APPENDIX F
DATA VALIDATION REPORT

Validation was performed according to level C criteria set forth in *Requirements for Quality Control of Analytical Data* (HAZWRAP 1990).

A computer program, DATAVAL, has been developed by personnel at the Oak Ridge National Laboratory in Grand Junction, Colo., for the validation of analytical chemical data issuing from the U.S. Environmental Protection Agency's (EPA) Contract Laboratory Program. The program accommodates the electronic transfer of: 1) sample data that have been entered into a computer in the field and 2) sample results in the prescribed format from an analytical laboratory. DATAVAL then guides the validator through the EPA validation procedures, performs calculations and evaluations of the data, and prints reports in the required format. The validation process is rendered less time-consuming and error-prone.

The data validation report is divided into two groups. The first group (Group 1) covers sample numbers 1000 through 1544, and the second group (Group 2) covers samples 1545 through 1597. Because the data validation program works from electronic copy data received from the analytical laboratory, it was necessary to validate the second round of groundwater samples as a separate group.

Each of the group reports are composed of several sections, which are listed and briefly described below.

Note: all of the tabbed sections in the data validation reports reflect 1st order headings in the descriptions.

Cross Reference Table

A cross-reference table is provided for each of the data validation groups. The information in this table consists of the four-digit sample or field number, the 16-digit-sample identification number, various field parameters, such as, time, temperature, pH, etc., and container requirements. The 16-digit-sample identification number is composed of various sections that provide useful tracking information. An example is provided.

```
M W 0 0 1 5 0 - 1 1 1 0 9 2 - 0 0 2
1  2 3 4 5 6 7   8 9 10 11 12 13  14 15 16
```

Sections 1 through 5 provide the sample location. The two letters followed by three numbers indicate the monitoring well (MW), borehole (BH), sediment (SD), surface water (SW), field blank (FB), equipment rinse (ER), or trip blank (TB) number. OT indicates other sources such as purge water containers.

Sections 6 and 7 provide the sample matrix; SO = soil, GW = groundwater, DI = deionized water, RI = rinsate, SR = soil replicate, WR = water replicate, WT = other water, and GR = grab.

Sections 8 through 13 provide the date of sample collection.

Sections 14 through 16 provide the sample depth for all soil matrix samples or the number of trip blanks used in the ascending order.

Organic/Inorganic Regional Data Assessment

These assessments provide the general condition of the data packages with respect to the individual analyses. Each package is rated by one of four qualifiers, defined on the assessment sheet.

- **Package Deficiencies Summary:** All problem areas discovered by data validation for the entire data group are listed here. This report lists the total number of samples analyzed by each analysis type, QC samples as a percentage of the total number of samples, and several sections delineating deficiencies.

- **Definitions and Qualifying Q Codes:** This summary provides a definition for each of the final "Q codes" determined by the DATAVAL program.

The following reports are grouped by analysis type (i.e., BNAs Report, Metals Report, etc.):

- **Holding Times Report:** DATAVAL issues this report as a check on the time between sampling and analysis to determine if it is within limits. A holding time report is generated for each analytical parameter.

- **Calibration Reports, Initial and Continuing:** Calibration reports, which include both initial and continuing calibrations, are required for all analyses and vary somewhat depending on the analysis. For metals, the initial calibration report is called CAL (Curve Validation) and the continuing calibration report is called CALIBRATION.

- **Tuning Report:** The tuning report is generated for VOL and BNA analyses. The purpose of the report is to check the % relative abundance and % ion abundance for certain ions. As PHC and metals analyses are not GC/MS based, tuning reports are not generated.

- **Surrogate Recovery Report:** This report is generated for all organic analyses. Evaluation of surrogate spikes is often subjective, requiring experience and professional judgement. Raw data is reviewed, and a series of questions are answered that determine surrogate data problems, if any.

- **Blank Reports:** This report gives the results for all the different types of blanks run for each type of analysis. The report consists of two pages: the first page shows the contamination associated with each blank, and the second page shows which SDG each blank is associated with.

- **Spike Reports:** Spike (MS/MSD, MS, and blank spike) data results reported here are used in conjunction with other quality criteria to determine the need for qualification of the data.

- **Field Duplicate Report:** This report verifies whether or not field blanks were used for duplicate analysis. It also reports the relative percent difference between the sample and duplicate sample concentrations of specific analytes.

- **Lab Duplicate Report:** This report lists the samples which required dilution and the results for the original and duplicate analyses.

- **Internal Standards Report:** This report is generated for VOL and BNA data only. DATAVAL determines if the sensitivity and response are stable during every analytical run.

- **Special Reports for Metal Analyses:**

  Interference Check Sample (ICS) Report: The ICS report verifies the laboratory's interelement and background correction factors.

Laboratory Control Sample (LCS) Report: The LCS serves as a monitor of the overall performance of all the steps in the analysis, including sample preparation.

ICP Serial Dilution Report: This report calculates the % difference between the initial sample and the serial dilution in the inductively coupled plasma (ICP) analysis. Whether or not the result falls within the limits for this difference is shown in the Limits column as true or false.

- Contamination Report: This report consists of two parts: The first part lists all TCL compounds and tentatively identified compounds (TICs) detected along with their high, low, and mean concentrations. The instrument detection limit (IDL) is also listed. The second part lists sample number, sample dilution, SDG, compounds detected, retention time (RT), concentration, units, and any flags.

Error Messages Report

This report provides a short explanation on what causes the Q Code to be changed to a lower quality level. The error messages refer to the actions taken when problems exist with the laboratory quality control items. This report applies to all analytes reported above the instrument detection limit. The report is prefaced with a detailed explanation of error messages and professional judgement messages.

Non-Detect Error Messages Report

This report provides a short explanation on what causes the Q Code to be changed to a lower quality level. The error messages refer to the actions taken when problems exist with the laboratory quality control items. As the name implies, this report applies to all analytes reported below the instrument detection limit. The report is prefaced with a detailed explanation of error messages and professional judgement messages.

Final Summary Report (by analysis type)

This report summarizes the data validation effort. It lists all of the detected and nondetected compounds in each sample and the concentration. The last two columns show the laboratory qualifier (Q CODE) and data validation qualifier (FINAL CODE). Also provided in this report are the associated samples, such as, trip blanks, field blanks, equipment rinsates, and method blanks. The final summary reports are grouped together by analysis type.

DATA ASSESSMENT SUMMARY

	VOA	BNA	PEC
1. HOLDING TIMES	O	O	O
2. GC/MS TUNE/INSTR. PERFORM	O	O	
3. CALIBRATIONS	M	M	O
4. BLANKS	M	M	O
5. SURROGATES	X	X	O
6. MATRIX SPIKE/DUP.	O	O	O
7. OTHER QC	O	O	O
8. INTERNAL STANDARDS	O	O	O
9. COMPOUND IDENTIFICATION	O	O	O
10. SYSTEM PERFORMANCE	M	M	O
11. OVERALL ASSESSMENT	M	M	O

O = DATA HAD NO PROBLEMS/OR QUALIFIED DUE TO MINOR PROBLEMS.
M = DATA QUALIFIED DUE TO MAJOR PROBLEMS.
Z = DATA UNACCEPTABLE.
X = PROBLEMS, BUT DO NOT AFFECT DATA.

ACTION ITEMS: THE CALIBRATIONS FOR VOL & BNA HAD NUMEROUS PROBLEMS. THE %RSD's & %D's EXCEEDED THE REQUIRED 25% AND 30% LIMITS. THE METHOD BLANKS HAD A HIGH NUMBER OF CONTAMINANTS THAT QUALIFIED DATA AS UNUSABLE DUE TO METHOD BLANK CONTAMINATION.

AREAS OF CONCERN: ERRATIC CALIBRATIONS FOR THE VOL AND BNA ANALYSES.

NOTABLE PERFORMANCE:

O = DATA HAD NO PROBLEMS/OR QUALIFIED DUE TO MINOR PROBLEMS.
M = DATA QUALIFIED DUE TO MAJOR PROBLEMS.
Z = DATA UNACCEPTABLE.
X = PROBLEMS, BUT DO NOT AFFECT DATA.

ACTION ITEMS: THERE WERE PROBLEMS WITH THE CURVE VALIDATION TESTS. THE CORRESPONDING CORRELATION COEFFICIENTS WERE OUTSIDE OF THE ± .995 LIMITS. SOME DATA WAS QUALIFIED DUE TO THIS PROBLEM.

AREAS OF CONCERN: THE INSTRUMENT CALIBRATIONS FOR THE ICP, FAA, AND THE MERCURY ANALYSES HAD A HIGH NUMBER OF RESULTS THAT WERE BELOW THE REQUIRED LIMIT.

NOTABLE PERFORMANCE:

DEFINITIONS OF QUALIFYING Q CODES

Final Q codes are determined by the flagging logic found in the U.S. EPA Functional Guidelines for the Validation of Organic and Inorganic Data (2/1/1988, 7/1/1988, and 6/1991). The definitions below for Q codes, are taken from these documents.

J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified", and the associated numerical value represents its approximate concentration.
P	This flag is used for a target analyte when there is a greater than 25% difference for detected concentrations between two GC columns. The lower value is reported and flagged with a "P".
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

Question 1) Were recoveries on form III verified?
Question 2) Were all recoveries >= 10%?
Question 3) Was surrogate recovery a problem?
Question 4) If 3) is T, is there evidence of purging, reinjection, or re-extraction?
Question 5) Were there two blanks with surrogates outside criteria?
Question 6) Were there two or more analyses for a fraction?

Question 1) Were recoveries on form III verified?
Question 2) Were all recoveries >= 10%?
Question 3) Was surrogate recovery a problem?
Question 4) If 3) is T, is there evidence of purging, reinjection, or re-extraction?
Question 5) Were there two blanks with surrogates outside criteria?
Question 6) Were there two or more analyses for a fraction?

Question 1) Were recoveries on form III verified?
Question 2) Were all recoveries >= 10%?
Question 3) Was surrogate recovery a problem?
Question 4) If 3) is T, is there evidence of purging, reinjection, or re-extraction?
Question 5) Were there two blanks with surrogates outside criteria?
Question 6) Were there two or more analyses for a fraction?

EXPLANATION OF THE ERROR MESSAGES.

The error messages refer to the actions taken when problems exist with the laboratory quality contol items. The USEPA Functional Guidelines for the Validation of Organic and Inorganic Data detail the action to be taken.

The error messages are short explanations on what causes the QCode to be changed to a lower quality level, as indicated by the QFinal code.

NOTE: If results are qualified due to the 5X/10X rule for Method Blank contamination, it takes precidence over all other problems.

Extraction/Analysis Holding Times

The recommended extraction or analysis holding time limit was exceeded by the laboratory. Positive results are changed to "J". Nondetects are flagged using professional judgement and can be flagged as unusable (R).

GC/MS Instrument Performance Check

Expanded criteria was used by the laboratory and the ion abundance criteria was exceeded. Associated data is flagged unusable (R).

GC/MS Instrument Performance Check

Instrument performance criteria was exceeded by the laboratory. Professional judgement must be used in evaluating the data.

Initial Calibration RRF

The average of the relative response factors did not exceed required minimum limits. Positive results are flagged as estimated (J) and nondetects are flagged as unusable (R).

Continuing Calibration RRF

The relative response factor did not exceed the required minimum limits. If the RRF < .05, positive results are flagged as estimated (J) and nondetects as unusable (R).

Initial Calibration %RSD

The percent relative standard deviation exceeded the required limits. If the RRF > .05, positive results are flagged as estimated (J) and professional judgement must be used on nondetects. If the RRF < .05, positive results are flagged as estimated (J) and nondetects as unusable (R).

Continuing Calibration %D

The percent difference exceeded the required limits and RRF > .05 positive results are flagged as estimated (J) and nondetects as "UJ". If the percent difference exceeded the required limits and rrf < .05 positive results are flagged as estimated (J) and nondetects as unusable (R).

LABORATORY: *COMPUCHEM LABORATORIES INC*
REVIEWER: *DENNIS MARTY* DATA VALIDATION LEVEL:*C*

EXPLANATION OF THE ERROR MESSAGES.

Method Blank Contamination (5X/10X Rule)
The sample result is flagged "R" if the result does not exceed the method blank result by the 5 times or 10 times factor, depending upon the compound and its specific limit.

Internal Standard (Area Count)
The internal standard area count is outside of the -50% and +100% window. Positive results should be flagged as estimated (J). Nondetected compounds using an IS area count less than 50% are qualified as UJ.

Internal Standard (Retention Time)
The internal standard retention time varies by more than 30 sec. The chromatographic profile for the sample must be examined and if large magnitude shifts are observed, the reviewer may consider partial or total rejection of the data.

Linearity Calibration (Correlation Coefficient)
The linearity calibration did not result in a correlation coefficient that is greater than the required minimum limit. Results that are > IDL are qualified as J and results that are < IDL are qualified as UJ.

Percent Relative Standard Deviation (%RSD)
The %RSD exceeds the required maximum limit for the Initial Calibration. Positive results are qualified as estimated (J) and are qualified by professional judgement.

Percent Difference (%D)
The %D exceeds the required maximum limit for the Continuing Calibration. Positive results are qualified as estimated (J). Nondetects are qualified as UJ.

Percent Recovery (%R)
The %R between the True and Found concentrations exceeds the required limit. Positive results are qualified either J or UJ according to the actual %R result.
Nondetect results are qualified UJ or R according to the actual %R result.

The Percent Recovery (%R) for the Laboratory Control Samples (LCS)
The %R exceeds the required limits for the LCS tests.
Positive results are qualified J or UJ according to the actual %R result.
Nondetect results are qualified UJ or R according to the actual %R result.

The %R for ICP Interference Test Samples
The %R exceeds the required limits. Positive results are qualifie J or UJ according to the actual %R result.
Nondetect results are qualified UJ or R according to the actual %R result.

PROJECT: *NEVADA AIR NATIONAL GUARD* DATE:*03/30/94*
LABORATORY: *COMPUCHEM LABORATORIES INC*
REVIEWER: *DENNIS MARTY* DATA VALIDATION LEVEL:*C*

EXPLANATION OF THE ERROR MESSAGES.

The %D for the ICP Serial Dilutions test
The %D exceeds the required limits. Associated data is qualified estimated (J).

DDT Response Time
The DDT Response Time is outside of the required response time windows. If adequate separation is not achieved all associated compound data is qualified R.

Response Time (RT) Windows
The compound RT is outside of the required RT window. Additional review is required of the sample chromatograms.

PHC, Sample Result Verification
The compound RT is outside of the required RT window. Additional review is required of the sample chromatograms.

EXPLANATION OF THE PROFESSIONAL JUDGEMENT MESSAGES.

The Relative Percent Difference (RPD)
The matrix spike/matrix spike duplicate (MS/MSD) RPD is outside of recommended limits. Professional Judgement must be used in the evaluation of the data.

The Matrix Spike %R
The MS/MSD percent recovery for the matrix spike is outside of recommended limits. Professional Judgement must be used in the evaluation of the data.

The Matrix Spike Duplicate %R
The MS/MSD percent recovery for the matrix spike duplicate is outside of recommended limits. Professional Judgement must be used in the evaluation of the data.

The Matrix Spike Recovery
The MS report percent recovery for the matrix spike is outside of recommended limits. Professional Judgement must be used in the evaluation of the data.

The Blank Spike Percent Recovery
The Blank Spike percent recovery for the matrix spike is outside of recommended limits. Professional Judgement must be used in the evaluation of the data.

The Field Duplicate Informational Flag
The relative percent difference exceeds 25% between the samples. The 25% is an arbitrary number and is an informational flag only.

The Lab Duplicate Informational Flag
The relative percent difference exceeds 25% between the dilutions. The 25% is an arbitrary number and is an informational flag only.

EXPLANATION OF THE ERROR MESSAGES.

The error messages refer to the actions taken when problems exist with the laboratory quality contol items. The USEPA Functional Guidelines for the Validation of Organic and Inorganic Data detail the action to be taken.

The error messages are short explanations on what causes the QCode to be changed to a lower quality level, as indicated by the QFinal code.

NOTE: If results are qualified due to the 5X/10X rule for Method Blank contamination, it takes precidence over all other problems.

Extraction/Analysis Holding Times

The recommended extraction or analysis holding time limit was exceeded by the laboratory. Positive results are changed to "J". Nondetects are flagged using professional judgement and can be flagged as unusable (R).

GC/MS Instrument Performance Check

Expanded criteria was used by the laboratory and the ion abundance criteria was exceeded. Associated data is flagged unusable (R).

GC/MS Instrument Performance Check

Instrument performance criteria was exceeded by the laboratory. Professional judgement must be used in evaluating the data.

Initial Calibration RRF

The average of the relative response factors did not exceed required minimum limits. Positive results are flagged as estimated (J) and nondetects are flagged as unusable (R).

Continuing Calibration RRF

The relative response factor did not exceed the required minimum limits. If the RRF < .05, positive results are flagged as estimated (J) and nondetects as unusable (R).

Initial Calibration %RSD

The percent relative standard deviation exceeded the required limits. If the RRF > .05, positive results are flagged as estimated (J) and professional judgement must be used on nondetects. If the RRF < .05, positive results are flagged as estimated (J) and nondetects as unusable (R).

Continuing Calibration %D

The percent difference exceeded the required limits and RRF > .05 positive results are flagged as estimated (J) and nondetects as "UJ". If the percent difference exceeded the required limits and rrf < .05 positive results are flagged as estimated (J) and nondetects as unusable (R).

REVIEWER: *DENNIS MARTY* DATA VALIDATION LEVEL: *C*

EXPLANATION OF THE ERROR MESSAGES.

Method Blank Contamination (5X/10X Rule)
The sample result is flagged "R" if the result does not exceed the method blank result by the 5 times or 10 times factor, depending upon the compound and its specific limit.

Internal Standard (Area Count)
The internal standard area count is outside of the -50% and +100% window. Positive results should be flagged as estimated (J). Nondetected compounds using an IS area count less than 50% are qualified as UJ.

Internal Standard (Retention Time)
The internal standard retention time varies by more than 30 sec. The chromatographic profile for the sample must be examined and if large magnitude shifts are observed, the reviewer may consider partial or total rejection of the data.

Linearity Calibration (Correlation Coefficient)
The linearity calibration did not result in a correlation coefficient that is greater than the required minimum limit. Results that are > IDL are qualified as J and results that are < IDL are qualified as UJ.

Percent Relative Standard Deviation (%RSD)
The %RSD exceeds the required maximum limit for the Initial Calibration. Positive results are qualified as estimated (J) and are qualified by professional judgement.

Percent Difference (%D)
The %D exceeds the required maximum limit for the Continuing Calibration. Positive results are qualified as estimated (J). Nondetects are qualified as UJ.

Percent Recovery (%R)
The %R between the True and Found concentrations exceeds the required limit. Positive results are qualified either J or UJ according to the actual %R result.
Nondetect results are qualified UJ or R according to the actual %R result.

The Percent Recovery (%R) for the Laboratory Control Samples (LCS)
The %R exceeds the required limits for the LCS tests.
Positive results are qualified J or UJ according to the actual %R result.
Nondetect results are qualified UJ or R according to the actual %R result.

The %R for ICP Interference Test Samples
The %R exceeds the required limits. Positive results are qualifie J or UJ according to the actual %R result.
Nondetect results are qualified UJ or R according to the actual %R result.

LABORATORY: *COMPUCHEM LABORATORIES INC*
REVIEWER: *DENNIS MARTY* DATA VALIDATION LEVEL:*C*

EXPLANATION OF THE ERROR MESSAGES.

The %D for the ICP Serial Dilutions test
The %D exceeds the required limits. Associated data is qualified estimated (J).

DDT Response Time
The DDT Response Time is outside of the required response time windows. If adequate separation is not achieved all associated compound data is qualified R.

Response Time (RT) Windows
The compound RT is outside of the required RT window. Additional review is required of the sample chromatograms.

PHC, Sample Result Verification
The compound RT is outside of the required RT window. Additional review is required of the sample chromatograms.

EXPLANATION OF THE PROFESSIONAL JUDGEMENT MESSAGES.

The Relative Percent Difference (RPD)
The matrix spike/matrix spike duplicate (MS/MSD) RPD is outside of recommended limits. Professional Judgement must be used in the evaluation of the data.

The Matrix Spike %R
The MS/MSD percent recovery for the matrix spike is outside of recommended limits. Professional Judgement must be used in the evaluation of the data.

The Matrix Spike Duplicate %R
The MS/MSD percent recovery for the matrix spike duplicate is outside of recommended limits. Professional Judgement must be used in the evaluation of the data.

The Matrix Spike Recovery
The MS report percent recovery for the matrix spike is outside of recommended limits. Professional Judgement must be used in the evaluation of the data.

The Blank Spike Percent Recovery
The Blank Spike percent recovery for the matrix spike is outside of recommended limits. Professional Judgement must be used in the evaluation of the data.

The Field Duplicate Informational Flag
The relative percent difference exceeds 25% between the samples. The 25% is an arbitrary number and is an informational flag only.

The Lab Duplicate Informational Flag
The relative percent difference exceeds 25% between the dilutions. The 25% is an arbitrary number and is an informational flag only.
