MEMORANDUM FOR DOD STANDARDIZATION MANAGEMENT ACTIVITIES

SUBJECT: 1993 Report on the Age of Department of Defense
Specifications and Standards

The attached report provides management information that gives each Military Department, Defense Agency, and Standardization Management Activity an indication of the age distribution of their standardization documents. Secretary Perry recently signed a memorandum directing the Military Departments and Defense Agencies to take action to ensure that their specifications and standards are current, promote the acquisition of commercial products, and reflect state-of-the-art technologies. As a general rule, overage documents (i.e., those that are more than 5 years old since last updated or validated) don't support these goals and should be updated, inactivated for new design, or cancelled.

We think this report is a useful management tool. We wish to thank Mr. Stephen Clark and the Air Force Materiel Command for their efforts in developing this report.

Foreword

This report has been prepared on behalf of the Office of the Assistant Secretary of Defense for Economic Security, OASD(ES)MMD by the Air Force Materiel Command (AFMC) Standardization Office. The objective of the report is to inform the DoD standardization community of both the quantity and the age of their documents. The report is not intended to be recriminatory, but is intended to inform and motivate the standardization community. Last year was the first time that many DoD Standardization Management Activities (SMAs) had seen data on the documents for which they were responsible. Hopefully, the knowledge of responsibilities and a measure of performance will aid in the management of the DoD's Standardization Program.

This is the second edition of this report. This should enable the standardization community to track improvement over the next few years. Accordingly, suggestions for improvements to later versions are encouraged. They can be sent to the sponsoring office, OASD(ES)MMD. Their address can be found in the DoD Defense Standardization Program Standardization Directory, Publication SD-1, under Code SO.

The author would like to thank several personnel for providing the support necessary for the publication of this document:

Mr. Steve Lowell, OASD(ES)MMD, continued support in this initiative.

Mr. Richard Rodemer, Defense Printing Service, provided technical information.

Any questions on the preparation of this document can be directed to the author.

Stephen M. Clark

Background

Over the last few years, the US market place has adopted and developed a system of Total Quality. One of the premises of this system is that management must have a metric to determine compliance with corporate goals and policies. DoD 4120.3-M, "Defense Standardization Program Policies and Procedures," requires that "all documents listed in the active DoDISS [Department of Defense Index of Specifications and Standards] must be reviewed within five years from the time they were last updated or validated." This is a critical policy. It facilitates review of documents to ensure that they are still technically valid so that the DoD can procure items in a cost effective manner while enhancing competition. This report provides a metric for document age and is provided as a management tool for all levels of the DoD standardization community.

Last year's report was based on the Navy Print On Demand System (NPODS). This year the data for this report were obtained from the Acquisition Streamlining and Standardization Information System (ASSIST). There were some inconsistencies between the NPODS and the ASSIST databases. Many corrections were submitted by SMAs, and additional corrections may be required. The ASSIST is now used to generate the DoDISS. If an SMA disagrees with the data provided in this report, the DoDISS should be checked to determine if the data is correct. If the DoDISS is incorrect, it is the SMA's responsibility to submit a form DD-1865 (DoDISS Change/Correction Request) to the Defense Printing Service so the ASSIST and the DoDISS can be corrected. The ASSIST will be used for all subsequent reports and it is in everyone's best interest to have an accurate database.

The author of the report agrees to provide the specific data used to generate the graphics in this report to any SMA. SMAs should mail or fax their requests to the author. Data can be sorted on date, FSC or document number. If copies on electronic media are desired, a formatted DOS disk should be mailed to the author. The data are available in Microsoft Excel. If the SMA does not desire the information in Excel Version 4.0, the SMA should state the desired format. The SMA should also state the type of sort desired for the spreadsheet. Data can also be obtained through the ASSIST over a modem.

Data Analysis

For the simplification of the graphics in this report, the years analyzed were limited to 1950 to 1993. This simplification caused dates to be adjusted in two ways. First, the data for this report were generated in February, 1994. Several documents were dated in 1994. These documents were included in the 1993 data. Secondly, some documents were dated earlier than 1950. These documents were included in the data for 1950. This simplification caused some misleading increases in the bar representing the number of 1950 documents.

As mentioned above, DoD 4120.3-M requires that documents be reviewed every five years. When documents are reviewed, and changes are deemed necessary, complex documents can require almost two years to develop, coordinate and publish a document revision. For this reason, the graphics list both the percent of documents over five years old and the percent of documents over seven years old. All documents over five years old should be in some phase of a review cycle. An aggressive goal is to have no documents over seven years old.

This year's report has added an analysis of the age of interim documents. The DoD 4120.3-M defines an interim document as "revisions, amendments, or change notices issued by a single Military Department, a Defense Agency, or an activity in the DoD Component for coordinated Federal or military specifications or standards; guide specifications; or military handbooks or bulletins to meet a need when time does not permit preparation of a coordinated document." DoD 4120.3-M, para 5.D.3.e. states that "the interim document must be superseded by a coordinated document within two years of the interim document's approval date or it shall be canceled by the OASD(ES) SPD. 'Used-in-lieu-of' documents are now referred to as 'interims.'"

Two techniques were used to determine interim documents. First, the ASSIST carries a field called "INTERIM_IND" which defines those "specifications/ standards with interim amendments or interim change notices." All documents with a "Y" in this field were extracted from the ASSIST. Second, all "00" documents were extracted from the ASSIST. MIL-STD-961, "Preparation of Military Specifications and Assorted Documents," para 5.2.3.3, and MIL-STD-962, "Preparation of Military Standards, Handbooks, and Bulletins," para 5.3.2.3, state that "Used-in-lieu-of" documents shall be assigned numbers beginning with "00". The summation of these two sets of documents represents the interim document database for the DoDISS.

Comparison of Document Quantity

Summary

The document age distribution of the DoD documents demonstrates that all the services need to pay increased attention to overage documents. There are two ways to address the problem. The first is to automatically issue validation notices for all overage documents. The second is to review the document and examine the purchase history of the parts associated with the document. If the document is not used, then the document should be canceled. If the document is used, then a document update should be initiated, as required. Obviously the first technique is the best way to "pencil whip" the problem. The best long-term solution for the DoD, however is the latter course of action. Since the last similar report, the Air Force has initiated a program to reduce the quantity of overage documents. This effort has contributed to the reduction of almost 600 documents.

We are very aware of the shrinking manpower base within the DoD. In a few years the personnel available to screen standardization documents will be a fraction of those available today. If we "pencil whip" the situation now, we will only create a bow wave of documents that will have to be handled with diminished resources later. Each Service and SMA is strongly encouraged to systematically review their overage documents. If a document is not used, cancel it. If a document is similar to those used by the other Services, create a consolidated document and share the workload. If a document is required, ensure that it is technically current, describes the requirements in functional terms rather than design terms, and encourages competition. Along with diminished manpower, the DoD will have diminished financial resources. Top-quality specifications and standards will help us maintain the most effective weapon systems possible despite diminished resources.

This report has been written to induce positive action within the DoD Standardization Community. The issuance of this report on an annual basis will provide a metric for us all to track improvement. Suggestions for enhancements to this report are encouraged and should be sent to either the author or the OASD Standardization Office.

Appendix A - Spreadsheet for Graphics

This appendix provides the data that were used to generate the graphs of this report. They are provided so that standardization personnel can obtain a clearer understanding of the document age distributions depicted in the report. As mentioned above, any documents dated earlier than 1950 were listed under 1950. Also, documents dated in 1994 were listed under 1993.
