43*, 684(1951).

E 70 Peripheral Utilization of Thyroid Hormone. M. W. Hamolsky, G. S. Kurland, and A. S. Freedberg. *Federation Proc. 12*, 60–1(1953).

E 71 The Permeability of Human Dental Root Structures to Radioactive Iodine. W. W. Wainwright. *J. Periodont. 23*, 95(1952).

E 72 The Permeability of the Red Corpuscle Membrane for Sulfate Ions. G. Giacomello. *Arkiv Kemi 4*, 11–6(1952).

E 73 Pharmacological Studies of Radiogermanium (Ge71). H. C. Dudley and E. J. Wallace. *Arch. Ind. Hyg. Occupational Med. 6*, 263–70 (1952).

E 74 P–32-Labeled Endotoxin of Pseudomonas Aeruginosa; Preliminary Report—Isolation of

Radioactive Endotoxin from Culture Filtrate on Synthetic Media Containing P-32-Labeled Phosphate and Its Distribution in Mice. J. Y. Homma, T. Katsura, S. Hosoya, Y. Miyazaki, K. Kimura, and N. Saito. *Japan. J. Exptl. Med.* 21, 381–93(1951).

E 75 On the Possible Application of Isotopes to the Management of Cancer. S. T. Cantril. *Ann. Internal Med. 33*, 1450–8(1950).

E 76 Preferential Incorporation of Formate Carbon Into Leukemic Blood Cells as Indicated by Autoradiography. H. E. Skipper, J. B. Chapman, G. A. Boyd, W. H. Riser, Jr., and M. Bell. *Proc. Soc. Exptl. Biol. Med. 77*, 849–54(1951).

E 77 Quantitative Evaluation of Experimental Blockade with the Aid of Radioactive Chromium Phosphate. E. R. Gabrieli. *Intern. Physiological Congr.* 373(1953).

E 78 Radioactive Decay and Metabolic Loss of Iodine from Normal Thyroid. F. J. Burns, W. A. Fish, J. W. Hackett, and F. C. Hickey. *J. Appl. Physiol. 4*, 15–20(1951).

E 79 Radioactive Isotopes in Medicine. 2.–Iodine. R. G. Wood. *Atomics 4*, 105–13(1953).

E 80 Radioactive Thyrotropic Hormone Preparations. M. Sonenberg, A. S. Keston, W. L. Money and R. W. Rawson. *J. Clin. Endrocinol. and Metabolism 12*, 1269–86(1952).

E 81 Radioactive Tracers: Rationale and Methodology. H. J. Bartelstone. *N. Y. J. Dentistry 20*, 20–22(1950).

E 82 The Rate of Removal of Radioactive Iron From The Plasma—An Index of Erythropoiesis. L. R. Wasserman, I. A. Rashkoff, D. Leavitt, J. Mayer, and S. Port. *J. Clin. Invest. 31*, 32–9(1952).

E 83 Recent Trends in Experimental Oncology: A Review. K. M. D. Stern. *Am. J. Clin. Pathol. 22*, 1084–96(1952).

E 84 Role of Radioisotopes in Blood Dyscrasias and Neoplastic Diseases. H. B. Hunt. *Texas State J. Med. 46*, 496–503(1950).

E 85 Selective Uptake of Radioactive Sulfur by Human Chondrosarcomas. R. G. Gottschalk and H. C. Allen, Jr., *Cancer Research 12*, 266(1952).

E 86 Serial Observation of I–131 Uptake by the Thyroid Following Thyrotropin, Corticotropin, and Cortisone. C. L. Spurr and F. J. Kelly. *J. Lab. Clin. Med. 40*, 946(1952).

E 87 Simultaneous Determination of Plasma Cardiac Output with Evans Blue and Iodinated Albumen N. Freinkel, G. E. Schreiner and J. W. Athens. *Am. J. Physiol. 167*, 785(1951).

E 88 Simultaneous Determination of Total Body Water by Antipyrine and Deuterium Oxide; Evaluation of the Methods on Edematous Subjects. W. W. Hurst, F. R. Schemm and W. C. Vogel. *J. Lab. Clin. Med. 39*, 36–40(1952).

E 89 Some Medical and Dental Implications of Radioactive Tracers Studies Including Tooth Permeability. W. W. Wainwright. *Ann. Dentistry 11*, 51–61(1952).

E 90 Some Theoretic Considerations of Electrolyte Space Measured by the Tracer Method in Intact Man. G. E. Burch, C. T. Ray, and S. A. Threefoot. *J. Lab. Clin. Med. 42*, 34–57(1953).

E 91 Staining of Radioautographs with Metanil Yellow and Iron Hematoxylin. E. B. Simmel, P. J. Fitzgerald, and J. T. Godwin. *Stain Tech 26*, 25–8(1951).

E 92 Studies of Excretion (and Absorption) of Co–60 Labeled Vitamin B_{12} in Pernicious Anemia. R. W. Heinle, A. D. Welch, V. Scharf, G. C. Meacham and W. H. Prusoff. *Trans. Assoc. Am. Physicians 65*, 214–22(1952).

E 93 Studies on the Inhibition of Proteolytic Enzymes by Serum. 1: The Mechanism of the Inhibition of Trypsin, Plasmin and Chymotrypsin by Serum Using Fibrin Tagged With I–131 as a Substrate. N. R. Shulman. *J. Exptl. Med. 95*, 571–91(1952).

E 94 Studies on Radiocodeine Metabolism in Man and in the Rat. T. K. Adler. *J. Pharmacol. Exptl. Therap. 110*, 1(1954).

E 95 Studies on the Role of the Thyroid in Changes in Blood Lipids Following Cortisone Administration. L. E. Schaefer. *J. Clin. Endocrinol. Metabolism 12*, 963–4(1952).

E 96 Studies of Total Body Water with Tritium. T. C. Prentice, W. Siri, N. I. Berlin, G. M. Hyde, R. J. Parsons, E. E. Joiner and J. H. Lawrence. *J. Clin. Invest. 31*, 412–18(1952).

E 97 Studies with Iodine-Tagged Albumin in Cirrhotic patients. M. P. Tyor and D. Cayer. *Southern Med. J. 45*, 141–5(1952).

E 98 A Study of the Mechanism of the Inhibition of the Thyroid Gland Induced by Ingestion of Thyroid Substance. M. Perlmutter, S. Weisenfeld, S. Slater, and E. Z. Wallace. *J. Clin. Endocrinol. Metabolism 12*, 208–27(1952).

E 99 A Study of the Use of Radioactive Gallium in Medicine. F. R. Lang. *Ann. Internal Med. 35*, 1237–49(1951).

E 100 Surface Activity Following Administration of Radioactive Phosphorus. A. Geffen, R. Loevinger, and B. S. Wolf. *Radiology 56*, 857–68 (1951).

E 101 The Thyroid Hormonal Pool in Man and Dog. A. S. Freedberg, L. Wolsky, G. S. Kurland, and M. W. Hamolsky. *J. Clin. Invest. 31*, 628–9 (1952).

E 102 The Transfer of Sodium and Chloride Across a Membrance Produced in Man by the Application of the Vesicant Cantharides. F. J. Kelly, and A. H. Svedberg. *J. Lab. Clin. Med. 40*, 818(1952).

E 103 The Turnover Rate of Serum Albumin in Man as Measured by I–131 Tagged Albumin. K. Sterling. *J. Clin. Invest. 30*, 1228–37(1951).

E 104 The Turnover Time of Phosphorus in Normal, Sickle Cell Trait, and Sickle Cell Anemia Blood *in Vitro* as Measured with P–32. H. Branson and L. O. Banks. *Science 115*, 89–90(1952).

E 105 Uptake of Radioactive Vitamin B–12 by the Liver in Humans: Test for Measurement of Intestinal Absorption of Vitamin B–12 and Intrinsic Factor Activity. G. B. J. Glass, L. J. Boyd, G. A. Gellin, and L. Stephanson. *Arch. Biochem. and Biophys. 51*, 251–7(1954).

E 106 Urinary Excretion of Gallium by Man and Animals. J. I. Munn, N. H. Walters and H. C. Dudley. *J. Lab. Clin. Med. 37*, 376–82(1951).

E 107 Urine-Blood Ratios of Deuterium Oxide in Man. W. W. Hurst, F. R. Schemm, and W. C. Vogel. *J. Lab. Clin. Med. 39*, 41–3(1952).

E 108 Use of a Chelating Agent for Accelerating Excretion of Radio-Iron. H. Foreman, R. L. Huff, J. M. Oda, and J. Garcia. *Proc. Soc. Exptl. Biol. Med. 79*, 520–4(1952).

E 109 Use of I–131-Labeled Protein in Study of Protein Digestion and Absorption in Children with and without Cystic Fibrosis of Pancreas. P. S. Lavik, R. W. Matthews, G. W. Buckaloo, S. Spector, and H. L. Friedell. *Pediatrics 10*, 667–75(1952).

E 110 The Use of I–131 Red Cell Plasma Ratio as a Measure of Thyroid Function. K. G. Scott, J. C. Reavis, W. W. Saunders and W. E. White. *Proc. Soc. Exptl. Biol. Med. 76*, 592–5(1951).

E 111 The Use of K–42 or P–32 Labeled Erythrocytes and I–131 Tagged Human Serum Albumin in Simultaneous Blood Volume Determinations. S. A. Berson and R. S. Yalow. *J. Clin. Invest. 31*, 572–80(1952).

E 112 The Use of Radioactive Sodium Chromate to Evaluate the Life Span of the Red Blood Cell in Health and Certain Hematologic Disorders. R. C. Read, G. W. Wilson and F. H. Gardner. *Am. J. Med. Sci. 228*, 40–52(1954).

E 113 The Use of Radioactive Chromium 51 as an Erythrocyte Tagging Agent for the Determination of Red Cell Survival *in Vivo*. F. G. Ebaugh, Jr., C. P. Emerson, and J. F. Ross. *J. Clin. Invest. 32*, 1260–76(1953).

E 114 Use of Radioactive Iodine as a Tracer in the Study of the Physiology of Teeth. II. Uptake by Human Teeth. H. J. Bartelstone. *J. Dental Research 28*, 658(1949).

E 115 *In Vitro* Incorporation of Glycine-2-C^{14} into Purines and Proteins. G. A. LePage. *Cancer Research 13*, 178–85(1953).

E 116 *In Vitro* Studies of Aspects of the Metabolism of Sodium by Human Erythrocytes Using Sodium 22. W. D. Love and G. E. Burch. *J. Lab. Clin. Med. 41*, 337–50(1953).

E 117 *In Vivo* Study of the Uptake of Radioactive Iodine by Human Teeth. III. H. J. Bartelstone. *J. Dental Research 29*, 684(1950).

E 118 The Volume of the Extracellular Fluid in Experimental and Human Hypertension. A. Grollman and A. P. Shapiro. *J. Clin. Invest. 32*, 312–6(1953).

E 119 L'Association de la Leucemia a la Polycythemie Vraie. J. De Backer and J. H. Lawrence. *La Presse Med. 59*, 461–3(1951).

E 120 The Behavior of Intravenously Injected Particulate Material. Its Rate of Disappearance from the Blood Stream as a Measure of Liver Blood Flow. E. L. Dobson and H. B. Jones. *Acta Med. Scand. 144*, Supp., 273(1952).

E 121 Behavior of Thyroid Toward Elements of Seventh Periodic Group. III. Technetium. E. J. Baumann, N. Z. Searle, A. A. Yalow, E. Siegel, and S. M. Seidlin. *Federation Proc. 11*(1952).

E 122 Blood Volume Expansion Produced by Gelatin, Serum Albumin and Plasma. G. M. Hyde, N. I. Berlin, R. J. Parsons, and B. Whittington. *Surg. Gynecol. Obstet. 95*, 657–60(1952).

E 123 Blood Volume in Preeclampsia as Determined with P 32 Labeled Red Blood Cells. N. I. Berlin, G. M. Hyde, J. H. Lawrence, R. J. Parsons, and S. Port. *Surg. Gynecol. Obstet. 94*, 21–2(1952).

E 124 The Circulating Splanchnic Blood Volume in Dog and Man. S. E. Bradley, P. A. Marks, P. C. Reynell, and J. Meltzer. *Trans. Assoc. Am. Physicians 66*, 294–302(1953).

E 125 Clinical Evaluation of Radioactive Iodine (I–131) as a Diagnostic and Therapeutic Agent. R. S. Clayton, Sr. *Texas State J. Med. 50*, 743–7(1954).

E 126 Colloid Disappearance Rate as a Measure of Liver Blood Flow. E. L. Dobson, G. F. Warner and H. B. Jones. *Federation Proc. 11*, 35(1952).

E 127 A Comparative Study of the Radiosodium and Thiocyanate Space in Disease States. J. K. Aikawa and E. L. Rhoades. *Am. J. Med. Sci. 224*, 632(1952).

E 128 Consistency of Clearance of Radioactive Sodium from Human Muscle. L. H. Wisham, R. S. Yalow and J. Freund. *Am. Heart J. 41*, 810–8(1951).

E 129 Correlation of the 24-Hour Radioiodine Uptake of the Human Thyroid Gland with the 6- and 8-hour Uptakes and with the "Accumulation Gradient". M. A. Greer. *J. Clin. Invest. 30*, 301–4(1951).

E 130 Dependence of Ratio of Radioiodide Concentrations in Thyroid Gland and Serum on Serum Iodide Concentration: Without Propylthiouracil. S. H. Wollman and R. O. Scow. *Endocrinology 55*, 837–44(1954).

E 131 Depression of Red Cell Iron Turnover by Transfusion. P. J. Elmlinger, R. L. Huff and J. M. Oda. *Proc. Soc. Exptl. Biol. Med. 79*, 16–9(1952).

E 132 Distribution of Functional Activity among the Nephron Population. Part II. Tubular Functions Other Than the Regulation of Acid-Base Balance. S. E. Bradley, E. Leifer, and J. F. Nickel. *Ciba Foundation Symposium on the Kidney* 50–64(1954).

E 133 The Effect of Cortisone on the Course of Acute Glomerulonephritis. C. H. Burnett, M. A.

Greer, B. A. Burrows, J. H. Sisson, A. S. Relman, L. Weinstein, and C. Colburn. *New Engl. J. Med. 243*, 1028–32(1950).

E 134 The Effect on Endogenous Thyroid Activity of Feeding Desiccated Thyroid to Normal Human Subjects. M. A. Greer. *New Engl. J. Med. 244*, 385–90(1951).

E 135 The Effect of Exogenous Thyroid Hormone on Thyroid Function of Normal Human Subjects, as Determined with Radioactive Iodine. M. A. Greer. *Am. J. Med. 10*, 236(1951).

E 136 The Effect of Neoplasia of Pregnancy on the Tissue Desoxypentosenucleic Acid. L. S. Kelly, A. H. Payne, M. R. White, and H. B. Jones. *Cancer Research 11*, 694–6(1951).

E 137 The Effect of Oxophenarsine on the Phosphate Metabolism of *Trypanosoma equiperdum* in the Rat. W. Cantrell. *J. Infectious Diseases 95*, 92–7(1954).

E 138 Effects of α-Methopterin on Formate Incorporation into the Nucleic Acids of Susceptible and Resistant Leukemia Cells. H. E. Skipper, L. L. Bennett, Jr., and L. W. Law. *Cancer Research 12*, 677–9(1952).

E 139 Efficacy of a New Substance, Polymeric Glucose, as a Plasma Extender. S. M. Harvath, A. Y. Werner, D. M. MacCanon, and D. W. Knapp. *J. Appl. Physiol. 7*(1954).

E 140 Electron Microscopic Study of Epidermal Basal Cells and Epidermal Dermal Junction. E. L. Laden, I. Linden, J. O. Erickson, and D. Armen. *J. Invest. Dermatol. 21*, July(1953).

E 141 Epidemiologic Studies in Dental Caries, Series VI. A Review of Intrinsic Factors as They May Affect Caries Progression. J. D. Boyd. *J. Pediat. 44*, 578–90(1954).

E 142 Evidence for a Pituitary Erythropoietic Factor. A. N. Contopoulos, D. C. Van Dyke, S. Ellis, M. E. Simpson, J. H. Lawrence, and H. M. Evans. *Gaz. Med. Portugal 7*, 99–104(1954).

E 143 Experimental Hypersensitivity. D. Pressman, B. Sherman, and L. Korngold. *Science 116*, 433(1952).

E 144 Familial Occurrence of Polycythemia and Leukemia. J. H. Lawrence and A. T. Goetsch. *Calif. Med. 73*, 361–4(1950).

E 145 The Fixation of Urethan Carbon Atoms in Sperm and in Resting and Rapidly Dividing Cells. I. Cornman, H. E. Skipper, and J. H. Mitchell, Jr. *Cancer Research 11*, 195–9(1951).

E 146 Hemolytic Anemia Secondary to a Familial (Hereditary) Defect in Hemoglobin Synthesis. H. Mills, R. L. Huff, M. A. Krupp, and J. F. Garcia. *Arch. Internal Med. 86*, 711–26(1950).

E 147 Increase in Circulating Red Cell Volume after Oral Administration of Pituitary Anterior Lobe. A. N. Contopoulos, D. C. Van Dyke, M. E. Simpson, J. F. Garcia, R. L. Huff, B. S. Williams, and H. M. Evans. *Blood 8*, 131–9(1953).

E 148 The Influence of Steroids on Uterine Protein Metabolism. H. Hoffman and S. Roberts. *J. Clin. Endocrinol. and Metabolism 14*, 797(1954).

E 149 Influence of Tumors on Liver Concentrations of Radioactive Stilbamidine. J. C. Weaver, B. M. Tolbert, and B. J. Krueckel. *Proc. Soc. Exptl. Biol. Med. 75*, 741–3(1950).

E 150 Intestinal Lymphatic Transport of Absorbed Cholesterol. M. W. Biggs, M. Friedman, and S. O. Byers. *Proc. Soc. Exptl. Biol. Med. 78*, 641(1941).

E 151 *In Vivo* Studies with Radioisotopes. E. Strajman and N. Pace. *Advances in Biol. and Med. Phys. 2*, 193–241(1951).

E 152 Iron Absorption Normal, Anemic and Hemochromatotic Subjects. R. B. Chodos, J. F. Ross, M. A. Adams, and M. C. O'Brien. *Federation Proc. 11*, 411(1952).

E 153 Iron Absorption in Normal, Anemic and Hemochromatotic Subjects. R. B. Chodos and J. F. Ross. *Am. J. Med. 14*, 499(1953).

E 154 Liver Blood Flow Changes in Thermal Injury. E. L. Dobson and G. F. Warner. *Federation Proc. 13, No. 1*, 36–7(1954).

E 155 The Measurement of Liver Circulation by Means of the Colloid Disappearance Rate. I. Liver Blood Flow in Normal Young Men. E. L. Dobson, G. F. Warner, C. R. Finney and M. E. Johnston. *Circulation 7*, 690–5(1953).

E 156 Mechanism of Action of Azaserine. H. E. Skipper, L. L. Bennett, Jr. and F. M. Schabel, Jr. *Federation Proc. 13, No. 1*(1954).

E 157 Metabolism of Copper in Wilson's Disease and in Normal Subjects. Studies with Cu 64. C. J. Earl, M. J. Moulton and B. Selverstone. *Am. J. Med. 17*, 205–13(1954).

E 158 Metabolism of Hemoglobin and of Bile Pigment. I. M. London. *Bull. N. Y. Acad. Med. 30*, 509(1954).

E 159 Molecular Exchange and Blood Perfusion Through Tissue Regions. H. B. Jones. *Advances in Biol. and Med. Phys. 2*, 53–75(1951).

E 160 Observations on the Fate of Ingested Cholesterol in Man. M. W. Biggs, D. Kritchevsky, D. Coleman, J. W. Gofman, H. B. Jones, F. T. Lindgren, G. Hyde and T. P. Lyon. *Circulation 6*, 359–66(1952).

E 161 Physiologic Concepts of Thyroid Tumors as Revealed with Newer Tools of Study. R. W. Rawson and J. E. Rall. *Med. Clin. N. Amer. 36*, 639–62(1952).

E 162 Physiological Studies of the Thyroid Using Radioactive Iodine. W. L. Money. *N. Y. Med. 6*, 16–19, 42(1950).

E 163 Polyvinyl Pyrrolidone as a Plasma Expander. H. A. Ravie, A. M. Seligman, and J. Fine. *New Engl. J. Med. 247*, 921–2(1952).

E 164 Pool Systems in Iron Metabolism; with Special Reference to Polycythemia vera. L. Sharney, L. Schwartz, L. R. Wasserman, S. Port, and D. Leavitt. *Proc. Soc. Exptl. Biol. Med. 87*, 489(1954).

E 165 Porphyrin Metabolism and Diseases of the Nervous System. Metabolic and Toxic Disease of the Nervous System. I. M. London. *Proc.*

Assoc. Research in Nervous and Mental Disease 32, 392(1953).

E 166 Post-eruptive Maturation of Teeth—Radioiodine Uptake in Ivory. J. D. Boyd and A. S. Blum. *J. Dental Research 33*, 702(1954).

E 167 Radioactive Digitoxin. F. E. Kelsey. *Illinois Med. J. 100*(1951).

E 168 Radioactive Sodium Chromate for the Study of Survival of Red Blood Cells. III. The Abnormal Hemoglobin Syndromes. I. M. Weinstein, C. L. Spurling, H. Klein, and T. F. Necheles. *Blood 9*, 1155(1954).

E 169 Red Cell Life Span in the Polycythemia of High Altitude. N. I. Berlin, C. Reynafarje, and J. H. Lawrence. *J. Appl. Physiol. 7*, 271–2(1954).

E 170 Red Cell Potassium Exchange in Sickle Cell Anemia. D. C. Tosteson and J. Johnson. *Federation Proc. 11*, 163(1952).

E 171 Relative Polycythemia—The Polycythemia of Stress. J. H. Lawrence and H. I. Berlin. *Yale J. Biol. Med. 24*, 498–505(1952).

E 172 A Simultaneous Study of Glycine–N–15 Incorporation into Uric Acid and Heme and Fe–59 Utilization in a Case of Gout Associated with Polycythemia Secondary to Congenital Heart Disease. T. F. Yu, L. R. Wasserman, J. D. Benedict, E. J. Bien, A. B. Gutman, and D. Stetten. *Am. J. Med. 15*, 845(1953).

E 173 The Source of Human Cerebrospinal Fluid. A Study of the Dynamic State of Its Constituents. B. Selverstone, C. V. Robinson, and P. Benda. *Proc. Fifth Intern. Neurol. Cong., Lisbon 2*, 128–9(1953).

E 174 Steroid Action and Interaction in Uterine Metabolism. C. M. Szego and S. Roberts. *Recent Progr. Hormone Research 8*, 419–69(1953).

E 175 Studies of Formation, Flow and Absorption of Cerebrospinal Fluid. II. Studies with Heavy Water in the Normal Man. W. H. Sweet, B. Selverstone, S. Soloway, and S. DeWitt, Jr. *Surg. Forum Proc. 36th Cong. Am. Coll. Surgeons*(1950), 376–81(1951)

E 176 Tetraethylthiuram Disulfide (antabuse(²)) and the Anesthetic Agents. B. M. Cooper, H. C. Slocum and C. R. Allen. *Anesthesiology 14*, 29–32(1953).

E 177 The Time Function of P–32 Incorporation into DNA of Regenerating Liver; The Effect of Irradiation. L. S. Kelly. *Proc. Am. Assoc. Cancer Research 1, No. 2*, 24–5(1954).

E 178 Uptake of Radioactive Phosphorus by Normal and Neoplastic Ocular Tissues. E. B. Dunphy and B. Selverstone. *Am. J. Ophthalmol. 36*, 774–6(1953).

E 179 Use of a Chelating Agent for Accelerating the Excretion of Radio-Iron. H. Foreman, R. L. Huff, J. M. Oda and J. Garcia. *Proc. Soc. Exptl. Biol. Med. 79*, 520–4(1952).

E 180 The Use of Isotopes as Metabolic Tracers. S. DeWitt, Jr. *Ann. Internal Med. 32*, 1(1950).

E 181 The Visceral Circulation in Homeostasis. S. E. Bradley. *Symposium on Stress Army Med. Res. Graduate School, Wash., D. C.*, 27 36(1953).

E 182 Absorption of Radioactive Vitamin B-12 after Total Gastrectomy—Relation to Macrocytic Anemia and to the Site of Origin of Castle's Intrinsic Factor. J. A. Halsted, M. Gasster, and E. J. Drenick. *New Engl. J. Med. 251*, 161–8(1954).

E 183 Dependence of Ratio of Radioiodide Concentrations in Thyroid Gland and Serum on Serum Iodide Concentration: With Propylthiouracil. S. H. Woolman and R. O. Scow. *Endocrinology 55*, 837–44(1954).

E 184 Electron Microscopic Study of Epidermal Basal Cells and Epidermal Dermal Junction. E. L. Laden, I. Linden, J. O. Erickson, and D. Armen. *J. Invest. Dermatol. 21*, 37–41(1953).

E 185 Le fer radioactif dans le diagnostic de laboratoire. G. Schapira. *Semaine des Hôpitaux de Paris 28*, 1416(1953).

E 186 Histidine and Ascorbic Acid Treatment of Arteriosclerosis Obliterans. M. T. Friedell. *J. Am. Med. Assoc. 138*, 1036(1948).

E 187 Physiopathologie de l'hémoglobine et du globule rouge étudiée à l'aide du fer radioactif. G. Schapira, J. C. Dreyfus et J. Kruh. *Le Sang 24*, 142(1953).

E 188 Studies with N–C–$14H_3$ Labeled Morphine in Man. H. W. Elliott, B. M. Tolbert, T. K. Adler, and H. H. Anderson. *J. Pharmacol. Exptl. Therap. 106*, 383(1952).

E 189 Studies in Neuromuscular Diseases with Radioactive Potassium. W. H. Blahd, F. K. Bauer, R. L. Libby, and A. S. Rose. *Neurology 3*, 604–8 (1953).

E 190 Thyroid-Adrenocortical Interrelationship During Surgical Convalescence. I. S. Goldenberg and M. A. Hayes. *Surg. Forum, Proc. Am. Coll. Surgeons*(1954).

E 191 Thyroid-Adrenocortical Interrelations Following Operation. I. S. Goldenberg, L. Lutwak, P. J. Rosenbaum, and M. A. Hayes. *Surg. Gynecol. Obstet. 98*, 513–22(1954).

E 192 *In Vitro* Metabolism of Human Brain Cortex Slices. V. C. Sutherland and T. N. Burbridge. *Federation Proc. 12*, 370(1953).

E 193 *In Vitro* Studies on Diphasic Action of Methadone. J. W. Miller and H. W. Elliott. *J. Pharmacol. Exptl. Therap. 110*, 106–14 (1954): *Federation Proc. 12*, 351(1953).

E 194 *In Vitro* Sulfate Fixation by Granulation Tissue and Injured Muscle Tissue from Healing Wounds. L. L. Layton, D. R. Frankel, and S. Scapa. *Proc. Soc. Exptl. Biol. Med. 73*, 570–2 (1950)

E 195 Investigations of Malignant Tumours with Radioactive Phosphocholine. S. Bursell, G. Neaslund, J. Naeslund, and K. E. Swenson. *Acta Soc. Med. Upsaliensis 59*, 1–2, 1–11(1953).

E 196 Thyroid Homeostasis. J. P. Kriss and F. S. Freenspan. Stanford *Med. Bull. 10*, 206(1952).

Immunology

F 10 Detection of Non-precipitating Antibodies Coexisting with Precipitating Antibodies Using I–131 Labeled Antigen. R. Feinberg. *Federation Proc. 13, No. 1*, 493(1954).

F 11 Determination of Antibody Through the Use of I–131 Label Experiments with Equine Diphtheria Antitoxin. S. Cohen. *J. Immunol, 67*, 339–46(1951).

F 12 Distribution of Antigens in the Rabbit Organism. H. H. Reller, C. F. Crampton, and F. Haurowitz. *Federation Proc. 12*, 456(1953).

F 13 Distribution of a Particulate Antigen in Normal, X-irradiated, Immunized or Splenectomized Rabbits. J. S. Ingraham. *Federation Proc. 13, No. 1*, 236(1954).

F 14 Effect of Antibiotics on Mortality from Internal Radiation. S. Koletsky and J. H. Christie. *Proc. Soc. Exptl. Biol. Med. 75*, 363–6(1950).

F 15 The Effect of Antigen Administration on the Behavior of I–131 Labeled Rabbit Anti-Ovalbumin in Mice. S. P. Masouredis, L. R. Melcher, and M. B. Shimkin. *J. Immunol. 71*, 268–74(1953).

F 16 The Effect of Cobalt 60 Gamma Radiation on Antibody Formation and Immunity. W. M. Hale and R. D. Stoner. *Record Med. Gen. Practice Clinics 165*, 358–60(1952).

F 17 Effect of Cobalt 60 Gamma Radiation on Susceptibility and Immunity to Trichinosis. R. D. Stoner and W. M. Hale. *Proc. Soc. Exptl. Biol. Med. 80*, 510–2(1952).

F 18 The Effect of Rabbit Antibody Administration of the Behavior of I–131 Labeled Human Serum Albumin in Mice. L. R. Melcher, S. P. Masouredis, and M. B. Shimkin. *J. Immunol. 71*, 275–9(1953).

F 19 Effect of Sensitization and Irradiation on the Fate of I–131 Labeled Bovine Gamma Globulin in Rabbits and Mice. F. J. Dixon, G. J. Dammin, and S. C. Bukantz. *Federation Proc. 9*, 380–1(1950).

F 20 Effects of Serum from Carcinomatous Mice on Erythrocyte Metabolism. A. F. Reid, M. C. Robbins, R. G. Budd, and E. B. Ryan. *Cancer Research 12*, 290(1952).

F 21 Elimination of Radioiodinated Antirickettsial Homologous Gamma Globulin from Non-Immune and Specifically Immunized Rabbits. L. Anigstein, D. M. Whitney, and W. Barnes. *Texas Repts. Biol. Med. 12*, 3–20(1954).

F 22 Experimental Hypersensitivity in the Rabbit. Blood and Tissue Concentrations of Foreign Proteins Labeled with Radioactive Iodine and Injected Intravenously. H. Latta. *J. Immunol. 66*, 635(1951).

F 23 Experimental Hypersensitivity in the Rabbit. Disappearance rates of Native and Labeled Heterologous Proteins from the Serum after Intravenous Injection. D. Gitlin, H. Latta, W. H. Batchelor, and C. A. Janeway. *J. Immunol. 66*, 451(1951).

F 24 Fate of Antibody Following *in Vivo* Combination with Specific Antigen. F. J. Dixon and P. H. Maurer. *Proc. Soc. Exptl. Biol. Med. 84*, 442–6(1953).

F 25 The Fate in Rabbits of Intravenously Injected 1–131-Iodoovalbumin. F. Haurowitz and C. F. Crampton. *J. Immunol. 68*, 73–85(1952).

F 26 The Fixation of Anti-Organ Antibodies *In Vivo* as Determined by Radioactive I–131. L. Anigstein. *Texas Repts. Biol. Med. 10*, 648–9(1952).

F 27 The Half-Life of Homologous Gamma Globulin (Antibody) in Several Species. F. J. Dixon, D. W. Talmage, P. H. Maurer, and M. Deichmiller. *J. Exptl. Med. 96*, 313–8(1952).

F 28 Incorporation of C–14-Carboxyl-Labeled Leucine by Antibody Protein. N. Bulman and D. H. Campbell. *Proc. Soc. Exptl. Biol. Med. 84*, 155–9 (1953).

F 29 The *in Vitro* Purification of Tissue Localizing Antibodies. L. Korngold and D. Pressman. *J. Immunol. 71*, 1–5(1953).

F 30 I–131-Labeled Antigen Precipitation as a Measure of Quantity and Quality of Antibody. D. W. Talmage and P. H. Maurer. *J. Infectious Diseases 92*, 288–300(1953).

F 31 I–131 Labeled Diphtheria Toxoid and the Rate of Antigen Elimination in the Guinea Pig. M. E. Koshland. *Federation Proc. 13, No. 1*, 501(1954).

F 32 Labeling of Proteins with Iodine 131, Sulphur 35 and Phosphorus 32. G. E. Francis, W. Mulligan, and A. Wormall. *Nature 167*, 748(1951).

F 33 Life Span of Canine Erythrocytes Modified by Influenza Virus. W. B. Stewart, C. W. Petenyi, and H. M. Rose. *Federation Proc. 12*, 404(1953).

F 34 Localization of Alergen-protein Conjugates in Skin. H. N. Eisen, E. A. Byrne, S. Belman, and M. Tabachnick. *Federation Proc. 13, No. 1*, 491(1954).

F 35 Localizing Anti-tissue Antibodies with Increased Specificity. L. Korngold and D. Pressman. *Federation Proc. 13, No. 1*, 501(1954).

F 36 Localizing Properties of Anti-Rat-Aorta Antibodies. D. Pressman, B. Sherman and L. Korngold. *Proc. Soc. Exptl. Biol. Med. 80*, 427–9(1952).

F 37 Localizing Properties of Anti-Rat-Kidney Serum Prepared in Ducks. D. Pressman, L. Korngold and W. Heymann. *Arch. Pathol. 55*, 347–8(1953).

F 38 The Nature of the Combining Sites of Antibodies. D. Pressman and L. A. Sternberger. *J. Immunol. 66*, 609–20(1951).

F 39 Non-specific Anamnestic Responses to Serum Protein Antigens in Rabbits. F. J. Dixon and P. H. Maurer. *Federation Proc. 13, No. 1*, 489–90(1954).

F 40 The Persistence of Antigen in the Mouse. J. O. Erickson, D. M. Armen and R. L. Libby. *J. Immunol. 71*, 30–7(1953).

F 41 Persistence of C–14-Anthranil-azo-ovalbumin in Injected Rabbits. C. F. Crampton, H. H. Reller and F. Haurowitz. *Proc. Soc. Exptl. Biol. Med. 80*, 448–51(1952).

F 42 Radioactive Isotopes as Tracers of Antibodies. L. Anigstein. *Texas J. Sci. 5*, 148–53(1953).

F 43 Relation of Circulating Antibody Concentration to Localization of Labeled (S–35) Antigen. J. S. Garvey and D. H. Campbell. *Federation Proc. 12*, 443–4(1953).

F 44 The Relative Rates of Iodination of Serum Components and the Effect of Iodination on Antibody Activity. D. Pressman and L. A. Sternberger. *J. Am. Chem. Soc. 72*, 2226(1950).

F 45 Specificities of the Binding to Rabbit Serum. D. Pressman and M. Siegel. *Arch. Biochem. and Biophys. 45*, 41–54(1953).

F 46 Stability of an Azoprotein Antigen *in Vivo*. F. Haurowitz, H. Walter, and F. D. Humm. *Federation Proc. 13, No. 1*, 496(1954).

F 47 Studies on Isolation of Antigen and Antibody from Livers of Immune Rabbits. J. S. Garvey and D. H. Campbell. *Federation Proc. 13, No. 1*, 493–4(1954).

F 48 Unstained Cell Counts as A Method of Evaluating Cancerocidal Agents. R. O. Vycital, R. Schrek, and T. H. Clarke. *Cancer Research 12*, 304(1952).

F 49 Uptake of Labeled Antigens by the Mitochondria of Mouse Liver. M. Fields and R. L. Libby. *J. Immunol. 69*, 581–6(1952).

F 50 Use of Radioactive Phosphorus in Studies of Chick Embryo Infections with a Common Cold Virus. T. G. Ward. *Am. J. Hyg. 52*, 107–32 (1950).

F 51 *In Vitro* Inhibition of Radiophosphorus Uptake and Growth of a Neurotropic Virus by 5-Chlorouridine. M. E. Rafelson, Jr., H. E. Pearson and R. J. Winzler. *Proc. Soc. Exptl. Biol. Med. 78*, 689–92(1951).

F 52 *In Vivo* Localization of Antibodies Against Kidney, Ovary and Adrenal in Rats. I. L. Spar and W. F. Bale. *Federation Proc. 13, No. 1*, 143(1954).

F 53 The *in Vivo* Localization of Anti-Wagner-Osteogenic-Sarcoma Antibodies. D. Pressman and L. Korngold. *Cancer 6*, 619–23(1953).

F 54 The *in Vivo* Stability of the I–131 Protein Label of Rabbit Antibody in Guinea Pigs as Determined by the Quantitative Precipitin Reaction. L. R. Melcher and S. P. Masouredis. *J. Immunol. 67*, 393–402(1951).

F 55 The Zone of Localization of Antibodies. IV. The *in Vivo* Disposition of Anti-Mouse-Kidney Serum and Anti-Mouse-Plasma Serum as Determined by Radioactive Tracers. D. Pressman. *J. Immunol. 63*, 375–88(1949).

F 56 The Zone of Localization of Antibodies. VIII. Some Properties of the Antigen Responsible for the Renal Localization of Anti-Kidney Serum. H. N. Eisen and D. Pressman. *J. Immunol. 64*, 487–98(1950).

F 57 The Zone of Localization of Antibodies. XI. The *in Vivo* Purification of Kidney-Localizing Anti-Kidney Antibody. D. Pressman and B. Sherman. *J. Immunol. 67*, 15–20(1951).

F 58 The Zone of Localization of Antibodies. XII. Immunological Specificities and Cross Reactions in the Vascular Beds of Liver, Kidney and Lung. D. Pressman and B. Sherman. *J. Immunol. 67*, 21–33(1951).

F 59 The Zone of Localization of Antitissue Antibodies as Determined by the Use of Radioactive Tracers. D. Pressman. *J. Allergy 22*, 387–96(1951).

F 60 Amino Acid Inhibition of Theiler's GDVII Virus in Mouse Brain Minces. H. E. Pearson and R. J. Winzler. *Federation Proc. 9*, 389(1950).

F 61 Antibodies as Specific Chemical Reagents. D. Pressman. *Advances in Biol.* and *Med. Phys. 3*, 99–152(1953).

F 62 Antibody Formation in Surviving Tissues. H. M. Ranney and I. M. London. *Federation Proc. 10*, 563(1951).

F 63 The Binding of Simple Substances to Serum Proteins and Its Effect on Apparent Antibody-Hapten Combination Constants. D. Pressman and M. Siegel. *J. Am. Chem. Soc. 75*, 685–94 (1953).

F 64 Changes in the Tissue Radiosodium Space Associated with Experimental Rocky Mountain Fever in Guinea Pigs. J. K. Aikawa and G. T. Harrell. *J. Infectious Diseases 93*, 263–5(1953).

F 65 The Comparative Retention of Antigen in the Skin of Immune and Normal Rabbits as Determined with Egg Albumin Labelled with Radioactive Iodine. L. Korngold, et al. *J. Immunol. 70*, 345–51(1953).

F 66 Determination of Antibody Through the Use of I–131 Label: Experiments with Equine Diphtheria Antitoxin. S. Cohen. *J. Immunol. 67*, 339(1951).

F 67 Distribution of Radio-iodinated Anti-organ Antibodies in the Injected Rat. L. Anigsteink K. P. McConnell, D. M. Whitney, P. Pappas, O. W. Portman, and W. Barnes. *Texas Repts. Biol. Med. 12*(1954).

F 68 The Effects of Feline Pneumonitis Virus Infection on the Phosphorus Metabolism of Chick Embryo Yolk Sac. S. A. Zahler. *J. Infectious Diseases 93*, 150–8(1953).

F 69 Energy Requirements for Synthesis of Feline Pneumonitis Virus in Isolated Chick Embryo Yolk Sac. J. W. Moulder, B. R. S. McCormack, and M. K. Itatani. *J. Infectious Diseases 93*, 140–9(1953).

F 70 Failure to Demonstrate *in Vitro* Lysis of Sensitized Guinea Pig Leucocytes by Dog Hemoglobin Antigen. L. J. Bernard, W. C. Jefferson, and P. F. Hahn. *Proc. Soc. Exptl. Biol. Med. 80*, 58–60(1952).

F 71 Formation of Tetanus Antitoxin by Spleen and Lymph Node Intraocular Transplants. W. M. Hale and R. D. Stoner. *Yale J. Biol. Med. 26*, 46–54(1953).

F 72 Hypersensitivity and Rheumatic Fever. J. K. Aikawa. *Ann. Internal Med. 41*, 576–604(1954).

F 73 Immunophysiology. Increase in Radiosodium Space of Adrenal Glands in Rabbits Sensitized with Human Plasma. J. K. Aikawa and E. L. Rhoades. *Proc. Soc. Exptl. Biol. Med. 79*, 233–5(1952).

F 74 Incorporation of C–14 Leucine by Antibody Protein. N. Bulman and D. H. Campbell. *Federation Proc. 10*, 404(1951).

F 75 The Incorporation of Radioactive Phosphate into Feline Pneumonitis Virus in the Chick Embryo Yolk Sac. S. A. Zahler. *J. Infectious Diseases 93*, 159–65(1953).

F 76 The Incorporation of Radioactive Phosphorus into Influenza Virus. O. C. Liu, H. Blank, J. Spizizen and W. J. Henle. *J. Immunol. 73*, 415(1954).

F 77 Increased Susceptibility of Mice to Anaphylactic Shock Following Cobalt 60 Gamma Radiation. R. D. Stoner and W. M. Hale. *J. Immunol. 72*, 419–23(1954).

F 78 Isotopic Studies of Fluid and Electrolyte Changes in Domestic Rabbits with Rocky Mountain Spotted Fever. J. K. Aikawa and G. T. Harrell. *J. Infectious Diseases 93*, 222–35(1953).

F 79 Kinetic Studies on Immune Hemolysis. VII. Decay of EAC '1,4,2, Fixation of C'_5 and Other Factors Influencing the Hemolytic Action of Complement. M. M. Mayer, L. Levine, H. J. Rapp, and A. A. Marucci. *J. Immunol. 73*, 443–54(1954).

F 80 The Localization of Antilymphosarcoma Antibodies in the Murphy Lymphosarcoma of the Rat. L. Korngold and D. Pressman. *Cancer Research 14*, 96–9(1954).

F 81 The Localization of Anti-lymphosarcoma Antibodies in the Murphy Lymphosarcoma of the Rat. L. Korngold and D. Pressman. *Proc. Am. Assoc. Cancer Research 1*, 31(1953).

F 82 The Persistence of Antigen in the Mouse. J. O. Erickson, D. M. Armen and R. L. Libby. *Federation Proc. 11*, 467(1952). *J. Immunol. 71*, 30–7(1952).

F 83 Purification of a Substance Responsible for Localization of Anti-Rat-Kidney Antibodies in the Kidney. D. Pressman, Y. Yagi, and L. Korngold. *Federation Proc. 13*, 509(1954).

F 84 The Relation of Circulating Antibody Concentration to Localization of Labeled (S–35) Antigen. J. S. Garvey and D. H. Campbell. *J. Immunol. 72*, 131(1954).

F 85 Relation Between Propagation of Mouse Encephalomyelitis Virus and Uptake of Radiophosphate by Minced Brain from Mice. R. J. Winzler, H. E. Pearson, and M. E. Rafelson. *Federation Proc. 9*, 247(1950).

F 86 Relation Between Propagation of a Mouse Encephalomyelitis Virus and Uptake of Radiophosphate by Minced Brain from Mice of Different Ages. H. E. Pearson, R. J. Winzler, and M. E. Rafelson. *Federation Proc. 9*, 389(1950).

F 87 Relationship between TMV and a Protein Accompanying TMV Infection. C. C. Delwiche, P. Newmark, and W. N. Takahashi. *Federation Proc. 13, No. 1*, 197(1954).

F 88 Studies on the Role of Ca++ and Mg++ in Complement Fixation and Immune Hemolysis. II. The Essential Role of Ca++ in Complement Fixation. L. Levine, K. M. Cowan, A. G. Osler, and M. M. Mayer. *J. Immunol. 71*, 367–73(1935).

F 89 The *in Vivo* Localization of Anti-Wagner-Osteogenic-Sarcoma Antibodies. D. Pressman and L. Korngold. *Proc. Am. Assoc. Cancer Research 1*, 43(1953).

F 90 The Zone of Localization of Antibodies. XI. The *in Vivo* Purification of Kidney-Localizing Anti-Kidney Antibody. D. Pressman and B. Sherman. *J. Immunol. 67*, 15–20(1951).

F 91 The Zone of Localization of Antibodies. XIII. The *in Vivo* Localization of Anti-Liver-Blood-Vessel Antibodies in the Rat. D. Pressman, B. Sherman, and L. Korngold. *J. Immunol. 67*, 493–500(1951).

F 92 Cortisone Inhibition of Antibody Synthesis in the Rabbit. E. P. Benditt and A. Breslow. *Proc. Inst. Med. Chicago 20*, 40(1954).

F 93 Differences sans le comportement metabolique

des anticorps dans l'immunite active et dans l'immunite passive. Recherches effectuees au moyen d'isotopes indicateurs! Carbone 13 et carbone 14. P. Gros, J. Coursaget et M. Macheboeuf. *Bull. Soc. Chim. Biol. 34, No. 11*, 1074–77(1952).

F 94 *In Vivo* Localization of Labeled Rat Adrenal Antibodies. I. L. Spar and W. F. Bale. *J. Immunol. 73*, 134–7(1954).

F 95 *In Vivo* Localization of Rat Organ Antibodies in Ovaries, Adrenals, and Other Tissues. W. F. Bale and I. L. Spar. *J. Immunol. 73*, 125–33 (1954).

F 96 Recherches sur l'existence de precurseurs proteiques dans la formation des anticorps. Travail effectue avec de la valine marquee par le carbone 14. P. Gros, J. Coursaget and M. Macheboeuf. *Bull. Soc. Chim. Biol. 34, No. 11*, 1070–74(1952).

Metabolite Physiology in Animals

G 1 Aberrations of Estrone Metabolism in Rat Hepatoma. C. M. Szego and D. C. Wolcott. *J. Clin. Endocrinol. Metabolism 14*, 796–7(1954).

G 2 Absorption of Cholesterol-4-C–14 in Rats Fed Mixed Soybean Sterols and β-Sitosterol. H. H. Hernandez, D. W. Peterson, I. L. Chaikoff and W. G. Dauben. *Proc. Soc. Exptl. Biol. Med. 83*, 498–9(1953).

G 3 Absorption of Radioactive Calcium by Brook Trout. F. E. Lovelace and H. A. Podoliak. *Progressive Fish Culturist* 154–8, October(1952).

G 4 Acetate Utilization in the Dog. P. V. Harper, Jr., W. B. Neal, Jr., and G. R. Hlavacek. *Metabolism 2*, 62–8(1953).

G 5 Acetate Utilization in Normal, Fasting, and Pyruvate-Treated Rats. J. G. Coniglio, C. E. Anderson, and C. S. Robinson. *J. Biol. Chem. 198*, 525–32(1952).

G 6 Action of Human Chorionic Gonadotropin upon the Metabolism of Phosphorus in the Thymus of Hypophysectomized Immature Rats. U. Borell and E. Diczfalusy. *Endocrinology 49*, 189–96(1951).

G 7 Action of Insulin on the Extrahepatic Tissues. A. N. Wick, D. R. Drury, R. W. Bancroft, and E. M. MacKay. *J. Biol. Chem. 188*, 241–9(1951).

G 38 Comparative Excretion and Distribution of C–14–Labeled Carbonate and Formate in Large Albino Rats. F. Sperling, E. S. Maxwell, and W. F. V. Oettingen. *Am. J. Physiol. 174*, 33–8(1953).

G 39 A Comparative Study of the Effect of Various Solutions on the Calcium Depletion of The Rat Tooth Using Radioactive Calcium. C. Urakami, C. T. Want, J. B. Data, and J. E. Christian. *J. Am. Pharm. Assoc., Sci. Ed. 42*, 410–4(1953).

G 40 Composition of Honeydew Excreted by Pineapple Mealybugs. R. A. Gray. *Science 115*, 129–33(1952).

G 41 Concentration and Organic Binding of Radioiodide by Thyroid Tissue. S. H. Wollman. *Texas Repts. Biol. Med. 11*, 775–8(1953).

G 42 Content of Radioactive Vitamin B–12 in the Feces of Rats Fed Co–60 and Aureomycin. R. L. Davis and B. F. Chow. *Proc. Soc. Exptl. Biol. Med. 77*, 218–21(1951).

G 43 Conversion of C–14-Palmitic Acid to Glucose. II. Specific Glucose Carbons Labeled. S. Abraham, I. L. Chaikoff, and W. Z. Hassid. *J. Biol. Chem. 195*, 567–81(1952).

G 44 Conversion of First and Sixth Carbons of Stearic Acid to Carbon Dioxide by Rats. E. O Weinman, I. L. Chaikoff, B. P. Stevens, and W. G. Dauben. *J. Biol. Chem. 191*, 523–9(1951).

G 45 Corticosteroid Metabolism in Liver: Studies on Perfused Rat Livers. O. Hechter, M. M. Solomon, and E. Caspi. *Endocrinology 53*, 202–15(1953).

G 46 Demonstration of β-Oxidation and Acetoacetate Formation in a Mouse Hepatoma. G. W. Brown, Jr., I. L. Chaikoff, and D. D. Chapman. *Proc. Soc. Exptl. Biol. Med. 84*, 586–8(1953).

G 47 Deposition of C–14 in the Metaphysis of Long Bones of Young Rats. W. Bloom. *Anat. Record 103*, 425(1949).

G–48 Depression of Hepatic Lipogenesis from Acetate–1–C–14 in Rats Exposed to Cold. E. J. Masoro and A. I. Cohen. *Federation Proc. 13, No. 1*, 95(1954).

G 49 Determination of Iron Absorption Using Two Isotopes of Iron. L. Saylor and C. A. Finch. *Am. J. Physiol. 172*, 372–6(1953).

G 50 Development of Obesity in Force Fed Young Thyroidectomized. R. O. Scow. *Endocrinology 49*, 522–9(1951).

G 51 Dihydroxyacetone Esters as Precursors of Triglycerides During Intestinal Absorption. R. Reiser and M. C. Williams. *J. Biol. Chem. 202*, 815–9(1953).

G 52 The Dispersion of Radioactive Phosphorus in the Embryonated Hen's Egg. R. A. Webster and T. G. Ward. *Arch. Biochem. and Biophys. 45*, 384–96(1953).

G 53 Distribution of C–14 Labeled Alloxan in the Tissues of the Rat and Its Mode of Elimination. R. G. Janes and T. Winnick. *Proc. Soc. Exptl. Biol. Med. 81*, 226–9(1952).

G 54 The Distribution of C–14 Labeled Isonicotinic Acid Hydrazide in Normal Mice. L. J. Roth and R. W. Manthei. *Proc. Soc. Exptl. Biol. Med. 81*, 566–9(1952).

G 55 Distribution of Co–60, Cu–64, and Zn–65 in the Cytoplasm and Nuclei of Tissues. I.

Rosenfeld and C. A. Tobias. *J. Biol. Chem. 191*, 339–49(1951).

G 56 On the Distribution, Detoxification and Excretion of Radioactive Pyribenzamine in Guinea Pigs. T. A. Geissman and E. O. Weinman. *Federation Proc. 12*, 49–50(1953).

G 57 Distribution and Dosage of Radiocarbon in the Tissues. G. L. Nardi. *Am. J. Roentgenol. Radium Therapy and Nuclear Med. 67*, 989–90 (1952).

G 58 The Distribution and Excretion of C–14 in the Tissues of Mice after Administration of C–14 Methyl Labeled Glycine. G. L. Nardi. *Am. J. Roentgenol. Radium Therapy Nuclear Med. 70*, 613–16(1953).

G 59 Distribution and Excretion of Radioactive Hafnium–181 Sodium Mandelate in the Rat. C. F. Kittle, E. R. King, C. T. Bahner, and M. Brucer. *Proc. Soc. Exptl. Biol. Med. 76*, 278–82(1951).

G 60 Distribution and Excretion of Radioactivity in Mice Following the Administration of C–14 Labeled Atropine. V. Evertsbusch and E. M. K. Geiling. *Federation Proc. 12*, 319(1953).

G 61 The Distribution of Radioactivity in the Organs of the Fetus or of Young Rats Born by Mothers Injected with Vitamin B–12 Containing Co–60. B. F. Chow, L. Barrows, and C. T. Ling. *Arch. Biochem. and Biophys. 34*, 151–7(1951).

G 62 The Distribution of S–35 from Labeled DL-Methionine in Mice Bearing Carcinoma of the Breast, Neoplasms of the Hematopoietic System, or Liver Abscesses. H. S. Bloch, C. R. Hitchcock, and A. J. Kremen. *Cancer Research 11*, 313–7(1951).

G 63 The Distribution and Excretion of S–35 Sodium Sulfate in the Albino Rat. N. B. Everett and B. S. Simmons. *Arch. Biochem. and Biophys. 35*, 152–6(1952).

G 64 Distribution of Fixed Carbon. R. W. Swick, D. L. Buchanan and A. Nakao. *Federation Proc. 11*, 157–8(1952).

G 65 Distribution of Label from Metabolism of Radioactive Leucine, Norleucine and Norvaline in Tissues, Excreta and Respiratory Carbon Dioxide. M. U. Hassan and D. M. Greenberg. *Arch. Biochem. and Biophys. 39*, 129–37(1952).

G 66 Distribution of Methionine–S–35 During Healing of Experimental Wounds. M. B. Williamson and H. J. Fromm. *Federation Proc. 12*, 291(1953).

G 67 The Distribution of Phosphorus (P–31 and P–32) in Dorsal and Ventral Halves of the *Rana pipiens* Gastrula. P. Grant. *Anat. Record 117*, 554–5(1953).

G 68 Distribution of P–32 in Tissues of Normal Animals. I. Rosenfeld and O. A. Beath. *Proc. Soc. Exptl. Biol. Med. 81*, 608–11(1952).

G 69 Distribution and Turnover of Administered Rubidium (Rb–86) Carbonate in Blood and Urine of Man. A. Zipser, H. B. Pinto, and A. S. Freedberg. *J. Appl. Physiol. 5*, 317–22(1953).

G 70 The Distribution and Utilization of Radio-Iron (Fe–59) in Protein-Depleted Rats. W. F. Bethard, R. W. Wissler, J. S. Thompson, and M. J. Robson. *J. Clin. Invest. 31*, 617(1952).

G 71 Dynamic Aspects of Sodium Metabolism in Experimental Adrenal Insufficiency Using Radioactive Sodium. T. N. Stern, V. V. Cole, A. C. Bass, and R. R. Overman. *Am. J. Physiol. 164*, 437–49(1951).

G 72 Dynamics of Calcium Metabolism Time Distribution of Intravenously Administered Radiocalcium. R. O. Thomas, T. A. Litovitz, M. I. Rubin, and C. F. Geschickter. *Am. J. Physiol. 169*, 568–75(1952).

G 73 Effect of Acetate and Pyruvate on Alcohol Metabolism. J. J. Vitale, D. M. Hegsted, and N. Zamcheck. *Federation Proc. 13, No. 1*, 481(1954).

G 74 Effect of ACTH on Incorporation of Labeled-Histidine into Tissue Proteins in Male Adult Mice. A. Novak. *Am. J. Physiol. 168*, 121–5(1952).

G 75 The Effect of Adrenal Cortical Hormones on the Incorporation of C–14 into the Protein of Lymphatic Cells. S. Kit and E. S. G. Barron. *Endocrinology 52*, 1–9(1953).

G 76 The Effect of 2-Amino-fluorene on the Utilization of S–35 DL-Methionine. A. W. Wase, J. B. Allison, and J. F. Migliarese. *Science 116*, 536–7(1952).

G 77 The Effect of Antibiotics and the Composition of Diets on Fecal Vitamin B–12 and Biotin. B. F. Chow, R. L. Davis, and S. Davis. *J. Nutrition 49*, 657–68(1953).

G 78 The Effect of Bal on Distribution and Metabolism of P–32 and Sr–90. W. E. Kisieleski, W. P. Norris, and L. A. Woodruff. *Proc. Soc. Exptl. Biol. Med. 77*, 694–6(1951).

G 79 Effect of Beta-Hydroxybutyric Acid on Glucose Oxidation in Insulin Treated Eviscerated Animals. A. N. Wick and D. R. Drury. *Federation Proc. 12*, 290(1953).

G 80 Effect of Bioflavones upon Metabolism of Iodine and Iodinated Compounds in the Rat. K. G. Scott and L. Strei. *Proc. Soc. Exptl. Biol. Med. 81*, 493–7(1952).

G 81 The Effect of Bromobenzene and 3,4-Benzpyrene on the Metabolism of Radioactive L-Cystine. H. R. Gutmann and J. L. Wood. *Cancer Research 10*, 8–12(1950).

G 82 Effect of Calcium Status, Mass of Calcium Administered and Age on Ca–45 Metabolism in the Rat. S. L. Hansard, C. L. Comar, and M. P. Plumlee. *Proc. Soc. Exptl. Biol. Med. 78*, 455–60(1951).

G 83 The Effect of Certain Drugs on the Metabolism of Ascorbic Acid, Studied Using 1-Ascorbic-1-C–14 Acid. J. J. Burns, E. H. Mosbach, S. Schulenberg, and J. Reichenthal. *J. Pharmacol. Exptl. Therap. 110*, 9(1954).

G 84 Effect of Certain Metabolic Alterations on the Subcellular Distribution of I–131 Labeled Thy-

roxine and Triiodothyronine. P. Van Arsdel, Jr., R. Miller, J. R. Hogness, and R. H. Williams. *J. Clin. Endocrinol. Metabolism 14*, 804(1954).

G 85 Effect of Choline and Cystine on the Oxidation of the Methyl Group of Methionine. C. G. Mackenzie and V. D. Vigneaud. *J. Biol. Chem. 195*, 487–91(1952).

G 86 Effect of Coprophagy upon S-35 Uptake by Rabbits after Ingestion of Labeled Sodium Sulfate. R. Kulwich, P. B. Pearson, and A. H. Lankenau. *Arch. Biochem. and Biophys. 50*, 180–7(1954).

G 87 Effect of Cortisone Treatment for 28 Days on Radio-iodine Metabolism in Normal Rats and Adrenalectomized Rats Maintained with Desoxycorticosterone. C. J. Migeon, L. I. Gardner, J. F. Crigler, Jr., and L. Wilkins. *Endocrinology 51*, 117–26(1952).

G 88 Effect of Cortisone Upon Rates of Glucose Production and Oxidation in the Rat. I. D. Welt, D. Stetten, Jr., D. J. Ingle, and E. H. Morley. *J. Biol. Chem. 197*, 57–66(1952).

G 89 Effect of Dibenamine (N-(2-Chloroethyl) Dibenzylamine) on the Metabolism of Radioactive Epinephrine. R. W. Schayer, J. Kennedy and R. L. Smiley. *J. Biol. Chem. 202*, 39–43(1953).

G 90 The Effect of Diet on the Rate of Loss of Labeled Amino Acid from Tissue Proteins. G. Solomon and H. Tarver. *J. Biol. Chem. 195*, 447–52(1952).

G 91 Effect of Food and Water on Thyroid Uptake of Radioiodine (I-131) in Rats. J. P. Storaasli, S. Rosenberg, and H. L. Friedell. *Proc. Soc. Exptl. Biol. Med. 83*, 748–50(1953).

G 92 Effect of Fructose on Lipongenesis from Lactate and Acetate in Diabetic Liver. N. Baker, I. L. Chaikoff, and A. Schusdek. *J. Biol. Chem. 194*, 435–43(1952).

G 93 The Effect of β-Hydroxybutyric Acid on Glucose Oxidation in Insulinized Animals. D. R. Drury and A. N. Wick. *J. Biol. Chem. 196*, 129–33 (1952).

G 94 Effect of Hypophysectomy on the Intrathyroidal Metabolism of I-131. A. Albert and N. Lorenz. *Proc. Soc. Exptl. Biol. Med. 77*, 204–5(1951).

G 95 Effect of Hypophysectomy on I-131 Metabolism in Normal and Thiouracil Treated C3H Mice. S. H. Wollman and R. O. Scow. *Endocrinology 52*, 338–45(1953).

G 96 The Effect of Inherited Factors, The Milk Agent, and Physiological State on Phosphorus Metabolism of Endocrine Glands of Mice. S. Albert and R. M. Johnson. *Cancer Research 12*, 243–4(1952).

G 97 The Effect of Insulin on The Incorporation of C-14 into The Protein of Rat Diaphragm. F. M. Sinex, J. MacMullen, and A. B. Hastings. *J. Biol. Chem. 198*, 615–19(1952).

G 98 Effect of Insulin on Phosphate Transport and Glucose Metabolism. J. Sacks and F. M. Sinex. *Federation Proc. 11*, 135(1952).

G 99 Effect of Iodide, Thiouracil and Thyroxine on the Disappearance of Thyroidal I 131. A. Albert and A. Tenney. *Proc. Soc. Exptl. Biol. Med. 77*, 202 3(1951).

G 100 Effect of Low Fat and High Fat Diets on the Synthesis of Cholesterol in Rats. R. B. Alfin-Slater, M. C. Schotz, F. Shimoda, and H. J. Deuel, Jr., *J. Biol. Chem. 195*, 311–5(1952).

G 101 Effect of Low Protein Diet and Fasting on Nucleic Acid Metabolism in the Rat. J. A. D. Cooper. *J. Biol. Chem. 200*, 155–9(1953).

G 102 The Effect of Metabolic Disturbance on Cystine-S 35 Partition among Rat Liver Cytostructures. N. D. Lee and R. H. Williams. *J. Biol. Chem. 200*, 451–9(1953).

G 103 The Effect of Neoplasia on the Turnover of Nucleic Acids Studied with Formate-C14 and Glycine-2 C-14. A. H. Payne, L. S. Kelly, G. Beach, and H. B. Jones. *Cancer Research 12*, 426–8(1952).

G 104 Effect of Neoplastic Tissue on the Turnover of Liver Nucleic Acids. A. H. Payne, L. S. Kelly, and M. R. White. *Cancer Research 12*, 65–8 (1952).

G 105 Effect of Ouabain on the Utilization of C-14-Labelled Glucose and Pyruvate by Cardiac Muscle. A. Wollenberger. *J. Pharmacol. Exptl. Therap. 101*, 38–9(1951).

G 106 Effect of Oxophenarsine on Phospholipid Metabolism of *Trypanosoma equiperdum* in the Rat. W. Cantrell. *Federation Proc. 12*, 308(1953).

G 107 The Effect of Phytate and Other Food Factors on Iron Absorption. L. M. Sharpe, W. C. Peacock, R. Cooke and R. S. Harris. *J. Nutrition 41*, 433–46(1950).

G 108 Effect of Prolactin on Phosphorus Metabolism of Pigeon Crop-Sac: P-31 and P-32 Analyses. R. W. Brown, D. M. Woodbury, and G. Sayers. *Proc. Soc. Exptl. Biol. Med. 76*, 639–42(1951).

G 109 Effect of Prolactin on Turnover of P-32 in Pigeon Crop-Sac. R. W. Brown, D. M. Woodbury, and G. Sayers. *J. Pharmacol. Exptl. Therap. 101*, 4(1951).

G 110 Effect of Protein and Cholesterol in the Diet on Metabolism of Injected C-14 Choline. R. Okey and E. Goossen. *Federation Proc. 12*, 425(1953).

G 111 Effect of Protein Depletion on Rate of Disappearance of Radioactive Protein from the Blood Stream. C. A. Hubay, H. Krieger, W. D. Holden and T. Hancock. *Proc. Soc. Exptl. Biol. Med. 78*, 402–6(1951).

G 112 The Effect of Riboflavin on the Protein-bound Radioactivity and on the Urinary Metabolites of Rats Fed 2-Acetylamino-fluorene-9-C-14. E. K. Weisburger, J. H. Weisburger, and H. P. Morris. *Proc. Am. Assoc. Cancer Research 1*, 58(1953).

G 113 Effect of Sodium 5-Allyl-5-(1 Methylbutyl) 2-Thiobarbiturate on Uptake of I-131 by Rat Thyroid. A. W. Wase and J. Greenspan. *Proc. Soc. Exptl. Biol. Med. 84*, 154–5(1953).

G 114 Effect of Thyroxine and Thiouracil on S-35 Deposition in Articular Cartilage. D. D. Dziewiatkowski. *J. Biol. Chem. 189*, 717–27(1951).

G 115 Effect of Vitamin D on the Metabolism of Radiocalcium in Rachitic Rats. B. Lindquist. *Acta Paediat. 41, Suppl. 86*, 82(1952).

G 116 Effects of Adrenal Cortical Steriods on C-14 Glucose Metabolism by Rat Diaphragm. M. S. Grossman, C. S. Ryder, and O. H. Pearson. *Federation Proc. 12*, 57(1953).

G 117 Effects of Adrenocorticotrophic Hormone on the Phosphorus Metabolism of Lymphoid Tissue. W. Hull and A. White. *Endocrinology 51*, 210–6(1952).

G 118 Effects of Altered Thyroid Function Upon the Metabolism of Endogenously Labeled Hormone. A. Albert. *J. Clin. Endocrinol. Metabolism 13*, 880(1953).

G 119 Effects of Altered Thyroid Function Upon the Metabolism of Endogenously Labeled Thyroid Hormone. A. Albert, E. Ford, and N. Lorenz. *Endocrinology 53*, 50–9(1953).

G 120 Effects of Fasting and Pyruvate on Palmitic Acid Metabolism. R. P. Geyer, E. J. Bowie, and J. C. Bates. *J. Biol. Chem. 200*, 271–4(1953).

G 121 Effects of a Folic Acid Antagonist on Nucleic Acid Metabolism. D. A. Goldthwait and A. Bendich. *J. Biol. Chem. 196*, 841–52(1952).

G 122 The Effects of Hypophyseal Growth Hormone on the Metabolism of Ca–45 in Hypophysectomized Rats. F. Ulrich, W. O. Reinhardt, and C. H. Li. *Endocrinology 49*, 213–7(1951).

G 123 Effects of Injection of 5–Adenylic Acid on Tissue Nucleotides of the Rat. H. G. Albaum, D. Pankin, and E. K. Harvill. *Proc. Soc. Exptl. Biol. Med. 84*, 529–31(1953).

G 124 Effects of Low Iodine Diet on Thyroid: Serum Radioiodide Ratio of Mice and Rats. H. J. Lipner, B. P. Wagner, and H. P. Morris. *Federation Proc. 13, No. 1*, 465(1954).

G 125 The Effects of Nitrogen Mustard and a Pyridinium Compound on the Phosphorus-32 Turnover in Rat Liver During Azo-Dye Cancer Induction. D. N. Ward, E. L. Brandt, and A. C. Griffin. *Cancer 5*, 625–30(1952).

G 126 Effects of Polyoxyethylene Sorbitan Monolaurate (Tween 20) Upon Gastrointestinal Iron Absorption in Hamsters. R. W. Wissler, W. F. Bethard, P. Barker, and H. D. Mori. *Proc. Soc. Exptl. Biol. Med. 86*, 170–7(1954).

G 127 The Effects of Various Steroids on the Collection of Radioactive Iodine by the Thyroid Gland of the Rat. W. L. Money, L. Kraintz, J. Fager, L. Kirschner, and R. W. Rawson. *Endocrinology 48*, 682–90(1951).

G 128 Electrical Stimulation of Metabolism of Homogenates and Particulates. L. G. Abood, R. W. Gerard, and S. Ochs. *Am. J. Physiol. 171*, 134–9(1952).

G 129 Endogenous Cholesterol Metabolism in the Rat Studied with C–14 Labeled Acetate. E. J. Landon and D. M. Greenberg. *J. Biol. Chem. 209*, 493–502(1954).

G 130 The Enterohepatic Circulation of Radiothyroxine A. Albert. *J. Clin. Endocrinol. Metabolism 12*, 942(1952).

G 131 The Enterohepatic Circulation of Radiothyroxine A. Albert and F. R. Keating, Jr. *Trans. Am. Goiter Assoc. 231*, 41(1952).

G 132 The Enterohepatic Circulation of Thyroxine in the Rat. F. N. Briggs, A. Taurog and I. L. Chaikoff. *Endocrinology 52*, 559–67(1953).

G 133 Evaluation of Catabolic Pathways of Glucose in Mammalian Systems. B. Bloom, M. R. Stetten, and D. Stetten, Jr. *J. Biol. Chem. 204*, 681–94(1953).

G 134 Excretion of C–14 Labeled Synthetic Atropine and Tropic Acid in Mice. R. E. Gosselin, J. D. Gabourel, S. C. Kalser, and J. H. Wills. *Federation Proc. 13, No. 1*, 359(1954).

G 135 The Excretion and Distribution of I–131 Following Administration of Physiologic Amounts of Labeled Iodine, Di-iodotyrosine and Thyroxine in the Rat. H. W. Johnson and A. Albert. *Endocrinology 48*, 669–81(1951).

G 136 The Excretion of Metabolites of Progesterone–21–C–14 after Intragastric Administration to Rats. Nai-Hsuan C. Shen, W. H. Elliott, E. A. Doisy, Jr., and E. A. Doisy. *J. Biol. Chem. 208*, 133–7(1954).

G 137 Excretion of the Metabolites of Testosterone–4–C–14 in the Rat. J. Ashmore, W. H. Elliott, E. A. Doisy, Jr., and E. A. Doisy. *J. Biol. Chem. 200*, 661–8(1953).

G 138 Excretion of Radioactive Colchicine in Normal and Tumor-Bearing Mice. E. J. Walaszek and A. Beck. *J. Pharmacol. Exptl. Therap. 106*, 421(1952).

G 139 The Excretion of Radioactivity During a Four-Day Period Following the Feeding of Carbon 14-Labeled 2-Acetylamino-Fluorene to Rats. J. H. Weisburger, E. K. Weisburger, and H. P. Morris. *J. Natl. Cancer Inst. 11*, 797–803(1951).

G 140 The Excretion and Retention of the Carbon of Ingested Sucrose by the Mouse. R. Steele. *J. Biol. Chem. 209*, 91–103(1954).

G 141 Excretion and Tissue Distribution Studies on Radioactive Nicotine. A. Ganz, F. E. Kelsey, and E. M. K. Geiling. *J. Pharmacol. Exptl. Therap. 103*, 209–14(1951).

G 142 Experimental Hepatic Porphyria: Excessive Porphyrin Formation Resulting from Disturbance in Liver Catalase Metabolism. R. Schmid, S. Schwartz, J. Figen, and M. Kiefer. *J. Lab. Clin. Med. 42*, 947–8(1953).

G 143 Extrahepatic Metabolism of Progesterone–4–C–14 and Testosterone–4–C–14 in Rats. W. G Wiest, D. L. Berliner, and G. Woods. *Federation Proc. 13, No. 1*, 417(1954).

G 144 Fasting and Hepatic Lipogenesis from C 14 Acetate. I. Lyon, M. S. Masri, and I. L. Chaikoff. *J. Biol. Chem. 196*, 25–32(1952).

G 145 Fat Metabolism in Nephrotic Hyperlipemia. W. Heymann, L. W. Matthews, J. Lemm, P. Olynyk, M. Salehar, and C. Gilkey. *Metabolism, Clin. Exptl. 3*, 27–31(1954).

G 146 Fat Metabolism and Role of Liver in the Hyperlipemia of Nephrotoxic Renal Disease in Rats. W. Heymann, D. B. Hackel, and L. W. Matthews. *Federation Proc. 12*, 391(1953).

G 147 Fat Metabolism in Three Forms of Obesity. M. W. Bates, J. Mayer and S. F. Nauss. *Federation Proc. 13, No. 1*, 450–1(1954).

G 148 The Fate of C–14 Testosterone and C–14 Progesterone in Mice and Rats. M. C. Barry, M. L. Eidinoff, K. Dobriner, and T. F. Gallagher. *Endocrinology 50*, 587–99(1952).

G 149 The Fate of Intravenously Administered Egg Yolk Phospholipides in Dogs. D. B. Zilversmit. *Arch. Biochem. and Biophys. 46*, 261–5(1953).

G 150 Fate of Iodine in the Body. C. P. LeBlond. *J. Am. Pharm. Assoc., Sci. Ed. 40*, 595–606 (1951).

G 151 The Fate of Thiamine–S–35 in the Rat. P. T. McCarthy, L. R. Cerecedo and E. V. Brown. *J. Biol. Chem. 209*, 611–8(1954).

G 152 Fatty Acid Metabolism and Hepatic Lipogenesis. I. Lyon and R. P. Geyer. *Federation Proc. 13, No. 1*, 466(1954).

G 153 Fatty Acid Metabolism and Intracellular K+ and Na+. R. P. Geyer, K. J. Sholtz and M. A. Ryan. *Federation Proc. 13, No. 1*, 458(1954).

G 154 Fluid and Electrolyte Shifts in the Hydrated Adrenalectomized Rat after Nephrectomy. R. C. Frost and R. V. Talmage. *Proc. Soc. Exptl. Biol. Med. 80*, 171–5(1952).

G 155 Formation of Glucose by the Kidney. D. R. Drury, A. N. Wick, and E. M. MacKay. *Am. J. Physiol. 163*, 655–61(1950).

G 156 Formation of Muscle Protein in Diabetic Dogs, Studied with S–35–Methionine. L. L. Forker, I. L. Chaikoff, C. Entenman, and H. Tarver. *J. Biol. Chem. 188*, 37–48(1951).

G 157 Formation of Phospholipids in Animal Tissue. C. Artom. *Phosphorus Metabolism 2*, 203–42 (1952).

G 158 Further Studies on the Absorption of Vitamin B–12 Following Oral and Parenteral Administration. R. Yamamoto, C. Barrows, Jr., C. Land, and B. F. Chow. *J. Nutrition 45*, 507–19(1951).

G 159 Further Studies in Fat and Carbohydrate Metabolism Using C–14-Labeled Glycerol. L. I. Gidez and M. L. Karnovsky. *Federation Proc. 11*, 219–20(1952).

G 160 Glucose-C–14 Oxidation in Alloxan Diabetic Rats. N. Baker and G. Incefy. *Federation Proc. 13, No. 1*, 6(1954).

G 161 Glucose Pool and Glucose Space in the Normal and Diabetic Dog. G. L. Searle, E. H. Strisower, and I. L. Chaikoff. *Am. J. Physiol. 176*, 190–4(1954).

G 162 Glucose Utilization in Adipose and Hepatic Tissues. F. X. Hausberger, S. W. Milstein and R. J. Rutman. *Federation Proc. 13, No. 1*, 364(1954).

G 163 Glucose Utilization in the Diabetic Dog, Studied with C–14-Glucose. D. D. Feller, I. L. Chaikoff, E. H. Strisower, and G. L. Searle. *J. Biol. Chem. 188*, 865–80(1951).

G 164 Glucose Utilization by the Extra-Hepatic Tissues. D. R. Drury, A. N. Wick, R. W. Bancroft, and E. M. MacKay. *Am. J. Physiol. 164*, 207–12(1951).

G 165 Glycogen Regeneration in Intact Animals. D. Stetten, Jr. and M. R. Stetten. *Federation Proc. 13, No. 1*, 304–5(1954).

G 166 Growth of Carcinoma Implants in Fed and Fasted Rats. G. A. LePage, V. R. Potter, H. Busch, C. Heidelberger, and R. B. Hurlbert. *Cancer Research 12*, 153–7(1952).

G 167 Growth of Free Tumor Cells in the Pleural Exudate and Their Implantation into the Pleura of the Mouse. H. Goldie, B. R. Jeffries, M. C. Maxwell, and P. F. Hahn. *Cancer Research 12*, 422–5(1952).

G 168 Growth and Metabolism in Normal and Thyroid-Ablated Infant Rhesus Monkeys (Macaca Mulatta). III. Growth and Metabolism Following l-Thyroxine Administration in Thyroid-Ablated Infant Rhesus Monkeys (Macaca Mulatta). D. E. Pickering and D. A. Fisher. *Am. J. Diseases Children 86*, 147–56(1953).

G 169 Growth and Metabolism in Normal and Thyroid-Ablated Infant Rhesus Monkeys (Macaca Mulatta). IV. Radiosodium (Na–24) Space in Normal and Thyroid-Ablated Infant Rhesus Monkeys (Macaca Mulatta). D. E. Pickering, D. A. Fisher, and K. G. Scott. *Am. J. Diseases Children 86*, 157–61(1953).

G 170 Growth and Metabolism in Normal and Thyroid-Ablated Infant Rhesus Monkeys (Macaca Mulatta). VII. Morphology of Normal and Thyroid-Ablated Infant Rhesus Monkeys (Macaca Mulatta)–Skeletal System. J. T. Crane, D. E. Pickering, G. Van Wagenen, and F. S. Smyth. *Am. J. Diseases Children 87*, 708–23(1954).

G 171 Guanine in Cancer. S. Graff, M. Engelman, H. B. Gillespie and A. M. Graff. *Cancer Research 11*, 388–92(1951).

G 172 Hepatic Catabolism of Thyroid Hormone Studied by Radioactive Iodine in Splenic Autotransplants. M. W. Hamolsky and Z. S. Gierlach. *Proc. Soc. Exptl. Biol. Med. 80*, 288–91-(1952).

G 173 Hepatic and Extrahepatic Regulation of Serum Protein Metabolism. S. Roberts and R. Brunish. *Federation Proc. 12*, 259–60(1953).

G 174 High Vegetable Fat Diet on Oxidation of Acetate-2-C–14 in the Intact Rat. E. Goossen and R. Okey. *Federation Proc. 13, No. 1*, 219(1954).

G 175 The Incorporation of Formate into Pentosenucleic Acids in Various Organs of the Rat. P. Drochmans, D. H. Marrian, and G. B. Brown. *Arch. Biochem. and Biophys. 39*, 310–16(1952).

G 176 Incorporation of Labeled Cystine into Tissue Protein and Subcellular Structures. N. D. Lee, J. T. Anderson, R. Miller, and R. H. Williams. *J. Biol. Chem. 192*, 733–42(1951).

G 177 Incorporation of Short Chain Fatty Acids into Phospholipides by the Rat. B. P. Stevens and I. L. Chaikoff. *J. Biol. Chem. 193*, 465–72(1951).

G 178 Incorporation of S–35 from DL-Cystine into Glutathione and Protein in the Rat. E. I. Anderson and W. A. Mosher. *J. Biol. Chem.* 188, 717–22(1951).

G 179 Incorporation and Turnover of Radiophosphorus in Mouse Mammary Tumors (dbrB and C3H). H. Alabaum, A. Goldfeder, and L. Eisler. *Cancer Research 12*, 188–91(1952).

G 180 Inflammation and Protein Metabolism Studies of Carbon-14 Labled Proteins in Dogs with Sterile Abscesses. C. L. Yuile, F. V. Lucas, C. K. Jones, S. J. Chapin, and G. H. Whipple. *J. Exptl. Med. 98*, 173–4(1953).

G 181 Influence of Fasting on the Effect of Insulin on Glucose Oxidation. D. R. Drury, A. N. Wick, and E. M. MacKay. *Proc. Soc. Exptl. Biol. Med. 75*, 479–80(1950).

G 182 Influence of Folic Acid Deficiency on Metabolism of Chicken Bone Marrow Cells. J. S. Dinning and P. L. Day. *Federation Proc. 13, No. 1*, 455–6(1954).

G 183 Influence of Hypophysectomy and Growth Hormone on Cartilage Sulfate Metabolism. S. Ellis, J. Huble, and M. E. Simpson. *Proc. Soc. Exptl. Biol. Med. 84*, 603–5(1953).

G 184 Influence of Previous Diet on the Synthesis of Glycogen, Fatty Acids, and Cholesterol by Rat Liver *in Vitro*. J. E. Whitney and S. Roberts. *Federation Proc. 13, No. 1*, 320(1954).

G 185 Influence of Steroids on Uterine Protein Metabolism. S. Roberts and H. Hoffman. *J. Clin. Endocrinol. Metabolism 14*, 797(1954).

G 186 Inhibition of Methanol Oxidation by Ethanol in the Rat. G. Bartlett. *Am J. Physiol. 163*, 619(1950).

G 187 Inhibition Studies on Radioactive Fatty Acid Metabolism. R. P. Geyer, M. Cunningham and J. Pendergast. *J. Biol. Chem. 188*, 185–91(1951).

G 188 Insulin and the Fate of Acetate and Formate in the Diabetic Liver. J. M. Felts, I. L. Chaikoff, and M. J. Osborn. *J. Biol. Chem. 193*, 557–62(1951).

G 189 Insulin and the Fate of Lactate in the Diabetic Liver. J. M. Felts, I. L. Chaikoff, and M. J. Osborn. *J. Biol. Chem. 191*, 683–92 (1951).

G 190 Insulin and the Relation between Phosphate Transport and Glucose Metabolism. J. Sacks and F. M. Sinex. *Am. J. Physiol. 175*, 353–7(1953).

G 191 Insulin and the Volume of Distribution of Glucose. D. R. Drury and A. N. Wick. *Am. J. Physiol. 166*, 159–64(1951).

G 192 Interference with Metabolism of C–14 Labeled Estrone in Aminopterin-Treated Rats. J. B. Trunnell and W. E. Bowman. *J. Clin. Endocrinol. Metabolism 14*, 796(1954).

G 193 Intermediary Metabolism of DL-Lysine-(C–14). M. Rothstein. *Federation Proc. 12*, 261(1953).

G 194 Intestinal Lymph as Pathway for Transport of Absorbed Fatty Acids of Different Chain Lengths. B. Bloom, I. L. Chaikoff, and W. O. Reinhardt. *Am. J. Physiol. 166*, 451–5(1951).

G 195 Intracellular Phosphorus Turnover in the Rat Liver Cell. M. Griffiths and N. Pace. *Proc. Soc. Exptl. Biol. Med. 83*, 771–8(1953).

G 196 Investigation of Ca-Metabolism During the Fracture Healing Using Ca–45. Preliminary Report. T. Yonezawa, S. Chin, M. Kuga, N. Shimada, R. Yoshioka, and S. Imagi. *J. Kyoto Prefect. Med. Univ. 50*, 318–23 (1951).

G 197 Investigation of Ca-Metabolism with the Aid of Radioactive Ca–45. M. Araki, T. Yonezawa, S. Chin, M. Kuga, N. Shimada, and R. Yoshioka. *J. Kyoto Prefect. Med. Univ. 49*, 291–8(1951).

G 198 Investigation of the Nucleic Acids of Viscera and Tumor Tissue from Animals Injected with Radioactive 8-Azaguanine. J. H. Mitchell, Jr., H. E. Skipper, and L. L. Bennett, Jr. *Cancer Research 10*, 647–9(1950).

G 199 Investigations on the Mechanism of the Anti-Leukemic Action of Urethan Employing Carbon 14 Compounds. H. E. Skipper. *Texas Repts. Biol. Med. 8*, 543–50(1950).

G 200 Iodide Metabolism on Low Iodide Goiter-Producing Diet. L. Van Middlesworth and A. Intoccia. *Federation Proc. 13, No. 1*, 157(1954).

G 201 Iodination of Milk Proteins by Iodide. L. Van Middlesworth, A. H. Tuttle, and D. F. Haney. *Federation Proc. 13, No. 1*, 157(1954).

G 202 I–131 Excretion in Bile and Urine Following Injection of I–131 Labeled Thyroxine in Euthyroid, Hypo- and Hyperthyroid Rats. H. M. Klitgaard. *Federation Proc. 12*, 78(1953).

G 203 I–131 Labeled L–Thyroxine. II. Nature of the Excretion Project in Bile. A. Taurog, F. N. Briggs, and I. L. Chaikoff. *J. Biol. Chem. 194*, 655–68(1952).

G 204 Iodine Uptake and Release in Larvae of *Hyla versicolor*. J. N. Dent and E. L. Hunt. *Anat. Record 115*, 299(1953).

G 205 I–131 Uptake by Transplantable Thyroid Tumors in the C3H Mouse. S. H. Wollman, R. O. Scow, B. Wagner, and H. P. Morris. *Cancer Research 12*, 311(1952).

G 206 Iron Excretion in the Mouse. A. R. Stevens, Jr., P. L. White, D. M. Hegsted, and C. A. Finch. *J. Biol. Chem. 203*, 161–5(1953).

G 207 Iron Metabolism in the Cobalt-Polycythemic Rat. N. I. Berlin, R. L. Huff, and T. G. Hennessy. *J. Biol. Chem. 188*, 445–50(1951).

G 208 The Isotope Distribution in the Rapidly Metabolizing Fatty Acid Fraction of the Liver. G. A. Swan. *Arkiv Kemi 3*, 167–9 (1951).

G 209 Isotopic Measurements on the Oxidation of Histamine to Imidazoleacetic Acid *in Vivo*. H. Tabor, A. H. Mehler, and R. W. Schayer. *J. Biol. Chem. 200*, 605–7(1953).

G 210 Kinetic Aspects of Acetate and Lipid Metabolism in the Intact Rat. T. T. Hutchens and J. T. Van Bruggen. *Federation Proc. 11*, 235(1952).

G 211 Lactate Transfer by Isolated Gastric Mucosa: Theoretical Consideration of Weak Electrolyte Active Transport. C. A. M. Hogben. *Federation Proc. 13, No. 1*, 71(1954).

G 212 Levels of Acids of the Citric Acid Cycle in Tissues of Normal and Diabetic Rats. C. E. Frohman, J. M. Orten, and A. H. Smith. *J. Biol. Chem. 193*, 803–7(1951).

G 213 Lipid Synthesis and Transport in the Dog. P. V. Harper, Jr., W. B. Neal, Jr., and G. R. Hlavacek. *Metabolism 2*, 69–80(1953).

G 214 Lipide Metabolism During Cell Division. R. M. Johnson, E. Levin, and S. Albert. *Arch. Biochem. and Biophys. 51*, 170–5(1954).

G 215 Measurement of Total CO–2 Output by Use of Double Labeled Water. N. Lifson and G. B. Gordon. *Federation Proc. 13, No. 1*, 89(1954).

G 216 The Metabolic Conversion of the Carbon Chain of Lysine–6–C–14 to Glutamic Acid, Aspartic Acid and Arginine. L. L. Miller and W. F. Bale. *Arch. Biochem. and Biophys. 48*, 361–9 (1954).

G 217 Metabolism of Cholesterol in Scorbutic Guinea Pigs. B. Belavady and S. Banerjee. *J. Biol. Chem. 209*, 641–5(1954).

G 218 Metabolic Defects in the Liver of Fasted Rats as Shown by Utilization of C–14–Labeled Glucose and Fructose. G. H. Wyshak and I. L. Chaikoff. *J. Biol. Chem. 200*, 851–7(1953).

G 219 The Metabolic Degradation in the Mouse of 1, 2, 5, 6-Dibenzanthracene–9, 10–C14. III. Some Quinone Metabolites Retaining the Intact Ring System. C. Heidelberger, H. I. Hadler, and G. Wolf. *J. Am. Chem. Soc. 75*, 1303–8(1953).

G 220 On the Metabolic Equivalence of Deuterium and Tritium in Animal Experimentation. R. C. Thompson and J. E. Ballou. *Arch. Biochem. and Biophys. 42*, 219–20(1953).

G 221 Metabolic Fate of Cholesterol, 7–Keto–Cholesterol and 7–Hydroxycholesterol in Rabbit. F. E. Kendall, E. H. Mosbach, L. L. Abell, and W. Meyer. *Federation Proc. 12*, 449(1953).

G 222 The Metabolic Pattern of C–14 Diethylstilbestrol. D. J. Hanahan, E. G. Daskalakis, T. Edwards, and H. J. Dauben, Jr. *Endocrinology 53*, 163–70(1953).

G 223 Metabolic Studies on Methionine and Ethionine and Their Sulfonium Salts in Rats. J. A. Stekol, S. Weiss, E. I. Anderson, and B. Hsu. *Federation Proc. 13, No. 1*, 304(1954).

G 224 Metabolic Studies of 17–Methyl–C–14–Testosterone. P. M. Hyde, W. H. Elliott, and E. A. Doisy. *Federation Proc. 12*, 223(1953).

G 225 Metabolic Studies of Progesterone–21–C–14. F. N. H. Shen and E. A. Doisy, Jr. *Federation Proc. 12*, 267(1953).

G 226 Metabolic Studies with Ethanolamine-1,2-C–14. L. O. Pilgeram, E. M. Gal, E. N. Sassenrath, and D. M. Greenberg. *J. Biol. Chem. 204*, 367–77(1953).

G 227 Metabolism of Acetate by the Extrahepatic-Tissues. A. N. Wick and D. R. Drury. *J. Biol. Chem. 199*, 127–31(1952).

G 228 The Metabolism of Acetone in the Intact Rat. W. Sakami and J. M. LaFaye. *J. Biol. Chem. 193*, 199–203(1951).

G 229 The Metabolism of Adrenaline Containing Isotopic Carbon. R. W. Schayer. *J. Biol. Chem. 192*, 875–81(1951).

G 230 Metabolism of 2-Benzoylaminofluorene-9-C–14 and 2-Acetylaminofluorene-9-C–14 in the Rat. H. R. Gutmann and J. H. Peters. *Federation Proc. 12*, 212–3(1953).

G 231 Metabolism of Calcium in Normal, Rachitic and Vitamin D Treated Rats as Evidenced by Radiocalcium Ca–45 Studies. E. Underwood, S. Fisch and H. C. Hodge. *Am. J. Physiol. 166*, 387–93(1951).

G 232 Metabolism of C–14-Butyrate by Mammalian Heart Muscle. V. Lorber. *Federation Proc. 13, No. 1*, 91(1954).

G 233 The Metabolism of 2-Carbon Compounds Related to Glycine. I. Glyoxylic Acid. A. Weissbach and D. B. Sprinson. *J. Biol. Chem. 203*, 1023–30(1953).

G 234 The Metabolism of 2-Carbon Compounds Related to Glycine. II. Ethanolamine. A. Weissbach and D. B. Sprinson. *J. Biol. Chem. 203*, 1031–7(1953).

G 235 Metabolism of α-C–14-DL-Histidine in the Intact Rat: Urinary Metabolites. G. Wolf and Pei-Hsing L. Wu. *Federation Proc. 13, No. 1*, 323–24(1954).

G 236 Metabolism of C–14-Ethanol by Surviving Rat Tissues. E. J. Masoro, H. Abramovitch, and J. R. Birchard. *Am. J. Physiol. 173*, 37–40 (1953).

G 237 The Metabolism of α-C–14-Histidine in the Intact Rat. I. Radioactivity in Amino Acids from Protein. G. Wolf. *J. Biol. Chem. 200*, 637–45(1953).

G 238 Metabolism of C–14-Labeled Dextran in the Mouse. W. H. Cargill and H. D. Bruner. *J. Pharmacol. Exptl. Therap. 103*, 339(1951).

G 239 The Metabolism of C–14-Labeled D-Glucuronic Acid in the Guinea Pig and the Albino Rat. J. F. Douglas and C. G. King. *J. Biol. Chem. 203*, 889–94(1953).

G 240 The Metabolism of C–14-Labeled Ethylenediamine-tetraacetic Acid in the Rat. H. Foreman, M. Vier, and M. Magee. *J. Biol. Chem. 203*, 1045–53(1953).

G 241 Metabolism of C–14-Labeled Glucose and Pyruvate by Rat Diaphragm Muscle *in Vitro*. C. A. Villee, V. K. White, and A. B. Hastings. *J. Biol. Chem. 195*, 287–97(1952).

G 242 Metabolism of C–14-Labeled Tyrosine and Phenylalanine in Phlorizinized Rats. D. R. Sanadi and D. M. Greenberg. *Arch. Biochem. 25*, 257–61(1950).

G 243 Metabolism of 2-C–14–Uracil. R. J. Rutman, A. Cantarow, and K. E. Paschkis. *Federation Proc. 13, No. 1*, 124(1954).

G 244 Metabolism of Cardiac Muscle. M. Brin and R. E. Olson. *J. Biol. Chem. 199*, 475–83(1952).

G 245 Metabolism of Cardiac Muscle. IV. Utilization of Pyruvate and DL-Lactate by Duck Heart. O. N. Miller and R. E. Olson. *J. Biol. Chem. 199*, 457–66(1952).

G 246 Metabolism of Cardiac Muscle. V. Comparative Studies with L(+)– and D (–)–C–14–lactate in Duck and Rat Tissues. M. Brin, R. E. Olson, and F. J. Stare. *J. Biol. Chem. 199*, 467–73(1952).

G 247 Metabolism of Cesium 137 in Rats and Farm Animals. S. L. Hood and C. L. Comar. *Arch. Biochem. and Biophys. 45*, 423–33(1953).

G 248 Metabolism of Cholesterol in the Chick Embryo. I. The Synthesis of Cholesterol. W. M. Stokes, W. A. Fish, and F. C. Hickey. *J. Biol. Chem. 200*, 683–9(1953).

G 249 The Metabolism of Choline and its Conversion to Glycine in the Rat. S. Soloway and D. Stetten, Jr. *J. Biol. Chem. 204*, 207–14(1953).

G 250 Metabolism of Cr–51 by Animals as Influenced by Chemical State. W. J. Visek, I. B. Whitney, U. S. G. Kuhn, III, and C. L. Comar. *Proc. Soc. Exptl. Biol. Med. 84*, 610–15(1953).

G 251 Metabolism of Dextran-A Plasma Volume Expander, Studies of Radioactive Carbon-Labeled Dextran in Dogs. R. Terry, C. L. Yuile, A. Golodetz, C. E. Phillips, and R. R. White, III. *J. Lab. Clin. Med. 42*, 6–15(1953).

G 252 Metabolism of DL-Homocysteic Acid by Rat. W. J. Wingo and J. W. Currie. *Federation Proc. 13, No. 1*, 323(1954).

G 253 The Metabolism of D-Lysine—ε—C–14. M. Rothstein, C. G. Bly, and L. L. Miller. *Arch. Biochem. and Biophys. 50*, 252–6(1954).

G 254 The Metabolism of DL-Methionine Sulfone by the Rat. W. J. Wingo, R. A. Smith and J. Wood. *Arch. Biochem. and Biophys. 47*, 307–13(1953).

G 255 Metabolism of Energy-Rich Phosphate in Isolated Heart Studied with Radioactive Phosphate and the Action of Adrenaline. A. Omachi, J. M. Ginski, M. Eto, and A. G. Mulder. *Federation Proc. 12*, 106–7(1953).

G 256 The Metabolism of Epinephrine Containing Isotopic Carbon. II. R. W. Schayer, R. L. Smiley, and E. H. Kaplan. *J. Biol. Chem. 198*, 545–51(1952).

G 257 The Metabolism of Epinephrine Containing Isotopic Carbon. III. R. W. Schayer and R. L. Smiley. *J. Biol. Chem. 202*, 425–30(1953).

G 258 The Metabolism of Glutaric Acid-1, 5-C–14. I. In Normal and Phlorhizinized Rats. M. Rothstein and L. L. Miller. *J. Biol. Chem. 199*, 199–205(1952).

G 259 Metabolism of Glycine. A. D. Barton. *Proc. Soc. Exptl. Biol. Med. 77*, 481–4(1951).

G 260 The Metabolism of I–131-Labeled Diiodotyrosine. W. Tong, A. Taurog and I. L. Chaikoff. *J. Biol. Chem. 207*, 59–76(1954).

G 261 Metabolism of I–131-Labeled Thyroxine: Studies with Isolated, Perfused Rat Liver. F. N. Briggs, R. W. Brauer, A. Taurog, and I. L. Chaikoff. *Am. J. Physiol. 172*, 561–4(1953).

G 262 Metabolism of Iodobenzene. G. C. Mills and J. L. Wood. *J. Biol. Chem. 204*, 547–52(1953).

G 263 Metabolism of Labeled 2-Carbon Acids in the Intact Rat. S. Weinhouse and B. Friedmann. *J. Biol. Chem. 191*, 707–17(1951).

G 264 The Metabolism of L-Lysine-6-C–14. M. Rothstein and L. L. Miller. *J. Biol. Chem. 206*, 243–53(1954).

G 265 Metabolism of Mannose by the Extrahepatic Tissues. D. R. Drury and A. N. Wick. *Am. J. Physiol. 177*, 535–8(1954).

G 266 The Metabolism of Methyl Mercaptan in the Intact Animal. E. S. Canellakis and H. Tarver. *Arch. Biochem. and Biophys. 42*, 446–55(1953).

G 267 The Metabolism of Methylated Aminoazo Dyes. 1. The Demethylation of 3′-Methyl-4-dimethyl-C^{14}-amino-azo-benzene *in Vivo*. E. C. Miller, A. M. Plescia, J. A. Miller, and C. Heidelberger. *J. Biol. Chem. 196*, 863–74(1952).

G 268 Metabolism of Neoplastic Tissue. I. The Oxidation of Carbohydrate and Fatty Acids in Transplanted Tumors. S. Weinhouse, R. H. Millington, and C. E. Wenner. *Cancer Research 11*, 845–50(1951).

G 269 Metabolism of Neoplastic Tissue. IV. A Study of Lipid Synthesis in Neoplastic Tissue Slices *in Vitro*. G. Medes, A. Thomas, and S. Weinhouse. *Cancer Research 13*, 27–9 (1953).

G 270 Metabolism of Neoplastic Tissue. V. Fatty Acids Oxidation in Slices of Transplanted Tumors. S. Weinhouse, A. Allen, and R. H. Millington. *Cancer Research 13*, 367–71(1953).

G 271 Metabolism of Nicotine in the Dog. R. E. Tedeschi, D. R. Bennett, and P. S. Larson. *Federation Proc. 12*, 372(1953).

G 272 Metabolism of Plasma Expanders Studied with Carbon 14-Labeled Dextran. I. Gray. *Am. J. Physiol. 174*, 462–6(1953).

G 273 Metabolism of Pyruvate in Tumor Homogenates. D. P. Groth, G. A. LePage, C. Heidelberger, and P. A. Stoesz. *Cancer Research 12*, 529–34(1952).

G 274 Metabolism of Radioactive Cholesterol in the Intact Rat. D. Kritchevsky, M. R. Kirk, and M. W. Biggs. *Metabolism 1*, 254–8(1952).

G 275 The Metabolism of Radioactive Cobalt (Co–60) in Normal and Alloxan Diabetic Rats. F. Ulrich and D. H. Copp. *Arch. Biochem. and Biophys. 31*, 148–53(1951).

G 276 Metabolism of Radioactive Estrone in the Pseudopregnant Rabbit. B. F. Stimmel. *Federation Proc. 13, No. 1*, 305(1954).

G 277 The Metabolism of Radioactive Nicotinic Acid and Nicotinamide. E. Leifer, L. J. Roth, D. S. Hogness and M. H. Corson. *J. Biol. Chem. 190*, 595–602(1951).

G 278 The Metabolism of Radioactive Strontium in Adult, Young, and Rachitic Rats. D. C. Jones and D. H. Copp. *J. Biol. Chem. 189*, 509–14 (1951).

G 279 Metabolism of Radioactive Thiamine in the Rat. J. M. Iacono, G. Wolf, and B. C. Johnson. *Federation Proc. 12*, 223(1953).

G 280 Metabolism of Radioactive Vitamin B–12 by the Rat. K. W. Barbee and B. C. Johnson. *Proc. Soc. Exptl. Biol. Med. 76*, 720–1(1951).

G 281 Metabolism of Radioyttrium. B. Kawin. *Arch. Biochem. and Biophys. 45*, 230–1(1953).

G 282 The Metabolism of Ring-Labeled Histamine. R. W. Schayer. *J. Biol. Chem. 196*, 469–75 (1952).

G 283 Metabolism of Several Isomers of Adenine and Guanine Pentose Nucleotides in the Rat. H. Weinfeld and P. M. Roll. *Federation Proc. 12*, 287(1953).

G 284 The Metabolism of Sorbitol. A. N. Wick, M. C. Almen and L. Joseph. *J. Am. Pharm. Assoc., Sci. Ed. 40*, 542–4(1951).

G 285 Metabolism of Sorbitol and Glucose Compared in Normal and Alloxan-Diabetic Rats. M. R. Stetten and D. Stetten, Jr. *J. Biol. Chem. 193*, 157–65(1951).

G 286 Metabolism of S–35 Thiopental (Pentothal). Chemical and Paper Chromatographic Studies of S–35 Excretion by the Rat and Monkey. J. D. Taylor, R. K. Richards, and D. L. Tabern. *J. Pharmacol. Exptl. Therap. 104*, 93–102(1952).

G 287 Metabolism of Two Isotopically Labeled Pentaquine Salts. C. C. Smith. *Federation Proc. 12*, 367–8(1953).

G 288 The Metabolism of Uniformly Labeled D-Glucuronic Acid-C-14 in the Guinea Pig. J. F. Douglas and C. G. King. *J. Biol. Chem. 198*, 187–94(1952).

G 289 The Metabolite Degradation in the Mouse of 1,2,5,6-Dibenzanthracene-9,10-C. II.5-Hydroxy-1,2-Naphthalic Acid, a New Metabolite. C. Heidelberger and W. G. Wiest. *Cancer Research 11*, 511–8(1951).

G 290 Metabolites of Thyroxine. J. Gross and C. P. LeBlond. *Proc. Soc. Exptl. Biol. Med. 76*, 686–9(1951).

G 291 Methionine Metabolism of Healing Bone Fractures. L. Van Middlesworth. *Arch. Biochem. and Biophys. 43*, 458–62(1953).

G 292 Methionine-S-35 Uptake by Hs-1 Ascites Tumor Cells. G. Z. Williams, J. T. Williams, and M. L. Haigler. *Cancer Research 12*, 310(1952).

G 293 Nature of the Metabolic Products of C–14 Cholesterol Excreted in Bile and Feces. M. D. Siperstein, M. E. Jayko, I. L. Chaikoff, and W. G. Dauben. *Proc. Soc. Exptl. Biol. Med. 81*, 720–4(1952).

G 294 The Nature of the Mineral Phase of Bone. W. F. Neuman and M. W. Neuman. *Chem. Revs. 53*, 1–45(1953).

G 295 Neosynthesis of Methionine, Choline and Serine in the Chick. B. Hsu, E. I. Anderson, S. Weiss, and J. A. Stekol *Federation Proc. 13, No. 1*, 461–2(1954).

G 296 New Developments in Potassium and Cell Physiology: 1940–1950. C. W. Sheppard. *Science 114*, 85–91(1951).

G 297 A Newly Identified Metabolic Product of Codeine: N-Demethylated Codeine. T. K. Adler. *J. Pharmacol. Exptl. Therap. 106*, 371(1952).

G 298 Nicotinic Acid Metabolism. II. The Metabolism of Radioactive Nicotinic Acid and Nicotinamide in the Rat. Pei-Hsing Lin and B. C. Johnson. *J. Am. Chem. Soc. 75*, 2974–7(1953).

G 299 Nucleic Acid Turnover Rates in Arbacia Eggs and Sperm. C. Villee, D. Villee, and R. LaPlace. *Biol. Bull. 105*, 386(1953).

G 300 Nutrition and Goiter. M. A. Greer. *Physiol. Revs. 30*, 513–48(1950).

G 301 Observations on Metabolism of C-14-Diethylstilbestrol. D. J. Hanahan, E. G. Daskalakis, T. Edwards, H. J. Dauben, Jr., and R. W. Meikle. *Arch. Biochem. and Biophys. 33*, 342–3(1951).

G 302 Observations on the Suitability of Tritium-Labeled Cholesterol for the Study of Cholesterol Metabolism. M. Biggs and D. Kritchevsky. *Arch. Biochem. and Biophys. 36*, 430–3(1952).

G 303 Oxidation of Lipides (—C1400—) *in Vivo* by Extrahepatic Rat Tissues. R. P. Geyer, W. R. Waddell, J. Pendergast, and G. S. Yee. *J. Biol. Chem. 190*, 437–43(1951).

G 304 The Oxidation of Mannitol. A. N. Wick, T. N. Morita, and L. Joseph. *Proc. Soc. Exptl. Biol. Med. 85*, 188–90(1954).

G 305 Oxidation of Methionine S–35 to Sulfate by the Eviscerated Dog. L. L. Forker, I. L. Chaikoff, C. Entenman and H. Tarver. *J. Biol. Chem. 188*, 31–5(1951).

G 306 Paper No. 2 in the Symposium on Intermediary Carbohydrate Metabolism in Tumor Tissue Oxidation of C–14 Labeled Carbohydrate Intermediates in Tumor and Normal Tissue. R. E. Olson. *Cancer Research 11*, 571–84(1951).

G 307 Paper No. 4 in the Symposium on Intermediary Carbohydrate Metabolism in Tumor Tissue Studies on the Carbohydrate and Protein Metabolism of the Rat Hepatoma. P. C. Zamec-

nik, R. B. Loftfield, M. L. Stephenson, and J. M. Steele. *Cancer Research 11*, 592–602(1951).

G 308 Participation of Phospholipides in Lymphatic Transport of Absorbed Fatty Acids. B. Bloom, I. L. Chaikoff, W. O. Reinhardt, and W. G. Dauben. *J. Biol. Chem. 189*, 261–7(1951).

G 309 Pathways of Elimination of C-14 Labeled Thyroxine in the Rat. H. M. Klitgaard, H. J. Lipner, S. B. Barker, and T. Winnick. *Endocrinology 52*, 79–82(1953).

G 310 The Pathways of Mineral Metabolism in the Tooth Tissues as Shown by Radioisotopes. H. C. Hodge. *N. Y. J. Dentistry 21*, 288(1951).

G 311 Pentadecanoic Acid-5-C-14, Its Absorption and Lymphatic Transport. I. L. Chaikoff, B. Bloom, B. P. Stevens, W. O. Reinhardt, and W. G. Dauben. *J. Biol. Chem. 190*, 431–5(1951).

G 312 Peptide Bond Synthesis in Normal and Malignant Tissue. P. C. Zamecnik and I. D. Frantz, Jr. *Cold Spring Harbor Symposia Quant. Biol. 14*, 199–208(1950).

G 313 Pharmacological Studies of Radiogermanium (Ge–71). H. C. Dudley and E. J. Wallace. *Arch. Ind. Hyg. Occupational Med. 6*, 1–8(1952).

G 314 Phenylalanine and Tyrosine Utilization in Normal and Phenylalanine-Deficient Young Mice. C. R. Grau and R. Steele. *J. Nutrition 53*, 59–71(1954).

G 315 Phosphate Metabolism During Oogenesis in *Rana temporaria*. P. Grant. *J. Exptl. Zool. 124*, 513–43(1953).

G 316 Phosphate Metabolism in Normal and Pathological Mammalian Erythrocytes. T. A. J. Prankerd and K. I. Altman. *Federation Proc. 13, No. 1*, 113(1954).

G 317 Phosphate Transport and Turnover in the Liver. J. Sacks. *Arch. Biochem. 30*, 423–37(1951).

G 318 Phospholipide and Nucleoprotein Metabolism in Rabbits Inoculated with Papilloma (Shope) Virus. W. E. Cornatzer and D. G. Gallo, *Am. J. Med.* 13(1953).

G 319 P-32 Distribution and Excretion in Rats Fed Vitamin D-Free and Low Phosphorus Diets. J. P. Feaster, R. L. Shirley, J. T. McCall, and G. K. Davis. *J. Nutrition 51*, 381–92(1953).

G 320 P-32 Distribution in the Serum Proteins of the Chicken. R. E. Clegg and R. E. Hein. *Science 117*, 714–5(1953).

G 321 Phosphorus Metabolism in the Dog Kidney. A. R. Goldfarb, L. Santamaria and P. P. Foa. *Proc. Soc. Exptl. Biol. Med. 84*, 523–6(1953).

G 322 Phosphorus Metabolism in Resting and Pregnancy-Stimulated Mammary Glands and in Spontaneous Mammary Carcinomas of Mice. S. Albert, R. M. Johnson, and M. S. Cohan. *Cancer Research 11*, 772–6(1951).

G 323 Phosphorus Turnover in Phospholipid Fractions of Rat Brain Homogenates. E. Streicher. *Federation Proc. 12*, 139–40(1953).

G 324 P-32 Uptake by the Rat Liver Desoxyribosenucleic Acid (DNA) in Alloxan Diabetic Rats. H. F. Diermeier and A. D. Bass. *Federation Proc. 12*, 316(1953).

G 325 Placental Transfer of Radioactive Digitoxin in Rats and Guinea Pigs. G. T. Okita, R. B. Gordon, and E. M. K. Geiling. *Proc. Soc. Exptl. Biol. Med. 80*, 536–8(1952).

G 326 Plasma Protein Labeled with Lysine-θ-C-14; Its Oral Feeding and Related Protein Metabolism in the Dog. C. L. Yuile, A. E. O'Dea, F. V. Lucas, and G. H. Whipple. *J. Exptl. Med. 96*, 247–54(1952).

G 327 Plasma Protein. IV. Results with Generally Labeled Plasma Protein. I. A. Abdou and H. Tarver. *Proc. Soc. Exptl. Biol. Med. 79*, 102–6 (1952)

G 328 The Portal Transport of Absorbed Fatty Acids. J. Y. Kiyasu, B. Bloom, and I. L. Chaikoff. *J. Biol. Chem. 199*, 415–9(1952).

G 329 Protein Transfer in Tumor-Bearing Rats. A. L. Babson and T. Winnick. *Cancer Research 14*, 606–11(1954).

G 330 The Quantitative Relation between Insulin and its Biological Activity. W. C. Stadie, N. Haugaard, and M. Vaughan. *J. Biol. Chem. 200*, 745–51(1953).

G 331 Radioactive Iodine as an Indicator of the Uptake of Iodine by the Liver, Gastrocnemius, and Thyroid of *Rana pipiens*. W. O. Bradley. *Science 117*, 483–4(1953).

G 332 Radioautographic Studies of Sulfate-sulfur (S–35) Metabolism in the Articular Cartilage and Bone of Suckling Rats. D. D. Dziewiatkowski. *J. Exptl. Med. 95*, 489–96(1952).

G 333 Radiocalcium as an Indicator in the Study of the Action of Estradiol on Calcium Metabolism. J. Govaerts, M. J. Dallemagne, and J. Melon. *Endocrinology 48*, 443–52(1951).

G 334 Radiocalcium Turnover and Excretion in Adult, Young, and Rachitic Rats. D. H. Copp, and D. M. Thomson. *Am. J. Physiol. 167*, 775–6 (1951).

G 335 Radiocontaminants in Biological Studies with Copper–64. W. J. Frierson, S. L. Hood, I. B. Whitney, and C. L. Comar. *Arch. Biochem. and Biophys. 38*, 397–404(1952).

G 336 Radioiodine Metabolism in the Chick Embryo. S. H. Wollman and E. Zwilling. *Endocrinology 52*, 526–35(1953).

G 337 Radioiodine Penetration Through Intact Enamel with Uptake by Bloodstream and Thyroid Gland. H. J. Bartelstone. *J. Dental Research 30*, 728–33(1951)

G 338 Rate of Absorption of Cobalt from the Peritoneal Cavity and Rate of Elimination from the Blood. N. I. Berlin and W. Siri. *Am. J. Physiol. 164*, 221–5(1951).

G 339 Rate of Alcohol Metabolism in Fed and Fasted Animals. D. M Hegsted, J. J. Vitale, and J. D. Giorgio. *Federation Proc. 12*, 416(1953).

G 340 Rate of Penetration of Electrolytes into Nerve Fibers. M. A. Rothenberg and E. A. Feld. *J. Biol. Chem. 172*, 345–6(1948)

G 341 Relation Between Glycogen Content and Synthesis of Fatty Acids by Rat Liver. E. S. Haugaard and W. C. Stadie. *J. Biol. Chem. 199*, 741–4(1952).

G 342 The Relation of Methylbutyrate to Isoleucine Metabolism. II. Propionate Formation. M. J. Coon, N. S. B. Abrahamsen and G. S. Greene. *J. Biol. Chem. 199*, 75–84(1952).

G 343 Relation of Thyroid Status to Nitrogen Excretion Following Exposure to Thermal Radiation. A. W. Wase, H. J. Eichel and E. Repplinger. *Proc. Soc. Exptl. Biol. Med. 84*, 152–4(1953).

G 344 Relationship Between Radiosensitivity and Metabolic Activity of Tumors. A. Goldfeder and F. Nagasaki. *Federation Proc. 12*, 52–3 (1953).

G 345 Relationship of Cell Surface to Metabolism. IX. Digestion of Phosphorylated Compounds by Enzymes Located on Surface of Intestinal Cell. A. Rothstein, R. C. Meier, and T. G. Scharff. *Am. J. Physiol. 173*, 41–6(1953).

G 346 The Relationship of Folic Acid to Formate Metabolism in the Rat: Formate Incorporation into Purines. G. R. Drysdale, G. W. E. Plaut and H. A. Lardy. *J. Biol. Chem. 193*, 533–8(1951).

G 347 The Relative Rates of Renewal of Choline and Phosphate in Liver Phospholipide in the Rat. M. E. Tolbert and R. Okey. *J. Biol. Chem. 194*, 755–68(1952).

G 348 Renal Phosphate and Carbohydrate Metabolism Studied with the Aid of Radiophosphorus. A. F. Dratz and P. Handler. *J. Biol. Chem. 197*, 419–31(1952).

G 349 The Role of the Gastrointestinal Tract, Including the Liver, in the Metabolism of Radiothyroxine. A. Albert and F. R. Keating, Jr. *Endocrinology 51*, 517–43(1952).

G 350 The Role of the Pituitary-Adrenal System in Cystine–S–35 Incorporation into Protein. N. D. Lee and R. H. Williams. *Endocrinology 51*, 451–6(1952).

G 351 Route of Absorption of Free Fatty Acids and Triglycerides from the Intestine. R. Reiser and M. J. Bryson. *J. Biol. Chem. 189*, 87–91(1951).

G 352 Secretion of Radio-Calcium in Milk. A. H. W. Sten, Jr. and C. B. Heyn. *Am. J. Physiol. 162*, 579–80(1950).

G 353 Selective Incorporation of Radioactivity from Proteins of Labeled Chorioallantoic Grafts of Adult Chicken Tissues into Proteins of Homologous Tissues of Host Chick Embryos. J. D. Ebert. *Anat. Record 117*, 523(1953).

G 354 The Significance of the Stomach in Iodine Metabolism. R. Dominguez and W. C. Schmidt. *Am. J. Pathol. 29*, 581–2(1953).

G 355 Site of Formation of Plasma Phospholipides in the Bird. R. E. Ranney, I. L. Chaikoff, and C. Entenman. *Am. J. Physiol. 165*, 596–9 (1951).

G 414 Thyroidal Metabolism of Iodine in the Shark *Scyliorhinus* (Scyllium) *canicula*. A. Gorbman, S. Lissitzky, R. Michel, and J. Roche. *Endocrinology 51*, 311–21(1952).

G 415 Thyroxine Metabolic Turnover Rate. W. T. Salter, M. De Visscher, and G. McAdams. *Trans. Assoc. Am. Physicians 64*, 364–71(1951).

G 416 Time Course of Lipid Labeling Following Single Injections of C–14 Acetate. J. T. Van Bruggen, C. K. Claycomb, and T. T. Hutchens. *Federation Proc. 11*, 301(1952).

G 417 Time Course of Lipide Labeling in the Intact Mouse and Rat. J. T. Van Bruggen, T. T. Hutchens, C. K. Claycomb, and E. S. West. *J. Biol. Chem. 200*, 31–7(1953).

G 418 Tissue Localization and Excretion Routes of Radioactive Diethylstilbestrol. G. H. Twombly and E. F. Schoenewaldt. *Cancer 4*, 296–302 (1951).

G 419 Tracer Studies on the Metabolism of the Gardner Lymphosarcoma. IV. The Conversion of Lactate-2-C–14 to Alanine, Glutamate, and Aspartate by Tumor and Spleen Cells. S. Kit and D. M. Greenberg. *Cancer Research 11*, 791–4(1951).

G 420 Transformation of Choline to Glycine in the Rat. S. Soloway. *Federation Proc. 12*, 270–1 (1953).

G 421 Transitory Increase in Fat Content and Size of Liver Induced by Insulin in Alloxan-Diabetic Rats. M. J. Osborn, J. M. Felts and I. L. Chaikoff, *J. Biol. Chem. 203*, 173–81 (1953).

G 422 Tumor-Host Studies. III. Alteration of Thyroid, Skin, Blood, and Tumor Uptake of I–131 Tagged Di-iodo-tyrosine in Rats by Transplanted Tumors. K. G. Scott and R. S. Stone. *Cancer 4*, 345–52(1951).

G 423 Turnover of Proteins of Cell Fractions of Adult Rat Liver *in Vivo*. E. B. Keller and P. C. Zamecnik. *Federation Proc. 10*, 206(1951).

G 424 The Turnover Rate of Fibrinogen in the Dog. R. E. Madden and R. G. Gould. *J. Biol. Chem. 196*, 641–50(1952).

G 425 Turnover of Serum Proteins in Diabetes as Studied with S–35 Labeled Proteins. L. L. Forker and I. L. Chaikoff. *J. Biol. Chem. 196*, 829–40(1952).

G 426 Two Blocks in Carbohydrate Utilization in the Liver of the Diabetic Rat. S. S. Chernick and I. L. Chaikoff. *J. Biol. Chem. 188*, 389–96(1951)

G 427 Uptake of Deuterium into Proteins of Fertilized and Unfertilized Arbacia Eggs Suspended in Heavy Water. H. D. Hoberman, C. B. Metz, and J. Graff. *J. Gen. Physiol. 35*, 639–43(1952).

G 428 The Uptake and Distribution of Barium 140 and Lanthanum 140 in Larvae of *Drosophila repleta*. V. T. Bowen. *J. Exptl. Zool. 118*, 509–25(1951).

G 429 The Uptake of Inorganic Cu by the Hemocyanin of *Busycon canaliculatum* L. Using Cu–64. S. J. Townsley. *Anat. Record 117*, 570(1953).

G 430 Uptake of P–32 by Cardiac Muscle *in Vivo*. J. B. Marsh, G. G. Casten, and H. F. Elliott. *Am. J. Physiol. 173*, 297–300(1953).

G 431 The Uptake of P–32 in the Femur of Growing Rachitic and Normal Rats as Compared with the Uptake in the Total Skeleton. V. Claassen and B. S. J. Wostmann. *Biochim. et Biophys. Acta 10*, 625–6(1953).

G 432 The Uptake of Radioactive Phosphate Ions by the Oyster, *Crassostrea virginica* G. and their Distribution in the Tissues. L. R. Pomeroy and H. H. Haskin. *Anat. Record 111*, 15(1951).

G 433 The Uptake of Radioactive Phosphorus by Rat Liver Following Partial Hepatectomy. R. M. Johnson and S. Albert. *Arch. Biochem. and Biophys. 35*, 340–5(1952).

G 434 The Uptake and Utilization of Phosphate Ions from Sea Water by the American Oyster, *Crassostrea virginica* (G). L. R. Pomeroy and H. H. Haskin. *Biol. Bull. 107*, 123–9(1954).

G 435 The Use of Radioactive Isotopes in the Study of the Metabolism of the Nervous System. R. M. C. Dawson. *Biochem. Soc. Symposia No. 8, Metabolism and Function in Nervous Tissue.* 93–102(1952).

G 436 Utilization of Amino Acids, Peptides, and Protein by Cultures of Embryonic Heart. R. E. Winnick and T. Winnick. *J. Natl. Cancer Inst. 14,* 519–25(1953).

G 437 Utilization of Asparagine by Rats. G. Krotkov, E. J. Masoro, C. D. Nelson, and G. B. Reed. *Arch. Biochem. and Biophys. 42,* 471–2(1953).

G 438 Utilization of Carbohydrate by Extrahepatic Tissues of the Adrenalectomized Dog. C. Cohn, B. Katz, B. Huddlestun, M. Kolinsky, and R. Levine. *Am. J. Physiol. 170,* 87–93(1952).

G 439 Utilization of C-14 Labeled Glucose by Cardiac Muscle Treated with a Cardiac Glycoside. A. Wollenberger. *Science 113,* 64–5(1951).

G 440 Utilization of Dissolved Calcium by a Pelecypod. K. P. Rao and E. D. Goldberg. *J. Cellular Comp. Physiol. 43,* 283–92(1954).

G 441 Utilization of Intravenously Injected Radioactive Colloidal Iron in Rabbits with Myopathy of Vitamin E Deficiency. I. Indovina. *Am. J. Physiol. 165,* 352–5(1951)

G 442 Utilization of Methionine-CH_3-C–14, Glycine-2-C–14, Serine-3-C–14, and Formate-C–14 for the Synthesis of Choline and Creatine by Chicks, Weanling Rats and Mice. J. A. Stekol, S. Weiss, B. Hsu, and P. Smith. *Federation Proc. 11,* 292–3(1952).

G 443 Utilization of Phytate and Inorganic Phosphorus in the Chick as Measured by P-32 Tracer Studies. K. W. Keane, R. A. Collins, and M. B. Gillis. *Federation Proc. 13, No. 1,* 463(1954).

G 444 Vitamin A and Endochondral Ossification in the Rat as Indicated by the Use of Sulfur 35 and Phosphorus 32. D. D. Dziewiatkowski. *J. Exptl. Med. 100,* 11–24(1954).

G 445 Vitamin D and Endochondral Ossification in the Rat as Indicated by the Use of Sulfur 35 and Phosphorus 32. D. D. Dziewiatkowski. *J. Exptl. Med. 100,* 25–32(1954).

G 446 *In Vivo* Inhibition of Monoamine Oxidase Studied with Radioactive Tyramine. R. W. Schayer. *Proc. Soc. Exptl. Biol. Med. 84,* 60–3(1953).

G 447 *In Vivo* Studies on Incorporation of Glycine-2-C–14 into Proteins and Nucleic Acid Purines. E. P. Tyner, C. Heidelberger, and G. A. LePage. *Cancer Research 12,* 158–64(1952).

G 448 *In Vivo* and *in Vitro* Incorporation of C–14 Leucine into Ferritin. R. B. Loftfield. *Federation Proc. 13, No. 1,* 465(1954).

G 449 The Absorption and Distribution of Labeled Fatty Acids in the Rat. J. G. Coniglio, C. E. Anderson, and C. S. Robinson. *Proc. Soc. Exptl. Biol. Med. 75,* 666(1950).

G 450 Absorption of Phospholipides. Manner of Transport from Intestinal Lumen to Lacteals. B. Bloom, J. Y. Kiyasu, W. O. Reinhardt, and I. L. Chaikoff. *Am. J. Physiol. 177,* 84–6(1954).

G 451 Acetate Utilization and Fatty Acid Synthesis in Normal and X-Irradiated Rats. J. G. Coniglio and G. W. Hudson. *Federation Proc. 13, No. 1,* 578(1954).

G 452 Alimentary Excretion of Phosphorus 32 in Rats on High Molybdenum and Copper Diets. R. L. Shirley, R. D. Owens, and G. K. Davis. *J. Nutrition 44,* 595–601(1951).

G 453 Calcium Metabolism of Growing and Mature Bone. J. S. Arnold. *Federation Proc. 11*(1951).

G 454 Carbohydrate Metabolism. S. Weinhouse. *Ann. Rev. Biochem. 23,* 125–76(1954).

G 455 Cationic and Hormonal Influences on Carbohydrate Metabolism of Rat Liver *in Vitro.* A. B. Hastings, A. E. Renold, and C. T. Teng. *Trans. Assoc. Am. Physicians 66,* 129(1953).

G 456 Cholesterol Synthesis by Liver. II. Effect of Hypophysectomy. G. M. Tomkins, I. L. Chaikoff, and L. L. Bennett. *J. Biol. Chem. 199,* 543–5(1952).

G 457 A Comparison of the Oxidation of Octanoate-1-C–14, -7-C–14, and Butyrate-1-C–14 by Neoplastic and Normal Mouse Tissue. D. D. Chapman, G. W. Brown, Jr., I. L. Chaikoff, W. G. Dauben, and N. O. Fansah. *Cancer Research 14,* 372–6(1954).

G 458 Distribution of Injected Methyl-C–14-Methionine in the Chick. J. T. Sime and B. C. Johnson. *Proc. 19th Intern. Physiol. Congr.* 758(1953).

G 459 Distribution of I–131 and C–14 Labeled Thyroxine in Rat Cell Fractions and Elimination by Way of Bile, Urine and Expired Air. H. J. Lipner, H. M. Klitgaard, S. B. Barker, and T. Winnick. *Federation Proc. 11*(1952).

G 460 The Effect of Ascorbic Acid Deficiency on the Guinea Pig's Response to Thyrotropic Hormone and Thiouracil; A Preliminary Report. S. Weisenfeld and R. W. Rawson. *Trans. Am. Goiter Assoc.,* 259–71(1952).

G 461 The Effect of Cortisone and Desoxycorticosterone on the Turnover of Plasma and Tissue Phospholipide of Adrenalectomized Dogs. D. B. Zilversmit, N. R. DiLuzio, and M. L. Shore. *Proc. 19th Intern. Physiol. Congr.* 914(1953).

G 462 Effect of Diet and ACTH on Nucleic Acid Metabolism in the Rat. J. A. D. Cooper. *Federation Proc. 11,* 27(1952).

G 463 The Effect of Insulin on Phosphorylation in Muscle. J. Sacks. *Phosphorus Metabolism 2,* 653–61(1952).

G 464 Effect of Potassium and Other Electrolytes on Carbohydrate Metabolism in Liver Slices. C. T. Teng. *Lancet 73,* 192(1953).

G 465 Effect of Thyroxine on the Thyroid. L. Van Middlesworth. *Federation Proc. 11*(1952).

G 466 The Effects of ACTH on the Metabolism of Radioactive Calcium in Normal and Hypophysectomized Rats. F. Ulrich, D. H. Copp, C. W. Asling, C. H. Li, and W. O. Reinhardt. *Endocrinology 48*, 245(1951).

G 467 Effects of Dietary Calcium and Phosphorus Levels Upon the Physiological Behavior of Calcium and Phosphorus in the Rat. S. L. Hansard and M. P. Plumlee. *J. Nutrition 54*, 17–32(1954).

G 468 Excretion of Radioactive Phosphorus into the Alimentary Tract of Rats on High Molybdenum and Copper Diets. R. L. Shirley, R. D. Owens, and G. K. Davis. *Federation Proc. 9*, 371(1950).

G 469 Further Observations on Potassium and Carbohydrate Metabolism. A. B. Hastings, A. E. Renold and C. T. Teng. *Federation Proc. 11*, 227(1952).

G 470 Further Studies on the Nicotinic Acid Metabolites Excreted by Rats Given Radioactive Nicotinic Acid or Nicotinamide. P. H. Lin and B. C. Johnson. *Federation Proc. 11*, 488(1952).

G 471 Gastrointestinal Absorption of Labeled Calcium in Acidotic and Alkalotic Young Rats. E. F. Williams, Jr. *Abstr. Regional Conclave, Am. Chem. Soc., New Orleans*, Dec.(1953).

G 472 Gastrointestinal Absorption of Labeled Calcium in Young, Calcium-Starved Young, Mature and Pregnant Rats, Respectively. E. F. Williams, Jr., and B. M. Hightower. *Abstr. 8th Southwest Regional Meeting, Am. Chem. Soc., Little Rock*, Dec.(1952).

G 473 Gastrointestinal Absorption of Radioactively Labeled Calcium in Rats. E. F. Williams, Jr., B. M. Hightower, and D. Courtney. *Abstr. 117th Natl. Meeting, Am. Chem. Soc., Houston*, 8 C(1950).

G 474 Haversian System Growth and Formation in Rabbits. J. S. Arnold and W. S. S. Jee. *Anat. Record 115*, 276(1953).

G 475 Impairment by Calcium of Phosphate Absorption from the Intestine of the Rat. B. M. Hightower, E. F. Williams, Jr., and D. Courtney. *Southern Chemist 11*, 58(1951).

G 476 Incorporation of Labeled Glycine in the Proteins of Tissues of Normal and Tumor-Bearing Mice. E. Norberg and D. M. Greenberg. *Cancer 4*, 383–6(1951).

G 477 Inhibitory Action of Hyperglycemia on Delivery of Glucose to the Blood Stream by Liver of the Normal Dog. G. L. Searle and I. L. Chaikoff. *Am. J. Physiol. 170*, 456–60(1952).

G 478 Insulin Metabolism. R. H. Williams, N. J. Elgee, N. D. Lee, J. R. Hogness and T. Wong. *Trans. Assoc. Am. Physicians 66*, 137(1953).

G 479 Iodide Metabolism During Anoxia, Nephrectomy, Trauma, Avitaminosis and Starvation in the Rat. L. Van Middlesworth and M. M. Berry. *Am. J. Physiol. 167*, 576(1951).

G 480 Iron Assimilation by Marine Diatoms. E. D. Goldberg. *Biol. Bull. 102*, 243(1952).

G 481 Labeling of Specific Glucose Carbons Formed from Succinic Acid-1-C–14 and -2-C–14 in the Diabetic Dog. S. Abraham and I. L. Chaikoff. *Arch. Biochem. and Biophys. 41*, 143–7(1952).

G 482 The Late Pattern of Bone Growth in the Rabbit's Tibia. J. S. Arnold and W. S. S. Jee. *Anat. Record 115*, 420(1953).

G 483 Low Iodine Intake Without Goiter. L. Van Middlesworth. *Proc. Am. Goiter Soc. 419*(1950).

G 484 Meat Feeding and Absorption of Labeled Calcium. B. M. Hightower and E. F. Williams Jr. *Federation Proc. 11*(1952).

G 485 Mechanisms of Phosphate Assimilation. D. M. Greenberg. *Phosphorus Metabolsim 2*, 3–23 (1952).

G 486 Metabolic Functions of Biotin. H. A. Lardy and R. Peanasky. *Physiol. Revs. 33*, 560(1953).

G 505 Protein Metabolism of Fracture Callus and Muscle Trauma Studied with Radioactive Methionine. L. Van Middlesworth. *Federation Proc. 9*, 129(1950).

G 506 Rate of Individual Haversian System Formation. W. S. S. Jee and J. S. Arnold. *Anat. Record 118*, 315(1954).

G 507 The Role of the Reticuloendothelial System in the Uptake of Plasma Phospholipides. M. L. Shore and D. B. Zilversmit. *Federation Proc. 11*, 147(1952).

G 508 Some Aspects of the Role of Pituitary Hormones in Calcium Metabolism. II. Growth Hormone. F. Ulrich, W. O. Reinhardt, and C. H. Li. *Acta Endrocrinol. 10*, 117(1952).

G 509 Some Changes in Amino Acid Metabolism Associated with Chronic Caloric Restriction. H. P. Rusch, A. D. Barton, and R. K. Boutwell. *Unio Intern. Contra Cancrum Acta 8*(1953).

G 510 Stimulation by the Adenylic Acid System of Amino Acid Incorporation Into Protein of Liver Granules. E. M. Peterson, T. Winnick and D. M. Greenberg. *J. Am. Chem. Soc. 73*, 503(1951).

G 511 Studies on Chronic B–6 Deficiency in the Rat. I. Changes in the Intact Animal. N. S. Olsen and W. E. Martindale. *J. Nutrition 53*, 317–28(1954).

G 512 Studies on the Metabolism of Copper Using Radiocopper. H. Bergh and Eieland. *Det kgl. Videnskabers Selskap 23, No. 14*(1950).

G 513 Studies on the Metabolism of Digitoxin. F. E. Kelsey, E. M. K. Geiling, S. Fishman, L. Gluck and M. Dahi. *J. Pharmacol. Exptl. Therap. 98*, 17(1950).

G 514 Studies on the Metabolism of the Nucleic Acids. A. Bendich. *Exptl. Cell Research 3, Suppl. 2*, 181–99(1952).

G 515 Studies on the Metabolism of Zinc Using Radiozinc Zn–65. H. Bergh. *Det kgl. Norske Videnskabers Salskap 23, No. 13*, 49(1950).

G 516 Studies on the Metabolism of Zinc Using Radiozinc Zn–65. H. Bergh. *Det kgl. Norske Videnskabers Salskap 23, No. 30*,123(1950).

G 517 A Study of the Rate of Oxidation of the Methyl Group of Dietary Methionine. C. G. Mackenzie, J. R. Rachele, N. Cross, J. P. Chandler, and V. du Vigneaud. *J. Biol. Chem. 183*, 617(1950).

G 518 Susceptibility to Experimental Atherosclerosis and the Methylation of Ethanolamine-1,2-C–14 to Phosphatidyl Choline. L. O. Pilgeram and D. M. Greenberg. *Science 120*, 760–1(1954).

G 519 Tracer Studies on the Metabolism of the Gardner Lymphosarcoma. E. Farber, S. Kit, and D. M. Greenberg. *Cancer Research 11*, 490–504 (1951).

G 520 The Urinary Excretion of Mercapturic Acids after Administration of Bromobenzene and 3,4–Benzpyrene. H. R. Gutmann and J. L. Wood. *Cancer Research 10*, 701(1950).

G 521 On the Utilization of Guanine by the Rat. M. E. Balis, D. H. Marrian and G. B. Brown. *J. Am. Chem. Soc. 73*, 3319–20(1951).

G 522 *In Vitro* Metabolism of Androgens by Guinea Pig Tissues. C. D. Kochakian, D. Nall, and G. Stidworthy. *Federation Proc. 12*, 232(1953).

G 523 The Comparative Metabolism of Dietary and Endogenous Cholesterol Differentiated by Use of Radioactive Carbon. R. G. Gould. *Circulation 2*, 467(1950).

G 524 The Effect of Adrenocorticotrophic Hormone (ACTH) on Phosphorus Metabolism in Selected Areas of Monkey Brain. H. G. Loeb, R. S. Cleland, and J. A. Anderson. *Stanford Med. Bull. 11*, 106(1953).

G 525 Effect of Dietary Cholesterol on Rate of Cholesterol Synthesis in the Intact Animal Measured by Means of Radioactive Carbon. R. G. Gould. *Circulation 2*, 467(1950).

G 526 The Metabolism of Fluorine in the Rat Using F–18 as a Tracer. P. Wallace-Durbin. *J. Dental Research 33*, 789–800(1954).

G 527 Metabolism of L-Histidine-2-C–14 in the Hepatoma-Bearing Rat. J. C. Reid, M. O. Landefeld and J. L. Simpson. *J. Natl. Cancer Inst. 12*, 929–36(1952).

G 528 The Metabolism of Skeletal P–32 in Experiments of Longer Duration, Performed with Rachitic and Control Animals. V. Claassen and B. S. J. Wostmann. *Biochim. et Biophys. Acta 13*, 48–53(1953).

G 529 Utilisation du cholesteril—C–14 pour l'et de de l'absorption et de l'excretion intestinale du cholesterol chez le rat. L. Bugnard, F. Chevallier et J. Coursaget. *J. Physiol. 45*, 413–9(1953).

G 530 Comparative Studies in the Uptake of Phosphorus by Tissues Under Different Doses of Injection Radioactive Phosphorus P–32. K. L. Bhattacharya, K. P. Chakraborty, A. Bose and N. N. Das Gupta. *Science 118*, 651(1953).

Nonmetabolite Physiology in Animals

H 1 The Acute Effect of Adrenal Cortical Extract, Adrenocorticotropichormone, and Desoxycorticosterone Acetate on the Thiocyanate, Bromide, and Mannitol Spaces; Plasma Volume and Total Body Water in Normal Dogs. J. M. B. Bloodworth, Jr. *Endocrinology 50*, 174–86(1952).

H 2 An Autoradiographic Study of the Distribution of Polonium in the Rat During 24 Hours after Intravenous Injection. J. C. Gallimore, G. A. Boyd, and J. N. Stannard. *Anat. Record 118*, 253–74(1954).

H 3 Behavior of I–131 Anti-Mammary Tumor Microsome Fraction in Mice. S. P. Masouredis, L. R. Melcher, and M. B. Shimkin. *Cancer Research 12*, 281(1952).

H 4 The Biliary Excretion of Gallium 72, Gold 198, and Hafnium 181 in the Rat. J. W. Archdeacon, J. B. Nash, and G. C. Wilson. *Texas Repts. Biol. Med., 10*, 281–5(1952).

H 5 Blood and Tissue Distribution Studies on Radiogold Colloids in Dogs. A Ganz. *Federation Proc. 12*, 323–4(1953).

H 6 Bone Carbonate Turnover. D. L. Buchanan and A. Nakao. *Federation Proc. 11*, 19–20(1952).

H 7 Comparative Uptake of Br–82 by the Hypophisis and Other Tissues. J. F. Mack and R. A. Shipley. *Proc. Soc. Exptl. Biol. Med. 80*, 18–20 (1952).

H 8 A Comparison of Rates of Incorporation of Iron and of the α-Carbon Atom of Glycine into Hemoglobin. K. I. Altman, T. R. Noonan, S. C. Spraragen, and K. Salomon. *Federation Proc. 11*, 4(1952).

H 9 Deposition of Mn in the Thyroid Using Mn^{52-54}. H. D. Bruner, J. D. Perkinson, Jr., and R. L. Hayes. *Federation Proc. 12*, 305–6(1953).

H 10 Deposition of Radioactive Strontium and the Rare Earth Promethium in the Skeletal Tissues of the Rat. C. W. Asling, D. A. Heller, D. H. Copp, and J. G. Hamilton. *Anat. Record 103*, 420(1949).

H 11 The Determination and Physiological Disposition of Milontin (N-Methyl-α-Phenylsuccinimide). A. J. Glazko, W. A. Dill, L. M. Wolf, and C. A. Miller. *J. Pharmacol. Exptl. Therap. 111*, 413–24(1954).

H 12 Disappearance of Isotopically Labeled Gold Colloids from the Circulation of the Dog. C. W. Sheppard, G. Jordan, and P. F. Hahn. *Am. J. Physiol. 164*, 345–50(1951).

H 13 Distribution of Colloidal Radioactive Chromic Phosphate after Intracavitary Administration in the Rat. J. A. D. Cooper and E. M. Zorn. *J. Lab. Clin. Med. 42*, 867–71(1953).

H 14 Distribution and Excretion of Radioactivity after Administration of Morphine-N-Methyl C–14 to Rats. C. H. March and H. W. Elliott. *Proc. Soc. Exptl. Biol. Med. 86*, 494–7(1954).

H 15 Distribution and Excretion of C–14 Labeled Priscoline–HCl in Rats. B. Century, L. E. Ellinwood, J. D. Kohli and J. M. Coon. *J. Pharmacol. Exptl. Therap. 109*, 318–27(1953).

H 16 Distribution and Excretion of Radioactive Thallium in the Chick Embryo, Rat, and Man. R. K. Barclay, W. C. Peacock and D. A. Karnofsky. *J. Pharmacol. Exptl. Therap. 107*, 178–87(1953).

H 17 The Distribution and Excretion of Radio-Meperidine in the Albino Rat. N. Plotnikoff. *J. Pharmacol. Exptl. Therap. 101*, 31(1951).

H 18 The Distribution and Excretion of Stilbamidine-C–14 in Mice. J. C. Reid and J. C. Weaver. *Cancer Research 11*, 188–94(1951).

H 19 Distribution of Gallium in Man; Autopsy evidence. M. Brucer. *J. Pharmacol. Exptl. Therap. 101*, 4–5(1951).

H 20 Distribution of Intravenously Injected Ga–67 Citrate Compared with Ga–72 Citrate. H. D. Bruner, J. D. Perkinson, Jr., R. L. Hayes, and C. Wilson. *J. Pharmacol. Exptl. Therap. 103*, 338(1951).

H 21 The Distribution of 3′-Methyl-(C–14)-4-Dimethylaminoazobenzene in the Rat. D. A. Salzberg, S. Hane, and A. C. Griffin. *Cancer Research 11*, 276(1951).

H 22 Distribution and Persistence of Dibenzyline-C–14 in the Body. R. M. Horowitz and M. Nickerson. *Federation Proc. 13, No. 1*, 367(1954).

H 23 Distribution of P–32 Following the Injection of TEPA in Rats. M. L. Crossley, J. B. Allison, R. Wannemacher, J. Migliarese, R. P. Parker, E. Kuh, D. R. Seeger and R. Partridge. *Proc. Soc. Exptl. Biol. Med. 83*, 398–400(1953).

H 24 Distribution of Radioactive Colchicine in Some Organs of Normal and Tumor-Bearing Mice. A. Back, E. Walaszek, and E. Uyeki. *Proc. Soc. Exptl. Biol. Med. 77*, 667–9(1951).

H 25 The Distribution of Radioactivity Following Administration of Triethylenimino-s-Triazine-C–14 in Tumor-bearing and Control Mice. M. V. Nadkarni, E. I. Goldenthal and P. K. Smith. *Cancer Research 14*, 559–62(1954).

H 26 The Distribution of Radioactivity in Mice Following Administration of 3,4-Benzpyrene-5-C–14 and 1,2,5,6-Dibenzanthracene-9,10-C–14. C. Heidelberger and S. M. Weiss. *Cancer Research 11*, 885–91(1951).

H 27 The Distribution of Radioactivity in the Tissues of Mice Receiving Triphenylbromoethylene-Br–82. G. H. Twombly, E. F. Schoenewaldt, and D. Meisel. *Cancer Research 11*, 780–2(1951).

H 28 Distribution and Retention of Carrier-Free Radioberyllium in the Rat. C. D. Van Cleave and C. T. Kaylor. *Arch. Ind. Hyg. Occupationat Med. 7*, 367–75(1953).

H 29 The Distribution of Stilbamidine in the Livers of Normal and Sarcoma-bearing Mice. E. L. Bennett, D. E. Pack, B. J. Krueckel, and J. C. Weaver. *Cancer Research 13*, 30–8(1953).

H 30 Distribution Studies in Gallium 72 in Rats. H. D. Bruner, J. D. Perkinson, Jr., E. R. King, G. A. Andrews, J. B. Nash, and M. Brucer *Radiology 61*, 555–70(1953).

H 31 Distribution and Turnover of Cholesterol in Rats Fed 3'-Methyl-4-dimethylaminoazobenzene. W. A. Fish, W. M. Stokes, and F. C. Hickey. *Cancer Research 14*, 433–7(1954).

H 32 Distribution of Yttrium Administered by Various Routes. G. C. Kyker, E. A. Cress, and G. I. Gleason. *Federation Proc. 13, No. 1*, 245–6(1954).

H 33 The Effect of Bal on the Excretion and Tissue Distribution of Polonium in Rats. J. B. Hursh. *J. Pharmacol. Exptl. Therap. 103*, 450–59(1951).

H 34 Effect of a Carcinogenic Azo Dye on Radiophosphorus Turnover in Rat-Liver Nuclei and Cytoplasm. A. C. Griffin, L. Cunningham, E. L. Brandt, and D. W. Kupke. *Cancer 4*, 410–15(1951).

H 35 Effect of Chemical Agents on Skeletal Content and Excretion of Injected Strontium 89. S. H. Cohn and J. K. Gong. *Proc. Soc. Exptl. Biol. Med. 83*, 550–4(1953).

H 36 Effect of Cholinesterase and Choline Acetylase Inhibitors on the Potassium Concentration Gradient and Potassium Exchange of Human Erythrocytes. I. M. Taylor, J. M. Weller and A. B. Hastings. *Am. J. Physiol. 168*, 658–65(1952).

H 37 Effect of Excess Iodide Upon Anterior Pituitary Cytology of the Completely Thyroidectomized Rat and Its Bearing on the Question Extrathyroidal Thyroxine Synthesis. R. F. Hum, R. C. Goldberg and I. L. Chaikoff. *Endocrinology 49*, 21–4(1951).

H 38 Effect of N-Allyl Normorphine on Excretion of C–14-Labeled Morphine in Mice. L. B. Achor and E. M. K. Geiling. *Proc. Soc. Exptl. Biol. Med. 84*, 688–9(1953).

H 39 The Effect of Phenothiazine, N. F. (Green) on the Uptake of I–131 by the Rat Thyroid. R. V. Talmage, H. Nachimson, L. Kraintz and J. A. Green. *Science 118*, 191–2(1953).

H 40 The Effect of Radioactive Colloidal Metallic Gold in the Treatment of "Acute" AK–4 Leukemia in Mice. P. F. Hahn, H. E. Skipper, E. L. Carothers,and L. J. Bernard. *Cancer 4*, 634–6(1951).

H 41 The Effect of Thyroid-Stimulating Hormone in Acute Thyroiditis. J. Robbins, J. E. Rall, J. B. Trunnell, and R. W. Rawson. *J. Clin. Endocrinol. 11*, 1106–15(1951).

H 42 Effects of Certain Antithyroid Drugs on the Uptake of Radioactive Iodine by the Frog Thyroid. W. O. Bradley. *Biol. Bull. 101*, 62–70(1951).

H 43 Enamel Penetration by Radioactive Salts of Zinc, Calcium, Silver, Plutonium, Palladium and Copper. W. W. Wainwright. *J. Am. Dental Assoc. 43*, 664–84(1951).

H 44 Excretion and Distribution in the Tissues of Rats and Guinea Pigs of P-Chloroacetanilide-Cl–36. J. M. Gryder, M. F. Argus, and F. E. Ray. *Federatior Proc. 13, No. 1*, 221–2(1954).

H 45 Excretion of Radioactive C–14 by Rats Given C–14-Phenurone (Phenacetylurea). D. T. Asher, J. D. Taylor and R. K. Richards. *Federation Proc. 12*, 299(1953).

H 46 Excretion by the Rat of Intravenously injected Ga–72(Cl_3 and Ga–72 Citrate. E. R. King, H. D. Bruner, J. D. Perkinson, and J. Gray. *J. Pharmacol. Exptl. Therap. 101*, 21(1951).

H 47 The Failure of C–14-Formate to Affect the Course of Mouse Leukemia. H. E. Skipper, M. Bell, and J. B. Chapman. *Cancer Research 12*, 371–2(1952).

H 48 The Fixation of Radioactive Digitoxin by Isolated Hearts. A. Sjoerdsma and C. S. Fischer. *Circulation 4*, 100–4(1951).

H 49 Gallium Citrate and Radio-gallium (Ga–72). H. C. Dudley. *J. Am. Chem. Soc. 72*, 3822(1950).

H 50 Gastro-Intestinal Absorption of Ions. I. Agents Diminishing Absorption of Strontium. N. S. MacDonald, R. E. Nusbaum, F. Ezmirlian, R. C. Barbera, G. V. Alexander, P. Spain, and D. E. Rounds. *J. Pharmacol. Exptl. Therap. 104*, 348–53(1952).

H 51 Hafnium Complexes for Biological Investigation. E. MacDonald and C. T. Bahner. *Proc. Soc. Exptl. Biol. Med. 83*, 801–4(1953).

H 52 Hemoglobin as a Tracer Antigen in Anaphylaxis. H. D. West, E. W. Chappelle, W. F. Clark and P. F. Hahn. *Am. J. Pathol. 29*, 363–8(1953).

H 53 Incorporation of Phenylalanine-3-C–14 into Anterior Pituitary Proteins of the Rat. H. A. Levey and S. Roberts. *Federation Proc. 13, No. 1*, 87(1954).

H 54 Influence of Tumor Extracts on the Distribution Pattern of Radioactive Colchicine. E. J. Walaszek and A. Back. *Federation Proc. 12*, 377(1953).

H 55 Intracellular Distribution of Digitoxin. S. C. Harvey and G. R. Pieper. *Federation Proc. 12*, 329(1953).

H 56 Kinetics Concerned with Distribution of Isotopic Water in Isolated Perfused Dog Heart and Skeletal Muscle. J. A. Johnson, H. M. Cavert, and N. Lifson. *Am. J. Physiol. 171*, 687–93(1952).

H 57 Localization of Antimony in Blood. C. T. Bahner. *Proc. Soc. Exptl. Biol. Med. 86*, 371–3(1954).

H 58 The Metabolism of 1-C–14-L-Ascorbic Acid in Guinea Pigs. J. J. Burns, H. B. Burch, and C. G. King. *J. Biol. Chem. 191*, 501–14(1951).

H 59 A Method for Maintaining Bile Production in the Isolated Rat Liver; its Application to the study of the Pharmacology of the Liver. R. W. Brauer and P. Pizzolato. *J. Pharmacol. Exptl. Therap. 101*, 4(1951).

H 60 Pathogenesis of Alloxan Pulmonary Edema Investigated by Phosphorus 32 and Iodine 131. D. M. Aviado, Jr. *Federation Proc. 12*, 299(1953).

H 61 Pharmacological Studies of Radiogermanium (Ge 71). II. Inhalation of Dusts. H. C. Dudley. *Arch. Ind. Hyg. Occupational Med. 8*, 528–30(1953).

H 62 Preliminary Distribution Studies of $_{31}$Ga 72 in the Wistar Rat. E. R. King and J. D. Perkinson. *Texas Repts. Biol. Med. 9*, 491–7(1950).

H 63 The Preparation of 2-Aminonaphthalene-5, 8-C 14 (Radioactive β-Naphthylamine) and the Study of Its Excretion Pattern in Dogs, Rabbits, and Rats. G. H. Twombly and H. Meislich. *Cancer Research 12*, 303(1952).

H 64 Rates of Transcapillary Movement of Calcium and Sodium and of Calcium Exchange by the Skeleton. W. D. Armstrong, J. A. Johnson, L. Singer, R. I. Lien'e and M. L. Premer. *Am. J. Physiol. 171*, 641–51(1952).

H 65 Relation of Blood Content and Anticonvulsant Activity of 5-Methyl-5-Phenylhydantoin. J. B. Nash and H. R. Henze. *J. Pharmacol. Exptl. Therap. 110*, 40(1954).

66 Renal and Hepatic Excretion of Cobalt 60. C. C. Lee. *Federation Proc. 12*, 84(1953).

H 67 The Response of Monocytes to Adrenal Cortical Extract. E. H. Tompkins. *J. Lab. Clin. Med. 39*, 365–71(1952).

H 68 Studies on the Metabolism of 2-Benzoylaminofluorene-9-C14 and 2-Acetylaminofluorene-9-C14 in the Rat. H. R. Gutmann and J. H. Peters. *Cancer Research 13*, 415–21(1953).

H 69 Retention and Distribution of Radioactive Colloids: A New Technique for Tissue Disintegration and Counting. T. H. Lahr, G. I. Gleason, R. Olson, and D. L. Tabern. *Federation Procs. 13, No. 1*, 246–7(1954).

H 70 The Tissue Distribution and Excretion of Radioactive Digitoxin. Studies on Normal Rats and Cats, and Rats with Dietary-Induced Myocardial Lesions. C. S. Fischer, A. Sjoerdsma, and R. Johnson. *Circulation 5*, 496–503(1952).

H 71 The Tissue Distribution and Excretion of Radioactive Hafnium 181 Mandelate in the Rat. C. F. Kittle, E. R. King, and M. Brucer. *J. Pharmacol. Exptl. Therap. 101*, 21(1951).

H 72 Tissue Localization Response to Radioactive Chromic Phosphate Colloids. L. Seed, J. B. McCormick and G. Milles. *Am. J. Pathol. 29*, 615(1953).

H 73 Uptake by Duck Erythrocytes of Iron Added to Blood. L. M. Sharpe, P. S. Krishnan and J. R. Klein. *Arch. Biochem. and Biophys. 35*, 409–18(1952).

H 74 The Uptake of Subcutaneous and Intramuscular Silver-Coated Radioactive Gold Colloids by Lymph Nodes in Dogs. A. H. Jackson, F. E. Staggers and P. F. Hahn. *J. Lab. Clin. Med. 42*, 739–45(1953).

H 75 The Use of Chelating Agents for Accelerating Excretion of Radioelements. H. Foreman. *J. Am. Pharm. Assoc., Sci. Ed. 42*, 629–32(1953).

H 76 Volume of Distribution of Radioactive Chloride in Dogs; Comparisons with Sodium, Bromide and Insulin Spaces. J. L. Gamble, Jr., and J. S. Robertson. *Am. J. Physiol. 171*, 659–67(1952).

H 77 Distribution of Radioactive Thallium in Chicken Embryos and Rats. R. K. Barclay, W. C. Peacock, and D. A. Karnofsky. *Federation Proc. 10*, 59–60(1951).

H 78 The Effect of 8-Azaguanine and 1,4-Dimethane-Sulfonoxybutane upon Uptake of P 32 by Tumor Nucleic Acids. J. D. Davidson and B. Freeman. *Proc. Am. Assoc. Cancer Research 1*, 11(1953).

H 79 The Effect of India Ink on Bromsulfalein Excretion, Phagocytosis and Circulation in the Liver. M. L. Shore and D. B. Zilversmit. *Am. J. Physiol. 177*, 436(1954).

H 80 The Ethionine-Induced Fatty Liver: Dosage, Prevention and Structural Specificity. D. Jensen, I. L. Chaikoff and H. Tarver. *J. Biol. Chem. 192*, 395–403(1951).

H 81 Fixation of Metal Ions by Bone Tissue. N. S. MacDonald. *Federation Proc. 12*, 346(1953).

H 82 Intraprostatic Injection of Radioactive Yttrium Chloride in the Dog. J. A. D. Cooper, G. J. Bulkley, and V. J. O'Conor. *J. Lab. Clin. Med. 44*, 783(1954).

H 83 Intraprostatic Injection of Radioactive Colloids. I. Distribution and Excretion Following Injection in the Dog. J. A. D. Cooper, G. J. Bulkley, and V. J. O'Conor. *J. Urol. 71*, 624(1954).

H 84 Intraprostatic Injections of Radioactive Colloids: II. Distribution within the Prostate and Tissue Changes Following Injection in the Dog. G. J. Bulkley, J. A. D. Cooper, and V. J. O'Conor. *Trans. Am. Assoc. Genital Urinary Surg.*, May(1953).

H 85 Pharmacological Studies of Radiogermanium (Ge-71) II. H. C. Dudley. *Arch. Ind. Hyg. Occupational Med. 8*, 528–30(1953).

H 86 Studies on Ethionine. II. The Interference with Lipide Metabolism. E. Farber, M. V. Simpson and H. Tarver. *J. Biol. Chem. 182*, 91–9(1950).

H 87 A Tracer Study of Distribution of Iodoacetate in Rat Tissues. P. R. Thomassen and H. M. Leicester. *Proc. Soc. Exptl. Biol. Med. 77*, 622–4(1951).

H 88 Xenon Concentration Changes in Brain and Other Body Tissues of the Dog. E. E. Stickley, C. B. Pittinger, E. G. Featherstone, and L. Levy. *J. Pharmacol. Exptl. Therap. 110*, 458–62(1954).

H 89 Biological Studies on Stable and Radioactive Rare Earth Compounds. I. On the Distribution of Lanthanum in the Mammalian Organism. D. Laszlo, D. M. Ekstein, R. Lewin, and K. G. Stern. *J. Natl. Cancer Inst. 13*, 559–73(1952).

H 90 Biological Studies on Stable and Radioactive Rare Earth Compounds. II. The Effect of Lanthanum on Mice Bearing Ehrlich Ascites Tumor. R. Lewin, K. G. Stern, D. M. Ekstein,

L. Woidowsky, and D. Laszlo. *J. Natl. Cancer Inst. 14, No. 1,* August (1953).

H 91 Distribution of Y-90 in Ascites Tumor Mice Following Intraperitoneal Administration of Yttrium Chloride. R. Lewin, H. E. Hart, J. Greenberg, H. Spencer, K. G. Stern and D. Laszlo. *Science 119,* 880-1(1954).

H 92 Distribution of Y-90 in Cancer Patients and in Ascites Tumor Mice, Following the Intracavitary Injection of Yttrium. R. Lewin, H. Hart, J. Greenberg, H. Spencer, K. G. Stern and D. Laszlo. *Proc. Am. Assoc. Cancer Research 1,* 28-9(1954).

H 93 Effect of La-139 and La-140 Chloride on Mice Bearing Ehrlich Ascites Tumors. R. Lewin, H. Spencer, D. M. Ekstein, L. Woidowsky, K. G. Stern, and D. Laszlo. *Cancer Research 12,* 278-9(1952).

H 94 Effect of Pretreatment with Propyl Thiouracil on Accumulations of Astatine-211 by Thyroid Gland of the Rat. P. W. Durbin, J. G. Hamilton, M. W. Parrott. *Proc. Soc. Exptl. Biol. Med. 86,* 369-71(1954).

H 95 The Metabolism of Silver in the Rat with Radio-Silver Used as an Indicator. K. G. Scott and J. G. Hamilton. *Univ. Calif. Press*(1950)

H 96 Studies of Stable and Radioactive Lanthanum in Normal and Tumor-Bearing Mice. D. M. Ekstein and R. Lewin. *Cancer Research 11,* 246(1951).

Injurious Agent Physiology in Animals

I 1 Biliary Excretion of Selenium in the Dog after Administration of Sodium Selenate Containing Radioselenium. K. P. McConnell and R. G. Martin. *J. Biol. Chem. 194,* 183-90(1952).

I 2 C-14 Isoniazid Concentration in Normal and Tuberculous Tissues. R. W. Manthei, L. J. Roth, W. R. Barclay, and R. H. Ebert. *Federation Proc. 12,* 348(1953).

I 3 Distribution of Intravenously Injected Colloidal Radioactive Iron in Iron Proteins of the Normal Rabbit and of Rabbits with Turpentine Abscess and Diphtheria Toxicosis. I. Indovina. *Am. J. Physiol. 165,* 348-51(1951).

I 4 The Distribution of Radioactive DDT in House Flies. A. W. Lindquist, A. R. Roth, and R. A. Hoffman. *J. Econ. Entomol. 44,* 931-4(1952).

I 5 Distribution and Retention of Radioberyllium in Lungs of Rats following Intratracheal Injection. C. D. V. Cleave and C. T. Kaylor. *Federation Proc. 12,* 376(1953).

I 6 The Effect of Added Carrier on the Distribution and Excretion of Soluble Be. J. K. Scott, W. F. Neuman, and R. Allen. *J. Biol. Chem. 182,* 291-8(1950).

I 7 Effect of Adrenocorticotrophic Hormone on Tissue Distribution and Acute Toxicity of Beryllium. M. R. White, A. J. Finkel, and J. Schubert. *Proc. Soc. Exptl. Biol. Med. 80,* 603-4(1952).

I 8 Effect of Bal on Survival of Rats after Lethal Doses of Polonium. J. B. Hursh. *Proc. Soc. Exptl. Biol. Med. 79,* 210-2(1952).

I 9 The Effect of 2,4-Dinitrophenol on the Turnover of the Acid-Soluble Phosphorus of Rat Diaphragm. J. Sacks and F. M. Sinex. *Arch. Biochem. and Biophys. 39,* 205-13(1952).

I 10 The Effect of Perchlorate on the Human Thyroid Gland. J. B. Wyngaarden and J. B. Stanbury. *J. Clin. Endocrinol. Metabolism 12,* 973(1952).

I 11 The Effect of Thiouracil on the Collection of Radioactive Iodine in Experimentally Induced Thyroid Tumors. W. L. Money, P. J. Fitzgerald, J. T. Godwin, and R. W. Rawson. *Cancer 6,* 111-20(1953).

I 12 The Effects of Iodide, Perchlorate, Thiocyanate, and Nitrate Administration Upon the Iodide Concentrating Mechanism of the Rat Thyroid. J. B. Wyngaarden, J. B. Stanbury, and B. Rapp. *Endocrinology 52,* 568-74(1953).

I 13 Factors Contributing to the Difference in Propylthiouracil Goitrogenesis in Rats and Guinea Pigs. C. G. Rand, N. D. Lee, and R. H. Williams. *Proc. Soc. Exptl. Biol. Med. 78,* 307-9(1951).

I 14 Fixation of Selenium in Dog Leukocytes. K. P. McConnell. *Federation Proc. 13, No. 1,* 262(1954).

I 15 The Interaction of Carcinogenic Hydrocarbons with Tissue Constituents. I. Methods. W. G. Wiest and C. Heidelberger. *Cancer Research 13,* 246-9(1953).

I 16 The Interaction of Carcinogenic Hydrocarbons with Tissue Constituents. II. 1,2,5,6-Dibenzanthracene-9,10-C-14 in Skin. W. G. Wiest and C. Heidelberger. *Cancer Research 13,* 250-4(1953).

I 17 The Interaction of Carcinogenic Hydrocarbons with Tissue Constituents. III. 1,2,5,6-Dibenzanthracene-9,10-C-14 in the Submaxillary Gland. W. G. Wiest and C. Heidelberger. *Cancer Research 13,* 255-61(1953).

I 18 The Liver Nucleic Acid Incorporation of Adenine-8-C-14 During Azo Dye Carcinogenesis. A. C. Griffin, W. E. Davis, Jr., and M. O. Tifft. *Cancer Research 12,* 707-12(1952).

I 19 The Metabolism of Methylated Aminoazo Dyes. III. The Demethylation of Various N-Methyl-C-14-Aminoazo Dyes *in Vivo.* J. C. MacDonald, A. M. Plescia, E. C. Miller, and J. A. Miller. *Cancer Research 13,* 292-7(1953).

I 20 Production of Pituitary Tumors in Mice by Chronic Administration of a Thiouracil Derivative. G. E. Moore, E. L. Brackney, and F. G. Bock. *Proc. Soc. Exptl. Biol. Med. 82,* 643-5(1953)

I 21 A Protective Role of Pyridoxin Against the Toxic Effects of P-32. C. Artom, W. E. Cornatzer, and G. T. Harrell, Jr. *Proc. Soc. Exptl. Biol. Med. 79,* 494-7(1952).

I 22 Studies on the Fate of Nicotine in the Body. VII. Observations on the Excretion of Nicotine and its Metabolites by the Dog. D. R. Bennett, R. E. Tedeschi, and P. S. Larson. *Arch. Intern. Pharmacodyanmie 98*, 221–7(1954).

I 23 Studies of Fate of Parathion in Rabbits, Using Radioactive Isotopes Techniques. J. A. Jensen, W. F. Durham, and G. W. Pearce. *Arch. Ind. Hyg. Occupation Med. 6*, 326–31(1952).

I 24 The Toxicity of Polonium 210 in Mice. I. The Thirty Day LD 50, Retention and Distribution. M. P. Finkel, W. P. Norris, W. E. Kisieleski, and G. M. Hirsch. *Am. J. Roentgenol. Radium Therapy Nuclear Med. 70*, 477–85(1953).

I 25 Unstained Cell Counts As a Method of Evaluating Cancerocidal Agents. R. O. Vycital, R. Schrek, and T. H. Clarke. *J. Lab. Clin. Med. 42*, 326–34(1953).

I 26 Applications of Radioisotopes to Studies of Carcinogenesis and Tumor Metabolism. C. Heidelberger. *Advances in Cancer Research 1*, 273–338(1953).

I 27 The Carcinogenic Aminoazo Dyes. J. A. Miller and E. C. Miller. *Advances in Cancer Research 1*, 340–96(1953).

I 28 Collection of Radioiodine in Thiouracil-Induced Tumors of the Rat Thyroid. W. L. Money. *Proc. Natl. Cancer Conf., 2nd Conf.*, 487–8(1954).

I 29 A Comparative Study of Effects of Phenothiazine on the Thyroid Uptake of I–131. H. I. Nachimson, R. H. Benson, J. J. Szafir, R. B. Turner, H. C. Allen, Jr., and R. V. Talmage. *Proc. Soc. Exptl. Biol. Med. 87*, 157(1954).

I 30 Effect of Aminopterin on Nucleic Acid Metabolism in the Rat. D. A. Goldthwait and A. Bendich. *Federation Proc. 10*, 190(1951).

I 31 Effect of Salicylates on Experimental Beryllium Poisoning. A. J. Finkel and M. R. White. *Federation Proc. 11*, 344(1952).

I 32 Effects of p-Aminosalicylic Acid on Thyroid and Adrenal. T. Wong, J. R. Hogness and R. H. Williams. *Proc. Soc. Exptl. Biol. Med. 82*, 598(1953).

I 33 Effects of Certain Chelating Agents on Survival of Beryllium-Poisoned Mice and on Distribution of Be–7. M. R. White and J. Schubert. *Anat. Record 117*, 529(1953).

I 34 Effects of Chloramphenicol on Incorporation of Glycine-2-C–14 into Mammalian Tumor Cell Proteins and Purines. G. A. LePage. *Proc. Soc. Exptl. Biol. Med. 83*, 724–6(1953).

I 35 Effects of a Folic Acid Antagonist on Nucleic Acid Metabolism. B. A. Lowy, J. Davoll and G. B. Brown. *J. Biol. Chem. 196*, 841–52(1952).

I 36 The Effects of p-Hydroxypropiophenone on the Thyroid Gland of Experimental Animals. W. L. Money, V. Lucas, J. Fager, and R. W. Rawson. *J. Clin. Endocrinol. 11*, 973–7(1951).

I 37 The Effects of Tumor Growth, X-radiation, and 8-azaguanine on the Incorporation of Adenine into Nucleic Acids of Mice. J. L. Way, H. G. Mandel, and P. K. Smith. *Cancer Research 14*, 812–6(1954).

I 38 Gallium Chemistry of Biological Interest. J. D. Perkinson, Jr., J. S. Eldridge, and B. M. Cooper. *Radiology 61*, 543–5(1953).

I 39 An Incident of High Mortality Among Large Rainbow Trout Following Treatment with P. M. A. R. F. Foster and P. A. Olson, Jr. *Progressive Fish Culturist 13*, 129–30(1951).

I 40 Iron Absorption in Dogs During Anemia Due to Acetylphenylhydrazine. W. B. Stewart, P. S. Vassar, and S. R. Stone. *J. Clin. Invest. 32*, 1225(1953).

I 41 The Polycythemia Produced in the Rat by Cobalt. N. I. Berlin. *Acta Haematol. 5*, 30–5(1951).

I 42 Selenium Metabolism. M. A. Heinrich, Jr., and F. E. Kelsey. *Federation Proc. 13, No. 1*, 364(1954).

I 43 Studies on the Inhibition of Proteolytic Enzymes by Serum. II. Demonstration that Separate Proteolytic Inhibitors Exist in Serum; Their Distinctive Properties and the Specificity of Their Action. N. R. Shulman. *J. Exptl. Med. 95*, 593–603(1952).

I 44 Studies on the Inhibition of Proteolytic Enzymes by Serum. III. Physiological Aspects of Variations in Proteolytic Inhibition. The Concurrence of Changes in Fibrinogen Concentration with Changes in Trypsin Inhibition. N. R. Shulman. *J. Exptl. Med. 95*, 605–18(1952).

I 45 Tracer Studies on the Uptake of Cadmium in the Rat Molar. H. M. Leicester, P. R. Thomassen, and G. L. Denzler. *J. Dental Research 32*, 663(1953).

I 46 Biliary Excretion of a Metabolite (s) of Codeine in the Rat. M. E. Latham. *J. Pharmacol. Exptl. Therap. 101*, 22(1951).

I 47 Distribution of C–14 Labeled Meperidine in the Albino Rat. N. P. Plotnikoff. *Federation Proc. 9*, 308(1950).

I 48 The Ethionine-Induced Fatty Liver: Dosage, Prevention and Structural Specificity. D. Jensen, I. L. Chaikoff, and H. Tarver. *J. Biol. Chem. 192*, 395–403(1951).

I 49 The Distribution and Excretion of S–35 Labeled Sulfobromophthalein-Sodium Administered to Dogs by Continuous Infusion. R. W. Brauer, R. L. Pessotti, et al. *J. Clin. Invest. 34*, 35(1955).

I 50 Effect of Calcium Salt of Versene upon Metabolism of Plutonium in the Rat. J. G. Hamilton and K. G. Scott. *Proc. Soc. Exptl. Biol. Med. 83*, 301–5(1953).

I 51 The Effect of Various Pathological Conditions on *in Vivo* Hemoglobin Synthesis. I. Hemoglobin Synthesis in Beryllium-Induced Anemia as Studies with α-14-C Acetate. H. E. Stokinger, K. I. Altman, and K. Salomon. *Biochim. et Biophys. Acta 12*, 439–44(1953).

I 52 The Effect of Various Pathological Conditions on *in Vivo* Hemoglobin Synthesis. II. Polonium-

Induced Anemia as Studied with α-C–14 Glycine. R. G. Thomas, K. I. Altman, J. N. Stannard, and K. Salomon. *Radiation Research 1*, 180–8(1954).

I 53 The Fate of Dibenzyline in the Body and the Role of Fat in Its Duration of Action. B. B. Brodie, L. Aronow, and J. Axelrod. *J. Pharmacol. Exptl. Therap. 111*, 21(1954).

I 54 The Metabolism of Arsenic in Laboratory Animals Using As–74 as a Tracer. H. Lanz, P. C. Wallace, and J. G. Hamilton. *Univ. Calif. Press*(1950).

I 55 Preliminary Observations on Toxicity of Elemental Selenium. R. H. Hall, S. Laskin, P. Frank, E. A. Maynard, and H. C. Hodge. *Arch. Ind. Hyg. and Occupational Med. 4*, 458–64(1951).

General Animal Physiology

J 1 The Absorption of Thyroxine from the Gastrointestinal Tract of the Rat. A. Albert, A. Tenny and N. Lorenz. *Endocrinology 50*, 374–6(1952).

J 2 The Accumulation of Phosphate by Fertilized Sea Urchin Eggs. E. L. Chambers and W. E. White. *Biol. Bull. 106*, 297–307(1954).

J 3 Accumulation of Radioiodine in the Thyroid Gland of Elasmobranchs. T. P. Lin and E. D. Goldberg. *Endocrinology 48*, 485–8(1951).

J 4 The Action of Thyrotrophic Hormone and Cortisone on the Uptake of I–131 by the Thyroid Gland. F. Verzar and V. Vidovic. *J. Endocrinol. 8*, 321–8(1952).

J 5 Activity of Thyroid of Cold-Exposed Rats Evaluated by I–131 Uptake and Histometric Studies. B. Catz, I. E. Rawi and E. Geiger. *Am. J. Physiol. 174*, 29–32(1953).

J 6 Albumin and Globulin Circulation in Experimental Ascites. Relative Rates of Interchange between Plasma and Ascitic Fluid Studied with C–14-Labeled Proteins. F. W. McKee, C. L. Yuile, B. C. Lamson, and G. H. Whipple. *J. Exptl. Med. 95*, 161–72(1952).

J 7 Alteration in the Dynamics of Transcapillary Exchange from Intravenous Injection of Hyaluronidase. M. D. Turner, C. B. Ferrel, and R. R. Overman. *Federation Proc. 12*, 146(1953).

J 8 An Analytical Study of *in Vivo* Survival of Limited Populations of Animal Red Blood Cells Tagged With Radioiron. I. W. Brown, Jr., and G. S. Eadie. *J. Gen. Physiol. 36*, 327–43(1953).

J 9 Anethole, Sodium Salicylate and Glycogen Deposition in Adrenalectomized Fasted Rat. A. Edelmann, R. L. Bogner, and R. Steele. *Federation Proc. 13, No. 1*, 39–40(1954).

J 10 Application of Perfused Rat Liver Preparation to Isotopic Study. J. W. Archdeacon and M. Brucer. *Proc. Soc. Exptl. Biol. Med. 81*, 325–7(1952).

J 11 Accumulation of Radioiodine (I–131) in Thyroid Gland of the Hamster Embryo. L. A. Nansborough and H. Seay. *Proc. Soc. Exptl. Biol. Med. 78*, 481–3(1951).

J 12 Athyroid Joint Disease in Mice of Various Ages. M. Silberberg and R. Silberberg. *Arch. Pathol. 58*, 227–35(1954).

J 13 Behavior of Radiocalcium in the Rat and the Bovine. S. L. Hansard, C. L. Comar, M. P. Plumlee, and C. S. Hobbs. *J. Animal Sci. 9*, 657(1950).

J 14 Biliary and Urinary I–131 Excretion in Euthyroid, Hyper- and Hypothyroid Rats Injected with Labeled Thyroxine. H. M. Klitgaard. *Proc. Soc. Exptl. Biol. Med. 82*, 578–9(1953).

J 15 Blood-Clotting Studies on Dogs Internally Irradiated with Radio-Gold. J. H. Ferguson, G. A. Andrews, and M. Brucher. *Proc. Soc. Exptl. Biol. Med. 80*, 541–5(1952).

J 16 Blood, Plasma and "Globulin" Space of Guinea Pigs Determined with I–131 Rabbit Globulin. S. P. Masouredis and L. R. Melcher. *Proc. Soc. Exptl. Biol. Med. 78*, 264–6(1951).

J 17 Blood Volume of Swine. S. L. Hansard, H. E. Sauberlich, and C. L. Comar. *Proc. Soc. Exptl. Biol. Med. 78*, 544–5(1951).

J 18 Blood Volumes of Ducks Using Human Serum Albumin Labeled with Radioiodine. O. W. Portman, K. P. McConnell, and R. H. Rigdon. *Proc. Soc. Exptl. Biol. Med. 81*, 599–601(1952).

J 19 Brain Potassium Exchange in Normal Adult and Immature Rats. R. Katzman and P. H. Leiderman. *Am. J. Physiol. 175*, 263–70(1953).

J 20 Cardiac Output in Monkeys. C. B. Ferrel, M. D. Turner and R. R. Overman. *Federation Proc. 12*, 43(1953).

J 21 Changes in Adrenal and Pituitary Concentrations of I–131 and P–32 Following Thyroidectomy. J. B. Boatman, J. H. Sunder, C. Russ, and C. Moses. *Proc. Soc. Exptl. Biol. Med. 78*, 250–3(1951).

J 22 Changes in Concentration of Phosphorus P–32 in the Organs of the Rat Following Unilateral Adrenalectomy. J. B. Boatman, J. H. Sunder and C. Moses. *Federation Proc. 10*, 16(1951).

J 23 Chemopathology of Hemoglobin Synthesis in Mice with a Hereditary Anemia. K. I. Altman, E. R. Russell, K. Salomon, and J. K. Scott. *Federation Proc. 12*, 168(1953).

J 24 Circulation of Plasma Proteins: Their Transport to Lymph. L. L. Forker, I. L. Chaikoff, and W. O. Reinhardt. *J. Biol. Chem. 197*, 625–36(1952).

J 25 Comparative Distribution and Fate of I–131-Labeled Thyroxine and Triiodothyronine. P. Van Arsdel, Jr., J. R. Hogness, R. H. Williams, and N. Elgee. *Endocrinology 55*, 332–43(1954).

J 26 Comparative Effects of Cortisone and DCA on Ionic Balance and Fluid Volumes of Normal and Adrenalectomized Dogs. A. K. Davis, A. C.

Bass and R. R. Overman. *Am. J. Physiol. 166*, 493–503(1951).

J 27 The Comparative Effects of Various Steroids on Lymphoid Tissue of the Rat. W. L. Money, J. Fager and R. W. Rawson. *Cancer Research 12*, 206–10(1952).

J 28 Comparative Studies Upon the Reticuloendothelial Activity in Different Mice Strains. E. R. Gabrieli. *Federation Proc. 12*, 47(1953).

J 29 Comparison of *in Vitro* and *in Vivo* Radioiron Uptake by Pigeon Erythrocytes. K. Nakao, L. Plzak and W. Bethard. *Science 120*, 260–2(1954).

J 30 Conversion of Plasma Protein to Tissue Protein Without Evidence of Protein Breakdown. C. L. Yuile, B. G. Lamson, L. I. Miller, and G. H. Whipple. *J. Exptl. Med. 93*, 539–57(1951).

J 31 Correlation of Effects of Desoxycorticosterone on Specific Activity Curves of Na–24 and Response to Nor-Epinephrine in Dogs. J. C. Vanatta, I. Danhof and A. F. Reid. *Federation Proc. 13, No. 1*, 155–6(1954).

J 32 Cutaneous Accumulation and Retention of Hexachlorophene–C–14 (G–11). I. Shemano and M. Nickerson. *Federation Proc. 13, No. 1* 404(1954).

J 33 Decreased Phosphorylation During Stimulation of the Nervous System. L. G. Abood and R. W. Gerard. *Federation Proc. 13, No. 1*, 1(1954).

J 34 Depression of the Thyroidal Iodine Uptake by Hypothalmic Lesions. W. F. Ganong, D. S. Fredrickson and D. M. Hume. *J. Clin. Endocrinol. and Metabolism 14*, 773–4(1954).

J 35 Differential Incorporation of S–35 Methionine by Tumor Cells and Normal Tissue. M. L. Haigler, G. Z. Williams, and J. T. Williams. *Federation Proc. 12*, 389(1953).

J 36 Diminished P–32 Assimilation by *Trypanosoma equiperdum* in the Rat Late in the Infection. W. Cantrell. *J. Infectious Diseases 93*, 219–21(1953).

J 37 Direct Tissue Radioautography Technique Applied to Teeth. N. D. Martin and E. S. Slater. *Science 113*, 721–2(951).

J 38 Distribution of Cells and Plasma in the Normal and Splenectomized Dog and Its Influence on Blood Volume Estimates with P–32 and T–1824. E. B. Reeve, M. I. Gregersen, T. H. Allen, and H. Sear. *Am. J. Physiol. 175*, 195–203(1953).

J 39 Distribution, Exchange and Migration of Phosphate Compounds in the Nervous System. A. J. Samuels, L. I. Boyarsky, R. W. Gerard, B. Libet, and M. Brust. *Am. J. Physiol. 164*, 1–15(1951).

J 40 Distribution of "Extra Plasma" in the Blood of Some Tissues in the Dog as Measured with P–32 and T–1824. T. H. Allen and E. B. Reeve. *Am. J. Physiol.* 218–23(1953).

J 41 Distribution of Injected Radioiron Among the Tissues and Tissue Fractions of Mice. J. K. Hampton, Jr. *Federation Proc. 12*, 61(1953).

J 42 Distribution of Phosphorus 32 in the Embryo and Larva of the Frog. L. A. Hansborough and D. Denny. *Proc. Soc. Exptl. Biol. Med. 78*, 437–41(1951).

J 43 The Distribution of Radioactive Chromium Phosphate in Tissues of Rodents Following Intravenous Injection. E. R. Gabrieli. *Acta Pathol. Microbiol. Scand. 21*, 195–204(1952).

J 44 Distribution of Radioactive Estrone 16–C–14 in Mice. A. M. Budy. *Federation Proc. 12*, 306–(1953).

J 45 The Distribution of Radioactive Gold Colloid in Rats, Mice, and Transplanted Mouse Tumors. G. Z. Williams, A. C. Stanton, R. M. Jamison, and J. T. Williams. *Southern Med. J. 43*, 1031–8–(1950).

J 46 Distribution of Radioactivity Following Intravenous Administration of Trivalent Chromium 51 in the Rat and Rabbit. L. Kraintz and R. V. Talmage. *Proc. Soc. Exptl. Biol. Med. 81*, 490–2(1952).

J 47 The Distribution of Thyroxine in Rat Liver Cell Fractions. H. J. Lipner, S. B. Barker, and T. Winnick. *Endrocrinology, 51*, 406–11(1952).

J 48 Distribution of Tissue Fluid in Hearts of Rats Subjected to Anoxia. J. M. Lemley and G. R. Meneely. *Am. J. Physiol. 169*, 61–5(1952).

J 49 The Drainage of Radioactive Silver Colloids by the Lymphatics Following Intrapulmonary Administration in Dogs. P. F. Hahn, G. Rouser, H. Brummitt, J. Moorehead, and E. L. Carothers. *J. Lab. Clin. Med. 39*, 624–8(1952).

J 50 Dynamics of Iron Absorption. W. B. Sweet and S. R. Gambino. *Federation Proc. 13, No. 1.*, 444(1954).

J 51 Early Postnatal Changes in Pulmonary Blood Volume of the Guinea Pig. N. B. Evertt. *Am. J. Physiol. 169*, 34–9(1952).

J 52 Effect of Adrenalectomy, Desoxycorticosterone and Cortisone and Brain Potassium Exchange. P. H. Leiderman and R. Katzman. *Am. J. Physiol. 175*, 271–5(1953).

J 53. Effect of Adrenalectomy and DCA on the Radioisotope Intramuscular Clearance and Distribution in the Rat. F. R. Franke, J. B. Boatman, and R. S. George. *Angiology 2*, 46–50(1951).

J 54 Effect of Adrenocortical Hormones on Phospholipid Turnover of Adrenalectomized Dogs. D. B. Zilversmit, N. R. DiLuzio, and M. L. Shore. *Metabolism, Clin. Exptl. 3*, 433–7(1954).

J 55 Effect of Amphenone "B" on the Function of the Thyroid, Adrenals and Testes. R. H. Williams and J. R. Hogness. *J. Clin. Endocrinol. and Metabolism 12*, 943(1952).

J 56 The Effect of Anesthetic Agents on the Thyroid Activity of the Rat. A. W. Wase, E. Rapplinger, and W. C. Foster. *Endocrinology 53*, 630–2(1953).

J 57 Effect of Anesthetic and Convulsant Drugs on P–32 Exchange in Rat Brain. E. Streicher. *Federation Proc. 13, No. 1*, 146(1954).

J 58 Effect on Bone Grafts of Radioactive Isotopes of Phosphorus. R. T. Odell, C. B. Mueller and J. A. Key. *J. Bone Joint. Surg. 33–A*, 324–32–(1951).

J 59 Effect of Corticotropin, Cortisone and Desoxycorticosterone on Thyroid Weight of the Goitrogen-Treated Rat. J. L. Gabrilove, W. R. Dorance, and L. J. Soffer. *Am. J. Physiol. 169,* 565–7(1952).

J 60 The Effect of Cortisone and Corticotropin on the Biologic Decay of Thyroidal Radioiodine. A. Albert and A. Tenney. *Endocrinology 50,* 324–6(1952).

J 61 Effect of Cortisone on the Distribution of Radioiodine in Control, Thyroxine and TSH-Treated Rats. D. M. Woodbury and D. T. Goates. *J Clin. Endocrinol. and Metabolism 14,* 822(1954).

J 62 Effect of Cortisone on the Function, Capacity and Activity of the Reticuloendothelial System. J. H. Heller. *Federation Proc. 12,* 65(1953).

J 63 The Effect of Cortisone on the Thyroidal and Renal Metabolism of Iodine. S. H. Ingbar. *Endocrinology 53,* 171–81(1953).

J 64 Effect of Decreased Atmospheric Pressure on Blood Volume of Rats. G. R. Fryers. *Am. J. Physiol. 171,* 459–64(1952).

J 65 Effect of Destruction of Thyroid Glands by Radioactive Iodine on Pancreatic Diabetes in The Dog. W. B. Neal, Jr., L. R. Dragstedt, G. R. Rogers, and G. McKeague. *Am. J. Physiol. 168,* 29–32(1952).

J 66 Effect of Diphenylhydantoin on Brain Electrolytes in Normal, Hyponatremic and Postical Rats. D. M. Woodbury. *J. Pharmacol. Exptl. Therap. 106,* 425(1952).

J 67 The Effect of Epinephrine and Thyrotropin on Thyroid Function in Rats. A. L. Botkin and H. Jensen. *Endocrinology 50,* 68–72(1952).

J 68 Effect of Experimental Athyroidism and Hypothyroidism upon Gastric Secretion in the Rat. D. C. H. Sun, H. Shay, H. Siplet, and M. Gruenstein. *Gastro-enterology 27,* 189–200(1954).

J 69 The Effect of Goitrogen Withdrawal on the Pituitary-Thyroid System of the Guinea Pig. S. A. D'Angelo, C. E. Stevens, K. E. Paschkis, A. Cantarow, F. W. Sunderman, and G. Griedler. *Endocrinology 54,* 565–79(1954).

J 70 The Effect of Goitrogen Withdrawal on Thyroidal I-131 Uptake in the Rat. S. A. D'Angelo, K. E. Paschkis, and A. Cantarow. *J. Clin. Endocrinol. and Metabolism 12,* 976–7(1952).

J 71 Effect of Growth and Body Size on Fixed Carbon Turnover. D. L. Buchanan and A. Nakao. *J. Biol. Chem. 200,* 407–16(1953).

J 72 The Effect of Helium on the Gas Exchange of Mice as Modified by Body Size and Thyroid Activity. D. R. Young and S. F. Cook. *J. Cellular Comp. Physiol. 42, 319–25(1953).*

J 73 Effect of Hormones on Calcium 45 Accumulation in Various Tissues. L. F. Wolterink, R. L. Cornwall, C. Vinson and L. L. Cole. Federation *Federation Proc. 12, 158–9(1953).*

J 74 The Effect of Hypophysectomy on the Biologic Decay of Thyroidal Radioiodine. R. V. Randall, N. Lorenz, and A. Albert. *Endocrinology 48,* 339–40(1951).

J 75 The Effect of Hypophysectomy on the Uptake of Radioactive Iodine by the Thyroid of the Rat. R. V. Randall and A. Albert. *Endocrinology 48,* 327–33(1951).

J 76 The Effect of Hypothyroidism on the Development of Experimental Uremia. R. T. Marshall and S. Freeman. *Endocrinology 55,* 205–11 (1954).

J 77 The Effect of Iodothiouracil on the Biologic Decay of Thyroidal Radioiodine. A. Albert and E. Ford. *Endocrinology 50,* 272–3(1952).

J 78 The Effect of Low Iodine Diet on Thyroid Function in the Rat. W. L. Money, J. E. Rall and R. W. Rawson. *J. Clin. Endocrinol. and Metabolism 12,* 1495–505(1952).

J 79 Effect of Parathyroid Extract on P-32 Excretion in Thyroparathyroid-ectomized Dogs. G. D. Buchanan and R. V. Talmage. *Anat. Record 117,* 622(1953).

J 80 Effect of Parathyroids on Radio-calcium Uptake and Exchange in Rat Tissues. R. V. Talmage, F. W. Kraintz, and L. Kraintz. *Proc. Soc. Exptl. Biol. Med. 80,* 553–7(1952).

J 81 The Effect of Particle Size on Blood Clearance and Tissue Distribution of Radioactive Gold Colloids. D. B. Zilversmit, G. A. Boyd, and M. Brucer. *J. Lab. Clin. Med. 40,* 255–260(1952).

J 82 Effect of Physical Factors on Radiosodium Clearance from Subcutaneous and Intramuscular Sites in Animals. F. R. Franke, J. B. Boatman, R. S. George, and C. Moses. *Proc. Soc. Exptl. Biol. Med. 74,* 417–21(1950).

J 83. Effect of Starvation on Exchangeable Potassium and Tissue K-42 Content in Rabbits. J. K. Aikawa. *Proc. Soc. Exptl. Biol. Med. 78,* 524–8(1951).

J 84 Effects of Thyroidectomy on the Uptake of I-131 in the Thymus Gland of the Rat. W. C. Foster, J. H. Van Dyke, and A. W. Wase. *Federation Proc. 13, No. 1,* 46(1954).

J 85 Effect of Thyroid Hormone on Growth of Thyrotrophin-Secreting Pituitary Tumors. E. L. Gadsden and J. Furth. *Proc. Soc. Exptl. Biol. Med. 83, 511–4(1953).*

J 86 The Effect of Thyroid Hormone on the Growth of Transplantable Pituitary Tumors. E. L. Gadsden. *J. Tenn. Acad. Sci. 28,* 180(1953).

J 87 The Effect of Thyroxine and Radioactive Iodine on Resistance of Mice to Infection with Murine Pneumonitis Virus. E. Weiss, J. W. Moulder and M. K. Itatani. *J. Infectious Diseases 90,* 21–9(1952).

J 88 Effect of Variations of Sodium Intake and of Desoxycorticosterone on the Relationship of Sodium Space to Chloride Space in Dogs. J. L. Gamble, Jr. *Am. J. Physiol. 175,* 276–82(1953).

J 89 Effect of Various Physical Therapy Measures on Blood Flow. B. F. Randall, C. J. Imig, and H. M. Hines. *Am. J. Physiol. 167,* 819(1951).

J 90 Effects of Adrenal and Gonadal Products on the Weight and Radioiodine Uptake of the Thyroid Gland in the Rat. W. L. Money, L. Kirschner, L. Kraintz, P. Merrill, and R. W. Rawson. *J. Clin. Endocrinol. 10*, 1282–95(1950).

J 91 Effects of Adrenalectomy and Dietary NaCl upon Thyroid I–131 Concentration in the Rat. J. B. Boatman, J. H. Sunder, C. Russ, R. D. Cole, and C. Moses. *Federation Proc. 12*, 16–7 (1953).

J 92 Effects of Alteration in Blood Volume and Venous Hematocrit in Splenectomized Dogs on Estimates of Total Blood Volume with P–32 and T–1824. E. B. Reeve, M. I. Gregersen, T. H. Allen, H. Sear, and W. W. Walcott. *Am. J. Physiol. 175*, 204–10(1953).

J 93 Effects of Amphenone "B" on Thyroid and Adrenal Functions. J. R. Hogness, N. D. Lee, and R. H. Williams. *Endocrinology 52*, 378–89(1953).

J 94 Effects of Anoxia on Pressure, Resistance and Blood (P–32) Volume of Pulmonary Vessels. D. M. Aviado, Jr., A. Cerletti, J. Alanis, P. H. Bulle, and C. F. Schmidt. *Am. J. Physiol. 169*, 460–70(1952).

J 95 The Effects of Continuous Light or Darkness on Thyroid Function in Mice. G. Puntriano, and J. Meites. *Endocrinology 48*, 217–24(1951).

J 96 Effects of Corticotropin and Convulsion-Inducing Agents on P–32 Uptake of Brain Phospholipids and Total Phosphorus-Containing Compounds. C. Torda. *Federation Proc. 12*, 145(1953).

J 97 Effects of Cortisone and DCA on Radiosodium Transport in Normal and Adrenalectomized Dogs. R. R. Overman, A. K. Davis and A. C. Bass. *Am. J. Physiol. 167*, 333–40(1951).

J 98 Effects of Cortisone on Thyroid Function in White Leghorn Cockerels. C. J. Shellabarger. *Anat. Record 117*, 552(1953).

J 99 The Effects of Hypophysectomy and of Growth Hormone on the Uptake of Radioactive Phosphorus by Tissues. I. I. Geschwind, C. H. Li, and H. M. Evans. *Arch. Biochem. and Biophys. 31*, 168–82(1951).

J 100 The Effects of Induced Hyperthyroidism and Vitamin B–12 on the Synthesis of Some Phosphate Fractions in the Rat Liver. P. R. Venkataraman and M. T. Friedell. *Endocrinology 54*, 612–9(1954).

J 101 Effects of a Magnesium-Adenosinetriphosphate Complex on Uptake of Orthophosphate by Rabbit Erythrocytes. H. Jonas. *Federation Proc. 13, No. 1*, 76(1954).

J 102 Effects of Picrotoxin on Distribution and Excretion of C–14-Labeled Pentobarbital. J. B. Kahn. *Current Researches Anesthesia and Analgesia 31*, 130–5(1952).

J 103 Effects of Temperature and Surgery Upon the Elimination of Radioiodine in the Rat. W. V. McFarlane. *J. Clin. Endocrinol. and Metabolism 12*, 942(1952).

J 104 The Effects of Vitamin A and Reichstein's Compound L on the Thyroid, Adrenal and Lymphoid Systems of the Rat. W. L. Money, J. Fager, V. Lucas, and R. W. Rawson. *Endocrinology 51*, 87–93(1952).

J 105 Electrolyte Composition of Bone and the Penetration of Radiosodium and Deuterium Oxide into Dog and Human Bone. I. S. Edelman, A. H. James, H. Baden, and F. D. Moore. *J. Clin. Invest. 33*, 122–31(1954).

J 106 Enterohepatic Circulation of Carbon 14 of Cholesterol. M. D. Siperstein, H. H. Hernandez, and I. L. Chaikoff. *Am. J. Physiol. 171*, 297–301(1952).

J 107 Erythrocyte Life Span in Small Animals Comparison of Two Methods Employing Radioiron. E. L. Burwell, B. A. Brickley, and C. A. Finch. *Am. J. Physiol. 172*, 718–24(1953).

J 108 An Evaluation of the Effectiveness of Antiperspirant Preparations Using Frog Membrane and Radioactive Tracer Techniques. C. Urakami and J. E. Christian. *J. Am. Pharm. Assoc., Sci. Ed. 62*, 179–80(1953).

J 109 Excretion and Distribution of Radioactive S–35–Cyclamate Sodium (Sucaryl Sodium) in Animals. J. D. Taylor, R. K. Richards, and J. C. Davin. *Proc. Soc. Exptl. Biol. Med. 78*, 530–3(1951).

J 110 Excretion of Hydrocortisone-4–C–14. P. M. Hyde and R. H. Williams. *J. Clin. Endocrinol. and Metabolism 14*, 817(1954).

J 111 Excretion of Phosphate by Isolated Frog Kidney: An Adsorption Semipermeability Model for Maximal Tubular Transport. C. A. M. Hogben and J. L. Bollman. *Am. J. Physiol. 164*, 662–9(1951).

J 112 Excretion of P–32 in the Bile of Rabbits Following Intravenous Administration. F. B. Moreland, J. H. Gast, and B. Halpert. *Am. J. Clin. Pathol. 21*, 828–30(1951).

J 113 Factors Governing the Development of the Chick Embryo Thyroid. I. Determination of the Time at which I–131 Collection Begins. J. B. Trunnell and F. T. Brayer. *J. Clin. Endocrinol. and Metabolism 13*, 88–94(1953).

J 114 Factors Regulating Capillary Blood P–32 Volume in the Lungs. D. M. Aviado, Jr., P. H. Bulle, A. H. Niden, and C. F. Schmidt. *Am. J. Med. Sci. 223, 461*(1952).

J 115 Fate of I–131 Labeled Bovine Gamma Globulin in Rabbits. F. J. Dixon, S. C. Bukantz, G. J. Dammin and D. W. Talmage. *Federation Proc. 10*, 553–7(1951).

J 116 Fixed Charge Hypothesis (FCH) for Selective Ionic Accumulation. G. Ling. *Federation Proc. 12*, 88(1953).

J 117 Fixed Charge Hypothesis for Selective Ionic Accumulation. G. Ling. *Federation Proc. 13, No. 1*, 90(1954).

J 118 Fluid and Electrolyte Shifts in the Hydrated Adrenalectomized Rat. R. C. Frost and R. V. Talmage. *Endocrinology 49*, 606–12(1951).

J 119 Function of Transplantable Tumors of the Thyroid Gland in C_3H Mice. S. H. Wollman, H. P. Morris and C. D. Green. *J. Natl. Cancer Inst. 12*, 27–35(1951).

J 120 Growth Characteristics of Free C–1498 (Granulocytic Leukemia) Tumor Cells in the Peritoneal Fluid and the Blood of C–57 Mice. H. Goldie, C. H. Butler, M. M. Anderson, M. C. Maxwell, and P. F. Hahn. *Cancer Research 13*, 125–9(1953).

J 121 Half-Lives of Homologous Serum Albumins in Several Species. F. J. Dixon, P. H. Maurer, and M. P. Deichmiller. *Proc. Soc. Exptl. Biol. Med. 83*, 287–8(1953).

J 122 Hemin Synthesis in Polonium-Induced Anemia in the Rat. R. G. Thomas, K. I. Altman, J. N. Stannard, and K. Salomon. *Federation Proc. 12*, 143–4(1953).

J 123 Hemodynamic Effects of Serotonin (5-Hydroxytryptamine) Injected into the Pulmonary Artery of Anesthetized Dogs. D. M. MacCanon and S. M. Horvath. *Federation Proc. 13, No. 1*, 92–3(1954).

J 124 Histo-Physiological Effects of Cortisone on Rat Pituitary and Thyroid. N. S. Halmi and S. B. Barker. *Endocrinology 51*, 127–34(1952).

J 125 Hormone-Secreting Transplantable Neoplasms of the Pituitary Induced by I–131. J. Furth and W. T. Burnett, Jr. *Proc. Soc. Exptl. Biol. Med. 78*, 222–4(1951).

J 126 Hyperplasia and Cystic Dilatation of Extrahepatic Biliary Tracts in Mice Bearing Grafted Pituitary Growths. J. Furth, E. L. Gadsden, and A. C. Upton. *Cancer Research 12*, 739–43 (1952).

J 127 Hyperplasia and I–131 Uptake of Guinea Pig Thyroid During and After Chronic Propylthiouracil Treatment. S. A. D'Angelo, K. E. Paschkis, A. Cantarow, A. N. Siegel, and J. L. Rivero-Fontan. *Am. J. Physiol. 167*, 778(1951).

J 128 Inability of Growth Hormone to Prevent the Anemia which Follows Hypophysectomy. D. C. Van Dyke, M. E. Simpson, J. F. Garcia, and H. M. Evans. *Proc. Soc. Exptl. Biol. Med. 81*, 574–6(1952).

J 129 Incorporation of C–14 Amino Acids into Peptides by Normal and Diabetic Rat Tissues. M. E. Krahl. *Science 116*, 524(1952).

J 130 Incorporation of N–15 Into Protein and P–32 Into Nucleic Acid of the Thermally Injured Rat. J. S. Roth. *Am. J. Physiol. 176*, 471–4(1954).

J 131 Incorporation *in Vitro* of Carbon 14-Labeled Glycine in Individual Cells of Bone Marrow. A. Ficq, F. Gavosto and M. Errera. *Exptl. Cell Research 6*, 69–75(1954).

J 132 Incorporation *in Vivo* of Carbon 14-Labeled Glycine in Individual Cells on Bone Marrow. F. Gavosto, A. Ficq and M. Errera. *Exptl. Cell Research 6*, 238–9(1954).

J 133 Increased I–131 Collection by the Thyroid of the Rat in Acute Starvation. B. Catz, I. E. Rawi, and E. Geiger. *Am. J. Physiol. 172*, 291–4(1953).

J 134 Increased Phagocytic Activity of Reticuloendothelial System Following Foreign Red Cell Administration. E. R. Gabrieli. *Federation Proc. 13, No. 1*(1954).

J 135 Independence of Capillary Filtration and Tissue Clearance. C. Hyman, S. I. Rapaport, A. M. Saul, and M. E. Morton. *Am. J. Physiol. 168*, 674–9(1952).

J 136 Influence of Androgens on Synthetic Reactions in Ventral Prostate Tissue. S. J. Nyden and H. G. Williams-Ashman. *Am. J. Physiol. 172*, 588–600(1953).

J 137 The Influence of Cortisone on the Iodine Concentrating Mechanism of the Rat Thyroid. N. S. Halmi, E. M. Bogdanove, B. N. Spirtos, and H. J. Lipner. *Endocrinology 52*, 233–5(1953).

J 138 Influence of Different Dietary Protein Levels in Starvation on the Endocrine System of Male and Female Rats. J. Rivero-Fontan, K. E. Paschkis, E. West, and A. Cantarow. *Endocrinology 51*, 100–9(1952).

J 139 Influence of Drugs on Cat Papillary Muscle. K. S. Lee. *Federation Proc. 13, No. 1*, 378–9(1954).

J 140 Influence of Growth Hormone (GH) on the Excretion of Water and Electrolytes. A. A. Batts. *J. Clin. Endocrinol. and Metabolism 14*, 835(1954).

J 141 Inhibition of Active Sodium Transport in the Isolated Frog Skin. F. A. Fuhrman. *Am. J. Physiol. 171*, 266–78(1952).

J 142 Inhibition of Thyroid Function by Cortisone and ACTH in Hypophysectomized Rats. D. Epstein, A. Cantarow, G. Friedler, and K. E. Paschkis. *Proc. Soc. Exptl. Biol. Med. 82*, 50–3(1953).

J 143 The Initial Function of the Chick Thyroid Gland with the Use of Radioiodine (I–131). L. A. Hansborough and M. Khan. *J. Exptl. Zool. 116*, 447–53(1951).

J 144 Internal Water Exchange Rates Following Hemorrhage in Splenectomized Dogs. M. J. Fogelman, P. O'B, Montgomery, and C. A. Moyer. *Am. J. Physiol. 169*, 94–101(1952).

J 145 Intracellular Localization of I–131 Tagged Lactogenic Hormone in Mammary Gland of the Rabbit. W. F. Williams and C. W. Turner. *Proc. Soc. Exptl. Biol. Med. 85*, 524–5(1954).

J 146 Intravascular Life Span of the Duck Red Blood Cell as Determined by Radioactive Selenium. K. P. McConnell, O. W. Portman, and R. H. Rigdon. *Proc. Soc. Exptl. Biol. Med. 83*, 140–3(1953).

J 147 Investigations on the Mechanism of the Anti-Leukemic Action of Urethan Employing Carbon 14 Compounds. H. E. Skipper. *Texas Repts. Biol. Med. 8*, 543–50(1950).

J 148 Iodine Distribution in Chick Embryos. E. L. Hunt, and P. B. Huff. *J. Tenn. Acad. Sci. 27*, 204(1952).

J 149 I–131 Distribution in Normal and Hemithyroidectomized Rats Treated with Desoxycorticosterone Acetate. J. B. Boatman, C. Russ, J. H. Sunder, A. Konnerth, and C. Moses. *Endocrinology 50*, 134–9(1952).

J 150 I–131 Labeled L–Thyroxine. I. An Unidentified Excretion Product in Bile. A. Taurog, F. N. Briggs, and I. L. Chaikoff. *J. Biol. Chem. 191*, 29–34(1951).

J 151 Kinetics of Deuterium Oxide Exchange in Heart and Muscle. H. M. Cavert. *Federation Proc. 13, No. 1*, 24–5(1954).

J 152 Kinetics of D_2O Exchange in Isolated Perfused Rat Liver. A. M. Thompson and H. M. Cavert. *Federation Proc. 13, No. 1*, 152(1954).

J 153 Kinetics of Radiopotassium in the Circulation. W. G. Walker and W. S. Wilde. *Am. J. Physiol. 170*, 401–13(1952).

J 154 Kinetics of Release of Radioactive Substances from the Frog Sartorius. J. A. Johnson. *Federation Proc. 13, No. 1*, 75—6(1954).

J 155 Labeled Iron Stores in Study of Iron Liberated During Red Cell Destruction by Acetylphenylhydrazine. H. D. West, P. F. Hahn, W. F. Clark, and E. W. Chappelle. *Am. J. Physiol. 169*, 194–7(1952).

J 156 Labeled Red Cell and Plasma Protein Distribution Studies in Tourniquet Shocked Mice. R. C. Millican. *Federation Proc. 13, No. 1*, 388–9(1954).

J 157 Life Span of Naturally Labeled Platelets of Rats. T. T. Odell, Jr., F. N. Gamble and J. Furth. *Federation Proc. 12*, 398–9(1953).

J 158 Life Span of the Rat Red Blood Cell as Determined by Glycine-2-C–14. N. I. Berlin, L. M. Meyer, and M. Lazarus. *Am. J. Physiol. 165*, 565–7(1951).

J 159 Life Span of the Red Blood Cell in the Hypophysectomized Rat. N. I. Berlin, D. C. Van Dyke, and C. Lotz. *Proc. Soc. Exptl. Biol. Med. 82*, 287–8(1953).

J 160 Life Span of *In Vivo* Labeled Transfused Platelets. T. T. Odell, Jr., F. G. Tausche, and J. Furth. *Federation Proc. 13, No. 1*, 440(1954).

J 161 Localization of Radioactive L-Thyroxine in the Neurohypo-Physis. J. M. Jensen and D. E. Clark. *J. Lab. Clin. Med. 38*, 663–70(1951).

J 162 Localization of Radioactivity After Administration of Labeled Prolactin Preparations to the Female Rat. M. Sonenberg, W. L. Money, A. S. Keston, P. J. Fitzgerald, and J. T. Godwin. *Endocrinology 49*, 709–19(1951).

J 163 Localization of Radioactivity in the Lung and the Lymph Nodes. J. R. Bryant, H. F. Berg, and W. M. Christophersen. *J. Thoracic Surg. 26*, 221–31(1953)

J 164 Localization of Radioactivity in the Rat Prostate After the Administration of Labeled Prolactin Preparations. M. Sonenberg, W. L. Money, and R. W. Rawson. *J. Clin. Endocrinol. and Metabolism 14*, 832(1954).

J 165 Mean Red Cell Life of Rats Exposed to Reduced Barometric Pressure. G. R. Fryers and N. I. Berlin. *Am. J. Physiol. 171*, 465–70(1952).

J 166 Measurement of Cardiac Output in the Dog by the Simultaneous Injection of Dye and Radioactive Red Cells. H. C. Lawson, W. F. Cantrell, J. E. Shaw, D. L. Blackburn, and S. Adams. *Am. J. Physiol. 170*, 277–84(1952).

J 167 Measurements of Radioisotopes in Blood Applied to Determinations of the True Hematocrit. W. D. Armstrong, L. Singer, and B. R. Dunshee. *Proc. Soc. Exptl. Biol. Med. 80*, 639–42(1952).

J 168 The Mechanism of the Osmotic Adjustment of the Body Cells. A. Leaf, J. Y. Chatillon, O. Wrong, and E. P. Tuttle, Jr. *J. Clin. Invest. 33*, 952(1954).

J 169 A Method for Determining Blood Volume of the Rat Using Radioactive Phosphorus. P. O'B. Montgomery. *Proc. Soc. Exptl. Biol. Med. 77*, 445–7(1951).

J 170 Modification of Thyroid Activity in Absence of the Anterior Pituitary Gland. R. C. Goldberg, R. O. Greep, and L. B. Nay, Jr., *Proc. Soc Exptl. Biol. Med. 84*, 621–4(1953).

J 171 Myxedema in the Radio-Thyroidectomized Dog. R. C. Goldberg and I. L. Chaikoff. *Endocrinology 50*, 115–23(1952).

J 172 Nature of the Stimulating Action of Insulin on Lipogenesis from Acetate in Fasted Rat Liver. M. S. Masri, I. Lyon, and I. L. Chaikoff. *J. Biol. Chem. 197*, 621–4(1952).

J 173 Non-Thyroglobulin Iodine of the Thyroid Gland. W. Tong, A. Taurog and I. L. Chaikoff. *J. Biol. Chem. 191*, 665–75(1951).

J 174 Non-Thyroglobulin Iodine of the Thyroid Gland. II. Inorganic Iodide. A. Taurog, W. Tong and I. L. Chaikoff. *J. Biol. Chem. 191*, 677–82(1951).

J 175 Nutritional Factors in Fatty Acid Synthesis by Tissue Slices *in Vitro*. G. Medes, A. Thomas, and S. Weinhouse. *J. Biol. Chem. 197*, 181–91 (1952).

J 176 Observations with Radioactive Hydrogen (H–3) in Experimental Atherosclerosis. M. W. Biggs and D. Kritchevsky. *Circulation 4*, 34–42(1951).

J 177 Oral Administration of Vitamin B–12 Containing Cobalt 60 to Rats. B. F. Chow, C. Rosenblum, R. H. Silber, D. T. Woodbury, R. Yamamoto, and C. A. Lang. *Proc. Soc. Exptl. Biol. Med. 76*, 393–5(1951).

J 178 Organ Erythrocyte and Plasma Volumes of Tumor-bearing Mice. The Oligemia of Neoplasms. R. H. Storey, L. Wish and J. Furth. *Cancer Research 11*, 943–7(1951).

J 179 The Origin of Aortic Phospholipid in Rabbit Atheromatosis. D. B. Zilversmit, M. L. Shore and R. F. Ackerman. *Circulation 9*, 581–5(1954).

J 180 Over-All Tracer Studies with C–14-Labeled Nitrogen Mustard in Normal and Leukemic

Mice. H. E. Skipper, L. L. Bennett, Jr. and W. H. Langham. *Cancer 4*, 1025–7(1951).

J 181 Parametrial Injection of Collodial Gold (Au–198) in the Monkey. J. F. Nolan, E. G. Jones and R. H. Neil. *Am. J. Roentgenol. Radium Therapy Nuclear Med. 69*, 805–12(1953).

J 182 Pathologic Physiology of Mammalian Blood Platelet Utilizing P–32 Tagged Rabbit Platelets. J. F. Mueller. *Proc. Soc. Exptl. Biol. Med. 83*, 557–61(1953).

J 183 Penetration of Intact Frog Nerve by Ions and Sucrose. A. M. Shanes and M. D. Berman. *Federation Proc. 12*, 130–1(1953).

J 184 Penetration of the Intact Frog Nerve Trunk by Potassium, Sodium, Chloride and Sucrose. A. M. Shanes and M. D. Berman. *J. Cellular Comp. Physiol. 41*, 419–50(1953).

J 185 The Penetration of Radioactive Phosphate into Marine Eggs. S. C. Brooks and E. L. Chambers. *Biol. Bull. 106*, 279–96(1954).

J 186 Percutaneous Absorption of Tritium Oxide. C. W. DeLong, R. C. Thompson, and H. A. Kornberg. *Am. J. Roentgenol. Radium Therapy Nuclear Med. 71*, 1038–45(1954).

J 187 Permeability of the Bladder to Water Studied by Means of Isotopes. J. A. Johnson, H. M. Cavert, N. Lifson and M. B. Visscher. *Am. J. Physiol. 165*, 87–92(1951).

J 188 The Permeability of Nucleated and Enucleated Fragments of Amoeba Proteus to D_2O. D M. Prescott and D. Mazia. *Exptl. Cell Research 6*, 117–26(1954).

J 189 Permeability and Structure of Inert Porous Membranes. E. M. Renkin. *Federation Proc. 13, No. 1*, 116–7(1954).

J 190 The Permissive Role of Adrenal Steroids in Protein Anabolism. N. D. Lee. *J. Clin. Endocrinol. and Metabolism 14*, 824(1954).

J 191 Phosphate Turnover Rates in the Red Blood Cells of Normal and Cancerous Mice. A. F. Reid, E. B. Ryan, S. E. Jones, and J. A. Sorenson. *Cancer 4*, 1028–9(1951).

J 192 Physiological Disposition of Radiophosphorus Labeled Leucocytes. W. V. C. Leahy, T. F. McNickle, and P. K. Smith. *Federation Proc. 13, No. 1*, 378(1954).

J 193 Possible Interrelationship of Digitoxin and Calcium Studied With Radiocalcium on the Isolated Guinea Pig Heart. S. C. Harvey and E. E. Daniel. *J. Pharmacol. Exptl. Therap. 106*, 394 (1952).

J 194 Potassium Exchange in Red Blood Cells of the Duck. D. C. Tosteson and J. S. Robertson. *Federation Proc. 12*, 145(1953).

J 195 Potassium Uptake by the Dog Erythrocyte. H. S. Frazier, A. Sicular, and A. K. Solomon. *J. Gen. Physiol. 37*, 631–41(1954).

J 196 Potency and Duration of Action of Triiodothyronine and Thyroxine in Rats and Mice. B. G. Anderson. *Endocrinology 54*, 659–65(1954).

J 197 Prevention of Neonatal Anemia in the Rat by a Pituitary Erythropoietic Factor. A. N. Contopoulos and J. H. Lawrence. *Federation Proc. 13, No. 1*, 29(1954).

J 198 A Procedure for Functional Hepatectomy of the Unanesthetized Fowl. R. E. Ranney, I. L. Chaikoff, and E. L. Dobson. *Am. J. Physiol. 165*, 588–95(1951).

J 199 Proportion of "Extra Plasma" in the Eviscerate Dog. M. I. Gregersen, L. J. Cizek, and T. H. Allen. *Am. J. Physiol. 175*, 224–6(1953).

J 200 Pulmonary Distribution of Radioactive Particles in Rabbits After Inhalation and Intravenous Injection. G. V. Taplin, J. S. Grevior, M. L. Gautschi, C. Finnegan, and A. Dunn. *Ann. Allergy 9*, 703–13, 726(1951).

J 201 Quantitative Effects of Thyrotrophic Hormone on I–131 Accumulation in Thyroid and Plasma Proteins of Hypophysectomized Rats. B. N. Ghosh, D. M. Woodbury, and G. Sayers. *Endocrinology 48*, 631–42(1951).

J 202 Quantitative Relationship Between Growth of Pituitary Tumors Secreting TSH and Thyroid Function. TSH Bioassay in Mice. J. Furth, W. T. Burnett, Jr., and E. L. Gadsden. *Federation Proc. 12*, 387–8(1953).

J 203 Quantitative TSH Assays of Normal Pituitaries and Pituitary Tumors of Mice. W. T. Burnett, Jr., B. Anderson, E. L. Gadsden, and J. Furth. *Federation Proc. 13, No. 1*, 21(1954).

J 204 A Radioactive Tracer Study of Phosphorylated Choline as a Possible Neuro-Humoral Agent. J. G. Adams and T. R. Sherrod. *J. Pharmacol. Exptl. Therap. 103*, 337(1951).

J 205 Radioiodide-Concentrating Ability of Transplantable Tumors of the Thyroid Gland in C_3H Mice. S. H. Wollman, R. O. Scow and H. P. Morris. *J. Natl. Cancer Inst. 14*, 593–605(1953).

J 206 Radioiodine Concentrations and Clearances in Rats Receiving Iodine, Thyroid and Propylthiouracil. J. B. Boatman and C. Moses. *Endocrinology 48*, 413–22(1951).

J 207 Radiomanganese Studies on the Mouse, Rat and Pancreatic Fistula Dog. W. T. Burnett, Jr., R. R. Bigelow, A. W Kimball, and C. W. Sheppard. *Am. J. Physiol. 168*, 620–5(1952).

J 208 Radiosulfate Space of Muscle. M. Walser, D. W. Seldin and A. Grollman. *Am. J. Physiol. 176*, 322–4(1954).

J 209 Rapid Serial Recording of Concentrations in the Blood Circulation and in Perfusion Systems: The Effluogram. J. M. O'Brien and W. S. Wilde. *Science 116*, 193–4(1952).

J 210 Rate of Absorption of Radioactive Calcium and Strontium from the Intestine. L. F. Wolterink and L. L. Cole. *Federation Proc. 13, No. 1*, 166–7(1954).

J 211 Rate of Potassium Exchange in the Rat Erythrocyte. J. M. Weller and I. M. Taylor. *Proc. Soc. Exptl. Biol. Med. 78*, 780–2(1951).

342334—55——11

J 212 Rate of Uptake of Fluid from Alveolus Measured with Radioisotopes: Comparison of Rapid Rate for Water with Slower Rate for Saline. G. R. Meneely, G. Qualls, and H. J. Curtis. *Am. J. Physiol. 167*, 809(1951).

J 213 Rate of Uptake of Fluid From Lung Measured with Radioisotopes; Comparison of Rapid Rate for Water With Slower Rate for Saline. G. Qualls, H. J. Curtis, and G. R. Meneely. *Am. J. Physiol. 172*, 221–5(1953).

K 7 Calcium Metabolism in Dairy Cows as Studied with Ca–45. W. J. Visek, R. A. Monroe, E. W. Swanson, and C. L. Comar. *J. Dairy Sci. 36*, 373–84(1953).

K 8 Calcium Metabolism in Lactating Goats as Studied with Ca–45 Following Oral and Intravenous Administration. W. J. Visek, L. L. Barnes, and J. K. Loosli. *J. Dairy Sci. 35*, 783–792(1952).

K 9 Carbonate and Fatty Acids As Precursors of Amino Acids in Casein. A. L. Black, M. Kleiber, and A. H. Smith. *J. Biol. Chem. 197*, 365–70(1952).

K 10 Carbonate as Precursor of Milk Constituents in the Intact Dairy Cow. M. Kleiber, A. H. Smith, and A. L. Black. *J. Biol. Chem. 195*, 707–14(1952).

K 11 Comparison of Two Isotope Methods for Determination of Endogenous Fecal Calcium. C. L. Comar, A. R. Monroe, W. J. Visek, and S. L. Hansard. *J. Nutrition 50*, 459–68(1953).

K 12 Conversion of Glucose to Galactose in the Mammary Gland. J. M. Barry. *Nature 169*, 878–9(1952).

K 13 Copper, Molybdenum and Zinc Interrelationships in Rats and Swine. R. Kulwich, S. L. Hansard, C. L. Comar, and G. K. Davis. *Proc. Soc. Exptl. Biol. Med. 84*, 487–91(1953).

K 14 Determination of Endogenous Fecal Calcium in Cattle by a Simple Isotope Dilution Method. W. J. Visek, R. A. Monroe, E. W. Swanson, and C. L. Comar. *J. Nutrition 50*, 23–34(1953).

K 15 Distribution of Intravenously Injected Radioactive Phosphorus (P–32) Among Swine Tissues. A. H. Smith, M. Kleiber, A. L. Black, M. Edick, R. R. Robinson, and H. Heitman, Jr. *J. Animal Sci. 10*, 893–901(1951).

K 16 Distribution of Radioactivity in the Egg after Feeding Sodium Acetate-1-C–14. D. Kritchevsky, C. R. Grau, B. M. Tolbert, and B. J. Krueckel. *Proc. Soc. Exptl. Biol. Med. 76*, 741–3(1951).

K 17 Distribution in the Young Dairy Calf of Orally Administered P–32. R. H. Olson, R. S. Allen and N. L. Jacobson. *Iowa State Coll. J. Sci. 28*, 467–75(1954).

K 18 Effect of Cobalt in Diet of the Chick. R. L. Davis, G. M. Briggs, and H. J. Sloan. *Proc. Soc. Exptl. Biol. Med. 82*, 175–7(1953).

K 19 The Effect of Methionine on the Tissue Distribution of Radioactive Cobalt Injected Intravenously into Dairy Calves. R. E. Ely, K. M. Dunn, C. F. Huffman, C. L. Comar, and G. K. Davis. *J. Animal Sci. 12*, 394–401(1953).

K 20 Effect of Parathyroid Extract Administration in Sheep. W. E. Lotz, R. V. Talmadge, and C. L. Comar. *Proc. Soc. Exptl. Biol. Med. 85*, 292–5(1954).

K 21 The Effect of Phenothiazine N. F. (Green) and Phenothiazine N. F. Purified on the Uptake of I–131 by the Thyroid of the Burro. A Preliminary Report. R. V. Talmage, B. F. Trum, R. A. Monroe, and J. H. Rust. *J. Am. Vet-Med. Assoc. 123*, 328–9(1953).

K 22 The Effects of Age upon Calcium Utilization and Maintenance Requirements in the Bovine. S. L. Hansard, C. L. Comar, and M. P. Plumlee. *J. Animal Sci. 13*, 25–36(1954).

K 23 Effects of Age Upon the Physiological Behavior of Calcium in Cattle. S. L. Hansard, C. L. Comar, and G. K. Davis. *Am. J. Physiol. 177*, 383–9(1954).

K 24 Effects of Fluorine on Calcium Metabolism and Bone Growth in Pigs. C. L. Comar, W. J. Visek, W. E. Lotz, and J. H. Rust. *Am. J. Anat. 92*, 361–89(1953).

K 25 The Excretion of Injected P–32 into the Gastrointestinal Tract of the Young Calf. G. P. Lofgreen, M. Kleiber, and A. H. Smith. *J. Nutrition 47*, 561–9(1952).

K 26 Excretion of P–32 and Ca–45 into the Various Alimentary Segments of Hens. R. L. Shirley, J. C. Driggers, J. T. McCall, and G. K. Davis. *Poultry Sci. 31*, 316–20(1952).

K 27 Fermentation in the Rumen of the Sheep. 3. Intermediate Stages in the Fermentation of Wheaten Hay *in Vitro* by Micro-Organisms from the Rumen. F. V. Gray and A. F. Pilgrim. *J. Exptl. Biol. 29*, 54–6(1952).

K 28 The Hen Is a Better Chemist Than We Thought. H. R. Bird. *Feed Age 2*, 26–8(1952).

K 29 Incorporation of P–32 into Tissue Phosphorus Fractions. L. M. Julian and L. J. Cole. *Am. J. Vet. Research 14*, 137–40(1953).

K 30 The Influence of Certain Water Soluble Vitamins on Phosphorus (P–32) in Bone Mineralization. H. Patrick and G. K. Schweitzer. *Poultry Sci. 31*, 750–1(1952).

K 31 Integration of Concurrent Chemical and Radioisotope Balance Trials for Interpretation of Calcium Metabolism Studies. S. L. Hansard, C. L. Comar, M. P. Plumlee, and C. S. Hobbs. *J. Dairy Sci. 34*, 508(1951).

K 32 The Metabolic Fecal Nitrogen Excretion of the Young Calf and the True Digestibility of Casein. G. P. Lofgreen and M. Kleiber. *J. Nutrition 49*, 183–90(1953).

K 33 The Metabolic Fecal Phosphorus Excretion of the Young Calf. G. P. Lofgreen, M. Kleiber, and J. R. Luick. *J. Nutrition 47*, 571–81(1952).

K 34 Metabolism of Radioiodine by the Near-Term Bovine Fetus. A. Gorbman, S. Lissitzky, O. Michel, R. Michel and J. Roche. *Endocrinology 51*, 546–61(1952).

K 35 Metabolism of Sodium Sulfate Labeled with Radioactive Sulfur in the Sheep. R. Kulwich, P. B. Pearson, and A. M. Lankenau. *Federation Proc. 12*, 420(1953).

K 36 Metabolism of Vitamin B–12. I. The Comparative Excretion and Distribution in the

Chick of Co–60 and Vitamin B–12 Labeled with Co–60. R. A. Monroe, H. Patrick, C. L. Comar, and O. E. Goff. *Poultry Sci. 31*, 79–84 (1952).

K 37 Metabolisme du Radioiode par le Foetus de Boeuf au Voisinage du Terme. A. Gorbman, S. Lissitzky, O. Michel, R. Michel, and J. Roche. *Compt. Rend. Soc. Biol. 165*, 1642–5(1951).

K 38 Mobility of Skeletal Phosphorus in a Mature Dairy Cow as Determined with Radioactive Phosphorus. A. L. Black, M. Kleiber, A. H. Smith, and N. P. Ralston. *Proc. Soc. Exptl. Biol. 82*, 248–52(1953).

K 39 The Nature and Origin of the Volatile Fatty Acids in the Rumen of the Sheep. F. V. Gray, A. F. Pilgrim, H. J. Rodda, and R. A. Weller. *J. Exptl. Biol. 29*, 57–65(1952).

K 40 Placental Transfer and Deposition of Labeled Calcium in the Developing Bovine Fetus. M. P. Plumlee, S. L. Hansard, C. L. Comar, and W. M. Beeson. *Am. J. Physoil 171*, 678–86(1952).

K 41 Propionate As A Precursor of Milk Constituents in the Intact Dairy Cow. M. Kleiber, A. L. Black, M. A. Brown, and B. M. Tolbert. *J. Biol. Chem. 203*, 339–46(1953).

K 42 Radioactive Eggs. II. Distribution of Radioactivity in the Yolks. D. Kritchevsky and M. R. Kirk. *Proc. Soc. Exptl. Biol. Med. 78*, 200–2(1951).

K 43 Radiophosphorus (P–32) as Tracer for Measuring Endogenous Phosphorus in Cow's Feces. M. Kleiber, A. H. Smith, N. P. Ralston, and A. L. Black. *J. Nutrition 45*, 253–63(1951).

K 44 A Respiration Apparatus for C–14 Studies with Cows. M. Kleiber and M. Edick. *J. Animal Sic. 11*, 61–71(1952).

K 45 Retention of Co–60 Labeled Vitamin B–12 in Chickens. J. T. Jackson, L. J. Machlin, E. A. Brandenburger, C. A. Denton, and H. R. Bird. *Federation Proc. 12*, 418(1953).

K 46 Retention of Co–60 Labeled Vitamin B–12 in Chickens. J. T. Jackson, L. J. Machlin, E. A. Brandenburger, W. L. Kellogg, and C. A. Denton. *Proc. Soc. Exptl. Biol. Med. 83*, 221–2(1953).

K 47 Role of Copper in Erythropoiesis. M. E. Lahey, C. J. Gubler, M. S. Chase, G. E. Cartwright, and M. M. Wintrobe. *Am. J. Physiol. 167*, 804–5(1951).

K 48 Studies on the Developing Chicken Embryo with the Use of Radioactive Phosphorus. I. Uptake of P–32 by the Body and Selected Tissues of the Chicken Embryo Between the Ninth and Nineteenth Day of Incubation. L. M. Julian. *Am. J. Vet. Research 14*, 129–36(1953).

K 49 Studies on Egg Shells. IV. The Site of Deposition of Radioactive Calcium and Phosphorus. C. Tyler. *J. Sci. Food Agr. 5*, 335–39(1954).

K 50 A Survey of the Effect of Phenothiazine on Uptake of Radioiodine by the Thyroids of Farm Animals. R. V. Talmage, R. A. Monroe, and C. L. Comar. *J. Animal Sci. 13*, 480–2(1954).

K 51 Synthesis of Sulfur Amino Acids from Inorganic Sulfate by Ruminants. II. Synthesis of Cystine and Methionine from Sodium Sulfate by the Goat and by the Microorganisms of the Rumen of the Ewe. R. J. Block, J. A. Stekol, and J. K. Loosli. *Arch. Biochem. and Biophys. 33*, 353–63(1951).

K 52 Tagged Atoms in Nutrition Research. M. Kleiber. *Cooperative Poultryman 17*, 3–7(1952).

K 53 Trace Elements in Cattle Nutrition and Some Practical Applications. G. K. Davis. *Southwestern Veterinarian 5*, 133–7, Winter(1952).

K 54 Uptake of Radioactive Phosphorus by Bull Spermatozoa. D. W. Bishop and I. Weinstock. *Anat. Record 101*, 81(1948).

K 55 Uptake of S–35 Labeled Methionine by the Feathers and Some Tissues of the Growing Chicken. L. J. Machlin, J. T. Jackson, and P. B. Pearson. *Federation Proc. 12*, 422(1953).

K 56 The Utilization of Carboxyl Labelled C–14 Acetate by the Perfused Bovine Mammary Gland. L. S. Mix, W. E. Peterson, and H. E. Struss. *J. Dairy Sci. 35*, 504(1952).

K 57 The Utilization of Sulfate Sulfur by the Laying Hen and its Incorporation into Cystine. L. J. Machlin, P. B. Pearson, C. A. Denton, and H. R. Bird. *J. Biol. Chem. 205*, 213–9(1953).

K 58 Venous Catheterization of Dairy Cows. N. P. Ralston, M. Kleiber, and A. H. Smith. *J. Dairy Sci. 32*, 889–93(1949).

K 59 *In Vivo* Determination of Thyroid I–131 of Dairy Cows. C. Blincoe. *Nucleonics 11, No. 11*, 70–1(1953).

K 60 Absorption and Retention of Radioactive Phosphorus by Chicks. H. Patrick and G. K. Schweitzer. *Poultry Sci. 31*, 888–92(1952).

K 61 Absorption and Tissue Distribution of Radiozinc in Steers Fed High Zinc Rations. J. P. Feaster, S. L. Hansard, J. T. McCall, F. H. Skipper, and G. K. Davis. *J. Animal Sci. 13*, 781–8(1954).

K 62 Absorption and Utilization of Radioactive Charcoal by Swine. T. Robert, M. P. Plumlee, T. W. Perry, and W. M. Beeson. *J. Animal Sci. 12*, 610(1953).

K 63 An Accidental Finding Raises a Question of Phenothiazine. B. F. Trum. *Blood Horse 44*, 494(1953).

K 64 The Availability of the Phosphorus in Alfalfa Hay. G. P. Lofgreen and M. Klieber. *J. Animal Sci. 12*, 366–71(1953).

K 65 Beta Ray Therapy in Ocular Diseases of Animals. E. J. Catcott. *J. Am. Vet. Med. Assoc. 122*, 912(1953).

K 66 Biosynthesis of Amino Acids in Lactating Dairy Cows from $C^{14}O_2$. A. L. Black. *Federation Proc. 11*, 437(1952).

K 67 Biosynthesis of Milk Constituents by the Intact Dairy Cow Studied with C–14 as Tracer. M. Klieber. *Ro[illegible]ic Energy in Agr. Research Symposia, O[illegible]* 253–94(1953).

K 68 Blood Volume in Swine as Determined by Radiophosphorus. J. D. Burke, R. L. Shirley, and G. K. Davis. *Anat. Record 3*, 3(1951).

K 69 C14 Studies on Biosynthesis of Milk Constituents. M. Klieber, A. H. Smith, and B. Tolbert. *18th Intern. Physiol. Congr.*(1950).

K 70 Cobalt Metabolism Studies with Sheep. H. A. Keener, R. R. Baldwin, and G. P. Percival. *J. Animal Sci. 10, No. 2*(1951).

K 71 Deposition and Alimentary Excretion of P-32 in Steers on High Molybdenum and Copper Diets. R. L. Shirley, R. D. Owens, and G. K. Davis. *J. Animal Sci. 9*, 4(1950).

K 72 Distribution of Intravenously Injected Radioactive Phosphorus (P-32) among Sheep Tissues. A. H. Smith, M. Kleiber, A. L. Black, J. R. Luick, R. F. Larson, and W. C. Weir. *J. Animal Sci. 11*, 638–45(1952).

K 73 Distribution in the Young Dairy Calf of Orally Administered P-32. R. H. Olson, R. S. Allen, and N. L. Jacobson. *Iowa State Coll. J. Sci. 28*, 467–75(1954).

K 74 Effect of Age upon Physiological Behavior of Calcium in Cattle. S. L. Hansard, C. L. Comar, and G. K. Davis. *J. Animal Sci. 13*, 25–36 (1954).

K 75 Effects of Massive Doses of P-32 and Ca-45 on Laying Hens. R. L. Shirley, J. C. Driggers, J. P. Feaster, J. T. McCall, and G. K. Davis. *Poultry Sci. 33*, 612–5(1954).

K 76 Excretion and Retention of P 32 and Ca 45 by Laying Hens. R. L. Shirley, J. C. Driggers, J. McCall, G. K. Davis, and N. R. Mehrhof. *Poultry Sci. 30*, 730–4(1951).

K 77 Isotopes as Metabolic Tracers. M. Kleiber. *Calif. Veterinarian, March–April*, 21(1951).

K 78 Metabolic Fate of Sulphur 35 in the Lactating Cow When Fed $S^{35}O_2$ Preserved Silage. H. A. Keener, A. E. Terri, R. V. Harrington, and R. R. Baldwin. *J. Dairy Sci. 36*, 1205(1953).

K 79 Metabolic Power of Animals Measured with Isotopic Tracers. M. Kleiber. *19th Intern. Physiol. Congr.*, 520(1953).

K 80 Metabolism of Bovine Semen. I. Uptake of Glucose-C-14 by Bovine Spermatozoa. R. J. Flipse. *J. Dairy Sci. 37*, 425–30(1954).

K 81 Methionine Metabolism in the Laying Hen. 1. Effect of Change in the Dietary Protein or Tryptophan Level on Deposition of S-35 in the Egg. L. J. Machlin. *Poultry Sci. 33*, 201–5(1954).

K 82 Mixing Rate of Phosphate between Plasma and Interstitial Body Fluid of Cows. M. Kleiber. A. H. Smith, and N. P. Ralston. *J. Gen. Physiol. 33*, 525–35(1950).

K 83 Movement of Calcium in Chicks. H. Patrick and G. K. Schweitzer. *Poultry Sci. 32*, 920 (1953).

K 84 Placental Transfer of Mo-99 and Ca-45 in Swine. R. L. Shirley, M. A. Jeter, J. P. Feaster, J. T. McCall, J. C. Outler, and G. K. Davis. *J. Nutrition 54*, 59–64(1954).

K 85 Radioisotopes and Animal Nutrition. C. L. Comar. *Feed Age 4*, 30–3(1954).

K 86 Radioisotopes in Poultry Research. C. L. Comar, O. E. Goff, R. A. Monroe, and H. Patrick. *Proc. Am. Vet. Med. Assoc.* 266–73 (1950).

K 87 The Rate of Decomposition and Turnover of P-32 and Ca-45 in the Tissues of the Laying Hen. R. L. Shirley, J. C. Driggers, J. T. McCall, M. Mirenburg, and G. K. Davis. *Poultry Sci. 33*, 932(1954).

K 88 Some Clinical Aspects and Therapy of the Acute Radiation Syndrome of Veterinary Clinicians. J. H. Rust. *J. Am. Vet. Med. Assoc. 119*, 44–5(1951).

K 89 A Study of Corneal Healing in the Dog. E. J. Catcott. *Am. J. Vet. Research 15*, 55(1954).

K 90 Tagged Atoms in Nutrition Research. M. Kleiber. *Proc. 4th Calif. Animal Ind. Conf.*, 35–42(1951).

K 91 Tracer Studies on Carbonate Pool of Dairy Cows. M. Kleiber. *Federation Proc. 11*, 83 (1952).

K 92 Uptake of S-35 in the Feathers, Gizzard Lining, Liver and Muscle of Young Chickens after Injection of Radioactive Methionine and Sulfate. L. J. Machlin, J. T. Jackson, A. H. Lankenau, and P. B. Pearson. *Poultry Sci. 33*, 234–8(1954)

K 93 The Use of Radioisotopes in Cattle Nutrition Research. G. K. Davis. *Atlantic Coast Line Agr. and Livestock Topics 2*, 6(1950).

K 94 Absorptie en uitscheiding van oraal toegediend radioactief methyl-thiouracil bij hanen. J. J. Bezem, J. Lever, en F. Brunnekreeft. *Landbouwkund. Tijdschr. 61, No. 12*, 905–12(1949).

K 95 Beta-Hydroxybutyric Acid Metabolism of the Mammary Gland. S. Kumar and S. Lakshmanan. *J. Dairy Sci. 37*, 669(1954).

K [illegible]he Distribution of Orally Administered Radio-[illegible]ive Methyl-Thiouracil in Cockerels. J. J. [illegible]ezem, F. Brunnekreeft, M. J. E. Ernsting, J. Lever, and W. T. Nauta. *Acta Endocrinol. 3*, 151–55(1949).

K 97 Hyperventilation and Other Factors Affecting Rate of Blood Flow in Perfusions of Excised Bovine Mammary Glands. S. Kumar, S. Lakshmanan, E. A. Corbin, and J. C. Shaw. *Am. J. Physiol. 173*, 82(1953).

K 98 Perfusion Technique in Tracer Studies of Milk Secretion. S. Lakshmanan, S. Kumar, D. R. Jacobson, and J. C. Shaw. *Maryland Agr. Expt. Sta. Misc. Publ. No. 168*, (1953): *J. Dairy Sci. 36*, 589(1953).

K 99 Precursor—Product Relationship for Milk Formation in the Intact Dairy Cow. M. Kleiber. *Rev. can. biol. 13*, 333–48(1954).

K 100 Specific Activity-Time Relationship in Tracer Studies of Milk Secretion. S. Lakshmanan and S. Kumar. *J. Dairy Sci. 37*, 670(1954).

Bacteriology

L 1 Accumulation of 2-Heptadecyl-2-Imidazoline, Silver, and Cerium by Fungus Spores in Mixed and Consecutive Treatments. L. P. Miller, S. E. A. McCallan, and R. M. Weed. *Contribs. Boyce Thompson Inst. 17*, 283–98(1953).

L 32 Factors Associated with the Fungitoxicity of Ferbam and Nabam. R. M. Weed, S. E. A. McCallan, and L. P. Miller. *Contribs. Boyce Thompson Inst. 17*, 299–315(1953).

L 33 Fermentation of L-Arabinose-1-C-14 by *Lactobacillus pentoaceticus*. D. A. Rappoport, H. A. Barker and W. Z. Hassid. *Arch. Biochem. and Biophys. 31*, 326(1951).

L 34 Fixation of C-14O_2 in Amino Acids by *Brucella abortus*. A. G. Marr and J. B. Wilson. *Arch Biochem. and Biophys. 34*, 442–8(1951).

L 35 The Fixation of Carbon Dioxide by Growing and Non-Growing Yeast. I. E. Liener and D. L. Buchanan. *J. Bacteriol. 61*, 527–34(1951).

L 36 Fixation of C-14O_2 into Nucleic Acid Constituents by *Brucella abortus*. J. W. Newton, A. G. Marr, and J. B. Wilson. *J. Bacteriol. 67*, 233–6(1954).

L 37 Fixation of Molecular Tritium by Bacterial Suspensions. G. N. Smith and R. O. Marshall. *Arch. Biochem. and Biophys. 39*, 395–405(1952).

L 38 Formation of D-Methionine from L- by *Streptococcus faecalis*. G. D. Shockman and G. Toennies. *Arch. Biochem. and Biophys. 50*, 9–17(1954).

L 39 Formation of Propionic Acid from Lactic Acid by *Clostridium propionicum* and by *Propionibacterium arabinosum*. F. W. Leaver. *Federation Proc. 12*, 471(1953).

L 40 Formation of Propionyl-, Butyrl-, and other Acylglycines by Enzymes of *Clostridium kluyveri*. J. Katz, I. Lieberman and H. A. Barker. *J. Biol. Chem. 200*, 431–41(1953).

L 41 Glucose Dissimilation by Rhizopus. M. Gibbs and R. Gastel. *Arch. Biochem. and Biophys. 43*, 33–8(1953).

L 42 Glucose and Gluconic Acid Oxidation of *Pseudomonas saccharophila*. N. Entner and M. Doudoroff. *J. Biol. Chem. 196*, 853–62(1952).

L 43 Growth and Mutation of Bacteria During Continuous Irradiation. B. A. Rubin. *J. Bacteriol. 67*, 361–8(1954).

L 44 The Heterolactic Fermentation. II. Position of C-14 in the Products of Glucose Dissimilation by *Leuconostoc mesenteroides*. I. C. Gunsalus and M. Gibbs. *J. Biol. Chem. 194*, 871–5(1952).

L 45 Hydrogenase and Hydrogen Metabolism in *Micrococcus aerogenese*. W. Curtis and E. J. Ordal. *J. Bacteriol. 68*, 351–61(1954).

L 46 Intracellular Conjugation and Detoxification of Palmitic Acid by *Mycobacterium tuberculosis*. J. L. Karlsson. *J. Bacteriol. 67*, 456–9(1954).

L 47 On the Interconversion of Purines by *Lactobacillus casei*. M. E. Balis, G. B. Brown, G. B. Elion, G. H. Hitchings, and H. Vanderwerff. *J. Biol. Chem. 188*, 217–9(1951).

L 48 Isoleucine and Valine Metabolism of *Escherichia coli*. I. Growth Studies on Amino Acid-Deficient Mutants. H. E. Umbarger and J. H. Mueller. *J. Biol. Chem. 189*, 277–85(1951).

L 49 Ioleucine and Valine Metabolism of *Escherichia coli*. II. The Accumulation of Keto Acids. H. E. Umbarger and B. Magasanik. *J. Biol. Chem. 189*, 287–92(1951).

L 50 Isoleucine and Valine Metabolism in *Escherichia coli*. V. α-Ketoisovaleric Acid Accumulation. E. A. Adelberg and H. E. Umbarger. *J. Biol. Chem. 205*, 475–82(1953).

L 51 Lactic Acid Fermentation of Xylose by *Escherichia coli*. L. A. Nutting and S. F. Carson. *J. Bacteriol. 63*, 575–80(1952).

L 52 Lactic Acid Fermentation of Xylose by *Escherichia coli*. L. A. Nutting and S. F. Carson. *J. Bacteriol. 63*, 581–9(1952).

L 53 Mechanism of Cell Wall Penetration by Viruses. I. An Increase in Host Cell Permeability Induced by Bacteriophage Infection. T. T. Puck and H. H. Lee. *J. Exptl. Med. 99*, 481–94 (1954).

L 54 The Mechanism of Virus Attachment to Host Cells. IV. Physicochemical Studies on Virus and Cell Surface Groups. T. T. Puck and L. J. Tolmach. *Arch. Biochem. and Biophys. 51*, 229–45(1954).

L 55 Mechanism of Ethanol Formation by *Pseudomonas lindneri*. R. D. DeMoss and M. Gibbs. *Bact. Proc.*, 146(1952).

L 56 Metabolism of Hydrogen Isotopes by Rapidly Growing *Chlorella pyrenoidosa* Cells. D. Weinberger and J. W. Porter. *Arch. Biochem. and Biophys. 50*, 160–8(1954).

L 57 The Metabolism of Purines and Pyrimidines by Growing Yeast. M. Edmonds, A. M. Delluva and D. W. Wilson. *J. Biol. Chem. 197*, 251–9(1952).

L 58 Metabolism of Ribonucleic Acid in Normal and Bacteriophage-Infected *Escherichia coli*. L. A. Manson. *Federation Proc. 12*, 242–3(1953).

L 59 The Metabolism of Species of *Streptomyces*. IV. The Effect of Substrate on the Endogenous Respiration of *Streptomyces coelicolor*. V. W. Cochrane and M. Gibbs. *J. Bacteriol. 61*, 305–7(1951).

L 60 The Metabolism of Species of *Streptomyces*. VI. Tricarboxylic Acid Cycle Reactions in *Streptomyces coelicolor*. V. W. Cochrane and H. D. Peck, Jr. *J. Bacteriol. 65*, 37–44(1953).

L 61 The Metabolism of Species of *Streptomyces*. VII. The Hexosemonophosphate Shunt and Associated Reactions. V. W. Cochrane, H. D. Peck, Jr., and A. Harrison. *J. Bacteriol. 66*, 17–23(1953).

L 62 Methionine Metabolism of *Streptococcus faecalis*. G. D. Shockman and G. Toennies. *Federation Proc. 12*, 267(1953).

L 63 Mode of Action of Isoniazid. W. R. Barclay, R. H. Ebert and D. Koch-Weser. *Am. Rev. Tuberc. 67*, 490–6(1953).

L 64 The Mortality of Bacteriophage Containing Assimilated Radioactive Phosphorus. A. D. Hershey, M. D. Kamen, J. W. Kennedy, and H. Gest. *J. Gen. Physiol. 34*, 305–19(1951).

L 65 Nonequivalence of Methyl and Carboxyl Groups in Photometabolism of Acetate by *Rhodospirillum rubrum*. M. D. Kamen, S. J. Ajl, S. L. Ranson, and J. M. Siegel. *Science 113*, 302 (1951).

L 66 Observations on the Mechanism of Fermentation of 1–C14–D–Xylose by *Lactobacillus pentosus*. J. O. Lampen, H. Gest, and J. C. Sowden. *J. Bacteriol. 61*, 97–8(1951).

L 67 The Origin of Phosphorus in *Escherichia coli* Bacteriophages. L. W. Labaw. *J. Bacteriol. 62*, 169–73(1951).

L 68 The Oxidation of Acetate by *Micrococcus lysodeikticus*. H. J. Saz and. L. O. Krampitz. *J. Bacteriol. 67*, 409–18(1954).

L 69 The Oxidation of Acetone by a Soil Diphtheroid. S. Levine and L. O. Krampitz. *J. Bacteriol. 64*, 645–50(1952).

L 70 The Oxidation of Glucose and Acetate by *Saccharomyces cerevisiae*. N. R. Eaton and H. P. Klein. *J. Bacteriol. 68*, 110–6(1954).

L 71 The Oxidation of Glucose By *Penicillium chrysogenum*. C. W. DeFiebre and S. G. Knight. *J. Bacteriol. 66*, 170–2(1953).

L 72 Oxidative Assimilation by *Pseudomonas saccharophila* with C–14-Labeled Substrates. J. M. Wiame and M. Doudoroff. *J. Bacteriol. 62*, 187–93(1951).

L 73 Pattern of Glucose Oxidation by *Acetobacter melanogenum*. H. Katznelson and S. W. Tanenbaum. *Federation Proc. 12*, 470(1953).

L 74 Penicillin Uptake by Bacterial Cells. E. A. Maass and M. J. Johnson. *J. Bacteriol. 57*, 415–22(1949).

L 75 Pentose and Desoxypentose Metabolism in Bacteria. J. O. Lampen. *J. Cellular Comp. Physiol. 41, Supp. 1*, 183–205(1953).

L 76 Phosphate Turnover Studies with Soil Bacteria. J. O. Harris, R. E. Hein, and R. H. McFarland. *Trans. Kansas Acad. Sci. 54*, 560–4(1951).

L 77 The Phosphogluconate Pathway of Carbohydrate Metabolism in the Multiplication of Bacterial Viruses. S. S. Cohen and L. Roth. *J. Bacteriol. 65*, 490–5(1953).

L 78 Phosphorolysis of Maltose by Enzyme Preparations from *Neisseria meningitidis*. C. Fitting and M. Doudoroff. *J. Biol. Chem. 199*, 153–63 (1952).

L 79 Phosphorylation and Chemosynthesis by *Thiobacillus thiooxidans*. R. W. Newburgh. *J. Bacteriol. 68*, 93–7(1954).

L 80 Properties of the Penicillin Binding Component of *Micrococcus pyogenes*. J. W. Daniel, Jr., and M. J. Johnson. *J. Bacteriol. 67*, 321–8(1954).

L 81 Protein Degradation in Bacteria. R. J. Podolsky. *Arch. Biochem. and Biophys. 45*, 327–40 (1953).

L 82 Purine Metabolism of a Diaminopurine-Resistant Strain of *Lactobacillus casei*. G. B. Elion, H. Vanderwerff, G. H. Hitchings, M. E. Balis, D. H. Levin, and G. B. Brown. *J. Biol. Chem. 200*, 7–16(1953).

L 83 Quantitative Studies on the Role of Hydrogen Sulfide Formation in the Toxic Action of Sulfur to Fungus Spores. L. P. Miller, S. E. A. McCallan, and R. M. Weed. *Contribs. Boyce Thompson Inst. 17*, 151–71(1953).

L 84 Radioactive Phosphorus and the Growth and Metabolic Activities of Soil Microorganisms. C. A. I. Goring and F. E. Clark. *Soil Sci. Proc. 16*, 7–9(1952).

L 85 Radioactive Phosphorus Tracer Studies on the Reproduction of T–4 Bacteriophage. O. Maaloe and G. S. Stent. *Acta Pathol. Microbiol. Scand. 30*, 149–57(1952).

L 86 Radioactive Sulfur Tracer Studies on the Reproduction of T–4 Bacteriophage. O. Maaloe and N. Symonds. *J. Bacteriol. 65*, 177–82(1953).

L 87 Radioactive Yeast Fractions Derived from C–14-Labeled Pyruvate and Acetate. R. F. Labbe, R. C. Thomas, V. H. Cheldelin, B. E. Christensen, and C. H. Wang. *J. Biol. Chem. 197*, 655–61(1952).

L 88 The Rate of Endogenous Respiration as Affected by the Oxidation of Exogenous Substrates. H. J. Blumenthal, H. Koffler, and E. P. Goldschmidt. *Science 116*, 475–7(1952).

L 89 Rate of Uptake and Toxic Dose on a Spore Weight Basis of Various Fungicides. L. P. Miller, S. E. A. McCallan, and R. M. Weed. *Contribs. Boyce Thompson Inst. 17*, 173–95(1953).

L 90 The Relations Between Bound Penicillin and Growth in *Staphylococcus aureus*. E. A. Maass and M. J. Johnson. *J. Bacteriol. 58*, 361–6(1949).

L 91 The Relationship between the Metabolic State of Tubercle Bacilli and the Uptake of C14 Isoniazid. W. R. Barclay, R. H. Ebert, and D. Koch-Weser. *J. Lab. Clin. Med. 42*, 779–80(1953).

L 92 Response of *Escherichia coli* to Ferrous Ions. I. Influence of Temperature on the Mutagenic Action of Fe++ for A Streptomycin-Dependent Strain. B. W. Catlin. *J. Bacteriol. 65*, 413–21(1953).

L 93 Response of *Escherichia coli* to Ferrous Ions. II. Influence of Nitrogen and Oxygen on the Mutagenic and Lethal Effects of Fe++ for a Streptomycin-Dependent Strain. B. W. Catlin. *J. Bacteriol. 65*, 422–7(1953).

L 94 Role of Carbon Dioxide in the Bacterial Synthesis of Aspartate. E. B. Fowler and C. H. Werkman. *Arch. Biochem. and Biophys. 36*, 365–70(1952).

L 95 Routes of Ethanol Formation in Bacteria. R. D. DeMoss. *J. Cellular Comp. Physiol. 41, Sup. 1*, 207–24(1953).

L 96 Some Precursors of the 5-Hydroxymethylcytosine of T–6r+ Bacteriophage. S. S. Cohen and L. L. Weed. *J. Biol. Chem. 209*, 789–94(1954).

L 97 Steroid Metabolism By a Species of Pseudomonas. II. Direct Evidence for the Breakdown of Testosterone. M. Santer and S. J. Ajl. *J. Biol. Chem. 199*, 85–9(1952).

L 98 Studies on Fungicidal Action Using Radioactive Tracers. L. P. Miller and S. E. A. McCallan. *Trans. N. Y. Acad. Sci. 14*, 329–31(1952).

L 99 Studies on the Mechanism of Acetate Oxidation by Bacteria. IV. Acetate Oxidation by Citrate-Grown *Aerobacter aerogenes* Studied with Radioactive Carbon. S. J. Ajl. and D. T. O. Wong. *J. Bacteriol. 61*, 379–87(1951).

L 100 Studies on the Mechanism of Acetate Oxidation by *Escherichia coli*. S. J. Ajl and M. D. Kamen. *J. Biol. Chem. 189*, 845–57(1951).

L 101 Studies on the Mechanism of Acetate Oxidation by *Micrococcus lysodeikticus*. S. J. Ajl, M. D. Kamen, S. L. Ranson, and D. T. O. Wong. *J. Biol. Chem. 189*, 859–67(1951).

L 102 Studies on the Metabolism of Photosynthetic Bacteria. XII. Comparative Light and Dark Metabolism of Acetate and Carbonate by *Rhodospirillum rubrum*. J. Glover, M. D. Kamen, and H. Van Genderen. *Arch. Biochem. and Biophys. 35*, 384–408(1952).

L 103 Studies on the Methane Fermentation. VIII. Tracer Experiments of Fatty Acid Oxidation by Methane Bacteria. T. C. Stadtman and H. A. Barker. *J. Bacteriol. 61*, 67–80(1951).

L 104 Studies on the Methane Fermentation. IX. The Origin of Methane in the Acetate and Methanol Fermentations by Methanosarcina. T. C. Stadtman and H. A. Barker. *J. Bacteriol. 61*, 81–6(1951).

L 105 Studies on the Methane Fermentation. X. A New Formate-Decomposing Bacterium, *Methanococcus vannielii*. T. C. Stadtman and H. A. Barker. *J. Bacteriol. 62*, 269–80(1951).

L 106 Studies on the Specificity of the Fermentation of Pentoses by *Lactobacillus pentosus*. J. O. Lampen and H. R. Peterjohn. *J. Bacteriol. 62*, 281–92(1951).

L 107 Studies on the *in Vitro* Effects of Radioactive I–131 Labeled 3,5 Diiodo Pas on the Tubercle Bacillus. I. Kass. *Am. Rev. of Tuberc. 65*, 316–24(1952).

L 108 A Study of Carbon Dioxide Fixation by *Micrococcus lysodeikticus*. I. R. McManus. *J. Biol. Chem. 188*, 729–40(1951).

L 109 Succinate Decarboxylation Reaction in Propionibacterium. E. A. Delwiche, E. F. Phares, and S. F. Carson. *Federation Proc. 12*, 194–5 (1953).

L 110 Sulfur Metabolism in *Escherichia coli*. II. Competitive Utilization of Labeled and Non-labeled Sulfur Compounds. D. B. Cowie, E. T. Bolton, and M. K. Sands. *J. Bacteriol. 62*, 63–74(1951).

L 111 Sulfur Metabolism in *Escherichia coli*. III. The Metabolic Fate of Sulfate Sulfur. E. T. Bolton, D. B. Cowie, and M. K. Sands. *J. Bacteriol. 63*, 309–18(1952).

L 112 Sulfur Metabolism in *Escherichia coli*. IV. Influence of Nonmethionine Sulfur Compounds Upon A Methionine Requiring Mutant. D. B. Cowie and E. T. Bolton. *J. Bacteriol. 64*, 87–96(1952).

L 113 Sulfur 35 As a Mutagenic Agent in Neurospora. F. P. Hungate and T. J. Mannell. *Genetics 37*, 709–19(1952).

L 114 The Toxicity of P–32 for Normal and Influenza Virus Infected Embryos. A. F. Graham, G. Dempster, and B. Buchner. *J. Bacteriol. 63*, 426–7(1952).

L 115 Tracer Experiments on the Mechanism of Acetate Formation from Carbon Dioxide by *Butyribacterium rettgeri*. L. Pine and H. A. Barker. *J. Bacteriol. 68*, 216–26(1954).

L 116 Tracer Studies of Formate Metabolism in Fungi. W. E. Jefferson and J. W. Foster. *J. Bacteriol. 65*, 587–92(1953).

L 117 Tracer Studies on Ornithine, Lysine, and Formate Metabolism in an Amino Acid Fermenting Clostridium. T. C. Stadtman and F. H. White, Jr. *J. Bacteriol. 67*, 651–7(1954).

L 118 Transfructosidation Reactions of an Enzyme of *Aspergillus oryzae*. J. H. Pazur. *J. Biol. Chem. 199*, 217–25(1952).

L 119 Transthiomethylation. F. Schlenk and R. L. Smith. *Federation Proc. 12*, 265(1953).

L 120 Uptake of C–14O_2 by *Aspergillus niger* in the Formation of Citric Acid. S. M. Martin and P. W. Wilson. *Arch. Biochem. and Biophys. 32*, 150–7(1951).

L 121 The Uptake and Distribution of Phosphorus in *E. coli* B/r. B. A. Rubin, M. F. C. Perry, and F. Z. Thanassi. *Bacteriol. Proc.* 137 (1952).

L 122 Uptake of Lanthanum by a Yeast. V. T. Bowen and A. C. Rubinson. *Nature 167*, 1032(1951).

L 123 Uptake of Radioactive Vitamin B_{12} by Various Microorganisms. R. L. Davis, L. L. Layton, and B. F. Chow. *Proc. Soc. Exptl. Biol. Med. 79*, 273–6(1952).

L 124 Uptake of Vitamin B_{12} by *Escherichia coli*. E. L. Oginsky. *Arch. Biochem. and Biophys. 36*, 71–9(1952).

L 125 The Use of Phosphorus 32 in Studies on *Plasmodium gallinaceum*. I. The Development of a Method for the Quantitative Determination of Parasite Growth and Development *in Vitro*. D. H. Clarke. *J. Exptl. Med. 96*, 439–50(1952).

L 126 The Use of Phosphorus 32 in Studies on *Plasmodium gallinaceum*. II. Studies on Conditions Affecting Parasite Growth in Intact Cells and in Lysates. D. H. Clarke. *J. Exptl. Med. 96*, 451–63(1952).

L 127 Use of Radioactive Isotopes in Study of Fungi and Bacteria. J. M. Hammer, I. A. Pearson, K. E. Corrigan, H. S. Hayden, and W. L. Mallmann. *Am. J. Clin. Pathol. 20*, 282–6(1950).

L 128 Utilization of C–14-Labeled Pyruvate and Acetate by Yeast. C. H. Wang, R. F. Labbe, B. E. Cnristensen, and V. H. Cheldelin. *J. Biol. Chem. 197*, 645–53(1952).

L 129 Utilization of Glucose-1-C–14 by Yeast. C. Gilvarg. *J. Biol. Chem. 199*, 57–64(1952).

L 130 Utilization of Guanine by *Tetrahymena geleii*. M. R. Heinrich, V. C. Dewey, and G. W. Kidder. *J. Am. Chem. Soc. 75*, 1741–2(1953).

L 131 The Utilization of Host Pyrimidines in the Synthesis of Bacterial Viruses. L. L. Weed and S. S. Cohen. *J. Biol. Chem. 192*, 693–700(1951).

L 132 The Utilization of Purine Ribotides by *Lactobacillus casei*. M. E. Balis, D. H. Levin, G. B. Brown, G. B. Elion, H. Vanderwerff, and G. H. Hitchings. *J. Biol. Chem. 200*, 1–6(1953).

L 133 Utilization of Some Purine Riboside Derivatives By *Lactobacillus casei*. M. E. Balis, D. H. Levin, G. B. Brown, G. B. Elion, H. Vanderwerff, and G. H. Hitchings. *J. Biol. Chem. 199*, 227–34(1952).

Fertilizer Uptake by Plants

M 1 Absorption by Sugar Cane of Phosphorus from Tagged Superphosphate Added to a Phosphorus-Fixing Latasol. J. A. Bonnet and A. Riera. *Soil Sci. 76*, 355–9(1953).

M 2 Accumulation of Radioisotopes in Corn Leaves. J. D. Sayre. *Research Bull. 723*, Ohio Agricul. Experiment Sta., Wooster, Ohio.

M 3 The Availability and Mobility of Calcium in a Ca–45 Labeled Wilson Dam Slag as Determined by Pot and Lysimeter Studies. D. E. Davis. *Proc. Assoc. Southern Agri. Workers* (February), 145(1952).

M 4 Availability of Residual Phosphorus of Superphosphate and Rock Phosphate Determined by Phosphorus in Crops from Radioactive Superphosphate. J. R. Neller and H. W. Lundy. *Soil Sci. 74*, 409–15(1952).

M 5 Bicarbonate Ion and Oxygen Level as Related to Chlorosis. W. L. Lindsay and D. W. Thorne. *Soil Sci. 77*, 271–9(1954).

M 6 Calcium Translocation in Calcium Starved Peas. H. Jonas. *Proc. Assoc. Southern Agr. Workers* (February), 146 (1952).

M 7 Calcium Uptake by Tobacco from Band Applications of Fertilizer Materials, J. M. Blume and N. S. Hall. *Soil Sci. 75*, 299–306(1953).

M 8 Competitive Uptake by Plants of Potassium, Rubidium, Cesium, and Calcium, Strontium and Barium from Soils. R. G. Menzel. *Soil Sci. 77*, 419–25(1954).

M 9 Corn Leaf Autographs Show where Elements Accumulate. J. D. Sayre. *Ohio Farm and Home Research 37*, 36–44(1952).

M 10 A Dithizone Tissue Test for Zinc in Plants. E. Shaw. *Soil Sci. 74*, 479–80(1952).

M 11 Effect of Lime on Availability of Labeled Phosphorus of Phosphates in Rutlege Fine Sand and Marlboro and Carnegie Fine Sandy Loams. J. R. Neller. *Soil Sci. 75*, 103–8(1953).

M 12 Effect of Lime on Uptake of Phosphorus Using Labeled Calcium and Phosphorus. W. K. Robertson. *Proc. of Assoc. of Southern Agr. Workers* (February), 54–5(1952).

M 13 Fertilizer Traced in Corn Leaves (Radioactive Tests in Corn Leaves). J. D. Sayre. *Agr. Chemicals 7*, 34–6(1952).

M 14 Influence of Soil Acidity on Absorption of Calcium by Alfalfa as Revealed by Radiocalcium. W. R. Schmehl, M. Peech, and R. Bradfield. *Soil Sci. 73*, 11–21(1952).

M 15 On the Kinetics of Phosphorus Exchange in Lakes. F. R. Hayes, J. A. McCarter, M. L. Cameron, and D. A. Livingstone. *J. Ecol. 40*, 202–16(1952).

M 16 Manganese Studies with Some New Jersey Soils. S. J. Toth and E. M. Romney. *Soil Sci. 78*, 295–303(1954).

M 17 Movement and Effect of Lime and Gypsum in Soil. D. Ririe, S. J. Toth, and F. E. Bear. *Soil Sci. 73*, 23–35(1952).

M 18 Phosphate Fertilizers for the Texas Blacklands: I. Relative Availability of Various Phosphatic Fertilizers. R. J. Speer, S. E. Allen, M. Maloney, and A. Roberts. *Soil Sci. 72*, 459–64(1951).

M 19 Phosphate Fertilizers for the Texas Blacklands: II. Utilization of Phosphate as Influenced by Plant Species and by Placement and Time of Application. S. E. Allen, R. J. Speer, and M. Maloney. *Soil Sci. 77*, 65–63(1954).

M 20 Phosphorus Utilization by Corn as Affected by Placement and Nitrogen and Potassium Fertilization. W. K. Robertson, P. M. Smith, A. J. Ohlrogge, and D. M. Kinch. *Soil Sci. 77*, 219–26(1954).

M 21 Plant and Soil Studies with Radioactive Manganese. E. M. Romney and S. J. Toth. *Soil Sci. 77*, 107–17(1954).

M 22 Plant Studies with Radioactive Calcium. D. Ririe and S. J. Toth. *Soil Sci. 73*, 1–10(1952).

M 23 Plant Uptake of Zinc 65 from Soils and Fertilizers in the Greenhouse. E. Shaw, R. G. Menzel, and L. A. Dean. *Soil Sci. 77*, 205–14(1954).

M 24 Radioautographs Revealed Nutrient Distribution in Ladino. I. Stewart. *N. J. Agric. Expt. Sta. Bull. 759*, 20–2(1951).

M 25 Residual Effects of Phosphorus in Soil at Different pH Levels as Measured by Yield and Phosphorus Uptake by Oats. C. McAuliffe, G. Stanford, and R. Bradfield. *Soil Sci. 72*, 171–8 (1951).

M 26 Residual Effects of Superphosphate Application on Soil Phosphorus Level and Growth of Crimson Clover as Measured by Yield and Phosphorus Uptake. A. B. Prince. *Soil Sci. 75*, 51–7(1953).

M 27 Residual Phosphorus of Heavily Fertilized Acid Soils. E. J. Rubins. *Soil Sci. 75*, 59–67(1953).

M 28 Response of Evergreen Sweet Clover and Cotton to Phosphorus Applications on Houston Black Clay. L. C. Kapp, R. J. Hervey, J. R. Johnston, and J. C. Smith. *Soil Sci. 75*, 109–18(1953).

M 29 Rock Phosphate Studies with Neutron Irradiated Rock Phosphate. M. Fried and Arnold J. MacKenzie. *Soil Sci. Soc. Am. 14*, 226–31(1950).

M 30 A Study of the Utilization of Phosphorus in Green Manure Crops by the Succeeding Crop, Using Radioactive Phosphorus. J. L. White, M. Fried, and A. J. Ohlrogge. *Agron. J. 41*, 174(1949).

O 58 The Path of Carbon in Photosynthesis XIV. M. Calvin, J. A. Bassham, A. A. Benson, S. Kawaguchi, V. H. Lynch, W. Stepka, and N. E. Tolbert. *Selecta Chima 10*, 143–79(1951).

Radiation Effects on Living Organisms

P 1 Accidental Skin Ulcerations, from Radioisotopes: Recognition, Prevention and Treatment. H. S. Patton and R. G. Miller. *J. Am. Med. Assoc. 143*, 554–5(1950).

P 2 ACTH Secreting Transplantable Pituitary Tumors. J. Furth, E. L. Gadsen, and A. C. Upton. *Proc. Soc. Exptl. Biol. Med. 84*, 253–4 (1953).

P 3 The Action of Radioactive Phosphorus in Drosophila. J. Blumel. *Science 111*, 205(1950).

P 4 Alterations in Metabolism of C–14-Labeled Glycine Following Severe Burn Injury. W. Lee and E. L. Alpen. *Federation Proc. 13, No. 1*, 249(1954).

P 5 Alterations in Transcapillary Exchange and Hemodynamics in Monkeys Subjected to Whole Body X-Radiation. C. B. Ferrell, M. D. Turner, and R. R. Overman. *Federation Proc. 13, No. 1*, 43(1954).

P 6 Amphophil Tumors of the Hypophysis Induced in Mice by I–131. A. S. Burt, B. H. Landing, and S. C. Sommers. *Cancer Research 14*, 497–502(1954).

P 7 Application of Isotopic Sources to Food and Drug Sterilization. L. E. Crean, P. J. Isaacs, G. J. Weiss, and F. Fahnoe. *Nucleonics 11, No. 12*, 32–7(1953).

P 8 The Application of Radiocarbon in the Study of Radiolesions. G. Hevesy. *J. Chem. Phys. 48*, 275–9(1951).

P 9 Atomic Energy and the Plant Sciences. N. E. Tolbert and P. B. Pearson. *Advances in Agron. 4*, 279–303(1952).

P 10 Atomic Radiation Causes Tobacco Cancer Growth. A. H. Sparrow and L. A. Schairer. *Science News Letter 66*, 179(1954).

P 11 Beta-Radiation Cataracts. J. E. McDonald, W. F. Hughes, Jr., and V. G. Peiffer. *Am. J. Ophthalmol. 37*, 646(1954).

P 12 Biologic Effects of Radioactive Phosphorus Poisoning in Rats. S. Koletsky and J. H. Christie. *Am. J. Pathol. 27*, 175–94(1951).

P 13 Brain and Liver Phosphorus Metabolism in the Acute Irradiation Syndrome. W. H. Florsheim and M. E. Morton. *Am. J. Physiol. 176*, 15–9 (1954).

P 14 Calculation of Radiation Doses to P–32-Labeled Male *D. melanogaster*. R. C. King. *Nucleonics 10, No. 11*, 88–9(1952).

P 15 Cation Exchange in Mammalian Erythrocytes. III. The Prolytic Effect of X-Rays on Human Cells. C. W. Sheppard and G. E. Beyl. *J. Gen. Physiol. 34*, 691–704(1951).

P 16 Cellular Destruction and Protein Breakdown Induced by Exposure to X-Rays. I. K. Schreier, N. DiFerrante, G. W. Gaffney, L. H. Hempelmann, and K. I. Altman. *Arch. Biochem. and Biophys. 50*, 417–20(1954).

P 17 Changes Induced in Iodine Metabolism of Rat by Internal Irradiation of Its Thyroid with I–131. D. D. Feller, I. L. Chaikoff, A. Taurog, and H. B. Jones. *Endocrinology 45*, 464–79 (1949).

P 18 Clinical Observations upon the Response of the Burro to Large Doses of External Whole Body Gamma Irradiation. B. F. Trum, J. H. Rust, and J. L. Wilding. *Auburn Veterinarian 8*, 131–6(1952).

P 19 Comparative Effects of Cobalt 60 and Radium When Utilized in Identical Doses on the Skin of Rabbits. I. Meschan and A. Nettleship. *Am. J. Roentgenol. Radium Therapy Nuclear Med. 71*, 306–19(1954).

P 20 Conditions of Transplantation and Hormonal Secretions of Pituitary Tumors Induced by I–131. J. Furth, W. T. Burnett, Jr., E. Gadsden, and J. N. Dent. *Cancer Research Sci. Proc.*, 263(1952).

P 21 Control of Trichinosis by Gamma Irradiation of Pork. S. E. Gould, H. J. Gomberg, and F. H. Bethell. *J. Am. Med. Assoc. 154*, 653–8(1954).

P 22 Demonstration of Radiation Injury to the Reticulo-Endothelial System by Radioactive Colloids. J. L. Cutler and E. R. Gabrieli. *Federation Proc. 13, No. 1*, 32(1954).

P 23 Depth Dose Relation for Biological Materials Exposed to Beta Rays. E. B. Darden, Jr., and C. W. Sheppard. *J. Tenn. Acad. Sci. 27*, 210–1(1952).

P 24 The Developmental Genetics of the Rg Mutant in Maize. L. W. Mericle. *Am. J. Botany 37*, 100–16(1950).

P 25 Development of Thyroid Neoplasms in the Rat Following a Single Injection of Radioactive Iodine. R. C. Goldberg, and I. L. Chaikoff. *Proc. Soc. Exptl. Biol. Med. 76*, 563–6(1951).

P 26 Disappearance Rate of Tagged Substances from the Circulation of Roentgen Irradiated Animals. L. Wish, J. Furth, C. W. Sheppard, and R. H. Storey. *Am. J. Roentgenol. Radium Therapy Nuclear Med. 65*, 628–40(1952).

P 27 Disappearance Rate of Tagged Substances from the Circulation of Roentgen Irradiated Animals. L. Wish, J. Furth, C. W. Sheppard, and R. H. Storey. *Am. J. Roentgenol. Radium Therapy Nuclear Med. 67*, 628–40(1952).

P 28 Distribution and Effect of Colloidal Radioactive Gold in Peritoneal Fluid Containing Free Sarcoma 37 Cells. H. Goldie and P. F. Hahn. *Proc. Soc. Exptl. Biol. Med. 74*, 638–42(1950).

P 29 Distribution and Excretion of Electrolytes after Acute Whole-Body Irradiation Injury. I. Studies with Radiopotassium. J. Z. Bowers and K. G. Scott. *Proc. Soc. Exptl. Biol. Med. 78*, 645–8(1951).

P 30 Distribution and Excretion of Electrolytes after Acute Whole-Body Irradiation Injury. II. Studies with Radiosodium. J. Z. Bowers and K. G. Scott. *Proc. Soc. Exptl. Biol. Med. 78*, 648–52(1951).

P 31 Distribution and Pathology Following Intracerebral and Intraventricular Radio Gold. C. C. McClure, Jr., E. L. Carothers, and P. F. Hahn. *Federation Proc. 12*, 396(1953).

P 32 The Dosimetry of Beta Radiation and its Application to Inhomogeneous Distributions of Radioactivity in Cells. W. K. Sinclair. *Texas Repts. Biol. Med. 11*, 745–54(Winter, 1953).

P 33 Effect of Acute Whole-Body X-Irradiation Upon Water and Electrolyte Balance. R. J. Soberman, R. P. Keating, and R. D. Maxwell. *Am. J. Physiol. 164*, 450–6(1951).

P 34 Effect of Antibiotic Dosage on Mortality from Whole Body X-Irradiation. G. E. Gustafson and S. Koletsky. *Proc. Soc. Exptl. Biol. Med. 84*, 266–9(1953).

P 35 Effect of Cobalt 60 Gamma Radiation on Microorganisms. C. A. Lawrence. L. E. Brownell and J. T. Graikoski. *Nucleonics 11, No. 1*, 9–11(1953).

P 36 The Effect of Cobalt 60 Gamma Radiation on Passive Immunity. W. M. Hale and R. D. Stoner. *Yale J. Biol. Med. 25*, 326–33(1953).

P 37 Effect of Colloidal Au198 on the Growth Cycle of Leukemic Cells and on the Survival of Their Host. H. Goldie, F. B. Watkins, C. Powell, and P. F. Hahn. *Cancer Research 12*, 92–9(1952).

P 38 Effect of Continuous Gamma Radiation on Mutation Rate in Maize. W. R. Singleton. *Genetics 36*, 575–6(1951).

P 39 Effect of Experimental Feeding of Massive Numbers of Irradiated Trichina Larvae. S. E. Gould and H. J. Gomberg. *Am. J. Clin. Pathol. 24*, 72(1954).

P 40 Effect of 400 Fractional Whole Body γ-Irradiation in the Burro (*Equus asinus asinus*). B. F. Trum, T. J. Haley, M. Bassin, J. Heglin, and J. H. Rust. *Am. J. Physiol. 174*, 57–60(1953).

P 41 The Effect of Gamma Radiation on Some Pharmaceutical Products. J. Controulis, C. A. Lawrence, and L. E. Brownell. *J. Am. Pharm. Assoc., Sci. Ed. 43*, 65–9(1954).

P 42 The Effect of Ingested Radiophosphorus on Egg Production and Embryo Survival in the Wasp Habrobracon. D. S. Grosch and R. L. Sullivan. *Biol. Bull. 102*, 128–40(1952).

P 43 Effect of Internal Irradiation on Respiration of Rat Liver Slices. J. D. Perkinson, Jr., and R. S. Ingols. *Radiology 61*, 545–50(1953).

P 44 Effect of Intragastric Irradiation on Gastric Acidity in the Dog. B. W. Fox. A. Littman, M. I. Grossman, and A. C. Ivy. *Gastroenterology 24*, 517–34(1953).

P 45 Effect of Intravenously Injected Radioisotopes on Metastatic Tumor Cells in Organs of the Mouse. H. Goldie, H. D. West, B. R. Jeffries, and W. F. Clark. *Proc. Soc. Exptl. Biol. Med. 84*, 549–51(1953).

P 46 The Effect of Irradiation on Azo Dye Neoplasia in the Rat Liver. I. Influence of X-Ray and Radio-Gold on the Incidence of Hepatoma and the Histology of the Liver in Rats Fed Dimethylaminoazobenzene. G. Z. Williams, N. F. Young, and J. P. Moore. *Cancer Research 11*, 289(1951).

P 47 Effect of Irradiation on DNA. L. Kelly and A. Payne. *Federation Proc. 12*, 76(1953).

P 48 Effect of Irradiation with Cobalt 60 on Trichina Larvae. H. J. Gomberg and S. E. Gould. *Science 118*, 75–7(1953).

P 49 The Effect of β Irradiation on the Respiration and Morphology of *Melanoplus differentialis* Embryos. T. N. Tahmisian and J. Gasvoda. *Trans. Illinois State Acad. Sci. 44*, 235–52(1951).

P 50 Effect of Irradiation on Synthesis of Rat Thymus Desoxyribonucleic Acid (DNA). H. Harrington and P. S. Lavik. *Federation Proc. 12*, 214(1953).

P 51 Effect of Irradiation on the Universal Reaction in Polycythemia Vera. R. L. Kahn, W. H. Bullock, and F. H. Bethell. *Cancer Research 12*, 176–9(1952).

P 52 Effect of Irradiation on *in Vivo* Tetrazolium Reduction by HS1 Mouse Tumor Cells. J. T. Williams and G. Z. Williams. *Federation Proc. 12*, 406(1953).

P 53 The Effect of Isotopic (I–131) Radiation and X-Radiation on the Total Coproporphyrin Excretion in Humans. H. J. Koch, Jr., T. R. Talbot, M. Bernstein, J. MacKinnon, and C. Elias. *J. Clin. Endocrinol. 10*, 1029–53(1950).

P 54 Effect of La–139- and La–140-Chloride on Mice Bearing Ehrlich Ascites Tumors. R. Lewin, H. Spencer, D. M. Ekstein, L. Woidowsky, K. G. Stern, and D. Laszlo. *Cancer Research 12*, 278–9(1952).

P 55 Effect of Polonium 210 and Selenium 75 in Experimental *Schistosoma mansoni* Infection in Mice. N. P. Watts and K. P. McConnell. *Am. J. Hyg. 53*, 11–6(1951).

P 56 Effect of Prolonged Administration of Radioactive Zinc 65 on the Pancreas. J. W. Sherrill and A. N. Wick. *J. Lab. Clin. Med. 41*, 40–2(1953).

P 57 The Effect of Propylthiouracil on Radioiodide Concentrating By the Thyroid Gland in Normal and Hypophysectomized Mice. S. H. Wollman and R. O. Scow. *Endocrinology 53*, 332–41(1953).

P 58 Effect of 200 Roentgens Fractional Whole Body Irradiation in the Burro. J. H. Rust, B. F. Trum, J. Heglin, E. McCulloh and T. J. Haley. *Proc. Soc. Exptl. Biol. Med. 85*, 258–61(1954).

P 59 The Effect of Radioactive Phosphorus upon the Development of the Embryonic Tooth and Supporting Structures. M. S. Burstone. *Am. J. Pathol. 27*, 21–31(1951).

P 60 Effect of Repeated Doses of External and Internal Irradiation on Structure of the Spleen. H. Goldie, G. J. Tarleton, Jr., B. R. Jeffries, and P. F. Hahn. *Proc. Soc. Exptl. Biol. Med. 82*, 395–9(1953).

P 61 The Effect of Roentgen Radiation on the Incorporation of Radiophosphorus into Nucleic Acids

and Other Constituents of Mouse Mammary Carcinoma. H. Vermund, C. P. Barnum, R. A. Huseby, and K. W. Stenstrom. *Cancer Research 13*, 633–8(1953).

P 62 Effect of 2,000 Roentgens Local X-Irradiation on Metabolism and Alkaline Phosphatase Activity of Rat Bone. S. H. Cohn and J. K. Gong. *Am. J. Physiol. 173*, 115–9(1953).

P 63 The Effect of Sensitization and X-Radiation on the Metabolism of I–131 Labeled Proteins. F. J. Dixon, S. C. Bukantz, and G. J. Dammin. *Science 113*, 274–6(1951).

P 64 The Effect of Spleen Protection on Iron Distribution in Irradiated Rats. R. L. Huff, W. F. Bethard, J. H. Garcia, B. M. Roberts, L. O. Jacobson, and J. H. Lawrence. *J. Lab. Clin. Med. 36*, 40–51(1950).

P 65 The Effect of S–35 on the Development of Arbacia Eggs. J. W. Green and J. S. Roth. *Biol. Bull. 105*, 364–5(1953).

P 66 The Effect on the Thyroid Gland and the Gonads Following Chronic Treatment of Mice with Low Doses of Radioiodine (I–131). R. Hugh. *J. Exptl. Zool. 122*, 151–67(1953).

P 67 Effect of Total Body Irradiation on Rabbit Pituitary as Measured by Gonadotropin Response in Chicks. J. J. Lane, J. R. Paysinger, R. L. Murphree, J. H. Rust, and B. F. Trum. *Proc. Soc. Exptl. Biol. Med. 86*, 36–8(1954).

P 68 Effect of Total-Body X-Irradiation on Relative Turnover of Nucleic Acid Phosphorus. A. H. Payne, L. S. Kelly, and C. Entenman. *Proc. Soc. Ecptl. Biol. Med. 81*, 698–701(1952).

P 69 The Effect of Whole Body X-Irradiation on the Reticulo-Endothelial System as Demonstrated by the Use of Radioactive Chromium Phosphate. E. R. Gabrieli and A. A. Auskaps. *Yale J. Biol. Med. 26*, 159–69(1953).

P 70 The Effect of X-Radiation of the Biosynthesis of Hemoglobin. J. E. Richmond, K. I. Altman and K. Salomon. *J. Biol. Chem. 190*, 817–25(1951).

P 71 The Effect of X-Irradiation on Erythrogenesis Plasma, and Cell Volumes. J. Furth, G. A. Andrews, R. H. Storey, and L. Wish. *Southern Med. J. 44*, 85–92(1951).

P 72 Effect of X-Radiation on Absorption and Distribution in the Rat of a Labeled Lipid. M. G. Morehouse and R. L. Searcy. *Federation Proc. 13, No. 1*, 267(1954).

P 73 Effect of X-Irradiation upon the Incorporation of Adenine-4, 6–C–14 in Mice. E. L. Bennett, L. Kelly, and B. Krueckel. *Federation Proc. 13, No. 1*, 181(1954).

P 74 The Effect of X-Irradiation on Intestinal Absorption and Thyroid Uptake of the Iodide Ion Using I–131. P. F. Belcastro, J. E. Christian, and H. G. DeKay. *J. Am. Pharm. Assoc. 41*, 174–7(1952).

P 75 Effect of X-Radiation on the Incorporation of P–32 into Mononucleotides of Ribosenucleic Acid. F. G. Sherman. *Federation Proc. 13, No. 1*, 136(1954).

P 76 Effect of X-Ray on Radioactive Phosphorus Turnover and Oxygen Consumption of Brain. W. Florsheim, C. Doernbach, and M. E. Morton. *Proc Soc. Exptl. Biol. Med. 81*, 121–2(1952).

P 77 Effect of X-Rays on Nucleic Acid and Protein Synthesis. R. Abrams. *Arch. Biochem. 30*, 90–9(1951).

P 78 Effects of Acute Whole Body X-Radiation on Absorption and Distribution of Radiosodium in the Fasted Rat. C. J. Goodner and J. Z. Bowers. *Federation Proc. 13, No. 1*, 57–8(1954).

P 79 Effects of External and Internal Radiation on Cell Division. A. M. Brues and L. Reitz. *Ann. N. Y. Acad. Sci. 51*, 1497–507(1951).

P 80 Effects of Pantothenic Acid and Its Analogs in Radiation Injury by P–32. C. Artom. *Proc. Soc. Exptl. Biol. Med. 86*, 162–5(1954).

P 81 Effects of Ploidy and Linear Energy Transfer on Radiobiological Survival Curves. R. E. Zirkle and C. A. Tobias. *Arch. Biochem. and Biophys. 47*, 282–306(1953).

P 82 Effects of Radioactive Colloidal Gold (Au 198) on Guinea Pigs. E. R. Fisher, J. C. Neering, J. B. Hazard, and R. A. Hays. *Am. J. Med. Sci. 223*, 502–11(1952).

P 83 The Effects of Radioactive Phosphorus on *Cricetus auratus*. A. Martin. *Genetics 35*, 679 (1950).

P 84 Effects of Radiophosphorus (P–32) on Mitosis in Larval Tail-Tips of *Amblystoma punctatum*. D. P. Costello and C. Henley. *Anat. Record 108*, 578–9(1950).

P 85 The Effects of Tumor Growth and X-Radiation on the Incorporation of Radiocarbon from 4-Amino-5-imid-azolecarboxamide-C–14 into Nucleic Acids. G. M. Conzelman, Jr., H. G. Mandel, and P. K. Smith. *Cancer Research 14*, 100–2(1954).

P 86 The Effects of Various Doses of Radioactive Iodine on The Function and Structure of The Thyroid of The Rat. F. Maloof, B. M. Dobyns, and A. L. Vickery. *Endocrinology 50*, 612–38(1952).

P 87 The Effects of Varying Dosage of Radioactive Phosphorus (P–32) on the Early Chick Embryo. A. O. Chapman and J. S. Latta. *Anat. Record 115*, 292–3(1953).

P 88 Effects of Whole Body Exposure to Irradiation upon Subsequent Fertility of Male Rabbits. R. L. Murphree, W. H. Whitaker, J. L. Wilding, and J. H. Rust. *Science 115*, 709–11(1952).

P 89 Effects of X-Ray, Neutron, and Chronic Gamma Irradiation on Growth and Yield of Potatoes. A. H. Sparrow and E. Christensen. *Am. J. Botany 37*, 667(1950).

P 90 Experimental Acute Radiodermatitis Following Beta Irradiation. I. Its Pathogenesis and Repair. C. C. Lushbaugh, J. B. Storer, and D. B. Hale. *Cancer 6*, 671–7(1953).

P 91 Experimental Acute Radiodermatitis Following Beta Irradiation. II. The Inhibition of Fibroplasia. C. C. Lushbaugh and J. B. Storer. *Cancer 6*, 678–82(1953).

P 92 Experimental Acute Radiodermatitis Following Beta Irradiation. III. The Changes in Water, Fat, and Protein Content. C. C. Lushbaugh and D. B. Hale. *Cancer 6*, 683 5(1953).

P 93 Experimental Acute Radiodermatitis Following Beta Irradiation. IV. Changes in Respiration and Glycolysis. C. C. Lushbaugh and D. B. Hale. *Cancer 6*, 686–9(1953).

P 94 Experimental Acute Radiodermatitis Following Beta Irradiation. V. Histopathological Study of the Mode of Action of Therapy with *Aloe vera*. C. C. Lushbaugh and D. B. Hale. *Cancer 6*, 690–8(1953).

P 95 Experimental Radiation Induced Ovarian Tumors Adenocarcinoma with Hypervolemia. J. Furth and J. B. Kahn. *Acta Unio Intern. Contra Cancrum 7*, 827–30(1952).

P 96 Experimental Studies on Early Lens changes after Roentgen Irradiation: II. Exchange and Penetration of Radioactive Indicators (Na-24, K-42, I-131, P-32) in Normal and Irradiated Lenses of Rabbits. L. Von Sallmann and B. Locke. *Arch. Ophthalmol. 45*, 431–44(1951).

P 97 Factors Influencing Development of Hypophyseal Tumors in Mice After Treatment with Radioactive Iodine. A. Gorbman. *Proc. Soc. Exptl. Biol. Med. 80*, 538–9(1952).

P 98 Factors Influencing Effect of Radioactive Colloidal Gold on Free Tumor Cells in Peritoneal Fluid. H. Goldie, F. B. Watkins, C. Powell, and P. F. Hahn. *Proc. Soc. Exptl. Biol. Med 76*, 477–80(1951).

P 99 Further Studies on the Radiosensitivity of Tumors Autogenous to Homozygous Hosts. A. Goldfeder. *Radiology 52*, 230–8(1949).

P 100 Genetic Changes Accompanying the Uptake of P-32 by *Drosophila melanogaster*. R. C. King. *Genetics 35*, 118–9(1950).

P 101 Growth of Bacteria in the Presence of Radioactive Phosphorus. F. E. Clark and C. A. I. Goring. *J. Bacteriol. 62*, 352–4(1951).

P 102 The Hazard Involved in the Use of Carbon 14. H. E. Skipper. *Nucleonics 10, No. 2*, 40–4(1952).

P 103 The Hazard Involved in the use of Carbon 14. II. The Effect of A Single Dose of Carbon 14 Labeled Sodium Bicarbonate on the Pattern of Deaths from Spontaneous Leukemia in AKM Mice. H. E. Skipper, M. J. Bell, and J. B. Chapman. *Cancer Research 10*, 362–3(1950).

P 104 Health Physics and Medical Aspects of a Strontium 90 Inhalation Incident. F. P. Cowan, L. B. Farabee, and R. A. Love. *Am. J. Roentgenol. Radium Therapy Nuclear Med. 67*, 805–9(1952).

P 105 The Hematological Effects Resulting from Injection of Radioactive Phosphorus (P-32) Albino Rats. J. S. Latta and R. E. Waggener. *Anat. Record 119*, 357–85(1954).

P 106 A Histochemical Study of Irradiated Bone. M. S. Burstone. *Am. J. Pathol. 28*, 1133(1952).

P 107 A Histochemical Study of Normal and Irradiated Salivary Gland Tissue in the Mouse. M. S. Burstone. *Anat. Record 115*, 543 57(1953).

P 108 Histological Changes Induced in Barley Plants by Radiation From P 32. R. W. Mackie, J. M. Blume, and C. E. Hagen. *Am. J. Botany 39*, 229 37(1952).

P 109 Histological Effects of Radiophosphorus on Normal and Lymphomatous Mice. W. S. Graff, K. G. Scott, and J. H. Lawrence. *Am. J. Roentgenol. Radium Therapy 55*, 44–54(1946).

P 110 Improved Storage Quality of Potato Tubers after Exposure to Co-60 Gammas. A. H. Sparrow and E. Christensen. *Nucleonics 12, No. 8*, 16 17(1954).

P 111 The Immediate and Delayed Morphological Effects of X-Radiations on Meiotic Chromosomes. R. Rugh. *J. Cellular Comp. Physiol. 36*, 185–203(1950).

P 112 The Inactivation of Bacteriophage by Ionizing Radiation. E. Pollard and F. Forro, Jr. *Arch. Biochem. and Biophys. 32*, 256–73(1951).

P 113 The Inactivation of Desoxyribonuclease by Electron Bombardment, Deuteron Bombardment and Heat. C. L. Smith. *Arch. Biochem. and Biophys. 45*, 83–90(1953).

P 114 Induction of Ascites and Cirrhosis (Perivascular Fibrosis) in the Dog by Means of Massive Doses of Internal Irradiation to the Liver. P. F. Hahn, H. Goldie, and M. Jackson. *Am. J. Physiol. 167*, 791(1951).

P 115 The Induction of Mutations in *Paramecium aurelia* by Beta Radiation. R. F. Kimball. *Genetics 34*, 210–22(1949).

P 116 Induction of Thyroid Cancer in the Rat by Radioactive Iodine. R. C. Goldberg and I. L. Chaikoff. *Arch. Pathol. 53*, 22–8(1952).

P 117 Ineffectiveness of *in Vivo* Dialysis in Prolonging Life in X-Irradiated Dogs. P. S. Lavik, J. R. Leonards, G. W. Buckaloo, C. Heisler, and H. L. Friedell. *Proc. Soc. Exptl. Biol. Med. 83*, 618–20(1953).

P 118 Influence of Homologous Tissue Factors on DNA Turnover and Radiation Protection. L. S. Kelly and H. B. Jones. *Am. J. Physiol. 172*, 575–8(1953).

P 119 Intranuclear Changes Resulting from Exposure to Ionizing Radiation as Detected in Frozen-Dried Preparations. M. W. Holt., S. C. Sommers, and S. Warren. *Lab. Invest. 2*, 408–18(1953).

P 120 The Irradiation of Dried Hemoglobins by Fast, Charged Particles. R. K. Appleyard. *Arch. Biochem. and Biophys. 35*, 121–31(1952).

P 121 Irradiation of the Pituitary of the Rat with High Energy Deuterons. C. A. Tobias, D. C. Van Dyke, M. E. Simpson, H. O. Anger, R. L. Huff, and A. A. Koneff. *Am. J. Roentgenol. Radium Therapy Nuclear Med. 72*, 1 21(1954).

P 122 Lethal Dose Studies with Burros and Swine Exposed to Whole Body Cobalt 60 Irradiation. J. H. Rust, B. F. Trum, J. L. Wilding, C. S. Simons, and C. L. Comar. *Radiology 62*, 569-74(1954).

P 123 The Lethal Dose of Whole-Body Tantalum 182 Gamma Irradiation for the Burro (Equus asinus asinus). J. H. Rust, J. L. Wilding, B. F. Trum, C. S. Simons, A. W. Kimball, Jr., and C. L. Comar. *Radiology 560*, 579–82(1953).

P 124 Lipogenesis from Acetate-1-C-14 by Liver Slices from X-irradiated Rats. S. R. Lerner, W. L. Warner, and C. Entenman. *Federation Proc. 12*, 85(1953).

P 125 Liver Cirrhosis with Ascites, Induced in Dogs by Chronic Massive Hepatic Irradiations with Radioactive Colloidal Gold. P. F. Hahn, M. A. Jackson, and H. Goldie. *Science 114*, 303(1951).

P 126 Liver Damage in Rats from Radioactive Colloidal Gold. S. Koletsky and G. Gustafson. *Lab. Invest. 1*, 312–23(1952).

P 127 Mechanism of Lethal and Mutagenic Action of Ionizing Radiation on *Aspergillus terreus*. I. Relationship of Relative Biological Efficiency to Ion Density. G. E. Stapleton, A. Hollaender, and F. L. Martin. *J. Cellular Comp. Physiol. 39*, 87–100(1952).

P 128 A Method for Studying the Effect of P–32 on Living Adult Human Epidermal Cells in a Perfusion Chamber. F. N. Hu, S. G. Holmes, and C. M. Pomerat. *Texas Repts. Biol. Med. 9*, 739–48(1951).

P 129 Mitotic Effects of Prolonged Irradiation with Low-Intensity Gamma Rays on the Chortophaga Neuroblast. J. G. Carlson, N. G. Harrington, and M. E. Gaulden. *Biol. Bull. 104*, 313–22(1953).

P 130 The Morphogenesis of Pituitary Tumors Induced by Radiothyroidectomy in the Mouse and the Effects of Their Transplantation on the Pituitary Body of the Host. N. S. Halmi and W. D. Gude. *Am. J. Pathol. 30*, 403–11(1954).

P 131 Morphologic Changes Associated with Thyrotrophin-Secreting Pituitary Tumors. J. Furth. *Am. J. Pathol. 30*, 421–63(1954).

P 132 The Mouse Thyroid and Radioactive Iodine (I–131). R. Rugh. *J. Morphol. 89*, 323–55(1951).

P 133 Mutation in *Drosophila melanogaster* Males Exposed to β-Radiation from Neutron-Activated Phosphorus-Bakelite Plaques. R. C. King. *Radiation Research 1*, 369–80(1954).

P 134 On the Nature of the Hypertrophied Pituitary Gland Induced in the Mouse by I–131 Injections, and the Mechanism of Its Development. R. C. Goldberg and I. L. Chaikoff. *Endocrinology 48*, 1–5(1951).

P 135 The Nature of the Serum Iodine after Large Doses of I–131. J. Robbins, J. E. Rall, D. V. Becker, and R. W. Rawson. *J. Clin. Endocrinology and Metabolism 12*, 856–74(1952).

P 136 Nuclear Changes in Response to Continuous Irradiation. M. S. Burstone. *Arch. Pathol. 55*, 55–62(1953).

P 137 Obliterating Tracheitis, A Complication Following Administration of Radioactive Iodine. R. Silberberg, M. Silberberg, and F. J. Dixon. *J. Lab. Clin. Med. 39*, 256–9(1952).

P 138 Organic and Inorganic Iodine Levels in Serum of Sheep Receiving Daily Oral Doses of I–131. M. H. Weeks, J. Katz, and N. G. Farnham. *Endocrinology 50*, 511–20(1952).

P 139 Osteogenic Sarcoma in a Muskrat from an Area of High Environmental Radiostrontium. L. A. Krumholz and J. H. Rust. *Arch. Pathol. 57*, 270–8(1954).

P 140 The Pathogenesis of Postirradiation Anemia. J. B. Kahn, Jr., and J. Furth. *Blood 7*, 404-16(1952).

P 141 The Pattern and Significance of Delayed Phenotypic Expression of Mutations Induced in *E. coli* by Absorbed P–32. B. A. Rubin. *Genetics 35*, 133(1950).

P 142 A Physiopathologic Study of the Effect of Radioactive Iodine on the Ovary. F. W. Tillotson, R. G. Rose, and S. Warren. *Am. J. Roentgenol. Radium Therapy Nuclear Med. 70*, 599–604(1953).

P 143 Plasma Proteins and Plasma Volume in Rats Following Total-Body X-Irradiation. H. Supplee, J. D. Hauschildt, and C. Entenman. *Am. J. Physiol. 169*, 483–90(1952).

P 144 Post-Irradiation Petechiae and the Mechanism of Formation with Snake Venom. K. A. Arendt, M. H. Shulman, G. P. Fulton, and B. R. Lutz. *Anat. Record 117*, 595–6(1953).

P 145 Preliminary Observations on the Effects of P–32 on the Development of Cotylophoron. Cotylophorum (Digenea: Paramphistomidae). T. B. Weber. *J. Tenn. Acad. Sci. 28*, 189–90(1953).

P 146 Production of Experimental Cretinism in Dogs by the Administration of Radioactive Iodine. C. A. Smith, H. A. Oberhelman, Jr., E. H. Storer, E. R. Woodward, and L. R. Dragstedt. *Arch. Surg. 63*, 807–20(1951).

P 147 Quantitative Relationship between Thyroid Function and Growth of Pituitary Tumors Secreting TSH. J. Furth, W. T. Burnett, Jr., and E. L. Gadsden. *Cancer Research 13*, 298–307(1953).

P 148 Radiation Effects on Plants Grown in Soil Treated with Fertilizer Containing P–32. J. M. Blume. *Soil Sci. 73*, 299–303(1952).

P 149 Radiation Sterilization. I. The Effect of High Energy Gamma Radiation from Kilocurie Radioactive Sources on Bacteria. W. Tarpley, J. Ilavsky, B. Manowitz, and R. V. Horrigan. *J. Bacteriol. 65*, 305–9(1953).

P 150 Radioactive Colloidal Gold in Macrophages and Serous Exudate in Peritoneal Fluid of Sarcoma Bearing Mouse. H. Goldie, L. B. Calvin, H. Nash, and P. F. Hahn. *Proc. Soc. Exptl. Biol. Med. 76*, 480–4(1951).

P 151 Radioactive Iodine for Hyperthyroidism Administered During Early Pregnancy. J. E. Clever. *Am. J. Obstet. Gynecol. 61*, 217-9(1951).

P 152 Radioactive Phosphate (P-32) in the Hamster Testis and Epididymis. A. L. Soderwall and A. L. Chaimov. *Anat. Record 118*, 410(1954).

P 153 Radioactivity in Animal Thyroids from Various Areas. L. Van Middlesworth. *Nucleonics 12, No. 9*, 56-7(1954).

P 154 Radiobiological Additivity of Various Ionizing Radiations. R. E. Zirkle. *Am. J. Roentgenol. Radium Therapy 63*, 170-5(1950).

P 155 Radiobiology Irradiation Lethality and Protection. R. Rugh. *Military Surgeon 112*, 395-413(1953).

P 156 Radiobiology of the Oral Tissues. M. S. Burstone. *J. Am. Dental Assoc. 47*, 630-6(1953).

P 157 Radioiodine and Histopathological Effects. R. Rugh. *J. Morphol. 89*, 457-99(1951).

P 158 Radioiodine Uptake by the Fetal Mouse Thyroid and Resultant Effects in Later Life. H. Speert, E. H. Quimby, and S. C. Werner. *Surg. Gynecol. Obstet. 93*, 230-42(1951).

P 159 Radioiodine Uptake by Transplantable Tumors of the Thyroid Gland in C3H Mice. I. Experimental Results. S. H. Wollman, R. O. Scow, B. Wagner, and H. P. Morris. *J. Natl. Cancer Inst. 13*, 785-805(1953).

P 160 Radioiodine Uptake by Transplantable Tumors of the Thyroid Gland in C3H Mice. II. Theory. S. H. Wollman. *J. Natl. Cancer Inst. 13*, 807-14(1953).

P 161 Radiological Use of High Energy Deuterons and Alpha Particles. C. A. Tobias, H. O. Anger, and J. H. Lawrence. *Am. J. Roentgenol. Radium Therapy Nuclear Med. 67*, 1-27(1952).

P 162 The Relative Biological Effectiveness of Beta and Rontgen Radiation as shown by the Radiotoxicity of Sodium 24 for Mice. R. H. Snyder and W. E. Kisieleski. *Radiology 54*, 743 (1950).

P 163 The Relative Biological Effectiveness of Cobalt 60 Gamma Radiation and Fast Neutrons. H. H. Vogel, Jr., J. W. Clark, and D. L. Jordan. *Anat. Record 117*, 529-30(1953).

P 164 Relative Biological Effectiveness of Fast Neutrons, Gamma Rays, X-Rays on Grasshopper Nymph Ovarioles. (*Melanoplus differentialis*). T. N. Tahmisian and H. H. Vogel, Jr. *Proc. Soc. Exptl. Biol. Med. 84*, 538-43 (1953).

P 165 The Significance of the Action of Radioactive Phosphorus on *Habrobracon juglandis* (A.). A. Martin, Jr. *Proc. Penna. Acad. Sci. 24*, 60-4(1950).

P 166 Relative Biological Effectiveness of Radium and Other Alpha Emitters in CF No. 1 Female Mice. M. P. Finkel. *Proc. Soc. Exptl. Biol. Med. 83*, 494-8(1953).

P 167 Some Early Nuclear Effects of Ionizing Radiation. S. Warren, M. W. Holt, and S. C. Sommers. *Proc. Soc. Exptl. Biol. Med. 77*, 288-91(1951).

P 168 Some Observations on the Effect of Gamma Irradiation on the Biochemistry of Rabbit Bone Marrow. J. F. Thomson, W. W. Tourtellotte, M. S. Carttar and J. B. Storer. *Arch. Biochem. and Biophys. 42*, 185-96(1953).

P 169 Some Observations on Effect of Gamma Radiation on the Biochemistry of the Rat Thymus. J. F. Thomson, W. W. Tourtellotte and M. S. Carttar. *Proc. Soc. Exptl. Biol. Med. 80*, 268-72(1952).

P 170 Spontaneous and Induced Chromosome Aberrations in the Grasshopper *Chloealtis conspersa*. K. H. Rothfels. *Genetics 35*, 687(1950).

P 171 Studies on the Alterations of Development of the Teeth and Adjacent Structures Following Local Administration of Chromic Phosphate Containing P-32. M. S. Burstone. *J. Am. Dental Assoc. 42*, 418-23(1951).

P 172 Studies of Autoplastic and Homoplastic Grafts in Rabbits. R. G. Williams. *Am. J. Anat. 93*, 1-23(1953).

P 173 Studies on the Dosimetry and Bactericidal Effects of Gamma Radiations from a Cobalt 60 Source. S. A. Goldblith, B. E. Proctor, S. Davison, D. A. Lang, B. Kan, C. J. Bates, and M. Karel. *Radiology 60*, 732-6(1953).

P 174 Studies on the Effect of Radioactive Colloidal Gold on the Development of the Oral Structures of the Mouse. M. S. Burstone. *Arch. Pathol. 50*, 419-26(1950).

P 175 Studies on the Effect of Radioactive Phosphorus on the Biochemical Oxidation of Sewage. W. N. Grune and R. Eliassen. *Sewage and Ind. Wastes 23*, 141-54(1951).

P 176 Studies on the Effects of Continuous Exposure of Animals to Gamma Radiation from Cobalt 60 Plane Sources. J. F. Thomson, W. W. Tourtellotte, M. S. Carttar, R. S. Cox, Jr., and J. E. Wilson. *Am. J. Roentgenol. Radium Therapy Nuclear Med. 69*, 830-8(1953).

P 177 Studies on the Mechanism of Action of Ionizing Radiations. II. Inhibition of Sulfhydryl Enzymes by Alpha-, Beta-, and Gamma-Rays. E. S. G. Barron and S. Dickman. *J. Gen. Physiol. 32*, 595-605(1949).

P 178 Studies with Radiophosphorus in Drosophila. I. The Mutagenic Effectiveness of Radioactive Phosphorus in Adult Male *Drosophila melanogaster*. R. C. King. *J. Exptl. Zool. 122*, 541-75(1953).

P 179 A Study of Antigen Localization and Degradation and the Histologic Reaction in the Spleen of Normal, X-Irradiated, and Spleen-Shielded Rats. F. W. Fitch, P. Barker, K. H. Soules, and R. W. Wissler. *J. Lab. Clin. Med. 42*, 598-620(1953).

P 180 A Study of the Short-Time Effects on the Mouse Ovary of Internal Irradiation with P-32. E. Odeblad. *Acta Radiol. 38*, 35-40(1952).

P 181 Sub-lethal Total Body Irradiation and I-131 Metabolism in the Rat Thyroid. R. A. Monroe,

J. H. Rust, and B. F. Trum. *Science 119*, 65–6 (1954).

P 182 Sulfur 35 as a Mutagenic Agent. F. P. Hungate and T. Mannell. *Genetics 36*, 555–6(1951).

P 183 Synergistic Lethal Action of Certain Radioisotopes in Rats. P. R. Salerno, H. L. Friedell, J. H. Christie, and M. Berg. *Radiology 59*, 564–9(1952).

P 184 Testicular Damage in Rats Induced by Radioactive Phosphorus. C. Biddulph, R. H. Peterson, and A. E. Johnson. *J. Clin. Endocrinol. and Metabolism 12*, 953(1952).

P 185 Thiouracil Modification of Effect of Radioiodine (I–131) on the Thyroid. R. Rugh. *Radiology 61*, 391–400(1953).

P 186 Thyroid Response to Total Body X-Irradiation. A. L. Botkin, E. H. Praytor, M. E. Austing and H. Jensen. *Endocrinology 50*, 550–4(1952).

P 187 The Tolerance in Humans of Intrabronchially Administered Radioactive Silver-Coated Gold Colloids. P. F. Hahn, G. H. Hilliard, and E. L. Carothers. *Brit. J. Radiol. 26*, 595–8(1953).

P 188 Toxicity of Radioiodine and Radiophosphorus in Rats in Doses Comparable to Those Used Clinically. C. Moses, J. B. Boatman, R. S. George, and A. M. DeLacio. *Proc. Soc. Exptl. Biol. Med. 79*, 343–4(1952).

P 189 Toxicity of Tritium Oxide to Mice. A. M. Brues, A. N. Stroud, and L. Rietz. *Proc. Soc. Exptl. Biol. Med. 79*, 174–6(1952).

P 190 Tritium-Induced Effects in *Paramecium aurelia*. E. L. Powers and D. Shefner. *Proc. Soc. Exptl. Biol. Med. 78*, 493–7(1951).

P 191 Tumors of Pituitary and Trachea in Mice after High Dosages of Radioactive Iodine. A. Gorbman. *Cancer Research 9*, 596(1949).

P 192 The Use of Beta Radiation on Corneal Lesions in the Dog. F. T. Candlin and M. H. Levine. *North Am. Veterinarian 33*, 632–9(1952).

P 193 The Use of Radiocobalt as a Source of Gamma Rays and Some Effects of Chronic Irradiation on Growing Plants. A. H. Sparrow and W. R. Singleton. *Am. Naturalist 87*, 29–48(1953).

P 194 Using Co–60 and Fission Products in Pork Irradiation Experiments. H. J. Gomberg, S. E. Gould, J. V. Nehemias, and L. E. Brownell. *Nucleonics 12, No. 5*, 38–42(1954).

P 195 Whole Body Irradiation of Large Animals. B. F. Trum. *Military Surgeon 112*, 333–41(1953).

P 196 Atomic Fruits for New Jersey Growers. R. F. Boehm. *Hort. News 5*, 12(1954).

P 197 Biological Effects of Ionizing Radiations from Radium and Polonium on Certain Fungi. S. Berk. *Mycologia 44*, 587–98(1952).

P 198 Carbon Isotope Effects in Biological Systems. D. L. Buchanan, A. Nakao, and G. Edwards. *Science 117*, 541–5(1953).

P 199 Changes in Radioactivity of Fat and Proteins of Frog Embryos During Development. F. Sperling. *Anat. Record 120*, 744(1954).

P 200 Chronic Exposure of Adult Mice to $C-14O_2$. D. L. Buchanan. *Federation Proc. 9*, 156(1950).

P 201 Chronic Low-Level Exposures of Young Mice to Ionizing Radiations and the Effect on Fertility. R. Rugh. *J. Pedial. 44*, 248–57(1954).

P 202 Cirrhosis and Tumors of the Liver Produced in Mice by Colloidal Gold 198. A. C. Upton, J. Furth, and W. T. Burnett, Jr. *Radiation Research 1*, 564(1954).

P 203 Civil Defense Problems Confronting the Veterinarian in an Atomic Age. J. H. Rust and B. F. Trum. *Vet. Med. 48, No. 3*(1953).

P 204 Cytogenetic Effects of X-Ray and Thermal Neutron Irradiation on Seeds of Barley. R. S. Caldecott, B. H. Beard, and C. O. Gardner. *Genetics 39*, 240–59(1954).

P 205 Cytologic and Pathologic Effects of Ionizing Radiation of Interest to the Veterinarian. J. H. Rust. *J. Am. Vet. Med. Assoc. 118*, 355–63(1953).

P 206 A Cytological and Cytochemical Approach to an Understanding of Radiation Damage in Dividing Cells. A. H. Sparrow, M. J. Moses and R. Steele. *Brit. J. Radiol. 25*, 182–9(1952).

P 207 Developmental Effects Observed in *Habrobracon juglandis* after Exposure to Beta Radiation. J. N. Dent and R. L. Amy. *Growth 14*, 113–21(1951).

P 208 Dosimetry of Ionizing Particles. G. Failla and H. H. Rossi. *Am. J. Roentgenol. Radium Therapy 64*, 489(1950).

P 209 Dosimetry of a Kilocurie Cobalt 60 Source. S. Davison, S. A. Goldblith, B. E. Proctor, M. Karel, B. Kan, and C. J. Bates. *Nucleonics 11, No. 7*, 22–6(1953).

P 210 The Early Detection of Experimental Pulmonary Edema in a Dog Breathing Spontaneously (by I–131). D. M. Aviado, Jr., D. Walters, and C. F. Schmidt. *Am. J. Med. Sci. 225*, 21(1953).

P 211 The Effect of Chronic Gamma Radiation on Endosperm Mutations in Maize. W. R. Singleton. *Genetics 39*, 587–603(1954).

P 212 Effect of Cysteine on the Radiosensitivity of Rat Lymphosarcoma. J. P. Storaasli, S. Rosenberg, and H. L. Friedell. *Cancer 6*, 1244(1953).

P 213 Effect of Fractionated Total Body Irradiation on Sarcoma Cells in the Peritoneal Exudate of the Mouse. G. J. Tarleton, H. Goldie, M. Brantley, and M. Simpson. *Federation Proc. 13, No. 1*, 515(1954).

P 214 Effect of High Concentration of P–32 on the Growth of the Potato. W. K. Sinclair and W. R. Stanton. *Nature 176*, 234(1951).

P 215 The Effect of Ionizing Radiations upon the Respiration and Oxidases of the Potato Tuber. A. S. Sussman. *J. Gen. Physiol. 42* (1953).

P 216 The Effect of Locally Applied Beta Radiation on Normal Tissue and the Hypophysis. T. Rasmussen and P. V. Harper, Jr. *Foundation Vol. Second Foundation Montreal Neurol. Inst.* (1954).

P 217 Effect of Pretreatment with Cysteine on Survival of Mice Exposed to External and Internal

Irradiation. H. Goldie, G. J. Tarleton, and P. F. Hahn. *Proc. Soc. Exptl. Biol. Med. 77*, 790–4(1951).

P 218 Effect of Radiophosphorus on Rats with Cobalt-Induced Polycythemia. W. F. Bethard, E. Skirmont, and L. O. Jacobson. *J. Lab. Clin. Med. 36*, 800(1950).

P 219 Effect of Roentgen-Ray Radiation on the Biosynthesis of Nucleic Acids and Nucleic Acid Purines. H. E. Skipper and J. H. Mitchell, Jr. *Cancer 4*, 363–66(1951).

P 220 The Effect of Tritium Oxide on Some Synthetic Processes of *Chlorella pyrenoidosa*. J. W. Porter and H. J. Knauss. *Radiation Research 1*, 253–61(1954).

P 221 The Effect of Various Pathological Conditions on *in Vivo* Hemoglobin Synthesis. II. Polonium Induced Anemia as Studied with Alpha-C–14-Glycine. R. G. Thomas, et al. *Radiation Research 1*, 180–8(1954).

P 222 Effects of Beta Irradiation on the Rabbit Lens. L. Von Sallmann, C. M. Munoz, and A. Drungis. *Arch. Ophthalmol. (Chicago) 50*, 727(1953).

P 223 Effects of Colloidal Gold 198 upon Mice Tumors. R. Robbins, J. Meszaros, G. C. Henny, and A. M. Spiegel. *Radiologica Clinica. 21*, 210(1952).

P 224 Effects of Ionizing Radiation on Immunity. W. M. Hale and R. D. Stoner. *Radiation Research 1*, 59–69(1954).

P 225 The Effects of Ionizing Radiations from Polonium on the Spores of *Aspergillus niger*. S. Berk. *Mycologia 45*, 488–506(1953).

P 226 Extension to Man of Experimental Whole-Body Irradiation Studies: Some Military and Civil Defense Considerations. J. H. Rust, A. M. Budy, and F. C. McLean. *Military Surgeon 112*, 174–82(1953).

P 227 Fractional Total-Body Irradiation and Thyroid Function in the Burro. J. C. Schoolar, J. J. Lane, R. A. Monroe, J. H. Rust, and B. F. Trum. *Science 120*, 1032–3(1954).

P 228 Gross Effects of Growth Inhibiting Levels of Tritium Oxide on *Chlorella pyrenoidosa*. J. W. Porter and H. J. Knauss. *Am. J. Botany 41*, 550–5(1954).

P 229 Hemotological Response of the Burro (Equus asinus asinus) to Total Body Tantalum-182 Irradiation. J. H. Rust, B. F. Trum, J. L. Wilding, and J. J. Lane. *Intern. J. Hematol. 12*, 327–35(1954).

P 230 Increased Susceptibility of Mice to Anaphylactic Shock Following Cobalt 60 Gamma Radiation. R. D. Stoner and W. M. Hale. *J. Immunol. 72*, 419–23(1954).

P 231 The Life Span of White Blood Cells in Irradiated Parabiotic Rats. D. C. Van Dyke and R. L. Huff. *Am. J. Physiol. 165*, 2(1951).

P 232 Mechanism of Petechial Formation (Hamster and Frog). G. P. Fulton, M. H. Shulman, B. R. Lutz, and K. A. Arendt. *Anat. Record 118*, 441(1954).

P 233 Modification of Maternal and Fetal Effects of Radioiodine by Pretreatment of the Mother. R. Rugh and E. Booth. *J. Pediat. 44*, 516–33 (1954).

P 234 Pathologic Changes in Normal Human Thyroid Tissue Following Large Doses of I 131. G. A. Andrews, R. M. Kniseley, R. R. Bigelow, S. W. Root, and M. Brucer. *Am. J. Med. 16*, 372–81 (1954).

P 235 Petechial Formation in the Cheek Pouch of the Hamster (*Mesocricetus auratus*). B. R. Lutz, G. P. Fulton, G. Young, M. H. Shulman, and H. J. Berman. *Federation Proc. 12*, 92(1953).

P 236 Physiological Aberrations Following Total Body Irradiation of Domestic Animals with Large Doses of Gamma Rays. J. H. Rust, B. F. Trum, and U. S. G. Kuhn, III. *Vet. Med. 49*, 318(1954).

P 237 The Protective Effect of Glutathione Against Radiation Induced Chromosome Aberration. K. Mikaelsen. *Science 116*, 172–4(1952).

P 238 Protective Properties of Cysteine, Sodium Hyposulfite and Sodium Cyanide Against Radiation-Induced Chromosome Aberrations. K. Mikaelson. *Proc. Natl. Acad. Sci. 40*, 171–8(1954).

P 239 Radioactive Materials as Plant Stimulants—Field Results (Summary). L. T. Alexander. *Agron. J. 42*(1950).

P 240 Relative Bactericidal Efficiencies of Three Types of High-Energy Ionizing Radiations. S. A. Goldblith, B. E. Proctor, S. Davison, B. Kan, C. J. Bates, E. M. Oberle, M. Karel, and D. A. Lang. *Food Research 18*, 659–77(1953).

P 241 The Relative Biological Effectiveness of Fast Neutrons and Co60 Gamma Rays. H. H. Vogel, J. W. Clark, and D. C. Jordan. *Radiation Research 1*, 233(1954).

P 242 Reproduction in Paramecium as Affected by Small Doses of X-Ray and Beta Radiation. G. E. Daniel and H. D. Park. *Proc. Soc. Exptl. Biol. Med. 83*, 662–5(1953).

P 243 The Role of Ionizing Radiation in Eliciting Tumors of the Pituitary Gland in Mice. A. Gorbman and A. Edelmann. *Proc. Soc. Exptl. Biol. Med. 81*, 348–50(1952).

P 244 Root Production in Plants Following Localized Stem Irradiation. E. Christensen. *Science 119*, 127–8(1954).

P 245 Some Blood Values of the Southwestern Burro (*Equus asinus asinus*) I. Cytoloty. J. L. Wilding, A. W. Kimball, M. W. Whitaker, B. F. Trum, and J. H. Rust. *Am. J. Vet. Research 13*, 509(1952).

P 246 Some Epidemiological Aspects of the Radiation Syndrome in Domestic Animals. U. S. G. Kuhn, III. *Southwestern Veterinarian 7*(1954).

P 247 Studies of F–1 Generation Hybrid Mice from an Irradiated Parent. J. H. Rust, A. M. Budy and R. D. Boche. *Federation Proc. 11*, 135(1952).

P 248 Studies on Induced Mutation in Maize. E. J. Dollinger. *Genetics 39*, 750–66(1954).

P 249 Synergistic Effect of Internal Irradiation and Phlebotomy on Production of Cirrhosis and Ascites in Dogs. P. F. Hahn, E. L. Carothers, and H. Brummit. *Am. J. Physiol. 175*, Oct. (1953).

P 250 Total Body Irradiation of Various Species of Animals—Some Physiologic and Pathologic Effects Evident in Blood, Bones and Thyroid. J. H. Rust and B. F. Trum. *Intern. Vet. Congr. Stockholm*(1953).

P 251 Ultraspectrophotometrical Studies of Mouse Tumors Treated with Colloid Au 198. R. Robbins. J. Meszaros, G. C. Henry, and A. M. Spiegel. *Federation Proc. 10*(1951).

P 252 Variations in the Floral Morphology of Normal and Irradiated Plants of *Tradescantia paludosa*. J. E. Gunckel, I. B. Morrow, A. H. Sparrow, and E. Christensen. *Bull. Torrey Botan. Club 80*, 445–6(1953).

P 253 Vascular Effect in the Hamster Cheek Pouch after Irradiation. G. P. Fulton, B. R. Lutz, D. L. Jofter, and F. W. Maynard. *Anat. Record 115*, 446–7(1953).

P 254 Vegetative and Floral Development of Irradiated and Non-Irradiated Plants of *Tradescantia paludosa*. J. E. Gunckel, A. H. Sparrow, I. B. Morrow and E. Christensen. *Am. J. Botany 40*, 317–32(1953).

P 255 Whole Blood Clotting, Clot Retraction and Prothrombin Utilization in Burros Following Total Body Gamma Radiation. B. F. Trum and J. H. Rust. *Proc. Soc. Exptl. Biol. Med. 82*, 347–51 (1953).

P 256 Irradiation and Adrenal Steroidogenesis: Influence of Irradiation of Isolated ACTH-Stimulated Calf Adrenals on Their Cortical Output. F. Ungar, G. Rosenfeld, R. I. Dorfman, and G. Pincus. *Endocrinology 56*, 30(1955).

P 257 The Acute Radiation Syndrome: A Study of Nine Cases and a Review of the Problem. L. H. Hempelmann, H. Liscoe, and J. G. Hoffman. *Ann. Internal Med. 36*, 279–510(1952).

P 258 Anaemia and Erythropoiesis in the Irradiated Rat. An Experimental Study with Particular Reference to Techniques Involving Radioactive Iron. E. H. Belcher, E. B. Harriss, and L. F. Lamberton. *Brit. J. Haematol. 1, No. 1*(1955).

P 259 The Combined Effects of Thermal Burns and Wholebody X Irradiation. II. Anemia. A. K. Davis, E. L. Alpen, et al. *Ann. Surg. 140*, 726–35(1954).

P 260 A Correlation of Morphologic with Metabolic Changes in Rat Skin Following Exposure to Beta (Sr–90) Radiation. C. C. Lushbaugh, et al. *Am. J. Pathol. 28*, 515(1952).

P 261 The Effects of Localized Beta Irradiation on the Skin Cycle of the Rat. J. P. Parnell and J. F. Gennaro, Jr. *Anat. Record 118*, 337(1954).

P 262 Influence of Ionizing Radiation and Dietary Restriction on Body Fuid Compartments and Water Kinetics in Patients with Malignant Lymphoma. J. Greenberg and D. Laszlo. *Federation Proc. 13, No. 1*, March(1954).

P 263 The Inhibitory Effect of Beta Radiation (P 32) on Fibroplasia in Rat Skin. C. C. Lushbaugh and J. B. Storer. *Am. J. Pathol. 28*, 515(1952).

P 264 Metabolism of Benzoic Acid in Normal and Irradiated Rats. K. Schreier, K. I. Altman and L. H. Hempelmann. *Proc. Soc. Exptl. Biol. Med. 87*, 61–3(1954).

P 265 Practical Aspects of Radiation Injury. L. H. Hemplemann and J. G. Hoffman. *Ann. Rev. Nuclear Sci. 3*(1953).

P 266 Radiomanganese Studies in the Pancreatic Fistula Dog. W. T. Burnett, Jr., R. R. Bigelow, and C. W. Sheppard. *Am. J. Physiol. 163*, 702(1950).

P 267 Radon Inhalation Studies in Rats. S. H. Cohn and R. K. Skow. *Arch. Ind. Hyg. and Occupational Med. 7*, 508–15(1953).

P 268 Remarks of the Radiosensitivity of Unicellular Organisms. C. A. Tobias. *Acta Radiol. 41*, 105–8(1954).

P 269 Serum and Urinary Fibrinolytic Activity Related to the Hemorrhagic Diathesis in Irradiated Dogs. J. Colgan, E. Gates, and L. L. Miller. *J. Exptl. Med. 95*, 531–42(1952).

Biochemistry

Q 1 The Absorption of C–14-Labeled Epicholesterol in the Rat. H. H. Hernandez, I. L. Chaikoff, W. G. Dauben, and S. Abraham. *J. Biol. Chem. 206*, 757–65(1954).

Q 2 Absorption of Enterally Administered 17α-Methyl-C–14-Testosterone and its Metabolites. P. M. Hyde, E. A. Doisy, Jr., W. H. Elliott, and E. A. Doisy. *J. Biol. Chem. 209*, 257–63(1954).

Q 3 Acetal Phospholipid. S. R. Korey and J. B. Wittenberg. *Federation Proc. 13, No. 1*, 244(1954).

Q 4 Acetate Utilization and Fatty Acid Synthesis in Intact Normal and X-Irradiated Rats. J. G. Coniglio and G. W. Hudson. *Federation Proc. 13, No. 1*, 194(1954).

Q 5 Acetoacetate Formation in Liver. II. On the Degradation of Acetoacetic Acid. D. S. Goldman, G. W. Brown, Jr., H. R. Matheson, and I. L. Chaikoff. *J. Biol. Chem. 195*, 415–22(1952).

Q 6 Acetoacetate Formation in Liver. III. On the Mechanism of Acetoacetate Formation from Palmitic Acid. G. W. Brown, Jr., D. D. Chapman, H. R. Matheson, I. L. Chaikoff, and W. G. Dauben. *J. Biol. Chem. 209*, 537–48(1954).

Q 7 An Action of ACTH on Adrenal Slices. R. Haynes, K. Savard, and R. I. Dorfman. *Science 116*, 690–1(1952).

Q 8 The Action of Adrenocorticotropic Hormone on Beef Adrenal Slices. R. Haynes, K. Savard, and R. I. Dorfman. *J. Biol. Chem. 207*, 925–38(1954).

Q 9 The Action of Isotopic Insulin Bound Tissues. W. C. Stadie, N. Haugaard and M. Vaughan. *Trans. Assoc. Am. Physicians 65*, 230(1952).

Q 10 Action of Rat Liver on 2-Acetylaminofluorene. J. H. Peters and H. R. Gutmann. *Federation Proc. 13, No. 1*, 273(1954).

Q 11 The Action of Transglucosidase of *Aspergillus oryzae* on Maltose. J. H. Pazur and D. French. *J. Biol. Chem. 196*, 265–72(1952).

Q 12 Activation of Formate for Purine Synthesis. R. A. Peabody. *Federation Proc. 12*, 254(1953).

Q 13 Adenylate Kinase Activity *in Vivo*. F. A. Cobey and P. Handler. *Federation Proc. 12*, 190–1(1953).

Q 14 The Alkali-Catalyzed Conversion of Glucose into Fructose and Mannose. Y. J. Topper and D. Stetten, Jr. *J. Biol. Chem. 189*, 191–202(1951).

Q 15 Alkaline Phosphatase Substrate Specificities in Cultured Normal and Malignant Cells of Mouse, Rat, and Fowl. J. J. Biesele and A. Y. Wilson. *Cancer Research 11*, 174–9(1951).

Q 16 Amide Metabolism in Higher Plants. I. Preparation and Properties of a Glutamyl Transphorase from Pumpkin Seedling. P. K. Stumpf, W. D. Loomis, and C. Michelson. *Arch. Biochem. 30*, 126–37(1951).

Q 17 Amino Acid Biosynthesis Studied with $C-14O_2$. R. W. Swick and D. M. Tahara. *Federation Proc. 13, No. 1*, 308(1954).

Q 18 The Amino Acid Composition of Phosphorylase. S. F. Velick and L. F. Wicks. *J. Biol. Chem. 190*, 741–51(1951).

Q 19 Amino Acid Incorporation *in Vivo* into Liver Fractions. R. Brunish and J. M. Luck. *J. Biol. Chem. 198*, 621–8(1952).

Q 20 The Amino End-Group and the Amino Acid Composition of Salmine. S. F. Velick and S. Udenfriend. *J. Biol. Chem. 191*, 233–8(1951).

Q 21 Aminopurine Interconversion in *Tetrahymena gele* II. Role of 8-Azaguanine and Hypoxanthine. M. Flavin and M. Engelman. *J. Biol. Chem. 200*, 59–68(1953).

Q 22 Anaerobic Dissimilation of C-14-Labeled Glucose and Fructose by *Pseudomonas lindneri*. M. Gibbs and R. D. DeMoss. *J. Biol. Chem. 207*, 689–94(1954).

Q 23 Apparent Adenylate Kinase Activity *in Vivo*. F. A. Cobey and P. Handler. *J. Biol. Chem. 204*, 283–8(1953).

Q 24 Ascorbic Acid Synthesis in Normal and Drug-Treated Rats, Studied with L-Ascorbic-1-C14 Acid. J. J. Burns, E. H. Mosbach, and S. Schulenberg. *J. Biol. Chem. 207*, 679–87 (1954).

Q 25 Assimilation of Carbon Dioxide in Oxalate and Citrate by *Aspergillus niger*. K. F. Lewis and S. Weinhouse. *J. Am. Chem. Soc. 73*, 2906–9(1951).

Q 26 Assimilation of C14-Labeled Carbon Dioxide by a Photosynthesizing Red Alga, *Irideae laminarioides*. R. C. Bean and W. Z. Hassid. *Federation Proc. 13, No. 1*, 179–80(1954).

Q 27 The Binding of Diphosphopyridine Nucleotide by Glyceraldehyde-3-phosphate Dehydrogenase. S. F. Velick, J. E. Hayes, Jr., and J. Harting. *J. Biol. Chem. 203*, 527–44(1953).

Q 28 Binding and Release of Radioactive Histamine in Intact Rats. R. W. Schayer and R. L. Smiley. *Federation Proc. 13, No. 1*, 289–90(1954).

Q 29 Bioassay of Parathyroid Hormone. B. L. Rubin and R. I. Dorfman. *Proc. Soc. Exptl. Biol. Med. 83*, 223–5(1953).

Q 30 Bioassay of Vitamin D with Radiophosphorus. H. L. Sassaman, A. Rodgers, and A. E. Schaefer. *Federation Proc. 13, No. 1*, 470–1(1954).

Q 31 Biochemical Changes in Unsaturated Fatty Acid Deficiency. P. D. Klein and R. M. Johnson. *Federation Proc. 12*, 231(1953).

Q 32 Biochemical Sequence of Events After Insulin Administration to Diabetic Rats. A. E. Renold and A. B. Hastings. *J. Clin. Invest. 33*, 959 (1954).

Q 33 Biochemical Studies of Virus Reproduction. V. The Origin of Bacteriophage Nitrogen. L. M. Kozloff, K. Knowlton, F. W. Putnam, and E. A. Evans, Jr. *J. Biol. Chem. 188*, 101–16(1951).

Q 34 Biochemical Studies of Virus Reproduction. XII. The Fate of Bacteriophage T7. R. P. Mackal and L. M. Kozloff. *J. Biol. Chem. 209*, 83–90(1954).

Q 35 Biochemical Studies of Virus Reproduction. VIII. Purine Metabolism. A. L. Koch, F. W. Putnam, and E. A. Evans, Jr. *J. Biol. Chem. 197*, 113–20(1952).

Q 36 Biochemical Studies of Virus Reproduction. XI. Acid-Soluble Purine Metabolism. A. L. Koch. *J. Biol. Chem. 203*, 227–37(1953).

Q 37 Biological Asymmetry of Glycerol and Formation of Asymmetrically Labeled Glucose. P. Schambye, H. G. Wood, and G. Popjak. *J. Biol. Chem. 206*, 875–82(1954).

Q 38 The Biological Functions of Pteridine Derivatives. J. R. Totter. *J. Cellular Comp. Physiol. 41, Sup. 1*, 241–59(1953).

Q 39 Biological Precursors of Glycine. F. C. Chao, C. C. Delwiche, and D. M. Greenberg. *Biochim. et Biophys. Acta 10*, 103–9(1953).

Q 40 Biophysical Methods for the Assay of the Life Span of Red Blood Cells. H. C. Box, W. G. Schenk, and C. E. Wiles. *Science 118*, 72–3 (1953).

Q 41 Biosynthetic Path from Glucose to Shikimic Acid. H. Shigeura, D. B. Sprinson, and B. D. Davis. *Federation Proc. 12*, 458(1953).

Q 42 Biotin Nutriture and the Exzymatic Incorporation of $NaHC-14O_3$ into Acetoacetate. G. W. E. Plaut. *Proc. Soc. Exptl. Biol. Med. 78*, 769–70(1951).

Q 43 The Breakdown of Desoxyribonucleic Acid under Deuteron and Electron Bombardment. C. L. Smith. *Arch. Biochem. and Biophys. 46*, 12–7 (1953).

Q 44 Butyrate as a Precursor of Milk Constituents in the Intact Dairy Cow. M. Kleiber, A. L. Black, M. A. Brown, J. Luick, C. F. Baxter, and B. M. Tolbert. *J. Biol. Chem. 210*, 239–47 (1954).

Q 45 Calcium Complexes of Adenosinetriphosphate and Adenosinediphosphate and Their Significance in Calcification *in Vitro*. V. DiStefano and W. F. Neuman. *J. Biol. Chem. 200*, 759–63 (1953).

Q 46 Carbohydrate Intermediates of the Human Erythrocyte. G. R. Bartlett. *Federation Proc. 13, No. 1*, 179(1954).

Q 47 Carbon Atom 2 of L-Histidine-2-C–14, a Source of the Carbon of Labile Methyl Groups in Liver. M. Toporek, L. L. Miller, and W. F. Bale. *J. Biol. Chem. 198*, 839–51(1952).

Q 48 Carbon Dioxide Fixation by Microorganisms. V. H. Lynch and M. Calvin. *J. Bacteriol. 63*, 525–31(1952).

Q 49 $C-14O_2$ Fixation During Amphibian Development. S. Cohen. *Federation Proc. 12*, 191 (1953).

Q 50 The Catabolism of Uracil *in Vivo* and *in Vitro*. R. J. Rutman, A. Cantarow, and K. E. Paschkis. *J. Biol. Chem. 210*, 321–9(1954).

Q 51 Cation Interrelationships at the *Fundulus ectoderm*. D. R. Shanklin. *Biol. Bull. 105*, 368 (1953).

Q 52 Certain Biological Activities of Crystalline Electrocortin. R. S. Speirs, S. A. Simpson and J. F. Tait. *Endocrinology 55*, 233–6(1954).

Q 53 Certain Interrelationships in the Metabolism of Glycine and Serine. D. Elwyn and D. B. Sprinson. *J. Biol. Chem. 207*, 459–65(1954).

Q 54 Characteristics of the Amino Acid-Incorporating System of Liver Homogenates. E. A. Peterson and D. M. Greenberg. *J. Biol. Chem. 194*, 359–75(1952).

Q 55 Chick Vitamin D Assay Method Using Radioactive Calcium (Ca–45). H. Patrick and G. K. Schweitzer. *Federation Proc. 13, No. 1*, 472 (1954).

Q 56 Cholesterol Metabolism. 1. Effect of Dietary Cholesterol on the Synthesis of Cholesterol in Dog Tissue *in Vitro*. R. G. Gould, C. B. Taylor, J. S. Hagerman, I. Warner and D. J. Campbell. *J. Biol. Chem. 201*, 519–28(1953).

Q 57 Cholesterol Synthesis by Liver. I. Influence of Fasting and of Diet. G. M. Tomkins and I. L. Chaikoff. *J. Biol. Chem. 196*, 569–73 (1952).

Q 58 Choline Phosphokinase. J. Wittenberg and A. Kornberg. *J. Biol. Chem. 202*, 431–44(1953).

Q 59 Chylomicrons and Absorption of Labeled Fatty Acid. W. W. Burr, Jr., C. Dunkelberg, and H. C. Tidwell. *Federation Proc. 13, No. 1*, 187–8(1954).

Q 60 Citrulline as a Precursor of Pyrimidines. M. R. Heinrich, V. C. Dewey, and G. W. Kidder. *J. Am. Chem. Soc. 76*, 3102–3(1954).

Q 61 Cleavage of Adenosine Triphosphate by Actomyosin. D. E. Koshland, Jr., and Z. Budenstein. *Federation Proc. 13, No. 1*, 245(1954).

Q 62 Coenzyme a Function in and Acetyl Transfer by the Phosphotransacetylase System. E. R. Stadtman, G. D. Novelli, and F. Lipmann. *J. Biol. Chem. 191*, 365–76(1951).

Q 63 The Coenzyme A Transphorase System in *Clostridium kluyveri*. E. R. Stadtman. *J. Biol. Chem. 203*, 501–12(1953).

Q 64 Cofactor Requirement for Lipogenesis. J. Van Baalen and S. Gurin. *J. Biol. Chem. 205*, 303–8(1953).

Q 65 The Combination between Hemolysins and Red Cells or Ghosts as Studied with A Radioactive Lysin and with New Color Reactions. E. Ponder and R. V. Ponder. *J. Gen. Physiol. 37*, 411–22(1954).

Q 66 The Combination of Organic Anions with Serum Albumin. VIII. Fatty Acids Salts. J. D. Teresi and J. M. Luck. *J. Biol. Chem. 194*, 823–34(1952).

Q 67 Comparison of *in Vitro* Serum Protein Binding of Thyroxin and Triiodothyronine. W. P. Deiss, E. C. Albright and F. C. Larson. *Proc. Soc. Exptl. Biol. Med. 84*, 513–6(1953).

Q 68 The Composition of Amino Acid End-Groups of Glyceraldehyde-3-Phosphate Dehydrogenases. S. F. Velick and S. Udenfriend. *J. Biol. Chem. 203*, 575–82(1953).

Q 69 Concerning the *in Vitro* Metabolism of Labeled Carcinogenic Hydrocarbons. W. G. Wiest and C. Heidelberger. *Cancer Research 12*, 308(1952).

Q 70 Conversion of 5-Amino-4-imidazolecarboxamide Riboside to Its Phosphoribotide and to Inosinic Acid. G. R. Greenberg. *Federation Proc. 12*, 211–2(1953).

Q 71 Conversion of C–14-Butyrate to Crotonate and Vinylacetate by Mammalian Heart Muscle. M. Cook. *Federation Proc. 13, No. 1*, 29–30(1954).

Q 72 The Conversion of C–14-Labeled Glucose to Glucuronic Acid in the Guinea Pig. J. F. Douglas and C. G. King. *J. Biol. Chem. 202*, 865–71(1953).

Q 73 Conversion of Ethanolamine and Pentose to Acetate in the Rat. D. B. Sprinson and I. Weliky. *Federation Proc. 13, No. 1*, 302(1954).

Q 74 Conversion of C–14-Labeled Propionate, Lactate, and Pyruvate to Acetyl Groups in the Rat. W. W. Shreeve. *J. Biol. Chem. 195*, 1–10(1952).

Q 75 Conversion of C–14-Palmitic Acid to Glucose. I. Normal and Diabetic Rats. E. H. Strisower, I. L. Chaikoff, and E. O. Weinman. *J. Biol. Chem. 192*, 453–63(1951).

Q 76 The Conversion of Cystinamine to Taurine in Rat, Rabbit, and Man. L. Eldjarn. *J. Biol. Chem. 206*, 483–90(1954).

Q 77 Conversion of Glucose to Amino Acids by Brain and Liver of The New-Born Mouse. R. J. Winzler , K. Moldave, M. E. Rafelson, Jr., and H. E. Pearson. *J. Biol. Chem. 199*, 485–92(1952).

Q 78 Conversion of Glucose-1-C–14 to Pectin. B. Axelrod, C. G. Seegmiller, and R. M. McCready. *Federation Proc. 13, No. 1*, 177(1954).

Q 79 The Conversion of L-Histidine to Glutamic Acid by Liver Enzymes. A. Abrams and H. Borsook. *J. Biol. Chem. 198*, 205–14(1952).

Q 80 The Conversion of L-Lysine-6-C–14 to Pipecolic Acid in the Rat. M. Rothstein and L. L. Miller. *J. Am. Chem. Soc. 75*, 4371–2(1953).

Q 81 Correlation of Bond Breaking with Enzyme Specificity. Cleavage Point of Invertase. D. E. Koshland, Jr. and S. S. Stein. *J. Biol. Chem. 208*, 139–48(1954).

Q 82 *In Vitro* Conversion of Radioglucose to Free and Protein-Bound Amino Acids by Virus-Infected Mouse Brain. K. Moldave, M. E. Rafelson, Jr., D. Lagerborg, H. E. Pearson, and R. J. Winzler. *Arch. Biochem. and Biophys. 50*, 383–91(1954).

Q 83 Cortisone Inhibition of Mucopolysaccharide Synthesis in the Intact Rat. L. L. Layton. *Arch. Biochem. and Biophys. 32*, 224–6(1951).

Q 84 Course of Development of Serum Lipoprotein Derangement Resulting from X-Irradiation of the Dog. W. H. Goldwater and C. Entenman. *Federation Proc. 13, No. 1*, 218–9(1954).

Q 85 Cyanide-Induced Acetylation of Amino Acids by Enzymes of *Clostridium kluyveri*. E. R. Stadtman, J. Katz and H. A. Barker. *J. Biol. Chem. 195*, 779–85(1952).

Q 86 Cystathionine-C–14 and Cystine-3-C–14 as Sources of Methyl Groups of Choline and Creatine in the Intact Rat. J. A. Stekol, S. Weiss, and P. Smith. *Federation Proc. 12*, 274(1953).

Q 87 Degradation of Isotopically Labeled Citric, α-Ketoglutaric and Glutamic Acids, E. H. Mosbach, E. F. Phares, and S. F. Carson. *Arch. Biochem. and Biophys. 33*, 179–85(1951).

Q 88 Degradation of Radioactive Penicillin G. J. Tome, H. D. Zook, R. B. Wagner, and R. W. Stone. *J. Biol. Chem. 203*, 251–5(1953).

Q 89 The Determination of the Stability of Vitamin B–12 in Multivitamin Mixture by a Radioactive Indicator Method. C. Rosenblum and D. T. Woodbury. *J. Am. Pharm. Assoc., Sci. Ed. 61*, 368–71(1952).

Q 90 The Determination of Vitamin D with Radiophosphorus. R. H. Snyder, H. J. Eisner, and and H. Steenbock. *J. Nutrition 45*, 305–18 (1951).

Q 91 Deuterium Studies on the Mechanism of Enzymatic Amino Acid Decarboxylation. S. Mandeles, R. Koppelman, and M. E. Hanke. *J. Biol. Chem. 209*, 327–36(1954).

Q 92 Deuteron Inactivation of Dry Bovine Serum Albumin. W. P. McNulty, Jr., and F. Hutchinson. *Arch. Biochem. and Biophys. 50*, 92–103(1954).

Q 93 The Disappearance of Radioactivity from the Tissues of Rats of Different Ages after Subcutaneous Administration of Radiovitamin B–12. C. A. Lang, D. M. Gleysteen, and B. F. Chow. *J. Nutrition 50*, 213–22(1953).

Q 94 Distribution and Incorporation of Radioactive 6-Mercaptopurine in the Tissues of the Mouse. G. H. Hitchings, G. B. Elion, and S. Bieber. *Federation Proc. 13, No. 1*, 230(1954).

Q 95 Distribution of Isotopically-Labeled Formate in the Nucleotides of Ribo- and Desoxyribonucleic Acids. J. R. Totter, E. Volkin, and C. E. Carter. *Abstracts, 118th Meeting, Am. Chem. Soc.*(1950).

Q 96 A Double Precursor Study of Nucleic Acid Turnover in Normal and Regenerating Liver. E. P. Anderson and S. E. G. Aqvist. *J. Biol. Chem. 202*, 513–20(1953).

Q 97 Effect of ACTH on the Incorporation of C–14 of Glycine in Tissue Proteins. L. M. Marshall and F. Friedberg. *Endocrinology 48*, 113–4(1951).

Q 98 Effect of Adenosine Triphosphate, Magnesium, and Calcium on the Phosphate Uptake by Rabbit Erythrocytes. H. Jonas and D. R. H. Gourley. *Biochim. et Biophys. Acta 14*, 335–45(1954).

Q 99 Effect of Aminopterin on Incorporation of C–14 Formate into the 2 and 8 Carbons of Guanine. D. A. Goldthwait. *Proc. Soc. Exptl. Biol. Med. 86*, 842–3(1954).

Q 100 The Effect of Antibiotics on Urea Breakdown in Mice. R. Z. Dintzis and A. B. Hastings. *Proc. Natl. Acad. Sci. U. S. 39*, 571–8(1953).

Q 101 The Effect of Arsenate on Aerobic Phosphorylation. R. K. Crane and F. Lipmann. *J. Biol. Chem. 201*, 235–43(1953).

Q 102 The Effect of Azaguanine on the Incorporation of Guanine and of 4-Amino-5-Imidazolecarboxamide into Tumor-Bearing Mice. P. E. Carlo and H. G. Mandel. *J. Biol. Chem. 201*, 343–7(1953).

Q 103 Effect of Cations on Incorporation of I–131 into Protein of Rat Thyroid Homogenates. R. L. Sherman and A. W. Wase. *Federation Proc. 13, No. 1*, 295–6(1954).

Q 104 Effect of Dietary Cholesterol on Cholesterol Synthesis in Monkeys' Tissue *in Vitro*. G. E. Cox, L. G. Nelson, W. B. Wood, and C. B. Taylor. *Federation Proc. 13, No. 1*, 31(1954).

Q 105 Effect of 2,4-Diamino-5-(3′,4′-Dichlorophenyl)-6-Methylpyrimidine on the Incorporation of Ureidosuccinic Acid into Nucleic Acid Pyrimidines. E. P. Anderson, E. A. Brown, and

P. K. Smith. *Federation Proc. 13, No. 1,* 174–5(1954).

Q 106 Effect of Dietary Hepatic Necrosis in Rats upon Liver Coenzymes. C. S. Yang and R. E. Olson. *Federation Proc. 13, No. 1,* 483(1954).

Q 107 Effect of 2,4-Dinitrophenol and Sodium Azide on Host Cell Metabolism and Influenza A Virus. J. L. Ingraham, T. O. Roby, and J. H. Peterson. *Arch. Biochem. and Biophys. 46,* 215–20(1953).

Q 108 Effect of Ethionine on the S–35-Cystine Pattern in Rat Liver Fractions. M. Levine. *Federation Proc. 13, No. 1,* 250–1(1954).

Q 109 The Effect of Fasting upon Lipogenesis in the Intact Rat. J. T. Van Bruggen, T. T. Hutchens, C. K. Claycomb, W. J. Cathey and E. S. West. *J. Biol. Chem. 196,* 389–94(1952).

Q 110 The Effect of Fasting upon Tissue Lipogenesis in the Intact Rat. T. T. Hutchens, J. T. Van Bruggen, R. M. Cockburn and E. S. West. *J. Biol. Chem. 208,* 115–22(1954).

Q 111 The Effect of Folic Acid Deficiency on the Metabolism of Choline by Chick Bone Marrow. J. S. Dinning, R. Neatrour, and P. L. Day. *J. Biol. Chem. 209,* 717–21(1954).

Q 112 The Effect of Folic Acid on A-Methopterin-induced Inhibition of Nucleic Acid Synthesis. H. E. Skipper, C. Nolan, M. A. Newton, and L. Simpson. *Cancer Research 12,* 369–70(1952).

Q 113 The Effect of Heparin on the Formation of P–32-Labeled Phospholipid. W. J. Levinsky, R. Shuman, C. R. Robbins and J. Meszaros. *J. Lab. Clin. Med. 41,* 899–905(1953).

Q 114 Effect of Hypophysectomy and of Administration of ACTH on Incorporation of P–32 into Nucleotides of PNA of Adrenals and Liver of the Rat. J. E. Logan and F. C. Heagy. *Federation Proc. 13, No. 1,* 254(1954).

Q 115 Effect of Hypoxia on DNA Synthesis in the Bone Marrow and Spleen of the Rat. W. A. Rambach, J. A. D. Cooper, and H. L. Alt. *Science 119,* 380–1(1954).

Q 116 The Effect of Inherited Factors, the Milk Agent, and Physiological State on Phosphorus Metabolism of Endocrine Glands of Mice. S. Albert and R. M. Johnson. *Cancer Research 12,* 548–8(1952).

Q 117 Effect of Inhibitors on the Photosynthetic Fixation of Carbon Dioxide. R. W. Newburgh and R. H. Burris. *Arch. Biochem. and Biophys. 49,* 98–109(1954).

Q 118 The Effect of Insulin on the Metabolism of Acetate by the Extrahepatic Tissues. D. R. Drury and A. N. Wick. *J. Biol. Chem. 203,* 411–7(1953).

Q 119 Effect of Linoleic Acid on Turnover Curves of Liver Fatty Acids. J. S. Andrews, Jr., S. B. Tove, and H. L. Lucas. *Federation Proc. 13, No. 1,* 175(1954).

Q 120 Effect of Liver on Metabolism of Thyroxine and Triiodothyronine. E. V. Flock and J. L. Bollman. *Federation Proc. 13, No. 1,* 209(1954).

Q 121 Effect of Pooling of Liver Slices upon Protein Synthesis in Guinea Pigs. K. M. Stevens. *Proc. Soc. Exptl. Biol. Med. 82,* 157–60(1953).

Q 122 Effect of Pyruvate on Octanoate Metabolism as Influenced by Potassium and Lithium. R. P. Geyer, E. J. Bowie, and J. C. Bates. *J. Biol. Chem. 203,* 625–8(1953).

Q 123 The Effect of Temperature on the Direct Action of Ionizing Radiation on Catalase. R. Setlow and B. Doyle. *Arch. Biochem. Biophys. 46,* 46–52(1953)

Q 124 The effect of Theiler's GD VII Virus on the Intracellular Distribution of Radiophosphorus in Mouse Brain *in Vitro.* K. Moldave. *J. Biol. Chem. 210,* 343–5(1954).

Q 125 The Effect of Thermal Burns on the Thyroid Activity of the Rat. A. W. Wase and E. Rapplinger. *Endocrinology 53,* 451–4(1953).

Q 126 The Effect of Threonine Deficiency on the Synthesis of some Phosphorus Fractions in the Rat. S. A. Singal, S. J. Hazan, V. P. Sydenstricker, and J. M. Littlejohn. *J. Biol. Chem. 200,* 875–82(1953).

Q 127 Effect of Triton WR–1339 on Cholesterol Synthesis in the Rat. I. D. Frantz, Jr. and B. T. Hinkelman. *Federation Proc. 13, No. 1,* 211–2(1954).

Q 128 Effects of A-Methopterin (4-Amino–N–10-methylpteroylglutamic Acid) on the Synthesis of the Adenine Moiety of Andenosin Triphosphate. H. E. Skipper, C. Morgan, and L. L. Bennett, Jr. *Cancer Research 12,* 413–4(1952).

Q 129 The Effects of A-Methopterin on the *in Vitro* Incorporation of $P\text{–}32O_4$ into Normal and Leukemic Mouse Tisses. A. D. Williams, R. J. Winzler, and L. W. Law. *Cancer Reserach 14,* 135–8(1954).

Q 130 The Effects of Certain Amino Acids and Metabolic Antagonists on Propagation of Theiler's GD VII Virus and P–32 Uptake by Minced One-Day-Old Mouse Brain. M. E. Rafelson, Jr., H. E. Pearson, and R. J. Winzler. *Arch. Biochem. 29,* 69–74(1950).

Q 131 Effects of Choline Administration on the *in Vitro* Oxidation of Fatty Acids by Extrahepatic Tissues. C. Artom. *Federation Proc 13, No. 1,* 176(1954).

Q 132 Effects of Estradiol on the Metabolism of Human Endometrium *in Vitro.* D. D. Hagerman and C. A. Villee. *J. Biol. Chem. 203,* 425–31(1953).

Q 133 Effects of Estradiol on the Metabolism of Human Placenta *in Vitro.* C. A. Villee and D. D. Hagerman. *J. Biol. Chem. 205,* 873–82(1953).

Q 134 Effects of Growth and Adrenocorticotropic Hormones on the Metabolism of Albumin in Hypophysectomized Rats. F. Ulrich, H. Tarver, and C. H. Li. *J. Biol. Chem. 209,* 117–25(1954).

Q 135 Effects of Steroid Hormones Upon Incorporation of Glycine–1–C–14 into Tissue Proteins. E. H.

Frieden and M. R. Laby. *Federation Proc. 13, No. 1*, 213–4(1954).

Q 136 Effects of Testosterone and Other Steroids on Incorporation of Glycine–1–C–14 into Protein by Rat and Human Liver Slices. J. D. Hauschildt and C. M. Grossman. *Endocrinology 53*, 306–10(1953).

Q 137 Effects of Thyroxine, Thyroidectomy and Lowered Environmental Temperature on Incorporation of Deuterium into Cholesterol. W. Marx, S. T. Gustin and C. Levi. *Proc. Soc. Exptl. Biol. Med. 83*, 143–6(1953).

Q 138 Effects of Tumor Growth and X-Irradiation on the Incorporation of Adenine–8–C–14. J. L. Way, H. G. Mandel, and P. K. Smith. *Federation Proc. 13, No. 1*, 317(1954).

Q 139 Electrolyte Metabolism of Rabbit-Kidney Slices: Studies with Radioactive Potassium and Sodium. G. H. Mudge. *Am. J. Physiol. 173*, 511–22(1953).

Q 140 Electrophoresis of the Serum Thyroxine-Binding Protein at pH 4.5. J. Robbins, M. L. Petermann, and J. E. Rall. *Federation Proc. 13, No. 1*, 280–1(1954).

Q 141 Enzymatic Acyl Exchange between Acetyl CoA and β-Ketoacids Leading to Asymmetric Labeling of Acetoacetate. H. Beinert and P. G. Stansly. *Federation Proc. 12*, 176(1953).

Q 142 Enzymatic Breakdown of Uric Acid. E. S. Canellakis and P. P. Cohen. *Federation Proc. 13, No. 1*, 189(1954).

Q 143 Enzymatic Carboxylation of Phosphoenolpyruvate to Oxalacetate. R. S. Bandurski, C. M. Greiner, and J. Bonner. *Federation Proc. 12*, 173–4(1953).

Q 144 Enzymatic Carboxylation of Ribulose Diphosphate. J. R. Quayle, R. C. Fuller, A. A. Benson, and M. Calvin. *J. Am. Chem. Soc. 76*, 3610–1(1954).

Q 145 Enzymatic Cleavage of Diphosphopyridine Nucleotide with Radioactive Pyrophosphate. A. Kornberg and W. E. Pricer, Jr. *J. Biol. Chem. 191*, 535–41(1951).

Q 146 The Enzymatic Conversion of Homogentistic Acid to 4-Fumarylacetoacetic Acid. R. G. Ravdin and D. I. Crandall. *J. Biol. Chem. 189*, 137–49(1951).

Q 147 Enzymatic Degradation of Lysine. T. C. Stadtman. *Federation Proc. 13, No. 1, 303*(1954).

Q 148 Enzymatic Degradation of the Cholesterol Side Chain in Cell-Free Preparations. C. B. Anfinsen and M. G. Horning. *J. Am. Chem. Soc. 75*, 1511–2(1953).

Q 149 The Enzymatic Formation of Oxalacetate from Pyruvate and Carbon Dioxide. I. J. P. Kaltenbach and G. Kalnitsky. *J. Biol. Chem. 192*, 629–39(1951).

Q 150 The Enzymatic Formation of Oxalacetate from Pyruvate and Carbon Dioxide. II. J. P. Kaltenbach and G. Kalnitsky. *J. Biol. Chem. 192*, 641–9(1951).

Q 151 Enzymatic Oxidation of α-Ketoglutarate and Coupled Phosphorylation. S. Kaufman, C. Gilvarg, O. Cori, and S. Ochoa. *J. Biol. Chem. 203*, 869–88(1953).

Q 152 Enzymatic Oxidation of Uric Acid. A. L. Tuttle and P. P. Cohen. *Federation Proc. 12*, 281–2(1953).

Q 153 Enzymatic Reactions in Purine Decomposition by Preparations of *Clostridium acidi-urici*. N. S. Radin and H. A. Barker. *Proc. Natl. Acad. Sci., U. S. 39*, 1196–204(1953).

Q 154 Enzymatic Synthesis of α-Acetolactate from Pyruvate. Y. Kobayashi and G. Kalnitsky. *Federation Proc. 13, No. 1*, 243(1954).

Q 155 The Enzymatic Synthesis of Nucleosides. I. Thymidine Phosphorylase in Mammalian Tissue. M. Friedkin and D. Roberts. *J. Biol. Chem. 207*, 245–6(1954).

Q 156 The Enzymatic Synthesis of Nucleosides. II. Thymidine and Related Pyrimidine Nucleosides. M. Friedkin and D. Roberts. *J. Biol. Chem. 207*, 257–66(1954).

Q 157 The Enzymatic Transfer of Hydrogen. I. The Reaction Catalyzed by Alcohol Dehydrogenase. H. F. Fisher, E. E. Conn, B. Vennesland and F. H. Westheimer. *J. Biol. Chem. 202*, 687–97(1953).

Q 158 The Enzymatic Transfer of Hydrogen. II. The Reaction Catalyzed by Lactic Dehydrogenase. F. A. Loewus, P. Ofner, H. F. Fisher, F. H. Westheimer, and B. Vennesland. *J. Biol. Chem. 202*, 699–704(1953).

Q 159 Enzyme Specificity and Enzyme Mechanism. D. E. Koshland, Jr., and S. S. Stein. *Federation Proc. 12*, 233–4(1953).

Q 160 Erythrocyte Preservation. I. The Relation of the Storage Lesion to *in Vivo* Erythrocyte Senescence. B. W. Gabrio and C. A. Finch. *J. Clin. Invest. 33*, 242–6(1954).

Q 161 Esterification of Inorganic Phosphate Coupled to Electron Transport Between Dihydrodiphosphopyridine Nucleotide and Oxygen. I. M. Friedkin and A. L. Lehninger. *J. Biol. Chem. 178*, 611–23(1949).

Q 162 Estimation of Glucose Catabolism Pathways. K. F. Lewis, H. J. Blumenthal, C. E. Wenner and S. Weinhouse. *Federation Proc. 13, No. 1*, 252(1954).

Q 163 Evidence for the Biochemical Stability of Desoxyribosenucleic Acid (DNA). A. D. Barton. *Federation Proc. 13, No. 1*, 422(1954).

Q 164 Evidence from Fermentation of Labeled Substrates Which Is Inconsistent with Present Concepts of the Propionic Acid Fermentation. F. W. Leaver and H. G. Wood. *J. Cellular Comp. Physiol. 41, Sup. 1*, 225–40(1953).

Q 165 Evidence of Intermediate Compounds in Serum Albumin Synthesis. T. Peters, Jr. *J. Biol. Chem. 200*, 461–70(1953).

Q 166 Evidence on the Metabolism of α-Acetyllysine. I. Clark and D. Rittenberg. *J. Biol. Chem. 189*, 529–31(1951).

Q 167 Evidence that Molybdenum Is a Nondialyzable Component of Xanthine Oxidase. J. R. Totter, W. T. Burnett, Jr., R. A. Monroe, I. B. Whitney, and C. L. Comar. *Science 118*, 555(1953).

Q 168 Exchange of Labeled Phosphate with Calcium Phosphate Precipitates Formed from Serum Salt Solutions. A. C. Kuyper. *Federation Proc. 12*, 234(1953).

Q 169 Factors Affecting Exchange of Formate with Pyruvate-Carboxyl by Phosphoroclastic Reaction. G. D. Novelli, H. Gest, and L. O. Krampitz. *Federation Proc. 13, No. 1*, 270 (1954).

Q 170 Fat Absorption after Oral Administration of a Dioleyl-Deuteriostearin and Glycerol-C–14. M. G. Morehouse and W. Skipski. *Federation Proc. 12*, 248–9(1953).

Q 171 Fate of the Methyl Group of the Carcinogen 2-Methyl-C–14-Aminofluorene. E. K. Weisburger, J. H. Weisburger and H. P. Morris. *Federation Proc. 13, No. 1*, 318–9(1954).

Q 172 Fatty Acid Oxidation by a Soluble Enzyme System from Mitochondria. G. R. Drysdale and H. A. Lardy. *J. Biol. Chem. 202*, 119–36 (1953).

Q 173 Fermentation of 3,4-C–14- and 1-C–14-Labeled Glucose By *Clostridium thermoaceticum*. H. G. Wood. *J. Biol. Chem. 199*, 579–83(1952).

Q 174 Fermentation of 1-C–14-D-Xylose by *Lactobacillus pentosus*. H. Gest and J. O. Lampen. *J. Biol. Chem. 194*, 555–62(1952).

Q 175 Fermentation of D-Xylose-1-C–14 by *Fusarium lini* (B.). M. Gibbs, V. W. Cochrane, L. M. Paege, and H. Wolin. *Arch. Biochem. and Biophys. 50*, 237–42(1954).

Q 176 Fermentation of Ribose-C–14 by *Lactobacillus pentosus*. I. A. Bernstein. *J. Biol. Chem. 205*, 309–16(1953).

Q 177 CO_2 Fixation into Oxalacetate. T. T. Tchen and B. Vennesland. *Federation Proc. 13, No. 1*, 310(1954).

Q 178 The Fixation of Carbon Dioxide in 6-Phospho-Gluconic Acid. B. L. Horecker and P. Z. Smyrniotis. *J. Biol. Chem. 196*, 155–42(1952).

Q 179 Formaldehyde-Pyruvate Condensing Enzyme. M. C. Mitchell and C. Artom. *Federation Proc. 11*, 261(1952).

Q 180 Formate Fixation in Pyruvate by *Escherichia coli*. H. J. Strecker. *J. Biol. Chem. 189*, 815–30(1951).

Q 181 Formate as a Precursor of Carboxylic Acids in Fungi. W. E. Jefferson, J. W. Foster, E. F. Phares and S. F. Carson. *J. Am. Chem. Soc. 74*, 1477(1952).

Q 182 The Formation of Amino Acids from Carbohydrate Carbon in the Mouse. R. Steele. *J. Biol. Chem. 198*, 237–44(1952).

Q 183 Formation of Lactose in Homogenates of Mammary Gland. F. J. Reithel, M. G. Horovitz, H. M. Davidson and G. W. Kittinger. *J. Biol. Chem. 194*, 839–48(1952).

Q 184 The Formation of New Glyceride-Ester Bonds During Digestion of Glycerides in the Lumen of the Small Intestine of the Rat. B. Borgstrom. *Arch. Biochem. and Biophys. 49*, 268–75(1954).

Q 185 Formation of a Protein-Bound Metabolite of Estradiol-16-C–14 by Rat Liver Homogenates. I. L. Riegel and G. C. Mueller. *J. Biol. Chem. 210*, 249–57(1954).

Q 186 Formation of a Protein-Bound Metabolite of Estradiol-16-C–14 in a Rat Liver Homogenate System. G. C. Mueller and I. L. Riegel. *Federation Proc. 13, No. 1*, 267–8(1954).

Q 187 The Formation of Sedoheptulose Phosphate from Pentose Phosphate. B. L. Horecker, P. Z. Smyrniotis and H. Klenow. *J. Biol. Chem. 205*, 661–82(1953).

Q 188 The Fortification of Bread with Lysine. 2. The Nutritional Value of Fortified Bread. H. R. Rosenberg, and E. L. Rohdenburg. *Arch. Biochem. and Biophys. 37*, 461–8(1952).

Q 189 Fractionation and Identification of Some Metabolites of 2-Acetylaminofluorene-9-C–14. J. H. Weisburger, E. K. Weisburger, H. A. Sober, and H. P. Morris. *Federation Proc. 12*, 287(1953).

Q 190 Further Requirements for Enzymatic Degradation of Cholesterol. D. S. Fredrickson, M. G. Horning, and C. B. Anfinsen. *Federation Proc. 13, No. 1*, 212(1954).

Q 191 Further Studies on the Phosphorylating Enzyme. S. Kaufman and S. G. A. Alivisatos. *Federation Proc. 13, No. 1*, 239(1954).

Q 192 Generality of Stepwise Protein Synthesis. C. B. Anfinsen and M. Flavin. *Federation Proc. 12*, 170(1953).

Q 193 Glucose, Gluconate, and 2-Ketogluconate Oxidation by *Acetobacter melanogenum*. H. Katznelson, S. W. Tanenbaum and E. L. Tatum. *J. Biol. Chem. 204*, 43–59(1953).

Q 194 Glutathione, A. Prosthetic Group of Glyceraldehyde-3-Phosphate Dehydrogenase. I. Krimsky and E. Racker. *J. Biol. Chem. 198*, 721–9(1952).

Q 195 Glycolysis and Phosphate Fractions of Red Blood Cells. C. B. Mueller and A. B. Hastings. *J. Biol. Chem. 189*, 881–8(1951).

Q 196 Glycine Ribotide Precursors of Inosinic Acid. D. A. Goldthwait and R. A. Peabody. *Federation Proc. 13*, No. 1, 218(1954).

Q 197 Heated Milk. V. Reacton of Lactose with Milk Protein as shown by Lactose-1-14–C. S. Patton and R. J. Flipse. *J. Dairy Sci. 36*, 766–71(1953).

Q 198 Hepatic Lipoproteins. R. E. Olson and J. R. Jablonski. *Federation Proc. 13, No. 1*, 270-1(1954).

Q 199 On the Heterongeneity of the Desoxyribonucleic Acids. A. Bendich, P. J. Russell, Jr., G. B. Brown. *J. Biol. Chem. 203*, 305–18(1953).

Q 200 The Hydroxylation of Phenylalanine and Antipyrine in Phenylpyruvic Oligophrenia. S. Udenfriend and S. P. Bessman. *J. Biol. Chem. 203*, 961–6(1953).

Q 201 Importance of Glycolytic and "Oxidative" Pathways in Glucose Utilization by Liver. J. Katz, S. Abraham, R. Hill, and I. L. Chaikoff. *J. Am. Chem. Soc. 76*, 2277–8(1954).

Q 202 Incorporation of DL-Alanine-1-C–14 into Liver and Carcass Glutamate in Intact Rats. R. E. Koeppe and R. J. Hill. *Federation Proc. 13, No. 1*, 243–4(1954).

Q 203 Incorporation of C–14 from Acetate into Cholesterol by Liver Cell Fractions. N. L. R. Bucher, J. W. Grover and R. Kingston. *Federation Proc. 13, No. 1*, 19–20(1954).

Q 204 Incorporation of Components of Purine Nucleotides into Rat Pentose Nucleic Acids. P. M. Roll and H. Weinfeld. *Federation Proc. 13, No. 1*, 282(1954).

Q 205 Incorporation of Glycine-2-C–14 into Acid-Soluble Nucleotide Purines. M. Edmonds and G. A. LePage. *Federation Proc. 13, No. 1*, 202(1954).

Q 206 Incorporation of P–32 into the Lipids, PNA and other Protein-Bound Phosphorus Fractions of Normal and Degenerating Nerve. W. L. Magee and R. J. Rossiter. *Federation Proc. 13, No. 1*, 257–8(1954).

Q 207 *In Vitro* Incorporation of C–14 Glycine and S-35 Sulfate into Protein by Human Colon Mucosa. C. M. Grossman, J. D. Hauschildt, and J. D. Case. *Proc. Soc. Exptl. Biol. Med. 82*, 785–8(1953).

Q 208 Incorporation of P–32 into Mononucleotide and Polynucleotide Components of Pentosenucleic Acid. T. D. Price, P. B. Hudson, L. Eisler, and I. Futter. *Federation Proc. 13, No. 1*, 276–7(1954).

Q 209 Incorporation of Radioactive Formate into Inosinic Acid by Fractions of Pigeon Liver Extract. J. G. Flaks, J. A. Gladner, and J. M. Buchanan. *Federation Proc. 13, No. 1*, 208(1954).

Q 210 *In Vitro* Incorporation of Radioactive S–35 Methionine by Beef Pituitary Slices. L. Kraintz and R. V. Talmage. *Anat. Record 117*, 537(1953).

Q 211 Influence of Hematocrit and Plasma on the Mechanism of Phosphate Uptake by Rabbit Erythrocytes. H. Jonas. *Biochim. et Biophys. Acta 13*, 525–32(1954).

Q 212 Influence of Intrinsic Factor Upon Utilization of Orally Administered Vitamin B–12. C. Rosenblum, D. T. Woodbury, E. W. Gilfillan, and G. A. Emerson. *Federation Proc. 13, No. 1*, 475 (1954).

Q 213 Inorganic Tripolyphosphate and Trimetaphosphate in Yeast Extracts. S. R. Kornberg and A. Kornberg. *Federation Proc. 13, No. 1*, 244–5 (1954).

Q 214 The Interaction of Hydrogenase with Oxygen. H. F. Fisher, A. I. Krasna, and D. Rittenberg. *J. Biol. Chem. 209*, 569–78(1954).

Q 215 The Isolation of Radioactive Phosphoserine from "Phosphoprotein" of the Ehrlich Ascites Tumor. E. P. Kennedy and S. W. Smith. *J. Biol. Chem. 207*, 153–63(1954).

Q 216 The Incorporation of Adenine into Ribonucleic Acid *in Vitro*. E. Goldwasser. *J. Biol. Chem 202*, 751–5(1953).

Q 217 Incorporation of 8-Azaguanine-2-C–14 into 8-Azaguanine-Susceptible and 8-Azaguanine-Dependent Leukemic Tumors. L. L. Bennett, Jr., H. E. Skipper and L. W. Law. *Federation Proc. 12*, 300–1(1953).

Q 218 The Incorporation of 8-Azaguanine into Nucleic Acids of Tumor-Bearing Mice. H. G. Mandel, P. E. Carlo, and P. K. Smith. *J. Biol. Chem. 206*, 181–9(1954).

Q 219 The Incorporation of 4-C–14-Cytidine in Rat Liver Slices. L. Grossman and D. W. Visser. *J. Biol. Chem. 209*, 447–52(1954).

Q 220 The Incorporation of Carbon Dioxide into Both Carboxyl Groups of Glutamic Acid. R. W. Hendler and C. B. Anfinsen. *J. Biol. Chem. 209*, 55–62(1954).

Q 221 Incorporation of C–14-Formate into Citrovorum Factor. S. F. Zakrzewski and C. A. Nichol. *Federation Proc. 13, No. 1*, 484(1954).

Q 222 Incorporation of C–14 in the Urinary Steroids *in Vivo*. F. Ungar and R. I. Dorfman. *J. Biol. Chem. 205*, 125–32(1953).

Q 223 The Incorporation of C–14-Orotic Acid into Nucleic Acid Pyrimidines *in Vitro*. L. L. Weed and D. W. Wilson. *J. Biol. Chem. 189*, 435–42 (1951).

Q 224 The Incorporation of the Carboxyl Carbon from Acetate into Cholesterol by Rat Liver Homogenates. I. D. Frantz, Jr., and N. L. R. Bucher. *J. Biol. Chem. 206*, 471–81(1954).

Q 225 Incorporation of Carboxyl Carbon of Octanoic Acid into Brain Lipides. W. M. Sperry, R. M. Taylor, and H. L. Meltzer. *Federation Proc. 12*, 271–2(1953).

Q 226 Incorporation of Formate-C–14 into Purines and Pyrimidines of RNA and DNA in Normal and X-Irradiated Chick Embryos. P. S. Lavik. *Federation Proc. 12*, 236(1953).

Q 227 Incorporation of Glycine-1-C–14 and Adenine-8-C–13 in the Purines of a Purine-Requiring Yeast. R. Abrams. *Arch. Biochem. and Biophys.* 37, 270–5(1952).

Q 228 Incorporation of Glycine-2-C–14 and Orotic-6-C–14 Acid by Surviving Uterine Segments. G. C. Mueller and A. Herranen. *Federation Proc. 12*, 249(1953).

Q 229 Incorporation of Glycine-2-C–14 into Proteins and Nucleic Acids of the Rat. G. A. LePage and C. Heidelberger. *J. Biol. Chem. 188*, 593–602 (1951).

Q 230 The Incorporation of P–32 into Liver Fractions. A. H. Ennor and H. Rosenberg. *Chemistry & Industry*, 953–4(1952).

Q 231 Incorporation of Labeled Dimethylethanolamine in Phospholipides of Isolated Liver Tissue. M. Crowder and C. Artom. *Federation Proc. 11*, 199–200(1952).

Q 232 Incorporation of Labeled Methionine *in Vitro* by Tissues of C3H Mice. J. B. Melchior and A. H. Goldkamp. *Cancer Research 13*, 798–801(1953).

Q 233 The Incorporation of Labeled Methionine Into Protein by Pituitary Tissue. J. B. Melchior and M. N. Halikis. *J. Biol. Chem. 199*, 773–81(1952).

Q 234 Incorporation of Palmitate into Tissue Lipids *in Vitro*. L. Jedeikin and S. Weinhouse. *Federation Proc. 12*, 225(1953).

Q 235 Incorporation of Radioactive Lysine into Protein. R. Schweet and H. Borsook. *Federation Proc. 12*, 266(1953).

Q 236 Incorporation of Radioactive Phosphate into Tumor Particles. E. P. Kennedy and H. G. Williams-Ashman. *Cancer Research 12*, 274 (1952).

Q 237 Incorporation of Radioactivity from DL-Leucine-1-C-14 into Proteins of Rat Liver Homogenates. P. C. Zamecnik. *Federation Proc. 12*, 295(1953).

Q 238 The Influence of Insulin on Glucose Utilization in Adipose and Hepatic Tissues *in Vitro*. F. X. Hausberger, S. W. Milstein and R. J. Rutman. *J. Biol. Chem. 208*, 431–8(1954).

Q 239 The Influence of N-Methylformamide on C-14–Formate Incorporation. I. In Nucleic Acids of Rat Liver. R. K. Barclay, E. Garfinkel and C. C. Stock. *J. Biol. Chem. 208*, 875–82(1954).

Q 240 The Influence of the Liver Upon Estrogenprotein Binding *in Vitro*. C. M. Szego. *Endocrinology 52*, 669–78(1953).

Q 241 Influence of Orthophosphate on the Oxidation of Hexanoate and its Derivatives *in Vitro*. R. F. Witter, E. H. Newcomb and E. Stotz. *J. Biol. Chem. 195*, 663–8(1952).

Q 242 The Influence of Sodium, Potassium, and Lithium on Fatty Acid Metabolism. R. P. Geyer, M. F. Meadows, L. D. Marshall and M. S. Gongaware. *J. Biol. Chem. 205*, 81–5(1953).

Q 243 The Inhibition of Purified, Human Plasma Cholinesterase with Diisopropyl Fluorophosphate. E. F. Jansen, R. Jang and A. K. Balis. *J. Biol. Chem. 196*, 247–53(1952).

Q 244 Inhibition of Spleen Diphosphopyridine Nucleotidase by Nicotinamide, An Exchange Reaction. L. J. Zatman, N. O. Kaplan, and S. P. Colowick. *J. Biol. Chem. 200*, 197–212(1953).

Q 245 Insulin and the Fate of Pyruvate in the Diabetic Liver. M. J. Osborn, I. L. Chaikoff, and J. M. Felts. *J. Biol. Chem. 193*, 549–55(1951).

Q 246 Insulin Fibril Formation: Application to the Isolation of S-35 Labeled Insulin. C. W. Pettinga and C. N. Rice. *Federation Proc. 11*, 269(1952).

Q 247 Insulin-Reversible Inhibition of Glucose Utilization by Serum Lipoprotein Fractions. J. Bornstein. *J. Biol. Chem. 205*, 513–9(1953).

Q 248 Interconversion of Propionate and Succinate by *Propionibacterium pentosaceum*. S. Barban and S. J. Ajl. *J. Biol. Chem. 192*, 63–72(1951).

Q 249 Intermediates in Purine Decomposition by *Clostridium cylindrosporum*. J. C. Rabinowitz and H. A. Barker. *Federation Proc. 12*, 255–6(1953).

Q 250 Interrelationships of Oxalacetic and 2-Malic Acids in Carbon Dioxide Fixation. M. F. Utter. *J. Biol. Chem. 188*, 847–63(1951).

Q 251 The Intestinal Absorption of Triglycerides. R. Reiser, M. J. Bryson, M. J. Carr and K. A. Kuiken. *J. Biol. Chem. 194*, 131–8(1952).

Q 252 The Intracellular Heterogeneity of Pentose Nucleic Acid as Evidenced by the Incorporation of Radiophosphorus. C. P. Barnum. *Arch. Biochem. 29*, 7–26(1950).

Q 253 The Intracellular Localization of Labeled Thyroxine and Labeled Insulin in Mammalian Liver. N. D. Lee and R. H. Williams. *Endocrinology 54*, 5–19(1954).

Q 254 Intrinsic Factor Studies. I. Paper Electrophoresis of a Mixture of Gastric Juice and Radioactive Vitamin B-12. R. F. Schilling and W. P. Deiss. *Proc. Soc. Exptl. Biol. Med. 83*, 506 (1953).

Q 255 Isobutyric, Propionic, and Lactic Acids as Intermediates in the Metabolism of Valine. D. Kinnory and D. M. Greenberg. *Federation Proc. 12*, 230–1(1953).

Q 256 Isolation of Radioactive Cholesterol from Plasma. R. S. Rosenfeld, L. Hellman, W. J. Considine, and T. F. Gallagher. *J. Biol. Chem. 208*, 73–84(1954).

Q 257 Isotopic Selection in Neogenesis of Labile Methyl Groups from Monodeuterio-, Mono-Tritio-, C-14-Labeled Methanol. J. R. Rachele, E. J. Kuchinskas, J. E. Knoll, and M. L. Eidinoff. *Federation Proc. 13, No. 1*, 278(1954).

Q 258 α-Ketoglutaric Dehydrogenase. IV. Coupled Phosphorylation. H. Hift, L. Ouellet, J. W. Littlefield, and D. R. Sanadi. *J. Biol. Chem. 204*, 565–75(1953).

Q 259 Kinetic Studies of Amino Acid Transport into Cells. E. Heinz. *Federation Proc. 13, No. 1*, 227–8(1954).

Q 260 Lactic Acid Fermentation of Xylose by *Escherichia coli*. I. Fermentation Studies. L. A. Nutting and S. F. Carson. *J. Bacteriol. 63*, 575–80(1952).

Q 261 Limits of Absorption of Orally Administered Vitamin B-12: Effect of Intrinsic Factor Sources. M. E. Swendseid, M. Gasster, and J. A. Halsted. *Proc. Soc. Exptl. Biol. Med. 86*, 834–6(1954).

Q 262 Lipogenesis of the Intact Alloxan-Diabetic Rat. J. T. Van Bruggen, P. Yamada, T. T. Hutchens, and E. S. West. *J. Biol. Chem. 209*, 635–40(1954).

Q 263 Liver Desoxyribosenucleic Acid (DNA) of Alloxan Diabetic Rats. H. F. Diermeier and H. S. Di Stefano. *Federation Proc. 13, No. 1*, 348–9(1954).

Q 264 The Liver Nucleic Acid Uptake of C-14 Adenine During Azo Dye Carcinogenesis. A. C. Griffin, W. E. Davis, and M. O. Tift. *Cancer Research 12*, 267(1952).

Q 265 Loss of the α-Amino Group in Lysine Metabolism to form Pipecolic Acid. M. Rothstein and L. L. Miller. *J. Am. Chem. Soc. 76*, 1459(1954).

Q 266 On Malic Acid and Carboxylations *in Vivo* in the Liver of the Chick Embryo. L. M. Marshall, K. O. Donaldson, L. H. Newman, and M. M. Khan. *J. Biol. Chem. 209*, 697–704(1954).

Q 267 Mechanism of Action of Alkaline Phosphatase. S. S. Stein and D. E. Koshland, Jr. *Arch. Biochem. and Biophys. 39*, 229–30(1952).

Q 268 The Mechanism of Action of Glyceraldehyde-3-Phosphate Dehydrogenase. P. Oesper. *J. Biol. Chem. 207*, 421–9(1954).

Q 269 Mechanism of Action of Oxalacetic Carboxylase. M. F. Utter and K. Kurahashi. *J. Biol. Chem. 207*, 821–41(1954).

Q 270 Mechanism of Action of Oxalacetic Carboxylase from Liver. M. F. Utter and K. Kurahashi. *Federation Proc. 12*, 282–3(1953).

Q 271 The Mechansim of Action of the Enzyme Hydrogenase. A. I. Krasna and D. Rittenberg. *J. Am. Chem. Soc. 76*, 3015–20(1954).

Q 272 The Mechanism of Adenine Thiomethylriboside Formation. F. Schlenk and R. L. Smith. *J. Biol. Chem. 204*, 27–34(1953).

Q 273 Mechanism of Enzymatic Hydrolysis of Adenosinetriphosphate. L. A. Heppel and R. J. Hilmoe. *J. Biol. Chem. 202*, 217–26(1953).

Q 274 Mechanism of Enzymatic Synthesis of Erythrulose-1-Phosphate. F. Charalampous. *Federation Proc. 13, No. 1*, 191(1954).

Q 275 Mechanism of Enzymatic Synthesis of γ-Glutamylcysteine. G. C. Webster and J. E. Varner. *Federation Proc. 13, No. 1*, 317(1954).

Q 276 Mechanism of Enzymatic Synthesis of Pantothenic Acid from β-Alanine and Pantoic Acid. W. K. Maas. *Federation Proc. 13, No. 1*, 256–7(1954).

Q 277 On the Mechanisms of the Enzymatic Synthesis of Succinyl CoA. S. Kaufman and S. G. A. Alivisatos. *J. Am. Chem. Soc. 76*, 2279–80(1954).

Q 278 On the Mechanism of Enzymic Transfer of Phosphate and Other Groups. P. D. Boyer and W. H. Harrison. Mechanisms of Enzyme Action, ed. William D. McElroy & Bentley Glass. *Johns Hopkins Press, Baltimore*, 658–70(1954).

Q 279 Mechanism of Esterase Action. P. Handler and B. B. Stewart. *Federation Proc. 13, No. 1*, 224(1954).

Q 280 The Mechanism of Formation of Citrate and Oxalate by *Aspergillus niger*. R. A. Bomstein and M. J. Johnson. *J. Biol. Chem. 198*, 143–53(1952).

Q 281 Mechanism of Hydrolysis of Adenosinetriphosphate Catalyzed by Lobster Muscle. D. E. Koshland, Jr. and E. Clarke. *J. Biol. Chem. 205*, 917–24(1953).

Q 282 Mechanism of Increased Hepatic Cholesterogenesis in Diabetes: Its Relation to Carbohydrate Utilization. S. Hotta, R. Hill, and I. L. Chaikoff. *J. Biol. Chem. 206*, 835–44(1954).

Q 283 The Mechanism of Kynureninase Action. I. L. Miller and E. A. Adelberg. *J. Biol. Chem. 205*, 691–8(1953).

Q 284 The Mechanism of Pentose Phosphate Conversion to Hexose Monophosphate. I. With A Liver Enzyme Preparation. B. L. Horecker, M. Gibbs, H. Klenow, and P. Z. Smyrniotis. *J. Biol. Chem. 207*, 393–403(1954).

Q 285 Mechanism of Pentose Phosphate Conversion to Hexose Monophosphate with a Pea Leaf and Pea Root Preparation. M. Gibbs and B. L. Horecker. *Federation Proc. 13, No. 1*, 216–7(1954).

Q 286 The Mechanism of Porphyrin Formation. The Role of the Tricarboxylic Acid Cycle. D. Shemin and J. Wittenberg. *J. Biol. Chem. 192*, 315–34(1951).

Q 287 The Mechanism of Ribose Formation in *Escherichia coli*. M. C. Lanning and S. S. Cohen. *J. Biol. Chem. 207*, 193–9(1954).

Q 288 Mechanism Studies of Glycogen and Glyceride Glycerol Biosynthesis. A. P. Doerschuk. *J. Biol. Chem. 196*, 423–6(1952).

Q 289 On the Mechanism of Taurine Formation from Cysteine in the Rat. J. Awapara and W. J. Wingo. *J. Biol. Chem. 203*, 189–94(1953).

Q 290 Mechanism of Tryptophan Synthesis in *Neurospora*. E. L. Tatum and D. Shemin. *J. Biol. Chem. 209*, 671–5(1954).

Q 291 Mechanisms of the Formation of Acetoin by Yeast and Mammalian Tissue. E. Juni. *J. Biol. Chem. 195*, 727–34(1952).

Q 292 Mechanisms in Enzymatic Transamination. Rate of Exchange of the Hydrogen of Aspartate. M. A. Hilton, F. W. Barnes, Jr., S. S. Henry and T. Enns. *J. Biol. Chem. 208*, 743–54(1954).

Q 293 Mechanisms in Enzymatic Transamination Reaction Between Carbon Chains of Same Length. A. Nisonoff, F. W. Barnes, Jr., T. Enns and S. Von Schuching. *Bull. Johns Hopkins Hosp. 94*, 117–27(1954).

Q 294 The Metabolic Activity of the α-Hydrogen Atom of Lysine. I. Clark and D. Rittenberg. *J. Biol. Chem. 189*, 521–8(1951).

Q 295 The Metabolic Fate of Imidazoleacetic(C14OOH) Acid in the Rat. L. P. Bouthillier and G. Leveille. *J. Am. Chem. Soc. 75*, 4075–77(1953).

Q 296 Metabolic Functions of Biotin. IV. The Role of Carbamyl-L-Glutamic Acid in the Synthesis of Citrulline by Normal and Biotin-Deficient Rats. G. Feldott and H. A. Lardy. *J. Biol. Chem. 192*, 447–52(1951).

Q 297 The Metabolic Reactions of Carbon Atom 2 of L-Histidine. D. B. Sprinson and D. Rittenberg. *J. Biol. Chem. 198*, 655–61(1952).

Q 298 Metabolic Studies of Carboxyl-Labeled C–14-Desoxycholic Acid. J. T. Matschiner, R. Richter, W. H. Elliott, and E. A. Doisy, Jr. *Federation Proc. 13, No. 1*, 261(1954).

Q 299 Metabolic Studies of Radioestrone. A. J. Valcourt and S. A. Thayer. *Federation Proc. 13, No. 1* 313(1954).

Q 300 Metabolism of 8-C–14-Adenine by a 6-Mercaptopurine-Resistant Strain of *Lactobacillus casei*. G. B. Elion and G. H. Hitchings. *Federation Proc. 13, No. 1*, 203(1954).

Q 301 Metabolism of Adipose Tissue. I. Incorporation of Acetate Carbon into Lipides by Slices of Adipose Tissue. D. D. Feller. *J. Biol. Chem. 206*, 171–80(1954).

Q 302 The Metabolism *in Vitro* of Cardiac Muscle in Pantothenic Acid Deficiency. R. E. Olson and F. J. Stare. *J. Biol. Chem. 190*, 149–64(1951).

Q 303 Metabolism of Cardiac Muscle. VII. The Effect of Inhibitors on the Metabolism of Pyruvate and DL-Lactate. O. N. Miller and, R. E. Olson. *Arch. Biochem. and Biophys. 50*, 257–62(1954).

Q 304 The Metabolism of C–14-Glycerol in the Intact Rat. L. I. Gidez and M. L. Karnovsky. *J. Biol. Chem. 206*, 229–42(1954).

Q 305 Metabolism of Glycerol-α-C–14 by Normal and Diabetic Rat Liver Slices. J. Ashmore, A. E. Renold, F. B. Nesbett and A. B. Hastings. *Federation Proc. 13, No. 1*, 176(1954).

Q 306 Metabolism of C–14-Labeled Glycerol and Pyruvate by Liver *in Vitro*. C. T. Teng, M. L. Karnovsky, B. R. Landau, A. B. Hastings, and F. B. Nesbett. *J. Biol. Chem. 202*, 705–16(1953).

Q 307 Metabolism of Dehydroepiandrosterone and Δ5–Androstene–3β, 17β–Diol. F. Ungar, A. M. Miller, and R. I. Dorfman. *J. Biol. Chem. 206*, 597–605(1954).

Q 308 Metabolism of Essential Fatty Acids Incorporation of Acetate into Arachidonic Acid. J. F. Mead, G. Steinberg and D. R. Howton. *J. Biol. Chem. 205*, 683–9(1953).

Q 309 Metabolism of Glycine–1–C–14 and Glycine–2–C–14 in Rat Brain Homogenates. L. C. Leeper, V. J. Tulane, and F. Friedberg. *J. Biol. Chem. 203*, 513–7(1953).

Q 310 Metabolism of I–131-Labeled Thyroxine by an Isolated Perfused Rabbit Liver. D. V. Becker, L. A. Woods, Jr., K. G. Dubois, and J. F. Prudden. *J. Clin. Endocrinol. and Metabolism 14*, 803(1954).

Q 311 Metabolism of Methionine in the Intact Rat. M. V. Patwardhan. *Federation Proc. 13, No. 1*, 272(1954).

Q 312 The Metabolism of Methylated Aminoazo Dyes. II. Oxidative Demethylation by Rat Liver Homogenates. G. C. Mueller and J. A. Miller. *J. Biol. Chem. 202*, 579–87(1953).

Q 313 Metabolism of β–Methyl-β–Hydroxy Glutaric Acid. L. C. Clark, I. Harary, O. Reiss, and K. Bloch. *Federation Proc. 13, No. 1*, 192–3(1954).

Q 314 The Metabolism of Pentose Phosphate. B. L. Horecker. *J. Cellular Comp. Physiol. 41, Sup. 1*, 137–64(1953).

Q 315 The Metabolism of 1,2–Propanediol. H. Rudney. *Arch. Biochem. 29*, 231–2(1950).

Q 316 Metabolism of Sedoheptulose–C–14 in Plant Leaves. N. E. Tolbert and L. P. Zill. *Arch. Biochem. and Biophys. 50*, 392–8(1954).

Q 317 Methionine Reversal of 2–Chloro–4–Amino-benzoic Acid Inhibition in *Escherichia coli*. C. H. Wang, T. E. King, V. H. Cheldelin, and B. E. Christensen. *J. Biol. Chem. 188*, 753–8(1951).

Q 318 Modification of the Distribution and Excretion of Radioisotopes by Chelating Agents. H. Hart and D. Laszlo. *Science 118*, 24–5(1953).

Q 319 New Cofactor Required for Palmitic Acid Oxidation by Plant Extracts. P. A. Castelfranco, P. K. Stumpf, R. Contopoulou, and T. E. Humphreys. *Federation Proc. 13, No. 1*, 189–90(1954).

Q 320 The Normal Content of Fixed Carbon in Amino Acids. R. W. Swick, D. L. Buchanan, and A. Makao. *J. Biol. Chem. 203*, 55–61(1953).

Q 321 Nucleic Acid Content of Reticulocytes and its Relation to Uptake of Radioactive Leucine *in Vitro*. B. W. Holloway and S. H. Ripley. *J. Biol. Chem. 196*, 695–701(1952).

Q 322 Nucleic Acid Molecular Bioheterogeneity. K. Moldave and C. Heidelberger. *Federation Proc. 12*, 247–8(1953).

Q 323 Nucleotide Metabolism. I. The Conversion of Orotic Acid–6–C–14 to Uridine Nucleotides. R. B. Hurlbert and V. R. Potter. *J. Biol. Chem. 209*, 1–21(1954).

Q 324 Nucleotide Metabolism. III Mono-, Di-, and Triphosphates of Cytidine, Guanosine, and Uridine. H. Schmitz, R. B. Hurlbert, and V. R. Potter. *J. Biol. Chem. 209*, 41–54(1954).

Q 325 Observations on Inhibition of Nucleic Acid Synthesis Resulting from Administration of Nitrogen Mustard, Urethan, Colchicine, 2,6-Diaminopurine, 8–Azaguanine, Potassium Arsenite and Cortisone. H. E. Skipper, J. H. Mitchell, Jr., L. L. Bennett, Jr., M. A. Newton, L. Simpson, and M. Eidson. *Cancer Research 11*, 145–9(1951)

Q 326 Observations on the Mechanism of Phosphate Uptake by Rabbit Erythrocytes. Phosphate Adsorption in Relation to Cell Surface Structure; Equilibria of Phosphate Adsorption and Absorption. H. Jonas. *Biochem. et Biophys. Acta 13*, 241–50(1954).

Q 327 Oral Versus Parenteral Administration of Co–60–Labeled Vitamin B–12 to Rats. C. Rosenblum, B. F. Chow, G. P. Condon, and R. S. Yamamoto. *J. Biol. Chem. 198*, 915–28(1952).

Q 328 The Origin of the Isooctyl Side Chain of Cholesterol. J. Wuersch, R. L. Huang, and K. Bloch. *Biol. Chem. 195*, 439–46(1952).

Q 329 The Origin of the Methyl Carbon of Nicotine Formed by *Nicotiana rustica* L. S. A. Brown and

R. U. Byerrum. *J. Am. Chem. Soc. 74*, 1523-(1952).

Q 330 Origin of Plasma Cholesterol Using Carbon 14. R. G. Gould, D. J. Campbell, C. B. Taylor, F. B. Kelly, Jr., I. Warner, and C. B. Davis, Jr. *Federation Proc. 10*, 191(1951).

Q 331 The Oxidation of Acetaldehyde to Acetyl Coenzyme A. R. M. Burton and E. R. Stadtman,. *J. Biol. Chem. 202*, 873-90(1953).

Q 332 Oxidation-Coupled Incorporation of Inorganic Radiophosphate into Phospholipid and Nucleic Acid in a Cell-Free System. M. Friedkin and A. L. Lehninger. *J. Biol. Chem. 177*, 775-88-(1949).

Q 333 Oxidation of Endogenous Fatty Acids of Rat Tissues *in Vitro*. M. E. Volk, R. H. Millington, and S. Weinhouse. *J. Biol. Chem. 195*, 493-501-(1952).

Q 334 Oxidation of Fatty Acids and Tricarboxylic Acid Cycle Intermediates by Isolated Rat Liver Mitochondria. E. P. Kennedy and A. L. Lehninger. *J. Biol. Chem. 179*, 957-72(1949).

Q 335 The Oxidation of Molecular Tritium in Mammals. G. N. Smith, R. J. Emerson, L. A. Temple, and T. W. Galbraith. *Arch. Biochem. and Biophys. 46*, 22-30(1953).

Q 336 Oxidation of Palmitic Acid by Plant Extracts A. H. Bokman, E. H. Newcomb, P. A. Castelfranco, and P. K. Stumpf. *Federation Proc. 12*, 180(1953).

Q 337 Oxidative Metabolism of Heart Mitochondria. G. W. E. Plaut and K. A. Plaut. *J. Biol. Chem. 199*, 141-51(1952).

Q 338 Oxidative Phosphorylation Catalyzed by Cytoplasmic Particles Isolated from Malignant Tissues. H. G. Williams-Ashman and E. P. Kennedy. *Cancer Research 12*, 415-21(1952).

Q 339 Oxygen Consumption and Chondroitin Sulfate Synthesis by Chick Embryonic Cartilage. E. S. Boyd. *Federation Proc. 12*, 385(1953).

Q 340 Participation of Bound Glutathione in D-Glyceraldehyde-3-Phosphate Dehydrogenase Action. I. Krimsky and E. Racker. *Federation Proc. 13, No. 1*, 245(1954).

Q 341 Pathways From Gluconic Acid to Glucose *in Vivo*. M. R. Stetten and Y. J. Topper. *J. Biol. Chem. 203*, 653-64(1953).

Q 342 Pathways of Glucose Catabolism. B. Bloom and D. Stettan, Jr. *J. Am. Chem. Soc. 75*, 5446(1953).

Q 343 Pentose Phosphate and CO_2 Fixation with Spinach Extracts. A. Weissbach, P. Z. Smyrniotis and B. L. Horecker. *J. Am. Chem. Soc. 76*, 3611-2(1954).

Q 344 Peptide-Bond Synthesis in Higher Plants. I. The Synthesis of Glutathione. G. C. Webster. *Arch. Biochem. and Biophys. 47*, 241-50(1953).

Q 345 Phosphate Esterification, Phosphate Transfer and Electron Transport. P. D. Boyer, W. H. Harrison, A. B. Falcone, and J. G. Gander. *Federation Proc. 13, No. 1* 185(1954).

Q 346 Phosphate (P-32) Exchange in Brain Phospholipids *in Vivo* and *in Vitro*. E. Streicher and R. W. Gerard. *Proc. Soc. Exptl. Biol. Med. 85*, 174-7(1954).

Q 347 Phospholipid and Protein-bound Phosphorus Synthesis in the Rabbit Papilloma. W. E. Cornatzer, D. G. Gallo, J. P. Davison, and R. G. Fischer. *Cancer Research 13*, 795-7(1953).

Q 348 Phospholipid Studies of Different Serum Lipoproteins Employing P-32. H. G. Kunkel and A. G. Bearn. *Proc. Soc. Exptl. Biol. Med. 86*, 887-91(1954).

Q 349 Phosphorolysis and Hydrolysis of Purine Ribosides by Enzymes from Yeast. L. A. Heppel and R. J. Hilmoe. *J. Biol. Chem. 198*, 683-94 (1952).

Q 350 Phosphorylation Coupled to Oxidation of Dihydrodiphosphopyridine Nucleotide. A. L. Lehninger. *J. Biol. Chem. 190*, 345-59(1951).

Q 351 Phosphoserylglycine from Diisopropylphosphoryl Chymotrypsin and Inversion of its Peptide Sequence by Acid. N. K. Schaffer, S. Harshman, and R. R. Engle. *Federation Proc. 13, No. 1*, 289(1954).

Q 352 Photochemical Carbon Dioxide Fixation. E. W. Fager. *Federation Proc. 12*, 201(1953).

Q 353 The Photosynthetic Metabolism of Acetone by *Rhodopseudomonas gelatinosa*. J. M. Siegel. *J. Biol. Chem. 208*, 205-16(1954).

Q 354 Plasma Protein. I. Loss from Circulation and Catabolism to Carbon Dioxide. I. A. Abdou and H. Tarber. *J. Biol. Chem. 190*, 769-80 (1951).

Q 355 Plasma Protein. II. Relationship between Circulating and Tissue Protein. I. A. Abdou and H. Tarber. *J. Biol. Chem. 190*, 781-90(1951).

Q 356 Plasma Protein, III. The Equilibrium Between Blood and Lymph Protein. I. A. Abdou, W. O. Reinhardt, and H. Tarver. *J. Biol. Chem. 194*, 15-23(1952).

Q 357 Plasma Protein. V. The Effect of the Protein Content of the Diet on Turnover. H. L. Steinbock and H. Tarver. *J. Biol. Chem. 209*, 127-32(1954).

Q 358 Potassium Metabolism of Liver Mitochondria. S. W. Stanbury and G. H. Mudge. *Proc. Soc. Exptl. Biol. Med. 82*, 675-81(1953).

Q 359 Precipitation of C-14-Labeled Dextran by Human Anti-dextran. E. A. Kabat, D. Berg, D. Rittenberg, L. Pontecorvo, M. L. Eidinoff, and L. Hellman. *J. Am. Chem. Soc. 76*, 564-6 (1954).

Q 360 The Precursors of Sphingosine in Brain Tissue. D. B. Sprinson and A. Coulon. *J. Biol. Chem. 207*, 585-92(1954).

Q 361 Preparation of Purified Myoglobin from Skeletal Muscle of the Guinea Pig. H. L. Helwig and D. M. Greenberg. *J. Biol. Chem. 198*, 695-701 (1952).

Q 362 Properties of B-12 Binding Substance in Gastric Juice. B. F. Chow and R. Yamamoto. *Federation Proc. 12*, 189(1953).

Q 363 Protein Changes in Tissue Culture Correlated with Radioactive Phosphorus Uptake. H. K. Boyer and P. L. Kirk. *J. Cellular Comp. Physiol. 39*, 95–107(1952).

Q 364 Protein Turnover in Bacteria. A. L. Koch and H. R. Levy. *Federation Proc. 13, No. 1*, 243(1954).

Q 365 Protein Turnover and Enzymatic Adaptation. N. D. Lee and R. H. Williams. *J. Biol. Chem. 204*, 477–86(1953).

Q 366 Purification of Oxalacetic Carboxylase from Chicken Liver. M. F. Utter and K. Kurahashi. *J. Biol. Chem. 207*, 787–802(1954).

Q 367 The Purine Metabolism of *Escherichia coli*. A. L. Koch, F. W. Putnam, and E. A. Evans, Jr. *J. Biol. Chem. 197*, 105–12(1952).

Q 368 Pyridine Nucleotide Transhydrogenase. V. Exchange Reactions Studies with C14. N. O. Kaplan, S. P. Colowick, L. J. Zatman, and M. M. Ciotti. *J. Biol. Chem. 205*, 31–43(1953).

Q 369 Pyrimidine Precursors for *Lactobacillus bulgaricus 09*. I. A. Rose and C. E. Carter. *J. Biol. Chem. 207*, 701–7(1954).

Q 370 A Quantitative Fractionation of Tissue Ferritin and Hemosiderin. B. W. Gabrio, A. Shoden, and C. A. Finch. *J. Biol. Chem. 204*, 815–21(1953).

Q 371 Radioactive Sodium Chromate for the Study of Survival of Red Blood Cells. I. The Effect of Radioactive Sodium Chromate on Red Cells. T. F. Necheles, I. M. Weinstein, and G. V. LeRoy. *J. Lab. Clin. Med. 42*, 358–67(1953).

Q 372 Rate of Formation of Myosin in the Muscle of the Rat. L. E. Bidinost *J. Biol. Chem. 190*, 423–30(1951).

Q 373 Rates of Metabolism of Acetate-1-C–14 in Tissues *in Vivo*. H. Busch and H. A. Baltrush. *Cancer Research 14*, 448–55(1954).

Q 374 Reactions of the Tricarboxylic Acid Cycle in Green Leaves. D. O. Brummond and R. H. Burris. *J. Biol. Chem. 209*, 755–65(1954).

Q 375 Reduction of Radioactive Estrone to Estradiol by Human Feces. B. F. Stimmel. *Federation Proc. 13, No 1*, 305–6(1954).

Q 376 Relation Between Phosphate Energy Donors and Incorporation of Labeled Amino Acids into Proteins, P. C. Zamecnik and E. B. Keller. *J. Biol. Chem. 209*, 337–54(1954).

Q 377 The Relation of Oxygen Uptake to Hemoglobin Synthesis. J. E. Richmond, K. I. Altman and K. Solomon. *Science 113*, 404–5(1951).

Q 378 Relations Between the Rate of Renewal and the Intracellular Localization of Ribonucleic Acid. R. Jeener and D. Szafarz. *Arch. Biochem. 26*, 54–67(1950).

Q 379 The Relationship Between Ferritin Hemosiderin in Rabbits and Man. A. Shoden, B. W. Gabrio and C. A. Finch. *J. Biol. Chem. 204*, 823-30(1953).

Q 380 The Relationship of Coenzyme A to Lipide Synthesis. II. Experiments with Rat Liver. H. P. Klein and F. Lipmann. *J. Biol. Chem. 203*, 101–8(1953).

Q 381 The Relationship of Mitochondrial Phosphate to Aerobic Phosphate Bond Generation. R. K. Crane and F. Lipmann. *J Biol. Chem 201*, 245–6(1953).

Q 382 Relationship of Phospholipide and Nucleoprotein Synthesis in the Liver. W. E. Cornatzer, J. P. Davison, and D. G. Gallo. *Federation Proc. 12*(1953).

Q 383 The Release of Labeled Amino Acids from the Proteins of Rat Liver Slices. M. V. Simpson. *J. Biol. Chem. 201*, 143–54(1953).

Q 384 Respiratory Cycles. W. W. Umbreit. *J Cellular Comp. Physiol. 41, Sup. 1*, 39–66(1953).

Q 385 The Reutilization of Nucleic Acid Catabolites. J. Dancis and M. E. Balis. *J. Biol. Chem. 207*, 367–74(1954)

Q 386 A Review: On the Mechanism of Action of Certain Temporary Anticancer Agents H. E. Skipper. *Cancer Research 13*, 545–51(1953).

Q 387 Ribonuclease I. A New Assay Method with P–32-Labeled Yeast Ribonucleic Acid. J. S. Roth and S. W. Milstein. *J. Biol. Chem. 196*, 489–98(1952).

Q 388 Ribonuclease. III. Ribonuclease Activity in Rat Liver and Kidney. J. S. Roth. *J. Biol. Chem. 208*, 181–94(1954).

Q 389 Role of Choline in the Oxidation of Fatty Acids by the Isolated Liver. C. Artom. *Nature 171*, 347(1953).

Q 390 Role of Choline in the Oxidation of Fatty Acids by the Liver. C. Artom. *J. Biol. Chem. 205*, 101–11(1953).

Q 391 The Role of the Carbon Skeleton of Lysine in the Biosynthesis of Hemoglobin. K. I. Altman, L. L. Miller, and J. E. Richmond. *Arch. Biochem. 29*, 447–8(1950).

Q 392 The Role of Microsomes in the Incorporation of Amino Acids into Proteins. E. B. Keller, P. C. Zamecnik, and R. B. Loftfield. *J. Histochem. Cytochem. 2*, 378–86(1954).

Q 393 Sedimentation of the Thyroxine-Binding Protein of Serum in the Partition Cell. M. L. Petermann, J. Robbins, and M. G. Hamilton. *J. Biol. Chem. 208*, 369–75(1954).

Q 394 Selective Uptake of Ag-111 by Sarcoma Tissue in CFW Mice. H. D. West, H. Goldie, and R. D. Handye. *Federation Proc. 12*, 288(1953).

Q 395 The Sequence Glycylalanylglycine in Silk Fibroin. E. Slobodian and M. Levy. *J. Biol. Cham. 201*, 371–5(1953).

Q 396 Sequences of Amino Acid Residues in Silk Fibroin. M. Levy and E. Slobodian. *J. Biol Chem. 199*, 563–72(1952).

Q 397 Serine Phosphoric Acid from Diisopropylphosphoryl Chymotrypsin. N. K. Schaffer, S. C. May, Jr., and W. H. Summerson. *J. Biol. Chem. 202*, 67–76(1953).

Q 398 Serine Phosphoric Acid from Diisoprophylphosphoryl Derivative of Eel Cholinesterase. N. K. Schaffer, S. C. May, Jr., and W. H. Summerson. *J. Biol. Chem. 206*, 201–7(1954).

Q 399 Short-Term Carbon Dioxide Fixation in Tumor *in Vivo*. F. Friedberg and L. M. Marshall. *Federation Proc. 12*, 204–5(1953).

Q 400 Short-Term Carbon Fixation into Succinate by Liver Homogenates. L. M. Marshall and F. Friedberg. *Federation Proc. 12*, 243(1953).

Q 401 A Simplified Photometric Analysis for Serine and Formaldehyde. W. R. Frisell, L. A. Meech and C. G. Mackenzie. *J. Biol. Chem. 207*, 709–16(1954).

Q 402 Sites of Intramitochondrial Phosphorylation. P. Siekevitz. *Federation Proc. 13, No. 1*, 297(1954).

Q 403 Some Hormonal Effects on Phosphorylation in the Liver of Rats. W. E. Cornatzer, D. G. Gallo, and J. P. Davison. *Proc. Soc. Exptl. Biol. Med. 84*, 103–5(1953).

Q 404 Some Interrelationships of Aspartic Acid, Threonine, and Lysine. J. M. Ravel, L. Woods, B. Felsing, and W. Shive. *J. Biol. Chem. 206*, 391–400(1954).

Q 405 Some Properties of Oxalacetic Carboxylase. M. F. Utter, K. Kurahashi, and I. A. Rose. *J. Biol. Chem. 207*, 803–19(1954).

Q 406 Some Properties of the Phosphoribomutase Reaction. H. Klenow. *Arch. Biochem. and Biophys. 46*, 186–200(1953).

Q 407 Source of the Bicarbonate of Saliva. H. F. Sand. *J. Appl. Physiol. 4*, 66–76(1951).

Q 408 Source of the Hydroxylysine of Collagen. F. M. Sinex and D. D. Van Slyke. *Federation Proc. 13, No. 1*, 297(1954).

Q 409 Squalene as A Precursor of Cholestrol in Liver. G. M. Tomkins, W. G. Dauben, H. Sheppard and I. L. Chaikoff. *J. Biol. Chem. 202*, 487–9(1953).

Q 410 The State of Beryllium in Blood Plasma. I. Feldman, J. R. Havill and W. F. Neuman. *Arch. Biochem. and Biophys. 46*, 443–53(1953).

Q 411 Stereochemistry of Reaction Catalyzed by Alcohol Dehydrogenase. F. H. Westheimer, F. Loewus, and B. Vennesland. *Federation Proc. 12*, 289(1953).

Q 412 Stimulation by 2,4-Dinitrophenol, 3,4-Dihydroxyphenylalanine, and Homogentisic Acid, of Uptake of Radioactivity from DL-Tyrosine-2-C–14 by Rat Liver Proteins *in Vitro*. H. Kamin, M. A. Koon, and P. Handler. *Federation Proc. 13, No. 1*, 238(1954).

Q 413 Stoichiometry and Reversibility of the Citrulline Phosphorylase Reaction. M. Korzenovsky and C. H. Werkman. *Federation Proc. 13, No. 1*, 245(1954).

Q 414 The Structure of "Active Acetyl" and a Theory of Fatty Acid Catabolism. S. Weinhouse. *Arch. Biochem. and Biophys. 37*, 239–41(1952).

Q 415 Studies in 2-Acetylaminofluorene Carcinogenesis. II. The *in Vitro* Uptake of Alanine-1-C–14 by Preneoplastic Liver and Hepatoma Mitochondrial Protein. R. J. Rutman, A. Cantarow, and K. E. Paschkis. *Cancer Research 14*, 115–8(1954).

Q 416 Studies in 2-Acetylaminofluorene Carcinogenesis. III. The Utilization of Uracil-2-C–14 by Preneoplastic Rat Liver and Rat Hepatoma. R. J. Rutman, A. Cantarow and K. E. Paschkis. *Cancer Research 14*, 119–23(1954).

Q 417 Studies on ACTH Action in Perfused Bovine Adrenals: Failure of Cholestenone to Act as a Corticosteroid Precursor. D. Stone and O. Hechter. *Arch. Biochem. and Biophys. 51*, 246–50(1954).

Q 418 Studies on Adaptive Enzyme Formation in Mammals. I. Galactose Metabolism. P. Feigelson and F. P. Conte. *J. Biol. Chem. 207*, 187–92(1954).

Q 419 Studies on Monoamine Oxidase in Intact Animals. R. W. Schayer, K. Y. T. Wu, R. L. Smiley, and Y. Kobayashi. *J. Biol. Chem. 210*, 259–67(1954).

Q 420 Studies in Oxidative Phosphorylation with Radioactive Phosphate. I. Exchange of Phosphate in an Acceptor-Free System. K. H. Lee and J. J. Eiler. *J. Biol. Chem. 203*, 705–17(1953).

Q 421 Studies in Oxidative Phosphorylation with Radioactive Phosphate. II. Mechanism of the Phosphate Exchange. K. H. Lee and J. J. Eiler. *J. Biol. Chem. 203*, 719–30(1953).

Q 422 Studies of Insulin Binding With Isotopically Labeled Insulin. W. C. Stadie, N. Haugaard, and M. Vaughan. *J. Biol. Chem. 199*, 729–39(1952).

Q 423 Studies of Nucleic Acid Metabolism in Embryonic Tissue Culture with the Aid of C–14-Labeled Purines. K. H. Lu and T. Winnick. *Exptl. Cell Research 6*, 345–52(1954).

Q 424 Studies of Pyrimidine Nucleotides with Orotic Acid-2-C–14 and P–32. L. L. Weed and D. W. Wilson. *J. Biol. Chem. 202*, 745–9(1953).

Q 425 Studies of Radioactive Injected Labeled Insulin. N. Haugaard, M. Vaughan, E. S. Haugaard, and W. C. Stadie. *J. Biol. Chem. 206*, 549–63(1954).

Q 426 Studies of the Incorporation of Palmitate-1-C–14 into Tissue Lipides *in Vitro*. L. A. Jedeikin and S. Weinhouse. *Arch. Biochem. and Biophys. 50*, 134–47(1954).

Q 427 Studies on Carbohydrate Metabolism in Rat Liver. I. The Effect of Cations in the Media. A. B. Hastings, C. T. Teng, F. B. Nesbett, and M. Sinex. *J. Biol. Chem. 194*, 69–81(1952).

Q 428 Studies on Ethionine. III. Incorporation of Ethionine into Rat Proteins. M. Levine and H. Tarver. *J. Biol. Chem. 192*, 835–50(1951).

Q 429 Studies on Histamine-Metabolizing Enzymes in Intact Animals. R. W. Schayer. *J. Biol. Chem. 203*, 787–93(1953).

Q 430 Studies on Histamine-Metabolizing Enzymes in Intact Animals. II. R. W. Schayer, J. Kennedy and R. L. Smiley. *J. Biol. Chem. 205*, 739–48 (1953).

Q 431 Studies on α-Ketoglutaric Oxidase. III. Role of Coenzyme A and Diphosphopyridine Nucleotide. D. R. Sanadi and J. W. Littlefield. *J. Biol. Chem. 201*, 103–15 (1953).

Q 432 Studies on Permeability. V. The Effects of Acetylcholine and Physostigmine on the Permeability of Human Erythrocytes to Sodium and Potassium. P. E. Lindvig. M. E. Greig and S. W. Peterson. *Arch. Biochem. 30*, 241–50(1951).

Q 433 Studies on Precursors of Pyrimidines of Nucleic Acid. L. L. Weed and D. W. Wilson. *J. Biol. Chem. 207*, 439–42(1954).

Q 434 Studies on the Chemical Composition of Normal and Abnormal Blood Vessel Walls. I. Chemical Nature of Vascular Calcified Deposits. D. Carlstron, B. Engfeldt, A. Engstrom, and N. Ringertz. *Lab. Invest. 2*, 325–35(1953).

Q 435 Studies on the Interaction of Labeled Carcinogenic Hydrocarbons with Tissue Components. W. G. Wiest and C. Heidelberger. *Cancer Research 12*, 308(1952).

Q 436 Studies on the Mechanism of Protection by Aurintricarboxylic Acid in Beryllium Poisoning. J. Schubert, M. R. White, and A. Lindenbaum. *J. Biol. Chem. 196*, 279–88(1952).

Q 437 Studies on the Metabolism of Iron-Containing Proteins with Radioactive Carbon and Iron. H. L. Helwig and D. M. Greenberg. *J. Biol. Chem. 198*, 703–12(1952).

Q 438 Studies on the Microbiological Degradation of Cholesterol. T. C. Stadtman, A. Cherkes, and C. B. Anfinsen. *J. Biol. Chem. 206*, 511–23 (1954).

Q 439 Studies on the Thyroxine-Protein Complex of Serum. J. Robbins and J. E. Rall. *J. Clin. Endocrinol. and Metabolism 14*, 772–3(1954).

Q 440 Studies with Radioactive Colchicine. I. The Influence of Tumors on the Tissue Distribution of Radioactive Colchicine in Mice. A. Back and E. J. Walaszek. *Cancer Research 13*, 552–5 (1953).

Q 441 A Study of Acetate Metabolism and Fatty Acid Synthesis in Liver Slices of Hyperthyroid Rats. M. A. Spirtes, G. Medes, and S. Weinhouse. *J. Biol. Chem. 204*, 705–13(1953).

Q 442 A Study of Carbon Dioxide Fixation by Mass Determination of the Types of C–13-Acetate. H. G. Wood. *J. Biol. Chem. 194*, 905–31(1952).

Q 443 A Study of Formate Utilization in Pigeon Liver Extract. P. Berg. *J. Biol. Chem. 205*, 145–62 (1953).

Q 444 A Study of Glucose Oxidation in Whole Tissue Homogenatses. C. E. Wenner, D. F. Dunn, and S. Weinhouse. *J. Biol. Chem. 205*, 409–22 (1953).

Q 445 The Study of Metabolic Turnover Rates by Means of Isotopic Tracers. I. Fundamental Relations. J. M. Reiner. *Arch. Biochem. and Biophys. 46*, 53–79(1953).

Q 446 The Study of Metabolic Turnover Rates by Means of Isotopic Tracers. II. Turnover in a Simple Reaction System. J. M. Reiner. *Arch. Biochem. and Biophys. 46*, 80–99(1953).

Q 447 A Study of Oxidative Phosphorylation with O–18-Labeled Inorganic Phosphate. M. Cohn. *J. Biol. Chem. 201*. 735–50(1953).

Q 448 A Study of the Nature of Glycogen Regeneration in the Intact Animal. M. R. Stetten and D. Stetten, Jr. *J. Biol. Chem. 207*, 331–40(1954)

Q 449 A Study of the Nature of the Circulating Thyroid Hormone in Euthyroid and Hyperthyroid Subjects by Use of Paper Electrophoresis. W. P. Deiss, E. C. Albright, and F. C. Larson. *J. Lab. Clin. Med. 40*, 791(1952).

Q 450 Succinate Decarboxylation Systems in *Propionibacterium* and *Veillonella*. E. A. Delwiche, E. F. Phares, and S. F. Carson. *Federation Proc. 13, No. 1*, 198(1954).

Q 451 Sugar Transformation in Leaves of *Canna indica*. I. Synthesis and Inversion of Sucrose. E. W. Putman and W. Z. Hassid. *J. Biol. Chem. 207*, 885–902(1954).

Q 452 Sulfate Esterifying Activity of Embryonic Chick Liver *in Vitro*. L. L. Layton and D. R. Frankel. *Arch. Biochem. and Biophys. 31*, 161–7(1951).

Q 453 Sulfate Fixation by Embryonic Chick Lung in Tissue Culture. M. Jones and H. W. Gerarde. *Proc. Soc. Exptl. Biol. Med. 84*, 310–2(1953).

Q 454 Suppression of Hepatic Cholesterol Synthesis in the Rat by Cholesterol Feeding. I. D. Frantz, Jr., H. S. Schneider, and B. T. Hinkelman. *J. Biol. Chem. 206*, 465–9(1954).

Q 455 The Surface Chemistry of Bone. V. The Ion-Binding Properties of Cartilage. E. S. Boyd and W. F. Neuman. *J. Biol. Chem. 193*, 243–51(1951).

Q 456 The Surface Chemistry of Bone. VI. Recrystallization *in Vivo*. W. F. Neuman and B. J. Mulryan. *J. Biol. Chem. 195*, 843–8(1952).

Q 457 The Synergistic Effect of Cortisone and Insulin on Lipogenesis in the Perfused Rat Liver as Studied with α-C–14-Acetate. K. I. Altman, L. L. Miller and C. G. Bly. *Arch. Biochem. and Biophys. 31*, 329–31(1951).

Q 458 Synthesis of Aspartic Acid-2,3-$C^{14}N^{15}$ and its Conversion to Uric Acid in the Pigeon. A. S. Pietro. *J. Biol Chem. 198*, 639–42(1952).

Q 459 The Synthesis of 4-$C^{14}N^{15}$-L-Threonine and a Study of its Metabolism. H. L. Meltzer and D. B. Sprinson. *J. Biol. Chem. 197*, 461–74(1952).

Q 460 The Synthesis and Degradation of Citric Acid by Ventral Prostate Tissue. I. Enzyme Mechanisms. H. G. Williams-Ashman and J. Banks. *J. Biol. Chem. 208*, 337–44(1954).

Q 461 Synthesis of Lactose in Rabbits Studied with C–14-Labeled Compounds. P. Schambye, H. G.

Wood and G. Popjak. *Federation Proc. 12*, 264–5(1953).

Q 462 Synthesis and Metabolic Studies of 17 α-Methyl-C–14-Δ5-Androstene-3β, 17 β-Diol. P. M. Hyde, W. H. Elliott, E. A. Doisy, Jr., and E. A. Doisy. *J. Biol. Chem. 207*, 287–94(1954).

Q 463 Synthesis and Metabolic Studies of Progesterone-21-C–14. H. J. Grady, W. H. Elliott, E. A. Doisy, Jr., B. C. Bocklage, and E. A. Doisy. *J. Biol. Chem. 195*, 755–62(1952).

Q 464 Synthesis and Metabolic Studies of 17-Methyl-C–14-Testosterone. P. M. Hyde, W. H. Elliott, E. A. Doisy, Jr., and E. A. Doisy. *J. Biol. Chem. 208*, 521–8(1954).

Q 465 Synthetic Action of Phosphatase. III. Transphosphorylation with Intestinal and Semen Phosphatase. H. Green and O. Meyerhof. *J. Biol. Chem. 197*, 347–64(1952).

Q 466 Synthesis and Metabolism of D-Ribo-Flavin-2-C–14. E. E. Haley and J. P. Lambooy. *Federation Proc. 13, No. 1*, 223–4(1954).

Q 467 Synthesis of PNA and DNA in *E. coli*. M. E. Balis and C. T. Lark. *Federation Proc. 13, No. 1*, 178–9(1954).

Q 468 Tetraethylthiuram Disulfide and Thyroid Activity. J. Christensen and A. Wase. *Federation Proc. 13, No. 1*, 343(1954).

Q 469 Synthesis of D-Riboflavin-2-C–14 and its Metabolism by *Lactobacillus casei*. E. E. Haley and J. P. Lambooy. *J. Am. Chem. Soc. 76*, 2926–9 (1954).

Q 470 Thyroglobulin in Serum after I–131 Therapy. I. Salting Out. J. Robbins. *J. Biol. Chem. 208*, 377–86(1954).

Q 471 Thyroglobulin in Serum after I–131 Therapy. II. Sedimentation in the Ultracentrifuge. J. Robbins, M. L. Petermann, and J. E. Rall. *J. Biol. Chem. 208*, 387–93(1954).

Q 472 A Thyroid Model Describing Kinetics of Exchange, Concentrating, and Organic Binding of Iodide. S. H. Wollman. *Endocrinology 54*, 35–47(1954).

Q 473 Thyroidal Iodide Trapping as Influenced by Serum Iodide Levels and Thyrotrophin. N. S. Halmi. *Endocrinology 54*, 97–103(1954).

Q 474 A Time Study of the Incorporation of Radiophosphorus into the Nucleic Acids and Other Compounds of a Transplanted Mouse Mammary Carcinoma. C. P. Barnum, R. A. Huseby, and H. Vermund. *Cancer Research 13*, 880–9(1953).

Q 475 Toleranse of Mice to $AgNO_3$ Inert or Radioactive (Ag–111) Injected by Various Routes. H. D. West, H. Goldie, and R. D. Handye. *Federation Proc. 13, No. 1*, 319(1954).

Q 476 Total Mercapturic Acid Synthesis by Liver and Kidney. G. C. Mills and J. L. Wood. *J. Biol. Chem. 207*, 695–700(1954).

Q 477 Tracer Experiments on the Mechanism of Citric Acid Formation by *Aspergillus niger*. W. W. Cleland and M. J. Johnson. *J. Biol. Chem. 208*, 679–89(1954).

Q 478 Tracer Studies on the Metabolism of the Gardner Lymphosarcoma. I. The Uptake of Radioactive Glycine into Tumor Protein. E. Farber, S. Kit, and D. M. Greenberg. *Cancer Research 11*, 490–4(1951).

Q 479 Tracer Studies on the Metabolism of the Gardner Lymphosarcoma. III. The Rate of Radioactive Alanine and Glycine Uptake into the Protein of Lymphosarcoma Cells and Normal Spleen Cells. S. Kit and D. M. Greenberg. *Cancer Research 11*, 500–4(1951).

Q 480 Tracer Studies of the Tricarboxylic Acid Cycle in Normal and Diabetic Rats. C. E. Frohman and J. M. Orten. *Federation Proc. 13, No. 1*, 215 (1954).

Q 481 Transamination Reactions in Plants. D. G. Wilson, K. W. King and R. H. Burris. *J. Biol. Chem. 208*, 863–74(1954).

Q 482 Transfer of Bromide Between Cerebrospinal Fluid and Blood. G. G. Rudolph and N. S. Olsen. *Federation Proc. 13, No. 1*, 287(1954).

Q 483 Transfer Reactions of Acetyl Phosphate Catalyzed by Glyceraldehyde-3-Phosphate Dehydrogenase. J. Harting and S. F. Velick. *J. Biol. Chem. 207*, 867–78(1954).

Q 484 Transformation of Cholesterol to Coprosterol. R. S. Rosenfeld, D. K. Fukushima, L. Hellman, and T. F. Gallagher. *Federation Proc. 13, No. 1*, 284(1954).

Q 485 Transformylation Cofactor and Mechanism of Activation of Formate. G. R. Greenberg. *Federation Proc. 13, No. 1*, 221(1954).

Q 486 Trimethylamine Production from Labeled Choline in Liver Homogenates. C. Artom and H. B. Lofland. *Federation Proc. 13, No. 1*, 176(1954).

Q 487 Uncoupled Oxidative Phosphorylation Associated with Essential Unsaturated Fatty Acid Deficiency in Rats. P. D. Klein and R. M. Johnson. *Federation Proc. 13, No. 1*, 242(1954).

Q 488 On the Unequal Conversion of the Carboxyl and Seventh Carbons of Octanoate to CO_2 by Liver Slices. G. W. Brown, Jr., I. L. Chaikoff, D. D. Chapman, and N. O. Fansah. *Arch. Biochem. and Biophys. 50*, 221–3(1954).

Q 489 Uptake of Glycine-1-C–14 by Connective Tissue. I. Effects of Estrogen and Relaxin. E. H. Frieden and A. S. Martin. *J. Biol. Chem. 207*, 133–42(1954).

Q 490 Uptake of Radioactive Alanine *in Vitro* into the Proteins of Rat Liver Fractions. P. Siekevitz. *J. Biol. Chem. 195*, 549–65(1952).

Q 491 The Uptake *in Vitro* of Radioactive Iron by Avian Erythrocytes. W. N. Jensen, H. Ashenbrucker, G. E. Cartwright, and M. M. Wintrobe. *J. Lab. Clin. Med. 42*, 833–46(1953).

Q 492 Uric Acid Synthesis in the Non-Gouty and Gouty Human. E. L. Spilman. *Federation Proc. 13, No. 1*, 302(1954).

Q 493 Uridine-5-Phosphate Compounds as Intermediates in the Incorporation of Orotic Acid into

RNA. R. B. Hirlbert. *Federation Proc. 12*, 222(1953).

Q 494 Urocanic Acid as an Intermediate in the Enzymatic Conversion of Histidine to Glutamic and Formic Acids. H. Tabor, A. H. Mehler, O. Hayaishi, and J. White. *J. Biol. Chem. 196*, 121–8(1952).

Q 495 Utilization of 1-C-14-D-Glucose by *Torula utilis* Yeast. J. C. Sowden, S. Frankel, B. H. Moore, and J. E. McClary. *J. Biol. Chem. 206*, 547–52(1954).

Q 496 The Utilization and Formation of Dicarboxylic Amino Acids by Cell Suspensions of Normal and Malignant Lymphatic Tissues. S. Kit. *Cancer Research 14*, 397–402(1954).

Q 497 Utilization of Glucose by Liver in Response to Cytophysiologic Alterations. B. W. Agranoff, M. Colodzin, and R. O. Brady. *Federation Proc. 13, No. 1*, 172–3(1954).

Q 498 Utilization of Methionine-CH_3-C-14 and Choline-CH_3-C-14 for Synthesis of Phospholipids in the Intact Rat. J. A. Stekol, S. Weiss, P. T. Hsu, and P. Smith. *Federation Proc. 12*, 274–5(1953).

Q 499 The Utilization of Purine Nucleosides for Nucleic Acid Synthesis in the Rat. B. A. Lowy, J. Davoll and G. B. Brown. *J. Biol. Chem. 197*, 591–600(1952).

Q 500 Utilization of Sulfur Amino Acids During Healing of Experimental Wounds. M. B. Williamson and H. J. Fromm. *Proc. Soc. Exptl. Biol. Med. 83*, 329–33(1953).

Q 501 Vitamin B-12 Binding Substances in Human Serum. R. L. Davis and B. F. Chow. *Federation Proc. 13, No. 1*, 33(1954).

Q 502 Vitamins and Enzymes in Milk. Effect of Gamma-Radiation on Activity. H. C. Kung, E. L. Gaden, Jr., and C. G. King. *J. Agr. Food Chem. 1*, 142–4(1953).

Q 503 Yeast Biosynthesis of Radioactive Sulfur Compounds. J. L. Wood and J. D. Perkinson, Jr. *J. Am. Chem. Soc. 74*, 2445(1952).

Q 504 *In Vivo* Incorporation of C-$14O_2$ from Bicarbonate During Development of the Chick. L. M. Marshall, L. H. Newman, K. O. Donaldson and M. M. Khan. *Federation Proc. 13, No. 1*, 259(1954).

Q 505 The *in Vitro* Interchange of Cholesterol Between Plasma and Red Cells. J. S. Hagerman and R. G. Gould. *Proc. Soc. Exptl. Biol. Med. 78*, 329–32(1951).

Q 506 *In Vitro* Solubility and Ion Exchange of *in Vivo*-Deposited Ca-45 in Bone. J. S. Arnold. *Federation Proc. 12*, 383(1953).

Q 507 *In Vitro* Studies on Metabolism of Acetone. E. Huff and H. Rudney. *Federation Proc. 12*, 221(1953).

Q 508 The *in Vivo* Conversion of Glycine to Serine. G. L. Nardi. *Science 117*, 160–1(1953).

Q 509 *In Vivo* Studies on Acid-Soluble Precursors of Nucleic Acid Purines. M. Edmonds and G. A. LePage. *Federation Proc. 12*, 199(1953).

Q 510 *In Vivo* and *in Vitro* Labeling of Cytochrome c with Glucine-2-C-14. J. B. Marsh and D. L. Drabkin. *Federation Proc. 13, No. 1*, 259(1954).

Q 511 The Absence of α-Amino-adipic Acid in Cholera *Vibroi*. E. Windsor. *J. Biol. Chem. 182*, 699–700(1950).

Q 512 The Absence of Tryptophan-Niacin Relationship in *E. coli* and *B. subtilis*. C. Yanofsky. *J. Bacteriol. 68*, 577(1954).

Q 513 Absorption and Metabolism of Cortisone-4-C-14 Acetate. B. C. Bocklage, E. A. Doisy, Jr., W. H. Elliott and E. A. Doisy. *J. Biol. Chem. 212*, 935–9(1955).

Q 514 Acetate Activation and Acetoacetate Formation in Plant Systems. A. Millerd and J. Bonner. *Arch. Biochem. and Biophys. 49*, 343–55(1954).

Q 515 Action of Choline on *in Vivo* and *in Vitro* Synthesis of Phospholipids. D. B. Zilversmit and N. R. Diluzio. *Federation Proc. 10*(1951).

Q 516 Activation of Purified Glutamic-Aspartic Apotransaminase by Crystalline Pyridoxamine Phosphate. A. Meister, H. A. Sober, and E. A. Peterson. *J. Am. Chem. Soc. 74*, 2385(1952).

Q 517 The Action of Hyaluronidase upon Sulfate Containing Mucopolysaccharide Synthesized in Tissues. L. L. Layton and I. Sher. *Federation Proc. 12*, 237(1953).

Q 518 Activation of Pyruvate Oxidation in Tumor Mitochondria by Diphosphopyridine Nucleotide. C. Wenner, M. A. Spirtes, and S. Weinhouse. *Proc. Soc. Exptl. Biol. Med. 78*, 416–21(1951).

Q 519 Acute Experiments on the Disposition of Inhaled C-$14O_2$. A. M. Brues and A. N. Stroud. *Federation Proc. 10*, 21(1951).

Q 520 Alkaloid Biogenesis, IV. The Non-availability of Nicotinic Acid-Carboxyl-14C and Its Ethyl Ester for Nicotine Biosynthesis. R. F. Dawson, D. R. Christman, and R. C. Anderson. *J. Am. Chem. Soc. 75*, 5115–6(1953).

Q 521 Amino Acid Metabolic Studies. VI. Aspartic Acid-Lysine Interrelations in *Streptoccocus faecalis* (6057). L. E. McClure, R. E. Neuman, and T. A. McCoy. *Arch. Biochem. and Biophys. 53*, Nov.(1954).

Q 522 Amino Acid Metabolism of Neoplastic Tissues and Regulatory Mechanisms. S. Kit. *Texas Repts. Biol. Med. 11*, 685–92(1953).

Q 523 Amino Acid Sequence in Proteins. P. H. Abelson. *Science 115*, 479(1952).

Q 524 α-Aminoadipic Acid as a Constituent of a Corn Protein. E. Windsor. *J. Biol. Chem. 192*, 595–606(1951).

Q 525 γ-Aminobutyric Acid in Brain: Its Formation from Glutamic Acid. E. Roberts and S. Frankel. *J. Biol. Chem. 187*, 55–63(1950).

Q 526 The Anabolic Metabolism of Radioactive Sulfate by Animal Tissues *in Vitro* and *in Vivo*. L. L. Layton. *Cancer 4*, 198–201(1951).

Q 527 Anaerobic Incorporation of C-14-Amino Acids into Protein in Cell-free Liver Preparations.

E. B. Keller and P. C. Zamecnik. *Federation Proc. 13, No. 1*, 1(1954).

Q 528 The Anaerobic Metabolism of Pyruvate in Homogenates of Normal and Neoplastic Rat Tissues. D. P. Groth and G. A. LePage. *Cancer Research 14*, 837–44(1954).

Q 529 The Association of Polonium 210 with Blood. J. E. Campbell and L. H. Talley. *Proc. Soc. Exptl. Biol. Med. 87*, 221(1954).

Q 530 The Bacterial Synthesis of α-Acetolactate. Y. Kobayashi and G. Kalnitsky. *J. Biol. Chem. 211*, 473–82(1954).

Q 531 Bile Pigment Formation in Pernicious Anemia I. M. London and R. West. *J. Biol. Chem. 184*, 359(1950).

Q 532 The Biochemistry of Neoplastic Tissue. P. C. Zamecnik. *Ann. Rev. Biochem. 21*, 411–30 (1952).

Q 533 The Biochemistry of Rubber Formation in the Guayule. II. Rubber Formation in Aseptic Tissue. B. Arreguin and J. Bonner. *Arch. Biochem. 26*, 178–86(1950).

Q 534 Biosynthesis of Carosine and Anserine in the Chick. P. Martignoni and T. Winnick. *J. Biol. Chem. 208*, May(1954).

Q 535 Biosynthesis of Coproporphyrin I and Its Relation to Hemoglobin Metabolism. M. Grinstein, M. D. Kamen, C. V. Moore, and H. M. Wikoff. *J. Biol. Chem. 182*, 715–21(1950).

Q 536 Biosynthesis of Nucleic Acid in *Escherichia coli*. E. Bolton. *Proc. Natl. Acad. Sci. 40*, 764–72(1954).

Q 537 Biosynthesis of Nucleic Acids. G. B. Brown, P. M. Roll, and H. Weinfeld. *Phosphorus Metabolism*, 385–406(1952).

Q 538 Biotin in the Assimilation of Heavy Carbon in Oxalacetate. G. E. Wessman and C. H. Werkman. *Arch. Biochem. and Biophys. 26*, 214–8(1950).

Q 539 Blood Levels of Absorbed Labeled Fat and Chylomicronemia. W. W. Burr, Jr., C. Dunkelberg, J. C. McPherson, and H. C. Tidwell. *J. Biol. Chem. 210*, 531(1954).

Q 540 Cancer Metabolism: Carbohydrates. V. R. Potter and H. Busch. *Proc. Second Natl. Cancer Conf.*, 1540–5(1954).

Q 541 The Carbon and Nitrogen Precursors of Bacterial Purines. W. B. Sutton and C. H. Werkman. *Arch. Biochem. and Biophys. 47*, 1–7 (1953).

Q 542 Chemistry and Histology of Keratin Formation. H. A. Bern. *Nature 174*, 509–11(1954).

Q 543 Cholesterol—A Precursor of Tetrahydrocortisone in Man. H. Werbin and G. V. LeRoy. *J. Am. Chem. Soc. 76*, 5260(1954).

Q 544 Citric Acid Synthesis by the Condensation of Acetate and Oxalacetate in Rabbit Kidney. G. G. Rudolph and E. S. G. Barron. *Biochim. et Biophys. Acta 5*, 59(1950).

Q 545 Combination of Insulin with Cells. N. Haugaard, E. S. Haugaard, and W. C. Stadie. *J. Biol. Chem. 211*, 289–95(1954).

Q 546 A Comparison of the Metabolism of Some Female Sex Hormone. E. A. Doisy, Jr., B. C. Bocklage, N. H. Shen and A. F. Valcourt. *Science 116*, 530(1952).

Q 547 The Conversion of Acetate-2-C-14 to Glycine by Cell Suspensions of the Gardner Lymphosarcoma. S. Kit. *J. Biol. Chem. 212*, 311–7(1955).

Q 548 Conversion of Acetate and Pyruvate to Glutamic Acid in Yeast. C. H. Wang, B. E. Christensen and V. H. Cheldelin. *J. Biol. Chem. 201*, 683(1953).

Q 549 Conversion of Acetate and Pyruvate to Tyrosine in Yeast. R. C. Thomas, B. E. Christensen, V. H. Cheldelin, and C. H. Wang. *J. Am. Chem. Soc. 75*, 5554(1953).

Q 550 The Conversion of Deutero-N-15-Tryptophan to Quinolinic Acid by the Rat. R. W. Schayer, R. W. Henderson and L. M. Henderson. *J. Biol. Chem. 195*, 657(1952).

Q 551 The Conversion of Glycine to Serine by Human Liver Tissue. C. M. Grossman, R. J. Winzler, and J. D. Hauschildt. *Science 118*, 330(1953).

Q 552 The Conversion of Hematin to Bile Pigment. I. M. London. *J. Biol. Chem. 184*, 373(1950).

Q 553 The Conversion of Lysine to Pipecolic Acid by *Phaseolus vulgaris*. P. Lowy. *Arch. Biochem. and Biophys. 47*(1953).

Q 554 Conversion of Protoporphyrin to Bile Pigment. I. M. London, M. Yamasaki, and G. Sabella. *Federation Proc. 10*, 217(1951).

Q 555 The Conversion of *l*-valine to Glucose and Glycogen in the Rat. W. S. Fones, T. P. Waalkes, and J. White. *Arch. Biochem. and Biophys. 32*, 89(1951).

Q 556 The Conversion of *l*-valine to Glycogen and Carbon Dioxide in Rats Receiving *p*-dimethylaminoazobenzene. W. S. Fones and J. White. *J. Natl. Cancer Inst. 12*, 423(1951).

Q 557 The Conversion of *d*-valine to Glycogen in the Rat. W. S. Fones, H. A. Sober, and J. White. *Arch. Biochem. and Biophys. 34*, 158(1951).

Q 558 Degradation of Insulin-I-131 by Liver and Kidney *in Vivo*. N. J. Elgee and R. H. Williams. *Proc. Soc. Exptl. Biol. Med. 87*, 352(1954).

Q 559 Differential Conversion of Specifically Labeled Glucose to $C-14O_2$. B. W. Agranoff, R. O. Brady and M. Colodzin. *J. Biol. Chem. 211*, 773(1954).

Q 560 The Direct Effect of TSH on the Iodide Concentrating Mechanism of Thyroid Tissue Slices. J. L. Blake and N. Lawrence. *Am. J. Med. 17*, 116(1954).

Q 561 The Direct Incorporation of Some Labeled Bases into the Nucleic Acids of Tumor Bearing Mice. P. E. Carlo and H. G. Mandel. *Proc. 2nd Cong. Internat. Biochem.*, 463(1952).

Q 562 Dismutative Assimilation of Carbon Dioxide. D. Watt and C. H. Werkman. *Arch. Biochem. and Biophys. 26*, 214–8(1950).

Q 563 Disposition of Hydrocortisone-4-C–14 in the Rat. J. B. Wyngaarden, A. Wolff, and R. E. Peterson. *Federation Proc. 13, No. 1,* 419(1954).

Q 564 On the Dissimilation of DL-Alanine-1-C–14 by Rat Brain Homogenates. F. Friedberg. *Biochim. et Biophys. Acta 11,* 308(1953).

Q 565 Dissimilation of DL-Alanine-1-C–14 by Rat Homogenates. F. Friedberg and L. M. Marshall. *Biochim. et Biophys. Acta 10,* 624(1953).

Q 566 Distribution Pattern of P–32 in Desoxyribonucleic Acid-Protein Complex of Intestinal Tract Mucosa. F. Friedberg. *Federation Proc. 2,* 173(1950).

Q 567 Drugs Inhibiting Growth and Nucleic Acid Synthesis in *Arbacia* Embryos. D. T. Balzer and C. A. Villee. *Biol. Bull. 101,* 204(1951).

Q 568 Effect of Aminopterin on Radioactivity of Rat Liver and Intestinal-Ribonucleic Acid after C–14 Formate Injection. J. L. Martin and J. R. Totter. *Proc. Soc. Exptl. Biol. Med. 86,* 41(1954).

Q 569 Effect of Amphenone "B" on Adrenal, Thyroid and Testes. J. R. Hogness, R. H. Williams and M. Lance. *Proc. Soc. Exptl. Biol. Med. 79,* 43(1952).

Q 570 The effect of Anoxia on Tumor Growth, with Especial Reference to Sarcoma 180 Implanted in C–57 Mice. A. L. Barach and H. A. Bickerman. *Cancer Research 14,* 672(1954).

Q 571 The Effect of Δ 7-cholestanol Feeding on the Cholesterol and Lipoproteins of Rabbit Serum. R. M. Lemmon, F. T. Pierce, M. W. Biggs, M. A. Parsons, and D. Kritchevsky. *Arch. Biochem. and Biophys. 51,* 161–9(1954).

Q 572 The Effect of Coenzyme "A" on Cholesterol Formation by Rat Liver Homogenates. B. B. Migicovsky and D. M. Greenberg. *Biochim. et Biophys. Acta 13,* 135–6(1954).

Q 573 Effect of Cortisone upon Chondroitin Sulfate Synthesis by Animal Tissues. L. L. Layton. *Proc. Soc. Exptl. Biol. Med. 76,* 596–8(1951).

Q 574 Effect of Cortisone upon the Tissue Synthesis of Acid Mucopolysaccharide. L. L. Layton. *Schweiz, Akad. Med. Wiss, 8,* 74–5(1951).

Q 575 Effect of Dihydrocholesterol (Cholestanol) Administration on Plasma Cholesterol and Atherosclerosis in the Rabbit. C. W. Nichols, M. D. Siperstein, and I. L. Chaikoff. *Proc. Soc. Exptl. Biol. Med. 83,* 756(1953).

Q 576 Effect of *p*-Dimethylaminoazobenzene on the Incorporation of Labeled Cystine into Protein of the Subcellular Components of Rat Liver. N. D. Lee, N. M. MacRae, and R. H. Williams. *Federation Proc. 10*(1951).

Q 577 Effect of Graded Doses of P–32 on Respiration of Rat Liver Slices. J. D. Perkinson, Jr. *Radiation Research 1,* 557(1954).

Q 578 Effect of Insulin on Ethanol Metabolism. E. J. Masoro and H. Abramovitch. *Can. J. of Biochem. and Physiol. 32,* 465–9(1954).

Q 579 Effect of Pteroylglutamic Acid on the Incorporation of Radioactive Glycine in Chick Liver Homogenates. J. R. Totter, B. Kelley, P. L. Day, and R. R. Edwards. *Federation Proc. 9,* 238(1950).

Q 580 The Effect of Riboflavine on the Metabolism of 2-Acetylaminofluorene-9-C–14 in Rats. J. H. Weisburger, E. K. Weisburger, and H. P. Morris. *J. Natl. Cancer Inst. 15,* 37(1954).

Q 581 Effect of *in Vitro* Citrovorum Factor and Aminopterin on Metabolism of Glycine by Chick Liver Homogenates. B. Kelley. *Federation Proc. 10,* 206(1951).

Q 582 Effects of Estradiol on Human Endometrium and Placenta *in Vitro.* D. D. Hagerman and C. A. Villee. *Federation Proc. 11,* 225(1952).

Q 583 Effects of Estradiol on Human Placenta Homogenate Metabolism. C. A. Villee and D. D. Hagerman. *Federation Proc. 12,* 284(1953).

Q 584 Effects of Estradiol on the Metabolism of Human Endometrium *in Vitro.* D. D. Hagerman and C. A. Villee. *Arch. Biochem. and Biophys. 40,* 481(1952).

Q 585 Effects of Estradiol on the Metabolism of Human Placenta. C. A. Villee. *J. Clin. Endocrinol. and Metabolism. 14,* 764(1954).

Q 586 Effects of Fast Neutrons and Co–60 Gamma Irradiation on Mouse Spleen. D. L. Jordan and J. W. Clark. *Radiation Research 1,* 501(1954).

Q 587 Effects of Ferric Chloride and Bile on Plasma Cholesterol and Atherosclerosis in the Cholesterol-Fed Bird. M. D. Siperstein, C. W. Nichols, and I. L. Chaikoff. *Science 117,* 386(1953).

Q 588 An Engery Dependent Incorporation of Amino Acids into the Protein of Plant Mitochondria. G. C. Webster. *Plant Physiol. 29,* 202–3(1954).

Q 589 Energy Yielding Reactions and Amino Acid Uptake into Protein of the Tumor Cell. S. Kit and D. M. Greenberg. *Cancer Research 11,* 495–9(1951).

Q 590 Enzymatic Breakdown of Threonine by Threonine Aldolase. S. C. Lin and D. M. Greenberg. *J. Gen. Physiol. 38,* 181–96(1954).

Q 591 The Enzymic Conversion of Adenine to Adenosine Phosphates. E. Goldwasser. *Biochim. et Biophys, Acta 13,* 341(1954).

Q 592 Enzymatic Decarboxylation of Aspartic Acid to Alpha-alanine. A. Meister, H. A. Sober and S. V. Tice. *J. Biol Chem. 189,* 577(1951).

Q 593 Enzymatic Phosphorylation of Nucleoside Diphosphates. P. Berg and W. K. Joklik. *J. Biol. Chem. 210,* 657(1954).

Q 594 Enzymatic Studies on Orotic Acid Metabolism. I. Lieberman, A. Kornberg, and E. S. Simms. *Federation Proc. 13, No. 1,* 252(1954).

Q 595 Enzymatic Syntheses of Pyrimidine and Purine Nucleotides. II. Orotidine-5′-Phosphate Pyrophosphorylase and Decarboxylase. I. Lieberman, A. Kornberg, and E. S. Simms. *J. Am. Chem. Soc. 76,* 2844(1954).

Q 596 Enzymatic Syntheses of Pyrimidine and Purine Nucleotides. III. Formation of Nucleoside

Diphosphates and Triphosphates. I. Leiberman, A. Kornberg, and E. S. Simms. *J. Am. Chem. Soc. 76*, 3608(1954).

Q 597 Enzymatic Synthesis and Breakdown of Orotic Acid. I. Leiberman and A. Kornberg. *Federation Proc. 12*, 239(1953).

Q 598 Enzymatic Synthesis and Breakdown of a Pyrimidine, Orotic Acid. I. Dihydroorotic Dehydrogenase. I. Leiberman and A. Kornberg. *Biochim. et Biophys. Acta 12*, 223(1953).

Q 599 Enzymatic Synthesis of the Coenzyme a Derivative of Long Chain Fatty Acids. A. Kornberg and W. E. Pricer, Jr. *J. Biol. Chem. 204, No. 1*(1953).

Q 600 Enzymatic Synthesis of Phosphorus-Containing Lipids. A Kornberg and W. E. Pricer, Jr. *J. Am. Chem. Soc. 74*, 1617(1952).

Q 601 Enzymes of the Citric Acid Cycle in Tumors. C. Wenner, M. A. Spirtes and S. Weinhouse. *J. Am. Chem. Soc. 72*, 4333(1950).

Q 602 Estradiol Induced Stimulation of Citrate Utilization in Placenta. C. A. Villee, J. M. Loring and F. M. Wellington. *Federation Proc. 13, No. 1*, 270(1954).

Q 603 Ethanol Oxidation by Rat Liver Slices. E. J. Masoro and J. R. Birchard. *Federation Proc. 11*, 101–2(1952).

Q 604 Evidence for Intermediates in Ovalbumin Synthesis. C. B. Anfinsen and D. Steinberg. *J. Biol. Chem. 199*, 25(1952).

Q 605 Evidence for a Three-Carbon Intermediate in the Metabolism of Valine. E. A. Peterson, W. S. Fones and J. White. *Arch. Biochem. and Biophys.* 36, 323(1952).

Q 606 Exchange Reactions of Radioactive Copper in Enzyme Systems. M. M. Joselow. *J. Biol. Chem. 191*, 11(1951).

Q 607 Excretion of Radioactive 17-Methylestradiol. B. C. Bocklage, E. A. Doisy, Jr., W. H. Elliott, S. A. Thayer, H. J. Nicholas, and E. A. Doisy. *Federation Proc. 10*(1951).

Q 608 Exploratory Studies in Amino Acid and Protein Metabolism. D. W. Racusen and S. Aronoff. *Arch. Biochem. 51*, 68(1954).

Q 609 The Extensive Synthesis of the Methyl Group of Thymine in the Adult Rat. D. B. Sprinson and D. Elwyn. *J. Am. Chem. Soc. 72*, 3317(1950).

Q 610 Factors Affecting Biosynthesis of Cholesterol from Acetate by Rat Liver Homogenates. N. L. R. Bucher, N. H. McGovern, R. Kingston and M. H. Kennedy. *Federation Proc. 12*(1953).

Q 611 Factors Influencing Glycogen Formation *in Vitro*. C. T. Teng, F. M. Sinex, and H. B. Hastings. *Federation Proc. 9*, 237(1950).

Q 612 Factors Influencing the Uptake of Iron by Blood and the Bone Marrow Cells *in Vitro*. G. H. Ellis, C. S. Brandt, and E. J. Thacker. *Science 119*, 94–5(1954).

Q 613 Factors Involved in the Formation and Utilization of Ketone Bodies. S. Weinhouse. *Brookhaven Symposia in Biol. 5*, 201–21(1953).

Q 614 The Failure of Hepatoma to Promote Estrogen-Protein Binding *in Vitro*. C. M. Szego and D. C. Wolcott. *Federation Proc. 13, No. 1*, 149(1954).

Q 615 The Fixation of Radioactive Digitoxin by Isolated Hearts. A. Sjoerdama and C. S. Fischer. *Circulation 4*, July(1951).

Q 616 Formation of Adenine Nucleotides from Adenine by Pigeon Liver Homogenates. E. Goldwasser. *Nature 171*, 176 1953).

Q 617 Formation of Co_2, Lipid and Carbohydrate from C-14-Labeled Glycerol. M. L. Karnovsky and L. I. Gidez. *Federation Proc. 10*(1951).

Q 618 The Formation of Monoiodotyrosine and an Intermediate Iodine Complex by Thyroid Homogenates. J. B. Wyngaarden and J. B. Stanbury. *J. Biol Chem. 212*, 151(1955).

Q 619 Formation of 8-Oxyadenine from Adenine in Bone Marrow Extracts. M. Bentley and R. Abrams. *Arch. Biochem. and Biophys. 53*, 314–5 (1954).

Q 620 Further Studies on the Biosynthesis and Metabolism of Carnosine and Anserine in Vertebrates. W. S. Harms and T. Winnick. *Biochim. et Biophys. Acta 15*, 480–8(1954).

Q 621 Further Studies on Stimulation of Aerobic Phosphorylation by, 2,4-Dinitrophenol with Phospho-Enolpyruvate Formation. H. W. Neuberg and G. H. Mudge. *Federal Proc. 13, No. 1*, 104(1954).

Q 622 Glycine as a Precursor of Bacterial Purines. W. B. Sutton, F. Schlenk and C. H. Werkman. *Arch. Biochem. and Biophys. 32*(1951).

Q 623 Hippuric Acid Synthesis in Man After the Administration of (α–14C) Glycine. N. I. Berlin, C. Hewitt and C. Lotz. *Biochem. J. 58*, 498–503(1954).

Q 624 Hormonal Factors Influencing Erythropoiesis. D. C. Van Dyke, A. N. Contopoulos, B. S. Williams, M. E. Simpson, J. H. Lawrence, and H. M. Evans. *Acta Haematol. 11*, 203–22(1954).

Q 625 Hydrogenase Activity and Photoassimilation. M. D. Kamen. *Federation Proc. 9*, 543–9(1950).

Q 626 Hyperplasia and I–131 Uptake of the Guinea Pig Thyroid During and After Chronic Prophylthiouracil Treatment. S. A. D'Angelo, K. E. Paschkis, A. Cantarow, A. N. Siegel, and J. L. Rivero Fontan. *Endicrinology 49*, 624–34(1951).

Q 627 Identification of α-Aminobutyric Acid Enzymatically Formed from Threonine. O. G. Lien and D. M. Greenberg. *J. Biol. Chem. 200*, 367–71(1953).

Q 628 Inactivation of Insulin by Rat Liver Extracts. H. H. Tomizawa, M. L. Nutley, H. T. Narahara and R. H. Williams. *J. Am. Chem. Soc. 76*, 3357(1954).

Q 629 Incorporation of 8-azaguanine into Nucleic Acids. H. G. Mandel, P. E. Calro, and P. K. Smith. *Federation Proc. 12*, 242(1953).

Q 630 Incorporation of Components of Purine Nucleotides into Rat Pentose Nucleic Acids. P. M.

Roll and H. Weinfield. *Federation Proc. 13, No. 1*, 935(1954).

Q 631 Incorporation of P–32 and Adenine C 14 into DNA by Human Bone Marrow Cells *in Vitro*. L. G. Lajtha, R. Oliver, and F. Ellis. *Brit. J. Cancer 8*, 367(1954).

Q 632 Incorporation of P–32 into Nucleic Acids of Lymphatic Cells *in Vitro*. Effect of Adrenal Cortical Hormones (Compound F). S. Kit, M. Bacila, and E. S. Guzman-Barron. *Biochim. et Biophys. Acta 13*, 516–24(1954).

Q 633 Incorporation of Radioactive Glycine into Proteins of Developing Oocytes of *Rana pipiens*. N. E. Kemp. *Anat. Record 118*, 317(1954).

Q 634 The Incorporation of Ureidosuccinic Acid into Nucleic Acid Pyrimidines of Tumor-Bearing Mice. E. P. Anderson, C. Y. Yen, H. G. Mandel, and P. K. Smith. *Proc. XIX Intern. Physiol. Congr. Montreal*, 166–7(1953).

Q 635 Incorporation *in Vitro* of Labeled Amino Acids into Bone Marrow Cell Proteins. H. Borsook, C. L. Deasy, A. J. Haagen-Smit, G. Keighley, and P. H. Lowy. *J. Biol. Chem. 186*, 297–307(1950).

Q 636 Incorporation *in Vitro* of Labeled Amino Acids into Rat Diaphragm Proteins. H. Borsook, C. L. Deasy, A. J. Haagen-Smit, G. Keighley, and P. H. Lowy. *J. Biol. Chem. 186*, 309–15(1950).

Q 637 Independent Antagonism of Amino Acid Incorporation into Protein. M. Rabinovitz, M. E. Olson, and D. M. Greenberg. *J. Biol. Chem. 210*, 837–49(1954).

Q 638 The Influence of the Adrenal Cortex on Plasma Protein Formation and Utilization. A. White and S. Roberts. *Symposia on Nutrition 2-Plasma Proteins*, 340–52(1952).

Q 639 Influence of Altered States of Carbohydrate Metabolism on Distribution and Degredation of Insulin-I–131. N. J. Eglee and R. H. Williams. *Proc. Soc. Exptl. Biol. Med. 87*, 178(1954).

Q 640 Influence of Choline on Phospholipide Metabolism of Normal and Choline Deficient Dog Liver Slices. N. R. DiLuzio and D. B. Zilversmit. *Am. J. Physiol. 171*, 720(1952).

Q 641 Influence of Cortisone on Thyroid-Pituitary Interaction in Normal and Goitrous Rats. S. A. D'Angelo, G. E. Stevens, K. E. Paschkis, and A. Cantarow. *Proc. Soc. Exptl. Biol. Med. 83*, 181–4(1953).

Q 642 Inhibition of Degradation of Insulin-I–131 *in Vivo*. N. J. Elgee and R. H. Williams. *Proc. Soc. Exptl. Biol. Med. 87*, 67(1954).

Q 643 Insulin and Hepatic Utilization of Glucose for Lipogenesis. S. S. Chernick and I. L. Chaikoff. *J. Biol. Chem. 186*, 535(1950).

Q 644 The Intermediary Metabolism of Human Fetal Tissues. C. A. Villee. *Cold Spring Harbor Symposia Quant. Biol. 19*, 100(1954).

Q 645 Intermediate Steps in the Biosynthesis of Threonine. S. Black and N. G. Wright. *Symposium, Amino Acid Metab.* (1954).

Q 646 I–131 Excretion after Injection of Radio Thyroxine into Hyperthyroid, Hypothyroid or Normal Rats. J. R. Hogness, T. Wong, and R. H. Williams. *Metabolism Clin. and Exptl. 3*, 510 (1954).

Q 647 Kinetic Studies on the "Influx" of Glycine-1-C–14 into the Ehrlich Mouse Ascites Carcinoma Cell. E. Heinz. *J. Biol. Chem. 211*, 781–90 (1954).

Q 648 The Kinetics of Biological Processes. Special Problems Connected with Use of Tracers. A. K. Solomon. *Advances in Biol. and Med. Phys. 3*, 65(1953).

Q 649 Lack of Direct Biological Conversion of Glycine to Ethanolamine. D. M. Greenberg and S. C. Harris. *Proc. Soc. Exptl. Biol. Med. 75*, 683–4 (1950).

Q 650 Lactose Metabolism III. The Reversible Conversion of Galactose-1-Phosphate to Glucose-1-Phosphate. R. G. Hansen and E. M. Craine. *J. Biol. Chem. 208*, 293–8(1954).

Q 651 Lipogenesis and Glucose Oxidation in the Liver of the Alloxan-Diabetic Rat. S. S. Chernick, I. L. Chaikoff, E. J. Masoro and E. Isaeff. *J. Biol. Chem. 186*, 527–34 (1950).

Q 652 Lipogenesis of Intact Diabetic Rat. J. T. Van Bruggen, T. T. Hutchens and P. Yamada. *Federation Proc. 12*(1953).

Q 653 Liver Nucleic Acid Incorporation of Phosphorus 32 in Rats Injected with Phenylbutazone. N. E. Delfel and A. C. Griffin. *Stanford Med. Bull. 11*, 65(1953).

Q 654 Lysine Biosynthesis in *Torulopsis utilis*. M. Strassman and S. Weinhouse. *J. Am. Chem. Soc. 74*, 3457(1952).

Q 655 Mammary Excretion of 20-methylcholanthrene. H. Shay, B. Friedmann, M. Gruenstein, and S. Weinhouse. *Cancer Research 10*, 797(1950).

Q 656 On the Mechanism of the Enzymatic Synthesis of Glutamine. G. C. Webster and J. E. Varner. *J. Am. Chem. Soc. 76*, 633(1954).

Q 657 Mechanisms of Formation of Erythrulose-1-phosphate by Phosphoketotetrose Aldolase of Rat Liver. F. C. Charalampous. *J. Biol. Chem. 211*, 249(1954).

Q 658 Melanogenesis in Cells of Diverse Genotype Cultured *in Vitro*. C. L. Markert and G. Fischer. *Genetics 39*, Nov. (1954).

Q 659 β-Mercapto Pyruvate, a Substrate for Rhodanose. J. L. Wood and H. Fiedler. *J. Biol. Chem. 205*, 231(1953).

Q 660 Metabolic Alteration of 4-amino-5-imidazolecarboxamide in Tumor-Bearing Mice. G. M. Conzelman, Jr., H. G. Mandel, and P. K. Smith. *Federation Proc. 11*, 199(1952).

Q 661 Metabolic Effects of Thyroid Hormones *in Vitro*. H. A. Lardy and G. F. Maley. *Recent Progr. Hormone Research 10*, 129(1954).

Q 662 Metabolic Fate of the Isopropyl Group of Leucine. M. J. Coon. *Federation Proc. 9*, 162 (1950).

Q 663 Metabolic Lesions in Dietary Necrotic Liver Degeneration. S. S. Chernick, G. P. Rodnan, and K. Schwarz. *Federation Proc. 13, No. 1,* 191(1954).

Q 664 Metabolic Studies of Radiotestosterone. J. Ashmore and E. A. Doisy. *Federation Proc. 11,* (1952).

Q 665 The Metabolism of Androgens. W. H. Elliott, J. Ashmore, and P. M. Hyde. *Science 116,* 520(1952).

Q 666 Metabolism of C-14-glucose and Pyruvate-2-C-14 by Mammalian Muscle *in Vitro.* C. A. Villee and V. K. White. *Federation Proc. 10,* 265(1951).

Q 667 Metabolism of C-14-Labeled Glucose and Pyruvate by Rat Diaphragm Muscle *in Vitro.* C. A. Villee, V. K. White, and A. B. Hastings. *J. Biol. Chem. 195,* 287(1952).

Q 668 Metabolism of C-14-Labeled Glucose and C-14-Labeled Pyruvate by Rat Liver *in Vitro.* C. T. Teng, F. M. Sinex, and H. B. Hastings. *Federation Proc. 10,* 258(1951).

Q 669 Metabolism of C-14-Labeled Glycerol and Pyruvate by Liver *in Vitro.* C. T. Teng, M. L. Karnovsky, B. R. Landau, A. B. Hastings, and F. B. Nesbett. *J. Biol. Chem. 202,* 705(1953).

Q 670 Metabolism of Cobalt 56 in the Hen's Ovary. H. H. Darby. *Federation Proc. 9,* 356(1950).

Q 671 The Metabolism of Cystamine and Cysteamine. C. Davison, R. A. Salvador, and P. K. Smith. *Radiation Research 1*(1954).

Q 672 Metabolism of Ethanol by Rat Tissues. E. J. Masoro and H. Abramovitch. *Federation Proc. 12,* 94(1953).

Q 673 Metabolism of Fetal Tissues *in Vitro.* C. A. Villee. *Federation Proc. 11,* 302(1952).

Q 674 The Metabolism of Gluconic Acid. M. R. Stetten and S. DeWitt, Jr. *J. Biol. Chem. 187,* 241(1950).

Q 675 Metabolism of Glutamic Acid-1-C-14 and Aspartic Acid-4-C-14 in Rat Brain and Kidney Homogenates. C. R. Rayford and F. Friedberg. *Biochim. et Biophys. Acta 14,* 390(1954).

Q 676 The Metabolism of Human Placenta *in Vitro.* C. A. Villee. *J. Biol. Chem. 205,* 113(1953).

Q 677 The Metabolism of Inorganic Iodide in Thyroid Slices with Delineation of a New Iodide Compartment. J. L. Bakke and N. Lawerence. *J. Clin. Endocrinol. 14,* 771(1954).

Q 678 The Metabolism of Intravenously Administered Ammonium Glutamate and Glutamine. M. Berenbom and J. White. *J. Biol. Chem. 182,* 5(1950).

Q 679 Metabolism of Lysine in Neurospora. R. W. Schweet, J. T. Holden, and P. Lowy. *J. Biol. Chem. 211,* 517(1954).

Q 680 Metabolism of the Perfused Cat Brain *in Vivo* H. L. Meltzer, R. M. Taylor, and W. M. Sperry. *Federation Proc. 11*(1952).

Q 681 The Metabolism in the Rat of Guanylic Acid Labeled with P 32. P. M. Roll, H. Weinfeld and G. B. Brown. *Biochim. et Biophys. Acta 13,* 141-2(1954).

Q 682 Metabolism of Sea Urchin Spermatozoa and Induced Anaerobic Motility in Solutions of Amino Acids. A. Tyler and L. Rothchild. *Proc. Soc. Exptl. Biol. Med. 76,* 52-8(1951).

Q 683 The Metabolism of Styrene in the Rat. I. Danishefsky and M. Wilhite. *J. Biol. Chem. 211,* 549-53(1954).

Q 684 Methionine as a Precursor of Uric Acid *in Vivo.* J. T. Sime and B. C. Johnson. *Am. Chem. Soc. Abstrs.,* 19C(1954).

Q 685 Nature of the Activation Process in Enzymatic Reactions. D. B. Sprinson and D. Rittenberg *Nature 167,* 484(1951).

Q 686 New Metabolites of the Carcinogen 2-Acetylaminofluorene-9-C-14. J. H. Weisburger, E. K. Weisburger, and H. P. Morris. *Proc. Am. Assoc. Cancer Research ,1* 51(1954).

Q 687 Non-Conversion of Arabinose and Ribose to Glycine. D. M. Greenberg and E. N. Sassenrath. *Biochim. et Biophys. Acta 15,* 150(1954).

Q 688 Non-Enzymatic Transamination with Glyoxylic Acid and Various Amino Acids. H. I. Nakada and S. Weinhouse. *J. Biol. Chem. 204,* 831-6(1953).

Q 689 Non-Uniform Labeling of Insulin and Ribonuclease Synthesized *in Vitro.* M. Vaughan and C. B. Anfinsen. *J. Biol. Chem. 211,* 267(1954).

Q 690 Nuclear Function Mitosis. D. Mazia and D. M. Prescott. *Science 120,* 120-2(1954).

Q 691 Nucleic Acid Turnover Rates in *Arbacia* Eggs and Sperm. C. A. Villee, D. T. Villee, and R. LaPlace. *Biol. Bull. 105,* 311(1953).

Q 692 Observations Concerning the Production and Excretion of Cholesterol in Mammals. IX. The Mechanism of the Hypercholesteremic Effect of Cholic Acid. S. O. Byers, M. Friedman, M. W. Biggs, and B. Gunning. *J. Exptl. Med.* 97, 511(1953).

Q 693 Occurrence of the Citric Acid Cycle in Tumors. S. Weinhouse, R. H. Millington, and C. E. Wenner. *J. Am. Chem. Soc. 72,* 4332(1950).

Q 694 Organization and Function of the Inorganic Constituents of Nuclei. D. F. Poulson and V. T. Bowen. *Exptl. Cell Research, Suppl. 2,* 161-70(1952).

Q 695 The Orgin of Asymmetrically Labeled Molecules from Symmetrical Precursors. D. Racusen and S. Aronoff. *Arch. Biochem. 34,* 218(1951).

Q 696 On the Origin of Bile Pigment in Normal Man. I. M. London, R. West, D. Shemin, and D. Rittenberg. *J. Biol. Chem. 184,* 351(1950).

Q 697 Origin of Serine and Glycine in Yeast. C. H. Wang, J. W. Davis, V. H. Cheldelin, and B. E. Christensen. *Nature 174,* 1145(1954).

Q 698 Oxidation of Aldehydes by Mitochondria of Rat Tissues. S. S. Walkenstein and S. Weinhouse. *J. Biol. Chem. 200,* 515-23(1953).

Q 699 Oxidation of Aspartic Acid by Rat Liver. H. I. Nakada and S. Weinhouse. *J. Biol. Chem. 187*, 663(1950).

Q 700 Oxidative and Phosphorylative Activity of Plant Mitochondria. A. Millerd, J. Bonner, B. Axelrod, and R. Bandurski. *Proc. Natl. Acad. Sci. 37*, 855–62(1951).

Q 701 Oxygen Consumption of Adipose Tissue. S. S. Chernick. *Proc. N. Dakota Acad. Sci. 6*, 49(1952).

Q 702 Peptide-Bond Synthesis in Higher Plants. II. Studies on the Mechanism of Synthesis of Glutamyl-cysteine. G. C. Webster and J. E. Varner. *Arch. Biochem. and Biophys. 52*, 22–32(1954).

Q 703 Peptide Bond Synthesis in Normal and Malignant Tissues. P. C. Zamecnik and I. D. Frantz, Jr. *Cold Spring Harbor Symposium Quant. Biol. 14*, 199–208(1950).

Q 704 Permeability of the Human Erythrocyte to Sodium and Potassium *in Vitro*. A. K. Solomon. *Federation Proc.* (1951).

Q 705 Phosphate Binding and the Glyceraldehyde-3-Phosphate Dehydrogenase Reaction. S. F. Velick and J. E. Hayes. *J. Biol. Chem. 203*, 545–62(1953).

Q 706 Phosphoglyceryl Kinase in Higher Plants. B. Axelrod and R. S. Bandurski. *J. Biol. Chem. 204*, 939–48(1953).

Q 707 Phosphohexokinase in Higher Plants. B. Axelrod, P. Saltman, R. S. Bandurski, and R. S. Baker. *J. Biol. Chem. 197*, 89–96(1951).

Q 708 Phospholipid Synthesis in Diabetic Dogs. D. B. Zilversmit. *Federation Proc. 10*(1951).

Q 709 Porphyrin and Hemoglobin Metabolism in Congenital Porphyria. I. M. London, R. West, D. Shemin, and D. Rittenberg. *J. Biol. Chem. 184*, 365(1950).

Q 710 The Possible Role of Proteolytic Enzymes in Protein Synthesis. R. B. Loftfield, J. W. Grover and M. L. Stephenson. *Nature 171*, 1024–7 (1953).

Q 711 Potassium Turnover in Rat Skeletal Muscle *in Vitro*. D. R. H. Gourley and H. Jonas. *Federation Proc. 13, No. 1*, 59(1954).

Q 712 Presence of 17-Ketosteroids Adrenal Perfusates. E. Bloch, R. I. Dorfman and G. Pincus. *Proc. Soc. Exptl. Biol. Med. 85*, 106–10(1954).

Q 713 Prevention of Plasma Cholesterol Elevation and Atheromatosis in the Cholesterol-Fed Bird by the Administration of Dihydrocholesterol. M. D. Siperstein, C. W. Nichols, and I. L. Chaikoff. *Circulation 7*, 37(1953).

Q 714 Production of Radioactive Serum Albumin by Liver Slices. T. Peters and C. B. Anfinsen. *J. Biol. Chem. 182*, 171(1950).

Q 715 Protein Synthesis in the Pancreas. II. Role of Ribonucleoprotein in Protein Synthesis. A. E. Mirsky, V. G. Allfrey, M. M. Daly, and S. Osawa. *J. Gen. Physiol. 37*, 157(1953).

Q 716 Protein Turnover and Enzyme Formation. N. D. Lee and R. H. Williams. *Federation Proc. 12*, 550(1953).

Q 717 Proteolytic Activity Determined with a Substrate Tagged with Radioactive Iodine. N. R. Shulman and H. J. Tagnon. *J. Biol. Chem. 186*, 69–75(1950).

Q 718 Purine Synthesis in a Purine-Requiring Yeast Mutant. R. Abrams. *J. Am. Chem. Soc. 73*, 1888(1951).

Q 719 Pyruvate and Acetate Metabolism in the Isolated Rat Diaphragm. J. M. Foster and C. A. Villee. *J. Biol. Chem. 211*, 797(1954).

Q 720 The Quantitative Determination of Proline and Pipecolic Acid with Ninhydrin. R. S. Schweet. *J. Biol. Chem. 208*, 603–13(1954).

Q 721 Quantitative Differential Fixation of Sulfate by Tissues Maintained *in Vitro*. L. L. Layton. *Cancer 3*, 725–34(1950).

Q 722 The Quantitative Significance of Glucolysis and Non-Glycolysis in Glucose Utilization by Rat Mammary Gland. S. Abraham, P. F. Hirsch, and I. L. Chaikoff. *J. Biol. Chem. 211*, 31–8 (1954).

Q 723 The Quantitative Significance of the Lymphatic Pathway in Transport of Absorbed Fatty Acids. B. Bloom, I. L. Chaikoff, W. O. Reinhardt, C. Entenman, and W. G. Dauben. *J. Biol. Chem. 184*, 1–8(1950).

Q 724 A Quantitative Study of the Relationship between Tryptophan and Niacin in Neurospora. C. W. H. Partridge, D. M. Bonner, and C. Yanofsky. *J. Biol. Chem. 194*, 269–78(1952).

Q 725 Radioactive Lipids from Tissue Extracts of Rats Injected with $NaHC^{-14}O_3$. L. M. Marshall and F. Friedberg. *Federation Proc. 11*, 253(1952).

Q 726 Radioisotopes in Biochemical and Medical Research. C. A. Villee. *Ann. Rev. Nuclear Science 1*, 525(1952).

Q 727 Rate of Cholesterol Synthesis in Hypo- and Hyperthyroid Rats. S. O. Byers, R. H. Rosenman, M. Friedman, and N. W. Biggs. *J. Exptl. Med. 96*, 513(1952).

Q 728 Rates of Glucose Production and Oxidation in Normal and Diabetic Rats. S. DeWitt, Jr., I. D. Welt, D. J. Ingle, and E. H. Morley. *J. Biol. Chem. 192*, 817(1951).

Q 729 Recent Contributions to the Understanding of the Metabolic Defect in Gout. S. DeWitt, Jr. *Geriatrics 9*, 163(1954).

Q 730 The Regulation of Blood Glucose in the Human Fetus. C. A. Villee. *J. Appl. Physiol. 5*, 437(1953).

Q 731 The Relation of Folic Acid to the Metabolism of Serine. D. B. Sprinson and D. Elwyn. *J. Biol. Chem. 184*, 475(1950).

Q 732 The Relation of Glucose Oxidation to Lipogenesis in Mammary Tissue. P. F. Hirsch, H. Baruch, and I. L. Chaikoff. *J. Biol. Chem. 210*, 785–97(1954).

Q 733 Relation between Protein Depletion and Protein Synthesis in Albino Rat. N. D. Lee and R. H. Williams. *Federation Proc. 11*(1952).

Q 734 On the Reported Gamma Glutamyl Activation of Peptide-bond Synthesis. R. W. Hendler and D. M. Greenberg. *Nature 170*, 123(1952).

Q 735 Review: Chemical Pathways of Metabolism. S. S. Chernick. *J. Agr. Food Chem. 2*, 893(1954).

Q 736 The Role of Cations in the Reversible Inactivation of Coliphage in Media of Low Ionic Strength. I. The Competitive Action between H+ and other Cation. W. R. Ruegamer. *Arch. Biochem. and Biophys. 50*, 269(1954).

Q 737 Role of Folacine and Vitamin B-12 in Synthesis and Utilization of Choline by the Rat as Studied with C-14-Glycine, Formate, and Methionine. J. A. Stekol, K. Weiss, and S. Weiss. *Federation Proc. 10*(1951).

Q 738 The Role of Glycine in the Biosynthesis of Heme. N. S. Radin, D. Rittenberg, and D. Shemin. *J. Biol. Chem. 184*, 755(1950).

Q 739 Role of the Liver in the Metabolism of Steroids. W. H. Elliott, E. A. Doisy, Jr., B. C. Boeklage, F. N. H. Shen, S. A. Thayer, P. M. Hyde, and E. A. Doisy. *Abstr. Proc. 12th Intern. Cong. Pure Appl. Chem.*, 105(1951).

Q 740 The Role of the Midpiece in the Incorporation of P-32 into the Ribonucleic Acid of *Arbacia* Spermatozoa. H. di Stefano and D. Mazia. *Biol. Bull. 103*, 299-300(1952).

Q 741 The Sequence of Formation of Fatty Acids in Developing Soybean Seeds. R. O. Simmons and F. W. Quackenbush. *J. Am. Oil Chemists Soc. 31*, 441-3(1954).

Q 742 Short Term Carbon Dioxide Fixation in Mouse Liver. L. Leeper, F. Friedberg and L. M. Marshall. *Nature 171*, 748(1953).

Q 743 Short Term Carbon Dioxide Fixation in Tumor *in Vivo*. F. Friedberg and L. M. Marshall. *Federation Proc. 12*, 201(1952).

Q 744 Significance of Endogenous Cholesterol in Arteriosclerosis: Synthesis in Arterial Tissue. M. D. Siperstein, I. L. Chaikoff, and S. S. Chernick. *Science 113*, 747-9(1951).

Q 745 On the Significance of a-Glutamyl Transpeptidation in Peptide Biosynthesis. R. W. Hendler and D. M. Greenberg. *Biochem. J. 57*, 641-9 (1954).

Q 746 Simultaneous Quantitative and Isotopic Analysis of Isotopic Dilution. M. Berenbom, H. A. Sober, and J. White. *Arch. Biochem. 26*, 369(1950).

Q 747 A Simultaneous Study of Glycine-N-15 Incorporation into Uric Acid and Heme, and of Utilization, in a Case of Gout Associated with Polycythemia Secondary to Congenital Heart Disease. T. F. Yü, L. R. Wasserman, J. D. Benedict, E. J. Bien, A. B. Gutman, and S. DeWitt, Jr. *Am. J. Med. 15*, 845(1953).

Q 748 Some Aspects of the Metabolism of 8-Azaguanine. P. K. Smith, H. G. Mandel, and P. E. Carlo. *Proc. XIX Intern. Physiol. Cong., Montreal*, 774-6(1953).

Q 749 Some Factors Influencing Nucleic Acid Purine Renewal in the Rat. R. Abrams. *Arch. Biochem. and Biophys. 33*, 436-47(1951).

Q 750 Sterol and Steroid Metabolism. D. K. Fukushima and R. S. Rosenfeld. *Chem. Pathways of Metabolism 1*, 349-411(1954).

Q 751 Studies of the Biosynthesis of the α-Amylase of *Pseudomonas saccharophila*. A. Markovitz and H. P. Klein. *Am. Chem. Soc. Abstr.*, 67c(1954).

Q 752 Studies on the Carbohydrate and Protein Metabolism of the Rat Hepatoma. P. C. Zamecnik, R. B. Loftfield, M. L. Stephenson, and J. M. Steele. *Cancer Research 11*, 592-602(1951).

Q 753 Studies on the Coenzyme Activation of Glutamic-Aspartic Apotransaminase. A. Meister, H. A. Sober, and E. A. Peterson. *J. Biol. Chem. 206*, 89(1954).

Q 754 Studies on the Conversion of 3-Hydroxanthranilic Acid to Niacin in Neurospora. C. Yanofsky and D. M. Bonner. *J. Biol. Chem. 189*, 211-8(1951).

Q 755 Studies with Isotopic Steroid Hormones. T. F. Gallagher, D. K. Fukushima and M. C. Barry. *Recent Progr. Hormone Research 6*, 131-57(1951).

Q 756 Studies in the Mechanism of Protection by Aurintricarboxylic Acid in Beryllium Poisoning. II. Equilibria Involving Alkaline Phosphatase. J. Schubert and A. Lindenbaum. *J. Biol. Chem. 208*, 359-68(1954).

Q 757 Studies on the Mechanism of Protection by Aurintricarboxylic Acid in Beryllium Poisoning. III. Correlation of Molecular Structure with Reversal of Biologic Effects of Beryllium. A. Lindenbaum, M. R. White, and J. Schubert. *Arch. Biochem. and Biophys. 52*, 110(1954).

Q 758 Studies on the Mechanism of Protection by Aurintricarboxylic Acid in Beryllium Poisoning. IV. Comparative Effects of Related Compounds on Survival of Be-Poisoned Animals and on the Distribution of Be. M. R. White and J. Schubert. *Arch. Biochem. and Biophys. 52*, 133-42(1954).

Q 759 Studies on the Mechanism of Protection by Aurintricarboxylic Acid in Beryllium Poisoning. V. Long-Term Distribution Studies with C-14-Labeled ATA. A. Lindenbaum, J. Schubert, and M. R. White. *Arch. Biochem. and Biophys. 52*, 143-7(1954).

Q 760 Studies on the Metabolism of Embryonic Tissues Cultured *in Vitro*. C. A. Villee. *Resume, II Cong. Intern. de Biochimie*, 44(1952).

Q 761 Studies on the Metabolism of Fetal and Placental Tissues. C. A. Villee and D. T. Balzer. *Biol. Bull. 101*, 195(1951).

Q 762 Studies of Metabolism of Isotopic Steroid Hormones in Man. T. F. Gallagher, H. L. Bradlow, D. K. Fukushima, C. Beer, T. H. Kritchevsky, M. Stokem, M. L. Edinoff, L.

Hellman, and K. Dobriner. *Recent Progr. Hormone Research*, 411–34(1954).

Q 763 Studies on Metabolism of Radioactive L-Ascorbic Acid. J. J. Burns, H. B. Burch, and C. G. King. *Federation Proc. 9*(1950).

Q 764 Studies on the Metabolism of *l*-Valine in Phlorizinized and Fasted Rats. W. S. Fones and J. White. *Arch. Biochem. 28*, 145(1950).

Q 765 Studies of the New Hampshire Chicken Embryo. III. Nitrogen and Lipid Analysis of Ultracentrifugal Fractions of Plasma. O. A. Schjeide. *J. Biol. Chem. 211*, 355(1954).

Q 766 Studies on Phosphorus Metabolism in Sea Urchin Embryos. C. A. Villee and D. T. Villee. *J. Cellular Comp. Physiol. 40*, 57(1952).

Q 767 Studies on the Schardinger Dextrins. VII. Cosubstrate Specificity in Coupling Reactions of *Macerans* Amylase. D. French, M. L. Levine, E. Norberg, P. Nordin, J. H. Pazur, and G. M. Wild. *J. Am. Chem. Soc. 76*, 2387–90(1954).

Q 768 Studies on Uracil Utilization in Normal and Acetaminofluorene-Treated Rats. R. J. Rutman, K. E. Paschkis, and A. Cantarow. *Science, 117*, 282(1953).

Q 769 Studies on Urea Formation in Surviving Liver Slices. C. H. W. Hirs and D. Rittenberg. *J. Biol. Chem. 186*, 429(1950).

Q 770 Studies on the *in Vitro* Metabolism of the Rat Hepatomata. P. C. Zamecnik. *Texas Repts. Biol. Med. 10*, 273–8(1952).

Q 771 A Study of Acetoacetate "turnover" in Rat Liver Slices *in Vitro*. S. Weinhouse and R. H. Millington. *J. Biol. Chem. 193*, 1(1951).

Q 772 Susceptibility to Experimental Atherosclerosis and the Methylation of Ethanolamine-1,2-C–14 to Phosphatidyl Choline. L. O. Pilgeram and D. M. Greenberg. *Science 120*, 760–1(1954).

Q 773 The Synthesis of Aldolase and Phosphorylase in the Rabbit. M. Heimberg and S. F. Velick. *J. Biol. Chem. 208*, 725–30(1954).

Q 774 Synthesis of Lipids from Radioactive Acetate by Surviving Adipose Tissue Slices. D. D. Feller. *Federation Proc. 11*, 45(1952).

Q 775 Synthesis and Metabolic Studies of 11-Dehydrocorticosterone-21-C–14 and Its Acetate. R. Sung-Lan Hsia, W. H. Elliott, E. A. Doisy, Jr., and S. A. Thayer. *Federation Proc. 11*(1952).

Q 776 Synthesis of 2-Methyl-1, 4-naphthoquinone-4-C–14. Liang-Li and W. H. Elliott. *J. Am. Chem. Soc. 74*, 4089–90(1952).

Q 777 Synthesis of Phospholipides in Diabetic Dogs. D. B. Zilversmit and N. R. DiLuzio. *J. Biol. Chem. 194*, 673(1952).

Q 778 Synthesis of Ribose by the Chick. I. A. Bernstein. *J. Biol. Chem. 205*, 309(1953).

Q 779 Thymidine and Related Pyrimidine Nucleosides. M. Friedkin and D. Roberts. *J. Biol. Chem. 207*, 257–66(1954).

Q 780 Thyroxine-like Compounds in Iodinated Protein and Thyroid Gland. W. Friedberg and E. P. Peineke. *Federation Proc. 11*(1952).

Q 781 Tissue Distribution and Excretion of N,N′, N″-triethylenephosphoramide-P–32 snf 2,4-6-triethyleimino-s-triazine-C–14 in Normal and Tumor-bearing Mice. M. V. Nadkarni, E. I. Goldenthal, and P. K. Smith. *Proc. Am. Assoc. Cancer Research 1*, 39(1953).

Q 782 Transaldolase: The Formation of Fructose-6-phosphate from Sedoheptulose-7-phosphate. B. L. Horecker and P. Z. Smyriniotis. *J. Am. Chem. Soc. 75*, 2021(1953).

Q 783 Transamination from Glutamine to alpha-Keto Acids. A. Meister and S. V. Tice. *J. Biol. Chem. 187*, 173(1950).

Q 784 Transfer of Proteins Tagged with Radioactive Iodine from Plasma into Lymph. H. D. Friedlander, P. Elrod, H. J. Curtis, and G. R. Meneely. *Federation Proc. 9*, 45(1950).

Q 785 The transformation of Cholesterol to Coprostanol R. S. Rosenfeld, D. K. Fukushima, L. Hellman, and T. F. Gallagher. *J. Biol. Chem. 211*, 301–11(1954).

Q 786 Transglucosidase of *Asperaillus oryzae*. J. H. Pazur and D. French. *J. Am. Chem. Soc. 73*, 3536(1951).

Q 787 The Tricarboxylic Acid Cycle in Accessory Sex Tissues. G. G. Rudolph and W. R. Starnes. *Abstr. 121st Meeting, Am. Chem. Soc.*, 41C(1952).

Q 788 Tumor Purine Metabolism as Studied with Radioactive Guanine and Azaguanine. H. G. Mandel and P. E. Carlo. *Proc. 2nd Cong. Intern. Biochem.*, 474(1952).

Q 789 The Turnover of C–14-labeled Alanine and Glycine in the Proteins of Rat Liver. N. L. R. Bucher and I. D. Frantz, Jr. *Cancer Research 10*, 207(1950).

Q 790 Turnover Rates of Phosphate and Fatty Acid Moieties of Plasma Phospholipides. E. O. Weinman, I. L. Chaikoff, C. Entenman, and W. G. Dauben. *J. Biol. Chem. 187*, 643–9(1950).

Q 791 Two Blocks in Carbohydrate Utilization in the Liver of the Diabetic Rat. S. S. Chernick and I. L. Chaikoff. *J. Biol. Chem. 188*, 389(1951).

Q 792 Uptake of Labeled Methionine by Pituitary and Mammary Tissue of C3H Mice. J. B. Melchior and A. H. Goldkamp. *Federation Proc. 12*, 245(1953).

Q 793 Uptake of P–32 by Cardiac Muscle *in Vitro*. J. B. Marsh, G. G. Casten, and H. F. Elliot. *Am. J. Physiol. 173*, 297(1953).

Q 794 Uptake of S–35 by Human Bone Marrow Cells *in Vitro*. L. G. Lajtha, F. Ellis and R. Oliver. *Brit. J. Cancer 7*, 401(1953).

Q 795 Uricolysis in Normal Man. J. B. Wyngaardan and S. DeWitt, Jr. *J. Biol. Chem. 203*, 9(1953).

Q 796 Use of Deficient Ration for Chicks in the Bioassay of Gonadotrophic Hormones. J. J. Lane and J. R. Paysinger. *Proc. Soc. Exptl. Biol. Med. 84*, 396–7(1953).

Q 797 The Use of Esters of Biologically Active Weak Acids in Overcoming Permeability Difficulties.

H. Beevers, E. P. Goldschmidt and H. Koffler. *Arch. Biochem. and Biophys. 39*, 236–8(1952).

Q 798 Utilization of C–14-Thymidine for the Synthesis of Desoxyribonucleic Acid. M. Friedkin. *Abstr. Am. Chem. Soc. Meeting*, 6C(1953).

Q 799 Utilization of Choline and Betaine Methyl in the Guinea Pig. J. Dubnoff. *Arch. Biochem. 22*, 474–5(1949).

Q 800 Utilization of Formate C–14 for Synthesis of DNA by Human Bone Marrow Cells *in Vitro*. L. G. Lajtha. *Nature 174*, 1013(1954).

Q 801 Utilization of Purine and Pyrimidine Compounds in Nucleic Acid Synthesis by *Escherichia coli*. E. T. Bolton and A. M. Reynard. *Biochim. et Biophys. Acta 13*(1954).

Q 802 Utilization of Purines for Nucleic Acid Synthesis in Chrysomonads and Other Organisms. L. Hamilton. *Ann. N. Y. Acad. Sci. 56*, 961–8 (1953).

Q 803 The Utilization of Sulfate Sulfur for the Synthesis of Taurine in the Developing Chick Embryo. L. J. Machlin, P. B. Pearson, and C. A. Denton. *J. Biol. Chem. 212*, 469(1955).

Q 804 *In Vitro* Conversion of Thyroxine to Triiodothyronine by Kidney Slices. E. C. Albright, F. C. Larson, and R. R. Trust. *Proc. Soc. Exptl. Biol. Med. 86*, 137(1954).

Q 805 The *in Vitro* Effects of Thyrotrophin on the Collection and Binding of Iodine by Thyroid slices. J. L. Bakke and N. Lawrence. *Clin. Research Proc. 2*, 143(1954).

Q 806 The *in Vitro* Exchange of Phospholipid Phosphorus between Lipoproteins. H. A. Eder, J. Brogden and E. Boyle. *Circulation 10*, 603 (1954).

Q 807 *In Vitro* CO_2 Fixation into Succinate. L. M. Marshall and F. Friedberg. *Biochim. et Biophys. Acta 13*, 61(1954).

Q 808 *In Vitro* Incorporation of 1-C–14-DL-alanine into Proteins of Rat-liver Granular Fractions. P. Siekevitz and P. C. Zamecnik. *Federation Proc. 10*(1951).

Q 809 *In Vitro* Incorporation of Leucine into the Proteins of *Micrococcus lysodeikticus*. R. L. Lester. *J. Am. Chem. Soc. 75*, 5448(1953).

Q 810 *In Vitro* Measurement of Potassium Turnover in Rat Skeletal Muscle. D. R. H. Gourley. *Virginia J. Sci. 5*, 317(1954).

Q 811 *In Vitro* Protein Synthesis and Turnover in Mouse Tissues. R. J. Winzler. *Texas Repts. Biol. and Med. 10*, 265(1952).

Q 812 The *in Vitro* Stimulation of Phospholipid Synthesis by Choline in Choline Deficient Dog Liver Slices. N. R. DiLuzio and D. B. Zilversmit. *J. Biol. Chem. 205*, 867(1953).

Q 813 An *in Vitro* Study of Thyroid Metabolism. A New Thyrotrophin Assay. The Non-equivalence of all Thyroidal Inorganic Iodine. J. L. Bakke and N. Lawrence. *Clin. Research Proc. 2*, 85(1954).

Q 814 *In Vitro* Uptake of Radiomethionine in Normal Tissue and Carcinoma. L. Van Middlesworth. *Federation Proc. 10*(1951).

Q 815 *In Vitro* Utilization of 2-C–14-Uracil and Thiouracil. R. J. Rutman, A. Cantarow and K. E. Paschkis. *Federation Proc. 12*, 122(1953).

Q 816 *In Vivo* Appearance of C–14 Glycine in Tissue Proteins. L. M. Marshall and F. Friedberg. *Endocrinology 48*, 113(1951).

Q 817 The *in Vivo* Conversion of Glutamic Acid into Proline and Arginine. H. J. Sallach, R. E. Koeppe, and W. C. Rose. *J. Am. Chem. Soc. 73*, 4500(1951).

Q 818 An Action of ACTH on Adrenal Slices. R. Haynes, K. Savard, and R. I. Dorfman. *Sci. 116*, 690(1952). *Chem. Abstr. 47*, 3443(1953).

Q 819 Adrenal Conversion of C–14 Labeled Cholesterol and Acetate to Adrenal Cortical Hormones. A. Zaffaroni, O. Hechter, and G. Pincus. *J. Am. Chem. Soc. 73*, 1390(1951).

Q 820 Androgen Biosynthesis in Testicular Tissue (*in Vivo*). K. Savard and R. I. Dorfman. *Canadian Physiol. Soc. Ann. Meeting* (Toronto) (1954).

Q 821 Biogenesis of Adrenal Cortical Hormones. O. Hechter. *Ciba, Foundation Colloq. Endocrinol. 7*, 161(1953).

Q 822 Conversion of C–14-Labeled Acetate and Cholesterol to Adrenocortical Hormones by Perfused Adrenal Glands. A Zaffaroni, O. Hechter, and G. Pincus. *Federation Proc. 10*(1951).

Q 823 The Conversion of Cholesterol to Pregneinnolone in Bovine Adrenal Homogenates. N. Saba, O. Hechter, and D. Stone. *J. Am. Chem. Soc. 76*, 3862(1954).

Q 824 The Conversion of Deutero-N–15 Tryptophan to Quinolinic Acid by the Rat. R. W. Schayer and L. M. Henderson. *J. Biol. Chem. 195*, 657(1952).

Q 825 Costicosteroid Metabolism in Isolated Perfused Rat Livers. O. Hechter. *Ciba Foundation Colloq. Endocrinol. 7*, 272(1953).

Q 826 Determination of Histamine as an Isotopic Derivative. R. W. Schayer, Y. Kobayashi, and R. L. Smiley. *J. Biol. Chem. 212*, 593(1955).

Q 827 The Effect of ACTH upon Steroidogenesis by the Isolated Perfused Adrenal Gland. G. Pincus, O. Hechter, and A. Zaffaroni. *Proc. 2nd. Clin. ACTH Conf. 1*, 40(1950).

Q 828 The Genesis of the Adrenocortical Secretion. O. Hechter and G. Pincus. *Physiol. Revs. 34*, 459(1954).

Q 829 Influence of ACTH on Progresterone Transformation to Corticosteroid in Perfused Bovine Adrenals. D. Stone, E. Gobeil, M. Feinstein, and O. Hechter. *Federation Proc. 12*, 139(1953).

Q 830 Irradiation and Adrenal Steroidogenesis· Transformations by Irradiated Isolated Perfused Calf Adrenals. G. Rosenfeld, F. Ungar, R. I. Dorfman, and G. Pincus. *Endocrinology 56*, 24(1955).

Q 831 On the Mechanism of the C–11-Hydroxlation of Steroids. M. Hayano and R. I. Dorfman. *J. Biol. Chem. 211*, 227(1954).

Q 832 On the Metabolism of Glycylglycine. H. D. Hoberman and D. Stone. *J. Biol. Chem. 149*, 383(1952).

Q 833 Steroidogenesis by Isolated ACTH-Stimulated Calf Adrenal Glands Irradiated During Perfusion. G. Rosenfeld, F. Ungar, R. I. Dorfman, and G. Pincus. *Federation Proc. 13, No. 1*, 399(1954).

Q 834 Studies on ACTH Action in Perfused Bovine Adrenals. The Site of Action of ACTH in Corticosteroid Oogenesis. D. Stone and O. Hechter. *Arch. Biochem. and Biophys. 51*, 1457(1954).

Q 835 Studies on Protein Synthesis *in Vitro*. V. The Effect of Diet and Fasting on the Incorporation of Methionine-S–35 into Liver Proteins. J. Rutman, R. J. Rutman and H. Tarver. *J. Biol. Chem. 212*, 95–103(1955).

Q 836 Action de la L-diaminoacide-déshydrogénase du foie de Dindon sur la L-Lysine radioactive. P. Boulanger et R. Osteux. *Compt. rend. 238*, 406(1954).

Q 837 Les destinées de la Lysine dans les régnes animal et vététal. P. Boulanger et R. Osteux. *Compt. rend. 239*, 458(1054).

Q 838 Métabolisme de l'hémoglobine dans le globule rouge circulant étudié par l'emplor combiné du fer radioactif et de la séroagglutination différentielle. J. C. Dreyfus, J. Dausset, G. Schapira, et J. Kurh. *Compt. rend. soc. biol. 148*, 199(1954).

Q 839 Recherches sur la biochimie de l'hémoglobine à l'aide du fer radioactif. V-Biosynthèse des hémoglobines "*in Vitro*". J. Kruh, J. C. Dreyfus et G. Schapira. *Bull. soc. chim. biol. 35*, 1181(1953).

Q 840 Recherches sur la biochimie de l'hémoglobine à l'aide du fer radioactif. I—Fractionnement des Hémoglobines de lapin adulte par dénaturation alcaline. G. Schapira, J. C. Dryfus et J. Kruh. *Bull. soc. chim. viol. 33*, 812(1951).

Q 841 Recherches sur la biochimie de l'hémoglobine à l'aide du fer radioactif. II—Fractionnement des hémoglobines de lapin adulte par électrophorèse. G. Schapira, J. Kruh, A. Bussard, et J. C. Dreyfus. *Bull. soc. chim. biol. 33*, 822(1951).

Q 842 Recherches sur la biochimie du fer musculaire. IX—Métabolisme du fer musculaire au cours de l'Atrophie musculaire par section nerveuse étudié à l'aide du fer radioactif. J. C. Dreyfus et G. Schapira. *Bull. soc. chim. biol. 34*, 518(1952).

Q 843 Recherches sur la biochimie du fer musculaire. VII—La biogenèse des "fer non héminiques" musculaires étudiée à l'aide du fer radioactif. J. C. Dreyfus et G. Schapira. *Bull. soc. chim. biol. 33*, 272(1951).

Q 844 Recherches sur la biochimie du fer musculaire. VI—Nature des "Fers non heminiques" musculaires. Utilisation du fer radioactif dans l'étude de leurs rapports avec la myosine. G. Schapira et J. C. Dreyfus. *Bull. soc. chim. biol. 33*, 265(1951).

Q 845 Recherches sur la biochimie du fer musculaire. VIII—Etude de la fatigue à l'aide du fer radioactif. G. Schapira et J. C. Dreyfus. *Bull. soc. chim. biol. 34*, 514(1952).

Q 846 Recherches sur la biochimie du fer musculaire. X—Etude de nécrose ischémique musculaire à l'aide du fer radioactif. G. Schapira et J. C. Dreyfus. *Bull. soc. chim. biol. 34*, 522(1952).

Q 847 Enzymatic Synthesis of α-Acetolactate from Pyruvate. Y. Kobayashi and G. Kalnitsky *Federation Proc. 13, No. 1*, 243(1954).

Q 848 On the Action of Pancreatic Lipase on Triglycerides *in Vitro*. B. Borgstrom. *Acta Physiol. Scand., No. 25*, 328(1952).

Q 849 Amino Acid Formation from C–14-Labelled Glucose in Cultures of Fibroblasts from Embryonic Chicken Heart Tissue. A Fischer, G. Fischer, C. Landschurz, G. Ehrensvard, M. Rafelson and R. Stjernholm. *Acta Physiol. Scand. 27*, 247–54(1952).

Q 850 Application of the Isolated Rat Liver Preparation to the Study of the Mechanism of Bile Secretion. R. W. Brauer and R. J. Holloway, et al. *19th. Intern. Physiol. Congr. Montreal*, Sept.(1953).

Q 851 Aspartic Acid as a Precursor for Ribonucleic Acid Pyrimidines. U. Langerquist, P. Reichard, and G. Ehrensvard. *Acta Chem. Scand. 5*, 1212–13(1951).

Q 852 Assay of L-Phenylalanine as Phenylethylamine after Enzymatic Decarboxylation: Application to Isotope Studies. S. Undenfriend and J. R. Cooper. *J. Biol Chem. 203*, 953(1953).

Q 853 Bile Formation in the Isolated Rat Liver—Transfer of K–42 from Perfusate to Bile. G. F. Leong and R. J. Holloway, et al. *Federation Proc. 13, No. 1*, 379–80(1954).

Q 854 Biosynthesis and Characterization of 11 β-Hydroxytestosterone. L. R. Axelrod and G. Arroyave. *J. Am. Chem. Soc. 75*, 5729(1953).

Q 855 Biosynthesis of Hemin in Soy Bean Root Nodules. J. E. Richmond and K. Salomon. *Federation Proc. 13, No. 1*, March(1954).

Q 856 The Burning of CO to CO_2 by Isolated Tissues as Shown by the Use of Radioactive Carbon. R. T. Clark, Jr., J. N. Stannard, and W. O. Fenn. *Am. J. Physiol. 161*, 1(1950).

Q 857 The Characterization of Four New Metabolites of Adrenocortical Hormones. D. K. Fukushima, N. S. Leeds, H. L. Bradlow, T. H. Kritchevsky, M. B. Stokem, and T. F. Gallagher. *J. Biol. Chem. 212*, 449–60(1955).

Q 858 Cholesterol and Fatty Acid Synthesis in Biotin Deficient Rats. G. L. Curran. *Proc. Soc. Exptl. Biol. Med. 75*, 496–8(1950).

Q 859 Cocarboxylase as a Phosphate Carrier. K. H. Kiessling and P. E. Lindahl. *Arkiv Kemi 4*, 17(1952).

Q 860 A Comparison of D-3 Glyceraldehyde Phosphate Dehydrogenase from Yeast and from Skeletal Muscle. S. F. Velick and S. Udenfriend. *Federation Proc. 9*(1950).

Q 861 Desoxyribonucleic Acid Complexes of Rare Earths. K. G. Stern and M. A. Steinberg. *Biochim. et Biophys. Acta 11*(1953).

Q 862 Distribution of Acetic Acid Carbon in High Fatty Acids Synthesized from Acetic Acid by Intact Mouse. W. G. Dauben, E. Hoerger, and J. W. Petersen. *J. Am. Chem. Soc. 75*, 2347–51(1953).

Q 863 The Dominant Role of the Liver in Plasma Protein Synthesis. A Direct Study of the Isolated Perfused Rat Liver with the Aid of Lysine-Σ-C–14. L. L. Miller, C. G. Bly, M. L. Watson, and W. F. Bale. *J. Exptl. Med. 94*, 431–53(1951)

Q 864 The Effect of Adenosine on the Phosphate Exchange in Mammalian Red Blood Cells. T. A. J. Prankerd and K. I. Altman. *Biochim. et Biophys. Acta 15*, 158–9(1954).

Q 865 The Experimental Study of Thyroid Metabolism with Radioactive Iodine. J. Gross and R. V. Pitt-Rivers. *Brit. Med. Bull. 8*, 136(1952).

Q 866 Extrahepatic Formation of Plasma Phospholipids in Rats. V. Claassen, R. J. Vogels and B. Wostmann. *Acta Physiol. Pharmacol. Neerl. 2*, 553–9(1951–2).

Q 687 The Formation of Tyrosine in *Escherichia coli* and *Neurospora crassa*, Grown on Isotope-Labelled Acetate as the Sole Source of Carbon. G. Ehrensvard and L. Reio. *Arkiv Kemi 5*, 229–34(1953).

Q 868 The Formation of Tyrosine in *Rhodosprillum rubrum* Grown on Acetate and Carbon Dioxide, Isotope Labelled, Under Anaerobic Condition. G. Ehrensvard and L. Reio. *Arkiv Kemi 5*, 327–32(1953).

Q 869 Hemin Synthesis in Spleen Homogenates. K. I. Altman and K. Salomon. *Science 3*, 117–8 (1950).

Q 870 The Identification of 3:5:3′ L-Triiodothyronine in Human Plasma. J. Gross and R. V. Pitt-Rivers. *Lancet 1*, 439(1952).

Q 871 The Incorporation of Isotopic Formate into the Thymine of Bone Marrow Desoxyribonucleic Acid *in Vitro*. J. R. Totter. *J. Am. Chem. Soc. 76*, 2196(1954).

Q 872 The Incorporation of Radioactive Iron in Human Foodstuffs. J. A. E. Halkett and J. F. Ross. *Clin. Research Proc. 2*, 30(1954).

Q 873 An Independent Synthesis of Phospholipids in the Femur and Tibia of White Rats. V. Claassen, R. J. Vogels, and B. Wostmann. *Nature 169*, 191(1952).

Q 874 Isotope Distribution in Amino Acids from Regenerating Rat Liver after Administration of Labelled Acetate. G. Hogstrom. *Acta Chem Scand. 7*, 45–50(1953).

Q 875 The Localization of Radiosulfate in Bone Tissue. B. Engfeldt, A. Engstrom, and H. Bostrom. *Exptl. Cell Research 6*, 251–3(1954).

Q 876 Mechanism of Bile Formation in the Isolated Perfused Liver. I. Origin of the Major Inorganic Constituents of Bile. G. F. Leong and R. W. Brauer, et al. *Federation Proc. 11*, 368–69(1952).

Q 877 The Metabolic Relation between Thionine and Adenine Thiomethylriboside in Yeast. R. L. Smith and F. Schlenk. *Arch. Biochem. Biophys. 38*, 167(1952).

Q 878 Microbiological Degradation of Cholesterol. T. C. Stadtman and A. Cherkes. *Federation Proc. 11*, 291(1952).

Q 879 The Nature of the Circulating Thyroid Hormone—Plasma Protein Complex. A. H. Gordon J. Gross, D. O'Connor, and R. V. Pitt-Rivers. *Nature 169*, 19(1952).

Q 880 The Net Enzymatic Synthesis of Acetyl Coenzyme A. E. R. Stadtman. *J. Biol. Chem. 196*, 535(1952).

Q 881 Non-Enzymatic Formation of a Melanin-like Substance from DI-Tyrosine-2-C14 in the Presence of Polyphenols and Quinones. H. Kamin, M. A. Koon, and P. Handler. *Federation Proc. 14*, 233(1955).

Q 882 A Note on the Synthesis of Cholesterol in the Animal Organism. B. Borgstrom. *Acta Chem. Scand., No. 5*, 1190(1951).

Q 883 A Note on the Synthesis of Fatty Acids in Bone Marrow Homogenates as Affected by X-Radiation. K. I. Altman, J. E. Richmond, and K. Salomon. *Biochim. et Biophys. Acta 7*, 460–5(1951).

Q 884 The Presence of 5-Hydroxytryptamine in the Venom of *Bufo marinus*. S. Udenfriend, C. T. Clark, and E. Titus. *Experientia 8*, 379(1952).

Q 885 Stimulation by 2,4-Dinitrophenol, 2,3-Dihydroxphenylalanine and Homogentistic Acid of Uptake of Radioactivity from DL-Tyrosine-2-C–14 by Rat Liver Protein *in Vitro*. H. Kamin, M. A. Koon, and P. Handler. *Federation Proc. 13*, 791(1954).

Q 886 Studies on the Biosynthesis of Chlorophyll. K. Salomon, K. I. Altman, and R. D. Rosa. *Federation Proc. 9*(1950).

Q 887 Synthesis of Mucosa and Lymph Phospholipide During Fat Absorption. R. Reiser and J. W. Dieckert. *Proc. Soc. Exptl. Biol. Med. 87*, 622–26(1954).

Q 888 3:5:3′-Triiodothyronine. I. Isolation from Thyroid Gland and Synthesis. J. Gross and R. V. Pitt-Rivers. *Biochem. J. 53*, 645(1953).

Q 889 Turnover Rates During Formation of Proteins and Polynucleotides in Regenerating Tissues. P. Reichard, S. Aquist, B. Thorell and G. Ehrensvard. *Acta Chem. Scand. 5*, 431–44 (1951).

Q 890 Ueber die Biosynthese der Poly-D-glutaminsaure von *Bacillus subtilis*. I. Die Umwandlung von L-Asparaginsaure in den D-Glutaminsaure-Baustein (Untersuchungen in Beziehung zu Eiweiss-Problemen III). F. Kogl, P. Emmelot und D. H. W. den Boer. *Justus Liebigs Annalen der chemie 589, No. 1*, 1–14(1954).

Q 891 Ueber die Biosynthese der Poly-D-glutaminsaure von *Bacillus subtilis*. II. Die Umsetzung der L-Glutaminsaure in den D-Glutaminsaure-Baustein (Untersuchungen in Beziehung zu Eiweiss-Problemen IV). F. Kogl, P. Emmelot und D. H. W. den Boer. *Justus Liebigs Annalen der chemie 589, No. 1*, 15–25(1954).

Q 892 Unidentified Iodine-Containing Compounds in Human Plasma, in Addition to Thyroxine and Iodide. J. Gross and R. V. Pitt-Rivers. *Lancet 2*, 766(1951).

Q 893 Uptake of Labelled Sulphate by Experimental Skin Tumors in the Rat and the Mouse. H. Bostrom, U. Friberg, E. Odeblad, and N. Ringertz. *Acta Pathol. et Microbiol. 35, No. 1* (1954).

Q 894 The Uptake of 32P in the Femur of Growing Rachitic and Normal Rats as Compared with the Uptake in the Total Skeleton. V. Clasasen and B. S. J. Wostmann. *Biochem. et Biophysica Acta 10*, 625–6(1953).

Q 895 Uptake of Radioactive Iron Fe59 by Nucleated Red Cells *in Vitro*. C. F. Baxter, E. H. Belcher, E. B. Harriss, and L. F. Lamberton. *Brit. J. Haematol. 1, No. 1*(1955).

Biosynthesis of Labeled Compounds

R 1 Acetoacetate Conversion to Fatty Acids in Liver: The Role of Insulin and the Nutritional State of the Animal. R. W. Chen, D. D. Chapman and I. L. Chaikoff. *J. Biol. Chem. 205*, 383–93(1953).

R 2 Acetoacetate Formation in Liver. I. From Palmitic Acid-1-C–14, 5-C–14, and 11-C–14. I. L. Chaikoff, D. S. Goldman, G. W. Brown, Jr., W. G. Dauben, and M. Gee. *J. Biol. Chem. 190*, 229–40(1951).

R 3 The Action of Branching Enzymes on Outer Chains of Glycogen. J. Larner. *J. Biol. Chem. 202*, 491–503(1953).

R 4 Adenosinetriphosphate Formation in the Oxidation of Succinic Acid by Bacteria. D. F. Hersey and S. J. Ajl. *J. Biol. Chem. 191*, 113–21(1951).

R 5 Amino Acid Biosynthesis in *Escherichia coli*: Isotopic Competition with C–14-Glucose. P. H. Abelson. *J. Biol. Chem. 206*, 335–43(1954).

R 6 α-Aminoadipic Acid as a Precursor to Lysine in *Neurospora*. E. Windsor. *J. Biol. Chem. 192*, 607–9(1951).

R 7 δ-Aminolevulinic Acid, its Role in the Biosynthesis of Porphyrins and Purines. D. Shemin and C. S. Russell. *J. Am. Chem. Soc. 75*, 4873–4(1953).

R 8 Applications of Radioactive Tracer Substances in Pharmacology. F. E. Kelsey, R. W. Manthei, and E. M. K. Geiling. *Kunstliche Radioaktive Isotope in Physiologie Diagnostik und Therapi*, 605–18(1953).

R 9 Asymmetric Labeling of Acetoacetate by Enzymatic Acetyl Exchange with Acetyl Coenzyme A-5. H. Beinert, and P. G. Stansly. *J. Biol. Chem. 204*, 67–76(1953).

R 10 Biogenesis of Histamine. R. W. Schayer. *J. Biol Chem. 199*, 245–50(1952).

R 11 Biological Synthesis of Cholesterol. K. Bloch. *Proc. Fourth Research Conf., Sponsored by the Council on Research of the American Meat Institute at the University of Chicago*, 5–7(1952).

R 12 Biological Syntheses of Radioisotope-Labeled Compounds. N. H. Woodruff and E. Fowler. *Nucleonics 7, No. 2*, 26–41(1950).

R 13 Biosynthesis of Aldolase and Glyceraldehyde-3-Phosphate Dehydrogenase. M. V. Simpson and S. F. Velick. *Federation Proc. 12*, 268(1953).

R 14 The Biosynthesis of Arginine by *Torulopsis utilis*. M. Strassman and S. Weinhouse. *J. Am. Chem. Soc. 74*, 1726(1952).

R 15 The Biosynthesis of C–14-Amino Acids with *Chlorella*. L. Schieler, L. E. McClure, and M. S. Dunn. *J. Biol. Chem. 203*, 1039–44(1953).

R 16 Biosynthesis of C–14-Labeled Benzylpenicillin. O. K. Sebek. *Proc. Soc. Exptl. Biol. Med. 84*, 170–2(1953).

R 17 The Biosynthesis of Carbon–14-Labeled Compounds. I. The Chromatographic Separation of Glucose and Fructose. G. R. Noggle and R. A. Bolomey. *Plant Physiol. 26*, 174–81(1951).

R 18 The Biosynthesis of Carbon 14 Labeled Compounds. II. The Chromatographic Separation of the Monosaccharides, Disaccharides, and Trisaccharides from Plant Extracts. G. R. Noggle and M. E. Schumacher. *Plant Physiol. 27*, 422–6(1952).

R 19 The Biosynthesis of Carbon 14-Labeled Compounds. III. The Separation and Isolation of Sugars by Ion-Exchange Chromatography. G. R. Noggle and L. P. Zill. *Plant Physiol. 28*, 731–5(1953).

R 20 A Biosynthesis of C–14-Labeled Glycogen. C. C. Hassett, W. H. Summerson and F. Solomon. *Nucleonics 12, No. 4*, 59–60(1954).

R 21 Biosynthesis of C–14-Labeled Protein and Amino Acids with *Rhodospirillum rubrum*. H. Tarver, M. Tabachnick, E. S. Canellakis, D. Fraser and H. A. Barker. *Arch. Biochem. and Biophys. 41*, 1–8(1952).

R 22 Biosynthesis of C-14-Specifically Labeled Cellulose by *Acetobacter xylinum*. I. From D-Glucose-1-C-14 with and without Ethanol. F. W. Minor, G. A. Greathouse, H. G. Shirk, A. M. Schwartz, and M. Harris. *J. Am. Chem. Soc. 76*, 1658–61(1954).

R 23 Biosynthesis of Carnosine and Anserine in the Chick. P. Martignoni and T. Winnick. *Federation Proc. 13, No. 1.* 259–60(1954).

R 24 The Biosynthesis of Chlorophyll as Studied with Labeled Glycine and Acetic Acid. R. J. D. Rosa, K. I. Altman, and K. Salomon. *J. Biol. Chem. 202*, 771–9(1953).

R 25 Biosynthesis of Cholesterol. Factors Regulating Biosynthesis of Cholesterol-Like Substances in Isolated Whole Livers. N. T. Werthessen and E. Schwenk. *Am. J. Physiol. 171*, 55–61 (1952).

R 26 The Biosynthesis of Cholesterol from Acetate. J. W. Cornforth, G. D. Hunter and G. Popjak. *Arch. Biochem. and Biophys. 42*, 481–2(1953).

R 27 Biosynthesis of Cholesterol from Isobutyrate. D. Kritchevsky and I. Gray. *Experientia 7*, 183(1951).

R 28 Biosynthesis of Cholesterol from Isotopic Acetoacetate in Rat Liver. M. Blecher. *Federation Proc. 13, No. 1*, 184(1954).

R 29 Biosynthesis of Cholesterol and β-Hydroxy-β Methylglutaric Acid by Extracts of Liver. J. L. Rabinowitz and S. Gurin. *J. Biol. Chem. 208*, 307–13(1954).

R 30 Biosynthesis of Citric Acid. S. F. Carson, E. H. Mosbach, and E. F. Phares. *J. Bacteriol. 62*, 235–8(1951).

R 31 Biosynthesis of D-Glucosamine. S. V. Rieder. *Federation Proc. 12*, 258(1953).

R 32 Biosynthesis of Dicarboxylic Acids by Carbon Dioxide Fixation. V. Further Study of the "Malic" Enzyme of *Lactobacillus arabinosus*. S. Kaufman, S. Korkes and A. Del Campillo. *J. Biol. Chem. 192*, 301–12(1951).

R 33 Biosynthesis of Dicarboxylic Acids by Carbon Dioxide Fixation. VII. Equilibrium of "Malic" Ensyme Reaction. I. Harary, S. R. Korey, and S. Ochoa. *J. Biol. Chem. 203*, 595–604(1953).

R 34 The Biosynthesis of Ergosterol from Isotopic Acetate. D. J. Hanahan and S. J. Wakil. *Arch. Biochem. and Biophys. 37*, 167–71(1952).

R 35 Biosynthesis of Fatty Acids by Cell-Free or Water-Soluble Enzyme Systems. R. O. Brady and S. Gurin. *J. Biol. Chem. 199*, 421–31 (1952).

R 36 The Biosynthesis of Glucuronic Acid from 1-C-14-Glucose. F. Eisenberg, Jr., and S. Gurin. *J. Biol. Chem. 195*, 317–25(1952).

R 37 Biosynthesis of Glycine, Serine and Threonine in Yeast. C. H. Wang, B. E. Christensen, and V. H. Cheldelin. *Federation Proc. 13, No. 1*, 482(1954).

R 38 Biosynthesis of Guanine from Adenine Compounds in Soluble Extracts of Bone Marrow. R. Abrams and M. Bentley. *Federation Proc. 13, No. 1*, 172(1954).

R 39 Biosynthesis of Histidine from Radioactive Acetate and Glucose. L. Levy and M. J. Coon. *J. Biol. Chem. 208*, 691–700(1954).

R 40 Biosynthesis of Hyaluronic Acid by Group A *Streptococcus*. S. Roseman, J. Ludowieg, F. E. Moses, and A. Dorfman. *Federation Proc. 12*, 260(1953).

R 41 The Biosynthesis of Hyaluronic Acid by Group A *Streptococcus*. I. Utilization of 1-C-14-Glucose. S. Roseman, F. E. Moses, J. Ludoweig, and A. Dorfman. *J. Biol. Chem. 203*, 213–25(1953).

R 42 The Biosynthesis of Hyaluronic Acid by Group A *Streptococcus*. II. Origin of the Glucuronic Acid. S. Roseman, J. Ludowieg, F. E. Moses, and A. Dorfman. *J. Biol. Chem. 206*, 665–9(1954).

R 43 Biosynthesis and Isolation of Carbon 14-Labeled Digitoxin. G. T. Okita, F. E. Kelsey, E. J. Walaszek, and E. M. K. Geiling. *J. Pharmacol. Exptl. Therap. 110*, 244–50(1954).

R 44 Biosynthesis and Isolation of Radioactive Colchicine. E. J. Walaszek, F. E. Kelsey, and E. M. K. Geiling. *Science 116*, 225–7(1952).

R 45 Biosynthesis and Metabolism of Some Radioactive *Veratrum viride* Alkaloids. A. Pircio and E. M. K. Geiling. *J. Am. Pharm. Assoc. 41*, 552–4(1952).

R 46 Biosynthesis of Nucleic Acids in Embryonic Chick Heart Tissue Cultures. K. H. Lu and T. Winnick. *Federation Proc. 13, No. 1*, 255–6(1954).

R 47 On the Biosynthesis of Nucleic Acids in the Livers of Adult Mice. J. R. Fresco and A. Marshak. *J. Biol. Chem. 205*, 585–95(1953).

R 48 Biosynthesis of Nucleic Acids in the Mammal. G. B. Brown. *Federation Proc. 9*, 517–23(1950).

R 49 Biosynthesis of Nucleic Acids Studied in Unicellular Systems. L. Hamilton, G. B. Brown, and C. C. Stock. *J. Clin. Invest. 31*, 636(1952).

R 50 Biosynthesis of Penicillin in the Presence of C-14. E. Martin, J. Berky, C. Godzesky, P. Miller, J. Tome, and R. W. Stone. *J. Biol. Chem. 203*, 239–50(1953).

R 51 Biosynthesis of Penicillin. I. Role of Phenylacetic Acid. M. Gordon, S. C. Pan, A. Virgona and P. Numerof. *Science 118*, 43(1953).

R 52 Biosynthesis and Pharmocology of Radioactive Digitalis and Other Medicinally Important Drugs. E. M. K. Geiling. *Med. Ann. Dist. Columbia 20*, 197–202(1951).

R 53 On the Biosynthesis of Purines in the Bird; Role of Formate. W. H. Marsh. *J. Biol. Chem. 190*, 633–41(1951).

R 54 Biosynthesis of Purines and Pyrimidines. J. M. Buchanan and D. W. Wilson. *Federation Proc. 12*, 646–50(1953).

R 55 Biosynthesis of Pyrimidines. C. Cooper and D. W. Wilson. *Federation Proc. 13, No. 1,* 194(1954).

R 56 The Biosynthesis of Radioactive Fufagin. J. Doull, K. P. Dubois, and E. M. K. Geiling. *Arch. Intern. Pharmacodynamie 84,* 454–64(1951).

R 57 The Biosynthesis of Radioactive Long-Chain Fatty Acids by Homogenized Pigeon Liver Tissue. R. O. Brady and S. Gurin. *Arch. Biochem. and Biophys. 34,* 221–2(1951).

R 58 Biosynthesis of Radioactive Nicotine. A. Ganz, F. E. Kelsey, and E. M. K. Geiling. *Botan. Gaz. 113,* 195–203(1951).

R 59 Biosynthesis of Radioactive Pyrethrins Using C–14O_2. J. P. Pellegrini, Jr., A. C. Miller, and R. V. Sharpless. *J. Econ. Entomol. 45,* 532–6(1952).

R 60 The Biosynthesis of Radioactive Senecioic Acid (P-Methylcrotonic Acid) in Particle-free Extracts of Rat Liver. J. L. Rabinowitz, *J. Am. Chem. Soc. 76,* 3037–8(1954).

R 61 Biosynthesis of Radioactive Sugars Using Cantaloupe Leaves. A. N. Wick, M. E. Blackwell, and N. Hillyard. *Arch. Biochem. and Biophys. 32,* 274–7(1951).

R 62 Biosynthesis of Radioactive Testosterone *in Vitro.* R. O. Brady. *J. Biol. Chem. 193,* 145–8(1951).

R 63 Biosynthesis of Riboflavin. I. Incorporation of C–14-Labeled Compounds into Rings B and C. G. W. E. Plaut. *J. Biol. Chem. 208,* 513–20(1954).

R 64 On the Biosynthesis of Ribonucleic Acid Purines and Their Interconversion in Yeast. S. E. Kerr and F. Chernigoy. *J. Biol. Chem. 200,* 887–94(1953).

R 65 Biosynthesis of Rubber. J. Bonner, M. W. Parker, and J. C. Montermoso. *Science 120,* 549–51(1954).

R 66 Biosynthesis of Serine. N. Alexander and D. M. Greenberg. *Federation Proc. 13, No. 1,* 173–4(1954).

R 67 Biosynthesis of Serine. S. Deodhar and W. Sakami. *Federation Proc. 12,* 195–6(1953).

R 68 Biosynthesis of Seventeen Amino Acids Labeled with C–14. I. D. Frantz, Jr., H. Feigelman, A. S. Werner and M. P. Smythe. *J. Biol. Chem. 195,* 423–8(1952).

R 69 The Biosynthesis of Squalene. R. G. Langdon and K. Block. *J. Biol. Chem. 200,* 129–34(1953).

R 70 The Biosynthesis of Squalene from Acetate in Man. M. L. Eidinoff, R. S. Rosenfeld, J. E. Knoll, B. J. Marano, and L. Hellman. *J. Clin. Invest. 33,* 333–6(1954).

R 71 The Biosynthesis of A Streptococcal Capsular Polysaccharide. Y. J. Topper and M. M. Lipton. *J. Biol. Chem. 203,* 135–42(1953).

R 72 Biosynthesis of the Aromatic and Ribityl Portions of Riboflavin. G. W. E. Plaut and P. L. Broberg. *Federation Proc. 13, No. 1,* 274(1954).

R 73 Biosynthesis of the C–14-Labeled Form of Dextran. N. J. Scully, H. E. Stavely, J. Skok, A. R. Stanley, J. K. Dale, J. T. Craig, E. B. Hodge, W. Chorney, R. Watanabe, and R. Baldwin. *Science 116,* 87–9(1952).

R 74 Biosynthesis of the Purines. I. Hypoxanthine Formation in Pigeon Liver Homogenates and Extracts. M. P. Schulman, J. C. Sonne, and J. M. Buchanan. *J. Biol. Chem. 196,* 499–512(1952).

R 75 Biosynthesis of the Purines. II. Metabolism of 4-Amino-5-Imidazolecarboxamide in Pigeon Liver. M. P. Schulman and J. M. Buchanan. *J. Biol. Chem. 196,* 513–26(1952).

R 76 Biosynthesis of the Purines. III. Reactions of Formate and Inosinic Acid and an Effect of the Citrovorum Factor. J. M. Buchanan and M. P. Schulman. *J. Biol. Chem. 202,* 241–52(1953).

R 77 Biosynthesis of the Purines. IV. The Metabolism of 4-Amino-5-Imidazolecarboxamide in Yeast. W. J. Williams and J. M. Buchanan. *J. Biol. Chem. 202,* 253–62(1953).

R 78 Biosynthesis of the Purines. V. Conversion of Hypoxanthine to Inosinic Acid by Liver Enzymes. W. J. Williams and J. M. Buchanan. *J. Biol. Chem. 203,* 583–93(1953).

R 79 Biosynthesis of Tyrosine from Glucose via Shikimic Acid. P. R. Srinivasan, M. Sprecher, and D. B. Sprinson. *Federation Proc. 13, No. 1,* 302–3(1954).

R 80 The Biosynthesis of Valine by *Saccharomyces cerevisiae.* I. R. McManus. *J. Biol. Chem. 208,* 639–44(1954).

R 81 Biosynthetic Pathways. III. The Biosynthesis of Lysine by *Torulopsis utilis.* M. Strassman and S. Weinhouse. *J. Am. Chem. Soc. 75,* 1680–4(1953).

R 82 Butyrate Oxidation in the Absence of Inorganic Phosphate by *Clostridium kluyveri.* E. P. Kennedy and H. A. Barker. *J. Biol. Chem. 191,* 419–38(1951).

R 83 Carbon Dioxide and Acetate Utilization by *Clostridium kluyveri.* I. Influence of Nutritional Conditions on Utilization Patterns. N. Tomlinson and H. A. Barker. *J. Biol. Chem. 209,* 585–95–1954).

R 84 Carbon Dioxide and Acetate Utilization by *Clostridium kluyveri.* II. Synthesis of Amino Acids. N. Tomlinson. *J. Biol. Chem. 209,* 597–603(1954).

R 85 Carbon Dioxide and Acetate Utilization by *Clostridium kluyveri.* III. A New Path of Glutamic Acid Synthesis. N. Tomlinson. *J. Biol. Chem. 209,* 605–9(1954).

R 212 Preparation of C14-Labeled D-Galactose and Glycerol. R. C. Bean, E. W. Putman, R. E. Truco and W. Z. Hassid. *J. Biol. Chem. 204*, 169–73(1953).

R 213 Preparation of Glutamate and Carbamyl Glutamate Selectivity Labeled with Deuterium. S. Grisolia and R. H. Burris. *J. Biol. Chem. 210*, 109–17(1954).

R 214 Preparation of L-Methionine-S–35 and L-Cystine-S–35 from Radioactive Yeast. J. L. Wood and G. C. Mills. *J. Am. Chem. Soc. 74*, 2445(1952).

R 215 Preparation of Maltose Labeled with C–14 in the Reducing or Non-Reducing Glucose Component. C. Fitting and E. W. Putnam. *J. Biol. Chem. 199*, 573–7(1952).

R 216 Preparation of Radioactive Iodinated Serum Albumin. L. Lutwak. *Proc. Soc. Exptl. Biol. Med. 80*, 741(1952).

R 217 Preparation of Randomly Labeled Steroid-C–14 Hormones: Testosterone-C–14, Δ-4-Androstene-3, 17-Dione-C–14, Progesterone-C–14 and Desoxycorticosterone-C–14 Acetate. E. Schwenk, N. T. Werthessen and A. F. Colton. *Arch. Biochem. and Biophys. 48*, 322–30(1954).

R 218 Protein Synthesis and Amino Acid Turnover in Tissue Culture. H. W. Gerarde, M. Jones and T. Winnick. *J. Biol. Chem. 196*, 51–68 (1952).

R 219 Purine Incorporation into Pentose Nucleotides of the Rat. D. H. Marrian, V. L. Spicer, M. E. Balis and G. B. Brown. *J. Biol. Chem. 189*, 533–41(1951).

R 220 Pyrimidine Biosynthesis from Citrulline Ureide Carbon. M. P. Schulman and S. J. Badger. *Federation Proc. 13, No. 1*, 292(1954).

R 221 Radioactive Eggs. III: Degradation of Yolk Glycerol. D. Kritchevsky and S. Abraham. *Arch. Biochem. and Biophys. 39*, 305–9(1952).

R 222 Radiotracer Studies of the Biosynthesis of Conjugated d-Glucuronic Acid. A. P. Doerschuk. *J. Biol. Chem. 195*, 855–9(1952).

R 223 Recent Trends in the Biochemistry of the Steroid Hormones. S. Lieberman and S. Teich. *Pharmacol. Revs. 5*, 285–380(1953).

R 224 The Relationship of Coenzyme A to Lipide Synthesis. I. Experiments with Yeast. H. P. Klein and F. Lipmann. *J. Biol. Chem. 203*, 95–9(1953).

R 225 Ribonuclease and Ribonucleic Acid Synthesis. L. E. Hokin and M. R. Hokin. *J. Histochem. Cytochem. 2*, 395–400(1954).

R 226 The Role of the Carbon Skeleton of Lysine in the Biosynthesis of Hemoglobin. K. I. Altman, L. L. Miller, and J. E. Richmond. *Arch. Biochem. and Biophys. 36*, 399–410(1952).

R 227 The Role of Ethyl Alcohol in the Biological Synthesis of Cholesterol. G. L. Curran and D. Rittenberg. *J. Biol. Chem. 190*, 17–20 (1951).

R 228 The Role of Formate in the Biosynthesis of Histidine. L. Levy and M. J. Coon. *J. Biol. Chem. 192*, 807–15(1951).

R 229 On the Role of Glycine and Adenine as Precursors of Nucleic Acid Purines. S. S. Furst and G. B. Brown. *J. Biol. Chem. 191*, 239–47 (1951).

R 230 The Role of N–15 Glycine, Glutamine, Aspartate and Glutamate in Hypoxanthine Synthesis. J. C. Sonne, I. Lin, and J. M. Buchanan. *J. Am. Chem. Soc. 75*, 1516–7(1953).

R 231 The Role of One-Carbon Compounds in Citric Acid Biosynthesis. E. H. Mosbach, E. F. Phares, and S. F. Carson. *Arch. Biochem. 35*, 435–42(1952).

R 232 S-Adenosylmethionine; A New Intermediate Formed Enzymatically from L-Methionine and Adenosinetriphosphate. G. L. Cantoni. *J. Biol. Chem. 204*, 403–16(1953).

R 233 The Separation of Monosaccharides by Ion Exchange. J. X. Khym and L. P. Zill. *J. Am. Chem. Soc. 73*, 2399–400(1951).

R 234 A Simple and Rapid Biosynthesis of Isotopically Labeled Succinic Acid. S. J. Ajl and M. D. Kamen. *J. Am. Chem. Soc. 73*, 2349(1951).

R 235 Some Aspects of Threonine and Serine Biosynthesis in *E. coli*. A. M. Delluva. *Arch. Biochem. and Biophys. 45*, 443–6(1953).

R 236 Stimulation of Ferritin Biosynthesis by Iron. R. A. Fineberg and D. M. Greenberg. *Federation Proc. 13, No. 1*, 207(1954).

R 237 The Stimulation of Serine Biosynthesis in Pigeon Liver Extracts by Tetrahydrofolic Acid. R. L. Kisliuk and W. Sakami. *J. Am. Chem. Soc. 76*, 1456–7(1954).

R 238 The Stimulation *in Vitro* of Phospholipid Synthesis in Thyroid Tissue by Thyrotrophic Hormone. M. E. Morton and J. R. Schwartz. *Science 117*, 103–4(1953).

R 239 Studies of the Biological Synthesis of Glucuronides. M. A. Packham and G. C. Butler. *J. Biol. Chem. 194*, 349–57(1952).

R 240 Studies on the Biosynthesis of Cholesterol. II. Isolation of 3 Beta, 5 Alpha-Dihydroxy-6-Ketocholestane from Cholesterol. E. Schwenk, N. T. Werthessen, and H. Rosenkrantz. *Arch. Biochem. and Biophys. 37*, 247–51(1952).

R 241 Studies on the Biosynthesis of Cholesterol. III. Purification of C–14 Cholesterol from Perfusions of Livers and Other Organs. E. Schwenk and N. T. Werthessen. *Arch. Biochem. and Biophys. 40*, 334–41(1952).

R 242 Studies on the Biosynthesis of Cholesterol. IV. Higher Counting Substances Accompanying C–14-Cholesterol in the Intact Rat. E. Schwenk and N. T. Werthessen. *Arch. Biochem. and Biophys. 42*, 91–3(1953).

R 243 Studies on the Biosynthesis of Cholesterol. V. C–14-Cholesterol in the Egg Yolk and in the Laying Hen. E. Schwenk and C. F. Baker. *Arch. Biochem. and Biophys. 45*, 341–8(1953).

R 244 Studies on the Biosynthesis of Cholesterol. VI. Companions of Cholesterol-C–14 in Liver Perfusions, Including Squalene-C–14, as Possible Precursors in Its Biosynthesis. E. Schwenk, D. Todd, and C. A. Fish. *Arch. Biochem. and Biophys. 49*, 187–206(1954).

R 245 Studies on the Biosynthesis of Ovalbumin. C. B. Anfinsen and D. Steinberg. *J. Biol. Chem. 189*, 739–44(1951).

R 246 Studies on the Mechanism of the Biosynthesis of Serine. C. Mitoma and D. M. Greenberg. *J. Biol. Chem. 196*, 599–614(1952)

R 247 Studies on the Mechanism of Citric Acid Production in *Aspergillus niger*. K. F. Lewis and S. Weinhouse. *J. Am. Chem. Soc. 73*, 2500–3(1951).

R 248 Studies on the Pathway of Protein Synthesis in Tissue Culture. M. D. Francis and T. Winnick. *J. Biol. Chem. 202*, 273–89(1953).

R 249 Studies on Protein Synthesis *in Vitro*. IV. Concerning the Apparent Uptake of Methionine by Particulate Preparation from Liver. E. S. Canellakis and H. Tarver. *Arch. Biochem. and Biophys. 42*, 387–98(1953).

R 250 Studies on the Utilization of Isovaleric Acid in Cholesterol Synthesis. I. Zabin and K. Bloch. *J. Biol. Chem. 192*, 267–73(1951).

R 251 Studies *in Vivo* on Labile Methyl Synthesis With Deuterio-C-14-Formate. C. Ressler, J. R. Rachele and V. Du Vigneaud. *J. Biol. Chem. 197*, 1–5(1952).

R 252 A Study of the Rate of Protein Synthesis in Humans. I. Measurement of the Urea Pool and Urea Space. A. S. Pietro and D. Rittenberg. *J. Biol. Chem. 201*, 445–55(1953).

R 253 The Synthesis of Aldolase and Glyceraldehyde-3-Phosphate Dehydrogenase in the Rabbit. M. V. Simpson and S. F. Velick. *J. Biol. Chem. 208*, 61–71(1954).

R 254 Synthesis of Aldolase and Phosphorylase in the Rabbit. M. Heimberg and S. F. Velick. *Federation Proc. 13, No. 1*, 227(1954).

R 255 Synthesis and Biochemical Investigation of Thymine-6-Carboxylic Acid-2-C-14. W. L. Holmes and W. H. Prusoff. *J. Biol. Chem. 206*, 817–23(1954).

R 256 Synthesis of C-14-17-Hydroxy-11-Desoxycorticosterone and 17-Hydroxy-corticosterone by Fractionated Extracts of Adrenal Homogenates. J. E. Plager and L. T. Samuels. *Arch. Biochem. and Biophys. 42*, 477–8(1953).

R 257 The Synthesis of Choline and Creatine in Rats Under Various Dietary Conditions. J. A. Stekol, S. Weiss, P. Smith, and K. Weiss. *J. Biol. Chem. 201*, 299–316(1953).

R 258 Synthesis of β, β-Dimethyl Acrylic Acid in Rat Liver Homogenates. H. Rudney. *Federation Proc. 13, No. 1*, 286–7(1954).

R 259 The Synthesis of dl-Propanediol-1-Phosphate and C-14-Labeled Propanediol and Their Isolation from Liver Tissue. H. Rudney. *J. Biol. Chem. 210*, 353–60(1954).

R 260 Synthesis of Erythrulose Phosphate by A Soluble Enzyme from Rat Liver. F. C. Charalampous and G. C. Mueller. *J. Biol. Chem. 201*, 161–73(1953).

R 261 The Synthesis of 17 β-Estradiol-16-C-14. M. Levitz. *J. Am. Chem. Soc. 75*, 5352–5(1953).

R 262 Synthesis of Glutamic Acid and Glutamyl Polypeptide by *Bacillus anthracis*. III. Factors Affecting Peptide Production in Synthetic Liquid Media. C. B. Thorne, C. G. Gomez, G. R. Blind, and R. D. Housewright. *J. Bacteriol. 65*, 472–8(1953).

R 263 The Synthesis of Glutathione in *Torula utilis* Studies with 14-C Carboxyl Labeled Glycine. P. J. Durkin and F. Friedberg. *Biochim. et Biophys. Acta 9*, 105–6(1952).

R 264 The Synthesis of β-Hydroxy-β-Methylglutaric Acid in Rat Liver Homogenates. H. Rudney. *J. Am. Chem. Soc. 76*, 2595–6(1954).

R 265 Synthesis of Labile Methyl Groups by Guinea Pig Tissue *in Vitro*. P. Berg. *J. Biol. Chem. 190*, 31–8(1951).

R 266 The Synthesis of Lecithin in Isolated Mitochondria. E. P. Kennedy. *J. Am. Chem. Soc. 75*, 249–50(1953).

R 267 The Synthesis of Pentose Nucleic Acids in the Liver of PGA-Deficient Megaloblastic Monkeys. C. U. Lowe and C. P. Barnum. *Arch. Biochem. and Biophys. 38*, 335–46(1952).

R 268 Synthesis of Phosphatides in Isolated Mitochondria. E. P. Kennedy. *J. Biol. Chem. 201*, 399–412(1953).

R 269 Synthesis of Phosphatides in Isolated Mitochondria. II. Incorporation of Choline into Lecithin. E. P. Kennedy. *J. Biol. Chem. 209*, 525–35(1954).

R 270 Synthesis of all Plasma Protein Fractions Except Gamma Globulins by the Liver. The Use of Zone Electrophoresis and Lysine-C-14 to Define the Plasma Proteins Synthesized by the Isolated Perfused Liver. L. L. Miller and W. F. Bale. *J. Exptl. Med. 99*, 125–32(1954).

R 271 Synthesis of Purines and Methyl Groups from Carbon Atom of Histidine. J. C. Reid and M. O. Landefeld. *Arch. Biochem. and Biophys. 34*, 219–21(1951).

R 272 The Synthesis of Radioactive Cholesterol and Fatty Acids *in Vitro*. R. O. Brady and S. Gurin. *J. Biol. Chem. 189*, 371–7(1951).

R 273 The Synthesis of Radioactive Cholesterol and Fatty Acids *in Vitro*. R. O. Brady, J. Rabinowitz, J. V. Baalen and S. Gurin. *J. Biol. Chem. 193*, 137–43(1951).

R 274 Synthesis of Radioactive Fatty Acids *in Vitro* and Its Hormonal Control. R. O. Brady, F. D. W. Lukens, and S. Gurin. *J. Biol. Chem. 193*, 459–64(1951).

R 275 Synthesis of Ribose by the Chick. I. A. Bernstein. *J. Biol. Chem. 205*, 317–29(1953).

R 276 The Synthesis of Thymine and Purines from Serine and Glycine in the Rat. D. Elwyn and D. B. Sprinson. *J. Biol. Chem. 207*, 467–76(1954).

R 277 Tetrapyrrole Precursors of Photoporphyrin IX. I. Uroporphyrin III. K. Salomon, J. E. Richmond, and K. I. Altman. *J. Biol. Chem. 196*, 463–8(1952).

R 278 Tracer Studies on the Biosynthesis of Lipids. S. Gurin. *Trans. N. Y. Acad. Sci. 15*, 92(1953).

R 279 Tracer Studies with the B-12 Vitamins. E. L. Smith, D. J. D. Hockenhull, and A. R. J. Quilter. *Biochem. J. 52*, 387(1952).

R 280 Transformation of Cholesterol and Acetate to Adrenal Cortical Hormones. O. Hechter, M. M. Solomon, A Zaffaroni and G. Pincus. *Arch. Biochem. and Biophys. 46*, 201–14(1953).

R 281 Tyrosine Iodinase. D. M. Fawcett and S. Kirkwood. *J. Biol. Chem. 209*, 249–56(1954).

R 282 Uracil in Growth and Pyrimidine Nucleotide Synthesis of *Lactobacillus bulgaricus* 09. L. D. Wright and C. S. Miller. *Proc. Soc. Exptl. Biol. Med. 81*, 131–4(1952).

R 283 Uric Acid Synthesis in the Dog. E. L. Spilman. *Federation Proc. 12*, 272(1953).

R 284 The Utilization of Acetate for Synthesis in *Escherichia coli*. K. McQuillen and R. B. Roberts. *J. Biol. Chem. 207*, 81–95(1954).

R 285 The Utilization of Acetic Acid for Amino Acid Synthesis in Yeast. C. Gilvarg and K. Bloch. *J. Biol. Chem. 193*, 339–46(1951).

R 286 Utilization of Acetoacetic Acid in Cholesterol Synthesis by Surviving Rat Liver. G. L. Curran. *J. Biol. Chem. 191*, 775–82(1951).

R 287 The Utilization of Adenine for Nucleic Acid Biosynthesis by *Tetrahymena geleii*. M. Flavin and S. Graff. *J. Biol. Chem. 192*, 485–8(1951).

R 288 The Utilization of Butyric Acid for the Synthesis of Cholesterol and Fatty Acids. I Zabin and K. Bloch. *J. Biol. Chem. 192*, 261–6(1951).

R 289 Utilization of Carbon Dioxide in the Synthesis of Nucleic Acid by *Escherichia coli*. E. T. Bolton, P. H. Abelson, and E. Aldous. *J. Biol. Chem. 198*, 179–85(1952).

R 290 Utilization of Carbon Dioxide in the Synthesis of Proteins by *Escherichia coli*. I. P. H. Abelson, E. T. Bolton, and E. Aldous. *J. Biol. Chem. 198*, 165–72(1952).

R 291 Utilization of Carbon Dioxide in the Synthesis of Proteins by *Escherichia coli*. II. P. H. Abelson, E. T. Bolton, and E. Aldous. *J. Biol. Chem. 198*, 173–8(1952).

R 292 The Utilization of 2-C-14-L-Threonine for the Synthesis of Uric Acid. A. I. Krasna, P. Peyser and D. B. Sprinson. *J. Biol. Chem. 198*, 421–6(1952).

R 293 Utilization of Glucose-1-C–14 for the Synthesis of Phenylalanine and Tyrosine. C. Gilvarg and K. Bloch. *J. Biol. Chem. 199*, 689–98(1952).

R 294 Utilization of Guanine for Nucleic Acid Biosynthesis by *Tetrahymena geleii*. M. Flavin and S. Graff. *J. Biol. Chem. 191*, 55–61(1951).

R 295 Utilization of Purines for Nucleic Acid Synthesis in Bone Marrow Slices. R. Abrams and J. M. Goldinger. *Arch. Biochem. 30*, 261–8(1951).

R 296 On the Utilization of Purines and Their Ribose Derivatives by Yeast. S. E. Kerr, K. Seraidarian, and G. B. Brown. *J. Biol. Chem. 188*, 207–16(1951).

R 297 Utilization of Radioactive Iodide by Cell-Free Preparations of Beef Thyroid Tissue. B. Weiss. *J. Biol. Chem. 201*, 31–43(1953).

R 298 The Utilization of Squalene in the Biosynthesis of Cholesterol. R. G. Langdon and K. Bloch. *J. Biol. Chem. 200*, 135–44(1953).

R 299 Utilization of Sulfate Sulfur in the Rat for the Synthesis of Cystine. D. D. Dziewiatkowski. *J. Biol. Chem. 207*, 181–6(1954).

R 300 Utilization of Sulfate Sulfur for Taurine Synthesis in the Chick Embryo. L. J. Machlin. *Federation Proc. 13, No. 1*, 466–7(1954).

R 301 Vitamin B–12 Biosynthesis after Oral and Intravenous Administration of Inorganic Co 60 to Sheep. R. A. Monroe, H. E. Sauberlich, C. L. Comar and S. L. Hood. *Proc. Soc. Exptl. Biol. Med. 80*, 250–7(1952).

R 302 Vitamin B–12 and Folic Acid in the Biosynthesis of Component Amino Acids of Glutathione. E. I. Anderson and J. A. Stekol. *J. Biol. Chem. 202*, 611–8(1953).

R 303 Vitamin B–12 and Folic Acid in the Synthesis of Choline in the Rat. J. A. Stekol, S. Weiss, and K. W. Weiss. *Arch. Biochem. and Biophys. 36*, 5–10(1952).

R 304 An *in Vitro* Effect of ACTH. R. Haynes, K. Savard, and R. I. Dorfman. *J. Clin. Endocrinol. and Metabolism 12*, 972(1952).

R 305 The *in Vitro* Incorporation of α C–14-Acetate into the Stroma of the Erythrocyte. K. I. Altman. *Arch. Biochem. and Biophys. 42*, 478–80(1953).

R 306 *In Vitro* Studies of Desoxyribonucleic Acid Synthesis with C–14-Thymidine. M. Friedkin, D. Tilson, and D. Roberts. *Federation Proc. 13, No. 1*, 214(1954).

R 307 Biosynthesis of Adrenal Epinephrine and Norepinephrine. S. Udenfriend and J. B. Wyngaarden. *Proc. 14th Intern. Physiol. Cong.*, 841–2(1953).

R 308 Biosynthesis of C–14 Specifically Labeled Cellulose by *Acetobacter xylinum*. II. From D-Mannitol-1-C–14 with and without Ethanol. F. W. Moner, G. A. Greathouse, H. G. Shirk, et al. *J. Am. Chem. Soc. 76*, 5052(1954).

R 309 Biosynthesis of C–14-Specifically Labeled Cotton Cellulose. G. A. Greathouse. *Science 117*, 553–4(1953).

R 310 Biosynthesis and Concentration of Cholesterol by the Intact Surviving Bovine Aorta *in Vitro*. N. T. Werthessen, L. J. Milch, R. F. Redmond, L. L. Smith, and E. C. Smith. *Am. J. Physiol. 178*, 23(1954).

R 311 Biosynthesis of Estrone and Beta-Estradiol in the Perfused Ovary. N. T. Werthessen, E. Schwenk, and C. Baker. *Science 117*, 3041 (1953).

R 312 The Biosynthesis of Glucuronic Acid from 1-C–14-Glucose. F. Eisenberg, Jr. and S. Gurin. *J. Biol. Chem. 195*, 317(1952).

R 313 The Biosynthesis of the Glucuronic Acid Moiety of Hyaluronic Acid. S. Roseman, J. Ludowieg, F. E. Moses, and A. Dorfman. *Arch. Biochem. and Biophys. 42*, 472(1953).

R 314 Biosynthesis of Histidine. M. J. Coon and L. Levy. *Federation Proc. 10*, 174(1951).

R 315 The Biosynthesis of Hyaluronic Acid by Group A *Streptococcus*. II. The Biosynthesis of the Glucuronic Acid Moiety of Hyaluronic Acid. S. Roseman, J. Ludowieg, F. E. Moses, and A. Dorfman. *J. Biol. Chem. 206*, 665(1954).

R 316 Biosynthesis of Hyaluronic Acid by *Streptococcus hemolyticus*. S. Roseman, F. E. Moses, R. Abeles, J. Ludowieg, and A. Dorfman. *Federation Proc. 11*(1952).

R 317 Biosynthesis of Leucine in Baker's Yeast. Reed, B. E. Christensen, V. H. Cheldelin, and C. H. Wang. *J. Am. Chem. Soc. 76*, 5574(1954).

R 318 Biosynthesis of Orotic Acid from Citrulline. L. H. Smith, Jr., and S. DeWitt, Jr. *J. Am. Chem. Soc. 76*, 3864(1954).

R 319 The Biosynthesis of Radioactive Cholesterol, β-Methylglutaconic Acid and β-Methylcrotonic Acid by Aqueous Extracts of Liver. J. L. Rabinowitz and S. Gurin. *J. Am. Chem. Soc. 76*, 5168(1954).

R 320 Biosynthesis of Riboflavin. II. Incorporation of C-14 Labeled Compounds into Ring A. G. W. E. Plaut. *J. Biol. Chem. 211*, 111(1954).

R 321 Biosynthesis of Shikimic Acid from Labeled Compounds. D. B. Sprinson and H. Shigeura. *Federation Proc. 11*, 286(1952).

R 322 The Biosynthesis of Sphingosine, I. The Utilization of Carboxyl-Labelled Acetate. I. Zabin and J. F. Mead. *J. Biol. Chem. 205*, 271(1953).

R 323 The Biosynthesis of Sphingosine, II. The Utilization of Methyl-Labelled Acetate, Formate and Ethanolamine. I. Zabin and J. F. Mead. *J. Biol. Chem. 211*, 87(1954).

R 324 Cellulose Production by *Acetobacter xylinum* from Unlabeled Glucose and C-14 Acetate and C-14 Ethanol. G. A. Greathouse, H. G. Shirk, and F. W. Minor. *J. Am. Chem. Soc. 76*, 5157(1954).

R 325 The Characterization and Degradation of Isotopic Acetic and Lactic Acids. S. Roseman. *J. Am. Chem. Soc. 75*, 3854(1953).

R 326 Cholesterol Biosynthesis in the Leukemic Mouse. N. T. Werthessen, R. B. Mefferd, Jr., and L. L. Smith. *Proc. Am. Cancer Soc. 1*, 51(1954).

R 327 Enzymatic Carbon Dioxide Fixation by Senecioyl Coenzyme A. W. G. Robinson, B. K. Bachhawat, and M. J. Coon. *Federation Proc. 13, No. 1*, 281(1954).

R 328 Incorporation of Glycine-2-14-C and Adenine-4,6-14-C into the DNA of Mature Sea Urchin Sperm. H. M. Malkin. *Biochim. et Biophys. Acta 12*, 585–6(1953).

R 329 Intramolecular Migration and Isoleucine Biosynthesis. M. Strassman, A. J. Thomas, L. A. Locke, and S. Weinhouse. *J. Am. Chem. Soc. 76*, 4241–2(1954).

R 330 Histidine Synthesis in Yeast and Human Liver. L. Levy and M. J. Coon. *Federation Proc. 11*, 248(1952).

R 331 Preparation of D-mannitol-C-14 and Its Conversion to D-fructose-1-(and 6)-C-14 by *Acetobacter suboxydans*. H. S. Isbell and J. V. Karabinos. *J. Research Natl. Bur. Standards 48*, 438(1952).

R 332 The Synthesis of the Methyl Groups and Ethanolamine Moiety of Choline from Serine and Glycine in the Rat. D. B. Sprinson, A. Weissbach, and D. Elwyn. *J. Am. Chem. Soc. 72*, 3316(1950).

R 333 The Synthesis of Radioactive L-Glutamic Acid. R. W. Hendler, M. G. Horning and C. B. Anfinsen. *Arch. Biochem. and Biophys. 51*, 470(1954).

R 334 *In Vivo* Synthesis of Ribose Studied with Radioactive Carbon. I. A. Bernstein. *Federation Proc. 11*, 187(1952).

R 335 Synthesis of Vitamin A-2-C14 for Use in Metabolism Studies. G. Wolf, B. C. Johnson, and S. G. Kahn. *Proc. 2nd. Radioisotope Conf., (England)*, 283(1954).

R 336 Tracer Studies on the Biosynthesis of Glucuronic Acid. E. H. Mosbach and C. G. King. *Federation Proc. 9*, (1950).

R 337 Utilization of Sulfur Compounds for the Biosynthesis of Penicillins. C. M. Stevens, P. Vohra, E. Inamine, and O. A. Roholt, Jr. *J. Biol. Chem. 205*, 1001(1953).

R 338 Valine Biosynthesis in *Torulopsis utilis*. M. Strassman, A. J. Thomas, and S. Weinhouse. *J. Am. Chem. Soc. 75*, 5135(1953).

R 339 Conversion of C-14-Acetate to Labelled Steroids. R. I. Dorfman, F. Ungar, and K. Savard. *11th. Intern. Biochem. Congr. Paris*, 21–7(1952).

R 340 Zur Synthese von Radioaktivem Progesteron. M. Gut. *Helv. Chim. Acta. 36*, 906–9(1953).

R 341 Fatty Acid Synthesis by Enzyme Preparations of *Clostridium kluyveri*. VI. Reactions of Acyl Phosphates. E. R. Stadtman and H. A. Barker. *J. Biol. Chem. 184*, 769(1950).

R 342 Metabolic Exchange of Carbon Dioxide with Carboxyls and Oxidative Synthesis of C-4 Dicarboxylic Acids. J. W. Foster and S. F. Carson. *Proc. Natl. Acad. Sci. 36*, 219–29(1950).

S 36 The Preparation of C-14-Labeled Vitamin B-12 (C-14-Cobalamin). G. E. Boxer, J. C. Rickards, C Rosenblum, and D. T. Woodbury. *Arch Biochem. 30*, 471(1951).

S 37 Preparation of C-14-Methyl-Labeled Dimethylaminoethanol. C. Artom and M. Crowder. *J. Am. Chem. Soc. 74*, 2412(1952).

S 38 Preparation of OC-14S, O-18CS, OCS-33, and CH_3Cl-36. G. M. Matlack, R. E. Ferguson, J. F. Haskin, and G. Glockler. *Proc. Iowa Acad. Sci. 59*, 202-5(1952).

S 39 Preparation of D-Arabinose-1-C-14 and D-Ribose-1-C-14. H. L. Frush and H. S. Isbell. *J. Research Natl. Bur. Standards 51*, 307-11(1953).

S 40 The Preparation of Demerol-N-Methyl-C-14 by Reductive Methylation. W. Tarpey, H. Hauptmann, B. M. Tolbert, and H. Rapoport. *J. Am. Chem. Soc. 72*, 5126(1950).

S 41 Preparation of Ethyl D,L-Glycerate-1-C-14 and Glycerol-1-C-14. A. P. Doerschuk. *J. Am. Chem. Soc. 73*, 821-2(1951).

S 42 Preparation of L-Arabinose-1-C-14. D. A. Rappoport and W. Z. Hassid. *J. Am. Chem. Soc. 73*, 5524(1951).

S 43 The Preparation of Morphine-N-Methyl-C-14. H. Rapoport, C. H. Lovell, and B. M. Tolbert. *J. Am. Chem. Soc. 73*, 5900(1951).

S 44 A Preparation of Progesterone-4-C-14. L. M. Thompson, C. H. Yates, and A. D. Odell. *J. Am. Chem. Soc. 76*, 1194-6(1954).

S 45 The Preparation and Purification of Methane-d, Ethane-d, Propane-1-d, Propane-2-d, n-Butane-1-d, n-Butane-2-d, Isobutane-1-d and Isobutane-2-d. C. D. Wagner and D. P. Stevenson. *J. Am. Chem. Soc. 72*, 5785(1950).

S 46 Preparation of Radioactive Iodocasein. C. F. Hamilton, M. H. Power, and A. Albert. *J. Biol. Chem. 178*, 213-6(1949).

S 47 Preparation of Radioactive Iodotriphenylethylene. D. C. Morrison. *J. Am. Chem. Soc. 74*, 4459(1952).

S 48 The Preparation of Tri-N-Butyl Phosphate. W. H. Baldwin and C. E. Higgins. *J. Am. Chem. Soc. 74*, 2431(1952).

S 49 Preparation of Xanthopterine-6, 7-C-14. R. M. Anker and J. W. Boehne, III. *J. Am. Chem. Soc. 74*, 2431(1952).

S 50 Radioactive Iodine-Labeled Fat. M. C. Hoffman. *J. Lab. Clin. Med. 41*, 521-5(1953).

S 51 The Reaction of Ethyl Radicals with Deuterium. M. H. J. Wijnen and E. W. R. Steacie. *J. Chem. Phys. 20*, 205-7(1952).

S 52 Rearrangements in the Reactions of 2-(4-Substituted)-phenylethylamines-1-C-14 with Nitrous Acid. J. D. Roberts and C. M. Regan *J. Am. Chem. Soc. 75*, 2069-72(1953).

S 53 Small Scale Preparation of Carbon 14-Labeled Succinic, Malic, Fumaric and Tartaric Acids. E. C. Jorgensen, J. A. Bassham, M. Calvin, and B. M. Tolbert. *J. Am. Chem. Soc. 74*, 2418(1952).

S 54 Small Scale Synthesis of Several Carbon 14-Labeled Alpha-Hydroxy Acids. D. M. Hughes, R. Ostwald, and B. M. Tolbert. *J. Am. Chem. Soc. 74*, 2434(1952).

S 55 Studies in the Wagner Rearrangement. II. The Synthesis and Structure Determination of Benzanthracene-5, 6-C-14. C. J. Collins, J. G. Burr, Jr., and D. N. Hess. *J. Am. Chem. Soc. 73*, 5176-8(1951).

S 56 Syntheses of Methylamine-C-14 and Diazomethane-C-14. A. R. Jones and W. J. Skraba. *Science 117*, 252-3(1953).

S 57 The Synthesis of Acetyl-1-C-14-Salicylic Acid. J. W. Clappison, J. P. Hummel, W. D. Paul, and J. I. Routh. *J. Am. Pharm. Assoc., Sci. Ed. 40*, 532(1951).

S 58 A Synthesis of Alpha- or Beta-C-14-Labeled Glycerol. L. I. Gidez and M. L. Karnovsky. *J. Am. Chem. Soc. 74*, 2413-5(1952).

S 59 The Synthesis of δ-Aminovaleric Acid-δ-C-14. M. Rothstein. *J. Am. Chem. Soc. 76*, 3038-9(1954).

S 60 The Synthesis and Autoxidation of 8,8,11-Tetradeutero-Cis-9-Octadecene. R. A. Max and F. E. Deatherage. *J. Am. Oil Chemists' Soc. 28*, 110-4(1951).

S 61 The Synthesis of 3,4-Benzpyrene-5-C-14 and of 2-Acetylaminofluorene-9-C-14. C. Heidelberger and H. S. Rieke. *Cancer Research 11*, 640-3-(1951).

S 62 Synthesis and Biological Studies of 17-Methyl-C-14-Estradiol. B. C. Bocklage, H. J. Nicholas, E. A. Doisy, Jr., W. H. Elliott, S. A. Thayer, and E. A. Doisy. *J. Biol. Chem. 202*, 27-37 (1953).

S 63 The Synthesis of Bis-(2-hydroxy-3,5,6,-tichlorophenyl)-methane-C-14 (hexachlorophene). H. M. Isikow and W. S. Gump. *J. Am. Chem. Soc. 74*, 2434(1952).

S 64 Synthesis of Butiadiene-2,3,-C-14. K. M. Mann and R. F. Nystrom. *J. Am. Chem. Soc. 73*, 5894(1951).

S 65 The Synthesis of Calcium D,L-Glycerate-1-C-14. H. J. Sallach. *J. Am. Chem. Soc. 74*, 2415(1952).

S 66 The Synthesis of Carbon-Isotopic Alkanes: Methane-C-13, Propane-1-C-13, n-Butane-1-C-13, n-Butane-1-C-14, Isobutane-1-C-13, Isobutane-1-C-14 and Isobutane-2-C-13. C. D. Wagner, D. P. Stevenson, and J. W. Otvos. *J. Am. Chem. Soc. 72*, 5786(1950).

S 67 The Synthesis of Carbon 14-Labeled Chloroform. H. C. Reitz, F. J. Carleton, and J. E. Christian. *J. Am. Pharm. Assoc. Sci. Ed. 42*, 85-7(1953).

S 68 A Synthesis of 1-C-14-Labeled Diethyl Ether. J. G. Burtle and W. N. Turek. *J. Am. Chem. Soc. 76*, 2498(1954).

S 69 The Synthesis of C-14-Labeled Glycerol. H. Schlenk and B. W. DeHaas. *J. Am. Chem. Soc. 73*, 3921-2(1951).

S 70 Synthesis of C-14-Labeled Guanine, Adenine, 8-Azaguanine and 8-Azaadenine. E. L. Bennett. *J. Chem. Am. Soc. 74*, 2420(1952).

S 71 Synthesis of Carbon 14-Labeled Urea. A. L. Myerson. *J. Am. Chem. Soc. 74*, 2437(1952).

S 72 The Synthesis of Certain Sulfur 35-Labeled Sulfa Drugs. P. J. Byrne, Jr., A. A. Alberts, and J. E. Christian. *J. Am. Pharm. Assoc. Sci. Ed. 62*, 77-8(1953).

S-73 The Synthesis of Choline and Acetylcholine Labeled in the Ethylene Chain with Isotopic Carbon. D. E. Walz, M. Fields, and J. A. Gibbs. *J. Am. Chem. Soc. 73*, 2968(1951).

S 74 Synthesis and Chromatographic Separation of Isotopically Labeled DL-Threonine and DL-Allothreonine. A. T. Shulgin, O. G. Lien, Jr., E. M. ,Gal, and D. M. Greenberg. *J. Am. Chem Soc. 74*, 2437(1952).

S 75 Synthesis of DDT Labeled with Carbon 14 in the Tertiary Position. G. W. Pearce and J. A. Jensen. *Science 118*, 45-6(1953).

S 76 Synthesis of 2,4-Dichlorophenoxyactic Acid Labeled with Isotopic Carbon. M. Fields, S. Rothchild, and M. A. Leaffer. *J. Am. Chem. Soc. 74*, 2435(1952).

S 77 Synthesis of dl-Adrenalin-β-C-14 and dl-Adrenochrome-β-C-14. R. W. Schayer. *J. Am. Chem. Soc. 74*, 2441(1952).

S 78 The Synthesis of DL-Aspartic Acid-4-C-14. S. C. Wang, T. Winnick, and J. P. Hummel. *J. Am. Chem. Soc. 73*, 2390(1951).

S 79 The Synthesis of Ethyl Acetamidocyanoacetate, Dl-Lysine, Dl-Ornithine and Dl-Tyrosine Labeled with Isotopic Carbon. M. Fields, D. E. Walz, and S. Rothchild. *J. Am. Chem. Soc. 73*, 1000(1951).

S 80 The Synthesis of Ethylene Oxide-1,2-C-14. A. J. Tomisek and H. R. Mahler. *J. Am. Chem. Soc. 73*, 4685-6(1951).

S 81 The Synthesis of Ethylenediamine Tetra-(2-$C_4$14 Acetic) Acid. A. Murray, III, and A. R. Ronzio. *J. Am. Pharm. Assoc. Sci. Ed. 41*, 596(1952).

S 82 The Synthesis of 17α-Ethynyltestosterone-20, 21-C-14. B. Riegel and Y. C. Liu. *J. Org. Chem. 16*, 1610-4(1951).

S 83 A Synthesis of Formaldehyde-C-14. A. R. Jones and W. J. Skraba. *J. Am. Chem. Soc. 74*, 2437(1952).

S 84 Synthesis of Histamine-2-C-14-Imidazole. R. W. Schayer. *J. Am. Chem. Soc. 74*, 2440(1952).

S 85 Synthesis of Lactose-1-C-14 and Lactobionic-1-C-14 Delta Lactone From 3-β-D-Galactopyranosyl-α-D-Arabinose. H. L. Frush and H. S. Isbell. *J. Research Natl. Bur. Standards 50*, 133-7(1953).

S 86 The Synthesis of Leucine and Several Branched Chain Fatty Acids Labeled with Carbon 14 in Various Positions. H. Hauptmann, P. T. Adams, and B. M. Tolbert. *J. Am. Chem. Soc. 74*, 2423(1952).

S 87 Synthesis and Mass Spectra of Some Hexa-, Hepta- and Octadeuterated Derivatives of Propane. F. E. Condon. *J. Am. Chem. Soc. 73*, 4675-8(1951).

S 88 The Synthesis of Methyl Groups from Serine and its Bearing on the Metabolism of One-Carbon Fragments. D. Elwyn, A. Weissbach, and D. B. Sprinson. *J. Am. Chem. Soc. 73*, 5509-10(1951).

S 89 The Synthesis of Methylamine-C-14 and Diazomethane-C-14. R. D. H. Heard, J. R. Jamieson, and S. Solomon. *J. Am. Chem. Soc. 73*, 4985-6(1951).

S 90 A Synthesis of Progesterone Labeled in Position 4. G. I. Fujimoto and J. Prager. *J. Am. Chem. Soc. 75*, 3259-61(1953).

S 91 Synthesis and Properties of Deuterocarbons. Benzene-d_6 and Cyclohexane-d_{12} la. J. A. Dixon and R. W. Schiessler. *J. Am. Chem. Soc. 76*, 2197-9(1954).

S 92 Synthesis of Radioactive Iodine I-131 Analog of DDT. J. A. Jensen and G. W. Pearce. *J. Am. Chem. Soc. 74*, 2436(1952).

S 93 Synthesis of Radioactive Noradrenaline. R. W. Schayer. *J. Am. Chem. Soc. 75*, 1757-8(1953).

S 94 The Synthesis of Sarcosine and Betaine with C-14 in the Methyl Group. E. M. Gal, R. E. Spencer, and D. M. Greenberg. *J. Org. Chem. 15*, 1261-3(1950).

S 95 Synthesis of Several Carbon 14-Labeled DL-Alanine. R. Ostwald, P. T. Adams, and B. M. Tolbert. *J. Am. Chem. Soc. 74*, 2425(1952).

S 96 Synthesis of Some O-Glucuronides and O-Glucosides of Phenolic Amino Acids. A. Taurog, S. Abraham, and I. L. Chaikoff. *J. Am. Chem. Soc. 75*, 3473-7(1953).

S 110 A Method for the Synthesis of High Specific Activity Benzene-C–14. R. J. Speer, M. L. Humphries, and A. Roberts. *J. Am. Chem. Soc. 74*, 2443(1952).

S 111 A New Synthesis of 2:5-Dihydroxyphenyl-DL-Alanine Adapted to Isotopic Scale. A. T. Shulgin and E. M. Gal. *J. Chem. Soc. 267*, 1316–18(1953).

S 112 Pregneninolone, an Intermediate in the Biosynthesis of Progesterone and the Adrenocortical Hormones. S. Solomon, A. L. Lenz, R. Van deWiele, and S. Liberman. *Abstr. 126th. Meeting Am. Chem. Soc.*, 29c(1954).

S 113 Preparation of Carbon 14-Labeled DDT. G. W. Pearce and J. A. Jensen. *J. Agr. Food Chem. 1*, 776–8(1953).

S 114 The Preparation of 1-C–14-Labeled Glucose Mannose and Fructose. H. G. Hers, J. Edelman, and V. Ginsburg. *J. Am. Chem. 76*, 5160 (1954).

S 115 Preparation of Crystalline Phosphorylated Derivatives of Vitamin B–6. E. A. Peterson and H. A. Sober. *J. Am. Chem. Soc. 76*, 169(1954).

S 116 Preparation of D-galactose-1-C–14 and D-talose-1-C–14. H. S. Isbell, H. L. Frush, and N. B. Holt. *J. Research Natl. Bur. Standards 53*, 217(1954).

S 117 Preparation of Glycerol Evenly Labeled with C–14. S. Abraham. *J. Am. Chem. Soc. 74*, 6098(1952).

S 118 Preparation of Macrocrystalline Fluorapatite Containing Radioactive Phosphorus. G. V. Elmore and E. O. Huffman. *J. Am. Chem. Soc. 74*, 4950(1952).

S 119 Simplified Procedure for the Preparation of n-butanol-1-C–14 in a Form Suitable for the Preparation of Esters. H. Gottlieb, J. Sorden, and K. Guenther. *Abstr. 121st Meeting Am. Chem. Soc.*, 91K(1952).

S 120 A Study of the Conditions Involved in the Preparation of 3,5-Diiodo-4-oxo-1-pyridineacetic Acid (Diodrast) Containing Iodine 131. A. Roe, R. L. Hayes, and H. D. Bruner. *J. Elisha Mitchell Sci. Soc. 66*, 163–70(1950).

S 121 Synthesis of Adrenalin-β-C–14. R. W. Schayer. *J. Am. Chem. Soc. 74*, 2441(1952).

S 122 Synthesis of L-Ascorbic-1-C–14 Acid from D-Sorbitol. L. L. Salomon, J. J. Burns, and C. G. King. *J. Am. Chem. Soc. 74*, 5161(1952).

S 123 The Synthesis of L-Ascorbic Acid Uniformly Labeled with C–14. A. A. Bothner-By, M. Gibbs, and R. C. Anderson. *Science 112*, 363(1950).

S 124 Synthesis of Carbon 14-Labeled 3-(p-Chlorophenyl)-1,1-Dimethylurea. N. E. Searle and H. E. Cupery. *J. Org. Chem. 19*, 1622(1954).

S 125 Synthesis of Carbon 14-Labeled dl-Glutamic Acid. R. J. Speer, A. Roberts, M. Maloney, and H. R. Mahler. *J. Am. Chem. Soc. 74*, 2444(1952).

S 126 The Synthesis of C–14-Labeled "Squalene". W. G. Dauben and H. L. Bradlow. *J. Am. Chem. Soc. 74*, 5204(1952).

S 127 Synthetic C–14–"Squalene": Concerning Its Incorporation into Cholesterol by Liver. G. M. Tomkins, I. L. Chaikoff, W. G. Dauben, H. L. Bradlow, and P. A. Srere. *J. Am. Chem. Soc. 74*, 6145(1952).

S 128 The Synthesis of Cyclobutene-d6 and Cyclobutane-d8. R. C. Lord. *J. Chem. Phys. 21*, 378(1953).

S 129 The Synthesis of Diodrast Containing Iodine 131. A. Roe, R. L. Hayes, and H. D. Bruner. *J. Elisha Mitchell Sci. Soc. 66*(1950).

S 130 The Synthesis of Double Labeled Parathion. R. E. Hein and R. H. McFarland. *J. Am. Chem. Soc. 74*, 1856(1952).

S 131 The Synthesis of 2-Ethylhexanol-1-C–14 and Ester. J. L. Kalinsky and A. Weinstein. *J. Am. Chem. Soc. 76*, 3730(1954).

S 132 Synthesis of Fumaric Acid-2-C–14. R. F. Nystrom and J. C. Leak. *J. Am. Chem. Soc. 75*, 3039(1953).

S 133 Synthesis of D-glucose-1-C–14 and D-mannose-1-C–14. H. S. Isbell, J. V. Karabinos, H. L. Frush, N. B. Holt, A. Schwebel, and T. T. Galkowski. *J. Research Natl. Bur. Standards 48*, 163(1952).

S 134 Synthesis of Histamine-2-C–14. Imidazole. R. W. Schayer. *J. Am. Chem. Soc. 74*, 2440(1952).

S 135 The Synthesis of Isotopically Labelled Adenosine–2′ Phosphate and Adenosine-3′ Phosphate. G. R. Barker. *J. Chem. Soc.*, 3396–8(1954).

S 136 Synthesis of α-D-lyxose-1-C–14 and β-D-lyxose-1-C–14. H. S. Isbell, H. L. Frush, and N. B. Holt. *J. Research Natl. Bur. Standards 53*, 325(1954).

S 137 Synthesis of 2-Methyl-Aminofluorene-N-Methyl-C–14. J. N. Little and F. E. Ray. *J. Am. Chem. Soc. 74*, 4955(1952).

S 138 The Synthesis of Radioactive DDT. C. H. Wang. *J. Am. Chem. Soc. 75*, 4336(1953).

S 139 Synthesis of Radioactive Parathion Using Sulfur 35. J. A. Jensen and G. W. Pearce. *J. Am. Chem Soc. 74*, 3184(1952).

S 140 The Synthesis of Tritium-Labeled Methyl Iodide and Acriflavine. K. E. Wilzbach, N. Smith, and W. G. Brown. *Abstr, 126th. Meeting Am. Chem. Soc.*)1954).

S 141 Microsynthèse de benzacridines angulaires marquées par du Carbone radioactif C–14. P. Daudel, M. Flon, A. Cheutin, R. Muxart, Buu-Hoi, B. Eckert, et W. Hoan. *Compt. rend. 232*, 968(1951).

S 142 Synthèse microchimique de dérivés des benzacridines marqués dans le noyau. P. Daudel, A. Cheutin, M. Flon, Buu-Hoi, et R. Muxart. *Bull. soc. chim., (France) 19*, 86(1952).

S 143 Preparation of Carboxylabelled Oleic Acid. S. Bergstrom, K. Paabo, and M. Rottenberg. *Acta Chem. Scand., No. 6*, 1127(1952).

S 144 Studies on Vitamin D, I. The Synthesis of Vitamin D-3 3 C–14. E. Havinga and J. P. L. Bots. *Rec. Trav. Chim. Pays-Bas 73, No. 6*, 393–400 (1954).

S 145 Synthese von L-und D-Glutamin-Saure-1,2-C–14 (13. Mitteilung Uber die Chemie der Tumoren). F. Kogl, J. Halberstadt, und T. J. Barendregt. *Rec. Trav. Chim. Pays-Bas 68, No. 6*, 387–96 (1949).

S 146 A Synthesis of Isonicotinic Acid by Halogen-Metal Exchange and Its Application to the Preparation of Isonicotinic-C–14-Acid Hydrazide. A. Murray and W. Langham. *J. Am. Chem. Soc. 74*, 6289(1952).

Y 12 The Average Energy of Sr–90- Y–90 as a Function of Ansorber. R. H. Goeckermann and W. H. Seitzer. *J. Chem. Phys. 20*, 1655(1952).

Y 13 Beta-Activity of Si–31 and the Masses of the Al and Si Isotopes. H. T. Motz. *Phys. Rev. 85*, 501–2(1952).

Y 14 Beta-Decay of 7.5-Day Ag–111 to a 0.1-Microsecond Excited State of Cd–111. D. Engelkemeir. *Phys. Rev. 82*, 552–3(1951).

Y 15 Beta-Decay of Isomeric Cd–113. W. L. Carss, J. R. Gum, and M. L. Pool. *Phys. Rev. 80*, 1028–9(1950).

Y 16 The Beta-Decay of the Triton. J. M. Blatt. *Phys. Rev. 89*, 86–92(1953).

Y 17 The Beta-Ray Distribution of Tc 99. B. H. Ketelle and J. W. Ruch. *Phys. Rev. 77*, 565–6(1950).

Y 18 The Beta-Ray Spectrum of Chlorine 36. C. S. Wu and L. Feldman. *Phys. Rev. 76*, 693–5(1949).

Y 19 Beta-Ray Spectrum of K–40. M. L. Good. *Phys. Rev. 83, 1054–5*(1951).

Y 20 Beta Spectra of Pr–142, Tm–170, and Rb–86. A. V. Pohm, W. E. Lewis, J. H. Talboy, Jr., and E. N. Jensen. *Phys. Rev. 95*, 1523–9(1954).

Y 21 The Beta-Spectra of Cs–137, Y–91, Pm–147, Ru–106, Sm–151, P–32, and Tm–170. H. M. Agnew. *Phys. Rev. 77*, 655–60(1950).

Y 22 The Beta-Spectra of Cu–64. L. M. Langer, R, D. Moffat, and H. C. Price, Jr. *Phys. Rev. 76*, 1725–6(1949).

Y 23 Beta-Spectra of Gaseous A–41 and O–15. H. Brown and V. Perez-Mendez. *Phys. Rev. 78*, 649–55(1950).

Y 24 The Beta-Spectra of P–32 and P–33. E. N. Jensen, R. T. Nichols, J. Clement, and A. Pohm. *Phys. Rev. 85*, 112–9(1952).

Y 25 The Beta-Spectrum of Cl–36. H. W. Fulbright and J. C. D. Milton. *Phys. Rev. 82*, 274(1951).

Y 26 Beta-Spectrum of Cl–36. C. S. Wu and L. Feldman. *Phys. Rev. 82*, 457–8(1951).

Y 27 Beta-Spectrum of Ne–23. H. Brown and V. Perez-Mendez. *Phys. Rev. 78*, 812(1950).

Y 28 The Beta-Spectrum of O–15. Mendez-Perez and H. Brown. *Phys. Rev. 76*, 689(1949).

Y 29 The Beta-Spectrum of 61–Pm–147. L. Lidofsky, P. Macklin and C. S. Wu. *Phys. Rev. 76*, 1888–9(1949).

Y 30 The Beta-Spectrum of S–35 from C_2H_5S–35H below 33-kev. G. J. Plain, H. L. Morrison, P. H. Pitkanen and F. T. Rogers, Jr. *Phys. Rev. 92*, 529–30(1953).

Y 31 The Beta-Spectrum of S–35 Using Window. R. B. Heller, E. F. Sturcken and A. H. Weber. *Phys. Rev. 83*, 848–9(1951).

Y 32 The Beta-Spectrum of Tc–99. S. I. Taimuty. *Phys. Rev. 81*, 461–2(1951).

Y 33 The Beta-Spectrum of Tritium and the Mass of The Neutrino. L. M. Langer and R. J. D. Moffat. *Phys. Rev. 88*, 689(1952).

Y 34 Binding Energy of the Triton. R. L. Pease and H. Feshbach. *Phys. Rev. 81*, 142–3(1951).

Y 35 Bombardment of Copper with Tritons. D. N. Kundu and M. L. Pool. *Phys. Rev. 84*, 481–3(1951).

Y 36 Branching Ratio and Gamma-Ray Order in the Decay of Sc–46. F. H. Schmidt and G. L. Keister. *Phys. Rev. 91*, 483(1953).

Y 37 Characteristics of Some Radionuclides of Tungsten, Rhendium, and Osmium Formed by Second-Order Thermal Neutron Capture. M. Lindner. *Phys. Rev. 84*, 240–4(1951).

Y 38 Charged Particles from the Interaction of 14-Mev. Neutrons with Li–6 and Li–7. G. M. Frye, Jr. *Phys. Rev. 93*, 1086–93(1954).

Y 39 A Cloud-Chamber Study of the Scattering of Fast Neutrons in Oxygen. J. P. Connor. *Phys, Rev. 89*, 712–4(1953).

Y 40 The Coherent Neutron Scattering Cross Sections of Nickel and Its Isotopes. W. C. Koehler, E. O. Wollan, and C. G. Shull. *Phys. Rev. 79*, 395(1950).

Y 41 Coincidence Studies in the Decay of La–140. B. L. Robinson and L. Madansky. *Phys. Rev. 84*, 1067–8(1951).

Y 42 Collision Lengths of Neutral, Penetrating-Shower-Producing Cosmic Radiation in Light and Heavy Water. D. Froman, J. Kenney and V. H. Regener. *Phys. Rev. 91*, 707–12(1953).

Y 43 Concentration of A–36 and A–38 and Study of the A–36 (d,p) A–37 Reactions and the Beta-Activity of A–39. A. Zucker and W. W. Watson. *Phys. Rev. 80*, 966–9(1950).

Y 44 The Continuous Gamma-Ray Spectrum Accompanying Beta-Decay. P. Bolgiano, L. Madansky, and F. Rasetti. *Phys. Rev. 89*, 679–83(1953).

Y 45 Conversion Coefficients and Spectrum Shapes from Sb–124. E. P. Tomlinson, S. L. Ridgway, and K. Gopalakrishnan. *Phys. Rev. 91*, 484–5(1953).

Y 46 The Coupling of Angular Momenta in Nuclear Reactions. R. F. Christy. *Phys. Rev. 89*, 839–42(1953).

Y 47 Cross Section and Angular Distribution of The D (d,p) T Reaction. W. A. Wenzel and W. Whaling. *Phys. Rev. 88*, 1149–54(1952).

Y 48 Cross Section for the Reaction D (d, p) H–3. C. F. Cook and J. R. Smith. *Phys. Rev. 89*, 785–6(1953).

Y 49 Cross Sections and Q–Values for the C–13 + D–2 Reactions. C. W. Li and W. Whaling. *Phys. Rev. 82*, 122–3(1951).

Y 50 The 43-Day Isomer of Cadmium (115). P. S. Gill, C. E. Mandeville, and E. Shapiro. *Indiana J. Phys. 24*, 567–70(1950).

Y 51 β-Decay of Cu–67. H. T. Easterday. *Phys. Rev. 92*, 537(1953).

Y 52 Decay of Au–198. L. Simons and E. P. Tomlinson, *Soc. Sci. Fennica Commentationes Phys.-Math. 16*, 1–10(1952).

Y 53 The Decay of I–125. G. Friedlander and W. C. Orr. *Phys. Rev. 84*, 484–6(1951).

Y 54 Decay of K–42. B. Kahn and W. S. Lyon. *Phys. Rev. 91*, 1212–13(1953).

Y 55 Decay of Rh–106. B. Kahn and W. S. Lyon. *Phys. Rev. 92*, 902–3(1953).

Y 56 Decay of Rb–86. W. S. Lyon and J. E. Strain. *Phys. Rev. 95*, 1500(1954).

Y 57 The Decay Scheme of Zr–95. P. S. Mittelman. *Phys. Rev. 94*, 99–102(1954).

Y 58 Degradation of Co–60 Gamma-Rays in an Infinite Water Medium. M. M. Weiss and W. Bernstein. *Phys. Rev. 91*, 483–4(1953).

Y 59 Deuteron Photodisintegration at High Energies. W. S. Gilbert and J. W. Rosengren. *Phys. Rev. 88*, 901(1952).

Y 60 Deuteron Photodisintegration at Intermediate Energies. J. M. Berger. *Phys. Rev. 94*, 1698–713(1954).

Y 61 The Deutron Quadrupole Moment and the Radiofrequency Spectra of H_2 and D_2 in Low Magnetic Fields. L. G. Kolsky, T. E. Phipps, Jr., N. F. Ramsey, and H. B. Silsbee. *Phys. Rev. 81*, 1061(1951).

Y 62 Disintegration Rate of Carbon–14. R. S. Caswell, J. M. Brabant, and A. Schwebel. *J. Research Natl. Bur. Standards 53*, No. 1, 27–8 (1954).

Y 152 An Investigation of Alpha-particle Groups from Al–27 (d, α) Mg–25. E. C. Toops, M. B. Sampson, and F. E. Steigert. *Phys. Rev. 85*, 280–3(1952).

Y 153 Investigations of the Capture of Protons and Deutrons by Deutrons. W. A. Fowler, C. C. Lauritsen, and A. V. Tollestrup. *Phys. Rev. 76*, 1767–8(1949).

Y 154 Isomeric State of Y–89 and the Decay of Zr–89. M. Goldhaber, E. D. Mateosian, G. Scharff-Goldhaber, and A. W. Sunyar. *Phys. Rev. 83*, 661–2(1951).

Y 155 The Isotope Effect in Superconductivity. I. Mercury. C. A. Reynolds, B. Serin, and L. B. Nesbitt. *Phys. Rev. 84*, 691–4(1951).

Y 156 The Isotope Effect in Superconductivity. II. Tin and Lead. B. Serin, C. A. Reynolds, and ' Lohman. *Phys. Rev. 86, 162–4*(1952).

Y 157 Isotope Shift in Neutral Oxygen. L. W. Parker and J. R. Holmes. *J. Opt. Soc. Amer. 43*, 103–9(1953).

Y 158 Isotope Shift in the 58–Ce II Spectrum. H. Arroe. *Phys. Rev. 93*, 94(1954).

Y 159 Isotope Shifts in Enhanced Samarium Isotopes. D. D. Smith and J. R. McNally, Jr. *J. Opt. Soc. Amer. 40*, 878(1950).

Y 160 The Isotopic Weight of Helium. K. T. Bainbridge. *Phys. Rev. 81*, 146–7(1951).

Y 161 K-Auger Electrons, Positrons, and Conversion Electrons of Zn–65 Above 5 kev. J. F. Perkins and S. K. Haynes. *Phys. Rev. 92*, 687–93(1953).

Y 162 The L to K Capture Ratio and Disintegration Energy of Sn–113. D. A. Thomas, S. K. Haynes, C. D. Broyles, and H. C. Thomas. *Phys. Rev. 82*, 961–2(1951).

Y 163 The Lamb Shift for Hydrogen and Deuterium. E. E. Salpeter. *Phys. Rev. 89*, 92–7(1953).

Y 164 Large-Angle Scattering of Co–60 Gamma Rays. T. D. Strickler. *Phys. Rev. 92*, 923–6(1953).

Y 165 Levels of Al–25 from the Mg–24 (d,n) Al–25 : action. E. Goldberg. *Phys. Rev. 89*, 760–5(1953).

Y 166 The Low States of Li–7. R. Avery and C. H. Blanchard. *Phys. Rev. 78*, 704–10(1950).

Y 167 Lower Limit for the Lifetime of the 665-kev Excited State of Mo–97. F. R. Metzger and W. B. Todd. *Phys. Rev. 91*, 1286–7(1953).

Y 168 Measure of K-Shell Internal Conversion Coefficients with a Coincidence Scintillation Spectrometer. F. K. McGowan. *Phys. Rev. 93*, 163–72(1954).

Y 169 The Measurement and Interpretation of the K Auger Intensities of Sn–113, Cs–137, and Au–198 C. D. Broyles, D. A. Thomas, and S. K. Haynes. *Phys. Rev. 89*, 715–24(1953).

Y 170 Metastable States of Ge–73. J. P. Welker, A. W. Schardt, G. Friedlander, and J. J. Howland, Jr., *Phys. Rev. 92*, 401–5(1953).

Y 171 Mo K and U L. X-Ray Transitions from Separated Isotopes. G. L. Rogosa and G. Schwarz. *Phys. Rev. 92*, 1434–7(1953).

Y 172 The Natural Radioactivity of In–115. E. A. Martell and W. F. Libby. *Phys. Rev. 80*, 977–82(1950).

Y 173 Nuclear Resonance Fluorescence in Hg–198 and the Lifetime of the 411-kev Excited State of Hg–198. F. R. Metzger and W. B. Todd. *Phys. Rev. 95*, 853–4(1954).

Y 174 Neutron Absorption and Scattering by Hafnium L. M. Bollinger, S. P. Harris, C. T. Hibdon

and C. O. Muehlhause. *Phys. Rev. 92*, 1527–31(1953).

Y 175 Neutron Capture Cross Sections for Production of Sc–46 and Sr–85. W. S. Lyon. *Phys. Rev. 89*, 1307(1953).

Y 176 Neutron Capture in the Separated Isotopes of Platinum. J. M. Cork, M. K. Brice, L. C. Schmid, G. D. Hickman, and H. Nine. *Phys. Rev. 94*, 1218–21(1954).

Y 177 Neutron Deficient Europium and Gadolinium Isotopes. R. W. Hoff, J. O. Rasmussen, and S. G. Thompson. *Phys. Rev. 83*, 1068–9(1951).

Y 178 Neutron Groups from the Reaction Li–7 (p, n) Be–7. B. Hamermesh and V. Hummel. *Phys. Rev. 78*, 73–4(1950).

Y 179 The Neutron Spectrum from the O–18 (d, n)F–19 Reaction. R. L. Seale. *Phys. Rev. 92*, 389–90(1953).

Y 180 Neutron Thresholds in Light Elements. E. B. Tucker. *Phys. Rev. 83*, 473–4(1951).

Y 181 The Neutrons from the Disintegration of C–13 by Deuterons. C. E. Mandeville and C. P. Swann. *Phys. Rev. 79*, 787–8(1950).

Y 182 The New State in Li–7 at Low Bombarding Energy. R. W. Gelinas, C. M. Class, and S. S. Hanna. *Phys. Rev. 83*, 1260–1(1951).

Y 183 Nuclear Configurations Inferred from High-Energy Pickup-Deuteron Distributions. W. Selove. *Phys. Rev. 92*, 1328(1953).

Y 184 Nuclear Energy Level for Some Long-Lived Isotopes. J. M. Cork. *Nucleonics 7*, No. 5 24–33(1950).

Y 185 Nuclear Energy Levels in the Region of the 28-Neutron Shell. G. F. Pieper. *Phys. Rev. 88*, 1299–1305(1952).

Y 186 Nuclear Excitation Functions Se–82(d,2n)Br–82 and Br–81(d,p)Br–82. J. A. Miskel and A. C. Wahl. *Phys. Rev. 84*, 700–2(1951).

Y 187 Nuclear Gyromagnetic Ratios. IV. Y. Ting and D. Williams. *Phys. Rev. 89*, 595–6(1953).

Y 188 Nuclear Isomerism and Shell Structure. M. Goldhaber and R. D. Hill. Rev. *Modern Phys. 24*, 179–235(1952).

Y 189 Nuclear Isomers of Ba–133 and Ba–135. R. D. Hill and F. R. Metzger. *Phys. Rev. 83*, 455(1951).

Y 190 Nuclear Levels Associated with Zirconium 95 and Niobium 95. J. M. Cork, J. M. LeBlanc, D. W. Martin, W. H. Nester, and M. K. Price. *Phys. Rev. 90*, 579–81(1953).

Y 191 Nuclear Levels in Cs–131. J. M. Cork, J. M. LeBlanc, W. H. Nester and M. K. Brice. *Phys. Rev. 91*, 76–7(1953).

Y 192 The Nuclear Magnetic Moment of Cr–53 and Sr–87. C. D. Jeffries and P. B. Sogo. *Phys. Rev. 91*, 1286(1953).

Y 193 The Nuclear Magnetic Moment of S–35 by Microwave Spectroscopy. B. F. Burke, M. W. P. Strandberg, V. W. Cohen, and W. S. Koski. *Phys. Rev. 93*, 193–4(1954).

Y 194 The Nuclear Magnetic Moment of Tc–99. H. Walchli, R. Livingston, and W. J. Martin. *Phys. Rev. 85*, 479(1952).

Y 195 On the Nuclear Magnetic Moments of Several Stable Isotopes. W. G. Proctor and F. C. Yu. *Phys. Rev. 81*, 20–30(1951).

Y 196 Nuclear Magnetic Resonance Measurements of Selenium. H. E. Walchli. *Phys. Rev. 90*, 331–2(1953).

Y 197 The Nuclear Magnetic Resonance of Titanium and Arsenic. C. D. Jeffries, H. Loeliger and H. H. Staub. *Phys. Rev. 85*, 478–9(1952).

Y 198 The Nuclear Moments of Sc–79. W. A. Hardy, G. Silvey, C. H. Townes, B. F. Burke, M. W. P. Strandberg, G. W. Parker, and V. W. Cohen. *Phys. Rev. 92*, 1532–7(1953).

Y 199 The Nuclear Moments of Technetium 99. K. G. Kessler and R. E. Trees. *Phys. Rev. 92*, 303–7(1953).

Y 200 Nuclear Quadrupole Resonance in Rhombic Sulfur and the Quadrupole Moments of S–33 and S–35. H. G. Dehmelt. *Phys. Rev. 91*, 313–4 (1953).

Y 201 Nuclear Radiofrequency Spectra of D_2 and H_2 in Intermediate and Strong Magnetic Fields. N. J. Harrick, R. G. Barnes, P. J. Bray, and N. F. Ramsey. *Phys. Rev 90*, 260–6(1953).

Y 202 Nuclear Radiofrequency Spectra of H_2 and D_2 in High and Low Magnetic Fields. H. G. Kolsky, T. E. Phipps, Jr., N. F. Ramsey, and H. B. Silsbee. *Phys. Rev. 87*, 395–403(1952).

Y 203 Nuclear Reaction Determination of the Sn–124–Te–124 Mass Difference. N. S. Wall. *Phys. Rev. 92*, 1526(1953).

Y 204 Nuclear Reaction Energies. D. M. VanPatter, A. Sperduto, P. M. Endt, W. W. Buechner, and H. A. Enge. *Phys. Rev. 85*, 142–3(1952).

Y 205 The Nuclear Spectra of Ce–144 and Pr–144. W. S. Emmerich, W. J. Auth, and J. D. Kurbatov. *Phys. Rev. 94, No. 1*, 110–12(1954).

Y 206 Nuclear Spectroscopy of Ba–131 and Cs–131. R. Canada and A. C. G. Mitchell. *Phys. Rev. 83*, 76–9(1951).

Y 207 The Nuclear Spin and Quadrupole Moment of I–131. R. Livingston, B. M. Benjamin, J. T. Cox, and W. Gordy. *Phys. Rev. 92*, 1271–2 (1953).

Y 208 Nuclear Spins and Band Spectra of the Selenium Isotopes. S. P. Davis. *Phys. Rev. 93*, 159–62 (1954).

Y 209 The Nuclide P–33 and the P–32 Spectrum. R. K. Sheline, R. B. Holtzman, and Chang-Yun Fan. *Phys. Rev. 83*, 919–23(1951).

Y 210 On the Spin and Beta-Spectrum of Cl–36. C. Longmire, C. S. Wu and C. H. Townes. *Phys. Rev. 76*, 695–6(1949).

Y 211 Spins and Hyperfine Splittings of Ag–111 and Cu–64. A Lemonick and F. M. Pipkin. *Phys. Rev. 95*, 1356–7(1954).

Y 212 The Photodisintegration Cross Section of Beryllium at 2.185 Mev. B. Hamermesh and C. Kimball. *Phys. Rev. 90*, 1063–5(1953).

Y 213 The Photodisintegration Cross Section of the Deuteron. S. A. Colgate. *Phys. Rev. 83*, 1262–3(1951).

Y 214 Photodisintegration of the Deuteron at 20 Mev. J. Halpern and E. V. Weinstock. *Phys. Rev. 91*, 934–9(1953).

Y 215 Photomeson Production from Deuterium. I. L. Lebow, B. T. Feld, D. H. Frisch, and L. S. Osborne. *Phys. Rev. 85*, 681–2(1952).

Y 216 Photo-Production of N–17. W. E. Stephens, J. Halpern, and R. Sher. *Phys. Rev. 82*, 511–4 (1951).

Y 217 Photoprotons from Mo–100 and Mo–92. W. A. Butler and G. M. Almy. *Phys. Rev. 91*, 58–65 (1953).

Y 218 Polarizability of the Deuteron. N. F. Ramsey, B. J. Malenka, and U. E. Kruse. *Phys. Rev. 91*, 1162–4(1953).

Y 219 Possible Natural Radioactivity of Neodymium. G. I. Mulholland and T. P. Kohman. *Phys. Rev. 85*, 144–5(1952).

Y 220 A Precise Determination of the Half-Life and Average Energy of Tritium Decay. G. H. Jenks, F. H. Sweeton, and J. A. Ghormley. *Phys. Rev. 80*, 990–5(1950).

Y 221 Precise Determination of the Magnetic Moment of the Deuteron. B. Smaller. *Phys. Rev. 83*, 812-20(1951).

Y 222 Production of Iodine 132. L. G. Stanf, Jr., W. D. Tucker, H. O. Banks, Jr., R. F. Doering, and T. H. Mills. *Nucleonics 12, No. 8*, 22–4 (1954).

Y 223 Proton Bombardment of the Lithium Isotopes. S. Bashkin and H. T. Richards. *Phys. Rev. 84*, 1124–9(1951).

Y 224 Proton Triton Interaction. J. S. McIntosh, R. L. Gluckstern, and S. Sack. *Phys. Rev. 88*, 752(1952).

Y 225 Protons from the Deuteron Bombardment of Kr–84 and Kr–86. G. W. Wheeler, R. B. Schwartz, and W. W. Watson. *Phys. Rev. 92*, 121–3(1953).

Y 226 Quadrupole Radiation in nD Capture. N. Austern. *Phys. Rev. 85*, 147(1952).

Y 227 Radiation from Antimony 122. J. M. Cork, M. K. Brice, G. D. Hickman, and L. C. Schmid. *Phys. Rev. 93*, 1059–61 (1954).

Y 228 Radiations from Arsenic 77 and Germanium 71. B. L. Saraf, J. Varma and C. E. Mandeville. *Phys. Rev. 91*, 1216–8(1953).

Y 229 The Radiations from Hafnium. S. B. Burson, K. W. Blair, H. B. Keller, and S. Wexler. *Phys. Rev. 83*, 62–8(1951).

Y 230 Radiations from Mo–99 and Tc–99. M. E. Bunker and R. Canada. *Phys. Rev. 80*, 961–5 (1950).

Y 231 Radiations from Rb–86 and Rb 86m. R. B. Schwartz, M. L. Perlman, and W. Bernstein. *Phys. Rev. 91*, 883–4(1953).

Y 232 Radiations from Selenium 75. E. N. Jensen, L. J. Laslett, D. S. Martin, Jr., F. J. Hughes, and W. W. Pratt. *Phys. Rev. 90*, 557–63(1953).

Y 233 Radiations from Zr–95. P. S. Mittelman. *Phys. Rev. 91*, 484(1953).

Y 234 Radiations from Zr–97 and Nb–97. C. E. Mandeville, E. Shapiro, R. I. Mendenhall, E. R. Zucker, and G. L. Conklin. *J. Franklin Inst. 254*, 381–9(1952).

Y 235 Radiations of Ce–143. W. H. Burgus. *Phys. Rev. 88*, 1129–32(1952).

Y 236 The Radiations of 64Gd–159 (18 hr) and 64Gd–161 (3.7 min). W. C. Jordan, J. M. Cork, and S. B. Burson. *Phys. Rev. 92*, 315–8(1953).

Y 237 The Radiations of Lanthanum 140. C. L. Peacock, J. F. Quinn, and A. W. Oser, Jr. *Phys. Rev. 94*, 372–3(1954).

Y 238 Radiations of Nd–147. W. S. Emmerich and J. D. Kurbatov. *Phys. Rev. 81*, 1062(1951).

Y 239 Radiations of Rh–99, Rh–101, Rh–105, and Ru–105. C. L. Scoville, S. C. Fultz, and M. L. Pool. *Phys. Rev. 85*, 1046(1952).

Y 240 Radiations of Ag–110. M. Goodrich. *Phys. Rev. 82*, 759–60(1951).

Y 241 The Radiations of Tl–199 and Tl–200. H. I. Israel and R. G. Wilkinson. *Phys. Rev. 83*, 1051(1951).

Y 242 Radiative Capture of Thermal Neutrons by Li–7. R. G. Thomas. *Phys. Rev. 84*, 1061–2(1951).

Y 243 Radiactive Electron Capture in Fe–55. L. Madansky and F. Rasetti. *Phys. Rev. 94*, 407–8(1954).

Y 244 Radiative Electron Capture of Fe–55, A–37, and Ni–59. W. S. Emmerich, S. E. Singer, and J. D. Kurbatov. *Phys. Rev. 94*, 113–6(1954).

Y 245 The Radioactive Decay of Barium 131. J. M. Cork, J. M. LeBlanc, W. H. Nester, and M. K. Brice. *Phys. Rev. 91*, 497(1953).

Y 246 The Radioactive Decay of Calcium 47. J. M. Cork, J. M. LeBlanc, M. K. Brice, and W. H. Nester. *Phys. Rev. 92*, 367–9(1953).

Y 247 Radioactive Decay of Cs–137. M. A. Waggoner. *Phys. Rev. 82*, 906–9(1951).

Y 429 A New Short-Lived Isotope of Cesium. R. W. Fink and E. O. Wiig. *J. Am. Chem. Soc. 74*, 2365(1952).

Y 430 Nuclear Energy Levels in Lead Isotopes. R. E. Peterson, R. K. Adair, and H. H. Barschall. *Phys. Rev. 79*, 935–7(1950).

Y 431 The Nuclear Gyromagnetic Ratio of V–50 and Measurements on Rb–85 and Cl–35. H. E. Walchli, W. E. Leyshon, and F. M. Schelitlin. *Phys. Rev. 85*, 922L(1952).

Y 432 Nuclear Magnetic Moment of I–129. H. E. Walchli, R. Livingston, and G. Herbert. *Phys. Rev. 82*, 97L(1951).

Y 433 Nuclear Magnetic Moment of Rb–85, Rb–87 and I–127. E. L. Yasaitis and B. Smaller. *Phys. Rev. 82*, 750(1951).

Y 434 Nuclear Magnetic Resonance in Metallic Hydrides. M. A. Garstens. *Phys. Rev. 79*, 397–8(1950).

Y 435 Nuclear Recoil Following Neutrino Emission from Beryllium 7. R. Davis, Jr. *Phys. Rev. 86*, 976–85(1952).

Y 436 Nuclear Recoils Resulting From the Decay of Be–7. P. B. Smith and J. S. Allen. *Phys. Rev. 81*, 381–5(1951).

Y 437 Nuclear Spin of Bi 210. M. S. Fred, F. S. Tomkins, and R. F. Barnes. *Phys. Rev. 92*, 1324(1953).

Y 438 Nuclear Spin of Selenium 77. S. P. Davis and F. A. Jenkins. *Phys. Rev. 83*, 891(A)(1951).

Y 439 The Nuclear Spin of Si–29. G. A. Williams, D. W. McCall, and H. S. Gutowsky. *Phys. Rev. 93*, 1428–9(1954).

Y 440 Nuclear Spins of Mo 95 and Mo 97. E. C. Woodward, Jr. *Phys. Rev. 93*, 954(A)(1954).

Y 441 The Pairing Effect in Nuclei and Isomerism. R. Katz. *Phys. Rev. 91*, 1487(1953).

Y 442 Photo-Disintegration of Silver and Aluminum. B. C. Diven and G. M. Almy. *Phys. Rev. 80*, 407–14(1950).

Y 443 Photo Neutron Thresholds for Pb 206, Pb 207 and Pb–208. H. Palevsky and A. O. Hanson. *Phys. Rev. 79*, 242A(1950).

Y 444 Promethium Isotopes. Nd–142, Nd–143, Nd–144, Nd–145, Nd–146, Nd–148, Nd–150. V. Kistiakowsky. *Phys. Rev. 87*, 859(1952).

Y 445 A Proposed Decay Scheme for 72–Hf–181 (46 Day, 5.7 Hour). S. B. Burson and K. W. Blair. *Phys. Rev. 78*, 89(1950).

Y 446 Proton Groups from the N–14(d,p)N–15 and N–15(d,p)N–16 Reactions. R. E. Malm and W. W. Buechner. *Phys. Rev. 80*, 771(1950).

Y 447 Energy Levels in W–182. C. M. Fowler, H. W. Kruse, V. Keshishian, R. J. Klotz, and G. P. Mellor. *Phys. Rev. 94*, 1082-3(1954).

Y 448 The Magnetic Moment of Tc–99. K. G. Kessler. *Phys. Rev. 82*, 341–2(1951).

Y 449 Cross Sections of the D(T,n)He 4 Reaction for 80 to 1200-Kev Tritons. H. V. Argo, R. F. Taschek, H. M. Agnew, A. Hemmendinger, and W. T. Leland. *Phys. Rev. 87*, 612–8(1952).

Y 450 The D–He–4 Interaction for 10.3 Mev Deuterons. J. C. Allred, D. K. Froman, A. M. Hudson, and L. Rosen. *Phys. Rev. 82*, 786(1951).

Y 451 The Disintegration of C–12, B–11, B 10 by Fast Neutrons. G. M. Frye and L. Rosen. *Phys. Rev. 92*, 1083(1953).

Y 452 Disintegration of He–3 by Fast Neutrons. J. H. Coon. *Phys. Rev. 80*, 488(1950).

Y 453 The Disintegration of Sr–91 and Y–91m. D. P. Ames, M. E. Bunker, L. M. Langer, and B. M. Sorenson. *Phys. Rev. 91*, 68–74(1953).

Y 454 Excitation Function for Fe–56(n,p)Mn–56. J. Terrell and D. M. Holm. *Phys. Rev. 95*, 650A(1954).

Y 455 The Excited Nuclear State of Be–7. G. D. Freier, T. F. Stratton, and L. Rosen. *Phys. Rev. 79*, 721(1950).

Y 456 Gamma Radiation from Ce–144 and Pr–144. W. E. Kreger and C. S. Cook. *Phys. Rev. 96*, 1276–8(1954).

Y 457 Half Life of Yttrium 90. H. L. Volchok and J. L. Kulp. *Phys. Rev. 97*, 102(1955).

Y 458 K-Capture to Positron Ratio for Na 22. W. E. Kreger. *Phys. Rev. 96*, 1554–5(1954).

Y 459 The Low Energy Portion of the C–14 Beta-Spectrum. G. W. McManaway, E. O. Kizer, and A. W. Waltner. *Phys. Rev. 87*, 176(1952).

Y 460 The Low Energy Yield of the H–2(d,p)H–3 Reaction. R. F. Heyenberger and A. W. Waltner. *Phys. Rev. 81*, 176(1952).

Y 461 The Low Energy Yield of the H–2(d,n)He–3 Reactions. P. Baker, B. L. Jones, and A. W. Waltner. *Phys. Rev. 87*, 176(1952).

Y 462 Neutron Yield for the Li+T Reactions. R. W. Crews. *Phys. Rev. 82*, 100–1(1951).

Y 463 Nuclear Disintegration Energies. D. M. Van Patter and W. Whaling. *Revs. Mod. Phys. 26*, 402–43(1954).

Y 464 Physique Nucleaire. Rayonnement de la transition 113–Sn 113–In. P. Avignon et Y. Deschamps. *Compt. rend. acad. sci. 236*, 478–80(1953).

Y 465 Radiations from Ir 192m. J. P. Mize, M. E. Bunker, and J. W. Starner. *Phys. Rev. 96*, 444–7(1954).

Y 466 The Tritium (p,γ) Reaction. J. E. Perry and S. J. Bame, Jr. *Phys. Rev. 90*, 380A(1953).

General Physics

Z 1 Absorption and Emission Spectra of Promethium. W. F. Meggers, B. F. Scribner and W. R. Bozman. *J. Research Natl. Bur. Standards 46*, 85–98(1951).

Z 2 Arc and Spark Spectra of Technetium. W. F. Meggers and B. F. Scribner. *J. Research Natl. Bur. Standards 45*, 476–88(1950).

Z 3 Atomic Hydrogen Hyperfine Structure in Irradiated Acids. R. Livingston, H. Zeldes, and E. H. Taylor. *Phys. Rev. 94*, 725(1954).

Z 4 Centrifugal Distortion in Asymmetric Molecules, II. HDS. R. E. Hillger and M. W. P. Strandberg. *Phys. Rev. 83*, 575–81(1951).

Z 5 Centrifugal Distortion in Asymmetric Top Molecules. III. H_2O, D_2O, and HDO. D. W. Posener and M. W. P. Strandberg. *Phys. Rev. 95*, 374–84(1954).

Z 6 Change in the Inversion Spectrum of ND_3 from Resonant to Nonresonant Absorption. G. Birnbaum and A. A. Maryott. *Phys. Rev. 92*, 270–3(1953).

Z 7 The Combination Band $\nu_1+\nu_2+\nu_3$ of Heavy Water Vapor. F. P. Dickey, C. A. Guderjahn, and E. D. Palik. *J. Chem. Phys. 20*, 375–7(1952).

Z 8 Compression to 10,000 Atmos. of Solid Hydrogen and Deuterium at 4.2° K. J. W. Stewart and C. A. Swenson. *Phys. Rev. 94*, 1069–70(1954).

Z 9 Detection of Small Fluid Flows by Means of P–32. F. T. Rogers, Jr., and L. E. Schilberg. *Nucleonics 9, No. 4*, 47–51(1951).

Z 10 Determination of Heavy Water by Mass Spectrometer. B. W. Thomas. *Anal. Chem. 22*, 1476–8(1950).

Z 11 Dielectric Properties of Ice and Solid D_2O. R. P. Auty and R. H. Cole. *J. Chem. Phys. 20*, 1309–14(1952).

Z 12 Electromagnetic Enrichment of FE–58 Content and Concurrent Improverishment of Fe–54 Content in Iron. C. P. Keim, H. W. Savage, and B. Weaver. *Science 112*, 47(1950).

Z 13 Hyperfine Structure in the Spectra of Sb, Sm, Hg, and Cd. K. Murakawa. *Phys. Rev. 93*, 1232–5(1954).

Z 14 The Infrared Spectrum and Molecular Constants of $C-14O_2$. A. H. Nielsen and R. T. Lagemann. *J. Chem. Phys. 22*, 36–9(1954).

Z 15 Internal Pair Spectrum from B–10+d. S. J. Bame, Jr., and L. M. Baggett. *Phys. Rev. 84*, 891–7(1951).

Z 16 Magnetic Lens Spectrometer Measurements of The Radiations From Light Nuclear Reactions. R. G. Thomas and T. Lauritsen. *Phys. Rev. 88*, 969–86(1952).

Z 17 Mass Spectrometric Determination of the Hydrogen-Tritium Equilibrium. H. C. Mattraw, C. F. Pachucki, and L. M. Dorfman. *J. Chem. Phys. 20*, 926(1952).

Z 18 The Microwave Spectra of the Deuterated Methyl Halides. J. W. Simmons and J. H. Goldstein. *J. Chem. Phys. 20*, 122–4(1952).

Z 19 The Microwave Spectra of the Deutero-Ammonias M. T. Weiss and M. W. P. Strandberg. *Phys. Rev. 83*, 567–75(1951).

Z 20 A Note on the Infrared Spectra of the Deutero-Ammonias. J. S. Burgess. *Phys. Rev. 76*, 1267(1949).

Z 21 Observation of Initial Flow in a Fluid Obeying Darcy's Law by Radioactive-Tracer Techniques. F. T. Rogers, Jr., and L. E. Schilberg. *J. Appl. Phys. 22*, 233–4(1951).

Isotope Techniques

BB 1 An Apparatus for Determining Bone Density by Means of Radioactive Strontium (Sr–90). F. G. Evans, C. C. Coolbaugh, and M. Lebow. *Science 114*, 182–5(1951).

BB 2 Apparatus for Intracavitary Administration of Colloidal Gold. R. S. Yalow and B. B. Cohen. *Nucleonics 11, No. 12*, 65–7(1953).

BB 3 Automatic Determination of Radioactivity on Filter Paper Chromatograms. L. B. Rockland, J. Lieberman, and M. S. Dunn. *Anal. Chem. 24*, 778–82(1952).

BB 4 The Autoradiograph—A Tool for Cytogeneticists. J. H. Taylor and S. H. Taylor. *J. Heredity 44*, 129–32(1953).

BB 5 Autoradiographic Arsenic Localization in Adult and Embyronic Epithelium and Connective Tissues. S. C. Sommers, B. S. Geyer, and R. N. Chute. *Proc. Soc. Exptl. Biol. Med. 84*, 234–9(1953).

BB 6 Autoradiographic Detection of Incorporation of P–32 into Chromosomes During Meiosis and Mitosis. J. H. Taylor. *Exptl. Cell Research 4*, 164–73(1953).

BB 7 Autoradiographic Distribution of Intravenous Colloidal Gold (Au–198) in the Rat. V. A. Stembridge, R. M. Kniseley, and W. Gibbs. *Lab. Invest. 2*, 349–56(1953).

BB 8 Autoradiographic Evidence of Cortisone Action on Mast Cells in Experimental Skin Tumors. G. Asboe-Hansen. *Cancer Research 14*, 94–5 (1954).

BB 9 Autoradiographic and Microphotometric Studies of the Relation between Phosphorus Incorporation into Desoxyribonucleic Acid and the Synthesis of Desoxyribonucleic Acid. R. McMaster and J. H. Taylor. *Anat. Record 117*, 584–5(1953).

BB 10 Autoradiographic and Staining Observations on the Use of Carbowax as an Embedding Medium for Frozen-Dried Tissues. M. W. Holt and S. Warren. *J. Natl. Cancer Inst. 13*, 236–8(1952).

BB 11 Autoradiographic Studies. J. C. Gallimore, Jr., G. A Boyd, G. A. Andrews, and M. Brucer. *Radiology 61*, 595–601(1953).

BB 12 Autoradiographic Studies on Iron 59 Turnover by Erythroid Cells in Rat Bone Marrow. M. E. Austoni. *Proc. Soc. Exptl. Biol. Med. 85*, 48–51(1954).

BB 13 Autoradiographic Studies of Surface Detail with Chromium 51. L. E. Preuss. *Nucleonics 12, No. 8*, 30–2(1954).

BB 14 Autoradiographic Technique with Carbon 14 in Rubber. A. D. Kirshenbaum, C. W. Hoffman, and A. V. Grosse. *Rubber Chem. Technol. 25*, 291–302(1952).

BB 15 An Autoradiographic Technique for Detailed Studies with Plant Tissue. W. M. Dugger, Jr., and D. E. Moreland. *Plant Physiol. 28*, 143–5(1953).

BB 16 Autoradiographs of Algae and Ciliates Exposed to Tritiated Water. C. Chapman-Andresen. *Exptl. Cell Research 4*, 239–42(1953).

BB 17 Autoradiography after Activation of Histological Sections with Deuterons. E. Odeblad and C. A. Tobias. *Arch. Biochem. and Biophys. 49*, 452–3(1954).

BB 18 Autoradiography of Mast Cells in Experimental Skin Tumors of Mice Injected with Radioactive Sulfur (S–35). G. Asboe-Hansen. *Cancer Research 13*, 587–9(1953).

BB 19 Autoradiography of Soil Sections and Its Applications. W. B. Johnston. *Soil Sci. 78*, 247–55(1954).

BB 20 Biologically Prepared Radioactive Indicators in a Study of the Metabolism of Pentobarbital. E. Titus and H. Weiss. *Federation Proc. 12*, 372(1953).

BB 21 Boron Detection in Tissues Using the (n,α) Reaction. G. Mayr, H. D. Bruner, and M. Brucer. *Nucleonics 11, No. 10*, 21–5(1953).

BB 22 Chest Radioautography. W. M. Loehr. *Am. J. Roentgenol. Radium Therapy, Nuclear Med. 68*, 355–9(1952)

BB 23 The Cholescintigram. E. T. Yuhl, L. A. Stirrett, M. R. Hill, Jr., and J. M. Beal. *Surgery 34*, 724–7(1953).

BB 24 Chromatographic Evidence for Incorporation of 2,6-diaminopurine into Nucleoside Phosphates of the Mouse. G. P. Wheeler and H. E. Skipper. *Federation Proc. 12*, 289(1953).

BB 25 Chromatographic Studies on the Interconversion of Amino Acids. O. G. Lien, Jr., and D. M. Greenberg. *J. Biol. Chem. 195*, 637–44(1952).

BB 26 Clinical Radiography with a Tm–170 Source. R. J. Hasterlik. *Nucleonics 12, No. 5*, 37 (1954).

BB 27 Comparison of Methods of Preparing Thin-Tissue Plant Leaves for Autoradiography. S. J. Toth and E. M. Romney. *Soil Sci. 78*, 95–8(1954).

BB 28 A Continuously Recording Scanning Device for Radiochromatographic Analysis of Labeled Antigen-Antibody Reactions. R. B. Williams and R. E. Smith. *Proc. Soc. Exptl. Biol. Med. 77*, 169–74(1951).

BB 29 Destruction of Amino Acids During Filter Paper Chromatography. M. K. Brush, R. K. Boutwell, A. D. Barton, and C. Heidelberger. *Science 113*, 4–6(1951).

BB 30 Detection of Tritiated Compounds in Paper Chromatography. I. Gray, I. Saburo, A. A. Benson, and D. Kritchevsky. *Rev. Sci. Instr. 21*, 1022(1950).

BB 31 Determination of Small Amounts of Niobium and Tantalum Using Radioisotope Tracer Technique. T. F. Boyd and M. Galan. *Anal. Chem. 25*, 1568(1953).

BB 32 Deuteron Activation and Autoradiography as Coupled Techniques in Tracer Experiments. K. M. Laing, R. E. Jones, D. E. Emhiser, J. V. Fitzgerald, and G. S. Bachman. *Nucleonics 9, No. 4*, 44–6(1951).

BB 33 Device for Loading Cobalt 60 Cartridges in Tubing for Cancer Therapy. G. W. Gallendine, Jr. and J. L. Morton. *Nucleonics 12, No. 4*, 62–4(1954).

BB 34 Distillation of "Carrier-Free" Iodine 131 Activity. M. Kahn, A. J. Freedman and C. G. Schultz. *Nucleonics 12, No. 7*, 72–5 (1954).

BB 35 The Distribution of Food in Amoeba Cytoplasm Studied by Means of Autoradiography. N. Andresen, C. Chapman-Andresen, H. Holter, P. K. Jensen, and H. Levi. *Exptl. Cell Research 1*, 139–42(1950).

BB 36 Effect of Buffer on Paper Electrophoretic Studies on State of Yttrium in Blood. D. B. Zilversmit and S. L. Hood. *Proc. Soc. Exptl. Biol. Med. 84*, 573–6(1953).

BB 37 Effect of Ultraviolet Light on Steroids during Paper Chromatography. K. Savard, H. W. Wotiz, P. Marcus, and H. M. Lemon. *J. Am. Chem. Soc. 75*, 6327–9(1953).

BB 38 Effluographic Determination of K–42 Release as Related to the Action Potential of Heart Muscle. J. M. O'Brien and W. S. Wilde. *Federation Proc. 12*, 105(1953).

BB 39 Electrochromatographic Separations of Calcium and Phosphate Ions. T. R. Sato, W. E. Kisieleski, W. P. Norris, and H. H. Strain. *Anal. Chem. 25*, 438–46(1953).

BB 40 Electron-Track Autoradiography of Radioactive Frog Embryo. F. Sperling. *Anat. Record 117*, 600(1953).

BB 41 Extrapolation Ionization Chamber for Measurement of Dosage in Intracavitary Irradiation. A. Littman, B. W. Fox, J. W. Beattie,

and J. S. Laughlin. *Am. J. Roentgenol, Radium Therapy Nuclear Med. 71*, 1046–8 (1954).

BB 42 Filter Paper Electrophoresis of Serum Proteins of the Domestric Fowl. W. P. McKinley, W. F. Oliver, W. A. Maw, and R. H. Common. *Proc. Soc. Exptl. Biol. Med. 84*, 346–51(1953).

BB 43 The Fluorometric Determination of Polycarboxylic Acids Following Chromatography. C. E. Frohman and J. M. Orten. *J. Biol. Chem. 205*, 717–23(1953).

BB 44 Freeze-Drying Tissues for Autoradiographic Study. M. W. Holt and S. Warren. *Lab. Invest. 2*, 1–14(1953).

BB 45 The Function of Various Types of Thyroid Carcinoma as Revealed by the Radioautographic Demonstration of Radioactive Iodine (I–31). P. J. Fitzgerald and F. W. Foote, Jr. *J. Clin. Endocrinol. 9*, 1153–70(1949).

BB 46 Handling of Radioactive Cadavers. Editorial. *J. Am. Med. Assoc. 156*, 773(1954).

BB 47 An Improved Technic for Liquid Emulsion Autoradiography. J. S. Arnold. *Proc. Soc. Exptl. Biol. Med. 85*, 113–6(1954).

BB 48 Incorporation of 2,6-Diaminopurine into the Nucleoside Phosphates of the Mouse. G. P. Wheeler and H. E. Skipper. *J. Biol. Chem. 205*, 749–54(1953).

BB 49 Intracellular Localization of Compounds with Tritium H3, by Radioautography. M. L. Eidinoff, P. J. Fitzgerald, E. B. Simmel, and J. E. Knoll. *Proc. Soc. Exptl. Biol. Med. 77*, 225–9(1951).

BB 50 Intracellular Localization of Labeled Nucleic Acid Determined with Autoradiographs. J. H. Taylor. *Science 118*, 55–7(1953).

BB 51 Intravenous Lipids, Lipoproteins, and Mucopolysaccharides in Experimental Atheroma. P. L. Benner and C. A. Woerner. *Lab. Invest. 2*, 321(1953).

BB 52 Iodinated Protein in Milk. L. Van Middlesworth, A. H. Tuttle, and A. Threlkeld. *Science 118*, 749(1953).

BB 53 The Irradiation of Crystalline Vitamin B–12 with Neutrons. P. Numerof and J. Kowald. *J. Am. Chem. Soc. 75*, 4350–2(1953).

BB 54 The Isolation of Iodinated Amino Acids from Thyroid Tissue by Means of Starch Column Chromatography. B. M. Dobyns and S. R. Barry. *J. Biol. Chem. 204*, 517–31(1953).

BB 55 Isolation and Purification of Radioactive Sugars by Means of Paper Chromatography. E. W. Putman and W. Z. Hassid. *J. Biol. Chem. 196*, 749–52(1952).

BB 56 The Isotope Derivative Method of Protein Amino End-Group Analysis. S. Udenfriend and S. F. Velick. *J. Biol. Chem. 190*, 733–40 (1951).

BB 57 Isotope Uptake of Individual Cells. Technic for Stained Autoradiographs and Microphotographs for Grain Counting. L. G. Lajtha. *Exptl. Cell Research 3*, 696–8(1952)

BB 58 Labeling Bovine and Human Albumin with I–131. R. C. Gilmore, Jr., M. C. Robbins, and A. F. Reid. *Nucleonics 12, No. 2*, 65–8(1954).

BB 59 The Localization of Certain Alkaline and Rare Earth Elements in the Costochondral Junction of the Rat. C. W. Asling, J. G. Hamilton, D. Axelrod-Heller, and B. J. Louie. *Anat. Record 113*, 285–300(1952).

BB 60 The Measurement of Deuterium Oxide in Body Fluids by the Falling Drop Method. P. R. Schloerb, B. J. Frisi-Hansen, I. S. Edelman, B. B. Sheldon, and F. D. Moore. *J. Lab. Clin. Med. 37*, 653–62(1951).

BB 61 The Measurement of Total Body Potassium by the Radioisotope Dilution Technique. B. A. Burrows and J. H. Sisson. *J. Clin. Invest. 29*, 801(1950).

BB 62 A Method of Preparing Radioautographs with Adjacent Sections. T. C. Evans and W. E. McGinn, Jr. *Cancer Research 13*, 661–5(1953).

BB 63 A Method for Radioautographic Localization of Isotopes in Tissues. H. W. Diserens and O. Hall. *Texas Repts. Biol. Med. 10*, 286(1952)

BB 64 Microscopic Distribution of Radioisotopes in Tissues. M. W. Holt and S. Warren. *Lab. Invest. 2*, 264–79(1953).

BB 65 A Multicelled Sample Container for the Rapid Counting of P–32 in Blood. H. C. Lawson, E. S. Coleman, and S. Adams. *Rev. Sci. Instr. 25*, 397(1954).

BB 66 Nature of Plasma Iodine Following Destruction of the Rat Thyroid with I–131. W. Tong, A. Taurog, and I. L. Chaikoff. *J. Biol. Chem. 195*, 407–13(1952).

BB 67 A New Method, Using Radioiron, for Determining the Iron-Binding Capacity of Human Serum. A. R. Feinstein, W. F. Bethard, and J. D. McCarthy. *J. Lab. Clin. Med. 42*, 907–14(1953).

BB 68 A New Technic for Visualizing Thyroid Outline Using I–131 and a Scintillation Counter. V. Spear. *Phys. Rev. 95*, 308 1954).

BB 69 A Non-Leaching Technic for Autoradiography. J. C. Gallimore, E. C. Bauer, and G. A. Boyd. *Stain Technol. 29*, 95–8(1954).

BB 70 A Note on a Chemographic Artifact in Autoradiography. L. E. Preuss and C. Harrison. *Science 120*, 67–8(1954).

BB 71 Observations on the Nodular Thyroid Gland with the Gammagraph. H. C. Allen, Jr., F. J. Kelly, and J. A. Greene. *J. Clin. Endocrinol. and Metabolism 12*, 1356–72(1952).

BB 72 Paper Chromatography of Choline and the Vitamins B_{-1}, B_{-2}, Niacin, and Niacinamide Preparation of Radioactive Choline Acetate and Study of Its Hydrolysis. A. Heyndrick. *J. Am. Pharm. Assoc. Sci. Educ. 42*, 680–1(1953).

BB 73 Paper Chromatography of Steroids. D. Kritchevsky and M. R. Kirk. *J. Am. Chem. Soc. 74*, 4484(1952).

BB 74 Penetration of Radiocalcium at Margins of Acrylic Restorations Made by Compression and Noncompression Technics. R. E. Sausen, W. D. Armstrong, and W. J. Simon. *J. Am. Dental Assoc. 47*, 636–8(1953).

BB 75 P–32 Localization in the Intestine. M. W. Holt and S. Warren. *Proc. Soc. Exptl. Biol. Med. 76*, 709(1951).

BB 76 Pipecolic Acid in *Phaseolus vulgaris*: Evidence on Its Derivation from Lysine. N. Grobbelaar and F. C. Steward. *J. Am. Chem. Soc. 75*, 4341–3(1953).

BB 77 Preparation of Microautoradiographs with the Use of Stripping Film. W. E. Lotz and P. M. Johnston. *Nucleonics 11, No. 3*, 54(1953).

BB 78 Preparation of Tissues for Determination of I–131 Activity. J. D. Perkinson, Jr., and H. D. Bruner. *J. Pharmacol. Exptl. Therap. 103*, 356–7(1951).

BB 79 Preparation of Tissues for Iodine 131 Counting. J. D. Perkinson, Jr., and H. D. Bruner. *Nucleonics 10, No. 11*, 66–7(1952).

BB 80 Propionic Acid Metabolism in Mouse Liver Slices. L. Daus, M. Meinke, and M. Calvin. *J. Biol. Chem. 196*, 77–87(1952).

BB 81 Pulmonary Penetration of Particles Administered by Intratracheal Insufflation. H. Cember, T. F. Hatch, J. A. Watson, and T. B. Grucci. *Arch. Ind. Hyg. Occupational Med. 10*, 124–9(1954).

BB 82 A Quantitative Autoradiographic Study of the Incorporation of S–35 in Tracheal Cartilage. H. Bostrum, E. Odeblad, and U. Friberg. *Arch. Biochem. and Biophys. 38*, 283–6(1952).

BB 83 Quantitative Estimation of Radioautographic Reactions of Thyroid Follicles. N. J. Nadler and R. Bogoroch. *Anat. Record 109*, 329(1951)

BB 84 Quantitative Radioautographic Study of the Concentration of *in Vivo* Fixed Ca–45 in New and Mature Bone. J. S. Arnold, K. E. Johnson, and W. S. S. Jee. *Federation Proc. 13, No. 1*, 421(1954).

BB 85 Radioactive Gold in Filter Paper Electrophoresis Patterns of Plasma. N. Simon. *Science 119*, 95–6(1954).

BB 86 Radioautographic Localization of Na–22 in the Rat Kidney. R. B. Jennings and J. S. Krakusin. *J. Lab. Clin. Med. 40*, 815(1952).

BB 87 Radioautographic Method for Studying Deposition of Cigarette Smoke in the Dog Lung. W. A. Wolff, J. G. Tuttle, and J. M. Godfrey. *Federation Proc. 13, No. 1*, 324(1954).

BB 88 Radioautographic Solubility Studies of I–131 and P–32 in Frozen-Dehydrated Tissues. M. W. Holt and S. Warren. *Proc. Soc. Exptl. Biol. Med 76*, 4(1951).

BB 89 Radioautographic Studies on the Reticuloendothelial System. D. Goulian, Jr. *Federation Proc. 12*, 211(1953).

BB 90 Radioautographic Studies of the Tissue Culture Incorporation of Isotopes after Incubation in Media Containing Radioactive Compounds: Technic. P. J. Fitzgerald, J. J. Biesele, M. C. Slautterback, and E. B. Simmel. *J. Histochem. and Cytochem. 1*, 379(1953).

BB 91 Radioautographic Study of the Deposition of the Calcium 45 in the Cranium, Teeth and Mandible. J. R. Jarabak, M. M. Kamins, and K. L. Vehe. *J. Am. Dental Assoc. 47*, 639–48(1953).

BB 92 Radioautographic Visualization of Sulfur–35 disposition in the Articular Cartilage and Bone of Suckling Rats Following Injection of Labeled Sodium Sulfate. D. D. Dziewiatkowski. *J. Exptl. Med. 93*, 451–8(1951).

BB 93 Radioautography: A Brief Review of Various Aspects and Applications with Special Reference to Thyroid Neoplasms. M. Kannerstein. *J. Newark Beth Israel Hosp. 3*, 269(1952).

BB 94 Radioautography in Cancer. P. J. Fitzgerald. *Cancer 5*, 166–94(1952).

BB 95 Radioautography in Cytology. P. J. Fitzgerald. *Texas Repts. Biol. Med. 11*, 671–7(1953).

BB 96 Radioautography: Theory, Technic, and Applications. P. J. Fitzgerald, E. Simmel, J. Weinstein and C. Martin. *Lab. Invest. 2*, 181–222(1953).

BB 97 Radiogold Administration. D. L. Tabern. *Nucleonics 12, No. 9*, 57–8(1954).

BB 98 Radioisotope Procedures with Farm Animals. S. L. Hansard, C. L. Comar, and M. P. Plumlee. *Nucleonics 9, No. 1*, 13–25 (1951); *Nucleonics 9, No. 2*, 38–45(1951).

BB 99 Radioisotopes as Tracers in Cigarette Smoke. W. A. Wolff, E. G. Purdom, and J. A. Isenhower. *Federation Proc. 13, No. 1*, 324(1954).

BB 100 Radiotracer Techniques in Embryological Research. J. N. Dent and E. L. Hunt. *J. Cellular Comp. Physiol. 43, Suppl. 1*, 77–101(1954).

BB 101 A Rapid Radioautographic Technique for Combined Calcified and Soft Tissues. H. M. Myers, E. Jennings, and H. Becks. *J. Dental Research 31*, 416(1952).

BB 102 Renewal of Phosphate in Bone Minerals. 2. Radioautographic Studies of the Renewal of Phosphate in Different Structures of Bone. B. Engfeldt, A. Engstrom and R. Zetterstrom. *Biochem. et. Biophys. Acta 8*, 375–80(1952).

BB 103 The Separation of Sodium from Potassium in Human Blood Serum by Ion Exchange Chromatography. W. L. Arons and A. K. Solomon. *J. Clin. Invest. 33*, 995–1000(1954).

BB 104 A Set of Parts for the Remote Handling of Radioactive Substances. A. B. Ritchie and W. T. Spragg. *J. Sci. Instr. 28*, 214–6(1951).

BB 105 Simplified Autoradiography Exposure Calculation. W. W. Wainwright, E. C. Anderson, P. C. Hammer, and C. A. Lehman. *Nucleonics 12, No. 1,* 19–21(1954).

BB 106 Simplified Method for Determining Thyroid Function with Radioiodine. J. W. Lewis. *Nucleonics 12, No. 6,* 59–60(1954).

BB 107 Simplified Procedure for Determination of PBI–131 in Blood. T. Fields and E. Kaplan. *J. Lab. Clin. Med. 43,* 960–1(1954).

BB 108 The Simultaneous Measurement of Exchangeable Body Sodium and Potassium Utilizing Ion Exchange Chromatography. W. L. Arons, R. J. Vanderlinde and A. K. Solomon. *J. Clin. Invest. 33,* 1001–7(1954).

BB 109 Single Cell Autographs of Bone Marrow and Blood from Rats Using Radioactive Phosphorus. W. I. Morse. *Am. J. Med. Sci. 220,* 522–9(1950).

BB 110 Single Dimension Chromatographic Separation of Thyroxine and Triiodothyronine. E. C. Albright, F. C. Larson, and W. P. Deiss. *Proc. Soc. Exptl. Biol. Med. 84,* 240–4(1953).

BB 111 *In Situ* Measurement of Soil Bulk Density. J. A. Vomocil. *Agr. Eng. 35, No. 9,* 651–4(1954).

BB 112 Standardized Co–60 Source Capsule for Teletherapy. M. Brucer. *Nucleonics 12, No. 6,* 58–9(1954).

BB 113 Sulfonamide Separations Based on Ion-Exchange Chromatography in Combination with Radioactive Techniques. H. H. Hutchins and J. E. Christian. *J. Am. Pharm. Assoc. Sci. Ed. 42,* 310–4(1953).

BB 114 A Technic for Measurement of Radioactive Iodine (I–131) Uptake by the Human Thyroid Gland. J. U. Hidalgo, S. B. Nadler, T. Bloch, and R. T. Nieset. *Proc. Soc. Exptl. Biol.* Med. 77, 764–6(1951).

BB 115 Thyroglobulin Formation in the Thyroid Follicle Visualized by the Coated Autograph Technique. C. P. LeBlond and J. Gross. *Endocrinology 43,* 306–24(1948).

BB 116 Thyroid Gland Weight Determination from Thyroid Scintigrams with Postmortem Verification. W. E. Goodwin, B. Cassen, and F. K. Bauer. *Radiology 61,* 88–92(1953).

BB 117 Tissue Surface Measurements as a Method of Studying *in Vivo* the Concentration of Beta Ray Isotopes. Theoretical and Experimental Analysis with Radioactive Phosphorus. E. Strajman. *Univ. Calif. Publs. Physiol. 8,* 333–76(1951).

BB 118 Tritium in Radioautography. P. J. Fitzgerald, M. L. Eidinoff, J. E. Knoll, and E. B. Simmel. *Science 114,* 494–8(1951).

BB 119 Uptake of Radioiodine in Frozen Thyroid Carcinoma Tissues. W. N. Harsha and B. R. Harsha. *Am. J. Clin. Pathol. 21,* 842–5 (1951).

BB 120 Use of Colloidal Au 198 for Obtaining Scintigrams of the Liver. E. T. Yuhl, L. A. Stirrett and B. Cassen. *Nucleonics 11, No. 4,* 54–56(1953).

BB 121 The Use of the Radioautograph for Studying the Relative Radioactivity of Dental Materials. R. F. Sognnaes and J. H. Shaw. *J. Dental Research 27,* 770(1948).

BB 122 The Use of Ultraviolet-Microscopy, Roentgen-Ray-Absorption, and Radioautographic Techniques in the Study of Neoplastic Disease. A. Discussion of These Cytophysical Techniques. P. J. Fitzgerald and A. Engstrom. *Cancer 5,* 643–77(1952).

BB 123 Zone Paper Electrophoresis Studies on Radio-Iodinated Human Serum Albumin. E. R. Gabrieli, D. Goulian, Jr., T. Kinersly, and R. Collet. *J. Clin. Invest. 33,* 136–41(1954).

BB 124 Activation Analysis of Several Rare Earth Elements. A Comparison with Spectrophotometric Procedures. W. W. Meinke and R. E. Anderson. *Anal. Chem. 26,* 907(1954).

BB 125 Activation Analysis Using Low Level Neutron Sources. W. W. Meinke and R. E. Anderson. *Anal. Chem. 25,* 778(1953).

BB 126 Adsorption Studies on Clay Minerals. I. Chromatography on Clays. J. A. Faucher, Jr., R. W. Southworth, and H. C. Thomas. *J. Chem. Phys. 20,* 157–60(1952).

BB 127 Age Measurements on African Micas by the Strontium-Rubidium Method. L. O. Nicolaysen, L. T. Aldrich, and J. B. Doak. *Trans. Am. Geophys. Union 34,* 342–3(1953).

BB 128 Amino Acids in Fossils. P. H. Abelson. *Science 119,* 576(1954).

BB 129 Analysis of the Radiocardiogram in Heart Failure. A. Shipley, R. E. Clark, D. Liebowitz, and J. S. Krohmer. *Circulation Research 1,* 428(1953).

BB 130 Analysis of Urine for Gross Radioactivity. F. P. Cowan and J. Weiss. *Nucleonics 10, No. 2,* 33–5(1952).

BB 131 Applications of Radioactive Tracer Techniques. D. L. Tabern. *Univ. Mich. Teachers Seminar,* 133(1952).

BB 132 Assay of Radioiron and Radiosilver in Biological Samples. L. Cheong, G. C. Perri and L. M. Sharpe. *Anal. Chem. 26,* 242–3(1954).

BB 133 Automatic Fraction Collector for Column Chromatography. O. G. Lien, E. A. Peterson, and D. M. Greenberg. *Anal. Chem. 25,* 920(1952).

BB 134 A Beta-Ray Microscope. W. Kerr and H. J. Gomberg. *Science 119,* 51–5(1954).

BB 135 Biological Applications of Tritium. R. C. Tompson. *Nucleonics 12, No. 9,* 31–5(1954).

BB 136 The Biosynthesis of Proteins and Peptides, including Isotopic Tracer Studies. H. Borsook. *Fortschr. Chem. Org. Naturstoffe 9,* 292–362(1952).

BB 137 Blood Volume Determinations by Means of Radioisotope Labelled Red Cells. An Experiment in Biochemistry. F. Lionetti and B. H. Sweet. *J. Chem. Educ. 30*, 63–6(1953).

BB 138 Calculation of I–131 Beta Radiation Dose to the Bone Marrow. J. S. Robertson and J. T. Godwin. *Brit. J. Radiol. 27*, 241–2 (1954).

BB 139 Capsules for Oral Administration of Radioisotopes. R. L. Libby and M. Tubis. *Nucleonics 10, No. 3*, 63–4(1952).

BB 140 Chromatographic Identification of Some Biologically Important Phosphate Esters. R. S. Bandurski and B. Axelrod. *J. Biol. Chem. 193*, 405–10(1951).

BB 141 Clinical Applications of Hepatic Radioactivity Surveys. L. A. Stirrett, E. T. Yuhl, and B. Cassen. *Am J. Gastroent. 21*, 310–17(1954).

BB 142 Comparison of the Ages of Some Pre-Cambrian Rocks Measured by Different Radioactive Decay Schemes. L. T. Aldrich. *Bull. Geol. Soc. Amer. 64*, 1390(1953).

BB 143 A Comparison of the Microtechnique and Macrotechnique for Blood Volume Determinations. W. E. Noel, E. R. King, R. B. Brown, and L. W. Brady. *Surg. Gynecol. & Obstet. 99*, 500–2(1954).

BB 144 A Comparison of the Oxygen and 14–C Methods of Measuring Marine Photosynthesis. J. H. Ryther and R. F. Vaccaro. *J. consuil, Consuil permanent intern. exploration mer 20*, 25–34 (1954).

BB 145 The Concentration, Distribution and Excretion of Radio-Ethionine (S–35) in the Rat on Stock and Protein-Depleted Diets—Determined by Radioactivity Counting and Radioautography. P. J. Fitzgerald, L. Hellman, J. Weinstein, and R. Schimmel. *Am. J. Pathol. 30*, 619–20 (1954).

BB 146 The Conversion of Hydrogenic Materials to Hydrogen for Isotopic Analysis. J. Bigeleisen, M. L. Perlman, and H. C. Prosser. *Anal. Chem. 24*, 1356–7(1952).

BB 147 The Density of the Rous Sarcoma Virus in Sucrose Solutions. H. Kahler, W. R. Bryan, B. J. Lloyd and J. Moloney. *J. Natl. Cancer Inst. 15*, 331(1954).

BB 148 Detection of Adenine C–14 in DNA by Autoradiography. L. G. Lajtha. *Nature 173*, 587(1954).

BB 149 The Detection of Thyroid Stimulating Hormone by I–131 Uptake in Chicks. C. J. Shellabarger. *Am. J. Physiol. 6*, 721(1954).

BB 150 Determination of the Age of Lepidolites by the Method of Isotope Dilution. G. L. Davis and L. T. Aldrich. *Bull. Geol. Soc. Amer. 64*, 379–80(1953).

BB 151 Determination of Dissociation Constants of Complex Ions by a Radioactive Indicator Method. F. A. Long and C. M. Cook, Jr. *J. Am. Chem. Soc. 73*, 4119(1951).

BB 152 Determination of Plasma Thyroid Hormone Using I–131 and Anionic Resin. W. A. Reilly and K. G. Scott. *Am. J. Diseases Children 88*, 788–9(1954).

BB 153 Determination of Polyglucose in Blood and Urine. F. M. Sinex and D. D. Van Slyke. *Proc. Soc. Exptl. Biol. Med. 79*, 163–9(1952).

BB 154 Determination of Soil Moisture by Neutron Scattering. W. Gardner and D. Kirkham. *Soil Sci. 73*, 391–401(1952).

BB 155 Dilution Methods for Determination of Amniotic Fluid Volume. E. D. Neslen, D. L. Hutchinson, R. L. Hallet, and A. A. Plentl. *Am. J. Obstet. Gynecol. 3*, 598–607(1954).

BB 156 Disappearance Rates of Na–24, K–42, and I–131 from Cerebral Cortex and Muscle in the Dog. W. Lawrence and L. Hellman. *Surg. Forum Proc. 39th Cong. Am. Coll. Surgeons*. 593–8(1954).

BB 157 Discussion of Biochemical Tracer Applications: Major Problems, Limitations, Perspective, and Future Objective. C. Heidelberger. *Proc. 2nd Natl. Cancer Conf. 2*, 1576–81(1954).

BB 158 Double Labeling in Studies of Protein Metabolism. W. Friedberg and F. Haurowitz. *Abstr. 126th Meeting Am. Chem. Soc.*, 16C(1954).

BB 159 Double Tracer Radioautographic Studies of Ca–45 and Ra–226 Bone Deposition. J. S. Arnold and W. S. S. Jee. *Radiation Res. Soc. 1, No. 5*(1954).

BB 160 Effects of Source and Specimen Dimensions on Resolution in Gamma Radiography. A. J. Stevens. *Non-Destructive Testing 11, No. 8*, 13–5(1953).

BB 161 Electroencephalographic Abnormalities in Endocrine Diseases. J. V. Condon, D. R. Becka, R. Gibbs, and F. A. Gibbs. *New Engl. J. Med. 251*, 638–41(1954).

BB 162 Electroencephalographic Abnormalities in Hyperthyroidism. J. V. Condon, D. R. Becka, and F. A. Gibbs. *J. Clin. Endocrinol. and Metabolism 14*, 1511–18(1954).

BB 163 Experimental Iontophoresis: Studies with Radio-Isotopes. E. P. O'Malley, Y. T. Oester, and E. G. Warnick. *Arch. Phys. Med. Rehabilitation 35*, 500–7(1954).

BB 164 Electron-Track Autoradiography of Radioactive Frog Ova. F. Sperling. *Nature 174*, 749(1954).

BB 165 Embedding and Sectioning Undecalcified Bone and Its Application to Radioautography. J. S. Arnold and W. S. S. Jee. *Stain Technol. 29*, 225–39(1954).

BB 166 Empirical Formulae for the Estimation of Thyroid Weight. R. L. Libby. *J. Clin. Endocrinol. and Metabolism 14*, 1265–8(1954).

BB 167 Endobronchial Geiger Counter Studies of Intrathoracic Malignancies Utilizing Radioactive Phosphorus. K. P. Klassen, N. C. Andrews, G. M. Curtis, and W. G. Myers.

Surg. Forum Proc. 37th Congr. Am. Coll. Surgeons, 19–25(1952).

BB 168 Fluoroscope and Geiger Counter for Measuring Ultraviolet Absorption of Chromatograms. T. D. Price. *Anal. Chem. 26*, 1127(1954).

BB 169 Gas Flow Counter for Scanning Paper Chromatograms and Paper Ionograms. H. L. Demorest and R. Baskin. *Anal. Chem. 26*, 1531 (1954).

BB 170 Geiger Counter Probe for Diagnosis and Localization of Posterior Intraocular Tumors. C. I. Thomas, . . S. Krohmer, and J. P. Storaasli. *Arch. Ophthalmol. (Chicago) 52*, 413(1954).

BB 171 The Gradient Tissue Culture Method. E. E. Osgood and M. L. Krippaehne. *Exptl. Cell Research*, Dec.(1954).

BB 172 A Gun for Interstitial Implantation of Radioactive Gold Grains. W. K. Sinclair, H. J. Holt, and D. W. Smithers. *Brit. J. Radiology 25*, 419D(1952).

BB 173 A High Efficiency Still for Pure Water. R. Ballentine. *Anal. Chem. 26*, 549(1954).

BB 174 High Resolution Autoradiography. L. G. Lajtha. *J. Phot. Sci. 2*, 130(1954).

BB 175 High Resolution Location of Radioisotopes—The Beta-Ray Microscope. W. Kerr and H. J. Gomberg. *1st Intern. Instr. Congr. and Exposition of the Instr. Soc. Am. Paper No. 54–13–3*, Sept.(1954).

BB 176 Hydrogen Determination and Liquid Analysis with a Beta-Particle Absorption Apparatus. V. N. Smith and J. W. Otvos. *Anal. Chem. 26*, 359–66(1954).

BB 177 An Improved Carbon 14 Wet Combustion Technique. J. H. Weisburger, K. K. Weisburger and H. P. Morris. *J. Am. Chem. Soc. 74*, 2399(1952).

BB 178 Improvements in Outlining of Thyroid and Localization of Brain Tumors by the Application of Sodium Iodide Gamma-Ray Spectrometry Techniques. H. C. Allen, Jr., J. R. Risser, and J. A. Greene. *Proc. of 2nd Radioisotope Conf., Oxford, England I*, 76–96(1954).

BB 179 The Influence of Blood Incompatibilities on the Measurement of Blood Volume by Cell-Tagging Methods. L. M. Sharpe, D. L. Nickerson, M. I. Gregersen and W. S. Rott. *Proc. Soc. Exptl. Biol. Med. 75*, 61–2(1950).

BB 180 Intracavitary and Interstitial Administered Methods for Radioactive Colloidal Gold. J. E. Stapleton and W. J. Wingo. *Nucleonics 11, No. 3*, 60–2(1953).

BB 181 *In Vitro* Ion Exchange of *In Vivo* Fixed Skeletal Ca–45. J. S. Arnold and W. S. S. Jee. *Federation Proc. 12*, 383(1953).

BB 182 Ion-exchange Chromatography of the Products of the Non-enzymatic Sugar Amino Acid Reaction, and the Occurrence of the Reaction in Liver Extracts. A. Abrams and H. Borsook. *J. Am. Chem. Soc. 75*, 6299–300(1953).

BB 183 Ion Exchange Mechanism and Isotherms from Deep Bed Performance. C. Merriam, Jr., R. W. Southworth, and H. C. Thomas. *J. Chem. Phys. 20*, 1842–6(1952).

BB 184 Ion Exchange and Recrystallization in Fixation of Ca–45 in the Rabbit's Skeleton. J. S. Arnold and W. S. S. Jee. *Proc. Soc. Exptl. Biol. Med. 85*, 658–63(1954).

BB 185 Iontophoresis with Dye Substances, Inorganic Compounds and Organic Drugs. Y. T. Oester and E. P. O'Malley. *Arch. Phys. Med. Rehabilitation*, 627–33(1953).

BB 186 Isolation of Pyruvic and Alpha-Ketoglutaric Acids from Blood and Tissue in the Presence of Carbon 14 Acetate. E. Kvamme and L. Hellman. *Anal. Chem. 26*, 1995–7(1954).

BB 187 Isotope Incorporation in *Paramecium aurelia* Studies with Radioautography and Chemical Analysis. L. D. Hamilton, P. J. Fitzgerald, G. B. Brown, and C. C. Stock, *J. Histochem. Cytochem. 1*, 378–9(1953).

BB 188 Isotopenbestimmung mit der Goldabsorptionsmethode. M. Forro. *Zeitschrift fur Physik 138*, 441–8(1954). (In German.)

BB 189 Isotopic Analysis of Some Gaseous Boron Hydrides. W. S. Koski, P. C. Maybury and J. J. Kaufman. *Anal. Chem. 26*, 1992(1954).

BB 190 Isotopic Composition of Lead in Olivine Bombs. G. R. Tilton, C. C. Patterson, and G. L. Davis. *Bull. Geol. Soc. Amer. 65*, 1314(1954).

BB 191 K– Capture Spectroscopy. H. K. Hughes and J. W. Wilczwoski. *Anal. Chem. 26*, 1889–99(1954).

BB 192 The Localization of P–32 in the Supranuclear Zone of the Columnar Absorbing Cell of the White Rat. P. M. Johnston. *J. Morphol. 95*, 77–94(1954).

BB 193 Low-cost I–131 Thyroid Uptake Apparatus. E. Siegel. *Nucleonics 11, No. 10*, 64(1953).

BB 194 Measurement of Flow in Straight Tubes by Means of the Dilution Technique. H. H. Rossi, S. R. Powers and B. Dwork. *Am. J. Physiol. 173*, 103(1953).

BB 195 Measurement and Handling of Radioactive Materials for Therapeutic Use. W. K. Sinclair. *Nucleonics 9, No. 6*, 35(1951).

BB 196 The Measurement of Radioactive Samples for Clinical Use. W. K. Sinclair. *Brit. J. Radiology 27*, 565(1954).

BB 197 Measurement of Regional Circulation in the Brain by the Uptake of an Inert Gas. S. S. Kety, W. M. Landau, and W. H. Freygang. *Proc. 14th Intern. Physiol. Congr. (Montreal)*, 511(1953).

BB 198 Measurement of Skin Penetration by Use of Subcutaneous Probe-Counter in Conjunction with Radioisotope Labelled Material. H. R. Gittes, E. R. Hart, and A. S. Marrazzi. *Federation Proc. 10*, 50(1951).

BB 199 Measurement of Specific Disintegration Rates by Internal Gas Counting. M. L. Eidinoff. *Anal. Chem. 23*, 632–5(1951).

BB 200 Measurements of Solvent Volume Changes in a Sugar Factory Using a Radioactive Tracer Technic. J. V. Hidalgo. *Phys. Rev. 95*, 306(1954).

BB 201 Metabolism of Bone as Studied by Radioautographic Distribution of Calcium, Plutonium and Radium. J. S. Arnold. *Am. J. Physiol. 167*, 765(1951).

BB 202 Method for Continuous Extraction with a Chelating Agent. W. W. Meinke and R. E. Anderson. *Anal. Chem. 24*, 708(1952).

BB 203 Method for the Location of Deuterium Atoms Attached to Cyclohexane Rings. E. J. Corey, R. A. Sneen, M. G. Danaher, R. L. Young, and R. L. Rutledge. *Chemistry & Industry 4*, 1294(1954).

BB 204 A Method for Simultaneous Determination of Carbon 14 and Total Carbon. D. L. Buchanan and A. Nakao. *J. Am. Chem. Soc. 74*, 2389–95(1952).

BB 205 Microscopic Autoradiography as a Tool in Cancer Research. G. A. Boyd. *Texas Repts. Biol. and Med. 8, No. 4*(1950).

BB 206 Mineral Age Measurement: Mass-Spectrometric Determinations of Rb 87 and Sr 87 in Lepidolites. L. T. Aldrich, J. B. Doak, and G. L. Davis. *Bull. Geol. Soc. Amer. 63*, 1230(1952).

BB 207 Modified Electrophoresis Cell for Determination of Labeled Phosphoproteins. R. E. Hein and R. E. Clegg. *Nucleonics 10, No. 10*, 70(1952).

BB 208 NaI Gamma-Ray Spectrometry Techniques Applied to the Outlining of Brain Tumors. J. R. Risser and H. C. Allen, Jr. *Bull Am. Phys. Soc. 29, No. 2*, 14(1954).

BB 209 New Method for Determination of Gall Bladder Function. L. A. Stirrett and E. T. Yuhl. *Arch. Surg. 68*, 417–21(1954).

BB 210 Nicotinic Acid Metabolism. I. The Use of Paper Chromatography in the Study of Nicotinic Acid Metabolism. B. C. Johnson and Pei-Hsing Lin. *J. Am. Chem. Soc. 75*. 2971–4(1953).

BB 211 Note on Interpretation of Autoradiographs. C. S. Brandt. *Soil Sci. 78*, 481–2(1954).

BB 212 Observations on the Histochemical Reduction of Photographic Emulsion in Radioautography. N. B. Everett and B. S. Simmons. *Anat. Record 117*, 25–35(1953).

BB 213 Paper Chromatography of the Systemic Insecticides Demeton and Schradan. R. B. March, R. L. Metcalf, and T. R. Fukuto. *Agr. Food Chem. 2*, 732–5(1954).

BB 214 Phospholipide Metabolism in the Aorta of the Cholesterol Fed Rabbit. M. L. Shore, R. F. Ackerman, and D. B. Zilversmit. *Am. J. Physiol. 171*, 767(1952).

BB 215 Physical Factors in the Use of Cobalt 60 in Interstitial and Intracavitary Therapy. G. H. Fletcher, P. Wooten, W. H. Storey, and R. J. Shalek. *Radiology 71*, 1021(1954).

BB 216 Plasma Volume Determination in the Hypovolemic State Produced by Intraperitoneal Injection of a Non-electrolyte Solution. H. Krieger, C. A. Hubay, W. E. Abbott, and S. Levey. *Proc. Soc. Exptl. Biol. Med. 81*, 503(1952).

BB 217 Preparation of Radioactive Plastic Microspheres. M. Tubis and H. I. Jacobs. *Nucleonics 10, No. 9*, 54(1952).

BB 218 Preparation of Tagged Spherical Clay Particles. W. S. Ginell and G. P. Simon. *Nucleonics 11, No. 3*, 49–51(1953).

BB 219 The Preparation of Wet Ashed Tissues for Liquid Counting. C. T. Bahner, D. B. Zilversmit and E. Macdonald. *Science 115*, 597–8(1952).

BB 220 Preparing Bond Sections for Radioautography. J. S. Arnold and W. S. S. Jee. *Stain Technol.* 29, 49–54(1954).

BB 221 Principles Which Should Govern Titrated, Regularly Spaced Radioactive Phosphorus or Spray X-Ray Therapy of the Leukemias. C. V. Moore. *Proc. 3rd Intern. Congr. Intern. Soc. Hematol. Cambridge, England*, 21–5(1950).

BB 222 Procedure for Digestion and Radioassay of Animal Tissues. H. Cember, J. A. Watson and T. B. Grucci. *Nucleonics 12, No. 8*, 40–1(1954).

BB 223 The Quantitative Determination of S–35-Labelled Compounds in Complex Mixtures. J. B. Melchior and A. H. Goldkamp. *Anal. Chem. 25*, 233–5(1954).

BB 224 Radioactive Methods of Analysis. G. D. Calkins. *Ohio J. Sci. 52*, 151(1952).

BB 225 A Radioactive Shadowing Technique. M. Simnad, L. Yang and G. M. Pound. *J. Appl. Phys. 25*, 268(1954).

BB 226 Radioactive Tracer Technics in Teaching and Research. J. E. Christian. *Proc. Teachers Seminar on Pharmacol. 2*, 61(1951).

BB 227 Radio Assay of Cobalt 60. R. Ballentine and D. Burford. *Anal. Chem. 26*, 1021(1954).

BB 228 Radioautographic Visualization of S–35 in the Tissue of Patients Given Labeled Sulfur. R. G. Gottschalk. *Abstract, Proc. Am. Assoc. for Cancer Research 1*, April(1953).

BB 229 Radiocardiography in Congential Heart Disease. H. Rogers, D. Goldring, M. Ter-Pogossian, and W. B. Seaman. *J. Pediatrics 44*, 392(1954).

BB 230 Radioisotope Procedures with Laboratory Animals. S. L. Hansard and C. L. Comar. *Nucleonics 11, No. 7*, 44–7(1953).

BB 231 Rapid Determination of I–131 Excretion Curves for Human Beings. F. E. Hoecker and H. L. Hiebert. *Nucleonics 10, No. 9*, 56–8(1952).

BB 232 Recovery and Estimation of Radioiostopes from Biologic Material. II. The Electroplating Apparatus. Procedures for Copper, Silver, Zinc, Mercury, Iron and Cobalt. R. W. Dunn. *J. Lab. Clin. Med. 37*, 644–52(1951).

BB 233 A Remote Control Precision Injector for the Interstitial and Intracavitary Injection of Radio-Active Gold. S. Taplits. *Am. J. Roentgenol. Radium Therapy 67*, 655–7(1954).

BB 234 Remote Pipette Control for Radioactive Liquids. E. J. Liljegren. *Nucleonics 10, No. 7*, 67–8(1952).

BB 235 A Remote Valve for Dispensing Colloidal Au-198 Solutions. L. E. Preuss. *Brit. J. Sci. Instr. 31*, 1347(1954).

BB 236 Respirator in Chronic Pulmonary Disease with Spondylitis and Fixation of Thorax. E. Kaplan, J. Detweiler, B. M. Kaplan, and L. A. Baker. *J. Am. Med. Assoc. 156*, 1499–1500 (1954).

BB 237 Role of Radioautographically Detected Bone Growth and Remodelling in Ca-45 Excretion and Redistribution. J. S. Arnold, W. S. S. Jee, and K. D. Johnson. *19th Intern. Physiol. Congr. (Montreal)*(1953).

BB 238 A Self-Calibrating Pipette for Remote Transfer of Colloidal Au-198. L. E. Preuss. *Nucelonics 11, No. 2*, 66(1953).

BB 239 Self-diffusion of Magnesium. P. Shewmon and F. N. Rhines. *J. Metals 6*, 1021–5(1954).

BB 240 Separate Assay of Fe-59 and Fe-59 in Mixed Preparations. W. B. Stewart and H. H. Rossi. *Nucleonics 11, No. 10*, 66(1953).

BB 241 Separation of dl-cis from dl-trans Labeled and Unlabeled Chrysanthemumic Acids on Paper. F. Acree, Jr., and F. H. Babers. *Science 120*, 948–9(1954).

BB 242 Separation and Determination of Ribonucleotides and Related Compounds by Iontophoresis on Filter Paper. W. C. Werkheiser and R. J. Winzler. *J. Biol. Chem. 204*, 971–81(1953).

BB 243 A Simple Laboratory Setup for Rapid Measurement of β-Ray Dosages Above 1 rep/sec. J. S. Krohmer and W. A. McCarthy. *Science 113*, 360(1951).

BB 244 Simple Pipetter. S. L. Hood. *Anal. Chem. 24*, 2020(1952).

BB 245 Simple Robot Drive for Craig Countercurrent Distribution Apparatus. F. C. Hickey. *Anal. Chem. 24*, 1993–5(1952).

BB 246 Simple Wet-Combustion Method Suitable for Routine Carbon 14 Analysis. N. Barker, H. Feinberg and R. Hill. *Anal. Chem. 26*, 1503 (1954).

BB 247 A Simplified Method for Determination of Lipide–C–14 in Liver. H. Baruch and I. L. Chaikoff. *Proc. Soc. Exptl. Biol. Med. 86*, 97–9(1954).

BB 248 A Simplified Method of Determining Radioisotopes in Tissues. D. L. Tabern and T. N. Lahr. *Science 119*, 739(1954).

BB 249 A Simplified Technique for Blood Volume Determinations Using I 131 HSA. T. Fields, E. Kaplan, and M. Terril. *J. Lab. Clin. Med. 43*, 332–4(1954).

BB 250 Simultaneous Use of I–131 Albumin and Cr 51-Labeled Red Cells in Blood Volume Studies in the Goat. A. W. Klement, Jr., D. E. Ayer and D. R. McIntyre. *Proc. Soc. Exptl. Biol. Med. 87*, 81(1954).

BB 251 Studies on the Reactions of the Krebs Citric Acid Cycle in Tumor, with Homogenates, Slices, and *In Vivo* Technics. V. R. Potter. *Cancer Research 11*, 565–70(1951).

BB 252 Studies of Rosin Sizing by Means of Autoradiography and Electron Microscopy. C. W. Hock. *Proc. Tech. Assoc. Pulp Paper Ind. 37*, 427–30(1954).

BB 253 Surface Detail Autoradiography. L. E. Preuss. *Nucleonics 12, No. 8*, 30 2(1954).

BB 254 Synthesis and Chromatographic Separation of Isotopically Labeled DL threonine and DL-allothreonine. A. T. Shulgin, O. G. Lien, E. M. Gal, and D. M. Greenberg. *J. Am. Chem. Soc. 74*, 2427–9(1952).

BB 255 A Syringe Shield Used in Injecting Radioactive Gold. P. Getzoff, J. Hidalgo, and J. Meyer. *J. Am. Med. Assoc. 152*, 1431–2(1953).

BB 256 A Technique for Evaluating the Effectiveness of Localization of Radioactive Coloidal Gold 198 after Direct Injection into Tumors. J. U. Hidalgo, E. Burns, and R. T. Neiset. *Am. J. Roentgenol. Radium Therapy 62*, 658–60(1954).

BB 257 A Test for Red Cell Production. R. L. Huff, C. A. Tobias, and J. H. Lawrence. *Acta Haematol. 7, No. 3*, 129–43(1952).

BB 258 A Test of Tritium as a Labeling Device in a Biological Study. W. G. Verly, J. R. Rachele, V. du Vigneaud, M. L. Eidenoff, and J. E. Knoll. *J. Am. Chem. Soc. 74*, 5941–3(1952).

BB 259 Use of Anionic Exchange Resin for the Determination of Protein Bound I–131 in Human Plasma. W. A. Reilly and K. G. Scott. *Metabolism 3*, 506–9(1954).

BB 260 Use of Chelating Agent for Accelerating Excretion of Radio-iron. H. Foreman, R. L. Huff, J. Oda, and J. Garcia. *Proc. Soc. Exptl. Biol. Med. 79*, 520–4(1952).

BB 261 The Use of Ion-Exchange Columns in Mineral Analysis for Age Determination. L. T. Aldrich, J. B. Doak, and G. L. Davis. *Am. J. Sci. 251*, 377–87(1953).

BB 262 Use of Radioactive Iodine in Mircodetermination of Protein-Bound Blood Iodine. F. Nesh and W. C. Peacock. *Anal. Chem. 22*, 1573 (1950).

BB 263 The Use of the Radioautographic Technique in Pathology. P. J. Fitzgerald. *Bull. N. Y. Acad. Med. 28*, 680–3(1952).

BB 264 Use of Silicones in Preparation of Samples for Radioactivity Measurement. W. J. Wingo,

J. H. Gast, and F. L. Aldrich. *Science 115*, 714(1952).

BB 265 Use of Sintered Glass Disc in the Preparation of Radioactive Precipitates. J. J. Pinatian and J. M. Cross. *Anal. Chem. 23*, 1056(1951).

BB 266 Variations in Strontium Isotope Abundances in Minerals. Part I. Mass Spectrometric Analysis of Mineral Sources of Strontium. L. T. Aldrich, L. F. Herzog, J. B. Doak, and G. L. Davis. *Trans. Am. Geophys. Union 34*, 457 60(1953).

BB 267 Apparatus for Automatically Scanning Two-Dimensional Paper Chromatograms for Radioactivity. W. J. Wingo. *Anal. Chem. 26*, 1527(1954).

BB 268 Clinical and Laboratory Experience with Cation Exchange Resins. F. Hine and C. J. Hlad, Jr. *Trans. Am. Clin. and Climatological Assoc. 63*(1951).

BB 269 A Device for the Decontamination of Bottles Which Have Held I-131 Containing Urine. W. J. Wingo. *Texas Repts. Biol. Med. 10*, 782-9(1952).

BB 270 Effect of Ultraviolet Light on Steroids During Paper Chromatography. H. H. Wotiz, K. Savard, P. Marcus, and H. M. Lemon. *Abstr. Natl. Meeting Am. Chem. Soc.*, 6-11(1953).

BB 271 Fractionnement des hématies selon leur âge. Centrifugation d'hématies marquées par le fe radioactif. J. C. Dreyfus, G. Schapria, et J. Kruh. *Compt. rend. soc. biol. 144*, 792(1950).

BB 272 Methods for Intracavitary and Interstitial Administration of Radioactive Colloidal Gold. J. E. Stapleton and W. J. Wingo. *Nucleonics 11, No. 3*, 60-2(1953).

BB 273 Methods of Isolating Corticosteroids from Blood. H. Levy and S. Kushinsky. *Recent Progr. in Hormones Research 9*, 357(1954).

BB 274 Recherches sur la biochimie de l'hémoglobine à l'aide de fer radioactif. III—Fractionnement des hémoglobines de lapin adulte par chromatographie sur papier. J. Kruh, J. C. Dreyfus, et G. Schapira. *Bull. soc. chim. biol. 34*, 773(1952).

BB 275 Recherches sur la biochimie de l'hémoglobine à l'aide de fer radioactif. IV—Fractionnement des hémoglobines de lapin adulte par chromatographie sur alumine. Comparaison avec les résultats obtenus par d'autres techniques. J. Kruh. *Bull. soc. chim. biol. 34*, 778(1952).

BB 276 Radioisotopes in Biology and Agriculture: Principles and Practices. C. L. Comar. McGraw-Hill Book Co., Inc., N. Y., N. Y.

BB 277 An Apparatus for the Wet Combustion of Organic Compound for C-14 Assay. B. Borgstrom. *Acta Chem. Scand.*, 1187(1951).

BB 278 Autoradiographic Visualization of Ca-45 Intake by Normal and Pathological Cartilage *in Vitro*. L. F. Belanger. *Proc. Soc. Exptl. Biol. Med. 88*, 150-2(1955).

BB 279 On the Behaviour of the "Sodium Pump" in Frog Skin at Various Concentrations of Na ions in the Solution on the Epithelial Side. H. Linderholm. *Acta Physiol. Scand. 31*, 36-61(1954).

BB 280 A Beta-Ray Microscope. W. Kerr and H. J. Gomberg. *Science 119, No. 3080*, 51-5(1954).

BB 281 A Comparison of Intracardiac and Intravenous Injections for the Measurement of Cardiac Output by the Dilution Technic. H. C. Lawson, O. W. Shadle, E. S. Coleman, and D. E. Holtgrave. *Circulation Research 2*, 251-5(1954).

BB 282 Decontaminable Surfaces for Millicurie-Level Laboratories. S. E. Eaton and R. J. Bowen. *Nucleonics 8, No. 5*, 27-37(1951).

BB 283 Determination of the Gamma Isomer Content of Benzene Hexachloride by Chlorine-36 Isotope Dilution Method. J. T. Craig, P. F. Tryon and W. G. Brown. *Anal. Chem. 25*, 1661-63(1953).

BB 284 Determination of Penicillin G Using C-13 Isotope as a Tracer. J. T. Craig, J. B. Tindall, and M. Senkus. *Anal. Chem. 23*, 332-33(1951).

BB 285 Determination of Penicillin C by Isotope Dilution Using C-14 Isotope as a Tracer. J. T. Craig. *Master's Thesis, Indiana State Teachers College, Terre Haute, Ind.*, June(1953).

BB 286 Depth-Dose Measurements of Beta-Ray Isotopes with Photographic Film. E. Tochilin and R. Golden. *Nucleonics 11, No. 8*, 26-8(1953).

BB 287 The Determination of the Total and Specific Activity of Calcified Tissue in Tracer Experiments Using 32-P. Advantages of the Extraction of the Inorganic Phosphate with Help of a 10% Trichloracetic Acid Solution. V. Claassen and B. S. J. Wostmann. *Biochim. et Biophys. Acta 10*, 632-33(1953).

BB 288 The Effect of Added Carrier on the Distribution and Excretion of Soluble Be. J. K. Scott, W. F. Neuman, and R. Allen. *J. Biol. Chem. 182*, 291-8(1950).

BB 289 The Electrical Potential Across Isolated Frog Skins and Its Dependence on the Permeability of the Skins to Chloride Ions. H. Linderholm. *Acta Physiol. Scand. 28*, 211-16(1953).

BB 290 An Improved Method for Degradation of Tyrosine and Phenols in General in Connection with Isotope Studies. L. Reio and G. Ehrensvard. *Arkiv Kemi 5*, 301-11(1953).

BB 291 Investigation on Lipid Separation Methods. Separation of Chlosterol Esters, Glycerides and Free Fatty Acids. B. Borgstrom. *Acta Physiol. Scand.*, 111(1952).

BB 292 Investigation on Lipid Separation Methods. Separation of Phospholipids from Neutral Fat and Fatty Acids. B. Borgstrom. *Acta Physiol. Scand., No. 25*, 101(1952).

BB 293 Isolation of C 14 Labeled Coenzyme I and II by Paper Chromatography. I Boone and K. T. Woodward. *Science 120, No. 3112,* Aug.(1954).

BB 294 Labeling and Tracing Rat Blood Platelets with Chromium–51. J. S. Robertson and W. L. Milne, et al. *Proc. 2nd. Radiosotope Conf.* 205–9(1954).

BB 295 Preparation, Extraction and Determination of Cholesterol Labeled with Deuterium or Carbon 14. L. Bugnard, F. Chevallier and J. Coursaget. *J. Physiol. (Paris) 45,* 463 9(1953).

BB 296 Le Probleme de la Separation des Elements de Transition sur un Echangeur Cationique, et le Phenomene de Queue, au Cours de L'Elution. I. Kadomtzeff. *J. chim. phys. 51, No. 4*(1954).

BB 297 Production of Acetate by Higher Plants, as Determined by the Isotope Dilution Technique. F. C. G. Hoskin, G. Krotkov, R. Y. Moir, and G. B. Reed. *Am. J. Botany 40,* 502(1953).

BB 298 A Remote Valve for Dispensing Colloidal 198–Au Solutions. L. E. Preuss. *J. Sci. Instr. 31,* 29(1954).

BB 299 Self-Calibrating Pipette for Remote Colloidal Au–198 Transfers. L. E. Preuss. *Nucleonics 11, No. 2,* 66(1953).

BB 300 Separation of Beryllium from Biological Material. T. Y. Toribara and P. S. Chen. *Anal. Chem. 24,* 539(1952).

BB 301 The Shay Rat as an Assay Animal for Anti-ulcer Factors: III. Paper Chromatography and Other Chemical Studies of Shay Rat Anti-ulcer Factors. H. L. Segal, L. L. Miller, R. P. Plosscowe, and L. M. Harountunian. *Gastroenterology 21,* 551 55(1952).

BB 302 A Simple Agitation Device for Highly Radioactive Volumetric Flasks. L. E. Preuss. *J. Sci. Instr. 30,* 252 3(1953).

BB 303 Sources of Error in the Determination of Plasma Volume Using I 131 Labelled Human Serum Albumin and Liquid Gamma Counting. M. G. Crane and R. Adams. *Am. J. Med. 17,* 118(1954).

BB 304 A Study of the Propagation Mode for Metallic Vapors in Shadow-Casting by Vacuum Evaporation of Au 198 and Cr 51. L. E. Preuss. *J. Appl. Phys. 24,* 1401 9(1953).

BB 305 Trace Element Analysis by Isotope Dilution. M. G. Ingraham. *J. Phys. Chem.,* Jan(1954).

BB 306 Use of a Gamma-Ray Pinhole Camera for *in Vivo* Studies. H. O. Anger. *Nature 170,* 200(1952).

BB 307 A New Method of Estimation of Radioactive Iodine in Different Fractions of Hydrolysed Thyroid. K. P. Chakraboarty. *Naturwissenschaften 41, No. 7,* 163(1954).

BB 308 A Technique for the Treatment of Carcinoma of the Cervix Uteri with Cobalt–60. A. Bose, K. L. Bhattacharjee and P. De. *Indian J. Radiol. 8, No. 4,* 200(1954).

Applied Industrial Use

CC 1 Absorption of Sulfur Dioxide in Cylinder Zone Oil Films in a Diesel Engine. F. A. M. Buck. *Ind. Eng. Chem. 46,* 1318(1954).

CC 2 Activation Analysis Determines Sodium Content of Aluminum Alloys. R. C. Plumb and R. S. Silverman. *Nucleonics 12, No. 12,* 29–32 (1954).

CC 3 Activity of Liquid Silver-Silicon Alloys. H. M. Schadel, G. Derge, and C. E. Birchenall. *Trans. Am. Inst. Met. Eng. 188,* 1282(1950).

CC 4 Application of the Beta Gauge to Calendering Processes. G. B. Foster. *Proc. Am. Inst. Elec. Eng. Conf. on Rubber & Plastics,* April (1952).

CC 5 Application of Cesium 137 to Industrial Radiography. J. W. Dutli and G. M. Taylor. *Non-Destructive Testing 12, No. 2,* 35–8(1954).

CC 6 Applications of Isotopes in the Petroleum Industry. C. D. Wagner. *Can. Oil and Gas Ind.,* 47–50(1954).

CC 7 The Application of Isotopes to the Examination of Industrial Materials. K. Fearnside. *Proc. Isotope Tech. Conf. 2,* Oxford(1951).

CC 8 Application of Isotopic Sources to Food and Drug Sterilization. L. E. Crean, P. J. Isaacs, G. J. Weiss, and F. Fahnoe. *Nucleonics 11, No. 12,* 32–7(1953).

CC 9 The Application of the Radioactive Tracer Technique to Metal Cleaning. J. C. Harris, R. E. Kamp, and W. H. Yanko. *ASTM Bull. 158,* May(1949).

CC 10 Application of Radiometric Procedures to the Evaluation of Surface Cracking of Elastomers. J. L. Kalinsky and T. A. Werkenthin. *Rubber Age 75,* 375–84(1954).

CC 11 The Appraisal of Detergency Through Radioactive Isotopes. C. P. McCord and R. L. Robertson. *Ind. Met. and Surg. 19*(1950).

CC 12 Atomic Camera. R. M. Deutsch. *Steelways,* May, 27(1951).

CC 13 Backscatter Thickness Gages. K. Fearnside, E. W. Jones and E. E. N. Shaw. *Applied Atomic Energy,* 140–2(1951).

CC 14 Bacterial Cleanability of Various Types of Eating Surfaces. G. M. Ridenour and E. M. Armbruster. *Am. J. Public Health 42,* 138–49 (1953).

CC 15 The Beta Radiation Gauge, a Revolutionary Method of Continuous Process Control. G. B. Foster. *Proc. Soc. Plastics Industries,* Dec.(1951).

CC 16 Beta Radiation Measurement Methods. G. B. Foster. *Radio-Television News,* April(1953).

CC 17 The Best Performance from Beta Gages. L. R. Zumwalt. *Nucleonics 12, No. 1,* 55–8 (1954).

CC 18 Beta Rays Slash H–2 Test Time. No Author. *Chem. Eng. 61,* 278–83(1954).

CC 19 Better Case Depth Measurements with C–14. A. D. Kirshenbaum and H. C. Boynton. *Iron Age 171,* 138–140(1953).

CC 20 The Catalytic Activity of Barium and Calcium Hydrides. I. An Exploratory Study. L. Wright and S. Weller. *J. Am. Chem. Soc. 76,* 5305(1954).

CC 21 The Catalytic Activity of Barium and Calcium Hydrides. II. The Nature of the Catalyst. S. Weller and L. Wright. *J. Am. Chem. Soc. 76,* 5302(1954).

CC 22 The Catalytic Activity of Barium and Calcium Hydrides. III. Hydrogen Exchange with Some C–4 Hydrocarbons. L. Wright and S. Weller. *J. Am. Chem. Soc. 76,* 5948(1954).

CC 23 Catalytic Activity and Electrical Conductivity of Chromic Oxide Catalysts. S. E. Voltz and S. Weller. *J. Am. Chem. Soc. 75,* 5227 (1953).

CC 24 Cesium Radio Isotope, New Tool for Parts Inspection. J. M. Thompson, Jr. and P. A. Glenn. *Iron Age,* Sept.(1953).

CC 25 Cobalt 60 for Testing Castings. Editorial Staff. *Ry. Age, 133,* Sept. 76–7(1952).

CC 26 Color Centers in Glass. R. K. Sheline, D. E. Sharp, and W. J. Arner. *J. Chem. Phys. 19,* 1422–3(1951).

CC 27 Copper as an Acceptor Element in Germanium. C. S. Fuller and J. D. Struthers. *Phys. Rev. 8,* 526–7(1952).

CC 28 Creep of Copper under Deuteron Bombardment. W. F. Witzig. *J. Appl. Phys. 23,* 1263(1952).

CC 29 Cutting Costs Through Use of Radioisotopes. E. D. Cook. *2nd Ann. Conf.*(1953). *Natl. Ind. Conf. Board, Inc.*

CC 30 Cutting Costs Through Use of Radioisotopes. H. S. Myers. *2nd Ann. Conf.*(1953). *Natl. Ind. Conf. Board, Inc.*

CC 31 Design Considerations of Radioisotope Gauging Devices in the Steel Industry. G. B. Foster. *Proc. Galvanizers Committee, Am. Zinc. Inst.* April(1954).

CC 32 Design Fission Irradiator to Break Trichinosis Cycle. H. J. Gomberg, S. E. Gould, J. V. Nehemias and L. E. Brownell. *Food Eng.,* 78–80, 154, 156(1954).

CC 33 Detection of Scrapers in Pipe Lines. D. B. Scott. *Nucleonics 9, No. 3,* 68(1951).

CC 34 Detergency Measurement. E. H. Armbruster and G. M. Ridenour. *Soap Sanit. Chemicals,* June(1952).

CC 35 Determination of Oxygen in Metals and Metal Oxides by the Isotopic Method. A. D. Kirchenbaum and A. V. Grosse. *Trans. Am. Soc. Metals 45,* 758(1953).

CC 36 Determination of Oxygen in Titanium and Zirconium by the Isotopic Method. A. D. Kirshenbaum, R. A. Mossman, and A. V. Grosse. *Trans. Am. Soc. Metals 46,* 525(1954).

CC 37 Determination of Sulfate in Chromium Baths Using Radiobarium. S. L. Eisler. *Metal Finishing 50,* 71–4(1952).

CC 38 Determination of Sulfur by Elementary Isotopic Analysis. A. D. Kirshenbaum and A. V. Grosse. *Anal. Chem. 22,* 613(1950).

CC 39 Determination of the Self-Diffusion Coefficients of Gold by Autoradiography. H. C. Gatos and A. D. Kurtz. *J. Metals 6,* 616–9(1954).

CC 40 Determination of Small Amounts of Zinc in Aluminum Alloys. K. Theurer and T. R. Sweet. *Anal. Chem. 25,* 119–21(1953).

CC 41 Diffusion of Antimony in Silver. E. Sonder, L. Slifkin and C. T. Tomizuka. *Phys. Rev. 93,* 970–2(1954).

CC 42 Diffusion of Co–60 in Some Ni–Al Alloys Containing Excess Vacancies. A. E. Berkowitz, F. E. Jaumot, Jr., and F. C. Nix. *Phys. Rev. 94,* 1407(1954).

CC 43 Diffusion of Gold into Copper. A. B. Martin, R. D. Johnson, and F. Asaro. *J. Appl. Phys. 25,* 364–9(1954).

CC 44 Diffusion of Indium into Gallium Near the Melting Point. R. E. Eckert and H. G. Drickamer. *J. Chem. Phys. 20,* 532(1952).

CC 45 Diffusivity and Solubility of Copper in Germanium. C. S. Fuller, J. D. Struthers, J. A. Ditzenberger, and K. B. Wolfstirn. *Phys. Rev. 93,* 1182–9(1954).

CC 46 Diffusion of Ions in Some Simple Glasses. J. R. Johnson, R. H. Bristow, and H. H. Blau. *J. Am. Ceram. Soc. 34,* 165–72(1951).

CC 47 Diffusion of Tungsten in Nickel. H. W. Allison and G. E. Moore. *Phys. Rev. 96,* 840(1954).

CC 48 Direct Determination of Oxygen in Rubber. A. D. Kirshenbaum and A. G. Streng. *Anal. Chem. 25,* 638(1953).

CC 49 Distribution of the Mass Transported from a Collector into a Germanium Crystal by the Forming Process. M. W. Aarons, M. Pobereskin, J. E. Gates, and E. B. Dale. *Phys. Rev. 95,* 1345)1954).

CC 50 Distribution of Solute in Crystals Grown from the Melt Part II—Experimental. J. A. Burton, E. D. Kolb, W. P. Slichter, and J. D. Struthers. *J. Chem. Phys. 21,* 1991–6(1953).

CC 51 Diffusion of Co–60 in Some Ni–Al Alloys Containing Excess Vacancies. A. E. Berkowitz, F. E. Jaumot, Jr., and F. C. Nix. *Phys. Rev. 95,* 1185(1954).

CC 52 Does Irradiation Induce Radioactivity in Food? W. W. Meinke. *Nucleonics 12, No. 10,* 37–9(1954).

CC 53 Economics of Pork Irradiation. H. J. Gomberg, S. E. Gould, J. V. Nehemias and L. E. Brownell. *Nucleonics 12, No. 9,* 66–70(1954).

CC 54 The Effect on Diffusion Measurements of Some Beta-Ray Absorption Phenomena. A. E. Berkowitz. *Phys. Rev. 94*, 1407(1954).

CC 55 Effect of Co–60 Gamma Radiation on Microorganisms. C. A. Lawrence, J. E. Brownell, and J. T. Graikoski. *Nucleonics 11, No. 1*, 9(1953).

CC 56 Effect of Water on the Catalytic Activity of Chromic Oxide. S. E. Voltz and S. Weller. *J. Am. Chem. Soc. 75*, 5231(1953).

CC 57 Electrostatic Neutralizer Discharge and Safety Characteristics. R. Beach. *Elec. Eng. 71*, April(1952).

CC 58 Evaluation of Food Sterilization Efficiency. S. A. Goldblith and B. E. Proctor. *Nucleonics 10, No. 9*, 28(1952).

CC 59 Equilibrium Thermochemistry of Solid and Liquid Alloys of Germanium and Silicon II—The Retrograde Solid Solubilities of Sb in Ge, Cu in Ge and Cu in Si. C. D. Thurmond and J. D. Struthers. *J. Phys. Chem. 57*, 831–4 (1953).

CC 60 Exchange of Iron between Liquid Metal and Iron Silicate Slag. G. Derge and C. E. Birchenall. *Trans. Am. Inst. Mining Met. Engrs. 197*, 1648(1953).

CC 61 Experimental Evidence for the Vacancy Mechanism in Diffusion in Metals and Alloys. F. C. Nix and F. E. Jaumot, Jr. *Phys. Rev. 83*, 1275(1951).

CC 62 An Experimental Study of Ink Film Thickness. D. N. Adams. *Sixth Ann. Rept. Tech. Assoc. Graphic Arts*, 194–206(1954).

CC 63 Extension of Isotopic Method for Determining Oxygen in Metals to Copper Containing 0.01–0.1 Weight % of Copper. A. D. Kirshenbaum and A. V. Grosse. *Anal. Chem. 26*, 1955(1954).

CC 64 Field Measurements of Soil Moisture and Density with Radioactive Materials. R. Horonjeff and I. Goldberg. *Proc. Highway Research Board, Natl. Research Council 32*, 500–7(1953).

CC 65 Film Thickness Measurements for Infrared Spectrophotometry. J. H. Peterson and J. R. Downing. *J. Opt. Soc. Amer. 41*, 862(1951).

CC 66 Further Study of Metal Transfer between Sliding Surfaces. J. T. Burwell and C. D. Strang. *Natl. Advisory Comm. Aeronaut.* 1–39(1951).

CC 67 Gamma-Activation of Synthesis–Polymerization of Ethylene. J. G. Lewis, J. J. Martin and L. C. Anderson. *Chem. Eng. Progr. 50*, 249–55(1954).

CC 68 Gamma Radiography. W. N. Blacklock. *Proc. Isotope Tech. Conf. 2*, Oxford(1951).

CC 69 Gamma-Ray-Initiated Polymerization of Styrene and Methyl Methacrylate. D. S. Ballantine, P. Colombo, A. Glines, and B. Manowitz. *Chem. Eng. Progr. Symposium Ser. 50*, 267–70(1954).

CC 70 Growth of Radioisotope Utilization in Industry and Engineering. P. C. Aebersold and C. E. Crompton. *Nuclear Eng. Part 3, Chem. Eng. Progr. Symposium Ser. 50, No. 13*, 105(1954). *Modern Lithography*, Oct.(1954).

CC 71 How Radiation Affects Long-Chain Polymers. A. Charlesby. *Nucleonics 12, No. 6*, 18(1954).

CC 72 How to Prepare and Use Radioactive Soils. J. M. Lambert, J. H. Roecker, J. J. Pescatore, G. Segura, Jr., and S. Stigman. *Nucleonics 12, No. 2*, 40–2(1954).

CC 73 Improved Storage Quality of Potato Tubers After Exposure to Cobalt 60 Gammas. A. H. Sparrow and E. Christensen. *Nucleonics 12, No. 8*, 16(1954).

CC 74 Improved Multiphase Flow Studies Employing Radioactive Tracers. V. A. Josendal, B. B. Sandiford, and J. W. Wilson. *Trans. Am. Inst. Mining Met. Engrs. 195*, 65–76(1952).

CC 75 Improved Radioactive Tracer Carrier for Metal Cleaning Studies. J. C. Harris, R. E. Camp, and W. H. Yanko. *ASTM Bull.*, 308–9(1950).

CC 76 Improving Product Quality with Use of Radioisotopes. J. C. Geniesse. *2nd. Ann. Conf.* (1953). *Natl. Ind. Conf. Board, Inc.*

CC 77 Improving Product Quality with Use of Radioisotopes. E. W. Bratton. *2nd. Ann. Conf.* (1953). *Natl. Ind. Conf. Board, Inc.*

CC 78 The Industrial Future of Radiation Chemistry. B. Manowitz. *Nucleonics 11, No. 10*, 18–20 (1954).

CC 79 Industrial Applications. C. Crompton. *Nucleonics 12, No. 10*, 72(1954).

CC 80 Industrial Use of Radioactive Isotopes. D. M. McCutcheon. *Metal Progr. 64*, 105–6 (1953).

CC 81 Iridium 192 Used to Detect Blisters in Steel Tank. *Chem. Eng. News 31*, 2992(1953).

CC 82 Isotope Inspection Controls Quality of Product. E. W. Bratton. *Tool Engr., July*, 78(1954).

CC 83 Instrumentation Radioactivity Plays an Important Role in Many Types of Industrial Instrumentation. B. W. Thomas. *Ind. Eng. Chem. 45*, 89A–91A(1953).

CC 84 Inside a Coke Drum. C. E. Werstler, R. J. Niederstadt, and H. A. Lutz. *Oil Gas J., August*(1954).

CC 85 Isotopes and Interfaces. J. Kohl and R. L. Newacheck. *Petroleum Engr.*, March(1954).

CC 86 Investigations Relating to the Possible Use of Atomic Fission Products for Food Sterilization. J. H. Hayner and B. E. Proctor. *Food Technol. 7*, 6–10(1953).

CC 87 An Investigation of Xeroradiography of Uranium with High Energy Sources. R. E. Cofield. *Non-Destructive Testing 12, No. 2*, 39–43(1954).

CC 88 Investigation of Wear of Metals by Radioactive Methods. M. Kerridge. *Proc. of the Isotope Tech. Conf. 2*, Oxford(1951).

CC 89 Iridium 192 for Gamma Ray Radiography. No Author. *Non-Destructive Testing J.*, Summer(1951).

CC 90 Leak Location by Radioactive Gases in Buried Pipes. A. Gemant, E. Hines, and E. L. Alexanderson. *J. Appl. Phys. 22*, 460–4(1951).

CC 91 Lithographic Press Ink Distribution Studies by Radiotracer Techniques. J. R. Bradford. *Sixth Ann. Rept. Tech. Assoc. Graphic Arts*, 91–4(1954).

CC 92 The Location of Sodium by Nuclear Activation in Glass-Corroded Tank Block Refractories. D. E. Emhiser, J. V. Fitzgerald, R. E. Jones, and K. M. Laing. *J. Am. Ceram. Soc. 34*, 380(1951).

CC 93 The Luminescence of Organic Substances. E. J. Bowen. *Nucleonics 10, No. 7*, 14(1952).

CC 94 Machining Technique for Radioactive Materials. M. Simnad and P. Shewmon. *Nucleonics 12, No. 7*, 69(1954).

CC 95 Measuring Catalyst Flow Rates in Cat Crackers. D. E. Hull and R. R. Bowles. *Oil & Gas J. 51*, 295(1953).

CC 96 Measurement of Wear of Cutting Tools by Tracer Techniques. M. E. Marchant. *Atomic Energy in Industry, Special Conf.*(1952). *Natl. Ind. Conf. Board, Inc.*

CC 97 The Measurement of Soil Moisture and Density by Neutron and Gamma-Ray Scattering. D. J. Belcher, T. R. Cuykendall, and H. S. Sack. *Tech. Development Rept. No. 127*, 20(1950). *U. S. Civil Aeronautics Administration, Tech. Development and Evaluation Center, Indianapolis, Ind.*

CC 98 Measuring the Time of Fall of a Labeled Plummet. A. J. Rogers, J. W. Heyd, W. L. Hood, and J. A. Williamson. *Nucleonics 12, No. 6*, 62(1954).

CC 99 The Mechanism of Exchange between Radioactive Ions in Solution and Metal Surfaces. M. T. Simnad and R. C. Ruder. *J. Electrochem. Soc. 98*, 301–6(1951).

CC 100 On the Mechanism and Kinetics of the Scaling of Iron. M. H. Davies, M. Simnad, and C. E. Birchenall. *Trans. Am. Inst. Mining Met. Engrs. 919*, 889(1951).

CC 101 The Mechanism of Passivity in Chromate Solutions. M. Simnad. *Rev. Met. 48*, 1(1951).

CC 102 Le Mechanism de L'echange Entre les Ions Chrome en Solution et les Surfaces Metalliques. M. T. Simnad. *Rev. Met. 48, No. 7*-(1951).

CC 103 A Metal Cleaning Test Using Radioactive Stearic Acid as Soil. J. W. Hensley, H. A. Skinner, and H. R. Sutter. *Special Technical Publications No. 115, Am. Soc. Testing Materials*(1952).

CC 104 A Method for Increasing the Electrical Resistivity of Insulators Under Ionizing Radiation. J. H. Coleman and D. Bohm. *J. Appl. Phys. 24*, 497–8(1953).

CC 105 Mobility of Impurity Ions in Germanium and Silicon. J. C. Severiens and C. S. Fuller. *Phys. Rev. 92*, 1322–3(1953).

CC 106 Neutron Logging of Drill Holes: The Neutron-Neutron Method. C. W. Tittle, H. Faul, and C. Goodman. *Geophysics 16*, 626–58(1951).

CC 107 Neutron Well Logging. R. E. Fearon. *Nucleonics 4, No. 6*, 30(1949).

CC 108 New Logging Technique Measures Density, Porosity. A. H. Flagg. *World Oil-Canadian Issue 139*, 142, 144, 156(1954).

CC 109 A Note on a Simple Technique for Obtaining Absorption Coefficients of Metals and Alloys for Complex Radioactive Spectra. F. E. Jaumot, Jr., and F. C. Nix. *J. Appl. Phys. 22*, 1294(1951).

CC 110 The Permeability of Different Elastomers to CO_2 Using Carbon 14. A. D. Kirshenbaum, A. G. Streng, and W. B. Dunlap, Jr. *Rubber Age 74*, 903–8(1954).

CC 111 The Physics of the Mechanical Removal of Ice from Aircraft. D. L. Loughborough. *Aeronaut. Eng. Rev. 11*, 29–34(1952).

CC 112 The Possibilities of Using Separated Fission-Products for Production of Electrical Power. C. B. Amphlett. *Atomic Research Establishment Report AEREC/R 1388*, March(1954).

CC 113 Preparation of a Tritiated Self-Luminescent Material. E. C. Farmer, I. A. Bernstein, W. Bennett, and M. Fields. *Nucleonics 11, No. 2*, 64(1953).

CC 114 Prevention of Side Effects in Sterilization of Foods and Drugs by Ionizing Radiations. B. E. Proctor and S. A. Goldblith. *Nucleonics 10, No. 4*, 64(1952).

CC 115 The Present Status of Nondestructive Test Methods for Inspection of Welded Joints in Ship Structures. J. Krieger, S. A. Wenk, and R. C. McMaster. *Non-Destructive Testing 12*, 27–33(1954).

CC 116 Problem to Check Soundness of 2,000 Compressor Blades. Solution: Automatic Radiography with Co–60. J. L. Hile. *Materials and Methods 40*, 108–9(1954).

CC 117 Progeny in Comminution. A. M. Gaudin, H. R. Spedder, and D. F. Kaufman. *Mining Eng. 9*, 69–70(1951).

CC 118 Practical Applications of Radioisotopes in Protective Coatings. H. Gottlieb. *Paint, Oil & Chem. Rev. Oct. 8*(1953).

CC 119 Radiation Chemistry and Sterilization of Biological Materials by Ionizing Radiations. J. P. O'Meara. *Nucleonics 10, No. 2*, 19(1952).

CC 120 Radiation from Fission Materials for Food Preservation. L. E. Brownell. *Food Manuf. 28*, 383–86(1953).

CC 121 Radiation Sterilization: II. The Effect of High Energy Gamma Radiation from Kilocurie Radioactive Sources on Steroid Hormones. B. Manowitz, R. V. Horrigan, J. Weiss, W.

Tarpley, and M. Yudis. *Ind. Eng. Chem. 46*, 1458–64(1954).

CC 122 Radioactive Control of Products Pipe Line Operation. D. E. Hull and B. A. Fries. *Proc. Am. Petroleum Inst. 33*, 90(1953).

CC 123 Radioactive Cutting Tools for Rapid Tool-Life Testing. M. E. Merchant, H. Ernst, and E. J. Krabacher. *Trans Am. Soc. Mech. Engrs.*, May, 549–59(1953).

CC 124 Radioactive Gages Signal Water Content of Snow Packs as Aid in Runoff Control. No Author. *Eng. News-Record 151*, 24–5(1953).

CC 125 Radioactive Isotope Dilution Method for Determining Sulfate Concentration in Chromium Plating Baths. S. L. Eisler. *Plating 39*, 1019–43(1952).

CC 126 Radioactive Isotopes in Timber Preservation Studies. No Author. *Bell Labs. Record 28*, June(1950).

CC 127 Radioactive Snow Gage with Telemetering System. J. A. Doremus. *Motorola, Inc. 6*, 3–11(1950).

CC 128 Radioactive Static Eliminators for the Textile Industry. P. S. H. Henry. *Proc. of the Isotope Tech. Conf. 2*, Oxford(1951).

CC 129 Radioactive Tires Used in Test. W. L. Davidson and W. L. Wittig. *Rubber Age 11*, 28–34(1951).

CC 130 A Radioactive Tracer Study of Silver Condensation on Substrates. L. Yang, M. Simnad, and G. M. Pound. *Acta Metallurgica 21*, 470(1954).

CC 131 Radioactive Tracers to Mark Interfaces and Measure Intermixing in Pipe Lines. D. E. Hull and J. W. Kent. *Ind. Eng. Cham. 44*, 2745(1952).

CC 132 Radiocobalt Level Gage Measures Contents of Closed Systems. S. L. Eisler. *Chem. Eng. 59*, 172–3(1952).

CC 133 Radioactive Tracers in Flow Tests. R. S. Archibald. *J. Boston Soc. Civil Engrs. 37*, 49–116(1950).

CC 134 Radioactive Tracers for Rapid Measurement of Cutting Tool Life. M. E. Merchant and E. J. Krabacher. *J. Appl. Phys. 22*, 1507–8(1951).

CC 135 Radioactive Tracers Reveal Friction and Wear of Metals. J. T. Burwell and C. O. Strang. *Metal Progr.*, Sept., 69–74(1951).

CC 136 Radioactive Tracers Speed Tool Life Study. E. J. Tangerman. *Am. Machinist 95*, 100–1(1951).

CC 137 Radioactive Tracers for Tagging Special Steel Melts. D. L. Douglas. *Nucleonics 12, No. 1*, 16–8(1954).

CC 138 Radioactive Tracers Track Metal Cleaner Effectiveness. J. W. Hensley. *Iron Age 170*, 151–4(1952).

CC 139 Radioactivity in Pipe Line Flow Studies. D. E. Hull, J. W. Kent, and R. D. Lee. *World Oil 129*, May (1949).

CC 140 Radiography with Cobalt 60. A. Morrison *Nucleonics 5, No. 6*, 19(1949).

CC 141 A Radioisotope Study of Cobalt in Porcelain Enamel. W. N. Harrison, J. C. Richmond, J. W. Pitts, and S. G. Benner. *J. Am. Ceram. Soc. 35*, 113–20(1952).

CC 142 Radioisotope Tracer Successful in Products-Pipe-Line Application. G. Weber. *Oil Gas J.*, Nov., 115–20(1952).

CC 143 Radioisotopes—A New and Important Tool in all Phases of Industry. B. F. Linz. *Oil Gas J. 52, No. 19*, 106, 108, 139(1953).

CC 144 Radioisotopes in Process Instrumentation. J. Kohl. *Chem. Eng. Progr. 48*, 611–6(1952).

CC 145 Radioisotopes in Industrial Control. G. D. Calkins and M. Pobereskin. *Chem. Eng. Progr. Symposium, Ser. 50*(1954).

CC 146 Radioisotopes in the Study of Metal Surface Reactions. M. Simnad. *Monograph on Properties of Metallic Surfaces, British Institute of Metals*(1953)

CC 147 Radioisotopic High-Potential, Low-Current Sources. J. H. Coleman. *Nucleonics 11, No. 12*, 42(1953).

CC 148 Radioisotopes in Paint Technology. G. G. Manov and O. M. Bizzell. *Paint Technol. 17, No. 198*, June(1952).

CC 149 Radioisotopic Tracers in the Pulp and Paper Industry. J. H. Rediske. *Southern Pulp Paper Mfr.*, Jan.(1953).

CC 150 Radiometric Determination of the Efficiency of Water Displacement from Phosphated Surfaces. S. L. Eisler. *Organic Finishing, No. 8*, 19–21(1952).

CC 151 Radiometric Evaluation of the Effectiveness of the Chromic Acid Rinse Treatment for Phosphated Work. S. L. Eisler and J. Doss. *Metal Finishing 50, No. 12*, 54–8(1952).

CC 152 Radiometric Evaluation of the Efficiencies of Various Surfactants in Displacing Water from Steel. J. E. Smallwood and S. L. Eisler. *Soap Sanit. Chemicals 29, No. 8*, 48–51(1953).

CC 153 Radiometric Evaluation of a New Stripping Solution for Phosphate Coatings. S. L. Eisler and J. Doss. *Metal Finishing 51, No. 8*, 58–63(1953).

CC 154 Radiometric Study of the Adsorption Characteristics of a Calcium Sulfonate Rust Inhibitor. V. Hong, S. L. Eisler, D. Bootzin, and A. Harrison. *Corrosion 10*, 343–8(1954).

CC 155 Radiometric Study of the Adsorption Characteristics of Stearic Acid. S. L. Eisler. *Corrosion 9, No. 3*, 91–4(1953).

CC 156 Radiometric Study of the Chromium-Sulfate Complex Formed in Chromium Plating Baths. R. L. Sass and S. L. Eisler. *Plating 41*, 497–501(1954).

CC 157 A Radiometric Study of the Iron Phosphating Process. S. L. Eisler and J. Doss. *Metal Finishing 52, No. 3*, 60–3(1954).

CC 158 Radiometric Study of Phosphating Problems. S. L. Eisler and P. C. Chamberlain. *Metal Finishing 50, No. 6,* 113–6(1952).

CC 159 Radiometric Study of Supplementary Chromate Coatings for Zinc and Cadmium Plating. S. L. Eisler, J. Doss, and M. Henderson. *Plating 41,* 147–54(1954).

CC 160 Radiotracers in the Petroleum Industry. D. E. Hull. *Atomic Energy in Industry, Special Conf.*(1952). *Natl. Ind. Conf. Board, Inc.*

CC 161 Ray-Sterilizing Food Wrappers. L. L. Kempe, J. T. Graikoski, and L. E. Brownell. *Food Eng. 25, No. 11,* 55–6, 174(1953).

CC 162 Reduction of SrO by Methane. G. E. Moore, H. W. Allison, and K. B. Wolfstirn. *J. Chem. Phys. 22,* 726–32)1954).

CC 163 Relative Importance of Various Sources of Defect-Producing Hydrogen Introduced into Steel During the Application of Porcelain Enamels. D. G. Moore, M. A. Mason, and W. N. Harrison. *J. Am. Ceram. Soc. 35,* 33–41(1952).

CC 164 Retention of Chromium by Glass Following Treatment with Cleaning Solution. E. B. Butler and W. H. Johnston. *Science 120,* 543–4(1954).

CC 165 Researchers Use Rays to Determine Soil Moisture and Density in Fields. No Author. *Eng. News-Record 148, No. 13,* 72(1952).

CC 166 The Role of Cyanide Neutralization in the Surface Treatment of Steel. J. H. Peterson, G. M. Nichols and W. F. McDevit. *Metal Finishing 52, No. 10,* 62(1954).

CC 167 Rules for Construction of Unfired Pressure Vessels Sub-Committee of Boiler Code. W. D. Kelley. *Am. Soc. Mech. Engrs. Boiler & Pressure Vessel Code Section VIII,* UW–51, 56–7(1952).

CC 168 Self-Diffusion in Cobalt, F. C. Nix and F. E. Jaumot, Jr. *Phys. Rev. 80,* 119(1950): *82,* 72(1951).

CC 169 Self-Diffusion in Copper. A. Kuper, H. Letaw, Jr., L. Slifkin, E. Sonder, and C. T. Tomizuka. *Phys. Rev. 96,* 1224–5(1954).

CC 170 Self-Diffusion of Iron in Iron Oxides. L. Himmel, R. F. Mehl, and C. E. Birchenall. *J. Metals 5,* 827(1953).

CC 171 Self-Diffusion in Pure Polycrystalline Silver. L. Slifkin, D. Lazarus, and T. Tomizuka. *J. Appl. Phys. 23,* 1032–4(1952).

CC 172 Self-Diffusion in Solid Sodium. I. N. H. Nachtrieb, E. Catalano and J. A. Weil. *J. Chem. Phys. 20,* 1185–8(1952).

CC 173 Soil Moisture Determination by Neutron Scattering. A. H. Knight and T. W. Wright. *Proc. of the Radioisotope Conf. 2,* Oxford(1954).

CC 174 Some Uses of Radioactive Tracers in Glass Technology. S. F. Cox and K. M. Laing. *Glass Ind. 35, No. 4,* 183(1954).

CC 175 Some Unusual Radiographic Problems. M. D. Phillips, M. L. Rhoten and C. Kimmel. *Non-Destructive Testing 12, No. 2,* 17–20(1954).

CC 176 A Study of the Method of Decrease in Surface Activity. R. C. Ruder and C. E. Birchenall. *J. Metals 3, Trans. Am. Inst. Met. Eng. 191,* 142–6(1951).

CC 177 A Study of the Oxidation of Rubber by Means of the Isotopic Method. A. D. Kirshenbaum, A. G. Streng and A. H. Nellen. *Rubber Age,* 625–30(1953).

CC 178 Studies on Radioisotope Removal by Water Treatment Processes. R. Eliassen. *J. Am. Water Works Assoc. 43,* 615–30(1951).

CC 179 Surface Chemistry of Chromic Oxide. S. Weller and S. E. Voltz. *J. Am. Chem. Soc. 76* 4695(1954).

CC 180 Telemetering System for Radio-Active Snow Gage. J. A. Doremus. *Natl. Electronics Conf.,* Chicago, Ill., Sept.(1950).

CC 181 Tetramethylthiuram Disulfide Vulcanization of Extracted Rubber. II. Structure of Radioactive Tetramethylthiuram Disulfide. D. Craig, W. L. Davidson, A. E. Juve, and I. G. Geibr. *J. Polymer Sci. 6,* 1–5(1951).

CC 182 Thickness Gaging by Radiation Absorption Methods. C. W. Clapp and S. Bernstein. *Gen. Elec. Rev.,* Nov.(1950).

CC 183 Tiny Atomic Battery May Some Day Light Homes. No Author. *Science Digest 35, No. 4,* 19(1954).

CC 184 Tracer Methods for Assessing Wear of Wire-Drawing Dies. J. C. E. Button, A. J. Davies and R. Tourret. *Nucleonics 9, No. 5,* 34(1951).

CC 185 Tracer Technique for Studying Gear Wear. V. N. Borsoff, D. L. Cook and J. W. Otvos. *Nucleonics 10, No. 10,* 67–9(1952).

CC 186 Tracers in Metallurgy. J. J. Harwood. *Nucleonics 2, No. 1,* 57(1948).

CC 187 Tracer Method for Sulfur Solubility and Diffusivity in Rubber. I. Auerbach and S. D. Gehman. *Anal. Chem. 26,* 685(1954).

CC 188 Transmission of Co–60 Gamma Rays Through Thick Uranium. L. H. Lanzl, L. S. Skaggs, J. H. Pingel and J. E. Rose. *Rev. Sci. Instr. 24,* 394(1953).

CC 189 Tube Wall Thickness Gage with Selection of Backscatter Gamma Radiations. J. L. Putman, S. Jefferson and J. F. Cameron. *Proc. of the Radioisotope Conf. 2,* Oxford(1954).

CC 190 Use of Fission Products for Insect Control. C. C. Hassett and D. W. Jenkins. *Nucleonics 10, No. 12,* 42(1952).

CC 191 The Use of Isotopes for Measuring Cleanliness of Surfaces. G. M. Ridenour. *Modern Sanitation 4, No. 4*(1952).

CC 192 Use of Kilocurie Radiation Sources. B. Manowitz. *Nucleonics 9, No.* [illegible]9(1951).

CC 193 The Use of Phosphorus 32 to Study the Movement of Wool Fibers During the Process of

Drafting. D. S. Taylor. *Proc. of the Radioisotope Conf. 2*, Oxford(1954).

CC 194 Use of Radioactive Iodine as a Tracer in Water-Flooding Operations. J. W. Watkins and E. S. Mardock. *J. Petroleum Technol. 6*, 117–24(1954).

CC 195 Use of Radioactive Material to Measure Soil Moisture and Density in Symposium on the Use of Radioisotopes in Soil Mechanics. D. J. Belcher, R. C. Herner, T. R. Cuykendall, and H. S. Sack. *Special Tech. Publication, No. 137*, 10–22(1952). *Am. Soc. Testing Materials.*

CC 196 The Use of Radioactive Isotopes in Industrial Radiography. G. H. Tenney. *Non-Destructive Testing 2*(1950).

CC 197 The Use of Radioactive Isotopes to Overcome Electorstatic Dangers in Hospitals and Industry. A. Quinton. *Proc. of the Radioisotope Conf. 2*, Oxford(1954).

CC 198 Use of Radioactive Isotopes in the Study of Vinyl Polymerization. F. C. Benington and H. W. Melville. *Proc. of the Radioisotope Conf. 2*, Oxford(1954).

CC 199 The Use of Radioactive Materials for the Generation of High Voltage. E. G. Linder and S. M. Christian. *Vacuum 3, No. 1*, 65(1953).

CC 200 Use of Radioactive Tracers in a Study of Displacement in a Model 5-Spot System. R. E. Wainerdi and R. F. Nielsen. *Producers Monthly 18, No. 12*, 16–20(1954).

CC 201 Using Cobalt 60 and Fission Products in Pork Irradiation Experiments. H. J. Gomberg, S. E. Gould, J. V. Nehemias, and L. E. Brownell. *Nucleonics 12, No. 5*, 38(1954).

CC 202 Using Radioactivity in the Refinery. G. C. Gester, R. D. Lee, and D. E. Hull. *Petroleum Processing 8*, 551(1953).

CC 203 Utility of Isotopes in Metallurgy. H. C. Boynton and A. D. Kirshenbaum. *Steel*, Nov., 130–3(1953).

CC 204 Vapor Pressure of Gold over Gold-Silver Alloys. C. L. McCabe, H. M. Schadel and C. E. Birchenall. *J. Metals 5*, 709(1953).

CC 205 The Vapor Pressure of Gold and the Activities of Gold in Gold—Copper Solid Solutions. L. D. Hall, *J. Am. Chem. Soc. 73*, 757–60(1951).

CC 206 Vapor Pressure of Silver. L. C. McCabe and C. E. Birchenall. *J. Metals 5*, 707(1953).

CC 207 The Vapor Pressure of Silver. H. M. Schadel and C. E. Birchenall. *Trans. Am. Inst, Mining Met. Engrs. 188*, 1134(1950).

CC 208 Variables Encountered in Tracer Experiments in Metallurgy. C. D. Starr, J. R. Lewis and T. J. Parmley. *Metal Progr.*, May, 673–80 (1951).

CC 209 Wanted: Better Materials for Nuclear Reactors. G. E. Evans. *Iron Age*, March(1952).

CC 210 Weighing Bagasse and Sugar with Gamma Rays*. G. O. Burr and J. H. Payne. *Repts. Hawaiian Sugar Technol.*, 123–6(1954).

CC 211 Will Atomic Batteries Change Present Methods of Electrical Generation? No Author. *Power 98*, 84–5(1954).

CC 212 Determination of Soil Moisture by Neutron Scattering. W. Gardner and D. Kirkham *Soil Sci. 73*, 391–401(1952).

CC 213 Field Measurements of Soil Moisture and Density with Radioactive Materials. R. Horonjeff and I. Goldberg. *Proc., Highway Research Board, Natl. Research Council 32*, 500–7(1953).

CC 214 Radioisotopes and Nuclear Reactions Applied to Soil Mechanics Problems. H. E. Hosticka. *Symposium on the Use of Radioisotopes in Soil Mechanics, Special Tech. Pub. No. 134, Philadelphia, Pa.: Am. Soc. Testing Materials* 3–9(1952).

CC 215 A Portable Slow Neutron Flux Meter for Measuring Soil Moisture. N. Underwood, C. H. M. Van Bavel. *Soil Sci. 77*, 339–40 (1954).

CC 216 The Adsorption of S–35 Labelled Sodium Tetradecyl Sulphate at the Solution-Air Interface of Solutions Containing Sodium Tetradecyl Sulphate and Sodium Dodecyl Sulphate. O. Lamm and G. Nilsson. *Acta Chem. Scand. 6*, 1175–85(1952).

CC 217 The Application of Radiochemical Techniques to the Study of the Interaction of Hair Fibers with Aqueous Solutions. P. B. Stam and H. J. White, Jr. *Textile Research J. 24*, 785–91 (1954).

CC 218 Atoms and Textiles. Editorial. *J. Textile Inst., Proc. 45, No. 7*, 301(1954),

CC 219 Exchange of Isotope Ions in Cation Exchangers. T. Westermark. *Acta Chem. Scand. 4*, 968–69(1950).

CC 220 High Resolution Autoradiography for Study of Grain Boundaries in Metals. H. J. Gomberg, et al. *Engineering Research Inst., Project 2029–1–F*, Feb.(1954).

CC 221 Influence of Deuteron Bombardment and Stain Hardening on Notch Sensitivity of Mild Steel. R. A. Meyer. *J. Appl. Phys. 25*, 1369–74(1954).

CC 222 Non-Destructive Testing by Means of Gamma Rays. O. Lamm. *Ing. Vetenskaps Akad. 25*, 170–1(1954).

CC 223 Precision Measurement of Uniformity of Materials by Gamma-Ray Transmission. A. I. Berman and J. N. Harris. *Rev. Sci. Instr. 25, No. 1*, Jan.(1954).

CC 224 Radioactive Tracers in Physical Metallurgy Research. M. B. Bever. *Modern Research Techniques in Physical Metallurgy*, 278–311 (1952).

CC 225 Radioactivity Helps Study of Silver Brighteners. S. E. Eaton, R. W. Fabian, and E. H. Newton. *Metal Finishing 50*, 63(1952).

CC 226 Radioactivity Units and Radiography. A. I. Berman. *Non-Destructive Testing 9, No. 2* (1950).

CC 227 Some Applications of Beta Radiation. T. Westermark. *Trans., Instr. and Measurements Conf., Stockholm,* 308(1949).

CC 228 Synthese einiger optisch aktiver α, α-Iminosäuren (Untersuchungen in Beziehung zu Eiweiss-Problemen I). F. Kogl, und J. de Flines unter Mitarbeit von D. H. W. den Boer. *Rec. Trav. Chim. Pays-Bas 72, 1009–19*(1953).

CC 229 Techniques Used in Measuring Uniformity of Materials with Gamma Radiation. J. N. Harris and L. R. Megill. *Non-Destructive Testing 11, No. 6,* July(1953).

CC 230 Ueber das Verhalten einiger α, α'Iminosäuren als Substratkomponenten in biologischen Systemen (Untersuchungen in Beziehung au Eiweiss-Problemen II). F. Kogl, und J. de Flines unter Mitarbeit von D. H. W. den Boer und C. A. Salemink. *Rec. Trav. Chim. Pays-Bas 72,* 1021–26(1953).

CC 231 Use of Deuterium to Investigate Extent of Branching in Polystyrene. L. A. Wall and D. W. Brown. *J. Polymer Sci. 14,* 513(1954).

DD 11 Studies with Radiophosphorus in *Drosophila.* II. The Turnover and Distribution of Phosphorus in Adult Drosophila. R. C. King, *J. Exptl. Zool. 125,* 331–52(1954).

DD 12 Studies with Radiophosphorus in *Drosophila.* III. The Lethal Effect of P-32-Treatment Upon Developing Flies. R. C. King. *J. Exptl. Zool. 126,* 323–35(1954).

DD 13 Study of Systemic Insecticides, Location and Amounts of Residue in Plant Tissues Determined with Aid of Radio-phosphorus Tracers. R. L. Metcalf, R. B. March, and T. R. Fukoto. *Calif. Agric. 8, No. 6,* 5–6(1954).

DD 14 Transfer of Radioactivity from Worker to Drone Honey Bees after Ingestion of Radioactive Sucrose. E. Oertel, R. B. Emerson and H. E. Wheeler. *Ann. Entomol. Soc. Amer. 46,* 596–8(1953).

DD 15 Uptake of P-32 by *Periplaneta americana:* Passage through the Fore, Mid, and Hindgut. C. C. Hassett. *Federation Proc. 13, No. 1,* 68(1954).

DD 16 The Dispersal of *Aedes taeniorhynchus.* I. Preliminary Studies. M. W. Provost. *Mosquitos News 12,* 174–90(1952).

DD 17 Dispersal and Flight Range of Subarctic Mosquitoes—Marked with Radiophosphorus. D. W. Jenkins and C. C Hassett. *Can. J. Zool. 29,* 178–87(1951).

DD 18 Studies of the Flight Habits of Three Species of Flies Tagged with Radioactive Phosphorus. A. W. Lindquist, W. W. Yates, and R. A. Hoffman. *J. Econ. Entomol. 44,* 397–400(1951)

DD 19 Absorption of DDT in House Flies over an Extended Period of Time. R. A. Hoffman, A. R. Roth, A. W. Lindquist, and J. S. Butts. *Science 115,* 312–3(1952).

DD 20 Absorption of Radioactive DDT by Resistant and Nonresistant Mosquitoes. C. M. Gjullin, A. W. Lindquist, and J. S. Butts. *Mosquitoe News 12,* 202–5(1952).

DD 21 Comparative Effectiveness of Five Radioisotopes as Tracers in Studying Dispersal of *Conothrachelus nenuphar.* R. W. Rings and G. W. Layne, Jr. *Ohio J. Sci. 54,* 231–6(1954).

DD 22 The Copper Metabolism of *Drosophila.* D. F. Poulson, V. T. Bowen, R. M. Hilse, and A. C. Ribinson. *Proc. Natl. Acad. Sci. 38,* 912–21 (1952).

DD 23 DDT Detoxification Product in American Cockroaches. J. S. Butts., C. S. Chang, B. E. Christensen, and C. H. Wang. *Science 117,* 699–(1953).

DD 24 Dispersal Habits of *Phormia regina* in Charleston, West Virginia. H. F. Schoof and G. A. Mail. *J. Econ. Entomol. 46,* 258–62(1953).

DD 25 Effect of Temperature and the Activity of House Flies on Their Absorption of DDT.

A. R. Roth, A. W. Lindquist, and L. C. Terriere. *J. Econ. Entomol. 46*, 127–30(1953).

DD 26 Further Studies on Dispersion of Flies Tagged with Radioactive Phosphoric Acid. W. W. Yates, A. W. Lindquist, and J. S. Butts. *J. Econ. Entomol. 45*, 547–8(1952).

DD 27 Fly Dispersal in a Rural Area Near Savannah, Georgia. K. D. Quaterman, J. W. Kilpatrick, and W. Mathis. *J. Econ. Entomol. 47*, 413–9(1954).

DD 28 House Fly Dispersion Studies in Metropolitan Areas. H. F. Schoof, R. E. Siverly and J. A. Jensen. *J. Econ. Entomol. 45*, 675–83(1952).

DD 29 An Investigation of Insect Fragment Production in Milling Using Radio-Active Rice Weevils. J. A. Shellenberger, P. A. Dahm, E. P. Farrell, R. E. Hein, R. H. McFarland, M. Milner and N. Lloyd. *Assoc. Operative Millers, Bull. 2* (1953).

DD 30 Multiple Release Studies on the Dispersion of *Musca domestica* at Phoenix, Arizona. H. F. Schoof and R. E. Siverly. *J. Econ. Entomol. 47*, 830–8(1954).

DD 31 A New Method of Tagging Insects with P–32. A. R. Roth and R. A. Hoffman. *J. Econ. Entomol. 45*, 1090(1935).

DD 32 The Occurrence and Movement of *Periplaneta americana* (L.) within an Urban Sewerage System. H. F. Schoof and R. E. Siverly. *Am. J. Trop. Med. Hyg. 3*, 367–71(1954).

DD 33 Plant Physiological Aspects of the Use of Systemic Insecticides. R. T. Wedding. *J. Food Agric. Chem. 1*, 832–34(1953).

DD 34 Phosphorus 32 Labelling of the Screw-Worm Fly. R. D. Radeleff, R. C. Bushland and D. E. Hopkins. *J. Econ. Entomol. 45*, 509–14(1952).

DD 35 Radioactive Tracers in Insecticide Research. P. A. Dahm. *Soap Sanit. Chemicals 29, No. 9*, 136–7, 139, 161; *No. 10*, 148–9, 153, 163, 165; *No. 11*, 141, 143, 145, 147, 165; *No. 12*, 167–8, 175(1953).

DD 36 Radioisotopes as Tracers in Plum Curculio Behavior Studies. R. W. Rings and G. W. Layne, Jr. *J. Econ. Entomol. 46*, 473–7(1953).

DD 37 Relation of the Activation of Schradan in Plant Tissues to Its Toxicity to Insects and Mites. P. de Pietri-Tonelli and R. B. March. *J Econ. Entomol. 47*, 902–8(1954).

DD 38 Tagging Boll Weevils with Radioactive Cobalt. F. H. Babers, C. L. Roan and R. L. Walker. *J. Econ. Entomol. 47*, 928–9(1954).

DD 39 Tissue Distribution, Excretion of $C-14O_2$, and Degradation of Radioactive Pyrethrins Administered to the American Cockroach. M. M. Zeid, P. A. Dahm, R. E. Hein and R. H. McFarland. *J. Econ. Entomol. 46*, 324–36(1953).

DD 40 Translocation of Systemic Insecticides Measured by Radioactive Tracers. R. T. Wedding and R. L. Metcalf. *Calif. Citrograph 38*, 132–42(1953).

DD 41 Urban Fly Dispersion Studies with Special Reference to Movement Pattern of *Musca domestica*. H. F. Schoof and R. E. Siverly. *Am. J. Trop. Med. Hyg. 3*, 539–47(1954).

DD 42 The Copper Metabolism of Drosophila. D. F. Poulson and V. T. Bowen. *Science 114*, 486(1951).

DD 43 The Copper Metabolism of Drosophila. D. F. Poulson, V. T. Bowen, R. M. Hilse and A. C. Rubinson. *Proc. Natl. Acad. Sci. 38, 912–21* (1952).

DD 44 Effects of Beta Rays and X-Rays on Mitotic Rate of Living Grasshopper Neuroblasts. M. E. Gaulden, M. Nix, and E. B. Darden, Jr. *J. Tenn. Acad. Sci. 27*, 211(1952).

DD 45 Fragmentation of Chromosomes in Grasshopper Neuroblasts by Beta Rays and X-Rays. M. E. Gaulden, K. Loemker, and E. B. Darden, Jr. *J. Tenn. Acad. Sci. 27, 211(1952)*.
